No. 457. *Portrait of a Gentleman on the summit of Mont Blanc, on the 25th of July, 1827, at two P.M.* W. S. Hastings.—A whimsical description. Probably the picture was not painted on the spot: yet it conveys an idea very like truth.

No. 459. *Enamel Portrait of a Lady, painted from the original Picture by Sir T. Lawrence*. W. Essex; No. 460. *Enamel Portrait of Master Bunbury, Page of Honour to her late Ma-*

jesty Queen Charlotte. W. Grimaldi; No. 461. *Enamel Portrait of the Son of the Hon. George Agar Ellis, painted from the original Picture by Sir T. Lawrence*. W. Essex.—Three skillfully executed enamels.

No. 463. *Portrait, in enamel, of Captain Sir William Hoste, R.N., Bart., K.C.B.* H. Bone, R.A.—A characteristic and spirited performance; and, we regret to say, the only one by this able artist.

No. 464. *Disegnatrice*. A. E. Chalon, R.A.—We always anticipate that we shall find something on this spot to be charmed with from the hand of this tasteful artist; and we have never yet been disappointed. The fair designer (are not all ladies fair designers?) is elegantly disposed;—we use the word in its ordinary, as well as in its technical sense;—for what can shew a more elegant disposition than the practice of any branch of the fine arts? To the female character it adds a peculiar grace; for it is the occupation of domestic retirement: it is unaccompanied by any of those personal and public displays which too frequently give to other accomplishments a vain and meretricious air. Mr. Chalon has two other fascinating examples of the powers of his pencil in No. 462. *Portrait of a Lady*; and No. 476. *Portraits of the Countess of Jersey and the Lady Adela Corisanda Villiers*.

No. 475. *Paris; Review of the British Army marching past the Emperor Alexander and other the King of Prussia, led by the Duke of Wellington*. G. Jones, R.A.—We regard this diminutive sketch as a promise, which we trust Mr. Jones will not break. It would be very gratifying to see a picture of the termination of the arduous and glorious struggle from the hand of this able artist.

No. 477. *The Colosseum, and part of the Campagna of Rome, from a Sketch by Miss Gubbins*. W. Westall, R.A.—Very poetically treated; and the Byronic figure introduced in the foreground is in strict accordance with that feeling.

No. 491. *A Spanish Señorita, with her Nurse of the Asturias, walking in the Prado of Madrid*. D. Wilkie, R.A.—This slight sketch is fuller of meaning than many a more laboured production. Patrician haughtiness and plebeian humility were never more amusingly depicted.

No. 488. *The Sketch from Nature*. J. Wood.—Why is this gay, spirited, and highly finished drawing called merely a sketch?

No. 553. *Design*. S. W. Arnald.—The subject is from the Revelations—"War in heaven." Groups of figures are complicated in every possible way, calculated to shew the anatomical knowledge of the artist.

No. 572. *View of the Eddystone Lighthouse, from a Sketch made on the spot*. H. Parke.—A very clever drawing; exhibiting one of the triumphs of art over difficulties apparently insurmountable.

No. 578. *Graystock Castle, Cumberland, a seat of the Hon. Henry Howard, M.P.* T. C. Hoffland. This view evidently possesses every desirable quality in landscape composition; but the skill of the artist is rendered entirely unavailing by the situation in which the picture is placed.

No. 584. *Mount Etna, seen from the road near Syracuse*. H. Parke.—A scene of solitary grandeur; and, as a drawing, executed with a skill that shews great practice.

No. 513. *Portrait of Miss L. E. Landon*. D. M'Clise.—Merely as a work of art, this drawing would do great credit to the artist; but it is much more: it is a faithful resemblance of one whose genius, whether displayed

in the descriptive, the imaginative, or the philosophical, has held captive the attention, and elicited the admiration, of all who are capable of feeling the beauties of fine poetical composition.

No. 498. *Portrait of a Lady*; No. 502. *Portrait of a Gentleman*. Miss Daniell.—These, and other slight but tasteful performances by the same lady, are examples of that rare knowledge, the knowledge of when and where to leave off.

Among the remaining prominent portraits in water-colours are *H. R. H. Princess Sophia*, *Mrs. S. C. Hall*, and *T. Campbell, Esq.*, *D. M'Clise*; *Miss Grim*, *T. Heaphy*; and *Lieutenant Richardson of the Bombay Marine*, *W. Derby*. The last is a highly finished performance.

There are in this room several very clever portraits in oil. We especially remarked *The Hon. Mrs. Newton Lane*, *Mrs. W. Carpenter*; *Thomas Stothard, Esq. R.A.*, *J. Green*; *Lieutenant-Col. D'Aguiar*, *R. Rothwell*; *A Family Group*, *J. G. Middleton*; *Miss Phillips*, of the *Theatre Royal Drury Lane*, *Miss E. Drummond*; *The Rev. J. Brooke*, *J. Lonsdale*; *The Rev. S. Creyke*, *T. Ellerby*, &c.

The miniatures are as numerous as usual; and many of them exhibit great talent. Among the most striking are those from the pencils of *Mrs. J. Robertson*, *A. E. Chalon, R.A.*, *A. Robertson*, *W. J. Newton*, *F. T. Rochard*, *W. C. Ross*, *C. R. Bone*, *W. Bone*, *M. Haughton*, *Miss M. Ross*, *Miss Heaphy*, *J. Burgess*, *C. Winsor*, and last and least, as we imagined, *The Rev. Henry North*, *E. Robertson*; but on looking further we found *Mrs. Russell*, *J. Stewart*, still more surprisingly small. Both these Lilliputian works of art are in the best style of execution, and furnish true examples of the *multum in parvo*.

Of flowers and fruit there is also a gay show. In *The Gardener's Shed*, *V. Bartholomew*, we recognise the same lightness of execution, and clearness and brilliance of colouring which distinguished the splendid cluster of *Hollyhocks* exhibited by the same artist last year. The *Jonquil* appears in the group, with a degree of unusual brightness, owing, we suspect, to a colour recently discovered by the ingenious and indefatigable *Mr. George Field*. *The Crinum Augustum*, from the *East Indies*, *Mrs. Denis Dighton*; *Fruit*, *E. Smith*; *Composition of Flowers*, *J. Holland*; *Dahlia*, *George the Fourth*, and other Varieties, *Mrs. Pope*; *Roses*, and *Studies of Black and White Grapes*, *Madame Comolera*—are all executed with great skill. We are likewise much pleased with a small drawing, *Flowers and Fruit*, *G. Sintzenich*. It is hung in a disadvantageous situation; but evinces a fidelity of imitation, a taste in composition, and a tenderness and delicacy of finish, which are rarely united.

In thus closing our account of the Exhibition of the present year, we beg to observe, that we are quite sensible it contains many able works which our limits have not permitted us to notice.

Prints from Lawrence.

Messrs. COLNAGHI and Son have just enriched our portfolio with a set of engravings which possess a peculiar interest at this moment, from being from paintings by *Sir Thomas Lawrence*, and several of them from pictures now attracting so much of public attention at the British Gallery in Pall Mall. They are as follow:

Whole-length of *Charles X.*, King of France, in mezzotinto, by *Charles Turner*, a fine fac-

simile of the original; and, as in other cases where the costume of the parties forces the painter to employ masses of colour more of necessity than of taste, we must say that we are inclined to prefer the print to the painting.

Cardinal Gonsalvi, *F. C. Lewis*, slightly tinged with colour, and with all the appearance of an exquisite chalk drawing. The vivid eyes of the acute Italian retain all their extraordinary expression.

Sir Astley Cooper, in mezzotinto, by *S. Cousins*; and as fine a specimen of the art as could be scraped. As in the portrait of the President himself, there is a considerable resemblance in this to *Mr. Canning*: no one who puts the least faith in physiognomy, but must grant that the possessor of such a head and countenance could be no ordinary person. Intellect is stamped upon them.

Dr. Thomas Young, by *C. Turner*, is another beautiful example of mezzotinto: it is, farther, a very faithful representation of that highly distinguished scholar.

Miss Susan Bloxam, by *F. C. Lewis*, a niece of the President's, and in the same style as *Gonsalvi*; a style admirably adapted to the portraiture of young and feminine grace and loveliness. It is one of *Lawrence's* sweetest compositions.

Italian Girls (by the same publishers) is from a painting by *P. Williams*, and engraved by *D. Lucas*. It is also a naive and delightful composition, such as one of our best Annuals might have prized. The costume and character are both charming.

Portrait of the late Sir Thomas Lawrence, P.R.A. Painted by himself, and engraved by *E. Cousins*. Tiffin.

THE publication of this fine print is also very opportune. It is an admirable resemblance; and is not rendered less interesting by the pensive expression which overspreads the features, and which marks the man of amiable feelings and strong sensibilities, on whom long and intimate acquaintance with the world has produced its too usual effects on such a character. The merits of *Mr. Cousins* as a mezzotinto engraver are well known; and he has evidently exerted himself on this occasion.

MR. THOM'S STATUES.

MR. THOM'S exhibition re-opened to the public yesterday, with two new statues, or rather with four new statues; for, although the statues of *Tam O'Shanter* and *Souter Johnny* are nearly the same as those by which the town was so delighted last year, yet they are absolutely new. The great interest of the exhibition, however, consists in the addition of the statues of the landlord and landlady; which, especially the latter, are quite worthy of their jolly companions. The four figures are arranged in a line; the landlord being in conversation with the souter, and the landlady with *Tam*:—the landlord throwing himself back in his chair in a convulsion of laughter at one of the souter's "queerest stories;" the landlady leaning earnestly forwards towards *Tam*, with whom she is evidently "growing" very "gracious."—A great musical amateur, when any piece of music, which he had not heard, was praised in his presence, used to ask "whether it would grind?" *Mr. Thom's* two former figures have received a similar testimony to their excellence, as may be seen on the board of every Italian boy who wanders the streets, offering his "images" for sale; and we have no doubt that the novelties will speedily have the same compliment paid to

them, and will become equally popular. In the meanwhile, every body who has any feeling for humour, or any love of native talent, must visit the admirable originals.

PUBLIC CEMETERY.

WHAT we observed, on the public meeting held at the Freemasons' Tavern on Wednesday 9th, relating to *Mr. Carden's* plan, referred to the *general principle*—viz. the necessity of doing away with the continuance of burying the dead within the metropolis; and, consequently, we gave our entire approval of that gentleman's plan for a general cemetery. But our support of *Mr. Goodwin's* design, which is of a higher character, arises from a desire to see such a project carried into effect, as it will not only take its share in removing the nuisance so generally and so loudly complained of, but at the same time afford the architects and sculptors of the British school that opportunity of exhibiting their talents, which becomes the present enlightened epoch, and is worthy of the metropolis of the British empire. Indeed, Paris having four public cemeteries; surely London, with its vast superiority of population, may well support two, or indeed four; namely, one east, west, north, and south. This of *Mr. Goodwin's*, if properly supported, would take the lead—the site proposed being one of the finest for such a purpose, perhaps, to be found near any city in the world.

ORIGINAL POETRY.

TO THE AUTHOR OF THE IMPROVISATRICE.

I KNOW thee not, high Spirit! but the sympathy of thought
Hath often to my hour of dreams thy living presence brought;
And I feel that I could love thee with the fondness of a brother,
As the sainted ones of Paradise bear love for one another.
For I know thy spirit hath been poured full freely in thy song,
Where feeling hath been prodigal, and passion hath been strong—
That the secrets of thy bosom are burning on thy lyre, [fire]
In the nature of thy worshipping, a ministry of
Young priestess at a holy shrine, I scarce can deem that years [tears—]
So few and beautiful as thine are registered in
That the gift of thy affections hath gone abroad in vain—
A rose-leaf on the autumn wind—a foam-wreath on the main!
Yet blended with thy beautiful and intellectual lays, [evil days;
I read a mournful consciousness of cold and
Of the weariness existence feels when its sunlight has gone down,
And from the autumn of the heart the flowers of Hope are strown;—
Of the coldness of the hollow world, its vanities that pass [the grass—
Like tinges from the sunset, or night-gems from
Its mocking and unmeaning praise, the flatterer's fatal art—
Flowers madly to the bosom clasped, with serpents at their heart!
And oh! if things like these have been the chasteners of thy years,
How hath thy woman's spirit known the bitterness of tears!
How have thy girlhood visions—the warm, wild thought of youth, [truth!
Folded their sunny pinions, and darkened into

O wearily, most wearily, unto the child of song,
The heavy tide of being rolls, a sunless wave,
When the promise of existence fades before the time of noon,
And the evening of the soul comes on, unblest by star or moon!

God help thee in thy weary way! and if the silver tone
Of Fame hath music for an ear so chastened as Thou hast it from another clime, where heart and mind are free,
And where the brave and beautiful have bowed themselves to thee.

And one whose home hath been among the mountains of the North,
Where the cataract mocks the earthquake, and the giant streams come forth—

Where spirits in their robes of flame dance o'er the cold blue sky,
And to the many-voiced storm the eagle makes reply!

A worshipper before the shrine at which thy spirit bendeth,

While on its pure and natural gifts the holy flame descendeth,

Hath poured his tribute on thine ear, as he would praise a star

Whose beams had wandered down to him from their blue home and far.

Lady! amidst the clarion-note of well-deserved fame,

It were, perhaps, but vain to hope this feeble lay might claim

A portion of thy fair regard, or win a thought of thine

To linger on a gift so frail and dissonant as

But onward in thy skyward path—a thousand eyes shall turn

To where, like heaven's unwasting stars, thy gifts of spirit burn—

A thousand hearts shall wildly thrill where'er thy lays are known,

And stately manhood blend its praise with woman's gentlest tone.

Farewell!—the hand that traces this may perish ere life's noon,

And the spirit that hath guided it may be forgotten with its lofty hopes—the fevered dreams of mind—

Unnoted, stealing to the dead without a name behind.

But thou upon the human heart, in characters of flame,

And on the heaven of intellect, hast registered The gifted ones of fallen earth shall worship at thy shrine,

And sainted spirits joy to hold companionship with thine.

J. GREENLEAF WHITTIER.*

Haverhill, Massachusetts,
8th of 1st Month, 1830.

DRAMA.

KING'S THEATRE.

LAST Tuesday a rather curious scene occurred at the Opera. Malibran was taken suddenly so ill as to be unable to go upon the stage in the second act of *Cenerentola*; and an apology was

* We do not often admit personal tributes into our columns; but the poetical beauties of this composition, and its gratifying character, as confirming, from another hemisphere, the fame attached to the writings of L. E. L., our long-valued and especial favourite in this country, have induced us to give it insertion. The author is described to us, in a letter from Philadelphia, to be a "young American poet-editor of great promise" in the U. S.; and these lines afford high proofs of talent.—*Ed. L. G.*

made for her. The manager was in a terrible puzzle what to substitute to fill up the evening's entertainments; when Blasis was luckily seen in a box, and begged to undertake the part so unexpectedly vacated. She accordingly dressed for it, and was just about to proceed, when it was found that the indisposed prima donna had recovered as rapidly as she fell sick, and was quite ready to finish the part herself. So much for the medical skill of Dr. Blasis!

DRURY LANE AND COVENT GARDEN.

THE period has again arrived for us to record the closing of the two great theatres, and to review the winter campaign. That its issue has been widely different from that calculated upon at the commencement of the season, even by the most "knowing ones," we believe they will admit; and the argument to be drawn from it is, in our opinion, all in favour of theatrical property. It proves that there is always vitality in a theatre; and that, provided a manager knows how to play a bad hand, the chances themselves are strongly in favour of the table. In September, 1829, the proprietors of Covent Garden Theatre would have been but too happy if any one would have insured them against the loss of nearly as many thousands as they now stand the gainers of. Mr. Price, the then lessee of Drury, on the contrary confided too much in the chances he thought he perceived against his rivals, and suffered himself to be out-generated by them in more than one important instance. But even this mistake, and the extraordinary lethargy which, during the commencement of the season, overhung that establishment, did not prevent it eventually from making strong head against the current which had set in for its neighbour, and fully sharing in the Pactolean stream. For, be it understood, as in justice to Drury Lane Theatre it should be, that the embarrassments of Mr. Price have arisen out of circumstances unconnected with theatricals, the receipts of the theatre having averaged 53,000*l.* per season during his lease: so that granting the expenses to be 250*l.* per night for the 200 nights, which they could scarcely exceed, it would leave a profit of 3,000*l.* on each season—not a sufficient recompense, perhaps, for the toil and anxiety attending theatrical management, but still any thing but a losing game. But to proceed to our review. Drury Lane opened on the first of October; and most injudiciously the lessee reduced the price to the boxes, instead of providing entertainments which should have rendered the admission money a matter of indifference. At Christmas the old prices were resumed; and the triumph of the pantomime over that of Covent Garden, the success of the *Brigand*, and the accession of Kean and Madame Vestris, gave a prosperous turn to the affairs, which was furthered by the production of the *National Guard*, *Perfection*, *Popping the Question*, the Easter piece, and the opera of *Hofer*; the latter particularly, if produced earlier in the season, might alone have redeemed the fortunes of the lessee. On looking at the course of Covent Garden, we are dazzled at the outset by the brilliant career of Miss Kemble. Her nights, it is reported, have averaged 300*l.* The off-nights, as they are technically termed, were, however, deplorable, till *Black-eyed Susan* came on board, "and brought them up with a wet sail" to Christmas. The comparative failure of the pantomime was a sad drawback; and Miss Paton in *Ninetta* only added to the expenses of the establishment. At this critical moment, *Teddy the Tiler* came *Pat*, and with more than forty-horse *Power* pulling after it.

A very bad melodrama, with a very good name, bettered the business till Easter. On Easter Tuesday the opera of *Cinderella* was produced; and originally from its intrinsic merits, and latterly through the equivocal interest thrown around its heroine, (*O tempora! O mores!*) has formed a triumphant close to the season. The following are the lists of the pieces produced at each theatre; which, curiously enough, exactly correspond in number, (15), counting *Black-eyed Susan*, as its success entitles us to do, amongst the productions at Covent Garden.

Drury Lane.

		Nights.
Oct. 14.	Epicharis, a Tragedy, 5 acts: Lister	5.
22.	Greek Family, a Melodrama, 2 acts: Barrymore and Raymond	Withdrawn.
Nov. 3.	Snakes in the Grass, a Farce, 2 acts: Buxton	9.
18.	Brigand, a Drama, 2 acts: Planché	47.
28.	Follies of Fashion, a Comedy, 5 acts: Lord Glengall	11.
Dec. 19.	Witch-Finder, a Drama, 2 acts: Jerrold	Withdrawn.
26.	Jack in the Box, Christmas Pantomime: Barrymore	50.
Feb. 4.	National Guard, an Opera, 2 acts: Planché	14.
23.	Past and Present, a Drama, 3 acts: Poole	10.
Mar. 23.	Popping the Question, Interlude: Buxton	18.
25.	Perfection, a Farce, 2 acts: Bayly	17.
Apr. 12.	Dragon's Gift, Easter piece: Planché	20.
May 1.	Hofer, an Opera, 3 acts: Planché	12.
4.	A Joke's a Joke, a Farce, 2 acts: T. Hook	Withdrawn.
25.	Spanish Husband, a Drama, 3 acts: H. Payne	6.

Covent Garden.

		Nights.
Oct. 10.	First of May, a Drama, 2 acts: Miss Hill	11.
22.	Robber's Wife, do. do.: Pocock	15.
29.	Shakespeare's Early Days, ib.: Somerset	11.
Nov. 7.	Night before the Wedding, &c. an Opera, 2 acts: Ball	4.
26.	Royal Fugitive, a Drama, 3 acts: C. Kemble	6.
30.	Black-eyed Susan, a Melodrama, 2 acts: Jerrold	18.
Dec. 26.	Harlequin and Cock Robin, Christmas Pantomime: Farley	34.
Jan. 5.	Husband's Mistake, a Comedy, 2 acts: Pocock	18.
12.	Phrenologists, a Farce, 2 acts: Wade	Withdrawn.
Feb. 2.	Robert the Devil, a Melodrama, 2 acts: Raymond	34.
4.	Ninetta, an Opera, 3 acts: Ball	12.
8.	Teddy the Tiler, an Interlude: Rodwell	45.
Apr. 12.	The Wigwam, Easter piece: Peake	21.
13.	Cinderella, an Opera, 3 acts: Lacy	20.
May 4.	The Colonel, a Farce, 2 acts: Lacy	Withdrawn.

Here break we off. Encouraged by their success, the managers of Covent Garden are making strong preparations for next season, the last under the existing and long-disputed lease. Drury Lane has already passed into fresh hands—untried ones certainly; but for that very reason not to be prejudged. Let Mr. Lee be sure that honourable and liberal behaviour will not only "deserve success," but "command it;" and that the Scylla of what has been hitherto called economy, is as fatal as the Charybdis of extravagance.

HAYMARKET.

THIS theatre opened on Tuesday. A new farce by Poole, from the French, was produced, and proved an amusing little piece. Kean has appeared in *Richard III.*, with less of demand upon his physical powers than at the large theatres.

VARIETIES.

Algerine Journal.—Among the advertisements in the French papers is one announcing the intention of establishing a journal, either on board a vessel belonging to the French fleet

before Algiers, or on shore in the event of a successful landing; to contain copious details of all the warlike proceedings, and literary and scientific information.

Literary Fund.—The Greenwich anniversary of this admirable charity promises to be more than usually well attended. It is understood that Mr. Cam Hobhouse, a V.P., will take the chair, and the friends of the Institution will rally round him on the occasion. For gastronomy, the white bait (upon which an essay is recommended, not to ascertain whether it is fish or fry, but how it tastes,) is ordered to allow itself to be caught. Broadhurst has promised the charm of song; and many other *agrémens* are in requisition.

Mr. Price, the celebrated oriental scholar, died suddenly at his residence, near Worcester, on Thursday morning.

Bourrienne's Memoirs.—In Bourrienne's Memoirs it is stated, that a M. de Sala had communicated to M. de Metternich at Vienna, that, in the year 1815, he had been engaged by M. de Stein, formerly a Prussian minister, to poison M. de Mongelas, the Bavarian minister. M. de Stein has published a lithographic brochure, in which he indignantly repels this charge, and, among other proofs of his innocence, adduces a letter from M. de Metternich, declaring that no such communication had ever been made to him. This correspondence affords, however, the strongest evidence we have yet seen of the authenticity of Bourrienne's work in other respects; and when we find such persons as Prince Metternich and the Prussian ex-minister bearing witness to its superior and accurate information, we advert with pleasure to the same opinion expressed in the *Literary Gazette*, upon the authority of an English minister, cognisant of many of the affairs related by De Bourrienne.

Science.—The Emperor of Russia assigned 10,000 rubles per annum for the continuation of the researches necessary to ascertain the exact measure of the degree. M. Struve, the eminent astronomer of Dorpat, is charged with the direction of this labour, which will last for ten years. Two officers have been sent to Finland to make observations; and M. Struve is also to undertake a journey on this subject.

Anatomical Model.—At the sitting of the Paris Academy of Medicine, on the 8th inst., M. Auzou, a physician, exhibited an anatomical model, intended to assist the young student in surgery, which excited great admiration. It is five feet seven inches in height, and is manufactured from *papier mâché*. Every part takes to pieces. The muscles can be removed, layer by layer, until the skeleton appears. The brain is divided into slices, exhibiting all the nerves and other ramifications. The lungs, diaphragm, heart, intestines, &c. are removable. In the heart, which is filled with black and red blood, all the minuteness of the organisation is shewn; and the whole is so contrived as to be a perfect study in the absence of the real subject. M. Auzou was twelve years engaged in the manufacture of this model; but having succeeded, he is now able to make perfect copies at 3000 francs each. He has also a model for the study of the accoucheur. This is an admirable contrivance. By means of caoutchouc and confined air, he is able to shew the expansions and contractions in labour, so as to enable the student to proceed in his practice with confidence and safety.

Cataract.—A French paper contains an account of a cure for cataract, by continued friction for several hours during the day, for a period of three months, over the eye. Similar

instances of cure have been related in this country.

Winter Gardens in Prussia.—There are at Berlin four large gardens, in which is kept up the appearance of perpetual summer. They are filled with orange-trees and exotics of different kinds, and being covered over and having good stove fires, the temperature is always that of July and August. They contain reading and refreshment rooms, and also small theatres. At night they are illuminated, and have a beautiful effect.—*Paris Paper.* Napoleon had a plan of this kind in contemplation for the Tuileries. It was his intention to roof them in, (which would have been an extraordinary undertaking), and at night to light them with a sort of artificial sun, like the new lamp at the French Opera. His reverses in the field of course prevented his carrying this seeming visionary plan into effect. It would be well if the proprietors of Vauxhall could do something in the same way, especially as our "*summer has set in* (according to the excellent *mot* of Lord Dudley) *with its usual severity*"!!

Canadian Giant.—The greatest man now in London is unquestionably Monsieur Modaste Mailhoit, to whom we paid our respects, up stairs, after visiting Mr. Thom's Scottish statues. He received us with gravity, but seems altogether a pleasant fellow of his inches, which are considerable, viz. 6 feet 4½ inches in height (5 inches taller than Daniel Lambert), 7 feet round the body, 3 feet 10 inches round the thigh, and 3 feet 4½ inches round the calf of the leg. His weight is 619 pounds, *i. e.* less than Lambert's. M. Mailhoit has passed, with all his fat, through his grand climacteric, being sixty-four years of age. He was originally a mill-wright at Quebec, and began to *take on* at the age of thirty. His countenance is not remarkable. He eats well, and a little more than an ordinary person; sleeps regularly about ten hours, and enjoys good health. His only language is French, and he converses in an agreeable tone, apparently quite alive to all that is going on about him. Reading and draughts are his chief relaxations, and he walks without any painful effort.

Chin-Chopping.—It appears that the musical chin is not entirely without an example; since in the 283d No. of the *Spectator*, published in 1712, Budgell writes thus:—"Nor can I in this place omit doing justice to a youth of my own country, who, though he is scarce yet twelve years old, has, with great industry and application, attained to the art of beating the grenadiers' march on his chin. I am credibly informed, that by this means he does not only maintain himself and his mother, but that he is laying up money every day, with a design, if the war continues, to purchase a drum at least, if not a pair of colours." What would this ingenious writer say, could he hear the performance of Michael Boai, who seems to have acquired such a mastery over this *organ*, if it may be so called, that he can execute chromatic passages, however difficult, with all the taste, rapidity, and precision of the violin and piano-forte—modulating his sounds to the subject, and varying his keys in a manner so surprising, as to prove that he is a musician in the fullest acceptance of the term.

Facetia.—An Irish servant lad, going along the passage, and singing rather inharmoniously, was asked by his master what horrid noise he was making? "I have not made any noise, sir!" he replied. "Why! you were singing, and a confounded noise it was." "Oh! perhaps it was the *singing* in my ears your honour heard!" This reminds us of the dialogue between two

meeneesters of the gude kirk of Scotland. One complained that he had got a *ringing* in his head! "Do ye ken the reason o' that?" asked his worthy crony. "Na!" "I'll tell ye: it's because it's empty!" "And have ye never a ringing in your head?" quoth the other. "Na; never." "And do ye ken the reason? It's because it's cracked!" was the retort; and the truth was not very far off.

A reverend and faithful old Gloucestershire servant was feeding her mistress's lap-dog with a plate of broken fish from the table; but she refused him the carcass of a chicken, alleging as her reason, "that the *rib-bones would be sure to choak him!*"!!

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XXV. June 19.*]

Travels to the Seat of War in the East, through Russia and the Crimea, in 1829, by J. E. Alexander, 16th Lancers.—An octavo edition of Travels in Sicily, Greece, and Albania, by the Rev. T. S. Hughes, B.D.—The Turf, a Novel; and Southemman, a Novel by Galt.—De L'Orme, a Novel, by the Author of "Richelieu" and "Darnley."—The Separation, a Novel, by the Author of "Filtration."—Wedded Life in the Upper Ranks, a Novel.—Clarence, a Tale of our Own Times.—We understand that Dr. Nares' laborious undertaking, a Life of Lord Burghley, the first volume of which was published in 1826, is now completed.—The Author of Sketches, Scenes, and Narratives, has in the press a poem entitled Visions of Solitude.

LIST OF NEW BOOKS.

METEOROLOGICAL JOURNAL, 1830.

June.	Thermometer.	Barometer.
Thursday... 10	From 46 to 56.	29.95 Stationary
Friday... 11	45. — 65.	29.93 to 29.90
Saturday... 12	44. — 65.	29.72 Stationary
Sunday... 13	40. — 58.	29.76 to 29.72
Monday... 14	40. — 60.	29.66 — 29.56
Tuesday... 15	43. — 67.	29.56 — 29.69
Wednesday 16	45. — 60.	29.56 — 29.79

Wind variable, N.W. prevailing. Except the 10th, generally raining; thunder and lightning about noon on the 13th, and on the evening of the 14th. Since the 20th of May, we have had four days only free from rain, viz. the 26th ult., and the 2d, 5th, and 6th instant; much clover, which had been previously cut down, is entirely spoiled; but the more distressing scene is, to see so many poor individuals, who have come from distant parts of the country to mow, necessarily out of employ, and obliged to beg.—Rain fallen, 1 inch, and .325 of an inch.

Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

P. A. will find a packet at our Office. In our next we intend inserting, entire, a very curious and interesting paper on hydrophobia, read at the last meeting of the College of Physicians.

ERRATA.—In our Review of the volume on Anglo-Galic Coins, last week, we stated the number of portraits of coins at ninety-eight; but on looking more carefully, we observe the important fact, that no fewer than *twenty-one* of gold ought to have been added to that number, making the whole 119. The words "still remaining," after the word "those," page 384, column 1, line 34, of the same Review, are wanted to complete the sense of the passage.

ADVERTISEMENTS, Connected with Literature and the Arts.

THE EXHIBITION of the SOCIETY of PAINTERS in WATER COLOURS, at the Gallery, Pall Mall East, WILL CLOSE for the present Season on Saturday next, the 20th inst. Open from Nine till Seven. Admittance, 1s.—Catalogue, 6d. CHARLES WILD, Secretary.

SOCIETY of BRITISH ARTISTS. The Exhibition for the Sale of the Works of living British Artists, in Suffolk Street, Pall Mall East, is now open to the Public, from Nine till Six. Admittance, 1s.—Catalogue, 1s. R. B. DAVIS, Secretary.

GENERAL CEMETERY COMPANY, (to be established by Act of Parliament), for providing Places of Interment secure from violation, injurious to Public Health and Decency, and ornamental to the Metropolis.

Shares may be obtained of Messrs. Snow, Paul, and Paul, Bankers, Temple Bar Without, on payment of 2l. 10s. per Share, on account of the Provisional Trustees:

Lord Viscount Milton, and Sir George Spottiswoode, Esq. M.P. Sir John Deane, Bart. George Frederick Carden, Esq.

An eligible site for a general Cemetery having offered itself, the public are now invited to join in this great national improvement.

The grounds will be laid out and planted after the manner of the celebrated Cemetery of Pere-la-Chaise, surrounded with an ornamental enclosure of sufficient height, and so watched and guarded as to prevent the possibility of the sepulchres within being violated or disturbed. Within this area parishes, public bodies, and individuals, may obtain ground for interment, with liberty to erect mausoleums or monuments, after their own design. Vaults and catacombs will also be constructed for general use.

A register of the death, age, and description of each individual interred, and of the situation of every monument, will be kept, and be open to inspection, in the same manner as the registers of parishes.

Original subscribers will be entitled to the privilege of removing their relatives from other places of interment at reduced fees.

Calculating on a small proportion of the annual interments, (40,000), there can be no doubt of an ample return for the capital invested.

At a Public Meeting, held at the Freemasons' Tavern, on Wednesday, the 9th of June, to consider the best means of relieving the metropolis from the inconveniences arising from the present system of interment of the dead, at which upwards of 300 persons were present.

Lord Viscount MILTON in the Chair, the following resolutions were agreed to:

It was moved by the Marquess of Lansdowne, and seconded by the Rev. James Harris,

1. That interment within the metropolis is highly objectionable, leading to consequences injurious to health, and offensive to decency.

It was moved by Andrew Spottiswoode, Esq. M.P. and seconded by Sir Robert Frick, M.P.

2. That the most effectual way of remedying the evil is, by the establishment of spacious cemeteries without the limits of the town, which, while they conduce to public health, may be rendered in a high degree ornamental to the metropolis.

It was moved by Sir J. D. Paul, and seconded by J. T. Barber Beaumont, Esq.

2. That in establishing such cemeteries, it is advisable to avoid every expense that may tend to increase the cost of interments. It was moved by G. F. Carden, Esq. and seconded by Lord Radstock.

4. That this meeting approves of the principles upon which the General Cemetery Company has been formed, and recommends to all who feel an interest in the public welfare, and in the improvement of public taste, to join them in promoting this important object.

It was resolved unanimously,

5. That this meeting approves of the resolution of the Provisional Committee of the General Cemetery Company, to the effect that no shares of the Company shall be transferable until three-fifths of the amount shall have been paid up. That the thanks of this meeting be given to Lord Viscount Milton, for his impartial conduct in the chair.

C. B. BOWMAN, Secretary, 18, Milk Street, Cheapside. Prospectuses and every information may be had as above, and of G. F. Carden, Esq., Inner Temple Lane.

This day is published,

THE GALLERY of SHAKESPEARE; a Series of Designs, illustrating his Dramatic Works, from the Designs of Retsch, Ruhl, &c.

He intends to continue the same on the Old Premises as above, which have been in the possession of his Family for upwards of a Century, and invites an inspection of his choice Assortment of Instruments of every Description, ready for immediate Sale.

BOOKS PUBLISHED THIS DAY.

Price 7s. 6d. VOL. VIII. Part I. of A SYSTEM of UNIVERSAL GEOGRAPHY. By M. MALTE-BRUN.

This Part contains the Geography of Spain, Portugal, and part of France. The work is now finished in the original; but in order to render it a more complete System of Geography for the English reader, large additions will be made to the description of Great Britain, which is now in progress, and will be published in a few months.

"We think the translators of M. Malte-Brun's Geography have done good service to the public, by rendering so valuable a work accessible to the English reader. If the part which is to treat of the United Kingdom be as well executed as that which treats of the United States of America, it will do something to supply one of the greatest desiderata in British literature—a tolerable account of the British dominions."—Edinburgh Review, No. 67.

"M. Malte-Brun is probably known to most of our readers as the author of a systematic work on geography; he is, besides, the editor of a periodical digest under the title of 'Nouvelles Annales des Voyages de la Géographie et de l'Histoire'; the first is as much superior to the compilations of our Guthries and Pinkertons as the other is to the garbled productions of our Trusters and Mavora."—Quarterly Review, No. 52.

"Infinitely superior to any thing of its class which has ever appeared in Literature."—Edinburgh Review, No. 67. Geography stripped of the swaddling-clothes in which it had been trammelled, and raised, principally by his example and expanded mind, to the rank of a useful and elegant science."—Foreign Literary Gazette, No. 1. Printed for Longman, Rees, Orme, Brown, and Green, London; and Adam Black, Edinburgh.

THE NOBLE GAME of BILLIARDS,

wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD.

Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 48 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficientes of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years. A London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

THE FOREIGN QUARTERLY

REVIEW, No. XI. was published this day. June 17, 1830.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

THE HISTORY OF THE CHURCH, from the Creation of the World to the Commencement of the Nineteenth Century of the Christian Era, in the form of Question and Answer. Compiled and abridged from various Authors, By the late ALEXANDER SMITH PATERNON, of Aberdeen.
Revised, edited, and prefaced,
By the Rev. JAMES BREWSTER, Minister of Craig.

The First Volume contains a Summary of Church History, from the Creation of the World to the conclusion of the Apostolic Age; and is thus, for the greater part, an Epitome of Sacred History. It comprises all the Historical Facts and Biographical Incidents recorded in the Inspired Volume, brought together in a comparatively small compass, and arranged in their natural order and connection.
The Second Volume forms a Summary of Church History, from the commencement of the Christian Era to the close of the Eighteenth Century.
This part of the Work is executed with great judgment and fidelity, and may challenge a comparison with any similar treatise in point of style, the clearness of arrangement, compass of information, and conciseness of statement.
Printed for G. Clark and Son, Aberdeen; and Whittaker, Treacher, and Co. Ave Maria Lane, London.

MAHOMETANISM UNVEILED; an Inquiry in which the Arch-Heresy, its Diffusion and Continuance, are examined on a new Principle, tending to confirm the Evidence, and with the Propagation of the Christian Faith.
By the Rev. CHAS. R. FOSTER, B.D. Chancellor of Ardfert, and Examining Chaplain to the Lord Bishop of Limerick.
The reader will find the subject of the Ishmaelitic descent of the Arabian treated in a clear and convincing manner by Mr. Foster, in his learned and valuable work, Mahometanism Unveiled.—*Quarterly Review*, No. 13.
Printed for James Duncan, 37, Paternoster Row; and John Cochran, 108, Strand.

To Heads of Schools, Parents, &c. &c.
Dedicated, by Permission, to Her Royal Highness the Duchess of Clarence, elegantly printed in royal 18mo. with a coloured emblematic Presentation Plate, price 6s. in handsome boards.

THE ANTHOLOGY; an Annual Reward Book for Musummers, 1829, consisting of Selections, adapted to the Amusement and Instruction of Youth.
By the Rev. J. D. PARKY, M.A.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

A LIST OF VALUABLE WORKS, in fine Condition, and offered at a low Price, including Thane's British Autography, 3 vols. 4to. morocco—Grose's Antiquities, &c. 13 vols. imperial 4to. large paper, uncut, half-bound, russia—European Scenery, 6 vols. royal 4to. Profus. morocco—Spectator, Tattler, and Guardian, 14 vols. imperial 8vo. large paper—Scott's (Sir Walter) Novels and Poetical Works, 50 vols. morocco.
R. W. SUSTANANCE, 102, Piccadilly, near St. James's Street.

PRACTICAL THEOLOGY; comprising Discourses on the Liturgy and Principles of the United Church of England and Ireland; Critical and other Tracts; and a Speech delivered in the House of Peers in 1824.
By the Rev. JOHN JERR, D.D. F.R.S. Bishop of Limerick, Ardfert, and Aghaou.

Also, just published, in 1 vol. 8vo. price 10s. 6d. boards,
Practical Discourses; a Selection from the unpublished Manuscripts of the late Venerable Thomas Tawson, D.D. Archdeacon of Richmond, and some time Fellow of St. Mary Magdalen College, Oxford. Edited, and with a Biographical Memoir, by John, Lord Bishop of Limerick.
They strike us to be nearly such sermons as Addison would have composed had he been a clergyman.—*Theological Review*, No. 10.
Printed for James Duncan, 37, Paternoster Row; and John Cochran, 108, Strand.

MEMOIRS OF A GENTLEMAN of the OLD SCHOOL.
By a LADY.
London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

SKETCHES OF the most PREVALENT DISEASES of India, comprising a Treatise on the Epidemic Cholera of the East, and the Annual Rate of Mortality, &c. of European Troops, and Practical Observations on the Effects of Cholera on the Alimentary Canal. Illustrated by Tables and Plates.
By JAMES ANNESLEY, Esq. Madras Medical Establishment.
Printed for Thomas and George Underwood, 32, Fleet Street.

A SHORT GRAMMATICAL INDEX to the HEBREW TEXT of the BOOK of GENESIS, to which is prefixed, a compendious Hebrew Grammar. Designed to facilitate the Progress of those who are commencing the Study of that Language.
By the Rev. THOMAS JARRETT, M.A.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane, London; and G. Barraclough, Cambridge.

TRAVELLERS in the MOREA.
By WILLIAM MARTIN LEAKE, F.R.S.
Author of the "Topography of Athens," and "A Tour in Asia Minor."
In 3 vols. 8vo. with a most accurate Map and Plates, price 2l. 5s.
For Travellers on the Continent.

"It claims a higher rank than to be classed among mere books of travels. These volumes are indispensable to the student of ancient Greek history and Geography, as well as to the intelligent traveller in Greece; and they ought to be, and we have no doubt will be, found in every classical library."—*Asiatic Journal*.

2. Information and Directions for Travellers on the Continent. By Marianna Starke. 6th edition, thoroughly revised, and with considerable Additions. Post 8vo. 12s.

3. The Diary of an Invalid in pursuit of Health; being the Journal of a Tour in Portugal, Italy, Switzerland, and France. By the late Henry Mathews, A.M. 8d edit. 2 vols. post 8vo. 15s.

4. Antiquities, Arts, and Literature of Italy, by Joseph Forsyth, Esq. 3d edition, 2 vols. post 8vo. 15s.

5. Rome in the Nineteenth Century, 4th edition, 3 vols. 8vo. 1l. 11s. 6d.

6. Switzerland; or, a Journal of a Tour and Residence in that Country. Followed by a general View of its History, brought down to the present time. By S. Simond. 3d edition, 2 vols. 8vo. 24s.

7. An Autumn near the Rhine; or, Sketches of Courts, Society, and Scenery, in Germany near the Rhine. 2d edition, 8vo. 14s.
John Murray, Albemarle Street.

By THOMAS STRATTEN.
London: Holdsworth and Ball, 18, St. Paul's Churchyard.

A GUIDE to the PRACTICAL READING of the BIBLE, in Three Parts.
Part I.—A Bibliographical and Critical Account of the English Bible.
Part II.—Suggestions and Observations on the Reading and Study of the Bible.
Part III.—On the Genuine, Authenticity, and Divine Origin of the Bible.
By WILLIAM CARPENTER.
Price 5s. cloth.
London: Holdsworth and Ball, 18, St. Paul's Churchyard.

Works published during the week by Longman, Rees, Orme, Brown, and Green.

TRAVELS IN RUSSIA, and a Residence at St. Petersburg and Odessa, in the Years 1827-1829; intended to give some Account of Russia as it is, and not as it is represented to be, &c. &c. By EDWARD MORTON, M.B. Member of Trin. Col. Cambridge, &c. &c. In 1 vol. 8vo. 14s. boards.

A Treatise on the Nature and Cure of those Diseases, either Acute or Chronic, which precede change of structure, with a view to the Preservation of Health, and particularly the Prevention of Organic Diseases. By A. P. W. Phillip, M.D. F.R.S.L. and E. &c. In 8vo. 12s. boards.

Inquiry into the Rise and Growth of the Royal Prerogative in England. By John Allen. In 8vo. 9s. bds. The British Flora; comprising the Phanerogamous, or Flowering Plants, and the Ferns. By William Jackson Hooker, LL.D. F.R.S. and L.S. Regius Professor of Botany in the University of Glasgow, &c. &c. In 1 vol. royal 18mo. 12s. cloth boards.

The plan of the above work is similar to that of the first Part of Dr. Hooker's "Flora Scotica." The Mosses, and the rest of the Cryptogamia, will form a distinct volume, corresponding with the above, and with the "English Flora" of the late Sir James Smith.

Memoirs of the Life of Sir Walter Raleigh, with some Account of the Period in which he lived. By Mrs. A. T. Thomson. Author of "Memoirs of Henry the Eighth." In 1 vol. 8vo. with Portrait, 14s. boards.

Such is the outline of a life which, in Mrs. Thomson's hands, is a mine of interest: from the first page to the last the attention is roused and sustained; and while we approve the manner, we still more applaud the spirit in which it is executed.—"Literary Gazette," May 8, 1830.

Emigration or no Emigration; being the Narrative of the Author, (an English Farmer), from the Year 1824 to 1830, during which time he traversed the United States of America, and the British Province of Canada, with a View to settle as an Emigrant. By Joseph Pickering, late of Fenny Stratford, Buckinghamshire. 12mo. 5s. boards.

The Baron, a Romance. By Miss Anna Maria Porter. 3 vols. 12mo. 11. 7s. boards.

The descriptions are picturesque even to poetry. The narrative and healthy spirit of that best of morality—the morality grounded on reason and feeling—thoroughly pervades these graceful pages.—"Literary Gazette."

St. Ethelbert; or, the Dissolution of Monasteries. A Romance. By the Author of "Santo Sebastiano," the Romance of the Pyrenees, &c. &c. 3 vols. 18mo. 11. 4s. boards.

Literary Recollections. By the Rev. Richard Warner, F.A.S. Rector of Great Chalfield, Wilts, &c. In 2 vols. 8vo. 11. 6s. boards.

We have seldom seen so much good sense, and still more rarely so much good humour, united with a greater abundance of charitable feeling and innocence of purpose. The style is remarkably forcible, chaste, and elegant.—"Monthly Review," June 1830.

Traditions of Palestine. Edited by Harriet Martineau. In post 8vo. 6s. boards.

Plain Instructions to Executors and Administrators, shewing the Duties and Responsibilities incident to the due Performance of their Trusts, &c. By John H. Brady, late of the Legacy Duty Office, Somerset House. 8vo. 8d. edition, enlarged, 8s. boards.

The Gardener's Magazine, and Register of Rural and Domestic Improvement. Conducted by J. C. Loudon, F.L.S. H.S. &c. 8vo. No. 26, (to be continued every two months, alternately with the Magazine of Natural History), price 3s. 6d. Also may be had,

Vols. I. to V. price 4l. boards.

A New General Atlas of Fifty-three Maps, with the Divisions and Boundaries carefully coloured. Constructed entirely from New Drawings, and engraved by Sidney Hall. (Completed in Seventeen Monthly Parts, any of which may still be had separate, price 10s. 6d. each.)

Folded in half, and pasted on guards, in strong canvass and lettered £8 9 0 Half-bound, rusia backs, corners, and lettered 9 9 0 In the full extended size of the Maps, half-bound, rusia backs, corners, and lettered 10 0 0 Proofs on India paper, half-bound, rusia backs, corners, and lettered 14 5 0

We have taken some pains to examine this new Atlas, and we can safely state our conviction of its general superiority to all other Atlases.—"Spinns," (conducted by J. S. Buckingham, Esq.) "The best and most recent authorities are in all cases consulted; and the maps are engraved in a masterly manner."—"New Monthly Magazine."

Preparing for publication, An Alphabetical Index of all the Names contained in the above Atlas, with References to the Number of the Maps, and the Latitude and Longitude in which the Places are to be found.

The Edinburgh Review; or, Critical Journal. No. 101. Price 6s.

Messrs. Colburn and Bentley have just published the following New Works:

PERSONAL MEMOIRS of PRYCE GORDON, Esq. 2 vols. 8vo. with Portrait.

2. The Oxonians; or, a New Glance at Society. By the Author of the "Road." In 3 vols.

3. The Undying One, and other Poems, by the Hon. Mrs. Norton, Author of the "Sorrows of Rosalie," &c. In 1 vol. 8vo.

4. The Denounced. By the Author of "Tales by the O'Hara Family," the "Nowlans," the "Croppy," &c. In 2 vols.

5. The Official Kalendar for 1830. By John Burke, Esq. Author of the "Dictionary of the Peerage and Baronetage," neatly bound, price 10s. 6d.

6. Tales of a Tar, by one of the Authors of the "Naval Sketch Book." 1 vol. post 8vo.

Contents.—The Breeze at Spithhead—Jack a Biographer—Kind Inquiries—Command O'Mini—Sailor Sam—Dreams at Sea—A Brush in the Boats—A "Call" for the Cat.

True State of Slavery in the West Indies. In 1 very thick vol. demy 8vo. illustrated by numerous Lithographic Engravings, and handsomely bound in cloth and lettered.

FOUR YEARS' RESIDENCE in the WEST INDIES. By F. W. N. BAYLEY, Esq.

"Opinions of the Public Press" has enabled our clearer author to produce a book at once amusing and valuable; amusing from his lively manner, and valuable from his judicious information. He is not one of those who saw nothing but negro oppression and misery in the West Indies; on the contrary, though an advocate for gradual emancipation, he draws, on the whole, a favourable picture of the condition of the slave population: and his testimony is entitled to the more attention, as, being the son of a military officer, and utterly unconnected with planters, he could have no bias to warp his views on this momentous question. We must not omit to notice the most useful and the most ornamental portions of the volume—the first, consisting of concise chronologies and statistics of the various islands, from their discovery to the present time; and the second, of a number of well-executed lithographic embellishments. In both these respects the author deserves our praise; and his work will, we are persuaded, be very favourably received by the public in general."

"This volume contains a variety of information which will be found of much avail to persons interested in the state of the Leeward Islands in particular, and will afford amusement to all, in virtue of the great variety of facts which it includes. All that relates to the habits and condition of the slaves will be read with much interest. The work is embellished with a number of very pretty lithographic prints, and altogether it forms a useful and attractive publication."—"Court Journal," June 12.

"Four Years' Residence in the West Indies" is a work which deserves a much longer notice than the present state of our columns will permit us to afford at this week. We shall therefore defer it till our next number, when it will receive the attention it so well merits; contenting ourselves in the mean time with saying, that both the subject of which it treats, and the manner in which that subject is handled, will secure it a place in the library of the historian and geologist, while the lightness and humour of its style and descriptions, will make it acceptable to the general reader.—"Intelligence," June 6.

"Our limits, last week, allowed us to do little more than mention the appearance of Mr. Bayley's interesting volume, entitled "Four Years' Residence in the West Indies." It well deserves, however, some further notice. Independent of the embellishments, which consist of many of the most well-executed lithographic plates of the principal buildings, &c. in the Leeward Islands, it contains much real and solid information concerning our West Indian Colonies, conveyed in an easy and colloquial style, which amuses by its lightness without giving offence by flippancy. The tables of the relative value of the currency and state of exchange will be found very useful by all persons who do duty, business, or inclination, may carry to these climates; while those of the comparative value of provisions, &c. will be no less so to those who are speculating on the advantages of the voyage. But there is much sterling information of a higher description in this volume, and we strongly recommend it perusal to all those who wish to form a correct and unbiased judgment on that so often agitated question, the state and proposed enfranchisement of the slave population. It is gratifying to know, from such authority, that most of the regulations recommended by Mr. Coleridge in 1825, for the amelioration of the condition of the negro, have not only been carried into effect, but that many others have also been adopted, all calculated to render their situation fully equal, not to say superior in point of comfort, to that of the working classes in the mother country. The account of Codrington College, illustrated by a beautiful lithographic engraving, is particularly satisfactory."—"Intelligence," June 13.

"We have been favoured with a sight of the proof sheets of a forthcoming work, entitled "Four Years' Residence in the West Indies." We shall take an early opportunity of entering more fully into a review of the merits of this important publication; and in the mean time we make the following extract, which, if we mistake not, will go to strengthen the eyes of those who entertain incorrect views of the real condition of the slaves in our West Indian colonies."—"Felix Farley's Bristol Journal," June 6.

"This is a volume for which we have no parallel in our plentifully stocked library of travels."—"Atlas," June 13.

"The volume which is written in a very lively style, contains much curious information on the state of our West Indian colonies. The author is very happy in his pictures of negro society."—"Sunday Times," June 6.

"Four Years' Residence in the West Indies" (though the production of a young writer), is a very clear and useful book. The author takes every opportunity afforded by his residence among the planters and the slaves, to make himself well acquainted with the condition of the black population; and though he advocates the gradual abolition of slavery, he yet, on the whole, gives a favourable description of the treatment of the negroes."—"Weekly Dispatch," June 15.

"Amongst the numerous volumes of voyages and travels with which the press teems daily, the "Four Years' Residence in the West Indies" deserves very favourable mention, whether we consider its manner or its method. The subject upon which it treats is one possessing considerable novelty; for, notwithstanding the great and increasing importance of our West Indian colonies, very little information has of been disseminated in this country respecting their internal situation, their statistical history, or the manners, customs, or amusements of their inhabitants. We know but little of the domestic habits and pursuits of the colonists, or of the real state of society in the parts of the British dominions. In the volume now before us, Mr. Bayley has given us much of novel and important information upon all these subjects, and that information is conveyed in a form which cannot fail to render his narrative extremely amusing to all classes of readers. The narrative portion of the work is written in an easy, familiar, and highly entertaining style; while the descriptive passages show that the author has a mind capable of feeling and appreciating the beauties of nature. The following description of the approach and progress of a storm, is an example at once of brevity and effect combined."—"Literary Gazette," June 12.

London: William Kidd, 6, Old Bond Street; Henry Constable, 17, Waterloo Place, Edinburgh; and Atkinson and Co. Glasgow.

The Life of Bishop Heber. 2 vols. 4to. with a Portrait and other Plates, price £1. 13s. 6d.

SATURDAY, JUNE 26, 1830.

REVIEW OF NEW BOOKS.

Conversations on Religion with Lord Byron.
By the late James Kennedy, M.D. 8vo.
pp. 461. London, 1830. Murray.

EVERY work that tends to throw light on Lord Byron's character is of great value; first, for the extreme interest of such a moral study; and secondly, (if it be possible to force on people the conviction drawn from the writer's experience), for placing in the strongest point of view, the folly, not to say cruelty, of harsh judgment, founded half on your own imaginary premises, and half on the mere gossip of the day, which is generally false, and always spiteful—false from its love of the marvellous, and spiteful from that consolation our own faults seem to derive from those of others. Literary fame has always been purchased at a dear price; genius has either had to complain of poverty and neglect, or of envy and misrepresentation—the leaves of the laurel may be given, “but the trail of the serpent is over them all.” And in the present day especially, the successful writer has to suffer under the false verdict of incompetent judges, or the still falser of interested ones; the feelings he avows are denied or misconstrued, those he conceals brought forward for reproach or ridicule; and while we grudge, hesitate, and refute, aught that is mentioned as praiseworthy, there is nothing too improbable for belief when it requires blame. Lord Byron's life is perhaps as discouraging a specimen of literary fame as ever gave a warning, and in vain; it began, and it ended, in bitterness. It is curious to observe how little the *Edinburgh Review* has led public opinion in respect to works of imagination: our principal poets have made their way in opposition to the critical judgment which pronounced sentence of death on their efforts; Wordsworth, Montgomery, Coleridge, &c., were alike jeered and run down; but no one now denies their poetical pre-eminence. Keen, lively, logical, French in his philosophy and its brilliancy of expression, Jeffrey had neither feeling nor imagination strongly developed in himself, and was therefore, by nature, incapable of doing justice to these qualities in others; and when his praise was given, it was in a spirit of nationality or private friendship. The effects of sarcasm, bitter, personal, and crushing, beyond what could ever be called for by a slight volume of youthful poems,—for we hold, that the critic will not err too much on the side of mercy, who takes a general tone of kindness and encouragement towards the efforts of the young,—censure so contemptuous, must have cut deep, and left its scar in a mind conscious of its own high powers, such as Byron's certainly was. To his first successful defiance of public opinion, for such it was to him, in the *English Bards and Scotch Reviewers*, may, we think, be traced much of his recklessness of it in after life; that to defy was to subdue, became with him a principle. Our limits forbid us from entering into the details of his career; he was the spoilt child of

society, to be afterwards punished for the very faults its indulgence had first sanctioned. Of all sins, vanity is the one which we owe most to others, and which they least forgive: an author is soon flattered into the personification of his own heroes; and it was a mere common love of exciting wonder, that made Lord Byron rather like that the mystery which hung round his creations should identify them with himself. But follies are always more severely visited than faults; and every crime he depicted, every expression of remorse, were soon considered to be his own: he had excited the imagination, and set it in array against himself. Among his many and dark offences, infidelity was most especially set forth for reprobation; and a species of warfare commenced between him and public opinion; and its various methods of expression were all directed to his mortification and annoyance. Much was, doubtless, said and written in the aggravation of the moment, which cooler judgment and less excited feeling would have avoided; and we cannot but think that *Don Juan* (the least defensible of his works) would, if written under less irritating circumstances, have rather avoided than sought occasions of unnecessary offence: if, as he himself asserts, he had a moral end in view, it was at least injudicious to begin by sneers at what was respectable to all, and, still more, sacred to so many of his readers. But let us first observe what the spirit of opposition effects in only the daily relations of quiet and domestic life, and thence allow for its effects in the exciting field of literature. And we do not think it taking too favourable a side, when we say that Lord Byron was originally a fine and noble nature: loving excellence more from impulse than judgment, variable in his opinions, from their being founded on impressions too keen and too impetuous to be lasting, he seems to have been generous, though hasty, and kind in feeling, though bad in temper. *His temper was certainly bad*—a key, we think, to much of his character, though too simple for general use; for who is not provoked to find that the meaning of a riddle is a very obvious one?

These *Conversations* shew Lord Byron in a very favourable point of view, giving his time, his thoughts, his fortune, in the hope of benefiting a cause he held to be both honourable and useful—beloved by his dependants, and facilitating, as much as lay in his power, the moral and religious instruction of those within his influence. Dr. Kennedy seems to have been a most well-meaning man—zealous, we must say, with little encouragement; for out of the five he begins with attempting to convert, not one of his efforts proved successful. We shall endeavour to extract those passages which throw the most light on Lord Byron's own opinions: they were elicited in the following manner:—

Dr. Kennedy says: “Before Byron came to Cephalonia, four officers had agreed to enter on the investigation of the doctrines of Christi-

anity; Byron heard of it, and wished to be present. I had seven or eight meetings at which he was not present; and I had seven or eight meetings with Byron alone.”

Indecision, rather than unbelief, is represented as the pervading feature of his mind: witness a passage in one of Count Gamba's letters. “In my opinion, the sentiments of his lordship on religion were not fixed, that is, he was not held more to one religious and Christian sect than another; but his profound sentiments were religious, and he professed a deep respect for the doctrines of Jesus Christ, as the source of virtue and felicity. With respect to the recondite mysteries of faith, his mind was involved in doubts, which, however, he had a desire to dissipate as troublesome, and on this account he never shunned conversations on this subject, as you well know. I have had occasion to observe him often in those situations in which the most involuntary and most sincere sentiments of the mind are unfolded,—in serious danger of the stormy sea, or otherwise—in the contemplation of a fine and tranquil night of summer—and in the midst of a solitude—and I have observed his emotions and his thoughts to be deeply tinged with religion. The first time that I had a conversation with him on this subject was at Ravenna, my native country, about four years ago, while we were riding on horseback in an extensive, solitary wood of pines. The scene invited to religious meditation. It was a fine day in spring. ‘How,’ he said, ‘raising our eyes to heaven, or directing them to the earth, can we doubt of the existence of God?—or how, turning them to what is within us, can we doubt that there is something within us more noble and more durable than the clay of which we are formed? Those who do not hear, or are unwilling to listen to those feelings, must necessarily be of a vile nature.’”

Again, he observes: “Prayer does not consist in the act of kneeling, nor in repeating certain words in a solemn manner. Devotion is the affection of the heart, and this I feel; for when I view the wonders of creation, I bow to the Majesty of heaven; and when I feel the enjoyments of life, health, and happiness, I feel grateful to God for having bestowed these upon me.”

The following dialogue is interesting, though it has only reference to his private feelings:—

“I have had letters from England,” said Lord B., “which mention that Ada has been unwell,—she is now better. Her complaint was a determination of blood to the head: what is the cause of it at her age?” “This depends on various causes, and I could not pretend to judge what the cause is in her case, unless I saw her.” “Do you,” asked he, “think that such a complaint is habitual?” “No, it is not necessarily so,” I replied. “It is curious,” he answered, “that it is a complaint to which I myself am subject.” “I could easily suppose so,” I said, “from your mode of life, and habits of study,—irregular, but intense; and I think I could have inferred so from the state of your

eyes. Your right eye appears inflamed.' 'That is from having read a good deal of late; but it will easily be removed, when I remove the cause. Ada,' he continued, 'is, I understand, very fond of reading. She lies on the sofa great part of the day reading, and displays, perhaps, a premature strength of mind, and quickness of understanding.' 'I hope,' I rejoined, 'that her inclination for acquiring knowledge will not be pushed too far, to the injury of her health, or even to the exhaustion of her intellectual powers, as is too often done by foolish and fond parents.' 'I hope not,' said Lord B.; 'and I am sure that I can rely on Lady B.'s judgment and discretion.' 'Do you know, my lord,' I said, 'that I hope ere long to see the day when your lordship will again be united to Lady B., and enjoy all the happiness of domestic life, instead of following your present wandering and unsettled state, so unsuitable to one of your rank and station.' 'What makes you think so? Have you had any private information?' asked Lord B. 'No,' I replied; 'I judge from circumstances, which I will mention, if they are not likely to offend your lordship.' 'By all means, tell me what they are.' 'I judge from the style in which you spoke of Lady B., when we were talking of whom we would save, at a former conversation, that your affection for her is not extinguished by absence, nor by all that has happened; that, in fact, she is not indifferent to you.' 'If I said any thing disrespectful of Lady B., I am very much to blame. Lady B. deserves every respect from me, and certainly nothing could give me greater pleasure than a reconciliation.' 'With such sentiments, how is it possible that a separation has taken place, or how is it that a reunion cannot be effected? Under such circumstances, neither you nor she can be happy; and the cause must be singular which two persons of such rank and understanding cannot find out and remove.' 'I do not, indeed, know the cause of separation,' said Lord B. 'I know that many falsehoods have been spread abroad—such as my bringing actresses to my house—but they were all false. Lady B. left me without explaining the cause. I sent Hobhouse to her, who almost went on his knees, but in vain: and at length I wished to institute an action against her, that it might be seen what were her motives.'"

An anecdote here shows how painful were his feelings on the subject of his daughter. "One day Colonel D. rode out with Lord Byron, when an infant, from fright, fell: Lord B. got off his horse with great anxiety, and, raising it, took it to his arms: it was a soldier's child. He said, in a hurried manner, 'I cannot bear to look at an English child; I am so reminded of my own, whom I have not seen for a long time.'"

Our next quotation depicts strongly the change from twenty to forty; but it is a change for the worse, when we learn to ridicule our own enthusiasm.

"You must have been highly gratified by the classical remains, and the classical recollections of Ithaca during your visit there," said Colonel D. "You quite mistake me," said Lord B.: "I have no poetical humbug about me; I am too old for that. Ideas of that sort are confined to rhyme. The people at home have very absurd notions of the Greeks, as if they were the Greeks of Homer's time. I have travelled through the country, and know the contrary. I have tried to remove these notions." He said he would do every thing for them, but would take no command. He added, 'a Turk's word could always be depended on, but not a Greek's, if his interest were in ques-

tion.' Speaking of his intention to go to Constantinople to redeem some Greek captives which he promised to their families when he came from Genoa, Colonel D. dissuaded him from it on account of the danger. 'Oh, the worst would be,' he said, 'that I will put me in the Seven Towers, from which I do not think Strangford would release me: besides he is a poet, and two of a trade, you know—' Speaking of Moore, he said: 'He is, like all the fraternity, at present employed in writing heroic and patriotic songs in favour of the Spaniards or Greeks; the last work he has dedicated to himself.' He said he would give his travels in the Morea to the world; but laughing, added, it would depend on the reception he met with, whether they should be written in the Childe Harold or the Don Juan style. When any one spoke finely, he used to say, 'That will do very well for rhyme.' Whether Homer lived or not, he said he did not know; 'but we poets must swear by him.' One night he was out at a gentleman's house; the weather was very hot, and he said when he went on board, that he would bathe. Some one expressed surprise that he should bathe at so late an hour. 'Oh,' said T. (a gentleman who from too great vivacity of imagination and thoughtlessness, exaggerated a little), 'we were two hours in the water late last night.' 'Yes,' said Lord B. emphatically, 'by Shrewsbury clock.' Dr. —, when on board one evening, was narrating to his lordship some wonderful act of legerdemain which he witnessed at Paris: Lord B. smiled. 'You look incredulous, my lord,' said the doctor. 'No, not all,' replied Lord B.; 'where is T.? I dare say he saw the same thing.'"

"When they were disputing about the motto for the Greek telegraph (the first having given offence to many), Lord B. insisted that the old one should not be retained. Count G. entered one day, and said, 'Pray, my lord, what motto shall we have?' Lord B. pettishly replied, 'Foolishness to the Greeks.'"

"Colonel D. took up a book, which was the *English Bards and Scotch Reviewers*. 'You need not look at this,' said D.; 'it is your own.' 'This book did me a great deal of harm,' replied his lordship; 'I lost a great number of friends who have never forgiven me.' 'It is the best you ever wrote.' 'Why,' said Lord B., 'I published a few silly songs, written when I was young; and when the reviewers treated me so severely, I wished to shew them that I would not put up with their insolence so tamely as they expected. But one thing I regret very much in this book, is what I wrote of Lord Carlisle. I am sorry for it.' Colonel D. mentioned the *Quarterly Review* on his *Cain*. 'Oh, you should read the *Edinburgh Quarterly*—this gives it much sharper; for though on my own side, it is always hardest against me.' One day, when talking of one of his aunts whom the colonel knew, he said, 'We have been an unfortunate family; none of us have come to any good.' The colonel said, 'He hoped to see him a Methodist yet, though he regretted that in the interval much time was lost, as his lordship should now be writing some beautiful hymns.' 'When I do become one,' he replied, 'I shall not be a lukewarm Christian.'"

Speaking of Shelley, he mentioned that "he was cool in his manner; yet impassioned, animated, and eloquent, in his conversation. I was much amused with him and another gentleman' (he mentioned the name, but I forget it); 'one was a Platonist, the other was not; and, after long arguments, they converted each other.'"

We have not entered into the detail of the purely religious conversations: Lord Byron's objections seem to have been much founded on matters of feeling; as, for example, where he says—"one of the greatest difficulties which he had met with, and which he could not overcome, was the existence of so much pure and unmixed evil in the world as he had witnessed; and which he could not reconcile to the idea of a benevolent Creator. He added, that whether he had been, he had found vice and misery predominant; and that real happiness and virtue were rarely, if ever, to be seen. He had made it, he said, his business to converse with, and inquire into, the history of many wretched and deformed creatures with whom he had met; and he generally found their history a record of unvarying misery from their very birth. 'How had these offended their Creator, to be thus subjected to misery? and why do they live and die in this wretched state, most of them without the Gospel being preached to them, and apart from the happiness which it is said to produce? And of what use are they in this world? Many are constantly suffering under bodily evils and pains; many are suffering from the constant pressure of poverty; many are doomed to incessant toil and labour, immersed in ignorance and superstition, and neither having time nor capacity to read the Bible, even if it were presented to them.'"

We leave these pages, observing that there is matter for the most serious meditation in their contents; and only pronounce judgment on the opinions they controvert, and the extraordinary individual they bring forward, in the beautiful lines of Southey:

"Oh, what are we,
That we should sit in judgment on man?
And what were we, frail creatures as we are,
If the All-merciful should mete to us
With the same rigorous measure wherewithal
Sinner to sinner metes?"

Songs of the Affections; with other Poems. By Felicia Hemans. 12mo. pp. 259. Edinburgh, 1830, Blackwood: London, Cadell.

ALREADY familiar to many a lip, and treasured in many a memory, these poems do not require the critical notice looked for on a first introduction: long the favourite pages of annuals, magazines, &c., we have only to rejoice that a more durable and compact form is given to them. Language the most polished, versification only another word for harmony, associations with the beautiful, affection tender rather than passionate, a fondness for linking the lovely in nature with some moral or sad feature in nature, historic associations, records of human feeling scattered through the pages of the traveller set in exquisite verse,—these are the characteristics of this little volume—can we give it higher praise?

We dare say the following poems are known to many of our readers, yet we cannot deny ourselves the pleasure of quoting them.

"The Chamois Hunter's Love.

Thy heart is in the upper world, where fleet the chamois bounds,
Thy heart is where the mountain-fir shakes to the torrent-
And where the snow-peaks gleam like stars, through the
And where the lawine's* peal is heard—Hunter! thy
heart is there!

I know thou lovest me well, dear friend! but better, bet-
ter far,
Thou lovest that high and haughty life, with rocks and
In the green sunny vales with me thy spirit would but
plunge—
And yet I will be thine, my love! and yet I will be thine!

* *Laurine*, the avalanche.

And I will not seek to woo thee down from those thy native heights, [delights;
With the sweet song, our land's own song, of pastoral
For thou must live as eagles live, thy path is not as mine—
And yet I will be thine, my love! and yet I will be thine.
And I will leave my blessed home, my father's joyous
hearth,
With all the voices meeting there in tenderness and mirth,
With all the kind and laughing eyes that in its firelight
shine,
To sit forsaken in thy hut—yet know that thou art mine!
It is my youth, it is my bloom, it is my glad free heart,
That I cast away for thee—for thee—al! reckless as thou
art! [dwell—
With tremblings and with vigils lone, I bind myself to
Yet, yet I would not change that lot—oh no! I love too
well!
A mournful thing is love which grows to one so wild as
thou, [brow!
With that bright restlessness of eye, that tamed fire of
Mourful!—but dearer far I call its mingled fear and
pride, [beside,
And the trouble of its happiness, than aught on earth
To listen for thy step in vain, to start at every breath,
To watch through long long nights of storm, to sleep and
dream of death,
To wake in doubt and loneliness—this doom I know is
And yet I will be thine, my love! and yet I will be thine!
That I may greet thee from thine Alps, when thence thou
com'st at last, [past,
That I may hear thy thrilling voice tell o'er each danger
That I may kneel and pray for thee, and win thee aid
divine, [thine!
For this I will be thine, my love! for this I will be

“The Lyre's Lament.”

A deep-toned lyre hung murmuring
To the wild wind of the sea;
O melancholy wind, 't'is sigh'd,
What would thy breath with me?
Thou canst not wake the spirit
That in me slumbering lies,
Thou strik'st not forth the electric fire
Of buried melodies.
Wind of the dark sea waters!
Thou dost but sweep my strings
Into wild gusts of mournfulness,
With the rushing of thy wings.
But the spell, the gift, the lightning,
Within my frame conceal'd,
Must I moulder on the rock away,
With their triumphs unrevealed?
I have power, high power, for freedom
To wake the burning soul!
I have sounds that through the ancient hills
Like a torrent's voice might roll.
I have pealing notes of victory
That might welcome kings from war;
I have rich deep tones to send the wail
For a hero's death afar.
I have chords to lift the psalm
From the temple to the sky,
Full as the forest-unsions
When sweeping winds are high.
And love—for love's lone sorrow
I have accents that might swell
Through the summer air with the rose's breath,
Or the violet's faint farewell:
Soft, spiritual, mournful—
Sighs in each note enshrined:
But who shall call that sweetness forth?
Thou canst not, ocean-wind!
I pass without my glory—
Forgotten I decay!
Where is the touch to give me life?—
Wild, fitful wind, away!
So sigh'd the broken music
That in gladness had no part:
How like art thou, neglected lyre,
To many a human heart!”

The first poem we do not remember to have before seen; we doubt, however, its hold on human sympathy: it is beautiful, but coldly so; the tale wins not on our belief, carries us not along with its mystery. Yet some of its lines are most exquisite; and the ensuing passage has all the author's own peculiar sweetness.

“I woke from those high fantasies, to know
My kindred with the earth—I woke to love:
O, gentle friend! to love in doubt and woe,
Shutting the heart the worshipp'd name above,
It to love deeply, and my spirit's dower
Was a sad gift, a melancholy power
Of so adoring;—with a buried care,
And with the o'erflowing of a voiceless prayer,
And with a deepening dream, that day by day,
In the still shadow of its lonely sway,
Folded me closer—till the world held nought
Save the one being to my centred thought.

There was no music but his voice to hear,
No joy but such as with his step drew near;
Light was but where he look'd—life where he moved—
Silently, fervently, thus, thus I loved.
Oh! but such love is fearful! and I knew
Its gathering doom: the soul's prophetic sight
Even then unfolded in my breast, and threw
O'er all things round a full, strong, vivid light,
Too sorrowfully clear! an under-tone
Was given to Nature's harp, for me alone
Whispering of grief.”

“Songs of the Affections,” voices of hearth,
heart, and home, these pages are the echo of
their title; and we like even more than we
praise, though that we do with the most cordial
admiration.

PRYSE LOCKHART GORDON'S MEMOIRS, &c.
AGREEABLY to our promise last Saturday, we
sit down to make our readers better acquainted
with this amusing medley, by which the worthy
author has diverted the tedium of a long illness,
and which is well calculated to divert the
ennui of similar invalids, as well as of more
healthy subjects.

The sketches of men and manners, which
spread over half a century, and various parts of
the world, set out with some very characteristic
traits of Scottish life, and afford a pleasing
picture of the excellent effects of the cheap system
of education which has long flourished in
that country; and from parochial (not parish)
schools sent forth many an able and distinguished
ornament to the active world and to
literature and science. At that early period,
the refinements which have since become familiar
to John o' Groat's house, were not so generally
known; and Master Gordon describes a grand
entertainment given by the travelled
Lord Findlater, in the following way:—

“He came, however, a year or two after his
father's death, bringing with him a countess,
who, being a catholic, had a confessor in the
shape of a priest, a French *chef de cuisine*, two
aides, a baker and pastry-cook! all of that
nation. The new lord gave notice that he
would receive his friends, the gentry of the
county, on a fixed day every week. This system
was quite novel, and was ill-received: there
were but few visitors at the castle for the
first three months; but Lady F. was found to
be amiable and affable; and although milord
was cold in manner and shy to strangers, his
table on Wednesdays was plentiful and
recherché; but few knew what they were eating!
The dishes were disguised and quite French,
excepting a joint (*morçeau de resistance*), on
the side table, which strangers were afraid to
ask for, not knowing whether or not it was to
make its appearance on the board! Shoulders
of lamb and hams looked like fiddles, and every
thing was served up in masquerade. Potatoes
and other vegetables kept company with the
joint on the side-board; there was no hobnobbing;
the cloth was not removed when the dessert
was served; nor did the bottle circulate
afterwards. All these were innovations and
new fashions but ill-suited to the meridian
of the north; yet a little habit accustomed the
good folks who ventured to attend on the
public days; and many discovered on a second
visit the necessity to call for beer when they
were thirsty, and to whisper to the butler (who
trod on tip-toe, and served the plates with white
gloves!) that a slice of roast beef would be
acceptable: and moreover, though the bottle
did not circulate as at other tables, yet there
was always a plentiful supply of the most delicious
wines to those who were *amateurs*. The
greatest evil was, that a man had not time to
get his *modicum* of drink. The dinner lasted
two hours; and when it was ended, the com-

pany washed their fingers and mouths, and
rose from the table, by no means pleased with
such French fashions!”

At one of these *treats*, “an old gentleman,
who had never before seen finger-glasses, drank
off the contents of his vessel; when the butler
put down another; but the laird turned to him
saying—“Na, na, John, I'm for nae mair
cauld water.” The same guest, when vermicelli
soup was placed before him, exclaimed, ‘I
winna fash wi' boiled worms.’”

In 1778 our author got a commission in the
marines, and, being properly fitted out, was
transported to London; and he tells us:—

“I had the pleasure of passing a few days
at Aberdeen with my two brothers, one of
whom was studying law, and the other divinity.
I embarked in a smack, *supercargo* to a kit of
salmon, for my uncle, who kept an academy at
Enfield, as I have already mentioned. The
crowded population of the environs of London,
and the approach to it by Westminster, struck
me with astonishment; though fifty years ago
there were but few houses in St. George's
fields, and the number of stage coaches and
private carriages was not a tenth of what it is
now. I had a letter to a Scotch grocer in
Piccadilly from a relation at Aberdeen, and I
thought it would be a prudent measure to deliver
my credentials to the vender of figs. On my
presenting my letter, he gave me a great many
bows, and when he had perused it, he begged
me to walk into a small dark room behind his
shop, which stunk of bacon, Hamburg sausages,
and rotten cheese, uniting an effluvia as insufferable
as the bilge-water of the smack. ‘Weel,’ said my
new friend, in a most perfect Buchan accent, ‘what
can I do for ye, captain?—(this was speedy promotion.)
My cousin tells me he kens your family—I have
several of your name my customers.’ ‘I want,’
I replied, ‘a lodging for a day or two, before I
go to visit a relation at Enfield.’ ‘An what
may his name be, if you please?—I serve twa
families there.’ When I satisfied him, and added
that he was master of an academy, and had three
score of boarders, his eye glistened, and he
rejoined, ‘I ha' a relation by the mither's side
o' the name of Morison, may be ye are of the
same kin; if at ony rate, I would be greatly
obliged if you wud mention to your uncle that
I sell tea and sugar, and a' kind o' groceries
as cheap as ony man within the city of London
or Westminster, and wud be obliged to you to
tak a *caird* o' my shop—he'll find it to his
advantage to deal wi' me. I'm sorry I canna
ge ye a bed myself, for I ha' unluckily let my
first stage, and am rather hampered for room,
for I ha' a sick mither; but I will introduce
you to an honest man, and a countryman, and
vary *ceevil*; he lives in Suffolk-street, near
Charing Cross—but as ye dinna ken Lunnon
I'll send my shop-boy to shew you the road;
it's No. 6. The man's name is Mitchel, and he
keeps a tailor's shop—you'll be wanting new
claiaths, and you canna do better than get them
frae him—he's an honest man.’ I had tact
enough to perceive that Mr. Mackey, from his
discourse, seemed to have his own and his
friend's interest at heart more than mine; nevertheless
I thanked him for his kindness, and would
accept of his offer by giving me a few lines
to the tailor, and I would get into a hackney-
coach, and save him the trouble of sending his
lad with me. ‘Na, na,’ replied he, ‘that will
cost ye a shilling—keep your siller in your
pouch—ye'll ha' occasion for it, I se warrant.
Suffolk-street is nae a quarter of a mile off.’
I told him that I had left my baggage in the
smack, and that I had nothing

to carry but what was on my back. Mr. Ogilvie, a gentleman whose acquaintance I had formed on the passage, and had brought me to town, at this moment passed in his carriage, and spoke to me. 'He seems a ceevil-like gentleman,' rejoined the grocer; 'fat's his trade?' 'I believe,' said I, 'he is a West India merchant.' 'In ye had any interest with him,' continued Mr. Mackey, 'I wish ye would speak a guid word for me. I wu'd serve him wi' his ain commodities, and may be buy from him.' But on my saying that I had never seen or heard of him till yesterday, he gave up the case as hopeless. The introductory note being written, my worthy friend presented me with a dozen of figs in a paper, saying, 'I dare say ye have a sweet tooth in your had—prie thae figs, they are vary frash, and lat your uncle taste ane or twa o' them—they are particularly guid for the bairns; and when you come back frae Enfield, call in and tak your breakfast—I ha' guid honey, and noo and then a yellow haddock that the skippers wha' deal wi' me bring up.' On promising that I would see him again, we shook hands and parted, his last words being, 'see fat ye can do wi' your uncle for me.' I have often since thought this grocer an admirable specimen of a Scotch tradesman; his selfishness and attention to his own interest, all his cunning could not conceal; and it so disgusted me, that I never repeated my visit."

To fancy this man "an admirable specimen of a Scotch tradesman," is no great compliment; and coming from a Scotsman, too, is the unkindest cut of all.

From London our marine hero went to Cork, to recruit; and he gives a warm account of the hospitalities which he received both there and at Limerick. "It is astonishing (he declares, being then seventeen) how soon I got initiated into fashionable life and expensive habits. * * * I had been for some time in the training of two old school-fellows in the 81st regiment, and frequently dined at their mess: being well acquainted with all the officers, they kindly admitted me as an honorary member. Nature had given me a strong head and a vigorous constitution. In this corps there were many hard drinkers, and my metal was put to the test, and found to be thorough good; but, like all noviciates, I shortly discovered that the horrors of getting sober greatly overbalanced the pleasures of getting drunk. I had formed a great intimacy with the worthy magistrate who attested my recruits; he was an alderman, a trading justice, and a *bon vivant*. He taught me to drink whisky punch, and no man ever saw the bottom of his jug. Billy Butler was so good-natured, and so desirous of getting the shillings, that he would start from his bed in the middle of the night to attest a recruit who might be suspected of repentance in the morning, and paying *smart* when he got sober; for Billy never inquired, when about to administer the oath, whether the volunteer was drunk or sober.

"My Irish education, on the whole, was not unprofitable. I had picked up a little knowledge of the world from society, and something of history from books; I had also got a slight insight into the French language; could play a duet on the flute (at *second sight*, like a HIGHLANDER); and I could sketch landscape decently after nature. I had an early taste for the arts, and had begun to collect prints; my library had swelled into nearly 200 volumes, which afterwards made a respectable figure in my barrack-room. Among other qualifications, I had been taught to drink *three bottles of claret*, and to speak *English* with an *Irish*

brogue interlarded with my *natural* accent! On my joining my corps at Plymouth in 1780, I went into quarters, and joined the mess. I had still fifty pounds in my pocket. I was appointed to the grenadier company, wore a white feather a foot in length, and in the absence of the captain I commanded the company. These were no small honours to a youth on joining his corps for the first time."

But one of the most graphic reminiscences of Ireland is connected with a visit to the celebrated Father O'Leary, with whom, it seems, the young captain formed an intimacy.

"Father O'Leary resided at Sundays Well, a hamlet on the river, a mile from the town. He invited Joe and myself one day to share his dinner, which we joyfully accepted. It was on a lovely summer's day, when we entered through a wicket into the holy father's premises, concealed from the public eye by a high quickset hedge. In the centre of an area of half an acre of shrubbery and flower-ground, stood a thatched cottage of one story, covered completely with Irish ivy, intermixed with honey-suckle and roses. Passing through a small vestibule, we were ushered into an apartment of twelve feet square, in which was seated our reverend host at his desk. After the usual salutations, we walked into the shrubbery, impervious to the sun. 'This,' said the father, 'is my drawing-room: the cabin you have quitted I call my library.' I observed—'that it was a little paradise.' 'To me,' he replied, 'it is so; for contentment is better than wealth, and a man may be as happy in a cottage as in a palace. The bit of ground on which my nest stands was given to me by a dear and departed friend, a lover of nature and of flowers, like myself. There was a *sheeling* on it; but *tempus edax rerum*, as the doctor would say. It was found unserviceable, and my friend pulled it down, and built this; which consists of four rooms, or rather closets *en suite*; but you shall see it, for I am very proud of it. We must first, however, consult Katheline, in case my dormitory should not be in proper order.' The dame was summoned from the rear, where was the kitchen; and finding 'that every thing was clane and dacent, though not grand,' according to her report, we visited the *salle-à-manger*, a well-proportioned room, with a bow window, from whence was a peep of the river, and a view of the city. It was furnished with great simplicity, the chairs and table, and side-board, being of black Irish oak. Over the mantel-piece was a fine portrait, which on my admiring, he said: 'That is the portrait of a celebrated person, who probably you may have heard of: it is Ignatius Loyola, the founder of the Jesuits, and esteemed a fine picture. It is by a Spanish artist, and was an heir-loom in my family: on this account I highly prize it; but I am not an admirer of the character of the original; for though I am a priest, I am not a bigot.' There were two other portraits in the room, which he told us were those of his benefactor and his wife. The library, into which we had first entered, was filled with books, and the cases were ornamented with busts of eminent persons. Two Gothic windows of ancient stained glass gave an air of seclusion to this apartment extremely pleasing. 'My library,' said our host, 'is small, but select; many of the books are the gifts of friends, which add to their value; but the chief part belonged to my father, who was a scholar. In this little room I am never at a loss for company; yet books are but dull companions, if not relieved occasionally by men. There is

no enjoyment in life without some society; and we

ought to be contented, however, with a few friends. I am too fond of company; and if I was not poor and a priest, I should never sit down to a meal alone: the presence of a friend is the best sauce to a dinner, however highly it may be seasoned by cookery. If I had the means, I would be an epicure; I am a disciple of Apicius, as it is; and you will see by an *omelette soufflée*, which Katheline prepares admirably from a receipt of my grandmother's, that I understand something of the noble art of cookery. Dr. Johnson, who I understand is a gourmand, says, 'that a man thinks more of his dinner than of any thing else.' I do not go so far as this; but eating is a *serious opera*. Do not, however, from this harangue, look for delicacies here—*non omnia possimus omnes*, as the doctor would say; but if I was a bishop, instead of a poor priest, you should fare better.' During this conversation we had returned to the summer drawing-room, for the weather was sultry. At the bottom of the miniature shrubbery was a kind of grotto, where stood a round table and three chairs. 'We will drink our punch here,' said our host, 'if agreeable, *à fresco*, and be saluted with the song of the thrush and the blackbird, my tenants. The nectar is already prepared, and is cooling in Katheline's well, for she has the merit of discovering this spring. I am a bit of a botanist; and though I cannot afford to raise exotics, I can boast of as fine indigenous evergreens as the bishop. Look at those arbutus trees; I brought them from Killarney ten years ago. In a few weeks I will shew you my carnations and pinks, and my moss-roses; they are worthy of adorning the parterres of a queen!' While he was thus descending on the beauties of Flora, Katheline announced that dinner was served. Salmon was removed by a corned shoulder of mutton, smothered in onions; to which succeeded a jugged hare, and the promised omelette: the two latter dishes were truly admirable. These luxuries were washed down, first by a glass of poteen (sauce to salmon as well as to goose!), then came Katheline's home-brewed, and with the dessert a bottle of Frontignan. On our praising these beverages, the father observed: 'They are all,' said he, 'from the vintage of my farm. The *soi-disant* French wine is manufactured from gooseberries; the beer is home-brewed; and the whisky is distilled in a black iron pot, and is hence called poteen.' No beverage could be more grateful in a hot day, especially when seasoned by the conversation of two such men, and drank in a cool grot, accompanied by the evening song of birds. I have a most perfect recollection of this delightful day, though nearly half a century has elapsed."

Before farther process, we shall extract two or three short insulated anecdotes from the first half of the first volume.

"Every man (says Mr. G.) is proud of having good blood in his veins. My maternal grandmother was descended from Andrew Ker (a near relation of the family of Roxburgh) and Bessy Burnet, daughter of Sir Robert of Leys, a family of Saxon descent, and one of the most ancient in Scotland. Portraits of these my ancestors were discovered in a farmhouse on the estate of Knock, in Banffshire, about the middle of the last century, and were in the possession of our family; and also a very curious collection of manuscript sermons, neatly written, and in fine preservation. They had been preached by the celebrated Cant* in the hall at Leys, about the year 1645, during

* "The word *canting* is said to be derived from this preacher."

the time of the covenants, the reverend man not being able to hold forth in the parish kirk, as Montrose's troops were in the neighbourhood. These discourses were chiefly political; they became the property of my brother Abercromby on the death of my grandfather, who, at my son's request, presented them to Sir Walter Scott, and they are considered by him as a valuable literary curiosity."

Mr. Gordon is, on more than one occasion, rather hard upon the late Dr. Burney. He tells us: "His library was regarded as a national object, and was purchased by vote of the House of Commons for the British Museum, and estimated at the sum of 16,000*l*. I picked up for him in my travels through Italy, in 1800, the most rare and valuable book in the collection, *Lascaris Grammatica Græca*, Milan, 1476, the first Greek book ever printed. It is so rare that five or six copies only are known to exist. I purchased it at Ferrara, from a *soi-disant marchese*, for fourscore sequins, and ceded it to the doctor for the same sum. I had also collected several other precious relics in my travels during the Italian revolution; all of which were added to the doctor's collection for an old song."—And he speaks of the learned doctor as not having evinced due gratitude for these favours.

Here we must break off for the present.

Travels in Russia, and a Residence at St. Petersburg and Odessa in the years 1827-29; intended to give some Account of Russia as it is, and not as it is represented to be. By Edward Morton, M.B., &c. &c. &c. 8vo, pp. 486. London, 1830. Longman and Co.

OUR worthy countryman seems, from his title-page, to have set out on his journey in a bad temper, and to have returned in a worse; cordially to dislike Russia, and determinedly to tell the reasons why. Yet he had good opportunities for making the best observations; and, with all due allowances for the spirit of resentment in which he writes, (having resigned his Russian appointment under a written protest, and demanded a passport for England), the circumstance of his enjoying such opportunities* entitles his work to a degree of consideration, both at home and abroad, which its obvious prejudices could not command,—at home, as a contrast to preceding writers; and in Russia, as a statement, however inimical, which may suggest necessary and useful improvements on several points.

On the arrival of the George the Fourth steam-boat, custom-house officers come on board; and here, as well as throughout his whole journey, the author vituperates these functionaries and the postmasters as corrupt and imposing rascals!

* Dr. Morton's engagement with Count Vorontoff (Woronzow) was that of private travelling physician (and not an official appointment); and as in this capacity a cover was always laid for him at the count's table, he had constantly the choice of dining with all the highest nobility of the country attached to the court. He remained in Russia about twenty months, and in St. Petersburg about four (during seven weeks of which Dr. Granville also resided in the count's house; and against the said doctor's work he inveighs continually, as a too flattering picture of Russia and the Russians). From St. Petersburg he accompanied the count and suite to Odessa, where they arrived in 1827: in a few months after, the emperor and empress reached Ode-a, and took up their residence at the house of Count Vorontoff; and this nobleman being governor-general of the provinces surrounding Odessa, whenever the chief officers of the court did not dine with the emperor or empress, they dined with him—as did also the foreign ambassadors, &c. Dr. M. had thus daily opportunities of acquiring intelligence. He had the honour to be presented to the empress, and afterwards was at several private parties where her majesty was.

Of the proposed assassination of the Emperor Alexander, we learn.

"The grounds (of Alexandria, an estate of the Countess Branitskii, near Kief) in summer are said to be exceedingly beautiful, and they may be so for Russia; but at the time of our visit their winter garb rendered them cheerless and uninteresting, except in reference to a circumstance which I shall here mention. The conspiracy which broke out upon the accession of the present emperor to the throne of Russia, had been in existence for some time previous to that event, and had for its object, it is said, not only the murder of the Emperor Alexander, but also that of every member of the imperial family; and I have been informed that the conspirators being aware the former would stop at Alexandria, during his journey to the south of the empire, had actually fixed upon this place as the scene of his intended assassination. His majesty, however, arrived before their plans were quite matured, and that circumstance alone prevented the consummation of the horrid project. I have also been informed, during my residence in Odessa, by an individual who was about the person of the late autocrat, that the latter was perfectly aware as to conspiracies against his life being in existence, and that his visit of inspection to the southern provinces of Russia was planned and undertaken for the sole purpose of affording him a plausible excuse for leaving the capital, as the most probable means of escaping the impending danger. I have, moreover, been assured that he had purchased a large extent of territory in the Tauride, where he had commenced building, with the intention of abdicating the throne in favour of his brother Nicholas, and of passing the remainder of his days there as a private individual."

The annexed is a striking picture of conjugal devotion.

"During my residence at St. Petersburg, I was professionally consulted in a hopeless case of disease, affecting the child of the unfortunate Prince Volkonsky, who is at present an exile in the mines of Siberia; and my subsequent residence in Russia was the cause of my becoming acquainted with the following remarkable instance of conjugal devotion in his wife. It amply deserves to be recorded; and will, I am sure, excite the sympathy of the reader. Prince Volkonsky and Major-General Orlof married two daughters of General Raiefskii, an old and distinguished officer in the Russian service. In the conspiracy of 1825, which has been already so often alluded to, both the prince and Orlof were, it is supposed, concerned; the latter having been induced to take a part in the plot through the persuasion and example of Volkonsky. On the discovery of the conspiracy, secret orders were instantly despatched from St. Petersburg for the apprehension of the prince, who was seized at night, in his own house at Odessa, by two gen darmes, and hurried off to the capital. Orlof was likewise arrested, and thrown into prison; but, after six months' detention, was discharged, without ever having been brought to trial: he was, however, deprived of his military rank and honours, being also ordered never in future to stir beyond the limits of his own estate in the interior. Prince Volkonsky was not so fortunate: in due time he was tried by the commission appointed for that purpose, and condemned to death. Upon this, the old general, overwhelmed with grief, reminded the emperor of his own former services, and besought his majesty, in the most affecting terms, to spare the life of his devoted

son-in-law. His prayer was granted; and the sentence of Prince Volkonsky commuted to banishment in the mines of Siberia for life.* After the departure of the unfortunate exile, his wife, disregarding the remonstrances and dissuasions of her friends, requested permission of the emperor to follow her husband, which was peremptorily refused; and she was informed, that if she attempted to join him, she would herself be deprived both of her title and her estates. The threat was utterly unheeded; (what, indeed, is there that a woman will not sacrifice for the object of her affections?) she accordingly set off, and reached her husband, nobly determining to be the companion of his chains and his misery. She is, however, only allowed to see him twice a week, for three hours at a time. As for the wretched prince, I learned when at St. Petersburg, that he was then employed in carrying coals to feed the fire of one of the furnaces in the mines, being also heavily ironed. He had just petitioned the emperor to allow his irons to be removed, but compliance with his prayer had been refused. Prince Volkonsky had a handsome house at Odessa, near the fortress; and Orlof was building a large mansion on the new Boulevard, when this melancholy occurrence took place. It remains, as he left it, unfurnished, and is indeed now rapidly falling to decay. I never passed it without thinking of its owner, who is said to be distinguished for scientific attainments; nor that of the unhappy prince, without being forcibly reminded of his fate, and unconsciously paying him the tribute of a sigh."

"From the commencement of the Turkish war, it was the fashion for ladies to make charpie, to be used at the various hospitals in dressing the wounded soldiers. This was the universal employment. The empress made charpie, and the empress-mother made charpie, and, of course, all the ladies of the court followed their example. Even the poor gentlemen were enlisted into the service, and sometimes, for the sake of being polite, joined in the labour. Square bits of old sheets and napkins, scissors, and a basket, were to be seen on every table; and before dinner and after it, in the morning and in the evening, all were busily employed in unravelling musty linen. I cannot say I thought it the most elegant or the most becoming amusement at all times, and in all places, however laudable in some might be the motive by which they were actuated; I was, on the contrary, rather inclined to believe that the really charitable would have done much more good in subscribing their money towards purchasing soft English lint, than in manufacturing such an abominably coarse and ill-adapted article for the dressing of painful and irritable wounds as charpie. But it was not the fashion to do so, and therefore I thought it best to keep my opinions to myself. However, I may now speak my mind freely, without running the risk either of the knout or Siberia. I shall therefore not hesitate to declare, that in spite of all this attention, and patriotic devotion displayed by the ladies to the wants of the wounded military, the latter were in fact completely neglected."

The doctor then goes on to exhibit the defects of the Russian government.

"The existing form of government in

* "When a Russian nobleman is sent to Siberia, he is deprived at once of all rank, becomes a slave, and is habituated like one, in a sheep-skin wrapper. His name is also changed; and no one, perhaps, but the governor of the province knows his real appellation or his former rank."

Russia,' as Bishop James observes, 'is a pure Oriental despotism;' but it must not be supposed that the emperor alone is despotic, all being so who have the power; of which the following are instances. During the summer of 1828, while the imperial court was at Odessa, Colonel — was suddenly sent away, in charge of a *gendarme*, to Kief, with orders never to return nearer to Odessa than the distance between those towns. The occurrence excited a great deal of talk at the time, from various circumstances. The colonel was guilty of no political offence; but a report existed that he had formerly been criminally intimate with a married lady of high rank, resident in Odessa, and that this connexion had been followed by the birth of two children, which, it was also said, he had threatened to claim; whereon the friends of the lady employed their influence with the emperor to procure his banishment from the town; and, in consequence, this was at once effected in the manner before mentioned. No one can for a moment defend the colonel's conduct, though the lady being of much higher rank and older than himself, it may be imagined that he was not the most culpable of the two: but what a monstrous system is this! No sooner has a man become obnoxious, from any cause, to those in power, than secret representations are made in the highest quarter; and, without trial,—without, perhaps, the accused knowing what he is charged with, or having the means of defending himself,—he may be suddenly seized by a *gendarme*, placed in a *telegra*, and, at a moment's notice, hurried off to Kief, or perhaps to Siberia! Who but must shudder at such reckless tyranny? The following occurrence is, in some respects, of a similar character:—One night, early in the last year (1829), an officer of lancers, while waltzing with a young lady at one of the governor-general's balls, happened to fall with her, or at any rate the circumstance appeared accidental. The next morning, or very soon afterwards, he was hurried off, as I was informed, in custody of a *gendarme*, notwithstanding that he owed at the 'Hotel du Nord' a considerable sum. Where he was sent to, I never had an opportunity of learning. The third instance of despotism I shall mention is that of a father towards his son, and which could have taken place in no other country. The present Count —, now resident at Odessa, was imprisoned in a monastery for a period of *twenty years*, by order of his own father; the reason of which was as follows: the old count, during the life-time of his wife, kept a mistress, which rendered the countess exceedingly unhappy; and the son, having strongly advocated his mother's cause, and expressed his opinions pretty freely with respect to the misconduct of his other parent, was, by the latter's order, secretly conveyed to a monastery, where he remained imprisoned until his father's death restored him to liberty. The horrors of so sudden and protracted a confinement have considerably affected the present count's mind: he seldom goes into society; and his dread of again experiencing similar treatment is such, that he has caused subterranean passages to be constructed in his garden, communicating, by secret doors, with his house, into which, when he perceives persons approaching the latter, he often retires until they have taken their departure."

We believe that there is no country in Europe of which similar stories might not be told, and similar conclusions drawn; therefore we turn to the more agreeable task of extracting a few examples of customs, &c.

"During the court mourning for the late empress-mother, I observed, at one of the governor-general's soirées, Madame Fonton, who had only been married a few days, arrayed in white, the other ladies, without exception, being in black. Upon inquiring the reason of this, to me, singular distinction, I learned that it is a custom in Russia for brides never to wear any but white or coloured dresses for one year after their marriage, whatever mournings may happen within that period. * *

"While sitting one day with the Prince and Princess Galitzin, at their house in Odessa, the former shewed me a Turkish ducat, which his lady had just received as a present from some female acquaintance, in observance of a custom prevalent in Russia. The princess had been recently confined; and it appears it is usual among the Russians for the friends of a lady thus circumstanced, each to present her, when sufficiently recovered to receive visits, with a ducat of some description or other. The Princess Galitzin had received six that morning. * *

"While I was sitting at breakfast this morning, a servant of the count entered, and, after uttering a few words in the Russian language, threw a handful of millet and oats into my face. I was, of course, surprised at this conduct; but guessing it to proceed from some custom prevailing here, I took it in good part. He then said that the Countess Vorontzof wished to see me immediately. I left my rooms accordingly, and went into the count's cabinet, where I found himself, the countess, their children, and one or two of the *employés*, at breakfast. His excellency, rising upon my entrance, shook hands, and wished me a happy new year; after which he threw a handful of millet and oats at me. I had hardly got rid of these, before the children and the other individuals present renewed the attack in a similar manner. Count Vorontzof informed me, in the course of conversation subsequently, that this is a custom prevailing only in the Ukraine and the south of Russia, which are corn countries. Throughout the whole day millet and oats were kept in constant readiness, and every one who entered the house, of whatever rank or sex, was assailed as I had been. * *

"The following anecdote will strikingly exemplify the general character of the Russian slaves. Baron Franck, colonel in the Guards, had given particular directions to his servant always to fold up the newspaper, which he was accustomed to receive regularly, with the title outwards; but the latter, regardless of his master's injunctions, continued to employ his own method. At last the baron became angry, and calling for him, 'Why,' said he, 'do you always fold up the paper in this way? have I not frequently told you to do it otherwise?' 'Please, sir,' answered the servant, with the greatest humility, 'you never beat me for it!' It is to be observed, that the baron is not a Russian, but a native of Germany, which may account for his considering the excuse offered by his servant as sufficiently curious to deserve relating. Perhaps, also, it may shew why a remedy for short memories, apparently so efficacious in the estimation of Russian slaves, had not been previously administered."

How far the following is to be trusted, from an author who betrays strong prejudices, we do not vouch: it is, however, a very novel view of a very important matter.

"It appears to be a generally received opinion in England, that the late Turkish war was

popular among the Russians; but from all I heard and saw, while resident within the autocratic dominions, I am inclined to doubt the correctness of this belief. That the war was agreeable to certain individuals, who reaped, or hoped to reap, important advantages from it, is perhaps true; but I by no means think that, even previously to its actual commencement, it was popular with the majority of the influential nobility of the country, or subsequently with the higher classes of military officers; more particularly, as I happen to know that much dissatisfaction was produced in many quarters from circumstances which took place during the early part of its progress. Previously to our leaving St. Petersburg, it was well known in the court circle that the emperor would be present at the future seat of operations, whenever the war might break out; and I was confidently assured that Count Vorontzof was to have the command in chief of the army, and that any difficulty which might arise from his being junior to other generals would be easily obviated by the omnipotence of the emperor. Scarcely, however, had we reached Odessa, before it became evident that these anticipations were not to be realised, and that others had more influence with the source of power. That dissatisfaction prevailed among the officers of all ranks, after their imperial master joined the army, will scarcely be doubted, perhaps, when I mention that one of them, who had just returned from Varna, informed me that the emperor's conduct on many occasions was most hasty and impetuous, and that he was continually interfering with the arrangements of the commander-in-chief: while, he added, 'it is well known that his majesty never had any opportunities himself of gaining practical experience in war; and therefore what could have induced him to imagine his own opinion more correct than that of an old general, who had previously been twice before the walls of that very fortress, is most unaccountable.' Another officer observed, 'the emperor is so accustomed to issue an ukase in St. Petersburg, and to have it obeyed as a matter of course, that he expects impossibilities to be performed in war, if he only order them to be attempted.' Thus a great loss was uselessly sustained at Varna upon one occasion, in consequence of this determination to command, when he even insisted upon the general-in-chief reprimanding the troops, although that officer was of opinion that they had done all that men could perform. It was also mentioned that, at Varna, Count Vorontzof had ordered all officers when on duty only to wear foraging caps, instead of cocked hats and feathers, the latter having rendered them remarkable objects for the Turkish riflemen, and thus occasioned considerable loss of life: but as soon as the emperor arrived, he commanded the officers to appear in full uniform, and the cocked hats and feathers to be resumed! From these and other facts, we may fairly conclude, that the emperor was not more popular with the army after his first campaign than before; and of this he most probably became himself aware; for on the return from Varna, I heard that it was confidently expected his majesty would not again take the field; and the result has fully proved this opinion to have been correct. It is not a little remarkable, that the first campaign, conducted by Russian generals, under the emperor in person, was dilatory, and in many points a complete failure; while the second, confided to the *unaided talents of a German*, proved as rapid as it was eminently successful, and untarnished, or at any rate not so obviously tar-

nished, by the employment of gold in aid of the sword. I shall never forget the bitter irony with which an officer of rank, just returned from the army, spoke to me respecting the taking of Varna. 'The emperor,' said he, 'was surrounded by a set of military sycophants, whose inordinate flattery was so palpable as to become ridiculous: thus it was always said by those courtiers, 'Your majesty has taken Varna,' 'when your majesty took Varna,' &c. 'as if,' continued he, 'it had been the emperor who reduced that place, and not Count Vorontzof. Had we waited for the former to take Varna, it would have been in possession of the Turks at the present moment!'"

Upon the whole, it seems to us that Dr. Morton's disappointments (see page 107) have made him treat Russia quite as much *couleur noire* as Dr. Granville *couleur de rose*. His statistical account of Odessa is good; and the work will have many readers, from the deep interest attached to all the movements of the great empire to which it refers.

The Juvenile Library, No. 1. ; containing the Lives of Remarkable Youth of both Sexes. Colburn and Bentley.

THIS publication has reached us too late this week to give such a notice of it as it merits. It supplies in literature what has long been considered to be a desideratum, and its success we do not think at all doubtful. The volume before us contains nearly 300 pages of interesting Lives, with four illustrative portraits, and is published at an extremely low price. Of the portraits, those of the Princess Victoria and Sir T. Lawrence will be particularly acceptable to the public. The former is a full-length, in a walking-dress, and is engraved from a portrait in the possession of Her Royal Highness the Duchess of Kent. The portrait of Sir Thomas is engraved from a crayon by himself, at the age of twenty-five. The other portraits are, King Edward VI. and Lady Jane Grey. A more pleasing holiday gift at the present moment we cannot conceive than this neat volume. We can assure the public that some of the ablest writers are already enrolled as contributors to this undertaking, and that it is likely to be conducted with great spirit.

The Recluse of Inchidoun, and other Poems. By J. J. Callanan. London, 1830. Hurst, Chance, and Co.

THE best verses in this volume are some translations from the Irish, which, if we recollect rightly, appeared about seven or eight years ago in *Blackwood's Magazine*. From the longest poem, which gives its name to the book, we quote the following favourable specimen of the author's powers, in a farewell to the

"Swift Awniduff, which of the Englishman
Is called Blackwater."

"On Cleada's hill the moon is bright,
Dark Avondu still rolls in light;
All changeless is that mountain's head,
That river still seeks ocean's bed,
The calm blue waters of Loch Lene
Still kiss their own sweet isles of green—
But where's the heart as firm and true
As hill, or lake, or Avondu?"

It may not be—the firmest heart
From all it loves must often part;
A look, a word, will quench the flame
That time or fate could never tame;
And there are feelings, proud and high,
That through all changes cannot die,
That strive with love, and conquer too;—
I knew them all by Avondu.

How cross and wayward still is fate,
I've learn'd at last, but learn'd too late:
I never spoke of love—twere vain,—
I knew it—still I dragged my chain:

I had not, never had, a hope;
But who 'gainst passion's tide can cope?
Headlong it swept this bosom through,
And left it waste by Avondu.

O Avondu! I wish I were
As once upon that mountain bare,
Where thy young waters laugh and shine
On the wild breast of Meenganne;—
I wish I were by Cleada's hill,
Or by Glenhuachra's rusky rill,—
But no! I never more shall view
Those scenes I loved by Avondu.

Farewell, ye soft and purple streaks
Of evening on the beautiful peaks;
Farewell, ye mists that loved to ride
On Cahir-bearna's stormy side!
Farewell, November's moaning breeze,
Wild minstrel of the dying trees!
Clara! a fond farewell to you—
No more we meet by Avondu.

No more—but thou, O glorious hill!
Lift to the moon thy forehead still;
Flow on, flow on, thou dark swift river,
Upon thy free wild course for ever;
Exult, young hearts, in life-time's spring,
And taste the joys pure love can bring;
But, wanderer, go—they're not for you!
Farewell, farewell, sweet Avondu."

Criticism on a posthumous publication like the present would be misplaced. The author died at Lisbon, we believe, about the time of the appearance of this volume, and is now beyond the reach of our praise or censure.

Narrative of a Residence in Algiers: Biographical Sketches of the Dey and his Ministers, &c. &c. By Signor Pananti; with Notes by E. Blaquiere, Esq. (Second edition.) 4to. pp. 467. Colburn and Bentley.

THE first edition of this work was sufficiently interesting at the period of its publication to merit our praise, and copious extracts; and the crisis of the present hour gives it so great an additional value, that we think the editor has done wisely in re-producing a volume so likely to afford gratification, as well as information, to readers of every class.

ARTS AND SCIENCES.

COLLEGE OF PHYSICIANS.—(*Hydrophobia.*)

JUNE 14th. Dr. Roberts in the chair.—Dr. Francis Hawkins, the registrar, read a paper relative to the prevention and cure of hydrophobia, and the bites of serpents, communicated by Mr. Cesar Hawkins, Surgeon to St. George's Hospital. He had tried, by desire of the president of the College, the effects of the *mikania guaco*, which had been brought into notice at a former meeting by Sir Robert Ker Porter; and had also made trial of the *veratrum sebadilla*, a South American species of hellebore, spoken of as a specific for hydrophobia, by Lieut. Hardy, in his recently published travels.

It appeared from these experiments, that, like every other remedy which had been found to mitigate the symptoms of hydrophobia, either in man or dogs, the guaco acted on the disease as a *sedative*, being sufficiently powerful to kill small healthy animals, such as rabbits or birds. The following remarks, however, struck us as curious, and deserving of the notice of medical men, as well as of our unprofessional readers. In estimating the effects of medicine in hydrophobia, two circumstances are not usually taken into account. The first is, that during part of the last twelve or eighteen hours, there is often a remission of the spasms for a considerable time, independent of any medicinal effect, previous to that nausea and vomiting which generally precede death: this was the case in the instance in which the guaco was tried; for at the time when the boy (labouring under the disease) was most violent, and the guaco had least effect, he ate and drank voraciously, notwithstanding the constant nausea from which he was beginning to suffer. The other cir-

cumstance is this: the unfortunate patient is tormented during part of the disorder by the viscid saliva which chokes him, and gives occasion to the spasms. The dog is constantly endeavouring to get rid of it with his paws; and the human patient will start in an instant from apparent sleep, and spit it around him, or cram the clothes into his mouth to wipe it away. For the same reason, notwithstanding the awful preparation which is necessary, and the violent and convulsive spasms which attend deglutition, yet the patient will voluntarily submit to this for the sake of the temporary relief which follows the attempt to wash his mouth, or swallow some fluid. He will muster all his resolution, and hold the cup in his extended arm for several minutes, half choked with spasm, and at last, with a sudden effort, will dash it to his mouth with such violence, as almost to break the vessel or his teeth, and fill his mouth with the liquid, while his whole frame is in the utmost excitement: he will then sink exhausted, but calm, upon his pillow, appearing as if under the influence of a powerful narcotic, while, in reality, the repose he enjoys can be procured by any cooling fluid. Taking these circumstances into the account, Mr. Hawkins thought that the relief experienced by a boy to whom the guaco was given was much less than he had seen in another instance obtained from prussic acid, and less than he expected from its effects upon a rabid dog, to which the same medicine had before been administered.

The result of the experiment upon the dog was, that it was a powerful *palliative*, completely removing for a time (nearly 36 hours) many of the symptoms. Mr. Hawkins said that there are several other medicines, the *alisma plantago*, or water plantain, the knowledge of which the Russian government bought at a high price; the *scutellaria*, or scull-cap; and especially the belladonna, all of which will mitigate the disease; but, from neither of them had such decided and long-continued an amendment been observed as from the guaco.

It failed then as a *cure*; but its effects as a palliative were such, that Mr. Hawkins expressed a great desire to obtain some more of the medicine, so as to try its efficacy at an earlier period of the disease, i. e. before those peculiar spasms occur which give rise to hydrophobia in man (for it is only in man that this symptom exists); and he further suggested that the only probable way to obtain a cure would be by a minute attention for the future to those precursory symptoms which take place for three or four days before the spasms in the throat commence, of which little more is known at present than that there is some pain usually in the bitten part, and some undefined general indisposition. If the changes in the constitution which attend the action of the long latent poison were better understood, and more accurately compared with those which take place in other animals, some clue might at last, he thought, be obtained towards the cure of the complaint.

With regard to the other South American remedy for hydrophobia, the *veratrum sebadilla*, Mr. Hawkins did not find that it justified the lavish encomiums which had been bestowed upon it; for it produced very little effect upon the disease; less than belladonna, and far less than the decided influence of the guaco.

We are tempted, as so much alarm has of late been created with regard to hydrophobia, to state at some length what Mr. Hawkins advanced, as to the prevention of hydrophobia. After some medical discussion upon this ques-

tion, which we omit, he proceeded to say, that very numerous experiments must be made before the surgeon can be justified in not having recourse to excision and the caustic, as the only means which analogy would point out as likely to be effectual, and which experience also justifies to an extent which ought to diminish materially the periodical alarm which is felt throughout the country with regard to hydrophobia. One half at least of those who are bitten by dogs receive no inoculation of the poison, and of the number of those who are injured by decidedly rabid animals, few indeed become affected, if the means alluded to have been adopted within a reasonable period after the wound has been inflicted.

Mr. Youatt has kept a record of four hundred persons who have had recourse to his assistance, after having been bitten by really rabid animals; and although one died of fright, not one had hydrophobia; a number which, if confirmed by other documents, leaves little ground for apprehension to those who have had early recourse to surgical assistance. It is probable, however, that much more might be done towards preventing the occurrence of the disease in dogs, from which animal it is most frequently communicated to man, if the public were better acquainted with the early symptoms of the disease. To shew how vague and erroneous are the notions usually entertained of the nature of rabies in dogs, we need only instance two examples. Every newspaper speaks of the application of a supposed test in a suspected dog; and if the animal attempts to lap water, he is allowed to go at large without apprehension; while in fact the only comfort of the rabid dog is to have plenty of water, in which he may attempt, ineffectually indeed, to assuage his thirst. And again, every poor hunted animal which tries to defend itself against its murderous pursuers, is set down as raging mad; while the placid quiet spaniel, or house-dog, is allowed to lick its master's fingers, or snarl and bite at its companions, without a consciousness of the hidden danger, because, forsooth, it does not rush furiously at every thing within its reach.

Mr. Hawkins observed, that what is called the dumb madness is equally dangerous with those cases in which the dog is furiously disposed; and expressed his opinion, that there was probably a corresponding difference in the disease in man; and that in both it arose in great measure from the previous habits and disposition: so that he had seen a quiet boy lie for hours in the last stage of the disease, smiling, and apparently engaged in a pleasing kind of delirium, while another was furious and unmanageable, and actually drove the attendants in terror from the room, till he dropt on the floor, insensible and exhausted by his own efforts. The one was well educated and amiable; the other afforded a striking moral lesson—as the very bite which caused the horrid death he suffered appeared to have been occasioned by his cruel and depraved habits.

Mr. Hawkins believes that there can be little doubt that rabies at present never originates spontaneously, even in dogs, but arises only from inoculation with saliva. He suggested, therefore, that if every dog which had been bitten by another, were carefully secluded for four months, (which exceeds the common period at which the disease commences after the injury), and if every dog which shows the least symptom of any indisposition, were prevented from communicating the disease, should it prove to be labouring under rabies, much might be done towards the diminution of this

alarming malady. And still more, perhaps, if the law were enforced with greater severity against those who keep these animals only for illegal or brutal purposes; for it is asserted by Mr. Youatt, that in nineteen cases out of twenty the disease is propagated by the fighting dog in town, and by the cur and lurcher in the country.

The second part of Mr. Hawkins's paper related to the power of preventing or curing the bites of poisonous serpents by means of the guaco. His experiments demonstrated the error of the accounts, that it would act as a preventive; but he had not been able to satisfy himself whether the guaco would cure the effects of the poison. He expressed a belief, however, that this part also of the account which had been given was exaggerated, and thought the bites of these reptiles ought to be treated by the use of the cupping-glass or ligature, to prevent the absorption of the poison, till incisions are made to evacuate some of that poison with the infected blood, and caustic applied to neutralise what remains. On the same principle, said Mr. Hawkins, though in a ruder manner, the hunters of Montpelier, when their dogs are bitten by the vipers of that country, are accustomed to make incisions into the wound, and fill them with gunpowder, which they afterwards explode.

LITERARY AND LEARNED.

Advertisement.—University Intelligence for the Quarter.

OXFORD, March 25th.—The following degrees were conferred:

Masters of Arts.—Rev. G. Huddleston, Merton College; F. Jeune, Scholar of Pembroke College; O. Philippott, St. John's College.

Bachelors of Arts.—Rev. T. Bullock, St. Alban Hall; S. G. Casement, Christ Church.

April 3d.—The following degrees were conferred:—*Masters of Arts*.—Rev. H. Wrightson, Queen's College, Grand Compounder; C. Pocock, Christ Church.

Bachelor of Arts.—J. Pearson, Magdalen Hall.
April 21st.—The following degrees were conferred:—*Doctor in Civil Law*.—Rev. F. B. Twisleton, Prebendary of Hereford, late Fellow of New College.

Masters of Arts.—C. P. Golightly, Oriol College, Grand Compounder; Rev. W. G. Dymock, Exeter College, Grand Compounder; Rev. J. Osborne, University College; Rev. P. H. Lee, Fellow of Brasenose College; H. D. Stephens, Fellow of New College; Rev. S. B. Shirreff, Wadham College; Rev. J. Fox, Queen's College.

Bachelors of Arts.—R. Briscoe, Jesus College; H. I. Nicholl, St. John's College; W. T. Marychurch, T. M. Fallow, Edmund Hall.

April 22d.—The following degrees were conferred:—*Bachelors in Divinity*.—E. Greswell, Fellow of Corpus College; J. T. Round, Fellow of Balliol College, and R. A. Thorp, Fellow of Corpus College (the late procurators of the University).

April 28th.—The following degrees were conferred:—*Masters of Arts*.—Rev. J. H. Parlyb, E. H. Chamberlain, University College; Rev. T. Hutchins, Chaplain, C. Saxton, Christ Church; J. R. F. Billingsley, Lincoln College; Rev. R. Hawkins, Scholar of Pembroke College; Rev. J. D. O. Crosse, Exeter College.

Bachelors of Arts.—C. Deedes, A. Johnson, Merton College; Sir W. M. Farquhar, Bart. Hon. C. J. Murray, Christ Church; T. Blackburne, Brasenose College.

May 6th.—The following degrees were conferred:—*Bachelors of Arts*.—H. C. Nowell, Exhibitioner, Corpus College; Viscount Villiers, Hon. H. F. A. Harrington, Christ Church; T. J. Ormerod, Brasenose College; J. Bliss, Oriol College.

May 13th.—The following degrees were conferred:—*Bachelor in Divinity*.—Rev. J. A. Cramer, late Student of Christ Church, Public Orator of the University.

Masters of Arts.—T. Tunnard, St. Mary Hall, Grand Compounder; Rev. E. Dudley, Worcester College; J. Cox, Christ Church.

Bachelors of Arts.—C. Benson, Queen's College; G. T. Comyns, W. J. Biew, Wadham College; J. Fox, Worcester College; T. Stanforth, Christ Church; R. Entwistle, A. F. Daubeny, Brasenose College; A. Cox, Scholar, Lincoln College; W. Davy, A. Daniel, Exeter College.

May 19th.—The following degrees were conferred:—*Doctor in Divinity*.—Rev. S. C. Lord, Wadham College, Grand Compounder.

Bachelor in Divinity.—Rev. C. C. Clerke, Student of Christ Church, and Archdeacon of Oxford.

Masters of Arts.—Rev. J. Medley, Grand Compounder, Rev. J. Hoole, Wadham College; Rev. E. S. C. B. Cave,

Brasenose College; Rev. H. Trimmer, Rev. J. Byron, Exeter College.

Bachelors of Arts.—J. A. Harrison, St. Mary Hall; W. Watts, T. Twiss, Scholars, University College; J. U. Gaskell, Magdalen Hall; I. S. Godmond, E. Cooke, Queen's College; J. N. Harrison, Scholar, Worcester College; J. B. Dyne, Scholar, H. Bostock, Wadham College; H. Fowler, W. R. Brown, T. Halton, Brasenose College; J. Guillemard, Fellow, St. John's College; J. Hayward, Exeter College; S. V. Edwards, Trinity College.

May 20th.—The following degrees were conferred:—*Doctor in Civil Law*.—Sir W. Heathcote, Bart., late Fellow of All Souls', Grand Compounder.

Bachelor in Divinity.—Rev. H. A. Woodgate, Fellow, St. John's College.

Masters of Arts.—Rev. J. J. Rowe, Magdalen Hall; Rev. F. T. Gregory, University College; Rev. C. Griffith, Christ Church; Rev. G. H. Hadfield, Pembroke College; F. Fynn, Worcester College; W. Hetherington, Trinity College.

Bachelors of Arts.—J. F. Stansbury, J. H. Kendall, Magdalen Hall; A. Graeber, W. Alford, St. Edmund Hall; R. Malcolm, T. W. Robson, University College; T. Maurice, Merton College; P. Williams, H. O. Pigot, Christ Church; M. Davies, Jesus College; J. S. Ogle, Fellow, New College; J. D. Shafto, Brasenose College; J. J. Digweed, P. Kitchingman, Pembroke College; A. Denny, F. C. Parsons, Worcester College; D. Jackson, T. Pearson, J. Nicholson, Queen's College; J. Nash, Trinity College; J. Pyemont, W. W. Butler, D. E. Jones, G. Malim, Lincoln College; T. H. Maitland, W. H. Karlake, T. G. F. Howes, Oriol College; T. Pateson, Exeter College.

June 3d.—The following degrees were conferred:—*Bachelor in Divinity*.—Rev. P. Aubin, Fellow, Jesus College.

Masters of Arts.—W. Grant, Brasenose College, Rev. C. Hesketh, Trinity College, Grand Compounders; J. S. Birley, Rev. F. Maude, Brasenose College; Rev. J. Sutcliffe, St. Edmund Hall; M. Mitchell, Magdalen Hall; W. Griffith, Scholar, Rev. F. Marendaz, Jesus College; Rev. W. N. Fall, University College; Rev. G. B. Hamilton, Corpus Christi College; E. W. Head, Fellow, Rev. W. H. Edmedes, Rev. T. B. Lancaster, Merton College; N. C. Strickland, Lincoln College; Rev. J. Maude, Michel, Scholar, Queen's College; Rev. G. S. F. Fanshawe, Demy, Magdalen College; H. D. Harington, Fellow, Exeter College.

Bachelors of Arts.—N. Kendall, Trinity College, W. W. Andrew, St. Mary Hall, Grand Compounders; E. M'All, St. Edmund Hall; T. W. Webb, R. Tomes, Magdalen Hall; W. Roche, Trinity College; D. Jones, T. Surners, Jesus College; J. Rogers, Balliol College; W. B. Smythe, Corpus Christi College; G. W. Murray, Merton College; E. Hotham, New College; J. Abernethy, O. Brock, Brasenose College; J. Stevens, St. John's College; E. Massie, O. J. Tancock, Wadham College; E. Hawkins, Scholar, R. P. Mallet, G. M. Dowdswell, C. Le Hardy, S. Nicholls, Pembroke College; F. H. Romney, G. W. Kershaw, J. Palmer, J. Steward, W. N. Skillicorn, S. H. Feild, Worcester College; R. W. Goodenough, Student, G. Palmer, E. Conroy, O. B. Cole, J. R. Drake, Christ Church; C. Cheyne, Lincoln College; J. Marriott, H. Stevens, Oriol College; F. Sturmer, E. D. Denton, M. Dand, Queen's College.

On the same day the prizes were decided as follow:—*Latin Essay*.—"Utrum apud Græcos an apud Romanos magis exulta fuerit civilis scientia?"—A. Grant, Student in Civil Law, and Fellow of New College.

English Essay.—"The character of Socrates, as described by his disciples Xenophon and Plato, under the different points of view in which it is contemplated by each of them."—H. Merivale, B.A., late Scholar of Trinity College, now Fellow of Balliol College.

Latin Verse.—"Tyrus"—W. Palmer, Demy of Magdalen College.
English Verse (Newdigate).—"The African Desert"—G. K. Rickards, Scholar of Trinity College.

June 10th.—The following degrees were conferred:—*Bachelors of Medicine, with License to practise*.—T. O. Ward, Queen's College; D. Badham, Pembroke College.
Bachelor in Civil Law.—Hon. and Rev. C. Bathurst, Fellow of All Souls' College, Grand Compounder.

Masters of Arts.—Lord Clonbrock, Christ Church, Grand Compounder; Rev. O. S. Harrison, Queen's College; Rev. W. Wheeler, Demy, Magdalen College; Rev. J. O. Parr, Brasenose College; Rev. W. J. Russell, Pembroke College; Rev. H. V. Shortland, Lincoln College; G. A. Denison, Fellow, Oriol College; Rev. J. Aldridge, Exeter College; Rev. J. S. Halifax, Rev. E. G. Rutdock, Trinity College; Rev. C. Banmatyne, Balliol College.

Bachelors of Arts.—The Earl of Selkirk, Grand Compounder, A. A. Holden, J. Mitchell, Christ Church; E. David, Jesus College; S. S. Wannoth, Queen's College; J. W. S. Donnison, J. J. A. Brown, H. J. Hoskins, H. Hodges, University College; W. E. Trenchard, Pembroke College; T. C. Curtis, Fellow, R. Hollings, St. John's College; E. T. Massey, Brasenose College; M. H. Chaytor, H. H. Cooper, F. J. Buriton, Worcester College; B. F. J. Willesford, Exeter College; H. James, Balliol College; G. Vigne, W. Smith, Trinity College; H. C. Wise, Oriol College.

June 17.—The following degrees were conferred:—*Bachelor in Civil Law*.—Rev. W. Howard, Fellow of New College.

Masters of Arts.—U. T. Price, Grand Compounder, Rev. W. Whalley, Rev. W. Fye, Student, Christ Church; M. C. Tompson, Grand Compounder, Rev. E. J. Ward, Trinity College; Rev. J. Launpen, Grand Compounder,

Rev. E. A. Ormanney, Exeter College; Rev. A. Bromley, St. Edmund Hall; Rev. J. Charnock, Worcester College; T. B. H. Abraham, Wadham College; W. W. Jackson, Lincoln College; W. B. Mant, Oriel College; Rev. J. T. Giffard, Fellow of New College.

Bachelors of Arts.—H. D. S. S. Horlock, Grand Compounder, W. M. K. Bradford, Magdalen Hall; W. A. Hodgson, Grand Compounder, J. Barrow, Scholar, Queen's College; P. D. La Touche, Grand Compounder, C. C. College; E. Odell, Grand Compounder, J. L. Irwin, H. Gray, C. Wordsworth, Student, Christ Church; H. P. Best, University College; J. Cooke, Balliol College; T. Whitaker, B. Hayley, A. M. Bennett, Worcester College; F. Wrench, Trinity College; T. Houlton, Oriel College.

Theological Prize, instituted June 2, 1825.—"The evidence deduced from prophecy in support of the truth of Christianity"—subject for an English essay.

The following subjects are proposed for the Chancellor's prizes, for the ensuing year, viz.—
For Latin Verse.—Nimantia.
For an English Essay.—On the use and abuse of theory.

For a Latin Essay.—Quænam fuerit oratorum Atticorum apud populum auctoritas.

Six Royal Neandride's Prize, for the best Composition in English Verse, not limited to Fifty Lines.—The Success.

CAMBRIDGE, March 26th.—The following degrees were conferred:—

Masters of Arts.—T. Stevens, St. John's College; Rev. R. Twigg, St. Peter's College; T. R. Ashworth, Jesus College; Rev. C. Morgell, Trinity College (*incom paratèd from Dublin*).

Bachelors in Civil Law.—C. A. Nott, Trinity College; J. H. Pattison, St. John's College.

Bachelor of Arts.—Rev. G. H. Langdon, St. Peter's College.

April 2d (the end of term).—The following gentlemen were admitted Bachelors of Arts:—P. Spencer, St. Peter's College; T. Smithett, Queen's College; J. N. G. Lynn, Queen's College; J. P. Cockburn, St. John's College; W. Corbould, E. Boor, Emmanuel College.

April 24th.—The following degrees were conferred:—
Honorary Master of Arts.—Lord Pollington, Trinity College.

Doctor in Physic.—T. Elliotson, Jesus College.
Masters of Arts.—B. Charlesworth, Trinity College; Rev. T. Jarrett, Fellow of Catherine Hall; F. T. Sergeant, C. C. College; T. Sikes, Queen's College.

Bachelor in Civil Law.—Rev. F. Baring, Christ College.
Bachelors of Arts.—J. W. Sanders, J. M. Carrow, J. K. Eagles, E. N. Cooper, Trinity College; F. C. Cook, G. Booth, St. John's College; T. Bates, W. Darby, St. Peter's College; W. K. Izon, Pembroke College; D. Hill, Clare Hall; T. H. Say, Caius College; C. Sandys, A. W. Brown, T. Leah, C. Waller, J. K. Marsh, R. Evans, J. Wright, Queen's College; R. Bealby, B. F. Tuckniss, W. Tomkins, Catherine Hall; F. T. Blackburn, W. Nunn, F. Barker, G. H. West, Jesus College; B. Wilmer, Christ College; J. L. M'Lachlan, Sidney College.

May 12.—The following degrees were conferred:—
Bachelor in Divinity.—Rev. D. Jones, Queen's College.
Masters of Arts.—S. Best, King's College; Rev. T. Dury, Pembroke College; S. Dawes, Caius College.

Bachelors of Arts.—L. W. Sampson, Fellow, King's College; C. Powell, Trinity College; R. M. Atkinson, St. John's College; W. Biscoe, J. Sanders, Queen's College; A. M. Parkinson, Jesus College.

May 20th.—The following degrees were conferred:—
Masters of Arts.—T. Turner, V. F. Hovenden, Fellows, Trinity College; J. Hills, St. John's College; J. Bishop, Compounder, Trinity Hall; G. King, Corpus Christi College.

Licentiate in Physic.—J. Johnstone, Trinity College.
Bachelor in Civil Law.—H. Bond, Christ College.

Bachelors of Arts.—F. Turnly, Trinity College; W. J. Concy, Compounder, Clare Hall; G. K. Jarvis, Pembroke College; T. Walker, Trinity Hall; G. A. Whitaker, Emmanuel College.

May 31st.—The Chancellor's gold medal to a resident Undergraduate, for the English poem, was on Monday adjudged to William Chapman Kinglake, of Trinity College.—Subject, *Bygonium*.

June 10th.—Sir William Browne's three gold medals for the present year were awarded as follow:—
Greek Ode.—J. Hildyard, Christ College.
Latin Ode.—C. R. Kennedy, Trinity College.
Epigram.—W. Fitzherbert, Queen's College.

The following are the respective subjects:—
Greek Ode.—Ilyssi laus.
Latin Ode.—Cuma.
Greek Epigram.—Ægrosit medendo.
Latin Epigram.—Spatilis inclusus iniquis.

June 11th.—The following degrees were conferred:—
Doctor in Divinity.—Rev. R. N. Adams, Fellow, Sidney Sussex College.

Bachelors in Divinity.—Rev. P. Dehary, Senior, Trinity College, Compounder; Rev. A. M. Wale, Compounder, Rev. W. Maddy, Fellows, St. John's College; Rev. J. Dewe, Fellow, Queen's College; Rev. W. F. Wilkinson, Fellow, Corpus Christi College; Rev. W. Holson, Catherine Hall, Compounder; Rev. T. Mortimer, Rev. D. Evans, Queen's College.

Master of Arts.—Rev. E. Lindsell, Jesus College, Compounder.

Bachelors in Civil Law.—J. D. Sprigge, St. Peter's College, Compounder; A. F. Bayford, Trinity Hall.

Bachelors in Physic.—J. Jackson, Senior, Catherine Hall (by royal mandate, on his departure for India);

C. J. Fox, St. John's College; D. L. Thorp, Caius College; J. Pendlebury, Queen's College; W. Whitworth, Jesus College, Compounder.

Bachelors of Arts.—G. Bingley, G. Broadhead, F. H. Gordon, W. E. Lumb, W. Ramsay, S. Starky, Trinity College; W. L. Mills, Queen's College; H. Armstrong, W. H. Apthorp, Christ College; C. A. Stewart, Trinity Hall.

June 12.—*Members' Prizes*. The Bachelors' prizes were awarded; the first to E. H. Fitzherbert, and the second to T. J. Phillips, both of Trinity College. The examiners consider these essays as possessing sufficient merit to entitle the authors to the prize of thirty guineas each; and they will be printed. The usual prize of fifteen guineas awarded to A. W. Chatfield, Undergraduate of Trinity College; but the essay is not to be printed. No second prize adjudged.

The following are the respective subjects:—
Bachelors.—Quantum momenti ad studium rei theologicæ promovendum, habet literarum humaniorum cultus?—*Ser.*

Undergraduates.—Quæ sit forma Πολιτῆας ad Græciæ renaissance status optime accommodata?

The Porson prize (for the best translation of a passage from Shakspeare into Greek verse) adjudged to C. R. Kennedy, of Trinity College. Subject, Romeo and Juliet, Act II. Scene 2, beginning, "He jests at scars," &c. and ending, "I'll no longer be a Capulet."

ROYAL SOCIETY OF LITERATURE.

THE following abstract of a memoir, entitled "the Greek and Latin Inscriptions upon the colossal statue of Memnon, restored and explained;" by M. Letronne, Member of the Institute of France, and Hon. M.R.S.L., was read at the last meeting of this Society. M. Letronne's communication is in French, and extends to 150 pages; it will form an important feature in the publication of the Society's Transactions; and, in the meantime, we congratulate ourselves on being able to present our readers with this accurate and interesting epitome.

M. Letronne precedes his historical and philological disquisitions on these inscriptions by a preliminary notice on the history, size, and probable destination or purport of the statue in question. The vocal statue of Memnon is one of two colossal figures in the plain of Thebes, and on that part of the ancient city which was on the left or western bank of the Nile. They are more than sixty feet in height, at nearly the same distance from each other. Although now unconnected with any of the various magnificent temples which still testify to the power and wealth of the ancient sovereigns of Upper Egypt, within the precincts of the capital of that country, they were formerly the principal ornaments of one of its temples or palaces, built, it is supposed, by Amenophis II. or III., and called, after him, Amenophium. This building was still in existence in the time of Pliny; and there is good reason to believe that one of the statues now remaining, probably that which bears the inscription, is that of the founder. The two statues were originally of a single block of breccia each: the more southern one is still entire; the other, the inscribed one, bears evident marks of having been broken by violence from the waist—the upper part has totally disappeared, but it has been restored—at what period it is impossible to say—by thirteen blocks of gneiss superimposed one upon the other, or laterally attached, so as to form five layers of stone. Strabo and Pausanias saw the colossus in its mutilated state, the upper part lying on the ground. These and other evidences prove that the restoration, whenever it took place, must have been later than the reign of Adrian. The fact, too, of the statue being in this condition during the reign of this emperor is proved by several of the inscriptions hereinafter given, as it is alluded to by them; and many concur with the opinion of historians, that the sacrilegious act was one of those which marked the invasion of the Persians under Cambyses. The learned world was first and principally

indebted for these inscriptions to the labours of our countryman Dr. Richard Pococke, whose Travels in Egypt and various other countries were published in 1743, who not only copied fifty-six of the whole number of 73 of which they consist, but has given them within outlines of the two legs on which they are inscribed,—a caution which M. Letronne has found to be of great advantage in enabling him to fix the date of some, to connect or disconnect others, and to account for the imperfect manner in which some words were originally inscribed. Worden, the Danish traveller, who was in Upper Egypt at the same time as Pococke was, has also given a few, but in a very imperfect state, and has been of little or no aid to M. Letronne. The learned men who accompanied the French expedition into Egypt in 1801 added scantily to the labours of predecessors. Something further has since been published by other English travellers. But the great harvest has been gained, and numberless errors corrected and lacunæ supplied, by Mr. Salt, late his majesty's consul-general in Egypt, and whose copies of these inscriptions have been presented to this Society. M. Letronne has found little or no assistance in the various memoirs which several of the philologists of the continent have already written upon these inscriptions: amongst them he enumerates Leich, Bouchier, Hagenbuch, D'Orville, Jablonsky, and Jacobs, the last of whom has published four of them, in verse, in his last edition of the *Anthologia Græca*. What Jablonsky has written on this subject is to be found in his *Syntagmata de Memnone*. M. Letronne's memoir, now before the Society, is confined to a critical explanation and restoration of the inscriptions alone. This gentleman has already published his views on the history and peculiar phenomena of the statue, as a vocal monument, in a memoir *ad hoc*, in which his hypothesis on the subject is principally founded on the tenor of the inscriptions, where they bear upon it. For a more clear understanding of these ancient documents, M. Letronne has classed them first into two parts: 1. those that have a date; 2. those that have no date. Those with a date are arranged chronologically, without regard to the language in which they are inscribed.* Those without a date are divided into two sections—the Greek and the Latin. Complete references are given in the memoir to the numbers in each preceding arrangement. The particular inscriptions are also marked with the initials of those who have severally published them.†

M. Letronne, after this preliminary introduction, proceeds to an examination of each inscription. The first inscription which he cites is in Latin, and testifies that Aulus Instælius Tenax, principularis of the twelfth legion, which was entitled Fulminatrix; and Caius Valerius Priscus, centurion of the twenty-second legion; and Lucius Quintus, a devisor, a traveller, heard the Memnon, in the eleventh year of the Emperor Nero, on the 17th day of the calends of April: the hour, too, was mentioned; but the figures are obliterated. The date corresponds to the 15th of March, of the sixty-fourth year of our era.

No. 2, also in Latin, states the same fact of Titus Julius Lupus, prefect of Egypt; and the hour was the first hour. This person is mentioned by Josephus and Pliny the elder; he succeeded Tiberius Alexander in this office,

* The first section of this part contains those which preceded the visit of Adrian; the second, those which make mention of this visit; the third, those of a date posterior to this visit.

† M. Letronne has otherwise bestowed great historical and philological research upon these documents.

about A.D. 71, in the reign of Vespasian, and he was succeeded by Paulinus.

No. 3, also in Latin, recites the same of Lucius Junius Calvinus, prefect, and his wife, Minicia Rustica, on the 1st of April, in the fourth year of Vespasian, and at the second hour.

The Suedius Clemens, prefect of the camp, mentioned in No. 4, is understood by M. Letronne to be the person of that name mentioned by Tacitus as a friend of the Emperor Otho; but as the date is the 3d of the ides of November, and the third year of our emperor, it must be assigned to the reign of Vespasian, as Suedius Clemens was only principalis in the time of Otho, and neither that emperor, nor Vitellius, nor Titus, reigned long enough to admit of any other interpretation.

No. 5, also in Latin, is remarkable for reciting no fewer than eleven occasions on which Hancius, son of Julius, paymaster of the third Cyrenaic legion, had heard the same sound; namely, four times in the fourth year of the reign of Augustus, once in the third year, as M. Letronne thinks, of Vespasian, and six times in the fourth year of the same emperor. Another inscription found at Dakkeh testifies that this legion was in Upper Egypt, also, during the reign of Tiberius.

No. 6, is by Tiberius Claudius Heron, in the eighth year of Vespasian.

No. 7 bears the name of a woman, Funisulana Vetulla, wife of Caius Lælius Africanus, prefect of Egypt, and the date of the 31st Jan. A.D. 84, the first year of Domitian. This lady visited the statue three times, but heard the sound only the last time.

No. 8 is entire, but only states the same fact of a centurion of the twenty-second legion, in the fourth year of Domitian Cæsar Augustus Germanicus, 2. 85 A.D.

No. 9 is partly in Latin, and in part Greek. The first part, in Latin, states, as read by M. Letronne, that Titus Petronius Secundus visited the statue in the seventeenth consulship of Domitian, A.D. 96. The second part consists of an hexameter and a pentameter Greek verse, in which M. Letronne observes, *φθίνζας, Ionice for φθίνζω — λάτοδα, Doricè for λητοῖδου—Μίμωνα* in the vocative case, and the words *τὸν γὰρ μέγας ἄδι κάθηται*, appear to prove that the statue was at this period a fragment. The third part, in Latin, is a notice that the prefect's inscription was engraved by Titus Attius Musa, president of the second cohort.

No. 10 serves only to prove, that in the fifth year of the Emperor Adrian, 12th calends of March, at half-past one, Titus Hatenius Nepos, prefect of Egypt, heard the sound (15 Feb. A.D. 121).

The name of the person in the inscription No. 11 is partly Roman and partly Greek; but the inscription itself is wholly Greek. The name is that of Lucius Funisulanus Charisius, and he was strategus of the nome of Hermonthis, and a native of the neighbouring nome of Latopolis. [An inscription at Philæ shews that these two nomes, or districts, were comprehended under the same strategia.] M. Letronne here makes allusion to a peculiarity in the Egyptian government under the emperors — that the strategi were Greeks. If so, the two Latin prænomena prove the application of the Greek Charisius to a Roman family. His wife, too, was a Roman lady of the name of Fulvia; they visited the statue, and heard the sound before and during the first hour of the — day of the month Thoth II I Z, answering to the 6th Sept., A.D. 123.

No. 12 would seem to be a continuation of No. 11, though not directly subjoined to it. It consists of thirteen Greek lines, more or less perfect iambic verses. They contain an address of the same Charisius to Memnon, alluding to the hour of his voice being heard, when his mother, Aurora, greets [bathes?] his body with drops of dew—to the sacrifices and libations which the strategus had offered to him, and comparing him to the Argo, and to the vocal oak of the Dodonaean Jupiter. M. Letronne presents on this occasion some learned remarks on the grammatical construction and poetic licenses of this military poet: as, where *μητρῆ* is used as the last foot of an iambus (perhaps the words *ἡνίκα μητρῆ* ought to have been transposed). The oak is called *φρηγός*, as in Apollonius of Rhodes, and in the pseudo-Orpheic poems. It was the *Quercus esculus* of Linneus. We refer to the original memoir of M. Letronne for the various restorations with which his learning and ingenuity have supplied him, to fill up the *lacunæ* in this poetical address.

No. 13. Caius Bibius Maximus heard the sound at 2½ and 3½ on the 14th calends of March, in the seventh year of the Emperor Cæsar Nerva Trajan, Augustus, Germanicus, Dacicus (16 Feb. A.D. 124).

No. 14, which contains nine imperfect Greek trimeter iambic verses, gives us the name of Celer, a Roman, as strategus, an exception to the general practice mentioned in No. 10. His first visit to Thebes was not to hear Memnon, but, as he says, to labour in the cause of the villagers (quære, was Thebes already reduced to the state of a village?) *τὸν καμύτων*, though he returned for that purpose, and at first Memnon was silent; but two days after, he heard the sound of the god, *τοῦ θεοῦ τὸν ἦχον*. The date, which is the 7th of the month Epiphiis, and the seventh of the reign of Adrian, answers to the 1st of July, A.D. 124, and the 2d hour.

No. 15 (Greek) is in a very imperfect state, particularly the first part of it: the second part, of which a large portion has been originally supplied by Mr. Salt, offers the name of Quintus, who was *νακάρης*, or keeper of the great temple of Serapis at Alexandria, and who was one of those exempted from public charges (*ἀπιλῶν*) and maintained in the museum, and who heard the sound in the fifth year of Adrian.

No. 16 (Latin), quite perfect, or at least offers no difficulty in being made so. Titus Flavius Titianus, prefect of Egypt, heard the Memnon on the 13th calends of April, under the third consulship of Verus and Ambibulus (20th March, A.D. 126, ninth year of Adrian).

No. 17, Latin, and very imperfectly given by those who preceded Mr. Salt. It tells us that Caius Menius Hanlochus, a native of Corinth and centurion of the twelfth legion Fulminator, heard the Memnon during the consulship of Gallicanus and Titianus, on the 13th of the calends of July, which was in the year A.D. 127.

The second section comprises those inscriptions in which allusion is made to the visit paid to Thebes by the Emperor Adrian and Sabina his empress, in the month of November, A.D. 130, viz. the fifteenth of the reign of that emperor.

No. 18 contains merely the words

IMPERAT. A[D]
RIANOC.

but, from its extreme simplicity and shortness, we may suppose it to have been engraved under the eye and by order of the emperor himself; and probably by a Greek, as the name is without the initial Η, and the final letter is Greek.

No. 19 consists first of three Greek lines, containing the name, as very probably made out by M. Letronne, of Julia Balbilla, who on Adrian's hearing the Memnon, on the 24th of the Egyptian month Athyr, A.D. 130, composed ten long and short verses, (given by M. Letronne), and, thanks to his labours and learning, now nearly perfect. They are, as usual, flattering both to the emperor and to the Memnon of Egypt, whose voice was three times heard by the emperor, king of the world. On the first occasion the sound uttered was *χαίρειν*, the Doric infinitive for *χαίρειν*. The statue is called in the second line *Θηβαϊκὸς ἄδης*. In the sixth line the words *ἰς οἰκίαν ἄρα ὄρα* are remarkable, as expressing the shadow cast on the dial by the gnomon; and in the seventh line, that of *ἄς χαλκῶσι τυπέντος*, beaten brass, to which the second sound is compared. The inscription terminates with stating, that Adrian saluted the statue twice — *δις ὃ ἀσπάζεται αὐτῆς Μίμωνα*: and the next inscription testifies that the sound was, in fact, only twice heard, so that probably the first sound (before sun-rise) was only in the imagination of the poetess.

No. 20 is the testimony of *Φλαυῖνος Φιλῶν* to this fact: *ἰνὸς ἄρας, ἰ. e.* within, during, the first hour.

No. 21 offers four Greek hexameters and three pentameters, published with the former in the *Anthologia* of Jacobs, after the notes and corrections of Dorville; but the later labours of Mr. Salt have furnished several improved readings, and the means of suggesting others, to the sagacity of M. Letronne. The same poetess Balbilla speaks:—

I, Balbilla, heard the speaking stone,
The divine voice of Memnon or Phamenoth.
I came along with the beloved Queen Sabina;
The sun was holding the first course of the hour,
In the fifteenth year of King Adrian,
On the 24th day of — Athyr.
On the 25th day of the month Athyr.

Here we observe *πρωτὸς δρόμος*, Doricè for *πρωτοῦ δρόμου*. Adrian is called *καίρειος αἰώνος*, *Eolicè* for *τίσασα*. The last line is a correction of the date given in the last but one.

No. 22 commemorates the simple fact of the sound being heard during the first hour (*ἰνὸς ἄρας*) by Sabina Augusta (wife) of the Emperor Cæsar Augustus.

No. 23 offers fourteen Greek verses of the same Balbilla, divided into two portions, one of six, the other of eight lines. It is addressed to Memnon, and begins with *χαίρει καὶ αὐτῆς προσφρόνως*. The allusion to the statue having been mutilated by the impious Cambyses is imperfect; but we read the words *δοκίμην ἐν σπυγῶν*, to shew that his sacrilegious act was not unpunished. The poetess mentions her royal descent from Antiochus. Her father Balbillus is called *σοφός*, and was probably the individual of that name called by Tacitus *virorum optimus, in omni litterarum genere rarissimus*. His name was Claudius Balbillus, and he was prefect of Egypt under Nero, A.D. 57. The Antiochus mentioned may have been the king of Commagene, third of that name, who died U.C. 770, or A.D. 17. The inscription called that of the Busiritani mentions that this Balbillus visited the pyramids.

No. 24, which offers two long and two short Greek verses, mentions that the Egyptian priests identified Memnon with the ancient king Amenoth; and it also adds its locality as opposite to Thebes, or the city of Jupiter, *ἔντα διὰς πόλιος*. It appears from this, that the Memnon, son of Tithonus, of the Greeks, was the Amenoth of the Egyptians. We read here also *τὸς ἰνίστασιν* for *ἄς ἰνίστασιν*: and the *αι* in *καλαίων* is made short.

The third section contains inscriptions of a date posterior to Adrian's visit to Thebes.

No. 25 presents to us the name of Artemidorus, γραμματις, or public secretary of two nomes, who heard Memnon in the month *Choiu*, which begun on the 27th or 28th of November, in the fifteenth year of the reign of Adrian; and as Adrian left Thebes two or three days before that period, Artemidorus must have engraved the notice of his visit shortly after the emperor's. He was accompanied by his wife (συμπίη) Arsinoë, and his two sons Ailouron and Ptolemy: the former name is unique, and, from its derivation from *αἴλουρος*, a cat, shews the usage of compounding Greek names from Egyptian manners.

In No. 26 Quintus Apollonius Boethus testifies to his having heard the sound with the foregoing.

In No. 27 we learn the fact that for three generations the office of ἀρχιδικαστής, or chief judge, was held in the same family by father, son, and grandson; and as it is in the Greek language, it is probable that this office was given by the Romans to Greeks: the name is Caius Julius Dionysius. *ὄης* is used for *οἰς*.

Nos. 28 and 29 offer nothing remarkable.

No. 30 contains the name of a Petronius, prefect of Egypt, and places the third consulship of Servianus and first of Varus in A.D. 133.

In No. 31 we have three very indifferent Latin lines—

Horam cum primam, cūmque horam sole secundam
 Prolata oceano luminat alma dies,
 Vox audita mihi est ter bene Memnoina.

By Viaticus, A.D. 133.

In No. 32 Memnon is called *Θεῖοστατος*, and mention is made of a month named *Ἀδριανος*. This appellation occurs also, according to M. Letronne, in an astrological papyrus preserved in the Royal Museum of Paris, where it is stated that the 8th of the month Adrian corresponded to the 18th of the old Egyptian Tybi. M. Letronne conjectures, with great probability, from the nonconcurrency of this month with any other, that it was introduced to flatter the emperor, and that it was made to begin on the 24th of Athyr, the month preceding Tybi, being the day on which Adrian arrived at Thebes. The thirty days, then, of the month of *Ἀδριανος* would be from the 20th of November to the 19th of December.

No. 33 only mentions the twentieth year of Adrian.

No. 34 offers the title of γραμματις βασιλικός.

No. 35 contains ten Greek hexameters, with many Homeric plagiarisms, in which the official poet, Gemellus, prefect of Egypt, probably A.D. 140, in the reign of Antoninus Pius, celebrates his visit and the voice of Memnon, in company with his wife Rafilla. The inscription offers nothing very remarkable but the ingenious conjectural emendations and substitutions of the learned author of our memoir.

No. 36 is the notice of M. Ulpius Primianus, prefect of Egypt, who heard the Memnon twice on the sixth of the calends of March in the second consulship of Septimius Severus, 24th of February, A.D. 194. This is the latest date which occurs in these inscriptions.

No. 37 gives the expression *egi gratias*.

No. 38, also in Latin, must be attributed to the reign of Septimius Severus, from the expression AVGG. This Felix, freedman of the emperors, i. e. Severus and Caracalla, held the office of procurator usiacus. This last word offers an instance of the facility with which Greek words were adopted into the Latin language in the decline of the empire. Usiacus can be no other than *οἰσιακός*, which, by the

inscription of the oasis, has the sense of public, imperial, national: *μαθήσους οἰσιακῶν* were the public farms or revenues. The word occurs in no dictionary.

Second Part: Inscriptions without a Date.

First Section: Greek Inscriptions.

No. 39. Two imperfect iambs express the wish of Tribulla that her mother too had heard the sacred voice of Memnon.

No. 40 is of the same poetess, and offers three lines of introduction and five Greek iambs, more correct and better expressed than the preceding. Cæcilia Tribulla, on her second visit, observes that Memnon, son of Aurora and Titobonus, received her and her companions as friends and old acquaintances; and the address finishes with this question: Whether Nature, the creatress of all, has given feeling and voice to stone? The only critical notices of M. Letronne on this inscription are, that *ἔξακουσάντας* and *Τιτοβονίω* terminate iambic lines, making them choliambic, and that *φθίγγματα* is written with two γγ. The place it occupies in reference to the preceding, the one being the highest and the other the lowest on the leg of the statue, proves that both of them must be more recent than the intermediate, i. e. later than the reign of Adrian.

No. 41 presents six Greek iambs, probably of another Cæcilia, daughter of the foregoing Cæcilia Tribulla. The injury done to the statue, and to the quality of the voice rendered by it, in consequence of the violence of Cambyses, are pathetically described.

No. 42. Panion? a native of Side, in Pamphylia? declares, in a Greek distich, that he had verified what he had heard of the vocal powers of Memnon.

In No. 43 Pardalas, of Sardis, promises Memnon that he will remember him in his tablets (*βιβλίω*), having twice heard him.

No. 44 is of Catulus (Græc *Κάτουλος*), τανός, or chief governor of Egypt, who bears witness to having heard the voice, after having come to the statue at night, notwithstanding the injuries of the spoilers.

No. 45 is too imperfect for any thing else to be extracted from it than that more than one person had visited the statue in vain, no sound being heard.

No. 46, also very imperfect, offers only to M. Letronne the opportunity of referring the expression *ὄν ἀνάγνωσ ἴης ποσι*, to a testimony that Memnon was not always thus without a head.

No. 47 presents us with six very good and well-expressed Greek elegiac verses of the poet Asclepiodotus, who was at the time *ἰσπίτροπος*, or procurator of the emperor. The lines are well preserved, and required but very little correction from the ingenuity of our author. The subject of the epigram is an address to Thetis, telling her that Memnon, warmed by his mother's torch, lives and speaks, where the Nile parts the fair-gated Thebes under the brows of Libya, while her son, the restless Achilles, is dumb, whether in the plain of Troy or in Thessaly.

No. 48 contains four Homeric verses, or rather verses made up of scraps from that poet, by Arius, who calls himself an Homeric poet.

No. 49. We have here ten Greek long and short verses, which are very well preserved, and of some merit for their expression and poetry. Poetical licenses are taken, especially in proper names; and M. Letronne has exhibited his usual talent and research in the few corrections which he has proposed. The subject of the little poem of Petronianus, who,

though an Italian, composes in Greek, is, the frequency of visitors to the statue to verify the fact of its uttering a sound at sun-rise, notwithstanding the violence of Cambyses, which had deprived it of the head.

No. 50 is of Heliodorus, the son of Zenon, native of Cæsarea, in the province of Pannias, who thought of his absent brothers, Zenon and Eannus, when he heard the sound twice.

No. 51 is a mere title—*ἱσαρχος λεγιώνος*. No. 52, much mutilated, but mentions that Aponius wrote the *προσκύνημα*, or act of adoration, of Aphroditarius.

No. 53. Claudius Germinus, arabarches and epistrategus of the Thebaid, heard the sound, both in going up and coming down the river. The desert between Egypt and the Red Sea was called Arabia, and the expression *ἀναπλιών*, for going up the river, seems to imply that he had his residence, not at Thebes, but lower down, probably at Ptolemais, which, under the Greeks and Romans, was the capital of the Thebaid.

No. 54. Achilles, with his brother Eumenes, having heard the sound, he leaves to his son Ammonius the task of engraving the notice of it on the stone.

No. 55 is of another epistrategus of the Thebaid, probably Messalinus, who heard the Memnon with his wife (*συμπίη*) Publia Sasis.

No. 56, very imperfect, presents the names of *Ἀρμίνιος* or *Ἀρμίνιος*, a prefect, and of Cambyses.

No. 57. Only the proper name Saturninus.

No. 58. The *προσκύνημα*, or adoration, of one Dionysias or Dianysia.

No. 59. Balbinianus, prefect and ἀρχιδικαστής, or chief judge, admired Memnon.

Second Section of the Second Part: Latin Inscriptions.

No. 60 presents the following hexameter:—
 Auribus ipse meis cepi, sumpsisque canorem.

Nos. 61, 62, 63, present nothing worth notice.

No. 64 gives the names of M. Herennius Faustus and Julius Fadus, of the seventh cohort.

The following inscriptions, to No. 72 inclusive, the number of the whole which are on the statue, are very short and imperfect, and they only present a few titles of legions and cohorts; they are almost all notices of military visitors.

FINE ARTS.

NEW PUBLICATIONS.

Miss Mordaunt. On stone, by W. Sharp, from a Drawing by J. Hayter. Dickinson. A GRACEFUL and elegant sketch; and, as far as a theatrical knowledge of the fair original enables us to judge, a good likeness.

Westminster Abbey and St. Margaret's Church. Drawn by O'Connor.

NEATLY executed; but by no means a favourable view of the magnificent and venerable cathedral. This print revives a strong inclination we have frequently felt to endeavour to blow up St. Margaret's church!

England and Wales. From Drawings by J. M. W. Turner, Esq. R.A. No. IX. Jennings and Chaplin.

MR. TURNER has the rare faculty of communicating to his local views an interest similar to that which Reynolds and Lawrence so frequently communicated to their portraits: he makes pictures of them, highly valuable in themselves, independently of their resemblance to the scenes from which the hint for them has

been derived. "Stamford" and "Alnwick Castle," in the present number, the one under the effect of a violent thunder-storm, the other wrapped in the dun shades of night, are singularly fine examples of his power in that respect.

Views of the Canterbury and Whitstable Railway, taken on the opening Day, May 3, 1830.

Executed in lithography by T. M. Baynes. Canterbury, Ward; London, Tilt.

THE picturesque and the useful seldom have any great analogy. Mr. Baynes has, however, communicated as much of the former quality as appears to have been possible to these two views; which are exceedingly interesting, when contemplated as representing one of those undertakings which will, no doubt, in a few years spread over the whole land, and produce changes that it would at present foil the most active imagination fully to anticipate.

The King. J. D. delt. Dickinson.

A STRIKING and pleasing resemblance of his Majesty, in his favourite pony-chaise. Would that his faithful subjects might have the gratification of again seeing him with such good looks, and enjoying a similar recreation!

Amy Robsart. Drawn on stone by W. Sharp, from an original Painting by G. S. Newton, A.R.A. Dickinson.

WE recollect in our boyish days an old idiotic beggar, "of the north countrie," exceedingly ugly, but of whom, as he was well known in the neighbourhood, an itinerant artist painted a portrait, as a specimen of his abilities. When it was finished, the original gazed at it very attentively for some minutes, and then, turning round with a countenance of great delight, amused the spectators of the scene by the exclamation of, "pretty creature!" Although on perfectly opposite grounds, the same words rose to our lips on the first glance at this sweet little print; "pretty creature!"

The Playfellows. Drawn on stone by W. Sharp, from an original Drawing by John Hayter. Dickinson.

TASTEFULLY executed; but we wish the attention of the boy had been monopolised by his favourite. There is a want of unity in the action; the arm and the countenance have different interests.

A Series of Subjects from the Works of the late R. P. Bonington. Drawn on stone by J. D. Harding. Part III. Carpenter and Son.

THE more we see of Mr. Bonington's works, the more sensible we become of the loss which the arts sustained by his death. The five subjects introduced in the present part of Messrs. Carpenters' most interesting publication, are delightful specimens of his taste and feeling; and the characteristic manner in which they are executed on stone is equally creditable to Mr. Harding.

Priam, the Winner of the Derby Stakes, May 27, 1830. The Property of W. Chiffney. London, published by S. Maunder.

IN our last, on noticing Rowton, we mentioned that the publisher had also announced Priam; but in a race of this kind there is much in the start; and we find from a beautiful and very cheap portrait of this celebrated horse just sent to us, that Mr. Maunder has taken the field so early as to distance all competition. We saw Priam win this famous race; and never, even with eyes inexperienced in these matters, witnessed such fine action in the animal creation. He ran like a well-built and fast-sailing vessel before a favouring breeze;

and like "swift Camilla scoured along the plain" without the appearance of exertion, or the waste of one spring or muscle more than caused him to skim the ground with exquisite grace and rapidity. The accurate portrait of so superior an animal is not only a fit treat for the sporting world, but a thing to be admired by all the lovers of mere beauty: and we would lay eleven to two, therefore, that Priam will be an especial favourite not only for the St. Leger, but for many a tapestried wall, and many a select portfolio.

ORIGINAL POETRY.

JUVENALIA.—NO. III.

WO unto him! who, though the proverb warn,
Sits down in the satiric chair of scorn!
That moment, Villany sets up his howl,
Worse than the Hell-dog's rugged-throated growl

When, by Alcides dragged into the light,
His form obscene stood full exposed to sight.
Wo to the keen Inquisitor of Hearts
Who, even to whispering reeds, the tale imparts!
Even though the deep disdain he mutely feels,
His nostril, looped and buttoned, half reveals!
But should he, with TERRIFIC TRUTH, declare
Aloud, what sinks of sinfulness they are,—
Lo! what a host of human fiends arise!
Hark! what a foul-mouthed din of bestial cries!
Like one who in some ruin gropes his way
Where skulking Owls avoid detective day;
His ears with shrieks, screams, hootings, they
astound, [round!
Whir up the dust, and flap him round and
Thus fares the Satirist! who says but sooth;
For the severest satire now is—*truth*.
No need to polish sentences, like swords,
Nor dip in venom his sharp-pointed words.
Yet, though he but *speak out* what is confest
By each man's conscience smothered in his
breast, [days,

(Some kill the brat that shames them, now-a-
And even to *keep* a conscience is some praise!)
That moment he is wished (devoutly!) dead,
And thousand hard words knock him on the
head;

With missile curses whizzing in his ears,
He sinks to Hades every oath he hears.
Each classic name our City Mermaids quote,
Which swells the Whitefriar linnet's Attic
throat, [rote;

Which parrots, kitchen-bred, have learned by
Each title, from old honour's fount, King Lud,
Which runs the public gutter, slick as mud;
Each rapid epithet of stale abuse,
Unseasoned even by common salt for use;
These, like the boarded Frenchman's savoury
show'r,

On JACK's anointed head, unceasing pour,
To whelm the wight whose cutlass keen and true
Assaults, Iniquity! thy coward crew.

That moment, every fool becomes his foe,
And gnashing teeth grin round in many a row—
The only shining parts that blockheads shew!
Like him who wanders Afric lands unknown,
To find out Niger's head, or lose his own,
And, curious, to some wilderness repairs
Of Monkeys, swinging in their forest chairs;
A sudden squall succeeds to fixt grimace!
And senseless words distort each jabbering face;
Some overhead, the threatening branches shake,
Some through the stems a mask of fury make;
Their fangs they grind with more than human
spite, [not bite!

Throw sticks, hurl nuts, fling dirt,—but dare
Come what come will, Truth shall rebuke the
rout! [shout;

Her sharp, small voice, will rise above their

Their tongues (lithe bows of falsehood!) let
them bend,

And call me any thing—except their friend!
So be my grave my resting-place on Earth,
The scorn my soul is big with shall have birth!
Stand forth, Sir Thomas!—upright, if you can,
And dare assert yourself an *honest man!*

"Honest!"—and yet, without remorse or dread,
Defraud the people of their daily bread!
To save your Country this your sole device,
That corn be kept—just at the starving price!

And you, Sir John!—whose genealogic roots,
Rotten by age, sprout *fungi* and not *fruits*;
You that, erewhile, cried out for blood alone,
French, German, Spanish,—any but your own!
Rabid for fight,—where others were to bleed;
Of victory vain,—where others won the meed;
Promised of war the sinews to supply,
And did!—from every lusty tenant's thigh;
Oped to the general need the public purse,
And put your own five fingers in of course!
Voted large sums for mercenary aid,
And sure! for that, at least, *you* should be paid!
With liberal soul conceded state demands,—
But raised, meanwhile, the rents of all your
lands!

Are you, Sir John! the honest man we seek?—
No!—but perchance we'll catch *white crosses*
next week!

MUSIC.

CIANCHETTINI'S CONCERT.

FEW performers deserve better of the public than Cianchettini; and that this feeling was a general one, his well-attended concert sufficiently proved. Mlle. Blasis sung her best; and La Blache was, as usual, melodious thunder. A solo on the harp, by Miss Gautherot, was played with most brilliant execution, only softened by exquisite taste; and a composition of Cianchettini's own, sung by Donzelli, well merited the immense applause it received.

DRAMA.

KING'S THEATRE.

WHETHER it be that Terpsichore has triumphantly trampled Euterpe under foot, or that *seeing*, as being nearer the "naked truth," has become more fashionable than *hearing*, we cannot exactly determine; but certes, never were people professing to be "passionately fond of music" less disposed to indulge in the prevailing passion than the thousands who congregated at this theatre during the last week to sleep out operatic performances. Notwithstanding the inimitable representation of *Gli Orsini e Curiazzi* and *Il Turco in Italia*, the merits of the vocalists were quite overlooked. All ears appeared to have been shut; and it was not till auditors were told to become spectators, the *legs Talionis* being in sight, that the very (query, pseudo?) musical multitude could be induced to open their eyes. Previous to the ballet not a hand was heard. All digits were reserved for the dancer's toes; and when Terpsichore stood upon these extreme points, the Bulls in the pit were absolutely roaring with delight, and seemed ready to stand on their heads, if not their horns. What the dilettanti are to do upon the dancer's departure, Laporte only can tell; doubtless the dormant propensities of the musical world.

We had intended to have offered a few rational remarks upon the "borrowed plumes" and huge umbrella bonnets which nightly obstruct the view in the pit of this theatre; but not being exactly in the vein, we shall content ourselves by substituting instead, part of a col-

loquy we happened to overhear on Saturday night; the subject—

A full-blown Dame, filling the fourth stall from the right, attired in pick-black hat, white feathers.

1st Dandy. "Who the deuce can she be?"

2d Dandy. "Don't know—must be an undertaker's wife"

1st Dandy. "I wish you could call her a tailor's wife—I'd borrow Mr. Snip's shears, and clip her feathers as close as her crop."

2d Dandy. "D—d nuisance—people have been indicted for less."

1st Dandy. "I can't stand it any longer—I have not seen a leg of her yet." (*Addressing Dame.*) "I beg your pardon, ma'am: may I request you to doff your wig."

Dame. "My wig, sir! Pray who told you I wore a wig?"

1st Dandy. "Your bonnet, ma'am"—

[*Retaining conversation lost in the Tagliani applause; and a quantity of Opera wit and eloquence buried in oblivion for ever.*]

The new lessee of Drury Lane has appointed Morton reader of plays, vice Fred. Reynolds, who is, we hear, about to make his first appearance as a *novelist*; and if he display as much originality in this character, as he formerly did in that of *dramatist*, his new novel will not, at any rate, prove "caviare to the million."

VARIETIES.

Public Education in France.—The French minister of public instruction has addressed a circular to the heads of the colleges and other public establishments for the education of youth, calling upon them to furnish an account of the system of instruction pursued, and of the food, clothing, and general care of the pupils. This is understood to be preparatory to a reform in all these institutions.

Volcano.—Letters from Sicily give lamentable details of the late eruption of Mount Etna. Eight villages, not one of which was ever before affected by the flames or lava of the volcano, have been buried under enormous masses of stones and cinders. The coasts of Calabria, and some parts of Italy, exposed to the wind, have been covered with the same red dust as the vicinity of Etna. The country round the volcano has been completely desolated.

Vegetable Extract.—In the north of France an excellent extract of the herbs used in soups and broths is made by boiling them very slowly with a sufficient quantity of salt, and afterwards evaporating the fluid. A little of this extract, dissolved with gum arabic in hot water, is said to make capital soup.

Yellow Dye from Potatoes.—A French paper disputes with Sir John Sinclair the honour of having discovered a yellow dye in the potato flower. The discovery is stated to have been made in 1794 by M. Dambourney, a merchant at Rouen, who published a treatise respecting it at the time.

Bread.—Baron Ferrusac states, that there are in Paris 500,000 persons who subsist chiefly on bread, and that an increase in the price of this article, at the rate of one halfpenny per day, makes a difference in the year of 9,125,000 francs.

Cæsarian Operation.—This operation was performed a few days ago in Paris, with complete success, by M. Dubois. At the date of the last account, the mother and child were living, and likely to do well.

Weather.—It is stated, in letters from Berne in Switzerland, that on the 24th of May a large quantity of snow fell in that canton; and the cold was so severe, that the inhabitants were all obliged to light fires.

Earthquake.—A letter from Kisliar, in the Caucasus, dated March 9th, states, that during an earthquake, which had just taken place

there, five hundred persons were buried in the ruins of their houses, or of the temples in which they had taken refuge. One of the mountains opened, and a part of it, which was detached, filled up a rich valley, overwhelming every thing.

Butter.—The *Journal des Connaissances Usuelles* gives an account of the means used in the canton of Issigny to procure excellent butter in winter. The cows are warmly clothed, so as to cause them to calve in the autumn, as it is found that the milk, after this process of nature at that time, becomes more abundant and richer in quantity; and during the severest weather in the winter, they were constantly kept clothed, and fed in the open air, as the taste of the butter is said to be much injured by confinement in the stable. The butter of this district is superior to any other on the continent.

Animalised Bread.—A new kind of bread, called *pain animalisé*, is now manufactured in Paris. It having been found that the gelatine of bones, used for soups, was exceedingly nutritious, it was imagined that if this gelatine could be introduced into bread from potato flour, which is very much less nutritious than wheat flour, the former would be equally pleasant, and even more nutritive than wheat-bread. The experiment has been tried with great success; and beautiful loaves of bread, made in this way, are now sold in Paris, at a much lower price than bread from wheat flour. The gelatine is so purified as to impart no unpleasant flavour; and the potato bread, thus manufactured, is as agreeable as it is wholesome. As a cheap, nutritious, and useful article of food for the poor, the potato bread thus made is unequalled. A large quantity of the biscuit sent out with the African expedition was prepared in this manner.

Human Horns.—At a recent sitting of the Royal Academy of Medicine of Paris, a paper was read relative to two human horns, which were submitted to inspection. One of them, resembling, in every respect, a ram's horn, had grown from a man's thigh, immediately over the great trochanter. The second, which is exactly like the other, grew from the posterior part of the leg of the same individual. The horns were removed, in January last, by a surgeon; and the wounds, being cauterised, healed speedily. They gave no pain or uneasiness.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XXXI. June 26.*]

The first volume of Sharpe's Library of the Belles Lettres.—The Anatomy of Society, by Mr. St. John.—An Exposition of the Doctrine of Original Sin, by a Layman.—Mr. Dyce announces the Dramatic Works of Robert Greene, uniform with his editions of Peole and Webster; to which are to be added, the Poems contained in his Prose Tracts; with an Account of the Author and his Writings.—The Journal of a Tour made by Senor Juan de Vega, the Spanish Minstrel of 1828 and 1829, through Great Britain and Ireland: a Character performed by an English Gentleman.—Mr. Ackermann announces a new Annual for 1831, entitled the *Hunnorist*, from the pen of W. H. Harrison, author of "Tales of a Physician;" with wood engravings from drawings by the late Mr. Rowlandson.—Mr. Guy, of Oxford, announces *Geographia Antiqua*, or School Treatise on Ancient Geography.—The Rev. J. Topham announces a small Collection of Prayers, in easy language, for every Day in the Week.—Major Leith Hay is preparing for publication a Narrative of the Peninsular Campaigns, extending over a period of nearly six years' service.—The Elements of the Theory of Mechanics, by the Rev. R. Walker, M.A., Wadham College, Oxford.—Schola Salernitana; a Poem, in Latin rhyme, on the Preservation of Health, by Giovanni di Milano, addressed to Robert of Normandy, son of William the Conqueror; with an Introduction and Notes by Sir Alexander Croke, an English Translation, engravings, &c.—A Translation of Professor Heeren's Works; one of the most valuable gifts that could be offered to English knowledge and literature: *sic ait Ed. L. G.*—Lord Nugent has been for a considerable time engaged upon a work embracing an interesting period of our his-

tory: it is to be entitled, Hampden's Character, Conduct, and Policy, as well as those of the Party with whom he acted. We are assured that the noble author has discovered new traits in the character and conduct of Hampden; and we trust that, not only by his own assiduity and research, but by the communications of literary friends, he may be enabled to illustrate the era he has chosen with much original information.

LIST OF NEW BOOKS.

The Oxonians, a Glance at Society, 3 vols. post 8vo. 1l. 11s. 6d. bds.—Gordon's Personal Memoirs, 2 vols. 8vo. 1l. 8s. bds.—Kennedy's Conversations on Religion with Lord Byron, 8vo. 12s. bds.—The Young Baronet, 18mo. 2s. hf.-bd.—Vening's Rudiments of Mineralogy, 12mo. 4s. 6d. hf.-bd.—The Orphan's Choice, 18mo. 1s. 6d. hf.-bd.—Petersdorf's Reports, Vol. XIV. royal 8vo. 1l. 11s. 6d. bds.—The Foreign Exclusives, 3 vols. 12mo. 1l. 1s. bds.—Journal of the Heart, edited by the Author of "Flirtation," post 8vo. 10s. 6d. bds.—Wilson's Questions on Luke, 12mo. 3s. 6d. sewed.—The Sailor-Boy, a Novel, 4 vols. 12mo. 1l. 4s. bds.—Hemans' Songs of the Affections, 12mo. 7s. bds.—The Captive of Fez, 12mo. 6s. bds.—Hogg's Chemical and Medical Tables, folio, 4s. 6d. sewed.—Hughes' Divines, Vol. II. 8vo. 7s. 6d. bds.

METEOROLOGICAL JOURNAL, 1830.

June.	Thermometer.		Barometer.	
	From	To		
Thursday 17	43.	55.	29.83	29.86
Friday 18	41.	66.	29.74	29.60
Saturday 19	45.	61.	29.53	29.64
Sunday 20	43.	64.	29.55	29.51
Monday 21	41.	66.	29.52	29.45
Tuesday 22	44.	66.	29.39	29.49
Wednesday 23	36.	62.	29.76	29.82

Wind very variable, N.W. and N.E. prevailing. The 17th and 19th generally cloudy, with rain at times: the 19th generally clear, till late in the evening, when it rained. The favourable change in the weather which took place on the 20th, and happening to be "new moon" on the afternoon of the same day, induced persons to commence cutting their grass on the 21st; unfortunately, however, without any second change of the moon, the rain again fell, and continued to do so during the night of the 21st and the greater part of the 22d: the next and this day (24th) have been very favourable to hay-making. Rain fallen, 4 of an inch.

Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude..... 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. May 1830.

Thermometer—Highest..... 78°
Lowest..... 31
Mean..... 51-05645
Barometer—Highest..... 30.03
Lowest..... 29.04
Mean..... 29-60677

Number of days of rain, 11.
Quantity of rain in inches and decimals, 3.75.
Winds.—5 East—9 West—4 North—2 North-east—1 South-east—6 South-west—2 South-west.

General Observations.—The month was not so warm as in the last two years, although the maximum was much greater than usual, and the range 47 degrees: the barometer has not been so low in the month of May since 1827, as respects the extremes—but the mean was less than last year: the quantity of rain remarkably great, being much more than in any of the corresponding months of the last seven years, and more than seven times as much as in May 1829. On the 21st thunder was heard about midnight, attended by vivid lightning: there was also a slight thunder-storm on the 23d, about 3 p.m., with very heavy rain: large hail fell on the 30th. In the afternoon, during a squall, with thunder and some lightning. The evaporation, 0,46875 of an inch.

TO CORRESPONDENTS.

¶ We beg to refer particularly to the two very important papers to literature and to science which will be found under our reports of the Royal Society of Literature and the College of Physicians: the former most interesting in regard to the gradual light which is breaking upon ancient Egyptian history; and the other to the pathology and cure of that appalling disorder, hydrophobia, which is at present so anxious a subject with the public at large. We cannot do what Hint, jun. advises.

A Constant Reader suggests that old English ecclesiastical architecture would be far more eligible for a national cemetery and Christian burial-ground than the imitation of heathen temples.

"Amicus" is little acquainted with the provincial press to fancy such a matter as he mentions worthy of notice. If true, the paragraph could only be considered a confession of folly; and if false, that the Editor of such a Journal was equally unfit to give public information.

To Captain Blakiston's communication, all that we shall at present say is, that he seems to have made a very loose bargain in the first instance, and afterwards to have shewn as much impatience as his publishers did dilatoriness in replying to his letters. This dilatoriness is a grievous fault, and is often visited as severely as absolute wrong. The price given appears to us to have been liberal; and the edition of 1500 fair, considering the expense and risk.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE MEDICAL GUIDE, for the Use of the Clergy, Heads of Families, and Seminaries, &c. &c. By RICHARD REECE, M.D. This edition, containing a copious description of all the new remedies, &c. we can cordially recommend. It embraces the practical part of medicine, without the superfluous theories with which most of the systems of physic are loaded. —Atoneum, April 1837. Printed for Longman, Rees, Orme, Brown, and Green, London.

A SERIES of the most esteemed DIVINES of the CHURCH of ENGLAND. With a Life of each Author, a Summary of each Sermon or Discourse, &c. &c. By the Rev. F. S. HUGHES, B.D. of Emmanuel College, Examining Chaplain to the Bishop of Peterborough, and late Christian Advocate in the University of Cambridge. To be continued in Monthly Volumes, containing, on an average, 50 pages, in a cheap, uniform, and commodious size, and printed by A. J. Valpy, M.A. Red Lion Court, Fleet Street; where Subscribers' names, for a part or the whole of the Series, are received, as well as by all Booksellers in Town and Country. A summary of contents will be prefixed to every sermon, tract, or disquisition; so that not only direct access may be had to any person required for perusal or consultation, but each summary may be considered as a select sermon, well calculated to assist the young divine in composition. Notes and observations will be added wherever they may appear necessary or useful; and at the end of each author will be given an Index of those scriptural passages which have been commented on. The works of Bishop Sherlock, a complete edition of which has not hitherto appeared, and Dr. Barrow, will be first published; afterwards will follow the most popular works of Hall, Aterbury, Jewell, Neeld, Jortin, South, Hurd, Bull, Beveridge, Balguy, S. Clarke, Ogden, Paley, Waddington, &c. Taylor, &c. It is not expected that the whole Series will exceed Fifty Vols.; but any Author may be had separately.

Opinions. "An excellent work. The life of Bishop Sherlock is written in a liberal and manly spirit, which does credit to the writer, and to the prelate to whom it is dedicated." —Times, June 6. "This work is one which ought not only to find its way into the library of every clergyman, but of every private family." —Morning Advertiser, June 3. "This series is intended to supply an important desideratum in the libraries of churchmen, by whom a collection of the best English divines has long been wanting." —Courier, June 10. "No divine, no student, nay, no gentleman, should be without it." —Saxo, June 10. "We are glad that Mr. Hughes has given so much original matter in his work; and we shall be much mistaken if the Summaries themselves do not form a sufficient attraction to the series." —Saturday Times, June 6. "This work is admirably calculated to assist the divine in the arduous task of composition for the pulpit." —Observer, June 6. "It cannot fail to become highly popular and useful in the religious world." —Weekly Dispatch, June 6. "A complete edition of the most celebrated British divines has long been a desideratum in English literature. The editor, the Rev. T. S. Hughes, is well known for his attainments in all branches of literature; and his Life of Sherlock is a great accession to the history of English divines." —Bell's Weekly Messenger, June 6. "I know not whether this work be more important to the public generally, or to our young divines, as models of spiritual argumentation and composition." —Lincoln Herald, June 11. "This undertaking is as great as it is useful. As a cheap and comprehensive body of divinity, it ought to find its way into the library, not only of every clergyman, but of all whose circumstances place it within their reach." —Aberdeen Chronicle, June 12.

Universal Lexicon of the Latin Language. In 2 very large vols. royal 4to. price 16s. 6d. in canvass boards. THE UNIVERSAL LATIN LEXICON OF FACCIOLATI and FORCELLINI. A new edition, in which the Paduan Appendix has been incorporated, and the Italian Significations rendered into English. An Appendix of Twenty Thousand Words has been added by the Editor; together with the Latin and the Latin and English of Gerard's Nigularium Romanum; and Gesner's Etymological Index. By JAMES BAILEY, M.A. London: Baldwin and Cradock, Paternoster Row; and W. Pickering, Chancery Lane. * * * Previously to the publication of this work, no Universal Lexicon of the Latin Language was open to the English Student. The deficiency is now supplied; and several of our Grammar Schools already possess at least one copy for the occasional reference of the pupils. The importance of a work of this nature, as relates to the composition of Latin prose or verse, is too obvious to require demonstration.

BURKE'S DICTIONARY OF THE PEERAGE and BARONETAGE OF THE BRITISH EMPIRE. The popular work justly deserves to be considered as a history of the British Nobility, published by a variety of personal anecdotes, never before published, relative to many illustrious houses in addition to numerous authentic details connected with their lineage, and communicated to the author by the noble inheritors of the titles. The volume, containing 900 pages of letter-press, is most richly illustrated with upwards of 150 heraldic plates, is printed in double columns, with so remarkably clear and beautiful a type, as to comprise a quantity of matter equal to no less than 12 octavo volumes. —John Bull. Henry Colburn and Richard Bentley, 8, New Burlington Street.

THE LOOKING-GLASS for the MIND; or, Intellectual Mirror: being an elegant Collection of the most delightful little Stories and interesting Tales; chiefly translated from that much admired work, "Les Amis des Enfants." With 24 Cuts, by Bewick. Price 2s. 6d. in paper. Printed for John Harris; Rivington and Co.; Longman and Co.; Baldwin and Co.; Harvey and Darton; Whittaker and Co.; Hamilton and Co.; Simpkin and Marshall; T. Cadell; J. Nunn; J. Souter; R. B. Kirby; R. Scholey; Poole and Edwards; Houlston and Son.

THE LIFE of ALEXANDER ALEXANDER. Written by HIMSELF. And edited by JOHN HOWELL. Author of "Journal of a Soldier," "Life of John Nicol," &c. This singular piece of autobiography exhibits, most minutely and faithfully, the real adventures of Alexander Alexander, the disowned son of a gentleman in the west of Scotland. It commences with infancy, traverses three quarters of the globe, and comprehends a period of nearly fifty years of the life of a man who has been in many trying situations, as a soldier, an overseer in the West Indies, and an officer in the patriot armies of South America: it is, in short, the complete, unreserved history of a human being.
 Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

Price 1l. 1s.
THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD.
 Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquis of Cleveland.
 This work is elegantly got up, and comprises 42 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the which comprise the most improvements and discoveries made in the game within the last twenty years.
 London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catherine Street, Strand; and to be had of all Booksellers.

Published by Effingham Wilson, Royal Exchange.
P O E M S; chiefly Lyrical. By ALFRED TENNYSON, Of Trinity College, Cambridge. In 1 vol. foolscap, price 5s.

On the 1st of July, dedicated to Her Highness the Princess Victoria, by the express permission of her Royal Highness the Duchess of Kent. To be continued in monthly volumes, price only 4s. each, neatly bound.

THE JUVENILE LIBRARY, No. I. containing the Lives of Remarkable Youth of both Sexes. This Work will be conducted by William Jerdan, Esq. the Editor of the "London Literary Gazette," with whom a number of Authors of high character are associated, to illustrate the various branches of polite literature and popular instruction in which their respective talents have already obtained public weight and celebrity.
 It will contain a portrait of Her Highness the Princess Victoria, from an original drawing, in the possession of Her Royal Highness the Duchess of Kent; portraits of King Edward VI. and Lady Jane Grey, and one of Sir Thomas Lawrence, engraved from a portrait painted by himself.
 Each Volume will form a complete Work, and may be purchased separately.
 Henry Colburn and Richard Bentley, 8, New Burlington Street.

BELL'S LIFE in LONDON of Sunday next, the 27th of June, will contain a spirited full-length Sketch of His Majesty, seated in his Pony Chaise, as he was seen driving in Windsor Park shortly before his recent indisposition. This Print can be sent, post-free, to all parts of the Kingdom, and will form an admirable companion to the Portrait of His Majesty, published in Bell's Life in London on the 6th of June. Bell's Life in London, price Sevenpence, containing this Print of the King, will be kept on sale Monday, June 26th, and Tuesday the 29th, at the Office, No. 169, Strand, where Franks may be had gratis, to send it to any part of England, Scotland, and Ireland, free of postage. Bell's Life in London of Sunday, June 27th, will, in addition to the Print of the King, contain a second Print, "A Bird's-eye View of Algiers."

Dublin Literary Gazette.
 On Monday, June 26th, will be published in London, No. XXVI. of **THE DUBLIN LITERARY GAZETTE;** or, Weekly Chronicle of Criticism, Belles Lettres, and Fine Arts. Price 3d.

It has been resolved to alter the form of this publication, on the completion of the 26th Number, which closes the first Half-year. In future it will be published monthly, under the title of the *Dublin Literary Gazette and National Magazine*, price 2s. 6d. It will thus contain a greater quantity and variety of matter, and at a much lower price, as it will no longer be subject to stamp duty. For the high character which the *Dublin Literary Gazette* has already attained, the Proprietors are happy to refer to the whole periodical press of Great Britain and Ireland. For the ability and regularity with which the *National Magazine* will be conducted, the best pledge they can offer is the fact, that its management is confided to the same Editor who has hitherto conducted the *D. L. G.*; and that in no one instance has a Number of that Journal ever been a single hour late in appearing than the time advertised in the prospectus. The First Number of the *Dublin Literary Gazette and National Magazine* will be published in London on Monday, July 5. No. II. for the Month of August, will be published on the last day of July, and every succeeding No. on the last day of the Month. Complete Sets of the *D. L. G.* in its weekly form, may be had any day after this week, of Messrs. Hurst, Chance, and Co. St. Paul's Churchyard; and of all London Booksellers.

In the press, and speedily will be published, in 2 vols. royal 8vo.
A NARRATIVE, compiled from JOURNALS written during the PENINSULAR WAR, from 1800 to 1814. By MAJOR LEITH HAY, F.R.S.E. Edinburgh: Daniel Lizars; W. Curry, Jun. and Co. Dublin; and Whittaker, Treacher, and Co. London.

In the press, and will be published on the First of July,
THE JOURNAL of a TOUR made by SENOR JUAN DE VEGA, the Spanish Minister of 1828 and 1829, through Great Britain and Ireland: a Chapter performed by an English Gentleman, and the whole composed in two octavo volumes, and will be accompanied with a Portrait of the Author in the Dress he wore during this undertaking, drawn by John Hayter, and lithographed by W. Sharpe. Printing for W. Simpkin and W. Marshall, Stationers' Hall Court, London.
 The Portrait name above will be published separately, by Dickenson, 143, New Bond Street.

FRASER'S MAGAZINE for Town and Country, price 2s. 6d. The July Number will be published on Thursday next.
 Contents: The Desperate System; Poverty, Crime, and Emigration—The Dead; by L. E. No. 702.—AMERICAN EDITION.

SATURDAY, JULY 3, 1830.

REVIEW OF NEW BOOKS.

The Cabinet Cyclopaedia; conducted by the Rev. D. Lardner, LL.D., &c. &c. No. 8. Vol. I. of the *History of England*, by Sir James Mackintosh, M.P. 8vo. pp. 332. London, 1830. Longman and Co.

OUR anticipations of this volume were certainly very highly raised, and, unlike such anticipations in general, they have not been disappointed. A philosophical spirit, a nervous style, and a full knowledge of the subject, acquired by considerable research into the works of preceding chroniclers and historians, eminently distinguish this popular abridgment, and cannot fail to recommend it to universal approbation. With so many and such sterling claims to our praise, its nature, however, does not impose upon us the duty of being very profuse in our extracts to illustrate the merits to which we have alluded. General character is sufficient where the ground has been so often trodden before; and yet we must, in justice to the vigorous and accomplished author, shew our readers how amply he has deserved the tribute which we have the pleasure to pay to his labours.

A vignette of John signing Magna Charta, by P. Martin after H. Corbould, is an appropriate porch to the literary fabric; an advertisement briefly explaining the writer's views, and an introduction throwing a glance over the earliest state of society among the European races, lead us to the British and Roman period; and thence we are conducted through the various revolutions of the country to the year 1451, when under our feeble sixth Henry the English were finally expelled from France. The general reflections upon this epoch offer a fair example of Sir James Mackintosh's performance.

"A historian (he observes) who rests for a little space between the termination of the Plantagenet wars in France and the commencement of the civil wars of the two branches of that family in England, may naturally look around him, reviewing some of the more important events which had passed, and casting his eye onward to the then unmarked preparations for the mighty mutations which were to affect the relations of states towards each other, their internal rule and condition, and to produce an influence on the character and lot of the European, and even of the human race. A very few particulars only can be selected as specimens from so vast a mass. The foundations of the political system of the European commonwealth were now laid. A glance over the map of Europe in 1453 will satisfy an observer that the territories of different nations were then fast approaching to the shape and extent which they retain at this day. The English islanders had only one town of the continent remaining in their hands. The Mahometans of Spain were on the eve of being reduced under the Christian authority. Italy had, indeed, lost her liberty, but had escaped the ignominy of a foreign yoke. Muscovy was

emerging from the long domination of the Tatars. Venice, Hungary, and Poland, three states now placed under foreign masters, then guarded the eastern frontier of Christendom against the Ottoman barbarians, whom the absence of foresight, of mutual confidence, and a disregard of safety and honour which disgraced western governments, had just suffered to master Constantinople and to subjugate the eastern Christians. France had consolidated the greater part of her central and commanding territories. In the transfer of the Netherlands to the house of Austria originated the French jealousy of that power, then rising into importance in south-eastern Germany. The empire was daily becoming a looser confederacy under a nominal ruler whose small remains of authority every day contributed to lessen. The internal or constitutional history of the European nations threatened in almost every continental country the fatal establishment of absolute monarchy, from which the free and generous spirit of the northern barbarians did not protect their degenerate posterity. In the Netherlands, an ancient gentry, and burghers enriched by traffic, held their still limited princes in check. In Switzerland, the patricians of a few towns, together with the gallant peasantry of the Alpine valleys, escaped a master. But parliaments and diets, states-general and cortes, were gradually disappearing from view, or reduced from august assemblies to insignificant formalities; and Europe seemed on the eve of exhibiting nothing to the disgusted eye but the dead uniformity of imbecile despotism, dissolute courts, and cruelly oppressed nations. In the mean time the almost unobserved advancement and diffusion of knowledge were paving the way for discoveries of which the high results will be contemplated only by unborn ages. The mariner's compass had conducted the Portuguese to distant points on the coast of Africa, and was about to lead them through the unploughed ocean to the famous regions of the east. Civilised men, hitherto cooped up on the shores of the Mediterranean and the Atlantic, now visited the whole of their subject planet, and became its more undisputed sovereigns. The man* was then born who, with two undecked boats and one frail sloop, containing with difficulty a hundred and twenty persons, dared to stretch across an unpassing ocean, which had hitherto bounded the imaginations as well as the enterprises of men; and who, instead of that India renowned in legend and in story, of which he was in quest, laid open a new world, which under the hands of the European race was one day to produce governments, laws, manners, modes of civilisation, and states of society, almost as different as its native plants and animals from those of ancient Europe. Who could then—who can even now—foresee all the prodigious effects of these discoveries on the fortunes of mankind? The moment was fast approaching, though unseen by civil and

* Columbus, born 1441, or earlier according to Mr. W. Irving."

spiritual rulers, when a Saxon monk was to proclaim (without his own knowledge, and against his opinions) the right of every man to think for himself on all subjects—the increasing duty of exercising that right in proportion to the sacredness and awfulness of the subject—the injustice and tyranny of all laws which forbid men to aid their judgment by discussion, and to disclose to others what they prized as invaluable truths. The discovery of the free exercise of reason, thus unconsciously and undesignedly made, was the parent of every other invention and improvement; but it could not have been, perhaps, effected at that time without another occurrence, which strikingly illustrates the contrast between the lasting and the momentary importance of the facts which affect the temporary greatness of single states, and those advances in civilisation in which the whole race of man partakes."

From the close of the book we are inclined to leap back all the way to its commencement for our next extract:—one in which the author states the purpose he has thus far so ably fulfilled.

"The object at which I have aimed is, to lay before the reader a summary of the most memorable events in English history, in regular succession, together with an exposition of the nature and progress of our political institutions clear enough for educated and thinking men, with as little reasoning or reflection as the latter part of the object to which I have just adverted will allow, and with no more than that occasional particularity which may be needed to characterise an age or nation—to lay open the workings of the minds who have guided their fellow-men; and, most of all, to strengthen the moral sentiments by the exercise of them on all the personages conspicuous in history. I am fearful that I shall be thought to have said too much for one class of readers, and too little for another, on the history of our government and laws. I can only offer in excuse, that the characteristic quality of English history is, that it stands alone as the history of the progress of a great people towards liberty during six centuries; that it does not appear reasonable to lose sight of this extraordinary distinction in any account of it, however compressed; that the statement offered here, short as it must be, may much facilitate the right understanding of more recent controversies and changes; and, lastly, that a writer, however much he is to curb his peculiarities and guard against his most frequent faults, must at the same time bear in mind that there are some parts of every extensive subject for which nature and habit have less unfitted him than for others. If in this case I have indulged my own taste too much while walking on a path by me before untrodden, I may reasonably hope that experience will enable me to avoid that excess in the sequel of my undertaking. It is now apparent that the work cannot be confined within the limits first announced to the public. How far it may be found necessary to extend them, is a matter on which it

will require the experience of at least another volume to warrant me in venturing publicly on a more specific declaration."

We cannot do better than select for our ensuing exemplification one of those passages to which the writer alludes, as likely to be thought too much by one, and too little by another class of his readers; and we look to the great struggle between church and state, which took place in the reign of Henry II.

"Thomas-à-Becket, the hero and martyr of the ecclesiastical party, was the son of a citizen of London, as ancient chroniclers tell us, by a Saracen lady, under circumstances which, however repugnant to the course of ordinary life, must have been probably more than once combined in the crusades. Gilbert, his father, made an expedition to the Holy Land, probably not without some views to his calling as a trader. He, and his only attendant, Richard, were made prisoners by a Mussulman emir, whose daughter they were permitted sometimes to see; a permission which loses much of its improbability, if we suppose that he was employed in procuring European ornaments for her, and was allowed to see a lady so exalted above him from a mixture of convenience and contempt. She asked him about his religion, and whether he was ready to risk his life for his God. 'To die,' he answered. 'Then,' said she, 'let us escape together.' He could not refuse. Either his courage left him, or the attempt failed. He escaped with safer companions. She afterwards broke her prison; and by the repetition of the word

"London," found her way so cleverly by sea, that she had no difficulty in passing through the Channel, and reaching the coast of France, where she was met by a merchant vessel, in which she was conveyed to the city of London. Her father, who was at that time in Syria, on his return, and on the coast of Syria, was informed of her adventures, and she was recognised by the faithful Richard, baptised with the royal name of Matilda, married to her Gilbert, and she became the mother of Thomas-à-Becket. This child of love and wonder was beautiful, brave, lively, even lettered; and we must not wonder that he plunged into the parade and dissipation of the noble companions who condescended to receive him among their friends. He appears to have been originally made provost of Beverly, before Theobald had prevailed on the king to make him archdeacon of Canterbury, and subsequently chancellor. His manners and occupations, his pursuits, his amusements, were eminently worldly. When Henry told him, that he was to be archbishop of Canterbury, he smiled at the metamorphosis: when spoken to more earnestly, he appears to have agreed with all other men in thinking, that the choice could only have arisen from Henry's confidence in him as a blind instrument in his expected contests with the church. Honour alone was, perhaps, enough to call up a sudden blush at so degrading a reliance. 'Do not appoint me, sir, I entreat you. You place me in the only office in which I may be obliged no longer to be your friend.' Thus far his deportment was manly; what followed is more ambiguous. He immediately dismissed his splendid train, cast off his magnificent apparel, abandoned sports and revels, and lived with fewer attendants, coarser clothes, and scantier food, than suited the dignity of his station. That extraordinary changes suddenly manifest themselves, especially in a lofty and susceptible spirit like that of Becket, is certainly true; and it is evident, on a merely human view of the subject, that personal honour might have

quickly revived the sense of professional decorum, and led rapidly to the simple conclusion, that the only sure way of appearing to be good is by being so in truth. A man of decisive character might seek to secure himself from relapse by flying to the opposite extreme in his outward deportment. It is not to be certainly pronounced, that either the subsequent violence of his policy, or the gross inconsistency of some parts of his conduct with his professions, decisively excludes the milder construction of his motives. Moderation is the best pledge of sincerity, but excess is no positive proof of hypocrisy. Though those who suddenly change the whole system of their conduct have most need of candour, they are by no means at all times the foremost to practise it. But the conduct of Becket has too much the appearance of being the policy of a man who foresaw that he was about to carry on war, as the leader of a religious party; and that it was necessary for him to assume that ostentation of sternness, and display of austerity, which the leaders of such parties have ever found to be the most effectual means of securing the attachment of the people, and of inflaming their passions against the common enemy. Religion might even acquire a place in his mind which she had not before; but it was so alloyed by worldly passions, that it is impossible for us to trust on any occasion to the purity of his motives. The common objects of vulgar ambition were undoubtedly sacrificed by Becket. He lost high office and unbounded favour. He preferred to them dominion over the minds of men, and the applause of the whole lettered part of Europe. In the year 1163, the hostilities between church and state began. Many instances of the most scandalous impunity of atrocious crimes, perpetrated by ecclesiastics, had lately occurred. The king, incensed by these examples, which he justly imputed to the exemption of the clergy from trial before the secular courts, while the ecclesiastical tribunals to whom they were subject had no power to inflict capital, or, indeed, any adequate punishment, called together a great council at Westminster, and required the bishops to renounce for their clergy an impunity as dishonourable to themselves as inconsistent with order and law. He required that every clerk taken in the act of committing an enormous crime, who was convicted of it, or had confessed it, should be degraded and forthwith delivered over to secular officers for the purpose of condign punishment. Finding it difficult to obtain this moderate demand, he tried to obtain the same object in less offensive language. He asked if they were ready to observe the customs and prerogatives of Henry I.? The archbishop answered, 'Yes; saving the rights and privileges of their order;'—one of those reservations which seem specious till it be discovered that they destroy the concession to which they are annexed. The king left them with just displeasure:—they followed him to Woodstock, where they assented to the demand without any saving of the rights of their order. The archbishop was not persuaded to follow his brethren till the last moment. Henry then called a general council at Clarendon, about the end of January, 1164, to give the form of law and the weight of national assent to the moderate concessions which the clergy had made to good order and public justice. The assembly at Clarendon seems to have been the most considerable of those which met under the title of the Great or Common Council of the Realm since the Norman invasion. They were not yet called by the name of a parliament. But whatever difficulty may

exist concerning the qualifications of their constituent members, there is no reason to doubt that the fulness of legislative authority was exercised by the king only when he was present in such national assemblies, and acted with their advice and consent. The king made his propositions to the parliament in the form most inoffensive to the church, as a recognition and affirmation of the customs and liberties observed in the time of his predecessors, especially of the late king; which, however disregarded in practice, yet by force of the comprehensive clause restoring the Saxon laws, might be easily made to extend to the concessions he had required from the clergy."

On Becket's death the following remarks occur.

"Thus perished a man of extraordinary abilities and courage, turbulent and haughty indeed; without amiable virtues, but also without mean vices; who doubtless believed that he was promoting the reign of justice by subjecting the men of blood to the ministers of religion; but who was neither without ambition nor above the vulgar means of pursuing his objects. That Henry did not intend the murder of Becket, may be concluded from the legal hostilities which were in contemplation against him, and from a confidence that so sagacious a monarch must have foreseen much of the mischief which this atrocious deed actually brought on him. It is deserving of observation, how many murders were perpetrated in churches in those ages, when they sheltered the worst criminals from justice. Since the period when they are considered with reasonable respect, and have ceased to enjoy a discreditable immunity, they have also ceased to be the theatre of such bloody scenes."

The subjoined refers to another most important era—the gradual formation of the English House of Commons.

"On the 6th of August, 1265, a fierce and cruel battle was fought at Evesham, between prince Edward and the Earl of Leicester. The king, who was then a prisoner in the hands of Leicester, is said to have been brought into the field. The Welsh auxiliaries in Leicester's army are charged (but by English writers) with breaking the line by a disorderly flight on the first onset. In attempting to rouse the valour of his troops, which this example had damped, by rushing into the midst of the enemy, Leicester was surrounded and slain: his army was totally defeated, with great slaughter both of the leaders and of the soldiery. His body was, after being mangled and mutilated in a manner to which the decency of a civilised age forbids a more distinct allusion, laid before the lady of Roger Lord Mortimer, as a sight grateful to her humanity and delicacy. 'His hands and feet were cut from the body, and sent to several places.' His memory was long revered by the people as one who died a martyr to the liberties of the realm. During the vigorous reign which ensued, the popular feeling was suppressed. In the next generation, when the public feeling could be freely uttered, he was called 'Sir Simon the Righteous.' Miracles were ascribed to him, and the people murmured at canonisation being withheld from their martyr. He died unconscious of the imperishable name which he acquired by an act which he probably considered as of very small importance,—the summoning a parliament, of which the lower house was composed, as it has ever since been formed, of knights of the shires, and members for cities and boroughs. He thus unknowingly determined that England was to be a free country; and he was the blind instrument of disclosing

to the world that great institution of representation which was to introduce into popular governments a regularity and order far more perfect than had heretofore been purchased by submission to absolute power, and to draw forth liberty from confinement in single cities to a fitness for being spread over territories which, experience does not forbid us to hope, may be as vast as have ever been grasped by the iron gripe of a despotic conqueror. The origin of so happy an innovation is one of the most interesting objects of inquiry which occurs in human affairs; but we have scarcely any positive information on the subject: for our ancient historians, though they are not wanting in diligently recording the number and the acts of national assemblies, describe their composition in a manner too general to be instructive; and take little note of novelty or peculiarity in the constitution of that which was called by the Earl of Leicester. That assembly met at London on the 22d of January, 1265, according to writs still extant, and the earliest of their kind known to us, directing 'the sheriffs to elect and return two knights for each county; two citizens for each city; and two burgesses for every burg in the county.' If this assembly be supposed to be the same which is vested with the power of granting supply by the Great Charter of John, the constitution must be thought to have undergone an extensive, though unrecorded, revolution in the somewhat inadequate space of only fifty years, which had elapsed since the capitulation of Runnymede: for in the Great Charter we find the tenants of the crown in chief alone expressly mentioned as forming with the prelates and peers the common council for purposes of taxation; and even they seem to have been required to give their personal attendance, the important circumstances of election and representation not being mentioned in the treaty with John. Neither does it contain any stipulation of sufficient distinctness applicable to cities and boroughs, for which the charter provides no more than the maintenance of their ancient liberties. Probable conjecture is all that can now be expected respecting the rise and progress of these changes. It is, indeed, beyond all doubt, that by the constitution, even as subsisting under the early Normans, the great council shared the legislative power with the king, as clearly as the parliament have since done. But these great councils do not seem to have contained members of popular choice; and the king, who was supported by the revenue of his demesnes, and by dues from his military tenants, does not appear at first to have imposed, by legislative authority, general taxes to provide for the security and good government of the community. These were abstract notions, not prevalent in ages when the monarch was a lord paramount rather than a supreme magistrate. Many of the feudal perquisites had been arbitrarily augmented, and oppressively levied. These the Great Charter, in some cases, reduced to a certain sum; while it limited the period of military service itself. With respect to scutages and aids, which were not capable of being reduced to a fixed rate, the security adopted was, that they should never be legal, unless they were assented to at least by the majority of those who were to pay them. Now these were not the people at large, but the military tenants of the crown, who are accordingly the only persons entitled to be present at the great council to be holden for taxation. Very early, however, talliages had been exacted by the crown from those who were not military tenants; and this imposition daily grew in im-

portance with the relaxation of the feudal tenures, and the increasing opulence of towns. The attempt of the barons to include talliage, and even the vague mention of the privileges of burghs, are decisive symptoms of this silent revolution. But the generally feudal character of the charter and the main objects of its framers prevailed over that premature but very honest effort of the barons. The following general observations may, perhaps, throw some light on the transition by which the national assembly passed from an aristocratical legislature, representing, perhaps not inadequately, the opinions of all who could have exercised political rights if they had then possessed them; through the stage of a great council, of which the popular portion consisted of all tenants in chief who had the power and the desire to attend such meetings; and at last terminated in a parliament, of which members chosen by the lesser nobility, by the landholders, and by the industrious inhabitants of towns, were a component part. With respect to the elections for counties, the necessary steps are few and simple. The appointment of certain knights to examine and redress the grievances in their respective counties, was likely to be the first advance. The instances of such nomination in the thirteenth century were probably, in some measure, copied from more ancient precedents, overlooked by the monkish historians. It is scarcely to be doubted that, before the Great Charter of John, the king had employed commissioners to persuade the gentry of the provinces to pay the scutages and aids, which, though their general legality was unquestionable, were sure to be often in arrear. They were, doubtless, armed with power to compromise and to facilitate payment by an equitable distribution of the burden among the military tenants. It is a short step from this state of things to direct the inferior military tenants of the whole kingdom to send deputies to the capital, empowered to treat with the crown respecting these contributions on general and uniform principles. The distinction made by the charter between the greater barons, who were personally summoned, and the smaller barons, who were only warned to attend by general proclamation, pointed out very obviously the application to the latter of the principle of representation, by which alone they could retain any influence over the public councils. The other great change, namely, the admission of all who held land from any lord mesne or paramount, not by a base tenure, to vote in the election of knights of the shire, has been generally regarded as inexplicable. Considerable light has lately been thrown upon it by one of the most acute and learned of our constitutional antiquaries. It is universally agreed, and, indeed, demonstrated by the most early writs, that the suitors at the county court became afterwards the voters at county elections. It is now proved that numerous free tenants of mesne lords, in every county of England, did suit and service at county courts, certainly in the reigns of Henry III. and of Edward I.; probably in times so ancient, that we can see no light beyond them. As soon, therefore, as the suitors acquired votes, the whole body of the freeholders became the constituents in counties. Some part of the same process may be traced in the share of representation conferred on towns."

Our remaining notice must be more brief than we could desire, looking at the very interesting parts which present themselves to us as eligible for selection. In describing the battle of Crecy, we notice that Sir James follows the

common story, and ascribes the Prince of Wales' assumption of the motto *Ich dien* to his having slain the King of Bohemia with his own hand; a fact of which we expressed a doubt in our recent review of the Anglo-Gallic Coins, and a doubt to which we still adhere, in spite of this new authority. It would perhaps be too much to expect from the author of a history like this, that he should give the toil of minute inquiry into every mere point which has been contraverted; but the fame of our hero Edward ought not to be stained upon the allegations of the enemies whom his valour humbled. The fable or romance of Eustace St. Pierre and the citizens of Paris is also told at this era, without any question of its historical truth: and the glorious battle of Poitiers is very shortly dismissed, without adverting to recent lights thrown on that memorable victory. We have only farther to add, respecting insulated events, that Sir James Mackintosh does not yield his belief to Mr. Fraser Tytler's theory of the residence of Richard II. in Scotland after his deposition.

A curious table of the Anglo-Saxon population is appended to the volume, of which we now take leave; hardly caring to repeat our recommendation of it to that popularity which it is so sure to enjoy as a model of history.

Southennan. By John Galt, Esq., author of "Lawrie Todd," "Annals of the Parish," &c. 3 vols. 12mo. London, 1830. Colburn and Bentley.

Who is not read in fairy love? and who will not recollect that there are some spirits all powerful in their own domain, but weak and subdued when beyond their own enchanted territory? Some such spirit is surely Mr. Galt's inspiration; and historic fiction is the running stream which puts a boundary to his magic, and over which he cannot pass. Public opinion has in this confirmed our own: while the *Annals of the Parish*, *Lawrie Todd*, &c., are in every body's hands, the volumes, of all others in the circulating libraries, which "see a deal of service"—the *Spac Wife* and *Rothallan* are consigned to more than comparative obscurity. For humour blent with pathos, for giving intense individuality to an oddity, for those slight touches—a phrase, a thought—which are to a book what breath is to the body, that which is its life—Mr. Galt is unrivalled. How is it, then, that his historic romances are cold, uninteresting, deficient in character and dramatic power? We are inclined thus to solve the difficulty. We do not think that either imagination or invention are with him very creative powers; he requires to see, in order to describe, which he will do to perfection; he requires a hint how to act, a face from which to draw his likeness, a living material on which he may work: in short, why *Lawrie Todd* is the first of its class, and *Southennan* so low, is, that Mr. Galt has lived in America, seen American people; whereas he certainly did not live in Queen Mary's time, and has only read about her courtiers: he possesses the rare and graphic talent of reality, but not that of romance. *Southennan*, the ostensible hero, is a nonentity; and the heroine only remarkable for the violence of her first love, and the quiet, easy manner she recovers from the most desperate grief to marry another—nothing can be more abrupt or unnatural than the transition. Again: we rather suppose the author means us to be interested for Mary; but he has contrived, and we think unconsciously, to make the sacrifice of Chatelard one of the most heartless, calculating pieces of self-security of which woman

complete adept in swimming, even before he becomes acquainted with the letters of the alphabet. From the nature of his profession he is in continual peril of suffering wreck; and the necessity of the above-mentioned advantage is obvious. The elder Beckner was fully aware of the truth of this assertion, and would not neglect so desirable a requisite in a seaman. No sooner had little Beckner issued from the cradle, and begun to move about, than his father applied himself to give him lessons in swimming. It is surprising of what human nature is capable when its powers are properly cultivated and called into exercise. The experience not only of danger, but of an unpleasant sensation, which causes so much pain and terror in little children, was undergone by Beckner with all the indifference of a full-grown man. His father used to cast him into the waves almost before he could speak — then, supporting him with one arm, he began to teach him how to move his little legs and arms. By this early application the pupil became such a proficient in the art, that in the fourth year of his age he was able to follow, by swimming, the vessel in which his parent served, to an astonishing distance. His father kept an active eye upon him, and when he perceived that the child began to be overcome with fatigue, would plunge into the sea after him, and bring him back to the vessel. At other times, when the little fellow did not appear much exhausted, a rope was thrown to him, by the aid of which he very briskly climbed up the side of the ship. In a short time Beckner became useful aboard; he was so hardy, active, and free from all sense of fear, that in the midst of the most tempestuous weather he did his duty about the vessel with perfect unconcern. In the dreadful conflict of the elements, when the wind howled furiously, tearing the unfurled canvass, and the rain fell in torrents, the hardy boy was to be seen actively at work, neither daunted by the gloomy aspect of the storm, nor by the hardships it imposed. He climbed up the masts with astonishing facility; and in the midst of the raging tempest, when the vessel was tossed about on the broad bosom of the sea, he might be observed perched on the top of the mast, or entangled in the rigging, in the same apparent tranquillity and indifference as might be shewn by a person viewing the storm from under cover, in complete safety and comfort. Severe and hardy education is the most apt to prepare men for heroic deeds and magnanimous resignation. In the present state of society, persons are prompted to deem rude and barbarous that system of education which confers decided benefits on our moral and physical qualities; but the lessons of experience should teach us the justice of the above statement. Little Beckner was brought up indeed in a most rigorous manner; his food was biscuit, so hard and musty that it was necessary to break it by main force; he was allowed a few hours of sleep, and that too taken, not in a comfortable bed, but stretched upon the hard floor; yet for all this the boy continually enjoyed a perfect state of health; he never suffered from a cold, and he was exempted from fevers, complaints of the stomach, and the long train of maladies which generally originate in a life of ease, sloth, and dissipation. This freedom from disease enabled Beckner also to possess a contented mind, and a heart free from wants and sorrows. The desire of glory and distinction must be born with the individual. Like every other human feeling, it may be improved or softened down, but it

cannot be fostered where nature has not already sown the seed. Circumstances certainly stimulate men to deeds, both of virtue and crime; but the passion that gives the impulse to those acts must have previously existed. In persons deprived of the advantages of education, we often see an ardent love of learning; and, in like manner, in a humble mind, we find an emulation for great things, which seem at variance with the condition of the individual. This must be the operation of natural instinct, which certainly displays itself before the reasoning faculties can be brought into action. Young Beckner, owing to the meanness of his origin, derived little benefit from instruction by books; and though he was naturally of a quick disposition and persevering spirit, these qualities could not be brought to maturity for want of mental cultivation. His father, having destined him to a seafaring life, bestowed all his attention, as we have seen, on the task of preparing him to become a good sailor. Delarred, therefore, from the enjoyments which are supplied by the improvement of the mind, and deprived, likewise, of every probability of obtaining any distinction from the exercise of its faculties, the desires of Beckner were directed into another channel. The great and the daring have unusual attractions for boys. We see a large proportion of children, even in their games and sports, give a preference to every object which argues the possession of courage, and the contempt of danger. This feeling, deeply rooted in the heart of Beckner, discovered itself very early; and was no doubt improved by the hardy system of education adopted towards him by his father. His early dreams were, accordingly, all of glory; since noble sentiments and courage mostly possess a larger share in its acquisition than mental possessions. Beckner, who felt conscious of his own intrepidity and constancy, and of having a frame prepared for toil and fatigue, anxiously longed for the moment when the glittering hopes that played before his fancy should be realised. The naval glories of England were the theme of his speculation; and, as he was aptly fitted by nature and education for the rough trials of the sea, he indulged the hope of obtaining distinction in the navy. Being asked one day what was glory, he answered, 'Glory is to serve our country with zeal, and fulfil with strictness the duties of our station.' Young Beckner was so assiduous, and so full of good-will, as well as quickness of disposition, that at the early age of twelve he had obtained a promotion in the vessel in which he served, and was adjudged double pay. The captain of the ship used to point him out as a model to other young seamen; and, on a certain occasion, he did not scruple to say, 'If this boy continues to display the same courage and good conduct, I doubt not, that in the sequel he will obtain a post superior to my own.' Young Beckner was continually exhibiting traits of daring; he never recoiled from the prospect of danger; and his adventurous soul appeared to enjoy a certain delight when engaged in the performance of some duty of which the probable peril would intimidate other youths. But amidst the various instances of courage and noble resolution illustrated in his short career, none deserves our admiration more justly than the action which put a period to his existence. Beckner and his father were making a voyage from Port-au-Prince to France. Among the passengers on board, there was a rich American, with his infant daughter. This child, taking advantage of a moment when her nurse, rather

indisposed, had insensibly fallen asleep, separated herself from the servant, with the strange propensity to roving discovered in children, and ran to the head of the vessel. There she began to look with mingled curiosity and wonder on the vast expanse of the ocean; and whilst her attention was thus occupied, something made her suddenly start, when, turning her head, she lost her balance, and fell into the sea. Fortunately enough, the elder Beckner saw the child fall, and, with the quickness of lightning, he plunged himself into the waves in order to effect its rescue. His noble endeavours were successful. In a few seconds he had seized the little girl, and whilst with one arm he held her close to his breast, he strove, by swimming with the other, to regain the vessel. His proficiency in swimming would have enabled him to save both the child's life and his own, when, to his consternation, he perceived a large shark advancing rapidly towards him. The formidable fish came lashing the waves on which it was borne, anxious for its prey. Beckner saw the horrible danger by which he was threatened, and cried aloud for help. In a moment all the passengers and crew thronged to the deck of the ship; but, though every one saw the peril, and lamented the lot of the courageous sailor, no one dared venture to his assistance: the appearance of the monster terrified them. Those of the vessel, unable to afford a more efficient aid, began a brisk fire against the shark, which, regardless of the noise, kept still advancing, and was near gaining its object. In this moment of horror and dismay, whilst vigorous and brave men were struck with amazement, and unable to act, a generous impulse of heroism and filial tenderness prompted a boy to perform what no one else had the courage to dare. Young Beckner, seeing the extremity of the danger to which his father was exposed, now seized upon a well-sharpened sword, and with this weapon plunged into the sea. By his dexterity in swimming, he soon succeeded in the plan he had formed. He dived under the water, and, getting behind the shark, he swam until he was below its stomach, and then, with equal skill, steadiness, and resolution, thrust his weapon into the animal, to the very hilt. Startled by this unexpected attack, and writhing under the pain which the wound produced, the shark, excited to rage, now abandoned its intended prey, in order to vent its fury upon the young assailant. A fearful spectacle presented itself to the view. Every one on the vessel stood in a throbb of anxious horror and expectation. The generous young Beckner, nothing daunted by the formidable appearance and superiority of the enemy with which he had engaged, in order to save his father, continued for some time the unequal contest. Whilst the huge animal was twisting and turning to seize upon its prey, the boy plunged again and again his sword into its body. But the strength of Beckner was not sufficient to produce a mortal hurt; and, though the numerous wounds which he inflicted did severe injury to the horrible foe, the little hero at length found the necessity of striving to regain the vessel and abandon the combat. The crew had meantime thrown out ropes to the father and his spirited and self-devoted son, in order that they might be rescued through their means. For some time, the motion of the waves, and the necessity of flying from the more imminent danger presented by the incensed shark, hindered the two objects of distress from availing themselves of the help held out to them; but at last they both succeeded in each grasping

one of the numerous ropes that were thrown out. Every one on board now lent his assistance to draw them out by strength of arms. These efforts, to the lively joy of the anxious spectators, were not void of success. Hope began to dawn in the breasts of all. Both father and son were now above the waves, and suspended by the ropes—their rescue appeared certain. The enraged and bleeding animal perceived that its prey was on the point of escaping. With the sagacity of instinct, and stimulated by the natural impulse of vengeance, the monster now collected every energy, and, making one mighty bound, succeeded in catching between its fearful teeth the unfortunate boy, who was still suspended on the rope which he held; the effort of the huge animal was so successful, that it divided its victim into two parts, of which the creature devoured one, whilst the other was left, a horrid token of the heroism and dreadful fate of young Beckner! The spectators, at this appalling scene, uttered a cry of horror, and stood fixed in sorrow and amazement. They then applied themselves to help the elder Beckner, who safely gained the vessel, with his little charge, the unfortunate cause of the calamity. Such was the end, at once generous and frightful, of young Volney Beckner. He was little more than twelve years of age when he encountered this terrible adventure, which put a period to his life, and smothered the rising hopes that his qualities had inspired in the breasts of those who knew him. His noble spirit, his courage and magnanimity, would certainly have enabled him to play a conspicuous part in the career which he had embraced; but Providence had decreed otherwise. His parents, in the hour of their distress, were not sufficiently prudent to have consulted the propriety of his education, and the necessity of his being educated in a school, where he might have been surrounded by the instruction of a liberal education. When we consider the devotedness of his parents, and the lively feelings of sorrow and regret, which the sympathising heart; but still, when the imagination is roused, and the best feelings of our nature are touched by the heroism of such deeds, we must admit that the misfortunes with which they may be attended are not left entirely without consolation."

We find that we must reserve the extracts from the life of Sir Thomas Lawrence for our next number.

Memoirs of the Life and Works of George Romney. By the Rev. John Romney, B.D. 4to. pp. 332. London, 1830. Baldwin and Cradock.

IN this age, so contemptuously characterised by Burke, in his eloquent lamentation over the flight of noble and chivalrous incentives to action, as "the age of economists and calculators," it is gratifying to find any work undertaken with views which it is impossible to mistake for mercenary; for the sale of 300 copies, to which we understand the impression of the volume under our notice has been limited, will certainly do little more than cover the expense of publication. Filial piety, one of the purest and best of human motives, is that by which alone Mr. Romney has been stimulated to its production. "The author," he observes in his preface, "when he first meditated these *Memoirs*, did not forget the judicious advice of Horace,

versate dtu, quid ferre recusant,
Quid valeant humeri;

and certainly should, under any other circumstances than those in which he was placed,

have declined the undertaking: but when he considered how much he was bound by duty to protect the posthumous fame of his revered relative, and saw with mortification that all the accounts which have been given both of him and of his works were either defective, false, or injurious, his scruples arising from diffidence soon yielded to a more powerful impulse; and he should have deemed himself guilty of very culpable indifference if he had not endeavoured to dispel the malignant cloud that hangs over his father's memory, and to place his character in its true light; by giving publicity to the documents in his possession, and by relating such circumstances as were within his own knowledge respecting the life and works of so rare a genius, which, in fact, none but himself could communicate."

George Romney was born at Beckside, adjoining to the town of Dalton, in Furness, Lancashire, on the 15th December, O.S. 1734. His father was a carpenter, joiner, and cabinet maker, of extensive business, who, notwithstanding the disadvantages of his station and circumstances, had enriched his mind with much science and general knowledge. Being taken from school in his eleventh year, George remained with his father until he was twenty-one; when he gave such decisive indications of talent, and manifested such a growing enthusiasm for the arts of design, that it was deemed advisable to place him under some able master. He was accordingly articled to an itinerant painter of provincial fame of the name of Steele, with whom, however, he remained only two years; and having in the mean while married, he immediately commenced the public profession of a portrait-painter; sometimes amusing himself by historical compositions, several of which were, even at that early period, distinguished for excellence, both in design and colouring. At length it was thought expedient that Mr. Romney should try to establish himself in the metropolis; and in the spring of 1762 he went thither. In the next year he became a competitor for the premiums offered by the Society for the Encouragement of Arts and Sciences, and was so successful as to obtain the second prize for his picture of "the Death of General Wolfe;" although subsequently the adjudication was revoked, the second prize assigned to Mortimer, and another premium, expressly created for the purpose, decreed to Mr. Romney as a recompense due to the merit of his performance. The occurrence gave publicity to his name, and procured him considerable employment. He became a member of the Free Society of Artists, and exhibited with it for five years; and, afterwards, with the Chartered Society in Spring Gardens. In 1773, when in full and lucrative practice as a portrait painter, Mr. Romney nobly determined to relinquish the temporary advantage, and to repair to Italy, for the purpose of making those studies which he felt to be necessary to the attainment of excellence in his profession. He accordingly set off, accompanied by his friend Mr. Ozias Humphreys, and visited Genoa, Leghorn, Pisa, Florence, and Rome. During his residence in the "eternal city," comprising a period of above a year and a half, Mr. Romney devoted himself with the most enthusiastic ardour to the study of the antique and of the great masters, not omitting occasionally to exercise his own invention. Returning by way of Florence, Bologna, Venice (at which place, he observes in one of his letters, he was "almost lost to every thing in this world but Titian"), Parma, Turin, &c. he arrived in

London in July 1775. The house in Cavendish Square recently occupied by the late Mr. Cotes, the crayon painter (the one at present occupied by Mr. Shee, the President of the Royal Academy), being vacant, it was engaged by Mr. Romney. Here he resided for the remainder of his professional career; and here, of course, all his principal pictures were painted. He was now generally acknowledged as the rival of Sir Joshua Reynolds; and in a short time his celebrity became so great, that his practice much exceeded that of his illustrious competitor. Unfortunately, his attachment to his art rendered his application to it excessive. He often worked for thirteen hours in the day, filling up the intervals between his sitters by painting fancy subjects. The consequence was, that his health rapidly declined. He had projected many great works; but when the period arrived at which they were to have been performed, he was become disabled by the infirmities of a premature old age. He retired, in the first instance to Hampstead, and subsequently to Kendal, in Westmoreland, where he died on the 15th November, 1802.

Such is a brief outline of this distinguished artist's life. It is filled up and enriched by his son with a variety of curious and interesting matter—with detailed descriptions of many of his works—and with letters from, and anecdotes of, a number of celebrated persons to whom he was known. Mr. John Romney, with a warmth which is highly honourable to him, vindicates his father's memory from the imputations cast upon it by Mr. Hayley, with regard both to the circumstances of his separation from Mrs. Romney, and to the alleged morbid reserve of his disposition. But as our space compels us to be very limited in our extracts from his work, we prefer quoting a few of those passages in which he speaks of his father's professional character.

"Subjects of the sublime, in which the powerful passions are represented, were, I think, the most congenial to Mr. Romney's mind. He had a perfect knowledge of the effects which the violent emotions of the mind produce upon the features of the face, and the action of the body; so that he could impart to the eye a language almost as expressive as that of the tongue, and communicate to the muscles and limbs all that appropriate action which they assume according to the impulse of different passions; he could represent with exact discrimination the shades by which kindred affections differ from each other, and even depict that agony of distress, when conflicting passions lacerate the tenderest feelings of the heart—which is the highest effort of skill—the acme of pictorial expression: and his designs representing the struggle between disappointed love and maternal affection in the bosom of Medea, so beautifully described in the epigram on the picture by Timomachus, are convincing proofs of his ability in this respect. In short, if there was any part of his art in which he more especially excelled, it was in expression, which is the soul of painting."—"Notwithstanding Mr. Romney's ardent enthusiasm for heroic painting, he had a rich and elegant fancy, and a nice perception of the charms and graces of female beauty; particularly of that fascinating reserve which results from innocence and virtue: he had, also, a correct feeling and knowledge of the unrestrained actions and playful antics of children; and by combining these respective impressions, he formed in his imagination those ideal beings called fairies, which have so frequently been employed as agents in poetic fictions. There are certain

felicities, both of conception and of execution, in painting, as well as in poetry, in which an artist may be said

‘To snatch a grace beyond the reach of art.’

That poetical fervour and almost magical influence which directs both the pencil and the pen, and gives birth to those felicities, was powerfully felt by Mr. Romney. He had a just conception of the *beau ideal*, which he had acquired by a diligent study of the antique while at Rome; so that even in his portraits he was able to combine ideal grace with the realities of nature. He could impart to his female figures that indescribable something, that *je ne sais quoi*, which captivates the spectator without his being able to account for it. He knew how to unite Grecian grace with Etruscan simplicity.”—“In the colouring of Mr. Romney’s portraits there is a purity, a clearness, and a relief, which give them the appearance of reality. In representing the carnations of the female face his skill was pre-eminent. It might truly be said, in the metaphorical language of Anacreon, that he

Γραφι ρινα και παριους,
Ρουο τη γαλακτι μιζας.

That is, in portraying the lovely features of woman, he combined the three primary colours of the most delicate character—for under the term *milk* may be comprehended all the gradations of tint from the skimmed blue to the yellow cream. He never sacrificed the durability of his colours in order to obtain by meretricious arts a temporary applause for rich and mellow tints. His style is clear, chaste, and unsophisticated; and he will obtain from time what others have anticipated by trick. His pictures which were painted sixty years ago, appear now as fresh as if recently taken from the easel.”—“As few of Mr. Romney’s pictures have ever been before the public, his professional character has not had a fair opportunity of being duly appreciated. To obviate in some measure this disadvantage, I have noted several of his principal works in the course of these Memoirs; but, unless they could be seen collectively, a just estimate of his great talents cannot now be formed.”

With reference to this last remark, we would take the liberty of suggesting, for the consideration of the governors of the British Institution, whether in the next, or in some succeeding season, an exhibition might not be advantageously formed of Mr. Romney’s works? It is as his son observes—owing to his not having been a member of the Royal Academy, and to other circumstances, “few of his pictures have ever been before the public.” But we are persuaded (and we say it advisedly) that it would be no difficult matter to assemble such a collection as would exceedingly surprise those who are not aware of his extraordinary powers, and would do justice and honour to the memory of a man whose genius, however it may be acknowledged and admired by individuals, has not yet had that national tribute paid to it which is unquestionably its due.

“He had studied Milton with much attention, and selected a series of subjects from the *Paradise Lost*, for great pictures, both of a sublime and of a beautiful character. He had also formed a scheme of painting a number of pictures representing the most important periods in human life. The first subject of this series, representing ‘the Birth of Man,’ was considerably advanced. Another great work, which he commenced about 1796, was ‘the Temptation of Christ.’ Had he finished this picture, it would have ranked him with Michael

Angelo. It was equal in original conception and wild fancy to any thing ever produced by any artist. When one looked at Christ, silent passiveness was the idea which presented itself to the spectator; when at the fiends that assailed him, vociferating noise and boisterous insult. Those visionary beings were the human passions and appetites personified. To aid the malevolent purpose, the illusive representations, or ghosts of Eve and Noah, were called forth; and the arch-fiend, the Miltonic Satan, grand as the human mind can conceive him, viewed from the upper corner of the picture with malignant satisfaction the ready obedience of his imps.”*

Towards the close of the volume is a Descriptive List of Pictorial Designs and Studies by Mr. Romney, presented by his son, in 1817, to the University of Cambridge, in order to be deposited in the Fitzwilliam Museum, as well as a List of Cartoons, presented in 1823 to the Liverpool Royal Institution. They consist of numerous designs, more or less advanced, from the Scriptures, from all the great poets, from nature, and from imagination; and shew an inexhaustible fertility of invention. There is also an Appendix, containing a valuable Letter on Expression, by the late Mr. Payne Knight, and a Sketch of the Life of Peter Romney, a brother of George, who appears to have been also a man of great genius, but who died young, the victim of combined misfortune and misconduct.

We must not omit to notice the portrait, from a picture by Mr. Romney himself, prefixed to the work. It is in every respect admirable, and does Mr. T. Wright, the engraver of it, the highest credit.

Life of Thomas Ken, D.D., deprived Bishop of Bath and Wells. By the Rev. W. L. Bowles. Vol. I.

MR. BOWLES, in this first volume respecting the good Bishop Ken, one of the seven who were imprisoned in the reign of James II., has produced a great variety of curious and interesting information concerning every thing except the bishop himself. We do not mean that circumstances are absolutely so; but the biography of Ken, in this earlier period of it, is (from want of materials) a mere thread whereon to string the multifarious matter relating to the religious and political opinions of the times in which he lived. The documents inserted are curious and interesting; and much light is thrown historically on this eventful period of our annals, particularly on the domination of Puritanism, Presbyterian or Cromwellian.

Dr. Hawes, of Salisbury, is the lineal descendant of *Piscator* Walton, and his wife Bishop Ken’s sister; and much information, perfectly novel, is given in the notices of Morley, Bishop of Winchester (Ken’s patron), from the traditional information of Dr. Hawes, who possesses the Prayer-book of old Isaac—of a date when Prayer-books were proscribed—and Ken’s coffee-pot. We extract a passage relative to these relics.

“To Dr. Hawes descended the identical Prayer-book of old Isaac Walton (of which more will be said), splendidly bound, adorned with the arms of Charles I., printed 1637, and containing, in Walton’s hand-writing, the dates of the birth of his children, and the first transcript of the epitaph on his wife Anne, buried in Worcester Cathedral two years after the Restoration. These family memorials are written in the blank leaf before the title-page

of this honoured relic. Dr. Hawes has also in his possession an original drawing in crayons, by Isaac Walton, jun., of his father, which is the most interesting and characteristic portrait I have ever seen, said to have been drawn from recollection, after death. With these records and relics to my friend, descended also the remains of Ken’s worldly splendour, a *small silver coffee-pot*, the companion of all his vicissitudes; together with his silver watch, made by Tompion: also the manuscript of his epic poem *Edmund*, most carefully written with his own hand, and, in places, elaborately corrected.”

We quote also the appalling picture of Cromwell’s death.

“Lord of life and death! how awful, how terrible, must have been the agony, if in a moment of sound mind, with eternity before him, he felt, for the first time, that all had been delusion. As his mind was sinking, new terrors were excited by the voice of his beloved daughter, departing before his eyes, and faintly murmuring, *murder!* He might now have seen, in sick and shadowy imaginings, the forms of those cut off by him, and heard the voice of the brave, the virtuous Capel,

Let me sit heavy on thy thoughts to-night;

or of the shade of the intrepid Lord Derby—

Let me sit heavy on thy thoughts to-night;

or the ‘crowned majesty of England,’ pale, and with look majestic, yet more in sorrow than in anger, pronouncing,

Let me sit heavy on thy thoughts to-night.

What must have been the agonies of death to such a man!”

A more detailed account of Bishop Ken will be given, we understand, in the next volume. The present one may be regarded as a valuable introduction to the main subject—like Dr. Robertson’s *Disquisition on the Feudal System*, preliminary to his *History of Charles V.* The reader will find it full of interest and attraction. The shrewd humour with which Lord Peter, Jack, and Martin, are depicted in the Introduction; the spirited defences of our church establishment and public schools; the raciness, the vivacity, the tenderness, which render the Wykehamical notices so delightful; the humorous account of undergraduate concerts; the exquisite domestic sketches of Walton’s Staffordshire cottage, and Morley’s family circle in the episcopal palace at Winchester; the ingenious and striking remarks on the authorship of the *Icon* and the *Whole Duty of Man*;—and, in short, a greater variety of beauties than we can find time even to enumerate, will render this volume a favourite companion with such readers as retain unsophisticated feelings and pure principle. Nor can we quit this *ασφodelον λιμωνα* without returning to Mr. Bowles the thanks which he has so well merited from all who love the church and constitution of England.

Twelve Designs for Shakespeare’s Richard III. By C. F. Tomkins; after the Drawings, and with the Descriptions of J. R. Planche, Esq. London, Colnaghi and Son.

To the vivacity of the dramatist, Mr. Planché unites the patient research of the antiquary; and the present volume, dedicated to the hereditary Earl Marshal of England, is an equal proof of his taste and industry.

“Methinketh (says old Chaucer) it accordant to reason,
To tellen you alle the condition
Of eche of hem, so as it seemed me,
And which they weren and of what degree,
And eke of what arate that they were in;”

* Milton’s *Paradise Regained*, book 4, lines 422–425.

and so it has seemed “accordant to reason” in

our author, who has placed his characters so cleverly before us in the very habits in which they lived. Such a work, however, appeals more to the eye than to the ear; and we are at a loss how to communicate its merits in the way of accurate delineation of costume to our readers, without a reference to engravings, whereof we have none. Of the title-page, we can only say that it is a charming device, replete with heraldic symbols beautifully arranged on a ground of gold. Speaking of the shields here displayed, Mr. Planché states (respecting Richard's device of a boar argent): "In the account of the materials provided for Richard's coronation, we find the entry of 13,000 boars, made and wrought upon fustian; at which time two standards, made of 'sarcenet beten with white lions,' appear to have been used."

The introduction furnishes a striking view of dress generally at the period, and quotes some curious examples: for instance the king's stomacher of purple satin. "It may seem to the uninitiated a strange article of male apparel, but the author of 'the Boke of Ker-vynge,' written about this period, in 'the Office of the Chamberlayne,' has this still stranger direction: 'warme your soverayne hys petticoate, his doublet, and his stomachere, and then put on hys hosen, and then hys shone or slyppers, then stryke up hys hosen mannerly and tye them up, then lace his doublet hole by hole, &c.' The fact is, that Englishmen of rank began about this period to wear 'a garment laced all the way down to their waste'—a standard like the women's stays, but of a different material, and of a different mobility. The fashion of the petticoat was only in wardrobe in the thirteenth century." "The king's son, Edward III., and his son Richard of Bordeaux, were both handsome and well-proportioned men, as well as all the kings of the house of Plantagenet, better fitted for stage effect, than the odd anomalies which still prevail, in spite of all our improvements and reforms—some of them, by the by, seeming to be rather retrograding than advancing of late years. "The dress now worn by the actors of Richard," says Mr. Planché, "is a fanciful mixture of the costumes of the reigns of Elizabeth and Charles I. A formidable pair of black mustaches and a dandified *imperial*, are also considered indispensable to the perfect personation of the character; although one of the most distinctive marks of the period is the entire absence of beard and whisker, except in portraits of exceedingly old men. The following observations of Mr. Sharon Turner are so appropriate that I shall not apologise for their introduction. 'Richard III. was born at Fodringay, on the 22d of October, 1452 (W. Wyr. 477.) Hence, on the 26th of June, 1483, he was thirty years, eight months, and twenty-four days old. Shakspeare, with correct judgment, did not place the death of Henry VI. in his tragedy of Richard III., yet by opening it with Henry's funeral, he, as Cibber afterwards, has confused the chronology. When Henry VI. was buried, Richard was but nineteen. He did not, at that funeral, court or see Lady Anne, nor marry her till a considerable time afterwards. At Edward the Fifth's accession he was thirty, and not thirty-three years of age when he fell, against Richmond; so that to personate the real historical character, the actor, as the play now stands, should be of the inconsistent ages of nineteen, thirty, and thirty-three, during the representation, instead of the elderly ruffian whom we usually see.' The person of

Richard was unquestionably short, or 'the prelate who came ambassador to him from Scotland would not, in his complimentary address, delivered to him on his throne, have quoted these lines:

'Nunquam tantum animum natura minori
Corpore, nec tantas, visa est, includere vires.
Major in exiguo regnabat corpore virtus.'

Bucke, p. 573. Nor would he have made such an allusion, if it had not been well known that Richard cared not about it. So Pol. Virgil represents Dr. Shaw as calling on the people to remark, that he was 'pusillus,' like his father, and not 'statura magnus,' as Edward IV. was known to be; p. 544. Rouse, his contemporary, mentions that he was 'corpore parvus, parvæ stature,' p. 216-18. 'I think the declaration of the old Countess of Desmond, who had danced with Richard, that he was the handsomest man in the room, except his brother, (Walp. Hist. Doubts, p. 102,) sufficient evidence as to the beauty of his face; and it seems to me to be implied by the Scotch orator's saying to him, 'he beholds thy face worthy of the highest empire and command;' Bucke, 572. Polydore Virgil described it to have been like his father's, short and compact, without the fullness of his brother's; p. 544. Rouse also mentions him as 'curtam habens faciem;' p. 216. More mentions his face to have been hard favoured, or warly, p. 164, which Grafton understands to be warlike, p. 758; in Hall, also, p. 343, though he chooses to add for himself the epithet of crabbed. As his body was publicly exposed after his fall in battle for some time at Leicester, the distorted features of violent death, in a state of the highest exertion and passion, may have fixed an unfavourable impression of his countenance on the crowds that flocked to contemplate him. That he was 'viribus debilis,' or weak in body, we have the sufficient authority of Rouse, p. 218; 'and his left arm seems to have been a shrunk or defective limb.' 'If this had not been well known to be the fact, it is not likely it would have had so prominent a part in More's detail of the arrest of Hastings, p. 202. He declares that 'no man was there present but well knew that his arm was ever such since his birth; ib. Rouse mentions his having unequal shoulders, the right the highest,' p. 216. This may have been true, the striking deformity would rest on the degree; for the hump back and crooked form I think we have no adequate authority."

Richard in his ducal robes, and as king and armed, are the next plates. The latter is remarkable for an extra cap placed over the knight's cap on his helmet, the only instance of the kind among the regal sigilla of England. Jocky of Norfolk is the next; and Lord Rivers, Sir T. Vaughan, a Nobleman, a Lady, a Widow in her mourning habit, an Archer, and a Standard-bearer, very happily complete the illustrations. As the coronation of a king and queen may now be looked for, we close with some particulars of the dresses worn by Richard and his consort.

"To the king (his wardrobe records,) was furnished for his apparel the vigil before the day of his coronation, to ride in from the Tower to Westminster—a doublet and stomacher of blue cloth of gold, 'wrought with netts and pyne apples,' a long gown of purple velvet furred with ermine, and a pair of short gilt spurs. For the queen, on the same occasion, 'a kirtle and mantle' of white cloth of gold trimmed with Venice gold and furred with ermine, the robe 'garnished with seventy annettes of silver and gylt.' Their henchmen wore doublets of green satin, long gowns of

crimson velvet lined with white sarcenet, and black bonnets. The king's henchmen had also provided for them long gowns of white cloth of gold and doublets of crimson satin. On the day of the coronation the king and queen appear each to have worn two complete sets of robes, one of crimson velvet embroidered with gold and furred with miniver pure, the other of purple velvet furred with ermine; their 'sabotons' (shoes) covered with crimson tissue cloth of gold. Richard's hose were of crimson satin, as were also the shirt, coat, surcoat, mantle and hood, in which he was anointed previously to putting on the last symbols of royalty. During this part of the ceremony he also wore 'a tabard like unto a dalmatic of white sarcenet,' and a coif made of lawn, which being put on his head after the unction, was to be worn for the space of eight days. On the morning after the coronation the following dresses were ordered to be furnished for the king. Two long gowns of crimson cloth of gold, one wrought with 'droops' and lined with green damask; the other 'checked' and lined with green satin. (Richard wrote from York for 'two short gowns of crimson cloth of gold; that one with *droppe* and that other with *net* lined with green velvet,' vide Introduction, p. 2.) A long gown of purple satin lined with white cloth of gold. A long gown of purple velvet lined with purple satin. A short gown of purple velvet lined with plunket cloth of gold. A long gown of purple cloth of gold wrought with garters and roses, and lined with white damask, the gift of the queen. Amongst other paraphernalia the mention of two hats of estate furred with ermine is curious, inasmuch as they are described 'with the round rolls behind and the becks (peaks) before;' and the peculiar position of the crest of England on the chapeau in the Warwick roll (vide illuminated title-page to this work) is thereby accounted for, it being exactly the reverse of the ordinary mode of placing it. To all the officers of state and to the principal nobility, cloths of gold and silver, scarlet cloth and silks of various colours were given as liveries and perquisites. To 'the Duke of Bukks' (Buckingham) who stands first, eight yards of blue cloth of gold wrought with 'droops'; eight yards of black velvet and twelve yards of crimson velvet, were delivered as a special gift from the king. The rest of the book is filled with a list of the furnitures required for the horses, the chairs of state, the canopies, &c., the embroideries for banners, pennons, and all the 'pomp and circumstance' of so splendid a ceremony, every yard of stuff and 'tymbre' of ermine being carefully noted in the margin."

The History and Antiquities of the Tower of London; with Memoirs of royal and distinguished Persons, &c. &c. By John Bayley, F.R.S., F.S.A., &c. 8vo. pp. 627. Second edition. London, 1830. Jennings and Chaplin.

MR. BAYLEY has here conferred a great favour upon that class of readers who, while they thirst for information, cannot afford the purchase of large and expensive works—such as his original History of the Tower. The present edition is very handsomely got up in a smaller form, and contains, with little variation, the whole matter of its predecessor; the notes and appendix, alone, having been somewhat abridged. We most cordially recommend this book to general readers: full of research and curious illustrations of older times, it is placed within their reach, by re-publication in a convenient size, and at a moderate price.

The Waverley Novels, Vol. XIV. Edinburgh, Cadell; London, Simpkin and Marshall.

This volume concludes the deeply-interesting tale of the "Bride of Lammermoor;" so that these fourteen neat and small volumes contain the original quantity published in the twelve-volume octavo edition. We cannot compliment Mr. E. Landseer on the frontispiece of Ravenswood shooting the bull. The vignette, by T. Duncan, is very well, but not of striking merit.

The Classical Library, No. VII.; of Herodotus, Vol. III. Colburn and Bentley.

This volume concludes the admirable history of Herodotus, with the Erato, Polymnia, Urania, and Calliope. The notes are worthy of much approbation.

The Aldine Poets, No. III. The Poetical Works of James Thomson, Vol. I. Pp. 232. London, Pickering.

This volume, containing the Seasons and an excellent memoir of their bard, whom it rescues from the misrepresentations of Dr. Johnson, is exactly such a production as we could wish to see in so handsome a publication as the Aldine Poets. It is every way creditable to the press of Mr. Pickering, and must tend highly to recommend the series of which it forms so deserving a feature. The portrait has an extraordinarily boyish appearance: it is as if the young "taught the young idea how to shoot."

The British Naturalist, Vol. II. 12mo. pp. 363. Whittaker and Co.

A VERY interesting and entertaining compilation, which embodies a great miscellany of natural history of all kinds, not very lucidus in the *ordo*, nor fruitful of new facts; but altogether extremely pleasing and instructive.

ORIGINAL CORRESPONDENCE.

STEAM NAVIGATION TO INDIA.

PROFESSOR HEEREN, who has devoted himself for so many years to the study of oriental history, has lately drawn up, for a society at Göttingen, a most interesting account of the intercourse which subsisted from the most ancient period between Europe and Asia, and more particularly of that between Europe and the island of Ceylon, which, in former times, was the great emporium of trade between the eastern and western parts of the world. In consequence of the efforts which are making to arrange a rapid communication, through Egypt, between England and India, by means of steam-boats, it becomes a subject of interest to see the nature of the intercourse which was carried on between Europe and Asia, through Egypt, in former days; we therefore give a translation of this memoir, which is the first that has appeared in England. It is entitled *De Taprobane insula, hodie Ceylon dicta, ante Lusitanorum in Indiam navigationes, per viginti fere sæcula communi terrarum mariumque australium emporio*, and commences with noticing the very great importance the ancients had attached to the island during their commercial intercourse with India. Hitherto, however, no information had been procured which served to fill up a portion of the chasm that exists in the history of the trade of India during the middle ages, until the appearance of a letter addressed by Sir Alexander Johnston to the Secretary of the Asiatic Society, in their

Transactions, vol. i. p. 3. Sir Alexander, who filled the situation of president of his Majesty's council, and chief justice of that island, at the desire of the government, not only traversed it in every direction, but caused—with the assistance of the Mahomedan priests and merchants, whose ancestors had been in the possession of the trade, and who, having very little intercourse with strangers, had completely monopolised every information—a thorough investigation to be made into the history of their ancient commercial establishments. The information being totally derived from historical sources, and not from the poetical dramas and romances, the professor found himself able to compare these accounts with those of the ancients, and with the still existing antiquities on the island.

The island of Ceylon, the largest on this side of the Ganges, and about the size of Ireland, appears from its position, and that of its harbours—of which Trincomalee, the finest in India, is the principal—to have been well calculated to be the centre of the trade between Africa and China. On the north it is separated from the continent of India by a ridge of sand-banks, which extends from the southern peninsula of India, and is known by the name of Adam's bridge, through which there are two passages. One of these, called the Manar passage, which separates the island of Manar from the opposite coast of Ceylon, near Mantotte, is not above four feet deep at high water. The other, called the Paumotu passage, separates the island of Ramissarum, celebrated throughout India for its Hindu pagoda, from the opposite coast of the peninsula of India, near Tonnotorré point; it is very narrow, and not above six feet deep at high water. The importance of the first of these passages arises from its being that through which all the small vessels trading between the south-west and north-west ports of Ceylon must pass. The importance of the latter arises from its being the passage through which all the smaller vessels trading between the coast of Malabar and the coast of Coromandel must pass. From the information collected by Sir A. Johnston during frequent visits which he paid to the islands of Ramissarum and Manar, he ascertained beyond doubt that both these passages had been much deeper in ancient times. The interior is filled with mountains, though the maritime provinces, particularly the northern, are remarkable for their tameness. In that part of the island which extends from Trincomalee to Manar and Aripo, there were still not only traces to be found of the ruins of pagodas and towns, but also of tanks, or artificial lakes, built of freestone, and extending over a surface of three or four British miles. They were used to irrigate the fields of rice in the neighbouring districts, which are now mere deserts. By one of these lakes, near Mantotte, called the Giant's Tank, it appears from an account of Sir A. Johnston's, that if put into repair, it would irrigate lands sufficient for the production of one million of parras of paddy, each parrah containing forty-four English pounds weight of rice. The inhabitants of the interior (the Cingalese) differ very much from those who inhabit the sea-coast, tempted thither by the advantages of commerce, and living under the guidance of chieftains.

The professor then proceeded to take a comprehensive view of the trade of the island, about the middle of the sixth century after Christ. Cosmas, a merchant, and afterwards a monk, in his *Topographia Christiana* has given us an account which he received from

his friend Sopater, also a merchant, who about the year 550 returned from Ceylon to Adule, near Arkeeko, the harbour of the territory of Axum, in Ethiopia. At that period Ceylon was in the possession of a most extensive trade, extending itself over the eastern coasts of Africa, Yemen, and Persia, and not only to the coast of this side of the peninsula of India, but also to the islands of Sunda, to China. The harbours and merchandise of these countries were famed; and it is observed that the inhabitants of the interior (the land of jewels) differ much from those dwelling on the sea-coast, who live under various chieftains—the latter partly Persians, who had formed a Christian establishment;—whether they were of true Persian descent, or only inhabitants of the countries on the Persian Gulf, who from time immemorial kept up an intercourse with India, remains uncertain.

The trade of Ceylon carried on there being of a reciprocal nature, and consequently one which affected the whole world, the emporium of that trade could not but enrich the immense store-houses, and fill the market. For these reasons, we must not be surprised that no mention has been made of the products of the island itself, consisting principally of cinnamon and pearls, since they were of little consequence, compared with the merchandise of the foreign countries.

The professor now went back from the time of Cosmas to the period of Ptolemy, about 150 years after Christ. He has dedicated a complete chapter in his work on Geography to the island of Taprobane, or Salice; and though he has given no history of trade, still we may infer the nature of it. He was acquainted not only with the sea-coast, but also with the interior ports. The former was lined with harbours and commercial settlements; and the principal production of the interior was the rice. Even the manner of catching the elephants seems not to have escaped his attention. The professor has already shewn, in a paper on the geography of Ptolemy, that his accounts are taken from travelling-books of merchants. The author now proceeded to compare Ptolemy's account with that of Robert Knox, who, towards the middle of the seventeenth century, resided twenty years on the island, and learned the language; and it is remarkable to observe a resemblance existing between the names of the places in the present, and of the same places in Ptolemy's time. The mountain, which in those days was called Male (the Adam's Peak), now bears the name of Malell; the principal river, the Ganges, is plainly the Mavela Gongga; Madutti will easily be recognised as the present Mandotte; and the name of the old capital, Amurogramma, with its district in the great plain, in which is situated the artificial lake (the Giant's Tank) for the purpose of irrigating the rice fields, has not lost its name: Knox calls it Amaroguro. Ptolemy has also, as well as Cosmas, mentioned the Maldiva islands; he states them to be nineteen in number, and to be called collectively the Atolloms; and even goes so far as to fix the number of the land islands at 1376. In the last, he knows Java (Jabadia), with the town of Argentum, near to the present Batavia, and Bantam, as well as the island of Sunda (Sinde), inhabited by cannibals (Battas), and the boats which are made use of by them, the Monoryla; lastly, he is not unacquainted with China and its trade.

About half a century later follows the celebrated voyage of Arrian, who gives a very faithful account of the then Indian trade. Unfortunately, though not far from Ceylon, he

never reached it, having got only to the coast of Malabar. Yet of Ceylon he has related several interesting facts. He says, the island was called Palasimundus, after the name of the town, which, according to Pliny, contained 200,000 inhabitants—probably near to Trincomalee, though some imagine it to be Jafnapatam. Large ships were then able to pass through the straits. The northern part of the island he reports to be well cultivated; and besides the products before mentioned, he states woollen cloth to be a principal commodity of export. Half a century later we have Pliny and Strabo as witnesses. The account given by Strabo of Taprobane, as well as of India, is very meagre. He mentions the trade as consisting of ivory, tortoise-shell, and other Indian commodities: that given by Pliny is taken from the travels of a diplomatic mission, sent, in the time of the Emperor Claudius, to Rome from Taprobane, at whose head was a rashia, or rajah. According to their account, the island contained 500 towns. The capital, as well as principal harbour, was Palasimundus. They were rich in precious wares, even more so than Rome. They traded as far as Serica, to which place the father of the rajah had travelled. The king, who sent the mission, did not rule over the interior; he inhabited a town on the sea coast. Ceylon appears to have been much in the same state then as it was later—at the period of Ptolemy and Cosmas.

This refers us to the time of Alexander and the Ptolemies. The two commanders of the fleet, Nearchus and Onesicritus, who conducted the expedition to the Persian Gulf and the Indian Ocean, were the first who discovered the island. Their discovery was first confirmed by the Portuguese, in the year 1498, at the conference about the passage to India, which was more remarkable for the discovery of the passage, and the passages to the East, as being of great importance to the maritime interests. The island was separated from the continent by shoals, through which there were passages, narrow, but very deep, sufficient to allow ships of 3000 amphoras to pass. The division of the year favourable to the sailing of vessels was also known at that time. Vessels only went out during four months, according to the change of the monsoons. All this we have received from Pliny. Nearchus informs us, that on reaching the entrance of the Persian Gulf, as soon as he saw the promontory of Maeceta (Mascat), he was told this was the emporium of the cinnamon and other Indian wares, which were conveyed from thence to Babylon. We need no more to convince us that Taprobane had already gained that importance which she retained in the time of the Romans.

It must, however, appear curious, that Eratosthenes and others should have believed the reports spread about the size of Taprobane, at the time of the Ptolemies. This is explained by our knowing that at this period no direct voyage had been made to India from Alexandria, as the Indian wares were to be procured in the southern parts of Arabia. Strabo clearly and positively asserts, that no single vessels had then arrived in India from Egypt; and the narrative of a certain Iambulus, handed down to us by Diodorus, belongs to the time of the travels of Taurinius and Damberg.

The accounts of which Eratosthenes and other geographers made use, were not received direct from Ceylon, but came by the way of Palibothra, the capital of the Prasii on the Ganges, whither the Seleucids had sent their ambassador Megasthenes, and others; and that

these accounts were often fabulous and contradictory is therefore not surprising. That a commerce existed between these countries and Taprobane is quite clear, from the accounts of the sea voyagers which Pliny has delivered to us.

We now come to the Persian period, about 500 years before Christ: it would scarcely be of any utility to prove that those accounts, which we have from Nearchus and Onesicritus, are well authenticated, and not to be doubted; and also, that even before the Persian monarchy there existed a more animated trade between Babylon and India, as the author has already shewn in his critical examination of the Babylonian history. But as the name of Taprobane had not reached the west, the author did not wish to return to the time of Salomo, and his expedition to Ophir, to avoid the slightest shade of doubt being cast over his statement. The professor, therefore, reverted to the point at which he had begun this discourse, namely, the age of Cosmas; and from thence he passed over to the history of the commerce of Ceylon in the middle ages.

The first Mahomedans who settled on Ceylon were, according to the tradition which prevails amongst their descendants, a portion of those Arabs of the house of Hashim who were driven from Arabia in the early part of the eighth century by the tyranny of the Caliph Abdul Malek; and who, proceeding from the Euphrates southward, made settlements in the Concan, in the southern parts of the peninsula of India, on the island of Ceylon, and at Malacca. The division of them which came to Ceylon formed eight considerable settlements along the north-east, north, and western coasts of that island; viz., one at Trincomalee, one at Jaffna, one at Mantotte and Manar, one at Coodramallé, one at Putlam, one at Colombo, one at Barbareen, and one at Point de Galle. The settlement at Manar and Mantotte, on the north-west part of Ceylon, from its local situation with respect to the peninsula of India, the two passages through Adam's Bridge, and the chank and pearl fisheries on the coasts of Ceylon and Madura, naturally became for the Mahomedan what it had before been for the ancient Hindu and Persian traders of India,—the great emporium of all the trade which was carried on by them with Egypt, Arabia, Persia, and the coast of Malabar, on one side, and the coast of Coromandel, the eastern shores of the bay of Bengal, Malacca, Sumatra, Java, the Moluccas, and China, on the other side.

On this part of Ceylon, at an equal distance from their respective countries, the silk merchants of China, who had collected on their voyage aloes, cloves, nutmegs, and sandal wood, maintained a free and beneficial commerce with the inhabitants of the Arabian and Persian Gulfs: it was, in fact, the place at which all the goods which came from the East were exchanged with those which came from the West. Although the Mahomedan traders who were settled on Ceylon had acquired great wealth and influence very early in the eleventh century; and although they continued to possess a most extensive and lucrative trade in its ports till the end of the fifteenth century, it was during the twelfth and thirteenth centuries that they attained the highest degree of their commercial prosperity and political influence on that island. During that period, the great Mahomedan merchants of Manar and Mantotte received, into the immense warehouses which they had established at this emporium, the most valuable produce of the island from

their subordinate agents, who resided at the different seaports which were situated in the neighbourhood of those provinces where the various articles of commerce were produced.

From their agents at Trincomalee they received rice and indigo; from those at Jaffna, the chaya-root, or red dye, the wood of the black palmyra-tree, and the sea shells called chanks; from those at Coodramallé, pearls; from those at Putlam, areca nut for chewing with betel leaves, ebony, satin, and calamander wood for furniture, and sappan wood for dyeing; from those at Colombo, cinnamon and precious stones; from those at Barbareen, cocoa-nut oil and coire; and from those at Point de Galle, ivory and elephants.

By means of armed vessels, which they maintained at their own expense, near the island of Manar, they commanded the only two passages by which vessels of any size could pass, as we have already described; and the wealth which they circulated through the country, enabled the inhabitants of the adjoining provinces to keep their tanks, or reservoirs for water, in perpetual repair, and their rice fields in a constant state of cultivation.

The Portuguese, on their first arrival on Ceylon, at the conclusion of the fifteenth century, found that the Mahomedan traders still monopolised the whole export and import trade of the island, and that they were, from their commercial and political power in the country, the most formidable rivals whom they had to encounter.

From the beginning of the sixteenth century, the trade and affluence of the Mahomedans on the island of Ceylon have been gradually, and constantly, on the wane; owing, in some degree, to the general decline of their trade and influence in every part of India, but more particularly to the systems of policy which have been respectively adopted by the Portuguese, the Dutch, and the English governments of Ceylon, and to the great improvement which has been made within the last three centuries in the science of navigation.

The Mahomedan population on that island now consists of about seventy thousand persons, who are distributed in every part of the country.

We may therefore, from what has been said, deduce the three following points:—1st, It has been historically proved that Ceylon had been, until the latter end of the fifteenth century, the emporium of the trade carried on between Africa, India, and China. 2dly, We may infer, from the imperfect accounts delivered to us, that Ceylon had been, during 500 years before Christ, of the greatest possible importance in respect to trade; and that, during that period, it had also been the staple of the Indian trade. 3dly, That the trade was not carried on by the inhabitants of the interior of the country, but by settlers on the sea coasts, who had come there after the Islam Mahomedan Arabs; and according to Knox, they differ entirely from the Cingalese, in their appearance, language, and manners.

The northern parts of the island are still inhabited mostly by Malabars, whose descendants live in the commercial and maritime towns.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR JULY.

22^d 22^h 38^m — the Sun enters Leo, according to the fixed signs: his true place in the heavens is near Presepe in Cancer.

Solar Spots. — June 29^d — several of these, of considerable magnitude and singular arrangement, are visible on the solar disc; the largest

is to the north-east of the centre, and surrounded with an extensive umbra, through which is a narrow channel directly connecting the nucleus with a small spot on the circumference of the shadowing. From the internal edge of the umbra are bright filaments stretching towards the centre as across a dark gulf: the principal combination of spots is arranged in the form of a sector, and exhibits appearances of perturbation.

Lunar Phases and Conjunctions.

	D.	H.	M.
○ Full Moon in Sagittarius	5	14	24
☾ Last Quarter in Pisces	12	15	36
● New Moon in Cancer	19	12	14
☽ First Quarter in Virgo	27	8	36

The Moon will be in conjunction with

	D.	H.	M.
Jupiter in Sagittarius	5	11	30
Mars in Pisces	10	18	45
Venus in Taurus	16	13	30
Mercury in Gemini	18	3	10
Saturn in Leo	21	4	0

Occultation of Aldebaran.—16^d—This remarkable star will again be occulted by the moon, visible only with a good telescope: the phenomenon will occur in the W.S.W., at an altitude of about 40°. The following are the circumstances, as calculated for four British observatories and the French capital:—

	Sidereal Time.		Mean Solar Time.	
	H.	M.	H.	M.
Greenwich	7	30	23	55
Bedford	8	17	0	42
Edinburgh	7	29	23	54
Dublin	8	14	0	39
Paris	7	20	23	45
	7	47	0	12
	6	59	23	24
	7	43	0	7
	7	41	0	6
	8	34	0	59

9^d—a favourable opportunity will occur of observing the planet Mercury before sunrise; his greatest angular distance from the sun will then be 26° 29', or 1° 51' less than his maximum of elongation. 14^d 19^h—in conjunction with ♊ Gemminorum. 25^d—in perihelion.

9^d—Venus in conjunction with 166 Mayer: difference of latitude 4'. This beautiful planet is retreating from the earth, and shines as a morning star, not very remote from Mercury.

Mars will soon be a conspicuous object on the midnight sky; the distance between this planet and the earth is diminishing.

The Asteroids.—6^d—Vesta near the small stars 42 and 43 in Cetus. Juno, a degree and a half north of ♋ Aquarii. Pallas, 5° south of ♋ Boëtis. Ceres, forming an equilateral triangle with ♋ and ♍ Virgins—the asteroid east of the stars.

5^d 0^h 15^m—Jupiter in opposition, and appearing on the low brow of eve with its greatest beauty and brilliancy. 27^d 12^h—in conjunction with ♋ Sagittarii.

Eclipses of the Satellites.

	D.	H.	M.	S.
First Satellite, emersion	8	11	38	5
	15	13	32	58
	24	9	56	45
	31	11	51	54
Second Satellite	25	9	1	23
Third Satellite	25	12	48	37

Saturn is too near the Sun to be satisfactorily seen.

31^d 19^h—Uranus in opposition, 5' south of 19 Capricorni. Though this planet was discovered to be such by Herschel, it had been observed nearly a century before by Flamsteed, in different places of the heavens, and registered in each position as a fixed star. The earliest observation is Dec. 13th, 1690, as ♋ Tauri; another observation March 22d, 1712, as ♌ Leonis: there are also three other observations, in 1715, which agree with the position of the planet at that time.

Deptford.

J. T. B.

MEDICO-BOTANICAL SOCIETY.

DR. SHORT in the chair.—Among the donations were a splendid collection of indigenous and exotic medicinal and other plants flowering at this season, from Mr. Gibbs, of Old Brompton, the treasurer; and a collection of medicinal plants from Mr. Houlton, who delivered an introductory lecture on botany. Dr. Whiting related the following case: a child about four years old, while playing under some laburnum trees (*Cytisus laburnum* Linn.) picked some of the capsules, and having eaten them with greediness, soon became drowsy, pale, and exhausted, in which state it was carried to its mother, who, greatly alarmed, sent immediately for a surgeon. As she began, however, to suspect the cause of the attack, the violence of which increasing, excited apprehensions for the child's life, she procured some hog's-lard, and forced a quantity down its throat: she had soon the pleasure of witnessing the good effects of the remedy, in the discharge of the whole of the pods: by the time the medical man had arrived, her child had nearly recovered from the stupor, and was ultimately completely restored to health.

At a subsequent meeting, Earl Stanhope in the chair, a large collection of East India drawings, &c. from Dr. Conwell; another donation of medicinal plants from Messrs. Gibbs and Houlton, and a beautiful specimen of cactus from Mr. Campbell, were received. Dr. Clendinning delivered an introductory lecture on toxicology. Dr. Whiting and Mr. Houlton made some interesting observations on several of the medicinal plants upon the table, and Mr. Everett on the detection and analysis of prussic acid.

LITERARY AND LEARNED.

ROYAL ASIATIC SOCIETY.

SIR ALEXANDER JOHNSTON in the chair.—The following donations were made: by the chairman, 4 vols., Ins' translation of Valentyne's works on Ceylon and Java;—Abraham Welland, Esq., a splendid Persian MS., containing the Shah Jehan Nameh, or Memoirs of Shah Jehan: this copy was written expressly for that monarch, and bears his autograph in a compartment of the illuminated title;—Admiral Sir C. M. Pole, Bart., a very fine Arabic MS. copy of the Koran, with a running paraphrase in Persian. A great number of other donations were likewise made to the Society.

A short paper was read, from the pen of Mrs. Skinner, intended to illustrate the Salágrama, or sacred stone, presented to the Society by that lady. It is entitled, "the History of the Salágram," and is to the following effect. To the south of a mountain called Himopenatum is a river named Gundagee Nudée, signifying one of the sources of the Ganges; on the north side is a holy pool, 180 miles in circumference, called Vishnu Chatrum, and here are found the stones called Salágramas. Near this spot, where Vishnu loved to dwell, a happy pair had made their habitation; the god saw, and became enamoured; he tried every art in vain, to win the constant wife from her duty: during the absence of the husband, who was fighting the battles of his country, Vishnu is represented to have descended to earth, and to have assumed the husband's form. The soldier returned earlier than the god had anticipated; and in his rage rushed on his wife to plunge a dagger into her bosom; Vishnu stayed his hand, resumed his own form, and, to recompense the

pair for their sufferings, changed the husband into the Salágrama, and the wife into the Toolsee plant; and commanded, that in future the two should be offered together upon his altar. He then metamorphosed himself into the holy pool above mentioned! and to this day the Salágrama and the Toolsee are ever united on the altar of the deity. The Salágrama is a fossil, containing one or more ammonites: and Mrs. Skinner was assured by a gentleman who has made some curious discoveries in Druidical antiquities in Somersetshire, that on every altar of Druid worship which had fallen under his notice in that county, he found a similar stone.

VENETIAN ANTIQUITIES.

DR. LABUS, of Milan, has just published a series of very curious observations on some Latin inscriptions recently discovered at Venice, or in its neighbourhood, and particularly on an antique altar which was found last year in repairing the altar of the ancient chapel of the baptistery of the basilic of Saint Mark. In raising upon that occasion the valuable table of oriental granite which forms what in Italy is still called, after the usage of the primitive church, the *Mensa*, or sacred table, it was discovered that it rested on an antique altar, dedicated to the sun, as appears from the following inscription, engraved in very beautiful Roman characters:—

SOLI
SACR
Q. BAIENVS
PROCVLVS
PATER
NOMIMVS.

Dr. Labus's explanations with respect to this monument and its inscription have for their principal object to shew the worship for which the altar had been used, and the title by virtue of which it was erected. He establishes, by a number of analogous ancient inscriptions of the same age, that the monument in question was consecrated to the worship of the sun, revived in the east from that of the Persian god *Mithra*, and that it was one of the ministers of that worship, termed *pater nomimus*, or, as Dr. Labus interprets it, *legitimate father, consecrated father*, who erected this monument of one of the oriental superstitions which longest and most obstinately disputed the ground with infant Christianity. Dr. Labus remarks, that the expression *nomimus*, hitherto unknown to Latin lexicographers, is only the Greek *νόμιμος* latinised, according to a custom of which the inscriptions of the same age furnish numerous examples; and that this expression answers to those of *pater* and *sacratu*, which appear by themselves in several Mithriac inscriptions. Dr. Labus might have added, that the title which seems to have been the most eminent in the Mithriac hierarchy, that of *pater sacrorum*, which is to be met with in several inscriptions of the second and third centuries, is probably the same which is expressed in this altar by the words *pater nomimus*; since the Latin qualification of *pater sacrorum* cannot be rendered into Greek in a more precise and exact manner than by *πάτερ νομίμων*, words which re-appear, almost identically, under a Latin form, in the words *pater nomimus*.—*Revue Encyclopédique*.

FINE ARTS.

MR. MARSDEN'S EXHIBITION.

We were exceedingly gratified on Wednesday last by a private view of a very fine picture

from the pencil of Mr. Richard Marsden, the public exhibition of which has since commenced at the Colosseum, in the Regent's Park. We cannot give our readers a more distinct and comprehensive notion of the subject, which is "St. Paul before Agrippa," than by quoting the words of the descriptive notice, circulated in the room:—

"Then Paul stretched forth the hand, and answered for himself." This is the immediate point of time expressed in the picture. In an open hall of audience, among the splendid buildings of Cæsarea, on the hilly coast of Syria, below the citadel or town of Straton, this memorable defence of the Christian religion was pleaded. The Apostle stands near the centre of the picture; a chain passes from his arm to that of the soldier behind him. At his right sits a Scribe, and more distant on his left is another, agreeably to the usage which ordained that one should attend for the accused, the other for the accusers. Behind the last-mentioned Scribe are two Rabbis, perusing a record of his former pleading before Felix, from whence to derive matter of accusation stands against him. Near the Scribe, on the right of the picture, on the fore-ground, sits a Pharisee, intent on the proceedings, and behind him another Jewish Rabbi. Near these are a group of Christian converts, among whom is the Greek Aristarchus, the friend of Paul and the evangelist St. Luke, the fellow-labourer of the Apostle. On the judgment-seat are enthroned Agrippa and Bernice. On the right of Agrippa stands Festus, the Roman proconsul. Among the captains and chief men of the city, behind the throne, are a Roman senator and Julius the centurion, who afterwards conducted St. Paul to Rome. On the fore-ground, on the left of the picture, is an Ethiopian attendant, with a censor, and the train-bearer of the queen. On the steep hill, in the back-ground, on the extreme right, is the tower of Straton, already mentioned."

With these materials, Mr. Marsden has produced a work which does him the highest honour. The composition is excellent; the expression powerful and well contrasted, the chiaroscuro forcible, without exaggeration, and the colouring rich but harmonious. We do not recollect ever to have seen a painting to more advantage. The hall, at one extremity of which it is placed, is lofty and spacious, and by the judicious management of surrounding draperies, and the concealment of the sources of the light which falls upon the picture, the effect, on entrance, is strikingly brilliant and imposing.

PRINTS AND PLATES;

The Works and Property of Mr. W. B. Cooke. THE engravings of this artist, in connexion with the names of Turner, Girtin, and others of our first painters of landscape and coast scenery, have been so frequently the subject of our highest encomiums, as to render it unnecessary for us to say anything more respecting them than simply to call the attention of our readers to the sale that, it will be seen by our Advertisements, is to take place on Wednesday next; and to observe, that it will enable the amateur or collector to enrich his portfolio with some of the finest examples of engraved art that have ever yet been brought before the public.

NEW PUBLICATIONS.

Imitations of the Chalk Drawings of Sir Thomas Lawrence. By R. J. Lane, A. R. A. Dickinson.

THE drawings, viz. Lady Charlotte Campbell,

Mrs. Siddons, two of Miss Siddons, Miss Cecilia Siddons, Mrs. John Kemble, an anonymous female portrait, two of Mr. Charles Kemble, and Sir Toby Belch. We confess that we think two or three of these drawings might very advantageously have been allowed to remain in their portfolio; but, on the other hand, several of them, such, for instance, as the front face of Miss Siddons, and the elder profile of Charles Kemble, are eminently beautiful.

Illuminated Ornaments, selected from Missals and Manuscripts of the Middle Ages. By Henry Shaw. Part I. Pickering.

"THE variety and beauty of those ornaments," it is observed in the prospectus of this splendid little work, "which decorate the Illuminated Missals of the Middle Ages, are so duly appreciated by all acquainted with them, that it is somewhat surprising no publication has yet appeared, which, by a judicious selection and careful imitation of them, might make their excellence more generally known." The talent and taste displayed by Mr. Shaw in his "History and Antiquities of the Chapel at Luton Park," are a sufficient assurance of the ability with which his present undertaking will be executed. It is to be completed in twelve parts; of which that under our immediate notice presents an admirable sample.

One Hundred Studies, in Groups and Single Figures, of Horses, Cattle, Sheep, and other Domestic Animals. Engraved from the celebrated Masters, Paul Potter, Cuyt, Berghem, Stoop, Karl du Jardin, &c. under the superintendence of George Cooke. Moon, Boys, and Graves.

To the lovers of picturesque art, the free, loose, and characteristic style in which these plates, thirty in number, are executed, will be highly gratifying. Some of those from Du Jardin are especially beautiful.

Portrait of the Duke of Reichstadt. Engraved by W. Bromley, A. E., after the original drawing by the late Sir T. Lawrence, P. R. A. Tiffin.

MUCH as the public have lately been occupied in viewing and admiring the works of the lamented President, the specimen of his matchless talents under our notice is at least as much calculated to excite attention as any thing that we have as yet seen from his hand. The stamp of his father's features is so very evident in this portrait of the young Napoleon, that no one can for a moment doubt the truth of the resemblance; though we believe from the statement of travellers, that it is indebted to the painter for the advantage of being taken in the position most favourable to grace and effect. It is, however, difficult to imagine a face in which the lines of beauty are more in accordance with those of the finest antique busts. This appears with peculiar distinctness in the mouth, the bland expression of which in some sort tempers the keen hawk-like character of the eye, which has a sternness in it not often seen at the age of eleven,—that at which this portrait was taken. As a work of art nothing can be imagined more beautiful, both with regard to the exquisite taste of the design, and to the inimitable skill with which the engraver has preserved that lightness and delicacy of tone by which the drawings of Sir T. Lawrence are invariably distinguished.

ORIGINAL POETRY.

FIRST AND LAST.—NO. VII.

First and Last Love.

I DEEM'D you loved me, for your eye
Would fondly rest on me;
I deem'd you loved me, for your sigh
Would breathe—your cheek would be
Tinged with a crimson, if I came
Across your path by chance;
And then what thoughts, without a name,
Spoke in your hurried glance!

I deem'd you loved me, for I knew
How in my heart I shrined you—
How in each gentle, tenderest clue
Of fancy I entwined you;
I deem'd you loved, because I saw
Your actions like mine own—
Your eye had my heart's timid awe,
Your voice my trembling tone.

I deem'd you loved—I ne'er had loved
Until that feeling burst—
Beautiful, glorious, tried and proved,
The passionate, the first.
I deemed you loved—I was deceived!
My dream of bliss is past:
Those only know like me bereaved,
Such First Love is the Last!

Worton Lodge, Isleworth.

M. A. BROWNE.

DRAMA.

A PARAGRAPH must include all our dramatic news and criticism this week. At the King's Theatre, on Tuesday, *Cenerentola* was substituted for *Tancredi*, and "God save the King!" was sung by nearly two first singers at the same time; for one had begun when the other rushed on the stage (after being waited for) to commence the anthem.—At the Haymarket, a successful petite comedy has been produced, entitled *Separation and Reparation*, said to be by Morton, and Farren its main pillar.—The English Opera season commenced on Thursday, at the Adelphi, with great éclat. Miss Kelly, inimitable in the *Sister of Charity*; Keeley (Mr. and Mrs.) also inimitable in their line; Wrench and others fully sustaining the well-earned reputation and attraction of the company.

VARIETIES.

Fever.—A new mode of treatment in cases of fever has been introduced into some of the West India islands with extraordinary success. It consists in the use of medicines applicable to the peculiar changes which the blood undergoes during the existence of fever, in opposition to the established theory as to the solids. It is stated by one of the physicians who adopt the new mode, that in 340 cases all the patients recovered.

March of Piety.—The *Propagateur de Calais* informs us, that a few days ago a carriage passed from Calais to St. Omer, containing two elegantly dressed females, who distributed, on their route, books of piety among all whom they met. They were said to be two rich young Englishwomen of the sect of Wesleyans.

Mechanical Improvements.—We have often turned with gratification to describe "the march" of mechanical improvement in our pages, (somewhat more substantial, in our opinion, than the boasted march of intellect); but we never noticed any thing of this kind with so much satisfaction as we now do the admirable contrivances of Mr. Pratt, (the well-known and ingenious patentee of improved chairs, beds, &c. &c.), by which he was enabled

to afford ease and comfort to our lamented Sovereign during the later period of his protracted sufferings. We find it rather difficult to convey a perfect notion of these contrivances to our readers; for they should be seen to have their merits fully understood. The chairs and bed (of which last there were three) were stuffed in the springy and elastic manner which distinguishes Mr. Pratt's patent; and so modified with joints, &c. as to be susceptible of sustaining the body in every possible position. But this not being found sufficient to afford all the relief desired in the painful situation of his Majesty, means were immediately invented, by passing bands of catgut transversely through the bed or cushion; which bands could be tightened or loosened at pleasure, to raise or lower, support or leave at rest, any limb or other part, whenever the royal patient expressed a wish to that effect. Sir H. Halford was much delighted with the ingenuity and singular aptitude of this very clever device; and if any thing can add to an artisan's triumph in framing an excellent work, it must be in the recollection that its first use gave many hours of consolation to a Monarch, ever the friend of talents in every branch of art and science.

Dr. Roget.—This gentleman has again replied to Mr. Babbage, and we must again repeat, that in our opinion he has most satisfactorily explained every point in the matter alluded to, both to his own honour, and to the honour of the Royal Society. With regard to that Society, there may, as in all others, be things which require amendment: and we trust they will be attended to, rather than persisted in, in opposition to opposition.

Vauxhall.—We have seen two or three fellows in the streets with placards on their breasts and backs, stating that Vauxhall opened on Friday, and would be open every Monday and Wednesday also. There were some details of the entertainments; but as the standard-bearers had large umbrellas over their heads to protect them from the pelting rain, and umbrella we had not, we did not stop to read the bills.

The Printers' Pension Society propose a two hundred miles aquatic excursion in the Harlequin steamer on Monday week, for the benefit of their charitable fund. What would old Caxton say if he could rise from his grave and witness this triumph of machinery in the cause of benevolence?

Monument to Shakspeare.—Proposals are in circulation for a public meeting to consider of the expediency of erecting a national monument to Shakspeare, worthy of the genius of the poet (impossible!), the progress of the arts, and the grandeur of the empire. We heartily wish the design success.

Steam-Carriage.—A steam-carriage has been built at Leipsic, which is to run between that place and Dresden. It was to commence running on the 1st inst. The saving in time is expected to be about one half. The Dresden letter from which we take this information says, that this carriage is provided with an apparatus for discharging the smoke imperceptibly, so as to prevent alarm to horses on the road.

Spiders.—Professor Weber, of Leipsic, states, that he watched a little spider as it was constructing its web between two trees. The three principal points to which it was attached, formed, as usual, an equilateral triangle. The two upper threads were fixed to the trunks of the trees; but not finding a point to fix the lower upon, the spider suspended from its ex-

trinity a little pebble, by way of counterpoise. The pebble being heavier than the animal, kept the web perfectly extended.—A curious paper was lately read at the Paris Academy of Sciences on the construction of a spider's nest in earth. This spider is a native of Corsica. The nest is in the form of a well, two inches deep, and six lines in width. The interior is lined with fine web, and the top is furnished with a kind of lid, with hinges, which shuts when the insect is in. This lid, which is composed of earth and web, consists of upwards of forty layers.

Bicephalous Girl.—At the sitting of the Paris Academy of Sciences on the 21st inst., M. Geoffroy Hilaire read a report on a bicephalous girl, which had been still-born at Aulay, near St. Girons. This child was very similar to Ritta Christina, who died lately in Paris. There were two separate hearts, having each a pericardium.

Domestic Animals.—M. Dureau Delamalle recently read to the French Academy a memoir, the object of which was to shew, that domestic animals are capable of a more extensive development of the intellectual faculties than is commonly supposed; that they have, although within limits not yet ascertained, instinctive qualities, powers of imitation, memory, will, deliberation, and judgment; that the individual, and even the race, are improvable by the state of knowledge of the persons with whom they live, by education, by their wants, by their dangers, and, in order to generalise the proposition, by the circumstances in which they are placed; and that many of the qualities which are considered instinctive, are, in fact, qualities acquired by their powers of imitation, and that certain acts attributed to instinct, are acts of choice, resulting from intelligence, memory, and judgment. M. Delamalle sustains these various propositions by a number of very curious facts.

A Chinese Student.—There is now at Brussels a Chinese merchant, on his way to France, where he intends to study French; and he is subsequently to proceed to this country for the purpose of learning English. As he is in full Chinese costume, he is an object of great curiosity. It is said that four other Chinese merchants, of great wealth in China, were to follow his example.

One good Turn deserves another.—Reynolds, the dramatist, who, as we mentioned in our last, is about to appear in the character of a novelist, was complaining to a friend of the many difficulties he encountered in his new undertaking; the latter replied—"Think, when the work is over, of the pleasure of correcting the press." "Ay!" rejoined Fred. Reynolds—"and when that work is over, think of the press having the pleasure of correcting me."

Dublin, June 26, 1830.
SIR,—I happened to meet with your paper of the 5th inst. this morning, and there read an extract from the *Life of Alexander Alexander*, which alludes to me. I beg leave to say that every line of it is false, from beginning to end. I can conceive a poor devil circumstanced as you describe the author to be, writing lies, or picking pockets, to get a livelihood; but I can with difficulty account for the selection, by the editor of a "*Literary Gazette*," of a passage which has no other merit than its falsehood and malignity, in order to recommend a work and its author to the generosity of the public. There was no Licut-Col. Wilson in the service of Venezuela at the time Mr. Alexander speaks of. I was colonel, commanding the British brigade under General Bolivar, who treated me with great ingratitude; but neither he, nor General Paez, nor any body else that I know of, except "Alexander Alexander," ever thought of charging me with any of the ridiculous plots spoken of in the life of that person, nor with being a "spy for the Spaniards." It might have little weight with the imprisoned libeller or his reviewer, perhaps, were I to produce the testimony of the Commander-

in-chief, the Secretary-at-war, or the Duke of Wellington, as to my character; but as I presume your journal is extensively circulated, and believe that the public in general respect those names, I beg leave to say that I have the honour to be known to all those personages, and have reason to think any one of them would vouch for my being incapable of acting the part ascribed to me by Mr. Alexander. I have requested a friend to hand you this letter, who will put you in the way of satisfying yourself as to every particular respecting me and my connexions; so that you will have the fullest opportunity of judging whether you ought to give my contradiction to the public, or persist in the libel that you have been induced to insert in your paper. In the meantime, I have the honour to be, sir, your very obedient servant, H. C. WILSON.
To the Editor of the London Literary Gazette.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXI. II. July 3.]

General Sir Hew Dalrymple's Proceedings whilst in command at Gibraltar, and afterwards when Commander of the Forces in Portugal, towards a full and faithful Narrative of the Peninsular War.—Dignities, Feudal and Parliamentary; the Nature and Functions of the Aula Regia, or High Court of the Barons, of the Magna Concilia, and of the Commune Concilium Regni, &c., by Sir William Betham, Ulster King of Arms.—A third edition of Montgomerie's Satan; a fourth of the Universal Prayer, Death, &c.; and a twelfth of the Omnipresence, &c. are announced.—Mr. Moore's second volume of the *Life of Byron* is promised in about a fortnight.—An Historical Sketch of the Danmonii, or Ancient Inhabitants of Devonshire and Cornwall, by Joseph Chattaway.—A Memoir of his late Majesty George IV., by the Rev. George Croly, A.M., is nearly ready for publication.—Dr. Hunter, of Leeds, announces a Treatise on the Mineral Springs of Harrogate.

LIST OF NEW BOOKS.

Lardner's Cyclopaedia, Vol. VIII., Mackintosh's England, Vol. I. fcp. 6s. bds.—Francour's Hydrostatics, translated, 8vo. 5s. 6d. bds.—Tennyson's Poems, 12mo. 5s. bds.—Light on the Poor, 8vo. 6s. bds.—Real Devil's Walk, with 13 woodcuts by Cruikshank, 18mo. 2s. sewed.—Monsieur Mallet, with 6 engravings, 18mo. 1s. sewed.—Talbot's Legendary Tales, fcp. 6s. 6d. bds.—Cayley's Commercial Economy, 8vo. 7s. 6d. bds.—Maycock's Flora Barbadenis, 8vo. 18s. cloth.—Berington and Kirk's Faith of the Catholics, 8vo. 12s. bds.—Family Classical Library, No. VII. 18mo. 4s. 6d. bds.—Juvenile Library, No. 1. 18mo. 4s. bds.

TO CORRESPONDENTS.

The *Juvenile Library*.—Our review of this work, to a certain degree explains the difficulty of our position with regard to it; but we have to add, that the volume was submitted for criticism to a gentleman as independent of the *Literary Gazette* as the *Literary Gazette* is itself independent. A man of firmness, talent, and integrity, he was assured that our invariable rule was to know neither friend nor adversary in these pages; and, therefore, that he should exercise, in this and every similar case, his unbiased judgment. Thus much appears to us to be necessary to all events in justice to such publications, and to ourselves; at all events it is the plain and simple truth. The plates in the volume, Lady Jane Grey, and Prince Edward, are beautifully executed; and the whole-length of the Princess Victoria, and the portrait of Lawrence, from his own crayon, are recommendations enough for a book of twice the price, independently of its literary contents.—Ed. L. G.

We have looked over the several pamphlets respecting the disputes unhappily existing at the London University; but we refrain from taking up the subject, in the hope that good sense and moderation may prevail at the meeting, which, we see, is appointed for to-day, and the Institution be restored to that cordiality which alone can promote its successful labours in the cause of education.

We observe by the very able address of Mr. Vigors to the Zoological Club at its last meeting, that it has been dissolved, having effected all the good objects for which it was established, and merged, as it were, into our now flourishing Zoological Society. Mr. Vigors' publication is otherwise very generally interesting, from the view it takes of the rapid advances recently made in every branch of zoological science. Many of the statements are curious, and the whole valuable.

H. G.'s lines cannot be inserted: nor F. W.'s. In answer to a Constant Reader's inquiry.—There is, we are assured, no Librarian yet appointed to King's College; but the Secretary receives all presents of books, &c. and records them in a catalogue, in which the names of the donors are entered.

* The Marquess of Sligo having vouched to us for the respectability of the writer of this letter, we think it best to let him state his grievances in his own temperate language. If he had consulted his reason, instead of allowing his military feelings to run away with such judgment as nature may have blessed him withal, he must have perceived that the "Reviewer" could have no cognizance of the transactions alluded to, except through the work before him; and that whether Alexander was a fabricator of falsehoods, or Colonel Wilson a mere adventurer in a foreign service, must be alike unknown to him. The character of the *Literary Gazette* ought to protect it from the suspicion of wishing to hurt the mind of any gentleman.

ADVERTISEMENTS,

Connected with Literature and the Arts.

London: Published by S. and J. Fuller, at their Sporting Gallery, 34, Rathbone Place, where every kind of Work is published relative to the Art of Drawing, by the best Masters, and by N.B. The newest Works and Lithographic Prints from Paris.

FROM MORNING POST.—The Examination of the Pupils at Goodenough House, Little Epping, which finished on Wednesday, was conducted on the only plan that can be a true Test of a Boy's Learning. What is the Estimation of a Latin Play? An Effort of Memory!—What is the translation of Greek and Latin Lines which have been read every Day for Six Weeks? A Test of Recollection!—The former is the Examination of Westminster Boys; the latter of Charter House Boys. But at Goodenough House the Pupils were required to translate 100 Lines of Greek and Latin, selected at the moment by the Examiner. This was a severe trial. But from the *Heccuba* of Euripides, a boy 15 years old translated 100 lines fluently; another, 100 from Homer; another, 100 from Xenophon; another, 100 from Livy; another, 100 from Horace; another, 100 from Virgil; and one little boy, reported to have studied Latin but two years, translated 100 lines of Virgil. Maps were drawn neatly, without copies, of all the world, by six boys. The Examination in Pure and Mixed Mathematics, Algebra, &c. did the pupils credit.
Prospectus, price 6d. at Egerton's, 30, Charing Cross; Rodwell's, 40, New Bond Street; and Moon's, 30, Threadneedle Street.

MR. A. NASMYTH, Surgeon-Dentist, removed from Sackville Street to 13 A. George Street, Hanover Square, Corner of Maddox Street.

English Translations of the Classics.
Neatly bound, price only 4s. 6d.
THE FAMILY CLASSICAL LIBRARY,
No. 7, containing Helios's Translation of Herodotus, the third and concluding Volume.
The object of the Proprietors of this undertaking is to produce a work, which, from its cheapness, and elegance, and uniformity, may recommend itself to all classes; the expensive existing editions having hitherto precluded the community at large from an acquaintance with the writings of the greatest poets, historians, and orators, the world has produced.
The First Three Numbers comprise Demosthenes, Sallust, Henry Colburn and Richard Bentley, 8, New Burlington Street.

Price 8s. 8vo.
THE CAMP OF WALLENSTEIN, from the German; and original Poems.
By LORD FRANCIS LEVESON GOWER.
John Murray, Albemarle Street.
Price 11s. 1s.
THE NOBLE GAME OF BILLIARDS, which have excited the admiration and surprise of Strokes of Europe. Translated from the French of the celebrated M. MINGAUD,
Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquis of Cleveland.
This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years.
London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catherine Street, Strand; and to be had of all Booksellers.

French Remedies.—New edition, 6s.
A FORMULARY for the PREPARATION AND EMPLOYMENT of several NEW REMEDIES, namely, Resin of Nux Vomica, Quinine, Morphine, Hydrocyanic Acid, Preparations of Ucheima, Iodine, Chlorurets of Iron and Potash, &c. &c. Translated from the 6th edition of the *Formulaire de M. Magendie*; with an Appendix, containing the Experience of British Practitioners with many of the new Remedies.
By JOSEPH HOUTTON, F.L.S.
Printed for T. and G. Underwood, 39, Fleet Street.

8vo. 8s.
THE BOOK OF PSALMS, newly translated from the Hebrew, and with Explanatory Notes, By W. FRENCH, D.D.
Master of Jesus College, Cambridge; and G. SKINNER, M.A.
Fellow of Jesus College, Cambridge.
Printed at the University Press, John Murray, Albemarle Street.

For all Families.—Price 5s. cloth.
FAMILY MANUAL and SERVANTS' GUIDE. With upwards of One Thousand New and Improved Receipts, arranged and adapted for Families and all Classes of Servants.
"This book contains a mass of information that cannot fail to be useful in the conduct of household affairs. We wonder at the pains that have been bestowed in the bringing together so much curious and really useful knowledge upon domestic economy."
Atlas, May 52.
"No servant should be without it."
Morning Advertiser.
The Arcana of Science for 1830, price 6s. cloth.
Printed for John Limbird, 148, Strand.

"CRABBE'S DICTIONARY OF GENERAL KNOWLEDGE has become the most popular work of the present day. It appears to us to combine all the features that are best adapted to please and attract, as well as to instruct. There is admirable tact and skill displayed in the compression of its details; and in the quality of the matter, as well as in the manner of its execution, the volume may be considered unique. The engraved illustrations, too, are exceedingly pretty; altogether, it is a work both for the eye and the understanding, and we doubt not that it will be found as useful as even some of the author's most important publications."—*Scott's Times.*
The work is beautifully printed at the Chiswick Press, and illustrated with nearly 500 Engravings, price 9s. in cloth, or 12s. in morocco.
Printed for Thomas Tegg, London; R. Griffin and Co. Glasgow; and sold by all the Booksellers.

The Work will consist of 30 coloured Drawings, accompanied by Letterpress Descriptions. To be published in Six Parts.
London: Printed for James Carpenter and Son, Old Bond Street; and Miller, Princes Street, Edinburgh.

Just imported, in 1 large vol. medium 8vo. price 21s. boards, being the Third Volume of
THE AMERICAN ANNUAL REGISTER for 1837-39, or the Fifty-second and Fifty-third Years of American Independence.
* The first work of its useful kind that has appeared in America."—*Literary Gazette.*
New York: Published by E. and G. W. Blunt; and sold by Thomas Ward, 84, High Holborn, London; and all Booksellers.

Price 6s. 6d. in cloth, or 7s. bound in roan and lettered,
AINSWORTH'S LATIN and ENGLISH DICTIONARY, abridged for the Use of Grammar Schools,
By JOHN DYMCK, K. L.L.D.
The 2d edition.

* Dr. Dymock is a practical teacher and an eminent scholar,—two advantages which peculiarly fit him for the task he has undertaken. This edition of Ainsworth's Dictionary possesses great advantages: than any with which we are acquainted; it is perfectly portable, remarkably voluminous, and published with a singular care, both in regard to the manner and matter, for the use of Latin students. It is exquisitely printed, and its shape is well adapted to suit varieties of taste. We do not hesitate to recommend it as the very best Dictionary which could be selected for the use of Grammar Schools."—*Edinburgh Literary Gazette.*
Glasgow: Printed for R. Griffin and Co.; and T. Tegg, London.

New editions of the following Juvenile Publications are ready for delivery at John Harris's, Corner of St. Paul's Churchyard
THE JUVENILE RAMBLER, in a Series of easy Reading Lessons, having the Syllables divided, with Twelve Woodcuts. 12mo. half-bound, price 3s. 6d. plain, 4s. 6d. coloured. 2d edition.

2. The Little Library; or the Mine. By the late Rev. Isaac Taylor, of Ongar. With 16 Illustrations, square 16mo. bound in coloured cloth, price 3s. 6d. 2d edition.

3. How to be Happy; or, Fairy Gifts: proving the Insufficiency of Talents, Fortune, Rank, and Riches, to secure Contentment. 2d edition, enlarged, with Eight Engravings, 12mo. half-bound, price 5s. 6d.

In 1 vol. small 8vo. price 5s. cloth gilt,
THE MAID OF SCIO; or, a Tale of Modern Greece. In Six Cantos.
By ELEANOR SNOWDEN.

* We consider Miss Snowden's poem as an admirably sustained effort. The metre she has chosen is perhaps the most treacherous form in which an elegant mind could be led to embody its bright conceptions; yet she appears to have surmounted all the fatal facilities which it presented, and to have preserved all through the style which was fitting her heroic subject. The "Maid of Scio" is a poem that would confer credit on any name which is extensively known."—*Monthly Review*, Feb. 1830.
* "A very sweet and pleasing little poem, printed at Dover. It displays considerable powers of versification, great tenderness of feeling, and a rich fancy."—*New Monthly and London Magazines.*
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In foolscap 8vo. price 7s.
SONGS OF THE AFFECTIONS; with other Poems.
By FELICIA HEMANS.

Printed for William Blackwood, 45, George Street, Edinburgh; and T. Cadell, Strand, London.

Of whom may be had, by the same Author,
1. Records of Woman; with other Poems. The 2d edition, foolscap 8vo. 8s. 6d.

2. The Forest Sanctuary; with other Poems. 2d edition, with Additions, foolscap 8vo. 8s. 6d.

Price 9s.
THE REAL DEVIL'S WALK; embellished with Thirteen Engravings on Wood, from Designs by R. Cruikshank.

Of the "Devil's Walk" there's been much talk,
And folks seem mighty curious;
Now this is the real "Devil's Walk,"
And all the rest are spurious.
London: Effingham Wilson, Royal Exchange.

In 3 vols. post 8vo. with a coloured Map, 1l. 11s. 6d. boards,
TRAVELS IN NORTH AMERICA,
In 1827 and 1828.

By CAPTAIN BASIL HALL, R.N. F.R.S.
The 3d edition, with Additions. To which is also added, an Appendix, on the Use of the Camera Lucida.
Printed for Robert Cadell, Edinburgh; and Simpkin and Marshall, London.

Of whom may be had,
Forty Etchings, illustrative of the Travels, taken with the Camera Lucida. By Captain Hall. Royal 4to. price 10s. 6d.

* Colonel Davies said, he thought great benefit would result to our penitentiary discipline, if we acted upon the system adopted in the United States. Criminals in England were frequently rendered worse by intercourse with one another in the hulks and prisons. In America, they were confined at nights in separate solitary cells, and brought out in the morning to work in silence, and under vigilant superintendance during the day. Many useful hints on these topics might be taken from the work of Captain Basil Hall on America."—*Debate in the House of Commons*, 21st May, 1830.

* Captain Hall's Descriptive Views look almost as if thrown out by some happy mechanical aid, corresponding to that of his Camera Lucida."—*Edinburgh Review*, Sept. 1829.
* Captain Hall gives a luminous and instructive account of the political constitution of the United States, and traces the changes it has undergone since the commencement of the Union. In this, as well as the other subjects introduced by him, which involve general reasoning and speculation, the talents of the author are exhibited in a very striking light."—*Literary Gazette.*
* Captain Hall's book may probably do good in America; we hope it will—but we are quite sure it must do so here. It may furnish many well-disposed persons with arguments by which to defend the blessings they enjoy. It may decide the swerving, and confute the infatuated, the turbulent and revolutionary. The common-sense views he has taken, the penetration he has exhibited in sifting facts, and the powerful scrutiny he has exercised, give to his communications a very uncommon character both of interest and information."—*Quarterly Review*, Nov. 1830.

In 8vo. 12s.
CONVERSATIONS ON RELIGION, with LORD BYRON and others. Held in Cephalonia, a short time previous to the Lordship's Death.
By the late JAMES KENNEDY, M.D.
OF H. M. Medical Staff.
John Murray, Albemarle Street.

New Works just published by Mr. Murray.

THE LIFE OF BISHOP HEBER.

By his WIDOW. 2 vols. 4to. 2l. 13s. 6d.

Dr. Arnold's Thucydides.—Vol. I. price 18s.

THE HISTORY OF THE PELOPONNESIAN WAR, by THUCYDIDES. The Text according to Hecker's Edition, with some Alterations. Illustrated by Maps, taken entirely from actual Surveys. With Notes, chiefly Historical and Geographical.

Oxford: Printed by S. Collingwood, Printer to the University, for J. Parker; Whittaker, Treacher, and Co.; C., J., G., and F. Rivington, London; and J. and J. Deighton, Cambridge.

In Folio, the Last Part of DUGDALE'S MONASTICON ANGLICANUM. Edited by Messrs. CALEY, ELLIS, and BANDINEL.

Subscribers are requested to make immediate application for their copies of this concluding Part of the Monasticon; and those persons who have not yet completed their sets are requested to do so at the earliest possible period, as, after a very short time, single Parts of this work will not be attainable, and copies not now completed must in consequence be rendered altogether imperfect.

Printed for Longman, Rees, Orme, Brown, and Green; and Harding and Lepard, London.

BOOKS IN THE PRESS.

Life of Byron.

Preparing for immediate publication, in monthly volumes, price 3s. each, beautifully embellished, and printed in small type. THE LIBRARY OF GENERAL KNOWLEDGE.

Edited by the Rev. G. R. GLEIG. No. I. containing the Life of Lord Byron, by John Galt, Esq. Henry Colburn and Richard Bentley, 8, New Burlington Street.

The following Works will be published during the month of July, by Messrs. Colburn and Bentley. LIFE and CORRESPONDENCE OF JOHN LOCKE. By LORD KING. 2d edition, with considerable Additions, in 2 vols. 8vo.

2. Life of Lord Burghley, Lord High Treasurer of England during the Reign of Queen Elizabeth, with Extracts from his Private Correspondence and other Papers. By the Rev. Dr. Nares, Regius Professor of Modern History in the University of Oxford. Vol. II.

3. Conversations of James Northcote, Esq. R.A. By William Hazlitt, Esq. In 1 vol. small 8vo. with Portrait.

4. Musical Memoirs, by W. T. Parke, Forty Years Principal Oboist at the Theatre Royal Covent Garden. 2 vols.

5. Memoirs of Captain Cooke, written by Himself, and comprising Personal Details of the Grand Military Operations in the Peninsula under the Marquess of Wellington. Interspersed with numerous Anecdotes and Traits of Adventure. 2 vols.

6. Captain Frankland's Travels to Constantinople. 2d edition, 2 vols. 8vo. with 38 Engravings, price 24s.

Dedicated, by permission, to Her Royal Highness the Princess Victoria.

THE JUVENILE LIBRARY, No. I. containing the Lives of Remarkable Youth of both Sexes, and illustrated by Portraits of her Royal Highness the Princess Victoria, Sir Thomas Lawrence, Lady Jane Grey, and King Edward VI.

This Work will be published in Monthly Volumes, price 4s. each, illustrated by Engravings, Etchings, Woodcuts, &c. On advancing into this new field with a Monthly Work, similar in plan to the very popular publications already in existence, the Proprietors beg very briefly to state their views, from which it will appear, that though intending all these valuable productions, it is not meant to interfere with any of them. The Juvenile Library is addressed to a very distinct and numerous class—the young of both sexes—and its objects are to enable that class, not only to comprehend and enjoy its more mature contemporaries, but to fit them the better for the pleasures, the disappointments, and the duties of active life and society.

The truth, that when the young are removed from their schools, or studies, with the character of having completed their education, they are in general deplorably ignorant of almost every thing which their immediate intercourse with the world requires, they should know, is too notorious to need argument. Actual experience is often dearly bought; and where the lessons of wisdom are sought from books, the seeker frequently discovers that these oracles assume too much to have been previously learnt, and consequently shew instruction in forms unintelligible to youthful capacities. In endeavouring to supply the want thus felt, to simplify information, to afford facilities to parents and teachers, to prepare juvenile minds for more complicated and extended relations than mere education (even with all its modern improvements) has ever contemplated—the Library proposes to supply a regular succession of volumes, which shall be eligible to place in the hands of the young, to guide their steps, to strengthen their moral character, and, by the great force of example, to smooth their way to knowledge, and its concomitant, happiness. And while thus anxiously cultivating the most important as well as the most useful and permanent part of education, it is hoped that able writers may demonstrate the possibility of being familiar and being superficial; easy, though possessed of all necessary intelligence; and amusing, though the superstructures are raised on the foundations of learning and science. The superintendance of this undertaking, which the proprietors trust the young will have no objection to, has been confided to William Jerdan, Esq. with whom a number of Authors of high character are associated, to illustrate the various branches of polite literature and popular instruction in which their respective talents have already obtained public weight and celebrity. Henry Colburn and Richard Bentley, 8, New Burlington Street.

Preparing for publication, during the ensuing Autumn, THE NEW COMIC ANNUAL for 1831.

Embellished with numerous Wood Engravings. London: Hurst, Chance, and Co. 45, St. Paul's Churchyard.

SHARPE'S LIBRARY OF THE BELLES LETTRES. In Monthly Cabinet Volumes, at 4s. each. Commencing in July, 1830, with Addison's Essays, in 2 vols.

In compliance with what appears to be the prevailing taste, the Proprietor has adopted the term "Library," although his work will in fact (like those of a similar class already in progress) differ but little in its collective form from the preceding volumes which have issued from his press during the last thirty years, and which have been honoured with so large a share of public approbation. It will scarcely be expected that, in this day of open competition, he should lullily disclose the plan of his publication; nor is a programme to a course of polite literature (always more agreeable when most discreetly) by any means called for. When he has stated that History, Geology, the Mathematics, and in short all the graver Sciences, will give place to Poetry, Romance, Literary and Biographical Anecdote, Epistolary Correspondence, and the pleasant gossip of Polite Learning, the leading features of this work will be sufficiently understood. It need hardly be added, that the judgment exercised in the selection of his material, will rigidly exclude every thing that militates in the most trifling degree against religion or morality.

Published by John Sharpe, Piccadilly. The Works which will follow the Essays of Addison, 2 vols. are the Lyre; Fugitive Poets of the 19th Century—The Modern Decameron, Vols. I. and II.—The Laurel, a Companion volume to the Lyre; Anecdotes of Literature—The Poetry (selected) of the Age of Queen Elizabeth.

George the Fourth. In 8vo. with a fine Portrait, from a Drawing by Wivell, nearly ready for publication. A MEMOIR OF HIS LATE MAJESTY GEORGE THE FOURTH. By the Rev. GEORGE CROLY, A.M. Printed for James Duncan, 37, Paternoster Row.

General Election. In a few days will be published, a 2d edition, in 1 vol. 8vo. price 10s. 6d. boards, SUGGESTIONS as to the Conduct and Management of a County Contested Election, addressed to Candidates for the House of Commons, their Friends, Committee Men, and Agents; and to the several Persons who may be engaged or interested in County Contests. With an Appendix of Statutes on County Elections, including those of the present session, systematically abridged, with Practical Forms, adapted to immediate use, for the purpose of facilitating the Business of the Canvass and the Polling.

By G. BUTT, of the Inner Temple. Printed for James Duncan, 37, Paternoster Row.

The following Works will be published in the course of a few days by Messrs. Colburn and Bentley. TRAVELS IN GREECE AND ALBANIA. By the Rev. T. S. HUGHES, B.D. Of Emmanuel College, Cambridge.

Second edition, in 2 vols. 8vo. with considerable Additions and Improvements, with 23 Illustrations. 2. De l'Orme; a Novel. By the Author of "Richelieu," and "Darnley, or the Field of the Cloth of Gold," &c. In 3 vols.

3. Narrative of a Journey over Land to India. By Mrs. Colonel Elwood. In 3 vols. 8vo. with Plates. 4. Southenham; a Tale of the Reign of Queen Mary. By John Galt, Esq. Author of "Lawrie Todd," &c. In 3 vols.

5. Travels to the Seat of War in the East, through Russia and the Crimea, in 1829, with Sketches of the Imperial Fleet and Army, Characteristic Anecdotes, &c. By Capt. James Edward Alexander, K.L.S., 16th Lancers, M.R.A.S. &c. In 2 vols. post 8vo. with Map and Plates.

6. The Persian Adventurer; forming a Sequel to the Kurzilbash. By J. B. Fraser, Esq. In 3 vols.

7. Private Correspondence of Sir Thomas Munro; forming a Supplement to his Memoirs. Edited by the Rev. G. R. Gleig. In 1 vol. 8vo.

8. Maxwell; a Story of the Middle Ranks. By the Author of "Sayings and Doings." In 3 vols.

9. The Revolt of the Angels, and the Fall from Paradise; an Epic Drama. By Edmund Reade, Esq., Author of "Cain the Wanderer," &c. 8vo.

10. The Heiress of Bruges; a Tale. By the Author of Highways and Byways," "Traits of Travel," &c. 4 vols.

11. Fuseli's Six New Lectures on Painting, delivered at the Royal Academy. Printed uniformly with the First Series, price 21s.

12. The Separation; a Novel. By the Author of "Filtration." 3 vols.

13. The Marquess of Londonderry's Narrative of the late War in Germany and France. 2d edition, 1 vol.

14. Wedded Life in the Upper Ranks; a Novel. 2 vols.

15. Frescati's; or, Scenes in Paris. 3 vols.

16. Stories of American Life. By American Writers. Edited by Mary Russel Mitford. 3 vols.

17. The Midsummer Medley for 1830. A Series of Comic Tales and Sketches. By the Author of "Brambletye House," &c. &c. 2 vols. small 8vo.

18. The Life of Dr. Edmund Calamy, written by Himself. 2d edition, 2 large vols. 8vo. 31s. 6d.

19. Lawrie Todd; or, the Settlers in the Woods. By John Galt, Esq. 2d edition, revised, in 3 small vols.

20. Clarence; a Tale of our own Times. In 3 vols.

21. Retrospections of the Stage. By the late Mr. John Bernard, Manager of the American Theatres, and formerly Secretary to the Beef-Steak Club. By his Son, W. Baltic Bernard. 2 vols. post 8vo.

22. The Turf; a Satirical Novel. 2 vols.

Nearly ready for publication, DR. LARDNER'S CABINET LIBRARY, in Monthly Volumes, small 8vo. price 5s. embellished.

This Work, which has been some time in preparation, is intended to embrace such subjects of powerful or immediate interest as do not fall within the regular plan of the "Cabinet Cyclopaedia." It will be supported in the same class of literary and scientific contributors as the Cyclopaedia, and will form a companion to that work.

The publication of the Cabinet Library will commence with the Life and Reign of George IV. in 3 vols. A Biographical Work by Thomas Moore, Esq. will be among the earliest Volumes.

Published by Longman, Rees, Orme, Brown, and Green, Paternoster Row; and John Taylor, Upper Gower Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; sold also by J. Clappell, 98, Royal Exchange; F. Marlborough, Ave Maria Lane; Ludgate Hill; A. Black, Edinburgh; Smith and Son, D. Robertson, and Atkinson and Co. Glasgow; and J. Cumming, Dublin.—Agent for America, O. Rich, 12, Red Lion Square, London.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 703.—AMERICAN EDITION.

SATURDAY, JULY 10, 1830.

REVIEW OF NEW BOOKS.

Royal Naval Biography; or, Memoirs of the Services of all the Flag-Officers, Superannuated Rear-Admirals, Retired Captains, Post-Captains, and Commanders, &c. &c. By John Marshall, Lieut. R.N. Supplement—Part IV. 8vo. pp. 458. London, 1830. Longman and Co.

OF the former portions of this well-arranged naval record, we have more than once had occasion to speak in terms of praise; and we believe that the work in general is too well known to require that we should now go into any detail as to its plan, mode of execution, &c. The most remarkable particulars in the present volume seem to be the memoirs of Captains Basil Hall, Parry, and O'Brien; the last of whom, our readers will recollect, underwent some severe trials and sufferings in his repeated endeavours to escape from French captivity, in the years 1808-9. The biographies of these distinguished officers cannot fail to be entertaining. We were also much amused by the number of lively and characteristic anecdotes scattered here and there throughout the volume. The following is one of these, which occurs in the memoir of Captain Badcock, while serving in the late American war:—

“On one of these occasions, a marine, named Patrick Gallagher, behaved with great coolness and presence of mind, while posted at some distance from the working party. Observing five American horsemen ride down to the corner of a wood, from whence three of them galloped towards him, he immediately got behind a hay-stack, cocked his musket, and waited their approach: they passed without seeing him, and dismounted; when he instantly called out, ‘Surrender, you rascals! I have you all in a line, and by J—, I will shoot you altogether, if you do not throw down your arms!’ They immediately complied, and he marched them before him, horses and all, to the beach. Unfortunately, this brave fellow was unfit for promotion, being too fond of strong drink, and therefore could not be rewarded. This circumstance serves to shew how much an Order of Merit is wanted in the naval service; for how many hundreds of sailors and marines have, like Patrick Gallagher, richly deserved medals, or some other honorary distinctions, who, for the same reason, could not be made petty or non-commissioned officers?”

This “order of merit,” proposed by the lieutenant, would, we think, be productive of rather disorderly effects, as it would appear, that no man who is not a confirmed drunkard would be eligible. We should like to see a chapter held by “the order.” The medals, too, would be without parallel in any mode of decoration yet extant; for, to be explanatory, the services of the elect should be represented on one side, while the reverse should present an effigy of the jolly god astride on a barrel, to signify, emblematically, why the wearer’s gallantry was not rewarded, as usual, by promotion. This is the “bane and antidote.” Pat would, no

doubt, congratulate himself upon so honourable a distinction, and say, “See what I’ve got by the drink! Sure, if I had been a sober man, the devil more I’d a had but a sergeant’s halbert! Now, don’t I dangle a fine medal to my button?”

The following is a striking anecdote. The fact occurred on board H. M. sloop, Pilot, captain J. T. Nicolas, when in contest with La Légère.

“An instance of heroism occurred during that action, which has seldom been surpassed, and which is scarcely rivalled by even Greek or Roman valour. The Pilot having had her main-top-sail yard shot away, the people were employed aloft in preparing to send up another, and were in the act of reeving a hawser for the purpose, when a voice was heard from the captain’s cabin (to which, as is usual in brigs, the wounded were sent, and through the skylight of which the mainmast is visible), exclaiming, ‘You are reeving the hawser the wrong way!’ This proved to be the case; and on looking down to see who had detected the mistake at the mast-head, it was found to be John Powers, quarter master’s mate, who was at the moment lying on his back on the table under the skylight, undergoing the amputation of his thigh, his leg having just before been carried away by a round shot. The man who under such circumstances can think only of his duty, is a hero, and, whether a common sailor or an admiral, deserves to have his name placed on record. John Powers was an Irishman, about 25 years of age. It was not likely that his conduct should pass unnoticed; and on his captain’s representing it, he obtained for him the object of his ambition,—a cook’s warrant. He was in the Drake sloop of war when that vessel was wrecked on the coast of Newfoundland; and though with but one leg, was amongst the eleven men who were saved.”

In the memoir of Captain John Smith (*b*), we find a simple and ingenious remedy for an evil too often occurring in tropical climates, and known by the name of night-blindness.

“In Sept. 1801, the Merlin, cruising on the north side of Jamaica, captured a small Spanish privateer, mounting one gun on a circular sweep; and Mr. Smith, then rated master’s mate, was sent in her, with twenty men, to cruise as a tender. ‘In a few days,’ says he, ‘at least half the crew were affected with nyctalopia. We were chased one calm morning by a large xebec, carrying from eighty to a hundred men, and towards evening she was fast pulling up to us, our people having been fagging at their oars many hours, without any relief. Knowing that night would deprive half our crew of sight, it was proposed to try our strength with the enemy while it was yet daylight: this was answered by three cheers. The oars were run across, and, the enemy by this time being within gun-shot, the action commenced. After a time, to our great relief, he sheered off and pulled away from us: we, in our turn, became the pursuers; but when night came on, we took especial care to lay our head

from the xebec, and saw no more of her. This circumstance put me on devising some means of curing the people affected with night blindness, and I could think of none better than excluding the rays of the sun from one eye during the day, by placing a handkerchief over it; and I was pleased to find, on the succeeding night, that it completely answered the desired purpose, and that the patient could see perfectly well with the eye which had been covered during the day; so that in future, each person so affected had one eye for day, and the other for night; and it was amusing enough to see Jack guarding, with tender care, his night eye from any the slightest communication with the sun’s rays, and occasionally changing the bandage, that each eye in turn might take a spell of night duty; it being found that guarding the eye for one day was sufficient to restore the tone of the optic nerve, a torpor of which, and of the retina, is supposed to be the proximate cause of the disease. I much question whether any purely medical treatment would have had so complete, and, above all, so immediate, an effect. Persons affected with nyctalopia become perfectly blind as night approaches, and continue so till the return of day-light. The medicinal treatment recommended is, bleeding and purging, blisters applied repeatedly to the temples, close to the external cañthus of the eye, cinchona bark, joined with chalybeates, &c.; all of which was impracticable by us, having no medicine on board our little vessel. I am aware that this disease frequently attends scurvy in tropical climates, and is sometimes occasioned by derangement of the digestive organs and hepatic system, in which cases our simple treatment would be useless; but in the above instance it was evidently caused only by the sun.”

Lieutenant Marshall’s work is, no doubt, highly estimated by his profession. We, as civilians, recommend it to the general reader, as a chronicle of interesting facts necessary to be known by every one who feels a laudable curiosity as to the history of his country.

Album Verses, with a few others. By Charles Lamb. 12mo. pp. 150. London, 1830. Moxon.

If any thing could prevent our laughing at the present collection of absurdities, it would be a lamentable conviction of the blinding and engrossing nature of vanity. We could forgive the folly of the original composition, but cannot but marvel at the egotism which has preserved, and the conceit which has published. What exaggerated notion must that man entertain of his talents, who believes their slightest efforts worthy of remembrance; one who keeps a copy of the verses he writes in young ladies’ albums, the proverbial receptacles for trash! Here and there a sweet and natural thought intervenes; but the chief part is best characterised by that expressive though ungracious word “rubbish.” And what could induce our author to trench on the masculine and vigorous Crabbe? did he think his powerful and dark outlines might

with advantage be turned to "prettiness and favour?" But let our readers judge from the following specimens. The first is from the album of Mrs. Jane Towers.

"Conjecturing, I wander in the dark,
I know thee only sister to Charles Clarke!"

Directions for a picture—

"You wished a picture, cheap, but good;
The colouring? decent; clear, not muddy;
To suit a poet's quiet study."

The subject is a child—

"Thrusting his fingers in his ears,
Like Obstinate, that perverse funny one,
In honest parable of Bunyan."

We were not aware of "Obstinate's" fun before.

An epitaph:—

"On her bones the turf lie lightly,
And her rise again be brightly!
No dark stain be found upon her—
No, there will not, on mine honour—
Answer that at least I can."

Or what is the merit of the ensuing epicedium?

"There's rich Kitty Wheatley,
With footing it featly
That took me completely,
She sleeps in the kirk-house;
And poor Polly Perkin,
Whose dad was still firking
The jolly ale firkin,
She's gone to the work-house.

Fine Gard'ner, Ben Carter
(In ten counties no smarter)
Has ta'en his departure

For Proserpine's orchards;

And Lilly, postilion,
With cheeks of vermilion,
Is one of a million

That fill up the churchyards.

And, lusty as Dido,

Fat Clementson's widow

Flits now a small shadow

By Stygian hid ford;

And good master Clapton

Has thirty years nap't on

The ground he last hap't on,
Entomb'd by fair Walford.

And gallant Tom Dockwra,

Of Nature's finest crockery,

Now but thin air and mockery,

Lurks by Avernus,

Whose honest grasp of hand

Still, while his life did stand,
At friend's or foe's command,
Almost did burn us.

But this day Fanny Hutton

Her last dress has put on;

Her fine lessons forgotten,
She died as the gince died;

And prim Betsey Chambers,

Decay'd in her members,
No longer remembers

Things as she once did.

And prudent Miss Wither

Not in jest now doth *with*er,
And soon must go—whither
Nor I well nor you know;

And flaunting Miss Waller,
That soon must befall her,
Whence none can recall her,
Though proud once as Juno!"

Mr. Lamb, in his dedication, says his motive for publishing is to benefit his publisher, by affording him an opportunity of shewing how he means to bring out works. We could have dispensed with the specimen; though it is but justice to remark on the neat manner in which the work is produced: the title-page is especially pretty.

Irish Cottagers. By Mr. Martin Doyle, author of "Hints to small Farmers." 12mo. pp. 137. W. Curry, junr., and Co., Dublin; Hurst, Chance, and Co., London; Oliver and Boyd, Edinburgh.

THIS unassuming little volume deserves the highest praise; it supplies a vacancy in our literature too much neglected. We cultivate and uphold a taste for reading in the lower classes, but we do not sufficiently attend to the necessity there is also for supplying wholesome and nutritive food to the appetite thus created.

Now, the pages before us apply admirably to this want; they are full of useful instruction and practical example. No one, whether landlord or tenant, could peruse these few leaves without benefit, and, we must also add, amusement. We extract an entertaining scene in court, the consequence of a housewarming, where spirits were illegally sold.

"*Bench.* Call the first case. *Clerk.* Mr. Gilbert Finem against Nicholas Moran, of Drumadecough, farmer, for selling spirits without a license, on Monday night, December 2d.—*Bench.* State your complaint, Mr. Finem. *Gauger.* I have received information that Nicholas Moran sold some gallons of whiskey in his house, last Monday night, without a license.—*Bench.* Moran, what have you to say to this? *Nick.* Plaze your worship, I defy man, woman, or child, to say that I handled a penny that same night for *spirits*.—

Gauger. Will your worship ask him what his wife was selling that night, and scoring with chalk on the leg of the table? *Bench.* Answer that question, Moran. *Nick.* I'll make your worships sensible, and I'll tell the truth; and Mr. Bruce, God bless him! knows that I wouldn't tell a lie for the whole world. Molly was noting down, just for her satisfaction, on the leg of the table, the number of dishes of *tay* that Judy Flynn and the rest of the woman-kind were after sweetening, bekaise, you see, they were sitting up with us that night, on account of the children being bad with the measles; and, by the same token, one of them is mighty bad entirely to-day. I'll give my oath that I sould nothing (and 'twasn't I, but my wife, all the time,) but *tay*. Not a drop of *spirits* crossed the threshold of my door that day; and why should it when the law is again it? I'll swear to that.—*Bench.* You are not required to criminate yourself by any admission, nor can you defend yourself in this way; if the court were to allow you to take what you call a clearing oath, you would be unquestionably perjured in this case. How could you, unprincipled man that you are, swear that no whiskey crossed your door that day, when you know that it did, or perhaps the day before? *Nick.* No, plaze your worship, nor any other day this month past, I'll take my bodily oath of that.—*Gauger.* The whiskey was seen *going* into his house for sale.—*Bench.* Where's your witness, Mr. Finem? *Gauger.* I can't persuade him to appear.—*Bench.* Then he shall be fined 10l. (To the clerk:) Let the fine be entered. You are an incorrigible fellow, Nick; but perhaps we may have you by and by. Call the next case. *Clerk.* James Cassidy against Brien Foley, for using a malicious and slanderous expression against him, in Nick Moran's house on Monday night, the 2d of December, and also for an assault.—

Bench. Cassidy, take the book; now state what you have to complain of. *Cassidy.* Plaze your worships, there was a small party of betewkst 50 or 49, (I wont prove to more than 49, barring the childer are to be counted.)—*Bench.* Don't mind unnecessary particulars; come to the point. *Cassidy.* There was, as I was obsarving, betewkst 49 or 50 of us in the two rooms, very pleasaant and neighbourlike together, taking a tumbler of punch to serve Nick Moran's new house, I mean the new ould house, bekaise he had to buy windys and to put up a chimney.—*Bench.* What do you mean by serving Nick Moran's house? *Cassidy.* Giving him the benefit, plaze your honor, of the whiskey.—*Bench.* Do you mean that you paid him for the whiskey? *Cassidy.* No, plaze your honor, by no means; it was for the

punch only we paid—that is, we owe him for it.—*Bench.* By virtue of your oath, did you understand that the punch there was to be paid for? *Cassidy.* Every sup, your honor, barring what Nick drank himself, and why not? sure we're on honor to pay, now that the score stick is broke.—*Bench.* (To the gauger.) This will prove your case. *Clerk.* make out a conviction for Nick Moran.—*Cassidy.* Bad luck to this tongue, 'twasn't to bring Nick Moran (my own wife's half sister's son) into trouble, I was intending—quite the contrary, your worships: I have no more to say (retiring).—*Bench.* Stay; you have not told one word of your own affair yet. What's your complaint against Foley? *Cassidy.* Sure enough. Why then, plaze your honour, I'd rather not be axed about Foley's business; it's enough to be an informer, in spite of one's self too, wanst in a day. Foley riz the skrimmage, that's all.—*Bench.* Oh, since you have nothing more to say, we dismiss the case, with costs against you; sixpence the summons—a shilling the—*Cassidy.* Will I have to pay for the summons, your honor? *Bench.* Certainly, if you have nothing to prove against the person you have summoned.—*Cassidy.* Why, then, your worship, if that's the case, I'll tell you all about it, from first to last, and I'll be on my oath.—*Bench.* You're on your oath already.—*Cassidy.* Well then, I'll be on my oath again, and leave it to my dying hour, that Brien Foley used a slanderous and terrible word against my character, that is not fit to be repeated before your honors and the people.—*Bench.* Come, sir, don't keep us here all day. What did he say? *Cassidy.* Why then, saving your presence, he called me before one hundred people.—*Bench.* You said just now there were only between forty-nine and fifty (whatever number that may be) present; take care. *Cassidy.* You're right; I stand corrected, your worship. Well then, before fifty of the neighbours—he called me—but would'nt it be decent, plaze your worships, to send the women out of court—the young girls any way; the ould one's an't so delicata.—To this suggestion, so very creditable to Jemmy Cassidy's delicacy, the worthy magistrates readily assented. The court was accordingly cleared of all females. And after the confusion which this occasioned had subsided, the complainant stated that Foley, after having called him nearly twenty times a gimlet-eyed rascal (Cassidy squinted a little) and a rogue and a liar, which he didn't much mind, as Foley had the cross sup in him, at last called him a—GOLUMPUS. Here there was an indication of merriment in the court, in which, to say the truth, the bench were constrained to participate; and this did not diminish when Mr. Bruce drily informed poor Cassidy that *Golumpus* was not an actionable word—humorously asserting that it was compounded of *Goliah* the giant, and *Olympus* the mountain, and therefore must mean a *Man-Mountain*; so, added his worship, instead of making *little* of you, as you had imagined, the defendant has really been making the *most* of you. We are, however, to consider the assault.—*Cassidy.* I don't care about that, since my character is cleared."

We again warmly recommend the present work, as useful to its Irish readers, both as a warning and example; and to its English ones, as giving just views of a country which falsehood and exaggeration have so much and so injuriously marked for their own.

Constable's Miscellany, Vols. 55 and 56. Life of King James I. By Robert Chalmers, Author of the "History of the Rebellions in Scotland." Edinburgh, 1830, Constable and Co.: London, Hurst, Chance, and Co.

INDEFATIGABLE in research, familiar with all old records, till he almost identifies his own feelings with their events, few writers have given more time, trouble, or interest, to their subject than Mr. Chalmers: he is the most enthusiastic of antiquaries—a pursuit, by the by, whose very uncertainty and dryness seems to excite the most opposite feelings in its followers; for your antiquary is generally a warm and ingenuous partisan, of whatever party, for whose sake he draws conclusions. This is Mr. Chalmers' case. His history of King James is full of curious details, amusing anecdotes, forming two most entertaining and readable volumes; but rather materials for history, than history itself: he is more accurate in his facts than in his deductions from them. Our limits are ill calculated for historical discussion; but we must say his favourable opinion of James is indifferently borne out even by his own statements; and we protest against his very unfair and unjust view of Raleigh's case: a little of the liberality so profusely bestowed on the sovereign's defects would not have been ill extended to those of the subject's. We shall now proceed to extract a few of the many amusing anecdotes with which these pages abound; and naturally begin with the birth of James.

"The room where this event took place is so extremely small, that it is yet the wonder of every one who sees it, how it could have afforded the proper accommodation. Indeed, there never perhaps was a king, even among those who have risen to their thrones from a plebeian rank, who was born in an apartment so limited in dimension, and so humble in appearance, as that in which the first monarch of Great Britain was ushered into the world. It measures no more than the length of two ordinary walking-canes in any direction; and it is somewhat irregular in shape. That Mary should have selected so narrow a room for her retirement under such circumstances, certainly gives a curious view either of her character, or of the manners of the age and country in which she lived. About two o'clock that afternoon, Lord Darnley came to visit the queen, and expressed a desire to see the child. 'My lord,' said Mary, as her attendants presented their precious charge to his arms, 'God has given you and me a son.' Darnley stooped and kissed the child, a blush mantling on his cheek, as the novel idea of paternity rushed to his mind. Mary then took her son into her arms, and withdrawing a cloth which partially covered his face, said to her husband, 'My lord, here I protest to God, and as I shall answer to him at the great day of judgment, this is your son, and no other man's son. He is indeed so much your son, that I only fear it will be the worse for him hereafter.' Then turning to Sir William Stanley, Darnley's principal English servant, Mary added, 'This is the son who, I hope, shall first unite the two kingdoms of Scotland and England.' Sir William answered, 'Why, madam! shall he succeed before your majesty and his father?' 'Alas!' Mary only answered, and the answer was expressive enough, 'his father has broken to me.' Darnley, who still stood near, heard this with pain. 'Sweet madam!' said he, 'is this your promise that you made, to forget and forgive all?' 'I have forgiven all,' said the queen; 'but will never forget. What

if Fawdonside's pistol had had shot? What would have become of him and me both! And what estate would you have been in? God only knows. But *we* may suspect.' 'Madam,' answered Darnley, 'these things are all past.' 'Then,' said the queen, 'let them go.' And next in order, as naturally, comes his christening.

"Before the appointed day, the Earl of Bedford arrived, with a retinue of eighty gentlemen on horseback, as ambassador from Elizabeth, bringing with him a font of gold to be employed in the ceremony, as a present from his mistress to Queen Mary. The accurate Stowe informs us, that this grand piece of plate cost the sum of one thousand and forty-three pounds nineteen shillings; while a more homely Scottish chronicler of the day has recorded, that it was 'twa stane wecht.' Large as it was, however, Elizabeth entertained apprehensions that it would be too small to contain the person of the infant prince; and as she had given Bedford instructions, among graver matters, 'to say pleasantly, that it was made as soon as we heard of the prince's birth, and then 'twas big enough for him; but now he, being grown, is too big for it; therefore it may be better used for the next child, provided it be christened before it outgrows the font.'"

Our next extract is from a more advanced period, circa 1589.

"About this time, James procured a marriage to take place betwixt his faithful school-fellow and counsellor, the Earl of Mar and Lady Mary Stuart, daughter of the late, and sister to the present Duke of Lennox. It is a tradition in the family of Mar, that the earl, before this period, when in widowhood, had consulted an Italian conjuror, as to the external appearance of the lady whom it should be his fate to marry for the second time, and that, the conjuror shewing him a figure in a glass somewhat like Lady Mary, he at once fell distractedly in love with her. Unfortunately for his passion, the young lady had a great aversion to becoming the second wife of a man who had already an earlier family to inherit his title and estates; and, moreover, the king was supposed to have destined her for another. Mar, therefore, fell grievously ill, and seemed about to enact that strange absurdity, a man, with a large family, dying for love. But the king, being informed of his illness by a letter, visited him in his affliction, and cheered him up by exclaiming, in his usual boisterous way, 'By G—, ye shanna dee, Jock, for ony lass in a' the land!' His majesty afterwards exerted those powers of small domestic intrigue for which he was remarkable, in bringing about a match between his lordship and Lady Mary—a match which proved exceedingly happy."

There is a curious account of the trials for witchcraft; we can only extract part: we must observe that the Christian tone of the prayer is strangely at variance with the supposed league with the devil.

"Among fifty distinct instances of necromancy which are displayed against Simpson in her indictment, perhaps the reader may tolerate one for a specimen. Being sent for to Edmonstone, to decide by her supernatural skill whether the lady of the house should recover from an illness or not—for women of her order appear in that age to have been as regularly called to the bedsides of the sick as physicians—she told the attendants that she could give them the required information that evening after supper, appointing them to meet her in the garden. She then passed to the garden, and, as was her custom in such cases, uttered

a metrical prayer, which, according to her own confession, she had learned from her father, and which enabled her to determine whether the patient would be cured or not—as, if she said it with one breath, the result was to be life—but if otherwise, death. This prayer was as follows:—

'I trow (*traw*) in Almighty God, that wrought
Baith heaven and earth, and all of nought;
In his dear son, Christ Jesu,
In that comely lord I trow,
Was gotten by the Haly Ghaist
Born of the Virgin Mary,
Stapped to heaven, that all weil than,
And sits at his father's right hand,
He bade us come and lord, to dome
Baith quik and dead to him convene.
I trow also in the Haly Ghaist;
In haly kirk my hope is maist,
That haly ship where hallowers wins
To ask forgiveness of their sins
And syne to rise in flesh and bane,
The lñ that never nair has gane.
Thou says, Lord, loved may he be
That forned and made mankind of me.
Thou coft (*baucht*) me on the haly cross,
Thou lent me body, saul, and voce,
And ordanit me to heavenly bliss;
Wherefore I thank ye, lord, of this.
That all your hallowers loved be,
To pray to them that pray to me.
And keep me fra that fellon fae,
And from the sin that saul would slay.
Thou, lord, for thy bitter passion in,
To keep me from sin and wardly shame,
And endless damnation. Grant me the joy never
will be gane.*
Sweet Christ Jesus. Amen.'

Having stopped in the course of this long prayer, she despaired of the lady's life. However, she called upon the devil, by the name of Elpha, to come to speak to her. He presently appeared climbing over the garden wall in the shape of a large dog; and he came so near her, that, getting afraid, she charged him, by the law that he lived on, to keep at a certain distance. She then asked if the lady would live; to which he only answered, that 'her days were gane.' He, in his turn, asked where the young gentlewomen, daughters to Lady Edmonstone, were at present. She answered, that she expected soon to see them in the garden. 'Ane of them,' said he, 'will be in perill; I wish to have her.' On her answering that it should not be so with her consent, he 'departit frae her,' says the indictment, 'yowling'; and from that time till after supper he remained into the draw-well. After supper, the young ladies walked out into the garden to learn the result of Mrs. Simpson's inquiries; on which the devil came out of the well, and seizing the skirts of one of them (probably a married one, as she is called Lady Torsonce), drew her violently towards the pit from which he had emerged; and it is added, that if Simpson and the other ladies had not exerted themselves to hold her back, he would have succeeded in his wishes. Finding himself disappointed of his prey, he 'passit away thair-efter with ane yowle.' The object of his ravenous passions fainted, and was carried home; she lay in a frenzy for three or four days, and continued sick and cripple for as many months. And it was remarked, that whenever the wise wife of Keith was with her she was well; but on her going away, all the

* Her prayer, or conjuration, for the healing of sickness, was as follows:

'All kynds of ill that ever may be,
In Christ's name I conjure ye;
I conjure ye, baith mair and less,
By all the vertues of the messe,
And rycht sa with the nailis sa
That nailed Jesus and not ma,
And rycht sa with the samen blude
That rekit ower the rathful rude,
Furth of the flesh and of the bane,
And in the eard and in the stane,
I conjure ye in God's name.'

Records of Justiciary.*

dangerous symptoms returned. In the mean time, it is to be supposed, the old lady died."

The Earl of Gowry.—"The fame of his accomplishments, his handsome person, and of Elizabeth's kindness to him, preceded his arrival, and being associated in the minds of the multitude with a recollection that his father was a sort of martyr in the cause of Presbyterianism and popular government, every where excited a lively interest in his favour. Like every other ambitious man, even while he listened with gratification to the applauses of the crowd, he secretly despised the flatterers: he remarked, as he made his way through the mob which received him at Edinburgh—"Pshaw! there were as many, I believe, to see my father's execution at Stirling." Still these marks of popular favour must have tended to foment that very ambition which enabled him to despise them."

We now quote a letter written during the King of Denmark's visit; and a pretty sample it is of manners:—

"My good friend,—In compliance with your asking, now shall you accept my poor account of rich doings. I came here a day or two before the Danish king came; and from the day he did come, till this hour, I have been well nigh overwhelmed with carousal and sports of all kinds. The sports began each day in such manner and such sort, as well nigh persuaded me of Mahomet's paradise. We had women, and indeed wine too, of such plenty as would have astonished each beholder. Our feasts were magnificent; and the two royal guests did most lovingly embrace each other at table. I think the Dane hath strangely wrought on our good English nobles; for those whom I could never get to taste good liquor now follow the fashion, and wallow in beastly delights. *The ladies abandon their sobriety, and are seen to rolle about in intoxication.* In good sooth, the parliament did kindly to provide his majesty so seasonably with money: for there have been no lacke of good living; shews, sights, and banquetings from morn to eve. One day, a great feast was held, and, after dinner, the representation of Solomon, his temple, and the coming of the Queen of Sheba, was made, or (as I may better say) was meant to have been made, before their majesties, by device of the Earl of Salisbury and others. But, alas! as all earthly things do fail to poor mortals in enjoyment, so did prove our presentment thereof. The lady who did play the queen's part, did carry most precious gifts to both their majesties; but, forgetting the steps arising to the canopy, overset her caskets into his Danish majestie's lap, and fell at his feet, though I rather think it was in his face. Much was the hurry and confusion; cloths and napkins were at hand, to make all clean. His majesty then got up, and would dance with the queen of Sheba; but he fell down, and humbled himself before her, and was carried to an inner chamber, and laid on a bed of state, which was not a little defiled with the presents of the queen, which had been bestowed upon his garments—such as wine, cream, jelly, beverage, cakes, spices, and other good matters. The entertainment and show went forward, and most of the presenters went backward, or fell down—wine did so occupy their upper chambers. Now did appear in rich dress, Hope, Faith, and Charity. Hope did assay to speak, but wine rendered her endeavours so feeble, that she withdrew, and hoped the king would excuse her brevity. Faith was then alone, for I am certain she was not joined to good works, and left the court in a staggering condition. Charity

came to the king's feet, and seemed to cover the multitude of sins her sisters had committed; in some sort she made obeisance and brought gifts, but said she would return home again, as there was no gift which heaven had not already given his majesty. She then returned to Hope and Faith, who were both sick and spewing in the lower hall. Next came Victory, in bright armour, and presented a rich sword to the king, who did not accept it, but put it by with his hand; and by a strange medley of versification, did endeavour to make suit to the king. But Victory did not triumph long: for, after much lamentable utterance, she was led away like a silly captive, and laid to sleep in the outer steps of the antichamber. Now did Peace make entry, and strive to get foremost to the king; but I grieve to tell how great wrath she did discover unto those of her attendants; and, much contrary to her semblance, rudely made war with her branch, and laid on the pates of those who did oppose her coming. I have much marvelled at those strange pageantries, and they do bring to my remembrance what passed of this sort in our queen's days; of which I was sometime an humble presenter and assistant: but I never did see such lack of good order, discretion, and sobriety, as I have now done. I have passed much time in seeing the royal sports of hunting and hawking, where the manners were such as made me devise the beasts were pursuing the sober creation, and not man in quest of exercise and food. I will now in good sooth declare to you, who will not blab, that the gunpowder fright is got out of all our heads; and we are going on hereabouts as if the devil was contriving every man to blow up himself, by wild riot, excess, and devastation of time and temperance. The great ladies do go well masked; and indeed it be the only shew of their modesty to conceal their countenance. But alack! they meet with such countenance to uphold their strange doings, that I marvel not at ought that happens. The lord of the mansion is overwhelmed in preparations at Theobald's, and doth marvellously please both kings, with good meat, good drink, and good speeches. I do often say (but not aloud), that the Danes have again conquered the Britons; for I see no man, or woman either, who can command herself."

This royal Dane was quite an enthusiast in drinking: he once pledged, at his own court, the healths of the English ambassadors in thirty-five cups of good Rhenish.

"On one of the evenings of the royal entertainment at Theobald's, this young bacchanal had nearly fallen into mortal quarrel with the Earl of Nottingham, the famed conqueror of the *soi-disant* invincible armada. It had pleased this ancient nobleman to marry, for his third wife, the youthful and blooming Lady Margaret Stuart, daughter of that Earl of Murray so famed in Scotland for his good looks and his unfortunate end, and who was, of course, cousin to the king. The addled brains of the King of Denmark were tickled at the idea of an old man married to so young a wife; and, encouraged perhaps by the character of the earl—for his lordship was an arrant coxcomb—he could not help, in the course of their carousals, making certain allusions, which at once touched the honour of the wife, and offended the vanity of the husband. The wrath of the latter was appeased at the time, probably by the mediation of the king; but not so the indignation of the countess. She, having learned what took place, lost no time in writing the following letter to the Danish ambassador; a composition worthy of herself and her ancestors.

"Sir,—I am very sorry this occasion should have been offered me by the king your master, which makes me troublesome to you for the present. It is reported to me by men of honour, the great wrong the King of Danes hath done me, when I was not by to answer for myself; for, if I had been present, I would have letten him know how much I scorn to receive that wrong at his hands. I need not urge the particular of it, for the king himself knows it best. I protest to you, sir, I did think as honourably of the king your master, as I did of my own prince; but I now persuade myself there is as much baseness in him as can be in any man: for, although he be a prince by birth, it seems not to me that he harbours any princely thought in his breast; for, either in prince or subject, it is the basest that can be to wrong any woman of honour. I deserve as little that name he gave me, as either the mother of himself or of his children; and if ever I come to know what man hath informed your master so wrongfully of me, I shall do my best for putting him from doing the like again to any other: but if it hath come by the tongue of any woman, I dare say she would be glad to have companions. So, leaving to trouble you any further, I rest, your friend,—M. NOTTINGHAM."

"Two gentlemen, noted for agility, trying to outjump each other in James's presence, he said to the individual who jumped farthest, 'And is this your best? Why, man, when I was a young man, I would have outleaped this myself.' An old practised courtier, who stood by, thought this a good opportunity of ingratiating himself with his master, and struck in with, 'That you would, sir; I have seen your majesty leap much further myself.' 'O' my soul!' quoth the king, as his usual phrase was, 'thou lyeest; I would, indeed, have leapt much farther; but I never could leap so far by two or three feet.'"

We now dismiss these amusing volumes, and recommend them as full of animated and curious pictures of the time.

The Templars; an Historical Novel. 3 vols. London, 1830. Whittaker and Co.

THERE is a considerable share of talent in these volumes; some of the scenes are very animatedly written, and Dermot Wharton's character is drawn with much originality. The conduct of the story is, however, but badly managed; the whys and wherefores are confused, with much of a young writer's carelessness: we think he or she has the power to do better. *The Templars, an historical novel*, is a misnomer: it belongs to the present day; and the templars are two young lawyer's clerks. We quote as a sample a scene in a battle, where a regiment in a state of inaction is exposed to the enemy's fire.

"'Plaguy awkward this, Aynton!' exclaimed our hero's brother officer, a regular iron-hearted veteran, as he tapped his snuff-box, and amused himself with an ample pinch with much sang-froid, as a couple of his men were borne wounded to the rear—'plaguy cruel for a green fellow like you.' 'Rather chilling, I confess,' returned Dudley, with something intended for a smile—'should have no particular objections to put one's blood into better circulation.' 'Time enough, man—'t will give one a better appetite when we do start—though, by St. George, we are d—d cruelly posted here, to be knocked down like so many ninepins without ever a blow.' 'Some-what of a sobering sensation, at least to me.' 'Sober enough, when the next may be your turn or mine; but, d—n it, never mind, my hero; we can but die once, you know: though,

egad, Ayrton, there is something rather of the interesting, as well as the picturesque, in the idea, that one's limbs, which this moment are bracing their sinewy grasps across our saddles, may, the next, be as useless as a dead cat's, and ourselves—d—— queer look out that, Ayrton, eh?" "A serious look out, I fancy, Lyon." "Dare say, old Sobersides, and I'll e'en take your word for it, for, 'pon my soul, it's quite out of my line." "The inquiry or the contingency, Lyon?" "The what, man?—contingency?—no d—— it, that's quite in my line—though I never bother myself about it—never could persuade myself to aught so useless." "It is, perhaps, well that you can arrange matters so comfortably." "Perhaps, Ayrton? It is well, man—what can be the use of boring one's brains about things which may not happen?—d—— bad plan, take my word for it." "Very likely, Lyon; but I have still my poor friend Peters before my eyes, and his wretched fate." "Ah, poor devil! confoundedly unlucky, sure enough." "Worse than unlucky, Lyon; it was miserable every way." Our hero repressed any more serious allusions, from a conviction of their unseasonableness, adding, with a deep sigh, "It has sadly unnerved me." "That will never do, Ayrton—good nerves nine-tenths the battle—for my part, mine never flinch—always stanch as—confound its impudence!" This sudden exclamation of the comfortable veteran was occasioned by a shell striking into the ground almost at their horses' feet, and bespattering them pretty plentifully with mud. The captain instantly dismounted, and seizing hold of the shell, threw it with all his might beyond the troop. "Crack, you ugly devil," he puffed out, as, ere it rested on the ground, the murderous missile burst out its hellish bowels in impotent rage. Our hero's pulse certainly beat a little quicker at so exciting a moment. His matter-of-fact comrade, however, quietly wiped off a part of the mud from his dress, then remounted his charger with perfect nonchalance, drew out his snuff-box, and, as it were, resettling himself in his seat with a good hearty pinch, observed to him—"D—n it, man, nothing like nerve—sees a man through many a scrape—will you snuff, Ayrton?" At the same time placing his box almost at the point of his sword, and extending the blade towards Dudley, with a firm, steady hand, in attestation of his perfect composure. "You are a lucky fellow!" exclaimed Dudley, as he held out his fingers to take the proffered refreshment,—"an enviable fellow, Lyon!" At the instant that Dudley's fingers touched the box, it fell suddenly to the ground; the firm sinewy arm that held it dropped nerveless down; and as his inquiring eyes looked up for an explanation, Dudley saw the last convulsive quivering of the in-turned balls, as they closed for ever, and the hardy veteran tumbled lifeless to the ground."

An Inquiry as to the Expediency of a County Asylum for Pauper Lunatics. By William Palmer, D.D. 2d edition. 8vo. pp. 36. Exeter, 1830, Trewman and Co.: London, Rivingtons; Underwoods.

THIS is a sensible and well-written pamphlet, relating to a subject of great general interest, which has frequently been mentioned in our pages. The author, a distinguished clergyman of the Church of England, has long been labouring to accomplish what every Christian heart must anxiously desire,—a suitable asylum in his native county for the proper care and treatment of a most helpless class of our afflicted fellow-creatures. We trust he has not laboured

in vain, and that he will soon have the pleasure of witnessing the full accomplishment of his benevolent views. Of the numbers and condition of the insane poor in England, we had little real knowledge till the documents published by Sir Andrew Halliday, in the course of last year, put us in possession of the startling fact, that more than one in every thousand of our population was actually mad. But this was not the whole of the valuable information given us by the indefatigable philanthropist. He clearly proved, by the same authentic records, that the disease had rapidly increased, and was still increasing; and that unless measures were quickly taken, the evil would become of such magnitude as to defy the most strenuous efforts of the legislature to put a stop to it. The statements of the worthy knight were doubted by some of our contemporaries, and his fears were laughed at by many; but they have been amply confirmed by the returns to Parliament, which are now printed and before the public. By these returns it appears, that the insane population in England and Wales amounts to nearly fourteen thousand souls!—all of them of the poorer classes, and most of them supported from the parish rates;* and it is no difficult matter to account for this great aggregate of numbers, when the manner in which they have hitherto been treated is patiently investigated. In most countries, but particularly in this, it has been the custom, the moment a poor wretch became deranged, to have him shut up in a dungeon, severed from all intercourse with his fellows, and treated, not as one suffering from disease, but as a leper whom the judgment of God had condemned to misery. Even private madhouses, which, till of late, were the only safe receptacles for lunatics, were conducted in a manner rather calculated to confirm the malady than to remove it. We do not speak of such places as were disgraceful to humanity, and conducted as mere objects of gain, but of the best and wisest regulated. No one thought of cure. It was not considered necessary to attempt to remedy the mental aberrations, or soothe the over-excited feelings. Recourse was only had to medicine when bodily ailments supervened; and the mind, thus left to prey upon itself, or further irritated by the insane babble of the numerous inmates of the asylum, or brutal conduct of keepers, very soon sunk into hopeless idiocy. Hence, every temporary attack became a permanent disease, and the number of the sufferers was hourly augmented. The wise measure of the legislature, which authorised the establishment of county hospitals, has hitherto been tardily acted upon, and but for the persevering and benevolent exertions of such men as the author of the pamphlet before us, would very soon have been lost sight of altogether. Where the sufferers are unable to make their own voice heard, few are disposed to give their condition any great degree of serious consideration; and where inquiries such as those connected with a subject so loath-

* Abstract of the number of insane persons in England and Wales, from the Parliamentary Returns:—

	Lunatics.		Idiots.		Total.
	Males	Females	Males	Females	
In England	2083	2737	2365	2054	9239
In Wales	98	118	225	226	659

Total number of Lunatics and Idiots, 9919

To which should be added the numbers ascertained to be in public or private asylums, taken from the annual reports of these establishments, amounting to 3496, which are not noticed in the returns to the House of Commons, and insane persons in the army and navy (not in any return), 280, making a total of 13,665.

some, and often disgusting, only lead, as they frequently do, to most harassing and hopeless discussions, who can be surprised at that apathy which so generally prevails even amongst the most humane? But now that this negligence has given rise to such a magnitude of evil, and that we can no longer shut our eyes to the consequences, it is to be hoped that a different conduct will be pursued, and that the magistrates who have hitherto held back, from an erroneous impression with respect to trouble and expense, will unanimously come forward and provide each for his own county the necessary accommodation for its insane population. The reverend doctor very forcibly observes on the subject of expense—

"That the expenditure now looked to is but trifling, and that it is relieved of much of its burden by the consideration of the legislature; I am sure therefore that it will be cheerfully met for those whose pitiable situations are generally irremediable, except by the aid of those who, unlike them, are blessed with reason, and the means of affording relief to their suffering and helpless fellow-creatures, and thus become the instruments, under Divine Providence, of removing from thousands the cloud of intellectual darkness, and of restoring the light of reason, and with it unfeigned thankfulness for the recovery of the greatest of all human blessings. From what I have here stated it will be seen, that in the first place there will be no difficulty in raising the comparatively small sum required for the erection of the building; that the establishment will not afterwards be attended with any expense to the county; that parishes now paying largely for the care of their lunatic paupers, will derive all the advantages of the profits of the establishment, which will be applied in reduction of the weekly sum; that an asylum, affording as it will a ready retreat for the sufferers, will enable parish officers to apply the earliest attention to the cases, which, as I have shewn, will tend more than any thing else to the cure of the patients, and the consequent diminution of the malady throughout the county. All these facts, therefore, prove that the outlay will be a measure of sound economy. I need not here allude to the higher and more important motives which should actuate us in the course of this inquiry; nor need I enter into any further remarks on the present inefficient and deplorable management of the lunatic poor, or compare it with the wholesome restorative treatment practised in a public asylum. These points are too obvious to require any comment from me."

What is here meant to apply to the county of Devon, may, with equal truth, be addressed to every county in England. Our only object in these few remarks is to keep the attention of our numerous readers directed to the subject, being well assured that it is one deserving of their most serious consideration; and when they have perused the melancholy case* which the worthy divine has related in his pamphlet, we are satisfied that we have done enough to engage their best feelings and exertions to prevent the necessity of ever again having to mention such a scene of horror.

Mackintosh's History of England.
(Second Notice.)

THERE is so much of profound observation, of acute analysis, of new and excellent observa-

* An inquest held at Exeter on the body of Sarah Priddis, a lunatic pauper, and so dreadful in its details, that it is hardly credible such circumstances should have occurred in a civilised land.—Ed. L. G.

tion, scattered through Sir J. Mackintosh's work, that it is only justice both to himself and to our readers to make a cento of those scattered remarks which illustrate the writer's mind as well as the history. Any one may narrate a fact, but it is the inference drawn from its results, the view taken of its moral and practical bearings, that display the historian's talents; and in these pages it is the philosopher enlightening the patriot, equally aware of the value of old associations, and the evil of old prejudices, and tracing in the most enlightened spirit the progress made by our ancestors in civil and religious liberty. We hardly select; for it would be difficult to point out a page without some mark of the thoughtful and superior mind; and first light on a view of the savage state, that deserves quotation.

"That the most secret mysteries of the Druidical priesthood were in Caesar's time most taught in Britain, may be explained by the natural proneness of such superstitions to take refuge among the blindest of their votaries, to fly from the neighbourhood of rival superstitions, and still more from the scrutiny of civilised and inquiring men. It is vain to inquire into the forms of government prevalent among a people in so low a state of culture. The application of the terms which denote civilised institutions to the confused jumble of usages and traditions which gradually acquire some ascendancy over savages, is a practice full of fallacy. The Britons had a government rather occasional than constant, in which various political principles prevailed by turns. The power of eloquence, of valour, of experience, sometimes of beauty, over a multitude, for a time threw them into the appearance of a democracy. When their humour led them to follow the council of their elders, the community seemed to be aristocratic. The necessities of war, and the popularity of a fortunate commander, vested in him in times of peril a sort of monarchical power, limited rather by his own prudence and the patience of his followers than by laws or even customs. Punishment sprung from revenge: it was sometimes inflicted to avenge the wrongs of others. It is an abuse of terms to bestow the name of a free government on such a state of society: men, in such circumstances, lived without restraint; but they lived without security. Human nature in that state is capable of occasional flashes of the highest virtues. Men not only scorn danger and disregard privation, but even shew rough sketches of ardent kindness, of faithful gratitude, of the most generous self-devotion. But the movements of their feelings are too irregular to be foreseen. Ferocious anger may, in a moment, destroy the most tender affection. Savages have no virtues on which it is possible to rely."

Change of Roman Policy.—"The slow progress of the Romans in the reduction of Britain is a fact which has not been sufficiently considered by historians. It forms a remarkable deviation from the ancient policy, and indeed a striking contrast to the conquest of Gaul, though that country was the last great acquisition in the West, and defended by a people as brave as the Britons, more improved, and far more numerous. It is an instance of the sudden change produced in their foreign policy by a revolution in their internal government. The patriate steadily advanced to universal dominion by adherence to the traditional policy of their body. The measures of each emperor fluctuated with his temper and his personal circumstances. The general policy was that of

Augustus, who disapproved a greater extension of an empire, which was already possessed of natural frontiers, and had begun to acquire a species of moral unity; for the Macedonian conquests had established the arts and language of Greece in Western Asia, and the Roman victories themselves had carried the same refinements throughout the European provinces. Beyond the frontiers, were either utter barbarism or the civilisation of another world. The foundation of the imperial power was laid in military usurpation, and the example was too recent not to affect the spirit of the administration. Domitian was jealous of Agricola, as a reproach to his own baseness. Wise and good emperors, desirous of securing a civil and legal government, reasonably avoided conquests, which might once more tempt victorious commanders to overthrow their work. The prizes of ambition had become more splendid at home than abroad; and the Roman dominions were too vast to be embraced as a native country with affection and pride by the most capacious soul. Under a prince of ability and energy, like Trajan, the ancient spirit might be rekindled at Rome; but, generally speaking, the foreign wars of the empire took their rise from inevitable collisions between the commanders on the frontier and the unconquered barbarians. Agricola considered the complete reduction of Caledonia, and even the conquest of Ireland, as the best means of securing the southern province; but the ordinary policy of Rome was to confine the barbarians within their mountains. The fickleness, rashness, and rapacity of the mountaineers, however, seldom failed to supply a Roman general, ambitious of distinguishing himself, with specious pretexts for hostilities against them, which might drag the empire into war. No instructions from Rome could be so pacific as to exclude a recourse to arms in self-defence; and the attacks of the barbarians were perhaps generally within the letter of such an exception, though probably often at variance with its spirit. It was easy to hide and disfigure facts in the relation of contests with a remote and unlettered enemy. The administration of Britain, therefore, depended on the character of the commander; and there seems no reason to wonder that the progress of conquests, attended by no gain and little glory, should be slow and fluctuating."

Naval Power.—"The British islands are naturally destined to be the seat of maritime power. Their coasts are much more extensive, compared with their inland territory, than those of any other great and civilised nation. Their position on the globe, reaching almost to the northern verge of that portion where the whole sea is open to navigation throughout the year, is better fitted than any other to render their numerous mariners hardy, daring, and skilful. Had it been more southerly, these qualities would have been incompletely exercised; had it been farther north, some part of the year, which now serves to train their seafaring inhabitants, would have been lost to that purpose. Their soil and climate neither withdrew their pursuit from the resources of the sea, nor refused the produce which might be exchanged by navigation for the produce of other countries. Their advanced position, as it was in front of Europe, favoured that disposition towards adventurous voyages and colonial establishments, in which, after a fortunate exclusion from the neighbouring continent, the genius and ambition of the people were vented with lasting, grand, and happy consequences to mankind. Popular govern-

ment gives dignity to commerce: it promotes navigation, one of the occupations of the lower and middle classes, and it is disposed to encourage the only species of military force which cannot be made the instrument of its overthrow. It is not unreasonable to add, that the settlement of so many pirates in England, the natives of every country from the Elbe, perhaps from the Rhine, to the North Cape, between the sixth and tenth centuries, may have contributed to cultivate those nautical propensities which form a part of the English character."

Alfred.—"There is no subject on which unanimous tradition is so nearly sufficient evidence as on the eminence of one man over others of the same condition. The bright image may long be held up before the national mind. This tradition, however paradoxical the assertion may appear, is in the case of Alfred rather supported than weakened by the fictions which have sprung from it. Although it be an infirmity of every nation to ascribe their institutions to the contrivance of a man rather than to the slow action of time and circumstances, yet the selection of Alfred by the English people as the founder of all that was dear to them, is surely the strongest proof of the deep impression left on the minds of all of his transcendent wisdom and virtue;—juries, the division of the island into counties and hundreds, the device of frankpledge, the formation of the common or customary law itself,—could have been mistakenly attributed to him by nothing less than general reverence. How singular must have been the administration of which the remembrance so long procured for him the character of a lawgiver, to which his few and general enactments so little entitled him! Had a stronger light been shed on his time, we should have undoubtedly discovered in him some of those characteristic peculiarities which, though always defects, and generally faults when they are not vices, yet belong to every human being, and distinguish him from his fellow-men. The disadvantage of being known to posterity by general commendation, instead of discriminating description, is common to Alfred with Marcus Aurelius. The character of both these ornaments of their station and their species seems about to melt into abstraction, and to be not so much portraits of man as models of ideal perfection. Both furnish a useful example that study does not disqualify for administration in peace or for vigour in war, and that scrupulous virtue may be combined with vigorous policy. The lot of Alfred forbade him to rival the accomplishments of the imperial sage. But he was pious without superstition—his humbler knowledge was imparted with more simplicity—his virtue was more natural: he had the glory to be the deliverer as well as the father of his country; and he escaped the unhappiness of suffering his authority to be employed in religious persecution."

The next is a just remark on cowardly cruelty:—

"It is difficult to trace the secret links that unite cowardice with cruelty; but experience seems to prove, that though the valiant are often not merciful, the pusillanimous, if forced into war, are more apt to become ferocious: whether it be that they find a compensation for being humbled by the brave in the infliction of pain on the weak—or that those who feel most suffering from conflict naturally practise the most terrible retaliation—or that the consciousness of the disgraceful vice of cowardice renders men less sensible to the honour

which generous minds and civilised times reserve for the union of clemency with prowess."

And this an admirable exposition of both Whig and Tory fallacy:—

"The antiquaries of the seventeenth century investigated the state of our ancient constitution industriously, and often learnedly, but aided by little critical estimate of authorities, and guided by no philosophical spirit. The greater number of these praiseworthy collectors, who began their labours at the period of the contest carried on in that century between the house of Stuart and the people of England, adapted their representation of our ancient laws to the part which they took in the momentous controversy of their own age. The contest was decided by the Revolution of 1688; but the mistaken opinions of the contending parties survived the determination. In two fundamental errors only did the Whig and the Tory antiquaries concur. They both held that the Saxon government was a well-ordered system, and that the right of the people to liberty depended on the enjoyment of it by their forefathers. Both treated the terms which denote political and legal institutions as retaining an unalterable signification through all the changes of 600 years; and hence both were led to believe that the same laws and government which they saw around them during the period of their controversy, from the birth of Bacon to the death of Newton, could have existed in the time of the first Saxon freebooters. The Tories represented the Saxon kings not the less as absolute monarchs because they acted by the advice of men of sense and weight chosen by themselves; and these writers treated all the privileges of the people as either usurpations or concessions, chiefly obtained from weak princes. The Whigs, with no less deviation from truth, endeavoured to prove that the modern constitution of king, lords, and commons, subsisted in the earliest times, and was then more pure and flourishing than in any succeeding age. No one at that time was taught, by a wide survey of society, that governments are not framed after a model—but that all their parts and powers grow out of occasional acts, prompted by some urgent expediency, or some private interest, which in the course of time coalesce and harden into usage; and that this bundle of usages is the object of respect and the guide of conduct, long before it is embodied, defined, and enforced in written laws. Government may be, in some degree, reduced to system—but it cannot flow from it. It is not like a machine, or a building, which may be constructed entirely, and according to a previous plan, by the art and labour of man. It is better illustrated by comparison with vegetables, or even animals, which may be, in a very high degree, improved by skill and care, which may be grievously injured by neglect or destroyed by violence, but which cannot be produced by human contrivance. A government can, indeed, be no more than a mere draught or scheme of rule, when it is not composed of habits of obedience on the part of the people, and of an habitual exercise of certain portions of authority by the individuals or bodies who constitute the sovereign power. These habits, like all others, can only be formed by repeated acts; they cannot be suddenly infused by the lawgiver, nor can they immediately follow the most perfect conviction of their propriety. Many causes having more power over the human mind than written law, it is extremely difficult, from the mere perusal of a written scheme of government, to foretell

what it will prove in action. There may be governments so bad that it is justifiable to destroy them, and to trust to the probability that a better government will grow in their stead. But as the rise of a worse is also possible, so terrible a peril is never to be incurred except in the case of a tyranny which it is impossible to reform. It may be necessary to burn a forest containing much useful timber, but giving shelter to beasts of prey, who are formidable to an infant colony in its neighbourhood, and of too vast an extent to be gradually and safely thinned by their inadequate labour. It is fit, however, that they should be appraised, before they take an irreparable step, how little it is possible to foresee whether the earth, stripped of its vegetation, shall become an unprofitable desert or a pestilential marsh. If these be truths applicable to all men, they are more obviously evident in the case of barbarians, where it would be peculiarly absurd to expect a lawgiver of foresight enough to provide for all emergencies, or a people so reasonable as to forego all their most inveterate habits of thinking, of feeling, and of acting, for the sake of making a fair experiment on a new system of laws and government."

Another notice must, we feel, be granted to the merits of this excellent historical compend.

Juvenile Library, No. I. Lives of Remarkable Youth of both Sexes. In 2 volumes. Vol. I. London, 1830. Colburn and Bentley.

[Second Notice.]

WE proceed to quote the extracts from the life of Sir Thomas Lawrence which we promised in our last Number. The life itself occupies nearly eighty pages of the volume. Of course, therefore, our extracts must be comparatively brief; and, in selecting them, we shall generally, though not exclusively, prefer passages which relate to this great artist's youthful days, before he obtained that distinguished rank in his profession which rendered his subsequent career a matter of public notoriety.

"The distinguished subject of this memoir affords one of the finest examples of the immeasurable superiority of genius and integrity over the accidental circumstances of birth and fortune. Sir Thomas Lawrence was born at Bristol, on the 13th of April, 1769. His father at that period kept the White Lion Inn and the American Coffee-house, and rented a small farm contiguous to the city. The ancestry of Sir Thomas is little connected with any thing that can render him of consequence to the public; but the immediate parentage of every man is of importance, as it is the source whence are derived his tone of sentiments, his habits, his deportment, and, to a great extent, his morals. * * * The paternal grandfather of Sir Thomas is reported to have been in the church; but our authentic memoirs commence with his son, who was apprenticed to a Mr. Ginger, an attorney at Hemel Hempstead. When his apprenticeship had expired, his master offered him a share of his business; but Mr. Lawrence had just received a small patrimony from his father's executors, and he had formed the scheme of enjoying a tour through England with a fellow-apprentice, a Mr. Price, who afterwards entered the church, and became the head master of King Edward's school, at Birmingham. Our travellers first directed their steps to Tenbury, in Worcestershire, where Mr. Price had several relations. Struck by the attractions of the neighbourhood, and, probably, finding the society agreeable, Mr. Lawrence felt very little in-

clination to continue his journey. At this period he wrote a few odes; and although they have not a high degree of poetical merit, they evince a taste for literature, and a sensibility to the beauties of nature. It argues much in his favour, that in a short time he had ingratiated himself with the best society of Tenbury. The vicar of Tenbury was the Rev. W. Read, of Brocket Hall, who was likewise rector of Rochford, and first portioner of the rectory of Burford. Mr. Read had married the daughter of Andrew Hill, Esq., of Court-de-Hill, by Anne, the daughter of Sir Thomas Powys, of Henley Court, who had married a daughter of Sir Adam Littleton, of Stoke Milburgh, Shropshire. In the social intercourse with the family of the Rev. Mr. Read, Mr. Lawrence was thrown much into the company of his younger daughter, Lucy, who resided alternately at her father's vicarage and at Court-de-Hill, now the seat of her uncle, Andrew Hill, Esq. In her frequent walks between these two places of residence, Miss Lucy Read was always accompanied by Mr. Lawrence. The confidence reposed in this young gentleman by the lady's parents and uncle may prove very fully their appreciation of his moral character and decorous habits; but it is no great proof of the discretion of a parent to have thrown into perpetual contact two such young, sensitive, and congenial minds. Mr. Lawrence was now in his twenty-fifth, and she in her eighteenth year. After incessant conflicts between reason and attachment, the feelings of youth and the influence of early precepts, the anticipations of parental displeasure and the disregard of those calculations that would most affect their future life, and, what was of more consequence, that of their offspring—the young persons came to the usual compromise of marrying without consent, in preference to marrying against it, or to having their affections blighted. Such was the sympathy for the lovers, that a neighbouring clergyman, the Rev. Mr. Baldwin, of Corley, consented to unite them, regardless of the influence of the wealthy squire at Court-de-Hill, or of that of the stern and rigid rector of Tenbury. The young couple returned to their respective homes, and, for three weeks, associated as before, without the least suspicion being entertained that they had formed a union so sacred. But the continuance of such a state was totally incompatible with the ingenuousness of youth, or with feminine delicacy and integrity. The young lady could not look, and act, and speak deception to her relations; and there was a treachery in receiving the caresses of her father as his maiden daughter, when she was secretly the wife of his guest. A mutual friend was induced to acquaint Mr. Read with the marriage; and to point out how much it was the result of circumstances of his own creation. The father was violent and inexorable. The young fondling of his heart was driven ignominiously upon the world. Her uncle at Court-de-Hill expelled her from his hall; and her father prohibited, under the consequences of his strong resentment, any relation from holding the slightest direct or indirect communication with either of them. But neither the wealth nor the religious influence of this clergyman could enforce an order so abhorrent to nature; and his son, the Rev. William Read, rector of Munslow and Ashton, always received his sister as the more endeared to him by her sufferings from poverty, and from her struggles through life. Mr. Lawrence was ever a welcome guest at his table. The father and his child never met again! In his dying moments he was tormented with a wish to embrace his

daughter; and a messenger was despatched with the utmost rapidity to Bristol, where she then resided. Mrs. Lawrence immediately set off for Tenbury, and arrived in time to see the corpse of her father—he had expired—ungratified by a reconciliation. She was kindly received by her mother, with whom she remained a few weeks; and she left one of her children with her when she returned to Bristol. At this time, however, pecuniary difficulties were accumulating upon her husband; and she had the mortification of hearing that her uncle at Court-de-Hill had altered his bequest to her from 500*l.* to one shilling. Expelled from her father's roof, and abjured by her former friends and relations, Mrs. Lawrence left Tenbury, and repaired with her husband to the other extremity of the kingdom. They resided for some time at Thaxsted in Essex, until Mrs. Gataker (formerly Miss Hill), the aunt of Mrs. Lawrence, procured her husband the situation of an excise-officer at the Port of Bristol. At Thaxsted they had had three children: the eldest died in infancy; the second, Andrew Lawrence, was brought up to the church, and was vicar of Long Parish, in Hampshire, and a chaplain in the navy. He died at Haslar Hospital in 1821. The third child, William Read Lawrence, became major of the 72d regiment, and died at the house of his brother Andrew in 1818. At Bristol, Mr. Lawrence became a most vigilant revenue-officer. He was a very tall, athletic man; active and of great muscular power. His mind was always imbued with a spirit of enterprise, and an ardour approaching to enthusiasm. His conflicts with the daring bands of smugglers at Bristol, which was then the second port in the kingdom, and the centre of illicit trade, could be understood only by a reference to the scale and system upon which those bands of desperate outlaws then carried on their trade, and of which, at present, people, in this country at least, have no idea. • • • Very shortly after removing to Bristol, we find Mr. Lawrence (in 1769), by means which it is impossible to trace, transferred from the humble revenue-officer into the landlord of two adjoining inns (the White Lion and the American Coffee-house), and into a tenant of a neighbouring farm. Whilst in possession of this triple cross-road to fortune or to ruin, Mr. Lawrence had five children living. Thomas and his two sisters were put out to nurse, and the two sons born at Thaxsted were sent to a boarding-school. Of the sixteen children of Mr. and Mrs. Lawrence, Sir Thomas was the youngest. Only five were living at the death of the parents in 1797; namely, the two sons we have already mentioned, the subject of this memoir, and two daughters; the younger married to the Rev. Dr. Bloxam of Rugby School, and the other to a Mr. Meredith, an attorney of Birmingham. The habits of Mr. and Mrs. Lawrence in early life totally disqualified them for keepers of an inn, and their speculations were profitless. Notwithstanding this, the two sitting members for Bristol advanced him funds for a similar speculation; and in 1772 he became the landlord of the Black Bear inn at Devizes. At this period every person of eminence annually visited Bath; the journey was not then performed in a day; and the Black Bear at Devizes was the nightly resting-place of the wits, actors, peers, and eminent characters of every description. The house was, therefore, remarkably suited to the disposition of Mr. Lawrence; but in the same degree it was little likely to be a source of profit. Mr. Lawrence's ruling passion was polite literature. His recitations and his original

verses at Bristol had drawn upon him the satirical castigation of the unhappy Chatterton, who was about sixteen when Mr. Lawrence was at his zenith as keeper of the White Lion. His large, fine person was decorated with a well-powdered wig, and more elaborate and bushy than even the fashion of that day warranted. On the top of this was a diminutive three-cornered cocked hat. The flaps of his waistcoat and skirts of his black coat, with his immense ruffles and long laced cravat, carried the remarkable costume of the period to an almost ludicrous extravagance. Such was his dress and appearance at Devizes. He had rather a large face, which combined the expression of drollery, of animal enjoyment, and of intellectual shrewdness. His gait by no means corresponded with his corporeal dignity: it was rather expressive of the unequal and rapid transitions of his mind; and its fluttering, strutting effect formed a contrast to the importance of his figure and the impression of his manner. When any guests arrived at the Black Bear, instead of finding a bill of fare which might tempt the satiated, or gratify the famished traveller, they were surprised by the figure of Mr. Lawrence, who, entering the room with a folio Shakspeare or Milton under his arm, would expatiate with energy upon the talents of his son Tommy, and request the guests to let the child recite to them a passage of poetry. Lord and Lady Kenyon (about fifteen years before the former attained the peerage) arrived one evening at Devizes, where they were resolved to stay for the night. The severe barrister's nature required from an inn-keeper the homage due to a satrap; and he wanted a good supper, a good bed, and a bill either so small as to gratify his penurious habits, or so large as to enable him to dispute the amount. The lady was in an angry mood at being stopped at Devizes on her short career of fashion to Bath. At an unfortunate juncture of altercation, in which the barrister most probably was out-argued and out-talked by the lady, Mr. Lawrence entered, his eye in a 'fine freuzy rolling,' and his arms compressing, the one a folio Shakspeare, and the other a Milton. He began to expatiate upon the genius of his beautiful boy, who, 'although only in his fifth year, could rehearse them poetry or speeches, or take their likenesses.' Lady Kenyon's vexation and anger at so untimely an interruption, and at the pertinacity of the father, were at their height, when the door opened, and there capered into the room, straddling upon a stick, the most lovely and spirited child they had ever beheld. His beautiful face was flushed with exercise, and neither she nor her husband felt inclined to stop his gambols. As soon as the boy could be got to stand still, Mrs. Kenyon took him in her arms, and asked him if he could take the likeness of that gentleman, pointing to the future lord chief justice. The child, looking with an impatient earnestness at Mr. Kenyon, exclaimed—'Yes, that I can—and very like too.' Whilst materials were sent for, the child had resumed his play; but when all was prepared, throwing his little legs from over his stick, he was lifted on the table and seated in an arm-chair, from which height he took Mr. Kenyon's likeness with a rapidity, a spirit, and a correctness, truly astonishing. The child was impatient to be gone; but Mr. Kenyon, coaxing him, asked if he could take the likeness of the lady. The boy exclaimed—'Yes, that I can, if she will only turn her side to me—for her face is not straight.' This produced a burst of laughter—for Lady Kenyon, by an accident, had a slight

curvature of the nose. The child took the profile. Twenty-five years after, an old friend of Lady Kenyon saw this portrait, and could distinctly trace a likeness to what her ladyship had been at the period when it was taken. The drawing was about five inches broad, delicately shaded, but with the feebleness and indecision of a child, except in the lines forming the contour of the countenance. At four years old, we have authentic memoranda of the child reciting the poem of Joseph and his Brethren; and at five, Addison's Nymphs of Solyma. At seven he gave an almost miraculous proof of memory, by rapidly learning and repeating Milton's Lycidas. Such as we have described was the father of our great artist, and such were the effects and objects of his instructions to this extraordinary child. • • • In no record of the wonders of intellect is there any instance of an earlier display of its powers than in the biography of Sir Thomas Lawrence's childhood. Art presents no parallel case of an equal degree of excellence attained so rapidly, and so exclusively without instruction, or opportunity of study. • • • Sir Thomas Lawrence in every respect may be termed a self-taught man. At six he was sent to a respectable school, kept by a Mr. Jones, at a place called the Fort, near Bristol: but he was removed from it before the age of eight. This was all the education he ever received, except a few lessons, in Latin and French, from a dissenting clergyman named Jervis, whose son, likewise in the church, was chaplain or librarian to the celebrated Earl of Shelburn, afterwards Marquess of Lansdowne, at his seat at Bow Wood, in Wiltshire. • • • But the mind that is worth educating will educate itself; and long ere our artist had attracted the public attention, he had acquired a more than ordinary fund of knowledge. Of Greek he was totally ignorant, and his knowledge of Latin was not extensive or profound; but yet he was well acquainted with the ancient classics, as far as that acquaintance can be acquired by the medium of translations. Sir Thomas was not a linguist: his ardent mind was always engaged in efforts to obtain ideas and new combinations of ideas; and he had neither time nor inclination to study in manhood what is generally acquired in youth—a knowledge of words. • • • In the writings of our own countrymen he was sufficiently versed. He was extensively read in poetry and the *belles lettres*. His memory was extraordinary, and he had a charming faculty of reading and reciting poems. His tone of voice was soft; it was clear, distinct, deep-toned, and admitted of every variety of expression. With respect to that which high birth, or early association with high society, can alone impart, George IV., than whom there never was a more competent judge, pronounced that Sir Thomas Lawrence was one of the most elegant and best-bred gentlemen in his dominions. He possessed, with much refinement and elegance, the conciliatory self-possession which men of humble origin seldom attain, even by a long and familiar intercourse with the world of fashion. The manners of people casually elevated, generally assume a tone of servility, of restless punctilio, or of selfish enjoyment. The fine person and features of Sir Thomas, as well as his air and conversation, gave him the appearance of one to whom dignity came by birth-right. He derived his fine cast of features, with his manly form and graceful action, from nature; but the charm of his conversation and manners arose from that which can alone impress the stamp of true gentility—intellect

and goodness of heart. Invaluable as are the manners of a gentleman, there is one thing of a far more exalted nature, the *mind* of a gentleman; and this, with its attendant spirit, its generosity, its frankness, and benevolence, seemed innate in our great painter. The defamatory reports respecting him have been traced to very unworthy sources, and are totally unfounded. It has been said that he had once assumed the profession of an actor; but he never appeared on any stage, except two or three times in the private theatrical amusements at the Marquis of Abercorn's, at the Priory, Stanmore. It has also been alleged against him, that he was addicted to games of chance. His rectitude and delicacy upon this point were beyond all praise. He was passionately fond of billiards, at which he was a most graceful and successful player, but he played merely for the tables, as it is called. Even this amusement he had given up long before his death. A lady once asked him the reason why he had so long ceased to play at billiards, the only game he was fond of, and at which he so greatly excelled. His reply was full of character—'My dear Mrs. —,' he replied, 'although I never played for money myself, my play attracted much attention, and occasioned many and often very high bets. Next to gambling yourself, is the vice of encouraging it in others; and as I could not check the betting, I have given up my amusement. I have not played a game for many years. The last time I was in a billiard-room was a few years ago, when who should casually come in but the Duke of Wellington? We had often played together, and with nearly equal success. We agreed to have a batch; but we were both so perfectly out of practice, that, after a few strokes, we could not help smiling at each other, and we laid down the cues.' Sir Thomas was fond of playing at drafts with children; and this was the extent of his gaming."

We find that, even now, we must reserve a few traits, anecdotes, &c. of this distinguished man for our next publication.

Brief Memoirs of the late Right Reverend John Thomas James, D.D., Lord Bishop of Calcutta; particularly during his Residence in India. By Edward James, M.A., &c. 8vo. pp. 204. London, 1830. Hatchard.

The life of a good man is a legacy of blessing, one of encouragement and example; and Dr. James was a most worthy member of the faith which he supported to the death. But the materials which would have made an interesting and instructive memoir are not sufficient for a volume;—the beginning of his life was past in quiet and useful employ, and the end is a brief account of exertion and sacrifice: he saw too little of India to have much to record. The following allusion to his children is touching.

"One may almost hold converse with 'the deep and dark blue ocean';—and yet, after all, it is a melancholy suggester of thoughts. How hard is it to be so far away from one's children; how hard, that others, and not myself, should hear all they say, and see all they do!—of all troubles, this is the only one that I have not found harder to bear in reality, than it was to regard it in prospect: and well it may be so, for no powers of the imagination can add to the severity of such a feeling: and yet, no doubt, mine is not the hardest part: no man can know half a woman's feeling towards her child. May the day come that we may both have pleasure to think of this, if such be the will of God!"

Of his spirit contending with sickness, the next passage is a proof.

"The bishop preached at the cathedral, and afterwards assisted in the service at the communion, though he was unable to administer the elements. Such, indeed, was his state of bodily weakness at this time, from the heat of the climate, that he was obliged to have cushions placed to support him in the pulpit, and actually preached on his knees; and in that posture delivered an eloquent and energetic discourse."

He did much for the schools in India, of whose benefit he had a high opinion.

"The most advantageous mode of proceeding among these people would be, for the wife of a resident missionary to open a school for girls; the parents would easily be induced to send them, as there is already an opinion gaining ground of the superiority of girls educated in English schools over the rest of their countrywomen; and when a father parts with his daughter in marriage, he makes a sale of her, receiving ten or twenty rupees, according to her estimated worth, and as the bargain may be. These women, carrying with them the principles in which they are brought up, might be expected to have much influence in after-life. The character of the hill people is vigorous and animated, and greatly superior to those of the plains. They are particularly fond of imitating European improvements; and there can be no doubt, that they are more prepared to listen to missionaries than those of the hills near Bhagulpoor, or the Garrow country."

The Adventures of Ariston. By an Eton Boy. pp. 168. London, 1830. J. Cadell.

OUR young author gives the popular form of narrative to much of classical information: these Adventures may afford both amusement and instruction to our juvenile readers.

The British Celestial Atlas. By G. Rubie. Part III. Baldwin and Cradock.

THE details of the "Solar System" form the chief portion of the third part of Mr. Rubie's work. We wish that he, or some other able astronomer, could devise the means of rendering the great centre of it a little more auspicious to us at the present season.

Fourth Epistle to a Friend in Town, and other Poems. 12mo. pp. 80. By Chandos Leigh. Warwick, 1830. J. Merridew.

THIS slight volume is imbued with much of the spirit of the olden poets, and polished versification enshrines sterling sense: the opening lines are peculiarly harmonious; but we prefer for quotation the following little poem.

"Believe me she is true indeed;
Whatever you surmise
Impartial be, and you may read
Her faith in her bright eyes.
Beaming with candour, every look
Gives evidence of love;
O do not then of Nature's book
The language disapprove!
Her smiles most eloquently speak
The self-approving glow
Of conscience, roses on her cheek
The health of virtue shew.
Hypocrisy could never give
To woman such a grace
As seems, a sign from heaven, to live
In her angelic face.
Believe me she is true indeed;
Whatever you surmise
Impartial be, and you may read
Her faith in her bright eyes."

In eighty too short pages there is much of similar beauty; and, in our judgment, the

pleasure derived from this, as from Mr. Leigh's former productions, is a proof that genuine poetry of any school will always delight.

ORIGINAL CORRESPONDENCE.

UNPUBLISHED LETTER OF POPE.

THE following letter was addressed by Mr. Pope to the Rev. Dr. Holmes, as an introduction to him of the late Rev. Thos. Hooke, rector of Berkby near Northallerton, and son of the celebrated Nathaniel Hooke, Esq., the Roman historian. We have seen the original manuscript, in the possession of his grandson, Mr. Lucius Hooke Robinson, &c. &c. &c. The letter is so very characteristic of the writer, both in style and in sentiment, that we are glad to preserve it for the public.

Sir,—I think, and I hope, you will not be surprised, but rather pleased, that I write to entreat a thing of you which will give me a true pleasure. It is always such (I am persuaded) to yourself to do a worthy man a kindness; and I can assure you, the person I send with this is very deserving of any; both as an ingenious and an honest gentleman. He is y^e son of a most particular friend of mine, Mr. Hooke, to whom every learned society is obliged for his Roman history. He is to pass some time at Oxford as a gentleman-commoner, (though his studies have been long since finished, and there are few better scholars,) with intention to take orders. Your countenance, acquaintance, and (if you will permit me to add) friendship, will lay me (as well as Mr. Hooke and him) under a most particular obligation. It may not be improper to mention, in such an age as ours, that he is a man who will be offensive to no party by any indiscretions; and to no individual by any vices. I am with real regard and sincerity, Sir, your most obedient and affectionate humble servant,

A. POPE.

Twittnam, March 28, 17—2.

The date is blotted at the third figure.

Mr. Hooke, the historian, was a catholic, and had two sons—the above-named, a Protestant clergyman, and the other Dr. Lucius Joseph Hooke, a doctor of the Sorbonne in Paris, and author of a very learned theological work, the standard of the Catholic faith, entitled *Religionis Naturalis et Revelata Principia*, in 3 vols. Latin. We understand there are other letters from the celebrated Earl of Orrery, the great Duchess of Marlborough, &c. in possession of Mr. Robinson, with a copy of which we may perhaps be favoured.

ARTS AND SCIENCES.

ASTRONOMY.

To the Editor of the *Literary Gazette*.

SIR,—Permit me to avail myself of your Journal to address astronomers throughout the world, as well as those of our own country.

Some years since, when writing my work on the *Beauties, Harmonies, and Sublimities of Nature*, it struck me as being very extraordinary, that the various satellites of Jupiter,* Saturn, and Uranus, should have received no

* When the illustrious Galileo discovered these beautiful stars, he named them the *Medicean stars*; and subsequently individualised them. Simon Marius and Jo. Baptistia Hodierna also gave them appellations; but as these names were (except in the instance of Marius) merely complimentary to comparatively obscure persons, they have seldom or never been designated after them.

- Galileo.* Simon Marius. Baptistia Hodierna.
 1. Cosmus Minor . . . Jupiter's Mercury . . . Principiapharus.
 2. Cosmus Major . . . Jupiter's Venus . . . Victripharus.
 3. Maria Medicea . . . Jovian Jupiter . . . Cosmipharus.
 4. Katherina Medicea } Jupiter's Saturn . . . Ferdinandipharus.

distinguishing appellations (except numerical ones) by which one could be distinguished from another. This I thought the more remarkable, and felt to be the more inconvenient, since the names of those belonging to the orb of Saturn are numbered, not according to their relative distances from their primary, but according to the dates of their discovery.

This occasions some confusion to those who are but superficially acquainted with astronomical science. Shall I, therefore, be excused for attempting to give a little more order to this complication, by affixing to each satellite an appropriate name? With due respect to the correction of others, I propose naming them after the following manner:—

Satellites of Jupiter.

First in the order of distance....	Hebe.
Second	Astrea.
Third	Flora.
Fourth	Pomona.

Satellites of Saturn.

First in the order of distance....	Cybele.
Second	Thetis.
Third	Doria.
Fourth	Hygeia.
Fifth	Echo.
Sixth	Psyche.
Seventh	Fortuna.

Satellites of Uranus (Herschel).

First in the order of distance....	Urania.
Second	Calliope.
Third	Clio.
Fourth	Melpomene.
Fifth	Psyche.
Sixth	Erato.

Permit me, sir, also to suggest, that if the planets are kept in their relative orbits by the power of attraction,—and that they are, who shall presume to doubt, but upon the most pointed and decisive evidence?—it must be a necessary consequence, since Jupiter disturbs the motions of Saturn on one side, that there must be one large primary planet, or several small ones (like Ceres, Pallas, Juno, and Vesta), between his orbit and that of Uranus. This, I think, is necessary to preserve the equilibrium observable in planetary motion. If astronomers, therefore, (especially those who reside between the tropics) direct a constant attention to the neighbourhood of the ecliptic, they will, I am persuaded, discover the truth of what I here venture to predict; unless, indeed, the surfaces of those planets are of a nature insufficient to reflect the light of the sun in such proportion as to be visible in our province of the universe.

May I presume to step one degree further? The satellites of Uranus possess the wonderful distinction of moving in a retrograde direction, and therefore contrary to the order of the signs. This circumstance leads me to suspect, that Uranus is not only the apparent, but the real, last primary planet of our system; and that the motions of the satellites alluded to, indicate the approach, and indeed the actual beginning, of another system, of which they are at once the heralds and the connecting links.

When a comet shall, at any future time, approach the sphere of Uranus, holding the above suggestion in remembrance, it will perhaps be most particularly worthy of attentive observation, with a view of determining, if possible, what effect the neighbourhood of such a stranger may have upon the motions of his satellites.

Dr. Herschel thought, for some time, that Uranus was accompanied by a double ring, like Saturn; but he afterwards gave up the idea, from the circumstance of the disappearance of what he took to be one. My opinion, however, is, that Uranus has a ring—it is required by all the laws of analogy—and that it will be again

seen in 1866, in 1873, and in 1876, and very probably in the intermediate times; for it ought to be remembered, that Uranus has not made one of his annual revolutions since his discovery. I remain, sir, &c.

Pulteney Terrace.

CHARLES BUCKE.

P.S. Should the above observations be favourably received, I shall take a future opportunity of making some remarks on the *origin* of Ceres, Pallas, Juno, and Vesta; the account of which, though sanctioned by many illustrious names, I cannot but esteem as being (to say the least) extremely unsatisfactory. Indeed, I think I shall be able to prove, that their cause of origin, as stated, involves an utter impossibility, according to the rules of gravity, and the simplest of the laws of projectiles.

By taking the new method of observance, perhaps many small planets may yet be discovered, even in regions which have been the most traversed. The highest of all possible magnifying powers, however, will be requisite. But astronomical observers should particularly bear in mind, what, no doubt, they constantly do, that Pallas does not subtend an angle sufficient to be measured, with any degree of precision, even by the best instruments; and that she ascends above the plane of the ecliptic even at an angle of 35°, which is nearly five times as much as any other planet—a very remarkable circumstance in itself, and almost sufficient to attest the existence of many other analogous bodies besides those already discovered.

C. B.

LITERARY AND LEARNED.

ROYAL SOCIETY OF LITERATURE.

AT a special meeting of the council on Wednesday, the President, the Lord Bishop of Salisbury, in the chair, an address of condolence, &c. to his Majesty was agreed on. As this is the only great National Institution founded and munificently supported by his late royal brother for the promotion of our literature, (though George IV. was the liberal patron of almost every establishment which had either the cultivation of the arts, the advance of learning and science, or the diffusion of benevolence in view), we entertain the surest hope that it will be equally the object of solicitude to the monarch who now fills the British throne; and who must feel, as his brother felt, that the noblest laurels which can encircle a crown are those derived from sources so pure and high.

LITERARY FUND SOCIETY.

THE committee of this Society, to which his late Majesty was also a princely benefactor for many years, likewise met on Wednesday, and voted an appropriate address to his august successor.

ANTIQUITIES.

THE following account of some new and interesting discoveries made in the neighbourhood of Kertch, in the beginning of last year, is extracted from the "Journal of St. Petersburg."

"Some workmen digging out clay from a ditch in the neighbourhood of Kertch, discovered, in the month of March, 1829, three antique tombs, upon which were placed ten little statues in terra-cotta, with six vases of the same material, (the form of one of which is most elegant,) and a quantity of small articles of mother-of-pearl, ivory, and glass, belonging to the ornaments of a female. Some metallic articles, discovered in the same ditch, were so

corroded by time, that they broke with the slightest effort. The statues, which are more or less injured, all represent the figures of women. Six of them are draped, and possess no attribute by which to recognise what divinities they personify. The four others form a kind of group, representing Venus and Love. The most remarkable of these pieces, and that which at the same time is the least injured, shews the goddess of Cythera, seated on a rock, partially covered by fine drapery. By the side of the goddess stands on the rock a Term, surmounted with the head of Serapis, with the *modius*; and at the foot of the Term is the child of Venus, standing in a very graceful attitude. Below the rock are two Cupids, mounted, the one on a dolphin, the other on a swan. This composition is in a good style; and wants only the fore-arm of Venus, and the head of one of the Cupids.

"The Museum of Antiquities at Kertch has also made another new acquisition. M. Pountsoff, captain (*jessaul*) of the Cossacks of the Black Sea, residing at Temruk, in the district of Tamane, has presented the Museum with a marble, having an ancient Greek inscription, containing a consecration or oblation to Hercules, and which bears the date of the time of King Perisade, the son of Spartocus. Unfortunately, the part of the marble on which was the commencement of the inscription has been broken and lost. The following is the preserved part; the letters of which are very beautiful and distinct:—

... ΔΑΟΤ ΤΟΤ ΣΠΑΤΟΚΟΤ
... ΤΙΜΟΓΕΝΟΤ
... ΑΘΝ ΕΙΚΡΑΤΟΤ
... ΙΚΡΑΤΗ ΚΡΗΤΙΝΗΝ
... ΗΡΑΚΛΕΙ

King Perisade, the son of Spartocus, who is not mentioned in history, and who is known to us only lately, by a similar inscription found at Kertch a few years ago, and afterwards transported to Theodosia, reigned over the Bosphorus, after the year 284 before Christ; the epoch at which, according to Diodorus Siculus, Spartocus IV. died."

PINE ARTS.

NEW PUBLICATIONS.

National Portrait Gallery of Illustrious and Eminent Personages of the Nineteenth Century: with Memoirs. By William Jerdan, Esq. No. XV. London: Fisher, Son, and Co.

THREE finely executed plates, accompanied by memoirs of the late Dr. Thomas Young, the Bishop of Chichester, and Earl Spencer, constitute the fifteenth number of the *National Portrait Gallery*. Of the memoirs, the first (the materials for which were principally furnished by one of Dr. Young's early friends) briefly exhibits the intellectual progress and attainments of "a man almost unequalled in the variety and extent of his acquirements;" the second is peculiarly interesting at the present moment, as to the excellent prelate to whom it relates, was intrusted "the sacred office of attending to the spiritual concerns of our [late] beloved king, during the long period in which it has pleased Almighty Providence to afflict him with earthly sufferings, and purify his spirit for an immortal world;" the last describes the character and career of a nobleman, whose "public life and services are happily blended with a private and literary history, equally fair and worthy of admiration." We extract from that part of the memoir of Lord Spencer which has reference to his lordship's

conduct when at the head of the Admiralty Board, the following curious anecdote :

"We believe it was under his favour that Mr. Brunel's ingenious and valuable inventions in block-machinery were introduced into our dock-yards; together with many other improvements made in these important depôts, which have since contributed in no small degree to our naval superiority. We have heard it told as an anecdote (without being able to answer for its authenticity), that Mr. Brunel's fine device for cutting ship-blocks was ultimately adopted from one of those chances which sometimes help clever men more than extraordinary talent and persevering industry. Like the generality of projectors who offer their schemes to government, he had, it is said, wasted many a day in fruitless endeavours to get his plans accepted and tried: at length, weary with deferred hopes, he presented a mechanical toy to Lady Spencer, into which a pack of cards being put, it could be so regulated as to deal them out to any number for a round game. The ingenuity of this trifle attracted so much notice, that the artist was immediately brought forward; and much of the rapidity with which future ships of war could be rigged and fitted for sea, was the result of a little box which saved fair dames the trouble of dealing cards for the amusement of a home circle!"

Master Williams Wynn. Drawn on stone by W. Sharp, from a Drawing by Sir Thomas Lawrence. Dickinson.

At that delightful age when the intellect is beginning to expand, and the passions have not yet clouded the brow.

His late most gracious Majesty George the Fourth. Engraved by Thomson, from a Miniature by Haines. Whittaker and Co. THE graphic decoration of the sixty-eighth Number of the new series of *La Belle Assemblée*, and a most pleasing and satisfactory resemblance of our lamented sovereign.

The Costumes of the French Pyrenees. Drawn on stone by J. D. Harding, from original Sketches by J. Johnson, Esq. No. I. Carpenter and Son.

AMONG the qualities which constitute the picturesque is the absence of familiarity: we do not mean to assert that the costume of a Yorkshireman is equally picturesque with that of a Basque; but there can be no doubt that the effect of the latter is heightened by its novelty, and that the present promises to be a very clever and entertaining work. We have fallen desperately in love with the demure little "Bourgeoise of Pau."

Albums.—The question whether the practice of keeping *Albums* is, or is not, a sort of polite nuisance, shall not be discussed by us at present. We have seen disreputable public uses made of the contents of these friendly receptacles of idle nothings; but their pretty keepers are generally so amiable, *et cetera*, that we hold the exceptions to be no bar to the rule of gratifying them whenever it is possible. And if you do, the delight of doing it in such an *Album* as has been submitted to our inspection by Messrs. De la Rue, Cornish, and Rock!! The binding is a model of embossing in leather; and the pages, of every beautiful variety of pasteboard and paper, tempt you to draw, paint, and write, something worthy of so elegant a shrine. We have offered our copy to one fair divinity, and been refused the honour of a presentation: if we could only determine

who had right to be first of the second, we would immediately present it where it would do more service to the tasteful proprietors than by remaining on our dusty shelves.

MISS HARRIET GOULDSMITH'S PAINTINGS.

THIS lady's paintings are now exhibiting in Pall Mall, for the purpose, as is stated, of being disposed of by lottery; and we take upon ourselves to say, that if to deserve success were to ensure it, the fair artist might claim her full share of public countenance. Most of these pictures have at different periods come under our notice, and have ever met our unqualified praise and admiration. Miss Gouldsmith's style is bold and masterly: she has formed her practice upon the manner of some of the best Flemish artists; but has, in all her productions, kept her eye on nature; and in form and effect her compositions may fairly vie with some of our best masters in landscape scenery.

ORIGINAL POETRY.

FIRST AND LAST.—NO. VIII.

The First and Last Voyage.

HE went down the sloping lawn
He entered the waving wood,
Where nought but the step of the bounding
fawn
Broke on his solitude.

He sat by the mossy stone
Whence the clear rivulet gush'd,
And thoughts of childhood's hours by-gone
Upon his spirit rush'd.

No witness but the skies
And the stream's light waves were near;
And up from the heart to the bright young
eyes
Flowed freely many a tear.

And he thought beneath these trees
He had many an hour beguiled;
And he bowed his head upon his knees,
And wept like a very child.

Past, past away full soon
Was the sorrow from his face,
Like a cloud from the sunny heaven of June,
That leaves behind no trace.

He reached the sandy shore,
Near which his vessel lay;
And the youthful wanderer it bore
On his earliest voyage away.

Away through the rushing waves,
And away through the boiling foam
That the vessel's side like a snow-wreath
laves—
It bore him from his home.

He reached the sea where never
The tide may roughly rise,
Where the ocean, like a placid river,
Reflects the stormless skies.

He looked on islets fair,
And on the Indian lands,
Where the tall plummy palm-trees rear
Their heads like armed bands.

And still he longed to turn
Again to his own dear shore,
And still his weary heart would burn
To see that land once more.

Again the noble ship
Is on the bounding sea,
And the waves, like a nereid's briny lip,
Kiss its stout sides buoyantly.

O well that voyage—the first—
In stormless seas had past;
And he little deem'd that the storm should
burst,
And this should be his last!
But the gallant bark was borne
To wreck by the frenzied main;
And he who left the shore that morn
Ne'er trod his own again.

Worton Lodge, Isleworth. M. A. BROWNE.

JUVENALIA.—NO. IV.

If, while you slept, a thief, by lamp-light chose,
Just as he took your purse, to tweak your nose;
And all unarmed, at said nose-length to stand,
Though you had sword and pistol at command;
Should not you think he wanted common sense
As much as either honesty or pence?

Again: if where the crowd directs its eyes
And mouths, distended to portentous size!
At puppets, actors, monsters, or great men,
Turks, tumblers, all the wonders of the Wen;
If there, alone, full in Detection's sight,
Some picaroon displayed his manual sleight,
While great Sir Richard and his Bow-street
Blues

Stood by with batons, as field-m Marshals use;
Whether should he (I mean the *cutpurse*), say,
Rather be sent to Bedlam or the Bay?
'Tis not so strange then, if, in public, few,
Well watched, seem other than "good men
and true."

The pulpit were an awkward place for sin
To do a sly deed of damnation in;
Aught (but Hypocrisy) to practise there,
Might foil the Devil, though he a parson were!
Yon grave Intemperance will there expose
Nothing to blaze his morals—but his nose;
And ev'n whate'er in sacristy he sips,
Will call it *water*—just to wet his lips!
That spruce, pert, lisper of the Word sublime;
Hums not his hunting-catch in holy time;
Or hums it when the organ drowns his noise,
Or both are drowned by clerk and parish boys.
The Lawyer, whose profession is—*to lie*,
Pleads, as in Truth's dear cause prepared to die;
While he, who takes the post point blank to his,
Seems just as great a friend to Truth (and is).
Behold that solemn, guinea-getting face,
Untaught to smile, but learned in grave grim-
mace;

(As if the unwary owner would proclaim,
It was no laughing-matter where *he* came!)
Feeling the sick man's pulse so gently, he
Says not he's feeling (gently) for a fee;
Nor when "The tongue!" he says,—in foolish
freak

Puts out his own,—but puts it in his cheek;
So decent, so decorous, who'd believe
The secret of his trade is—to deceive?
Loud as when unto Deeps the great Deep
calls,

Wide-gaping—hear how *Boanerges* bawls!
See, with rhetoric froth and patriot foam,
His rage run round the effervescing dome!
While roused from stupor each profound M.P.
Opens his wondering jaws as wide as he!
Murmurs break forth; in vast commotion rolls
A sea of white, black, brown, red jobbermolls;
Skull rings on skull, and shoulder shoulder jogs,
As in a foul wharf, empty casks and logs,
When from the side a rumbling, clattering
block,

Falls down the slip-board splash into the dock!
Let his Pandora-gifted mouth but open,
Out come all Evil things!—within lies Hope!
Hope of a *riband*, *pension*, *title*, *place*,
For self, or some young *Hopeful* of the race.
His Country's Wrongs, Distresses of the Times,
Starving Mechanics, Ministerial Crimes,

Famine, Disease, Rebellion, Bankruptcy,
Decline of Commerce, Death of Liberty,
His patriot soul laments to see and to foresee!
Some more, some less, pursue this gainful
trade,

By which fame *first*, and fortune *then*, is made;
Nor is it easy to detect the cheat,
Where knaves are plausible and fools discreet!
Though Reynard's eye somewhat betray the
rogue,

He barks, and looks, much like a simple dog;
If you would know him, watch him on the prow,
You'll find at length his paw upon a fowl!
'Tis thus with Patriot, Lawyer, Doctor, Priest,
With Mankind *all!* — They ne'er (not oft, at
least.)

Cajole the public in the public view,
Or if they do so, tell us that they do!
But pierce his cloak and penetrate his art,
Each Man will prove a hypocrite at heart.

This truth is universal as it's sad,
While men are not mere idiots, nor stark mad:
Ev'n fools will strain at lies they cannot tell;
And madmen talk most sagely, to seem well.

Some few there be, whose inmost deeds defy
Slander's foul tongue, or Scrutiny's sharp eye;
In whom Deceit ne'er was, nor can be shewn—
They keep it far too secret to be known!
Winging to Abraham's bosom, light as elves,
They die scarce conscious of the sin themselves!

SKETCHES OF SOCIETY.

THE MALAYS.

In the maps, the little Isle of Lingga, situated under the equator, between Sumatra and Borneo, and peopled by only nine or ten thousand souls, is generally indicated by the name of the Isle of Linggen. It has never been described with so many details as by M. van Angelbeek, in the last volume of the Transactions of the Society of Batavia. The author, having resided there in 1819, possessed the means of knowing the actual state of the island, as well as of the Malay empire, of which it is now the seat. The history of this remarkable people, who are at present spread through all the neighbouring islands of India, occupies the greatest part of the memoir in question. With respect to the ancient history of the Malays, the author states that he has derived his information from a history written in the Malay language, entitled *Sidjara-Malayoe*.

According to M. van Angelbeek, the true country of the Malays is Menangkabo, in the interior of the Island of Sumatra, in which there is a river named Malayoe, and a district bearing the same appellation. It is after these localities that, according to him, the Malays are designated. A part of the nation abandoned their homes about the middle of the twelfth century of our era, under the conduct of two chiefs, but from what motive is unknown, and embarked in order to establish themselves elsewhere. Storms pursued these emigrants to the peninsula of Malacca. They there founded the town of Singapore, and enjoyed peace in their colony for a century. About the middle of the thirteenth century, a prince of Java attacked and conquered Singapore. The Malays then went and founded another town at Malacca, which soon became one of the greatest places of commerce in India; and which the Portuguese, at the period of their expeditions, found in the most flourishing condition. The Malays incorporated in their kingdom the two isles of Bintan and Lingga. When the Farin-gies, or Europeans, took from them their rich place at Malacca, their sultan proceeded to found another residence at Djohor, in the

same peninsula. The neighbourhood of the Portuguese did not leave them much repose. At length, at the commencement of the eighteenth century, fatigued with the wars which they had to maintain against the Europeans, the sultan of the Malays abandoned the peninsula of Malacca, in which his nation had reigned for several centuries, and went to establish himself at Riouw, the chief place in the Isle of Bintan. But neither was this residence of long duration. In 1783, the Malays of Bintan fell out with the Dutch, who annoyed them in their possession. The seat of the Malay empire was then transferred definitively to Lingga, where that empire will probably expire; for it is not to be presumed that it will ever recover from its decline. Not that the Malay nation is not still very considerable; but it no longer forms a mass, a real nation. The Malays are dispersed throughout all the islands, without recognising the authority of the sultan. The latter reigns only in the little Isle of Lingga, and in a chain of small islands situated at the southern entrance of the Straits of Malacca; such as Singkeb, Labondadong, Batsang, and Karimon. Ten years ago he reigned over Djohor and Pahang; but in 1824, the English, finding it advantageous to be the sole masters of the peninsula of Malacca, deprived him of those portions of his empire. His residence in Lingga, called Kwala-Dai, consists of groups of houses, surrounded by thickets; and, together with the environs, contains six thousand persons. The rest of the isle contains only about three or four thousand. A colony of four hundred Chinese attaches itself here, as in the other isles, in spite of the contempt of the Mussulmans, to agriculture and trade, lives peaceably, tries to cheat a little, and purchases by presents the indulgence of the chiefs. The Malays, in their turn, love commerce, and possess every kind of personal advantage for devoting themselves to it with success. They are a well-made, active, engaging, and polished race. A Malay is always of the same opinion as the man who talks with him; he is prodigal of flattery; but he is perfidious: friendship is so little familiar to him, that there is not a word in his language by which it can be expressed; and he is obliged to borrow the word from an Arabic idiom. Fishing, and, above all, piracy, are his favourite occupations. He is mild and gentle in his domestic relations. Many Malays have only two wives, instead of the four which the Koran allows them; and it is said that the two wives of a Malay generally agree together. They weave silk stuffs, which are preferred to those of Celebes. Among the Malays there are no dances and theatrical amusements, as among the Javonese; the sultan alone has dancing-girls. Gaming and cock-fighting fill the place of ballets and comedies. Their superstition is excessive; and with respect to faith, or credulity, they are very good Mussulmans. Their audacity is feared by those who navigate the Indian latitudes. It is fortunate that their nation is divided; for, united, and obedient to a chief endowed with energy, they would be masters of the Indian seas. On the other hand, their division, under a crowd of petty leaders, is a scourge to commerce.

DRAMA.

KING'S THEATRE.

IN consequence of the inconvenient susceptibility of Madam Malibran to attacks of sudden and severe indisposition, (such as on Thursday, when Lalande's benefit was again postponed

thereby.) Mdle. Blasis, at very "short notices," has had the good fortune to be brought forward in the favourite parts of this fashionable siren. We allude to the *Cenerentola* of Rossini, and the *Zerlina* of Mozart's *Don Giovanni*. In the representation of both parts she is unsurpassed, and her Zerlina in particular is characterised by a vocal and histrionic truth worthy of the best days of Fodor. We listen with delight to the pure, unadulterated strains of Mozart. Nor is the eye ever offended by "wicked" looks, nor the ear annoyed by senseless innovations and "running commentaries," not more at variance with the author's text, than inconsistent with musical judgment and dramatic taste.

With some alterations in the cast, *Don Giovanni* was performed on Tuesday to the most musical audience we have seen this season. Suffice it to say, that there were four encores in the first act. In the *Donna Anna*, Lalande was extremely effective—her trembling tones are well suited to this character; and we know not when we have been better pleased with Curioni. Donzelli howled his best, though in *Don Giovanni* he is somewhat out of his element; and Lablache, though an exquisite actor, is not exactly the lightest *Leporello* we have seen on the boards. The opera, however, on the whole, was very spiritedly performed; and, had not the devils played the devil in the conclusion of the last act, by allowing Giovanni to escape their clutches, and thus marred the moral of the piece, we have no doubt that the representation of the opera would have met with the unanimous approbation of the audience.

Saturday night. One act of *Il Pirata* (one act too many, by the by.) preceded the immitable performance of the first act of *Il Turco in Italia*. So well cast as this opera is at present, we are surprised that the manager curtails it of its fair proportions. Lablache and Blasis are incomparable in their respective parts. Nor are the efforts of Santini and Curioni undeserving of praise.

ADELPHI.

THE English Operatic company at this theatre have distinguished the week by the performance of *Don Juan*. The overture (arranged by Hawes) is one of the finest treats which the lovers of music can enjoy; and they will here enjoy it to greater perfection than they have ever yet had an opportunity of doing at any theatre in London. It is truly Mozart. Mr. Phillips, in *Juan*, is not quite the light libertine, but his splendid organ makes amends for every thing. Benson is one of the best *Leporellos* on the stage. The lady portion not so effective; but the whole very superior.

VARIETIES.

Lithotripsy.—During the last month there were several successful operations for stone by the new method of crushing it in the bladder. The additional security against laceration, from any accidental rent in the instrument contrived by M. Costello, by means of several rounds of wire thread, to prevent the extension of the rent, has been introduced into the French hospitals, where it has given great satisfaction.—*Paris Journal*.

German Literature.—If from an increase in the number of printing-offices and booksellers' shops may be drawn any proof of the growth of civilisation, and of the arts and sciences, Germany may boast of having made a great progress in that respect; for the number of booksellers has been almost quadrupled in the last

fty years. In 1780, there were, in all Germany, only 223 booksellers; and there are at present 827!

Royal Consideration.—It is as much, or perhaps more, from lesser matters than from those of great importance, that we may form our opinion of the disposition of the prince, and the probable character of the reign which has just commenced. Thus, to us, the intimation that his Majesty has commanded an opening to be made into the Park at Carlton Terrace, affords an auspicious augury of the royal desire to cultivate popularity by the best means—yielding graciously to a general wish, and consulting even the slightest gratification of his people beyond a prerogative of the crown. We are sure the boon so granted will be gratefully felt, and the privilege so accorded will not be abused, either in itself, or as a precedent for encroachment. While on the subject of the relations between the new King and his subjects, we cannot help expressing the disgust with which the unparalleled adulation froth almost every quarter poured upon our gracious sovereign contrasts, not merely with the base obsequious neglect, but with the contumely shewn towards his great and yet unburi'd predecessor. Must he not in his soul despise the fawning sycophants who a few hours before bowed in worship to George the Fourth, and who now with tenfold protestations do homage to him? We are sure he must: it is a great moral lesson to all, and a pitiable example of the moral state of this country. But the subject is too painful to dwell upon; and we could most anxiously have longed to see every demonstration of respect, loyalty, and love for the King upon the throne, mingled with more of mournful recollection of the glories of him who has just passed away. We may be assured, that the selfish beings who so quickly forgot or reviled the late, cannot be true friends to any King.

Supply of Water in Paris.—It has been already stated, that the French Government have given permission to a public company to make arrangements for the supply of water in Paris in the same way as in London. This will be one of the greatest improvements of the French capital during the present century; for by the usual mode of supply, which is by water-carriers, the quantity of water furnished per head is only 23 quarts; whereas in London it is 80, at Edinburgh 61, at Manchester 44, and at Glasgow 100. Liverpool, however, seems to be almost as badly off as Paris; for the supply there is said to be only 28 quarts per head. It is to this deficiency of water, and to the expense of the supply, perhaps, that we are to attribute the comparatively filthy state of Paris—a clean staircase is unknown, the yards are rarely washed, and the windows are generally dirty. It is proposed to have the water supplied by steam-engines from the Seine above La Bièvre, and not from a canal, as was intended by Napoleon, as it is found that the Seine above La Bièvre is purer than all others, in the following proportions:

	Residuum after boiling.	Deliquescent salts.
Seine above La Bièvre—gram.	18,606	1,140
Seine below Paris	19,474	2,520
Canal de l'Oureq	24,206	2,780
Aqueduc d'Arcueil	38,900	10,974
Sources Saint Gervais	141,374	44,314
Do. of Belleville and Menilmontant	180,486	23,452

We have just seen the prospectus of this company. It is proposed, in the first instance, to allow to every house-owner in Paris the option of taking a 1500 franc share, so that he may enjoy in a double way the advantages of the scheme. In addition to the 1500 francs, which

would be his portion of expenditure of laying down pipes, &c., for one share about 1500 francs more are to be calculated upon for the expense, making the share 3000 francs, for which the shareholder would for eighty years have a free and very abundant supply of water without charge. As 3000 francs, at 4 per cent, amount to only 120 francs per annum, and as the present charge for a scanty supply of water by means of water-carriers is nearly 150 francs per annum on the average, there would be an actual saving of 30 francs per annum, besides having a more abundant and equally pure supply.

New French Coinage.—There is great activity in the French mint in coining new five-franc silver pieces, and gold *demi-louis* of ten francs. They will be in circulation next month.

Roquefort Cheese.—At the last sitting of the Paris Academy of Sciences a curious paper was read by M. Giron de Buzaraingue, on the manufacture of the celebrated cheese called *fromage de Roquefort*, which is made from the milk of ewes. The excellence of this cheese is stated to proceed from the peculiar construction of the caves, by which a perpetual freshness of temperature is maintained. It is also stated, that when the sheep have been milked in the regular way, the teat is struck with force, by which means a much larger quantity of milk is obtained; whilst, contrary to what might be imagined, no injury is done to the animal.

Sweden.—The Swedish Academy of Sciences has just purchased one of the handsomest hotels in Stockholm, for the purpose of converting it into a Museum of Natural History.

A letter from Berlin states, that *Mlle. Sonntag* has entered into an engagement with the opera in that city for two years; but that she is previously to go to St. Petersburg, on the invitation of the emperor.

Copernicus.—A statue of this great astronomer is about to be placed in the square which fronts the palace of the Imperial Society of the Friends of the Sciences at Warsaw.

Encroachments of the Sea.—In Clew Bay, on the western coast of Ireland, there was formerly an island, called *Minish*, the surface of which, in the reign of Charles I., was twelve acres in extent; as is proved by several public documents of that period. On being measured in the year 1814, it was found to be only 420 feet long, and 30 broad. In 1816 it entirely disappeared. The Island of *Clare*, in the immediate neighbourhood, furnishes another example of the destructive action of the sea on those coasts. Bounded every where by cliffs of immense height, it is continually corroded by the ocean, which has worn deep caverns; into which, when agitated, it throws immense blocks of stone, detached from the cliffs, with a noise that is quite appalling.

Turkey.—M. *Ribeaupierre*, the Russian ambassador, has obtained from the Grand Signior a firman, authorising him to visit all the mosques of Constantinople, even that of Saint Sophia. M. *Ribeaupierre* is the first European who has received this permission.

Diving-Bell.—An inhabitant of *Angerville*, in France, has invented a diving-bell, which enables any one to remain for above an hour under water, and to execute the most difficult labours.

HIC JACET

The Remains of Mrs. *Eliza Vaughan*, obit May 2, 1830, at 34 Years.

Adieu, Eliza! to save thee I fondly try'd,
Thou would'st not listen, but refusing all aid died:
To a much better world thou hast now bent thy way,
And left me behind a short time longer to stay. S. V.

The Measles.—The measles has lately been making great ravages in Paris. Most of the children who have fallen victims to it have also been attacked by brain fever.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXVIII. July 10.]

A new edition of the Bible is announced, with Illustrations by J. Martin, and under the immediate patronage of his most gracious Majesty the King. The design of so imaginative and sublime an artist to publish a Series of Prints to illustrate the Old and New Testament, gives rise to the most sanguine anticipation of a production alike glorious to himself and honourable to the fine arts of his country.—The Alexandrians, a Novel.—A new volume of the Transactions of the King and Queen's College of Physicians in Ireland.—Le *Keepsake Français*, with engravings.

LIST OF NEW BOOKS.

Marshall's Naval Biography, Supplement, Part IV. 8vo. 15s. bds.—Ingram's *Matilda*, 8vo. 12s. bds.—Macbraire's Medical Nosology, 12mo. 5s. bds.—Murray on Hydrophobia, 12mo. 4s. bds.—Southennan, 3 vols. post 8vo. 1l. 11s. 6d. bds.—Annual Register, 1829, 8vo. 16s. bds.—De la *Beche's Geological Phenomena*, 4to. 2l. 2s. bds.—McNeill on the Jews, 7s. bds.—Vincent's Sermons, 12mo. 6s. bds.—Grant's Lectures on the Prodigal Son.—Spillan's Supplement to the Pharmacopœias, 12mo. 6s. bds.—The *Templars*, a Novel, 3 vols. post 8vo. 1l. 7s. bds.—Laurent's Ancient Geography, 8vo. 14s. bds.—Rankin on Life Assurances, 8vo. 6s. bds.—Garde's Law of Evidence, 12mo. 6s. bds.—Holroyd on Patents and Inventions, 8vo. 10s. 6d. bds.—Dublin University Examinations, 8vo. 8s. bds.

METEOROLOGICAL JOURNAL, 1830.

June.	Thermometer.	Barometer.
Thursday.. 24	From 45. to 68.	29.43 — 29.85
Friday .. 25	— 52. — 70.	29.74 — 29.63
Saturday .. 26	— 55. — 76.	29.63 — 29.72
Sunday ... 27	— 51. — 76.	29.79 — 29.02
Monday .. 28	— 52. — 72.	29.44 — 29.79
Tuesday .. 29	— 53. — 72.	29.79 — 29.91
Wednesday 30	— 42. — 68.	29.96 — 29.99

Wind variable, S.W. prevailing. Since the morning of the 26th, generally fine, and free from rain. Haymaking in this neighbourhood has been generally brought to a close. On the evening of the 25th, from about half-past six till as much after nine, a rumbling noise was heard in the south resembling distant thunder, which continued for more than two hours without intermission: from ten till near eleven on the same evening, the atmosphere was continually illumined with vivid flashes of lightning. I have received accounts from Brighton, which state that the thunder and lightning were almost incessant during the greater part of the night of the 25th.

Rain fallen, .25 of an inch.

July.	Thermometer.	Barometer.
Thursday.. 1	From 47. to 71.	29.91 to 29.76
Friday ... 2	— 45. — 64.	29.71 — 29.61
Saturday .. 3	— 51. — 64.	29.46 — 29.64
Sunday ... 4	— 51. — 69.	29.72 — 29.77
Monday .. 5	— 47. — 70.	29.86 — 29.96
Tuesday .. 6	— 49. — 68.	29.96 — 29.76
Wednesday 7	— 55. — 64.	29.61 — 29.56

Wind variable, prevailing S.W. Except on the 5th and 6th, generally cloudy, with frequent showers of rain.

Rain fallen, .725 of an inch. CHARLES H. ADAMS.
Edmonton.
Latitude..... 51° 37' 32" N.
Longitude..... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

☞ The state of the times has caused a short literary inter-regnum: no new books of any consequence are appearing; and, indeed, all but the political world seems nearly asleep. We yet hope that our little sheet will be a pleasant repose in the midst of this turmoil. The proceedings of both the Societies mentioned by "Eclectic" are given when they are of sufficient public importance.

To a Correspondent who writes to us that we omitted to notice the death of our late beloved Monarch, we have to answer that a mention of the melancholy event appeared in the stamped edition of the *L. G.*; and that it escaped our recollection at the moment that only a small portion of our numerous readers would thereby see it: we now therefore insert it again throughout the whole edition of our Journal: "His Majesty George IV. died on Saturday last. As a monarch, his reign will be famous in the history of England. He was of a noble nature, liberal, munificent in his patronage of literature and the fine arts, and in most respects all that a great sovereign ought to be. His errors, as a man, have even already been made the theme of unbounded censure: but posterity alone can do justice to his character; and when it is calmly and candidly weighed, truth will render homage to the excellencies which vastly counterbalanced his less laudable qualities."

ADVERTISEMENTS,

Connected with Literature and the Arts.

Close of the Suffolk Street Gallery.

SOCIETY OF BRITISH ARTISTS. The

Exhibition for the Sale of Works of living British Artists, Suffolk Street, Pall Mall East, is now open to the Public from Nine till Six. WILL CLOSE on Saturday, July 17th.

Admission, 1s.—Catalogue 1s.

R. B. DAVIS, Secretary.

WEEKS'S MECHANICAL EXHIBITION, 3, Tichborne Street, Piccadilly.

The Nobility, Gentry, and the Public, are respectfully informed, that this ingenious Collection, which has remained so long closed, owing to the illness of Weeks, Senior, will be re-opened in the ensuing Week by his Sons, who, regardless of expense, have completed a Variety of curious and entertaining Mechanism, which they flatter themselves will be found worthy of public inspection.

Open from Twelve to Five.

The Subscribers will be admitted on mentioning their Names.

ROYAL MANCHESTER INSTITUTION. The Fifth Exhibition is intended to take place in August next, and will consist of the Works of Living Artists in Oil Painting and Sculpture.

Owing to an unexpected occurrence, the time for receiving pictures is altered, and will now be terminated on the 30th of July. Any pictures arriving after the 30th instant will be excluded from the chance of being exhibited. Artists desirous of exhibiting their works are requested to apply to the Honorary Secretary.

T. W. WINSTANLEY, Honorary Secretary.

1st July, 1830.

The Late King.

MR. FINDEN'S whole-length LINE ENGRAVING from SIR THOMAS LAWRENCE'S PICTURE of his late Most Gracious Majesty GEORGE the FOURTH, seated on a Sofa, may be had of the Publishers. Price 3s. 3d.

London: Moon, Boys, and Graves, Printers to the King, 6, Pall Mall. Who have also on sale, The Half-length Portrait, engraved in Mezzotint by Mr. Charles Turner, from the same Picture. Prints, 1s. 1s.; French Proofs, 2s. 2s.; India Proofs, 2s. 1s. 6d.

PUBLIC MOURNING, by AUTHORITY.—Two coloured Engravings of Fashions for the General Mourning as appointed to be worn for His late Majesty, is published this day, in a Supplementary Number of the Ladies' Pocket Magazine, in addition to a Memoir and numerous Anecdotes of George IV. written and collected from authentic sources; a Portrait, and a Representation of his favourite Pony Phaeton, as it last appeared in Windsor Park. Price 6d.

Published by J. Robins, Bride Court.

FALL of NINEVEH.—Mr. MARTIN begs to announce that the Proofs are now ready for delivery. Prices, unlettered Proofs, 20 Guineas; lettered ditto, 10 Guineas.

All Impressions that have not Mr. Martin's name written in the Right Corner of the Engraving are sold without his permission. July 10th, 1830.

NEWLY INVENTED PORTABLE GLOBES, by Mr. G. POCKOCK, of Bristol. These Globes, made of silk or paper, are 12 feet in circumference. The paper globes are inflated with atmospheric air in the space of one minute; they are simple and easy in use, and may be folded sufficiently small to be carried in the pocket. Those made of silk are distended by elastic meridians, which collapse like an umbrella, and when expanded are mounted on brass pillars. Both globes have been universally admired for their elegance and simplicity of construction, and have already received the highest patronage. Various specimens may be seen at the National Repository, Charing Cross, where Mr. Pockock, or one of his Sons, will attend daily till the 24th instant, from 12 till 4 o'clock. No globes have yet been published so well calculated for exportation, —40 of them may be packed in the space of a cubic foot. Lists of Subscribers are open for inspection at the Repository; at Mr. Houghton's, 161, New Bond Street; Fauntleroy and Burton's, Leadenhall Street; Reeves and Sons', 150, Cheap-side; Sherwood and Co.'s, Paternoster Row; Mr. Harris's, St. Paul's Churchyard; and at Mr. Pockock's Prospect Place Academy, Bristol.

This Establishment, conducted by Mr. Pockock's Sons, will reopen the 26th instant.

LONDON UNIVERSITY SCHOOL. Head Master, the Rev. HENRY BROWNE, A.M. of Corp. Chr. Coll. Camb.—A Classical Day School, to be called the London University School, will be opened on the 1st of November next, under the patronage of the Council of the University, in Gower Street, near Bedford Square. The branches of education intended to be taught are, the Latin, Greek, English, and French Languages, Geography, Arithmetic, the Rudiments of Algebra, the Introductory Books of Euclid, and Writing. The expense will be 15s. per annum for each pupil. There will be no boarders. It will be strictly a day school, and the hours of attendance will be from nine in the morning to three in the afternoon, with suitable intervals of recreation. Boys will be admitted at any age after the completion of their eighth year. The number of pupils is limited, and they will be admitted in the order of their application until the number is filled. The names may be entered at the Office of the University daily (except Sunday), from nine to five o'clock. A prospectus of the general plan of the school may be had at the University, and at the following Book-sellers:—Mr. Taylor, 30, Upper Flower Street; Mr. Lloyd, Harley Street; Mr. Murray, 40, Bedford Street; Messrs. Bristoll and Virtue, Soho Square; Mr. Knight, Pall Mall East; Mr. Gardner, Marseller, Regent Street; Mr. Wild, Mappeller, Charing Cross; Mr. Templeman, Percy Street; Mr. Alexander, 37, Great Russell Street; Mr. Smith, Mappeller, Strand; Mr. Underwood, 32, Fleet Street; Messrs. Rogers, Ludgate Street; Messrs. Manning and Chaplin, 69, Chancery Lane; Mr. Richardson, 24, Cornhill; Messrs. Farbury, Allen, and Co. Leadenhall Street; Messrs. Creech and Spencers, Lamb's Conduit Street.

DR. WOLLASTON'S DOUBLET MICROSCOPE, showing the most delicate Test Objects with as much distinctness as the most expensive Achromatic Microscopes.

Sold by W. Cary, 181, Strand, price 2l. 12s. 6d.

GENERAL CEMETERY COMPANY. At a General Meeting of the Shareholders of the General Cemetery Company, held at the Freemasons' Hall, on Monday, the 5th July, 1830,

ANDREW SPOTTISWOODE, Esq. M.P. in the Chair,

It was resolved,

That the election of Directors be postponed to a future day, and that the Provisional Committee be re-appointed for the Management of the Affairs of the Company in the mean time.

That the following Noblemen be appointed Vice-Presidents, viz.

The Marquess of Lansdowne | The Earl of Denbigh
The Marquess of Wexley | The Earl Fitzwilliam
The Earl of Cardigan | Lord Viscount Milton.

That William Fryer, Esq. and Thomas Cornish, Esq. be appointed Auditors for the year ensuing.

That George Frederick Carden, Esq. be re-appointed Treasurer.

That Charles Broughton Bowman, Esq. be re-appointed Secretary and Solicitor.

The Thanks of the Meeting were then unanimously voted to the Chairman.

Shares may be obtained of the Bankers, Messrs. Snow, Paul, and Paul, Temple Bar Without; and of the Secretary, on payment of 2l. 10s. per Share.

Prospectuses, and every information may be obtained of the Secretary, and of the Treasurer, G. F. Carden, Esq. 3, Inner Temple Lane.

C. BROUGHTON BOWMAN, Secretary, 35, Milk Street, Cheap-side.

WANTED, for a Youth in his Eighteenth Year, an Engagement till the ensuing Christmas, in an Academy, where a limited number of Pupils are instructed. The Youth referred to is competent to assist the Junior Classes in Latin, Greek, Hebrew, and French; Mathematics, Algebra, &c.; Astronomy, History, &c. He has from early years been accustomed to Scholastic Duties, and would be found generally useful. Salary is not an object.

Address to J. T. Barker, Academy, Deptford.

EDINBURGH REVIEW.—Advertisements, Notices, &c. to be inserted in the general Advertising Sheet of No. 102 of the Edinburgh Review, are requested to be sent to Longman and Co. Paternoster Row, by Friday, the 16th, and Prospectuses, Catalogues, Bills, &c. to be stitched in the Number, not later than the 23d. Advertisers will perceive the great advantage of sending their Advertisements and Bills early, as they are placed in the exact order they are received by the Publishers.

Books Published This Day.

Price 1l. 1s.

THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MENARD.

Formerly Captaine d'Antenne in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated practitioners of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years.

London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catherine Street, Strand; and to be had of all Booksellers.

Price 4s. 6d. in cloth, or 7s. bound in roan and lettered.

ANSWORTH'S LATIN and ENGLISH DICTIONARY, abridged for the Use of Grammar Schools, by JOHN DYMOCK, LL.D.

The 3d edition.

Dr. Dymock is a practical teacher and an eminent scholar,—two advantages which peculiarly fit him for the task he has undertaken. This edition of Answorth possesses greater advantages than any with which we are acquainted: it is perfectly portable, remarkably voluminous, and published with a singular care, both in regard to the manner and matter, for the use of Latin students. It is exquisitely printed, and its shape is well adapted to suit varieties of taste. We do not hesitate to recommend it as the very best Dictionary which could be selected for the use of Grammar Schools. —Edinburgh Literary Gazette.

Glasgow: Printed for R. Griffin and Co.; and T. Tegg, London.

In 8vo. 12s.

CONVERSATIONS on RELIGION, with LORD BYRON and others. Held in Cephalonia, a short time previous to his Lordship's Death.

By the late JAMES KENNEDY, M.D. Of H. M. Medical Staff.

John Murray, Albemarle Street.

Drawing Size 10s. Just published, in a Portfolio, fol. 12s. on plain paper, or 1l. 11s. 6d. on India paper.

ONE HUNDRED STUDIES, in Groups and Single Figures, of Horses, Cattle, Sheep, and other Domestic Animals, engraved (on Thirty Copper-plates) from the celebrated Masters.—Paul Potter, Cuyt, Berghem, Stoop, Karl du Jardin, &c. under the superintendance of George Cooke.

London: Moon, Boys, and Graves, Printers to the King, 6, Pall Mall.

Of whom may be had,

Parts I. to IV. of Landseer's Characteristic Sketches of Animals, drawn from the Life: each Part containing Eight Engravings, accompanied by interesting Descriptions and Notices of the various Animals portrayed.

Dr. Arnold's Thucydides.—Vol. I. price 18s.

THE HISTORY of the PELOPONNESIAN WAR, by THUCYDIDES. The Text according to Bekker's Edition, with some Alterations. Illustrated by Maps, taken entirely from actual Surveys. With Notes, chiefly Historical and Geographical.

Oxford: Printed by S. Collingwood, Printer to the University, on Parker, Whitaker, Treacher, and Co.'s Press, J. G. and F. Rivington, London; and J. and J. Dighton, Cambridge.

THE COURT JOURNAL and GAZETTE of the FASHIONABLE WORLD.

The very marked success which has attended this undertaking, may be fairly taken as a proof how great was the occasion really existing for some express and ample channel for the communication of intelligence regarding the movements, occupations, and feelings of the higher classes of society.

This success is the more gratifying by reason of the difficulties overcome in the execution of the design. It must be apparent that the task demanded not merely great tact in the selection of materials from public sources of information—a task commensurate with the refinement of the circle addressed—but like wise, extensive and costly arrangements for the constant supply of original private intelligence, together with a large share of literary talent in all the departments of the work, in order to ensure that novelty and air of distinction without which it could have no just pretensions to become the organ and the record of the fashionable world.

The result may be fairly appealed to, as demonstrating that it is possible to present a faithful chronicle of occurrences, without being dry; to be light and amusing, without being frivolous or indecorous; to be occasionally satirical, for the correction of folly, not for the indulgence of prejudice, or the display of mere animosity; and to offer, with the whole, an admixture of politics so concentrated as to be both clear and brief. In short, it is confidently hoped that a journal has been established having claims to be considered "exclusive in the best sense of the word"—that of being original.

The commencement of a new reign under the happiest auspices, and the approaching institution of a perfectly organised court, are circumstances which must heighten materially the general interest attached to the proceedings of royalty and nobility, and the brilliant circle connected with them. Public curiosity will be now especially solicited as to the transactions, the movements, and habits of exalted station, the triumphs of beauty, the benefits of diffused wealth, and all that concerns the elite of the community; that society whence are derived most of the graces and the agreeance of life. The favourable conjuncture of circumstances alluded to, will attend great accession to the profuse of the "Court Journal;" and those engaged in its direction will spare no efforts to avail themselves, to the utmost, of the enlarged opportunities for extending its utility and increasing its claims to general attention and patronage.

The "Court Journal," containing 48 columns, is printed on a hand-one 4to. stamped sheet, so that subscribers may receive and transmit it to their friends, postage free, throughout all parts of the kingdom.

Published every Saturday Morning, for Henry Colburn, by W. Thomas, at the Office, 19, Catherine Street, Strand, (where Advertisements and Communications for the Editor are requested to be addressed), and supplied by all Booksellers, News-vendors, and by the Clerks of the Roads.

Containing also a copious Collection of approved Prescriptions, Rules of Diet, Medical Management of Children, Virtues and Doses of all Medicines, &c. The whole forming a clear and comprehensive Medical Guide for the Clergy, Families, and Invalids.

By T. J. GRAHAM, M.D. &c.

"We conscientiously recommend it. It is very far above the celebrated Buchanan's, and we shall preserve the volume as the advice of an invaluable friend, to which we can refer in the hour of need, without any doubt of being benefited by its wisdom."—Literary Chronicle.

"In the opinion of a respectable physician, well known in our connexion, it is enriched with much of all that modern practice has ascertained to be valuable; and is not only incomparably superior to Buchanan's, but also to every similar work in our language."—Western Magazine.

"It is altogether deserving of permanent popularity."—London Weekly Review.

"One of the very best and most useful books published in modern times."—Monthly Observer.

London: Published by Simpkin and Marshall; and sold by all Booksellers.

Of whom may be had, by the same Author, 3d edition, price 3s. 6d.

2. A Treatise on Indigestion; illustrating the Symptoms, Varieties, Causes, and correct Treatment of the prevailing Disorders of the Stomach and Liver; with Practical Observations on some Painful Complaints originating in those disorders, as Tic Douloureux, Gout, Fulness of Blood in the Head, &c.

"We sincerely recommend it, and have long been convinced that such a work was imperatively called for."—London Medical Journal.

"It is very evidently the result of deep experience. Mr. Abernethy speaks of it in high terms."—British Magazine, Jan. 1830.

Handsome printed in 1 vol. post 8vo. price 10s. cloth boards.

THE CABINET ALBUM; a Collection of original and selected Literature.

This Volume will be found to contain a fund of entertainment adapted to all tastes and all seasons; equally suitable for the shady retirement of the arbour, or the cheerful and social fire-side.

Adam Black, Edinburgh; and Longman, Rees, Orme, Brown, and Green, London.

In 1 vol. 8vo. price 14s.

AN INTRODUCTION to the STUDY of ANCIENT GEOGRAPHY, with copious Indexes.

By PETER EDMUND AURENT. Of the Royal Naval College, in H. M. Dock-Yard, Portsmouth; Author of a "New Translation of Herodotus," the "Odes of Pindar in English Prose," &c. &c.

Oxford: for Henry Slatter; and Whittaker, Treacher, and Co. London.

This Volume combines a Treatise and a Dictionary of Ancient Geography; every geographical Name that can be found in Thucydides, Herodotus, Livy, and other ancient historians previous to the fall of the Byzantine Empire, may be easily referred to, and its situation ascertained, even without reference to a map, provided the reader has obtained some general notions of geography.

On the 30th of June was published, price 6s. the Fifteenth Number of

THE BRITISH CRITIC, QUARTERLY THEOLOGICAL REVIEW, and ECCLESIASTICAL RECORD.

Contents.—Lord King's Life of Locke—Memoirs of the Life and Times of De Foe—Waddington's present Condition and Prospects of the Greek Church—Irvine's Sermons—New Scheme of Evangelical Religion—Thompson's Pastoralia—Bishop of London's Sermons—Bishop Jebb's Practical Theology—Townsend's Sermons of Bishop James—State of the Dioceses in England and Wales—Proceedings of the Universities.

Printed for C. J., G., and F. Rivington, 8t. Paul's Churchyard, and Waterloo Place, Pall Mall.

THE GREEK GRAMMAR of
 FREDERICK THIERSCHE. Translated from the Ger-
 man, with brief Remarks.
 By D. K. SANDFORD, Esq. M.A.
 Of Christ Church, Oxford, and Professor of Greek in the
 University of Glasgow.
 Printed for William Blackwood, Edinburgh; and
 T. Cadell, Strand, London.

Already published, Parts 1, 2, and 3, to be completed in Twelve
 Monthly Parts, each containing Eight Plates, price 2s. 6d.
 plain, or 3s. 8d. coloured.

THE FAMILY CABINET ATLAS,
 constructed upon an original Plan, and embracing many
 important new Features.

"This Atlas corresponds in size with those popular publica-
 tions of the same form so useful an addition, namely, the
 Family Library, the Classical Library, and Cabinet Cyclopaedia."
 —*Court Journal*.

"Its very ingenious method of arrangement secures to the geo-
 graphical student the information for which hitherto he
 has been obliged to resort to works of the largest dimensions."
 —*Atlanicum*.

"This miniature and beautiful Atlas is likely to supersede,
 for general purposes, maps of a more expensive and elaborate
 character."
 —*Atlas*.

"The workmanship is among the best of the kind we have ever
 witnessed."
 —*Examiner*.

"It contains all the information to be derived from the most
 expensive and unwieldy Atlas."
 —*York Courier*.

"By a moment's reference, the exact situation of any place
 may be found."
 —*Birmingham Journal*.

"An excellent little work, engraved with a clearness and cor-
 rectness which is quite surprising. When complete, travellers
 will have a system of geography, and a complete Atlas, which
 they may carry in their pocket."
 —*Spectator*.

"This is the most perfect gem of an Atlas which has ever been
 published."
 —*Review*.

"It far surpasses any thing of the kind which we have seen,
 and is made to suit the popular libraries which Dr. Lardner and
 Mr. Murray are now sending into every family in the empire."
 —*Monthly Review*.

Edward Bull, 36, Holles Street, Cavendish Square; supplied
 also by every Bookseller in the United Kingdom.

In 2 vols. small 8vo. with several Engravings on Copper and
 Wood, price 16s. in handsome cloth.

THE PICTURE OF INDIA; Geographical,
 Historical, and Descriptive.

"We must say there is an elegance, if not a splendour, of de-
 coration about these volumes, that very properly corresponds with
 the ideas of magnificence which we usually associate with the
 name of India. The contents are worthy the beautiful frame-
 work in which they are embraced, and we mistake not the
 public taste, if the 'Picture of India' will supersede every competi-
 tor that has arisen, or that is likely to come into the field."
 —*Monthly Review*, June.

"This is a most useful and interesting little work, very much
 wanted as a manual, that remote and extensive portion of the
 British Empire, in which there is a very good map, and numerous
 well-executed engravings of scenery, &c. The volumes are got
 up with great care and neatness. They will afford the reader an
 outline of the features of a most remarkable country in a short
 space of time, and imprint upon his mind the character of the
 people and their manners in a way which cannot fail to profit
 him. The geography, geological features, mineralogy, climate,
 zoology, early history, statistics, &c. are all given in lucid order."
 —*New Monthly Magazine*, June.

"The 'Picture of India' will survive the immediate occasion
 which prompted its production, and take its place as a book of
 valuable information among works of permanent interest."
 —*Monthly Magazine*, May.

"The present work is particularly acceptable. It is diligently
 compiled, easily written, and very neatly as well as usefully illus-
 trated by plates and maps."
 —*Literary Gazette*, May 15.

"This work well deserves its title. It is a picture of India past
 and present, executed with laborious care and great ability."
 —*Sunday Times*.

"To all who wish for a knowledge of India as it is, for infor-
 mation of its government by Europeans, for a free and impartial
 statement of its wrongs and its rights, its improvements and its
 deteriorations, its claims to independence, and its benefits by sub-
 jugation, we recommend these volumes with much confidence
 and pleasure."
 —*Intelligence*.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 3 vols. post 8vo. price 7s.

THE TEMPLARS; an Historical
 Novel.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 18mo. price 7s. bound and lettered.

A GUIDE and POCKET COMPANION
 through ITALY, containing a concise Account of the
 Antiquities and Curiosities of that classical and interesting coun-
 try; with a particular Description of the principal Cities. Also,
 a correct List of Posts, Distances, Rates of Posting, Monies, Inns,
 Modes, and Expenses of Living; Manners and Customs, Direc-
 tions to Travellers, with Medical Advice to Invalids, Prescriptions,
 &c. &c.

By W. C. BOYD, M.D.

"A most unassuming and sensible guide-book to the wonders
 of nature and art, of which the fertile fields of Auzonia present an
 exhaustless a display. The descriptions, though necessarily brief,
 are lively; and no objects of curiosity that a traveller ought to
 inspect, escapes mention. The work is accompanied with a use-
 ful and well-written introduction, the rules and prescriptions of
 which will be found of value to every one going abroad, whether
 they may happen to make Italy the object of their travels or not."
 —*Spectator*, June.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

8vo. price 6s. boards.

A FAMILIAR TREATISE ON LIFE
 ASSURANCE and ANNUITIES, comprising a His-
 torical Sketch of the Science, and of Life Assurance Offices, with
 Observations on the Duration of Human Life, and other Objects
 of Interest connected with the Subject; an Appendix of original
 Tables, &c.

By ROBERT RANKIN,
 Secretary to the Bristol Union Fire and Life Insurance Company,
 London: Published by W. Simpkin and R. Marshall, Stationers'
 Hall Court; and W. Brown, Clare Street, Bristol.

M. A. NATTALI, 94, Tavistock Street, Covent Garden.
Turton's Conchology.

Dedicated, by permission, to his Royal Highness Leopold George
 Frederick, Prince of Coburg. In 4to. with 20 Plates, beauti-
 fully coloured by Sowerby, price 2l. in cloth.

THE BIVALVE SHELLS of the BRI-
 TISH ISLANDS, systematically arranged,
 by WILLIAM TURTON, M.D.
 Author of the Conchological Dictionary, General System
 of Nature, &c.

The Impression is limited to 250 Copies.

A practical conchologist observes, that "Dr. Turton's Account
 of British shells is not only interesting to the collector, but also
 particularly desirable, as it includes the shells that have been
 discovered since the publication of Montague. The author's resi-
 dence being on that part of the coast where the greatest number
 of shells are found, he had the most favourable opportunities of
 investigating the subject, the objects of his study being continually
 before him."

Outlines of Oryctology.

In crown 8vo. with Ten Plates, price 12s. in cloth, a new
 edition, corrected by the Author.

An Introduction to the Study of Fossil Or-
 ganic Remains, especially of those found in the British Strata.

 metical Plan, sorted with the above two works to suit the con-
 venience of Schools, may be had for Five Pounds.

Edinburgh Gazetteer, corrected to 1829.

In 1 large vol. 8vo. (with Maps), 11s. boards, the 2d edition,
 brought down to the present time, of

THE EDINBURGH GAZETTEER; or,
 Compendious Geographical Dictionary, being a com-
 plete Body of Geography, Physical, Political, Statistical, and
 Commercial. Abridged from the larger work, in 6 vols.
 Printed for Longman, Rees, Orme, Brown, and Green, London;
 and Adam Black, Edinburgh.

Of whom may be had,

The Edinburgh Gazetteer; or, Geographical
 Dictionary, brought down to the present Time. Complete in
 6 vols. 8vo. price 5l. 5s. boards.

Also, as an Accompaniment to the above Works,

A New General Atlas, constructed by A.
 Arrowsmith, Hydrographer to the King, from the latest Autho-
 rities. Comprehended in 54 Maps. In royal 4to. 11s. 6d.
 bound, or coloured, 2l. 12s. 6d.

Dr. Murray on Diseases of the Lungs.
 In 8vo. price 10s. 6d. boards.

A TREATISE ON ANIMAL HEAT,
 containing Practical Observations on the Inhalation of
 Iodine and various Vapours, in Consumption, Croup, Asthma,
 and other Diseases. With a Plate of the Apparatus.
 By JAMES MURRAY, M.D.
 Member of the Royal College of Surgeons, &c.
 Published by Longman, Rees, Orme, Brown, and Green.

Just imported, in 1 vol. 12mo. bound and lettered, and
 illustrated with Engravings, price 6s. 6d.

MYTHOLOGICAL FICTIONS of the
 GREEKS and ROMANS.
 By CHARLES PHILIP MORITZ.
 Translated from the Fifth German edition.

New York: Published by G. C. and H. Carvill; and sold by
 Thomas Ward, 94, High Holborn.

In 12mo. price 6s.

THE CAPTIVE OF FEZ; a Poem, in
 Five Cantos.
 By THOMAS AIRD.

 T. Cadell, Strand, London.

In 8vo. 3s.

ALFRED the GREAT, a Drama, in
 Five Acts.
 By the Author of "Liberation of Joseph," a Sacred Drama;
 Sonnets, Tour to Matlock, &c. &c.
 Published by Longman, Rees, Orme, Brown, and Green.

PICKERING'S ALDINE EDITION of
 the POETS.

Vol. III. containing the Poems of Thomson,
 Vol. I. with an original Memoir, Portrait, and a Fac-simile Au-
 tograph.

Vols. I. and II. containing the Poems and
 Songs of Burns.
 William Pickering, 57, Chancery Lane.

In 8vo. price 5s.

OBSERVATIONS on the DISORDERS
 of FEMALES, connected with UTERINE IRRITA-
 TION. By THOMAS ADDISON, M.D.
 Assistant Physician and Lecturer on the Theory and Practice of
 Physic at Guy's Hospital.
 Printed for S. Highley, 174, Fleet Street.

In 1 vol. 8vo. price 14s. boards, the 2d edition of

LECTURES on the ACTS of the APOS-
 TLES, delivered in the Parish Church of Stockton-upon-
 Tees, during Lent, in the Years 1803, 1804, 1805, and 1806,
 by JOHN BRUCE, F.R.S. M.

Rector of Egglecliffe, in the County of Durham.
 Printed for C. J. G. and F. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author,

Practical Reflections on the Ordination Ser-
 vices for Deacons and Priests in the United Church of England
 and Ireland; for the Use of Candidates for Orders, and of those
 who renew their Ordination Vows. With appropriate Prayers
 for Clergymen, selected and original. New edition, small 8vo.
 price 6s.

BOOKS IN THE PRESS.

London's Hortus Britannicus.

In August will be published, in 8vo.

A CATALOGUE of all the PLANTS
 Indigenous, Cultivated in, or introduced to Britain.

Part I.—The Linnaean Arrangement, in which nearly 30,000
 Species are enumerated, with the Systematic Name and Autho-
 rity, Accutention, Derivation of Generic Names, Literal English
 and Specific Names; Synonymes, Systematic and English, of
 both Genera and Species; Habit, Habitation in the Garden, In-
 digenous Habitation, Popular Character, Height, Time of Flow-
 ering, Colour of the Flower, Mode of Propagation, Soil, Native
 Country, Year of Introduction, and Reference to Figures: Pre-
 ceded by an Introduction to the Linnaean System.

Part II.—The Jusseuean Arrangement of nearly 4000 Genera,
 with an Introduction to the Natural System, and a General De-
 scription and History of each order.

Edited by J. LINDLEY, F.L.H.G. and Z.S.

The titlepage of this Catalogue indicates how much it is in ad-
 vance of all that have been hitherto published. The Linnaean
 Arrangement and its Supplement are entirely the work of Mr.
 George Don; the Natural Arrangement is founded on that of Pro-
 fessor Lindley, with some additions and alterations rendered
 necessary by the plan of this Catalogue; and Dr. Greville, the
 profound cryptogamist, assisted in arranging the Cryptogamia.

Those who are acquainted with the present state of botany, and
 with the botanists of this country, will allow that three gentle-
 men better adapted for co-operating in producing a Catalogue like
 that now submitted to the public are not to be found. The lit-
 eral translation of the specific names, the derivations of the generic
 names, the indications of derivations, and, above all, the general
 descriptions of the natural orders, will, the editor confidently
 expects, be found not only of great value in determining the names
 of plants, and in recognizing them at sight, both individually and
 in masses; but in assisting the botanical student and practical
 gardener to acquire some knowledge of their structure, physio-
 logical analogies, affinities, properties, uses, and culture.

Printed for Longman, Rees, Orme, Brown, and Green.

No. 704.—AMERICAN EDITION.

SATURDAY, JULY 17, 1830.

REVIEW OF NEW BOOKS.

George IV.: Memoirs of his Life and Reign, interspersed with numerous Personal Anecdotes; to which is prefixed an Historical Account of the House of Brunswick, from the Earliest Period. By H. E. Lloyd, Esq. 8vo. London, 1830. Treuttel and Co.

ON the day of the funeral of his late Majesty are we called upon to notice this the earliest (and, indeed, a very quickly produced) history of his life and reign. It is a melancholy task, amid the boom of distant minute guns, the dying sound of tolling bells, and all the outward demonstrations of a nation's mourning.* The depressed spirit can hardly take up the theme—every detail appears tedious—and nothing but a vague and overwhelming general impression fills rather than occupies the mind. How transitory are the days of the greatest monarch! How much more transitory do they seem to be than even those of private individuals! It is the mighty blank caused by the loss of one who has occupied so mighty a space: it is the sudden fall and disappearance of an object so lofty that, for a season, all eyes have been turned to its contemplation. And the very moment of its vanishing, without a pause between, new interests and another system rise to the view. The affairs of a kingdom are too pressing and too important to admit of the busy world's giving a period, however brief, to the sympathies of nature; and in a moral sense we see that the king never dies:—does he ever live? When a private person, however humble his station, passes away, there is some chasm, some distinct and obvious break, in the chain of existence; and it is only with the progress of time that his successor gradually glides into the vacant sphere, taking his place, discharging his duties, and supplying that similar atom of the endless tide of which the living flood is formed. But when the powerful monarch departs—when it might be imagined there was a gap created which nothing of humanity could replenish—is it not a wonderful contradiction to observe, that the instant call of circumstances, the operation of fears and hopes in all around, the rush of self-interest and ambition, the love of novelty, the gaud of spectacle, and a multitude of other springs of action, so absorb the public mind, that we may truly say the king descends from his throne into his sepulchre with about as slight a remembrance as the beggar exchanges his hospital truck for his last home in the pauper shell. It is a sad, but a useful, lesson: it proclaims to the great, that it is only by noble deeds, by the encouragement of those things which afford happiness to their species, which improve and adorn mankind, they can hope for such lasting fame as

Smells sweet, and blossoms in the dust.

* The fineness of the day, and the outpouring of the population of London, in consequence of all business being suspended, particularly towards Richmond and up the Thames, gave it, however, all the appearance of a holiday of recreation.

The work before us* enters into no enlarged or comprehensive views, either of personal character or of political transactions: it is a simple and honestly written narrative of the principal events in his late Majesty's life and government. It tells the story fairly, to the best of the author's knowledge; and it leaves philosophical speculation to a period when, perhaps, it can be more truly applied than it could be, so near the date of the matters recorded.

The prefatory "Historic Memoir" is concise, but sufficient; and traces the royal line of Great Britain from its founder, Boniface, created Count of Lucca in 789—above a thousand years ago—to the present epoch. The last words of George I., "*Je suis mort*," bear a striking resemblance to those reported to have been uttered by George IV.: "*This is death*." George II. exclaimed, "*Call Emily*," his daughter, and expired: what fell from the lips of our venerated third George in his final hour is doomed to that oblivion which covered his closing scene.

After devoting above a hundred pages to the ancestry of his late Majesty, Mr. Lloyd gives an account of his own infancy and education. Among other distinguishing features, he states that the prince was always sincerely attached to his instructors, though he seems to hint that they were quite as strict as was required, considering the prospects of their illustrious pupil. His father also shewed great regard to these eminent men: after several instances, the author says:—

"Another proof of the affection which the king had for Dr. Hurd, appeared in one of the finest compliments ever paid by a sovereign to a subject. The bishop's private seal had the bearing of a cross with the letters I. N. R. I. on a label, a glory above, and these words beneath—EK HUSTENON. His majesty, whose observation nothing could escape, was struck by the device, and instantly resolved to make use of it for a purpose he was then contemplating. This was the founding of an annual prize, consisting of a gold medal, for the best theological essay by a student of the University of Göttingen. On the one side of the medal was the profile of the king; and on the obverse an exact copy of Bishop Hurd's seal. When the medal was executed, his majesty took an opportunity of presenting one of the first impressions to the bishop, with his own hand, at Buckingham House. The royal gift was valued as it should be, by being left to the Bishops of Worcester in perpetuity. It is a trait highly honourable to the feelings of the Prince of Wales, that he ever continued to hold his preceptors in high respect. For a proof of this we have only to mention the two following short anecdotes, which reflect equal credit on his sensibility as a man, and on his condescension as a prince. On a summer excursion through some of the western counties of England, the prince happened to be in the neighbourhood of the palace of the Bishop of Worcester; and inquiring after the health of

* Advertised for publication on Wednesday next.

its venerable inhabitant, he was informed that his lordship was so infirm, that he rarely stirred out of his episcopal residence; but that, in other respects, his faculties remained unimpaired, and he possessed as good a share of health and spirits as usually fall to the lot of persons at his advanced period of life. On receiving this information, his royal highness despatched one of his attendants to the palace of his venerable and amiable preceptor, to ask his permission to wait upon him, as he understood that the state of his health did not permit him to come abroad. The good bishop, as may readily be conceived, was charmed with the condescension of his illustrious pupil, and in suitable terms expressed his grateful sense of the honour which his royal highness designed to shew him. An interview succeeded, highly interesting to those who witnessed it; and the prince left the venerable prelate penetrated with the kindness, affability, and flattering remembrance of his royal pupil. The other anecdote to which we refer is of a more recent date, and reflects, perhaps, still more honour on his royal highness's character. The prince, it is well known, for a number of years was in the habit of collecting portraits of all the eminent personages who had at any time been honoured with his friendship. These portraits are executed by the first artists, and form by far the finest collection of modern portraits that is to be met with in the kingdom. Among the other portraits of his distinguished friends, the Prince of Wales possesses an admirable likeness of the late Archbishop of York, which some few years ago was exhibited in the Royal Academy, and was then generally esteemed one of the finest portraits produced by the British school. It was painted by Hoppner, in his best style, and possesses so much of the manner and feeling of Sir Joshua Reynolds, that it might be mistaken for a work of that great master. It formerly occupied a conspicuous situation in the crimson drawing-room in Carlton House, in which splendid apartment there were also a portrait of Lord Erskine, by Reynolds, and one of Lord Chancellor Thurlow, by Sir Thomas Lawrence."

Mr. Lloyd attributes some of the Prince of Wales's youthful irregularities to his attachment to his uncle, the Duke of Cumberland—a feeble-minded and dissipated person, who, without bad intentions, led his nephew into very questionable company and companionship. Of this duke, Mr. Lloyd rather mars a good anecdote in the telling:—

"The duke being once in company with Foote, was so delighted with the wit of the player, that he said, 'Mr. Foote, I swallow all the good things you say.' 'Do you?' replied Foote; 'then your royal highness has an excellent digestion; for you never bring any of them up again.' On meeting Mr. Gibbon in Pall Mall, he thus accosted him: 'How d'ye do? What! at the old trade? aye, always scribble, scribble.'"

The writer has forgotten that it was a presentation copy, on which his royal highness

cried, "What! another big square book?" &c. &c. But to return to the prince: we are told—

"When he attained his majority, he was unquestionably the most accomplished young prince in Europe. Besides a correct and extensive knowledge of the ancient languages, he could converse with ease and fluency in French, German, and Italian. The best English writers, especially the poets, were familiar to him; and his refined taste and correct judgment on all subjects relative to the belles lettres have never been disputed. He was a considerable proficient in music, both vocal and instrumental, and was always considered as an excellent judge of that elegant science; and his taste in the fine arts has been as conspicuous as the munificence with which he has encouraged them. With all these accomplishments, the prince royal combined the advantages of an uncommonly handsome person, an expressive and intelligent countenance, the most polished and graceful address, the happiest mixture of conscious dignity and unaffected affability, a fascination of manner which nothing could resist, before which the voice of remonstrance was silent, and discontent was changed into a feeling of admiration." * * *

"Among the remarkable individuals who were honoured with the prince's countenance, and were frequent visitors at Carlton House and the Marine Pavilion, besides the many eminent public characters, there were others whose political importance was inconsiderable, but whom other circumstances had drawn into the royal circle."

This last paragraph, though confused in style and construction, introduces us to some of the persons indicated as associates of the prince—such as Fox, Burke, Sheridan, &c. &c.; but we select the description of others (except Lord Moira) less known to the public, and certainly (together with that noble lord) not very ceremoniously treated in these pages.

"The late Marquess of Hastings was certainly the steadiest of his majesty's friends; but he was an improvident man, and therefore ill calculated to be the adviser of the prince. He was continually in debt, and taking up money upon post-obits, and other securities, at enormous rates. His servants, of whom he kept a large number, lived riotously, and drank the dearest wines at their master's expense. He also had a number of pensioners, most of whom were blood-suckers. One of these was Felix M'Carthy, an Irish adventurer, who once absented himself longer than usual from St. James's Place, on which his lordship sent to know what was the reason. Felix returned

* "The writer of these pages recollects a circumstance which strongly confirms this remark. A gentleman of great respectability, with whom the prince had had extensive dealings, and had contracted a very large debt, used to express himself, and sometimes in no very measured terms, respecting the repeated delays in the payment. One day, in company of several gentlemen, he declared his intention of going to Carlton House, and telling his royal highness how much injury he did to his own character by thus neglecting to satisfy the just demands of those to whom he was indebted. Some of the company expressed their doubts of his carrying this project into execution; and on his persisting in it, he was induced to promise to make us acquainted with the result of his visit to Carlton House. Some time afterwards, the same company having again met, he was called upon to fulfil his promise. He said, that on sending in his name, he had been immediately admitted to wait on the prince, and obeyed the summons with a full resolution to make him sensible of the unfavourable light in which his royal highness placed himself by his neglect of his just engagements; but that the prince had received him with so much condescension, with such an appearance of satisfaction at his visit, and conversed with him on various subjects in a manner so delightful, that he had not once thought of the business on which he had come, till he had made his obeisance on quitting the apartment."

an old pair of shoes, worn out at toe and heel, asking 'whether those were fit for him to enter his lordship's house in?' It is no wonder that the prince and the marquess should have been constantly embarrassed. Among the early associates of the prince was George Hanger, afterwards Lord Coleraine—a man of the most eccentric character, not destitute of talent, but of dissipated habits, and fond of low company. In his latter years, he resided in a small cottage in or near the Hampstead Road; but though he ordinarily spent his evenings at an ale-house, he was not an unfrequent visitor at the palace. A short time before the regency, the prince laughingly said: 'George, in all the years we have been acquainted, you never asked me to dine with you: now, I should like to do so for once.' 'Sir,' said George, 'if you will dine as I do, no person will be more welcome: only fix your time, that I may be prepared.' The prince mentioned his day, and was punctual. There was little sign of cookery; but at last the cloth was laid by the female servant, and a baked shoulder of mutton, with potatoes, constituted the whole meal, to which was added simple porter; but whether any wine followed, the writer, who heard the story from Hanger himself, cannot now recollect. The colonel succeeded to the title of Coleraine in 1814, on the death of his brother; but a greater affront could not be offered him than to address him in word or writing as 'My lord.' He always wore a silk handkerchief round his neck, and a short club-stick under his arm. He died in 1817, at the age of seventy-three, having been for some years discarded from the prince's parties, on account of his low propensities. He was at one time a sort of purveyor for the royal pleasure; but though he had all the vice and good-humour of Falstaff, he had not the wit of fat Jack. Yet, compared with others, his old patron might say, 'We could have better spared a better man.' * * *

"Another of the convivial companions of the prince, was Henry Bate Dudley, commonly called 'the fighting parson.' His name was originally Bate, to which in 1784 he added that of Dudley. He succeeded his father in the rectory of North Farmbridge, in Essex, but never resided there; living constantly in London, where he wrote for the stage, and conducted the *Morning Post*. In 1780, he established the *Morning Herald*, which became the gazette of fashion. Bishop Lovth having called upon him to reside, or discharge clerical duty, near London, he, to avoid the former, took the curacy of Hendon. Here he used to attend on Sundays, with his friend Parsons the comedian; and between the morning and afternoon service, play at cribbage in the vestry! When the Duke of Bedford became Lord Lieutenant of Ireland, he gave Dudley the chancellorship of the cathedral of Ferns, and other preferments. In 1816, he obtained a prebend of Ely. The prince regent made him a baronet in 1812. But when, in 1807, application was made to Lord Grenville to promote him to the episcopate, his lordship referred the applicant to the words of St. Paul—'A bishop must be no striker.' The prince, soon after the establishment took place at Brighton, received into his service Louis Weltjie, a German. He was originally a ginger-bread baker, and sold cakes about the streets; and the prince being pleased with his manner and cakes, gave him a situation in his household. Here he rose to be chief cook and purveyor, both at Carlton House and the Pavilion. His pride kept even pace with his

good fortune; and he even took occasionally great liberties with his royal master. Weltjie at last, however, lost his place and the prince's favour by his folly. He had an only daughter, of whom he was fond, till she offended him by marrying her father's assistant cook. Weltjie was so exasperated at this degradation, that he had the assurance to complain to his royal highness, representing the ingratitude of the young man in strong terms, and stating the disgrace brought upon his family by this match. He concluded by soliciting the immediate dismissal of the offender. The good-natured prince only smiled, and told Weltjie to live amicably with the young couple. This Weltjie could not endure, but kept on remonstrating till, his royal highness's patience being tired out, he dismissed the cook from his presence, and shortly after from his service, giving the place to Weltjie's son-in-law. Weltjie, however, had realised a handsome fortune, and built several houses at Brighton. He also kept a subscription house in St. James's Street many years, the history of which would be curious. He died suddenly in 1800."

These, indeed, are truly strange companions for royalty, which should be surrounded by men of genius, the lights of literature and science. We are not of the class who exact more from kings than from other highly informed, polished, and enlightened men;—on the contrary, we feel that many excuses are to be made for the errors, follies, and vices of those whom ordinary experience and collision with society have never shaped for the just appreciation of the world, or the correct sense of relative duties—whom flattery and adulation have beleaguered from the cradle—whom the consciousness of power and superiority has spoiled—whom pliancy and sycophancy, ministering to their worst passions and appetites, have blinded—who, indeed, if possessed of angel virtues and angel attributes, could not escape the contagion that environs their station, or penetrate the darkness that is thrown about their perceptions:—but there is surely, amid all the close-girding delusions which mislead the infancy of power, enough of opening left to enable an intelligent sovereign to see that his welfare and his glory, his domestic comfort and his public triumph, depend upon the selection of other favourites, and the cultivation of other pursuits. Let him enjoy every luxury which fortune has placed before him—let him be sumptuous, and denied no pleasure which a king can taste; but he will augment all these tenfold, by proving that the good of his people is his first object, and by being the patron of men whose talents are for all time, and who, by their genius and abilities, are calculated equally to adorn and to strengthen the reign of the greatest monarch.*

* George the Fourth was a most munificent and distinguished patron of literature, science, and the fine arts: his acts in this respect will shed an everlasting lustre over his reign. It is astonishing that so few English kings have felt the expediency of pursuing a similar course; but barbarous times, and times of civil war and revolution, were not favourable to the advancement of the more illustrious objects which wisdom and policy alike recommend. Now, however, that peace offers the occasion, and the progress of knowledge and civilisation perpetually enforces the truth, it would be utter senselessness not to anticipate a better order of things. Let us concede, that the warrior is worthy of his honours, the statesman of his emoluments, the wealthy of his influence, the yielder of pleasure to his reward: but surely it is also time that the philosopher, the scholar, the man of useful science, should be distinguished from the mass by royal favour, instead of being left to the mere breath of popular opinion. It would reflect as bright a lustre on, as it would derive a lustre from, the throne; and earnestly do we hope to see the reign of William IV. made resplendent by such a course.

Mr. Lloyd, of necessity, enters largely into the painful history of that unfortunate union between the Prince of Wales and his cousin, which led to so much national confusion, disgrace, and danger. We will not revive the recollection farther than by quoting two or three curious passages, which bear on points of the question that so fearfully agitated the body politic. When the proposal of the marriage was made, says Mr. Lloyd, "the princess received the intelligence with composure, amounting to indifference. That the proposed union was one by which her family would be elevated, and by which her own happiness might be improved, she admitted; but her heart was, of course, unmoved by the prospect. Her consent she did not withhold, because, although she had heard of the follies of the prince, she had also heard of his virtues; and his generosity and sensibility had been greatly extolled. Yet here it must be admitted, that the princess neither did nor could love her future husband. Her affections had been fixed on a young German prince, to whom she could not give her hand. The precise state of her mind cannot be better explained than in her own words. In a letter written to a friend, dated 28th November, 1794, she thus expressed herself:—"You are aware, my friend, of my destiny. I am about entering into a matrimonial alliance with my first-cousin, George Prince of Wales. His generosity I regard, and his letters bespeak a mind well cultivated and refined. My uncle is a good man, and I love him very much; but I feel that I shall never be inexpressibly happy. Estranged from my connexions, my associations, my friends, all that I hold dear and valuable, I am about entering on a permanent connexion. I fear for the consequences. Yet I esteem and respect my intended husband, and I hope for great kindness and attention. But, ah me! I say sometimes I cannot now love him with ardour. I am indifferent to my marriage, but not averse to it; I think I shall be happy, but I fear my joy will not be enthusiastic. The man of my choice I am debarred from possessing, and I resign myself to my destiny. I am attentively studying the English language; I am acquainted with it, but I wish to speak it with fluency. I shall strive to render my husband happy, and to interest him in my favour, since the fates will have it that I am to be Princess of Wales."

At their first interview, it is stated the Prince was not only affable, but warm in his attentions to his bride; and the author adds—"Lady Jersey, who had been present during the greatest part of the interview between the prince and princess, and had remarked, with a feeling of displeasure, the attentions which the prince paid to his intended consort, seems to have resolved to avail herself of the time that would elapse before a second interview, to prejudice the prince against her royal mistress. The princess, it is said, had incautiously avowed to Lady Jersey her previous attachment to a German prince—but probably not in such strong terms as her ladyship represented; however, on the succeeding day Lady Jersey apprised the prince of this previous attachment owned by the princess, with whose person and manners she also found much fault. On the next day, therefore, when the Prince of Wales visited St. James's, he was cool and reserved in his manners, and manifested, if not an aversion to the Princess of Brunswick, at least a considerable alteration in his behaviour. Queen Charlotte has been accused of being the individual who effected,

or contributed to effect, this alteration; but it seems much more rational to ascribe it to the intrigues of a rival, than to a princess whose conduct in every part of her life places her far above any such suspicion."

Afterwards we are told—and the sentiment is a little at variance with the preceding quotation:

"While the conduct of the prince, in renewing his intimacy with Mrs. Fitzherbert, must be blamed and lamented, as an unhappy deviation from the course which a just regard to his own honour, and to the influence of his example, should have led him to pursue, it is impossible not to acknowledge that that of the princess was not calculated to overcome the dislike which she was well aware her consort had had to the union, to inspire him with that affection which she knew he did not, and could not, yet feel—or to command his respect and esteem at least, if she failed in gaining his love. As his present majesty, then Duke of Clarence, designated her, in the House of Lords, as a 'lovely and amiable woman' (a eulogium which, after the lapse of a quarter of a century, was repeated in still more energetic terms by the late Mr. Canning), it can hardly be doubted that, with patience and forbearance, she might, in a great degree at least, have attained so desirable an object. Might it not have been expected that she would, by such a mode of proceeding, have acquired the friendship of her most amiable and accomplished sisters-in-law, considering the sympathy that the female heart ever has for female wrongs? But, instead of acting in this manner, she took no pains to conceal her resentment and dislike. She behaved with marked difference to the king and to the queen—caressing the former as her father, and receiving the latter with stiffness and court etiquette. It has been stated that she vented her complaints on this subject to Lady Jersey, and that her ladyship repeated these complaints to the queen. If this be true, the inference irresistibly follows, either that the stories of the prince's attachment to her ladyship, and of the resentment of the princess on that account, are fables; or that the princess must have been the most imprudent of women, to make a confidante of a person whom she regarded as an enemy and a rival; unless, indeed, we should suppose that such observations were made with a view of vexing the person against whom they were directed, and to whom it was intended they should be conveyed. That a female of high descent, and a haughty spirit, could ill brook neglect or aversion, will be readily acknowledged; but the princess, instead of the lofty pride of conscious innocence and offended virtue, which have led women of as proud spirits as her own to endure in dignified silence the most outrageous wrongs, rather than expose them to the unhallowed gaze of unfeeling curiosity, was much too fond of venting her complaints both in conversation and letters; and during the course of her unfortunate life, her communications in writing, which ought to have been secret and confidential, too frequently found their way to the public through the medium of the press, for which, rather than for the information of those to whom they were immediately addressed, many of them, like speeches in some popular assemblies, appear to have been composed."

But we have done. This quarrel was an unhappy affair, in which, as in all family dissensions, there was little to commend, and much to condemn, on both sides. We rejoice to conclude by remarking on the harmony

which prevails among all the branches of the royal race at this day. It is an auspicious omen: the man who loves his nearest relatives, has a heart likely to expand in love and regard to a far wider circle; and our prayer is that such may be the fate of William the Fourth, till it embraces his entire people, and is inestimably returned by them.

Wallenstein's Camp, from the German; and Original Poems. 8vo. pp. 167. London, 1830. Murray.

A most animated translation of that curious picture of the momentary rest in a soldier's life, that scene among the privates which, preceding the appearance of their generals, is a species of prologue to Schiller's *Wallenstein*. How characteristic are the following speeches of a fearless but unscrupulous warrior, upholding to his companions the higher feeling, the honour of a warlike career!

"*First Cuirassier.*—The man whose trade it is to die, Must feel his profession's dignity; If not, he had better remain away From the losing game of the battle fray; Or, like the Croat, for paltry hire, By himself and others despised, expire.

Both Yagers.—Yes, life is light against honour weighed.

First Cuirassier.—The sword is neither share nor spade—

We were fools to plough with the iron blade. For us no corn-stalk, or golden grain, Springs, blooms, or ripens; on earth's wide plain We must flit, and look for an home in vain. The soldier checks not his restless flight To gaze on his own hearth's ruddy light: The city is thronged, and the streets are gay— On marches the column, he must not stay; In the village meadows he must not share With the cattle the verdure and freshness there; On vintage and harvest, with longing eye, From far he gazes and wanders by, What has the soldier to call his own, If it lie not in self-esteem alone? If that be denied him, in wrath he turns On others, and murders, and robs, and burns.

First Arquebuser.—God knows it a life of misery.

First Cuirassier.—Yet not to another beneath the sky Would I turn from the soldier's life to fly. Now, mark: through the world I have wandered wide Much by experience have proved and tried; Have served St. Mark's republican reign, And the crowns of Naples and kingly Spain; Sought fortune far, though I sought in vain— The church and the law have alike surveyed: The statesman, the monk, and the sons of trade; There is not among them, if choice were free, Robe, cow, or doublet, would sit on me Like the iron jerkin which here you see.

First Arquebuser.—In faith! with that I can hardly agree.

First Cuirassier.—Would we follow a chase, we must not be content

Through toil and through danger to track the scent: Who seeks for title, and rank, and state, Must bow down his neck to their golden weight: Who seeks to pass through his life possessing His children's love and his parents' blessing, In peace and honour some trade may ply:— Not so minded, in sooth, am I. Free would I wander and live and die— No man's spoiler and no man's heir; And with reckless glance, and with spirits gay, From the back of my charger the world survey."

Most of the minor poems have been published before: the spirit and gaiety of "Boyle Farm" are admirably contrasted with the noble translation of Müller's elegy on Lord Byron; but we prefer quoting the following little poem: it is new, we think, at least; and will, even if a repetition, excuse itself.

"*The White Lady.*

Our troops went forth on Sarfeldt's morn,
Beneath their monarch's eye,
And merrily peal'd the yager's horn
As the guard was marching by.

And first and last the howitzers past,
And the battery's iron train,
And all to throw the desperate cast
Upon Jena's fated plain.

The march they play'd was sweet to hear,
The sight was fair to see;
It smooth'd our Frederic's brow austere,
And Blucher smiled with glee.

That sight was fair to all but those
Who own'd prophetic fears:
And sweet that martial strain arose
To all but gifted ears.

And was there none in dream or trance
Could follow the column's way,
And with the vulture's prescient glance
The death-doom'd troops survey?

Yes, close at hand she had taken her stand,
I saw and I mark'd her well;
'Twas she who wanders through the land,
Whose name I fear to tell.

They saw not her form, nor her visage of grief—
It was not that their sight was dim;
But fix'd on his troops were the eyes of their chief,
And their glances were fix'd on him.

But I knew her at once by the long lank hair,
And the garments as white as snow;
And she linger'd there in her still despair,
And scowl'd on the troops below.

I knew her at once for a lady who wends,
Impell'd by the curse divine,
And who wanders abroad when wo impends
Upon Prussia's regal line.

I have kept the night-watch, where she chiefly is said
To roam by the ruinous stair;
I should not have trembled, I should not have fled—
For I could have faced her there.

For I fear'd not the sight of the lady in white
By the moonlight's spectral ray,
In the hall of our kings, at the hour of night;
But I shrunk from the vision by day.

Yet I thought what the fortunes of Prussia decreed
By questioning her to know;
So right to that lady I spur'd my steed,
Till no nearer he would go.

For he rear'd at the sight of the lady in white,
And he stopp'd in his full career.
She spoke, and her words, when I heard them aright,
They curdl'd my blood for fear.

'Now trouble me not—I list to the shot—
On Sarfeldt I see the dead;
Disturb me no more—I weep for your lot!
Was all that the lady said.

She strided away, and I could not tell where,
For a shuddering seized my frame;
And whither she vanish'd I cannot declare,
And as little know whence she came.

But at Sarfeldt's fight, since the morning light,
The Frenchmen had fled well,
And the lady had spoken the moment aright
When Louis of Prussia fell."

There are surprisingly few good translations from the German; and our literature owes an important service to the young nobleman (Lord Francis Leveson Gower) who thus devotes his talents and his information. We like this little volume too much not cordially to hope that its author will add industry to his other merits.

The Family Library, No. XIV. *Lives of British Physicians*. London, 1830. Murray.

It is full time that there should be a book in which medical men are the principal characters; for it is really a strange thing to say, we do not remember in history, in fiction, in the drama,* or in any other class of literature, a single instance in which a doctor, a surgeon, an apothecary, or an accoucheur, is the hero. How comes it that these able and amiable men have been so sadly neglected? This, we presume, is to be attributed to the nature of their profession. Deeply as every human sympathy is interwoven with the visit of the physician, his practice, his care; there is nothing in the mode of his proceedings which is elevated or imposing. On the contrary, almost all medical acts either approach the nasty or the ridiculous. Feeling the pulse with a grave look would make a savage laugh; and putting out the tongue, &c. &c. &c., besides dressing wounds and sores, examining noisome substances, and other necessary offices, are derogatory to those ideas of brilliancy with which the imaginative love to invest their he-

* We do remember one play in which a surgeon was the chief person. He was a sort of Inkle, and performed the operation of couching on a fair Indian—but the audience would not see it out.

roes. They have therefore thrown the whole medical tribe like physic to the dogs; and but for the kind interposition of a *Family Library* volume, these valuable family friends might have been passed over in silence to the end of time.

Here we have eighteen of them, from Linacre to Gooch, rescued from this unmerited fate; and if experience should prove the experiment to be judicious, there are now so many Libraries afloat, we have no doubt but the public will be drugged from Esculapius to Dr. Jordan. With this, however, we have at present little to do; the one pill before us is a dose; and as it is likely to produce a very good effect upon our patients, the public, we shall make it our business to inform them what are the component parts of the recipe.

The lives consist of Linacre, Caius, Harvey, Browne, (improperly Brown, without the finale, on the plate), Sydenham, Radcliffe, Mead, Huxham, Pringle, Fothergill, Heberden, Cullen, W. Hunter, Warren, Baillie, Jenner, Parry, and Gooch. The first, the founder of the College of Physicians, is more meagre than we could have wished; for the biography of Linacre was an extraordinary one, and might have furnished matter for a far longer and very interesting sketch. There is no notice whatever of the curious Greek manuscripts, and other stores of literature which he brought into England; and yet we know of no private individual whose efforts in this way would have furnished matter of greater attraction to the reader. The history of Caius is observable for its extract of his account of the sweating sickness.

In another work (as the writer states) the learned doctor "gives a brief account of the variety of dogs existing, in his time, in this country, and adds a systematic table of them, subjoining for the instruction of his correspondent, their English names, which are as follows: 'Terrare—harier—bludhunde—gasehunde—grehunde—leviner, or Iyemmer—tumbler—spainel—setter—water-spainel, or fynder—spainel-gentle, or comforter—shepherd's dog—mastive, or bande-dog—wappe—turn-spit—dancer.' Of his manner of treating his subject, the following may be given as specimens:—The *terrare* takes its name from its subterraneous employ, being a small kind of hound, used to force the fox, or other beasts of prey, out of their holes. The *harier* derives its name from hunting the hare. The *bludhunde*, or slothunde, was of great use, and in high esteem, among our ancestors. Slot means the impression left by the foot of the dog in the mire. This dog was remarkable for the acuteness of his smell, tracing any wounded game that had escaped from the hunter, and following the footsteps of the thief, let the distance of his flight be ever so great. The bloodhound was in great request on the confines of England and Scotland, when the Borderers were continually preying on the herds and flocks of their neighbours, and was used also by Wallace and Bruce, during the civil wars. The *gasehunde* would select from the herd the fattest and fairest deer, pursue it by the eye, and if lost for a time, recover it, and again select it from the herd which it might have rejoined. (This species is now extinct, or, at least, unknown.) The *grehunde* was the first in rank among dogs, as appears from the forest-laws of Canute, who enacted, 'That no one under the degree of a gentleman should presume to keep a greyhound;' as also from an old Welsh saying, which signifies that you may know a gentleman by his hawke, his horse,

and grehunde. Notwithstanding the rank it held among the canine race, Caius mentions, on the authority of Froissart, the following fact, not much to the credit of the fidelity of this species:—When that unhappy prince, Richard the Second, was taken in Flint Castle, his favourite greyhound immediately deserted him, and fawned on his rival, Bolingbroke, as if he understood and foresaw the misfortunes of his former master. This act of ingratitude, the unfortunate monarch observed, and declared aloud, to be the presage of his future death. The *leviner*, or *Iyemmer*: the first name is derived from the lightness of the kind; the other from the old word *Iyemme*, a thong: this species being used to be led with a thong, and slipped at the game. This dog hunted both by scent and sight, and in the form of its body observed a medium between the hound and the grehunde. They were chiefly used for the chase of wolves. According to Caius, we are indebted to Spain for the *spainel*; but the *comforter*, or *spainel-gentle*, comes from Malta. The *mastive*, or *bandedog*: of these, he says, three were a match for a bear, and four for a lion. It appears that Great Britain was so noted for its mastiffs, that the Roman emperors appointed an officer in this island, with the title of Procurator *Cyneгии*, whose sole business it was to breed, and transmit from hence to the amphitheatre, such dogs as would prove equal to the combat exhibited at that place. The mastiff has been described, by other naturalists, as a species of great size and strength, and a very loud barker; whence they have derived its name, *mastiff*, quasi *mase thefese*; it being supposed to frighten away robbers by its tremendous voice."

The next anecdote which occurs to us as worthy of extract is to be found in the life of Harvey, the immortal discoverer of the circulation of the blood: it follows—

"Soon after his return from Scotland, the anatomical skill of Harvey was employed, by the king's command, in the dissection of that extraordinary instance of longevity, Thomas Parr, who died November 14, 1635, at the age of 153 years. He was a poor countryman, who had been brought up from his native country, Shropshire, by Thomas, Earl of Arundel, and shewn as a great curiosity at court. At the age of 88 he had married his first wife; at 102 he had done penance in church, for a breach of the laws provided against incontinency. When he was 120 he married again, and done other agricultural work, by which he gained his livelihood. His usual habits of life had been most sparing; his diet consisting of coarse brown bread made of bran; of rancid cheese, and sour whey; but when, on his arrival in London, he became domesticated in the family of the Earl of Arundel, his mode of living was changed, he fed high, drank wine, and soon died. According to Harvey, who opened his body, his death was occasioned by a peripneumony, brought on by the impurity of a London atmosphere and the sudden alteration of his diet. There were adhesions of the lungs to the pleura on the right side; his heart was large, his intestines sound; but the cartilages of his ribs, instead of being ossified, as they generally are in elderly persons, were, on the contrary, soft and flexible in this man, who was more than a century and a half old. His brain was sound; he had been blind for twenty years before his death, but his hearing was distinct: his memory was very bad."

In the life of Sydenham we have an episode of the plague, of considerable interest, though it has been so often described; and we fear we may consider the anecdotes of Dr. Radcliffe, amusing as some of them are, to be also too notorious for any chance of novelty.

Richardson relates of him that he once said to Dr. Mead, 'I love you, and now I will tell you a sure secret to make your fortune; use all mankind ill,'—and it certainly was his own practice. Radcliffe himself owned that he was avaricious, even to spunging (whenever he could contrive to do it), at a tavern reckoning, a sixpence or shilling among the rest of the company, under pretence of hating (as he ever did) to change a guinea, because, said he, it slips away so fast. He could never be brought to pay bills without much following and importunity; nor even then, if there appeared any chance of wearying out his creditors. A pavier, after long and fruitless attempts, caught him just getting out of his chariot at his own door, in Bloomsbury Square, and set upon him. 'Why, you rascal,' said the doctor, 'do you pretend to be paid for such a piece of work? why you have spoiled my pavement, and then covered it over with earth to hide your bad work.' 'Doctor,' said the pavier, 'mine is not the only bad work that the earth hides.' 'You dog, you,' said Radcliffe, 'are you a wit? you must be poor—come in;' and paid him."

It appears that Radcliffe, who told King William he would not have his two (swollen) legs for his three crowns, and affronted Queen Anne by telling her nothing ailed her but the vapours, if she could only believe it,—was one of those medical men of whom there seems to have been a pretty regular succession in London, and who have got into great note and practice not merely by skill and talents, but by a real or affected rudeness in speech and manners. This is a peculiarity which we have observed in no other liberal profession; and it is difficult to account for it: but the notorious fact is, that there has always been some celebrated bear of the kind flourishing in the metropolis, and that no sooner does one die, than his mantle (we beg pardon, his skin) falls upon a worthy successor.

Of these, the diffident and gentle Gooch, so lately taken from us by death, was not one, and his personal memoir is particularly affecting; though we shall copy from it a portion of more general interest, relating to his literary labours.

"It was (says the writer) at the commencement of the year 1808 that Gooch first appeared in the character of a critic. Several of his friends agreed to establish a new medical journal, and he became one of the principal contributors to the *London Medical Review*, which existed for about five years, and contained many articles of very considerable merit. The great error of all young reviewers is the abuse of assumed power; it is gratifying to self-esteem to point out defects, and the youthful critic is more anxious to discover faults than excellencies. Gooch used often, at a later period of his life, to regret the severity in which he had indulged in some of his early essays in this department. His first article was on the subject of insanity; the book reviewed, a translation of Pinel. By a singular coincidence the first and the last of his literary labours were on the same subject. There is a paragraph in this review which is so applicable to Gooch's own peculiar conformation of mind, that he must have had an eye to himself when he wrote it. 'There are some characters,' he says, 'who are commonly called low-spirited, gloomy, desponding fellows. During an interval of occupation, when the mind

is free to range where it pleases, they are constantly painting their future lives with a pencil dipped in black. Aware that they possess certain resources of money, knowledge, and patronage, they view their present situation in the same light with the most cheerful of their companions. But the character of the man, the extent of his resources, and the usual conduct of the world being given, to find his future lot, he commences his calculations with the same assumptions, and differs from them in the conclusion. They deduce success, he misfortune; and the consequence is, that he becomes a frequent prey to those sorrowful apprehensions and gloomy emotions which want only strength and permanency to constitute one species of mental disease.'"

Poor Gooch! "on the 16th of February, 1830, he breathed his last. Enough has been stated in this brief memoir to shew that Robert Gooch was no ordinary man. During a short life, embittered by almost constant illness, he succeeded in attaining to great eminence in his profession, and left behind him valuable contributions to medical knowledge."

With this we end our notice: if not one of the most sparkling, this volume is not one of the least various and useful of the excellent Library of which it forms a part.

PRYSE LOCKHART GORDON'S MEMOIRS, &c.

AT Bristol,—continuing our review of these amusing volumes—at a future period, the author tells us:

"I happened to meet the celebrated Dean Tucker, who had just published a pamphlet against the American war, which made a great noise. It was one of the first political treatises I had read; and being struck with the reasoning, I could not avoid complimenting the reverend gentleman, saying—'that I should be converted into a Whig from his arguments.' Though the praises of such a youth were not highly flattering to a dignitary of the church, he seemed gratified, and next day sent me the pamphlet with an invitation to dinner. The dean was a man of singular conversational talents. He advised me to stick to the Tories; 'for depend on it,' said he, 'that gentlemen of the army have no business with politics.' At this party was the father of Lady Holland, Mr. Vassall, a wag, a *bon vivant*, and a whist-player. We cottoned in these propensities, and I was often at his pleasant dinners. I recollect a singular trick which he played on the 'Bristol hogs,' as he called the merchants, to which he made me an accessory. It is well known, that although these merchants have a handsome exchange, they transact all their business in the street, rain or sunshine. Vassall made a bet, that at the usual hour of high change he would collect the whole commercial body within the building. For this purpose he procured a badger and several brace of terriers; and as I had a famous dog, he made me an accomplice. As three o'clock struck, there was a great hubbub in the area of the Exchange, and every one ran to see what was the matter. The dogs were drawing the badger; not an individual dealer, broker, chapman, or merchant, was to be seen in the street while the sports continued; and it was at last found that it was one of Vassall's hoaxes. On another occasion he played one of his practical jokes off on these gentlemen. It was the fashion, 'fifty years ago,' to roast meat by a wheel, in which was enclosed a short-legged cur called a turn-spit. There was hardly any other sort of jack in Bristol;

and Vassall, who had a great love for the canine race, determined to give the turn-spits a holiday; and he fixed on Sunday, as on that day the bakers' ovens were not at work. Our wag, by bribing a batch of vagabonds, contrived to gather together every turn-spit within 'the bills of mortality,' which he shut up in stables, feeding them well. Great was the consternation of 'the hogs' when the cooks struck work, for lack of their marmitons. There was a hue and cry all over the town, and the roasts were put aside for another occasion. In the evening the dogs returned, and, contrary to their patron's calculation, got well trimmed; but he had the satisfaction of hugging himself with the thoughts that the gourmands had a meagre day, and the quadrupeds a holiday. It was soon found out that the trick was got up by Vassall. Miss Vassall was at this time a pretty *piquante* girl of sixteen, and a great favourite of her papa, who played off his tricks on every one but her."

If we can credit Mr. Gordon's recollection, the following is decisive on the disputed question about *breaking the line*. In 1782 he was on service at Rodney's landing, on his return from his celebrated battle in the West Indies, and he says:

"The hero was extremely condescending in his manners. I took an opportunity of complimenting him on the glorious victory he had achieved. 'I owe not a little of my success,' said he, 'to a countryman of yours, who sent to me a description of a plan, demonstrating that by breaking the centre of an enemy's fleet, either the van or rear would be compelled to fight. This gentleman's name is Clerk, a squire near Edinburgh, and who could not be supposed to know much of sea affairs; but his plan appeared to me to be ingenious, and I put it in practice with success; and I intend writing to him to thank him for giving me the first opportunity of shewing the effect of a mode of attacking fleets hitherto unpractised, and which in my opinion is a very important discovery.'"

Mr. Gordon occupied succeeding years by serving in the marines, till the breaking out of the French Revolution, when, after being fifteen years a subaltern, he joined the Fencible regiment raised by the Duke of Gordon, as lieutenant and quarter-master;—by marrying Miss Browne in 1787, and raising a family, as his chief raised a regiment;—and by subsequently travelling as a companion to Lord Montgomery.

As a part of his adventures in the latter sphere, we regret to read some statements very injurious to the memory of Lord Nelson and of Lady Hamilton. The moral repute of the lady it is not ours to defend, nor to go into the story of her connexion with the hero of the Nile; but we firmly believe that she rendered great political services to him and to her country; and we confess we cannot credit such an anecdote as the annexed.

"Shortly after our arrival (at Palermo) we dined with our ambassador. In the evening a stranger was announced as having arrived, bearing a despatch from the Emperor Paul of Russia; the messenger was a Turk. Lady H., with her usual tact, recommended Lord Nelson, for whom the despatch was destined, to clothe himself in his pelisse and aigrette to receive the Turk: this was done in a moment. The party moved to a *salle de réception*. The folding-doors were thrown open, and the Mussulman entered. The moment he caught a glance of his lordship's costume, the slave was prostrate on the earth, making the grand

salaam. This was the scene her ladyship had anticipated, and it was got up with stage effect. The credentials being delivered were found to contain an autograph letter from Paul, complimenting the hero on the glories he had achieved; and in testimony of his majesty's regard, the emperor of all the Russias desired his acceptance of a gold snuff-box, on which was the imperial portrait. The letter (in French) was read to the assembly, and the present exhibited. It was superb, of chaste [chased] gold; the portrait was set with large brilliants, a gift worthy of an emperor.

"The only memorable event which occurred at the minister's entertainment, was this warrior getting drunk with rum, which does not come under the prohibition of the prophet. The monster, who had the post of honour at her ladyship's side, entertained her through the interpretation of the Greek with an account of his exploits; among others, that of his having lately fallen in with a French transport, conveying invalids and wounded soldiers from Egypt, whom he had brought on board his frigate; but provisions and water having run short, he found it necessary to get rid of his prisoners, and amused himself by putting them to death. 'With this weapon,' said he, in his vile jargon, and drawing his shabola, 'I cut off the heads of twenty French prisoners in one day! Look, there is their blood remaining on it!' The speech being translated, her ladyship's eye beamed with delight, and she said, 'Oh let me see the sword that did the glorious deed!' It was presented to her; she took it into her fair hand covered with rings, and looking at the encrusted Jacobin blood, kissed it and handed it to the hero of the Nile! Had I not been an eye-witness to this disgraceful act, I would not have ventured to relate it. Mrs. C—s L—e, the beautiful and amiable wife of our consul-general, was sitting *vis-à-vis* to the Turk, and was so horrified at the scene (being near her accouchement), that she fainted, and was taken out of the room. Her ladyship said it was a piece of affectation, and made no efforts to assist her guest; the truth is, she was jealous of her beauty, and insinuated that, being a sister of the late Lord E. F., she must, necessarily, be a Jacobin. N.B. She wore green ribands. The toad-eaters applauded, but many groaned, and cried 'shame' loud enough to reach the ears of the admiral, who turned pale, hung his head, and seemed ashamed. Lord M. got up and left the room, and I speedily followed. Poor Nelson was to be pitied—never was man so mystified and deluded!"

On his return to London, Mr. Gordon became acquainted with the late Mr. Perry, editor of the *Morning Chronicle*, with whom and his associates he appears to have mixed a good deal in company; frequenting taverns with them in their dissipating hours, and being one of such convivial clubs as in those days, more than now, were the relaxations of literary men; for there were then no United Service, University, Oriental, Athenæum, or Literary Union haunts, with all their pseudo luxuries for novices; and the scribes, our predecessors, were fain to put up with "Humbug" Societies, and others of hardly more imposing denominations.

"Mr. Perry," we are informed, "was very convivial during his whole life, but never neglected his business for pleasure. He was a member of many clubs, one of which, of a very singular nature, originated with him. It was called the 'Humbug Club,' was instituted about forty years ago, and existed for two

seasons. It was a sort of quiz on all institutions, and composed of many men of *esprit* of its time. There were a president and twelve judges, and the meetings were weekly, at a tavern, during three or four of the winter months. The club was assembled by proclamation on the first day of the year, and published in the *Chronicle*: it was written by Mr. Perry, who was the president, designated 'Humbugallo Rex!' and countersigned by his secretary, 'Screech.' These proclamations were very humorous, and may be seen by looking on the files of the paper of 1790 (I think). When a new member was proposed, he was admitted blind-folded with great ceremony. He was then conducted by a member to the bottom of a large apartment, where he mounted a dozen of almost perpendicular steps, being warned, 'that if he slipped, he would probably break his neck!' When the candidate had ascended to the top of this *rostrum*, and the bandage was removed from his eyes, he found himself elevated some ten feet above the rest of the company, near the ceiling, and standing on a platform of four feet square, looking on a table round which were sitting the president, his secretary, and twelve judges, all masked, with long beards and black gowns; and in the centre of the table was a cauldron of spirits of wine, which threw a most lugubrious light on these hideous *dramatis personæ*! It required a man of good nerves to look on this *coup d'œil* without being a little agitated. Behind the president's chair was placed on a perch a live owl, whom he consulted in all difficult cases. The secretary, 'Screech,' was ordered to examine the candidate, and the queries were so extremely absurd, that answering them gravely was out of the question; they were merely intended to raise a laugh at the expense of the candidate; but it sometimes happened that a witty reply turned the laugh on the examiner; the candidate was in this case admitted without further questioning. 'Pray, sir, were you present at your birth?' was the first question put to me. 'I do not remember,' said I. 'Are you a sportsman?' 'Yes.' 'Well, suppose you are in a stubble field—the wind being easterly, your dog Nero points, and your bitch Juno backs—a covey of partridges take flight—there are thirteen in it: you kill two birds with the first barrel, and one with the second, how many remain?—take care what you reply, sir; think well before you speak.' I did not hesitate, boldly exclaiming, 'ten remained!' 'You may be a good shot, sir,' rejoined my examiner, 'but you have made a bad *hit* here—why three only remained, the ten flew away!' After having been badgered in this way for ten minutes, I was admitted a member on paying a bottle of claret—the usual fine. If a member became obnoxious to the society, he was got rid of in a summary way. The attorney general was ordered to prosecute him for some alleged crime, and council was appointed to defend him; but he was always 'found guilty, and fined 500*l.* or to quit the club!' Mr. Felix M'Carthy, a celebrated personage, was indicted 'for being a coxcomb.' His case was heard at a great length, and he made an able defence without the assistance of council, and was acquitted of the charge, but recommended 'to put on a clean shirt when he went to the club.' Another *worthy*, who was obnoxious to the society, had a practical joke played off on him, which produced great mirth. It was known he had many debts, and that he was afraid of being arrested. A hint was given to him one evening, 'that a suspicious fellow, looking like a bailiff, had got into the house, and was in-

quiring for him.' The bait took, and the same good-natured friend who had given him this information, recommended him to make his escape from the window. Ropes were procured, and the Jew (for he was a Levite) of sixteen stone was lowered into a yard from which there was no outlet. He remained quiet for two hours, fearing discovery; at length he began to hollow out for aid. It came—but he was taken for a thief, and the watch was about to be called, when an explanation saved Moses from the round-house; and he never shewed his face again at the club. This society, however, was short-lived: it became too mixed, and many disagreeable low-bred persons got into it. It died a natural death after the second year. Messrs. Perry and Gray were also members of a club (to which I belonged) at the *British*, in Cockspar Street: it was called 'the Anonymous,' and the meetings were monthly. Many eminent men were members of this society, which lasted till more than half of the club were dead. Professor Porson, Dr. Burney, Dr. Raine, my brother Mr. George Gordon, Mr. John Kemble, and many other men of *esprit*, composed one of the pleasantest societies ever formed, where wit, tempered with good humour, was 'the order of the day.' Toasts from Shakespeare were given, and it was expected that the members were to produce a new one at every meeting. The variety of convivial sentiments found in this great author was astonishing. Dr. Burney, on one occasion, having nothing *new* to propose, gave 'Another can!' All were puzzled to recollect the passage, till Porson exclaimed—'If one can't—another can.' Such was the extraordinary memory and quick imagination of the Greek professor. Out of this club rose another called 'the One Bottle;' but it was short-lived:—'the days of chivalry were gone,' along with many of the wits of the *Anon*. Hewerdine, the convivial poet, was laureate to the Humbug Club, as well as prosecutor-general; and his cross-examinations were never exceeded by Mr. Scarlett in his best days. H. was also ordered to write a constitutional song in eight days, under penalty of an *amende* of 500*l.*! He executed this task in four and twenty hours, and sang it the following evening. It was an admirable piece of humour."

There are still a few miscellaneous matters, to which we shall probably devote another paper.

Mackintosh's History of England.

(Third and concluding Notice.)

To give three notices to a small volume is some proof of the interest it has excited in us: with the present we close our review of Sir James Mackintosh's history.

The rise of the papal sway is well shewn in the following:—

"Hildebrand, who soon after ascended the papal throne, after having reigned over the church for many years, through a succession of his creatures whom he raised to a titular popehood, had then completed the portentous and tremendous scheme of a universal theocracy, administered by the pope, in which all civil rulers were to be treated as subordinate and removable officers. He was the greatest man of his age, combining original genius, commanding spirit, and undaunted courage, with an exemplary life, and with principles which seem to have been disinterested. The astonishing pretensions which had almost triumphed in his vigorous hands were deduced from simple and apparently true premises. Most associations

of men exercise the power of expelling delinquent or obnoxious members; excommunication was accordingly practised by the apostolical church, as it is at this day without dispute by the humblest meetings of Quakers. It would be absurd that civil rank and authority should involve exemption from an ecclesiastical censure. Hitherto the reasoning seems indisputable. The next step was alarming: as the faithful were forbidden to hold intercourse with any man excommunicated, they could scarcely perform any active duty towards him. It therefore became unfit for the subjects of an excommunicated king to obey him in peace or to serve him in war; and when the sovereign pontiff expressly absolved them from their allegiance, he seemed only to warn his children against the necessary consequence of acting under the commands of a man excluded from participation in sacred rites. Another reason, equally simple, offered itself. In the many contests between different states, or between subjects and their rulers, it was often difficult to determine on which side justice lay. As it was their moral duty to satisfy their conscience on that head before they proceeded to or persevered in violence, they could not consult any person more likely to be learned or impartial than the common father of Christians. As a king took the advice of the private director of his conscience, so it became him to recur, in great difficulties, to the general confessor of Christians. It could not be blamable in the pope to offer his mediation to prevent the effusion of Christian blood. The rejection of his good offices naturally indicated conscious guilt, and might be so contumacious as to justify a recourse to spiritual censures. In watching over the safety of the church, it was the duty of the pope to take care that the acts of civil governments should not endanger it. Of the reality and extent of the danger he alone could judge; and he had no effectual means of defending the church but by excluding enemies from her communion. As all subjects who abetted the aggressions of their rulers against the spiritual power were accomplices in that heinous crime, the pope might defend himself by the formidable sentence of a universal interdict, in the territory of the delinquents, of all those religious rites on which depended many of the most important transactions of life, and, in the opinion of the parties interested, their eternal salvation."

The view taken of the crusades strikes us as peculiarly just.

"No war is just which is not defensive. By that principle the expeditions for the recovery of the Holy Land must, like all other wars, be tried. It must be owned, at the outset, that the Europeans of that age did not conform to the technical rules of our international law. They did not make a formal demand of reparation for wrong, and of security against danger. They did not inquire whether the possession of Palestine could directly add to their means of defence. Nor did they content themselves with a moderate succour to the Greek empire, as some modern philosophers have required. But, is the disregard of technical rules always attended by violations of their principle? There was no doubt that embassy and negotiation would be vain. It was lawful for them to defend the safe exercise of their religious worship in Palestine; and it was for them to determine where they could best defend any of their rights which were either violated or threatened. The avowed principle of all Mahometans, that they are entitled to universal monarchy—a principle consecrated by their religion, and enforced by

their law,—might, in itself, be considered as a perpetual declaration of war against states of a different faith. But in the eleventh century this insolent pretension was maintained by arms, with a success very alarming to Christendom. About that time Europe, in different parts of her frontier, shewed the sense of danger by beginning to resist the invaders. The expeditions against the northern and Sarmatian pagans manifested the like vague and confused fear in an unwarrantable form. The tottering state of the Greek empire, and the successive invasions from Tatars, which renewed the valour and barbarism of the southern Mahometans, combined to threaten the eastern frontier of Christendom. The Mahometans acted on one principle, and as one body. The Christians were justified in acting, and compelled to act with the like union. According to the most rigid principles of international law, an attack on any Mahometan territory was an act of self-defence: it was the means of securing themselves against attack. The European rulers could undertake no such perilous enterprise without the hearty and enthusiastic concurrence of their people. Nothing but a strong feeling could have bound together all the scattered power of a feudal force. It was lawful to rouse their spirit against the wrong-doers, and excite a zeal necessary for the effectual exercise of just defence. The only means by which these ends could be reached were an appeal to the fellow-feeling and religious sentiments of the body of their subjects. These grand springs of human action were made to act by an expedition for the safety of the pilgrims to Jerusalem, who could not be really safe without the establishment of a Christian authority in Palestine. No cold representation of distant and disputable dangers could have put such masses in motion. But were not the feelings of the people perfectly justifiable? Is it true that nations, while they may maintain at the point of the sword every rock and islet of their old possessions, are forbidden to defend the undisturbed exercise of religion, which may (and if it be real, must) be their dearest and most precious interest? The assault on their territory cannot more wound and degrade them than outrage towards what they most reverence. They had acquired, by a usage older than Mahometan power, a right peaceably to visit Bethlehem and Calvary, and their rulers were morally bound to protect that right. As every state may maintain its honour because it is essential to its safety, so Europe had a right to defend her common honour, which consisted materially in resisting, or averting by chastisement, attacks on her common religion. It is not true that every war which is disinterested and generous, which is waged for our fellow-Christians against persecution, or for our fellow-men against tyranny, is on these accounts forbidden by the true principles of international law. Though it be dangerous to allow too much latitude where virtuous motives may be used as pretexts, yet it is also certain that every nation which supinely contemplates flagrant wrong done to others, weakens its spirit as well as lessens its reputation. They, on the other hand, who draw the sword for justice on behalf of other wronged nations, carry back to their own defence a remembrance which gives them the strength of an approving conscience in their own cause. A just and brave people may be wrongfully deprived of the confidence and esteem of other nations; but they cannot be bereaved of the efficacy of such remembrances, in assuring them that they who fought for justice alone in the case of others, may contend more

for right than interest in their own. If it be good for an individual to be disinterested, to help the miserable, to defend the oppressed, these virtues must equally contribute to the well-being, the honour, and the safety of communities. The European law of nations is well adapted to a body of states of the same general character, not differing from each other too widely in civilisation, and professing a reverence for the like principles of justice. In the ordinary wars of such nations, the rules of international law are of sacred authority. In relations spreading through communities of a different character, and on occasions too new and great to be embraced by precedent, the principles of that law retain their inviolability, but its rules may sometimes yield for the sake of the principle. It seems morally evident, that whatever a nation may lawfully defend for themselves, they may also defend for another people, if called upon to interpose. It is true that ambition often converts these principles into pretexts; but ambition deals in the same manner with all the purest motives of human conduct. Our blame is not in such cases to be lessened: it is to be applied, not to the principle avowed, but to the hypocrisy and fraud practised by the ambitious. Much doubt has been brought on these questions by the general condemnation of religious wars. This is an equivocal phrase. Wars to impose religion by force are the most execrable violation of the rights of mankind: wars to defend it are the most sacred exercise of these rights."

On the first war to preserve the balance of power, Sir James remarks:

"The support given by Louis le Gros to Robert and his gallant son, as well as to the malecontent nobles of Normandy, may be considered as the earliest precautionary wars to preserve such a balance in the force of neighbouring states, that one or a few might not acquire the means of oppressing the rest."

House of Brunswick.—"In 1165 the Elector of Cologne came to London to espouse the princess Matilda, the king's eldest daughter, as the proxy of Henry the Lion, duke of Saxony, a puissant, ambitious, and magnificent prince, who was spoiled of his dominions by a decree of the imperial diet, in 1180, and who twice took refuge in England from the pursuit of his triumphant enemies. It is a remarkable circumstance, that his posterity by this lady, who out of the vast dominions of their ancestor preserved only the duchies of Brunswick and Luneburgh, after the lapse of near six hundred years, came back to the throne of a greater England than the empire of the Plantagenets, to be holden by a nobler tenure than that of birth. At the espousals the Earl of Leicester would not kiss the archbishop-elect, because he was excommunicated as an adherent of the anti-pope Octavian."

Maid of Orleans.—"It is true that her accusers and all others then believed in the reality of sorcery: and the most important lesson taught by the event is the value of that knowledge, the fruit of free inquiry and fearless reflection, which has banished such imaginary crimes from the civilised world."

These are but a few of the acute and original remarks with which these pages abound; and in continuing his work as he has begun, Sir James Mackintosh will confer a great benefit on his country.

Juvenile Library, No. I.—(Conclusion).

THE length to which the story of Sir T. Lawrence's early days is carried, has compelled us

to make a third paper of this interesting illustration of precocious talent.

"At four, young Lawrence could take crayon likenesses; and it is a very remarkable fact, that at the age of five, his drawings of eyes forcibly attracted the attention of Mr. Prince Hoare, at Bath. Fuseli, who was fond of depreciating the merits of Sir Thomas, would conclude a detracting sentence, by uttering with his energy and strong emphasis—'But he paints eyes better than Titian.' At seven, the fame of Lawrence induced Sherwin to publish an engraving of his portrait; and an eminent author speaks of the child's wonderful faculty at taking likenesses. The same writer expresses his delight at the boy's recitations. He describes him as reciting from Milton and Shakespeare, with discrimination, feeling, and humorous set-off, by appropriate attitudes, gestures, and varieties of tones; with a voice full, harmonious, and flexible. It may be remarked, that the 'Black Bear' at Devizes was frequented by Garrick, Foote, Wilkes, Churchill, Barry, Henderson, Burke, Sheridan, and other great wits and orators; and no doubt the child must have attracted their attention, and benefited by their remarks. On one occasion, we find Sir William Chambers, the architect, praising the child's talents, and Colonel Von Hornich giving him a guinea for his beautiful hand-writing. Mr. and Mrs. Garrick, when they were at Devizes, used to take the child into a summer-house, and amuse themselves by his clever remarks and declamation. When they arrived at the Black Bear, their first inquiry was for Master Thomas, and whether he had learnt any more speeches. Mr. Hugh Boyd, one of the supposed authors of Junius, was so enraptured with the beauty and cleverness of the child, that he invited the father, for the sake of the son, to his house in town—we think, in Berkeley Square. They stayed with him several weeks, during which he took the child to the houses of eminent persons, whom he delighted with his extraordinary talents, particularly with his pencil. His copying some stuccoes, at the house of Mr. Richard Lee, is spoken of as a very surprising proof of juvenile talent. * * * The first painting that Lawrence ever saw, except the daubs upon the country inns, or the portraits over the farmers' chimney-pieces, was in 1777, when he was eight years old, and was taken through Corsham House, the seat of the Methuen family. Going over the rooms, the visitants totally forgot the child, and, retracing their steps, they found him in one of the rooms, rivetted to the spot by a painting of Rubens.—'Ah, I shall never be able to paint like that!' was his exclamation upon their removing him from the picture. At the age of ten, suddenly, and at his own suggestion, our young artist burst, from taking likenesses, into original compositions of the highest class. He painted as a subject, Christ reproving Peter for denying him before Pilate; and Reuben's application to his father, that Benjamin might accompany his brethren into Egypt. Encouraged in these attempts, he next chose for a subject 'Haman and Mordecai,' which he finished with great rapidity. The fame of the juvenile artist now spread among the higher families of Wiltshire and the neighbouring counties; and we find Mr. Wild, of Ludworth Castle, taking him to the Earl of Pembroke's, at Wilton, and to the mansions of other noblemen and gentlemen, who possessed galleries of the eminent masters. * * * Mr. Lawrence now felt the narrow circumstances of his family. The Black Bear at Devizes had not

proved a fortunate speculation, and for obvious reasons. Whilst the father was revelling in poetry and speeches, and attending to the drawings of his son, the hosts of the rival inns were attending to the drawing of the corks, and to all the details of their business. In 1779, Mr. Lawrence and his family were obliged to leave Devizes. In the first instance they proceeded to Oxford, Mr. Lawrence's design being to turn his son's talents to some profitable account. The boy was only ten years of age, and yet to him was the family obliged to look for assistance. The Bishop of Oxford, and many of the dignitaries of the University, in their way to Bath, had witnessed the extraordinary talents of the innkeeper's child at Devizes; and upon their return to Oxford, his genius had been the subject of much discussion. When, therefore, it was known that Mr. Lawrence and his family had arrived in the city, the father was much noticed, and the child as much caressed. The boy's pencil was in immediate requisition. * * * In 1782, his father repaired to Bath, and fixed his residence in Alfred Place, where he was soon surrounded by the most intellectual and refined of the nobility and fashion of the place. Bath, at that time, was as the west end of London, devoid of its mixed society and vulgarity, and it was the temporary sojourn of all that was titled, affluent, or distinguished. By these was young Lawrence patronised; and it became a fashion to sit for his oval crayon portraits, the price of which was soon raised from one guinea to a guinea and a half. * * * At seventeen, he made his first attempt in oils. The subject was Christ bearing the Cross, and the canvas was eight feet high. After this large painting in oils, of Christ bearing the Cross, young Lawrence painted his own portrait in oils. In this, he had evidently aimed at the style of Rembrandt in his middle life, when he had neglected his high finish, and availed himself of the broad fulness of the brush, with deep contrasts and sudden transitions, and with great breadth of light and shade. * * * On arriving in London, Lawrence was in his eighteenth year. His father immediately hired a very handsome suite of apartments (at four guineas a-week) over a pastrycook's shop in Leicester-square. This at once indicates his love of display and his possession of funds. These lodgings were within sight of the house of Sir Joshua Reynolds, whose study and drawing-rooms were daily visited by the nobility and the wealthy and celebrated persons in London. This was a sight inspiring to a lad of real genius and laudable ambition. Provincial and metropolitan fame are very distinct; and notwithstanding young Lawrence's having been the phenomenon of Bath, his having received the medal of the Society of Arts, and his juvenile drawings having been talked of in London and Paris, these were scarcely sufficient introduction to a step so bold as that of challenging the notice of Sir Joshua Reynolds, in the height of his fame and splendour. But Sir Joshua was kind, and easy of access to persons of decided talents; and Mr. Prince Hoare had paved the way for the president's noticing young Lawrence. Sir Joshua, in reply to an application from the father, immediately appointed an interview; and young Lawrence, with the sensibility inseparable from worth and talents, was taken to the painting-room of this favoured head of the English school of art. Sir Joshua was forcibly struck by the beauty, and fine figure, and graceful manners of the lad; and he received

him with an attention and a benignity that dissipated his apprehensions and restored him to self-possession. As they entered, Sir Joshua was examining the specimen of another juvenile aspirant, who had evidently come upon the same object. The youth stood in trembling expectation of the decision of the oracle, which was to determine his course of life; and after some ominous hems and hahas, some positive blame, and some condemning with faint praise, the Mæcenas dismissed him with the negative encouragement of 'Well, well, go on, go on.' The situation of young Lawrence during this scene may be easily imagined. Sir Joshua now inspected the oil portrait of young Lawrence, of which I have already spoken. He was evidently much struck with it. He discerned those marks of genius which gave promise of the future fame of the artist. He bestowed on the painting a very long scrutiny, in, as young Lawrence thought, an alarming contrast to the more hasty glance with which he had dismissed the other. At last he addressed the youth with an air of kindness, though serious and impressive: 'Stop, young man, I must have some talk with you. Well, I suppose you think this is very fine, and this colouring very natural, hey, hey?' He then broke into a sterner tone, and began to analyse the performance, and to point out imperfections sufficient, in the alarmed imagination of the sensitive lad, to destroy all hope of being a great painter. Presently, altering his tone, he began to shew the 'other side' of the picture—its merits; and he concluded in a mild manner, 'It is very clear you have been copying the old masters; but my advice to you is to study nature; apply your talents to nature, and don't copy paintings.' He then took him by the hand, and kindly told him he was welcome, whenever he chose to call. Young Lawrence was always well received by Sir Joshua from that hour to his last illness, which occurred four years after. Mr. Lawrence possessed every element of worldly success; and when the frequent parties of titled and eminently intellectual persons found he had the *entré* into Sir Joshua's house; and when they witnessed the pleasure which this really great and good man took in noticing the young aspirant, they drew inferences both of his talents and of his future success. He was quickly noticed by persons of consequence, and became a general favourite. Very shortly after, his majesty and the queen expressed their desire to patronise him. This is remarkable, for the late king had never given a single order to Sir Joshua Reynolds; and his gratification in art was at that time exclusively confined to the pencil of Mr. West. Sir Joshua had painted his majesty twice, but on each occasion at his own instance, and at his own expense. * * * At the death of Sir Joshua, Mr. Lawrence had not completed his twenty-third year, and yet numerous honours were bestowed on him, in preference to his very able competitors. The race was honourable to all; and his success was merited, and therefore excited no mean or malignant passions. The Dilettanti Society unanimously chose him to succeed Sir Joshua, as their painter, though, to effect this, they were obliged to rescind a regulation, which prevented the admission to the Society of any person who had not crossed the Alps. Mr. Lawrence's foot had never quitted the soil of England. His majesty also appointed him to succeed Sir Joshua Reynolds as painter in ordinary; and he was raised from the rank of associate to an academician."

For the reasons assigned at the beginning

of our first notice, we are compelled entirely to pass over a detailed description of the numerous and splendid works, the successive production of which placed Sir Thomas Lawrence, by common consent, at the head of his profession as a portrait-painter; and must confine ourselves to copy a few personal anecdotes of this amiable as well as celebrated man.

"On one occasion, a widow of a poor artist was told, in her distress, 'to try Mr. Lawrence,' and she was buoyed up to expect 5*l.* from him, 'as he was a liberal man.' She repaired to his house, and created very strongly his sympathy for her misfortunes. Having left the house, she unfolded the paper he had given her; and, what was her astonishment to find it not a five but a fifty pound note! Mr. B——, the artist, was in great pecuniary distress, which came to the ears of Sir Thomas. One morning Mr. B. unexpectedly called upon a mutual friend, in every appearance of gladness. It was to relate, that Sir Thomas Lawrence had sent him a present of a 100*l.* note, which, added Mr. B——, 'has relieved me from my distress, and has made my wife's heart leap for joy.' When his man, Robert, who had long been in the habit of setting his palettes, &c. for him, fell ill, Sir Thomas used to call on him at his lodgings, sit with him, and read to him; and he supported him to his death. When he went down to Haslar, to attend his brother's funeral, he witnessed the total destruction of the hut of a poor waterman, by the gale, which was so violent as to do very considerable damage to many public works. The wretchedness of the poor man, with his wife and numerous children in a state of nakedness, as they saw their whole property swept away, made a deep impression upon Sir Thomas Lawrence, whose mind was already oppressed with melancholy. He entered into the feelings of the sufferers, but what he gave them we know not; this, however, is known, that when a few years afterwards he again went to Portsmouth to witness the death of his remaining brother, he found the man and his family prosperous in a small cottage, and received from them their warmest gratitude for having 'enabled them to do well in the world.'

After the funeral, he took leave of these poor people; and, praising their sober and industrious habits, he gave them a ten-pound note.—Sir Thomas sometimes defended himself very humorously from the encroachments of sordid avarice, as well as from the annoyance of silly and purse-proud vanity. On one occasion, when a lady of property wished her portrait taken gratis, on the ground that her face would make a capital picture that would do the artist credit, Sir Thomas concluded his neatly turned and delicately ironical compliments to her beauty, with, 'but it is some years since I painted for fame.' When a wealthy lady was once exceedingly desirous that her portrait should be worth the money, she concluded every expression of sordid fear with the question, 'But how will you paint it, Sir Thomas?' Sir Thomas, with great good humour, kept making the reply, 'Why, madam, you pay to have it well done, do you not?' On the other hand, he would often paint from friendship. An old friend begged him to recommend a cheap but competent artist, to take the likeness of his nephew, who was about to sail to India. Sir Thomas duly promised, but, as usual, deferred the execution, until he was told that it was too late. He was evidently chagrined; but, to make amends, he made the young gentleman call upon him the next morning very early, and in a few hours took an admirable likeness, which he sent as a present to the uncle. * * *

His kindness to animals was excessive. It was not in his nature to inflict or to witness pain. In a letter to a lady he says, 'Have you had more letters from Sir Walter? (Scott.) How sincerely sorry I am to learn that his favourite hound is dead. A selfish regret has great part in this feeling, for the fine animal was to have been my subject.' * * * No man was ever more affectionate to relations. On the death of a niece, whose portrait he had taken, and had had engraved, he writes to a friend, in great depression of spirits—'I have lost a sweet, good, modest little being, in my niece Susan; but who can, for the innocent, lament the death of the innocent? It is a severe affliction to her parents, sisters, and friends. I feel thankful that this one talent, which God has given me, has, in this case, afforded consolation to my good sister and her family, by perpetuating the form, and expressing the nature, of this lovely lamented being, my dear Susan.' * * * No idea could have been entertained that the dissolution of this amiable and enlightened man was so fast approaching. On the 24th of December, a fortnight before his death, he dined alone with an old and confidential friend. In the course of conversation he observed that, from the regularity of his living, and the care he took of his health, he thought he might attain a good old age; but nevertheless he would wish to insure his life for 5000*l.*; and telling his age, he asked what would be the premium. He fixed on the Friday to effect the assurance—on the previous day he expired!"

We now conclude; and shall only hint at the expediency of making such volumes as these school-books. Young persons are drudged through the same thing so often, that they lose all interest in what is placed before them to read. Their tasks are truly so: But give them novelty combined with merit, to attract, to exercise, and to form their minds, and their lessons may be made pleasures to which they will devote themselves with greater alacrity than to the play-ground itself.

The Epping Hunt. By T. Hood, Esq. &c.

A SECOND edition of this whimsical *jeu d'esprit* does not call upon us to enter on another wild goose chase; and we only notice it for the sake of copying the announcement by which we find it accompanied, and which promises us another hearty laugh with our punning friend, and his able graphic coadjutor, George Cruikshank. It is as follows—and worthy of the author:

"Many persons having expressed a desire that the 'Epping Hunt' should have a companion, the author immediately expressed his readiness to comply with the wish as soon as he could provide himself with a suitable subject. In consequence, numerous hints, recommendations, and applications, have been forwarded to him from all quarters—the proprietors of sundry wakes and revels preferring very urgent requests in behalf of their own sports. Above all, the inhabitants of Epsom made such a grand stand for the Epsom races, that he was induced to take his course to theirs. The result has been satisfactory. Instructed by the gentlemen of the betting ring how to 'make up a book,' he is preparing a little volume, to be called 'Epsom Races,' illustrative of the yearly festival on those celebrated Downs. It will be accompanied, as usual, by various appropriate designs, or, to speak in turf language, with several 'plates for all ages.' Due notice of the time of starting will be given by public

advertisement; and to avoid any thing *oraclic*, be sure to ask for Hood's *Epsom*."

Anti-Draco; or, Reasons for abolishing the Punishment of Death in Cases of Forgery. By a Barrister of the Middle Temple. Pp. 49. London, 1830. Ridgway.

WHOEVER the writer of this pamphlet is, he has done himself great honour. It is an admirable production—humane in principle, forcible in argument, profound in legal acquirements, beautiful in morality, and irresistible in its general conclusion. Unless, indeed, the people of a country had become hardened by usage to the horrid spectacle of human life continually and ignominiously sacrificed for crimes of the least, equally as for crimes of the deepest, atrocity, the publication of such an appeal never could have been necessary. Death has truly been called the remedy for all human ills: our bloody statute-book seems to have considered it the remedy for all human offences. Except where modified by sheer accident—the caprice of a judge, the condition of a calendar, the under-word of a constable or a gaoler,—it has said alike, let the remorseless murderer die, let the forger of a name for a few pounds of property die, let the cruel violator of the person die, and let the petty thief who has broken a pane of glass and stolen a pocket-handkerchief, let him die!! Hang the sanguinary monster who has butchered a whole family; ay, and hang the famishing wretch who has robbed the flock of a single lamb. Let the "protecting genins of the public executioner" guard our lives from the assassin, our midnight rest from the burglar, our pocket from the coiner and forger, our property from the picker and stealer. But we will not attempt to go over any of the ground so ably occupied by the production before us; and we have only to add, that it demonstrates the utter inconsistency and insufficiency of the reform which has just been sanctioned by the legislature. The comfort is, that the good work is begun, and that it cannot stop.*

A Letter addressed to Thomas Simpson, M.D. (of York), on the Subject of Horse Exercise; pointing out the Cause of its pre-eminent Utility, as illustrated by the Author's own Case. Pp. 23. London, Underwood; Baldwin and Co.; Longman and Co.: York, Barclay: and Edinburgh, Lizars.

THE pre-eminent utility of horse exercise, "as illustrated by the author's own case!"—we wish we could add, and by his reviewer's; but a terrible downfall the other day has not only

* A novel and striking mode of illustrating the force of public opinion on this question has just appeared: it consists of a map of the kingdom in which no place is laid down but such cities, towns, &c. (214 in number) as have petitioned against the punishment of death for forgery. It is so well filled a chart, that we must think a judge would be most painfully circumstanced were he to leave an offender for execution for the crime of forgery at any of these, or indeed any other assize town. In this predicament, a strong inducement is held out for the commission of forgery; and nothing can be more injurious than the present unsatisfactory state of the subject, with the law one way, and the popular sentiment so strong the other way, as to render the carrying the law into effect almost impossible. It is worthy of remark, that this, however, is not the only temptation to crime which has recently been held out from high quarters: for, if we can believe the newspaper reports from the Old Bailey, Mr. Baron Garrow has incautiously cheered on the guilty of every class to try their hands, by the chance of escape which he tells them is now reserved for them in the Capital Lottery. The jury had recommended some convict to mercy, and the judge is reported to have said—"he had great pleasure in telling the jury that, from what he had recently observed, their recommendation would meet with every attention in the proper quarter. The royal mercy was unbounded, and would in future be exercised in every case that called for its interposition." Has it not been so heretofore?

put us *hors de combat* as it regards such an addition, but almost past the power of offering any opinion upon the subject. The writer asserts that the motion of his horse produced an increased *oxidisement* of the blood in the lungs, and thus restored him from debility: but the motion of ours caused a profuse *oozement* of blood from the head, and has thus reduced us to debility. Perhaps much depends on the mode of riding, and especially on the horse. For instance, if the author's horse had tumbled with him at a smart canter, and made such equal wounds on its own knees and his caput that it would be difficult to tell which were the worst, he would not have published this pamphlet. But it seems to have been a gentle, medical beast; and he to have derived great benefit by keeping upon its back, whilst at the same it kept its legs. On the whole, therefore, maimed as we are, we are still inclined to join in the recommendation of equestrianism, to bring atmospheric air into the lungs and invigorate the vital principles.

ARTS AND SCIENCES.

PESTILENTIAL DISORDERS.

A REPORT made by M. Moreau de Jonnés to the *Conseil Supérieur de Santé*, at Paris, contains a number of facts with respect to the irruption and progress of pestilential disorders in the year 1829; from which we extract the following:—

The Plague.—Favoured by the occurrences of the war in the East, the plague appeared in 1829 at several parts of the shore of the Black Sea. In the month of July it visited Varna, the neighbourhood of Odessa, and some of the vessels of the Russian squadron. Towards the end of August it manifested itself at Sevastopol, the grand maritime arsenal of Russia in the Black Sea. Two cordons of troops formed round the town, prevented its spreading into the interior of the Crimea.

The Cholera Morbus.—This terrible scourge, which for twelve years had afflicted all the countries in Asia, seems to have had its power limited in 1829. It was not so in the preceding year. In the month of April it appeared in Bengal, and attacked with violence the garrisons and inhabitants of Calcutta, Cawnpore, and Chittagong. In the month of June it appeared in Bombay, at the other extremity of the Indian peninsula; and in October attacked Madras and its neighbourhood. It was introduced into Borneo, and infected the Dutch garrison of Pontiana. The greatest mortality, however, occurred in the neighbourhood of Calcutta. Whole villages were depopulated; and in the city several public functionaries, and many of the inhabitants of the first classes of society, perished after eight hours' illness; some after only two.

The Yellow Fever.—In 1829, the yellow fever extended its ravages to a less number of places in America than usual. There was no appearance of it at Martinique, or Guadaloupe, throughout the year. The great Antilles were not so fortunate. The yellow fever existed at Port Royal in Jamaica in the month of April. In the first ten days of May, thirty sailors belonging to the crew of the *Magnificent* fell victims to it. In July it reigned on board the merchant vessels in the Road of Havannah; and the hospitals were filled with individuals who had been attacked by it. Nevertheless, the island of Portico Rico, which is separated from Cuba only by a narrow channel, remained entirely free from it. New Orleans imported it in the month of October from Havannah;

and its ravages were so dreadful, that it destroyed almost all whom it attacked. For six weeks, from twenty-five to thirty persons died daily in the town; and in the country in proportion. This is attributed to the want of proper precaution; and the American journalists assert, that in consequence of similar negligence, the population of New Orleans has been thrice renewed in ten years!

LITERARY AND LEARNED.

ROYAL ASIATIC SOCIETY.

SIR ALEXANDER JOHNSTON in the chair.—Many donations connected with oriental literature and art were made to the Society; amongst these we noticed Captain Macan's collated edition of the original Persian text of the celebrated poem of Firdousee, entitled, the *Shah Nameh, or Book of Kings*.

Mr. Houghton's account of a tombstone, lately presented to the Society by Mr. Samuel Broughton, was read. This curious relic of eastern antiquity was obtained by the late Mr. Salt, when in company with Lord Valentia, at a town called Dhalac el Kibeer, near Massowah, on the Red Sea coast of Abyssinia. It is of the kind commonly called clinkstone, and is in a wonderful state of preservation, when its great age is considered. The inscription upon it is very slightly engraved, but quite perfect, and bears date A. H. 439, answering to A. D. 1047. The inscription is Arabic, written in Cufic characters, and consists of fourteen lines, of which the first nine and a half contain the usual formula of monumental inscriptions, being a passage from the Koran; after which comes the following:—"This is the grave of Fatima, the daughter of Muhammad, the tailor. She was buried on the Sabbath day (Saturday), the 10th of the Muharram (6th July), in the year 439. Praise be to God, and may his blessing be upon Muhammad and his descendants. The peace of God be with you!"

A notice respecting the natives of New Guinea, by W. Marsden, Esq., followed the preceding paper. The observations in it principally refer to the existence of cannibalism among the natives of that island; and the information supplied was derived by Mr. Marsden through the medium of the Malayan language, from two Lascar seamen of the East India Company's ship Northumberland, who with many others were carried off by the natives during a temporary visit of the ship in March 1783, but who were subsequently released through the interference of a neighbouring rajah. We omit the details respecting the habits and customs of these islanders contained in Mr. Marsden's communication.

KING'S COLLEGE, LONDON.

IN referring to the subjoined appointments, which we understand to have been this week made by the council of this institution, we are bound to add, that we consider them as constituting an auspicious earnest of the talent which will characterise those departments to which the professors remain yet to be appointed:—To the professorship of mathematics, the Rev. T. G. Hall, of Magdalen College, Cambridge; surgery, J. H. Green, Esq.; practice of physic, Dr. F. Hawkins; anatomy and physiology, Herbert Mayo, Esq.; theory of physic and therapeutics, Dr. Bisset Hawkins.

NORTHERN LIBRARIES.

To the Editor, &c.

SIR,—I have esteemed it fortunate that the same columns which are so vigilant in the

cause of virtue and honour, should have been selected to promulgate my appeal in favour of the Northern Libraries.

I would now beg to acquaint you, that my request has been supported by the liberal contributions of Earl Spencer, the Archbishop of Canterbury, the Right Hon. Thomas Grenville, Sir Frederick B. Watson, Archdeacon Butler, Thomas Rickman, Esq., William Lloyd, Esq., John Lee, Esq., LL.D., Joshua Watson, Esq., Capt. W. H. Smyth, Rev. Peter Fraser, and Sampson Hanbury, Esq., and by other kind patrons of literature, whose choice selections of books will open a wide field of study to the industrious inhabitants of those inclement regions; and be the means of directing their attention to many important subjects, from which science may be expected to draw a rich harvest.

As the amount (250*l.*) which I anticipate is, however, far from being complete, I would again invite the co-operation of those who are friendly to the progress of knowledge; and I beg to add, that I shall keep the sentiments expressed in my former appeal open for a month or six weeks, after which time the whole collection will be confided to the integrity and discretion of Professor Rafn.

I have the honour to be, &c.

Somerset Place.

NICHOLAS CARLISLE.

THE BYZANTINE HISTORIANS.

THE collection of the works of the Byzantine historians, publishing under the auspices of M. Niebuhr and other able philologists, is rapidly advancing to its close. Georgius Syncellus, and Nicephorus C.P., have recently appeared at Bonn. Syncellus, by no means one of the least important of these writers, has been intrusted to the revision of M. Dindorf, whose works have rendered him justly celebrated. In a short preface, M. Dindorf states that he has availed himself of two manuscripts in the Paris library. The one served as the basis of the first edition published at Paris in 1652, by Father Goar; the other is mentioned in Bredow's Parisian Letters. M. Dindorf calls Goar *mediocri homo doctrinâ, artis critica faculitate nullâ, negligentia incredibili*; but has nevertheless reprinted his Chronological Canon, his Notes, and even his Index! The republication of Syncellus must, however, be very serviceable at the present moment, facilitating as it does a knowledge of the dynasties of Egypt. As for Nicephorus, that Archbishop of Constantinople merely gave a *chronographia compendiaria*, an abridgment, in which facts have been intercalated, posterior to his epoch.

FINE ARTS.

NEW PUBLICATIONS.

Sylva Britannica; or, Portraits of Forest Trees, distinguished for their Antiquity, Magnitude, or Beauty. Drawn from Nature by Jacob George Strutt. Royal 8vo.

WHEN this work appeared in its folio shape, in the year 1828, it was noticed in the *Literary Gazette* with the commendation which was its due. We think Mr. Strutt perfectly justified in the hope which he expresses in his preface to the present publication, namely, "that this comparatively small edition will afford a gratification similar to that which a lover of art derives from comparing a finished miniature with the same subject in full size—fidelity of representation being alike adhered to in both instances." It is undoubtedly true, as Mr. Strutt finely observes, that, "independently of

all other considerations, trees afford such delightful individuality, joined with such exquisite variety of character, and bring with them so many charming and hallowed associations of liberty and peace, of rural enjoyment or contemplative solitude, of the sports of childhood or the meditations of old age,—in short of all that can refresh or exalt the soul,—that it is wonderful they have not hitherto been more decided objects of interest to the painter and the amateur, than merely what may arise from their introduction, rather as accidents in pictorial delineation, than as pictures in themselves: yet what can afford more delightful contrast in landscape than the giant strength of the oak, with the flexile elegance of the ash; the stately tranquillity of the elm, with the tremulous lightness of the poplar; the bright and varied foliage of the beech or sycamore, with the funereal majesty of the cedar or yew; all differing in form and character, as in colour." We can scarcely conceive a more agreeable way of enjoying an autumn than, with Mr. Strutt's volume in our hands, to pay our court to all the sylvan monarchs whom he has so happily depicted and described.

Great Britain Illustrated. From Drawings by W. Westall, A.R.A.; with Descriptions by Thomas Moule. Nos. 24, 25, 26, and 27. Tilt.

THIS pleasing publication is proceeding with uniform fidelity, neatness, and elegance.

Landscape Illustrations of the Waverley Novels. Engraved by William and Edward Finden. Part III. Tilt.

"MIRKWOOD MERE," from a drawing by G. Barret, and "Solway Frith from Allonby," from a drawing by Copley Fielding, are our favourites in the present Part.

The Ruins and Scenery of South Wales. From Drawings after Nature by J. E. H. Robinson. Executed on Stone by J. E. H. Robinson and J. S. Templeton. Engelmann and Co.

"THE Castle and Monastic Ruins, and other Architectural Antiquities of Wales," observes the prospectus of this interesting publication, "are very numerous; those of South Wales exceeding fifty; and are justly celebrated for their picturesque beauty, and variously interesting expression. Many of them are in high preservation, and from their generally bold and elevated situations, objects of commanding attraction and interest. The scenery that surrounds them is generally fine, and often extremely captivating and impressive." The present is the first of twelve numbers, each containing six plates, in which these ruins and this scenery are to be represented. The plates are executed in a very free and pleasing style of lithography.

Dr. Wollaston. Drawn by Sir T. Lawrence, P.R.A. Engraved by F. C. Lewis. Tiffin. A MASTERLY and beautiful imitation of Sir Thomas's drawing of this eminent man; of whom it has been justly remarked, that "there are few persons whose names are more intimately connected with the general history of learning and science in the nineteenth century."

The Fall of Nineveh. By John Martin. MR. MARTIN has re-produced this splendid picture, as he has done his former great works, in mezzotinto; and thus multiplied the proofs of his extraordinary genius, in embodying in a picture the terrible scene described by the pro-

phet Nahum. Our pages have already dwelt upon the merits of this sublime and poetical production; so that nothing is now requisite from us but a notice of the engraving. And when we say that it possesses the grandeur of the original, and conveys the same powerful impressions to the mind, we need hardly add another syllable to recommend it to the public attention. It is, indeed, a glorious conception—the living desperation and ruin in the foreground—the magnificent architecture, doomed so soon to perish, too, though apparently built for eternity—and the elemental strife of the threatening heavens, are all combined in the wide swoop of desolation. In one word, the sheet is an *epic*.

M. Boai.—A lithographic representation of our friend the chin-chopper is to be acknowledged as a resemblance of this odd performer.

A Medallion of George the Fourth. Engraved by A. J. Stothard, Medal Engraver in ordinary, by special appointment, to the King.

A MEDALLION, executed in the style and taste in which this appears, cannot fail of becoming a popular and cherished memorial of our late and much-lamented Sovereign. Its character, as a work of art, may rank it among the first of its class. The proportion of its relief is admirably calculated to give a perfect idea of the features, and indeed to convey to the mind one of the best resemblances we have ever seen. We are well aware of the high value of this species of art, both as preserving the likenesses of the illustrious great, as recording national services, and as commemorating important events; and we are happy to find in Mr. A. J. Stothard the power and ability of meeting any occasion that may offer for the exercise of his talents in so lasting and elevated a walk. These medallions are struck in bronze and in silver: the size two inches and a half in diameter.

George IV.—Among the memorials to the late king, we have received specimens of his portrait, embossed by Mr. Dobbs, in paper, or rather card, of various colours, and surrounded by emblematical ornaments. These are strong likenesses, and beautifully executed: indeed, the effect of this art is as pleasing as it is new in its application to such subjects.

ORIGINAL POETRY.

JUVENALIA.—NO. V.

SINCE cloud-borne Chaos his dark ensign furled
Till now heard idly flapping through the world,
And fled before the cherub-van appeared
Whose thunderous step foretold the fate he
feared; [gun
Since Heaven's great work of wonder was be-
And light came roaring from the fountain sun;
Quiet, through space, a blind rough thing of
clay,
This Earth of ours has wound her airy way;
Still in her motion, steady though she turns,
Nor the soft rule that sways her ever spurns;
Onward she goes, in silent joy of speed,
Creature well worth Creation's toil indeed!
From her rich breast teeming no less a store
Than Life needs (some philanthropists say
more);
Varied with gentle slope, and cliff, and plain,
And Heaven-fall'n waters raised to Heaven
again;
For ever feeding with a silver flow
The streams that dancing to the ocean go,
Where, on his oozy wing, light Zephyr plays,
Curling the white surge most fantastic ways,

Or, in fierce mirth, some rude Eolian form
Chafes up the riotous pageant of a storm:
Though by the harrowy sled of wheeling Time
So often traced, still beautiful and sublime;
Fresh as when first from Nature's womb she
sprung,

For ever lovely and for ever young!
Now, ye bright sitters of the middle skies!
With dew-blobs fit your microscopic eyes,
And pore for half a century, if you please,
Like Entomologists on nits or fleas;
Perchance you'll scarce, upon this terrene ball,
Discover more than they do, after all!
Draw nearer, pray; and stronger lenses take,
For laughter, if not information's sake:
Only descend ye three-parts from the Moon,
Your midribs shall be tickled till ye swoon.
Now!—Do ye aught that moves, on Earth per-
ceive?— [conceive!
"We do!"—What is it?—"La! we can't
There are some millions of such moving things;
And now we mark, some creep, some go on
wings." [some two."
The *creepers* what?—"Some have four feet,
What are the *bipeds* like?—"Faith, much
like *you*!"

'Would it were not so! but alack 'tis true!
Well! can you guess what *sort* of things they
be, [see:
Reptiles, I own, but of what sort?—"Let's
A tribe, perhaps, of *earth-worms*."—O most
blind!

Can ye no trace of their great nature find?
These are the Mighty Creatures called—Man-
kind!

These!—these!—ay these! live corpuscles
of clay! [away
Which with light breath Destruction sweeps
By myriads every year!—Earth's atomies,
Though less to her than mites to massy cheese!
Yet, with stout lungs, and swelling every lobe,
They'll boast themselves—the Masters of her
Globe!

Mark you that *monad*?—"Hey—a perky thing,
With rod and ball? what's that?"—"Tis called,
a *king*!

"Heaven save his majesty! a royal mite!
His throne is surely three hairs'-breadth in
height!"

Of potent atoms such as this, a score
Or so, have Earth in shares (and would have
more!) [Rheims,
"Bless us! who gave it them?"—Inquire at
Where his *estate in tail* King Capet claims;
If holy oil, sent down in flasks from Heaven,
Give not the right,—I know not how 'twas
given! [breast,
"And pray what's that, with spark upon its
That struts so high, and crows above the rest?"
Strange ignorance these starchy people shew!
Why that's a *lord*, sirs!—sure ye ought to
know!

Hath it not something of an *air*—a *grace*—
A *je ne sais quoi*, that speaks a lofty race?—
"Excuse us! we must smile—when you assert
Grace, air, and lord knows what, in *grains* of
dirt!" [there,
But say,—those light things flitting here and
As specks of down that haunt Elysian air,
What things are they?"—"Faith your eyes
grow keen!

I guess it is our butterflies you mean;
Gay, painted, gaudy-pinioned creatures?—
"Yes!
Gay (painted too, most like), of garish dress;
But still, they mince the ground with little feet,
Or loll in four-wheeled chairs that whisk from
street to street." [view,
Bah! these are *she*-Men!—fair to outward
What else they are, Pope (Alexander) knew!

Yet 'tis the vermin-tribe at which ye sneer
Disturb, defoul, disgrace this patient Sphere;
War, tumult, faction, thirst for blood or dross,
Her peaceful wish, and God's good pleasure,
cross;
Minims! with Folly big, in Vice o'ergrown,
And daily lost in that great globe of dust they
think their own!

FIRST AND LAST.—NO. IX.

The First and Last Hope.

'Tis past, 'tis o'er! my first hope's knell

Within my heart has rung,

The echo of the cold farewell

Thy voice at parting flung.

That cherish'd hope of many years,

The beautiful, the first,

Hath melted, rainbow like, in tears,

On the clouds by which 'twas nurst.

'Tis past, 'tis o'er! and now my brow

Is free from passions wild,

My spirit is as quiet now

As a slumbering dreamless child.

I've done with earth—I've ceased to strive—

My first dear hope hath pass'd;

And yet another can survive—

The loveliest and the last.

The parting hour that hope so quench'd

Hath severed me from thee;

Yet were no ties of fondness wrench'd

That bound thee unto me:

'Twas my own visions made me deem

Thou loved'st me as I loved—

Sadly hath pass'd away the dream,

And its falsehood I have proved.

I blame thee not: thy heart was given

Unto another's shrine—

Thy vows to her approved by Heaven,

And why should I repine?

I feel no pang—I've felt but one,

'Twas in that hour we parted;

That storm of agony is gone,

And left me broken-hearted.

But now I see thee as a thing

That I must leave behind:

I hear death's summons murmuring,

As soft as summer wind.

No passion'd tempests o'er me roll;

My pains are gone to rest;

A sunny calm is on my soul,

A peace within my breast.

And what can give me thus a power

To hold my woman's faith,

Yet mourn not now it brings the hour

Of early wasting death?

'Tis that last hope, the holy trust,

That heaven's a home for me,

And, rising from earth's dark'ning dust,

I there may meet with thee.

Worton Lodge, Isleworth.

M. A. BROWNE.

MUSIC.

PAGANINI.*

Extract from a Sketch of an Excursion in the Interior of Germany, in the Years 1829, 30.

SIR NICOLÒ PAGANINI'S performance on the violin is truly remarkable, and such as perhaps has never before been heard; but it is rather the eccentricity of his performance, than any particular excellence, that elicits such general applause. In saying this, I am not to be understood as depreciating his talent; for his execution on the instrument is such as could only have been acquired by intense study and application during many years: there is great clear-

* A recent traveller has favoured us with the following, by far the most lively, sketch of this celebrated performer which we have yet seen.—Ed.

ness as well as precision in his performance; and he is more particularly expert in playing the flageolet notes, which he produces up to the very bridge. Nay, he frequently executes whole passages in double flageolet, and makes even a double shake in this manner, which is a thing that has never before been attempted,—because a single shake requires the application of three fingers, though Sir Nicolo is able with four to produce a double one. His manner of bowing is very remarkable for expertness in the *staccato*, and his *capricci* are effected with great distinctness and roundness. He is very clever in producing the *pizzicata* with the left hand, it being at the same time interlarded with bowing in *staccato*. This, however, is no novelty, nor can it be said to be particularly difficult, although few perhaps have acquired a like skill in this whimsical performance, in the application of which he frequently steps beyond the bounds of propriety, since it can only be considered as a jest; yet he introduces it like a laugh in a serious discourse, nay, even in a cadence of an *adagio*, where it is as much out of place as a joke in a solemn harangue. In other respects his cadences are in general good, and being the unpremeditated creation of the moment, are evidently effusions of genius.

But the peculiarity of his performance is more especially acquired by means that cannot generally be admitted. The strings of his violin are much thinner than they usually are on the instruments of other performers: this greatly facilitates his execution, but it also deteriorates his tone. Those who recollect the performance on the violin on Viotti, and now hear his countryman Paganini, will, in this particular, find a great falling off. The strings of Paganini's violin being uncommonly thin, and his instrument altogether of small dimensions, he is enabled to tune it half a note higher than the concert pitch of the orchestra. Accordingly he plays in D, when the orchestra accompanies him in E flat. Now the performance in D major being much easier than in E flat major, his execution by that means is much facilitated, though he is necessarily confined to such music as is calculated to answer his peculiar purpose. His solo pieces are, in consequence, few in number; and if he gives several concerts at one place, he does not scruple to play the same concerto two or even three times in succession. It is on account of this advantage that he always tunes his instrument in a room by himself, only sending for a violin from the orchestra that has previously been tuned, and never touching his own instrument publicly with the bow till the orchestra begins.

When he plays variations, he frequently alters the pitch of one of the strings between the variations, obtaining thus different intervals, by means of which much novelty is produced. His performing a few pieces only on the G string, is remarkable rather on account of its novelty than of its utility.

As to the general character of his performance, its leading feature is a plaintive tendency, sometimes interchanged with a frolicsome jest, and emitting occasionally the sparks of brilliancy; but of grandeur, greatness, or dignity, it has none. Nor is there any such a thing as grace belonging either to his execution or his appearance. On the contrary, it is rather his ghostly exterior that excites so much attention. He is only forty-seven years of age, yet his whole person is extremely meager and emaciated. In addition to this, his thin and pale face is nearly concealed under his long black hair, which hangs down almost to his shoulders. His look, except when he is

much pleased, is that of deep melancholy and latent affliction, either mental or bodily, or perhaps both. Arrogance is entirely foreign to his manner.

On the whole, this singular performer may be compared to a rider that sticks with the greatest ease and confidence to his horse,—now leaning forward, sympathising with and patting the neck of the animal, and now being up to every kind of wanton freak, leaping hedges, ditches, and five-bar gates, to the right and left, with a facility that must create wonder: but riding an easy and dignified gallop, or a stately walk,—these are things that are altogether unknown to him; and before doing so, he is said to despise them, it being evident that nature never designed him for either the one or the other.

The idle tales that have been spread respecting Paganini are wholly undeserving of notice; and must have had their origin in envy, detraction, and calumny. The Emperor of Austria and the King of Prussia have conferred honours on him; and before doing so, their majesties were no doubt informed of his history: how then could those illustrious personages ever have thought of bestowing favours on a criminal? Farther refutation of such scaudal would be an insult on common sense.

DRAMA.

KING'S THEATRE.

THE sudden and somewhat unexpected re-appearance of the "uncertain" Malibran, has been the only novelty worthy of notice since our last report. On Saturday night, after the conclusion of the first act of *Il Turco in Italia*,—a piece, by the by, which, if acted entire, must be most popular, from the spirit and strength of its cast,—the first act of the *Barber of Seville* succeeded the first doings of the *Turk in Italy*. Madame Malibran enacted the rôle of *Rosina*; and though her reception was characterised by a degree of coldness on the part of her numerous auditory, and which we are sorry so admirable a songstress should provoke by her caprice, it is but justice to say, that we never heard her sing better, or so little indulge in unmeaning ornament. Indeed, we were inclined to agree with the Abigail in Sheridan's comedy, that "illness best becomes her ladyship;" and that Madame M. always looks best and sings most delightfully, when most disposed to be indisposed. The fulness and firmness of tone in which she executed the difficult cavatina of *Una voce poco fa*, evinced splendid powers; and we had no reason to suspect illness but from the circumstance of her appearing slipshod on the boards, and treading the stage with the heels of her shoes down, as if the "fascinating siren" had chilblains in the dogdays. But, joking apart, though this vocalist has often disappointed the public, we do not think it altogether kind in the auditory to seem so austere. Madame M.'s singing of the song we have particularised, merited the *encore* which was called for, though over-ruled by other voices. When a singer sings well, all little tricks behind the curtain should be forgotten; and when an artist does her best, and such an artist too, why we cannot help thinking that to shew resentment is as unworthy of the house, as to commit pettish extravagances is ridiculous in the actor.

Of the admirable performance of Santini in *Figaro*, we have before spoken: he is certainly the best on the boards.

Tuesday night the first acts of *Matilda di Shabran* and *Il Turco in Italia* were tacked

together to make up the evening's performance. We have before now deprecated the bad taste of such unnatural conjunctions. By this practice all illusion is lost. If the manager must bring his forces together, why not in pieces complete, and not in mutilated *morceaux*? This error originates in leaving things to chance, instead of making timely arrangements in the early part of the season. We recommend the active and enterprising Laporte to look to this next year.

HAYMARKET.

MR. KEAN performed *King Lear* on Monday evening at the Haymarket, and therewith terminated, as he assures us, his last engagement in London. We are sorry to lose him, and trust a voyage to America, by restoring him to health and spirits, will induce him to change his determination; for he has in this short summer campaign shewn that he is still great in the prouder walks of tragedy. Nevertheless, most heartily do we rejoice at bidding adieu to Melpomene at the little theatre in the Haymarket, where in sign-board scenery and moth-eaten velvets she appears to ask for charity, in lieu of compelling homage. The barn-like decorations and properties of this theatre have been long the subject of animadversion; and though "the quips, and cranks, and wreathed smiles, such as hang on *Liston's* cheek"—induce one to overlook them in comedy, they become inexpressibly ludicrous when thrust forward as the appropriate "pomp and circumstance of glorious tragedy." The season, the company, the *every thing*, in short, is opposed to grief and terror; and our regret at witnessing the last performances of Kean, alone prevented our laughing outright, according to the laudable custom of Haymarket auditories;—a custom which we trust will be revived with the fine weather.

VARIETIES.

Chili.—Dr. Bertero, a distinguished naturalist now in Chili, writes that he has made an extensive and valuable collection of plants in that country. He mentions, among other discoveries, the *Mimosa balsamica* of Molina, called in this country *Sarilla*, a magnificent *Mimulus*, which he calls *Fenestratus*, several new species of plants of different kinds, two new species of *Cactus*, &c.

Campbell's Exile of Erin.—We thought it too absurd to notice a paragraph in the Irish newspapers, accusing Mr. T. Campbell of having stolen his beautiful little poem, the *Exile of Erin*, from a Mr. Reynolds. What Mr. Campbell has done proves how fully capable he was to write this piece; and though the charge has been reiterated with the addition of circumstantial evidence, we must confess that we are among those who must hold it to be founded on some entire mistake.

Mlle. Sontag.—The engagement of this lady at Warsaw is said to be 1000 ducats (more than 450*l.*) for each concert; the expense of which to her will not probably exceed 100 ducats. Her benefit at Berlin produced 5000 crowns (about 750*l.*)

French Coin.—It is said that gold pieces, of 100 francs each, are to be issued from the French Mint. They will, we imagine, be rather curiosities than useful pieces, as compared with the Napoleons and new Louis d'or.

Navarino.—A large sum has been received at Navarino from the French government, towards the re-erection of the citadel which was blown up in November last. Some French

speculators are also endeavouring to get up a scheme for the rebuilding of the town; but in the present state of Greece, it is not likely to meet with much success.

Prognostications of the Weather.—Under the title of *A Companion to the Almanacs, &c.*, we have the following prognostications, which we are assured are the result of fifty years' experience. As a matter of curiosity, if not of guidance, we think it worth being copied for the use of our readers; and we hope to hear if their meteorological observations confirm the data of our authority. "There are so many causes that have a tendency to produce alterations in the state of the atmosphere, and, of consequence, change of weather—particularly in an insular situation, as these kingdoms are—that it is not probable any mode will ever be discovered to foretell, to a certainty, what weather will absolutely succeed any precise period. But, as it must be of the utmost service to the traveller, farmer, gardener, and numerous other persons, to be enabled to form a judgment of what weather will most probably prevail at any fixed time, the following table, constructed upon a philosophical consideration of the attraction of the sun and moon in their several positions respecting the earth, and confirmed by the experience of many years' actual observations, will, without trouble, furnish the observer with the knowledge of what kind of weather there is the greatest probability of succeeding, and that so near the truth, that in very few instances it will be known to fail.

MUSIC.

GOD SAVE THE KING! J. WILLIS

and Co. Royal Musical Repository, 55, St. James's Street, London, and 7, Westmoreland Street, Dublin, respectfully inform the Nobility and Gentry, and the Public, that they have this day published a new edition of the National Anthem, "God save the King," in which the name of our beloved Sovereign is happily introduced, with a trifling alteration from the original Words, and an Additional Stanza to our Most Gracious Queen. The Music arranged for One, Two, or Three Voices (also full Chorus), with an Accompaniment for the Piano-Forte, by Sir John Stevenson, M.D. Price 2s. 6d.

N.B. A Lithographic Likeness of the King will be given on the Title-page.

FREDERICK KIRKMAN, Son of the late

Mr. JOSEPH KIRKMAN, of No. 19, Broad Street, Golden Square, Grand Piano-Forte Maker to his Majesty, begs leave most respectfully to inform the Nobility, Gentry, and his Friends, that he has succeeded to the Business of his late Father. He intends to continue the same on the Old Premises as above, which have been in the possession of his Family for upwards of a Century, and invites an Inspection of his choice Assortment of Instruments of every Description, ready for immediate Sale.

BOOKS PUBLISHED THIS DAY.

Price 1l. 1s.

THE NOBLE GAME OF BILLIARDS,

wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD.

Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, who work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years.

London: Traversed and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

Just published, the Third Volume, in 8vo. of **DR. DODDRIDGE'S PRIVATE CORRESPONDENCE,** including many Particulars in his Life hitherto unknown, with Notices of many of his Contemporaries, and a Sketch of the Ecclesiastical History of the Times in which he lived.

"We know not when, if ever, we have perused two volumes of the description of these now before us, with more intense curiosity, amusement, and instruction."—*Literary Gazette.*

The Rev. G. Croly's Poetical Works, in 2 vols. post 8vo. with Illustrations, 2l.

"We most cordially recommend these volumes to that universal attention which they will repay tenfold by the pleasure they are so well calculated to yield."—*Literary Gazette.*

Private Memoirs of the Court of Louis XVIII. By a Lady. In 2 vols. 8vo.

"If we except the entertaining Memoirs of the Empress Josephine, we know of none more amusing than these."—*Literary Gazette.*

"This work lays open the secret intrigues of the most intriguing capital in Europe. Almost every person of note in France, since the downfall of Napoleon, is here portrayed."—*Morning Journal.*

Stories of a Bride. By the Authoress of the "Mummy." In 3 vols. post 8vo. 3s. 6d.

"A very original as well as amusing work, and one which we think will be universally liked."—*Literary Gazette.*

The Reminiscences of Henry Angelo. The Second and concluding Volume. In 8vo. comprising Anecdotes of the most distinguished Persons of the last Fifty Years.

Travels in the East. By John Carne, Esq. Author of "Letters from the East." Printed uniformly with, and in continuation of that work. 1 vol. 10s. 6d.

Henry Colburn and Richard Bentley, 8, New Burlington Street.

VOYAGE de la CORVETTE PASTRO-

LABE, exécuté par ordre du Roi, pendant les Années 1826, 1827, 1828, et 1829, sous le Commandement de M. J. Dumont d'Urville, Capitaine de Vaisseau. Douze volumes, in-8vo, accompagnés d'Atlas, contenant près de 600 Planches ou Cartes, grand in-folio, gravées et lithographées par les premiers Artistes de Paris. Quatre-vingt-trois Livraisons. Prix de chaque Livraison, Texte et Planches, pour Londres, 16s. La 7ème Livraison de la Partie Historique vient de paraître.

On s'inscrit à Londres à la Librairie Dramatique Française, chez Monsieur Delaunay, 77, Burlington Arcade, précédemment, où se trouvent les Prospectus, le premier Volume de Texte, et les neuf premières Livraisons de Planches.

In 2 vols. 8vo. with a Portrait.

PERSONAL MEMOIRS OF PRYSE

GORDON, Esq.

2. Journal of the Heart. Edited by the Authoress of "Filtration." In 1 vol. post 8vo. with Illustrations.

3. Caleb Williams, by William Godwin, Esq. A new edition, 3 vols. 12mo. 2l.

4. The Undying One, and other Poems, by the Hon. Mrs. Norton, Authoress of the "Sorrow of Rosalie." In 8vo.

5. Foreign Exclusives in London; a Satirical Novel. 3 vols. 12mo. 2l.

6. The Oxoniacs. By the Author of the "Route." In 3 vols.

Henry Colburn and Richard Bentley, 8, New Burlington Street.

Dooley's and Rivington's Annual Register for 1839.

Price 16r. boards.

of the History, Politics, and Literature of the Year 1829. London: Printed for Baldwin and Cradock; C. J. G., and F. Rivington; Longman, Rees, and Co.; E. Jeffery and Son; J. Booker; J. M. Richardson; R. Scholey; Hurst, Chance, and Co.; Hamilton, Adams, and Co.; Whittaker and Co.; E. Lloyd and Son; G. Booth; W. J. G. B. J. Dowling; Simpkin and Marshall; G. Lawford; J. Laycock; S. W. Sutherland; and J. Colingwood.

By whom is also published, in a very large vol. price 84s.

A General Index to the Annual Register, from its Commencement in 1758 to the Year 1819, inclusive; after which Period, each successive Volume has a distinct Index.

PART XXIX. ENCYCLOPEDIA

METROPOLITANA; or, Universal Dictionary of Knowledge, on an original Plan, comprising the Twofold Advantage of a Philosophical and an Alphabetical Arrangement.—With appropriate and entirely new Engravings.

This Part contains the whole of an entirely original Article on Architecture; a Portion of Sculpture, the Continuation of Chemistry, and the Completion of Integral Calculus. In the Miscellaneous and Lexicographical Department, it brings the Work down to LES.

London: Printed for Baldwin and Cradock, Paternoster Row; C. J. G., and F. Rivington; J. Duncan; B. Fellowes; Suttaby, Fox, and Suttaby; E. Hodgson; J. Dowling; H. T. Hodgson; G. Lawford; J. Laycock; J. Fraser; W. Mason; and C. Westley; and for J. Parker, Oxford; and J. and J. J. Deighton, Cambridge.

Price 2s. 6d. each.

THE PROVERBS OF SOLOMON, digested

under separate Heads, and placed in Parallel Lines with an Intermediate Latin Version, consisting of the Nominatives and First Persons of the Nouns, Verbs, &c.; the whole forming a Series of Exercises on the Rules of Declension and Construction. For the Use of Schools.

By G. MACKREWNIE.

2. A Key to an Intermediate Latin Version of the Proverbs of Solomon; being a literal Translation of the same; by which the Tutor is enabled, without Reference to Grammar or Dictionary, to correct the Errors of his Pupil, in regard to Syntax, Declension, and the Strict Meaning of Words. Also, parallel with it, a Free Translation, according to the Vulgate. By C. Mackrewnie.

London: John Souter, School Library, 78, St. Paul's Churchyard.

A New and Improved Edition.

In 1 large 8vo. vol. third edition, greatly enlarged and improved. 15s.

MODERN DOMESTIC MEDICINE; or,

a Popular Treatise exhibiting the Nature, Symptoms, Causes, and most efficacious Treatment of all Diseases, embracing all the modern Improvements in Medicine. Containing also a copious Collection of approved Prescriptions, Rules of Diet, Medical Management of Children, Virtues and Doses of all Medicines, &c. The whole forming a clear and comprehensive Medical Guide for the Clergy, Families, and Invalids.

By T. J. GRAHAM, M.D. &c.
"We conscientiously recommend it. It is very far above the celebrated Buchan's, and we shall preserve the volume as the advice of an invaluable friend, to which we can refer in the hour of need, with no doubt of being benefited by its wisdom."—*Literary Chronicle.*

"In the opinion of a respectable physician, well known in our connexion, it is enriched with much of all that modern practice has ascertained to be valuable; and is not only incomparably superior to Buchan's, but also to every similar work in our language."—*Westonian Magazine.*

"It is altogether deserving of permanent popularity."—*London Weekly Review.*

"One of the very best and most useful books published in modern times."—*Monthly Olio.*

London: Published by Simpkin and Marshall; and sold by all Booksellers.

Of whom may be had, by the same Author,

2d edition, price 8s. 6d.

2. A Treatise on Indigestion; illustrating

the Symptoms, Varieties, Causes, and correct Treatment of the prevailing Disorders of the Stomach and Liver; with Practical Observations on some Painful Complaints originating in those disorders, as Tic Douloureux, Gout, Fulness of Blood in the Head, &c.

"I sincerely recommend it, and have long been convinced that such a work was imperatively called for."—*London Medical Journal.*

"It is very evidently the result of deep experience. Mr. Abernethy speaks of it in high terms."—*British Magazine, Jan. 1830.*

In 1 vol. 8vo. price 14s.

AN INTRODUCTION to the STUDY of

ANCIENT GEOGRAPHY, with copious Indexes.

By PETER EDMUND LAURENT, of the Royal Naval College, in H. M. Dock-Yard, Portsmouth; Author of a "New Translation of Herodotus," the "Odes of Pindar in English Prose," &c. &c.

Oxford: for Henry Slatter; and Whittaker, Treacher, and Co. London.

This Volume combines a Treatise and a Dictionary of Ancient Geography; every geographical Name that can be found in Thucydides, Herodotus, Livy, and other ancient historians previous to the fall of the Byzantine Empire, may be easily referred to, and its situation ascertained, even without reference to a map, provided the reader has obtained some general notions of geography.

In 3 vols. post 8vo. price 27s.

THE TEMPLARS; an Historical

Novel.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

A GUIDE and POCKET COMPANION

through ITALY, containing a concise Account of the Antiquities and Curiosities of that classical and interesting country; with a particular Description of its Principal Cities. Also, a correct List of Posts, Distances, Rates of Postage, Monies, Inns, Moles, and Expenses of Living; Manners and Customs, Directions to Travellers, with Medical Advice to Invalids, Prescriptions, &c. &c.

By W. C. BOYD, M.D.

"A most unassuming and sensible guide-book to the wonders of nature and art, of which the fertile fields of Aousia present so exuberant a display. The descriptions, though necessarily brief, are lively; and no objects of curiosity that a traveller ought to inspect, escapes mention. The work is accompanied with a useful and well-written introduction, the rules and prescriptions of which will be found of value to every one going abroad, whether they may happen to make Italy the object of their travels or not."—*Spectator, June 19.*

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 8vo. 2s.

ALFRED the GREAT, a Drama, in

Five Acts.

By the Author of "Liberation of Joseph," a Sacred Drama; Sonnets, Tour to Matlock, &c. &c.

Published by Longman, Rees, Orme, Brown, and Green.

In 4to. with Forty Plates, the greater part coloured, price 2l. 2s.

In extra cloth boards,

SECTIONS and VIEWS illustrative of

Reynard's Genealogical Chart of the Sovereigns of England, 2s.—The Descriptive Guide, 1s.

Wilson's Ancient History, 5s.
Hamilton's Epitome of Universal Chronology, History, and Biography, 2s. 6d.

Dr. Jameson's Celestial Atlas, exhibiting, in Thirty beautifully engraved Maps, the Construction of the Signs of the Zodiac, as they appear in the Heavens, with Scientific Descriptions of their Contents. Royal 4to. 25s.; coloured, 31s. 6d.

Just published,
History of France and Normandy, on the Plan of Pinnock's Histories. By W. C. Taylor. With a Map, 6s. bound and lettered.

Interesting Works just published.
 In 3 vols. post 8vo.

FIRST LOVE. A Novel.
 "One of the most beautifully written tales we remember."
 "Its style is elegant, and its information that of a lady of amiable feelings and motives, who well understands her sex."
 "The whole of the story, but particularly the dawning of that early sunbeam of life's morning, 'First Love,' and the subsequent progress of the passion, are indeed delightfully sketched."
 In 8 vols. post 8vo.

2. The Armenians; a Tale of Constantinople. By Charles Mac Farlane, Esq.
 "Mr. Mac Farlane has in this work condensed, in a most agreeable manner, all the pictures, reflections, and anecdotes, of its oriental tour."
 "His volumes are filled most admirably with details of curious customs, characteristic anecdotes, and scenes depicted with the eye of an artist, and the feeling of the poet."
 "The Armenians is a romance of that class the merits of which lie rather in their realities than their fiction. It contains description of scenery unsurpassed by any spot in the world, and pictures of the habits and usages of a foreign people in a state of society perfectly anomalous."
 "The author will appreciate our respect for his talents, when we say he has done more than any man to complete the picture of the east, dashed off by the bold pencil of the author of 'Anastasis.'"
 In 2 vols. 8vo. Plates.

3. Constantinople in 1828-29. A Residence of Sixteen Months in the Turkish Capital and Provinces. By Charles Mac Farlane, Esq., 2d edition.
 "Of all the tourists whom the late demand has tempted to the press, Mr. Mac Farlane will, beyond comparison, most reward the reader. The main purport of his book is specially adapted to the very points on which the curiosity of the moment is most alive. For the condition of this part of the Eastern World, of its politics, temper, and prominent interests just at present, an authority so recent and so satisfactory as Mr. Mac Farlane is a greater piece of good fortune than it would have been reasonable to expect."
 In 3 vols. post 8vo.

4. The Collegians.
 "This is the most powerfully written tale we have for some time met with."
 "The stern imbecility of the heart-broken gentleman may be compared in effect, and in touching beauty, to that most beautiful and imposing scene in the Antiquary,—the Fisherman's Lamentation over his Son. Can praise go higher?"
 In 12mo. 6s. boards, the 2d edition of

SERMONS ON POINTS OF DOCTRINE AND RULES OF DUTY.
 By the Rev. R. PARKINSON, M.A.

The Elements of the Arts and Sciences, and Useful Knowledge.
 Published by Whittaker, Treacher, and Co.; Ave Maria Lane, London; and sold by Waugh and Innes, Edinburgh; and every Bookseller in the United Kingdom, price 6d. each,
PINNOCK'S CATECHISMS OF THE ARTS and SCIENCES.

These publications are universally acknowledged to be the most comprehensive treatises on every branch of knowledge that can possibly be contained within their limits, each consisting of not less than seventy-two pages. The style in which they are written is at once clear and simple, conveying instruction to the youthful mind in a manner unobtainable by the use of more elaborate and comprehensive Works. In short, while they fix on the mind the leading facts in history, and the fundamental principles of science, the memory is relieved from the burden of retaining a mass of minutiae, with which larger books necessarily abound.

The extensive sale of these works constantly demanding fresh editions, enables the Publishers to avail themselves of all new discoveries and improvements in every department of the Arts and Sciences.

They consist of separate Catechisms on the following subjects:

Agriculture	Electricity	Latin Grammar
Algebra, 2 Parts	English Grammar	Logic
Anatomy	Entomology	Mechanics
Ancient Geography	Evidences of Christianity	Medicine
Ancient History	First Principles of French Grammar	Mental Philosophy
Arithmetic	French Grammar	Meteorology
Astronomy	General Knowledge	Modern History
Bible and Gospel	Geography	Morality
Biography	Geology	Music
British Biography	German Grammar	Natural History
Do. Geography, viz.	Greek Grammar	Ornithology
1. Pt. 1. England & Wales	Hebrew Grammar	Painting in Oil
2. Ireland	Heraldry	Perspective
3. Scotland	History of England	Poetry
4. Colonies in Europe & America	History of Scotland	Religion
5. Colonies in Africa, Asia, &c.	History of France	Religious Denominations
6. British Law	History of Rome	Rhetoric
7. Chemistry	History of Greece	Sacred Geography
8. Chronology	History of America, 2 Parts	Scripture History
9. Classical Biography	History of the Jews	Spanish Grammar
10. Conchology	Horticulture	Trade & Commerce
11. Drawing	Ichthyology	Universal History
12. Duty to Parents	Italian Grammar	Use of the Globes, 2 Parts, Terrestrial and Celestial
	Land Surveying	

The Series, complete, forms a perfect Juvenile Cyclopaedia, in 16 vols. neatly bound and lettered, price 4l. 4s.

The following may be had, with an explanatory Map to each, price 1s.
Modern Geography, Ancient Geography, Sacred Geography, Bible History, History of England.

For the use of Young Students in the French Language, the following have been translated by M. Delavoye.—**History of England, Geography, Bible and Gospel History.** Price 1s. each.

Also may be had, in Parts, 1s. each,
Pinnock's County Histories; or, the History and Topography of England and Wales. In Parts, 1s. each. Each County is published separately, and is therefore complete in itself, containing a compendious and accurate account of its history and topography, its antiquities, natural and artificial curiosities, local privileges, commerce, manufactures, &c. Comprising, also, the Biography of its most eminent Persons, and every local information to be met with in larger statistical works, and embellished by a neat and correct Travelling Map.

These Catechisms are well adapted to refresh the memory; and there is no one proud of his native county, but must feel a secret pleasure that it treasures, beauties, and interests, are so so ably and so familiarly delineated, and brought within the reach of the humblest individuals.

Pinnock's County Histories, in 6 vols. neatly half-bound and lettered, 2l. 12s. 6d.

In 18mo. a new edition, revised, to which is added a Chapter on the Modern History of Greece, price 3s. 6d. bound,
THE HISTORY OF GREECE.

No. 705.—AMERICAN EDITION.

SATURDAY, JULY 24, 1830.

REVIEW OF NEW BOOKS.

Lord King's Life of Locke. Second edition. 8vo. London, 1830. Colburn and Bentley.

HAVING received an early copy of this new edition of a work which our former estimate hailed as one of sterling value, we have great pleasure in affording a notice to an addendum which now enriches it, and to which the public will attach considerable importance. It is entitled, "Notes of Domestic and Foreign Affairs, during the last years of the reign of George I. and the early part of the reign of George II." The preface thus states the character of these Notes.

"After the trial of the Earl of Macclesfield, Sir Peter King, lord chief-justice of the Common Pleas, was made lord chancellor, and held the seals from 1725 to 1733, during which period he noted down in short-hand the principal subjects which occupied the attention of the administration of Sir Robert Walpole. It will be seen, however, that these memoranda are very much broken and discontinued after 1730, in consequence, probably, of the declining health of the writer. Abundant proof will be found in the following pages of the disproportionate importance attached to German politics during the reigns of the two first princes of the House of Brunswick, who were more interested in the welfare of their electorate, and in making some petty addition to their German territories, than in that of Great Britain, which they neither valued nor understood. Many of the questions stirred up by the restless activity of the Queen of Spain and the projects of the emperor, for establishing a great trading company at Ostend, to the detriment of English commerce in the East and West, perplexing as they may have been to the ministers of that day, have now lost the interest that formerly belonged to them; but as they may serve to explain some parts of our history, they are printed verbatim from the short-hand memoranda. There are some curious anecdotes of George II. and Queen Caroline, and a remarkable proof is afforded of their early hatred to their eldest son Frederick, afterwards Prince of Wales, in the plan which they had formed for disinheriting him in England. The project, however, was defeated, by the equally inimical feelings of the reigning king, George I., towards his own immediate successor, if not by his sense of right and justice. Wherever Walpole is mentioned, we may observe the good sense and discretion which distinguished him among the statesmen of his own times. He is, indeed, eminently distinguished above the statesmen of almost every age, by his love of peace—the first and greatest of all virtues in a minister."

The proof of the early hatred of Prince Frederick is afforded by a confidential conversation, July 24, 1725, in which, among other remarkable facts, Sir R. Walpole told the chancellor, while on a visit to him at his house at Ockham, "that pending the design in France of sending back the young queen

to Spain, there had been a negotiation between the princess and Count Broglio, the French ambassador, by the intervention of the late Lady Darlington, for Princess Ann to be given in marriage to the French king, and that the French court expected it as a thing sure; and for that reason, at the same time that the ambassador notified the resolution of sending the young queen back, he desired of the king his grand-daughter for his master, but that the king absolutely refused it. Another negotiation had lately been on foot in relation to the two young princes, Frederick* and William.† The prince‡ and his wife|| were for excluding Prince Frederick from the throne of England; but that after the king and prince, he should be elector of Hanover, and Prince William, king of Great Britain; but that the king said it was unjust to do it without Prince Frederick's consent, who was now of age to judge for himself; and so this matter now stood. But that Sir Robert Walpole had told the king, that if he did not in his life-time bring over Prince Frederick, he would never set his foot on English ground; so that he did not know whether the king, when he returned from Hanover, would not bring that prince with him." The king was then on a journey to Hanover.

The following is a very remarkable piece of political reformation, relating to the treaty between the emperor and Spain; to counterbalance which, the alliance was entered into by England, France, and Russia.

"June 20th (1726).—The Duke of Newcastle communicated to me the information given by Mr. Keene, the 15th instant, to the duke, of the discoveries made to Mr. Stanhope in Spain by the Duke of Ripperda. After the Duke of Ripperda's disgrace he sheltered himself in Mr. Stanhope's house, and whilst there, made such discoveries to Mr. Stanhope, that he did not think fit to send in writing, lest they should fall into the hands of those who might make an ill use of them, therefore sent Mr. Keene to acquaint the Duke of Newcastle with them by word of mouth, that so he might lay them before the king. The account that Mr. Keene gave was, that Mr. Stanhope having pressed the Duke of Ripperda to inform him of the schemes that had been projected or agreed to by the Emperor and King of Spain, either with regard to the state of Europe in general, or to his majesty's affairs in particular, the duke began with the secret treaty of Vienna, consisting of five articles, and three separate ones, the substance of which he dictated to Mr. Stanhope, who took them down in writing with his own hand, and are as follows:—Art. 1. Confirms and ratifies all preceding treaties made

* "Afterwards Frederick Prince of Wales.

† "Afterwards Duke of Cumberland. This is a very curious proof of the early hatred of George the Second and Queen Caroline to Frederick Prince of Wales. It would have been fortunate if the separation of Hanover from England had taken place then or at any time, by fair means, or by any means."

‡ "The then Prince of Wales, afterwards George the Second.

|| "The Princess of Wales, afterwards Queen Caroline.

between their imperial and catholic majesties. 2. The emperor gives the eldest archduchess in marriage to the infant Don Carlos. 3. The second archduchess is given to the infant Don Philip. 4. The Emperor and King of Spain enter into reciprocal engagements to begin a war for reconquering the duchy of Burgundy, Franche Comte, Alsace, and all the French conquests in Flanders and encroachments on Lorraine, Navarre, Roussillon, Petite Sardaigne, which are to be divided after the following manner: Burgundy, Franche Comte, Alsace, and all that formerly belonged to the house of Austria, is to be settled upon Don Carlos, and looked upon as the Austrian patrimony: Lorraine is to be restored to its duke; and Navarre, Roussillon, and la Petite Sardaigne, to be reunited to the Spanish monarchy. 5. The Emperor and King of Spain do mutually oblige themselves and posterity, never to give an archduchess or infanta in marriage to the house of Bourbon in France. 1. Separate article.—That in case the present King of France should die without issue to inherit that crown, the infant Don Philip is to be king of France. 2. The Emperor and King of Spain do solemnly engage to assist the Pretender with their forces, in order to the putting him in possession of the throne of Great Britain. 3. Is a reciprocal engagement between the Emperor and King of Spain, utterly to extirpate the Protestant religion, and not to lay down their arms till this design be fully and effectually executed. None of the King of Spain's ministers, besides himself, knew this treaty; and that it had not been communicated to any person whatsoever, except the emperor, the King and Queen of Spain, and the ministers who signed it. His Catholic majesty was so earnest for the extirpation of the Protestant religion, that in the several letters that had passed directly between the King of Spain and the emperor upon this subject, the king proposed, in case of necessity, to see the domains of his throne put up *grandezas* to the highest bidder, and dispose of all the employments for life in the Indies to the best purchaser, for promoting this scheme; and in one of his own letters he makes use of these extraordinary expressions: *Je vendrai ma me chemise.*"

At the present period it will be interesting to readers to have the particulars of an earlier succession to the crown in the reigning house, on the demise of George I.

"Wednesday, June 14th, 1727.—About five in the evening I had a letter from Sir R. Walpole, informing me that the king was dead, and desiring me to meet him immediately at the Duke of Devonshire's. I went there immediately, and found that Sir R. Walpole, on receipt of the news from Lord Townshend, had instantly gone to Richmond, and acquainted the prince with it, and that thereupon the prince had resolved to be in town as fast as he could that evening. In the mean time we prepared, by the attorney and solicitor-general, the draft for proclaiming the king, and set-

ted the other things necessary to be done. The king, in the mean time, came to town, and sent us word that he was ready, whenever we were ready to wait on him. Accordingly, we who were at the Duke of Devonshire's, except the duke himself, who had the gout, went to Leicester House, and there being joined by several others of the nobility, we sent in to the king to desire an audience: and although the archbishop was present, yet I made a short speech to the king, according to agreement, setting out the great sorrow we were under by the unexpected death of the late king, and that nothing could relieve or mitigate it, but the certain prospect of happiness under his future administration; and that being now become our liege lord, we desired leave to withdraw into the council-chamber, to draw up a form of a proclamation for proclaiming him, and to sign it as usual; which being granted, we retired into the council-chamber, and there the form, which we had before agreed upon, was produced, engrossed, and thereon all the lords of the council then present first signed it. Then the doors were opened, and the peers in the outer room were desired to walk in and sign it, which they did; then it was delivered to the gentlemen in the outer room to sign as many as they pleased. And after it had been some time out, the lords of the council sent for the parchment, which being returned, secret intimation was given to the king that the council were ready to receive him. Whereon he immediately came in, and seating himself in the royal chair, he there read the declaration, that was printed at the desire of the lords of the council: it had been prepared at the Duke of Devonshire's, by Sir R. Walpole and the speaker. After that, orders were given for the proclaiming of the king the next morning at ten o'clock, and several other orders of course were made, which are to be seen in the council-book, particularly one for proroguing the parliament, being now, by reason of the king's demise, immediately to meet.—Thursday, 15th. A little after ten, I came to Leicester House, and the heralds and all being ready, about eleven, the Archbishop of Canterbury, myself, and other lords, went into the yard before Leicester House, and there the heralds proclaimed the king, we being there on foot uncovered. As soon as that was done, we went into our respective coaches, and in the street before Leicester House the king was again proclaimed. From thence we went and proclaimed him at Charing Cross, Temple Bar, the corner of Wood Street, and the Royal Exchange.

On the king's coming to the throne, he ordered Sir R. Walpole and Sir S. Compton to confer together about his affairs, and let him know what they thought fit to be done for his service from time to time. Sir R. Walpole seemed so sensible that he should be laid aside, that he was very irresolute what to do, whether to retire into the House of Lords and give up all business, or whether to continue. But the king and the speaker persuading him to continue, he went on, and undertook what the king expected from him, as to the civil list and the queen's jointure, which he forwarded in parliament. During which time, by his constant application to the king by himself in the mornings, when the speaker, by reason of the sitting of the House of Commons, was absent, he so worked upon the king, that he not only established himself in favour with him, but prevented the cashiering of many others, who otherwise would have been put out. The speaker for some time came constantly to the king every afternoon,

and had secret conferences with him; but in about three weeks' time, he saw his credit diminish, and so left off the constancy of his attendance. The Tories and others, who expected great changes and alterations, finding things not to answer their expectations, began to retire about the end of the short session of parliament that was held for settling the civil list. The king, when he came to the throne, had formed a system both of men and things, and to make alterations in several offices, as to their power, and particularly as to mine. About July 8th, he told me that he expected to nominate to all benefices and prebendaries that the chancellor usually nominated to. I told him, with great submission, that this was a right belonging to the office, annexed to it by act of parliament and immemorial usage, and I hoped he would not put things out of their ancient course. He told me my Lord Cowper* told him, that in the latter part of his chancellorship, in the queen's time, he laid before the queen a list of all persons whom he recommended to benefices, that she might be satisfied they were good churchmen. I did not give up this point, but directly desired him to consider it; and afterwards, at another time, he told me that I should go on as usual.—Sunday, July 16th. I then saw him again: he seemed now very pleasant, and I gave him a list of all the judges, both in England and Wales, king's sergeants, and council, and other subordinate officers in the law, in his invariable nomination, and told him, that as to those which were not judges in England, they were many of them parliament men, and some now stood again. So he ordered me to make out *fiats* for such of them as were like to be parliament men. He also told me, now that he had heard that I had acted prudently in his father's time, as to the commissions of the peace, that his pleasure was, that I should put into the commission of the peace all gentlemen of rank and quality in the several counties, unless they were in direct opposition to his government; but still keep a majority of those who were known to be most firmly in his interest, and he would have me declare the former part as his sentiment. • • November 24. Sir R. Walpole took occasion to tell me of the great credit he had with the king, and that it was principally by the means of the queen, who was the most able woman to govern in the world. However, he wished now he had left off when the king came to the throne; for he looked upon himself to be in the worst situation of any man in England; that that which engaged him to go on, was seeing every one willing to settle a large civil list on the king. He went with the others, and that the civil list now given exceeded the civil list given to his father, and all the additions made to it; so that this civil list, which was given with unanimity, was more than the late king ever had, and so was a justification of

* Lord Cowper's diary, found among Lord King's papers at Ockham, confirms George the Second's account of the conversation.

“Extract from Lord Cowper's Diary.

“November 13th, 1705.—I had the queen's leave to bestow my livings of 40*l.* and under without consulting her.

“June 25th, 1706.—At cabinet. Before it begun, I had discourse with the archbishop about disposing of the livings in my gift, and my having promised the queen to present as she directed, in all the valuable ones; he said he feared it would be under a worse management than under the late keeper's servants, by the impertunity of the women and other hangers-on at court, and promised to endeavour to get that matter into a proper method.”

“These impertunate women and other hangers-on at court, were probably the first and loudest to cry, The church is in danger! on every occasion that suited their interest or secured their patronage: and they thought the best security of the church was to be found in the worst distribution of the richest benefices in that church.”

his conduct as to that matter in the late reign: that he was now struck at by a great number of people. All those who had hopes on the king's coming to the throne, seeing themselves disappointed, looked upon him as the cause. All the discontented Whigs, and Carteret, Roxburgh, Berkeley, Bolingbroke, the Speaker, Compton, and Pulteney, were entered into a formal confederacy against him; and if he could once retire, he would never meddle by way of opposition, but would comply with the government in every thing.”

With these specimens of a diary which we may well include among the valuable historical lights of this genuine description, we for the present conclude; and when the work to which it forms so interesting an addition is published, (we trust next week), we shall feel ourselves more at liberty to extend our extracts.

The Journal of the Heart. Edited by the Authoress of “Flirtation.” 8vo. pp. 323. London, 1830. Colburn and Bentley.

THIS is a most charming and feminine volume—one delightful for a woman to read, and for a woman to have written. Elegant language, kind and gentle thoughts, a sweet and serious tone of religious feeling, run through every page; and any extract must do very scanty justice to the merit of the whole. The following family sketch is quite from real life.

“The family consisted of a mother and six children, five of them grown up, and one not yet arrived at that state of felicity. The eldest, Mrs. Davies, left school at seventeen, and happened immediately to attract the fancy of a yellow, sickly, Indian judge, who was come home on a three weeks' prowl in search of a wife. None of her friends liked the marriage, but, nevertheless, she took him for ‘better for worse,’ trusting to the latter proving impossible, and sailed with him for India. Ever since this event, fashion has pronounced her ‘the flower of the flock,’ and will not allow that either of her sisters can play or sing like her, or look so pretty, or make themselves so agreeable, or, in short, be at all compared to Mrs. Davies. No wonder, for neither of them are married! and is not marriage the infallible criterion of a woman's character all the world over, and that which is proposed as the measure of her excellence? Certainly in this the testimony of the world in general must be right; and fashion, for once, speaks in the language of wisdom and experience; for when was it ever heard that a foolish, an ugly, or an ill-tempered woman was married? or that one handsome, or amiable, or good, remained an old maid? Captain Evelyn, the eldest son, was in reality as well known to the antipodes as to us, being in the army and abroad; but old Lord Morley had once seen him for two days, and declared he was a very fine young man, so all the neighbourhood echoed that John Evelyn was an uncommonly fine young man, very handsome, and as brave an officer as ever drew a sword; and thus his character has every chance of remaining *intact*, unless he has the impudence to destroy the dream by coming to dwell before our waking eyes. The other son, William, was at Oxford; he was intended for the church; had been more in the neighbourhood, and therefore was known a little better, but not much, which occasioned him to have a character of a mixed nature. He was said to have done divers very wrong things—he had stayed out on Saturday-night till the beginning of Sunday morning, and he had been two or three times inebriated. Moreover, report added, that he had frightened his

mother out of her wits, for fear he should be fashionable; and his sisters for fear he should not; some of his friends, lest he should be a missionary, and others, lest he should be a confirmed rake; but those persons who were inclined to like him, laid all the fault of these his aberrations, to his guardians, and pitied him, poor creature! and only thought him the more interesting, whilst others said it was entirely owing to his own wild and thoughtless disposition, that he was so ill spoken of. Arthur was but eight years old, and just placed at school; yet we heard more of him, and wished more to see him, than any of the rest of the family; for he was said to be an extraordinary child; the delight of his mother's heart, and the unwearied theme of her admiration and praise: and one of the worst traits of the Miss Evelyns, was their seeming to care so little about this delightful boy. He did not know his letters at four years old, because Mrs. Evelyn considered the brain as a sort of vegetable, and therefore thought that, like other vegetables, it would put forth the most fruitful and most vigorous shoots, if left to itself; besides which, she had been told by a learned physician, that his temperament was hot, and that if (to use another metaphor) she taught his 'young ideas how to shoot,' before nature had given them strength to bear, they would be firing off, to right and left, at all hazards, and drive either herself or her child into a brain fever. But the fact of Arthur's not knowing how to read till he was seven, only made his precocity of intellect the more remarkable. He listened most attentively whenever his mother read the Scriptures, and found out, from them, that Moses was taken to the hill by the Bristol carrier. Moreover, he had seen many little lions, in the shape of poodle-dogs, about Bath, the first time he was taken to that town, and had looked at them, and passed them without a sign of fear. But his grand feat was discovering the day of judgment, and desiring his mother to prepare for it, as it would take place on the morrow. He had heard her read that before that day, the stars would fall from heaven, and the moon would be turned into blood: and when he was going to bed at night, he had seen the full-moon rise slowly and magnificently, a dark and lurid red, and some of the stars falling (as it is called) from one part of the sky to another. At the time of our visit, only Mrs. Evelyn and her two daughters were at home—she, in the opinion of every one, was devoted to her duties, and a charming woman; and having made a confidant of my mother, we knew particularly about her. Poor woman! it was from the best of all authorities,—from her own mouth,—we learned how she suffered from these detestable girls. Where she liked to live, they hated to reside; and where she hated to sojourn, they liked to abide; she had taken Ashgrove entirely to please them, and from a hope that they would mix much with the society near them, and find it suit their wishes. Ellen Evelyn was a stupid, conceited, evil-speaking girl; and her sister, besides excelling her in the two last-mentioned particulars, was satirical—*bas bleu*—and all that was horrible. 'We shall have a woful visit of it.'

The paper whence this is extracted is called "prejudice," and the ensuing remarks in it, upon the subject of taking up hearsay and hasty opinions, are admirably set forth. An "owre true" tale is interestingly told (it seems to be by a different hand); and, altogether, we most cordially recommend this *Journal of the Heart*, though we are unable to do it justice by

any selection of its beauties, which are too intimately interwoven with each other to admit of separation. The volume is adorned by five very pretty plates.

An Account of the Great Floods of August 1829, in the Province of Moray, and adjoining Districts. By Sir Thomas Dick Lauder, Bart., of Fountainhall, F.R.S.E. 8vo. pp. 431. Edinburgh, 1830, Adam Black; London, Longman and Co.; Elgin, Forsyth and Young.

It must be confessed, that when we lifted this well-sized volume, though we could not expect a very dry narrative, either from the nature of the subject, or from the Laird of (here most appropriate) *Fountain-hall*, we could not help prejudging it as a production of far too great length for the event which it undertook to describe. Local details,—how one burn swelled, and another overflowed its banks; how a river raged, and a bridge was swept away; how the poor dwellers on the lowlands were forced to flee, and how their goods and chattels were destroyed by the merciless waters,—seemed to us, *à priori*, a sufficient theme, for some weeks, in a county newspaper, or a pamphlet at most; but a stout octavo—Neptune preserve us! thought we, from such a flood (not a rivulet) of text, and without any dishonest book-making breadth of margin! For (we went on considering) if there had been—(and the Lauders are an old family, whose ancestor came into Scotland with Malcolm Canmore)—if there had been any Sir Thomas Dick Lauder, Bart. in the time of Noah, or even of Deucalion, (*unde* Dick or Duck might very readily be derived by an ingenious etymologist), what famous long histories we might have had of either the sacred or the pagan deluge! At this rate, in the proportion of one volume octavo for Moray, we must have had, at least, ten thousand folios of papyrus for the old Patri-ark, and five thousand for the son of Prometheus. However, it was our duty to dip into Sir Thomas's "Account;" and who can guess our surprise and pleasure when we discovered, that out of so unpromising a theme he had contrived to make a book, not of merely ordinary, but of uncommon interest—a book which Scotsmen, especially, in every quarter of the world, will read with national and homefelt pleasure? It is true that the worthy baronet goes into many small details; but even in these there is a truth and freshness which remind us more of the fascinations of *Robinson Crusoe* than of any other work with which we are acquainted; and, generally speaking, there is a graphic spirit in the whole of this narrative which makes you not only a spectator of all the perilous incidents which it relates, and a hearer of the remarks of the people, whether sufferers or saviours, but absolutely an actor in the busy and affecting catastrophe. The book is one of the most complete pictures of Highland scenery and manners which we have ever read; and so far from being tired with its minuteness, in our opinion the omission of any one little particular would be an injury and a loss.

Indeed, the production is altogether peculiar—a novelty in manner and in matter—a literary curiosity. The alternation of characteristic traits, bordering on humour, with simple unadorned relations from the mouths of the parties where dangers were appalling and lives were sacrificed, adds much to the feeling with which these pages must be perused; and another striking variety is communicated to them by the recollection of ancient historical events, of superstitions and legends, of antiquities and

celebrated places, of raids and murders, and of spots, however marked by tradition, which are brought under notice by this strange visitation, where "the waters prevailed."

Such being our judgment upon this work, it may be but candid to say, that we cannot be sure of its possessing the same charm for every reader. The difference of taste may cause it to seem somewhat prolix and less interesting to others; but we are convinced that the great majority will agree with us in thinking it a very singular and captivating performance. It is finely embellished by two maps of the rivers chiefly augmented by the floods; and by sixty-five picturesque plates, illustrative of the state of the country, its inhabitants, their houses, ruins, bridges, inns, &c. &c. &c., from the clever burin of W. H. Lizars.

It is out of our power to afford room for the copious extracts we should otherwise be tempted to make, for the purpose of justifying our criticism; but we shall do our best, by selecting as great a diversity as we can, to do honour to the author, and to gratify our readers.

Among the previous indications or warnings of the flood were many electrical phenomena, aurora-borealis, waterspouts, &c. On the 12th of July, one of the latter occurred at Keenloch-Luichart, in Ross-shire; and the author tells us: "This waterspout did not extend beyond two miles on each side of the village—a circumstance that led these simple people to consider their calamity as a visitation of Providence for their landlord's vote in parliament in favour of Catholic emancipation."

So much for Highland simplicity! It was in August (3d and 4th) that the waters came down in torrents from the hills, and that the rain and tempest raged with incessant fury. On the Findhorn at Randolph's bridge (the Randolph of Douglas, in which tragedy the effects of the swollen river are so poetically described), the flood rose to the height of *fifty feet*; and Sir Thomas says:—

"Nothing can convey an idea of the violence and velocity of the water that shot away from the whirling sea above the cliffs. It was scarcely possible to follow with the eye the trees and wreck that floated like straws on its surface. The force was as much more than that of a raging ocean as gunpowder ignited within the confined tube of a cannon is more terribly powerful than the same material when suffered to explode on the open ground. I was particularly struck here with an example of the fact, that trees exposed to occasional struggles with torrents, instinctively prepare themselves to resist them. I observed one tall ash, growing a little way above Randolph's Bridge, covered to at least four-fifths of its height. It was broken over at last, but, having been taught by experience to resist the action of water, it was not rent away, whilst all those which had never been visited by floods before were torn up like weeds. Before I left this spot, I saw one of the under-gardeners wade into the water, as it had begun to ebb on the haugh, and, with his umbrella, drive ashore and capture a *fine salmon*, at an elevation of *fifty feet above the ordinary level of the Findhorn.*"

Among the incidents, where the inhabitants were rescued by the bravery of their neighbours from houses surrounded by the waters, and momentarily yielding to their force—we find the following:—

"After landing the Cumins, the next house of the hamlet the boat went to was that of Widow Speediman, an old bedrid woman, with whom resided her niece, Isabella Morrison, an elderly person. One of the walls of this house

was gone, and the roof was only kept up by resting on a wooden-boarded bed. Here those in the boat beheld a most harrowing spectacle. Up to the neck in water sat the niece, scarcely sensible, and supporting what was now the dead body of her aunt, with the livid and distorted countenance of the old woman raised up before her. The story will be best told in her own words, though at the risk of some prolixity. 'It was about eight o'clock, an' my aunty in her bed, fan I says till her, Aunty, the waters are cumin' about's; an' I had hardly spoken fan they wur at my back. 'Gang to my kist,' says she to me, 'and tak oot some things that are to be pit aboot me fan I'm dead.' I had hardly tukken oot the claes fan the kist was floated bodalie through the hoos. 'Gie me a haud o' your hand, Bell,' says my aunty, 'an' I'll try an' help ye into the bed.' 'Ye're nae fit to help me,' says I, 'I'll tak a haud o' the stoop o' the bed.' And sae I gat in. I think we war strugglin' i' the bed for aboot twa hours; and the water floatit up the cauf-bed, and she lyin' on't. Syne I tried to keep her up, an' I took a haud o' her shift to try to keep her life in. But the waters war ay growin. At last I got her up wi' ae haun to my breast, and hed a haud o' the post o' the bed wi' the ither. An' there wuz ae jaw o' the water that cam' up to my breast, an' anither jaw cam' and fuppit my aunty oot o' my arms. 'Oh! Bell, I'm gane!' says she; and the waters jist chokit her. It wuz a dreadfu' sight to see her! That wuz the fight and struggle she had for life! Willin' was she to save that! An' her haun, your honour! hoo she fought wi' that haun! It wad hae drawn tears o' pity frae a heathen. An' then I had a dreadfu' spekalation for my ain life, an' I canna tell the conseederable moments I was doon in the water, an' my aunty abeen me. The strength o' the waters at last brak the bed, an' I got to the tap o't; an' a dreadfu' jaw knockit my head to the bed-post; an' I wuz for some time oot o' my senses. It was surely the death-grip I had o' the post; an' surely it wuz the Lord that waukened me, for the dead sleep had cum'd on me, an' I wud hae faun, and been droont in the waters! After I cam' to mysel' a wee, I felt something at my fit, an' I says to mysel', this is my aunty's head that the waters hae torn aff! I felt wi' my haun, an' tuk haud o' wi' fear an' trumlin'; and thankfu' was I fan I found it to be naething but a droon't hen! Awel, I climbed up, an' got a haud o' the cupple, an' my fit on the tap o' the wa', an' susteened mysel' that way frae maybe aboot half-past ten that night till three next afternoon. I suppose it wuz twelve o'clock o' the day before I saw my aunty again, after we had gane doon thegither, an' the dreadfu' ocean aboot huz, just like a roarin' sea. She was left on a bank o' sand, leanin' on her side, and her mouth was fou o' san'. Fouk wondered I didna dee o' cauld an' hunger; but baith cauld an' hunger ware unkent by me, wi' the terrification I wuz in wi' the roarin' o' the waters aboot me, Lord save me! The corpse of the poor old woman Speediman was put into a cart, together with her niece, Bell, whose state of exhaustion was so great, that it was difficult to tell which was the living, and which the dead, body. . . .

"At a place called Fosse, immediately above the Hill of Birnie, there is an ancient course of the Lossie, by which it must have once run down through a totally different line of country from that which it now waters. Its modern level is considerably below the mouth of this. But, in the fourteenth century, Alex. Barr,

bishop of Moray, had a plan for restoring it to this channel, in order to relieve the valuable lands of the church from its troublesome inroads. Birnie was the first episcopal seat of the bishopric of Moray. The sanctity of the old church is still so great, that it is common to send from great distances to ask the prayers of its congregation for people in extremity. The popular saying is, 'If a man be ill, let him be prayed for in the kirk of Birnie, which will either end him or mend him.' There is a beautiful Saxon arch in the interior, and a very ancient stone font. But the most curious piece of antiquity is the Ronnell bell of Birnie, said to have been brought from Rome by the first bishop. It is about 18 inches high, by 6 inches one way, and 4 inches the other, at the mouth. Its shape angular, and joined at the sides with nails. It has a handle at the top, and no tongue remaining. Its metal seems to be bronze; but the popular tradition is, that there is a great deal of silver in it. I think I have seen bells resembling it, used in religious processions in Italy."

Speaking of the river Dulnan, we have a similar illustration (not of antiquities, but) of an old Cateeran affair.

"Near the hamlet of Carr, on the right bank, a slate-rock has been laid bare, which, if properly wrought, might turn out to some account. About 150 yards to the westward of the houses, there is a small patch of land surrounded by a few stunted birches, called Croft-na-croich, or the Gallows Croft, having the following story attached to it:—Near the end of the seventeenth century, there lived a certain notorious freebooter, a native of Lochaber, of the name of Cameron, but who was better known by his cognomen of Padrig Mac-an-Ts'agairt, Peter the Priest's son. Numerous were the creachs, or robberies of cattle on the great scale, driven by him from Strathspey. But he did not confine his depredations to that country; for, some time between the years 1690 and 1695, he made a clean sweep of the cattle from the rich pastures of the Aird, the territory of the Frasers. That he might put his pursuers on a wrong scent, he did not go directly towards Lochaber, but, crossing the river Ness at Lochend, he struck over the mountains of Strathnairn and Strathdearn, and ultimately encamped behind a hill above Duthel, called, from a copious spring on its summit, Cairn-an-Sh'uaran, or the Well Hill. But, notwithstanding all his precautions, the celebrated Simon, Lord Lovat, then chief of the Frasers, discovered his track, and despatched a special messenger to his father-in-law, Sir Ludovick Grant, of Grant, begging his aid in apprehending Mac-an-Ts'agairt and recovering the cattle. It so happened that there lived at this time on the laird of Grant's ground a man also called Cameron, surnamed Mugach-more, of great strength and undaunted courage: he had six sons, and a stepson, whom his wife, formerly a woman of light character, had before her marriage with Mugach; and as they were all brave, Sir Ludovick applied to them to undertake the recapture of the cattle. Sir Ludovick was not mistaken in his man. The Mugach no sooner received his orders than he armed himself and his little band and went in quest of the freebooter, whom he found in the act of cooking a dinner from part of the spoil. The Mugach called on Padrig and his men to surrender; and they, though numerous, dreading the well-known prowess of their adversary, fled to the opposite hills, their chief threatening bloody vengeance as he went. The Mugach drove the cattle to

a place of safety, and watched them there till their owners came to recover them. Padrig Mac-an-Ts'agairt did not utter his threats without the fullest intention of carrying them into effect. In the latter end of the following spring he visited Strathspey with a strong party, and waylaid the Mugach, as he and his sons were returning from working at a small patch of land he had on the brow of a hill, about half a mile above his house. Mac-an-Ts'agairt and his party concealed themselves in a thick covert of underwood, through which they knew that the Mugach and his sons must pass; but seeing their intended victims well armed, the cowardly assassins lay still in their hiding-place and allowed them to pass, with the intention of taking a more favourable opportunity for their purpose. That very night they surprised and murdered two of the sons, who, being married, lived in separate houses, at some distance from their father's; and having thus executed so much of their diabolical purpose, they surrounded the Mugach's cottage. No sooner was his dwelling attacked, than the brave Mugach, immediately guessing who the assailants were, made the best arrangements for defence that time and circumstances permitted. The door was the first point attempted; but it was strong, and he and his four sons placed themselves behind it, determined to do bloody execution the moment it should be forced. Whilst thus engaged, the Mugach was startled by a noise above the rafters, and, looking up, he perceived, in the obscurity, the figure of a man half through a hole in the wattled roof. Eager to despatch his foe as he entered, he sprang upon a table, plunged his sword into his body, and down fell—his stepson! whom he had ever loved and cherished as one of his own children. The youth had been cutting his way through the roof, with the intention of attacking Padrig from above, and so creating a diversion in favour of those who were defending the door. The brave young man lived no longer than to say, with a faint voice, 'Dear father, I fear you have killed me!' For a moment the Mugach stood petrified with horror and grief—but rage soon usurped the place of both. 'Let me open the door!' he cried, 'and revenge his death, by drenching my sword in the blood of the villain!' His sons clung around him to prevent what they conceived to be madness, and a strong struggle ensued between desperate bravery and filial duty; whilst the Mugach's wife stood gazing on the corpse of her first-born son in an agony of contending passions, being ignorant, from all she had witnessed, but that the young man's death had been wilfully wrought by her husband. 'Hast thou forgotten our former days of dalliance?' cried the wily Padrig, who saw the whole scene through a crevice in the door—'how often hast thou undone thy door to me when I came on an errand of love; and wilt thou not open it now to give me way to punish him who has but this moment so foully slain thy beloved son?' Ancient recollections and present affliction conspired to twist her to his purpose. The struggle and altercation between the Mugach and his sons still continued. A frenzy seized on the unhappy woman. She flew to the door—undid the bolt—and Padrig and his assassins rushed in. The infuriated Mugach no sooner beheld his enemy enter, than he sprang at him like a tiger, grasped him by the throat, and dashed him to the ground. Already was his vigorous sword-arm drawn back, and his broad claymores was about to find a passage to the traitor's heart, when his faithless wife, coming

behind him, threw over it a large canvass window sheet, and, before he could extricate the blade from the numerous folds, Padrig's weapon was reeking in the best heart's blood of the bravest highlander that Strathspey could boast of. His four sons, who had witnessed their mother's treachery, were paralysed. The unfortunate woman herself, too, stood stupefied and appalled: but she was quickly recalled to her senses by the active clash of the swords of Padrig and his men. 'Oh, my sons! my sons!' she cried—'spare my boys!' But the tempter needed her services no longer—she had done his work. She was spurned to the ground, and trampled under foot, by those who soon strewed the bloody floor around her with the lifeless corpses of her brave sons. Exulting in the full success of this expedition of vengeance, Mac-an-Ts'agairt beheaded the bodies, and piled the heads in a heap on an oblong hill, that runs parallel to the road, on the east side of Carr Bridge, from which it is called Tom-nan-Cean, the Hill of the Heads. Scarcely was he beyond the reach of danger, when his butchery was known at Castle Grant, and Sir Ludovick immediately offered a great reward for his apprehension; but Padrig, who had anticipated some such thing, fled to Ireland, where he remained for seven years. But the restlessness of the murderer is well known, and Padrig felt it in all its horrors. Leaving his Irish retreat, he returned to Lochaber. By a strange accident, a certain Mungo Grant of Muckrach having had his cattle and horses carried away by some thieves from that quarter, pursued them hot foot, recovered them, and was on his way returning with them, when, to his astonishment, he met Padrig Mac-an-Ts'agairt quite alone, in a narrow pass, on the borders of his native country. Mungo instantly seized and made a prisoner of him. But his progress with his beasts was tedious; and as he was entering Strathspey at Lag-na-caillich, about a mile to the westward of Aviemore, he espied twelve desperate men, who, taking advantage of his slow march, had crossed the hills to gain the pass before him, for the purpose of rescuing Padrig. But Mungo was not to be daunted. Seeing them occupying the road in his front, he grasped his prisoner with one hand, and brandishing his dirk with the other, he advanced in the midst of his people and animals, swearing potently, that the first motion at an attempt at rescue by any one of them, should be the signal for his dirk to drink the life's blood of Padrig Mac-an-Ts'agairt. They were so intimidated by his boldness, that they allowed him to pass without assault, and left their friend to his fate. Padrig was forthwith carried to Castle Grant. But the remembrance of the Mugach's murder had been by this time much obliterated by many events little less strange; and the laird, unwilling to be troubled with the matter, ordered Mungo and his prisoner away. Disappointed and mortified, Mungo and his party were returning with their felon-captive, discussing, as they went, what they had best do with him. 'A fine reward we have had for all our trouble!' said one. 'The laird may catch the next thief her's nanesel, for Donald!' said another. 'Let's turn him loose!' said a third. 'Ay, ay,' said a fourth, 'what for wud we be plaguing oursel's more wi' him!' 'Yes, yes! brave, generous men!' said Padrig Mac-an-Ts'agairt, roused by a sudden hope of life from the moody dream of the gallows-tree, in which he had been plunged, whilst he was courting his mournful muse to compose his own lament, that he might die with an effect striking

as all the events of his life had been; 'yes, brave men! free me from these bonds! it is unworthy of Strathspey-men,—it is unworthy of Grants to triumph over a fallen foe! Those whom I killed were no clansmen of thine, but recreant Camerons, who betrayed a Cameron! Let me go free, and that reward of which you have been disappointed shall be quadrupled for sparing my life!' Such words as these, operating on minds so much prepared to receive them favourably, had well nigh worked their purpose. But, 'No!' said Muckrach sternly, 'it shall never be said that a murderer escaped from my hands. Besides, it was just so that he fairly spake the Mugach's false wife. But did he spare her sons on that account? If ye let him go, my men, the fate of the Mugach may be ours; for what bravery can stand against treachery and assassination?' This opened an entirely new view of the question to Padrig's rude guards; and the result of the conference was, that they resolved to take him to Inverness, and to deliver him up to the sheriff. As they were pursuing their way up the south side of the river Dulnan, the hill of Tom-nan-cean appeared on that opposite to them. At sight of it, the whole circumstances of Padrig's atrocious deed came fresh into their minds. It seemed to cry on them for justice, and, with one impulse, they shouted out, 'Let him die on the spot where he did the bloody act!' Without a moment's farther delay, they resolved to execute their new resolution. But on their way across the plain, they happened to observe a large fir-tree, with a thick horizontal branch growing at right angles from the trunk, and of a sufficient height from the ground to suit their purpose; and doubting if they might find so convenient a gallows where they were going, they at once determined that here Padrig should finish his mortal career. The neighbouring birch thicket supplied them with materials for making a withe; and, whilst they were twisting it, Padrig burst forth in a flood of Gaelic verse, which his mind had been accumulating by the way. His song, and the twig rope that was to terminate his existence, were spun out and finished at the same moment, and he was instantly elevated to a height equally beyond his ambition and his hopes. No one would touch his body, so it hung swinging in the wind for some twelve months or more after his execution; and, much as he had been feared when alive, he was infinitely more a cause of terror now that he was a lifeless corpse. None dared to approach that part of the heath after it was dark; but in daylight people were bolder. The school-boys of Duthel, who, like the frogs in the fable, gradually began to have less and less apprehension for him, actually bragged one another on so far one day, that they ventured to pelt him with stones. A son of Delrachney, who happened to aim better than the rest, struck the birchen withe, by this time become rotten, severed it, and down came the wasted body with a terrible crash. As the cause of its descent was hardly perceptible to any of them, the terrified boys ran off, filled with the horrible belief that the much-dreaded Padrig was pursuing them. So impressed was poor young Delrachney with this idea, that, through terror and haste, he burst a blood-vessel, and died in two hours afterwards. Padrig's bones were buried about 100 yards to the north of the bridge of Carr; but, as if they were doomed never to have rest, the grave was cut through about 35 years ago, when the present Highland road was made; and they were reinterred immediately behind the inn garden. Should any idlers, who may

wander after dusk along the road leading by the base of the Tom-nan-cean, see strange sights cross his path, let him recall the story I have narrated, and it may furnish him with some explanation of what he beholds."

With this long extract we must for the present conclude; but we shall return to our author as soon again as possible.

ΘΟΥΚΤΑΙΔΗΣ. *The History of the Peloponnesian War, by Thucydides. The Text according to Bekker's Edition, with some alterations. Illustrated by Maps, taken entirely from actual Surveys. With Notes, chiefly historical and geographical, by T. Arnold, D.D., Head Master of Rugby School, &c. Vol. I. 8vo. Oxford, 1830. Parker.*

PERHAPS in no department of our literature has there been a more decided change for the better, within the last few years, than in the elementary class of school-books; and it is with great pleasure that we observe this change gradually extending itself to the higher classes and to the universities. We hail the appearance of this long-expected work, as the most decisive proof we have yet seen that this change will speedily become universal. The voice of reason has at length made itself heard, and henceforward the notes intended to assist the student in the study of the Classics will not be more difficult for him to construe or understand than the text of the author they are intended to illustrate. The appearance of a Greek classic with English notes, by a scholar of acknowledged eminence, who ranks indeed amongst the highest of his day, and this work printed in Oxford by the university printer, and published by the university bookseller, may well be said to form an era in the literature of our country. It is well known that the works published in this manner are considered to have received the indirect sanction of the authorities in the university, though not positively stamped with their fiat as published by the university, like those which were wont to be called the "Clarendon books." The Clarendon press no longer exists; but its legitimate successor, the university press, changed in name but not in nature, will, we trust, long continue its useful and honourable career. The distinction between a work printed at the university press or by the university printer, is too nice to be generally noticed or known out of Oxford; nor is it very important that it should be so, since Mr. Collingwood cannot print any thing without the permission of the vice-chancellor, and Mr. Parker is not very likely to publish any work of importance without previously consulting some of the leading delegates of the press. This indirect sanction is, therefore, sufficient for our purpose, and must be acknowledged as a chief point gained. Another circumstance which gives still greater force to the inference we have drawn, and importance to this publication, in our view, is the fact, which we "happen to know," that the greater part of the notes were first written in Latin and subsequently *rewritten* in English. As Dr. Arnold has long been celebrated amongst his friends for his remarkably elegant Latin, it must be acknowledged that this was a noble sacrifice of personal vanity to a strong feeling of duty, as rendering his work more conducive to public utility. He could well afford to make such a sacrifice, but perhaps few men could have done it. His reputation stands on too high ground to be shaken by any clamour that may be raised against him by that pedantry and bigotry which are generally only a cloak for ignorance. The immense fund of learning and research which he has brought

to bear on the illustration of his author, without attempting or thinking of any display of them, are a sufficient proof that his high character is not undeserved; and he, standing on the rock of common sense, may well despise any charge, if any is attempted, of being an innovator and a liberal.

It is difficult to give our readers any idea of a work of this nature: much that is invaluable in its proper place is necessarily unfit for extract; nor is the subject sufficiently interesting to the general body. The following extracts from the preface will suffice to shew the nature of the work, and give the author's reasons for adopting the change we have so heartily commended, and for which we think he is entitled to the thanks of the community.

"My own principal object has been to explain the historical and geographical difficulties of Thucydides, so as to enable a modern reader fully to understand his narrative, and to enter into the opinions and feelings of the times to which it refers. As a critical edition, the work now offered to the world has little pretension.

"It only remains that I should explain the reason of the Notes and Preface to this edition being written in English, when prescription has so long been in favour of the use of Latin. It seemed to me, that to continue at this time of day to write in Latin, were but to add one more to the numerous instances in which, by professing to tread closely in the steps of our ancestors, we in fact depart from them most widely, by persisting foolishly in what they began wisely. When the languages of modern Europe were no better than unformed dialects, and the inhabitants of neighbouring countries no more thought of learning them than we now think of acquiring the provincial patois of Lancashire or Somersetshire, it was very reasonable that literary men should neglect what were really so many local dialects, and should adopt in their writings what alone was their common language. Accordingly, not only editions of classical authors, but theology, history, law, philosophy, every thing, in short, except popular poetry, tales, and some few chronicles, were universally written in Latin. Now, however, when there is scarcely a language in Europe whose literature is so poor as that of Rome; when the knowledge of French, German, Italian, and English, forms so common a part of the acquirements of educated men in all these four countries; and when it would be ludicrous for a divine, a historian, or a philosopher, to publish his thoughts in any other than his native language, there can be no further reason why an Englishman, in editing a Greek writer, should have recourse to Latin; or why, in communicating between two nations, whose languages are both so rich and so flexible as those of Greece and England, we should call in the aid of an interpreter whose vocabulary is so meagre as that of the language of Rome. No cause but necessity would induce an active-minded man to submit to the constraint of writing in any other language than that in which he habitually speaks and thinks; and necessity can in this case no longer be pleaded, since the happy peace which we now enjoy has broken down the barriers between nation and nation; and has taught every civilised country of Europe to regard an ignorance of the language and literature of its neighbours as little less disgraceful than an ignorance of its own."

MR. GORDON'S MEMOIRS, &c.—concluded.
MR. GRAY, Mr. Perry's early co-editor in the *Chronicle*, was a school-fellow of Mr. Gordon's;

and the biographical sketches of him, of Perry, of Porson,* and of others, their contemporaries, are interesting.

Of Porson's marriage and sequent life the account is curious. "The circumstance of Mr. Porson's marriage with a sister of his friend Mr. Perry, a widow, is another proof of his eccentricity, as regards the mode of his deciding on this important step. The professor was not supposed to be likely to commit matrimony, and especially a marriage of inclination. One night, however, while he was smoking his pipe at the cider-cellar in Maiden Lane (his favourite haunt) with my brother, they had called for *second go*, when, addressing his companion, he said, 'Friend George, do you not think the widow L—— an agreeable sort of personage as times go?' throwing out a huge volume of smoke. An affirmative nod and a compliment to the lady was the reply. 'In that case you must meet me at St. Martin's in the Fields to-morrow morning at eight o'clock,' rejoined the other; and so saying, and finishing his *go*, he threw down his reckoning and retired. My brother, who knew his man well, though not a little astonished, determined to attend to the invitation; and at the hour fixed repaired to the church, where he found the professor and the fair widow attended by a female friend, with the parson and his clerk. The license being produced, the ceremony (a very short one) took place, when the parties separated, the bride and her friend retiring by one door, and Porson and his *man* by another. It appeared that the alliance which had just taken place, had been some time on the *tapis*, but the lady objected, without her brother's approbation; on this point, however, the *Greek* was immovable, and the widow, well knowing his temper, at length gave her consent to the clandestine step. My brother now urged him to declare his marriage to Mr. Perry, who he could not doubt would be speedily reconciled, though perhaps hurt, that he had not been consulted; but the professor would not listen to this advice, and they parted; my brother being determined that Mr. P. should not be kept in the dark, the more especially as he had been an accessory to the deed. In a few hours, however, the Benedick entered in his best paraphernalia, viz. his black satin nether garments and ruffled shirt, which he only wore on *solemn* occasions. 'Friend George,' said he, 'I shall for once take advice (which I seldom do, as you know), and hold out the olive-branch, provided you will accompany me to the 'Court of Lancaster': you are a good peace-maker.' They got into a hackney-coach, and found Mr. Perry at home. The bridegroom was presented, made a speech, and though his friend's *amour propre* was not a little *blessé*, a reconciliation soon took place, a few intimate friends were summoned 'on the spur of the occasion,' a handsome dinner was served, and an apartment was provided for the newly married couple. It caused no small speculation among the *Greeks* what could induce the professor to marry, and in so mysterious a manner. Poor Mrs. Porson did not live long to enjoy her new honours; within a year after the event her health began to decline, and before two had expired she was consigned to the grave. In her brother she had found a father for her children, whom he educated and provided for. She was a good-tempered and an amiable person, and the professor treated her with all the kindness of which he was capable. He continued to reside with Mr. Perry until her death, when he again re-

* It is mentioned that Mr. Scrope Davies, his intimate friend, is preparing a life of Porson for publication.

turned to his *kernel* in the Temple. His professorship did not produce him above 150*l.* a-year; he was too idle to continue the course of lectures which he had commenced on taking the chair, though with the most flattering prospects of advantage to the public and his own emolument; but he did not, it would appear, like a college life, and at the end of a couple of years he bade adieu to his *alma mater*, and returned to his customary habits, and the society of his friends in the metropolis. He had for many years been subject to severe attacks of spasmodic asthma, which frequently reduced him to the lowest state of debility. On these occasions he neither took medicines, nor consulted physicians, and he made no secret that he had a sovereign contempt for both. Starvation was his mode of treatment, but unfortunately, like all obstinate men, he carried his system too far. In a severe attack, which continued longer than usual, his bed-maker became alarmed, and offered him some light food, which his stomach rejected, debilitated by long fasting. It is supposed that he was himself alarmed at this symptom, for the same day he crawled towards the city; but whether his steps were directed was never known. Exhausted with this little exertion, he dropped on the pavement in Ludgate Hill, speechless, and with but small signs of life. He was carried to a neighbouring apothecary's shop, and a surgeon summoned to his assistance, who opened a vein, but scarcely any blood flowed. It was evident that the attack was apoplectic. Every usual remedy was resorted to, but with little good effect: he continued speechless. On examining his pockets, a note was found from his friend Doctor Raine, which identified the person of the invalid, and the abode of his friend, who, being apprised of his state, instantly flew to his assistance, and he was removed to his house; but the lamp of life was fast ebbing, for after continuing in a stupor for twenty-four hours, he expired, seemingly without pain or feeling. On a *post-mortem* examination, it was ascertained that his system of starvation had hastened his end; for having fasted so long, his stomach had entirely lost its tone, and could no longer perform its functions. It is melancholy to reflect that a man endowed with such extraordinary powers of mind, should have sacrificed his life to an obstinate whim, founded on no principle of common sense or sound reasoning."

To these characters succeed Pope the performer, Raymond, Romeo Coates, &c. &c.; but we have no room for their exhibition, and shall merely add a few anecdotes to this, of necessity, desultory notice.

When Mr. Addington was speaker, "Mr. Mackintosh, the provost of Inverness, came to London for the first time. One of his friends, on finding that he expressed a desire to hear a debate, advised him to write a note to the speaker, begging he might be admitted to sit under the gallery, 'which,' said the wag, 'you are entitled to do *ex officio*.' The note was written, and handed to the chair. The result was, that the worthy citizen, notwithstanding his high office, after being severely reprimanded for his impertinence, was ordered into the custody of the sergeant-at-arms. But an explanation took place; the provost protesting he had committed the offence from ignorance and bad advice, was discharged."

At Edinburgh, during the residence of the present King of France in Holyrood-house, "our government having granted a certain allowance to Monsieur, and the commander of the forces being desirous of doing him all possible honours, a weekly *levée* was got up, under

the auspices of Lord Adam Gordon, who, in defiance of his slender acquaintance with French, generally acted as master of the ceremonies. The mistakes which occurred at this modern court of Holyrood were sometimes not a little ludicrous. One gentleman, on presenting an officer of a Highland regiment (now a lord) in his full costume, said, 'Voilà, mon prince, Monsieur G., capitaine d'un régiment des Ecossais sauvages!' The *voilà* and the *sauvages* made his royal highness titter; and turning to General Drummond, he asked for an explanation, who replied, 'that *montagnard* and *sauvage* were synonymous.' On another occasion, Lord — was desirous of telling the duke that the adjutant-general kept a good table, and said, 'Monsieur le Général tient une bonne boutique!' which caused no small amusement.

"I had never seen Lord Kaimes, who was the great literary lion of his day. In manners he was quite a contrast to his brother of the bench, being plain, and blunt in speech, with a strong Scottish accent; while Monboddo was quite a courtier of the *ancien régime*, well-bred, and ceremonious. Of his bluntness in manner I have heard an anecdote, which it may not be amiss to introduce here. Every one knows that in the celebrated work on *man*, the author asserts that men originally had tails, but had worn them off by sitting on chairs! On one occasion, in Edinburgh, when Kaimes and Monboddo met to dine with a friend, a girl of six or seven years old, who was in the drawing-room, archly and slyly attached a fox's brush to Monboddo's skirt; and the ceremony of who should first proceed to the dining-room as usual produced some demur (Monboddo insisting that he could not possibly precede a senior lord), till Kaimes, spying the tricks which had been played on his friend, exclaimed, 'Gang in, man, and shaw's your tail!' pushing him forward. Of course the laugh was irresistible, but Monboddo could not enjoy it, as, through fear of giving him offence, he was not informed of the joke.

"When his majesty, the ex-King of Sweden, visited Basle in Switzerland some years ago, he dined at *tables d'hôte* and at *restaurateurs*, as his finances would permit; at last they were so low, that he could not afford to replace a pair of boots which were worn out, and he sent them to the cobbler to be soled. The son of Crispin thought that a king, though he might be poor, could always afford to pay better for mending boots than a commoner, and charged his majesty three times more than the job was worth. But Gustavus was not to be imposed on, and refused to pay so unreasonable a demand. The cobbler sued him, and was beat; he applied to a higher tribunal, who condemned him to an *amende* of a day's wages, and reduced the charge to the ordinary sum of soling a pair of boots. The king was highly gratified with the justice of this decision, and wrote to the judges expressing his satisfaction; at the same time he sent them the boots, entreating them to hang them over the tribunal, as a testimony of the justice of the laws of Switzerland. This anecdote I had from the Swedish minister."

Wine.—"Some of the Portugal wines of the vintage 1775, were not ripe until twenty years, when they became very fine. Mr. Mumm, a celebrated wine-merchant at Frankfort, told the writer that in general the wines of the Rhine were in their perfection within twenty years, and that they afterwards degenerated; at the same time confessing that it was not his interest to give such an opinion, as Englishmen preferred hock, rather on account

of its age than its quality. The vintage of 1811 was, at seven years old, preferable to any batch he had in his cellar, and bore a higher price in the market; its *bouquet* being particularly delicious. At Frankfort a wine-merchant demanded for hock of 1727 fifty-five guineas a dozen, and had found more than one amateur at the extravagant price.

"About fifteen years ago a dilapidated house, which had been upset by the earthquake of 1755, at Lisbon, being about to be rebuilt, a considerable number of bottles were discovered in the cellar; they were incrustated with small shells, the sea having had access to the cave. They were found to contain both white and red wine; though the corks had decayed, the incrustation had supplied their place, and the wine was perfectly entire, especially the calcavellos."

And here our medley ends. With somewhat of the garrulity of age, there is much to entertain, in the pages of Mr. Gordon; and they will be fastidious, who cannot forgive their imperfections, in compliment to their merits. The detestable phrase *talented* is of everlasting occurrence, and, together with the abuse of needless initial letters where names might just as well have been given, tends to disgrace the work; but, on the whole, we are thankful to it for a few hours' very tolerable amusement.

Pompeiana; or, Observations of the Topography, Edifices, and Ornaments of Pompeii. By Sir William Gell, F.R.S. F.S.A. &c. New Series, Part II. London, 1830. Jennings and Chaplin.

FROM the second Number of Sir Wm. Gell's tasteful and curious publication we extract the following account of the "Chalcidicum," the excavation of which, he observed in his first Number, took place soon after the publication of his former work, and laid open the only example of that species of edifice which has existed in modern times.

"Nearly opposite to the twelve gods is a fountain with steps, which, by two flights, lead to the interior of the Chalcidicum. The wall of the staircase is painted in black panels, separated by red pilasters, which have produced a good effect. Over this entrance was a lintel, or architrave, of marble, with the inscription—
EVMACHIA. L. F. SACRED. PVBL. NOMINE. SVO
ET. M. NVMISTRU. FRONTOVIS. FILL. CHALCIDIVM. CRYPTAM. PORTICVS. CONCORDIAE
AVGVSTAE. PIETATI. SVA. PEQVNTIA. FECIT
EADEMQVE. DEDICAVIT.

This inscription, or a great part of it, seems to have been repeated on certain large blocks of marble, which have formed part of the architectural decoration of the forum. It has been thought, in the present instance, to justify the application of the term Chalcidicum to the edifice in question, particularly as the crypto-porticus, or perhaps the crypt and the portico, remain to verify the supposition; and it seems, moreover, one of the most difficult problems of antiquity to discover what was the meaning of the word. Signor Becchi, a Florentine architect in the Neapolitan service, has published a dissertation on the subject, and seems to have been of opinion that the area, surrounded by its open and closed porticos, was quite distinct from the Chalcidicum, which he would place in front, so as to form a sort of deep porch toward the forum. By consulting the plan it may be observed that this porch, formed by sixteen pilasters, and paved with white marble, is of more consequence than the general line of portico surrounding the forum, being about 126 feet by 39; and the fragments of the repeated inscription before mentioned lying near, but by

no means opposite to the spot, seem, in some degree, to confirm the hypothesis of Signor Becchi, which, in the absence of a better, has met with general support. The remains of a marble pavement, and the evident traces of iron or brass gates which closed the south end of this portico, shew that it was appropriated to some particular purpose. Moreover, at the south angle of the supposed colonnade is a new pillar of marble, placed quite close to one of the old stone columns of the forum. It is so close to the old column that it could not be finished on that side, proving that the old pillar was intended to have been taken away, and that a new colonnade was beginning to be erected. The plan is sufficiently clear to enable the reader to form his own judgment. Nothing, however, seems more difficult than to draw any precise conclusion from the hints which the ancients have left us of the use of a Chalcidicum. Vitruvius says, that, if possible, the Chalcidica should be placed at the extremities of the basilica. This would seem to imply a portico. He also says that the Chalcidica should have two ranges of columns, the upper being one-fourth less than the lower. The pillars of the upper portico, in which it seems merchants transacted business, stood upon a sort of pluteus instead of a balustrade, so that those who were in the upper gallery were not easily seen by those below. This would make the Chalcidicum a sort of exchange. Ausonius, cited in Wilkins's Vitruvius, makes the Chalcidica the same as *TIEPNTIA*, or upper rooms, used as magazines. Moreover, there seems to have been a sort of earth or plaster called Chalcidica, used for the preservation of corn; and, to add to the difficulty of forming a just idea on the subject, we find the word sometimes explained as a caudicum, or court of justice, a mint, baths, cœnaculum, and a portico invented at Chalcis in Eubœa. It is possible the edifice at Pompeii may have served as a place of resort for merchants, and might have had a court of justice in the semicircle or tribunal which fronts the great entrance from the forum, where Signor Becchi supposes the statue of the *Pieta Concordia* to have been erected in a niche. This statue was found near the spot. The head was wanting, and the robe was bordered with a gilded or red stripe, not unlike the *laticlave*. It might have been the figure of a Roman empress. There seems no objection to the supposition that the crypto-porticus might have served for a cœnaculum, having been connected with the open portico by a door on each side and eleven windows, which could be opened or closed according to the season, as their marble lintels sufficiently demonstrate. There exist also certain pedestals of white marble on the spot, which seem to have served as supports to slabs or tables of the same material. The staircase on the right of the grand entrance makes it probable that there was either an upper colonnade or a terrace for walking round the hypæthrum, and a second seems to have ascended from the porch or Chalcidicum to the roof of the crypto-porticus. The folding-doors at the great entrance turned upon sockets or umbilici of brass, and were secured by two bolts, which were shot into holes yet visible in the centre of the marble threshold, twelve feet six inches wide. The court seems to have been paved with white marble, of which material were also the steps and the forty-eight Corinthian columns of the peristyle, which is 157 feet in length and 13 feet 6 inches in breadth; and here also were found certain cisterns, evidently used for washing, which serve again to confuse any precon-

ceived ideas of the uses of the building, particularly when combined with the dedication of the statue of Eumachia by the Fullones, who must have been either the washers or dyers of Pompeii. The hypæthrum, or court, was about 120 feet long, by less than half that breadth. The columns were ranged on each side to the number of eighteen. The two ends had only eight each. There was evidently a projection from the portico in front of the tribune. The whole edifice, with the porch in the forum, would be included in a quadrangle of about 126 feet 8 inches in breadth, and double that length; scarcely any thing being rectangular at Pompeii, a defect generally prevailing throughout Italy at the present day. The porticos are about fifteen feet seven inches wide, but almost all the columns had been excavated and removed by the ancients. Every part seems to have been well finished, and covered with thin plates of marble where such a decoration was requisite; but the earth appears to have been displaced and the edifice ransacked for the purpose of carrying off these marbles in ancient times. It must have been repairing at the time of the eruption, as a piece of marble was found on the spot with a line drawn in charcoal to guide the chisel of the stone-cutter. The walls of the crypt are painted in large panels, alternately red and yellow, having in the centre of each some little figure or landscape. One, which is now, or once existed, in the northern division, has been selected as presenting a pretty and picturesque group of buildings, and serving to give an idea of the beautiful effects which must have been frequently produced by the various combinations of shrines, columns, and ornamental pediments, in the cities of Greece and Italy. Below these panels are smaller divisions, in which, on a black ground, are painted flowers, not unlike the lily in form, but generally of a red colour. It is not impossible that some sorts of flowers, and particularly bulbous roots, may have been lost in Italy, as we rarely find that invention has been substituted for reality in a department of nature which affords such vast and pleasing variety. Some are of opinion that the red flowers in question resemble the Guernsey lily. They might be said to be more like the iris in form. There is no crypt on the side near the forum, and that on the opposite end is somewhat narrower than those of the flanks. In the centre of this innermost crypt, which is there fifteen feet eight inches wide, exactly behind the semicircular tribunal, and close to the staircase before mentioned as ascending from the Via dei Mercanti, is a recess painted in green and red panels, in the centre of which is the statue of Eumachia, the public priestess, and the foundress of the Chalcidicum, the crypt, and the portico, not ungracefully executed in white marble. She is represented about five feet four inches in height, and stands on a pedestal about three feet from the pavement, on which is inscribed—

EVMACHIAE. L. F.
SACERD. PUBL.
FVLLONES.

Plate IX. gives a representation of the recess and the statue as they were first discovered in the year 1820. The figure has been carefully preserved by a modern roof, and still remains in a case on the spot. The door which is seen painted on the wall in this plate seems to have been intended to correspond with the door of the staircase opening to the Via dei Mercanti. It is worthy of remark, because no real doors remain. It is six feet wide, and ten and a half high, and is separated into three folds, with

eight lines of division painted between each. A ring in the centre served to close it. Doors seem to have been called bivalves when only formed of two folds, but became valvatæ, volubiles, and versatiles, when the number of folds increased greatly, which must have been the case when the wide openings of the tablinum were to be closed. The learned Cavaliere Carrelli, in the account of the Temple of Isis, purposes giving an account of these varieties. Little more can be added to this very imperfect account of an edifice of a description so equivocal. It is much to be doubted whether the seventeen pilasters, each about three feet square, have any relation to the portico commonly called the Chalcidicum; and, were it not for the fine marble pavement, their defective construction would rather lead us to suppose them the only remains of a range of low arches on piers which might have surrounded the forum of Pompeii previously to the first earthquake, and which had been generally replaced by handsome Doric colonnades before the final destruction of the city. The absence of the eighteenth pier, and the substitution of a column, one side of which is left rough, at the junction of the street with the forum, and which was absolutely necessary to the supposed Chalcidicum, render it highly probable that the piers rather belonged to an old building on the point of being removed, than to a newly-constructed edifice. On the external wall of the crypt, in the Via dei Mercanti, is a notice of a show of gladiators, such as seems to have been usually affixed to the walls of public buildings on these occasions.

A. SVETTHI. CERII
ÆDILIS. FAMILIA. GLADIATORIA. PVGNABIT
POMPEIS. PR. K. JVNIAS. VENATIO. ET. VELA
ERVNT.

Which may bear this interpretation: 'The troop of gladiators of Aulus Suetius Cerius, the ædile, will fight in Pompeii on the last day of May. There will be a venatio, or chase of wild beasts; and shades to keep off the heat of the sun will be extended over the spectators.' It seems that those who had been ædiles frequently gave such games for the amusement of the populace. On the external wall of the crypt is also the inscription—

SABINVM. ET. RVFVM. Æ. D. R. P.
VALENTINVS
CVM. DISCENTES
SVOS. ROG.

It may seem extraordinary that these ædiles, so worthy of the republic, should protect a person like this Valentinus, who wrote *discentes*, instead of *discentibus*, at his own door. Perhaps the following inscription on the same wall, or in the neighbourhood, may be interesting, as tending to prove the opulence of the city:

C. CVSPIVM. PANSAM. ÆD.
AVRIFICES. VNIVERSI
ROG.

'All the goldsmiths invoke Cains Cuspis, the ædile.' On the wall of the crypt of Eumachia are written at length the words SIGLA. FAC FACIT, which have been useful in determining the disputed meaning of the three initials. The temple adjoining the Chalcidicum on the north, with the basso-relievo representing a sacrifice in the centre of the area, in which some have imagined the features of Cicero were distinguishable, has, since the publication of the former *Pompeiana*, been supposed to have been rather dedicated to Quirinus than Mercury, who seems to have had very little claim to it. The following inscription is copied from the work of the learned and indefatigable Cavaliere Arditi, the truly respectable patriarch of Neapolitan antiquaries, who has restored it. He says it was found on a pedestal near the

entrance of this temple, and adduces it, very rationally, in support of the more recent appellation:—'Romulus Martis filius urbem Romam condidit et regnavit annos 'plus minus' quadraginta, isque Acronne duce hostium et rege Cœniniensium interfecto spolia optima Joci Feretrio consecravit, receptusque in deorum numerum Quirini nomis appellatus est à Romanis.'"

Sharpe's Library of the Belles Lettres. Vols. I. and II. Addison's Essays. London, 1830. J. Sharpe.

MR. SHARPE justly claims the merit of having been before all our new "library" periodicals in producing beautiful and accurate series of works of merit; and he now returns to the field, an experienced veteran crowned with general applause. We hail him to the liberal competition; and trust that his *Belles Lettres* will meet with success. These volumes are got up with his usual skill and extreme neatness—the embellishments well chosen, and the printing handsome. The object, to give a selection of the lighter graces of British literature, could not be better begun than by the best of Addison's Essays from the Spectator.

History in all Ages. 12mo. pp. 520, and Index. London. J. O. Robinson.

ALL works of this kind are useful and valuable, if they are edited on sound principles and a good plan for reference. And such is the pre-

* In a letter from an intelligent correspondent, he justly remarks, on the subject of Pompeii and Herculæum—'To those who have visited the very interesting scenes which these cities exhibit (among whom it is my happiness to be classed), it is a source of surprise to find them in almost every English periodical always, or most frequently, named together, as if excavations were now continued equally at both; and discoveries so mentioned, as if they might be referred to either of the two cities. Let me assure you, in the first place, that many of the discoveries announced within the year 1828, were completed and exposed to view (only at Pompeii) before I left Naples, in April 1825:—I am not without suspicion that I myself saw the opening of one of the paintings just exhibited at Pompeii to the king of Bavaria. The house of Arrius Diomedes was, I believe, the very first which was wholly explored; but the exact date I cannot refer to at this moment. As to Herculæum, the investigations there have been long discontinued, on account of the expense and the danger to the towns of Resina and Portici, which are built over it; at least no excavations were going on in 1824 and 1825. The theatre of Herculæum is the only part now shewn: it is completely underground, and therefore very imperfectly seen by the general body of travellers, who are not aware of the quantity of lights required to give them a clear idea of it, until they find themselves groping about almost in the dark—so pernicious is the supply of light which the exhibitor furnishes. Among other inaccuracies arising from the confusion made between Pompeii and Herculæum, the most important, perhaps, relates to the papyri, or manuscripts. I may have misunderstood my informant, but the impression on my memory is, that none of the few found at Pompeii have been preserved, having mouldered into dust (as did many at Herculæum) as soon as they were exposed to the air. Indeed, the difference between the substances that covered the two cities renders this probable: I conceive that those only of the Herculæum papyri are preserved which were charred. Whenever you have space and can obtain from one of your numerous friends a plan of the excavations at Pompeii, it would prove extremely interesting, if the date to which it was corrected were stated. I have not seen any book of reference, any gazetteer, or topographical account, which has procured correct information relative to Pompeii later than 1819; and in those it is very imperfect: the opening of almost the whole circuit of the city walls is not mentioned—a very interesting operation, as it shews how much of the entombed city remains unexplored; though it is probable that the whole space within the walls was not so closely filled with houses and shops as the portion already excavated. It is to be wished that the entrance to Pompeii should be arranged so as to produce the full effect which the circumstances of the place are so well calculated to excite. The visitor ought to be so conducted to it that he should look down into it on the first view;—which, indeed, the mind is prepared for on approaching a buried city: this might be done without any other difficulty than making an approach on the north-west side, instead of driving into "the Street of the Tombs," which has been cleared so far to the right and left that the effect of the exhumation of the city is almost lost.'

sent volume, which is printed for the proprietors of publications on Christian principles, judiciously arranged, and comprehending so ample a store of information, that it may truly be said to furnish a satisfactory outline of "history in all ages." The notices are necessarily brief (the history of Prussia, Turkey, Denmark, for example, being respectively given in five pages); but, upon the whole, we very heartily recommend the performance as a source of great general intelligence, and one to which young people may apply with much benefit.

The Polar Star of Entertaining and Popular Science. 2 vols. (III. and IV.) 8vo. London, 1830. H. Flower.

THIS is the two quarterly collections to Lady-day and Midsummer of one of our agreeable contemporaries, whose diligence enables him to form a miscellany from the multitude of the productions of the day, which partakes of the utility and entertainment of them all. There is also original matter of considerable merit, and, for a medley of every sort of literature, we may very fairly point out the *Polar Star* as an ample and various home.

Insect Architecture.

THE volume of the *Library of Entertaining Knowledge* addressed to this curious and interesting subject is now before us; but as we noticed the parts as they appeared, (see *L. G.*, No. 697, &c.), we need only now express our admiration of the vast variety of anecdote and information on the subject which it contains, and of the number and accuracy of the illustrations. It does great credit to Mr. Knight's abilities, and to his general design; and is a most delightful book for readers of every description, particularly in the country, where opportunities are afforded of tracing the minute and remarkable creatures with which nature so profusely replenishes her universal domain.

The North of England Medical and Surgical Journal. No. I. August 1830. London, Whittaker and Co.

THE great ability displayed in several of the papers in this first No. induces us to notice with more than common approbation the first appearance of a new contemporary whose labours are devoted to so important a branch of science. It is in the magazine form, and promises to reflect great credit upon the medical and surgical school and practice in the northern parts of the kingdom.

Journal of a Tour made by Señor Juan de Vega, the Spanish Minstrel of 1828-9, through Great Britain and Ireland. 2 vols. 8vo. Simpkin and Marshall.

WE took up these volumes with strong hopes of amusement, from original and lively descriptions of manners; but we have been grievously disappointed. The book purports to be the journal of an English gentleman, who traversed the country in disguise of a Spanish player on the guitar, mixing with the populace of every description, and enjoying continual opportunities of studying them in their native colours. We have often entertained the idea, that an adventure of this sort might lead to the production of as entertaining a book as could possibly be written; and in competent hands it would do so. But our pseudo Don is not the man for the task; and instead of animated and curious illustrations of the mode of life among the inferior orders in towns and in the country, he has given us a

prolix narrative of uninteresting details, mixed up with a good deal of personal vanity, and disfigured by some stories of amours, and affairs approaching to amours, which are hardly to be tolerated in good society. On the latter account, particularly, we avoid giving any extracts from a publication which might have been what it is not.

Principles of Geology; being an Attempt to explain the former Changes on the Earth's Surface, &c. By Charles Lyell, Esq., F.R.S., &c. 2 vols. 8vo.: Vol. I. pp. 511.

ONE of the most important, or we may more correctly say, a moiety of one of the most important works upon geology which has ever been published. It will require much of our best, and shall have our earliest, attention.

Aneddoti piaceroli e interessanti occorsi nella Vita di Giacomo Gotifredo Ferrari. Scritti da lui Medesimo. Londra, 1830. A. Seguin.

To such of our readers as are interested in Italian literature, we can safely recommend these amusing little volumes. They will be found to contain a variety of anecdotes of remarkable personages, given with considerable naïveté; and are equally adapted for the perusal of both sexes—a consideration not always found in foreign productions. One anecdote, as illustrative of the general character of the work, and as interesting to the English in particular, we venture to cite. We need scarcely inform the travelled reader, that the Cavaliere Acton alluded to, was for several years prime minister to the King, or rather to the Queen, of Naples; which station, if history may be accredited, was the higher office of the two. Referring to the preponderant power of this personage, we find the following pasquinade of a court wag:

"Hic Regina,
Hic Acton,
Hic hæc hoc Acton."

ARTS AND SCIENCES.

OPENING OF A MUMMY.

A MUMMY, which was brought from Egypt by Baron Denon, was lately opened at the rooms of the Literary and Philosophical Society at Newcastle. The bandaging was remarkably clumsy, and seemed like loose pieces carelessly wrapped with narrower ones, resembling tapes. When this was removed, there was a common spiral bandage, from the feet upwards to the head, which appeared very neat. The operators next came to a crucial bandage, not very well put on, and then to another bandage, crossing in one direction. Several pieces of cloth were now discovered, which seemed to have been laid over the body after a certain degree of wrapping had taken place, to keep all as straight as possible. After removing some other bandages, a fifth crucial bandage was met with, which made two crosses about the neck and shoulders, finishing at the toes. A singular bandage then appeared from the neck over the face, across the occiput; compresses of many folds were found across the face, and large compresses from the shoulders to the feet. A spiral bandage from the feet upwards being removed, the moisture from the contents of the wrapping was very perceptible. Several pieces of bark were then discovered, and a strong bituminous odour prevailed. The bandaging altogether weighed more than 30lbs. In the course of the operation, a sheet of bituminous cloth, of more than usually large size, was discovered; the moisture between which and

the body was considerable. The vacant spaces between the legs and the arms, and the body, were filled with compresses, so as to preserve the regularity of the form. The *humerus* seemed to have been forced aside, and the cavity of the shoulder filled with bitumen, which bore evident marks of having been poured in while in a heated state. The head was enveloped in a very thick compress. The moisture had penetrated so strongly, that it was now difficult to remove the bandaging without destroying the texture and the order. The perfection of this mummy was remarkable. Perhaps, considering the supposed age, (between two and three thousand years,) there was hardly ever a mummy opened in such preservation. There was considerable pliancy of the joints. The arms admitted of a good deal of motion. They were in spiral bandages, but one up and down, the other beginning at the top. No papyrus was discovered in any part whatever. Within the bandaging, near the flesh, there was much bitumen, which had been run in when hot. The cuticle remained at the roots of the nails. In one instance, so careful had the embalmers been of this, that to preserve the nail, a piece of thread had been tied about the root where the cuticle was coming off. The abdomen was remarkably soft, and by no means of the hard, dry nature that might have been imagined. It was with difficulty the face could be cleared, but when it was, it was found very perfect. The teeth were good, the nose rather flat, but straight; the balls of the eyes had been taken out, and the sockets filled with linen or cotton. The hair was perfect; it seemed of a light texture, and not woolly. There was no section of the abdomen. The arms appeared much straighter down than in most of the mummies that have been opened. The fingers and toes might almost be taken for the remains of a person who had been only a few years embalmed.

LITERARY AND LEARNED.

PRESENT STATE OF LITERATURE, &c.

IN our last No. we took occasion, upon the simple *primâ facie* statements which had obtained circulation through the newspapers, to express our utter disbelief of an idle story charging Mr. Campbell with having pirated a ballad; and of a somewhat more extended allegation, that the volumes in Dr. Lardner's *Cyclopædia*, represented to be the productions of Sir James Mackintosh and Sir Walter Scott, were not, in fact, written by these gentlemen. General character would be, indeed, worth little if it could not protect men from such accusations; but the love of slander is so prevalent, that the most improbable inventions are likely to obtain some credit; and we were not sorry to see a distinct and decisive refutation of the last-mentioned of these fables, which appeared in the *Times* of Saturday, simultaneously with our conjectural denial of its truth.

The documents published on this occasion are so characteristic in themselves, and offer so much food for remark, that we make no apology for transferring them to our columns, together with a few of the observations which they suggest to our minds, and bearing upon the state of the press whether in general or periodical literature.

In the first place, we think we may fairly presume to warn readers against every work which attempts to acquire notoriety by abusing others. As no one can throw dirt without being dirty, it may be received as a certain truth that no book or journal which is guilty of im-

putting base motives to its contemporaries is worthy of honour for its own. The low in mind and in reputation are always the most suspicious and vituperative; and as they cannot rise to any elevation, they address themselves to the more congenial task of bringing others down to their own level. They insinuate charges of imposition or corruption, which would never enter into the conception, and far less within the commission, of a gentleman—and where is the gentleman to be found, unless the character exist among the well-educated and the enlightened, and especially among those of the class who venture into the open public, surrounded by every tie and connexion which could regulate even wavering principles, as authors and guides in literature? What is thought of the tradesman who endeavours to sell his own goods by causing it to be suspected that the goods of others in the same line are of an inferior quality, or obtained by discreditable means?—That he is a rascal, and, in all probability, the very cheat he represents his neighbour to be. And how much more despicable is such conduct in the literary man? Let all detractors lay this question to themselves; and let the public perceive, that it is much easier for pretenders to acquire a trumpety notice by falsehood and abuse than by laudable exertion and desert. We see these things every day, and, knowing what we know, look with ineffable contempt on the whole tribe of disappointed, envious, and struggling creatures, who try to attract by disparaging what they cannot emulate. It is thus that such trumpety accusations as Dr. Lardner has thought it right to refute originate; and perhaps, considering the facility with which the most obvious and ridiculous falsehoods are believed by some of the ignorant and thoughtless, it was as well not to trust entirely for the negation of the calumny to that which was quite sufficient with every person of honour and common sense—the bare names of the parties implicated. But, as a general rule, it is preferable to treat these slanders with silent disregard; for if you once begin to disprove, there is no saying to what length you may be carried, and it becomes a question that all beyond where you stop may acquire force from being uncontradicted. Upon the whole, we consider it wiser, as well as more expedient, to rest on character, and suffer detractors, like scorpions, to die of their own venom.

The following letters are, as we have said, well worth preserving as literary curiosities. How much of the writers appear even in these short notes! Scott, cold, firm, and peremptory in his flat denial; with the Scottish caution, mingling his "dear sirs" and "most obedient servants." Mackintosh, argumentative and sensible in his first paragraph—direct and conclusive in his last. Southey, betraying the *genus irritabile*, and, in a dread passion, wishing to take the law of the felons: it is droll that he appears to be more angry than his precursors, exactly in proportion to his not being accused as they were by name. Moore in a bustle, but with time enough to point a capital epigram—"such impostors are (indeed) worth knowing." The word "more" in the last line but two was omitted in the *Times* publication of this letter: it has since been added *per erratum*:—did Moore, in the first instance forget himself, or "more"? Campbell seems to be brought in for the make-weight of a name—he knows nothing either of the charge or the defence, and has merely to say, as far as he is concerned, that he has promised to do something for the *Cyclopædia* (or, as he will have it,

the *En-cyclopædia*), and (which is not strange) means to keep his word. The addresses and subscriptions to the last four letters are as peculiar as those we have noticed of the first. Dear sir, most faithfully yours—sir, yours faithfully—dear Doctor Lardner, yours very truly—and my dear Lardner, yours truly,—are all various and observable. Dr. Lardner's own letter is, in our opinion, too long: with such a case, the less that was put upon reasoning and inference the better. The able editor hypothetically supposing a possibility of the prostitution he describes in the third paragraph, merely for the sake of a vaunt, is in bad taste: and why the publishers should care one jot about an anonymous and rascally scandal, as mentioned in the next paragraph, is to us unaccountable. But we seldom know exactly where to pause in our own disputes; and the slight matters we have noticed are rather critical trifles than things of the least consequence to the case.

TO THE EDITOR OF THE *TIMES*.

Regent Street, 16th July, 1830.

SIR,—It is with the greatest reluctance that I am compelled to claim the public attention by the paragraphs respecting me which have lately appeared in the *Times*. What you consider a "hint of a charge against my *Cyclopædia*," was, according to my view, infinitely more injurious to the work and to myself (though not so intended by you) than any explicit imputation could have been. The charge was declared to be of such a nature that you could not give credit to it without the strongest evidence. Surely, any reader must have inferred from this, that some accusation of a disgraceful kind had been made; and no other course could have been pursued by me except that which I adopted; viz. that I request that the charge might be disclosed. I found that I was accused of having conspired with some of the most illustrious literary men of the age, to practise upon the world an unparalleled act of fraud, by publishing a series of works as theirs, such works not being written by them, and that these distinguished persons had merely hired out their names for this unjustifiable purpose. I confess that I did think that no individual could for one moment entertain a supposition of such measureless absurdity, and therefore conceived that an answer was unnecessary. The accusation, however, being reiterated, and an answer clamoured for, I am obliged—I trust, for the first time—to occupy, in your paper, a space which might be employed much more profitably than in such discussions.

I have communicated the particulars of the charge to the first five persons who appear on the published list of contributors; viz. Sir Walter Scott, Sir James Mackintosh, Robert Southey, Esq., Thomas Moore, Esq., and Thomas Campbell, Esq.; among whom are included the two persons more specially charged by your correspondent. I subjoin their answers; and should your readers require any more such disavows, they can be easily procured.

If men of high literary or scientific attainments can be found who would prostitute their names in the manner which your correspondent describes, I, with all humility, claim for myself sufficient honesty to save me from being a party to such a transaction. I fling back the charge with the indignation which it must excite in every right-minded man, and with the contempt which a reptile—spitting its venom from the shelter of an anonymous signature—merits.

The publishers desire me to say, that they feel gratified and flattered that the number, rank, and talent of the men by whose aid their undertaking is supported, are such as to have excited either the incredulity or the envy in which this strange accusation has originated.

I take this opportunity of stating, that the objection lately urged by you, on account of the narrow limits imposed upon the distinguished persons who have undertaken to write the volumes of the *Cyclopædia*, had been foreseen, and the ground of it removed. The *History of England* will extend to eight volumes; and Mr. Moore, Mr. Southey, and the other contributors, have as much space as they think desirable for their respective subjects. I have the honour to be, sir, your obedient servant,

DION LARDNER.

SIR WALTER SCOTT TO DR. LARDNER.

Abbotsford, Melrose, 12th July, 1830.

Dear sir,—I am favoured with your letter of 10th July, and the copy of the *Times* Newspaper, expressing, so far as I am concerned, the false and calumnious allegation that I am not the author of the work going under the name of the *History of Scotland*, published as mine in your *Cyclopædia*. Nothing can be more false than such an assertion, as I either wrote with my own hand or dictated every line in that *History*. I am, with regard, dear sir, your most obedient servant,

WALTER SCOTT.

SIR JAMES MACKINTOSH TO DR. LARDNER.

Battersea Rise, July 15th, 1830.

Dear sir,—When I first read the assertion in the *Times*, that the persons named as authors of the historical por-

tions of the *Cabinet Cyclopædia* were not the real writers, communicated, as it is said to be, by an unnamed correspondent, and professedly disbelieved by the editors who publish it, I thought it needless to contradict a statement so improbable and unsupported. As, however, the proprietors of the *Cabinet Cyclopædia* think a contradiction necessary, I have no hesitation in declaring that every word in the part of that publication which bears my name was written by me.—I am, dear sir, most faithfully yours,

J. MACKINTOSH.

ROBERT SOUTHEY, ESQ., TO DR. LARDNER.

Kenwick, 12th July, 1830.

Sir,—Your letter gives me the first information of the charge concerning the *Cabinet Cyclopædia*, which has been put forth through the medium of the *Times* newspaper. The publishers will do rightly in giving a prompt and decisive contradiction to a charge as false as it is absurd, and as injurious as it is impudent. They will do also a public service, as well as an act of justice to themselves, if they bring the person who has advanced it before a court of law, where he may be taught that not every kind of slander can be published with impunity.—I remain, sir, yours faithfully,

ROBERT SOUTHEY.

THOMAS MOORE, ESQ., TO DR. LARDNER.

Bury Street, St. James's, July 15th, 1830.

Dear Doctor Lardner,—Your note finds me in all the bustle of departure. I should have thought it hardly worth your while to notice this foolish charge, which is but one of the many brought forward from time to time, for no other purpose, it would seem, than to give somebody the trouble of contradicting them. I only wish that they had informed us *utro* are those persons that write under the names of Sir Walter Scott and Sir James Mackintosh—such impostors are worth knowing.

Should you really think it necessary to take notice of this imputation, I can have no objection to your adding my testimony to that of the many other more distinguished witnesses you can produce in disproof of the charge.—Yours, very truly,

THOMAS MOORE.

THOMAS CAMPBELL, ESQ., TO DR. LARDNER.

Middle Scotland Yard, Whitehall, July 16th, 1830.

My dear Lardner,—I have seen the paragraph in the *Times* newspaper in which you are called upon to contradict the assertion, that you have announced literary characters as contributors to your *Encyclopædia*, who do not intend to be the authors of the productions which they permit to be published under their names. As far as I am concerned, I can testify that I have promised you my assistance in the *Cabinet Encyclopædia*; and though I am unable from my present literary engagements to pledge myself precisely as to time, yet it is my intention to fulfil my promise. As to the idea of such men as you mention lending their names to articles not written by themselves, it is a calumny that brings its own refutation.—I remain, dear Lardner, yours truly,

T. CAMPBELL.

We do not think that either the editor or the publishers of the *Cyclopædia* have any cause to regret having been thus brought before the public: on the contrary, the recoil* of the absurd falsehood must be of considerable service to their work, by attracting universal attention to the most distinguished talents by which it is supported—a matter of much importance amid the great struggle for fair notoriety in the competition that exists. To be much talked of, is a great desideratum for every new design; and it is quite a hit to produce this effect, as in the present instance, without having recourse to expensive expedients, or lugging forward the business by head and shoulders. It is worth five hundred pounds spent in that monstrous tax upon our literature which is levied in the shape of advertisements, and amounts in many cases to a prohibition upon the efforts of talent and genius. We trust the *Cyclopædia* will flourish, as it amply deserves, accordingly.

* One advantage of the accusation was, that it was tangible—not in the more usual way of baseness, imputing motives only—for the latter, owing to their vagueness, are more difficult to deal with. For our own parts, we always view them as proofs of malignity which ought to be despised, because, in the first place, no one can really know the motives which influence another; and, in the second place, the innuendoes are generally of a character to defeat their own purposes, coming from unsuccessful rivals, and either bearing on their front the stamp of untruth, or showing that they have been hazarded without that due inquiry which alone can justify the promulgation of injurious assertions.

PINE ARTS.

NEW PUBLICATIONS.

An Account of a Collection of Drawings. By Major Hamilton Smith, F.R.S. F.L.S. &c., and Member of the Plymouth Institution. In a Letter to the President. Plymouth, Rowe.

THIS is a description of a very extensive collection of drawings, well known to the antiquary, in various stages of advancement, from pencil outline to complete finish, amounting to about ten thousand in number, and the whole, with scarcely a single exception, the work of one hand. The fundamental principle on which it was formed was "the acquirement of knowledge of all such facts and objects as could be presented to the mind by a direct exhibition of pictorial forms;" and accordingly the drawings have reference to the illustration of zoology, antiquities, costume, paleography, heraldry, topography, &c. Of these by far the most important appear to be the drawings which relate to costume, and which are divided into various series, comprehending the Egyptian, Indian, Babylonian, Persian, Greek, Roman, Byzantine, Celtic, Anglo-Saxon, feudal, continental of the chivalrous ages, &c. down to the costume of modern days. Major Smith has detailed and described these various series in a very interesting manner. We subjoin what he says of his Egyptian drawings:

"These are the more curious, because the conjectural hints of De Sacy and Ackerbladt led the late Dr. Young to a discovery which M. Champollion has extended to satisfactory readings of the long unintelligible hieroglyphical inscriptions of Egyptian antiquity:—what, therefore, was until lately vague conjecture, is now daily becoming historical; and the Egyptian collection of costume now under consideration will shortly be as completely within the reach of explanation as any other document where the figures are accompanied by inscriptions; at present, with some exceptions, they depend upon conjecture. All the materials of the set are taken from the insculptured monuments of Egypt; and many of these are still on the walls and ceilings of temples and catacombs, in the full splendour of their original colouring. The set consists at present of fifty drawings, containing above 150 figures of gods, kings, heroes, priests, warriors, women, artisans, musicians; of foreigners, such as Syrians, Greeks, Arabs, Jews, negroes; chariots, boats, temples, porticoes, funerals, processions, &c. They were obtained chiefly from the original sketches of one of the artists employed by the Institute of

Cairo; others are from the monument and work of the late Belzoni; from the paintings within the coffins of mummies, and from the papyri found upon them; from the great work of the Institute published at Paris; from Denon, and other sources. From this set we learn that the bull Apis, or Mnevis, had not invariably the same colours and markings; that the priests on ceremonial occasions wore masks, representing the heads of their many typical divinities. We see all their idols carried in arks, with veils often covering the theba; we find the brazen chariots, such as Herodotus relates to have issued from the hundred gates of Memphis. Here artists will see that Osymandias, Memnon, Sesostris, and the Pharaohs, appeared in a very different costume from the Romanised Greek dress, in which they are usually figured. We can distinguish the blue-eyed Phœnician, the cheretim or bowmen, the prisoners and the women; we observe that the complexion of the men varied from reddish to dark brown between the Delta and the cataracts, but that the women were uniformly of a pale colour; here are sowers and reapers, hunters, dancers; punishments, wrestlings, rejoicings, &c. Among the most curious is an attack upon a fortress, unquestionably the most ancient battle-picture in existence: the Egyptians are storming the walls by means of a testudo, unnoticed by the ancients; it seems to be of rhinoceros or camel's hide, supported by men, upon which the assailants are mounted, while others are scaling the walls upon ladders. There is also a naval battle between Egypt and the Syro-Phœnicians, of which, however, I have copied only the most prominent ships. A prince of the Memphian dynasty receiving homage, with his enemies painted bound upon his footstool, and lying on the ground, as noticed in the Psalms of David. To these I have still to add Egyptian horse-races from Herculaneum, and domestic scenes from the Præneste mosaics." There is much in this little tract which deserves the serious attention of the artist, and especially of the historical painter.

ORIGINAL POETRY.

FIRST AND LAST.—NO. X. AND LAST.

The First and Last Born.

MY first-born, my first-born! shall I e'er forget the charm
That filled with happiness my heart when on my clasping arm
Thy little head was pillowed, when I laid thee on my breast,
And wept for very joy as I watched thy tranquil rest?
Shall I e'er forget thy father's smile, and the beaming eye, that still
A glittering tear of joy and pride as he looked on thee would fill?
The ecstasy of those dear hours can my spirit e'er forget?
O no, they haunt my mem'ry, like stars that cannot set!
My gentle, helpless last-born! how differently I hailed
Thy coming midst the clouds of care that my life's full summer veiled!
My stars of hope and love were gone—my mind was full of fears;
And the tears I shed on thy quiet face, O they were bitter tears!
Hushed was his voice that blessed my first—his lip no longer smiled,
There was no father's eye to gaze with rapture on my child;

And O! how different from that first sweet sunny ecstasy,
Was the serious, deep, and chastened bliss, my babe, I had in thee!

My first-born, my first-born! how open was his brow!
How like his father's was his eye, alas! 'tis like it now!
How sweetly did the chestnut curls upon his forehead wave!
And now they lie, unstirred, within the dark and voiceless grave:
Like some full-leaved yet fallen tree, with its young and tender shoot—
The sire and son together rest, all motionless and mute:
The first two treasures that I called mine own, of all earth's store,
Sleep with death's curtains drawn around, to greet these eyes no more.

My last-born, my sweetest babe! it cheers me still to trace
Thy father's lip, thy brother's eye, upon thy lovely face;
Even now thy dear, unconscious hand twines sportive in my hair—
Thy lip hath just as bright a smile as my lost love used to wear:
I clasp thee to my bosom, and I find a gentle bliss—
A comfort to my wounded heart, that nought can give but this.
O my first babe! thou wast a flower to wreath the brows of love;
But when love's light failed, this last was sent a sweet star from above.

Worton Lodge, Isleworth.

M. A. BROWNE.

THE LAKE.

JUNE has charmed

The winds to rest; the broad, blue waters sleep
Profound from bank to bank; or if an air
Have leave a moment wantonly to bend
The graceful lily sitting on her throne
Of moist, lush leaves, the lovely shadow waves
In tremulous response below, and then
The lake is strangely still again. The eye
Delights to look into those glossy depths,
And glance refreshed from flower to flower, that blooms
Anew, in shadowy glory, ere the breeze
Destroy its brief, bright life. The very trees,
Deliciously deceptive, fling abroad
Aye, leaf for leaf, their greenness. E'en the bee
That buzzes round the woodbine, has his dark
But clear-seen image; and, anon, floats near
The gem-winged butterfly. The bird which skims
The tides of air, seems in the impassive flood
Again to sport; and every cloud that sails
Slowly through heaven, has motion, colour, shape,
In that clear, liquid world. Laburnum showers
Profuse her golden blossoms; and the vine
Her full, frank clusters, that but wait the breath
Of August to put on the glorious tint
Of amethyst; and proud the tulip shews
His gorgeous dyes—scarlet, and gold, and black—
The gayest flower the silver waters hold;
But not so dear, ah no! not half so dear,
To the fond eye as many that unfold
Their simpler beauties there. The queen-rose reigns
Supreme as ever—in that mirror still,
As in the rich and breathing world above,
Fairest among the fair.

N. T. CARRINGTON.

SKETCHES OF SOCIETY.

MACKLINIANA.

The Original Macheath.—Tom Walker, as he was constantly called, (the so much celebrated original *Macheath* in the Beggar's Opera), was well known to Macklin, both on and off the stage. He was a young man, rather rising in the mediocre parts of comedy, when the following accident brought him out in *Macheath*.* Quin was first designed for this part, who barely sung well enough to give a convivial song in company, which, at that time of day, was almost an indispensable claim on every performer; and on this account perhaps did not much relish the business: the high reputation of Gay, however, and the critical junto who supported him, made him drudge through two rehearsals. On the close of the last, Walker was observed humming some of the songs behind the scenes, in a tone and liveliness of manner, which attracted all their notice. Quin laid hold of this circumstance to get rid of the part, and exclaimed, "Ay, there's a man who is much more qualified to do you justice than I am." Walker was called on to make the experiment; and Gay, who instantly saw the difference, accepted him as the hero of his piece.

The Beggar's Opera.—Mr. Gay wrote all, or the greatest part of, this opera, at the Duke of Queensbury's, in the summer-house, which is something like a cavern on the side of a bank at Amesbury. The duke and duchess were great friends to learned and ingenious men; particularly to the late celebrated Dr. Arbuthnot. At that period the duchess thought herself slighted at court, and had desisted attending the drawing-room. Miss Arbuthnot and Mr. Gay were almost constantly with her; and, I believe, to gratify the duchess, he touched on the modes of the court; and Miss Arbuthnot knowing many old Scots and English songs, collected the most proper airs, and Gay wrote in suitable measure for them; so they had no need of a musician to compose new tunes.

The whole money received for the sixty-two nights of this opera was 11,199*l.* 14*s.*; and one night (making the sixty-three) for a benefit, 168*l.* 10*s.*

Young Macklin.—I was informed nearly fifty years since by an elderly gentleman, who was born and bred in Dublin, that Macklin had been a shoe-boy, i. e. a blacker of shoes, at the college in Dublin, and was a waiter or marker at a gaming-table, where his common appellation was cursed Charley.

Hyppesly, the original Peachum.—In this character Hyppesly adopted the very dress of Jonathan Wild—a black coat, scarlet waistcoat with broad gold lace, velvet breeches, white silk rolled-up stockings gartered under the knees with black straps, square-toed shoes, white flowing wig, laced hat, silver-hilted sword, &c. Shuter followed his example. He, Wild, was hanged in 1725.

The true-born Irishman.—acted at Covent Garden one night only, Nov. 28th, 1767, and not printed: Macklin seemed to acquiesce in the withdrawal, saying, in his strong manner, "I believe the audience are right; there's a geography in humour as well as in morals, which I had not previously considered."

In rehearsing this piece, Macklin took infinite pains to instruct a young actor in his part, who having to pronounce "Lady Kin-

* Quin performed the part of Macheath for his own benefit, (at Lincoln's Inn Fields, March 19, 1730), which produced 112*l.* 13*s.* 6*d.* in money—tickets, 93*l.* 16*s.*

negad," did it so differently from what the veteran expected, that he could not help exclaiming in an angry tone, "What trade are you, sir?" The performer answered, "Sir, I am a gentleman." "Then," rejoined he, "stick to that, sir; for you will never be an actor."

Macklin as Macbeth.—The squibs on this occasion were innumerable; the following being short, are given as a specimen:

I learned to-night what ne'er before I knew,
That a Scotch monarch's like an Irish Jew.

So uncouth Macklin's form, I'll suffer death,
If well I knew the witches from Macbeth.

No longer mourn, Macduff, thy children's fall,
Macklin hath murdered sleep, Macbeth, and all.

DRAMA.

KING'S THEATRE.

ON Tuesday *Otello* was the performance; and to this, the longest of Rossini's operas, was added an act of *Il Turco*; so that the lovers of music had "surely enough;" and it was near one o'clock before *Massaniello* could commence his capers. By the by, it is a bad sign of the properties, (though one of old use and standing), that they cannot find a pocket-handkerchief for *Otello*! It is true he might be equally jealous of the sheet of paper (which passes for one); but it would be more real, as the Scotch say, to see a "nose-napkin."

On Monday, Mr. Kean took his farewell at this house, when we were squeezed as flat as a pancake, and stewed down to a jelly afterwards, but *did* nevertheless manage to see and to hear (which was beyond our expectations) Mr. Kean take "his long, his last farewell" of the London audience, as he impressively expressed it. He had evidently screwed himself up to the trial, and went through his fatiguing task with unflagging energy. At the close of the performance he advanced, still in his *Otello's* dress, and uttered a few, we may call them incoherent, sentences, amidst the cheers of the house, and terminating them with the declaration above mentioned, retired, supported by Mr. Harley and Mr. Cooper. A couple of wreaths were flung to him on the stage, and loud cries of "No! no!" interrupted his allusions to a final separation from his theatrical friends. He makes a tour through the provinces before he departs for America; and although we do not think his resolution to quit the stage will hold, should he ever return to England, the probabilities are, that he follows his prototype, George Cooke, to a Transatlantic grave, and that we have really seen the last of this great but misguided actor.

HAYMARKET.

AN exceedingly stupid affair, called the *Force of Nature*, was produced here on Friday last. It is a translation from the French drama *Philippe*, which has drawn crowded houses in Paris, because, notwithstanding the unnatural tone of sentiment which prevails throughout the piece, it is founded upon customs (we cannot call them laws) which existed during the reign of terror, and has a peculiar interest for the many who personally witnessed, at that frightful period, incidents as singular as those referred to in the drama, or who still feel the effects of their influence on their families. In the French piece, also, the plot is dramatically developed; while in its mutilated copy, the consciousness of its want of interest for an English audience has induced the translator to huddle up the story, and run the chance of escaping in the confusion. It is such persons as these, who, without the slightest

taste, tact, or discrimination, send over their slubbered transcripts of every piece that is successful in Paris, merely because it has been successful there, that give a handle to the "tiny whippers" of the press, and furnish every would-be critic with examples to adduce in proof of the degradation of the English drama, the absence of all original talent, &c. &c. &c.—commonplace tirades that are at least as devoid of originality as the trash against which they are directed. Unfortunately for the manager, Farren's admirable acting saved the piece. We say unfortunately; as it can never be productive to the theatre, while yet it may linger, so supported, long enough to be paid for. As we have repeatedly noticed the wretched scenery at this house, we are bound in justice to observe that there was really a chamber-scene exhibited on this occasion which did not require a label upon it to state for what it was intended. Were we as vain as some of our brethren, we should take to ourselves the credit of working this miracle.

ENGLISH OPERA, ADELPHI.

MR. PEAKE produced a new melodrama here on the aforesaid Friday, not having, like his godfather, Sheridan, the fear of that most unlucky day before his eyes. The *Skeleton Lover* is of the same genus with the *Bottle Imp*, but we fear will not rival it in attraction. For those, however, who admire the *extravaganza-terrifica*, it has its pleasing horrors and its frightful fun; and at any rate is not burdened with that most heavy of dramatic sins—dulness. We are happy also to have it in our power to speak most favourably of the music by Mr. Rodwell. The opening chorus, the waltz in the last scene, Mrs. Keeley's ballad—"When the glow-worm," and that allotted to our charming little friend Miss H. Cawse, are highly creditable to the taste and skill of the composer, and were sung, the ballads especially, in the very best style. There was considerable opposition to the piece on the first night, in which we regretted to hear it said, that a young and popular musical composer, who had been passed into the house by the author, took a prominent part. The *Skeleton Lover* has, on its subsequent representations, been considerably improved by curtailment, and now goes off merrily and briskly enough.

ODD SORTS OF MUSIC.

OUR worthy friend Mr. Boai made an apology for not performing on his instrument the other day, on account of his having got a cold: a wag observed, that he supposed it must be the *chin-cough*! Another musical wonder has arisen in fertile Germany;—a woman who plays beautifully on the piano-forte with her nose. Nobody knows what the next improvement will be; perhaps to play the harp with elbows.

LADIES' BAZAR, IN AID OF THE FUNDS OF THE DISPENSARY FOR DISEASES OF THE EAR.

MR. JENKINS' grounds, so prettily laid out and so well adapted for the purpose, were crowded on Monday with a host of the remaining rank and fashion in town. Very gaily decorated stalls were kept by some of our *premières élégantes*.—Lady Vintry was proxy for the Duchess of Cumberland, and Prince George was the first purchaser. This benevolent institution deserves the highest encouragement from the public, if we think for one moment of the dreadful affliction it alleviates. Upwards of 6355 patients are stated to have been cured, or

greatly benefited; a circumstance which speaks volumes for the charity. It is stated that the fête will be repeated earlier next season: its supporters cannot do better, and we trust it will meet with all the favour it so well deserves.

VARIETIES.

Dress of the Bedouins.—A French officer in the Algerine expedition thus describes the costume of the Bedouins. "They are enveloped from head to foot in a covering of thick flannel, fastened over the head by means of a riband. They have neither shirt nor shoes, and are armed with a long gun, which carries very far and very true; they are besides furnished with a little sheath, similar to that used by butchers, in which they keep a small and exceedingly sharp knife.

New Street.—We rejoice to see it stated in the newspapers, that the new street from the Strand, opposite Waterloo Bridge, is to be carried into effect;—a great and manifest public improvement, and not the less welcome that it will re-establish so deserving an individual as Mr. Arnold on one of the finest theatrical situations in the metropolis.

Geology.—A new Society, under the name of "the Geological Society of France," has just been formed in Paris.

Potatoes.—At the present season it may not be superfluous to recall to the recollection of our friends in the country the fact which has been recently promulgated in France, with respect to the growth of that useful root, the potato. By nipping off the flowers after they are fully blown, an increase of fully one third may, it is said, be anticipated in the crop.

M. Grinthaussen.—His majesty the King of Bavaria has appointed M. Grinthaussen professor extraordinary of astronomy in the university of Munich. This extraordinary professor is the same gentleman who perceived the works of the fortified towns in the moon, and counted the number of the ships which were entering the various ports of that useful satellite of our globe!

School of Arts at Brussels.—The King of the Netherlands, with a view to improve the manufactures of the country, and create a desire to establish manufactories in Holland, has just founded a Royal School of Arts and Trade at Brussels. This monarch is a great promoter of manufactures, and is proprietor of several manufactories, which must have fallen but for his aid. It is customary with him to advance money to distressed manufacturers, taking an assignment of their property until they are able to repay the sums borrowed, and then to restore the property with a handsome present from his own purse.

College in New South Wales.—A college has been founded at Sydney, in New South Wales. The first stone was laid on the 26th of January last. The following inscription (in Latin), engraved on a brass plate, was inserted in it: "This foundation-stone of Sydney College— an institution founded for the vigorous and pious promotion of polite literature and the liberal arts among the youth of Australia— was laid by Francis Forbes, chief justice of New South Wales, on an auspicious day, viz. the 26th January, in the year of our Lord 1830, in the happy reign of George IV.; Lieutenant-General Ralph Darling being governor of New South Wales."

New Crops.—Last Friday were exhibited for sale, on the Market Hill, Huntingdon, two mandrakes, the plants, or rather roots, mentioned in Genesis. They were about thirty

inches long, and in shape resembled the formation of the human figure."—*Provincial Journal.* We are not told if they groaned either on being pulled up, or at the price given for them.

New Medicine.—M. Leroux, an apothecary at Vitry-le-Français, has extracted from the bark of the willow a new substance, to which he has given the name of salicine; and which he has found to be a powerful febrifuge. A committee of the French Academy, to whom M. Leroux's discovery was submitted for consideration, have pronounced most favourably with respect to it. They say that its medical properties are singularly energetic, and that it may be advantageously substituted for quinine. M. Majendie administered eighteen grains in a day, in three doses of six grains each, and that quantity sufficed to remove intermittent fever, without any return. Experiments have also been made in the various hospitals of Paris, especially at l'Hôtel-Dieu and La Charité; and it has always been found that eighteen, or at most twenty-four grains, administered in doses of six grains each, have been sufficient to prevent the return of the fit. It appears, therefore, that the quantity of salicine necessary for that purpose is smaller than the quantity of quinine which must be employed under the same circumstances. The committee are of opinion that M. Leroux's discovery is one of the most important with which the therapeutic art has for some years been enriched; encourage him to continue his researches; and advise him to undertake the preparation of the salicine in large quantities, that it may be sold as cheaply as possible.

To preserve dead Game.—The *Journal des Connaissances Usuelles* states, that if the entrails, &c. of the game to be preserved be taken out, the inside filled with wheat, and the hare or bird afterwards placed in a heap of wheat, so as to be completely covered, it will keep fresh for two or three months. The skin or feathers should not be taken off.

New Dishes.—The *Corsaire*, a French paper, says—"One of the outposts of the French army at Algiers killed two snakes and a lion, which they sent to the floating restaurant on the following day. The carte of this restaurant, among other things, contained the following:—filet de lion, sauté dans sa glace, matlotte de serpens, boa à la tartare, fraise de lion à la poulette, pieds de lion farcis, lion fraisé aux petits pois, &c.

Steam Carriages.—Attempts are making in the United States to introduce the use of steam for land travelling on ordinary roads. Amongst other announcements on this subject, is that of an inhabitant of Pennsylvania, who states, that by means of an ethereal vapour, of small cost, and which he can condense at pleasure, and restore to its gaseous state, he can impel a carriage of considerable size at the rate of nine or ten miles an hour, with a boiler little larger than a tea urn. We understand that a patent for something of this nature has been lately taken out in London by a speculative officer of marines; but we have not heard of any satisfactory experiment having been performed by him.

The Mazurka.—In the introduction to a collection of Polish national and popular airs, lately published by M. Sowirski, the mazurka is thus described: "The mazurek, the name of which comes from Mazovia, is the most characteristic dancing air of the country. It is the model of all our new airs. These latter are, however, easily distinguished from the ancient by their less original and less tuneful

cadence. There are two kinds of mazureks. The one, of which the first part is always in a minor, and the second in a major key, are composed to be sung, and, as they say in Polish, to be heard; the others are used in a dance, the figures and steps of which are numerous. Its movement is in $\frac{3}{8}$; but is, nevertheless, less rapid than the waltz."

Corsica.—A company has been formed to drain the marsh lands of Corsica. Several thousand acres will be thus gained for agricultural purposes, and the health of the inhabitants improved at the same time.

OLD EPIGRAM,

On the Taxes on Powder and Tea, by Mr. Jekyll.

You tax our powder and you tax our tea!
We soon shall have no beaux—not even Bo-hea!

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XXX, July 24.*]

Πλουτος ή της Ψυχης, πλουτος μονος εστιν αληθης, is given out as preparing for the press by Mrs. Harding.—A historical novel is announced by the Author of "Highways and Byways," entitled the Heiress of Bruges, and intended, we are told, as the first of a series of novels illustrative of the history of Holland and Flanders.—The Midsummer Medley is the title of the new work by the Author of "Braunletye House," which consists, we are informed, of a series of comic tales and sketches in prose and verse.—The Separation, by Lady C. Bury, so often announced as a sequel to "Flirtation," is now, it is said, positively about to appear.

LIST OF NEW BOOKS.

The Protestant Rector, 18mo. 2s. 6d. bds.—Concise Treatise on Dislocations and Fractures, 18mo. 4s. 6d. bds.—Booker's Tributes to the Dead, 12mo. 3s. bds.—Dissection of the Saxon Chronicle, 12mo. 10s. 6d. bds.—Borthwick on the Second Advent, 12mo. 3s. 6d. bds.—Johnson's Essays, with Remarks on Composition, 12mo. 5s. 6d. bds.—Ewart's Biographical Sketches, 8vo. 10s. 6d. bds.—Park's American Law, 8vo. 12s. bds.—Glenrock Sunday-School, 12mo. 5s. bds.—Jenour's Isaiah, Vol. II. 8vo. 12s. bds.—Keller's Panorama of Switzerland, plain, 12s. in case; coloured, 1l. 4s.—The Pocket Lawyer, 12mo. 6s. bds.—Russell on the Millennium, 12mo. 7s. 6d. bds.—Library of Useful Knowledge, Optics, 8vo. 4s. 6d. bds.—Fifty-six Engravings Illustrative of Italy by S. Rogers, Imperial 4to. proofs, 2l. 12s. 6d.; India, 3l. 13s. 6d.; before letters, 4l. 4s.—Burridge's Budget of Truth, 7s. 6d. bds.—The Pulpit, Vol. XIV. 7s. 6d. bds.

Prevailing wind, S.W.
Except the 18th and 20th, generally clear, raining heavily on the 18th.

Rain fallen, .55 of an inch.
Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude.... 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. July 1830.

Thermometer—Highest.....	74.00°
Lowest	35.00
Mean	52.46250
Barometer—Highest	29.95
Lowest	29.14
Mean	29.56444

Number of days of rain, 15.
Quantity of rain in inches and decimals, 4.11975.
Winds.—1 East—4 West—2 North—1 South—1 North-east—1 South-east—12 South-west—8 North-west.

General Observations.—So wet and cold a June, attended by so great a depression of the barometer, has not occurred during the last eight years: the quantity of rain was extraordinary, exceeding by upwards of half an inch the quantity which fell in the same month last year, which was noticed as being particularly great: the mean temperature was upwards of 22 degrees below the average of the last seven years. On the 25th there was much lightning all round the compass, from 8 P.M. until midnight—but the thunder was not loud. An indistinct lunar halo observed on the night of the 2d, about 10 P.M. The evaporation 0,21875 of an inch.

TO CORRESPONDENTS.

We thank J. J. (Croydon), but the anecdote is old in print.
We purpose inserting D.'s contrast next week, with some notes of our own.

ADVERTISEMENTS,

Connected with Literature and the Arts.

LIVERPOOL EXHIBITION OF WORKS OF ART.

The opening of the Exhibition of the Liverpool Academy is unavoidably postponed until One Fortnight after the closing of the Exhibition of the Royal Academy at Somerset House, which has been deferred beyond its usual period, and from which several Works of Art are promised.

KING'S COLLEGE, LONDON.—The

Council of this Institution do hereby give Notice, that they have deemed it expedient to extend the period for receiving Applications for the under-mentioned Appointments until the 1st of November next, viz.

- The Headmastership of the Lower Department.
The Professorships of Classical Literature.
English Literature.
Natural and Experimental Philosophy.
The Principles and Practice of Commerce.
Natural History and Zoology.
English Law and the Principles of Jurisprudence.

Information respecting these Situations may be obtained on application at the Office of the College, between the Hours of Twelve and Three. By order of the Council, H. SMITH, Secretary.

9, Parliament Street, 13th July, 1830.

DOCTOR BENJAMIN FRANKLIN.—The

Original Portrait of this celebrated Individual, painted by Chamberlin, in 1733, is now for sale, at Mr. Colnaghi's, Cockspur Street.

TO NOBLEMEN, GENTLEMEN, or LEARNED SOCIETIES.

A Gentleman twenty-three years of age, of scientific habits, and accustomed to respectable society, is desirous of a Situation as Tutor or Secretary in a Nobleman or Gentleman's Family, or as Superintendent of the Museum, &c. of a Learned Society. The Advertiser has enjoyed a good education, and is known as the Author of several Mathematical and Scientific Memoirs, and is a Fellow of several Learned Societies. The advantages which his pupils would enjoy abroad would be, an easy introduction to the learned men who might reside in the places they visited, and every facility in acquiring a knowledge of Natural History, Geology, and Botany, as well as in pursuing their usual Studies. The Advertiser also feels himself at liberty to offer himself as the Curator of a Learned Society, whether in England or elsewhere, having long pursued the necessary studies.

For particulars, address S. Curtis, Esq. F.L.S., Editor of the Botanical Magazine, Glazewood, near Brampton, Essex; G. Mantell, Esq. F.R.S., Lewis, Sussex; R. Venables, Esq. M.D., Chelmsford; or F. G. S. Witham, Essex.

RUSSELL'S GENERAL ATLAS of MODERN GEOGRAPHY, in Twenty-five Maps, composed from the latest and best Authorities.

By J. C. RUSSELL, Geographer. To this edition has been added, an Index of the Names of all the Countries, Towns, Rivers, &c. in the World. Bay, Cape, Gulfs, Islands, Lakes, Mountains, Rivers, &c. to be found on each Map, with the Latitude and Longitude, and a Direction to the Map on which each particular Name is to be found. London: Printed for Baldwin and Cradock, Paternoster Row.

Price 1l. 1s.

THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD.

Formerly Captain d'Intraire in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of this noble and surprising game of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years.

London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

8vo. 12s. a 3d edition of

A new and improved Edition.

In 12mo. price 5s. bound and lettered.

HISTORICAL and MISCELLANEOUS QUESTIONS, for the Use of Young People; with a Selection of British and General Biography, &c.

By RICHARD MANGNALL. The design of this work is to supply teachers and young persons with a compendium of useful and important information. It comprises a comprehensive abstract of classical, scripture, and general history; a more detailed account of the British Isles, with a sketch of the English Constitution; a select biography of eminent persons; a brief view of classical mythology; a short treatise on the elements of astronomy; besides a great variety of curious and useful miscellaneous matters, relating chiefly to subjects of natural history connected with the domestic arts. The present edition has been carefully revised, and may be recommended as a safe, pleasing, and important assistant to parents and to private and public instructors.

By the same Author,

A Compendium of Geography, 7s. 6d. bound. Printed for Longman, Rees, Orme, Brown, and Green.

TRAVELS IN NORTH AMERICA,
In 1825 and 1826.
By CAPTAIN BASIL HALL, R.N. F.R.S.
The 3d edition, with Additions. To which is also added, an Appendix, on the Use of the Camera Lucida.
Printed for Robert Cadell, Edinburgh; and Simpkin and Marshall, London.

Of whom may be had,
Forty Etchings, illustrative of the Travels, taken with the Camera Lucida. By Captain Hall. Royal 4to. price 10s. 6d.

Colonel Davies said, he thought great benefit would result to our peninsula if discipline, if we acted upon a system adopted in the United States. Criminals in England were frequently rendered worse by intercourse with one another in the hulks and prisons. In America, they were confined at nights in separate solitary cells, and brought out in the morning to work in silence, and under vigilant superintendance during the day. Many useful hints on these topics might be taken from the work of Captain Basil Hall on America.—*Debate in the House of Commons*, 21st May, 1820.

Captain Hall's Descriptive Views look almost as if thrown out by some happy mechanical aid, corresponding to that of his Camera Lucida.—*Edinburgh Review*, Sept. 1820.

Captain Hall gives a luminous and instructive account of the political constitution of the United States, and traces the changes it has undergone since the commencement of the Union. In this, as well as the other subjects introduced by him, which involve general reason and speculation, the talents of the author are exhibited in a very striking light.—*Literary Gazette*.

Captain Hall's book may probably do good in America; we hope it will—but we are quite sure it must do so here. It may furnish many well-disposed persons with arguments by which to defend the blessings they enjoy. It may decide the wavering, and confute, if not silence, the turbulent and revolutionary. The common-sense views he has taken, the penetration he has exhibited in sifting facts, and the powerful scrutiny he has exercised, give to his communications a very uncommon character both of interest and information.—*Quarterly Review*, Nov. 1820.

A new edition, in 4 vols. price 11s. nearly half-bound,
EARLY LESSONS.
By MARIA EDGEWORTH.

PRINCIPLES of GEOLOGY; being an Attempt to Explain the former Changes of the Earth's Surface, by Reference to Causes now in Operation.
 By CHARLES LYELL, F.R.S.
 Foreign Secretary of the Geological Society.

Third Edition of Guy's Historical Question Book.
 Price 4s. 6d. handsomely bound in green,
THE GENERAL SCHOOL QUESTION BOOK.
 By JOSEPH GUY.
 Late Professor at the Royal Military College; and Author of the School Geography, and many other popular School Books.
 The first and chief object of this manual has been to supply youth with a compendium of general history, and, perhaps, such a body of historical matter has never been compressed in so moderate a volume. It embraces the most prominent features of ten ancient and eighteen modern kingdoms and states. The miscellaneous portion includes the human structure explained; the mental powers; productions for food, wines, spirits, &c.; gums, spices, &c.; mineralogy, earths, gems, woods, vegetables; titles and distinctions, great offices, government, law, &c.; tithes, corporations, trade, and commerce; poetical and literary terms; the different denominations of Christians, &c.
 * * * Three large editions of this valuable school-book have been called for within twelve months.
 London: Printed for Baldwin and Cradock, Paternoster Row.

BOOKS IN THE PRESS.
Landscape's Illustrations of the Poems of Robert Burns.
 On Saturday, July 31, will be published, the celebrated
ADDRESS to the DEIL, with Explanatory Notes, illustrated by Eleven beautiful Engravings on Wood.
 London: William Kidd, 6, Old Bond Street.

On the 1st of August will be published, illustrated by Seven Plates, price 3s. the First Number of
THE NORTH of ENGLAND MEDICAL and SURGICAL JOURNAL.
 Containing Original Communications from Drs. Lyon and Carbutt, of Manchester;—the late William Hey, of Leeds.—Dr. Carson, of Liverpool.—J. Robertson, Esq.—Thomas Farrington, Esq. Josh. No. 706.—AMERICAN EDITION.

SATURDAY, JULY 31, 1830.

REVIEW OF NEW BOOKS.

Military Reminiscences; extracted from a Journal of nearly Forty Years' active Service in the East Indies. By Colonel James Welsh, of the Madras Establishment. 2 vols. 8vo. London, 1830. Smith, Elder, and Co.

NEARLY a hundred plates increase the interest of this very various and agreeable publication. The forty years' experience of a clever, observant, and sensible man, who has seen service in, and traversed almost every part of, our vast Indian empire, could not fail to yield materials for a work far larger than these Reminiscences; and, accustomed as we are to be treated with six weeks' tours over no very strange countries extended to as great a length, we feel disposed to think well of the taste and moderation of Col. Welsh in limiting his selections within so acceptable a compass.

The author states himself to be a native of Edinburgh, who went to India (to Madras, *via* Calcutta) as a cadet, at the age of fifteen, in the year 1790, and consequently as not having enjoyed the advantages of a complete education, or of literary culture. These deficiencies, however, are not observable in his narrative, which displays acuteness, good sense, and good feeling. He speaks, it is true, as a plain soldier; but his general views, when they occur, are discriminating, and his local descriptions and remarks at once concise and sufficient. We shall endeavour to exemplify these opinions by our extracts; and, on the whole, can justly recommend the work, as possessing many attractions for our Indian friends, as well as being of that miscellaneous and interesting nature which is calculated to please readers of every class.

We cannot do better for a beginning than give an account of the composition of the Company's native army. It is "composed (says Colonel W.) of five distinct castes, or classes of men, differing most essentially in manners, in religion, and in customs, who never unite, even at a meal or in marriage: the discipline and harmony which have ever distinguished those native forces are truly wonderful. The more especially, when the bigotry of one class and the superstitious prejudices of three others are taken into consideration. First, the Musulman, of whom at least one-third of the army is composed. This class is again subdivided into four particular sects, viz. the Sheik, the Syed, the Mogul, and the Puthaun or Pattan, as they are usually called. They are generally brave, enterprising, and intelligent; and, upon the whole, being free from religious prejudices, make excellent soldiers. Second, the Rajahpoot, or descendants of the ancient rajahs, the highest caste of Hindoos, a race not very numerous, but extremely scrupulous; and, when their prejudices are humoured, the bravest and most devoted soldiers, far surpassing all the other natives in a romantic but sometimes mistaken notion of honour. Third, the Telinga or Gentoo, a race of Hindoos generally remarkable for mildness of disposition and cleanliness of person; obe-

dient and faithful, but not very intelligent or enterprising soldiers. Fourth, the Tamoul, or Malabar; similar to the former. Fifth, the Pariah, or Dhère, as they are called in the army. The latter class, poor Chowry Mootoo, brave, active, and attached as they were to their officers and the service, with a few European failings, such as dram-drinking and eating unclean meats, &c. have of late years been excluded from the line, in order the more fully to conciliate the higher classes, who, however they may differ from each other in many points, are all united in considering any mixture with these as a contamination. They are now enlisted only in the pioneers, and as artillery and tent Lascars. The former corps, one of the most useful in the army, is composed almost entirely of this degraded class, than whom there exists not in all India a braver, more efficient, or zealous body of troops. I beg it to be understood, however, that though the preceding remarks are intended, in particular, for the Madras native army, yet they are almost equally applicable to those of the two other presidencies."

Of our Dutch neighbours in the East, the traits are "genuine." Speaking of them at Negapatam, the author says—

"As every article of life was comparatively reasonable, they still contrived, with hardly any external intercourse, to spin out a dull and peaceful existence, enjoying their pipe and dram, without even inquiring what was going forward in the surrounding world. If their countrymen in Europe are styled phlegmatic, what term can be applicable to their still more apathetic oriental brethren? I have met with many, but only in their own homes, who boasted that they had been thirty or forty years in the same house, and never went outside of the place they were living in! They never complain, or inquire how others get on; and as long as the mere necessities of life are to be procured, they are contented."

In the Carnatic, Colonel Welsh mentions—

"Secundermallee, a mountain held sacred by all castes, as supposed to contain the tomb of Alexander the Great, has a temple on its summit, the pavement of which is said to be regularly swept by royal tigers with their tails. There is a beautiful little spring near it, full of small fish; and rude steps have been made for foot-passengers from top to bottom, some hundred yards in length."

And at Ramnad, on the sea-coast (1795), he paints the portrait of an individual in the nabob's service, which is replete with eccentricity.

"Of all the hospitable men in the most hospitable country in the world, this extraordinary old gentleman stood foremost. He had a large well-furnished house, and received with a hearty welcome as his guests all who chose to come to it. He had a cellar, or go-down, as it is there styled, full of the choicest liquors, and among the rest, pipes of Madeira of various ages, slung by ropes from the roof, to which he decreed an 'Europe voyage,' as he called

it, every time the door was opened, by making a servant swing them about for some minutes. His wine was never fined, and seldom bottled, but drawn for immediate use. He was a man of few words, and directed his servants by snapping his fingers, or by whistling. A native of Savoy or Portugal, of a diminutive form, being under the middle size, with a visage more resembling a baboon than the human species, and manners the most uncouth and outré, Colonel Martinz was still the father of his corps, and the kind friend of all his little community; and, to sum up his character in a few words, was generally known, much beloved, and wanted only the outward forms of religion, to be universally respected and esteemed."

At this period our author assisted in the reduction of Ceylon; and on returning to India, took an active part in the Poligar war, the details of which (hitherto unknown to European readers) are given with uncommon effect. They create a deep emotion, which is not lightened by the tragedy with which our victory over the natives, considered as rebels, was consummated. We record this with pain:—

"(1801.) What followed afterwards was, indeed, of little importance, the enemy no where making head against us; parties were sent to hunt them down in the different jungles; and I had the bad luck to be in full pursuit of one of the Murdoos, for whom a large reward was advertised, when a few of our ally Peons fired at, wounded, and took him, close to our party; thus depriving us of about ten thousand pagodas, or four thousand pounds sterling. In a few days both the Murdoos, with their families, Catabómia Naig, Dalawai Pilly, and the Dumb Brother, were all taken, and the men all hanged, except Dora-Swamy, the youngest son of Cheena Murdoo, and Dallawai Pilly, who, being of less consequence, were transported for life to Prince of Wales's Island, with seventy of their devoted followers; and thus ended this most harassing warfare, in which the expenditure of life had been profuse, and the result any thing but honourable to the survivors. Of the two Murdoos, so frequently mentioned in this narrative, the elder brother was called Wella, or Velli Murdoo; but he had nothing to do with the management of the country. He was a great sportsman, and gave up his whole time to hunting and shooting. Being a man of uncommon stature and strength, his chief delight was to encounter the monsters of the woods; and it was even said, that he could bend a common Arcot rupee with his fingers. Unencumbered with the cares or trappings of government, he led a sort of wandering life; and occasionally visited his European neighbours at Tanjore, Trichinopoly, and Madura, by whom he was much esteemed. If any one wanted game, a message sent to Velli Murdoo was sure to procure it; or if he wished to partake in the sports of the field, Velli Murdoo was the man to conduct him to the spot, and to insure his success, as well as to watch over his safety.

Did a royal tiger appear, while his guest was surrounded by hardy and powerful pikemen, Velli Murdoo was the first to meet the monster and despatch him. A life such as this, although it may appear idle and insignificant to those accustomed to the safety of a well-regulated country, was very far from being without its usefulness in a district overrun with jungle, and infested by beasts of prey. The minor game was, however, politely decoyed, or driven in front of his European friend, who might thus, with less danger, kill hogs, elks, deer, pea-fowl, &c. in abundance. From this Oriental Nimrod I had received many marks of attention and kindness, when stationed at Madura, in the year 1795, and then one of the youngest subalterns in the place; a pretty certain proof of his disinterestedness. The Cheena Murdoo was the ostensible sovereign of an extensive and fertile country, and his general residence was at Sherewéle. Though of a dark complexion, he was a portly, handsome, and affable man, of the kindest manners, and most easy access; and though ruling over a people to whom his very nod was a law, he lived in an open palace, without a single guard; indeed, when I visited him in February, 1795, every man who chose to come in, had free ingress and egress, while every voice called down the blessing of the Almighty upon the father of his people. From a merely casual visit, when passing through his country, he became my friend, and during my continuance at Madura, never failed to send me presents of fine rice and fruit; particularly a large rough-skinned orange, remarkably sweet, which I have never met with in such perfection in any other part of India. It was he also who first taught me to throw the spear, and hurl the collyery stick, a weapon scarcely known elsewhere, but in a skilful hand capable of being thrown to a certainty to any distance within one hundred yards. Yet this very man, I was afterwards destined by the fortune of war to chase like a wild beast; to see badly wounded, and captured by common Peons; then lingering with a fractured thigh in prison; and lastly, to behold him, with his gallant brother, and no less gallant son, surrounded by their principal adherents, hanging in chains upon a common gibbet! Of the *Cat* I have already made mention, but I cannot close this account of horrors, without a few words in memory of one of the most extraordinary mortals I ever knew; a near relation of Catabómia Naig, who was both deaf and dumb, was well known by the English under the appellation of Dumbly, or the Dumb Brother; by the Mussulmans, as Mookah; and by the Hindoos, as Oomee; all having the like signification. He was a tall, slender lad, of a very sickly appearance, yet possessing that energy of mind, which, in troubled times, always gains pre-eminence; whilst, in his case, the very defect which would have impeded another, proved a powerful auxiliary in the minds of ignorant and superstitious idolaters. The Oomee was adored; his slightest sign was an oracle, and every man flew to execute whatever he commanded. No council assembled at which he did not preside; no daring adventure was undertaken which he did not lead. His method of representing the English was extremely simple: he collected a few little pieces of straw, arranged them on the palm of his left hand to represent the English force; then, with other signs, for the time, &c. he drew the other hand across and swept them off, with a whizzing sound from his mouth, which was the signal for attack; and he was generally the foremost in executing those plans for our annihilation. Whatever undisciplined

valour could effect, was sure to be achieved wherever he appeared; though poor Oomee was at last doomed to grace a gallows, in reward for the most disinterested and purest patriotism. He had escaped, as it were, by miracle, in every previous engagement, although every soldier in our camp was most anxious to destroy so notorious and celebrated a chieftain. On the 24th of May, when the fort was wrenched from them, and the whole were retreating, pursued by our cavalry, poor Oomee fell, covered with wounds, near a small village, about three miles from Punjalumcoorchy. As soon as our troops had returned from the pursuit, Colonel Agnew instantly ordered the Eteapoorians to follow them till night, offering rewards for any men of consequence, dead or alive. Our allies, consequently, set out with great glee, somewhat late in the evening; and in the meantime, an appearance of quiet induced some women of the village to proceed to the field of carnage, in the hope of finding some of the sufferers capable of receiving succour. Amongst the heaps of slain they discovered the son of one of the party, still breathing, and after weeping over him, they began to raise him up, when exerting his little remaining strength, he exclaimed, 'Oh mother! let me die, but try to save the life of Swamy, who lies wounded near me.' The word he used fully justifies my assertion of their adoration, as its literal meaning is a deity. The woman, animated by the same feelings, immediately obeyed her dying son, and speedily found Oomee, weltering in his blood, but still alive; and these extraordinary matrons immediately lifted and carried him to the mother's house, where they were busily employed stanching his wounds, when they were alarmed by a sudden shout from the Eteapoorians in pursuit. There is nothing like the ingenuity of woman at such a crisis. These miserable and apparently half-imbecile creatures conceived a plan in an instant, which not only proved successful, but most probably saved the lives of several others. They covered the body over with a cloth, and set up a shriek of lamentation peculiar to the circumstances. The Eteapoorians, on their arrival, demanded the cause, and being informed that a poor lad had just expired of the small-pox, fled for their lives out of the village, without ever turning to look behind them. How he was afterwards preserved, I could never learn; but, certainly, he was present, and as active as usual, on the 7th and 10th of June; and was taken alive at the conclusion of the campaign, and hanged, along with his gallant and ill-fated relation, on the tower we had erected in the plain before Punjalumcoorchy; now the only monument of that once-dreaded fortress, if we except the burying-ground of six or seven hundred of our slaughtered comrades, in its vicinity. No sooner was order again restored than the southern corps returned to Pallamcottah; and I was detached to command Tutucorine, whither all the rebels destined for transportation were sent in the first instance; and there I had the melancholy satisfaction of lightening the chains of Dora Swamy, the younger and only surviving son of my poor quondam friend Cheena Murdoo, a youth of about fifteen, condemned to perpetual banishment. With a mild and dignified resignation, this amiable young man bore his cruel fate without a murmur; but such was the melancholy expression in his fine countenance, that it was impossible to see and not commiserate him. As he was consigned to my personal charge, to connive at his escape was impossible; but being under the same roof with me, in the large fortified factory, I was enabled

to free him from his ignominious fetters, and separate him from the mass of his former menials. Never shall I forget the day when, on the wharf at Tutucorine, I consigned my charge over to Lieutenant Rockhead. I still seem to see the combination of affection and despair which marked the fine countenance of my young friend Dora Swamy, as I handed him into the boat; and the manly and silent misery which his companions in affliction displayed on quitting their dear native land for ever. Here, to all appearance, our acquaintance was to end; but fortune had still another pang in store for me; for being forced to sea for my health in the year 1818, and landing at Penang, I received a sudden visit from a miserable decrepit old man, who, when, without the most distant recollection of his person or countenance, I demanded his name and business, looked for some time in my face, the tears ran down his furrowed cheek, and at length he uttered the word 'Dora Swamy!' It came like a dagger to my heart; the conviction was instantaneous. My poor young prisoner stood before me; changed, dreadfully changed in outward appearance, but still with the same mind, and cherishing the remembrance of former days and former friendships. The casual hearing of my name had revived his affection, and, I much fear, the mistaken hope, that an advancement in rank might afford me the means of lessening his misery. He even entreated me to be the bearer of letters to his surviving family; but this I understood was contrary to the existing orders, since, though I found the governor, the late Colonel Bannerman, my former commanding officer, kind and considerate, it did not appear to rest with him, and I was compelled to decline. Let me, however, in conclusion, express a hope that this narrative may fall into the hands of some kind-hearted director of that honourable company, which I have served so long, and be the means of alleviating, if not entirely removing, the sufferings of an innocent man; the country being now completely settled, and no chance of any ill effects, as regards state policy, likely to accrue from such a compassionate measure." To this melancholy finale we say Amen! with all our hearts. After the conclusion of the Poligar war, our author served with General Wellesley (the Duke of Wellington), and was a participator in the glories of Assaye and Argaum. His mention of the hero, in these his earlier days, cannot be passed without quotation, though we shall be very brief in our selection. "Our camp (he tells us) was pitched about four miles to the northward of the fort; and I joined my corps on the 22d of January, 1803. The Honourable Major-general Arthur Wellesley, who then commanded Seringapatam, as well as our force, lived in the Dowlut Baugh, on the island; and in the short interval before our march, he manœuvred his future army, and taught us that uniformity of movement, which was afterwards to enable him to conquer foes twenty times as numerous, and to acquire for himself a name which can never perish in the East. In the pursuit and annihilation of Dhoondia, the Sepoy general had already laid the foundation of his future fame; but little did any mortal at this time foresee the resources of that master-mind, which the approaching campaign was destined to develop." Of Assaye he states:—"When our troops had arrived at their ground, two horsemen were taken, who informed us that the combined armies of Scindiah and the Berar Rajah,

were encamped about five miles off, instead of twelve, as was supposed; and that the cavalry were actually preparing to move. Almost any other man would have hesitated to give battle to so very overwhelming a force, at the head of only four thousand five hundred men; but that decision of character which, by a series of immortal and increasing triumphs, has so pre-eminently marked his after-career in Europe, was here displayed, to the extreme dismay of the enemy, and the utter astonishment of all India. General Wellesley immediately ordered the rear-guard, strengthened by the 1st battalion of the 2d regiment, under Lieut.-Colonel Chalmers, to halt, and cover the whole of the baggage at the adjoining village; when moving on himself, with his staff, and Captain Johnson of the Bombay engineers, he ordered the picquets to follow, and the line to come up as soon as formed. After marching about three miles, he suddenly came up in sight of the enemy's army, drawn up in order of battle, on a small peninsula, formed by the rivers Kaitnah and Jootee; the cavalry being on their right, and the infantry and guns on the left; the river Kaitnah half a mile in their front, and the Jootee, with very steep banks, about three-quarters of a mile in their rear. The general immediately determined to turn their left flank, a movement which would necessarily reduce their operations within a narrow space, and more effectually secure the flanks of his own little force, during the action."

The battle is described in a most interesting manner. At eight o'clock in the evening, the British were in "quiet possession of the dear-bought field, with one hundred and three cannon, most of which were brass, and twelve howitzers, all beautiful guns, an immense quantity of ammunition, and one thousand two hundred dead bodies. Amongst the spoils of this memorable day were many standards, and a number of orderly books, kept by European officers; by which it appeared, that they had ten thousand eight hundred regular infantry, and thirty thousand cavalry in the action."

Some of the prisoners said it was generally understood, that when Colonel Stevenson's and our force had united, we intended to offer them battle; but when they first discovered only one body advancing, they thought them actually mad, as it was their own intention to have attacked our little camp the same day. Here may be seen the advantage of that prompt and energetic decision which so early characterised the hero of Assaye as the first general of the age. He not only gained a splendid and important victory, but by anticipating his enemy, cramped and confined his enormous force within such narrow bounds, that they could not form a larger front to oppose his handful, nor turn his flanks in the action: whereas, had they been permitted to assail his camp on the plain, defendants being always somewhat dispirited, they could have entirely surrounded it, and employed every man in the assault. As soon as all the remains of our army were collected on the ground, the cavalry were ordered back, to bring on the camp equipage, baggage, &c.; but did not return till the next morning. The night after this victory, even to those few who had escaped unhurt, cannot be supposed to have passed very agreeably; what then must it have been to the numerous wounded, who lay on the cold ground without shelter, and many even without any kind of succour? The dawn of the 24th of September was hailed by the victors with a mixed feeling of exultation and regret; for few, if any, of the survivors had not lost a friend, or had

one or more lingering on the bed of sickness, and pierced with wounds."

The total killed was 649, wounded 1,610, and missing 18; total rather more than half of the whole number engaged, viz. 2,277.

"The general had two horses killed under him, and his staff four more. Of one thousand two hundred horses, which the cavalry carried into action, one hundred and thirteen were killed, and three hundred and twenty-five wounded; leaving only eight hundred and sixty-two mounted in the whole brigade, at the end of the day."

Here we must pause for the present; but shall return to those amusing volumes next week.

Literary Recollections. By the Rev. Richard Warner, F.A.S. 2 vols. 8vo. London, 1830. Longman and Co.

THIS is one of those amusing and interesting works with which men of letters in the leisure of retirement now and then favour the world. The lucubrations of such a person as the rev. author of these volumes, who now calmly looks out from his loop-hole of retreat, must, from their very nature, afford a high gratification to the reader; and, whether we trace him back to the first little tome which introduced him to the ocean of authorship, follow him when fairly embarked, or see him coming into port with all his works "thick about him," we must derive both pleasure and instruction from the employment. Here is his first venture. He made his maiden essay by "a Companion in a Tour round Lymington," from which he gives a short extract, and continues:

"It was in the month of May, 1789, that my work issued from a printing-press at Southampton. That the immediate wants of a public might be supplied, I had ordered an impression of one thousand copies to be struck off; and requested the printer to keep the matter standing, (every author will understand the phrase,) to furnish, with greater celerity, and at less expense, that second edition, which, I had no doubt, would be required in the course of a fortnight from the appearance of the first. A large hamper of copies, as speedily as they could be boarded, was sent to a worthy little bookseller at Lymington, the literary caterer for the town; who had already received strict injunctions to notify, in every possible manner, the sale, on a specific day, of 'Warner's Companion in a Tour, &c. Burning with curiosity, as to the impression made on the public mind of the Lymingtonians by my work, and the success of its sale, I dropped, as if by accident, into Mr. Jones's shop, on the third day of its exposure on the counter, (for no longer could I contain); when a dialogue, much to the following effect, took place between the writer and the vender of the book.

Author. 'Good morning, Mr. Jones. Delightful weather this. A glorious May. Quite tempting for a little tour.' Bookseller. 'Yes, sir; every thing alive, except trade. But it's still winter with us. Dead, sir, very dead!'—A. 'Sorry to hear it, Mr. Jones. However, you mustn't be disheartened: when you get the spring publications from town, your shop will be crowded like a bee-hive. By the by, has the printer sent you a few copies of my little work?' B. 'Yes, sir, a hamper full of them; 250 in boards. The carriage came to 4s. 3d.'—A. 'Only 250, Mr. Jones! Will they be sufficient for a present supply?' B. 'Quite enough, sir.' (With a true sardonic grin).—A. 'Allow me then to ask you, how many you have already sold?' B. 'Two,

—A. 'Two! eh! two hundred I presume you mean?' B. 'No, sir, two! one: two: man and wife, sir. The curate, good man, was my handsel; and Mr. Gripe, the apothecary, purchased the second copy, out of respect (as he said) for the family.'—A. 'Most marvellous! couldn't have believed it, if you hadn't told me so yourself, Mr. Jones. In what a deplorable state is the world of letters! However, so it has ever been; and from the very first invention of printing, we authors, after having, as Milton says, 'scorned delights, and lived laborious days,' for the sake of 'Fame,

(That last infinity of noble minds)
Then, the fair querdon when we hope to find,
And think to burst out into sudden blaze,
Comes the blind fury,'

in the shape of brutish ignorance, stubborn prejudice, or false taste; quashes all our hopes, and leaves us always disappointed, and too often pennyless. Good morning, Mr. Jones.' The debtor and creditor account of my 'Tour' was made up in about eighteen months; and on its settlement, I, with some difficulty, scraped together twenty-two pounds seventeen shillings, to discharge the balance against the concern. This omen, it must be confessed, was not a very encouraging one; and ought to have cured my disease in its commencement—but, as the sequel will shew, it did not quench my 'clear spirit;' nor make me

'bate a jot
Of heart or hope'—
I determined to 'still bear up and steer
right onward';

fully satisfied, that on my second voyage I should be favoured with more propitious gales than had hitherto attended my bark; and return to port, laden with an ample freight of reputation and profit."

From such small beginnings, we accompany with pleasure our worthy divine to his more finished productions, which have long held a high rank in the republic of letters, distinguished alike for the research they evince, and the ability displayed in their composition.

But to the present *Recollections*. Mr. Warner, in his earlier history, refers to all the then celebrated residents of Lymington and Christchurch. And his short but happy sketches of their various inhabitants seem like a moving panorama of life, giving a vivid picture of each once familiar face, and throwing around them that indescribable grace which at the same time renders them in the highest degree pleasing, and gives assurance to the reader of their faithful resemblance. He has a tale or anecdote of every one; and whether he celebrates "the honest chief magistrate of *Crischurch*," who gives his civic toast of "prosperation to this corporation," or relates the short but eventful history of Nancy Bere, he is alike lively and amusing. We give the latter in his own words.

"Once, and only once (for her opportunities of recreation were but few), I remember to have seen at a *fête champêtre* a beautiful young female, the real incidents of whose singular story were as far removed from the occurrences of every-day life, as the adventures of the heroine in any of the less extravagant novels of modern days. Her name was Nancy Bere. She resided in Lymington; mingled, occasionally, in private parties; but very rarely appeared in any of an indiscriminate kind. Her home was with a Mr. and Mrs. Hackman, who lived in the best house in the town, and had adopted Miss Bere as their daughter, under the following circumstances. Mr. Hackman, an eccentric, lively, and improvident character, had originally, as I have understood, been bred to, and followed

the profession of, the law; but, long before I recollect him, having married a widow lady, with a considerable life estate, had settled as an independent gentleman in Lymington. No contrast could be more marked than the difference in the character and habits of the husband and wife: he, hospitable, convivial, full of frolic and fun, a keen sportsman, and a jolly *bon vivant*—she, an hypochondriacal valetudinarian, shunning society, confining herself in a great measure to her home, and rarely extending her excursions beyond the limits of the garden, which lay at the back of her residence. I know not, for a certainty, whether this dissimilarity of character weakened the conjugal affection of the parties, or disturbed their domestic tranquillity. The probability, however, is, that Mr. and Mrs. Hackman jogged on as gaily as the generality of husbands and wives are accustomed to do; since *he* was infinitely good-humoured and complying, and *she* indulged in every wish, and uncontradicted in every whim. Her garden, in which alone she found particular pleasure, stood in need, as is usual in the spring season, of an active weeder; and John the footman was despatched to the poor-house, to select a little pauper girl, qualified for the performance of this necessary labour. He executed his commission in a trice; brought back a diminutive female of eight or nine years of age; pointed out the humble task in which she was to employ herself, and left her to her work. The child, alone amid the flowers, began to 'warble her native wood-notes wild,' in tones of more than common sweetness. Mrs. Hackman's chamber-window had been thrown up: she heard the little weeder's solitary song; was struck with the rich melody of her voice, and inquired from whom it proceeded? 'Nancy Bere, from the poor-house,' was the answer. By Mrs. Hackman's order, the songstress was immediately brought to the lady's apartment, who became so pleased, at this first interview, with her *naïveté*, intelligence, and apparently amiable disposition, that she determined to remove the warbling Nancy from the workhouse, and attach her to her own kitchen establishment. The little maiden, however, was too good and attractive to be permitted to remain long in the subordinate condition of scullion's deputy. Mrs. Hackman soon preferred her to the office of lady's maid; and, to qualify her the better for this attendance on her person, had her carefully instructed in all the elementary branches of education. The intimate intercourse that now subsisted between the patroness and her *protégée* quickly ripened into the warmest affection on the one part, and the most grateful attachment on the other. Nancy Bere was attractively lovely; and still more irrealisable, from an uncommon sweetness of temper, gentleness of disposition, and feminine softness of character; and Mrs. Hackman, whose regard for her daily increased, proposed, at length, to her complying husband, that they should adopt the pauper orphan as their own daughter. From the moment of the execution of this plan, every possible attention was paid to the education of Miss Bere, and, I presume, with the best success, as I have always understood that she became a highly-accomplished young lady. Her humility and modesty, however, never forsook her; and her exaltation in Mr. Hackman's family seemed only to strengthen her gratitude to her partial and generous benefactress. It could not be thought that such 'a flower' as the adopted beauty

'Was born to blush unseen,
And waste its sweetness on the desert air.'

or that, however retired her life might be, Miss Bere would remain long the beloved *protégée* of Mr. and Mrs. Hackman, without being remarked, admired, and solicited to change her name. Very shortly, indeed, after her assuming this character, such an event occurred; though without, at that time, producing any propitious result. A clergyman of respectable appearance, had taken lodgings in Lymington, for the purposes of autumnal bathing, and amusing himself with a little partridge-shooting. The hospitable Mr. Hackman, ever attracted towards a brother-sportsman, by a sort of magnetic influence, called upon the stranger, shot with him, and invited him to his house. The invitations were repeated, and accepted, as often as the shooting days recurred; nor had many taken place ere their natural effect on a young, unmarried clerk was produced. He became deeply enamoured of Miss Bere, and offered her his hand. She, for aught I know, might have been 'nothing loath' to change the condition of a recluse for the more active character of a clergyman's wife; but, as the gentleman had no possession save his living, and as Mr. Hackman could not, out of a life-estate, supply Miss Bere with a fortune, it was judged prudent, under these pecuniary disabilities, that she should decline the honour of the alliance. A year elapsed without the parties having met; and it was generally imagined, that Lethe had kindly administered an oblivious potion to both; and, with the aid of absence, had obliterated from their minds the remembrance of each other. But such was not the case. At the ensuing partridge season, the gentleman returned to Lymington; and, with the title of 'very reverend' prefixed to his name (for he had obtained a deanery in the interval), once more repeated his solicitations and his offers. These (as there was now no obstacle to the marriage) were accepted. The amiable pair were united, and lived, for many years, sincerely attached to each other—respected, esteemed, and beloved by all around them. The death of the husband dissolved, at length, the happy connexion. His lady survived her loss for some time; and, a few years ago, the little warbling pauper, Nancy Bere, of Lymington workhouse, quitted this temporal being, the universally lamented widow of the Right Rev. Thomas Thurloe, Palatine Bishop of Durham."

We have a short account of Vincent Hawkins Gilbert, Esq., a celebrated fox-hunter, of whom a little trait is brought forward as characteristic of his zeal for the chase. He appears to have been a perfect gentleman in his bearing, but sometimes would suffer this zeal to swallow up his usual good manners. "An acquaintance of mine (says a narrator, alluding to Mr. Gilbert), a good sportsman, but a warm man, when he sees the company pressing too closely upon his hounds, begins with crying out, as loudly as he can—'Hold hard.' If any one should persist after that, he goes on, moderately at first—'I beg, sir, you will stop your horse.' 'Pray, sir, stop.' 'Heaven bless you, sir, stop.' 'D—n your blood, sir, stop your horse.'"

Mr. Warner himself was curate of Fawley, in Hants, and relates a rather curious adventure which was the occasion of his transfer to All Saints' Chapel, Bath.

"I had crossed the river one November day to transact some business, and to dine, in the opposite town of Southampton. The evening was dark, and I hurried down the street to my boat, which was waiting for me at the quay. In my haste I came in rude contact with the

shoulder of a person who was walking in an opposite direction to my own. I felt that I was to blame, and made my apology accordingly. 'Bless me,' exclaimed the gentleman (in a voice that I immediately recognised to be that of the Rev. Mr. A——n's), 'is that Warner?' 'The same unquestionably,' said I. 'Why, I fully thought you had been at Bath. I left that place only a few days ago, and learned while I was there, that the rector of Walcot had appointed you to his vacant curacy of All Saints' Chapel, and that you were every day expected there to undertake the charge.' 'Would that it were true, my friend,' I replied; 'but not a breath of such good tidings has reached my ear. I know neither the rector nor his chapel, and am perfectly sure that my family are as little acquainted with the former as myself. Adieu!' My passage across the river afforded me leisure for meditation, and I ruminated much on the oddity of the adventure. My epistolary intercourse with Bath was frequent; but I had received no communication that bore at all upon the business of Mr. Sibley (the rector's name) or his curacy; information which I felt sure I should have received had there been any foundation for the Rev. Mr. A——n's intelligence. I resolved, however, at all events, to inform my connections at Bath of my *rencontre* with this gentleman, and to request they would make the earliest inquiries on a subject so interesting to us all. In a few days an answer from them arrived. They had not heard of the vacancy, nor were acquainted with the rector of Walcot; but had applied to a friend of that gentleman both for information and assistance. The Rev. Dr. Griffiths (the person alluded to) afforded the one, and promised them the other; the curacy was vacant, and he would apply to Mr. Sibley. He redeemed his pledge. 'The rector of Walcot knew not Mr. Warner even by name. There were many applicants for the situation; but in consequence of his regard for Dr. G., and his confidence in the propriety of his recommendation, he would nominate his friend to the curacy, provided he could make it convenient to enter shortly upon the duty.' * * * The source of Mr. A——n's intelligence to me in the street of Southampton has never been explained; for, singular to say, from that moment to the present time (an interval of nearly six and thirty years) I have neither seen nor heard of the gentleman in question."

We might continue these extracts *ad infinitum*. Now and then, perhaps, the stories approach the garrulity of old age; but it is the garrulity of the scholar and the gentleman; and we are not sure that we shall not recur to these volumes for the amusement of our readers, who we are satisfied will be anxious to know more of them: in the mean time we dismiss them with our hearty commendation.

Wedded Life in the Upper Ranks. 2 vols. 12mo. London, 1830. Colburn and Bentley.

A VERY interesting tale is here made the vehicle of that best of morality, the lessons deduced by experience from facts. The danger, as well as crime, of indulging in vain regrets, which render us blind at once to the feelings of others, and the advantages of our own situation; the necessity of keeping guard over an unoccupied imagination; and the incumbent duty that it is to weigh our benefits in the balance with our drawbacks,—are well set forth in these pages; which are a pleasant addition to, after all, a very prevalent and fasci-

nating species of reading. Good, and even bad novels are, and will be, extensively devoured; and we always rejoice when one comes before us which we can recommend to our readers. There are two tales; the first is the most interesting, the second in a more lively style. We give a spirited quotation, describing the change which has taken place in one whom the writer left a bride, and returns to find a matron of some years standing.

“To those who have been absent from home many years, the return to the abode of their early days is matter of so much mixture of feeling, that neither pleasure nor pain may be said usually to predominate. If, as in the case of him who is now about to present himself to the reader, the absence has been more than ten years, in another quarter of the globe; unfeigned delight at the sight of the paternal halls, might argue that many bitter moments had intervened since last he greeted them. On the other hand, if those years have not been years of sorrow, but only according to the chequered career of mortal life—then, the home view may appear tame, melancholy, uninteresting; and a doubt of the happiness therein to be enjoyed may cross the mind of even a wearied traveller in the busy scenes of life. With such blended feelings, I heard the heavy gates of my brother's park (which I had left my father's) close upon me; in another few minutes, those of the court-yard opened, and in the next moment I was fast locked in the arms of a brother. That minute was one of perfect felicity, unblended with retrospection or anticipation, either pleasing or painful. Ten years and more in a foreign land had not been unblest by many ties of friendship; but none could equal the bond which unites brothers in kindred love,—that love which grew with their growth, and strengthened with their strength, and which, in my case and my brother's, engrossed all the affections of our parents; for we had no sisters or brothers to share that which consequently was for ourselves alone. ‘My dearest Arthur!’ ‘My dearest John!’ were all the words that for some time were heard to issue from our lips. ‘But Flora, where is Flora?’ said my brother, after a pause; ‘I must seek Flora—she has only walked into the pleasure-ground. She never would have gone farther the day you were expected. I will seek her; but first come in here. This was the billiard-room, which you may remember; well, it is now the breakfast-room, and we have had the billiard ta But this will all do another time,—I must run and fetch Flora.’ My departure from England was strongly connected with the recollection of this same Flora. The day before I sailed, I had taken my chance, and flying up to London, had witnessed the ceremony of my brother's nuptials; and was just in time back again at Portsmouth, with a fast-sailing boat, to catch the Indiaman in which I had secured my passage.—This Flora was to my mind's eye as visible as though we had parted yesterday. I saw her blushing cheek, concealed beneath her Brussels veil; her long, fair curling hair; her slender figure bending beneath folds of lace, drapery, and jewels; and withal so truly bridelike, feminine, lovely, and modest;—she was all, in short, that a boy's first dream of love presents to him, and which so seldom proves other than a dream. In all my thoughts of home, this lovely creature shedding light and life around my brother's fireside, was ever present to my view. My brother's footstep was again heard. I turned my eyes from the contemplation of a picture of my father, hang-

ing over the chimney-piece, to the door. My brother indeed entered, and with him a lady. The lady was short and plump; a coarse, and not precisely new Dunstable straw bonnet, undecked by ribands, was drawn low on her face. A dark common shawl, thick shoes which bore manifest token that the rain which had fallen that morning had moistened the soil, completed the costume of my brother's companion. It could not be Flora; so I resumed the contemplation of my father's picture. In a moment, however, the lady had sprung forward and seized my hand; and my brother's voice was heard; ‘What! Arthur, have you forgotten Flora?’”

There is an occasional incorrectness in either style or printing, and the French is frequently inaccurate: indeed this blemish of interlarding with an ill-understood foreign language ought to be discountenanced.

ENGLISH HISTORY.

Lord King's Journal, in Memoirs of Locke : concluded.

IT is not our intention to exhaust the valuable lights which are thrown upon our national history by this tract of 132 pages, which forms so interesting an appendage to the new edition of the *Memoirs of John Locke*; and we shall therefore merely state, that the latter moiety of it unfolds one of the most curious internal expositions of state machinery and policy which we ever read. It relates to the efforts of England to ally the Dutch republic and France, and some of the German electorates, in a common cause against Spain and Austria.

In March 1728-9, George II. being then in Hanover, Lord Chesterfield our ambassador in Holland, Lord Townshend with his majesty, and the queen at home assisted by a council of noblemen and ministers; we find the following picture of Holland, then on the eve of a great political change:—

“Lord Townshend sent me some letters from Lord Chesterfield, ambassador in Holland, to Lord Townshend, and his answers; the first was a private letter from the Hague, from Lord Chesterfield to Lord Townshend, dated 15th March, 1729; wherein he wrote that he had been yesterday with the pensionary, to know if he had any positive answer to give upon the subject of a very private letter of the 20th of February, O.S., of Lord Townshend's; and that the answer he gave was, that he had consulted with the greffier, and with some few others of his friends, upon the proposition of concerting a plan with England to oblige the emperor and Spain to come into measures, and to excite and press France to join in that design; but that he found it was impossible for him to propose it here; that they were so sensible of their own weakness, so persuaded of the inactivity of France, and so apprehensive of engaging in measures that may by any accident bring on a war, that he was sure such a proposal would be instantly rejected, and with a good share of indignation upon himself for having done it. That the only possible way of bringing it about, was for England and France to join in pressing the republic to come into such measures, in which case, he believed, they neither could or would refuse; but to act separately with England alone, he was sure they would never do it. The Earl of Chesterfield proceeds farther in his letter to give an account of the arguments that he made use of with the pensionary to induce him to enter into the concerting of the said plan with England; but it was all without success. For the pensionary told him, that he was as much convinced of the truth of

those reasonings as Lord Chesterfield could be himself, and as desirous to bring the republic into vigorous measures if possible; but that the weakness of the government, the private interest of some, and the reasonable fears of others, made it impossible to carry it through, and consequently imprudent to attempt it. That besides, the stay that the Prince of Orange had made at the Hague, though but short, had given so great an alarm, and caused so much uneasiness amongst the anti-stadholder party, that they could think of nothing else, and they would apprehend that a war would facilitate the designs of that prince. The Earl of Chesterfield says farther in that letter, that it is impossible to describe the miserable situation of the republic. The disputes between province and province engross both the thoughts and the time of the states general, as the disputes between town and town wholly employ the states of each particular province. Private interest or resentment is to be gratified at the expense of the whole. Present and imminent dangers are neglected for the fear of those remote and chimerical; and I may venture to say, with justice, of this government, that the utter ignorance of some, the notorious depravity of many, and the private view of all, render this republic at present a most contemptible enemy, and a most insignificant ally.”

Our ambassador, after dwelling on the Dutch government's objection to the marriage of the stadtholder with an English princess, says, very confidentially, no doubt, at that period, though thus let out *now* :—

“Upon the whole, I am persuaded the prince is not likely to be stadtholder by fair means, the power and profit of that employment being so much taken away from the most considerable people of the province, who will always oppose it. But I am convinced too, that whenever it shall be thought proper to push that affair, a general insurrection of the people may with very little difficulty and expense be procured, and a stadtholder imposed upon the province.”

So much, as a specimen of diplomacy. This is further illustrated by the annexed :—

“The affairs of the Prince of Orange in Zealand seemed to take a favourable turn, and I think it not impossible that he may be declared stadtholder of that province very unexpectedly; the whole thing depends upon three people, two of whom are corruptible. I must therefore beg to know whether, if a sum not exceeding ten thousand should absolutely secure that affair, I might, upon a proper occasion, be empowered to promise it?”

To the latter part of the proposition the reply to our ambassador (Lord Chesterfield) who made it, is, that “his majesty did not think it at all expedient for him to take a step of that nature at present, when the consequences may be throwing things into disorder, and without any immediate real advantage to the prince.”

There is a great deal of discussion respecting the orders to and the joint operations of the combined English and Dutch fleets; in which there seems to have been a little underhand dealing and secret intentions on both sides; but as Spain acted, the whole ended on paper. Our ministers (for instance) and their royal master pass these opinions :—

“It appears probable to his majesty that the Dutch will be inclined to join some of their ships to those of the king's that shall be ordered to the West Indies, which cannot be refused them if they desire it: his majesty is of opinion that this part of their lordships' scheme, which relates to the operation of his fleet alone in

those seas, should be kept secret, since the states would most certainly oppose it, and the proposing it to them would most certainly break the union which subsists between them and his majesty, which would be fatal at this juncture. Besides, the sailing of the joint squadron thither upon some general concert, in common for annoying the Spaniards, and protecting the trade of both nations, will not hinder his majesty from sending some more ships in a reasonable time after, with four Irish battalions on board, under pretence of strengthening our garrisons in those parts, in order to put in execution any attempt on Porto Rico, or any other place of the Spanish dominions there. Such particular expeditions have been several times undertaken in the last war without any communication with our allies, and cannot reasonably be excepted against, in case a war should be actually begun with Spain—and this may be done without putting the nation to any greater expense, by finding some pretence to keep back so many of Sir Charles Wager's squadron as may be thought necessary to convey the troops that shall be sent to the West Indies."

We have the following extraordinary memorandum:

"Monday, 2d Sept. 1729, went to town. The next day saw the queen at court; from thence went to Sir R. Walpole's in his chariot, and dined with him and his lady only. He told me, that since the last time I saw him, they had received the draught of articles for a definitive peace concerted between our plenipotentiaries and the cardinal and the *garde des sceaux*; that they were so plain and good, that they did not think it worth the while to send for me to come to town to see and agree to them, or to give any farther instruction; that they were as good as we could desire, he was afraid too good—but, however, the cardinal said that he was sure Spain would come into it; that, for expedition, as soon as they were agreed on in France, they were immediately sent to Spain, and were there by this time. In talking with him about the king's orders, that orders for the fleet and the negotiations with Spain should be all from hence without first sending to Hanover, he told me that Lord Townshend was very much displeased at it; that he, in concert with the queen, gained it by a stratagem; that the queen wrote a letter to the king, intimating that some people thought the orders for the fleet were too long coming from Hanover, but that she would not for the world desire the king to send a power to her or to any one—here to give immediate orders; that would be to execute a power which belonged only to him, and should be only executed by him. Whereon he wrote her a letter, that he would trust his throne and kingdom entirely with her, and thereupon ordered, that not only the fleet, but also the plenipotentiaries at Paris, should receive their immediate orders from hence, and not stay for his. On this occasion he let me into several secrets relating to the king and queen—that the king constantly wrote to her by every opportunity long letters of two or three sheets, being generally of all his actions—what he did every day, even to minute things, and particularly of his amours, what women he admired and *took as favourites*;* and that the queen, to continue him in a disposition to do what she desired, returned as long letters, and approved even of his amours, and of the women he took;* not scrupling to say, that she was but

* The words used in stating this remarkable fact are such as to compel us to corrupt the text.—Ed. L. G.

one woman, and an old woman, and that he might love more and younger women, and she was very willing he should have the best of them. By which means, and a perfect subserviency to his will, she effected whatsoever she desired, without which it was impossible to keep him within any bounds."

In 1730, there is a curious story about a Spanish vessel, which we also copy, as an example of politics where money is the temptation.

"November 5, 1730.—On a summons of the cabinet council, there met at Lord Harrington's office, himself, Lord Wilmington, Lord Torrington, and myself. When Lord Harrington told us that the king had news that a Spanish man-of-war, coming from Carthagena to Spain with a great quantity of money and effects, had been cast away at St. Pedro's Shoals, about ten leagues from Jamaica; and that they had help from Jamaica to save what could be saved out of the ship, and that an officer had been ashore at Jamaica to desire help for that purpose, and that the king desired us to advise him whether he should not on some pretext or other detain the silver and effects, to be disposed of as hereafter should seem reasonable. By the treaty of Seville, the Spaniards were to restore the money and effects they had seized of ours during the rupture; among which was 200,000*l.* in silver belonging to the South Sea. The King of Spain had given orders to his officers in the West Indies to restore it, but they said they had contrary orders from Patino, to send it home to Europe, which they had done. So that as yet we had no restitution; and if there were the same sums to be met with in this shipwrecked ship, by this means we might obtain restitution. On the whole, we were of opinion that a frigate should be sent forthwith to Jamaica, under pretext of carrying orders to the governor, to provide place and conveniencies for the two regiments of soldiers that were to go thither from Gibraltar; but that a letter should be writ to him to take care and help the Spaniards in securing all the silver and effects; that he should take an exact account in their presence, and by their concurrence, of all the silver and effects that were saved, put them in safe custody, and then tell them that he would give an account thereof to England, and have orders from thence about the delivery."

With the following notice of what would in our day be considered a strange occurrence, namely, the French right to recruiting in Ireland, we shall conclude these extracts.

"November 8, 1730.—At Lord Harrington's, present myself, Duke of Newcastle, Lord Wilmington, Lord Harrington, Lord Torrington, and Horace Walpole. The Duke of Newcastle informed the company that the king had promised the French king to permit him to list 750 men in Ireland, to fill up the Irish regiments in France, and that French officers were gone over, and at Dublin. But this had made so great a noise there that the prime and other justices did not care to meddle therein but by positive and direct orders from hence, that therefore it was thought reasonable that we should endeavour to get a discharge of this promise from France; and it was proposed to consider in what manner to write to France to this purpose. The Duke said that it had been thought a proper way to let France know the disturbance the putting it in execution would do at this present, and therefore desire them to waive it; but if, notwithstanding, they insisted upon it, the king would certainly do it. I gave my opinion, that

at the first view I did not think it proper to enter into any new engagement; but what to do I could not tell till I was first satisfied of the legality of it, and when I was satisfied as to that, I would give the best opinion I could.

"Wednesday, November 11th.—The same persons as before were at Lord Harrington's, and the Duke of Newcastle desired the company to advise what was best to be done with relation to the permitting the filling up the Irish regiments in the French king's service. As to the legality, this depending upon an act of Parliament in Ireland, it might be taken for granted, that, following the direction of that law, it was legal. As to the prudential part of it, all wished no such promise had been made. But it was affirmed by the Duke of Newcastle and Lord Harrington, that such promise had been frequently made; and therefore it was the thought of all that proper application should be made to the court of France to obtain a discharge of it; and the Duke of Newcastle took out a copy of an intended letter to the cardinal, the purport whereof was to lay before him the great alarm this made in Ireland, and the great impediment there would be to the king's affairs if it were insisted on, which it was hoped the French king would take into consideration, withal assuring him, that if he should not like to comply with this reasonable request of our king, upon the return of the courier the king's promise should be performed. I objected against this last clause, and gave it as my opinion, that the king should not put himself under any new engagement. What was passed could not be helped, but he should not anew tie himself down. But except Lord Torrington, every one present was against this, alleging, that the best way to procure this act of amity from France was to shew the king's adherence to his promises. I thought this had no solid argument in it, therefore still declared my opinion that it should not be done. But at the instance of Lord Torrington, they softened the assurance of doing it the next courier, by saying, that if the king of France insists on it, it should be done *d'abord*."

It is from such records as these that we are really enabled to understand public transactions, appreciate characters, and arrive at the truth of history. We are infinitely indebted to Lord King for opening this new lock.

Sir T. Dick Lauder's Account of the Great Floods of Aug. 1829, in Moray, &c.

[Second Notice.]

AGREEABLY to our pledge, we return to the *Floods in Moray*, which, according to the doctrine of Pythagoras* (we believe), seem to have been one of those periodical visitations which, as the philosopher holds, have at various times visited, and will at various times to come visit the earth, not as universal deluges, but as local and partial scourges, such as that of Deucalion, which, according to the same authority, was principally confined to Hellas.

* A work similar to that of Sir Thomas Lauder's has been published in the German language by Major Müller, a military engineer in the kingdom of Hanover, giving a historical and technical description of the extraordinary inundation which, in February 1826, devastated the countries situated, as well on the shores of the North Sea, as on the banks of the rivers which flow into it. This inundation extended from Antwerp to Lubeck, towns distant from each other more than 120 leagues in a right line. It was preceded by various remarkable indications: large flights of wild geese were seen passing from the north-west towards the south-east; the waves of the sea assumed a frothy and phosphorescent character; human beings were affected as if by some electrical agency; and even the animals in the fields wandered restlessly about, and seemed to be agitated by some sinister foreboding.

In our last *Gazette* we mentioned the author's agreeable references to past events, and we now illustrate this by an extract historically relating to Kingston, near Garmouth.

"The alarm at the mill of Garmouth, occupied by George Scott, induced his wife and daughters to wade away, driving their cattle before them; whilst the miller and his lad remained to put something to rights about the premises, with the intention of following the family. But the flood increased, and the tempest still raged, and neither came. After relieving the family of the Lambs next morning, the boatmen pulled for the miller's house. They rowed several times round it, and among the ruined outbuildings, calling loudly on the miller; and, receiving no answer, they turned away, in the sad conviction that the unfortunate inmates had perished. As they were in the act of leaving the place, the wall of the house gave way in a moment, and great part of it fell into the rushing waves. The boatmen pulled off, in dread of being overwhelmed by the fall of the remainder of the building, when, to their no small surprise, they espied Mr. Scott's head and red night-cap thrust through the broken roof, and heard him calling loudly for help. They gladly returned, lowered him and his lad down into the boat, and placed both of them in safety. Mr. Scott's own account was, that, having gone from the mill into the house to dinner, they were surrounded by the water, 'which,' said he, 'gaed on growin' an' growin' till between eleven an' twal o'clock. We got up on a table on ane o' the beds, and syne on chairs aboon the table, till we proppit oursel's up to the ceilin' o' the hoose. Ilka ither thing was floatin' aboot. The water was fiver five feet deep, an' mysel' but five an' a half, an' the loon five feet high. I was hearin' the rummel o' the oot hooses as they war fa'in', an' sae I began to be frightit that the farrest up end o' our fire-hoose might tummel doon an' kill us baith. So mysel' and the loon got a hand o' a rope, and swung wi' the help o' it to a bed at the ither end o' the hoose, whar there was nae ceilin', an' we had hardly gotten there wi' the providence o' God, when the upper end o' the hoose that we had left gied way, an' cam' doon wi' sic an awfu' rummel that my heart lap to my mouth wi' fright. I thought surely the end we war in wad gang naist. But whan I put my head oot o' the roof, an' saw a' the hooses in ruins, an' spied the boat, I trow I praised the Lord for our salvation. What think ye o' my swine, only sax months auld. Ane o' them swemed doon to the bar, an' then four miles east, through the sea to Port Gordon, whar' the poor beast landed safe, an' I sauld him there. Ither three o' them teuk a sea voyage five miles to the wast, an' landed at the Blackhill. See they's them i' the sty there. A'my furniture was ruined, an' I thought I wad ha'e been ruined too, if no killed or drowned. But wi' some fish [trouble] I got ahaud o' my watch, an' my bit pickters, an' some ither usefu' papers, an' rowed them i' my napkin, an' pat them aboot my throat. I thought whan the water should come there, I wad soon ha'e little need o' them. But feggs I saved them that way.' Strange as it may appear, the miller assured his deliverers that he had 'got a glimmer o' sleep about five o'clock i' the mornin'.' The populous village of Garmouth stands about a quarter of a mile above the embouchure of the Spey, occupying the base and slope of a gently rising ground. It consists of several winding streets. The houses, many of them three stories high, are built of clay

* Meaning his bank-notes.

kneaded up with straw, in a frame, as practised in the south of France, at Roanne, for example, the whole of which town is of these materials. Here they are plastered, or rough-cast, with lime, so as to present an extremely good exterior. The smaller village of Kingston stands on a ridge close to the sea-shore, composed of rounded pebbles brought down by the river and again thrown up by the tide. It has its name from the historical fact of Charles II. having landed here from Holland in 1650. The descendants of a man of the name of Milne, who carried his majesty ashore, are still in existence; and the family have been distinguished ever since by the appellation of *King Milne*, from the service then performed by their ancestor. Thomas Milne, or, as some will have it, John Milne, was ferryman here in 1650. The vessel which brought Charles to Scotland could not come into the harbour, but rode at anchor in the bay, whilst a boat was sent to land the king. The boat could not approach the shore sufficiently near to admit of Charles landing dry-shod; and Milne, wading into the tide, turned his broad back to the king at the side of the boat, and resting his hands on his knees, very quietly bade his majesty 'loup on.' 'Nay, friend,' said the king, smiling, though somewhat alarmed at the proposal, 'I am too great a weight for so little a man as you.' 'Od! I may be leetle o' stature,' replied Milne, looking up and laughing in Charles's face, 'but I'se be bound I'm baith strong an' steedy; an' mony's the weightier burden I've carried i' my day.' Amused with the man, and persuaded by those around him that there was no danger, the king mounted on Milne's back, and was landed safely on the boat-green. It does not appear that Milne received any reward for this piece of service."

Our next quotation exemplifies the characteristic facetiousness to which we alluded, as being mixed up with the details of this sad calamity. We trust its Doric dialect will be sufficiently intelligible to our southern readers.

"The rapid burn of Tomore descends from the mountain of Belrinnes on the right. John Cly, the meal-miller of Tomore, a sturdy, hale, independent-minded old man of seventy-five, has been singularly persecuted by floods, having suffered by that of 1768, and by three or four inundations since, but especially by that of 1783, when his house and mill were carried away, and he was left pennyless. He was not a little affected by that calamity, which fell upon him and on no one else; but his indomitable spirit got the better of every thing. About seven years ago, he undertook to improve a piece of absolute beach, of two acres, entirely covered with enormous stones and gravel. But John knew that a deep rich soil lay below, buried there by the flood of 1768. He removed the stones with immense labour, formed them into a bulwark and enclosure round the field, trenched down the gravel to the depth of four or five feet, and brought up the soil, which afterwards produced most luxuriant crops. His neighbours ridiculed his operations while they were in progress, saying that he never would have a crop there. 'Do ye see these ash trees?' said John, pointing to some vigorous saplings growing near, 'are they no thriving?' It was impossible to deny that they were. 'Well,' continued John, 'if it wunna produce corn, I'll plant it wi' ash trees, and the laird, at least, will hae the benefit.' The fruits of all John's labours were swept away by the direful flood of the 3d of August. But pride of his heart, as this improvement had been, the flood was not able to sweep away his equa-

nimity and philosophy together with his acres. When some one condoled with him on his loss 'I took it frae the Awen,' said he, with emphasis, 'and let the Awen hae her ain gain.' And, when a gossiping tailor halted at his door one day, charitably to bewail his loss, he cut him short, by pithily remarking, 'Well! if I have lost my croft, I have got a fish-pond in its place, where I can fish independent of any one.' After the year 1783, he built his house on a rock, that shewed itself from under the soil at the base of the bank, bounding the glen of the burn. During the late flood, the water was dashing up at his door, and his sister who is older than he, having expressed great terror, and proposed that they should both fly for it: 'What's the woman afeard o'?' cried John, impatiently, 'hae we not baith the rock o' nature an' the Rock o' Ages to trust till?—We'll no stir one fit!' John's first exertion after the flood was to go down to Ballinalloch, to assist the laird in his distress. There he worked hard for three days, before Mr. Grant discovered that he had left his own haystack buried to the top in sand, and insisted on his going home to disinter it. When Mr. Grant talked to him of his late calamity, 'Odd, sir,' said he, 'I dinna regard this matter hauf sae muckle as I did that slap i' the aughty-three, for then I was, in a manner, a marked man. Noo we're a' sufferin' t'gether, an' I'm but neebourlike.' Mr. Grant says that the people of this district bear misfortunes with a wonderful degree of philosophy, arising from the circumstance of their being deeply tinged with the doctrine of predestination. I was much gratified with my interview with honest John Cly. Whilst I was sketching him unperceived, Mr. Grant was doing his best to occupy his attention. 'Well now, John,' said Mr. Grant to him, pointing to an apparently impracticable beach of stones a little way up the glen, 'if you had improved that piece, as I advised you, it would have been safe still, for you see the burn hasn't touched it at all.' 'Na, fegs!' replied John, with a most significant shake of his head, 'gin I had gruppit her in wi' the stanes that cam' oot o' ye, whaur wad she hae been noo, think ye?—Odd, I kent her ower lang.' The flax-miller's croft shared the same fate as John Cly's, and the mill, full of flax, was sanded up to the beams of the first floor."

The following is an appalling story, and worked up with all the fearful interest of a melo-drama; but, unfortunately, of a fatal termination.

"The flood, both in the Spey and its tributary burn, was terrible at the village of Charlestown of Aberlour. On the 3d of August, Charles Cruickshanks, the innkeeper, had a party of friends in his house. There was no inebriety—but there was a fiddle; and what Scotsman is he who does not know that the well-jerked strains of a lively strathspey have a potent spell in them that goes beyond even the witchery of the bowl? On one who daily inhales the breezes from the musical stream that gives name to the measure, the influence is powerful; and it was that day felt by Cruickshanks with a more than ordinary degree of excitement. He was joyous to a pitch that made his wife grave. I have already noticed the predestinarian principles prevalent in these parts. Mrs. Cruickshanks was deeply affected by her husband's unusual jollity. 'Surely my goodman is daft the day,' said she gravely; 'I ne'er saw him dance at sic a rate. Lord grant that he binna fey!' When the river began to rise rapidly in the evening, Cruickshanks, who had a quantity of

wood lying near the mouth of the burn, asked two of his neighbours, James Stewart and James Mackerran, to go and assist him in dragging it out of the water. They readily complied; and Cruickshanks getting on the loose raft of wood, they followed him, and did what they could in pushing and hauling the pieces of timber ashore, till the stream increased so much, that, with one voice, they declared they would stay no longer, and, making a desperate effort, they plunged over-head and reached the land with the greatest difficulty. They then tried all their eloquence to persuade Cruickshanks to come away—but he was a bold and experienced floater, and laughed at their fears; nay, so utterly reckless was he, that having now diminished the crazy, ill-put-together raft he stood on, till it consisted of a few spars only, he employed himself in trying to catch at and save some hay-cocks belonging to the clergyman, which were floating past him. But while his attention was so engaged, the flood was rapidly increasing, till, at last, even his dauntless heart became appalled at its magnitude and fury. 'A horse! A horse!' he loudly and anxiously cried—'run for one of the minister's horses, and ride in with a rope, else I must go with the stream.' He was quickly obeyed; but ere a horse arrived, the flood had rendered it impossible to approach him. Seeing that he must abandon all hope of help in that way, Cruickshanks was now seen, as if summing up all his resolution and presence of mind, to make the perilous attempt of dashing through the raging current with his frail and imperfect raft. Grasping more firmly the iron-shod pole he held in his hand, called in floater's language a *sting*, he pushed resolutely into it; but he had hardly done so, when the violence of the water wrenched from his hold that which was all he had to depend on. A shriek burst from his friends as they beheld the wretched raft dart off with him down the stream like an arrow freed from the bow-string. But the mind of Cruickshanks was no common one to quail before the first approach of danger. He poised himself, and stood balanced, with determination and self-command in his eye, and no sound of fear or of complaint was heard to come from him. At the point where the burn met the river in the ordinary state of both, there grew some trees, now surrounded by deep and strong currents, and far from the land. The raft took a direction towards one of these; and seeing the wide and tumultuous waters of the Spey before him, in which there was no hope that his loosely connected logs could stick one moment together, he coolly prepared himself, and, collecting all his force into one well-timed and well-directed effort, he sprang, caught a tree, and clung among its boughs, whilst the frail raft hurried away from under his foot, was dashed into fragments, and scattered on the bosom of the waves. A shout of joy arose from his anxious friends—for they now deemed him safe; but he uttered no shout in return. Every nerve was strained to procure help. 'A boat!' was the general cry, and some ran this way and some that, to endeavour to procure one. It was now between seven and eight o'clock in the evening. A boat was speedily obtained from Mr. Gordon of Aberlour; and though no one there was very expert in its use, it was quickly manned by people eager to save Cruickshanks from his perilous situation. The current was too terrible about the tree to admit of their nearing it so as to take him directly into the boat; but their object was to row

through the smoother water to such a distance as might enable them to throw a rope to him, by which means they hoped to drag him to the boat. Frequently did they attempt this, and as frequently were they foiled, even by that which was considered as the gentler part of the stream—for it hurried them past the point whence they wished to make the cast of their rope, and compelled them to row up again by the side, to start on each fresh adventure. Often were they carried so much in the direction of the tree as to be compelled to exert all their strength to pull themselves away from him they would have saved, that they might avoid the vortex that would have caught and swept them to destruction. And often was poor Cruickshanks tantalised with the approach of help, which came but to add to the other miseries of his situation, that of the bitterest disappointment. Yet he bore all calmly. In the transient glimpses they had of him as they were driven past him, they saw no blenching on his dauntless countenance,—they heard no reproach, no complaint, no sound, but an occasional short exclamation of encouragement to persevere in their friendly endeavours. But the evening wore on, and still they were unsuccessful. It seemed to them that something more than mere natural causes was operating against them. 'His hour is come!' said they, as they regarded one another with looks of awe; 'our struggles are vain.' The courage and the hope which had hitherto supported them began to fail, and the descending shades of night extinguished the last feeble sparks of both, and put an end to their endeavours. Fancy alone can picture the horrors that must have crept on the unfortunate man, as, amidst the impenetrable darkness which now prevailed, he became aware of the continued increase of the flood that roared around him, by its gradual advance towards his feet, whilst the rain and the tempest continued to beat more and more dreadfully upon him. That these were long ineffectual in shaking his collected mind, we know from the fact, afterwards ascertained, that he actually wound up his watch while in this dreadful situation. But, hearing no more the occasional passing exclamations of those who had been hitherto trying to succour him, he began to shout for help in a voice that became every moment more long-drawn and piteous, as, between the gusts of the tempest, and borne over the thunder of the waters, it fell from time to time on the ears of his clustered friends, and rent the heart of his distracted wife. Ever and anon it came, and hoarser than before, and there was an occasional wildness in its note, and now and then a strange and clamorous repetition for a time, as if despair had inspired him with an unnatural energy. But the shouts became gradually shorter,—less audible and less frequent,—till at last their eagerly listening ears could catch them no longer. 'Is he gone?'—was the half-whispered question they put to one another, and the smothered responses that were muttered around, but too plainly told how much the fears of all were in unison. 'What was that?' cried his wife in delirious scream,—'that was his whistle I heard!'—She said truly. A shrill whistle, such as that which is given with the fingers in the mouth, rose again over the loud din of the deluge, and the yelling of the storm. He was not yet gone. His voice was but cracked by his frequent exertions to make it heard, and he had now resorted to an easier mode of transmitting to his friends the certainty of his safety. For some time his un-

happy wife drew hope from such considerations, but his whistles, as they came more loud and prolonged, pierced the ears of his foreboding friends like the ill-omened cry of some warning spirit; and, it may be matter of question whether all believed that the sounds they heard were really mortal. Still they came louder and clearer for a brief space; but at last they were heard no more, save in his frantic wife's fancy, who continued to start as if she still heard them, and to wander about, and to listen, when all but herself were satisfied that she could never hear them again. Wet and weary, and shivering with cold, was this miserable woman, when the tardy dawn of morning beheld her, straining her eye-balls through the imperfect light, towards the trees where Cruickshanks had been last seen. There was something there that looked like the figure of a man, and on that her eyes fixed. But those around her saw, alas! too well, that what she fondly supposed to be her husband was but a bunch of wreck, gathered by the flood into one of the trees; for the one to which he clung had been swept away. The body of poor Cruickshanks was found in the afternoon of next day, on the Haugh of Dandaleith, some four or five miles below. As it had ever been his uniform practice to wind his watch up at night, and as it was discovered to be nearly full wound when it was taken from his pocket, the fact of his having had self-possession enough to obey his usual custom, under circumstances so terrible, is as unquestionable as it is wonderful. It had stopt at a quarter of an hour past 11 o'clock, which would seem to fix that as the fatal moment when the tree was rent away; for when that happened, his struggles amidst the raging waves of the Spey must have been few and short. When the men, who had so unsuccessfully attempted to save him, were talking over the matter, and agreeing that no human help could have availed him, 'I'm thinkin' I could ha' ta'en him oot,' said a voice in the circle. All eyes were turned towards the speaker, and a general expression of contempt followed, for it was a boy of the name of John Rainey, a reputed idiot, from the foot of Belrinnes, who spoke. 'You!' cried a dozen voices at once, 'what would you have done, you wise man?' 'I wud ha'e tied an empty anker-cask to the end o' a lang lang tow, an' I wud ha'e floated it aff frae near about whar the raft was ta'en first awa, an' syne, ye see, as the stream teuk the raft till the tree, maybe she wud ha'e ta'en the cask there too,—an' if Charley Cruickshanks had ance gotten a haud o' the rope,'—He would have finished, but his auditors were gone. They had silently slunk away in different directions, one man alone having muttered, as he went, something about 'wisdom coming out of the mouth of fools.'

Of such materials is this volume, of which we reluctantly take leave, in the hope that we have interested our readers with the same fancy for it, which we indulge ourselves. If not, we can only regret the difference of tastes, and look for the comet of 1830 for a subject of an entirely different kind, wherewith to entertain them—if we all live.

The Cabinet Cyclopaedia. Vol. IX. Outlines of History. pp. 461. London, 1830. Longman and Co.

THE design of this volume will be best shewn by an extract from its preface.

"The object of the writer of the present volume has been to give a correct, and, as far as the limits would permit, a comprehensive

epitome of the history of the world, which accuracy of narration and chronology would render valuable as a book of reference, and in which general views and reflections would remove the dryness inseparable from a mere enumeration of facts. As a portion of a Cyclopædia, it is to the historical volumes what in an atlas the map of the world is to those which follow it, representing in connexion what they exhibit isolated, and displaying the relative proportions and importance of the several parts. Its chief utility will be, doubtless, as a book of reference for those who are already versed in history; yet it is hoped that even the tyro who studies it with attention will find himself, at the termination of his labour, ignorant of few of the great characters and events which occur in the history of the world."

Useful rather than amusing, it is a well-contrived dictionary of dates and names; but less adapted for reading than reference, for which latter purpose it will be very valuable.

Foreign Exclusives in London. 3 vols. 12mo. London, 1830. Colburn and Bentley.

THE title of these pages is a mere catch, having neither the personality nor the knowledge in London society, of its prototype. There is nothing requiring either much of censure or of praise.

The Pulpit. Vol. XIV. London, Harding; Edinburgh, Oliphant.

IN acknowledging the attention of our graver contemporary in sending us his fourteenth volume, and a series of his later weekly Nos., we take the opportunity of mentioning the very marked additional interest which these Nos. possess from their ample reports of so popular and curious a subject as the sermons preached by clergymen of all sects, and every variety of opinion, on the death of the late King. Even those who have not previously been disposed to read *the Pulpit*, will be strongly tempted by these piquant bits of politico-theology: they have, we confess, astonished, amused, and informed us, in no small degree.

Waverley Novels, Vol. XV.—A Legend of Montrose.

WE discover from this that we fell into a mistake in reckoning Vol. XIV. the conclusion of the series in twelve vols. 8vo.; and we are very glad to have had another pleasure added to our list. The frontispiece is ably engraved by a rising Edinburgh artist, of the name of R. Lauder; and the volume, with introduction and notes, is certainly one of the most interesting even of the author's productions.

A Practical Latin Grammar, in two Parts. By L. Edward Peithman, LL.D., Author of the "Practical Greek Grammar," "Elements of Latin Composition," &c. London, 1830. Longman and Co.

THIS is a really practical grammar. It includes grammatical rules, exercises, reading lessons, and a vocabulary. By a course of progressive exercises, the pupil is enabled to form the rules for himself, by induction; and rules deduced by this process are not only better understood, and lastingly impressed on the mind, but will prepare the learner to reason logically and philosophically on any subject whatever. In the etymological part, however, the author enters too deeply into the niceties of the language, and overburdens the learner, in the first instance, with too many forms, be-

fore the mind is stored with matter fit to be conformed. But, notwithstanding this defect, or rather redundancy, we are strongly inclined to the opinion that this is the best book for the purpose of learning the Latin language that we know. The plan of reciprocal translation is excellent; for thus only can abstract rules be permanently impressed on the mind. The exercises, we see, are drawn from Latin prose writers, and are calculated to convey useful information on history and the nations of antiquity.

ORIGINAL CORRESPONDENCE.

NAVAL UNIFORM.

AT a moment when our gallant tars are crowding in their new uniforms to pay homage to a sea-bred King of the House of Brunswick, it is amusing to look back, some eighty odd years, to the days of his great grandfather, to see the state of our sailors' personal equipments at that time. We are indebted to the brave and distinguished veteran Sir J. Saumarez for the following original letter from Captain Keppel (afterwards so famous) to Capt. Philip Saumarez, on the subject of dress,—important, it seems, to heroes as well as to ladies. It is curious to find that there was no regular uniform.

London, August 25th, 1747.

MY DEAR SIR,—I received the pleasure of yours just as my Lord Anson was talking of you, and saying that he had received your letter, which he would answer, but in the mean time desired me to make some excuse to you for him, which I readily undertook. He at present has the troubles of the navy on him, as there are many days when they cannot form a board; so pray be easy till you hear from him.

Your letter is so extremely polite, that I don't know how to answer it; but still write to keep up our intimacy, which I assure you gives me great pleasure. Tim Brett tells me you have made a uniform coat, &c. after your own fancy; my Lord Anson is desirous that many of us should make coats after our own taste, and then that a choice should be made of one to be general; and if you will appear in it here, he says he will be answerable your taste will not be amongst the worst.

We reason variously on the subject of Bergen-op-Zoom; the place still defends itself bravely, and the French do not gain an inch of ground but what they undermine; but still I fear it cannot hold out above a week or ten days longer: I wish I may judge wrongly. Only think what alarms we shall have, and how much our cruising will be interrupted, if any more invasions are trumped up, which they will be in the winter, so that their Martinico ships may pass safe without the English protecting them.

I pity your situation at Plymouth, but you will soon be at sea. I hope soon to be with you. Men will be the thing I want, and from the finest mann'd ship in the service, perhaps shall have the worst, though I am told I shall have my own people; but to expect them all to come will be extraordinary.

Cheap and Saunders, who are now with me, desire their compliments; and I conclude with assuring you that I am, with the greatest truth, yours, (Signed) A. KEPPEL.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR AUGUST.

The Sun.—The solar disc has not during the past month been free from spots. 28th July—

two of considerable magnitude are now near the centre. Some astronomers have hazarded the idea, that there may be a connexion between the frequency of this singular phenomenon and the uncertain character of the seasons. Independent, however, of the want of a long-continued series of observations, so necessary to form a theory, the opinions of those who have attended at all to the subject are at variance, some considering the spots as concomitants of a cold, humid season; and others, of excessive heat and drought. A long space of time occasionally occurs when the sun's orb has been observed to be free from these appearances:—from the year 1650 to 1670 scarcely any spots were visible: a similar purity of disc was noticed about a century since, so as nearly to sanction the opinion of the bigoted persecutors of Galileo—that the sun was immaculate, "without spot or wrinkle, or any such thing." For some years past, the sun has exhibited these spots, with scarcely any interruption, and occasionally in great numbers and magnitude.

The occasional deficiency of brilliancy observed in the sun by ancient writers might possibly be owing to the orb being copiously covered with spots. A.D. 321, the Chinese annals have an account of spots seen in the sun, visible to the naked eye. A.D. 807, a large spot was observed for eight days. In 1547, there is recorded a very general deficiency of the solar light, which might be owing to numerous small spots. These mysterious appearances on the central globe of the system have furnished a very plausible explanation of the phenomenon of variable stars. These are considered to be suns, which have large permanent spots unequally distributed on their orbs, that when, by rotation, that side which is least covered with these spots is turned towards the earth, then the maximum of brilliancy occurs; and that when that side which is most covered is similarly directed, then its minimum of light appears. A star in Sobieski's shield, of this description, is now in a favourable position for observation. This star goes through all its changes in sixty-two days.

A singular circumstance has been noticed in solar observations—that the spots near the limb require the focus of the telescope to be shorter than for those near the centre of the disc. This has been attributed to the superior brilliancy of the central parts. The bright planets, Jupiter and Venus, require a different focus to the less bright planets Mars and Saturn.

17^d 23^h 53^m—the Sun eclipsed. This eclipse, though occurring at noon, will, owing to the great south latitude of the Moon, be invisible to the northern hemisphere: it will prove a very small obscuration to the inhabitants of high south latitudes: two digits only of the sun will be concealed.

23^d 5^h 7^m—the Sun enters Virgo.

Lunar Phases and Conjunctions.

	D.	H.	M.
☾ Full Moon in Capricornus	4	0	57
☾ Last Quarter in Taurus	10	20	8
☾ New Moon in Leo	17	23	53
☽ First Quarter in Ophiuchus	26	2	3

The Moon will be in conjunction with

	D.	H.	M.
Jupiter in Sagittarius	1	16	0
Mars in Pisces	7	13	30
Venus in Gemini	15	9	30
Saturn in Leo	17	18	15
Mercury in Leo	19	3	52
Jupiter in Sagittarius	28	22	7

4^d 8^h 30^m—Mercury in his superior conjunction. 8^d 18^h—in conjunction with Saturn. Difference of latitude, 39'.

12^d—Venus in conjunction with p Gem-
 norum: difference of latitude 30". 25^d—
 in conjunction with 344 Mayer: difference of lati-
 tude 4'.

13^d—Mars stationary, and appearing with
 increasing splendour; it may easily be distin-
 guished by its ruddy aspect; it rises in the
 east at the following times respectively:—

D. H. M.	D. H. M.	D. H. M.
1 9 42	13 9 1	25 8 17

The Asteroids.—5^d—Vesta is near no par-
 ticular star to indicate its situation; it passes
 the meridian at 16^h 32^m. Pallas is near
 α Boötis, and Ceres near 578 Libræ. 25^d—
 Juno in opposition 2° 13' north of 44 Aquarii.
 This small planet shines as a star of the eighth
 magnitude, is of a reddish colour, and free
 from that nebulous atmosphere that surrounds
 each of the other asteroids. This latter cir-
 cumstance has given occasion for the suspicion,
 that if these bodies are the wreck of an ex-
 ploded planet, Juno was the satellite of the
 destroyed world, and not a component part;
 but though no cloudy atmosphere is perceived,
 this asteroid is liable to considerable variations
 in its light, arising probably from its rotation,
 which is supposed to be performed in 27 hours.

The elements and other phenomena of Juno
 are as follow:—

	V. D.	H. M.	S.
Sidereal revolution.....	4 132	15 51	33.12
Mean synodical revolution ...	0 474	0 0	0
Longitude of ascending node ..	5 signs 21°	7'	40".4
Place of perihelion	1 ...	23 33	46
Eccentricity of the orbit, 65 millions of miles, or one fourth of the mean distance from the Sun.	13°	4'	9".7
Inclination of the orbit.....	13°	4'	9".7
Proportional quantity of light and heat, the earth being 114037		
Mean diameter	3"		
True diameter.....	1425 miles.		

Owing to the great ellipticity of the orbit,
 Juno occupies twice the time in traversing that
 part of its course most remote from the Sun,
 that it does in describing the remainder.

Jupiter cannot fail to strike the most insen-
 sible spectator with its beauty and brilliancy,
 as it slowly ushers in the autumnal season: its
 low altitude on the meridian affords an excel-
 lent opportunity of contemplating the almost
 infinite variety of position which the system
 assumes;—sometimes all the satellites to the
 east of Jupiter, as on the 9th evening; or to
 the west, as on the 21st—only two visible on
 the 8th and 23d—conjunctions among them-
 selves, 9th, 21st, and 30th—clustering to-
 gether on the 15th and 22d. Every description
 of elongation, transit, occultation, and station-
 ary position, which is slowly developed in the
 planets of the system, are here beautifully seen
 in miniature, and in very short spaces of time.
 The following will be the visible eclipses of the
 satellites:—

	D.	H.	M.	S.
First Satellite, emersion	16	10	11	11
Second Satellite	1	11	38	17
	26	8	40	1
Third Satellite.....	30	8	52	47

14^d 15^d—Saturn in conjunction with the Sun.
 Uranus continues favourably situated for
 telescopic observation. A lapse of six years
 occurred between the discovery of the primary,
 and the first observation of the second and
 fourth satellites, and thirteen years before the
 other four were seen. It is generally believed
 that there are other satellites belonging to this
 remote planet, but shining with a light too
 feeble to be seen with our instruments.

The comet of Encke will this month attain
 its aphelion, and re-commence its return to
 this part of the system, and cross the earth's
 orbit in the spring of 1832.

The comet of Halley has completed seventy-
 one years of its period, and is now rapidly ap-

proaching these lower regions. It is calculated
 that it will pass its perihelion 16th November,
 1835. J. T. B.

Substitute for Ships' Rudders.—Lieut. G.
 W. Rabett, of the R.N., has circulated a plan
 (previously, we understand, submitted to the
 Admiralty) for substitute rudders, in the
 event of the usual rudders being carried away
 or rendered useless at sea. The invention,
 judging from the diagrams, as we have not
 seen a model, appears to be very simple as
 well as ingenious. It consists of a metallic
 composition rudder on each side of the ship's
 rudder, but cased upon the stern of the
 vessel, so as not to injure her way, and secured
 by a long bolt. Should the rudder be dis-
 placed, this bolt is withdrawn, and the substi-
 tute, released from its case, acts in its stead.
 Thus the ship, as it were, carries two spare
 rudders, ready for immediate use, with it to
 sea; and all the dangers and delays hitherto
 incident to the service, when such accidents
 happen, may be avoided. We are not aware
 what objections any seaman may entertain to
 this plan: we are told that many experienced
 persons have highly approved of it. The ex-
 pense, we presume, may be some obstacle; or,
 perhaps, the idea that the necessary opening
 might weaken a ship's timbers, may operate
 still more forcibly: but as the design is obvi-
 ously new and clever, we think its author de-
 serving of praise for his zeal and ability, and
 the thing itself worthy of trial.

LITERARY AND LEARNED.
 ROYAL ASIATIC SOCIETY.

THE RT. HON. C. W. W. WYNN in the
 chair.—Baron W. Humboldt, and several other
 foreigners of distinction, made various dona-
 tions to the Society. Three papers were read:
 from one of them, by Mrs. Skinner, entitled,
 "Notes on Cudapah," we select the following
 interesting account, relating to the heroism of
 a headman of the village of Chitway. This
 village stands on a beautiful lake, which for
 three successive seasons overflowed its banks,
 and destroyed the crops of rice on which the
 inhabitants depended for subsistence. Dis-
 heartened by these repeated visitations, they
 went in procession to a temple of Siva to con-
 sult the god. The oracle declared, says the
 tradition, that nothing would avail to stop the
 ravages of the flood, unless some inhabitant of
 the village offered himself as a sacrifice for the
 sake of his countrymen. All was dismay,
 when the reddy, or headman, volunteered to be
 buried alive for the good of his native village;
 all he asked was, that his wife should be kept
 in ignorance of his intended fate. On the day
 appointed, accompanied by all the pomp of
 religion, he calmly proceeded to the spot, on
 the bank of the lake, where a grave was pre-
 pared to receive him. On his arrival, he was
 struck at observing a second grave close to his
 own; he looked round, as if to ascertain the
 meaning of this, when his wife rushed towards
 him, exclaiming, "It is mine; we have lived
 blessed, and we shall die together!" Vain
 had been the attempt to keep her husband's
 fate a secret to her, and equally vain were all
 attempts to induce her to change her purpose.
 They entered their graves together; and it is
 remarkable, that the lake has never since been
 known to overflow its banks.

This meeting was the last of the season.
 At a special general meeting, held on Tues-
 day, a vote of thanks was passed by acclama-
 tion to the King's most excellent Majesty for
 the gracious manner in which he had been

pleased to accede to the Society's wishes, of
 becoming its patron. At the same meeting
 the thanks of the Society were also given to
 H.R.H. Prince Leopold, he having expressed
 his readiness to accept the office of Vice Patron
 recently held by His Majesty when Duke of
 Clarence.

ECLECTIC SOCIETY.

JUNE 29. An address of condolence and con-
 gratulation was unanimously voted to his Ma-
 jesty King William the Fourth.

July 20. Mr. Jenkins read a paper on a new
 and more effectual plan of extinguishing fires;
 which it is not in our power to render intelli-
 gible without figure. It cannot fail to have
 struck every observer of fires, he remarked,
 that the beneficial effects produced by the
 present method of extinguishing them are
 vastly inferior to the power of the engines, the
 quantity of water consumed, and the skill and
 energy of the firemen. There are but two
 principles on which the extinguishing of fire
 depends, namely, the cutting off the supply of
 atmospheric air, and the application of water:
 with the first we have nothing to do here, inas-
 much as it will be for ever impossible to con-
 struct an extinguisher which will cover a house;
 and the problem appears to be, as regards the
 latter, to extinguish fire with the least labour
 and the least possible quantity of water. It is
 evident that a dozen engines playing upon a
 house in a state of conflagration can benefit
 little, if some are playing on the external walls,
 and some through a broken window, without
 method and without union of design. Nine-
 tenths of the water either returns into the
 street, or never reaches the burning material;
 or passing in one dense stream through the
 flames, extinguishes truly all that it touches,
 but quickly finds its level in the lowest part of
 the building, where it remains inert and useless.
 The only mode in which fires can be speedily
 and effectually extinguished, Mr. Jenkins con-
 tinued to maintain, is by water falling from
 above in a continued shower, coming into im-
 mediate contact with every part of the burning
 material; and, by its incessant action, leaving
 no chance of revivification to that flame which
 it has once subdued. His plan went to effect
 this by a perfectly simple process, which, he
 stated, had been submitted to the test of prac-
 tice, and was found fully adequate to the end
 proposed. A model of a dwelling-house, with
 the apparatus of the pipes, &c. &c. was ex-
 hibited, in corroboration of it. It was not,
 the inventor observed, the least advantageous
 part of the plan, that fire in any separate floor
 of a house may be extinguished, independent of
 the rest, by simply attaching the hose of the
 engine to that particular story.

FINE ARTS.

MR. LOUGH'S EXHIBITION.

SINCE our last notice of Mr. Lough's Exhi-
 bition, he has added two admirable works to
 the collection;—the one a model of a monk,
 which is about to be reproduced in stone; the
 other a model of a sleeping child, the son of
 Mr. Manning. The severe abstraction of the
 former, and the bold and broad style of its
 execution, furnish a striking contrast to the
 sweetness and simplicity of the latter, and the
 tenderness and finish of its beautifully undu-
 lating forms. We never saw infantile slumber
 more happily expressed.

* Brathwaite's engine, wrought by steam, of which we
 recently gave a description, is one of these prodigi-
 ously effective means.—Ed. Lit. Gaz.

ROYAL BAZAR.

MR. REINAGLE, the Royal Academician, has recently assembled an interesting collection of pictures, which has just been opened for public view at the Royal Bazar in Oxford Street. They are above thirty in number; and, besides two magnificent altar-pieces, copied by Mr. Reinagle himself from two of Rubens's noblest productions, comprehend some very fine original works by Claude, G. Poussin, Bassano, Tintoretto, Paul Veronese, Guido, Rubens, Vandyke, Correggio, Procaccini, Romanelli, Carlo Dolce, Giorgione, Mutziano, Parmegiano, L. Caracci, Vernet, Westall, Gudin, &c.—The most beautiful picture in the room is unquestionably "the Assumption of the Virgin," by Carlo Dolce. It is as highly finished and admirable a specimen of the master as we ever met with, and would of itself constitute an attractive exhibition. We were also much struck with a modern work of great talent, "the loss of the Kent East Indiaman, by fire, in the Bay of Biscay," by Monsieur Gudin. But the most curious article in the collection is, "the celebrated antique Greek painting, the Portrait of Cleopatra; a picture in encaustic, 1863 years old;" presumed to be by Timomachus, who lived in the reign of Augustus Caesar. Of the authenticity of this singular performance we understand that no doubt whatever exists. It is in extraordinary preservation, considering its age; and although it does not rank very highly as a work of art, is, nevertheless, not without its merits.

Now that the more extensive exhibitions of the season are closed, we hope that this select little gallery will have numerous visitors.

WEEKS'S MECHANICAL EXHIBITION.

THE admirers of ingenious and minute mechanism will be much pleased with this splendid little exhibition; which principally consists of a collection of valuable and superbly ornamented clocks; the striking of the hours of which is followed by the singing of birds, the dancing of peasantry, the flowing of rivers, the passage of boats, the falling of cascades, the revolving of wind-mills, the fluttering of butterflies, the expanding and closing of flowers, and a number of other amusing varieties.

NEW PUBLICATIONS.

Panorama of Switzerland, as viewed from the Summit of Mont Righi. Drawn from Nature by Henry Keller; engraved by J. Clark. Also a Circular View of the Country, by General Pflyffer; with Descriptive Notices of the most remarkable Objects. London; Leigh.

At the hottest moment of the hottest day of the last hot week did this tantalising Panorama meet our eye, and fill us with vain wishes to plunge into the fresh lakes, or ascend the frozen peaks, represented within its extensive round.

"O happy they! the happiest of their kind!"

who, at such a season, are able to exchange Hampstead Heath, and the canal in St. James's Park, for scenes like these; in which nature assumes her grandest and most romantic shapes; and in which the walk of a league comprehends almost every variety of climate and temperature. If we had Fortunatus's cap upon our heads at the present instant, the next would find us lying on the summit of Mont Righi, close to the Kulm Inn, (we have excellent English reasons for such a vicinity,) with Mr. Leigh's most distinct and intelligible Pa-

norama spread before us, tracing the numerous features of the stupendous and sublime prospect.—But we are forgetting ourselves; we must away to Took's Court!

Illuminated Ornaments, selected from Missals and Manuscripts of the Middle Ages. By Henry Shaw. Part II. London, Pickering.

THE second part of this singularly beautiful publication exceeds even the first in splendour. The specimens in it are almost entirely derived from the Harleian and Royal Libraries, in the British Museum. What a striking contrast does the patient labour of many months bestowed on the decoration of a single copy of a work in former days, afford to the steam-press expedition of the present times! It is the garden, as compared with the field: the spade and the rake have been exchanged for the plough and the harrow. Far be it from us to doubt the value of the benefits which the world now enjoys, and which it will henceforth enjoy, from the cheap and wide diffusion of learning and science; but there is, nevertheless, a character, even in the merely mechanical execution of ancient productions, which must always command our admiration and respect. We should think it a great improvement if the dates, or supposed dates, of the originals were given.

ORIGINAL POETRY.

TO THE EVENING STAR.

MILD cresset of Eve, in thy lustre appearing,
Like Hope's beacon-lamp, midst yon fast-fading ray,
While the dun-vested twilight in stillness is
Her flowers to the last golden glances of day;
How sweet, when in peace sinks each feverish emotion,
Reclined by the brink of the hoarse-sounding
To watch thy pale beam on the bosom of Ocean,
And trace the dim records of joys that are o'er!
Say, Star of the lonely—Night's fairest of daughters,
By whom are thy far-distant regions possess'd?
Do the depths of thy valleys—the banks of thy waters,
Resound to the praises and strings of the blest;
Where the morn of content breaks, unclouded by sorrow,
And joy blooms, unchilled, by the clear-flowing
And fear shrinks no more from the dark-frowning
And Time dooms no parting, and Love has
Oh! fain would we deem that the shades of the perished,
Released from life's ills and the fetters of earth,
Smile thence on the hearts where their memories are cherished,
And still fondly watch o'er the place of their
And fain would we trust, that each now-mourning spirit,
When one darkness is spread o'er our dust and
May hope, by those fountains of light, to inherit
A bliss unpolled and lasting as theirs.
Whate'er be the scenes which thy radiance discloses,
Or thy realm's joyous tenants, bright gem of Still,
as now, when Eve scatters yon heaven with her roses,
Be thine influence descending, as balm to the
And still, where the minstrel is silently musing,
May the smile of thy glory be shed from a-far,
Its own gentle ray on his pathway diffusing,
Its peace on his visions—thou soft-beaming Star!

J. F. H.

TO LUCY ON HER BRIDAL MORN.

AND has the vow of mortal love been breathed upon thine ear?
And hast thou pledged thy faith, O maid, to one of earthly sphere?
And has that virgin heart, whose sigh like incense rose to heaven,
To Love's enchantment yielded, and to earth that incense given?
I cannot smile as others smile to see the paganant gay,
That flaunts so pompons and so bright upon Thy vestal glory shone so pure, so like the modest light
Of the dear twilight-star that shines more tender still than bright.
And must that maiden lustre now so quickly pass away?
That lambent radiance disappear before a
It must be, for the vow is pledged—triumphant at thy side
Young Edward stands, and claims thee for his own, his beautiful bride.
Thy soft, thy lovely cheek, that erst a lonely pillow prest,
Shall bloom no more upon the lilies of its virgin
For Love's blush-roses proudly have thy snowy temples crown'd,
And Hymen's orange-flowers and myrtle in the wreath are found.
Then fare thee well!—thy mother weeps to give thee from her arms,
And prays, and hopes, and sighs, with all a mother's kind alarms.
Thy father holds thy hands in his, and with uplifted eye,
Invokes upon his lovely child a blessing from Thy sister's lips are prest to thine, in long and dear embrace;
Her tears are mixed with thine—they fall upon thy glowing face:
That full, effusive confidence of hope, or joy,
Which sister maidens know, with thee she cannot know again.
But fare thee well!—the hour is come, the hour when thou must part
From all that most are cherished by a yet unwedded heart:
Go—be thy Edward's halcyon love, the load-star Thou hast shone peerless as a maid—be perfect as a wife.

JUVENIS.

SKETCHES OF SOCIETY.

Anecdote of Charles X.—The present King of France, when a child, was one day playing in an apartment of the palace, while a peasant from Auvergne was busily employed in scrubbing the floor. The latter, encouraged by the gaiety and playfulness of the young count, entered familiarly into conversation with him, and, to amuse him, told him a number of diverting stories and anecdotes of his province. The prince, with all the ingenuousness of childhood, expressed his commiseration for the narrator's evident poverty, and for the labour which he was obliged to undergo in order to obtain a scanty livelihood. "Ay!" said the man; "my poor wife and five children often go supperless to bed." "Well then," replied the prince, with tears in his eyes—"you must let me manage for you. My governor every month gives me some pocket-money, for which, after all, I have no occasion, since I want for nothing. You shall take this money and give

* At a moment when the king of France appears to be in a position of much peril, it may be interesting to read this anecdote of his infancy.—Ed.

it to your wife and children; but be sure not to mention a word of the matter to a living soul, or you will be finely scolded." On leaving the apartment, the honest dependant acquainted the governor of the young princes with the conversation that had taken place. The latter, after praising the servant highly for his scrupulous integrity, desired him to accept the money, and to keep the affair a profound secret; adding, that he should have no cause to repent of his discretion. At the end of the month the young Count d'Artois received his allowance as usual, and watching the moment when he was unobserved, hastily slipped the whole sum into the hands of his protégé. On the same evening a child's lottery was proposed, for the amusement of the young princes, by the governor, who had purposely distributed among the prizes such objects as were most likely to tempt a boy of the count's age. Each of his brothers eagerly hazarded his little store; but the Count d'Artois kept aloof from his favourite amusement. The governor, feigning astonishment, at last demanded the reason of this unusual prudence:—still no answer from the count. One of the princes, his brothers, next testified his surprise, and at length pressed the young count so hard, that in a moment of childish impatience he exclaimed—"This may be very well for you; but what would you do if, like me, you had a wife and five children to support!"

A friend conversing with Talleyrand about the portrait of a ministerial personage not remarkable for eloquence, exclaimed—"What a striking resemblance! It positively wants only the faculty of speech." "No wonder," replied Talleyrand—"it was sketched in the House of Lords."

A provincial actor performing the part of Augustus in the tragedy of *Cinna*, during the late severe winter, evinced his delicate sensibility to cold by the very un-Romanlike action of rubbing his hands together. A few audible hisses from some classic spectators in the pit reminded the performer of his want of noble bearing. Nothing disconcerted, the actor exclaimed, with a loud oath—"Idiots! a Roman knows just as well as a Christian when the thermometer marks fifteen degrees below zero."

DRAMA. HAYMARKET.

A FARCE called *Honest Frauds*, from the pen of Mr. Lunn, was produced on Thursday last, and received with as much applause as the few persons scattered about the benches could prevail on themselves to bestow at twelve o'clock on a sultry night, exhausted by the heat and satiated with acting. A fourth piece was begun, positively after the stroke of midnight, and that a two-act farce, *The Happiest Day of my Life!* This is downright cruelty to animals, and ought to be punishable under Mr. Martin's act. *Honest Frauds* is unworthy the author of *Roses and Thorns*, and is evidently two pieces dovetailed together that have no natural connexion in style or plot, and pertinaciously refuse the aid of the joiner. Why the farce should be called "*Honest*" *Frauds*, too, we do not exactly perceive. It may be very droll or very dramatic to trick an old gentleman out of his daughter, by making him suppose his son-in-law a man of great genius and fortune, when the first is questionable and the second positively false; but we do not clearly see the honesty of the hoax. Mr. Horn sang a very elegant song, "The deep, deep sea," which will be sure of popularity, whatever may be the fate of the farce.

Of Mrs. Evans, a vocal *débutante*, we hope to speak in our next.

ENGLISH OPERA, ADELPHI.

THE splendid opera *Der Vampyr* has been revived here, and went off on Tuesday evening with great *éclat*. It was followed by what the bills call "a dramatic foolery," entitled, *Pop, or Sparrow Shooting*. This little sketch appeared some time ago in the *New Monthly Magazine*, and was never intended for the stage. The author of *Paul Pry*, however, may not put his pen to paper with impunity, and accordingly Pop! we behold it on the boards of the Adelphi. We confess we laughed at its pleasant absurdity, and wondered that any body could put themselves into such a passion about trifles this tremendously hot weather, as a few atrabillious critics did at the fall of the curtain.

In answer to Mr. J. Barnett's note, respecting a report to which we gave currency last Saturday, we have only to say, that we were not entrusted with the name of "the young and popular composer," and regret that Mr. Barnett should have occasion to think himself the person alluded to.

Parisian Drama.—Considerable excitement was caused amongst the playgoers of Paris, by the announcement of the *clowns* who were to appear at the Théâtre de Nouveautés; and equal disappointment was experienced when the manager unwillingly announced that the English mimes had been forbidden to appear, because this species of pantomime was not included in the privileges of the theatre; but permission to play a certain number of nights has been granted by the minister of the interior, who took into consideration the enormous expense of the proprietors.

VARIETIES.

Natural History.—A letter from Hamburg states that great preparations are making there for the assembly of naturalists and other scientific men, which is to take place in September. The professors and students in natural history on the continent have for some years past had an annual meeting in some city of Germany, at which they form new acquaintances or renew those of early life. At these meetings essays are read and important discoveries communicated, but amusement and good cheer are not neglected. The meeting at Hamburg this year is expected to be very numerously attended.

Mr. Buckingham.—Owing to the delay in sending us tickets, we were not present at a meeting in which the plan of a philanthropic voyage round the world, under the command of Mr. Buckingham, was brought forward, under very high auspices. We have, however, seen the papers published on the subject; and have to express our hope that sufficient support may be given by the benevolent and patriotic towards carrying this design into effect. At present we abstain from discussing the details, the difficulties, and the probable results; being contented with the general excellence of the motives, and satisfied with the feasibility of doing much good.

The Camel.—An attempt is making to introduce the camel into the South of France. Several of the principal persons in the department of the Landes, apprised of the useful designs of the government in that respect, have offered to contribute all in their power to the naturalisation in that district of an animal which offers so many resources, and whose services will be so beneficial.

The Papal Rose.—It is customary for the pope to give every year a golden rose, ornamented with diamonds, to whichever of the powers of Europe appears in his eyes to be the most distinguished for sincere piety. His counsellors intrigue deeply to obtain the preference, every one proposing his favourite nation. The general of the Jesuits has carried it off this year. And who do the public think is the prince beyond all others the *enfant chéri* of Father Roothan? Don Miguel! He will receive the rose.—*Le Mercure Etranger*.

New Coach.—A new coach, loyally named after our excellent Queen, has begun to run, of which the announcement is very whimsical; being as follows:—"The Queen Adelaide! starts from the King's Arms, at Bushy, every morning at eight o'clock."

Silk Shirts.—A silk manufacturer at Berlin has presented to the Society of Arts in that city an article for shirts, which he calls *toile de soie*. Several physicians assert, that the use of silk near the skin is very conducive to health.

Silk Worms in America.—A correspondent of a New York paper states, that he had obtained from 9,000 silk worms more than thirty pounds of fine cocoons, containing one-third more silk than those of Europe. He says, that in consequence of the success which had attended his and other experiments, the breeding of silk worms in the United States was likely to become general.

Silk in Sweden.—A company for the production of silk in Sweden has been established at Stockholm. The prince-royal has made them a grant of land sufficient for transplanting 2,400 mulberry-trees, of from two to four years old, which are placed at the disposal of the society.

Gold in Russia.—In the beginning of March last there arrived at St. Petersburg a caravan with the gold and platina obtained during the second six months of 1829, from the mines of Oural, viz.

Gold from the government mines	1783 lbs.
Do. from private mines	3025
	4808
Platina from the government mines	47 lbs.
Do. from private mines	1108
	1155

The produce of the first half year of 1829 was 4,688 lbs. of gold, and 1,041½ of platina. The value of the gold alone for the year is about 650,000*l*.

Gold.—The heads of the Americans seem to have been almost turned, by the accounts of the discovery of gold in Georgia and the Cherokee territory. It is found in small pieces and fine grains, and sometimes in smooth cubes, weighing nearly 150 dwts. The stratum in which it lies is of granite stone and sand, one or two feet thick, resting on slate. This stratum is very near the surface.

Zoology.—A zoological society, similar to that of London, has, we hear, been set on foot in Dublin.

Swan River.—The governor, Captain Stirling, it is mentioned in the latest letters, has sailed on board the Eagle for the southern coast, on a voyage of discovery.

Louis XVIII.—It is said, that a person who was on terms of intimacy with the late king of France, received from him, either as a legacy or as a deposit, several sealed letters, with a prohibition against opening them during the reign of his successor; and it is thought that in these letters Louis the Eighteenth has applied himself to describe beforehand all the political events which, according to his conjectures and experience, must take place in France,

during the years immediately following his death. This is a singular idea; but it is conformable enough to the turn of mind of the prince to whom it is attributed.

Parisian Dialogue between a Lady and her Servant.—"Madam, somebody has called upon you." "What is his name?" "He says, madam, that that is of no consequence; he has brought a new number of M. de Jouy's works." "Ah, mon Dieu! another! Will M. de Jouy never have done writing? Take it, and pay for it." (The servant goes out, and returns immediately with two octavo volumes.) "Madam, the man begs you will have the goodness to give him something to drink." "Eh! give him the books, and let there be an end of it."—*Le Mercure Etranger.*

Fine Arts in England.—His Majesty sat for an hour and a half to Chantrey for his bust, as a model for a new coinage.

On Saturday the King went over the new palace at Pimlico, to which he has been pleased to give the name of *St. James's Palace*, instead of the various appellations by which it has hitherto been designated.

The Duc de Bordeaux.—This young prince, who received the rudiments of his education from his mother, by whom all his books were chosen, (most of them being in English,) is said to display great fondness for the study of military tactics, to the exclusion of studies more proper for his age. He is already half a mathematician, and designs very prettily.

Paris Academy of Sciences.—At the last sitting of this Society a child was introduced, who had lost by gangrenous inflammation the right cheek, the lower lip, and a part of the chin. In this horrible state, M. Dupuytren took the child in hand, and by means of a portion of flesh and skin taken from the neck, and placed over the denuded parts, succeeded in obtaining a union, and restoring them, so that when the child was presented to the Academy, although disfigured, there was nothing repulsive in his appearance. At the same sitting a long discussion ensued, on the discovery of some bones of the extinct bird, which was known in the Isle of France, up to the year 1630, under the name of *dronte* and *didart*. M. Cuvier took this opportunity of stating, that among the animals now extinct, we may place two species of crocodiles, of which several embalmed specimens have been found in Egypt.

Artificial Nose.—The Rhenoplastic operation was performed on the 21st ult., at the hospital of *La Pitié*, in Paris, by M. Lisfranc, with success. The patient was a female, who had lost her nose by ulceration. The skin was taken from the cheeks for the operation.

Heat discovered in the Moon's Rays.—An American paper communicates the following as an experiment made by Dr. Howard of Baltimore. It is very similar to one, of which an account was some time ago given in this country. Dr. Howard says:—"Having blackened the upper ball of my differential thermometer, I placed it in the focus of a thirteen-inch reflecting mirror, which was opposed to the light of a bright full moon. The liquid began immediately to sink, and in half a minute was depressed eight degrees, where it became stationary. On placing a screen between the mirror and the moon, it rose again to the same level, and was again depressed on removing the obstacle. This experiment was repeated several times, and always with the same result."

Barbarous Levity.—A French paper states that at Montauban, a lady hearing the shouts

of some assassins who were furiously attacking the house of a M. de Preissac and Madame de Condat, his sister; laughingly observed, "The ladies of Condat love music; it is a serenade they are giving them." This reminds one of the horrors of the revolution.

Algiers.—An officer of the French army at Algiers gives the following description of it:—"To reach this place, we passed through a country little worthy of notice—sands, hills, and heaths, with laurel, myrtle, and thorns; but round Algiers the soil is very superior—orange, lemon, date, and palm-trees, mixed with the fruit trees of Europe, prove its fertility, although their sad condition shews the indolence of the cultivator. Near the town there are country-houses, some of which are very pretty in their way, though the architecture is sufficiently grotesque. The outside of the houses is whitewashed, the interior is lined with marble and porcelain—they contain little furniture; but they have good fountains, and every house has an excellent stock of poultry."

—An important question relating to this place now divides and perplexes the Parisian literati. It is nothing less than deciding whether Algiers, which is spelt in French *Alger*, should be pronounced *Algé* or *Alger*, with the *r*. This puzzling question, respecting which authorities are cited on both sides, will, says the *Messenger des Chambres*, be in all probability referred to the Academy.*

Absence of Mind.—Who does not sometimes forget the day of the month, or the day of the week? It is said that M. de Bonnaud, a well-known French academician, asked his own name of one of his friends when he was about to sign a contract of marriage. One of Napoleon's courtiers, talking to Louis XVIII. in the year 1814, began, "Sire, your genius and your victories—" A similar *lapsus lingue* is just now amusing the good people of Paris. A peer of France exclaimed to his jealous and angry spouse, "I assure you—my dear Fanny!" forgetting that that was the name of the fair one whom the lady suspected of being her rival. —*Le Mercure Etranger.*

New Musical Instrument.—M. Lichental, a piano-forte maker of Ghent, has invented a new instrument, called *piano-viole*, in which, with all the execution of the piano-forte, the sounds of the violoncello may be obtained with the same degree of continuity. From the description given to us, however, we conclude that it is merely a modification of the piano exhibited here last year, in which the chords, which are of cat-gut, are played upon with a bow moved by the keys.

Triumphant Column.—The French government has resolved to erect a rostral column, surmounted by a pharos, in the Roan of Toulon, to commemorate the national triumph at Algiers, of the cannon taken at which place it is to be formed.

Sand.—Showers of reddish dust have lately fallen in various parts of Italy. This phenomenon was, in the first instance, attributed to an eruption of Mount Etna; but it is now believed to have been sand transported from the plains of Africa by a violent sirocco.

Fine Arts in France.—It is a striking proof of the encouragement given to native art in France, that a French artist, M. Eugene Isabey, was appointed by the king "Painter to the Expedition to Algiers." M. Isabey has made, and sent home a number of drawings, which are about to be lithographed.

* We would again refer to the edition of Pananti's *Travels*, just republished, as affording the latest and best intelligence respecting this portion of Africa.—*Ed. L. G.*

The Pasha of Egypt.—A negotiation is carrying on between the Pasha of Egypt and the French envoy, M. Baron Taylor, who has the title of King's Commissioner, for the purpose of procuring for the government of France one of those pillars at Alexandria, known as Cleopatra's Needles, and the two celebrated monuments of Luxor. The baron has written to the minister of marine, on the success of his mission, in the following terms:—"The pasha, unable to deny any request of the King of France, has eagerly embraced the occasion of presenting these splendid obelisks to his acceptance." They will consequently be conveyed to France forthwith.

Sheep.—A paper has been presented to the French Academy by a M. Petri, a German, in which it is stated, as the result of experiments, that by shearing lambs early, and shearing them several times in the year, a thicker and finer fleece is obtained than by the present practice.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XXXI, July 31.*]

Dr. Jamieson announces the Elements of Algebra, designed as an Introduction to Bland's Algebraical Problems; also a Key.—Dr. Lingard has sent to press the eighth volume of his History; and as it will bring down the work to the epoch of the Revolution, it will be accompanied by a copious index.

Bavaria.—One of the King of Bavaria's librarians, M. Schmieller, has just published, at Stuttgart, a Saxon poem of the ninth century, entitled *Helund*. This is the first complete edition of this poem. The dialect in which it is written resembles the remains of the language of the Goths; and it is a valuable publication for philology and for the history of German poetry. Klopstock was acquainted with this poem: in a letter to Gleim he praises its lyric rhythm, and says he frequently found in it expressions very poetical, but which unhappily have fallen into desuetude; he also speaks highly of the energy of its style.

LIST OF NEW BOOKS.

Lardner's Cabinet Cyclopaedia, Vol. IX. Outlines of History, fcp. 6s. bds.—Hunter on Harrowgate Waters, 12mo. 3s. bds.—Chambers' Book of Scotland, 8vo. 9s. bds.—Lauder's Account of the Floods in Moray, &c. in August 1829, 8vo. 14s. bds.; royal 8vo. procs, 11. 1s. bds.—Lyell's Principles of Geology, Vol. I. 8vo. 15s. bds.—Album Verses, by C. Lamb, crown 8vo. 7s. bds.—Cabinet Album, 8 vols. 10s. bds.—Clarance, a Tale of our own Times, 3 vols. fcp. 11. 1s. bds.—Devotional Sonnets, 18mo. 4s. bds.—Christian's Appeal, 12mo. 2s. 6d. bds.—The Moral Muse, by E. METEOROLOGICAL JOURNAL, 1830.

July.	Thermometer.		Barometer.	
	From 55.	to 74.	30.16	to 30.14
Thursday .. 22	57.	76.	30.08	to 30.06
Friday 23	60.	77.	30.01	to 30.06
Saturday .. 24	61.	80.	30.15	to 30.16
Sunday 25	60.	83.	30.10	Stationary
Monday .. 26	61.	84.	30.24	to 30.26
Tuesday .. 27	62.	83.	30.29	to 30.21
Wednesday 28	62.	83.	30.29	to 30.21

Except the 22d and 23d, almost cloudless. The more seasonable weather of the past week has caused the harvest to commence in neighbouring places; and we rejoice to state that there is every appearance of productive crops, both of oats and wheat.

Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

Philotas, if "a constant reader" must be aware how cautious the *Literary Gazette* is of being made the organ of any puffing, by the representations of parties or their friends. Of the matter to which he alludes, and we can say no more on an anonymous assertion, we know nothing, except from the documents publicly circulated at the meeting.

When G. W., of Manchester, chooses to write amatory songs, we wish he would sing them to his dears; or, if he must effuse them in MS. to parties who do not care a farthing either for him or them, that he would pay the postage of his letters.

We are unhappy in not being able to insert M. J. S.'s lines on Happiness.

ERRATUM.—In the first page of our last No., middle col., line 31, for "reformation," read "information."

ADVERTISEMENTS,

Connected with Literature and the Arts.

TO AMATEURS.—For Sale, a DOME, 13 Feet diameter, painted by the late Sir James Thornhill, at intervals, while painting Greenwich Hospital. The Subject represents either the Day or the Four Seasons. May be seen at the Nursery Grounds of Thomas Gibbs and Co., Seeds and Nursery Men to the Honourable Board of Agriculture, at Old Brampton, situated One Mile from Hyde Park Corner, on the direct Road to Earlscourt.

Switzerland.

In Case, price 12s. plain, or 11. 4s. beautifully coloured, PANORAMA of the LAKES, MOUNTAINS, and PICTURESQUE SCENERY of SWITZERLAND, as viewed from the Summit of Mount Righi. Drawn from Nature, by HENRY KELLER. Accompanied with Descriptive Letter-press, Directions to Tourists, &c.; and a Circular View of the same portion of the Country, on the Plan of General Pflüger. Printed for Samuel Leigh, 18, Strand. Of whom may be obtained.

A variety of Guides for the Use of Travellers on the Continent.

THE SHANNON and CHESAPEAKE. Just published, in double elephant folio, price Two Guineas, on India paper, a Series of Four Views to illustrate the Naval Action fought on the 1st of June, 1813, between the English Frigate Shannon and the American Frigate Chesapeake. Drawn in the most beautiful style of Lithography, from very accurate Paintings, by S. C. Schuetzky, Esq. under the Inspection of Captain R. H. King, R.N. Accompanied by a Description of the Plates, and a general Account of the Engagement. Smith, Elder, and Co. Cornhill.

MUSIC.

VERY superior ITALIAN and ENGLISH SINGING TAUGHT, in an unusually elegant manner, uniting a chasteness of style with a classical correctness of articulation rarely met with in the vocal art. By this Method, feeble voices are rendered effective. Also, the Piano-Forte and the Rough Bass. Letters addressed W. H. at Messrs. Goulding and D'Almaine's Music Warehouse, Soho Square, will be immediately attended to.

BOOKS PUBLISHED THIS DAY.

English Translations of the Classics.

THE FAMILY CLASSICAL LIBRARY, 1. No. 1, containing Virgil: The Georgics translated by Archdeacon Wraughton; the Georgics by Sotheby; and the Aeneid by Dryden.

The object of the Projectors of this undertaking is to produce a work, which, from its cheapness, elegance, and uniformity, may recommend itself to all classes; the expensive existing editions having hitherto precluded the community at large from an acquaintance with the writings of the greatest poets, historians, and orators, the world has produced. The Seven Numbers already published comprise Demosthenes, Sallust, Xenophon, and Herodotus. Henry Colburn and Richard Bentley, 8, New Burlington Street.

THE UNITED SERVICE JOURNAL and NAVAL and MILITARY MAGAZINE for August; embellished with a fine Portrait of his late Majesty, Price 2s.

Contents: Sketch of the Life and Reign of George IV.—Extraordinary Events which took place at St. Petersburg on the 14th of December, O.S. 1825—Service Afloat during the late War; Cruising in the West Indies—Wellington and Marlborough; written on the spot—Rural Economy of a Marine left on an Island in the Pacific—Account of the Formation and Revolt of the Irish Brigade in the Brazilian Service at Rio, in 1822—Proposal for Manning the Fleet, without generally resorting to Imprecement in Time of War—Letters from Gibraltar, No. IV., by the Author of the Military Sketch Book—On the present Distribution of Weight and Pressure in Ships of War, by Commander John Pearse, R.N.—Sketch of the Military Services of the late Lieutenant-General Guard—The Officer's Cemetery at Gibraltar—Facts connected with the Manoeuvre of Breaking the Enemy's Line on the 8th of April, by Sir Gilbert Blane, Bart.—On the Deflection of Bullets from the Line of their Flight, &c.—Regulations for the Training of Seamen Gunners, and the General Organisation of Ships' Crews in the French Marine—Evidence of Sir Herbert Taylor before the Finance Committee—Captain Phillips's improved Captains—Dr. Clark on the Influence of Climate—Foreign Miscellany—General Correspondence—Editor's Portfolio—General Orders, Circulars, &c. Henry Colburn and Richard Bentley, 8, New Burlington Street.

AT HALF PRICE, the following New and Popular Works.—Ming's Life of Brong—Lord King's Life of Locke—Gleg's Life of Munro—Nares' Life of Burghley—Memoirs of Jefferson—Comic Annual—Lost Heir—Deveraux—Chelsea Pensioners—Adventures of a King's Page—the New Forest—Cloudeney—Anne of Gelstein—Traits of Travel—Hungarian Tales—Excursions—Richelieu—the Borderers—Tyler's Scotland—Hardy's Mexico—Royal Correspondence—Military Adventures—Stories of Waterloo—the Ball—Flood and Flood—Letters from the Aegean—Memoirs of Lady Fanshawe—Records of Woman—Southey's All for Love—Foreign Quarterly Review, complete—Foreign Review, ditto—and New Monthly Magazine for the last Two Years. The whole quite clean and in excellent condition. Apply to H. Grollier, 138, Holborn, adjoining Furnival's Inn.

MODERN NOVELS, ROMANCES, &c. Wanted, for Exportation, a large Collection of Second-hand Modern Novels, Romances, &c. in good condition. Letters, post-paid, are requested to be addressed to Mr. Tegg, No. 73, Chesapeake.

Joyce's Scientific Dialogues. In 6 vols. 18mo. price 15s. half-bound, a new edition of SCIENTIFIC DIALOGUES, intended for the Instruction and Entertainment of Young People, in which the First Principles of Natural and Experimental Philosophy are fully explained; comprising Mechanics, Astronomy, Hydrostatics, Pneumatics, Optics, Magnetism, Electricity, and Galvanism.

By the Rev. J. JOYCE. * * * In this edition Woodcuts are substituted for Plates, as facilitating the Reference from the Text to the Figures. London: Printed for Baldwin and Cradock; and R. Hunter.

- Of whom also may be had, by the same Author, 1. A Companion to the Scientific Dialogues (forming a Seventh Volume to that Work); or, the Tutor's Assistant and Pupil's Manual. To which is added, a Compendium of the principal Facts in each Department of Science. 2s. 6d. half-bound. 2. Dialogues on Chemistry, with Questions for the Examination of Pupils. A new edition, greatly improved according to the present state of the Science. In 2 vols. price 9s. half-bound. 3. Dialogues on the Microscope, with Ten Plates, in 2 vols. 7s. half-bound. 4. Letters on Natural and Experimental Philosophy. 2d edition, 17 Plates, price 8s. boards. 5. The Catechism of Nature, for the Use of Children. 18th edition, price 1s.

For Classical Schools.

Printed by A. J. Valpy, and published by Baldwin and Cradock. A DICTIONARY of LATIN PHRASES, comprehending a Methodical Digest of the various Phrases from the best Authors, which have been collected in all Phraseological Works hitherto published; for the more speedy Progress of Students in Latin Composition. By W. ROBERTSON, A.M. of Cambridge.

- A new edition, with considerable Additions and Corrections. In a very thick vol. royal 12mo. 15s. bound. 2. Analecta Latina Majora; containing Selections from the best Latin Prose Authors, with English Notes, &c. exactly on the Plan of Dazell's Analecta Graeca. In 8vo. price 10s. 6d. bound. 3. Schrevelius' Greek Lexicon, translated into English. With numerous Corrections, and with many new Words added. For the Use of Schools. In a large vol. 8vo. price 10s. 6d. boards. 4. The Antiquities of Greece, being an Account of the Manners and Customs of the Greeks, designed to illustrate the Greek Classics. By John Robinson, D.D. Second edition, considerably enlarged, with a Map, and Designs from the Antique. 8vo. 17s. boards. 5. Cards of Euclid, containing the Enunciations and Figures belonging to the Propositions in the First Six and Eleventh Books of Euclid's Elements, which are usually read in the Universities. By the Rev. J. Brasse, late Fellow of Trinity College, Cambridge. Price 5s. 6d. in a case; or in a book, for the Tutors themselves, price 4s. 6d. sewed.

Under the Superintendance of the Society for the Diffusion of Useful Knowledge.

The following Works are published by Baldwin and Cradock. THE LIBRARY of USEFUL KNOWLEDGE, twice a Month, in Numbers at 6d. each. Of these, 89 Numbers are published, in which the following Subjects are completed:—The Preliminary Treatise, Mechanics, Hydrostatics, Hydraulics, Pneumatics, Heat, Optics, Polarisation of Light, and Glossary, in 15 Numbers; or in a volume, price 8s. The History of Greece, in 9 Numbers; or in a volume, price 5s. Lives of Bacon, Newton, Locke, Leibnitz, Halley, Newton, Blaise, Newton, Galilee, and Kepler, in 13 Numbers. Arithmetic and Algebra, in 4 Numbers. Geometry, in 5 Numbers; or a Volume, price 5s. An Account of Optical Instruments, in 2 Numbers. An Account of Sir Isaac Newton's Optics, in 2 Numbers. An Account of Facts in Natural Organism, in 2 Numbers. Electricity, in 2 Numbers. Galvanism, in 1 Number. Thermometer and Pyrometer, in 2 Numbers. Navigation, in 1 Number. Mathematical Geography, in 1 Number. Physical Geography, in 2 Numbers. Art of Brewing, in 2 Numbers. Animal Physiology, in 4 Numbers. Art of Brewing, in 2 Numbers. The Subjects not yet complete are—Vegetable Physiology—Chemistry, and Outlines of History. The Subjects immediately forthcoming are—A History of Rome, a History of Italy, Astronomy, Political Geography, an Ecclesiastical History, &c.

2. A Series of Maps, Modern and Ancient, in Numbers, each containing 2 Maps, in size 15 inches by 10, price only 1s. per Number, plain, or 1s. 6d. coloured, and published every two months or oftener. The Six Numbers already published contain Two Maps of Greece, both Ancient and Modern; Two of Turkey, both Ancient and Modern; One of Italy, Ancient and Modern; and Two of England.

* * * In preparing these Maps, the Editors have had access to, and fully availed themselves of, all the late naval surveys for the coast lines; while recent travels have led to many material corrections in the inland Geography, including the text of the Geography, and historians has been scrupulously compared with discoveries and hypotheses of modern writers. The Publishers may safely challenge competition for the combined cheapness and elegance of this work.

3. The Farmer's Series of the Library of Useful Knowledge, published in monthly Numbers at 6d. each. Nos. 1. to VI. and No. VIII. contain the Commencement of a complete Account of the Horse, which will comprise its History—Various Breeds—Anatomical Structure of each Variety—Diseases—with their Prevention and Cure—Breeding, Training, &c. No. VII. is the First of a Series of Accounts of Select Farms in various Parts of the Kingdom, and on the Continent. The Farmer's Series will embrace—1st. Every Description of Live Stock—their Varieties, Food, and Management—Breeding—Diseases—their Prevention and Remedies. 2d. The General Labours of Agriculture, including every Kind of Husbandry—with Building, Machinery, Hords, Plantations, Timber, &c. 3d. Domestic Economy, including the Dairy, Brewing, Wine and Cider, Baking, Curing Meat, &c. * * * These Publications of the Society for the Diffusion of Useful Knowledge are too generally known to render further explanation necessary. It is certain that no series of works have ever before appeared, which comprise so much useful information in so small a compass, and at so cheap a rate.

In 1 vol. 8vo. price 14s.; or with Proof Impressions of the Plates, price 21s.

AN ACCOUNT of the GREAT FLOODS of August 1829, in the Province of Moray and adjoining Districts; exhibiting a View of their Effects on the Rivers Nairn, Findhorn, Lossie, Spey, Deverdon, Don, Dee, and other Streams. By Sir THOMAS DICK LAUDER, Of Fountainhall, F.R.S.E. &c. Interspersed with Geological Remarks, Traditional Anecdotes, &c. and illustrated by 57 Enchings and Charts. "The waters prevailed."—Genesis. Printed for Adam Black, Edinburgh; and Longman and Co. London.

History and Art of Printing.

In a very large vol. royal 8vo. price 3l. 3s. extra boards. TYPOGRAPHIA: or a Historical Sketch of the Origin and Progress of the Art of Printing; with Practical Directions for Conducting every Department in an Office. Also a Description of STENOGRAPHY and LITHOGRAPHY. By T. C. HANSAARD.

* * * The Work is illustrated by numerous Engravings of Presses, Machines, and various Instruments and Utensils, employed in Letter-press Printing, Stereotype, and Lithography; and it is embellished by some curious and beautiful Portraits, as well as by other Engravings interesting both to the Antiquarian and the Printer. London: Printed for Baldwin and Cradock, Paternoster Row.

Price 11. 1s.

THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD.

Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 42 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the lovers of the elegant diversion, to work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years. London: Published and sold by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

Mr. Pinnock's New School Books.

New and popular Works on Education, by W. Pinnock, Author of "The Elements of Grammar," &c. &c.

A COMPREHENSIVE GRAMMAR of MODERN GEOGRAPHY and HISTORY, embellished with numerous Plates, illustrative of the Costumes, Manners, Customs, and Cities of the different Nations of the Globe, and Seven Maps, engraved on Steel, by Sidney Hall. The 2d edition, considerably improved and enlarged. Price 5s. 6d. neatly bound in green.

A Comprehensive Grammar of Sacred Geography and History, embellished with numerous Plates, illustrative of the most celebrated Events recorded in Scripture, Biographical Portraits, and accurate Maps, engraved on Steel. Price 5s. 6d. neatly bound in green.

In the press, on the same Plan as the two preceding Works, A Comprehensive Grammar of Classical Geography and History. To be embellished with Plates and Maps.

A Comprehensive Grammar of the English Language, with Exercises and Questions for Examination, and Notes, Critical and Explanatory. Embellished with an elegant Frontispiece and Vignette Title, price 4s. neatly bound.

"We incline to the opinion that the new work of Mr. Pinnock is the very best book of its kind that we have. Our impression is, that this grammar would deserve to supersede many, if not most others, if it were only in virtue of his remarks on the subjunctive mood—that most ill-understood of all the delicacies of English grammar; and as it is used as a standard, the new work of Mr. Pinnock is the first school grammar which has placed this matter in its true light; and if for no other reason than this, (though there are several), we would strongly recommend the general use and adoption of the work for the purposes of elementary teaching."—Court Journal. London: Printed for Poole and Edwards, (late Scattergood and Letterman), 12, Ave Maria Lane.

Neubit's Mensuration, &c. &c.

In 12mo. with numerous Woodcuts, Copperplates, &c. 6s. bound, the 4th edition, corrected, of

A TREATISE on PRACTICAL MENSURATION, containing the most approved Method of drawing Geometrical Figures, Mensuration of Superficies, Land Surveying, Mensuration of Solids, &c. &c. by Mr. Neubit, Master of the Trade of Carpenters, Planing, Timber Measure, Artificer's Work, Mensuration of Hay Stacks, Drains, Canals, Mast Pits, &c. &c. Concise sections and their Solids, the most useful Problems in Gauging, and a Dictionary of the Terms used in Architecture.

Master of the Classics, Commercial, and Mathematical Academy, Oxford Street, Manchester.

By the same Author, A Key to the above, 3d edit. 12mo. 5s. 6d.

A Complete Treatise on Practical Land Surveying. A new edition, in 1 large vol. 8vo. 18s. boards.

A Treatise on Practical Arithmetic, containing all the latest Improvements in the Science. 2d edition, enlarged, 6s. bound.

A Key to the same, 5s. bound.

An Introduction to English Parsing. 3d edit. 18mo. 2s. 6d. bound.

A Treatise on Practical Gauging. By A. Neubit, and W. Little, Officer of Excise. A new edition, with 180 Woodcuts. Dedicated, with permission, to the Honourable Commissioners of Excise. Price 6s. bound.

A Key to the same, price 4s. bound. Printed for Longman, Rees, Orme, Brown, and Green, London; and Wilson and Sons, York.

Dr. Ayre on Dropsy.
3d edition, price 8s. boards.
PATHOLOGICAL RESEARCHES
concerning the TRUE ORIGIN and NATURE of
DROPSIES. An Expositor, View of an improved Method
of Treating these Diseases. 2d edition, enlarged.
By JOSEPH AYRE, M.D.
Member of the Royal College of Physicians, &c.

Petersburgh and Odessa, in the years 1827—1829; intended to
give some Account of Russia as it is, and not as it is represented
to be, &c. &c. By Edward Cotton, M.B. Member of Trinity
College, Cambridge, &c. &c. In 8vo. 44s. boards.

A System of Universal Geography. By
M. Malte Brun, Editor of the "Annales des Voyages." Vol. 8.
Part I. price 7s. 6d.

This Part contains the Geography of Spain, Portugal, and part
of France. The Work is now finished in the original; but, in
order to render it a more complete System of Geography for the
English reader, a large addition has been made by the descrip-
tion of Great Britain, which is now in progress, and will be pub-
lished in a few months.

"We think the translators of M. Malte-Brun's Geography
have done good service to the public, by rendering so valuable a
work accessible to the English reader."—*Edinburgh Review*,
No. 27.

"Indisputably superior to any thing of its class which has ever
appeared."—*Literary Gazette*, No. 405.

A Treatise on the Nature and Cure of those
Diseases, either Acute or Chronic, which precede Change of
Structure, with a view to the Preservation of Health, and particu-
larly the Prevention of Organic Diseases. By A. P. W. Phillip,

That thus my truant eye should stray." — *Langhorne.*
London: Printed for Baldwin and Cradock, Paternoster Row.

Natural History of Great Britain, on a new and Interesting Plan. With Illustrations.

THE BRITISH NATURALIST. Second Volume.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.
The first volume of this little work deserved, and obtained from us a favourable notice some months ago. We praised the amiable spirit in which it was written, the lively and accurate pictures of nature which it exhibited, and the familiar diction in which subjects, usually obscured by technicalities, were rendered intelligible to the most moderate capacity. The present volume is equally worthy of the author. — *Monthly Review*, July.

In thick 12mo. 7s. 6d. boards,
DISCOURSES ON THE MILLENNIUM, the Doctrine of Election, Justification by Faith, and on the Historical Evidence for the Apostolical Institution of Episcopacy; together with some Preliminary Remarks on the Principles of Scriptural Interpretation.
By the Rev. MICHAEL RUSSELL, LL.D.
Author of a "Connection of Sacred and Profane History," &c.
Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

Of whom may be had, lately published,
The True Plan of a Living Temple; or, Man considered in his proper Relation to the Ordinary Occupations and Pursuits of Life. By the Author of the Morning and Evening Sacrifice, the Last Supper, and Farewell to Time. In 3 vols. 12mo. 11s. 6d. boards.

Dialogues on Natural and Revealed Religion, with a Preliminary Inquiry, an Appendix, containing Supplemental Discourses; and Notes and Illustrations. By the Rev. Robert Morehead, D.D. F.R.S.E. &c. 12mo. 6s. boards.

Geography, with Atlas, on an entirely New Plan. In royal 18mo. 3s. 6d. neatly bound and lettered, embellished with numerous Engravings, illustrating Manners, Customs, and Curiosities.

RUDIMENTS OF GEOGRAPHY, on a New Plan, designed to assist the Memory by Comparison and Classification.
By W. C. WOODBRIDGE, A.M.

The Geography is accompanied by an Atlas, exhibiting, in connexion with the outlines of countries, the prevailing religions, forms of government, degrees of civilisation, the comparative size of towns, rivers, and mountains, and the climates and productions of the earth. In royal 4to. coloured, 8s. half-bound.

This Atlas has been compiled from the best authorities, and contains all the late discoveries of Parry, Weddell, Denham, and Clapperton. But its principal claim to attention is founded on the entire novelty of the plan; each map presents, not only the geographical outlines of countries, but a series of numbers affixed to the mountains, rivers, and cities, which indicate their comparative rank, and enables the student, by reference to the table of classification, to discover their actual magnitude. The Isothermal chart exhibits the climate of different regions, as determined by the thermometer, with their most important productions, and presents a striking illustration of the diversity existing in the same latitude, according to the situation of countries. In the moral and political chart, the outlines of each country contain a number, showing its population, and several symbols indicating its government, religion, and state of civilisation, and forms, in effect, a moral picture of the world.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane,
Of whom may be had, gratis,
A Complete School Catalogue.

18mo. price 10s. 6d.
ANCIENT HISTORY, English and French, exemplified in a regular Dissection of the Saxon Chronicle; preceded by a Review of Wharton's *Urnum Elicivus Grammaticus*; of Malmesbury's *Life of St. Wulstan*; and Hugo Candidus' *Peterborough History*, wherein the principal Saxon Annalists are now (for the first time) identified.
London: Published by J. Hatchard and Son, 187, Piccadilly.

Price Six Shillings, No. XI. of
THE FOREIGN QUARTERLY REVIEW.

Contents.—I. Demonology and Witchcraft.—II. Danish and Norwegian Literature.—III. Dutrochet's New Researches on Vegetable Physiology.—IV. Calliæ's Travels in Africa.—V. Modern Swedish Poetry.—VI. History of the Amphictyonic Confederacy.—VII. The English in India.—VIII. State and Prospects of the Wool Growers.—IX. Fetis; Music made Easy.—X. Fontanier's Travels in Asiatic Turkey. Critical Sketches: XI. Plutarchi Vitæ; curâ G. H. Schoefer.—XII. A Disquisition upon Robert Wace's Poem, entitled *Le Brut*.—XIII. Bagay; Nouvelles Tables Astronomiques et Hydrographiques.—XIV. Sacchi; Anticliche Romantiche d'Italia.—XV. Antologia Straniera.—XVI. Prophete Minores, perpet. annot. illustr. D. Ackermann.—XVII. Norum Testamentum Græcè; curâ D. L. M. A. Scholz.—Miscellaneous Literary Notices from Denmark, France, Germany, Italy, Russia, Spain, and Switzerland.—Oriental Literature.—VIII. of the Principal New Works published on the Continent, from February to May 1833, inclusive.

Printed for Treuttel and Wûrtz, Treuttel, Jun., and Richter, 30, Soho Square; and Black, Young, and Young, 3, Tavistock Street.

"The varied ability with which, from its commencement up to the present time, this work has been conducted—the range of information, of thought, of sentiment, that it has uniformly displayed—entitles it to the highest praise from the lovers of genuine literature. The editor is manifestly a man of very general research, and that not in the common and confined acceptance of the word, but in its most comprehensive meaning. His present number is admirable." — *Spectator.*

"The junction of the two Foreign Reviews promises well for the interests of literature. This is the first produce of their union, and although we cannot discover in its pages any increased claims to approbation, yet there is sufficient proof that the unwearied spirit and sound judgment which characterized its former numbers are still vigorous and healthy. The selection of subjects is judicious, and the portions into which we have looked amply sustain the previous high character of the work." — *Atlas.*

"This is the first number under the joint management of the proprietors of the Foreign Quarterly and Foreign Reviews, and it shows most favourably for the arrangement under which this work is to be conducted. It is, in our mind, what a Foreign Review ought to be—rather a business-like analysis of the contents of books, than a series of essays on the subjects of them." — *Scotts Times.*

"In our opinion, a Foreign Review is far more necessary, and if conducted with ability and candour, may be far more useful than Reviews confined to our own literature. In the number before us there are several articles which, in point of erudition and talent, cannot be surpassed by the very best of our quarterly or monthly periodicals. The English in India is a most judicious and useful article, and written with great ability and a very best spirit, and there are many hints thrown out in it, from which both our Missionary Societies and our India governors might derive very considerable advantage." — *Pertshire Advertiser.*

"The new number of this most admirable and truly valuable periodical is equal in every respect to any one of its predecessors in the same series. It is pleasant to observe old rivalries so amicably adjusted, as has been the case in respect to the Foreign Review and the Foreign Quarterly, which two works will for the future be merged in one, still retaining the title of the latter. The whole of the contents of the present number, which our limited space will not admit of our characterising individually, or even mentioning their several titles, evince throughout that varied ability, sound criticism, logical argument, indefatigable industry, and strictly unbiased judgment, which so rapidly obtained for the Foreign Quarterly the high state of estimation it now holds in public estimation." — *Felix Farber's Bristol Journal.*

"We have risen from the perusal of the present number with a feeling of unusual satisfaction; it is characterised by profound thinking, and a tone of humane philosophy." — *Kent Herald.*

No. XII. will be published in August.

FRASER'S MAGAZINE

for Town and Country, price 3s. 6d.

SATURDAY, AUGUST 7, 1830.

REVIEW OF NEW BOOKS.

Principles of Geology; being an Attempt to explain the former Changes of the Earth's Surface, by reference to Causes now in Operation. By Charles Lyell, Esq., F.R.S. 2 vols. 8vo. Vol. I. London, 1830. J. Murray.

FROM the distinguished situation which the author of the work before us occupies, as Foreign Secretary to the Geological Society, no less than from the intrinsic importance of the subject, his *Principles* have been looked for with more than ordinary impatience, and more than is customary with the scientific class of readers. The subject may indeed be said to be yet in its infancy when compared with many other departments of science: or, more correctly speaking, practical geology is yet in its infancy, though it appears to be advancing with rapid strides through the different stages of its minority; and at present may be regarded as one of the most interesting and important branches of inquiry that can engage the attention of man.

Mr. Lyell's work differs from all others which have preceded it, in being less encumbered with hypothetical speculations, on the one hand, and minute subdivisions of those fossil remains which pervade nearly the whole of the secondary and tertiary strata, on the other. In point of classification, it is inferior to the excellent *Outlines* of Messrs. Conybeare and Phillips; but as it is not addressed to the mere tyro in the science, this is of less importance. Mr. Lyell's aim appears to have been that of carrying into effect, so far as the laborious research of an individual can accomplish, the excellent principles pursued by the Geological Society, that of collecting and collating facts;—as the following extract will testify:—

After taking a rapid historical view of the several theories of the earth which have been advanced by former geologists, our author remarks:—"A great body of new data were required, and the Geological Society of London, founded in 1807, conduced greatly to the attainment of this desirable end. To multiply and record observations, and patiently to await the result at some future period, was the object proposed by them; and it was their favourite maxim, that the time was not yet come for a general system of geology, but that all must be content for many years to be exclusively engaged in furnishing materials for future generalisations. By acting up to these principles with consistency, they in a few years disarmed all prejudice, and rescued the science from the imputation of being a dangerous, or at least but a visionary pursuit. * * * Whether (says the author) our investigation of the earth's history and structure will eventually be productive of as great practical benefits to mankind, as a knowledge of the distant heavens, must remain for the decision of posterity. It was not till astronomy had been enriched by the observations of many centuries, and had

made its way against popular prejudices to a sound theory, that its application to the useful arts was most conspicuous. The cultivation of geology began at a later period; and in every step which it has hitherto made towards sound theoretical principles, it has had to contend against more violent prepossessions. The practical advantages already derived from it have not been inconsiderable; but our generalisations are yet imperfect, and they who follow may be expected to reap the most valuable fruits of our labour."

To the justice of which conclusions, we offer our entire concurrence.

The principal merit of the author of the work before us is that of endeavouring to simplify the subject as far as possible, by discarding those speculations relative to the Mosaic cosmogony with which former writers have embarrassed the study. That important changes have taken place in the relative position of the different strata composing the crust of the earth, and that many of these changes are still in operation to a greater or less extent, is admitted by every geologist; but, in tracing these changes, and investigating the physical laws by which they are induced, there is no more necessity for mixing geological investigation with the traditional records which have been handed down to us from the great Hebrew lawgiver, than to refer chemistry, or any other branch of physical science, to the same standard. We therefore entirely agree with Mr. Lyell, "that the identification of the objects of geology with those of cosmogony has been the most common and serious source of confusion."

Though we are far from asserting that the amiable Mr. Granville Penn* and the able chemist Dr. Ure† are not justified in the geological conclusions they have drawn, in order to harmonise with the Mosaic period assigned to the creation,‡ yet we do not dislike the argument, that it might be much better, for the interests of religion and the advancement of science, to keep the two branches of inquiry quite distinct. It is scarcely possible to reconcile the original formation of the materials of our globe, or even the comparatively recent formation of those myriads of organic remains that are imbedded many thousand feet in limestone rocks, and which attest the existence of countless ages, with the recent period which chronologists have uniformly assigned as the era to which the divine historian refers the creation of man. It does not impeach this record, to conceive the previous existence of organic and inorganic matter; and we are not therefore to be debarred from the inquiry, when we reflect, that the more we investigate the wonders of creation, the more we feel inclined to reverence and admire that Almighty Power by which such physical agency was originally planned. Can it diminish the awe and gratitude we feel on beholding the

beautiful designs of the great Architect of the universe, to be told that the globe we inhabit, and all the glorious orbs by which we are surrounded, have existed in progressive stages of advancement for immeasurable ages?

Mr. Lyell, professing to render his work a record of those changes which have taken place in the temperature of the crust of the earth, and the correspondent change of climate, judiciously observes—"In the present state of our knowledge, we cannot pretend to institute a close comparison between the climate which prevailed during the gradual deposition of our secondary formations and that of the older carboniferous rocks; for the general temperature of the surface must at both epochs have been so dissimilar to that now experienced in the same, or perhaps in any latitudes, that proofs from analogy lose much of their value, and a larger body of facts is required to support theoretical conclusions. If the signs of intense heat diminish, as some suppose, in the newer groups of this great series, there are, nevertheless, indications in the animal forms of the continued prevalence of a climate which we might consider as tropical in its character. We may now turn our attention to the phenomena of the tertiary strata, which afford evidence of an abrupt transition from one description of climate to another. If this remarkable break in the regular sequence of physical events is merely apparent, arising from the imperfect state of our knowledge, it nevertheless serves to set in a clearer point of view the intimate connexion between great changes in the physical geography of the earth, and revolutions in the mean temperature of the air and water. We have already shewn, that when the climate was hottest, the northern hemisphere was, for the most part, occupied by the ocean, and it remains for us to point out that the refrigeration did not become considerable until a very large portion of that ocean was converted into land, nor even until it was in some parts replaced by high mountain chains. Nor did the cold reach its maximum until these chains attained their full height and the lands their full extension."

The following extract shews Mr. Lyell's views regarding the comparative periods at which the secondary and tertiary series were thrown up from the great basin of the ocean; but, although ingenious, it is difficult to reconcile his conclusions with sound analogy, as we shall subsequently endeavour to shew.

"A glance at the best geological maps now constructed of various countries in the northern hemisphere, whether in North America or Europe, will satisfy the inquirer, that the greater part of the present land has been raised from the deep, either between the period of the deposition of the chalk and that of the strata termed tertiary, or at subsequent periods, during which various tertiary groups were formed in succession. For as the secondary rocks, from the lias to the chalk, are, with a few unimportant exceptions, marine, it follows, that every district now occupied by them has been converted into land since they

† New System of Geology, 1829.

‡ On the contrary, our Reviews of their valuable works have spoken most highly of them.—Ed. L. G.

originated. We may prove, by reference to the relative altitudes of the secondary and tertiary groups, and several other circumstances, that a considerable part of the elevation of the older series was accomplished before the newer was formed. The Appennines, for example, as the Italian geologists hinted long before the time of Brocchi, and as that naturalist clearly demonstrated, rose several thousand feet above the level of the Mediterranean before the deposition of the sub-Appennine beds which flank them on either side. What now constitutes the central calcareous chain of the Appennines must for a long time have been a narrow, ridgy peninsula, branching off at its northern extremity from the Alps near Savonna. A line of volcanoes afterwards burst out in the sea, parallel to the axis of the older ridge. These igneous vents were extremely numerous, and the ruins of some of their cones and craters (as those in Tuscany, for example) indicate such a continued series of eruptions, almost all subsequent to the deposition of the sub-Appennine strata, that we cannot wonder at the vast changes in the relative level of land and sea that were produced. However minute the effect of each earthquake which preceded or intervened between such countless eruptions, the aggregate result of their elevating or depressing operation may well be expected to display itself in seas of great depth, and hills of considerable altitude. Accordingly, the more recent shelly beds, which often contain rounded pebbles derived from the waste of contiguous parts of the older Appennine rocks, have been raised from one to two thousand feet; but they never attain the loftier eminences of the Appennines, nor penetrate far into the higher and more ancient valleys; for the whole peninsula was evidently subjected to the action of the same subterranean movements, and the older and newer groups of strata changed their level in relation to the sea, but not to each other.

“These phenomena (continues the author) are exhibited in the Alps on a much grander scale, those mountains being encircled by a great zone of tertiary rocks of different ages, both on their southern flank towards the plains of the Po, and on the side of Switzerland and Austria, and at their eastern extremity towards Styria and Hungary. This tertiary zone marks the position of former seas or gulfs, like the Adriatic, which were many thousand feet deep, and wherein strata accumulated, some single groups of which are not inferior in thickness to the whole of our secondary formations in England. These marine tertiary strata rise to the height of from two to four thousand feet, and consist of formations of different ages, characterised by different assemblages of organised fossils. The older tertiary groups generally rise to greater heights, and form interior zones nearer the Alps. We may imagine some future convulsion once more to upraise this stupendous chain, together with the adjoining bed of the sea, so that the greatest mountains of Europe might rival the Andes in elevation, in which case, the Deltas of the Po, Adige, and Brenta, now encroaching upon the Adriatic, might be uplifted so as to form another exterior belt of considerable height around the south-eastern flank of the Alps.”

Now, although Mr. Lyell has given us a diagram to illustrate the position of the strata across the peninsula, which divides the Mediterranean from the Adriatic, (and we give full credit to the accuracy of his observations,) yet we can see no necessity for that imaginary line of demarcation which he draws between the

elevation of the secondary and tertiary series from the bed of the ocean. We cannot perceive any proof, “by reference to the relative altitudes of the secondary and tertiary groups, that a considerable part of the elevation of the older series was accomplished before the newer was formed.” On the contrary, as the tertiary series of the Appennines correspond in their organic remains with the tertiary strata deposited in the great chalk basin of Paris, the Isle of Wight, and the London chalk basin, it is fair to infer that the same agency operated in each instance. Thus, if we go back to the remote period when the great basin of the Mediterranean, whence the whole peninsula of Italy was thrown up, was in a state of repose, with the tertiary strata overlying the chalk series, in parallel strata nearly horizontal; and in this state of things, the same volcanic agency which has operated beneath the chalk series in a small scale in this country, (according to the opinion of Dr. Buckland, Mr. Conybeare, and other eminent geologists), be supposed to operate on a much grander scale under the chalk basin of the Mediterranean, we shall have precisely similar results. The up-heaving of the chalk will carry before it the superincumbent beds of the tertiary class to a certain extent, when a disruption of the latter will take place, from their being less tenacious. The expansive force still operating will drive the chalk strata into the ridge, or saddle-back form, as it is invariably observed to be at a far greater altitude than the broken strata of the tertiary class, which will necessarily recede on each side.

Now, when we look at the gigantic power of volcanic agency which still prevails in the great ridges of the Mexican Andes, there is nothing improbable in the supposition, that the elevation of the peninsula of Italy might have been the work of a single day, or even a single hour, and that both the secondary and tertiary strata might have been lifted from the deep by the same convulsion of nature.

We will allow Mr. Lyell his minor proposition, that these tertiary beds may have been the theatre of subsequent volcanic eruptions. Indeed, such a result seems a natural sequence to the volcanic agency by which the whole mass of the peninsula was raised. For the lesser tenacity of the tertiary strata would doubtless afford a more ready exit to the volcanic fire beneath than the more compact limestone series; and the succession of small volcanoes running parallel with the chalk ridge on each side, would be the natural result, as described by our author.

We must, however, defer further remarks on this very able work.

The Hobart-Town Almanac for 1830. 18mo. pp. 272. Hobart Town. James Ross.

We last year noticed our distant contemporary; and have now to call the attention of our home readers to this new annual specimen of his industry and talents. Together with the usual Almanac matters, addressed to the meridian and wants of Australia, this little tome contains a very picturesque and novel itinerary, which gives us good notions of the scenery, &c. of the country. From this we select, as a specimen, the following passages of an excursion in Van Diemen's Land.

Morning is thus painted at the starting of the party:—

“As we sallied forth, the day was just opening, and my chanticleer and his two mates were hopping to the ground from the higher branches of a honeysuckle tree (Banksia inte-

grifolia, an umbrageous bush about twenty feet high), in which they had taken roost and spent the night. Our way for a short distance lay up a beautiful valley, with the river and its opposite bank on one side, and a lofty range of hills to the west. The sun was just raising his red disk above the horizon, and had already awakened the wattle bird, which flew, uttering its singular note, with its long yellow pendants or ear-drops, from tree to tree as we advanced. A slight dew, just enough to deck the grass with pearls, hung upon the blades, having rather a frosty appearance where the long shadows of the trees yet eclipsed it from the sun's rays. At intervals, the magpie, though unseen, filled the valley with its loud but sweet song, or rather bar of music. Here and there, a little bandicoot or a kangaroo rat would start from beneath our feet, and run with the velocity of an arrow for shelter in the scrub; and sometimes, a noble buck kangaroo, with two or three attendants, sitting upright on his haunches, after looking at us attentively as if waiting our near approach, would all at once turn round and hop off with the elegance and elasticity peculiar to that animal.

“Our way through this almost impervious forest continued in a westerly direction for about four miles. At last we thought we could perceive a lightness in the horizon a-head, which gradually became more evident; and we eventually emerged on the edge of a very extensive plain, in the midst of which was a large rushy lagoon. On looking round we were not a little surprised to see several small parties of blacks, some strolling about, while others sat in little families, as it were, round small fires. We found they were a tribe of about sixty or seventy, whom I had occasionally met with before, and who had sometimes visited Hobart Town, where they had been kindly treated by the government and the inhabitants, who had supplied them with provisions, clothing, and blankets. Here we slackened our pace, willing to waste a few minutes on the new scene which presented itself. As we were walking towards one of the little parties, a tall fellow overtook us with a bunch of seven fat, but strong-smelling, opossums slung on his back and round his neck. We followed him to the fire, and he very deliberately chucked them all upon it, one after the other, just as he had caught them. The company seemed to have little to say; for but few words passed between them, and what was rather mortifying to gentlemen in our rank of life, they scarcely deigned to look upon us. On our parts, however, we could not help admiring their upright and even elegant gait, which would be a pattern to any Bond Street loungers. It was quite indicative of persons who had little to do, with their pleasure only to seek. Their air of independence was quite charming; and upon reflection, I know no race of people who have greater claims to that property. So perfectly indifferent were they of dress and clothing, that several of them had cast away the blankets they had in Hobart Town, as an unnecessary incumbrance. What a host of supervacaneous tinkers, tailors, dress-makers, shoemakers, bottle blowers, shop-keepers, store-keepers, and manufacturers of all sorts of things, are thrown into the shade by these aboriginal ladies and gentlemen! Diogenes with his tub is a slave to luxurious life compared to them. The only symptom of weakness which they betrayed, was the pains that some of them (no doubt dandies in their community) took with their heads. They had smeared their hair with a red pigment mixed with grease; and one gentleman had decorated himself with two

white cockatoo feathers. In this respect they resembled some of the civilised race, whom I have known besmear their heads with perfumed pomatum, or some of the four-legged canine species whom I have sometimes, when they come across some putrified or strong-smelling substance, rub their cheeks against it until they have thoroughly imbibed the stench. As soon as the opossums were singed and well heated on one side, our cook turned them on the other, and then dragging them by the leg from the fire, he scraped off the fur, and with a sharp flint cut out the inside, and again threw it on the fire, from which it was soon after taken and eaten, without the trouble of knife or fork, in a half-raw state. Occasionally they would take a short walk to the lagoon, and laying themselves on their breast, and dipping their mouths into the water, drink, without cups or chalice, the pure element of nature. They then returned to their rural hearth, and sitting or reclining on the ground, they dozed as deliciously as if they had reposed on a velvet couch. Notwithstanding the kindness and civility shown by the settlers in the colony generally to these benighted people, I regret to say, that in other instances the conduct of unprincipled stock-keepers, remote from restraint, has gradually incited a spirit of hostility towards the whites, which scarce any effort or ingenuity of the authorities appears able to subdue or counteract. The best possible arrangements have lately been adopted by the government throughout the island, and parties of military and field police are stationed to watch or scour various districts; so that if the whole of the tribes are not speedily apprehended, a certain period must be put to their outrages. An establishment has been formed on Brune island, superintended by Mr. Robinson, for the domestication and instruction of such as are caught, and considerable progress has already been made in civilising about twenty or more, who now compose that establishment.

"The sun was already fast descending behind the Western lakes, lengthening the shadows of the few straggling trees that here and there enlivened the edge of the Shannon, when crossing a curious ravine, where the river took a sudden bend, forming an acute angle in its course, we arrived at a cluster of very curious upright rocks that stood upon a rising ground. Here we resolved to take up our abode for the night. Having selected a place for the scene of our bivouac, my friend and I left Regan and Carrots to prepare the essentials while we scrutinised the neighbourhood. In parts the rocks stood up like the turrets of a castle, in others ranged themselves along like a temple of the Druids; here and there they formed curious caves; and, in short, it was the most singular conglomeration of alluvial remains that I have ever witnessed. Among them grow some fine specimens of that species of eucalyptus called the cider-tree—from its exuding a quantity of saccharine liquid resembling molasses. Streaks of it were to be seen dripping down the bark in various parts, which we tasted, and found very palatable. The natives have a method, at the proper season, of grinding holes in the tree, from which the sweet juice flows plentifully, and is collected in a hole at the root. We saw some of these covered up with a flat stone, doubtless to prevent the wild animals from coming to drink it. When allowed to remain some time, and to ferment, it settles into a coarse sort of wine or cider, rather intoxicating if drank to any excess. Here we ate our last biscuit, reserving but a small portion of tea and sugar for next morning. As we lay our-

selves to rest on the graas, we were again serenaded by the cawing of the rooks as in the preceding evening, but with the addition of the purling of the adjoining stream as it fell several yards and dashed itself on the perpendicular rocks on the opposite bank."

As we began with Morning, so must Evening, and a remarkable echo, close our notice.

"After travelling about four miles, we again emerged into light at the upper end of an extensive marsh or plain, about four or five miles in length, and one or two broad. Pursuing our course through some thick bushes that grow on the upper edge of this plain, for about another half mile, just as the sun was setting, and gave to the scene an enchanting serenity, we all at once found ourselves on the border of an extensive lake. The pleasure we enjoyed at the beautiful sight was enhanced by conceiving ourselves the first discoverers of it among Europeans, and we stood upon the sandy beach viewing the black swans as they sailed along its surface, and the long dark shadows cast by the setting sun from the western bank and from two beautiful little islands that stood near the centre,—we stood, I say upon the beach, forgetting all the fatigues of the day, and fancying ourselves the lords and masters of the scene before us. The sun, however, quickly disappeared, and when we had satiated our eyes with the heavenly prospect, I took a fancy to shoot a black swan as it glided past. The echo that succeeded the report continued to reverberate in a circle as it were round the shores, in three distinct and successive parts. The effect was sublime, and we exulted in a sort of rhapsody, as we repeated the effects by other shots in the discovery of so eloquent, so supreme a charm of nature, in so remote and hitherto unfrequented a part of Van Diemen's land."

Clarence: a Tale of our own Times. 3 vols. London, 1830. Colburn and Bentley.

THE title of this work gives us little idea of the contents, which are American entirely, and exclusively American, and evidently written by a native. As a novel, it has no striking characteristics; the plot is full of old-fashioned improbabilities and mysteries—the personages as beautiful and superexcellent on the one side, as they are detestable and wicked on the other. Mrs. Layton is a Transatlantic copy of Lady Delacourt; only the desire of something of novelty in the delineation has occasioned an inconsistency not in Miss Edgeworth's model. But what attracts our attention to these pages is their national character; and we proceed to extract two or three amusing specimens.

Dinner Difficulties.—"I ordered the dinner yesterday," said Miss Clarence, with faint voice and faint heart; for she well knew that the result of ordering a dinner bore a not very faint resemblance to that of 'calling spirits from the vasty deep.' 'Yes, ma'am, I know you ordered it; but I told Amanda to let you know that the butcher did not come down from the village this morning, and we've neither lamb nor veal in the house.' 'But we have Neal's fine mutton.' 'Not a pound of it. He came up yesterday to say his fat sheep had all strayed away.' 'Why did not you tell me?' 'You were riding out, ma'am, and I sent John to Hilson for a roaster.' 'Oh, spare me, Becky; a roaster, you know, is papa's aversion, and mine too.' 'I know that, Miss Gertrude; but then I thought to myself, it's no time to be notional when there's company invited, and not a pound of fresh to

be had for love or money; but as ill luck would have it, Hilson had engaged the whole nine for the Independence dinner—a delightful sight they'll be, all standing on their feet, with each an ear of corn in his mouth. But thinking of them,' added Becky—mentally reproaching herself for this gush of professional enthusiasm,—'thinking of them won't fill our dishes; and so, Miss Gertrude, I want you to send word to the Widow Carter, you must have her fowls whether or no. To be sure they'll be rather tough, killed at this time of day.' 'Yes, Becky, since we know why she refuses them, they would be too tough eating for any of us. No, I had rather give our friends a dinner of strawberries and cream.' 'Cream! the thunder turned all that last evening.' 'The elements against us too!' 'Elements! ice-creams, you mean. No, ma'am, they were mixed last night; but Malvina says she can't stay to freeze them. She must go down to the village to Mrs. Smith's funeral. She says the general expects it. 'It is a hard case, Becky; but we must make the best of it. You must not let this Englishman spy out the nakedness of our land. Your fingers and brains never failed me yet, Becky. Now let us think what we have to count upon.' 'There's as good a ham as ever came from Virginia.' 'Yes, or Westphalia either; and as beautiful lettuces as ever grew. Ham and salad is a dinner for a prince, Becky; and then you can make up a dish from the veal of yesterday with currie—boullie a tongue—prepare a dish of macaroni—see that the vermicelli soup is of your very best, Becky—papa says nobody makes it better—and the trout, you forgot the trout, here comes old Frank up the avenue with them now—bless the old soul, he never disappoints us—boil, stew, fry the trout; every body likes fresh trout. As to the ice-creams, tell Malvina she shall go down to the village to every funeral for a year to come, if she will give up the general's lady. The dinner will turn out well yet, Becky. As you often say, it's always darkest just before day.'"

A proposal:—

"To Miss Clarence.

"Respected lady,—'If a man would thrive, he should wive,' therefore, as agent, and acting for my son (John Smith), I have the satisfaction of proposing an alliance (matrimonial) between you and him (that is, my son). He is a remarkable genteel young man in a drawing-room (John is)—quite up to any thing; but as that is where you have seen him (chiefly), I shall say no more about it, only observing, that my son (John) always goes for the first (he can afford it), i. e. Wheeler's coats, Whitmarsh's pantaloons, Byrne's boots, &c. &c., which is (I take it) the reason he has made you, valued lady, his choice, you being the first match in the city (at present). John (my son) has been a healthy lad from the egg, and cleanly (his mother says), thorough cleanly. A touch of the intermittent that he is taken down with (this evening), makes nothing against it (i. e. against his constitution). As I have found procrastination (in all kinds of business) a bad thing, and to strike while the iron's hot a safe rule (without exceptions), and as the doctor says my son (John) may be down for a week, I concluded (knowing his mind) not to delay, for fear of accidents. As I have not writ a love-letter since I married my wife, I hope you will, ma'am, excuse all mistakes and deficiencies. As soon as I receive a punctual answer (to the above), we will arrange all matters of business (there I'm at home) to you and your honoured father's wishes. (Er-

rors excepted,) your obedient servant to command, ma'am,
SAM'L SMITH."

There are some curious marks of ignorance as regards English customs and facts. The traveller, for example, is a little effusion of spleen: we are not aware that even one of our gastronomes would deem salad with fish any solecism either in taste or manners: the hat under the arm belongs to our grandfathers: Sir Benjamin West must thank these pages for his title: and there is not a little national partiality in stamping the heroine as perfect in her literary taste, because she prefers Bryant to Byron. We think these volumes the production of a lady;* for they often display much tact and vivacity, that lively perception of the ridiculous which is so truly feminine; but they are deficient in all that requires a higher degree of power—they can copy well, but not create. Yet if *Clarence* be a first essay, we do think its author might attain a much greater success.

Juvenile Library. Vol. II. Historio Anecdotes; France. London, 1830. Colburn and Bentley.

"ALTHOUGH the History of France," it is observed in the preface to this volume, "has been for many centuries so intimately connected with that of Great Britain, the English reader has not, heretofore, been sufficiently supplied with the means of obtaining an easy knowledge of even its most leading events. The object of the present volume is to afford, accompanied by historical data, as correct an idea as could be preserved within a space necessarily limited, of the most remarkable circumstances that have taken place, and the most extraordinary men who have flourished in the kingdom of France, from the earliest period of its history to the times in which we live. And, it is presumed, that, while contributing to their amusement, especial care has been taken to add to the information of the young. 'History is philosophy teaching by example;' and the following pages may supply many an excellent lesson to those who desire that, while amused, they should also be improved: that Pleasure should be at all times the handmaid of Knowledge, and only welcome when she visits in company with her more valuable associate."

Such is the intention of the work. As a specimen of its execution, we subjoin,—from no motive of selection, however, other than its offering a consecutive extract of convenient length,—the account of the celebrated Maid of Orleans: and, at a period when the affairs of France excite such a vivid interest throughout the world, we must consider it a very opportune chance which has produced a volume for the young (and old too) so full of the not less striking events that have so strangely diversified the history of this country. It is by comparing the past that we can judge of the present; and assuredly these anecdotes are as full of matter for reflection as they are in themselves memorable and interesting.

"In 1422, Charles the Sixth died, and the kingdom was inherited by his son, Charles the Seventh, surnamed 'the Victorious.' During the first six years of his reign, the English arms in France were almost uniformly successful; and the young king was reduced nearly to a state of penury. Nor was he

previously very fortunate, for shortly before he obtained the crown, he had been forced to supply his table even by the sale of his wife's jewels. His little court was torn by intestine factions; the English, under the command of John, Duke of Bedford, uncle to Henry the Sixth, were proceeding to lay siege to Orleans; and the ruin of Charles appeared inevitable—when an occurrence, the most singular in the records of history, turned the scale in his favour, and restored him in power to the throne of his ancestors. The fortitude, courage, perseverance, and cruel death of the Maid of Orleans form one of the most romantic and interesting portions of French history: her spirit and good fortune may with propriety be called marvellous; since, informed as we happily are, we cannot deem it, as in her own time it was universally deemed, miraculous. Joan d'Arc, a native of Droimy, near Vaucouleurs, on the Meuse, was a country girl, somewhat above twenty years of age, handsome, lively, and of irreproachable conduct. She had been early accustomed to the management of horses, and rode with grace and ease, having filled the humble situation of maid in the inn of her native village; where she had frequent opportunities of hearing discussed the calamities and misery under which the lower orders were suffering, the deplorable state of the country, and the peculiar character of Charles—one so strongly inclined to friendship and affection—which naturally rendered him the hero of that sex whose generous minds place little bounds to their enthusiasm. These discussions warmed the maiden's imagination, rendered her indignant against the English, and inspired her with the noble resolution of delivering her country from its enemies. She went therefore to Vaucouleurs, obtained admittance to Baudricourt, the governor, and assured him that she had seen visions, and heard voices exhorting her to re-establish the throne of France. An uncommon intrepidity of soul made her overlook all the dangers which might attend her in such a design; and the village-girl burst forth at once into the fearless heroine. Doubtless her inexperienced mind mistook the impulses of passion for heavenly inspiration; for no one act of Joan d'Arc leads to the belief that she ever contemplated imposition. The governor of Vaucouleurs treated her at first with neglect; but after a time, wisely considering that, in the present state of affairs, advantage might be taken of her enthusiasm, he entered into her views, and sent her, with proper attendants and recommendation, to the king, who was then residing at Chinon. The age was one of almost unbounded credulity; and it was the interest of the king and his friends, when accepting her services, to persuade the people she was sent by God. She resided two months at Chinon, and the priesthood confirmed the rumour of her being an inspired person. It is but fair to suppose that all were disposed to believe what they so ardently wished. Joan, armed *cap-à-pie*, and mounted on horseback, was triumphantly presented to the people as the messenger of Heaven, and began her martial transactions by escorting a large convoy for the supply of Orleans, as the English were then besieging that city. She ordered the soldiers to confess themselves before they set out on their enterprise; banished from the camp all dissolute characters; and carried in her own hand a consecrated banner, on which the Supreme Being was represented grasping the globe of earth, and surrounded with *Jeux-de-lis*. The Maid wrote to the commanders of the English troops, desiring

them, in the name of the Omnipotent Creator, to raise the siege and evacuate France, and menaced them with divine vengeance in case of their disobedience. The English affected to deride her and her heavenly commission, but their imaginations were secretly affected by the strong feeling that prevailed in all around them; and they waited with anxious expectation for the issue of these extraordinary proceedings. Strange it was, but no less true, that provisions were safely and peaceably permitted to enter the city; and Joan was received as a celestial deliverer by all the inhabitants, who now believed themselves invincible under her influence. An alteration of affairs was visible to the whole civilised world, whose attention was fixed upon the war between two such nations; and the sudden change had a proportionate effect on the minds of both parties. The spirit resulting from a long course of uninterrupted good fortune, was rapidly transferred from the victors to the vanquished. The Maid cried aloud for an immediate sally of the garrison—her ardour roused to exertion—she attacked and conquered. Nothing, after this success, seemed impossible to her votaries; she declared that within a little time the English would be entirely driven from their entrenchments, and was herself foremost in the battle, animating and exhorting her troops. Nor was her bravery more singular than her presence of mind: in one attack she was wounded by an arrow in the neck; she pulled the weapon out with her own hands, had the wound quickly dressed, and hastened back to head the troops and plant her victorious banner on the ramparts of the adversary. The English no longer denied that Joan was inspired, but they declared she was possessed by an evil, not a good spirit. Whether 'the Maid of Orleans' (an appellation given to her when she had finally succeeded in obliging the English to raise a siege upon which so much money and so many valuable lives had been expended) really acted upon her own counsel or upon that of the French general, Dunois (as it was said), she is alike entitled to our praise and admiration; for there is often as much wisdom shewn in following, as in giving advice. And it must never be forgotten that, when necessary, she curbed her visionary temper and zeal by prudence and discretion. The Maid gave two promises to Charles; one that she would force the invaders to raise the siege of Orleans; the other, that she would see him crowned at Rheims. The former having been kept, the latter remained to be fulfilled. The king joined his victorious people, and, accompanied by her who might be truly termed his guardian angel, set out for that ancient city. Such was the universal panic, that he hardly perceived he was marching through an enemy's country. When he arrived at Rheims, he was there joined by the Dukes of Lorraine and Bar; and next day, the 17th of July, 1429, his coronation was performed with the holy oil, to which we have elsewhere referred, and which, it was said, a pigeon had brought to King Clovis from heaven, on the first establishment of the French monarchy. The Maid of Orleans stood by his side in complete armour, displaying that sacred banner with which she had so often animated his troops and dismayed his enemies. When the impressive ceremony was concluded, she threw herself at the monarch's feet, and shed a flood of exulting and tender tears. 'At last,' she exclaimed, 'my dear sovereign, the will of God is fulfilled; in this happy event he hath shewn that you are he to whom this kingdom

* We have since learnt that they are written by a Miss Sedgewick, the author of a pleasing volume, (the name of which we cannot just now call to mind), and are a republication from America, as we suspected. We state this as a proof (certainly not needed) of our critical sagacity.

doth indeed belong.' It is impossible to imagine one more devoid of personal ambition than Joan d'Arc. It is true that Charles ennobled her family, and exempted her native village from taxation; but, having fulfilled the professed end of her mission, she earnestly solicited the favour of being permitted to return to her home and tranquillity. When the indelible stain made by her death on the page of English history is remembered, it will be deeply regretted that Charles refused her request. Finding that her services were again required, she threw herself into Compiègne, then besieged by the English, and made many successful sallies against the assailants; but being deserted by her party on one occasion, she was pulled from her horse and taken prisoner by one Lionel de Vendôme, an officer of the Burgundian army. It is hardly to be credited, that a king whom she had crowned, a people whom she had saved, should have made no effort to recover their preserver from her bitter enemies. Yet they left the intrepid girl to the cruel vengeance of her foes; and the Duke of Burgundy purchased, for the sum of ten thousand pounds sterling, the casket that contained the soul of Joan of Arc. She was carried to Rouen, loaded with irons, and summoned to appear before a tribunal formed of persons interested in her destruction. Nothing could exceed the intrepidity of her conduct, or the coolness of her replies: they could not try her as a prisoner of war; and so for a period of four months, they harassed her with religious interrogatories. During the whole time, she never betrayed any weakness or womanish submission, and no advantage was gained over her. Her answers to the various questions proposed to her are too long for insertion here, but they must ever prove highly interesting to the lovers of true heroism. In the issue she was found guilty of all the crimes imputed to her: of being a sorceress, an idolater, a witch, and a heretic. But the chief part of her accusation was wearing man's apparel: and she was finally sentenced to be delivered over to the secular arm. It was hardly to be expected but that, sooner or later, the weakness of the woman would triumph over the fortitude of the heroine. Browbeaten by men invested with the appearance of holiness, her spirit was subdued: the visionary dream of inspiration with which she had been buoyed up by the applauses of her party, as well as by continual success, faded before the punishment to which she was condemned. She confessed her willingness to recant, acknowledged the illusion of those revelations which the church had rejected, and promised never more to mention them: her sentence was then, as they termed it, 'mitigated.' She was doomed to perpetual imprisonment, and to be fed during life upon bread and water. But the vengeance of the maiden's enemies was not yet appeased. Suspecting that the female dress had been rendered uncomfortable by habit, although she had consented to resume it, they purposely placed in her chamber a coat of armour, and meanly watched for the effects of the temptation. At the sight of a dress in which she had acquired so much renown, and which she had once believed she wore by the direct command of Heaven, all her former feelings and passions revived, and she ventured in her solitude to clothe herself again in the forbidden steel. Her base and contemptible foes surprised her in that condition; the slight offence was interpreted into an heretical relapse, and she was doomed to be publicly burned in the market-place of Rouen (June the 14th, 1431). 'This admirable heroine,' says Hume,

'to whom the more generous superstition of the ancients would have erected altars, was, on pretence of heresy and magic, delivered over alive to the flames, and expiated by that dreadful punishment the signal services she had rendered to her prince and her native country.' The English king, Henry, was at Rouen at the time of this authorised murder; and there is still extant a very curious letter from him to his uncle, the Duke of Bedford, on the death of Joan, which he terms the 'extirpation of a pestilential error.' The effects of her influence, however, were felt long after her death; and although by a kind of mock coronation, the young king of England received the crown of France at Rheims, it was manifest that the English power was rapidly declining in that country."

Of the plates we hope we may without imputation, and we are sure we may with truth, speak highly. The "Portrait of Francis I." engraved by Dean, from the well-known picture by Titian, is pre-eminently beautiful.

The Aldine Edition of the British Poets. IV. Thomson's Poems, Vol. II. Pp. 318. London, W. Pickering.

MR. PICKERING is following up his design with great spirit; and this volume possesses more novelty and interest than we could have anticipated from the subject. Some Addenda to the Memoir of the poet, communicated by Mr. David Laing, of Edinburgh; and the publication of some inedited minor pieces, must be received as valuable acquisitions to any work of the kind; and, with one or two exceptions, we think we may say the reader will feel indebted for them to the editor. We are sorry to make exceptions; but while we hold the pen of public critics, we never can allow such passages as occur in the letter quoted at page cv. to pass without protesting against the want of taste, and of sense to appreciate the decorum of the age, which is evinced by such lapses. We are not squeamish cavillers; but we know not what there is inherent in such matters to recommend them to revival: on the contrary, every consideration would teach us to bury them in oblivion. Expressions that seem very coarse to our ears were not deemed unpolite a century ago: but prudence, if not refinement, would prompt us to refrain from reprinting even these, where it could be avoided; and still more imperatively, the resuscitation of indecent ideas couched in vulgar language. For let us only see what an injury it is to a bard like Thomson,—moral, deeply imbued with the love of nature, and impressively religious, and hardly impeached by a slight excess of poetical warmth—what an injury it is to such a bard, we say, to have a familiar letter prefixed to his beautiful compositions, in which the most incorrect and objectionable statements are too plainly written. The editor has called this "levity" (p. civ.), but it deserves a harsher name—it is indecency; and, as Pope, who himself wrote indecently enough to be intolerable in our days, justly asserted, admits of no defence. The elegy on James Therburn, from being liable to the same objection, ought not to have been inserted in this otherwise excellent volume, of which the "Castle of Indolence" and "Liberty" are the chief ornaments.

But as these are on the memory and tongue of every lover of true poesy, we shall look elsewhere for our illustrations; and cannot do better than select them from about a score of the slight productions now given to the world for the first time.

Our choice for the opening is a poetical

epistle to Sir W. Bennet, supposed to be one of Thomson's earliest efforts, and written before he was sixteen.

"My trembling muse your honour does address—
That it's a bold attempt most humbly I confess;
If you'll encourage her young fagging flight,
She'll upwards soar and mount Parnassus' height.
If little things with great may be compared,
In Rome it so with the divine Virgil fared;
The tuneful bard Augustus did inspire,
Made his great genius flash poetic fire;
But if upon my flight your honour frowns,
The muse folds up her wings, and dying—justice owns."

The pruning of the muse's wing before the flights that spread her flying fame upon the earth, is always an object of interest; and the above is little more. The following song to Amanda has higher claims.

"Come, dear Amanda, quit the town,
And to the rural hamlets fly;
Behold! the wintry storms are gone;
A gentle radiance glads the sky.
The birds awake, the flowers appear,
Earth spreads a verdant couch for thee;
'Tis joy and music all we hear,
'Tis love and beauty all we see.
Come, let us mark the gradual spring,
How peeps the bud, the blossom blows;
Till Philonel begins to sing,
And perfect May to swell the rose.
E'en so thy rising charms improve,
As life's warm season grows more bright;
And opening to the sighs of love,
Thy beauties glow with full delight."

Amanda was a Miss Elizabeth Young, afterwards the wife of Vice-admiral John Campbell, whom Thomson was prevented from soliciting to unite her fate with his, in consequence of the want of fortune. We like the gentle pity of the subjoined "Stanzas written by Thomson on the blank leaf of a copy of his *Seasons*, sent by him to Mr. Lyttelton, soon after the death of his wife.

Go, little book, and find our friend,
Who nature and the Muses loves,
Whose cares the public virtues blend
With all the softness of the groves.
A fitter time thou canst not choose,
His fostering friendship to repay;
Go then, and try, my rural muse,
To steal his widow'd hours away."

In our next quotations we fully recognise the author of the *Seasons*.

"On May.

Among the changing months, May stands confest
The sweetest, and in fairest colours drest!
Soft as the breeze that fans the smiling field;
Sweet as the breath that opening roses yield;
Fair as the colour lavish Nature paints
On virgin flowers free from unodorous taints!
On rural scenes thou tempt'st the busy crowd,
Who, in each grove, thy praises sing aloud!
The blooming belles and shallow beaux, strange sight!
Turn nymphs and swains, and in their sports delight.

The Morning in the Country.

When from the opening chambers of the east
The morning springs, in thousand liveries drest,
The early larks their morning tribute pay,
And, in shrill notes, salute the blooming day,
Refreshed fields with pearly dew do shine,
And tender blades therewith their tops incline,
Their painted leaves the unblown flowers expand,
And with their odorous breath perfume the land.
The crowing cock and chattering hen awakes
Dull sleepy clowns, who know the morning breaks.
The herd his plaid around his shoulders throws,
Grasps his dear crook, calls on his dog, and goes
Around the fold: he walks with careful pace,
And fallen clouds sets in their wonted place;
Then opens the door, unfolds his fleecy care,
And gladly sees them crop their morning fare!
Down upon easy moss he lays
And sings some charming shepherdess's praise."

The last of our extracts is, on the contrary, dissimilar to any piece of the author's; and though it begins poorly, there is much to admire in the four concluding stanzas.

"A Complaint on the Miseries of Life.

I loathe, O Lord, this life below,
And all its fading, fleeting joys;
'Tis a short space that's fill'd with wo,
Which all our bliss by far outweighs.
When will the everlasting morn
With dawning light the skies adorn!

Fly this life's compared to night,
 When gloomy darkness shades the sky;
 Just like the morn's, our glimmering light
 Reflected from the Deity.
 When will celestial morn dispel
 These dark surrounding shades of hell?
 I'm sick of this vexatious state,
 Where cares invade my peaceful hours;
 Strike the last blow, O courteous fate!
 I'll smiling fall like mowed flowers;
 I'll gladly spurn this clogging clay,
 And, sweetly singing, soar away.
 What's money but refined dust?
 What's honour but an empty name?
 And what is soft enticing lust
 But a consuming idle flame?
 Yea, what is all beneath the sky
 But emptiness and vanity?
 With thousand ills our life's oppress'd,
 There's nothing here worth living for;
 In the lone grave I long to rest,
 And be harass'd here no more;
 Where joy's fantastic, grief's sincere,
 And where there's nought for which I care.
 Thy word, O Lord, shall be my guide;
 Heaven, where thou dwellest, is my goal;
 Through corrupt life grant I may glide
 With an untainted upward soul:
 Then may this life, this dreary night,
 Dispell'd be by morning light."

We now dismiss this volume; of which, if only two pages had been omitted, we should have spoken with unqualified eulogy; and we are sorry to have been compelled to do otherwise; but we are sure, after what we noticed of Burns, that Mr. Pickering will consult the wide and extensive popularity of this elegant and delightful publication most efficaciously, by impressing the editor with the remembrance, that it is especially calculated to win its way among the fair and young, for whose reading every indiscreet word is a blot, every impure image a pollution. We pray him to let none such escape his vigilance in new editions of the past or in future volumes.

Autobiographical Memoirs of Timour. 4to. pp. 180. London, 1830. Murray, Parbury, &c. To that excellent institution, the Oriental Translation Committee, we are already indebted for many valuable publications. Our acknowledgments must now be made for another very curious and interesting volume—the *Mulfuzát Timúry*, or Memoirs of the Great Moghul Emperor Timour (or Tamerlane), originally composed, or dictated, by himself, in the Jagalay-Turkey language, translated into Persian by Aly Taleb Hussyny, and into English by Major Charles Stewart, whose reputation as an Orientalist has long been established by various works.

The *Institutes of Timour* were published many years ago, by Davy and White. Respecting the authenticity of the *Memoirs*, Major Davy bears witness, in a letter to Dr. White (1779), but mentions the extreme difficulty of procuring them. "Shah Aulum," says he, "the present moghul, has a beautiful copy of the *History and Institues of Timour*, which he holds in such esteem, and of which he is so exceedingly careful, that, though he granted me the use of any other book in his possession, this he positively excepted by name, as a work so rare and valuable, that he could not trust it to the care of any person whatever." Yet of this imperial volume Major Stewart obtained two transcripts, containing Timour's account of himself from his birth (A.D. 1336) during the first forty-one years of his life, and reminding us in many passages of another very entertaining publication, the *Autobiographical Memoirs of Jehan-guir*, which lately issued from the press of the Oriental Translation Committee. The two great eastern despots evince the same ambition and love of conquest; the same affected zeal for religion, and the same superstition. Yet

Timour, who frequently consulted astrologers, and was favoured with numerous dreams, omens, and visions, encouraging him in his favourite designs, says, "Another extraordinary circumstance was this: whenever I undertook any thing, I cared not whether it was deemed a lucky or unlucky hour, but, placing my faith on God, I commenced it: yet the astrologers always affirmed, that whatever I had undertaken, the hour had been propitious for the event." When he felt a desire to conquer some distant province, he "determines on a holy war against the unbelievers;" and in 1367 "I entered," says he, "my thirty-third year, and being of a restless disposition, I was much inclined to invade some of the neighbouring countries." He was extremely shocked one day at having unintentionally trodden on an ant; yet ordered that melted lead should be poured down the throats of some persons who had indulged in wine; and he tells us himself, "At the time I invaded the province of Fars, the people of Shiraz took part with Shah Mansur, and having joined him, put my governor to death; I therefore gave orders for a general massacre of the inhabitants," &c. Of the numerous visions, dreams, and other extraordinary circumstances which always occurred most opportunely, and served to encourage Timour (or rather his troops) on occasions of importance, we shall notice one. "At the period when I invaded Fars, Shah Mansur came unexpectedly on me with five thousand horse; I called out for a spear, but none of my attendants were in readiness. I suddenly saw a spearman in the form and dress of an Arab at my side, who gave into my hand a lance, and said, 'O God, assist Timour!' At this instant Shah Mansur fell from his horse, and my son Shah Kukh came up with and wounded him. When I made inquiry for the Arab, he was no where to be found; but I subdued the province of Fars."

Pompeiana; or, Observations of the Topography, Edifices, and Ornaments of Pompeii. By Sir William Gell, F.R.S., F.S.A., &c. Part III. Jennings and Chaplin.

From the present Part of Sir William Gell's curious and interesting publication, we extract a portion of his description of the Pantheon, or College of the Augustales, which was excavated in the years 1821-22.

"This edifice, which is called on the spot the Pantheon, for no other reason than that twelve pedestals were found in its centre, is one of which the use is the least evident of any at Pompeii. The plan is, as nearly as possible, similar to that of the building miscalled the Temple of Serapis at Pozzuoli, but which, by the more recent excavations, is proved to contain the baths or thermæ of Puteoli, with their appropriate medicinal spring, now cleared and applied to its original use. In each of these edifices we find an open court, with its colonnades and little chambers, and, in each, we have a circular or polygonal tholos in the centre, corresponding with that which Pausanias describes at Epidauros as the place where patients waited till they could enter the bath. In each we find, exactly in the same relative situation, a temple or building evidently more sacred than the porticos; but these coincidences only serve to prove, that the convenience of such a disposition of the apartments of public buildings was the motive for its frequent adoption in places serving for the union of any great concourse of people. Signor Carlo Bonucci, in his work printed at Naples in the year 1826, has called a part of this edifice the

Temple of Augustus, and considers the remainder as the scene of the sacred banquet of the Augustales; and there seems no reason to doubt this theory, except the difficulty of finding so large a piece of ground, in the centre of a city already built, for the erection of such a fabric, and for such a purpose, at so late a period. Yet Vitruvius, cited by Signor Bonucci, gives such a situation for the Temple of Augustus. The Augustales were highly honoured, as we are informed by Vegetius, being chosen by Augustus, the founder of the order, to lead the troops in battle; and they seem to have presided at the feasts and games called Augustalia, in honour of that deified emperor. Tacitus has given some accounts of the institution, and Lipsius has added almost every thing else that was known of the Augustales, till the numerous inscriptions at Pompeii proved that they were of great consequence in that city, though neither their office nor their antiquity is likely to conciliate the respect of the moderns, or give any interest to their history. They seem, by one inscription, to have been six in number at Pompeii. It appears, however, that the Augustales were possessed of funds which supplied them with the means of feasting, and inviting their fellow-citizens to partake in the banquet, for which purpose the building now called the Pantheon was so well calculated, that, whether belonging to a particular order, or the common property of all the inhabitants of Pompeii, it may be safely considered as a place of feasting or carousal under the protection of some deity, who, from his more elevated sacellum, was supposed to overlook and patronise the banquet. That such was the destination of this edifice, and that it differed but little in its uses from that which the Greeks called Lesche, and the modern Italians a Trattoria and coffee-house, seems to be rendered more probable by many of its internal decorations; while its proximity to the Forum, the chief resort of the inhabitants of the city, would point out this situation as the most eligible for a place of conversation and refreshment. Pausanias, in his account of Delphi, describes a building called Lesche, which, he says, was a place of meeting and conversation common in many of the more ancient cities of Greece, where, says Harpocration, citing Cleanthes, the Lesche was sacred to Apollo. In that was a temple, as in this at Pompeii, and the walls were covered with paintings, some of which represented the very personages repeated on the walls of our Pantheon. The Lesche of Lacedæmon was even called Poikilos, or painted; and as most of the smaller temples had little light, these pictures must, like those of Pompeii, have been disposed on the walls of the portico or peribolus. The Lesche of Delphi, among other historical paintings, had many Homeric subjects. Ulysses, Ariadne, Theseus, Penelope, Phædra, Bacchus, and Æthra, were among the personages represented there; and we find many of these on the walls of the Pompeian edifice, with other scenes taken from Italian history. It must be confessed that this coincidence of ornament proves little more than that the plans and decorations of many public buildings were not very dissimilar; as a portico, surrounding a court with a more sacred portion at one extremity, would be the characteristic of the greater number of them. That feasting, however, was the principal motive for assembling in the porticos of Pompeii, may be presumed from the subjects of many of the smaller paintings. The street which runs along the north side of the Pantheon from the Temple of Jupiter has been called that of dried fruits,

from the number of figs, raisins, chestnuts, and plums, fruits in glass vases, lentils, hempseed, and other objects of the same kind, found in the shops. Bread, scales, money, and moulds for pastry, were among the discoveries; and a bronze statue of Fame, of small size and fine work, with golden armlets. We find at the northern entrance, which has on a pilaster the name *CELSVM*, and near which was found a box containing an engraved stone set in a gold ring, with 41 silver medals and 1036 brass coins, Cupids employed in making bread, or driving the ass, crowned with a wreath, that brought the flour. On the opposite side, they are employed in making garlands for the guests. On the wall at the southern entrance is painted a hatchet for cutting the meat; while hams, boars' heads, fish, and other viands, compose the picture. In other places we find geese, turkeys, vases full of eggs, fowls and game ready plucked for roasting, oxen and sheep, dishes of fruit, and a cornucopia poured out, with a variety of amphoræ for holding wine, and every other sort of accessory for the banquet. To the evidence of the pictures may be added that of a drain or sink near the tholos or dodecagon, in the centre of the court, which was found obstructed with bones of fish, and other indications of the remains of articles of food."

Among the plates are a "Victory," a representation of "Comedy," another of a "Dwarf and Monkey," "the Peristyle of the Dioscuri," an "Ariadne," a view of "the Door of a House;" various "Pictures," "Bas-reliefs," &c. In speaking of the pictures found at Pompeii, Sir William says:—

"All subjects mentioned by poets or historians have a value, as conveying to our senses the conception which the ancients themselves had formed of circumstances with which they were more intimately connected than ourselves. The work of Millin, aided by the treasures of Pompeii and Herculaneum, may, probably, in time, enable us to produce editions of the classics illustrated by ancient art. It may be necessary to add, that none of these pictures have that strong effect of light and shadow which is the characteristic of modern painting, and must have been the invention of a nation which lived more in the house than the Greeks and Romans. Though the pictures are shaded, it is only to a depth that might exist in the open air."

Colonel Welsh's Military Reminiscences of the East Indies.

[Second notice.]

FROM general military topics we turn to more diversified subjects; and shall quote the personal exploits of a Lieutenant Bryant, who was with a party attacked by a superior force of about fifteen to one. "Captain O'Donnell, who, though small, was a truly gallant fellow, immediately assumed the command, and led on his motley band, amounting in the whole to not more than one hundred men, to the charge. Lieutenant Bryant, a very powerful man, first saved the life of O'Donnell, who had snapped his pistol at the leader of the Arabs, and was about to be cut down by him, when Bryant put him to death; and then attacking their colour-bearer, cut him down also, and seized their standard. At this moment the enemy's cavalry appeared, and Captain O'Donnell drew off his little party into the village; but so closely were they pursued, that they were forced to take post in a large choultry, from whence the enemy could not dislodge them. Here the extraordinary courage and strength

of Bryant, if it did not entirely save their lives, at least conduced to their preservation from famine. He harangued the Sepoys in broken English, not knowing a word of any native language, and continually sallied out with a few volunteers in search of food, and as regularly killed some of their opponents. Amongst other feats, having broken his sword on some Arab's skull the first day, he seized a musket and bayonet, which he always used afterwards; and so dexterous was he with this new weapon, that he frequently put the bayonet through one man, and knocked a second down with the but-end. One day, seeing a leader mounted on a beautiful mare, he immediately singled him out for his prey; and running him through the body, seized the mare by the bridle, and bore her off in triumph. On this mare he afterwards rode all the time he remained in the Mahrattah country." * * * A year after, in another part of the country, our friend made a bit of a mistake; for Colonel Welsh says, "While I was otherwise employed, I had informed Lieutenant Bryant, the hero of Kurjet Koriagaum, that there were pea-fowl a short distance off; when he sallied out and brought home a grass-cutter, whom he had taken for a peacock: hearing a rustling behind the bush, and mistaking her blue cloth for feathers, he fired, and shot her dead. I must do him the justice, however, to state, that he was greatly distressed; and not only brought her corpse back in his arms, paid for her interment, and gave her family a handsome present, but actually came to deliver himself up to me, being judge advocate of the force, as the only legal practitioner in the camp."

From man we go to birds. "The battle of Assaye had collected all the birds of prey in the country, a few following the army, and the rest taking possession of the inheritance left them, by their kindest benefactor, man, on the field of battle. On the 19th I killed one on the march, an adjutant, which seemed by its attention in following us, to be anticipating a feast on the road. From the tips of its wings this bird measured ten feet across, and was exactly similar to those so cherished at Calcutta and Fort William as public scavengers. I mention this extraordinary fact, because I had never before seen one in any part of India, the vicinity of Calcutta and the Hooghly only excepted; nor did I ever again see any in after-times in the Mahrattah country; proving the strength and power of their olfactory nerves. * * *

While marching along the north bank before crossing the river Toombudra, in the morning, we saw a large flight of saruses, or demoiselles, on the southern bank. This is a rare and very wild bird, of enormous dimensions, somewhat resembling a stork. I have only met with them in the Mahrattah and Mysore countries, and that very rarely. They always keep in a flock, and, rising gradually, soar over the same spot, screaming like a woman in distress, so as to be heard when out of sight overhead. The river being some hundred yards broad, I drew up a small party, who, firing by word of command, brought down two out of perhaps fifty or sixty birds. The difficulty then was to secure them, when Captain Pepper, and a havildar, both grenadiers, volunteered to swim over; and, strange to say, the latter would have been drowned but for the captain, who supported him in the middle of the stream; though the natives, in general, are very expert swimmers. The remains of my fever still hanging constantly about me, prevented my accompanying them. Although struck by a ball, one of the

birds made its escape; the other, which was brought away and served at dinner, was much larger than a turkey, and very good eating it proved. I acknowledge myself to have incurred deserved censure for this achievement; and I should never have forgiven myself, had any accident happened to my friend, or his havildar; but we were all deceived as to the depth of the river; and this was, I suppose, the last opportunity we should have of obtaining a bird of a species, which, though frequently alarming and disturbing our camp with their distressing cries, had never been shot by any person in our army during a three years' campaign."

And from birds to vegetables—grass. In the hill country, near the source of the river Paunjur, north of Poonah, the author says: "Being anxious to take some bearings from a rising ground in our neighbourhood, I endeavoured to force my way through the grass and reeds, but could not effect it, and was very glad to find my road back again. To ascertain the height of the grass, I held up my gun at arm's length, and could then perceive it some feet above the muzzle."

Near a large sheet of water called Tinghully Tallowe, in the Mysore, Col. W. also states: "On the margin of the lake, between us and the water, grew some most luxuriant and tempting-looking grass, in which many of the natives allowed their cattle to graze; and our horse-keepers also permitted the grass-cutters to give it to the horses, instead of going to a distance, and cutting the roots of the delicate pasture on which they are generally fed. The consequence of which was, that in one night, every horse in our camp was taken ill, and out of twenty with the corps, about sixteen died; and the head man of the village, instead of warning us beforehand, very coolly told me, that one of our regiments of cavalry, going the same route, had lost ten times as many; for the grass was all poisonous near the tank. One word would have saved all; but he had not the sense or the humanity to utter it. I wrote a complaint against him to the resident in Mysore, and was informed that he was disgraced for this misconduct; but the past was without remedy."

Near this place there is a prodigious work of art, which is thus described:—

"Estimated as a military post only, Nungdeo must ever rank high, from its being almost inaccessible; though all wonder at the preceding sight was speedily lost in our surprise, when, after ascending several neat stair-cases, we suddenly came upon a large stone building, above which we then first discovered a finely formed image, carved out of one solid stone, about seventy feet high, and representing a young man with wreaths of laurel winding from his aules to his shoulders, every leaf of which was so exquisitely laboured, as to bear the closest examination. We were able to contrast the size of this extraordinary colossus with men, monkeys, and vultures, two of the latter being perched upon its head, and the upper part being seven times the height of a middle-sized man who stood on the top of the building, with the legs and thighs of the statue below. That it was cut out of the solid rock cannot admit of a doubt; for no power on earth could have moved so massive a column to place it there on the top of a steep and slippery mountain—so steep, indeed, that we could not even see this statue till we had ascended close to it. The legs and thighs are cut out in proportion to the rest, but are attached to a large fragment of the rock behind them, artfully covered by the building, of which it forms

the back wall. I never in my life beheld so great a curiosity, every feature being most admirably finished: from the nose inclining to aquiline, and the under lip being very prominent and pouting, the profile shews it to the greatest advantage; and every part, from top to toe, is smooth and highly polished. I could hardly conceive how the hand of man, and that particularly of a race by no means either intelligent or educated, could have accomplished such a work of labour, and that too on the summit of a sterile rock. No person on the spot seemed either to know or care when, or how, or by whom, it was made; and though I have given it the usual appellation, the Brahmins called it Gometrauz and Gomethez; and at a distance it appeared to be a stone pillar."

The author mentions a brass gun taken in a warfare against the Rajah of Travancore, and cast on the spot: this gun was "sixteen feet long, and bored as a twenty-two pounder: it was so extremely massive, that 1200 men, assisted by sixteen elephants, could not move it even for a few yards." This war finished too like that of the Poligars; after defeating the enemy, we are informed—"the late dewaun was speedily traced into the interior of a pagoda with brazen doors, and while our party was forcing them open he killed himself; when his brother, with six friends, who were taken alive, were carried to Quilon and hanged in *terrorem*; and thus terminated the Travancore war, designated a rebellion."

In continuation, he also relates the following:—

"Having obtained leave of absence to return to Pondicherry, where I had left my family, on the way from Madras, I arrived at Pallamcottah on the 10th of April, and setting out post, was bit by a tarantula at Kytaur, where I stopped to change horses. The effect was such in a few hours, that about twenty miles from Madura I fell off my horse, and was carried on by the kindness of the collector's public servants to Teppocolon, where our kind old friend Mr. Parish immediately called in medical assistance. I have mentioned this circumstance, because it was out of the common routine of accidents: I had previously experienced the stings of scorpions and bites of centipedes, one of the latter while sleeping on board the Piedmontaise, a few nights before, being eight inches long, without much inconvenience: but this reptile stung me on the same spot both going and coming, and I was suffering tortures from the first bite when I joined the force on the 5th of February; one of the advantages of posting on horseback without servants or baggage. I must, however, acknowledge that I did not see the creature either time. I was reclining on a little straw under the only tree left at Kytaur, while a fresh horse was saddling for me, on both occasions; but the natives described it to be an enormous spider which bites and even kills cattle; and I have actually seen tarantulas in that neighbourhood. It certainly did not put me, as is usually reported, into dancing trim, but was each time followed by excruciating pain and a burning fever."

At Trevycary, seventeen miles from Pondicherry, he proceeds—

"Of all the curiosities I have witnessed in the East, the petrifications in the vicinity of this insignificant village are the most interesting and extraordinary. There being no shelter for Europeans in its neighbourhood, it is necessary to pitch tents near a small pagoda, on ground somewhat above the level of the plain. This building is evidently of great antiquity,

though it possesses no beauty or attraction at present; but close to it are several rude rocky hillocks, which on a near approach prove to be of a circular form, and hollow in the centre, resembling the craters of volcanoes. These craters were all more or less choked up with weeds and bushes, so that we could not penetrate to the bottom, though they did not appear to be of any great depth; but still, considering them in that light, our wonder was the greater, to find the surface covered with large fragments of petrified wood, instead of coals and lava. On a nearer examination, the soil of these cavities proved to be a whitish loose sand, and that of the exterior surface a compound of sand and clay completely transformed to stone, extremely porous, and perforated in a thousand places, like rocks under water, in a stream, with enormous masses of trees of various forms and descriptions, some of which were actually buried in them, and others scattered about, as if they had been thrown down by some sudden eruption of nature and broken by the fall. When these rarities were first discovered, or by whom, I have no idea; and it was only on our return from Poonah that I first heard at Madras of 'the petrified tamarind wood,' as it was always designated. Masses being cut out into various ornaments and highly polished, very much resembled Scotch pebbles, and were then much in fashion as a novelty. Yet this very name, given indiscriminately to all these stones, however varied in shape or colour, proved to my mind that the spot from whence they were taken had never been visited by any European, or person capable of examining and distinguishing the original petrifications—for I found them so perfectly different, and some so nearly entire, as to be able to pronounce positively as to their variety; and actually carried to my tent, with much difficulty, part of a branch of a cocoa-nut tree, which bore the strictest examination, and could not possibly have been mistaken. It is natural in such situations to endeavour to trace the causes of such extraordinary transmutations; but I could find no native capable of assisting my research, nor any other signs to enable me to form any correct conclusion. I therefore venture a diffident opinion, that, when formerly flourishing and planted with trees, the ground on which these hillocks now stand was inundated by a sudden flood many centuries back; and after continuing under water for several hundred years, was as suddenly dried up again by some volcanic eruption, and left in that state, in which, with little alteration, I found them; for all the lapidaries in the East uniting together could not clear the ground of these fragments, which would most likely require a thousand waggons to remove to any distance."

Near Nundydroog, where Colonel Welsh was for some time stationed, he says:—

"In this valley, and about a mile from our house, stood a rocky hill, a few hundred yards high, with a remarkably large perpendicular rock at the eastern extremity, known by the name of Hyder's Drop; which, not less from its very picturesque appearance, than from the blood-stained fame connected with its former history, certainly merits an especial mention. This rock was nearly insular, and was connected with the summit of the hill by a narrow causeway, evidently the work of man. It had a wall round it, and a small gate by which to enter a low bungalow of coarse materials, in which some hundreds of European prisoners were confined by those monsters Hyder and Tippoo; and it was well known that whenever

the inmates became too numerous, some of them were hoisted over the precipice; when a fall of seventy or eighty feet ended their misery by breaking every bone in their bodies, which were kindly left as food for jackals, hyenas, and tigers. We found the names of many of our countrymen scratched upon the walls and roof; and this puts me in mind of another favourite drop of those inhuman Mussulmans, on the top of Nundydroog, towards the southwest, where the rock is in one place about one thousand, or one thousand two hundred, feet in perpendicular height; from which spot I was assured that some hundreds of our sepoy, having been taken prisoners and refused to serve the tyrant, were rolled over to eternity, sewn up in sacks. I even visited the bottom of the precipice with much labour, but could not find any traces of the facts related, time having removed all vestiges of their remains."

The interest of these *Reminiscences*, especially on the author's visits to Coorg, will probably tempt us to another notice.

Hints originally intended for the small Farmers of the County of Wexford. By Martin Doyle. 6th edition. Dublin, 1830. Curry and Co.

WE have a word or two to say to our friend Martin Doyle, whose second edition we noticed with due commendation about a year and a half since (No. 638). Pray, Mister Martin, when you recommend a savings' bank, and talk of government security for the spare shillings of an Irish peasant, where are the spare shillings to come from? Answer us this.—Why, says Martin, "the shillings saved by abstinence from whisky and tobacco;" yet in the very preceding page we are told that "you have often seen a very large family picking delicately at one salt herring for dinner;" which is a near neighbour to Tom Moore's poetical dish of "potatoes and point."—Answer us this, honest Martin, in your seventh edition; for into a seventeenth we prophesy your Hints will run.

Martin Doyle, Martin Doyle, let us speak a word of sense to you: Don't overstrain your admonitions; and then write half a dozen tracts for the peasantry of Ireland to read, and you will be a national benefactor. You have no sectarian prejudices—your words come home to high and low—and your poetry in its way is perfect: take for example:—

"This section introduces to your notice
A plant, whose name uncouth to English throat
From Germany the *Mangel Wurzel* came,
And well deserves its widely-spreading fame."

Or this on dairy management:—

"Beware the fate of Mr. Synges,
From England if your maids you bring:
Then how shall Irish damsels please,
Unblest with art of making cheese?
Why—but one mode can I discern,
And that is, send them there to learn."

The Marquis of Londonderry's Narrative, &c. LORD LONDONDERRY'S second volume, to which we have so long owed a promised continuation of our review, we have at last, in consequence of the time that has elapsed, been induced to lay upon the shelf; but we cannot do so without again reminding our readers that it contains a vast store of information, both military and political, of the highest interest and importance. No history of the events to which it relates can be correct without reference to its statements; and the independent spirit in which the noble marquis's remarks

* Of Glenmore Castle, in the county of Wicklow: this gentleman is a valuable landlord.

are made, adds materially to its value as a present light and a future guide.

Discourses on the Millennium, &c. By the Rev. Michael Russell, LL.D. 12mo. pp. 443. Edinburgh, Oliver and Boyd; London, Simpkin and Marshall.

THE most interesting object of this work is to shew, that the idea of the Millennium is a fanciful invention of the Jews, long prior to the Christian era, with which Christians or the Christian religion can have no possible concern. Had it been true, the author also contends, the period for its arrival has long since passed; but the whole is a piece of imaginative foolishness. For ourselves, all we shall say on the subject is, that if both the believers and the unbelievers were to remember and practise the golden rule, the earth would present much more of Millennium happiness than it does amid controversial acrimonies, and the want of the charities and humanities of life.

The Life of Samuel Johnson, LL.D., &c. By James Boswell. London, 1830. J. Sharpe.

THE whole of Boswell's most entertaining and characteristic *Life of Johnson* is here, by the neat hand of the printer, and the use of double columns, compressed into one pretty pocket volume of 622 pages. If we go on this way, the impossibility of putting Homer in a nutshell will soon cease to be impossible. The general reader is much indebted to Mr. Sharpe for this cheap and convenient publication of a work so justly popular.

The Family Classical Library, No. VIII. Colburn and Bentley.

VOLUME I. of *Virgil*, with a beautiful bust, engraved by Freeman, as frontispiece. This vol. contains Wrangham's Translation of the *Eclogues*; Sotheby's *Georgics*; and two books of the *Eneid*, by Dryden. The volume is executed in a handsome style; and reflects great credit on this classical publication, combining the three important requisites of accuracy, elegance, and cheapness.

Burns's Address to the Deil. With Notes. Illustrated by eleven Engravings on Wood, after Designs by T. Landseer. London, W. Kidd.

THE character and excellence of these designs, which possess extraordinary merit, both for invention and execution, must recommend this little work to great favour. Mr. Landseer has displayed his powers upon the evil Power, and has given his portrait so faithfully after the Ayrshire bard, that, whether in his sootie cavern, in betraying travellers, in frightening clowns, in tempting Job, or in watching his opportunity in Eden, we can conceive nothing superior to the spirit with which he is delineated. The notes are but poor appendages to the poem; but the Deil himself is in all his phases so d—ish well done, that he absolutely extorts our admiration. The wood-cutting is a superb specimen of the art, worthy of the designs and talent of the original artist.

Constable's Miscellany. No. LVII. THIS Vol. is the first of a translation of Bourrienne's *Memoirs of Napoleon*, which is to be completed in three volumes. Too much publicity cannot be given to this important work; and the translator seems to have done his part with skill and spirit, abridging only what very slightly impairs the text, and not at all the sense of the original.

A Comparative Grammar of the English, French, and Italian Languages, &c. By Mrs. Eaton. 12mo. London, 1830. Holdsworth and Ball.

No foreign languages are more generally studied than the French and Italian; and as they bear such a close affinity to each other, a close comparison of the rules which determine their respective structure, must be very beneficial to the student; since it will teach him, not only where they are similar, but also where they differ. At the same time, a comparison of two such highly-cultivated languages with our own, so judiciously presented as it is in this little volume, will be the best method for acquiring the knowledge of general grammar. The introductory dialogue will be found particularly useful by those who have to initiate either themselves or others into this abstruse study; as we have never met with a book where this science is more philosophically, and, at the same time, more clearly and simply developed. It is a work which ought to be in the hands of every teacher of languages.

ARTS AND SCIENCES.

GEOGRAPHICAL SOCIETY OF LONDON.

ON the first proposition for establishing this Society (so loudly called for by the actual state and unexampled capabilities of the British nation), it has been espoused by the influential and the scientific, the powerful and the intelligent, of every description to whom it could address its views and pretensions; so that already, after only one meeting, nearly five hundred members have been enrolled, including such names of ministers, noblemen, members of parliament, distinguished officers of every service, official persons, eminent travellers, authors and men of science, as we never saw combined at the commencement of any undertaking whatever.

We have, in a preceding *Gazette*, given the outline of this institution. At the meeting of the 16th ult., J. Barrow, Esq. was in the chair; and after the rules, &c. were adopted, he delivered the following judicious and enlightened observations to the meeting, explanatory of the general views of the Society:—

The Geographical Society of London being now established, the provisional committee cannot close its proceedings without adverting to the gratifying fact of there being enrolled, on the list of its members, within so short a space of time, considerably more than four hundred names. From this great and increasing number, and still more from the general character of the subscribers, it is fair to conclude that a favourable opinion has been formed of the utility likely to result from the labours of such a Society. The *degree* of utility, however, which will be really effected, the committee deem it almost unnecessary to observe, must depend on the attention and assiduity which the president, the vice-presidents, and the council, may bestow on its concerns, quite as much as on the stock of knowledge they may bring to the consideration of the several subjects that will come before them. And not on the council alone will depend the extent to which the useful labours of the Society may thus be carried, but in a very great degree also on the assistance which they may receive from the many individuals eminent in the arts, sciences, and literature, and from the distinguished officers of the army and navy, whose names appear on the list of members.

The many opportunities that are afforded to officers of the army while on service abroad,

and the promptitude and ability with which they avail themselves of them, (as the office of the quarter-master-general and the board of ordnance so amply testify,) are the best pledges of what may reasonably be expected from that quarter; and the more so, since the committee has had the satisfaction to witness the readiness with which so many distinguished officers of the royal artillery and engineers have come forward to join the Society.

With the same confidence the committee look for aid from the officers of the sister service, who on their own peculiar element in particular, will, it is hoped, be assisted by other experienced navigators, whether of, and belonging to, the corporation of Trinity, the East India Company, or to any other maritime service. On the exactitude of the minutest details of hydrography must always depend the safety of commerce and navigation. Numerous dangers unquestionably exist in various parts of the ocean, that have not yet been ascertained, while others that have no existence still figure on our charts to the dread of navigators. It has been well observed, that 'the man who points out, in the midst of the wide ocean, a single rock unknown before, is a benefactor of the human race;' and scarcely less so is he, who, after careful examination, is able to decide that a rock or shoal, which appears on a chart, is either misplaced, or has no existence. These, it is true, may not be ranked among brilliant discoveries; but the smallest obstruction, whether rock or shoal, that exists in the ocean, may have been, and, so long as its exact position remains unascertained, is still likely to be, the cause of destruction to life and property. It may also be noticed, that many practical observations are still desirable on the prevailing winds and currents, and more particularly on tides, of which there are various peculiarities among the islands, and along the different coasts of the ocean, concerning which facts and observations are still wanting, for establishing one general theory that shall be found applicable to every part of the globe.

Every accession, therefore, to hydrographical knowledge—a real danger discovered—a fictitious one demolished—or a peculiarity ascertained—must be of great importance to navigation, and a fit object for promulgation by the Society.

The committee, however, are also willing to hope, that many valuable contributions on geographical subjects will be received from other individuals, whether on the list of members or not, than those who are thus professionally qualified and invited to furnish them, particularly from such of their countrymen as have permanent residences abroad, from the various public authorities in the British colonies, and from those who have travelled, or may yet travel, in foreign countries. It is not for the committee to specify in detail the various points of information which should engage the attention of the traveller; but they may observe, that every species of information, connected either with physical geography or statistics, if it have only accuracy to recommend it, will be acceptable; and in cases where the stock of information, generally, in the hands of any individual, is not of sufficient magnitude or importance to form a volume for publication, if sent to the Society, it will be made available, in some form or other, in its transactions. The routes, for example, which travellers may have pursued through portions of countries hitherto but imperfectly known, or inaccurately described,—the objects of natural history that may have presented themselves,—the meteorological and

magnetic phenomena that may have been observed,—the nature of the soil and its products, of its forests, rivers, plains, mountains, and other general features of its surface; but, above all, the latitudes and longitudes of particular places which the resident or traveller may have had the means of determining to a degree of precision on which he may rely;—such notices of detached portions of the earth's surface, where regular surveys cannot be held, are of extreme importance, as furnishing the only means by which any thing approaching to correctness in our general maps can be attained. And the committee cannot, therefore, entertain a doubt, that it will constitute a part of the Transactions of the Society to publish such detached pieces of information bearing on each of these points, as may be thought of sufficient interest and importance to be communicated for the use of its members, and of the public at large.

But there are many other means, besides those now mentioned, by which geography may be advanced, which are too numerous to be here specified at length. In addition to the few, however, which have been noticed here, as well as in the printed prospectus already circulated, the following points may be briefly stated, as being among the most important that will probably engage the attention of the Society:—

1. The composition of maps illustrative of particular branches of geographical knowledge, more especially those relating to orology, hydrology, and geology.

2. The establishment of new divisions of the earth's surface, formed upon philosophical principles, and adapted to different departments of science; more especially as regards those divisions which are founded on physical and geological characters, on climate, and on distinctions of the human race, or of language.

3. A more uniform and systematic orthography than has hitherto been observed, in regard to the names of cities and other objects; and a more precise and copious vocabulary than we at present possess of such objects.

4. The preparation and improvement of road-books for different countries, of gazetteers, and of geographical and statistical tables, and all such matters as are of general utility.

The committee cannot take upon itself to pronounce to which, of so many important considerations as have been enumerated, the attention of the Society should be first directed; the order of precedence must obviously, in some measure, depend on the means, rather than the wishes, of the council. But the committee are willing to hope that, sooner or later, most or all of the subjects mentioned will engage that attention of the members to which they appear to be fairly entitled; and that the range of investigation will in no respect be less comprehensive than the title of the Society implies.

In making these observations, which have reference chiefly to facts, the committee wish, however, to guard themselves against any supposition that might be entertained of their being hostile to theory; or of recommending to the Society to limit the reception of communications to such only as are the result of actual observation and experiment. On the contrary, they are fully aware that great benefits have been, and yet may be, derived from speculative geography. Theories that do not involve obvious absurdities or impossibilities, but are supported by reasonable probabilities, may serve as guides to conduct to important discoveries; by exciting curiosity they stimulate inquiry, and inquiry generally leads to truth. And reasonings and suggestions, there-

fore, in regard to parts of the world deserving of minuter investigation, which are little known, or of which no good account has yet been given, the routes to be observed in examining them, the chief subjects of inquiry, and best modes of overcoming the probable difficulties that may occur in the research,—all these will form proper subjects for admission into the proceedings of the Society.

And lastly, the committee having reason to think, that at no great distance of time, the Society will be able to obtain suitable apartments for the reception of books, maps, charts, and instruments, they would venture to suggest, that donations of such materials as may tend to the elucidation and extension of geographical science would afford facilities to the attainment of its views. And they are willing to hope that, aided by such means, a library of books and manuscripts on geographical subjects, with a collection of charts and maps, may be formed, that will not be undeserving of public approbation and patronage.

Who can doubt the eminent success and national utility of such a Society? Our hopes of it are of the most sanguine kind; for it possesses all the elements of greatness.

ASTRONOMY.

His Majesty's favour, in knighting Sir James South, we observe it stated in the *Times*, was in accordance with the declared purpose of his august brother and predecessor; and intended, as well as a personal honour, to mark the royal approbation of the scientific pursuits in which Sir J. South had so long and so zealously been engaged. We rejoice to see the glorious science of astronomy so distinguished, and in the person of a votary who has spared neither study nor fortune in advancing the knowledge of it: witness his noble observatory at Kensington, and the splendid apparatus and glasses with which it is furnished. The same journal states, that his Majesty has placed 300*l.* a-year at the disposal of Sir James to promote the cultivation of astronomy; a measure which we also hail as indicative of a desire in the highest quarter to rescue the British government from the imputation to which it is (as a government) too justly exposed, of great apathy towards every thing connected with literature, the arts, or science. What makes this matter more remarkable is, that the new knight is one of the most fierce impugnors of the Royal Society.

ACADEMIA CÆSARÆA NATURÆ CURIOSORUM.

WE learn, from Germany, that the president of this distinguished Society, Dr. Nees von Esenbeck, has removed his residence from Bonn to Breslau, where he continues to conduct the affairs of the Academy. The library has been placed under the charge of the first secretary and librarian, Professor Goldfuss, at Bonn, in the building appropriated for its reception by the Prussian government; communications for the Academy, therefore, may safely be sent to either place. While we seize the opportunity of giving information of interest to our scientific readers, we avail ourselves of the occasion to compliment the learned president and his associates on the many and essential services which their labours are continually rendering to natural history and all its congenial, useful, and delightful branches.

LITERARY AND LEARNED.

KING'S COLLEGE, LONDON.

AMONG other gracious acts of his Majesty, the royal pleasure has been communicated to the

Committee of the King's College, that it shall be placed under the immediate protection and patronage of William IV.

GRECIAN ANTIQUITIES.

(From the *Greek Gazette Universelle*.)

Ægina.—The friends of Greece, and the friends of antiquities and the fine arts, will no doubt hear with interest of the foundation here of an establishment as useful, as honourable. In digging the foundations for the House of Refuge for Orphans at *Ægina*, several ancient vases were found, the material and form of which attracted the attention of antiquaries. Similar ones have been discovered in excavating some of the streets of the town of *Ægina*; and on the site of the new lazaretto a bas-relief has been turned up, representing a horse with its leader. Such is the origin of a museum which has just been established at the House of Refuge for Orphans; and which already contains two statues, two heads, nine inscriptions, sixty-seven bas-reliefs, a large stone vase, with bas-reliefs, and two gold ear-rings. These articles of antiquity have been partly collected by the government, at a trifling expense; but the greater number have been presented by individuals. The museum is visited every day by travellers; and drawings have been made of some of the most remarkable of its contents. Hopes are entertained that it will soon be greatly augmented.

FINE ARTS.

NEW PUBLICATIONS.

Picturesque Views of the Antiquities of Ireland.

Drawn on Stone by James D. Harding, from the Sketches of Robert O'Callaghan Newenham, Esq. 4to. T. and W. Boone.

WE deferred our notice of this publication, which was commenced about four years since, and appeared in quarterly parts, until its completion. We can now bear testimony to the creditable manner in which Mr. Newenham has fulfilled his engagement to his numerous subscribers; and we rejoice to see that due national encouragement has been given to his labours.

The leisure of five and twenty years has been devoted by Mr. Newenham to sketching the remains of such remarkable objects as appeared to merit the notice of the artist or the antiquary; and his official situation as superintendent-general in the barrack department of Ireland afforded him particular facilities in exploring (if we may use the term) every part of the country. From the mass of sketches thus accumulated, we are now presented with a selection of one hundred and twelve subjects, admirably lithographed by Mr. Harding. Round towers, abbeys, and castles, predominate in these Views; the former singular buildings are judiciously illustrated by those of Scattery, Clondalkin, Swords, Devenish, Kilmacduagh, Timahoe, Roscrea, and Glendalough; and their greatest varieties by that of Kinneigh, in the county of Cork, and that of Ardmore, in the county of Waterford; the basement of the former for the height of fifteen feet is hexagonal, and the latter is girthed by five bands or sets-off.

Mr. Newenham, speaking of the Pillar Tower at Kilmacduagh, in the county of Galway (we believe the highest in Ireland), observes, that "it is said in the *Monasticon Hibernicum* to deviate from the perpendicular even more than the well-known Leaning Tower at Pisa, which inclines thirteen feet, whilst the inclination of that at Kilmacduagh is stated to be seventeen feet and a half. Hav-

ing the means of accurately measuring the inclination, I found that the tower leans only two feet and a half;—the height is one hundred and two feet, and its diameter at the base nineteen feet—so that the deviation from the perpendicular amounts to little more than one-eighth of a diameter; a quantity which could hardly be perceived without the assistance of instruments."

After a description of the Pillar Tower at Timahoe, in the Queen's County (stated to be eighty-four feet high), we find the following account of an extraordinary achievement, which we presume, from Mr. Newenham's matter-of-fact manner, to be unquestionable. "As a local feat, it may be worth mentioning here, that on the 2d of July, 1827, a countryman, named Daniel Keane, climbed up on the outside of this tower, without any assistance whatever, and stood on his head on the summit, where he fastened and left his coat as a memento of the performance."

We may here remark, that Mr. Newenham, in the literary portion of his work, confines himself to concise local and historical notices of the buildings represented. He enters into no controversy, and offers no antiquarian conjectures respecting the pillar towers of Ireland, or similar debatable matters; but he places before us faithful resemblances of these mysterious structures, and such other remarkable buildings as best illustrate the progress of architecture in the sister island.

Coast Sketches. Drawn and etched by E. W. Cooke. Part I.

THERE is in our eyes much greater merit in such etchings as these, in which the character of every object is marked with a light but firm hand, and away, than in those more laboured productions, where every inch of the copper or steel is covered with work that in many instances might have been advantageously spared. This is a publication which exhibits Mr. E. W. Cooke's taste and feeling as an artist in a very favourable point of view. It consists of twelve plates of subjects at and near Brighton. They are full of picturesque beauty. The next Part will be devoted to Hastings and its neighbourhood; and we hope that Mr. Cooke may be induced to proceed until he has embodied in his sketches all the various and distinctive features which the coast of this island presents.

Mary Queen of Scots and her Secretary Chatelard. Engraved by A. Duncan, from the original Picture painted by H. Fradelle. London, 1830. Moon, Boys, and Graves.

THERE have been few prints so popular in England, and perhaps no English print was ever so popular on the continent, as the well-known mezzotinto plate which was published a few years ago from Mr. Fradelle's picture. The present is an engraving in line, and of a smaller size than its predecessor. It is very ably executed, and especially with reference to the great charm of the composition, namely, the fond abstraction with which the lovely queen is contemplating the amorous, but rash and unfortunate Chatelard.

Ten Views of Picturesque Scenery in the North and North-West of Ireland. Engraved by William Miller, from Drawings by George Petrie, Esq., R.H.A., &c. Dublin, Curry and Co.

THE plates of the northern tourist, done up in the most attractive shape—and very superior plates they are, both as to the drawing and the engraving. Friend Miller decidedly ranks next

to Le Keux for delicacy of execution. The view of Narrow-water Castle is perfect in the way of scenery; and the Giant's Causeway and Dunluce Castle are beautiful specimens of art.

National Portrait Gallery of Illustrious and Eminent Personages of the Nineteenth Century. With Memoirs, by William Jerdan, Esq. No. XVI. Fisher, Son, and Co.

THE present Number contains memoirs of Lord Lyndhurst, the Earl of Fife, and Sir Thomas Le Breton. With respect to the first, the steps by which, from a condition of comparative obscurity, he has "risen to the highest legal honours to which a subject of England can aspire," are fully and, we believe accurately, detailed. The second, hitherto "little known to our London world except as a man of high fashion, a friend and favourite of royalty, and an ornament to the social circle, where his polished manners and intelligence are so justly prized," is shewn to be quite as deserving of notice "for his brave conduct throughout the Peninsular War, his important services, and the privations and dangers which he encountered in that splendid cause." And of the third, who is Bailli of the island of Jersey, and President of the States, it is "justly presumed, that great merit, worth, and ability in the discharge of his various and important duties, have contributed to raise him to so elevated a station among his fellow-citizens." The plates in this Number are remarkably fine. The portrait of the Lord Chancellor, in particular (drawn and engraved by Mr. T. Woolnoth), is a most striking resemblance, and conveys a perfect idea of the intelligence and acuteness by which that eminent person is distinguished. That of the Thane of Fife, in his tartans, is well calculated for a great run among the northern clans; and the natives of Jersey will, no doubt, be gratified to see their magistrate in such company.

Characteristic Sketches of Animals. Drawn from the Life, and engraved by Thomas Landseer. Part IV. Moon, Boys, and Graves.

THE Gazelle, the Lion-Tiger Cubs, the Calmuc or Little Russian Horse, and the Elephant, have been the subjects of Mr. Landseer's crayon and etching point for this, the fourth Part of his clever work; and they furnish a fine exhibition of animal elegance, ferocity, picturesqueness, and sagacity. The accompanying descriptions are written with their usual ability.

PLATE.

It is always with pleasure that we find ourselves justified in noticing such productions of English artists as shew the progress of taste and skill, in whatever department it may be displayed. Thus, we have this week been highly gratified by the inspection of a piece of plate, voted by the Roman Catholics to the Secretary of the Association, for Great Britain, Mr. Blount, and executed for them by Mr. Kensington Lewis. This splendid and elegant design consists of four beautifully chased female figures, conjoined by wreaths, and supporting a shell-vase, whence a (real silver) fountain descends so as to form the support or pedestal. There is great originality in the general appearance of this work; and we never saw any thing of the kind which at the first glance gave more of the idea of grace. Six hundred guineas was the sum subscribed for this heir-loom to the family of Blount; and they may well be proud of the token.

ORIGINAL POETRY.

JUVENALIA.—NO. VI.

[Series concluded.]

THERE's nought (held some philosopher of old) So silly, but philosophers will hold! Append your faith to liberal Demo's sleeve, And mankind, all but little gods, believe; See through dark Timon's blear and bloodshot eyes,

You'll think mankind but devils in disguise; What paragons! how noble! one exclaims, The other beats through Bilingsgate for names, And, in the foulness of his deep attain, Fiends become fair and Satan turns a saint. On either side of that old Samian line, The hair-broad bridge that leads to Truth divine

Midway of errors (hard to tread or see!), Both deviate far, and both in like degree.

Let us in metaphysic mortar bray The two opinious: their result will say— Of Beings, none within our polar span, So wise, so weak, so great, so mean, as Man!

In the vast scale of sentient things, I own, Rank is assigned to mental worth alone; Through all the grades of Reason, Instinct, Sense,

From Apathy to pure Intelligence. Grandeur of soul from size is quite disjoint, And God may be a mathematic point.

The wiser ant we place above the sloth, We class the beaver with the behemoth; Herculean clowns we couple oft with hogs, And puppy gentlemen with puppy dogs.

But is it much that Man is wise and great Compared with Brutes?—'Tis true, beyond debate,

Sagacious as he is, no Elephant Could subtilise like Coleridge or like Kant; No geometric Spider could, perchance, Bear off the Polytechnic bell in France; Ev'n in the honied range of industry, Brougham makes greater buzz than any bee; Bacon is somewhat brighter than a pig, And Newton by dull Neddy might look big; In cunning, Reynard has been long renowned; Yet keener rogues at Crockford's may be found; Monkeys have mother-wit, yet more by half Liston or other mimes will make you laugh: I grant, in short, what scarcely Swift denies, Men are lords-paramount beneath the skies; But are we, therefore, truly great and wise?

Now turn the tapestry!—Certes, here indeed, Men do all earthly creatures far exceed, Still paramount—in Folly and in Crime!

The running-base and burden of my rhyme. What a wide-walking gander would not do, Man will commit, and think it wisdom too! That foolish bird will gabble, if you please,

But not till he disgusts the other geese; While drivelling Balbus prates so loud and long, We sicken ten days after at a tongue!

The ostrich when pursued, 'tis said, will push (To blind the pack) its head into a bush, Hoping, because it cannot see the rout, They are as much at fault for it without; But, unpursued, wise Man the knee will pat, For Death to leap upon him like a cat!

See Morus play with grim Perdition's paws, Phillip his beard, and walk into his jaws! Through Sin's foul mass, down to Tartarean gloom,

Blinder than moles, we work out our own doom; Dancing the barlot-reel and red with grapes, We knock at hell-mouth where Destruction gapes;

Rot for a debt, are pistolled for a punk, Or sober die for what we said when drunk! Behold Nasidio! blacklegs know him well, With what sang froid he saunters to his hell!

Where hawk-eyed fiends, with claws of griffin clasp,
Sharks in their gullet, for his substance gasp;
His gingling purse proclaims him made for sport,
As cap and bells declared the fool at court!
Though knave and cheat he sees convened to rob,
And feels the great Rook pecking at his fob,
He smiles—sits—plays—wins—loses, o'er and o'er—

Till he can lose (except his wits) no more;
Perchance by rope or razor ends his pains,
Or proves, when blown out, that he had some brains!

Thus would it seem, that greatly to go wrong,
Does to the *Reasoning Race* alone belong;
And only they can put forth just pretence
To err by light of Knowledge and of Sense!

TO LAURA,

On her asking if I loved her.

LAURA bids me tell my love,
That I may her beauty flatter;
But its warmth words cannot prove—
Words that every wind may scatter:
'Tis in deeds that I would shew
How my warm affections glow.

Should I call her loveliest,
Say her charms like brilliants glisten,
Swear she is my dearest, best—
Language that might make her listen,—
I should swear what I before
Oft have sworn to many more!

Lovers' vows are only air,
Forgotten with the ease they're spoken;
Chains of flowers, light as fair,
Easy to be made and broken:
Leave such things to girls and boys—
Only children play with toys!

But a heart that loves her well,
With a warm and lasting fire,
Though it have no songs to tell
How it pants in soft desire,
By my deeds shall brightly shew
How my warm affections glow!

LA BASTIE.

SKETCHES OF SOCIETY.

FREDERICK-WILLIAM FIRST, OF PRUSSIA.

THE memoirs of the Princess of Baireuth, the sister of Frederick II., have already initiated us in the household secrets of that most whimsical of monarchs, Frederick-William I., who thought nothing so satisfactory to the heart of a king, as the appearance of a regiment of men of six feet; and who carried the spirit of economy and avarice in his palace to such an extent, as to refuse absolute necessities to his family, who were frequently reduced to envy the condition of the meanest citizen. A volume has lately been published at Hamburg, by Dr. Cramer, consisting of papers rescued from obscurity (found, it is said, in the collection of one of Frederick the Second's preceptors), which perfectly accords with the Princess of Prussia's memoirs, and places the extravagancies of the father of Frederick the Great in a still stronger light. The second of these papers is entitled, "How my son Frederick is to carry on his studies at Wusterhausen." It is an instruction written by the king. Among other things he says, "on Sundays, he (the prince-royal) will rise at seven o'clock: as soon as he has put on his slippers, he will kneel by the side of the bed, and address a short prayer to God, but in a tone of voice loud enough to be heard by those who are in the room; as soon as that is done, he will dress himself quickly, wash himself well, tie his hair, and powder it. Dressing and pray-

ing will not occupy more than a quarter of an hour. It will then be a quarter after seven. He will breakfast in seven minutes. After that, his servants and Duhan (the governor) will enter, to say prayers on their knees, &c." With respect to education, the king has written on the margin of the plan of studies which he proposes:—"The history of Greece and Rome to be omitted; it is good for nothing." The poor prince-royal found much difficulty in complying with the demands of his august father. In 1728, he addressed a humble letter to him, to ascertain why he succeeded so ill in satisfying the king. The answer to the letter is,—"Because you are obstinate, because you do not love your father; in the second place, you well know that I do not like an effeminate fellow, who has no human inclinations, who is full of awkwardness, who does not distinguish himself either in riding, or in shooting, who is dirty, who frizzes his hair like a fool, and who, a thousand times reprimanded, never corrects himself; who, moreover, has a ridiculous pride, never speaks to any body, is neither popular nor affable, makes faces, and never obeys my wishes except when he is compelled to do so. There is my answer. (Signed) Frederick-William." The same monarch says in his instructions to his son's governors:—"The principal care of the two tutors must be to inculcate in my son the love of a military life, and to make him sensible that as nothing in the world can confer on a prince so much honour as the sword, he will be despised if he does not love it above every thing, and seek in it his sole glory." It certainly appears that these instructions were fulfilled to the letter, and that the tutors succeeded pretty well in inspiring Frederick II. with "the love of the sword!" Another paper in this collection exhibits the despotism of Frederick-William I. in religious matters. Full of Lutheran zeal, the king had it much at heart to banish from the service every thing that could recall the rites of the Catholic church. In consequence, he prescribed, with a rigour almost fanatical, or rather with his usual military despotism, surplises, tapers, Latin psalms, &c. to the great dismay of the pastors and the parishioners, habituated from their infancy to these customs. Happily, his son afterwards restored liberty in that respect, without, however, entirely abolishing the arbitrary orders of his father. The most curious paper of the collection, seems to us, however, to be the ordinance by which Frederick-William summoned the Count de Stein to the vice-presidency of the Academy of Sciences. The following are the contents of this document, the German style of which is singularly absurd:—"The king enjoins the new vice-president to observe closely the conjunctions of the stars, and to see if there is not in the firmament a meeting of comets which may endanger the earth. In such a case, the vice-president must confer with his colleagues, in order to devise the means of remedying the disorders which may ensue. The vice-president is enjoined to take care that night-hags, flying-dragons, mountain-dwarfs, will-o'-the-wisps, and other mischievous beings, the existence of which incredulity would fain deny, do no harm. As they love to sojourn in marshes, lakes, ditches, and heaths, the vice-president must exert himself to extirpate such malevolent creatures. He will be allowed seven crowns for every monster that he may deliver up, dead or alive." Such were to be the occupations of a vice-president of the Prussian Academy in 1732! What an enormous distance between the gross superstitions of Frederick-

William I. and the philosophical spirit of his son Frederick II.!

THE BOMARANG: A MISSILE OF NEW HOLLAND.

THE natives of New South Wales have the art of throwing a curved flat stick, made of very heavy wood, and in the form of a crescent, with such force and accuracy, as to break a man's leg at sixty or eighty yards; but the strange peculiarity of it is, that it can also be thrown to the distance of a hundred yards and upwards in the air, and, without striking any thing, will return to the person who threw it, and even pass beyond him twenty or thirty yards. A similar stick is used by a people to the southward of Trichinopoly, the Colareese: they, however, only use it for straight-forward purposes, and do not understand how to make it return. Captain Cook, when at Botany Bay, having seen the Bomarang, concluded it was a wooden sword; and under that idea, conjectured that the natives of New South Wales were descended from Malays, from the supposed similarity of the Bomarang to the Malay sword.

THE WOMORA, OR THROWING STICK.

THE New Hollanders also have a method of discharging their spears, which surpasses any other that I have heard or read of. The spears they use are from seven to eight feet long, and they are cast by means of a flat stick called a *Womora*, about a yard in length, with a sort of hook at the point of it, on which the hinder end of the spear rests; this stick acts as a sling or lever; by this means the spear can be thrown to the distance of a hundred and twenty yards: with the hand alone, the spear cannot be thrown beyond fifty yards. J. N.

MUSIC.

THE JEW'S HARP: MR. EULENSTEIN.

OUR old, and we will add our modest, ingenious, and deserving friend and favourite, Mr. Eulenstein, has been indulging his London admirers with specimens of his exquisite performance on the Jew's harp, previous to his departure on a provincial excursion, to include, as he tells us, Cheltenham, Gloucester, Worcester, Birmingham, Edinburgh, and other populous places. We have at former times described the extraordinary effect which he produces on these simple instruments, by attuning a number of them to a certain scale, and changing them with astonishing rapidity in the course of his playing, so as never for an instant to interrupt the melody or impair the most brilliant execution. But since we previously heard him, (when he performed with so much applause before his late Majesty, and also at the Royal Institution to illustrate Mr. Faraday's lecture and Mr. Wheatstone's theory of musical sounds,) Mr. Eulenstein has made great improvements in his practice. By increasing the size and tone of his larger harps, he has added much power to his former delicious sweetness; and his range is now as extended as it is delicate, possessing an organ-like swell, in union with the dying cadences of the Eolian harp. It is impossible to imagine any thing so beautiful from such means; and when we also find that science is deeply indebted to these charming vibrations for the advancement of a very interesting inquiry, we are the more inclined to point out the subject for public notice, and, in this instance, its certain consequence, public encouragement. Our readers in the country will do well to

avail themselves of any opportunity to hear, what we have no hesitation in stating to be as delightful as it is unique.

NEW PUBLICATIONS.

My silent Heart shall drink to thee. Poetry by Mrs. B. C. Wilson. Music by Mr. Rodwell. Goulding and D'Almaine.

WITH pretty words and sweet music, every body must be pleased with this ballad, as we have been; though it is rather of the longest, which a ballad for singing ought never to be, even with the remedy of leaving out verses.

The Gondola, for four Voices. E. W. N. Bayley, Esq. Composed and published by J. Green.

It is long since we have heard a quartetto which has pleased us so much as this. It is beautifully simple, and the accompaniment and symphony peculiar and striking. The composer has marked it "rowing time:"—what does he mean? why not sailing time, plunging time, ducking time?

Green Hills of Tyrol. Goulding and D'Almaine.

THE words by George Linley, Esq., the music by Rossini, and sung by Malibrán, in Guillaume Tell, this is a gay and lively Tyrolean air, very Swiss in its style, and already so general a favourite, that we need say nothing more for it.

Romantic War Song. Lonsdale and Mills.

THE poetry is by H. J. Bradfield, who has distinguished himself by the production of more important compositions (see our Literary Reviews), inspired by his travels in Greece, and the love of that country. When we have time to turn our attention from French and domestic politics again to this interesting portion of the world, Mr. Bradfield's words, and Mr. Macdonald Harris's music, will be prized as a spirited theme, doing equal justice to the writer and the composer. We think, with energy and a fine male voice, it would have great effect on the stage or in the field.

My own Love, my true Love. Words by T. Haynes Bayly, Esq. Composed by Joseph Gould. Goulding and D'Almaine.

MR. GOULD himself sings this so sweetly (at the Melodists' Club), that we fear to say it would most probably be thought monotonous if sung by any other person.

Le nouveau petit Tambour. T. Boosey and Co. COMPOSED by De Begnis, the enlivening soul of the concert-room, theatre, or social board. The present piece is quite worthy of him, and displays his musical talents to great advantage.

Herr's "celebrated Galoppe à la Giraffe." arranged for the harp by N. C. Bochsa.

AN excellent easy little piece for beginners on the harp, and, we are told, fashionable, which is a sufficient recommendation to their elders, to the age of seventy, and perhaps more.

Overture to Guillaume Tell. Rossini.

Goulding and D'Almaine.

Too well known to require our passport; but we do cordially advise our fair young friends to make it a favourite piano-forte exercise. The single air, page 5, has beauty and melody enough to sell hundreds of copies.

Matrimonio Segreto Quadrilles. N. C. Bochsa. A CAPITAL set, nice airs, and well suited to dancing, which is all that can be required.

DRAMA.

NOTHING new this week at either of the theatres on this side the water. *The Battle of Herham* has been revived, Heaven knows why, at the Haymarket; and on Thursday last its devoted company absolutely got through eleven acts!—(three two-act farces and a five-act comedy)—being four more than the usual and fully sufficient number. We really should not be surprised at seeing Inchbald's *British Theatre* announced for representation some evening at this house. Surely, if we may judge by the complaints on this subject which reach us from every side, it cannot be policy to weary out actors and audiences, night after night, in this manner. The new *Susannah*, Mrs. Evans, possesses a good voice; but operas, and Mozart's operas, at this theatre, without singers, and without an orchestra, are wonderfully absurd. Oh, to think upon the halcyon days, when *Teasing made Easy*, *Exit by Mistake*, *the Green Man*, &c. &c. &c., crammed nightly the house to the ceiling! when Liston, and Jones, and Mathews, and Terry, and Tokely, and Mrs. Davenport, and Mrs. Gibbs, and twenty others scarcely less celebrated, kept the benches in a roar! We have now Farren, and Mrs. Glover, and—but "comparisons are odorous."

UNPUBLISHED FRAGMENTS BY TALMA.

(From the *Revue de Bruxelles*.)

EVERY body can judge of strong passions by himself. They exist in the depths of all souls; the actor only awakens them.

The high style is wearisome when it is badly played. In that case the public no longer go in quest of noble emotions; they prefer laughing at farces; especially when written by a man of wit.

There is in tragic diction an indescribable harmony. A tragic actor ought to have an ear exceedingly sensible to harmony.

When an actor has studied a part, when he has well reflected on its general tone and character, and proceeds to the details, he must always reflect that in every scene there is an intention, in every couplet a principal object: he must always aim at that intention and that object, sustain and give value to all which relates to them, and keep down the rest. If you try to make every thing felt, you will fail in every thing. There is a general rule in all the arts; namely, to give splendour to ornaments by repose. An actor who endeavours to make every thing felt, is like an architect who covers his walls with decorations;—they destroy one another. A bas-relief has much the best effect on a plain wall.

There are many good ways of saying any thing; but one of them is always the best.

Our theatrical representations are more natural than those of the ancients; and more difficult for modern actors.

To put pebbles into the mouth is a bad way of rendering pronunciation more distinct.

As every thing in a theatre is artificial, the scenes, the lights, &c. and as the spectator himself is unacquainted with what is passing on the boards, a loud declaimer will never make him forget that he is present at a play. But let an actor be natural, let his voice assume the true tone of passion, and suddenly all is changed; the painted canvass is transformed into a real palace; the light of the lamps becomes daylight, the actor disappears; it is Manlius or Nero. The spectator is no longer aware that he has neighbours; he is no longer in Paris; he is at Rome, or at Athens; and if he recollects himself, it is to conceal the tears which he feels as if ashamed to have shed.

There are objects enough on the stage,—the scenes, the poetical language,—which compel the spectator to make an effort to surrender himself to the illusion, without adding a pompous declamation, which does not affect him, which makes him always feel that an actor is before him, and which prevents him from forgetting the actor to think only of the play.

Characters of ingenuousness have this inconvenience, that an actor cannot play them well until he is no longer of the age of such characters. Every thing that belongs to the passionate is well played in youth; but still a youth wants knowledge of the combinations necessary to play youth. You must not experience, but you must have experienced the feelings which you are representing; for if you experience them, you will no longer be master of yourself—you will be carried beyond the bounds of discretion—you will no longer have the power of forming the combinations which are necessary to exhibit the beautiful in feeling. If you represent tears, they will suffocate you; you will no longer have control enough over yourself to distribute them at your discretion, for the purpose of producing the greatest effect. If you represent anger, and are really angry, your words will be confused and faltering. So with love. We must have experienced all the passions; but it is only the recollection of them of which we must avail ourselves in order to play them well. Ingenuousness, for example, is not a passion—it is a state of mind. Well, it is only when we are no longer at the age of ingenuousness that, reflecting on the manner in which it discloses itself by outward signs, we are able by art to give it its just expression.

Music has a powerful effect on the soul. I always wish to hear it before I go on the stage, because it throws me into a state of exaltation favourable to the development of my mental faculties.

It is in the silence of night that I study my parts to the greatest advantage.

People often say to me, "Why do you not educate a pupil?" My answer is, "Give me a fit subject." They might as well have desired Voltaire to educate a pupil. Nature must create the actor, as well as the poet or the painter.

The greater number of painters, sculptors, or actors—nay, of authors, preachers, and learned men, are born of honest but poor parents. They are a little like the ancient Mamelukes, who, bought in the first instance to recruit the army, in time raised themselves to the higher ranks, and ended by becoming the masters of the country.

VARIETIES.

French Honesty.—The following paragraph appears in *Galignani's Messenger* of Monday: "On Wednesday, 200 young mechanics and workmen, who had been fighting all the previous day, without tasting food, traversed the restaurant that connects the Rue Vivienne with the Passage Colbert, for the purpose of procuring arms, said to be concealed in one of the warehouses of the latter place. A number of silver forks and spoons, with heaps of small loaves, were lying on the various tables of the establishment; but though the band passed twice from one extremity to the other of the restaurant, not a single article was put out of its place, or a morsel of bread touched."

Musical Phenomenon.—A person, the imitator with his voice of so many kinds of musical instruments, (from the harp to the double bass),

was to exhibit his extraordinary powers yesterday afternoon at the Egyptian Hall; but we regret to say the hour was too late to admit of our reporting his performances.

Operatics.—An Italian company is to perform at the Hague during the rejoicings for the marriage of the Princess Marianne: Laurent is to be the manager. Among the principal singers the following are mentioned:—Donzelli, Zucchelli, Santini, Lablache, Graziana, Malibran, Damoreau-Cinti, Meric-Lalande, and Blasis.

Cairo.—The Pasha of Egypt has resolved to establish at Cairo a museum of antiquities. With this view he has forbidden Europeans to export, and even to search for, antiquities. However, Mr. Barker, the English consul-general, has obtained leave to ship at Alexandria two sphynxes, which he had purchased. They may soon be expected in England.

Etna.—If what is stated in private letters be correct, the recent eruption of Mount Etna must have been dreadful. The ashes were carried by the wind as far as Florence, and even to Turin.

French Literary Gazette.—A weekly publication, under the name of *La Gazette Littéraire*, on the plan of the *London Literary Gazette*, has been regularly published in Paris for the last eight months.

Railway in France.—A great improvement is contemplated in the road between Paris and Orleans. An iron railway will be laid down immediately, and continued as far as Tours. The minister of public works has issued an order authorising a society of capitalists to proceed with the undertaking; and the prefects of the various departments are desired to forward, by every means in their power, a plan which holds out such great advantages to commerce and communication.

Culture of Potatoes.—A correspondent observes, in reference to what was stated in a late Number respecting potatoes, promulgated in France, that the same fact was much adverted to in England about fifteen years ago; but it was then stated that the increase of size was at the expense of the quality. It is, however, very desirable, that some experiments should be made to the fact. Our correspondent further says:—Is not the potato in its native state poisonous? and may not cropping the flowers divert the poison to the root?

The French Press.—It is stated, by persons who are thoroughly acquainted with the facts, that, on the abolition of the liberty of the press by Charles X., and the consequent stoppage of the liberal journals, property to the amount of more than 150,000*l.* was either destroyed or placed in danger of destruction; and upwards of three hundred literary persons and compositors were thrown out of bread. The number of copies of the *Constitutionnel*, *Journal des Debats*, *Courier*, *National*, *Temps*, and *Journal du Commerce*, printed daily, exceeded fifty-five thousand: and it is computed, that the readers of these papers diurnally were upwards of two millions. It is supposed, however, that since the liberty of the press has again taken place, the number of copies of these papers will increase to eighty thousand daily.

The French journals announce the death, at Chambéry, on the 21st ult., of a very eccentric but benevolent officer, General Boigne. From the following account of his will, he appears to have been enormously rich. To his servants he left from 1,500 to 10,000 francs each; to his brother and nephew 30,000; to each grandchild 200,000 francs; to physicians, and others of his acquaintance, legacies to the amount of 100,000 francs; to his widow, 60,000 francs;

per annum; to his son, estates, &c., valued at from 15 to 18 millions of francs; to the town of Chambéry, for public improvements, an estate which is expected to fetch from 4 to 500,000 francs; to every poor person in the hospitals, asylums, poor-houses, &c., 5 francs per annum. During his life, General Boigne made the following donations at Chambéry:—

For the construction of a theatre	400,000 <i>fr.</i>
To the lunatic asylum	500,000
Mendicity dépôt	300,000
Hospital for aged persons	1,200,000
To the college	300,000
For the enlargement of the public library	30,000
Facade of the Hôtel de Ville	60,000
The construction of a street	500,000
Founding thirty beds in the hospital	200,000
For the purchase of linen, &c., for the prisoners in the jail	24,000
To the <i>Chevaliers Turans</i>	30,000
To an establishment for teaching trades to young girls	100,000
Total	3,678,000

France.—The following lines are stuck on the walls in different parts of Paris:—

Camarade le Dey, par mol ton fort est pris.
—Oui, l'amî Charles dix: mais vous perdez Paris.
Nous volla donc tous deux sans capitale:
Buvons un coup; c'est moi qui vous régale.

Piracies.—It is probable that Germany will soon be delivered from the plague of pirated works, which it has so long endured without an attempt at remedy. Austria, it is said, in conjunction with all the other states of the confederation, is about to submit to the Diet of Frankfort a plan of a general law on the subject.

A new Saint.—On the 16th of May the Pope decreed the canonization of the blessed Alphonse Marie de Ligori, the founder of the Congregation of the Holy Redeemer. To authorise the public worship of the new saint, all that is wanting is the solemn celebration of the canonization; the period for which is not yet fixed.

Isthmus of Panama.—It appears from the researches made by the special commission charged to measure the isthmus of Panama, in order to ascertain the best mode of communication between the two seas, that the opinions are in favour of rendering the river Chagres navigable for steam-boats, and continuing the line with an iron railway.

Earthquake.—The great city of Guatemala, and the surrounding country, has been desolated by an earthquake, which continued for five days, in the month of May. The particulars have not reached us; but the calamity seems to have been very extensive and destructive. Some doubts have since been thrown on this intelligence.

The Prussian Press.—In 1819 there were 516 presses in Prussia; in 1822, 530; in 1825, 693. Of periodical publications of various kinds, there were 300 at the end of the year 1827.

The Polish Press.—In Independent Poland, with a population of 107,934, the number of journals published is five; in Russian Poland, with a population of 15,377,389, thirty-nine; in Prussian Poland, with a population of 1,984,124, one; and in Austrian Poland, with a population of 4,226,969, four; being forty-nine journals for a population of 21,696,416; or, on the average, one journal for 442,784 persons.

Electricity.—A curious fact has been established with respect to electricity; namely, that the transmission of it, from one conductor to another, varies very sensibly according to the manner in which the current is conducted: for instance, that positive electricity passes more easily from copper into zinc, than

from zinc into copper. This discovery explains a number of phenomena hitherto considered as anomalies.

Spanish Idea of the Arts.—A letter from Madrid says: "Our government patronises the arts with a dignity worthy of it. It has just established at Seville a school of *taourmachy*, under the protection of the intendant. This school has two professors, with salaries of 12,000, and 8,000 reals; and, henceforth, every town or village wishing to have bull-fights, must contribute at least 100 reals towards the expense of the school."

New Medicine.—It is stated, in a letter from Rome, that the French medical men in that city continue to administer, with great success against intermittent fevers, the bark of the willow. These gentlemen assert that it has more power than Peruvian bark.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement*, No. XXXII. Aug. 7.]
The Natural History of Poisons, by John Murray, F.L.S., &c.—A History of the County Palatine of Lancaster, by Edward Baines, Esq.—Author of the "Topography of Lancashire," &c.—No. 1. of Views in India, from Sketches by Captain R. Wind variable, S.W. prevailing.
On the evening of the 29th and morning of the 30th ult. frequent and vivid lightning in the S. and S.E., since which we have had less sunshine, and frequent cold showers of rain.

Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude..... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

We have only had time to read the first two volumes of De L'Orme; and though we can abstain from an imperfect criticism, we cannot refrain from saying that they have greatly delighted us. If the third does not fall off, which we have no reason to suppose, this work will raise the already high character of the Author of "Richelieu" and "Darnley."

We do not enter on politics in prose, and E. B. must excuse our doing it in verse.

Mr. Barnett's letter, with Mr. Parry's enclosure, reached us too late for this No.

We have not seen the Sermon mentioned by an "Old Subscriber;" but rejoice to hear that the son of so distinguished a mother has given so much satisfaction to his parishioners.

We cannot be judges of the claims of Mr. George Allen upon the New Bridge Committee, and can only say that his Fourth Memorial presents, *primâ facie*, a very strong case.

Edmund is upon one of those too prolific subjects on which we cannot enter.

ERRATUM.—Page 496, last column. Lest we should prematurely terrify our readers, we have much satisfaction in noticing that the year 1830, near the end (of the column) in our last, is a misprint for 1832, at which time, as stated elsewhere, the Encke comet is calculated to return to our sphere, towards which, indeed, its course is now tending, as may be credited from the heat of the weather.

ADVERTISEMENTS,

THE NOBLE GAME OF BILLIARDS,
wherein are exhibited extraordinary and surprising Strokes,
which have excited the admiration of most of the Sovereigns of
Europe. Translated from the French of the celebrated
M. MINGAUD.
Formerly Capitaine d'Infanterie in the Service of France.
Dedicated, by permission, to the Most Noble the Marquess of
Cleveland.

This work is elegantly got up, and comprises 43 well-executed
copper-plates, with directions for performing, with precision, the
most masterly strokes of all the celebrated proficient of the pre-
sent day. It is, in this respect, a great desideratum to all the
admirers of this elegant diversion, no work having appeared in
the English language which can be compared with it, for the
beauty and precision of its rules and illustrations; and none
which comprise the great improvements and discoveries made in
the game within the last twenty years.
London: Translated and published by John Thurston, Billiard
Table Manufacturer, 14, Catherine Street, Strand; and to be had
of all Booksellers.

"One of the most beautifully written tales we remem-
ber."—*Morning Journal.*
"Its style is elegant, and its information that of a lady of
amiable feelings and motives, who well understands her sex."—*Speciator.*
"The whole of the story, but particularly the dawning of that
early sunbeam of life's morning, 'First Love,' and the subsequent
progress of the passion, are indeed delightfully sketched."—*Morn-
ing Post.*

In 3 vols. post 8vo.
**2. The Armenians; a Tale of Constanti-
nople.** By Charles Mac Farlane, Esq.
"The author will appreciate our respect for his talents, when
we say he has done more than any man to complete the picture of
the East, dashed off by the bold pencil of the author of 'Anasta-
sius.'"—*Edinburgh Literary Journal.*

In 2 vols. 8vo. Plates.
**3. Constantinople in 1828-29. A Residence
of Sixteen Months in the Turkish Capital and Provinces.** By
Charles Mac Farlane, Esq. 8s. 3d. edition.

dressed. Sold by all Booksellers.

Price 7s. boards,
**ALBUM VERSES; or, THE WIFE'S
TRIAL,** a Drama; and other Poems.
By CHARLES LAMB.

Lines in my own Album.
"Fresh clad from heaven, in robes of white,
A young probationer of light,
Thou wert, my soul, an album bright,
A spotless leaf; but thought and care,
And friend and foe, in foul or fair,
Have 'written strange defacements there."
And Time, with heaviest hand of all,
Like that herce writing on the wall,
Hath stamp'd sad dates—he can't recall.
And error gliding worst designs—
Like speckled snake, that strays and shines—
Betrays his path by crooked lines.
And vice hath left his ugly blot;
And good resolves, a moment hot,
Fairly begun—but finished not;
And fruitless, late remorse doth trace,
Like hollow ides, a backward pace,
Her irrevocable race.
Dis-jointed numbers, sense unknit,
Huge reams of folly, stridged wit,
Compose the mingled mass of it.
My scalded eyes no longer brook
Upon this ink-blav'd thing to look—
Go shut the leaves, and clasp the book."

"O rare Charles Lamb!"—*Blackwood's Magazine* for August,
Part I.
London: Edward Moxon, 64, New Bond Street.

The 18th edition, considerably improved, price 15s. boards,
or 18s. half-bound, parchment back.

and Whittaker, Treacher, and Co. London.

The Barbary States.
2d edition, embellished with a View and Map of Algiers, and a Plan of the City and Fortifications, price 25s.

NARRATIVE of a RESIDENCE in ALGIERS, comprising an Account of the Author's Captivity, of the Manners, Amusements, and Modes of Living among the different People of Barbary, with Observations on the Climate, Population, Trade, and Productions of the Country, the State of Agriculture, of the Arts, Military and Naval Power, Christian Slavery, Financial and Piratical Systems, Anecdotes of the Dey and his Ministers, &c. &c.

By M. PANANTI.
With Notes, by EDWARD BLAQUIERE, Esq.
"This volume will be found to be an object of particular curiosity, from the minute and lively manner in which it lays open the interior of the court of the Dey of Algiers. It contains the only complete and authentic account, by an eye-witness, which has hitherto appeared of the manners and conduct of this despot and his ministers, and details such scenes and events as will scarcely seem credible in the eye of an European."

In a few days, in 2 vols. with considerable Additions,
2. **Life and Correspondence of John Locke**, by Lord King. 8vo. edition.

3. **Life of Lord Burghley**, Lord High Treasurer of England during the Reign of Queen Elizabeth, with Extracts from his Private Correspondence and Journals. By the Rev. Dr. Nares. Vol. II.

4. **Conversations of James Northcote**, Esq. R.A. with W. Hazlitt, Esq. In 1 vol. small 8vo. with a fine Portrait of Mr. Northcote.

6. **Captain Frankland's Travels to Constantinople**. 2d edition, 2 vols. 8vo. with Thirty-Eight Engravings, price 24s.

7. **An Octavo Edition of Mr. Buckingham's Travels in Assyria, Media, and Persia**. 2 vols. with numerous Engravings, price 31s. 6d.

8. **Letters from the East, written during a recent Tour through Turkey, Egypt, Arabia, the Holy Land, Syria, and Greece**. By John Carne, Esq. 3d edition, in 2 vols. post 8vo. 18s.

9. **An Octavo Edition of Mr. Crawford's Narrative of a Residence at Siam**. 2 vols. with Plates, 31s. 6d.

10. **Conversations of Lord Byron with Thomas Medwin**, Esq. Noted during a Residence at Pisa. A new edition, in 2 vols. small 8vo. price only 4s. 6d. each volume.

11. **Sir Jonah Barrington's Historic Memoirs of Ireland**, with Secret Anecdotes of the Union. Illustrated by Delineations of the principal Characters connected with those Transactions, curious Letters and Papers in Fac-simile, and above 40 original Portraits, engraved by the elder Heath. "This important work, the publication of which was commenced some years since, but suspended by unavoidable circumstances, is nearly completed, in 2 vols. 4to. or in Ten Numbers, at 10s. 6d. each; and the Subscribers are requested to send their orders for the completion of their Copies to their respective Booksellers."

12. **Personal Sketches of his own Times**, by Sir Jonah Barrington. 2d edition, with Additions, in 2 vols. 8vo. Price 24s.

13. **Memoirs of Lady Fanshawe**, written by herself. 2d edition, in 1 vol. post 8vo. with a Portrait, 10s. 6d. Henry Colburn and Richard Bentley, 9, New Burlington Street.

Keil's Mathematical and Geographical Works, &c. &c.

THE ELEMENTS of PLANE GEOMETRY; containing the First Six Books of Euclid, from the Text of Dr. Simson; with Notes, Critical and Explanatory. To which are added, Book VII. including several important Propositions which are not in Euclid; and Book VIII. consisting of Practical Geometry; also, Book IX. of Planes and their Intersections; and Book X. of the Geometry of Solids. 3d edition, 8vo. 10s. 6d. boards.

An Introduction to the Theory and Practice of Plane and Spherical Trigonometry, and the Stereographic Projection of the Sphere; including the Theory of Navigation; comprehending a variety of Rules, Formulae, &c. with several practical applications to the Measurement of Heights and Distances, &c. &c. 8vo. 16s. boards, 5th edition.

A System of Geography, on an entirely new Plan, in which the recent Alterations in the Division of the Continent are carefully attended to. 12mo. 6s. bound.

A New Treatise on the Use of the Globes; or, a Philosophical View of the Earth and Heavens; comprehending an Account of the Figure, Magnitude, and Motion of the Earth; with the natural Changes of its Surface, caused by Floods, Earthquakes, &c. New edition, 12mo. with Plates, 6s. boards.

The Arithmetician's Guide; or, a Complete Exercise Book, for the Use of Public Schools and Private Teachers. By William Taylor. New edition, 12mo. 2s. 6d. bound.

A Key to the Same. By W. H. White. 4s. bound.

An Introduction to Practical Arithmetic, in Two Parts, with various Notes and occasional Directions, for the Use of Learners. By Thomas Molineux. 13th edition, 12mo. Part I. 2s. 6d. bound. Part II. 4th edition, 2s. 6d. bound. Printed for Longman, Rees, Orme, Brown, and Green.

Price 12s. in cloth boards,
BOSWELL'S LIFE of JOHNSON; with the Notes and Biographical Illustrations of MALONE. Complete in one small octavo volume.

This typographical gem will be found more especially adapted for the boudoir or table than any other volume of a similar class hitherto published.

Also, in 2 cabinet vols. price 8s. in cloth boards,

By H. E. LLOYD, Esq.
Published by Treuttel and Wurtz, Treuttel, Jun. and Richter, 30, Solo Square.

Colonel Welsh's Military Reminiscences.
In 2 vols. 8vo. illustrated by nearly One Hundred Plates, price 16. 10s. bound in cloth.
MILITARY REMINISCENCES; extracted from a Journal of nearly Forty Years' Active Service in the East Indies.
By Colonel JAMES WELSH, of the Madras Establishment. Smith, Elder, and Co. Cornhill.

Handsome printed in 1 vol. post 8vo. price 10s. cloth boards,
THE CABINET ALBUM; a Collection of original and selected Literature.

This Volume will be found to contain a fund of entertainment adapted to all tastes and all seasons; equally suitable for the study retirement of the labourer, or the cheerful and social fire-side.
London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

WAVERLEY NOVELS. New Edition. Vol. XV. of this edition, containing a Legend of Montrose, with an Introduction by the Author, and illustrated by R. Lauder and W. Boxall, was published on Saturday, the 31st July.

All the early Volumes are again reprinted, and are to be had of all Booksellers.
Printed for Robert Cadell, Edinburgh; and Whittaker, Treacher, and Co. London.

Of whom may be had,
The Poetical Works of Sir Walter Scott, Bart. in 11 vols. 8vo. price 6s. boards; and 11 vols. 18mo. 3s. 2s. boards, with Smirke's Plates, and New Introductions.

Also,
The Eleventh Volume separately, in 8vo. price 18s. and 18mo. 9s. to complete former editions.

Also,
Mr. Skene's Sketches of the Localities of the Waverley Novels. Nos. I. to XV. price 1s. and 1s. 6d. each.

Margoman's Improved School Books.

Published by Sherwood and Co. London; and Oliver and Boyd, Edinburgh.

FIRST LESSONS in LATIN READING and GRAMMAR, selected from the Classics; with a Dictionary annexed to each Part. Price of Part I. 2s. bound, 3d edition; of Part II. 2s. bound, 2d edition.
Mr. Thomson, Rector of Kilmarnock Academy, is "fully convinced of their superior utility."
Mr. Thomson, of Ayr Academy, is "convinced of their practical utility."

The Rev. S. Richardson, of Maybole Grammar School, considers them "decidedly superior to any other book of the kind."

2. **A Practical English Grammar**, with improved Definitions and Arrangements, and copious Exercises. 3d edition, 2s. bound.

Mr. Sefton, of Liverpool, says, "Since I adopted the English Grammar, the improvement of my scholars has been fully twice as great as it was when I used L. Murray's Grammar."
Mr. Gartin, of Ash Hill House, Douglas, "thinks the rising generation will be more indebted to the authors of these books than to any others who have ever written on the same subject."

The *Literary Gazette* recommends these, and some of the minor works, for their "practical utility," and because "they teach children to think, instead of condemning them to learn things by rote."

3. **First Lessons in Arithmetic, on the Plan of Perfect Progressive Instruction**. Recommended by the Controlling Surveyor of Customs of Hull, lately of Liverpool. 1s. 6d. bound.

4. **Nature's First French Lessons, 1s.** Nature's First English Lessons, in Two Parts, 6d. each.

In the press,
First Lessons for Infants, beginning with interesting Sentences of Words of Two Letters, to be used before the Alphabet. With Ten Engravings, price 3d.

Albemarle Street, July 1st, 1880.

New Works just published by Mr. Murray.

Of whom may be had, by the same Author, price 12s.
Poems; including the Pleasures of Memory, Human Life, &c. Illustrated by Fifty Wood Engravings, from the Designs of T. Stothard, R.A.

London's Hortus Britannicus.

In August will be published, in 8vo.

A CATALOGUE of all the PLANTS

Indigenous, Cultivated in, or introduced to Britain.
Part I.—The Linnean Arrangement, in which nearly 30,000 Species are enumerated, with the Systematic Name and Author, Latin, Accents, and Derivatives; Generic Names, Literal and Specific Names; Synonyms, Systematic and English, of both Genera and Species; Habit, Habitation in the garden, Indigenous Habitation, Popular Character, Height, Time of Flowering, Colour of the Flower, Mode of Propagation, Soil, Native Country, Year of Introduction, and Reference to Figures: preceded by an Introduction to the Linnean System.

Part II.—The Jussieuian Arrangement of nearly 40,000 Genera, with an Introduction to the Natural System, and a General Description and History of each Order.

Edited by J. C. LODDON, F.L.H.G. and Z.S.

The title-page of this Catalogue indicates how much it is in advance of all that have been hitherto published. The Linnean Arrangement and its Supplement are entirely the work of Mr. George Don; the Natural Arrangement is founded on that of Professor Lindley, with some additions and alterations rendered necessary by the plan of this Catalogue; and Dr. Greville, the profound cryptogamist, assisted in arranging the Cryptogamia. Those who are acquainted with the present state of botany, and with the botanists of this country, will allow that three gentlemen better adapted for co-operating in producing a Catalogue of the plants of this country, and in securing them at sight, both individually and in masses, but in assisting the botanical student and practical gardener to acquire some knowledge of their structure, physiology, analogies, affinities, properties, uses, and culture.

Printed for Longman, Rees, Orme, Brown, and Green.

SATURDAY, AUGUST 14, 1830.

REVIEW OF NEW BOOKS.

De L'Orme. By the Author of "Richelieu" and "Darnley." 3 vols. London, 1830. Colburn and Bentley.

IN former days an historical novel meant a castle and a dungeon,—a heroine and a lute,—a tyrannical baron and a hero as handsome and as valiant as words could make him; but, save in name, all as much belonging to the nineteenth as to any other century. But we have reversed this law of perpetual imprisonment, and have been in danger of running into the other extreme, and making the novel a sort of antiquary's diary, full of dates and dryness, where the dress of the heroine is only inferior in interest and accuracy to the dinner and accoutrements of the hero. The work before us has steered happily between the two: the time, that of Louis the Thirteenth, was one of the strongest political excitement, when politics involved every species of romantic adventure; and nothing can be more varied than the career of *De L'Orme*. Bold, enterprising, yet with a vein of deep melancholy, which gives a touch of poetry to the character, without detracting from its activity; born among the wild mountains of the Pyrenees, he becomes equally engaged in the revolts of the Spanish and the conspiracies of the French side: but how he succeeds, we leave to the reader to discover, to whom we shall now endeavour to introduce him, enough for interest, but not for knowledge; and we rather think his further acquaintance will be strongly desired. Chance circumstances throw *De L'Orme* into the very midst of the rising in Catalonia: he is taken prisoner, and brought before the viceroy, whose short career is so animatedly sketched, that we must try to abridge it.

"Seated in an ivory chair, somewhat resembling in form the curule chair of the ancient Romans, appeared a short fat man, not unlike the renowned governor of Barataria, as described by Cervantes. I mean in his figure; the excessive rotundity of which was such, that the paunch of Sancho himself would have ill borne the comparison. His face, though full in proportion, had no coarseness in it. The skin was of a clear pale brown, and the features small, but rather handsome. The eye-brows were high, and strongly marked, the eyes large and calm, and the expression of the countenance, on the whole, noble and dignified, but not powerful. It offered lines of talent, it is true, but few of thought; and there was a degree of sleepy listlessness in the whole air of the head, which, to my mind, spoke a luxurious and idle disposition. The dress of the viceroy—for such was the person before me—smacked somewhat of the habits which I mentally attributed to him. Instead of the stiff *fraise*, or raised ruff, round the neck, still almost universally worn in Spain, he had adopted the falling collar of lace, which left his neck and throat at full liberty. His *juste-au-corps* of yellow silk had doubtless caused the tailor some trouble to

fashion it dexterously to the protuberance of his stomach; but still many of the points of this were left open, shewing a shirt of the finest lawn. His hat and plume, buttoned with a sapphire of immense value, lay upon a table before him; and as I entered, he put it on for an instant, as representative of the sovereign, but immediately after, again laid it down, and left his head uncovered for the sake of the free air, which breathed sweetly in at one of the open windows, and fanned him as he leaned back on the cushions of his chair. Behind the viceroy stood his favourite negro slave, splendidly dressed in the Oriental costume, with a turban of gold muslin on his head, and bracelets of gold upon his naked arms. He was a tall, powerful man; and there was something noble and fine in the figure of the black, with his upright carriage, and the free bearing of every limb, that one looked for in vain in the idle listlessness of his lord. His distance from the viceroy was but a step, so that he could lean over the chair and catch any remark which his lord might choose to address to him, in however low a tone it was made, and at the same time, he kept his hand resting upon the rich hilt of a long dagger; which seemed to shew that he was there as a sort of guard, as well as a servant, there being no one else in the room when we entered. I advanced a few steps into the room, followed, as I have said, by Achilles alone, and paused at a small distance from the viceroy, on a sign he made me with his hand, intimating that I had approached near enough. After considering me for a moment or two in silence, he addressed me in a sweet musical voice. 'I perceive, sir,' said he, 'notwithstanding the disarray of your dress, and the dust and dirt with which you are covered, that you are originally a gentleman—I am seldom mistaken in such things. Is it not so?' 'In the present instance, your excellence is perfectly right,' replied I; 'and the only reason for my appearing before the viceroy of Catalonia in such a deranged state of dress, is the brutal conduct of a party of soldiery, who seized upon me while travelling peacefully on the high road, and brought me here without allowing me even a moment's repose.' 'I thought I was right,' rejoined the viceroy, somewhat raising his voice: 'but do you know, young sir, that your being a gentleman greatly aggravates the crime of which you are guilty. The vulgar herd, brought up without that high sense of honour which a gentleman receives in his very birth, commit not half so great a crime when they lend themselves to base and mean actions, as a gentleman does, who sullies himself and his class with any thing dishonourable and wrong. From the mean, what can be expected but meanness? and consequently the crime remains without aggravation; but when the well-born, and the well-educated, derogate from their station, and mingle in base schemes, their punishment should be, not only that inflicted by society on those that trouble its repose, but a separate punishment should be added for the

breach of all the honourable ties imposed upon a gentleman—for the stigma they cast upon high birth—and from the certainty in their case that they fall into error with their eyes open—'

De L'Orme soon clears himself of all participation, and is freed from his temporary restraint by an attack on the city, which is most spiritedly defended by the viceroy; and the chapter thus concludes:—

"I beheld the viceroy sitting on one of the steps, evidently totally exhausted; while Scipio the negro, kneeling on a lower step, offered him a cup of wine, and seemed pressing him to drink. At the sound of my steps the slave started up and laid his hand upon his dagger, but seeing me he gave a melancholy glance towards his lord, and again begged him to take some refreshment. Unused to all exertion, and enormously weighty, the excessive toil to which the viceroy had subjected himself had left him no powers of any kind, and he sat, as I have described, with his eyes shut, his hand leaning on the step, and his head fallen heavily forward on his chest, without seeming to notice any thing that was passing around him. It was in vain that I made the proposal to parley with Garcia; he replied nothing; and I was again repeating it, hoping by reiteration to make him attend to what I said, when one of his officers came running down from above. 'My lord,' cried he, 'the galleys answer the signal, and from the observatory I see the boats putting off. If your excellence makes haste, you will get to the shore as they do, and will be safe.' The viceroy raised his head, 'At all events I will try,' said he; 'they cannot say that I have abandoned my post while it was tenable. Let the soldiers take torches.'

The immense iron door was trembling and shivering under the continual and incessant blows of axes and crow's with which it was plied by the people, in spite of a fire of musketry that a party of the most determined of the soldiery was keeping up through the loopholes of the ground story and from the windows above. A great number of the soldiers, whose valour was secondary to their discretion, had already fled down a winding staircase, the mouth of which stood open at the farther end of the hall, with an immense stone trap-door thrown back, which, when down, doubtless concealed all traces of the passage below. When we approached it, only two or three troopers remained at the mouth holding torches to light the viceroy as he descended. 'Don José,' said the viceroy, in a faint voice, addressing the officer who commanded the company which still kept up the firing from the windows; 'call your men together, let them follow me to the galleys—but take care, when you descend, to shut down the stone door over the mouth of the stairs—lock it and bar it as you know how; and make haste.' 'I will but roll these barrels of powder to the door, my lord,' replied the officer, 'lay a train between them, and place a minute match by way of a

spigot, and then will join your excellence with my trusty iron hearts, who are picking out the fattest rebels from the windows. Should need be, we will cover your retreat, and as we have often tasted your bounty, will die in your defence.' In dangerous circumstances there is much magic in a fearless tone; and Don José spoke of death in so careless a manner, that I could not help thinking some of the soldiers who had been most eager to light the viceroy, were somewhat ashamed of their cowardly civility. About forty of the bravest soldiers in the garrison, who remained with the officer who had spoken, would indeed have rendered the viceroy's escape to the boats secure, but Don José was prevented from fulfilling his design. We descended the stairs as fast as the viceroy could go; and, at the end of about a hundred steps, entered a long excavated passage leading from the arsenal to the sea-shore, cut through the earth and rock for nearly half a mile, and lined throughout with masonry. At the farther extremity of this were just disappearing, as we descended, the torches of the other soldiers who had taken the first mention of flight as an order to put themselves in security, and had consequently led the way with great expedition. In a moment or two after—by what accident it happened I know not—an explosion took place that shook the earth on which we stood, and roared through the cavern as if the world were riven with the shock. 'God of heaven! they have blown themselves up!' cried the viceroy pausing; but the negro hurried him on, and we soon reached the sands under the cliffs to the left of the city. To the cold chilliness of the vault through which we had hitherto proceeded, now succeeded the burning heat of a cloudless sun in Spain. It was but spring, but no one knows what some spring days are at Barcelona, except those who have experienced them; and by the pale cheek, haggard eye, and staggering pace of the viceroy, I evidently saw that if the boats were far off, he would never be able to reach them. We saw them, however, pulling towards the shore about three-quarters of a mile farther up, and the very sight was gladdening. Four or five soldiers remained, as I have said, with their commander, and lighted us along the gallery; but the moment they were in the open air, the view of the boats, towards which their companions who had gone on before were now crowding, was too much for the constancy of most of them, and without leave or orders, all but two ran forward to join the rest. The tide was out; and stretching along the margin of the sea, a smooth dry sand offered a firm and pleasant footing, but a multitude of large black rocks, strewed irregularly about upon the shore, obliged us to make a variety of turns and circuits, doubling the actual distance we were from the boats. The cries and shouts from the place of the late combat burst upon our ears the moment we had issued from the passage, and sped on us with greater rapidity. Seeing that he could hardly proceed, I took the left arm of the viceroy, while his faithful negro supported him on the right, and hurried him towards the boats; but the moment after, another shout burst upon our ear. It was nearer, far nearer, than the rest; and turning my head, I beheld a body of the peasantry pursuing us, and arrived at about the same distance from us that we were from the boats. The viceroy heard it also, and easily interpreted its meaning. 'I can go no farther,' said he; 'but I can die here as well as a few paces or a few years beyond;' and he made a faint effort to draw his sword. 'Yet a little

farther, my lord, yet a little farther,' cried the African; 'they are a long way off still—we are nearing the boats—see, the head boat is steering towards us! Yet a little farther, for the love of Heaven!' The unfortunate viceroy staggered on for a few paces more, when his weariness again overcame him, his lips turned livid, his eyes closed, and he fell fainting upon the sand. Running down as fast as I could to the sea, I filled two of the large shells that I found with water, and carrying them back, dashed the contents on his face; but it was in vain; and I went back again for more, when on turning round, I saw a fresh party of the insurgents coming down a sloping piece of ground that broke the height close by. It would have been base to have abandoned him at such a moment, and I returned to his side with all speed. The first of the peasantry were already within a few paces, and their brows were still knit and their eyes still flashing with the ferocious excitement of all the deeds they had done during the course of that terrible morning. As they rushed on, I saw Garcias a step or two behind, and called to him loudly in French to come forward and protect the viceroy, assuring him that he had wished the people well, and even had been the means of saving my life. The smuggler made no reply, but starting forward, knocked aside the point of a gun that one of the peasants had levelled at my head, and catching me firmly by the arm, held me with his gigantic strength, while the people rushed on upon their victim. The negro strode across his master, and drew his dagger—one of the insurgents instantly rushed upon him, and fell dead at his feet. Another succeeded, when the dagger broke upon his ribs—the noble slave cast it from him, and throwing himself prostrate on the body of his master, died with him, under a hundred wounds."

Though the interview with Richelieu is somewhat long for our pages, it is too well painted to be omitted.

"He led me into a small hall, and thence into a cabinet beyond, hung with fine tapestry, and lighted by a single silver lamp. Here he bade me sit down and left me. In a few minutes a door on the other side of the room opened, and a cavalier entered, dressed in a rich suit of black velvet, with a hat and plume. He was tall, thin, and pale, with a clear bright eye, and fine decided features. His beard was small and pointed, and his face oval, and somewhat sharp; and though there was a slight stoop of his neck and shoulders, as if time or disease had somewhat enfeebled his frame, yet it took nothing from the dignity of his demeanour. He started, and seemed surprised at seeing any one there, but then immediately advanced, and looking at me for a moment, with a glance which read deeply whatever lines it fell upon—'Who are you?' demanded he: 'what do you want? what paper is that in your hand?' 'My name,' replied I, 'is Louis Count de L'Orme; my business is with the Cardinal de Richelieu, and this paper is one which I am charged to deliver into his hand.' 'Give it to me,' said the stranger, holding out his hand. My eye glanced over his unclerical habiliments, and I replied, 'You must excuse me. This paper, and the farther news I bring, can only be given to the cardinal himself.' 'It shall go safe,' he answered in a stern tone. 'Give it to me, young sir.' There was an authority in his tone that almost induced me to comply; but reflecting that I might be called to a severe account by the unrelenting minister, even for a mere error in judgment, I per-

sisted in my original determination. 'I must repeat,' answered I, 'that I can give this to no one but his eminence himself, without an express order from his own hand to do so.' 'Pshaw!' cried he, with something of a smile, and taking up a pen, which lay with some sheets of paper on the table, he dipped it in the ink, and scrawled in a large, bold hand—'Deliver your packet to the bearer,

'RICHIEU.'

I made him a low bow and placed the letter in his hands. He read it, with the quick and intelligent glance of one enabled by long habit to collect and arrange the ideas conveyed to him with that clear rapidity possessed alone by men of genius. In the mean time, I watched his countenance, seeking to detect amongst all the lines with which years and thought had channelled it, any expression of the stern, vindictive, despotic passions, which the world charged him withal, and which his own actions sufficiently evinced. It was not there, however—all was calm. Suddenly raising his eyes, his look fell full upon me, as I was thus busily scanning his countenance, and I know not why, but my glance sunk in the collision. 'Ha!' said he, rather mildly than otherwise, 'you were gazing at me very strictly, sir. Are you a reader of countenances?' 'Not in the least, monseigneur,' replied I; 'I was but learning a lesson—to know a great man when I see one another time.' 'That answer, sir, would make many a courtier's fortune,' said the minister; 'nor shall it mar yours, though I understand it. Remember, flattery is never lost at a court! 'Tis the same there as with a woman—if it be too thick, she may wipe some of it away, as she does her rouge; but she will take care not to brush off all! To be detected in flattery has something in it so degrading, that the blood rushed up into my cheek, with the burning glow of shame. A slight smile curled the minister's lip. 'Come, sir,' he continued, 'I am going forth for half an hour, but I may have some questions to ask you; therefore, I will beg you to wait my return. Do not stir from this spot. There, you will find food for the mind,' he proceeded, pointing out a small case of books; 'in other respects, you shall be taken care of. I need not warn you to discretion. You have proved that you possess that quality, and I do not forget it.' Thus speaking he left me, and for a few minutes I remained struggling with the flood of turbulent thoughts which such an interview pours upon the mind. This, then, was the great and extraordinary minister, who at that moment held in his hands the fate of half Europe—the powers of whose mind, like Ni-order, the tempest-god of the ancient Gauls, raised, guided, and enjoyed the winds and the storms, triumphing in the thunders of continual war, and the whirlwinds of political intrigue! In a short time two servants brought in a small table of lapis lazuli, on which they proceeded to spread various sorts of rare fruits and wines; putting on also a china cup and a vase, which I supposed to contain coffee—a beverage that I had often heard mentioned by my good preceptor Father Francis, who had tasted it in the East, but which I had never before met with. All this was done with the most profound silence, and with a gliding, ghost-like step, which must certainly have been learned in the prisons of the Inquisition. At length one of these stealthy attendants desired me, in the name of his lord, to take some refreshment, and then, with a low reverence, quitted the cabinet, as if afraid that I should make him any answer. I could not help thinking, as

they left me, what a system of terror that must be, which could drill any two Frenchmen into silence like this! However, I approached the table, and indulged myself with a cup of most exquisite coffee, after which I examined the book-case, and glancing my eye over histories and tragedies, and essays and treatises, I fixed at length upon Ovid, from a sort of instinctive feeling, that the mind, when it wishes to fly from itself, and the too sad realities of human existence, assimilates much more easily with any thing imaginative than with any thing true. I was still reading, and though sometimes falling into long lapses of thought, I was nevertheless highly enjoying the beautiful fictions of the poet, when the door was again opened, and the minister re-appeared. I instantly laid down the book and rose, but pointing to a chair, he bade me be seated, and taking up my book, turned over the pages for a few moments, while a servant brought him a cup of fresh coffee and a biscuit. 'Are you fond of Ovid?' demanded he, at length; and then, without allowing me time to reply, he added, 'he is my favourite author; I read him more than any other book.' The tone which he took was that of easy, common conversation, which two persons perfectly equal in every respect might be supposed to hold upon any indifferent subject: and I, of course, answered in the same. 'Ovid,' I said, 'is certainly one of my favourite poets, but I am afraid of reading him so often as I should wish; for there is an enervating tendency in all his writings, which I should fear would greatly relax the mind.' 'It is for that very reason that I read him,' replied the minister. 'It is alone when I wish for relaxation, that I read, and then—after every thought having been in activity for a whole long day—Ovid is like a bed of roses to the mind, where it can repose itself, and recruit its powers of action for the business of another.' This was certainly not the conversation which I expected, and I paused without making any reply, thinking that the minister would soon enter upon those important subjects on which I could give the best and latest information; but on the contrary, he proceeded with Ovid. 'There is a constant struggle,' continued he, 'between feeling and reason in the human breast. In youth, it is wisely ordained, that feeling should have the ascendancy; and she rules like a monarch, with Imagination for her minister—though, by the way,' he added with a passing smile, so slight that it scarcely curled his lip, 'though, by the way, the minister is often much more active than the monarch. In after years, when feeling has done for man all that feeling was intended to do, and carried him into a thousand follies, eventually very beneficial to himself, and to the human race, Reason succeeds to the throne, to finish what feeling left undone, and to remedy what she did wrong. Now you are in the age of feeling, and I am in the age of reason; and the consequence is, that even in reading such a book as Ovid, what we call is as different as the wax and the honey which a bee gathers from the same flower. What touches you, is the wit and brilliancy of the thought, the sweetness of the poetry, the bright and luxurious pictures which are presented to your imagination; while all that affects me little; and shadowed through a thousand splendid allegories, I see great and sublime truths, robed, as it were, by the verse and the poetry in a radiant garment of light. What can be a truer picture of an ambitious and daring minister than Ixion embracing a cloud?' and he looked me full in the face, with a smile

of melancholy meaning, to which I did not well know how to reply. 'I have certainly never considered Ovid in that light,' replied I, 'and I have to thank your eminence for the pleasure I shall doubtless enjoy in tracing the allegories throughout.' 'The thanks are not my due,' replied the minister; 'an English statesman, near a century ago, wrote a book upon the subject, and shewed his own wisdom, while he pointed out that of the ancients. In England the reign of reason is much stronger than it is with us in France, though they may be considered as a younger people.' 'Then does your eminence consider,' demanded I, 'that the change from feeling to reason proceeds apace with the age of nations, as well as with men?' 'In general, I think it does,' replied he; 'nations set out, bold, generous, hasty, carried away by impulse rather than by thought; easily led, but not easily governed. Gradually, however, they grow politic, careful, anxious to increase their wealth, somewhat indolent, till at length they creep into their dotage even like men.—But,' he added, after a pause, 'the world is too young for us to talk about the history of nations. All we know is, that they have their different characters like different men, and of course some will preserve their vigour longer than others, some will die violent deaths, some end by sudden diseases, some by slow decay. A hundred thousand years hence, men may know what nations are, and judge what they will be. It suffices, at present, to know our contemporaries, and to rule them by that knowledge—and now, Monsieur le Comte de L'Orme, I thank you for a pleasant hour, and I wish you good night. Of course, you are still at an inn; when you have fixed your lodging, leave your address here, and you shall hear from me. In the mean while, farewell!'

We shall finish with one of many brief observations, which shew the mind of an author as much as those in conversation do that of the speaker.

"Yet, although not knowing it, my mother, I am sure, did not escape without feeling some small share of maternal pride at her son's first achievement. I saw it in her face, I heard it in her tone; and often since I have had occasion to remark, how like the passions, the feelings, and the prejudices, which swarm in our bosoms, are to a large mixed society, wherein the news that is painful to one is pleasing to another, and joy and sorrow are the results of the same cause, at the same moment. Man's heart is a microcosm, the actors in which are the passions, as varied as opposed, as shaded one into the other, as we see the characters of men, in the great scene of the world."

As an historical novel, these pages have the great and rare merit of marking the spirit as well as the manners of their time; the real personages introduced are drawn with equal animation and accuracy, while in the story itself the interest is well sustained to the last, and a tone of imaginative reflection, and touches of picturesque description, are the lights and shades which fill up the picture. Public opinion has amply confirmed our praise of *Richelieu* and *Darnley*; but we must say we think *De L'Orme* much superior to his predecessors.

Orlando Innamorato di Bojardo, Orlando Furioso di Ariosto; with an Essay on the Romantic Narrative Poetry of the Italians: Memoirs and Notes by Antonio Panizzi. Vol. II. London, 1830. W. Pickering.

PERHAPS by quoting the exact words of the indefatigable editor, the second portion of whose labours now calls for our notice and praise, we

shall give our readers the most just idea of the industry and research requisite for such a task:—

"I have already mentioned five editions of the *Innamorato*, which I have collated in order to render my own correct; and I have now to add, that I have also collated every line of the poem with two other editions in the library of the British Museum. I cannot say that any one of these is good, although each of them offers some correct readings peculiar to itself. I had at first chosen for my text that of Zoppino, 4to. 1532 or 33, with which the two editions of Niccolini dated 1539 and 1544 generally agree. These are, however, too modern, and are often capriciously altered by the editors. Whenever the pronoun *lui* occurs instead of *egli*, in these editions *quel* has been substituted. In like manner, whenever the poet has taken too great a license, some alteration has been made to avoid it. I could not, therefore, always follow the text adopted in these three editions; but I have selected that reading which seemed to me most likely to have been that of the author, whatever was the edition which suggested it, although it might sound strange to modern Italians; and I have inserted such various readings, as I thought deserving notice on account of their peculiarity. I have sometimes given the reasons for my preference; but the work would have extended to double the number of volumes, had I pretended to do so in every instance. This will be easily believed when it is remembered that there is scarcely a stanza which does not offer several various readings, and which would admit of long discussion, were I to indulge the humour of a commentator. I have never made the slightest change without giving to it the best attention, and the most mature consideration. However inelegant the construction, or inharmonious the versification might seem, I never yielded to the temptation of making any amendment, with the rash idea of improving the poem. Although none of the seven editions which I have collated offers one single stanza, probably, as I have printed it, yet my text is wholly derived from them. I have not departed from the rule of never altering without an authority, except in very few instances, when all the editions which I have consulted were so evidently wrong as to make nonsense; and even then I have had the pleasure of finding the alterations which I resolved upon making, supported by the old editions of Domenichi; the first of which I have constantly had under my eyes."

The volume begins with a life of Bojardo, which at once embraces a panoramic view of his own poem and its historical bearings; and for ingenious inference and historical accuracy, research to find and great taste to select, is a model for poetical essays. The materials for Bojardo's life are few, and of slight interest; and Mr. Panizzi has most judiciously turned his attention to the history of the poem, rather than of the poet. We select the following anecdote for its rarity; few bards having been in such good plight.

"The poet in his younger days was fond of conversing with the old inhabitants of his castle respecting past events, and was very generous to those from whom he sought such information; so that, when one wished good luck to another, it was usual to say—'Heaven send Bojardo to your house.'"

It is much to be regretted that we have no remains of the music which formerly accompanied poetry: on this subject our author remarks:—

"His poetry was not written to be read, but to be sung, and was submitted to those musical, as well as metrical laws, by which that of Petrarca had been governed. In his days, music was still subject to poetry; and the inanimate instruments were designed to support, not to drown the human voice. Hence it is, that lyrical compositions, written since that period, and not intended to be accompanied by such music, are no longer possessed of the same melodious harmony. The lines of Petrarca, with those of Dante, Guido Cavalcanti, and a few others of the same stamp, as well as those of Bojardo, breathe a strain of sweet, majestic, rich, and glowing melody, which has seldom, if ever, been seized by even the happiest imitators of Petrarca. These imitators put forth their skill, and succeeded to a wonderful degree, in substituting a metrical harmony for melody. The distribution of accents, or pauses in the lines of the old bards, was determined by the musical time; and when the sister art ceased to be the inseparable companion of poetry, a spurious and artificial jingle was affected, whilst pure melody was no longer one of the principal elements of poetry. Hence, it is as difficult to understand by what means the lyrical effusions of those ancient poets read so peculiarly, and at the same time so simply musical, as it is impossible to emulate their exquisite beauty in this respect."

Among our own poets, Moore possesses this melody in its highest perfection. May not this then be ascribed to his writing to music, and his own musical recitation?—his own performance of his songs rather resembling harmonious and measured reciting, than what is now termed singing; for in our modern style of singing, the voice almost resigns its faculty of speech, to become certainly the sweetest of instruments.

"Bojardo received the traditions respecting Charlemagne as a foundation for his poem, but introduced at the same time a very important novelty by enlivening them with love, which is constantly banished from them in their primitive state. He went farther; he took for his principal hero, Orlando; and for the subject of his poem, the love of that hero, whilst the romancers agree in saying, that Orlando was never so foolish (or so noble-hearted) as to fall in love. The boldness of this innovation cannot now be fully appreciated, when the romantic traditions are matter of curious inquiry for the learned, instead of being the subject of popular belief, as they were in Bojardo's time. His daring to alter the stories generally received, is a sufficient proof of the self-confidence, as well as sound taste of the poet. He had perceived the charms, which love spread over the romantic traditions respecting Arthur and his court; and it was from the romances of the Round Table, as we shall see by Bojardo's own words, that he borrowed the idea of embellishing his poetical effusions with love and the ladies. He had the merit of being the first of the romanesque poets, who, faithful to the title which he gave to the work, wrote on the subject, as he had promised his readers he would do.

"Considering the succession of events, all tending to shew the love of Orlando for Angelica, and the mischief done by her beauty among the Christians, we cannot doubt this love to be the main action of the poem. The love of Orlando is the chief subject of the *Innamorato*, as the anger of Achilles is that of the *Iliad*. The events proceed and grow out of one another without interruption. Had not Orlando been in love with Angelica, he would

not have followed her to India; and thus he would have defended his king and his country from the invaders. Every event is attached to the first coming of Angelica into France, not only indirectly, but, in some cases, in the most direct manner. The Christians are beaten by the Saracens on account of Orlando's absence, just as the Greeks are by the Trojans, on account of the absence of Achilles; the absence in both cases is produced by the passions, which are sung by the poets; in Bojardo, love; in Homer, anger. The loss of the Christians, as well as that of the Greeks, is *indirectly* the effect of this love, and of this anger."

The analysis of many romantic traditions is given in a most animated style: witness the following.

"Agolante succeeded to the African throne. He was the father of Trojano, Almonte, and Galaciella, a heroine. The father of Agolante, who was called Bramante or Brabante, had been formerly killed by Charlemagne; and one of his sons, Guernieri, fell by the hand of Milone, the father of Orlando, and one of Charlemagne's bravest knights. Agolante, and his sons and daughters, determined upon invading Christendom, with the intention of revenging the death of Brabante and Guernieri; and, as the first step towards the accomplishment of this object, they attacked Italy. Being satisfied that the most terrible warrior they would have to engage with was Ruggero di Risa, or Reggio, in Calabria, they resolved to besiege that city, where the gallant knight, who was called after it Ruggero di Risa, lived with his father Rampallo or Rampaldo. Milone, a natural brother of Ruggero, and very brave, together with Beltrame, the eldest brother, a thorough villain, dwelt also in that place. In single combat Ruggero thrice smote down Galaciella in the most graceful manner possible. He was very loath to do so, but as the lady insisted upon fighting, he could not help knocking her down as often as she wished; when she was tired, he told her she was his prisoner. Never did knight gain a fairer prize. As he was one of the handsomest cavaliers that ever wielded a sword, some malicious persons suspected at the time that the battle was not fairly fought, but that the lady did her best to be taken prisoner. There are circumstances which would almost induce a belief that such was the case. For, it so happened, that as soon as he advised her to become a Christian, she yielded to his request, which was not supported by weighty theological arguments; nor is there any reason for believing that she was influenced by supernatural agency. Her conversion was followed by her marriage with Ruggero, to the great disappointment of Beltrame, who aspired to her hand. But Galaciella said, that she would marry no one except her conqueror. The traitor Beltrame, availing himself of the opportunity of being alone with the lady, had the assurance to claim a share in her affection; a proposal which she received and answered, as was becoming a young bride and a heroine. She disdainfully told him that his request was insulting; and as he would not cease to annoy her, she gave him a sound drubbing to teach him good manners. The villain then betrayed the city, Risa, into the hands of Almonte, who was besieging it; on that occasion Rampallo, Milone, and Ruggero, were murdered, and Galaciella was taken prisoner. It was then discovered that Beltrame, to induce Almonte to agree to the treachery, gave him to understand that Rampallo was unjustly partial to Ruggero, and would have left to him the dominions, to the prejudice of

Beltrame, who, as the eldest brother, had a better right to them. As this, however, proved to be a falsehood, Almonte, who regretted having been ensnared into an unworthy action, gave Galaciella leave to pass a sentence on the traitor, proportionate to his enormities, and he was therefore put to death. Almonte next strongly urged Galaciella to return to Africa, and apostatise, which she did not intend to do. But thinking this to be the only means of escaping from his hands, she pretended to consent, and was shipped off. On the high seas this brave heroine made a sudden assault on the sailors, part of whom she threw overboard, and did not cease till she had got rid of every one of them, by some means or other. Thus remaining the only person alive in the ship, she was driven by the wind to a solitary place, where Ruggero and Marfisa were born, and where also she died."

The *Orlando Innamorato* begins in this volume, and the notes affixed are most excellent: we quote one, as a specimen of the lively manner in which the writer seems himself touched with the spirit and sarcasm of his author.

"Galerana, or Galeana, was daughter of Galafro, King of Spain, and sister of Marsiglio, Balugante, and Falsirone. She fell in love with Charlemagne, who was five years older than herself, when he lived *incognito* as page at the Spanish court, his throne having been usurped by Oldrigi and Lanfroi. Seeing that the boy was rather shy, she told him that she was in love with him, and in due time they eloped. I wish the reader should not be scandalised at this. The ladies in romances are in general the first to make advances, because a hero must be irresistible in all respects. Hence, the eldest son usually wants to be legitimated *per subsequens matrimonium*. Galerana was a very fine creature, and one Bramante of Africa, who was forty-five years of age, having gone into Arragon with thirty thousand men, to ask her in marriage, Galafro saw no objection; but Marsiglio, who 'was a very learned man, and fond of necromancers,' said 'that it was not reasonable that a lady only fifteen years old should marry a man who was forty-five,' and the others agreed with him. These stories are told in the *Reali di Francia*, which I believe to have been written by a young blue-stocking, married to an old man; and this I judge, from seeing the great aversion which the writer invariably expresses at any such marriage."

Every library, aspiring to add the treasures of other languages to our own, will be deficient without this requisite and excellent work; and we cannot but think such a production will awaken, and turn much attention to the fair field of Italian literature. Mr. Panizzi has done credit to his own country, and service to ours: we wish his undertaking all the success it merits, and we can scarcely say more.

Lyell's Principles of Geology.

(Second Notice.)

IN resuming the notice, begun in our last Number, of Mr. Lyell's "Principles of Geology," we confess ourselves unable to do full justice to the work, without going more at length into the subject than is compatible with our miscellaneous columns. We shall, however, bring together a few of the points in which the author differs in opinion from former geologists, accompanied by some extracts, shewing to what extent he has succeeded in rendering the subject attractive for the general reader.

Mr. Lyell is of opinion, that the very commonly received notion among geologists, that the organic remains found in the several strata, from the lower red sand-stone to the tertiary series, had a progressive development in the order of creation, is erroneous; and this opinion he supports, by citing an instance of the remains of fish being found in Perthshire in quarries of the old red sand-stone, which is lower in the series than the coal or mountain limestone. The vertebræ of a reptile has also been found in the mountain limestone of Northumberland, which the author deems conclusive as to the fact of the higher class of animals, as well as testacea and vegetable remains, having existed at the very remote era when the oldest of the secondary class of strata were deposited. Some farther researches, however, are necessary to determine this point satisfactorily.

The comparatively recent origin of the human race, Mr. Lyell also considers as affording no argument in favour of that progressive order of animal creation which is contended for by some geological writers; and which is supported by a mass of very strong inductive evidence against the few isolated facts advanced in the present work. But we must allow the author the benefit of his own evidence. "Assuming, then, that man is, comparatively speaking, of modern origin, can his introduction be considered as one step in a progressive system, by which, as some suppose, the organic world advanced slowly from a more simple to a more perfect state? To this question we may reply, that the superiority of man depends not on those faculties and attributes which he shares in common with the inferior animals, but on his reason, by which he is distinguished from them. If the organisation of man were such as would confer a decided pre-eminence on him even if he were deprived of his reasoning powers, and provided only with such instincts as are possessed by the lower animals, he might then be supposed to be a link in a progressive chain, especially if it could be shewn that the successive development of the animal creation had always proceeded from the more simple to the more compound, from species most remote from the human type to those most nearly approaching to it. But this is an hypothesis which is wholly unsupported by geological evidence. On the other hand we may admit, that man is of higher dignity than were any pre-existing beings on the earth, and yet question whether his coming was a step in the gradual advancement of the organic world; for the most highly civilised people may sometimes degenerate in strength and stature, and become inferior in their physical attributes to the stock of rude hunters from whom they descended."

Leaving this difficult problem for the determination of our metaphysical readers, we shall proceed to give an extract which will be far more generally interesting, as illustrating in a remarkable degree the influence of running water in excavating deep valleys and depositing the débris of rocks in the bottoms of lakes and the mouths of rivers. After shewing the powerful agency of mountain torrents in excavating valleys through the soft, calcareous, and volcanic deposits of Italy and other parts of Europe, the author observes:

"The falls of Niagara afford a magnificent example of the progressive excavation of a deep valley in solid rock. That river flows from Lake Erie to Lake Ontario, the former being 330 feet above the latter, and the distance between them being thirty-two miles. On flowing out of the upper lake, the river is almost on

a level with its banks; so that if it should rise perpendicularly eight or ten feet, it would lay under water the adjacent flat country of Upper Canada on the west, and the state of New York on the east. The river where it issues is about three quarters of a mile in width. Before reaching the falls it is propelled with great rapidity, being a mile broad, about twenty-five feet deep, and having a descent of fifty feet in half a mile." After this immense body of water has been precipitated over a precipice of 160 feet, "the bed of the river below the falls is strewn over with huge fragments which have been hurled down into the abyss. By the continual destruction of the rocks, the falls have within the last forty years receded nearly fifty yards, or, in other words, the ravine has been prolonged to that extent. Through this deep chasm the Niagara flows for about seven miles, and then the table-land, which is almost on a level with Lake Erie, suddenly sinks down at a place called Queenstown, and the river emerges from the ravine into a plain which continues to the shores of Lake Ontario. There seems good reason for the general opinion, that the falls were once at Queenstown, and that they have gradually retrograded from that place to their present position, about seven miles distant. If the ratio of recession had never exceeded fifty yards in forty years, it must have required nearly 10,000 years for the excavation of the whole ravine; but no probable conjecture can be offered as to the probable period of time consumed in such an operation, because the retrograde movement may have been much more rapid when the whole current was confined within a space not exceeding a fourth or a fifth of that which the falls now occupy. Should the erosive action not be accelerated in future, it will require upwards of 30,000 years for the falls to reach Lake Erie (twenty-five miles distant), to which they seem destined to arrive in the course of time, unless some earthquake changes the relative levels of the district. Should Lake Erie remain in its present state until the period when the ravine recedes to its shores, the sudden escape of that great body of water would cause a tremendous deluge; for the ravine would be much more than sufficient to drain the whole lake, of which the average depth was found, during the late survey, to be only ten or twelve fathoms. But in consequence of its shallowness, Lake Erie is fast filling up with sediment; and the annual growth of the deltas of many rivers and torrents which flow into it is remarkable."

We do not remember any preceding geological writer giving a satisfactory theory of the production of those enormous masses of rock salt which contribute so materially to the mineral riches of this country, and certain portions of the European continent. Alluding to the constant current which flows from the Atlantic into the basin of the Mediterranean, and the fresh water carried off by evaporation, being the only outlet for this vast mass of water, flowing in on all sides, from the Black Sea in the east, to Gibraltar in the west, of Europe. Mr. Lyell pertinently asks:—

"What then becomes of the excess of salt?—for this is an inquiry of the highest geological interest. The Rhone, the Po, and many hundred minor streams, pour annually into the Mediterranean large quantities of carbonate of lime, together with iron, magnesia, silica, alumina, sulphur, and other ingredients, in solution. To explain why the influx of this matter does not alter the composition of this sea, has never been thought to present a great

difficulty; for it is known that calcareous rocks are forming in the delta of the Rhone, the Adriatic, and other localities. Precipitation is acknowledged to be the means whereby the surplus mineral matter is disposed of, after the consumption of a certain portion in the secretion of testacea and zoophytes. But some have imagined, that before muriate of soda can in like manner be precipitated, the whole Mediterranean ought to become saturated with salt, as the brine springs of Cheshire, or Lake Aral, or the Dead Sea. There is, however, an essential difference between these cases; for the Mediterranean is not only incomparably greater than these two basins, but its depth is enormous. In the narrowest parts of the straits of Gibraltar, where they are about nine miles broad, between the isle of Tariffa and Alcanzar point, the depth varies from one hundred and sixty to five hundred fathoms; but between Gibraltar and Ceuta, Captain Smyth sounded to the extraordinary depth of nine hundred and fifty fathoms! where he found a gravelly bottom, with fragments of shells. Saussure sounded to the depth of two thousand feet, within a few yards of the shore at Nice. What profundity may we not, then, expect some of the recesses of this sea to reach? The evaporation being very rapid, the surface water becomes impregnated with a slight excess of salt; and its specific gravity being thus increased, it falls to the bottom, while lighter water supplies its place at top from the current of the Atlantic and the great rivers. But the heavier fluid does not merely fall to the bottom, but flows on till it reaches the lowest part of one of those submarine basins into which we must suppose the bottom of this inland sea to be divided. By the continuance of this process, additional supplies of brine are annually carried to deep repositories, until the lower strata of water are fully saturated, and precipitation takes place—not in thin films, such as are said to cover the alluvial marshes along the western shores of the Euxine, nor in minute layers, like those of the salt 'estangs' of the Rhone—but on the grandest scale,—continuous masses of pure rock salt, extending perhaps for hundreds of miles in length, like those of the mountains of Poland, Hungary, Transylvania, and Spain."

It is a question of vast geographical interest to future generations, and scarcely less to the present proprietors and occupiers of land on our eastern and southern coast, to investigate the destructive agency that is continually going on by the water of the ocean. We therefore think the following remarks of Mr. Lyell worthy of much attention.

"The current which flows from the north-east, and bears against our eastern coast (of England) transports materials of various kinds. It undermines and sweeps away the granite, gneis, trap-rock, and sand-stone of Shetland, and removes the gravel and loam of Holderness, Norfolk, and Suffolk, which are between fifty and two hundred and fifty feet in height, and which wastes at the rate of from one to six yards annually. It bears away the strata of London clay on the coast of Essex and Sheppy, consumes the chalk with its flints for many miles continuously on the shores of Kent and Sussex, commits annual ravages on the fresh-water beds covered by chalk, and continually saps the foundation of the Portland limestone. It receives, besides, during the rainy months, large supplies of pebbles, sand, and mud, which the Grampians, Cheviots, and other chains, send down to the sea. To what regions then is all this matter consigned? It is not retained in

mechanical suspension by the waters of the sea, nor does it mix with them in a state of chemical solution. It is deposited *somewhere*, yet certainly not in the immediate neighbourhood of our shores; for in that case there would soon be a cessation of the encroachments of the sea, and large tracts of low land, like Romney Marsh, would every where encircle our island. As there is now a depth of water exceeding thirty feet in some spots where cities flourished but a few centuries ago, it is clear that the current not only carries far away the materials of the wasted cliffs, but tears up, besides, many of the regular strata at the bottom of the sea. The German Ocean is deepest on the Norwegian side, where the soundings give one hundred and ninety fathoms; but the mean depth of the whole basin may be stated at only thirty-one fathoms. The bed of this sea is encumbered in an extraordinary degree with accumulations of débris, especially in the middle. One of the great central banks trends from the Firth of Forth north-east to a distance of one hundred and ten miles; others run from Denmark and Gutland upwards of one hundred miles to the north-west; while the great Dogger bank extends to three hundred and fifty-four miles from north to south."

Could we look into the womb of futurity a few thousand years, we should, in all probability, witness the whole of these sand-banks united into one mass, and become the habitation of man and the inferior animal creation!

Mr. Lyell pursues the same course in the investigation of volcanic phenomena as he adopts in examining the effects of diluvial action on the earth's surface. Instead of labouring to establish some favourite hypothesis regarding the origin of volcanoes, as many preceding geologists had done, the author proceeds at once to the registry of facts and observations derived either from the most unquestionable authorities, or in many cases from his own examination. The practical tone which characterises this portion of his volume may be judged of by the following remark connected with the production and decomposition of volcanic lavas.

"They who have visited the Phlegrean fields, and the volcanic region of Italy, and are aware of the many problematical appearances which igneous rocks of the most modern origin assume during their decomposition, cannot but be astonished at the confidence with which the contending Neptunists and Vulcanists in the last century dogmatised on the igneous or aqueous origin of certain rocks of the remotest antiquity. Instead of having laboured to acquire an accurate acquaintance with the aspect of known volcanic rocks, and the transmutations which they undergo subsequently to their first consolidation, the adherents of both parties seem either to consider themselves born with an intuitive knowledge of the effects of volcanic operations, or to have assumed, that they required no other analogies than those which a laboratory and furnace might supply."

These remarks appear to be as much levelled at the empirical system of geology taught in our northern universities, as at the wild hypotheses of Messrs. De Luc, Saussure, and other geologists of the last century.

Mr. Lyell is so disinclined to speculation, that it is difficult to trace any thing like a theory throughout his volume, explanatory of the origin of volcanic agency. In this respect we think the author has shewn his good judgment; for the subject may be said to have been previously exhausted by the very able researches

of Messrs. Daubeny and Scrope. But in spite of the great interest which attaches to the subject, our limits warn us to give only another extract from Mr. Lyell's present volume, and we select one descriptive of a phenomenon of the most extraordinary kind, to which the author himself bore witness within the last two years:—

"A remarkable discovery has lately been made on Etna, of a mass of ice, preserved for many ages, perhaps for centuries, from melting, by the singular event of a current of red hot lava having flowed over it. The following are the facts in attestation of a phenomenon which must at first sight appear of so paradoxical a character. The extraordinary heat experienced in the south of Europe during the summer and autumn of 1828, caused the supplies of snow and ice, which had been preserved in the spring of that year, for the use of Catania and the adjoining parts of Sicily and the neighbouring island of Malta, to fail entirely. Considerable distress was felt for the want of a commodity regarded in these countries as one of the necessities of life rather than an article of luxury, and on the abundance of which, in some large cities, the salubrity of the water and the general health of the people may be said to depend. The magistrates of Catania applied to Signor M. Gemmelaro, in the hope that his local knowledge of Etna might enable him to point out some crevice or grotto in the mountain where drift snow was still preserved. Nor were they disappointed: for he had long suspected that a small mass of perennial ice at the foot of the highest cone was part of a larger and continuous glacier covered by a lava current. Having procured a large body of workmen, he quarried into this ice, and proved the super-position of the lava for several hundred yards, so as completely to satisfy himself that nothing but the subsequent flowing of the lava over the ice could account for the position of the glacier. Unfortunately for the geologist, the ice was so extremely hard, and the excavation so expensive, that there is no probability of the operation being renewed. On the 1st of December, 1828, I visited this spot, which is on the south-east side of the cone, and not far from the Casa Inglese; but the fresh snow had already nearly filled up the new opening, so that it had only the appearance of the mouth of a grotto. I do not, however, question the accuracy of the conclusion of Signor Gemmelaro, who being well acquainted with all the appearances of drift-snow in the fissures and cavities of Etna, had recognised, even before the late excavations, the peculiar position of the ice in this locality. We may suppose, that at the commencement of the eruption a deep mass of drift snow had been covered by volcanic sand, showered down upon it before the descent of the lava. A dense stratum of this fine dust mixed with scorïæ is well known to be an excellent non-conductor of heat, and may thus have preserved the snow from complete fusion when the burning flood poured over it. The shepherds in the higher regions of Etna are accustomed to provide an annual store of snow to supply their flocks with water in the summer months, by simply strewing over the snow in the spring a layer of volcanic sand a few inches thick, which effectually prevents the sun from penetrating. When lava had once consolidated over a glacier at the height of ten thousand feet above the level of the sea, we may readily conceive that the ice would endure as long as the snows of Mont Blanc, unless melted by volcanic heat from below. When I visited the great crater in the beginning of

winter (1828), I found the crevices in the interior encrusted with thick ice, and in some cases hot vapours were streaming out between masses of ice and the rugged and steep walls of the crater. After the discovery of Signor Gemmelaro, it would not be surprising to find in the cones of the Icelandic volcanoes repeated alternations of lava streams and glaciers."

This fact affords a decisive proof of the slow conducting power of the igneous class of rocks, whether in the mass, or broken into scorïa by volcanic action; while it serves to confirm the commonly received opinion among geologists of the present day, that the surface of the earth, including the basin of the ocean, is nothing more than a crust or shell enclosing vast masses of mineral matter in a state of incandescence or partial fusion. Yet to what limits these fiery vaults may extend, it is impossible to form any estimate. Volcanic eruptions and earthquakes may be distinctly traced throughout three-fourths of the continents and nine-tenths of the islands which constitute the habitable globe. But we have no data whereon to form any adequate conception of the amount of volcanic agency constantly going on in the sub-marine regions of the Atlantic and Pacific!

We cannot dismiss the work before us without thanking the author for the vast mass of evidence he has condensed into a small compass, on one of the most interesting inquiries which can occupy the attention of mankind. We observe a few repetitions, and some other minor blemishes in style and classification; but we have no hesitation in stating, that Mr. Lyell's labours must have the effect of dispelling many of the mists which have hitherto concealed, and removing much of the delta which has obstructed, the current of geological knowledge.

Col. Welsh's Reminiscences of the East Indies.

(Third notice.)

WHILE at the post up the country where our last quotation left Col. Welsh, he paid two visits to Coorg, a place and government so remarkable, that we must afford as much space as we can to his striking accounts of both.

"The kingdom of Coorg, situated to the westward of Mysore, is of small extent, being comprised within the twelfth degree of north latitude, and the seventy-fifth and seventy-sixth degrees of east longitude. It is about fifty miles in length, and thirty-five only in the broadest part. Surrounded by lofty mountains, for the most part inaccessible, it contains many others, scattered over the interior surface, forming a succession of wild rugged hills and highly cultivated valleys; and, as if this were not sufficient to confirm its title to the appellation of a 'strong country,' they have divided the whole interior into squares. Those where no streams or marshes are contained, being generally about a mile in width, with an enormous ditch and high mound or bank, formed by the original contents of the ditch, and covered, inside and out, with deep jungle, in which are included many enormous forest trees. Some of these enclosures have four apertures for ingress and regress, one in each face, particularly those through which the principal roads pass, and which consequently present so many strong barriers against an approaching enemy. Every hill and mountain is also covered with jungle; the finest teak, jack, mango, and other large trees, growing spontaneously in a country watered by numerous streams, and continual fogs and misty clouds, which, from its

great height, even above the Mysore, are attracted by the hills, and cover them during the night. In such a country, no town or village meets the eye until you are close upon it; but though I have traversed nearly the whole, at different times, I do not remember to have seen above six or eight villages throughout; and I am, indeed, inclined to pronounce the majority of its inhabitants to be wild elephants, tigers, bears, bisons, buffalos, hyenas, civets, elks, deer, antelopes, and minor game. With such resources, it is easy to ensure a day's sport, by opening the barriers of one or more enclosures for some time previous, and, when required, to secure them simultaneously. In the days of Hyder's successful usurpation of the Musnud of Mysore, the reigning Rajah of Coorg was defeated and taken prisoner by this Mussulman prince, and carried to Mysore, where he was kindly treated from policy, and persuaded the usurper, that if he would send him back to his own country, he would prevail on all his subjects to submit to the Mussulman yoke, they having previously betaken themselves to their hills and fastnesses, from whence he could neither drive nor recall them. This man's name was Vêrâjunder: it is said that he took an oath of fidelity to Hyder before he was released, and that, in after times, he boasted of this breach of faith. Be that as it may, he proved himself an able statesman, if such a term be applicable to a mountain chief; since he improved the natural fortifications of his kingdom, built towns, formed an armed militia, and successfully defied his former conqueror. After the death of Tippoo, this extraordinary man went suddenly mad, and in one day destroyed one thousand two hundred of his relations and principal nobles, leaving, under an erroneous idea of his imbecility, only one younger brother alive, of all the males of his family. Vêrâjunder did not long survive this act, and most likely such a man was assisted out of this world by some of the trembling slaves by whom he was attended. I had, however, nearly omitted to mention the act of all others which stamped his conduct with the most indelible character of insanity. There was an old woman who had confidentially attended him for years, cooked his victuals, and frequented the interior of his palace, and a child, only a few years old, who was born there, a relation of this woman. After completing the work of destruction, in which he had played a conspicuous part, assisted by several elephants and soldiers in the court-yard, he retired into his study; the old woman came in to offer her services, followed by the child, when he immediately stabbed the woman, and, seizing the child, laid it upon his table, and deliberately dissected it with a penknife. He was succeeded by the boy whom his blindness had spared, and left him immense wealth, as well as most absolute power over all his subjects, and every kind of property in his little kingdom; indeed, I blush to write it, the absolute deity of his ignorant and misguided people. Such, in March 1811, was Lingrajunder Wadeer, to whom I carried an introduction from the Honourable Arthur Cole, resident in Mysore, who was also nominal resident in Coorg."

The reception was most magnificent, and every kind of sport was liberally provided. After shooting, hunting, &c. the author says:

"On entering his palace, we were amused by a set of dancing girls, keeping time to reels and country dances played on two fiddles; and the Mahâ Swâmee shewed us various portraits of himself, the King, the Prince of Wales, General Wellesley, &c. He then took us into ano-

ther apartment, and shewed us a dozen of highly finished single and double rifles, by Manton and Jover; fowling-pieces, pistols, &c. then an air-gun, which he desired us to try. It was now seven p.m. and torch-light had succeeded the day-light in his court-yard; we took aim out of the window at various things, and hit them, and I even knocked down a lime, a species of small lemon, off the top of a cocconut; so uncommonly true did it carry. His son and several relations were next introduced to us, all fine-looking boys; and the heir apparent, being about seven or eight years old, dressed in a general's uniform, with a sword by his side, put me in mind of some old French prints, in which the girls are dressed in hoops and farthingales, and the boys with bag-wigs and small swords. Ram-fights, &c. were going on all this time in the yard, as it were to amuse the attendants; and two of the rams had four horns each. Then a lion made his appearance, led by a dozen men, with a strong rope. He appeared very tame, played with his leaders, and suffered me to go up to him and pat him on the back. I acknowledge this was a bit of bravado on my part, and I was by no means sure how it would be received. Thank God! it turned out well; though there was more folly than judgment in the attempt. Next came a large royal tiger and two panthers, the former having his claws pared, but very savage, trying every instant to break loose. We took leave at half-past seven, quite pleased with the kind and affable treatment of this prince, who, I am inclined to believe, is adored by his people."

He was, as it appeared in the sequel, grievously mistaken: but we proceed with these characteristic extracts.

"After all our exertions of this day, it may readily be supposed we slept soundly; and on the morning of the 23d rose betimes as usual, a custom which I most strenuously recommend to all young men doomed to spend any time in the East, and went to visit the rajah's stud and elephants, and amongst the latter found a young white one, about two years old, most perfectly formed, with flaxen hair, light eyes, and fair skin. Of these animals, as his country abounds in them, he has great abundance. After breakfast, we were astonished by a visit from the Mahâ Swâmee, in state. No longer disguised in a European dress, he appeared in his native robes, richly decorated with jewels, and certes, in my eyes, he appeared a much handsomer man. He sat a few minutes, and then told us that he had received intelligence of a wild elephant, and would, if we pleased, accompany us to go and shoot him. To us this was the most acceptable offer he could have made. We retired to prepare ourselves and our shooting apparatus, and, on our return from our own rooms, found his highness ready, with elephants and attendants. Away we set, the rajah himself driving the one I rode, sitting across its neck, with a hook in the right hand and a knife in the other, to cut down any small branches of trees likely to incommode me in the excursion. 'Such a man,' thought I, 'at the head of his followers, must be invincible,'—so perfectly different from the effeminate grandeur of most eastern potentates. Arrived at the spot, which was only about a mile off, we dismounted; and while the people were preparing seats on trees for our reception, amused ourselves by shooting arrows at a mark, in which, as usual, the rajah beat us hollow. When all was ready, each climbed his own tree, the rajah between us, and sat in a snug little wicker-box with three guns of the rajah's each, and two of his eunuuchs

to load our pieces. The rajah had a single rifle carrying a twelve-ounce ball, and two double ones, of one ounce each. Williamson had a single rifle of two ounces, a double Manton of one ounce, and his own double fowling-piece. I had a single Jover of four ounces, a double Manton of one ounce, and my own double Beckwith; and before we ascended, the rajah explained to us where to take aim, &c. which, in an elephant, is a projecting spot immediately over each eye. This space, in the smallest, will be about four inches, and in the largest nearly eight inches in diameter; and the eunuuchs were to advise us when the game was near enough to fire. After four hours' watching, while tomtoms were beating, colliery horns blowing, and English drums sounding the general, the monster made his appearance, strutting in all the pride and wantonness of his enormous strength, and laying down every obstacle that opposed his passage. He came close under Williamson's gun, who fired and killed him on the spot. The creature rolled over instantaneously, carrying away several small trees as he extended his enormous bulk upon the ground. For a minute afterwards, the successful sportsman, unused to such game, sat with his mouth open, gazing in utter amazement at the mighty proof of his own prowess; while the rajah and myself, more used to such scenes, descending by our wicker ladders, were on the top of the carcass in a moment. It stood ten feet high, and was in excellent condition; the tusks were two feet outside, and nearly three feet long when extracted; and the length of the body was very nearly the same as its height. He had been very violent all the morning, being what the natives call *must*, and had demolished the huts and plantations of several of the ryotts or farmers, in his way to meet his *quietus*. At such seasons the elephant is very dangerous, and blindly rushes on every thing that opposes him; at other times, though very furious when wounded, he is rather timid, and will not be the aggressor in a fray."

In 1812, the year following his first, our countryman paid his second visit to Coorg, and we select the following particulars relative to it:—

"The little white elephant had grown considerably, but his skin was getting darker, and he appeared to be in bad health."

On the first day's sport, in a jungle beset by several thousand natives:—"After three hours' beating, we collected our game within shot of our post, and marched home with eight elks, a monkey, squirrel, and jungle fowl. Of the former I killed three, Lieutenant Pridham two, and Lieutenants Meredith and Davies, one each; the peons killed one, besides lesser game. Our eunuuchs and rajah's people would not permit any of us to quit our places of safety ere the whole was over, and told us it would cost them their lives if any accident happened to us. We were, therefore, literally state prisoners, *pro tempore*. Not one of the elks could be carried by fewer than six men, and they generally took twelve and fourteen, after being tied to bamboos for that purpose. We therefore cut no small figure, with our game following, on our return to Cuggore, where we found a capital English tiffin waiting for us. The horns of one of the elks being nearly a yard long, with several branches, and extremely heavy, we naturally concluded that the beast who could carry them without inconvenience, must have been very thick-headed.

"I killed a jungle buckrah, or wood-goat, with a single ball, while running like the wind: it was a very curious animal, with a body the

same colour and size of a deer, having exceedingly short legs, and therefore its swiftness must proceed from the length and strength of its body; it had short branching antlers, and was so extraordinary an animal altogether, that I preserved the head and antlers on it, till Lady Hood, passing through Bangalore, collecting curiosities, I gave it to her. It was the only animal of the kind I ever saw in my life.

"A panther was started, but he escaped, from the density of the jungle. We got into our palanquins at sunset, and having moved in great state, with every one of our three thousand attendants carrying a lighted fire-stick, arrived at our pavilion at half-past eight P.M., actually illuminating all the country through which we passed.

"I have observed, that every square league, or mile, occasionally, is marked out into a kind of fortification; having a high bank, deep ditch, hedge, and barrier. This renders the country extremely strong in a military point of view, every man being a good marksman, and famous for sporting: because two thousand men can do more, in such enclosures, than ten, or even twenty thousand, in equally thick jungle, without these advantages. I remarked, also, this evening, from my bed-room window, an immense concourse of people, seemingly labourers, winding through a distant road; and mentioning the circumstance at dinner, I observed it threw a damp on the countenances of the attendants, amongst whom, in spite of all my entreaties to the contrary, I saw the native officer of our honorary guard. No one would satisfy my curiosity. I therefore changed the subject, and speaking to my old friend the butler, asked him how he came to be so sickly since I last saw him, and what had become of four fat Bengalees, who amused me with their civilities when I was last there? A part of their duty being to run after us, if we only went into the garden for a moment; one carrying a chair, another a juglet of water, a third a bottle and tumbler; as if an European could not exist a minute without such accompaniments. He turned pale, and trembled; told me he had had a fever, but was now better, and that the other men were gone away. I rallied him on his grave appearance, and inquired if he was not happy. He immediately replied, 'Happy! he must be happy in such a service; that every one, under the Máhá Swámeé, enjoyed happiness.' I immediately launched forth in his praise, and I observed this gave Mahomed pleasure: little did I dream, that every word he or I uttered, would be instantly repeated to the rajah; yet, fortunately, every thing I then had to say was favourable. On retiring to rest, and sitting down to bring up my journal, the occurrences of the day passing in review, I began to ruminate particularly on the workmen I had seen, and all the repairs I had witnessed in the fort and barriers. It immediately struck me that the rajah, mistaking a late prohibition of Europeans passing through his country, issued in consequence of the gross misconduct of two officers, both since dismissed from the King's and Company's service, had imagined the British were going to declare war against him, and was consequently fortifying his country; and I supposed the work-people were employed on some strong place in the neighbourhood. Having obtained special permission for myself and companions, I therefore determined that I would immediately undeceive him, as an act of kindness to both parties. Rising very early on the 25th, we took a quiet walk in the garden, and

returning up stairs, were followed by Mahomed Sahib, the butler, who entreated to speak with me in private, and to request Lieutenant Meredith to remain in the veranda, to prevent any one from listening. This we acquiesced in; and no sooner were we alone in the bed-chamber, than he threw himself at my feet, and entreated me, by the memory of his old master, to save his life. I was perfectly thunderstruck; raised him up, and desired him to explain himself; when he told me a tale which harrowed my soul. The four Bengalees, whom I had left fat and happy, had become dissatisfied with promises, and wages protracted and never paid; they had demanded their dismissal, and had, in consequence, been inhumanly murdered. He himself had applied for leave, and was immediately mulcted of all he had, and his thumbs squeezed in screws, made on purpose, and used in native courts; his body flagellated, and a threat held out, that the next offence would be punished with death. That the rajah being acknowledged as the god of the country, exercised the supposed right without remorse and without control. That, for instance, if a poor fellow, standing in his presence, with both hands joined in adoration, as of the Supreme, incessantly calling out Máhá Swámeé! or Great God! should be suddenly bit by a musquito, and loosen his hands to scratch; a sign, too well known, would instantly be made by this *soi-disant* deity, and the poor wretch be a head shorter in a twinkling. This, he told me, had been the fate of the fine-looking Parsee interpreter, whom I had seen at my last visit, who, having built a house, and amassed some wealth, was beheaded, and his property seized for the state; and this, he also assured me, was the fate of every man who entered the country, if he ever attempted to quit it again: and the rajah, admitting his troops to a share in the plunder, bound them to his interests by chains of adamant. He entreated me to take him with me out of the country, which, he said, could be easily accomplished, because he must accompany me to the barrier; but I could not listen to such a proposal, and at once told him so. To connive at the escape of one of the rajah's servants, while I was his guest, would have been a direct breach of hospitality, which I could not consent to practise. But learning, on some further conversation, that the native officer, under the appearance of an honorary guard, was placed there as a spy over every word and action of every gentleman who lived in that palace; I proposed to enter into such conversation with him, in Hindoostanee, as being reported, might induce the rajah to grant him leave."

We need not give the details, how this was managed; but conclude with the finale.

"With all his kindness, I could not help remarking, that his highness had lost some of his affability, so easily are we led by circumstances, or by previous opinion, to fancy what, perhaps, has no existence. His conduct to us throughout had been kind and condescending, beyond that of any native prince I ever knew, and was never equalled, in after times, but by the Rajah of Népaunee. He was particularly fond of the flower of the Calderah, called in Hindoostanee Kewrah, the odour of which is generally too strong for English organs, but sweet beyond any flower in the East. No man in his dominions dare use it, all being the property of the Máhá Swámeé; as the finest flowers of their gardens are appropriated solely to the decoration of their temples, by all the other natives of India. The sequel may as

well be anticipated here, to connect the whole in one. A few months after, when in my own house at Bangalore, I was surprised by the sudden appearance of Mahomed Sahib, extremely emaciated, ill-dressed, and with a picture in his hand. He threw himself at my feet, and told me I had saved his life; that the rajah had given him four months' leave, and desired him to carry his picture to me in proof thereof. I refused it, however, when he told me he had returned a beggar, being stripped of every thing at the last barrier; but that he never would return. I saw him in a good place, shortly afterwards, well and happy. The rajah, Lingrajunder Wadeer, died in the year 1820, and was succeeded on the Musnud by his son, whom I had seen an infant in 1810. I have heard of no cruelties committed by the present Máhá Swámeé, who is described as a mild, inoffensive young man. The English have had, however, little or no intercourse with that country, since 1811, a road being opened through Wynaud to the Malabar coast, and a capital ghaut made by our own pioneers. I have omitted to mention, that as this country abounds with royal tigers, it is absolutely necessary that they should be hunted every season, and the former rajah seldom killed fewer than there were days in the year; and invariably gave a gold bangle to the first man who should touch the tiger after he had fired, which must make brave soldiers."

The Northern Tourist; or, Stranger's Guide to the North and North-West of Ireland. By Philip Dixon Hardy, Esq., M.R.I.A. Dublin, 1830. Curry and Co.

A GUIDE-BOOK, exceedingly creditable "in the getting up" to the Irish press, and, as far as we can judge, the literary portion executed with great care, and a strict adherence to truth. From the many amusing anecdotes interspersed through this volume, we select the following.

"Some writers have stated the number of islands in Strangford Lough to be upwards of two hundred, but it has been ascertained that there are not more than fifty-four. Some are inhabited; on others cattle of various kinds are kept by the proprietors of the grounds on the opposite shore. Upon one of them there is a very extensive rabbit-warren. The individual who resides on this island had for many years derived a considerable income from the sale of the rabbit-skins, and although he had erected a very good house, he never once dreamed of paying any thing in the shape of excise or taxes. At length, however, a tax-gatherer, who had paid a visit to the houses on the neighbouring shore, beheld with anxious gaze the goody edifice which presented itself upon the island, and determined upon visiting it in the name of his majesty. The proprietor of the place, having been in the habit of receiving visits from persons who came to purchase his skins, and supposing the taxman to be one of them, sent off a boat to fetch him to the island. On reaching the place, the man of taxes began to make various inquiries as to the time the house had been erected, the number of windows, hearths, &c. it contained; and, having gained the desired information, he immediately demanded, on behalf of his majesty, a considerable sum, as the amount of taxes and arrears due upon the place. In vain the poor man protested against the proceeding, as an imposition—in vain he contended, that the demand never having been made before, he had no right to pay it then. The stranger was inexorable, and nothing would satisfy him but

the payment of the money down, or, in default thereof, he threatened to return direct, with a party of the army, and lead, drive, and carry away all that he could find upon the island. At length, fearing such a catastrophe, and finding every effort to soften the hard heart of the exciseman completely fruitless, the poor man paid down the amount demanded, and got a regular acknowledgment for the same; and the officer, having put the money in his pocket, haughtily desired that he might be put ashore. 'No, no,' said the old man; 'although his majesty may compel me to pay taxes, he cannot compel me to keep a boat to row you, and the likes of you, back and forward.' After many threats and entreaties, the islander at last consented, as he had brought his visitor over, to give him 'a bit of a row' back again; and both getting into the boat, along with a young lad, son to the proprietor, they pulled for some time in the direction of the shore. When about midway, however, the islander, quietly laying down his oar, informed the officer, that although he had promised to give him 'a bit of a row,' he had never any intention of taking him the entire way, and that he must now do the best he could, as he was himself obliged to return to the island, or that they would land him on Phaddy Lhug, (a large rock, which was visible at low water, but was many feet beneath the surface at full tide)—from which, if he shouted loud enough, perhaps some of his friends on the shore might hear him, and send a boat to convey him the remainder of the distance. On the other protesting against such conduct, and insisting that they should continue their labour, and take him ashore—the old man, pulling his oar into the boat, and desiring his son to do the same, very drily observed, that if the gentleman did not wish to quit the boat, they would not insist upon his doing so, as they 'could swim like two water-dogs,' and thus easily regain the island; but that if he chose to pay him for it, they would willingly land him at any place he wished. Finding himself outwitted by the islanders, the officer deemed it the more advisable way to accede to the terms proposed—when, to his astonishment, he found that the demand was nothing less than the entire amount he had received for the taxes, together with a receipt for those of the following year, and a special engagement, that he would never again return to that island to demand taxes or excise. Hard as the terms were, he was at length compelled to accede to them, rather than take the alternative of being left to drift out to sea in an open boat, on a tide which, at the time, was running at the rate of nine miles an hour, with scarcely a hope of relief from any quarter. It is scarcely necessary to observe, that having paid back the money, and given the required receipt, the crest-fallen tax-man was put safely ashore, and never again visited the island, or trusted himself in company with so tricky a customer as the old dealer in rabbit-skins."

Mr. Hardy, in some of his notes, is pleasantly enough severe upon the blunders of former writers: take for example the observation which he makes, after noticing the village of Crumlin.

"The following extraordinary description of this small place appears in the *Topographical Dictionary of the United Kingdom*, published in London, in the year 1826! 'Antrim, eighty-four miles from Dublin, is the capital of the county of the same name. There is a good road and pier here; but the custom-house, which was formerly established, has, in conse-

quence of its increased trade, been transferred to Belfast!!' Of the accuracy of the foregoing, the reader will be able to form a correct idea, when informed that the said capital of Antrim is a small inland town, not less than twelve miles distant from any part of the coast. As, however, Mr. Wright also mentions that there was at one time a custom-house here, we suppose such to have been the case, but are inclined to suspect it must have been for some time 'before the flood,' when, as has been suggested by a learned writer, Lough Neagh formed a part of the Irish Sea, or Northern Channel!"

And again, speaking of a monument of the Chichester family at Carrickfergus, near the base of which an old author (M'Skimin) mentions "tablets of black marble, with a very long inscription in English." Mr. Hardy remarks:—

"The inscriptions on these tablets must have certainly undergone some very extraordinary metamorphose since the period at which they were viewed by Mr. Wright, in the year 1823, as he informs us they were at that time in Latin—they are at present all in English!!"

Brighton; a Comic Sketch. Seven Wood Engravings by R. Cruikshank. Pp. 36. Kidd.

A HUMOROUS little poem, with a number of commendable puns, after the manner, but not up to the merit, of Hood's Hunts, &c. The cuts do not strike us as being peculiarly applicable to Brighton: though clever enough, they might as well apply to London or York; and of one of them, the drunken party, we cannot express our approbation.

The Midsummer Medley for 1830. A Series of Comic Tales, Sketches, &c., in Prose and Verse. By the Author of "Brambletye House." 2 vols. 12mo. London, 1830. Colburn and Bentley.

Two amusing little volumes, from which the previous popularity of many of their component parts, alone prevents our quoting. Without calling for any thing like strict criticism, they will pass away half an hour, or more, pleasantly enough, as the reader chances to be of slow or rapid habits of perusal. We cannot characterise them better than by quoting the motto in the title-page. "It is a good thing to laugh, at any rate; and if a straw can tickle a man, it is an instrument of happiness." There is not, however, much of that broad wit or humour that excites laughter, in these volumes; which are rather agreeable and pleasing.

Norrington; or, the Memoirs of a Peer. 2 vols. London, 1830. Hurst, Chance, and Co.

APPARENTLY a reprint of some novel of "sixty years' since," being on a par with the humblest of a now exploded school.

Protestant Truths, and Roman Catholic Errors. By the Rev. Plumpton Wilson, LL.D. 12mo. pp. 235. London, 1830. Longman and Co.

An interesting and prettily told story, but very unfair in its premises, and illiberal in its conclusions. An author, it is true, is like an absolute monarch, and does what he pleases with his subjects. It is, however, neither very good reasoning, nor very strict justice, to make certain imaginary individuals commit certain imaginary acts, and then hold them as pro-

totypes and examples of a numerous and existing body.

ORIGINAL CORRESPONDENCE.

NAPOLEON BUONAPARTE.

[The history of this interesting fragment is as follows; and we leave our readers to form their own judgment as to its authenticity. It appeared in a work which was immediately suppressed in France; and since that period no trace of it has been discoverable; so that this MS., copied from it at the time, has very nearly the value of an original. It purports to be part of a letter written by Buonaparte at the period of the execution of Louis XVI., and must be perused with peculiar feelings at this eventful moment.]

"I LEARNT the next day that the advocate Target had refused his professional aid to his sovereign. This was, in the strongest acceptance of the term, to erase his name from the records of immortality! What were the arguments of his cowardly prudence? 'I shall not save his life, whilst I may risk my own.' Maiesherbes, Tronchet, Desèze, faithful and devoted subjects (whom I could not imitate, but whom, if I were a monarch, I would place at my right hand), united to defend by their zealous exertions the descendant of St. Louis. Should they survive this courageous act of fidelity, I will never pass them without baring my head. Detained by business at Versailles, I only returned to Paris on the 16th of January; I had consequently lost three or four scenes of this ambitious tragedy, but on the 18th I attended the National Convention. Ah! my friend! whatever these revolutionary maniacs may say, a monarch is not merely a man: his head will fall, it is true, with that of the shepherd, but he who commands the murder will shudder at his own temerity; and were he not compelled by the force of his *secret* motives, the sentence would expire on his lips ere its utterance. I gazed eagerly on the intrepid mortals who were about to dare pronounce on the fate of their virtuous sovereign. I studied their looks—scrutinised their very hearts. It was by the excess, the importance of their trespass, they were supported, whilst inwardly awed by the rank of their victim: could they have ventured to retract, the prince had been saved! But unfortunately they had said, if his head does not fall to-day, *ours* must soon submit to the stroke of the executioner. This was the predominant idea that dictated their votes. No pen could with justice describe the situation of the people in the galleries. Silent, gloomy, breathless, their looks were alternately directed towards the accused, his advocates, and his judge. Circumstance as strange as horrible, *D'Orleans' vote was—Death!* The shock of electricity would have been less visibly felt: the assembly rose with one spontaneous start of horror, and the hall reverberated the murmur of similar and responsive feeling: one man alone, immovable as a rock, kept his seat—*it was I!* I ventured to inquire of myself the cause of this indifference; I found it in ambition—only such a sentiment could reconcile the conduct of the Duke of Orleans; to me, therefore, it was natural: he sought a throne to which he had no title, and such acquisitions are not to be made without forfeiting the right to virtuous and general estimation.

"I shall now, my friend, become concise: I do not like the unfolding of funereal crape. The king was condemned to death! and if the 21st of January did not for ever affix an odium on the French character, at least it added a glorious name to the list of martyrs! What a town was Paris on this awful day! The populace appeared in a state of stupefaction: it seemed that the people assembled only to exchange gloomy looks, and to fly from each

other without speaking. The streets were deserted, and houses and palaces wore the appearance of tombs. *The air even seemed to smell of the executioner.* To be brief, the descendant of St. Louis was led to death, through files of mournful automata, but lately his subjects.

"If any one be near you, my friend, when you read this despatch (even were it your father), conceal from him what follows—it is a stain on the stuff of which my character is made. That Napoleon Buonaparte should be sensibly affected at the destruction of a human being, and constrained to keep his bed from the consequences of this impression, is a fact scarcely to be believed, though true, and one which I cannot avow without blushing with contempt for myself. Yes, I experienced a feeling, which, however admirable in another, was disgraceful to one who had disavowed all the weaknesses of the human heart. The night preceding the 21st of January I had not closed my eyes; yet I was unable to account to myself for the cause of my unusual agitation. I rose early, and eagerly ran wherever the crowd was assembling. I wondered at, or rather I despised, the passive imbecility of forty thousand national guards, of whom nine-tenths were only mechanically the agents of the executioner. At the Porte St. Denis I met Santerre: he was followed by a numerous staff. I should have liked to have cut off his ears: I spit at him, not being able to do more. In my opinion, his post had been better filled by the Duke d'Orleans: his object was a crown; and we all know that such a motive overbalances many considerations. Proceeding along the Boulevards, I reached the Place de la Révolution. I was ignorant of the invention of the guillotine: a cold perspiration crept over me. A stranger, who stood near me, attributed my agitation and paleness to a peculiar interest in the King of France. 'Be of better cheer,' said he, 'he will not perish: the Convention is only desirous of proving its power, and he will meet his pardon at the foot of the scaffold.' 'If that be so,' replied I, 'the gentlemen convention-alists are not themselves far from their fall, and never would culprits more richly deserve their fate. He who attacks a lion, and would avoid being destroyed by him, should not wound, but throw him dead upon the spot.' A low and confused noise was heard—it was the royal victim! I hurried forward, elbowing and elbowed. I approached as far as I could—all my efforts to get near were vain: the scaffold was hid from me by an armed force. The rolling of drums suddenly interrupted the mournful silence of the assembled multitude. 'It is the signal of his release,' said the stranger. 'And it will rebound on his murderers,' I replied: 'in such a case, half a crime is a weakness.' A momentary silence ensued. Suddenly something fell heavily on the scaffold: the noise struck at my heart. I inquired the cause of a grandarme. 'It is the falling of the axe,' he replied. 'The king is not then saved!—he is dead!—he is dead!' I pronounced at least ten times these words—'he is dead!' I became insensible for some minutes, and, without knowing by whom, I had been taken from the crowd, I found myself on the Quai des Théatins: there I recovered some degree of recollection, but I could utter no word except 'he is dead!' In a state of distraction I reached home, but at least an hour elapsed before I had perfectly regained my senses."

To the Editor, &c.

SIR,—I observed in your last number of the *Literary Gazette* a mention made of a person

at Berlin having presented to the arts and sciences there, an *article* for silk shirts.

I am not aware of the said *article* being a new discovery, I am now manufacturing and have been for sometime an *article* of silk Mixt with other *articles* which produce an *article* of the appearance of silk, possessing all the qualities of silk and for which I have obtained his Majesty's Royal Patent, this *article* is not only used for shirts, but for sheets to Sleep in, and for various other uses, as a substitute for Flannel next the skin, and strongly recommended by the most Eminent Physicians as being very conducive to Health and very particularly so, for weak and sickly constitutions, It is also made in colors in stripes and checks for Shirts, that may be used for summer, without waistcoats and well calculated for all warm or cold climates.

If you will please to Insert this or with any alteration you may deem proper in your next Number you will much oblige, Sir your most obedient

No. 37 Basinghall St.
5 Aug. 1830.

NAISH and Co.

I shall be Glad to shew you or any of your Friends the various *articles*, and if you will please to call a pair of Gloves of the same *article* will be at your Service.*

ARTS AND SCIENCES.

ASTRONOMY.

A valued correspondent, referring to Mr. Bucke's letter, which appeared in our No. 703, while fully subscribing to the utility and convenience of the proposed Nomenclature of the Satellites, differs from the conclusions on one or two other points adverted to in that essay.

"You infer," he says to the writer, 'that it must be a necessary consequence (of attraction), since Jupiter disturbs the motions of Saturn on one side, that there must be one large primary planet, or several smaller ones (like Ceres, Juno, Pallas, and Vesta), between his orbit and that of Uranus.' But how does such a theory agree with the law of the excesses of the planetary distances discovered by Professor Bode? A law, which has been extended to the satellites in the last volume of the Cambridge Philosophical Transactions, and seems as thoroughly established as the celebrated one of Kepler. According to this law, the excesses of the planetary distances above Mercury form a geometrical series, of which the common ratio is 2; each orbit in ascent being double the distance of the next inferior one from that of Mercury. Its soundness was demonstrated by the subsequent discovery of the Asteroids moving in the assigned path, at nearly the same mean distances from the sun, being about half the distance of Jupiter, and twice that of Mars from Mercury. Saturn revolves at twice the distance of Jupiter, and Uranus at twice that of Saturn. Is it not therefore necessary to the harmony of the system, that Uranus must be the next primary planet to Saturn?

"You infer from the retrograde motions of the satellites of Uranus, that he is 'the last primary planet of our system,' and that these motions 'indicate the approach, and indeed the actual beginning, of another system, of which they are at once the heralds and the connecting links.' But, as according to the established recession of the planetary orbits, the next above Uranus (if any such there be) would be

at double that planet's distance from Mercury, how inconceivably greater must be that of the nearest planet of the next system to ours? And how can Uranus or his satellites be imagined, any more than our other planets, or indeed at all, within the sphere of that system's attraction? And all this without reference to the immeasurable distances of the fixed stars, the admitted centres of other systems.

"I would further remark, in reference to your opinion of the received account of 'the origin of Ceres, Pallas, Juno, and Vesta, being (to say the least) extremely unsatisfactory,' &c.—that the theory of their origin, from an exploded planet formerly moving between the orbits of Mars and Jupiter, which I take to be that you allude to, seems directly to result from Bode's law; because this law, and the harmony of the whole system, requires one original primary planet within that zone, and not four. Does it not therefore immediately follow, that the four asteroids must of necessity be fragments either of that original planet or of a dismembered secondary system like Jupiter's? And this, independent of the arguments to be derived from the proximity and intersections of their orbits, which have conducted astronomers to the same conclusion. Indeed, with the above-mentioned law, and its proofs before us, any longer to suppose the asteroids original independent members of the solar system, would, I apprehend, be to suppose an anomaly in the all-perfect and harmonious works of creation. The existence of many, perhaps hundreds, of analogous fragments of the exploded planet or system, the majority of which are probably far too minute for the highest telescopic vision, may also doubtless be inferred."

"Kennington.

J. CULLMORE."

Upon the whole of this correspondence, the subject being one of the highest scientific importance, we would shortly remark, that Mr. Bucke is correct respecting the satellites of Saturn; they are not numbered according to their order of distance but discovery; thus the sixth and seventh are, in fact, the first and second.

It does not seem necessary that there should be a large planet revolving between Saturn and Uranus, to complete the equilibrium of the system; for though Jupiter does disturb the motions of Saturn, he is himself disturbed by Saturn; but those mutual perturbations become compensated after a lapse of ages.

The arrangement of the system of Uranus is very singular and amazing—the satellites retrograde, and moving nearly at right angles to the ecliptic: but there does not seem sufficient reason for supposing that it is the exterior planet.

Respecting *undiscovered planets*, Mr. B. is, perhaps, nearer the mark than he is aware: several small planets are suspected; the splendid catalogues of stars by Bessel and Struve, and the list of the Astronomical Society, will tend very considerably to set this question at rest; when these catalogues come to be revised, by going over the stars again, some may be missed, others may be found, proving that some which have been classed as fixed stars are, in fact, planets. There is ground for the suspicion, which, if confirmed, will completely upset the "explosion system."

The comet of 1770, one of great bulk, passed through the system of Jupiter, and was retained four months near his orb, without having any perceptible effect on the motions or places of the satellites; a sufficient proof that comets possess very little matter in proportion to their magnitude. We can expect but little satisfac-

* Having received a letter of this kind, our sense of justice induces us to publish it, and our sense of literature not to alter it. We say nothing about the *article*; but we think we have won our gloves.—Ed. L. G.

tion from such a visit to the system of Uranus.*

EXPEDITIONS.

A GERMAN periodical of recent date contains a letter addressed to a literary friend in Germany by Dr. Mertens, secretary to the Academy of Sciences at St. Petersburg, and Naturalist to the Russian expedition to Behring's Straits, and thence to Manilla, and farther to some imperfectly known islands in the eastern ocean. It describes the volcanoes of Kamschatka, &c.; and is dated from the harbour of St. Peter and St. Paul, in October 1828, at which period the Siniavin, having completed her survey of the Straits of Behring, &c. was within a week of her departure for Manilla.

It appears highly probable from the frequency of Russian voyages of discovery in the Pacific, that the Russians will, ere long, take possession of and colonise some of the most productive islands. In Dobell's travels through Kamschatka, China, &c. (published April 1830), after enumerating the many local and other advantages of Kamschatka, he particularly mentions its vicinity to the most fertile and populous countries on the globe, and states that the passage thence to any part of the Japanese islands, is only ten or twelve days; to the Sandwich isles, to Macao, the Philippines, or any of the Indo-Chinese islands, only thirty or forty days; to the N. W. coast of America, California, or the islands of the Great Pacific, sixty days.

A chain of island-groups extends from New Holland to Kamschatka, namely, the Moluccas; the large islands of Borneo and New Guinea; the Carolinas, the Philippines, the Ladrões, the Loo-Choo isles, the Japanese isles, the Zezo isles, the Kourile isles, and others of less importance. In this immeasurable Archipelago, the Philippines alone consist of not fewer than 1200 islands, of which the Spaniards occupy only Luzou (Manilla), Mindanao, Samar, Leyte, Mindoro, Panay, Negros, Zebu, and the Calamianes; and on this insignificant number they possess merely portions of territory near the sea, while the interiors are very little known. Most of the islands above named are of volcanic origin, presenting great variety of surface, and valleys of singular fertility. The island of New Guinea alone is well worthy of a national expedition, with a view to present traffic and ultimate colonisation. This immense island, which is immediately north of New Holland, and not farther from England than the Swan River, is preferable to Borneo, being farther from the equinoctial line, and possessing, from its varied and mountainous surface, a climate better suited to European constitutions.

In its fertile groves and valleys the spices of the Moluccas grow wild; and of the following list of valuable produce, the growth of the Moluccas and Philippines, many grow in New Guinea, and all might easily be cultivated to any extent.

Sugar of the finest quality, coffee, cocoa, pepper, ginger, nutmegs, cloves, almonds, coconuts, rice, tobacco of superlative excellence,

* Our ingenious and scientific correspondent, Mr. Bucke, does not seem to be aware, that the satellites of Jupiter when first discovered by Galileo, were named by him *Sidera Medicea*. The first satellite, *Cæmon minor*; the second, *Cæmon major*; the third, *Mæia Medicea*; and the fourth, *Katherina Medicea*. Simon Marius gave the first satellite the name of *Jovial Mercury*; the second, that of *Jovial Venus*, &c. Johannes Baptistæ Hodierna (who was the first that published Ephemerides of the motions of these satellites), names the first *Principiarius*; the second, *Victriarius*; the third, *Comitiarius*; and the fourth, *Fernandipharis*; each of which names were intended as a compliment to the reigning family in Tuscany.

oranges, dates, tamarinds, pine-apples, paradise figs and other delicious fruits, hemp-trees, cotton of superfine staple, precious dyewoods, ebony and many other finely-grained and beautiful woods for cabinet-makers, also camphor trees, areka, and betel.

Such are the capabilities of New Guinea, an island discovered early in the sixteenth century, but hitherto overlooked by all the colonising nations of Europe; containing a surface exceeding that of Borneo, over which a population of half a million is thinly scattered. Here also the wild bees produce immense quantities of honey and wax; here are birds of paradise and other birds innumerable, and most of them suitable for the table: also cattle and pigs, buffaloes, stags, goats, horses, and various kinds of monkeys. The seas are stored with shell and other fish, also pearls and ambergris; while there is good reason to believe, that the mountains are rich in minerals, especially gold and iron, and that the river-sands contain gold-dust. The produce of New Holland and Van Diemen's Land is meagre and contemptible when compared with the boundless variety and opulence of New Guinea; and we throw out these hints from having seen that Mr. Buckingham again explained the nature of his projected voyage at a public meeting on Thursday last. Let him survey this island and make its advantages known—he would find numerous settlers from New Holland, Hindostan, and Great Britain, to recompense all the toils and dangers of his expedition.

LITERARY AND LEARNED.

ROYAL PATRONAGE OF GREAT PUBLIC AND NATIONAL INSTITUTIONS.

IN our last we recorded his Majesty's gracious declaration of patronage to the King's College now erecting, and to form the left wing of Somerset House; and in a preceding *Literary Gazette* we also stated that his Majesty had in the same gracious manner placed himself at the head of the Royal Asiatic Society—a Society already conducted with a degree of energy and judgment which scarcely needed an addition to its strength and spirit, however grateful such an addition must be.

But his Majesty has not stopped here with his encouragement of those things which contribute most to the power and refinement of a nation, and to the lasting splendour and glory of a crown. It has been mentioned that the King's pleasure was communicated to the Royal Academy, founded by his venerated father, and a request made to the Council which manages its affairs, that it should point out the best means of promoting the cultivation of the Fine Arts. In like manner has William IV. notified (through Sir Robert Peel) to the Royal Society of Literature, the spontaneous and munificent foundation of his late lamented brother, that he consents to be the patron of this noble Institution. The Royal Society, too, has been honoured by the King's attention, and we believe we may consequently anticipate some considerable changes in the government of that learned and scientific body:—we have reason to expect that the excellent president, Mr. Davies Gilbert, will retire from that high station, and that H. R. H. the Duke of Sussex will be elected in his stead. With every feeling of regard and esteem for Mr. Gilbert—and he has eminently deserved them by his personal conduct and great attainments—it may be allowed us to congratulate the Society on the probability of having a prince of the blood at its head, and one likely to quash all the

cabals and disagreements which have for some time unfortunately interrupted the purer pursuits of scientific objects.* This arrangement, we understand, will be agreeable to his Majesty's wishes.

We are not among the cavillers who think finding fault with every thing the best road to improvement; but neither can we be blind to the fact, that long-established systems have a tendency to degenerate (were it only into inactivity), and that an occasional infusion of judicious change and reform does a great deal of public good. With regard to the Royal Academy, we are not aware that it has yet found time to reply to his Majesty's patriotic inquiry; but we are sure that its constitution is susceptible of very beneficial alterations. An exclusive party of artists managing all the concerns of art is in itself objectionable—since every individual must have personal and private interests opposed to those of the whole profession. There ought unquestionably to be a fair proportion of eligible persons unconnected with the practice of any of the arts (sculpture, architecture, painting, engraving,) upon the council of the Academy, where their mere presence would lead to justice being done to the numerous, and often most accomplished, aspirants who were not academicians. In the annual exhibitions it is too much to expect that an artist who has the power of choosing favourable places for his own productions will voluntarily yield them up to some other claimant who is out of the pale, and throw himself into the back ground. Thus there is no season in which we are not inundated with complaints on this subject. And another part of the existing mode is perhaps still more objectionable;—we allude to the members of the Academy being allowed to paint on their pictures after they are hung up. Every one at all acquainted with the art knows that the consequence of this is the making of our exhibition rooms mere patch-work, where pictures of intrinsic excellence are completely destroyed by the whelming glare of their neighbours, wrought up to the requisite pitch of gilding and colour. Nothing can be more unfair than this; and we have often been astonished when we saw pictures after the show was over, and found on examination that its brilliant ornaments were daubs, and some of its obscured and unnoticed performances honours to the English school. Another effect of the opposition of individual to general benefits is the use, or rather the abuse, of the invitations to private views, the Academy dinners, and other little complimentary opportunities. We firmly believe that not one in five hundred of these is addressed to the advancement of the national arts: on the contrary, they are invariably disposed of to

* As a proof of the necessary result of such circumstances, and the deterioration of the country in the eyes of the world when compared with the advance of the eyes of other nations in the highest walks of science, the following statement has been made to us. The *Nautical Almanac* was (as is well known) commenced many years ago by the celebrated Dr. Maskelyne, and was found to be of so great importance, that scarcely a vessel left England without having a copy on board. Since that period, however, many deficiencies and errors, especially the former, have been discovered in Dr. Maskelyne's work. To ascertain the best mode of remedying these, Lord Melville applied the other day to ———. The plan suggested by this gentleman to his lordship was, to translate the *Ephemeris* of Professor Encke, the astronomer royal at Berlin, which is published every year in that city, and to reduce the meridian of Berlin, and adapt it to that of Greenwich!!!—Whilst England possesses native philosophers equal to the task, we are glad to find that Lord Melville did not act upon this suggestion; for he soon after transferred his inquiry to the Astronomical Society of London—a council of which was immediately called, for the purpose of giving that attention to his lordship's application which its interest required.

procure patronage for the artist who is the possessor of the power of offering them. In this light, and we are sorry to say in most others, the fine arts are as much a trade as chandling or shoemaking. Instead of those ennobling sentiments, and the thirst for fame, which in former days and in foreign countries made painters the companions of the greatest and the wisest men of the age, the profession has become a mere commercial pursuit; and the greedy and unjustifiable huckstering about copyrights to be hired out to engravers and printsellers, is only one of the disgraceful indications of this debasing practice.

How the Academy disposes of its rich funds is unknown out of the body. We have been assured by members, men *per se* of character and integrity, that they are faithfully and liberally administered, and therefore we can only doubt this, in so far as our opinion of what is liberal may differ from the opinions of our informants: we must add, that there are few external evidences of the fact apparent. The last remark we shall offer to the Academy is upon the wretched way in which its honours are attained,—by cringing, fawning, and intriguing, and not by superior merits and genius. We have frequently met with foreigners who were utterly confounded on going over the names of our foremost artists, and discovering that some whom they properly ranked as the very first in order, were not members of the R. A.; while others, of very middling talents, and of no note whatever, were graced by that title. When asked why this was, we never could answer the question; for we did not like to repeat what we had been told, that an artist must grovel and supplicate, or he is not eligible for admission. It is no wonder then that this institution should have done nothing, and worse than nothing, for our National Arts. Its school is the school for the encouragement of portrait painting, in preference to every other style, and money-making as its reward. To such persons as the late Lord de Tabley, and to the British Institution and its supporters, the country owes all its debt of gratitude for any advance in the higher walks.

Many intelligent men have been so struck by the insufficiency of the results from associations, when compared with the hopes held out by their originators and friends, as to deny their utility in any case whatever; and to maintain, that, in this country at least, it was infinitely better to leave every thing to individual exertion. But the premises do not seem to us to warrant this conclusion; for societies, if they do not do all that their sanguine promoters predicate, always contribute something to the general stock: and besides, their existence not only does not interfere with individual enterprise, but in innumerable instances calls it forth, stimulates, and cherishes it. On these grounds we trust the Geographical Society, which we noticed at large in our last Number, will also find the Sovereign inclined to become its patron. So intimately connected with our navy, it has a natural claim to this distinction; and we are convinced his Majesty would not hesitate an instant in bestowing his countenance upon it.

That most meritorious and truly benevolent charity, the Literary Fund, which pours balm into the wounds of the helpless children of literature, is also worthy of the royal protection which has been bestowed upon it; and sure we are, that the consciousness of fostering so estimable and well-regulated an Institution, must be delightful even to the widely extended philanthropy of the royal breast.

While on these topics, there is one idea more which we desire to broach, but without being able to discuss its bearings on one side or the other. We are persuaded that it would be a permanent glory to the present reign, and a great encouragement to exalted endeavours, were the King to found an Order of Honour, to be bestowed upon the eminent and deserving in the various departments of learning, the sciences, and the fine arts. There is no argument against this which might not with equal force be urged against every kind of public distinction, for success in arms, in adventure, in politics, or in any other line of life. When we are told, therefore, of probable jealousies, and envy, and disappointments, and repinings, it is equally strong against the Garter, the Thistle, and the Bath. Nor have evils resulted from a similar course in other nations where it has been adopted; on the contrary, the court has not been the less adorned, nor the people less improved, where the former witnessed crosses and ribands for civic services, mingled with the proudest of other orders; and the latter saw the labours of the instructed and God-gifted stimulated by the grant of public honours. We can imagine no brighter circle round the throne of William IV. than one of Literary Stars.

PINE ARTS.

NEW PUBLICATIONS.

Lodge's Portraits of Illustrious Personages of Great Britain, with Memoirs of their Lives and Actions. Folio. Part XXXIV. Second Edition, 8vo. and 4to. Part XL. Third (monthly) Edition, 8vo. and 4to. No. 20. Fourth (monthly) Edition, 8vo. and 4to. No. 16. Harding and Lepard.

WE have here to record the appearance of new parts of four distinct editions of this popular publication in various stages of progress at the same time,—an example of literary success altogether without parallel, and powerfully denoting the increasing avidity with which works of merit are now sought by the mass of society, when published upon a scale that enables the middling classes to purchase them. The eminent persons, whose portraits and lives are commemorated in this new part of the folio edition of Mr. Lodge's work, are, the Earl of Burlington; the first Duke of Devonshire; the second Duke of Ormond; Thomas Holles Pelham, Duke of Newcastle, who directed the affairs of state for nearly half a century; the first Duke of Leeds; and the hero of Abonkir, Sir Ralph Abercromby. It is from the passage in the last-named memoir, descriptive of our gallant countryman receiving his death-wound, that we shall select our quotation. Mr. Lodge observes: "It was in this charge of the cavalry that the gallant Sir Ralph Abercromby, always anxious to be most forward in danger, received his mortal wound. On the first alarm he had mounted his horse, and finding that the right wing was seriously engaged, proceeded thither. When he came near, he despatched his aides-de-camp with orders to different brigades; and whilst thus alone, some dragoons of the French cavalry penetrated to the spot, and he was thrown from his horse. One of them, supposed from the tassel of his sword to have been an officer, then rode at him, and attempted to cut him down; but just as the point of his sword was falling, his natural heroism, and the energy of the moment, so invigorated the veteran general, that he seized the sword, wrested it from the Frenchman's hand, and at that instant the officer was bayoneted by a soldier of the forty-second." Sir

Sydney Smith was the first officer who came to him, and who by accident having broken his own sword, which Sir Ralph observing, instantly presented to him the one he had so gloriously acquired."

The portraits are executed with their usual merit, from authentic pictures in the mansions of the noble descendants of the persons represented, the present Dukes of Devonshire, Newcastle, Leeds, and of the Hon. James Abercromby; and if Mr. Lodge's work thus continues to gather strength and increase in interest as it approaches our own times, there is no saying to what circulation it may attain, or how many editions we may witness in simultaneous progress, addressed, as it is, to the best feelings of every one who thinks as he ought of the venerated names by whom his country has been exalted to her present pre-eminence;—of those warriors and sages, whose memory is associated with all that is dearest and most glorious to Englishmen.

The Black Knight and the Clerk of Copmanhurst revelling, from Ivanhoe. Painted by H. Fradelle; engraved by W. Say.

Rebecca and Ivanhoe. Same Painter; engraved by T. Lupton.

THESE are companion prints, of a large size, and, as far as contrast goes, are well imagined; the revels of the jovial companions in the friar's humble cell being well opposed to the characters engaged in the humane office of tending the wounded knight in the splendid chamber of the wealthy Jew. In both, however, we think there is too much of the artificial; and, for effect, the lights are certainly too much scattered. As specimens of mezzotinto they are truly admirable, and may well take their stand among the highest productions of that pleasing branch of art. In painting such scenes, it must be confessed, the painter has great difficulties to contend against; and not the least that which arises out of the graphic vigour and spirit of the original author, who has so described them as to create images already formed in the mind of every reader. Instead, therefore, of being viewed as new conceptions, they are referred to a standard existing in our fancy; and the picture is prized or disapproved of, as it agrees with, or departs from, our preconceived notions. Thus we confess, that, with the exception of the lovely Rebecca, and, perhaps, the Jew leech, we are not disposed to recognise Scott's *dramatis personæ* either in the figures or expression of Mr. Fradelle's representations. Ivanhoe and the Black Knight both smack of the theatre; nor does the attitude of the friar escape from this imputation. The dogs in the latter, and the accessories in the former, are carefully and excellently done; so that withal we must repeat our general praise and recommendation of these works, as brilliant ornaments of the portfolio.

Landscape Illustrations of the Waverley Novels. Part IV. London, C. Tilt; J. Andrews: Edinburgh, T. Ireland, jun.

IN this part the first view is Durham, after Robson, and one of the most beautiful gems we ever saw. For grandeur, the buildings in the back-ground; for rural simplicity, the objects and landscape in the fore-ground; for effect, the management of the sky and the lights throughout; and for execution, the burin of Finden; have combined to produce nothing preferable in this style of art. The Tolbooth (the second engraving) is equally picturesque and interesting. Nasmyth has here preserved what

time has caused to disappear. Caerlaverock Castle, by D. Roberts; and London from Highgate, by J. Barret; are worthy companions of the preceding two.

Great Britain Illustrated. No. 28. C. Tilt. FROM Westall's drawings, with Moule's descriptions, this moderately priced work goes on favourably. Calne, Newport in Monmouthshire, Pelham Crescent Hastings, and Bradford, all engraved by E. Francis, are the various and well-chosen subjects in this No.

Eve. (From Milton). Painted and engraved by J. Mills. J. Brooker.

THIS is a very sweet piece of mezzotinto, in which our first mother is seen when "adorned the most," and just listening to the serpent in Eden. The landscape part is rich and well managed; and the figure well studied, without being either very graceful, or rounded into the usual voluptuousness in which the brethren of the brush are so fond of indulging.

ORIGINAL POETRY.

ALL IS NOT DARK BELOW.

COLD and ungrateful must the bosoms be
Of those who look upon the sunlit earth,
And trace the finger of the Deity,
Yet own no cheerfulness and feel no mirth;
Who deem all dark the lot of man below,
One changeless gloom, one all-pervading woe.
Hath God then made for nought each lovely thing,
That sheds its beauty o'er this world of ours;
The feathered warblers, that so sweetly sing,
The ever-waving wood, the scented flowers?
I cannot think of these, and yet believe
That man was only formed to mourn and grieve.
But who can look upon the azure sky,
And mark the glorious orbs revolving there,
Or turn his glance towards earth's verdant dye,
And deem, where all is formed so bright and fair,
That man was made to wander on in gloom,
Then sink in sorrow to the silent tomb?
'Tis true earth's joys are ever mixed with care,
And men are fated to one common curse;
But should we therefore cherish dark despair,
And make our too imperfect being worse?
Though "weep with them that weep" is God's own voice,
He bids us, too, "with those who joy rejoice."

SKETCHES OF SOCIETY.

[Under this head, to-day, we insert some very curious matter, for which we are indebted to a high continental source: the anecdote of Prince Polignac is very striking, and we have no doubt of its veracity.]

Prince Jules of Polignac.—The father of this prince emigrated, like many other French noblemen, at the beginning of the Revolution, and resided for some time at Radstadt (Grand Duchy of Baden). On the birth-day of his son Jules (the present too famous ex-minister of France), when he had attained his tenth year, he invited all his companions in misfortune, and some other friends, and shewed them into a room, where, upon a table, a crucifix and two lighted candles had been placed. He then ordered young Jules to approach the table, and, in imitation of Amilcar (Hannibal's father), bound him by an oath, that he would always oppose the French Revolution and the principles to which it had given birth. This solemn act seems to have powerfully worked upon the mind of the young nobleman, and may explain in some measure his detestation of

liberal ideas. With right, one can apply to him, what the poet says:

"Children, like tender osiers, take the bow,
And as they first are fashioned always grow."*

Walhalla.—In the northern mythology, a palace called Walhalla was appropriated for the heroes who met death in battle. The present king of Bavaria, when hereditary prince, was so ravished by this illustrious idea, that he decided on carrying it into execution in good time. John Müller, the renowned historian, whom he made acquainted with his resolution, wrote to him in the following terms, twenty years ago, at the very time Germany was suffering under the French thralldom: "It does your highness great honour, that you do not abandon the elevated idea of the Walhalla, this ornament of our country. Never was the German nation more in need of not forgetting herself, in order to shew her character in this new era with dignity. Fathers and their offspring, if in shadows the mind is still alive, and if, as we hope, the German trunk shall still flourish for future times,—fathers, I repeat, and their offspring, will thank you, noblest of the Wittelsbachs, that you, in a time which threatens to deprive us of ourselves, have been mindful of the German father-land." This magnanimous idea, of which the juvenile mind of the prince was so fond, the king now puts into execution. Last May, the preparations were begun for building the Walhalla on a hill close to Donaustauf (a country town not far from Ratisbon), and on the 18th of next October, the anniversary of the battle of Leipzig, the solemnity of laying the first stone will take place in the king's presence. This temple, supported by a number of marble pillars, and adorned with the busts of great men, will become one of the noblest monuments of the age. The place where the Walhalla will stand is exceedingly well selected, as a ravishing landscape surrounds the hill, from whose top this majestic building is to look down. Many travellers will, in future, visit a place which contains all the predominant characters of Germany's warlike history.

The late Grand Duke of Darmstadt.—It is a curious circumstance, that this prince foretold his death. "I shall die," he used to say at different times, "on the very day my father breathed his last;" viz. the 6th of April; and his prophecy has been fulfilled. It is also a curious coincidence in high life, that this prince, as well as two of his sisters, celebrated their golden wedding-feasts (*i. e.* a celebration on the fiftieth anniversary of the marriage).

Love of Music in Bohemia and Germany.—A miller in the hamlet Beraun, in Bohemia, bequeathed, some years ago, his whole fortune, amounting to seventeen thousand florins, for the foundation of a conservatory of music. On the day of installation, eighty country musicians executed Mozart's *Requiem* and Palestrino's *Miserere* in a masterly style. Last year, Haydn's oratorio *The Creation* was performed by dilettanti, at Heppenheim, a small country town in the Grand Duchy of Darmstadt. The 6th of last June, the annual musical festival took place at Spire, where four hundred and forty artists executed Schneider's *Last Judgment* with great precision and applause.

DRAMA.

* This anecdote is from an eye-witness, and play-fellow of the prince, who still lives at Radstadt.

himself compromised by a notice of an impropriety in our dramatic criticism, we are induced to insert the following elucidatory and exculpatory letter; adding only the expression of our own satisfaction, that a composer to whose talents we have been indebted for so much grateful enjoyment should have rectified a mistake that must have been so painful to himself and others.

T. R. Adelphi, 5th Aug., 1830.

Dear Sir,—The appearance of your name in the *Literary Gazette* of the 31st ult. was certainly caused by your application of the paragraph of the former Saturday's paper to yourself.

I have already explained to you, personally, on the testimony of Mr. Parry, that he entirely exonerated you from the charge made against you; and I am very glad to receive the assurance of so respectable a person, and that such an accusation should be refuted. As I am certain that the parties who communicated the disagreeable affair to me in strict confidence, were not actuated by any bad motive, but were labouring under an erroneous idea, and were misled by the sounds of the opposition about the box which you occupied, and also in the box where Mr. Parry was seated,—I cannot, of course, in honour or justice, give up their names. It must surely be enough for you to know, that the inquiry into the truth of the report has ended in your acquittal in my mind, and in that of others to whom I had communicated the circumstance.

You are at liberty to make any use you please of this letter. I am, dear sir, yours truly,
To John Barnett, Esq. R. B. PEARE.

VARIETIES.

Paris Academy of Sciences.—The annual sitting of this Society was held a few days ago, when most of the prizes were distributed. It was announced, however, that the Academy, in the absence of sufficient claims, had postponed the grand prizes for mathematics and natural sciences. Several new prizes were announced for different branches of science—surgery, chemistry, mathematics, &c.

Asiatic and African Population.—The extent of the Ottoman empire, comprehending Turkey in Europe (of which Moldavia, Wallachia, Bulgaria, Servia, and Bosnia, form a part), Asia Minor, the Islands of Candia and Cyprus, a large portion of Armenia, Kurdistan, Irack-Arabia, Mesopotamia, Assyria, Syria, Palestine, Egypt, and a great part of Nubia, with the exception of the new Greek state—is estimated at about 1,064,000 square miles; the population at about 25,000,000 souls. The population of the vassals of the Ottoman empire is estimated—Tripoli at 2,000,000; Tunis at 2,800,000; and Algiers at 2,500,000 souls. The extent of the empire of Morocco is estimated at 130,000 square miles; its population at 4,500,000 souls. The extent of the kingdom of Abyssinia is about 130,000 square miles; its population, 1,500,000 souls. The territory of the Iman of Muscat extends about 500 miles along the coast; the number of inhabitants probably does not exceed 1,000,000. The extent of Persia is about 350,000 square miles; its population about 9,000,000 souls. The extent of Afghanistan (between Persia and India) is 172,000 square miles; its population, 6,500,000 souls. Belouchistana (to the south of the country of the Afghans) has about 3,000,000 of inhabitants. The extent of Bokhara is 173,000 square miles; its population, 2,500,000 souls.

Russia.—Manufactories of every description have increased rapidly in number in Russia during the last five years. Twelve months ago there were in Archangel 42 of different descriptions; in the government of Witehek, 4 cloth manufactories, 31 tanneries, and 7 others; in the government of Kalouga, 27 cotton-factories, 15 paper-manufactories, and 100 others, employing altogether 12,000 hands. This was an increase of double within twenty years. The

culture of tobacco in parts of the Russian empire is followed with success; and the breed of Merino sheep in other parts is very lucrative: the wool is said to be of the best possible quality.

Egypt.—M. de Prokesch, of the Austrian navy, has just published at Vienna a work on Egypt and Asia Minor, in which he states, that Egypt is divided into 24 *nazirats*; this division having been made by the viceroy in 1826, in preference to that of provinces, then 14 in number. Lower Egypt consists of the following *nazirats*:—1. Kelioubieh; 2. Belbys; 3. Chybeh; 4. Mit-Kammer; 5. Mansoura; 6. Damietta; 7. Tantah; 8. Mck-halleh; 9. Foua; 10. Melik; 11. Menouff; 12. Negyleh; 13. Damanhour; and Upper Egypt, of 14. Djizeh; 15. Atfyeh; 16. Bouch; 17. Benisouet; 18. Favioum; 19. Minich; 20. Monfalout; 21. Chiout; 22. Djirdjeh; 23. Kané; 24. Esné. The term Middle Egypt, which comprises the country between Cairo and Monfalout, is, he says, unknown to the natives. Cairo, with Boulack and Fostad, or Old Cairo, are divided into separate districts. At the head of each of the *nazirats* is a *nazir*, who is commonly called "bey of the people." He is charged with the government of the district, the distribution of the lands, and the collection of the taxes. The city of Alexandria and its dependencies have a particular governor, Moharem Bey, the son-in-law of the viceroy. The latter resides chiefly at Cairo, but goes for some months in the year to Alexandria, where he is the guest of his son-in-law. In 1827, there were in Egypt 1,958,550 feddens of cultivated land, which produced to the viceroy in *miri* 73,937,925 piastres. Besides this tax there is one on houses, of from 10 to 100 piastres each. The number of houses is 618,600, producing 24,000,000 of piastres per annum. Every date-tree also pays on an average 65 piastres of tax per annum. They are in number five millions, and yield 3,750,000 piastres. In addition, there are enormous duties on imports and exports, fees for permission to carry on certain branches of manufacture and agriculture, &c. altogether yielding to the viceroy an enormous revenue.

A fruitful Mother.—In a village in the neighbourhood of Venice, a woman was lately delivered of six living boys. Four of them died at the end of a fortnight, but the two others survive, and are likely to do well.

Tobacco.—The cultivation of every description of American tobacco has been lately carried on in Russia with great success.

Salt.—The use of salt in the food of horses is becoming very general in the Netherlands. One of the first agriculturists in the neighbourhood of Brussels says, in a letter to a friend here, "I give salt to all my horses with the best effect; my own cabriolet horse has had from an ounce to an ounce and a half of salt in his corn every night for the last three years; and during that time he has had excellent health, and taken no physic."

Lithotripsy.—Baron Heurteloup has within the last few days operated with complete success, with the brize coque, upon a stone composed of uric acid, and weighing one hundred and forty grains. The patient, who was nearly fifty years of age, suffered very little inconvenience from the operation.

Preservation of Wood.—Put 12 ounces of resin in an iron pot, and when it is melted, add 8 ounces of stick sulphur. When these are liquefied, add to them 10 quarts of sperm-ceti oil. Heat the whole moderately, and add by degrees about 2 ounces of yellow wax, cut

into small pieces. Keep this mixture stirred frequently; and when it is well melted, add carefully any colour that is required, the powder being first mixed with a little oil. Two or three coats of this varnish or paint will preserve wood for twenty years.—*French Paper.*

Paganini.—This extraordinary musician is now at Frankfort; but it is said that he will speedily arrive in England.

An accommodating Parson.—A Paris paper of the 9th says: "It is related that on Sunday last, a *curé* performing service at a church in the environs of Paris, began, as usual, to chant the prayer for the king—'Domine, salvum fac regem;' but, as soon as he arrived at *fac*, he stopped short. After a pause he began again, in a loud voice, and pronounced, 'Domine, salvum fac le Gouvernement Provisoire,' to the great amusement of the congregation."

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXXIII. Aug. 17.]

The Sonnets of Shakespeare and Milton are in the press.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. July 1830.

Thermometer—Highest.....	82.50°	29th.
Lowest.....	40.75	16th.
Mean.....	59.51613	
Barometer—Highest.....	30.18	
Lowest.....	29.18	
Mean.....	29.68031	

Number of days of rain, 10.
Quantity of rain in inches and decimals, 2.45475.
Winds—1 East—7 West—0 North—4 South—3 North-east—5 South-east—10 South-west—1 North-west.

General Observations.—The commencement of the month was extremely wet, and the greater part of the rain fell in the first eleven days; but the whole quantity was little more than one half of what fell in July last year: the latter end of the month very fine, and the thermometer rose higher than since 1826; the barometer was also above the maximum and means of the last two years. Thunder heard on the 3d, 7th, and 30th, and lightning seen on the 29th, to the northward. An indistinct rainbow appeared on the 9th, in the evening. The evaporation 0.68775 of an inch.

TO CORRESPONDENTS.

If Mr. Fortunato la Moile publishes his work, we shall attend to it in due course; previously, we can do nothing. Maria is pretty and pathetic; but we must be ungalant. A Storm is also ineligible.

Referring to this No. of our *Gazette*, we are induced to point the attention of our readers to the Review of Lyell's Geology, and to the article headed Astronomy, as comprising some very striking and popular information respecting the past and (probable) future state of the world which we inhabit, and the system of which it forms a part. In the *Buonaparte MS.*, the story of Prince Polignac, and other miscellanies, they will find matter of immediate interest, which would relieve them from scientific subjects, even if dry, while these are not.

ADVERTISEMENTS,

Connected with Literature and the Arts.

MANCHESTER COLLEGE, YORK.
Under the superintendance of the Rev. C. WELL-BELOVED, Theological Tutor and Principal—the Rev. J. KENRICK, M.A. Tutor in Ancient Languages and History—the Rev. W. HINCKS, F.L.S. Tutor in Mathematics and Philosophy, and Resident Tutor.

The Committee of this Institution are of opinion that the present is a suitable time for calling the attention of parents and of the public at large, to the advantages which it offers for completing a course of liberal education, both on account of the increasing demand for such advantages,—which they believe the spirit of the present times must occasion,—and of their conviction that such a course of liberal education, lately made to improve the discipline of the College, entitle them to recommend it without hesitation to public confidence.

The plan of instruction embraces a constant attention to the study of the Greek and Latin Classics; an extensive course of Mathematics and Natural Philosophy; Latin and English Composition; Ancient and Modern History; Intellectual, Moral, and Political Philosophy, and Political Economy; and the Evidences of Natural and Revealed Religion. Instruction in the French, Italian, and Spanish Languages, may be obtained from able masters; and German is taught by the Rev. J. Kenrick. The Students breakfast, dine, and sup at the Table of the Resident Tutor, and have their apartments in buildings immediately adjoining his house, and enclosed in a common gate. The expenses to which they are subjected, independently of the charge for board and lectures, are very small; and the Committee challenge inquiry, both on account of the economy of the plan, and the character of the instruction afforded.

The Terms for Lay Students are One Hundred Guinea per Annum.

The importance of education is now so much felt amongst all classes, that parents must naturally be desirous of affording to their sons opportunities of improvement more extensive than can be enjoyed even at the best schools; and it will be acknowledged to be highly desirable that young men should be prepared for taking their places in the world, by passing a certain time in a situation where, while they are controlled in all essential points by the strict discipline of a school, they are not, as at home, children, but learn to act for themselves, and take upon themselves in some degree the management of their own affairs.

To these views the plan of Manchester College has been adapted. It offers the advantages of a college education unfettered by religious tests, and free from the danger of moral corruption, which the Committee feel assured, from an intimate acquaintance with its present state, that it will not disappoint those who approve of its general principles.

The College Session will commence on Friday, the 24th of September.

Applications for Admission of Students may be addressed to the Rev. C. Wellbeloved, Principal of the College; to the Treasurer, George William Wood, Esq. Manchester; or to either of the Secretaries, the Rev. J. J. Taylor, and S. D. Darbishire, Esq. Manchester.

Manchester, July 1830.

EDUCATION for INDIA, at the

LONDON ORIENTAL INSTITUTION, originally established Twelve Years ago, under the Auspices of the Hon. E. I. Company. It combines the Oriental, Classical, and Mathematical requisites for those preparing for the Civil or Military Service, for the East India House Examinations, or for Haileybury or Addiscombe. The same system is followed as at these Seminaries. The Oriental Languages by Professors who have studied them among the learned Natives of India; the Classics by a Graduate of Oxford. Classes for the Season to commence immediately. For particulars, apply at No. 2, South Crescent, Bedford Square, personally or by letter.

THE POETICAL WORKS OF ROBERT MONTGOMERY.

Address to the Public.
The most illiberal attacks having of late been repeatedly made upon me as a Poet, by certain Reviewers, who, in their desire to destroy the popularity and with a view to account for the extensive sale, of Mr. R. Montgomery's Poems, charge me with having unduly raised that author into public favour by a system of Puffing, which, they thus define—1st. By the Publisher having his own Review—2dly. By his exchanging favours with other Reviews—3dly. By his influencing the public opinion through the literary coteries—and 4thly. By his bribing the periodical press. I feel myself called upon to declare (and I defy any man living to disprove the assertion), that this is a deliberate and malicious calumny. 1st. I have no Review whatever—2dly. I have not the power of exchanging favours with other Reviews, and should disdain so to use it if I had—3dly. I am not connected, either directly or indirectly, with any of the coteries—and 4thly. I never bribed, or paid, or offered to pay, any individual connected with the periodical press, to praise the works of Mr. Montgomery, or any other works in which I have an interest. I shall make no comment on the motives which influence these gentlemen, nor point to the corrupted sources whence the venom flows; but I appeal to the public, whether it is not a gross abuse of critical power, and a flagrant instance of critical injustice, thus to invade my property and impugn my conduct, on grounds which, I repeat, are at once malicious, scandalous, and false?
SAMUEL MAUNDER.

TO THE TRADE.—Mr. E. DONOVAN,

Author of British Insects, Birds, &c. is disposed to enter into a Literary Undertaking of considerable promise with any respectable Bookseller. Letters, post-paid, addressed to him, No. 13, Baker Street, near the Asylum, Lambeth, will be attended to.

PORTRAIT of GEORGE the FOURTH.

Wanted to purchase, a Choice Proof before the Letters, of the Full-length Portrait of His late Majesty, engraved by Fladen from the Painting by Sir Thomas Lawrence. If any come framed and glazed it would not be objected to, or it would be purchased separately. Persons having such to dispose of, are requested to address a line (post-paid), stating the price and where the Engraving may be seen. Address, post-paid, to B. C. at Taylor's Architectural Library, 69, High Holborn.

TO BOOKSELLERS AND PRINT-SELLERS.—To be disposed of, with immediate possession, an old and successful Establishment in the above Lane, in one of the largest Cities in the West of England. The Premises are spacious, and fitted up in the most complete manner, and in every way undeniable. The Stock to be taken at a Valuation, and Part of the Purchase Money would be left on approved security if required.

Applications, post-paid, directed to B. B., at Messrs. Hurst and Chance, Booksellers, St. Paul's Churchyard, will receive due attention.

Architectural Library, 59, High Holborn.

This day is published,

THE ARTISAN'S TABLE, for immediately ascertaining the Amount of Wages due, calculated from Half an Hour to Twelve Days, at Ten Working Hours per Day, at the progressive Rates of from Ten to Forty Shillings per week. By EDWARD SANDELL.

Price 2s. on a Sheet; or 5s. mounted on a Board. Published by J. Taylor, Architectural Library, 59, High Holborn.

Where may be had, all Works on Architecture, Building, &c. at prices adapted to Workmen.

As above may be had,

Tables for the purchasing of Estates, Leases, or Annuities, and for the Renewing of Leases, &c. By W. Inwood. Small 8vo. price 7s.

MUSIC.

New National Songs.

OUR KING is a TRUE BRITISH SAILOR.

"Hard up with the helm, Britannia's sheet flows, Magna Charter on board will avail her, And letter she sails at the harder it blows, For her pilot's a king and a sailor."

The Words by Captain MITFORD, R.N. Dedicated to Her Majesty Queen Adelaide. 2s.

Our Queen is the Wife of a Sailor, written as a Companion to the above, by Captain Mitford. Dedicated to His Majesty. 2s.

Here's a Health to merry England, with additional Stanzas in honour of His Majesty. Composed by John Barnett. 2s.

England, the Home of the World. John Barnett. 2s.

The Pilot. By Thomas Haynes Bayly, Esq. 2s.

The Waterloo Medal. By T. H. Bayly, Esq. 2s.

The public are respectfully informed, that "Our King is a true British Sailor" from the great character of the words and music, will be one of the most popular naval songs since the days of Din-din. It is dedicated to our most gracious Queen Adelaide, and will, we think, be a decided favourite with the ladies of England. Published only by Mayhew and Co. 17, Old Bond Street; and to be had of every respectable Music-seller in the United Kingdom.

BOOKS PUBLISHED THIS DAY.

Just imported, in 1 vol. large 8vo. price 14s. boards,

Illustrated with several Engravings, price 5s. bound and lettered,

THE LITERARY and SCIENTIFIC CLASS-BOOK.

By the Rev. J. PLATTES.

Second edition, improved.

This work contains popular descriptions of the most interesting and useful objects of science, written in plain and familiar language. The design of the compiler has been to collect a series of reading lessons which should combine both information and amusement, and which should awaken the attention of youth to the study of the natural sciences, by the detail of such facts as are most likely to arrest attention and stimulate inquiry. The lessons in the end of the volume consist of a series of reflections on the works of creation, collected from the best modern writers, the sublime truths of natural theology being thus appropriately subjoined to the description of the universe, lead the youthful mind, by an easy process, from the contemplation of the material world to reverence and admiration of the all-wise and all-powerful Author of its existence.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Also, new editions of **Pinnock's Juvenile Reader, 1s. 6d.**

Explanatory English Reader, price 4s. 6d.

Introduction to the English Reader, price 5s.

 "A very ingenious and very interesting little work."—*Monthly Review*, Feb. 1.
 "A useful little work, full of amusing as well as valuable anecdotes and instances."—*Atlas*, 10th July.
Researches in Natural History, 2d edition, 18mo. 6s.
 "The chapter on the Chameleon is particularly interesting, and contains the fullest account of that singular animal. A learned disquisition on the ascent of the Spider follows in the second and third chapters. On the question of torpidity, and the numerous instances of torpid animals brought before us, with the facts that illustrate their habits, the author is very happy. The whole of the remarks on migration are valuable."—*Atlas*, 4th July, p. 441.

Price 6s. the Fifth Monthly Part of a new, greatly improved, and cheap edition of the
ENCYCLOPEDIA BRITANNICA, with Preliminary Dissertations.
 By Sir JAMES MACRINTOSH, and Professors STEWART, PLAYFAIR, and LESLIE.
 To be completed in Twenty Volumes, 4to. With a New Set of Engravings on Steel.
 Edited by Professor NAPIER.

Notice to Subscribers.
 The Proprietors of the Encyclopedia Britannica, resolved that no expense should be spared in rendering it worthy of the high character and liberal patronage it enjoys, are about to introduce an improvement, which cannot fail greatly to enhance the value of the book.
 The Maps illustrative of the work, which have hitherto been confined to a single quarto page, will now extend to twice the usual dimensions, and occupy two entire pages, each map forming a folio leaf, folded in the middle, and placed upon a guard. The subscribers will thus be furnished with a series of Maps of sufficient size for every purpose of consultation, while no advance will be made in the price of the book.
 The engravings will be executed in the best manner upon steel, by Sidney Hall, from new drawings after the most approved and recent authorities.
 Duplicates of the folio maps, to supply the place of those that have already appeared on the quarto scale, will be given in a succeeding part.
 Printed for Adam Black, Edinburgh; Simpkin and Marshall; Whittaker, Treacher, and Co.; Hamilton, Adams, and Co.; and Jennings and Chaplin, London; and John Cumming, Dublin.

Handsomely printed in 1 vol. 8vo. with a Portrait, price 18s. extra boards,
GEORGE IV. Memoirs of his Life and Reign, interspersed with numerous Personal Anecdotes; to which is prefixed an Historical Account of the House of Brunswick, from the earliest Period.
 By H. E. LLOYD, Esq.
 Published by Treuttel and Würtz, Treuttel, Jun. and Richter, 39, Soho Square.

Price 2s. 6d.
THE FIFTH of NOVEMBER; or, the Gunpowder Plot. An Historical Play. Supposed to be written by WILLIAM SHAKESPEARE.
 London: Baldwin and Co. Paternoster Row; and Carpenter and Son, Old Bond Street.
 Of whom may also be had, the 3d edition, enlarged, of **Modern Methodism Unmasked.** By a Layman. Price 2s. 6d.

Price 4s. 6d. bound and lettered,
THE HISTORICAL MISCELLANY.
 By W. C. TAYLOR, A.M.
 "This is an instructive volume for the youthful student, intended as a supplement to Pinnock's (Greek, Roman, and English) Histories. The first half of the volume is occupied with the primeval and classical periods, in which the author has particularly directed his attention to those branches of history on which school-books are frequently deficient, although directly illustrative of the general course of study. Among these topics may be instanced, the Histories of the Persians and Carthaginians, the antagonists and rivals of Greece and Rome. In the moral division especial attention is paid to the Feudal System and the Crusades, and afterwards to the English Empire in India, and British Commerce in general. The following is a series of British Biography, and, in conclusion, a View of the British Constitution. Prefixed to the volume is a Union Map, exhibiting, in one sheet, the ancient divisions of the world in red, and the modern in black,—an ingenious and very useful plan."—*Genl.'s Magazine*.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

By the same Author,
History of France and Normandy, from the Accession of Clovis to the Battle of Waterloo. 12mo. 6s. bound and lettered.
 May be had, gratis,
 Whittaker and Co.'s New School Catalogue.

New Theory of Astronomy.
 In 8vo. price 16s.
RUDIMENTS of the PRIMARY FORCES OF GRAVITY, MAGNETISM, and ELECTRICITY, in their Agency on the Heavenly Bodies.
 By P. MURPHY, Esq.
 "There is not a son or a daughter of Adam but has some concern in astronomy."—*Dr. Watts*.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Thomson's Arithmetic.
 The 4th edition, enlarged and improved, price 1s. 6d. bound,
A FIRST BOOK of ARITHMETIC; or, Arithmetic made Easy for Children. Containing above Nine Hundred Examples in the Fundamental Rules, the Rule of Three, and Practice; a Variety of Miscellaneous Questions, &c.
 By JOHN THOMSON.
 Printed for Whittaker, Treacher, and Co.; Ave Maria Lane.
 Also may be had,
 A Key to the same.

MANUSCRIPT SERMONS. A Series of Sixty Manuscript Sermons, in Fifteen Parts.
 By a DOCTOR of DIVINITY.
 Part III. containing Four Sermons, may now be had, price 6s.
 T. Cadell, Strand.
 Part IV. will be ready for delivery on the 1st of September, and the succeeding ones monthly.

Price 11s. bound,
THE SCOTTISH TOURIST and ITINERARY; or, a Guide to the Scenery and Antiquities of Scotland and the Western Islands. With a Description of the principal Steam-Boat Courses. 2d edition, with considerable additions and improvements. Illustrated by Maps and Views.
 Printed for Stirling and Kenney, and John Patraim, Edinburgh; Whittaker, Treacher, and Co. Ave Maria Lane, London.
 "The rapid sale of two large editions of the Scottish Tourist is a decided proof of the superiority both of its plan and execution over any similar work. The third edition, besides being illustrated by several new Plates, will be found to contain very considerable additions and improvements. The scenery of Loch Lomond, Loch Katrine, and Loch Tay, was visited last summer, by the author of the account of these places, as given in this edition.

In 1 vol. 8vo. price 18s.; or with Proof Impressions of the Plates, price 21s.
AN ACCOUNT of the GREAT FLOODS of August 1829, in the Province of Moray and adjoining Districts: exhibiting a View of their Effects on the Rivers Nairn, Findhorn, Lossie, Spey, Deveron, Don, Dea, and other Streams.
 By Sir THOMAS DICK LAUDER, Of Fountainhall, Bart. F.R.S.E. &c.
 Interspersed with Geological Remarks, Traditional Anecdotes, &c. and illustrated by 57 Etchings and Charts.
 "The waters prevailed."—*Genesis*.
 Printed for Adam Black, Edinburgh; and Longman and Co. London.

Price 11s. 1s.
THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD, Formerly Captain of Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.
 This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficient of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant recreation, to work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years.
 London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

Dr. Ayre on Dropsy.
 2d edition, price 8s. boards,
PATHOLOGICAL RESEARCHES concerning the True Origin and Nature of Dropsies, with an Explanatory View of an improved Method of treating these Diseases. 2d edition, enlarged.
 By JOSEPH AYRE, M.D.
 Member of the Royal College of Physicians, &c.
 Published by Longman, Rees, Orme, Brown, and Green.

Neatly bound, price only 4s. embellished with Portraits of Francis I., Henry IV., Louis XIV., and Marie Antoinette,
HISTORICAL ANECDOTES—FRANCE.
 Forming the Second Volume of the Juvenile Library.
 "This volume may be said to form a complete, but concise, History of France, from the earliest period to the present time. A sketch of all the various sovereigns, chronologically arranged, together with a detail of the most remarkable events that transpired during their reigns, including a very interesting account of the revolution of 1789—recommend it in a peculiar manner as the present moment."—*Globe*.
 Henry Colburn and Richard Bentley, 8, New Burlington Street.

Cuvier's Natural History.
 Embellished with Seventeen Engravings, price, in demy 8vo. 2s.; royal 8vo. 18s.; royal 16s. with the Plates carefully coloured, 24s.; demy 4to. with Proofs on India paper, 24s. Part XXV. being the First of the
CLASS REPTILIA, of the ANIMAL KINGDOM, described and arranged in conformity with its Organization, by the Baron Cuvier, translated, with large additional Descriptions of all the Species hitherto named, and of many not before noticed, and with other Original Matter.
 By E. GRIFFITH, F.L.S., C. HAMILTON SMITH, F.L.S., and E. PIGEON.

The *Class Mammalia*, complete in Twelve Parts, with upwards of Two Hundred Engravings, forming Five Volumes, price, in extra cloth boards—
 Demy Octavo £7 4 0
 Royal Octavo 10 16 0
 —ditto, coloured 14 8 0
 Demy Quarto, India paper 14 8 0
 A Supplementary Volume, just published, contains an Account of the Fossil Genera and Species. Demy 8vo. 11s. 12s.; royal 8vo. 21s. 12s.; demy 4to. 31s. 12s.

The *Class of Birds*, complete in Nine Parts, forming three volumes, price, in extra cloth boards—
 Demy Octavo £5 8 0
 Quarto, India paper 10 15 0
 Royal Octavo 8 2 0
 —ditto, coloured 10 16 0
 The Reptiles will form Three Parts, (25, 26, and 27), and the Insects will form about Six Parts; the whole comprising about Forty Parts. It will be so arranged, for the convenience of those who may confine their Zoological Studies to either of the Classes, that each Class will make a distinct work, as well as one of the series of the "Animal Kingdom." The conclusion will contain a tabular view of the system, a copious index, and a general terminology of the science.

The engraved illustrations of this work are in a superior style of execution, by different artists of distinguished eminence; and, among the rest, many are by Mr. Landseer. Most of them are from original drawings, made from nature; and several represent species altogether new, or never figured before.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 8vo. the 2d edition, entirely recomposed and greatly enlarged, with new Plates, price 18s.
AN INTRODUCTION to GEOLOGY, comprising the Elements of the Science in its present advanced State, and all the recent Discoveries, with an Outline of the Geology of England and Wales.
 By ROBERT BAKEWELL.
 In the preface to an American reprint of this edition, Professor Silliman says,—"I believe I am performing a service to my country by encouraging the republication of a work conspicuous for attractiveness and perspicuity; but my immediate motive was, that as a public instructor, I might place in the hands of my own classes a comprehensive Treatise on Geology, which they would be willing to read and able to understand."
 Published by Longman, Rees, Orme, Brown, and Green.

BOOKS IN THE PRESS.
MAJOR RENNELL'S GEOGRAPHY of HERODOTUS. In the press, and speedily will be published, in 2 vols. 8vo. a 2d edition of the above Work, printed from the Author's revised Copy, with the original Major Rennell's Portrait will be given, by permission of Comtesse Spencer.
 Printing for C., J., G., and P. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

George the Fourth.
 In the press, and shortly will be published, in 8vo. with a fine Portrait, from a Drawing by Wivell,
A MEMOIR of HIS LATE MAJESTY GEORGE the FOURTH.
 By the Rev. GEORGE CROLY, A.M.
 Printing for James Duncan, 37, Paternoster Row.

No. 709.—AMERICAN EDITION.

SATURDAY, AUGUST 21, 1830.

REVIEW OF NEW BOOKS.

Narrative of a Journey overland from England, by the Continent of Europe, Egypt, and the Red Sea, to India; including a Residence there, and Voyage home; in the years 1825, 26, 27, and 28. By Mrs. Colonel Elwood. 8vo. 2 vols. London, 1830. Colburn and Bentley.

Mrs. COLONEL ELWOOD, being the first English lady who has performed the overland journey to India, or, as it is expressed in this Narrative, the "outward bound," and having kept a journal of her impressions and adventures—the wishes of several friends have, as is not uncommon, induced her to publish. We have, accordingly, two pleasant, chatting volumes, just such as an intelligent and "inquiring" lady (see our review of Shakespeare's *Fifth of November*) might be expected to produce. Many matters, to be sure, appeared to be of consequence to her, which a male traveller would have galloped over unnoticed; but then, we are not bored with pedantry and philosophy, nor is a touch of nursing science intruded upon us throughout the whole peregrination. For this relief we are inclined to say, "much thanks;" and be the more placable with the little unimportant affairs which occasionally occupy our fair countrywoman's pen and our precious time, remembering that during so long a transit she had more leisure to write than we have to read.

By a dedication, we observe that Mrs. Elwood is the daughter of Mr. Curteis, D.P. for Sussex, and sister of Mrs. Elphinstone, to whom her letters were originally addressed; and we farther gather, that she travelled with her husband, who is called by the familiar name, we beg pardon, the familiar letter C—, in his good lady's despatches. So much being premised, behold us start from Windmill Hill, Sussex, for Bombay, by Paris, Fontainebleau, and Dijon—by Mount Cenis—by Turin—by Genoa, Lucca, and Pisa—by Florence, Rome, Naples, Sicily, and Malta; and lo! we arrive at Alexandria, having met with nothing all the way that has not been met with by our precursors. At Alexandria, the party were hospitably entertained by Mr. Salt; and Mrs. Elwood states that his collection of Egyptian curiosities, having been rejected by our economical government, have passed into the hands of the French, at the price of ten thousand pounds. We hope we may yet say this news wants confirmation, and that neither the refusal, on the one hand, nor the foreign disposition, on the other, has been final. We know that at Mr. Salt's death the business was still under consideration.

As we have gone so rapidly through Europe, we are not anxious to tarry long on the African shores; and shall, therefore, refrain from threading Cleopatra's needle, partaking of a pic-nic, or a climb at the Pyramids, or even sailing on the Nile to Thebes, and re-examining the remains of curious and magnificent antiquity there. Here Mrs. E. met Mr. Gal-

loway, the engineer, who was lighting the pasha's palace at Soubra, near Cairo, with gas.

"He was (she informs us) much interested in, and exceedingly sanguine about, the overland passage to India, which he demonstrated to be perfectly feasible. The plans laid down were, to have steam-packets from Alexandria to Cairo, which were to communicate with those at Suez by means of the ancient canal, which might be easily re-opened, or the seventy intervening miles be passed in a few hours by camels, relays of which might be stationed in the desert; and to prevent all danger of infection in case of plague, an albergo, or caravan-sera, was to be built outside the city walls, which was to have no communication with the interior."

Of the Turks, Mrs. E. speaks very favourably. Thus, riding through the streets of Cairo, she relates:—

"Our procession was most curious. First of all rode two janissaries, heavily armed; then followed in file, it being scarcely possible for two to ride abreast, the general and his aide-de-camp, C—, Mr. Maltass, Osman Effendi, and myself—all upon donkeys, which went scuffling through the streets at a prodigious rate. Each of the party was attended by a dirty, half-naked Arab driver, besides other attendants. The Turks laid down their pipes as we passed, and I distinctly heard the cry of 'Frankistan' as we trotted by. We rode through streets so narrow, that a person in the centre might easily have touched the opposite houses at the same moment; and we passed long files of loaded camels tied together, guided by one man. We saw Turks on donkeys, and Mamelukes on horseback, 'pride in their port, defiance in their eye,' riding down every one before them, purposely and offensively sticking out their tremendous shovel-shaped stirrups: one chieftain, in particular, seemed to wish to evince in what utter contempt he held the Franks; but when he saw a female among the party, it is impossible to describe the change that instantaneously took place in his whole demeanour: the proud and contemptuous air with which he surveyed the gentlemen, was to me altered to one of the most perfect courtesy and civility; and the most polished Frenchman could not have reined in his steed with more grace, or have expressed more gentlemanly regret at my being annoyed and alarmed by my donkey accidentally running against his horse. Though it was evident he held the Christians in abhorrence, he saw that I was a woman, and he treated me with deference and respect. Indeed, I must say for the Turks, in general, whatever their other faults may be, that their manners towards our sex as far exceed those of our countrymen in courtesy as their graceful costume surpasses that of the Franks in magnificence and grandeur. Then we saw women mounted on camels, riding on immense saddles, towering aloft in the air, and shrouded in their black cloaks, looking really very tremendous and awful. In a narrow, a very narrow, street, a vicious camel, at the head of a long

file, had chosen to lie down, and completely filled up the narrow way, roaring and bellowing most tremendously. In vain did the driver beat it, and the janissaries goad it with their silver sticks; it only redoubled its cries, and stretched out its long neck, and opened its ugly mouth, and seemed to threaten death and destruction all around. The gentlemen, being mostly military men, were brave by profession, and were, consequently, not to be daunted by an angry camel; but alas! for me, who was a woman and a coward!—I do not think I ever felt more thoroughly frightened in my life, than whilst in the vicinity of this frightful creature, which, however, I eventually passed in safety.

"I am inclined to think, that all that we are told of the imprisonment of the seraglio is a great mistake. I suspect the Turkish ladies are under no greater restraint than princesses and ladies of rank in our country; and the homage that is paid them seems infinitely greater. The seclusion of the haram appears to be no more than the natural wish of an adoring husband to guard his beloved from even the knowledge of the ills and woes that mortal man betide. Whilst he himself dares danger in every form, he wishes to protect 'his lady-bird'—'the light of his haram,' from all trouble and anxiety. He would fain make her life 'a fairy tale;' he would not even let 'the winds of Heaven visit her face too roughly;' and as we carefully enshrine a valuable gem, or protect a sacred relic from the profane gaze of the multitude, so does he, on the same principle, hide from vulgar ken his best, his choicest treasure—'his ain kind dearia.' The Turks, in their gallantry, consider the person of a woman sacred; and the place of her retreat, her haram, is always respected. Nay, there have even been instances where persons have fled for protection to their enemy's seraglio, and been thereby saved; so that I found, that in Egypt I was likely to be the guardian of the party, and that in my utter helplessness I might possibly be a panoply from danger to my protectors themselves. In fact, Mr. Salt seriously recommended that I should always carry all our most valuable papers and money about me for safety."

It would be a droll change, upon any invasion of Turkey, to have a female army, or at least a commander-in-chief, a beautiful staff, and a few regiments. Instead of a bloody war,

"'T would be merry in the hall,
And beards wag all!"

and, as Mr. Murray of our good Theatre-Royal, Edinburgh, sings so admirably,

"They would never see the like again."

Dress, however, in Turkish, as in European impressions, is of considerable importance, as Mrs. E. had occasion to witness in their transmutations afterwards, when, sailing with a cargo of pilgrims towards Mecca, she came to anchor in the bay of Arabok or Rabogh.

"Upon this spot the first rites of the Mahometan hadje commence. All the passengers,

and we among the rest, hurried instantly on shore; and as there could not have been fewer than two thousand persons assembled, the scene of confusion that ensued is almost inconceivable, and quite indescribable. Some fell to pitching tents and temporary awnings, others to kindling fires in small holes upon the sand, whilst a band of Bedouin Arabs came down with provisions from the neighbouring village of Arabok or Rabogh, which appeared to be about four or five miles distant, and where some date-trees were visible. They offered for sale, mutton cut up in small pieces of a quarter of a pound each, wood, water, &c. all tied up in sheep-skins. The evening was damp and chilly, when in about half an hour after their landing, the pilgrims began to perform the first rite of the hadje, termed *jaharmo*. Stripping off their warm and gay-coloured robes and turbans, which were carefully tied up in bundles by their attendants, they plunged into the sea, where, after bathing and praying, or rather reciting certain forms of prayer, they invested themselves in the *ihram*, which is a long piece of cloth loosely wrapt round their waists, such as is worn by the commonest Arabs. Some few threw an additional and similar piece over their shoulders, like a lady's lace-scarf. This rite is said to have been instituted by Mahomet to inculcate humility in his followers; but the sudden transition from the warm woollen garments of the Turk to the thin cotton *ihram* must be very trying to the constitution; and the more we saw of the privations undergone by the pilgrims, the more were we convinced that the hadje is no light affair, and that considerable enthusiasm and resolution must be necessary to enable them to support the hardships incident to the undertaking.

"The metamorphosis which took place in the appearance of the passengers, in consequence of the assumption of the *ihram*, was most amusing, and even ridiculous. He who left the ship a well-dressed, majestic, and handsome-looking man, came back the bald, shivering, shaking hadje; and, stripped of his Turkish trappings, which certainly are most imposing and becoming, many a dignified and magnificent-looking personage was transformed, as by a magic spell, into a common-place, mean, insignificant-looking figure, seeming as if half ashamed of his appearance, and not knowing what to make of himself when divested of his flowing robes. After bathing, the hadjes fell piously to scratching up the sand like so many dogs, and forming it into little heaps, sometimes to the number of a hundred. To judge from the disturbed state of the surface of the sand in consequence, the pilgrims must have been either great sinners or great saints. Little do our English children think, when they are making what they term 'dirt pies,' that they are literally only performing one of the initiatory rites of the Mahometan hadje. The women, retiring to some little distance, apparently went through the same ceremonies, as we saw them plunging into the sea, whilst their friends kept guard over them, and waved to intruders to keep at a distance."

But we must turn back to Kenné, whence our fair traveller set out in the country litter, called a *takhtroman*, and borne by two camels, one in front and one in the rear, like Irish chairmen, to cross the desert of the Thebaid to Cosseir, a passage of about a hundred and twenty miles; and which she accomplished in six nightly marches, resting during the heat of day, and going at the rate of from 2½ to 3 miles an hour. Mrs. E. seems to have enjoyed

her novel situation exceedingly; and at the end says:—

"We found ourselves upon a barren and extensive plain, covered with tents and caravans, outside the walls of Cosseir, at which place we had safely arrived, having completed our journey from Kenné to the Red Sea in six days and nights. We had performed it with the utmost ease, and with much gratification to ourselves. We had fortunately met with neither the robber nor the Samiel of the desert; but in their stead with courteous Arabs and delightful north winds, which had pleasantly attempered the heat of the atmosphere. The trifling disasters and *contretemps* we had encountered, had been but so many adventures, attended with a little temporary annoyance and inconvenience it is true, but likewise affording a great deal of amusement; indeed I have often looked back with pleasure to my campaign in the desert; and, when tired of the unfeelingness, selfishness, and barbarity of pseudo-civilised society, frequently have I felt disposed to exclaim—

'Fly to the desert, oh, fly with me!'

At Cosseir a remarkable natural phenomenon is described. The residence was a stone's throw from the sea, and she remarks—

"Conceive my astonishment and surprise, upon repairing thither, on first entering, to gaze upon the exquisite beauty of the waves, and to watch the sun which was just emerging from the bosom of the water, to see the latter, instead of rising in its usual circular form, assume that of a pillar of fire! I positively doubted the evidence of my senses, and I should scarcely hope to be believed, but that I find the ancients, and Agatharchides in particular, have mentioned the same phenomenon upon these coasts, where they observed 'the sun rose like a pillar of fire.' Lord Valentia also noticed a similar appearance at Mocha, where he saw it set in like manner. We subsequently frequently saw it assume an elongated, but never again so completely columnar a figure. We could but think of the pillar of fire, which for forty years gave light to the Israelites in the wilderness. The colour of the Red Sea here was of the most exquisite blue imaginable, far exceeding in beauty the boasted hue of the Mediterranean. The breakers had a peculiarly vivid and lively whiteness, which by contrast added greatly to the brilliancy of the azure main; but though I could have gazed for hours, it was too dazzling to permit me to do so with impunity."

When we add to this description and reference to "Agatharchides in particular" that the house was of the form of a "trapezium," we are afraid we must qualify our exordium a trifle, and allow that there is a smack of learning and blue-ism here and there. At Yazbo Mrs. E. alludes to similar phenomena.

"The effects of refraction upon the sun's appearance upon this coast were really very surprising and amusing. This evening it assumed the shape of a *mushroom* as it sank in the west! In fact, we scarcely ever saw it set in a regularly circular form."

The voyage on the Red Sea seems altogether to have been the most interesting portion of the "outward bound," and must indeed have presented many strange exhibitions for an English lady to see—very different from the pastoral and simple scenes of Windmill Hill, Sussex. For example, in the Arab dow, from Cosseir for Djidda—

"Considering (she relates) the immense number of persons in our crazy-looking vessel, the silence was astonishing, though the deck

was so crowded that there literally was not room for the hadjes to lie down at full length. There were complexions of every hue, and features of every description on board:—the handsome turbaned Turk—the finely featured Greek renegade—the wild and intelligent-looking Bedouin of the desert—the swarthy Arab—the coal black, woolly-headed, flat-countenanced Negro—the savage-looking Moor—the slightly-formed, dusky-complexioned Hindoo—and our European selves. There were also several Nubian women and girls, who having been taken prisoners by Mahomet Ali's soldiers, were now sent for sale to the Djidda slave-market: their price was about two dollars a-head. Naked from the waist upwards, they were much ornamented with glass beads; their figures were finely formed; their head-dress and features much resembled those in the kings' tombs at Thebes; they were more than ordinarily good-looking, and their whole appearance was pleasing and agreeable. They seemed perfectly happy, and amused themselves with playing with their infants and—if, *poor hasard*, our cabin-door were left open—with watching my movements, apparently with much curiosity and interest. Their fare consisted entirely of dry biscuit, which, indeed, appeared to be the only food used on board; but we frequently sent them things from our stores, for which they always seemed most grateful. Among them, C— one day observed an African copying a manuscript, in a small neat hand, which he wrote from right to left with great quickness and facility, apparently undisturbed by the confusion and Babel of languages with which he was surrounded. Some of the hadjes put up a little temporary awning upon deck to protect themselves from the sun; others lay down upon their luggage; but the privations and hardships necessarily undergone in the pilgrimage to Mecca are really surprising. In a cabin in front of ours was a Turk, who, to judge from the respect paid to him, and the number of his attendants, must have been a man of considerable consequence in his own country. His manners were polished and dignified: he passed his time in reposing on his carpet and smoking his pipe; and though his suite occasionally betrayed their curiosity by furtively taking a peep at me, he never looked into our cabin, but behaved with the utmost politeness. Indeed, I think the manners of the superior Turks I have occasionally met with, are more truly gentlemanly, and frequently preferable to those of the generality of Europeans. There is a grandeur and almost majesty about them, that induces one to think they are of a high caste; and, at the same time, they always behave with the utmost civility and courtesy."

Having landed at the port of Hodeida,* our countrywoman had an opportunity of visiting an Arab haram; and as her account of the ladies is the most amusing thing in the book (Vol. I.), we shall conclude with extracting it.

"In C—'s absence I always remained in my own room; but one evening, as I went upon my terrace to enjoy the fresh sea-breeze which was just setting in, a casement which I had never before observed slowly opened, and a black hand appeared waving significantly at me. Impressed with some degree of fear, I

* At this place we are told—"We had very good meat, which we fancied was beef, till one day, on casual inquiry, we discovered it was *camel's* flesh which we were at the moment very compositely eating! Immediately afterwards a boy brought in some young hyenas for sale, which we took up into our arms as if they were kittens, and very pretty little animals they were. Thus, at Hodeida, we can safely say we had camels for dinner, and hyenas for desert."

immediately retreated, but on looking again, the waving was repeated; and several women peeping out, beckoned me to them, making signs that the men were all out of the way. Whilst I was hesitating, a negro woman and a boy came out upon another terrace, and vehemently importuned me by signs to go to them. I had just been reading Lady Mary Wortley Montague's description of a Turkish haram—an opportunity might never again occur of visiting an Arab one. After some conflict between my fears and my curiosity, the latter conquered, and down I went, the boy meeting me at the foot of the stairs, and lifting up a heavy curtain, he introduced me into a small interior court, at the door of which were a number of women's slippers, and inside were about a dozen females clothed in silk trousers, vests closely fitting the figure, and fastening in front, and turbans very tastefully put on. They received me with the utmost cordiality and delight, the principal lady, Zaccara, as I found she was called, making me sit down by her side, caressingly taking my hand, presenting me with a nosegay, and, after previously tasting it, offering me coffee, which was brought on a silver tray, in the usual beautiful little china cups. It was, however, so perfumed that I could scarcely drink it. She did the honours, and appeared as superior to the others in manners and address, as an English lady would be to her maid-servants. Her figure was light and slender, her features pretty and delicate, her countenance lively and intelligent, whilst her manners, which were peculiarly soft and pleasing, were at the same time both affectionate and sprightly. The other women crowded round me with great *empressement*; by signs we kept up a very animated conversation, and when we could not quite comprehend each other's meaning, we all laughed heartily. They asked me where I came from, whether I had many ornaments, any children, &c. exhibiting theirs with great glee. They were amazingly struck with my costume, which they examined so minutely, that I began to think I should have had to undress to satisfy their curiosity: but what most amused them, was the circumstance of my gown fastening behind, which mystery they examined over and over again; and some broad French tucks at the bottom seemed much to astonish them, as they could not discover their use. They asked me the names of every thing I had on, and when, to please them, I took off my cap, and let down my long hair, Zaccara, following my example, immediately took off her turban, and shewed me hers; the negro woman, who seemed the wit of the party, in the mean time holding up the lace cap upon her broad, fat hand, and exhibiting it to all around, apparently with great admiration, exclaiming 'eaap, caap,' and also endeavouring, much to their detriment, to put on my gloves, with which they were particularly amused. I sat with them some time, and it was with difficulty they consented to allow me to leave them at last—indeed, not till I had made them understand my 'cowasjee' wanted me. Cowasjee's claims they seemed to understand completely, and, on my rejoicing the gentlemen, if I were amused with their description of the tournament, you may conceive how astonished they were to learn that I had been actually visiting the haram! On the following morning I received an invitation, in form, to repeat my visit, and I was conducted up a very handsome collegiate-looking staircase, near which was stationed the master of the house, apparently at his devotions, but evidently intending to have a furtive peep at me, without my being

aware of his so doing. I was now received *in state* in the interior apartments, and all the ladies were much more splendidly dressed than on the preceding evening. Zaccara had on handsome striped silk drawers, and a silk vest descending to her feet, richly trimmed with silver lace. All their hands and feet were dyed with henna, and they were much surprised to see mine of their natural colour. The furniture consisted principally of couches ranged round the room, upon which they invited me to sit cross-legged, after their own mode, and seemed astonished at my preferring our European style. On the walls was a sentence of the Koran framed and glazed, and in a recess was an illuminated Koran, which they shewed me. An interesting-looking young woman, seated in a low chair, was employed in making silver lace, the process of which she explained to me, as also its use to trim vests and turbans. My costume underwent the same minute investigation as on the yesterday, and as at this time I had on no cap, they were much struck with the manner in which my hair was dressed, and my shoes and stockings created universal astonishment. Refreshments were brought, but every thing was carefully tasted before it was offered to me—I suppose to shew no treachery was intended,—and I was again interrogated as to my ornaments, children, &c. They told me all their names, and endeavoured, but in vain, to accomplish mine. Suddenly there was a shriek of joy, laughing and clapping of hands. They drew me quickly to the window, from whence I saw C— walking in the streets, with one of his servants holding an umbrella over his head, surrounded by an immense concourse of people; and very foreign he certainly did look in the streets of Hodeida, with his English dress and hat. The delight of my fair, or rather of my dusky friends, was beyond description; but it was redoubled when they found it was *my* cowasjee. The master of the house then came in: he treated me with the greatest deference and respect, and, bringing me a little baby with gold rings in its nose and ears, with all a father's pride he informed me it was his, and that Zaccara was its mother. He also asked me about my children and my ornaments, the two things always apparently foremost in an oriental imagination. My wedding-ring catching the eyes of the women, I made them partly understand its signification, but they evidently seemed to consider it as a *charm*. Zaccara then taking my hand with a very caressing air, invited me to accompany her, and she shewed me all over the house. It was completely 'upstairs, downstairs, in my lady's chamber,' and I saw a number of small rooms, with loopholes and windows in every direction, where they could see without being seen. They pointed out to me our ship, the bazar, the mosque, from whence the dowlah was just returning in grand procession; and they then exhibited to me all their ornaments and trinkets. In return, I shewed them such as I had about me. My friend the negro woman, poor black Zaccina, as she was called, was the only one who ventured to smell to my salts, and this she did with so much eagerness, that the tears were forced into her eyes in consequence, to the great amusement of her companions. We parted with mutual expressions of regard; and though I had met with neither the beauty of Fatima, nor the luxury of a Turkish haram, yet I was well pleased with the simplicity, mirth, and happiness, that apparently reigned in the Arab one; and I should have been churlish indeed had I not been gra-

tified with their friendly and artless attempts to please me. Indeed, I flatter myself I made a conquest, for a great boy of twelve or fourteen took such a fancy to me, that he volunteered to accompany me to 'Hindy' in the 'mercab,' or ship, and he really appeared anxious for me to accept of his services. What should you have thought of my Arab page? The women in Arabia are, apparently, allowed more liberty than in Egypt, for they seemed to be permitted to walk out together whenever they pleased; and once, as we were setting out for, and they were returning from, a promenade, we met in the court. They were so carefully veiled, that I had some difficulty to recognise my friends of the haram again; but they affectionately seized my hand, and caressingly invited me to return with them to their apartments. All the gentlemen were with me; and I cannot help thinking that the Arab ladies prolonged their interview purposely, in order to have a better view of the Fringee cowasjees, my companions."

We have now gone over as much of the outward bound as the occasion seems to require; and we have only to notice that Sir Hudson Lowe was frequently the companion of our travellers, being also travelling overland to India; and that they reached Bombay to a miracle of accuracy, through the perils, real or imaginary, of a navigation so scientific, that when at a loss, the skipper used to put two compasses together to help one another!

The Fifth of November; or, the Gunpowder Plot. An Historical Play, supposed to be written by William Shakespeare. 8vo. pp. 114. London, 1830, Baldwin and Cradock; Carpenter.

"SUPPOSED" only, to be written by Shakespeare—as if there could be a doubt of it! The advertisement after the title-page most truly states that it is "supposed to have been written between his retirement into the country and his death in 1616, and about ten years after the discovery of the Gunpowder Plot;" adding, "the reasons of it not being published in his life-time are sufficiently obvious." Nothing can be more feasible. The Plot (an excellent plot) was in 1605, and the author died in 1616; and he therefore must have written the play within ten years after the discovery of the treason, and also, without question, before his own death. Thus time and place adhering, and their fitness fitting, we have only to look to the drama itself for that complete internal evidence which must carry conviction home to every understanding.

Not only every line, but every word, syllable, and letter, will be found to breathe of Shakespeare; if not exactly as he is handed down to us by his other immortal works, at any rate in a perfectly new and original manner. We had better turn over the pages; there is not one without its beauties.

p. 1. "Methinks the paths of glory are unclogg'd," says Percy, the conspirator;—

"Avenging hate
Our prostrate altars, persecuted faith,
Firm my fierce purposings."—p. 2.

It ought to be remarked, that our friend Shakespeare in his retirement and towards the close of his life, was not very particular about grammar; but by the force of genius makes the same word serve as verb, or noun, or any other part of speech, just as he pleases. So "to firm," though a verb in the above quotation (and frequently afterwards), does duty as an adjective twelve lines below:

" Shall honour firm, and meek humanity,
Propel him to his doom?"—p. 2.

That doom is to be blown up with the king, the council,

" Th' imperial crown, the sceptre, and the dove,
The cross, and orb, and mitre; *star of merit*,
Garter of honour, cushion'd coronal,
The velvet ermin'd; lawn pontifical;
Th' emblazoned pomp of antique heraldry;
All the enrolled records of the realm;
The seal of sovereignty, the stamp of law."

Upon which inventory Catesby exclaims—

" Even let them mount and claim their *kindred stars*."

Why kindred, we cannot tell: the "star of merit" might claim a relationship; not so garters and lawn!! But the sun is worse *be-epitheted* than the stars (though they are said to be "*misted*"); for in the course of the play he is "*suffused*" under "*tenfold mufflings*," "*unfettered*," "*burnished*," "*dancing*," "*pageant*," and "*purpled*," together with other feats and aspects altogether unknown to our darker era. We must acknowledge, however, that he is not "*paled*," that favourite phrase being applied to every thing else, animate or inanimate, to woman, to flower, to purpose, to plumes, &c. &c. &c.—all are "*pal'd*!"

The entry of the nurse is finely prefaced by a line from Julia (the Juliet of the *Fifth of November*)—

" Discovery sits affrighted on her brow!"

and well it may; for she screams—

" Here's a combustion! take it, lady, take it!"

and gives her mistress a trifling mem. of the worthy Catesby's, descriptive of the pleasure anticipated from the explosion, as before described. Our next quotation consists of the speech of Lady Habington, who is also in the secret, and whom her husband accuses of being, like all her sex, "*inquiring and trustless*." This taunt is too much for the Roman (Catholic) matron to bear, and she replies (*sola*)—

" Women are fond, and are confiding too.
Whilst we possess the ears of youthful priests,
And we confess to them, and they to us
Their secret souls, without a husband's aid
I might have ravel'd all this mighty clew.
Women, prevent us as ye can, may still
Know what we wish, and practise what we will."

which we take to be a little libellous both upon the priests, the practice of confession, and the fair sex.

But

Pray remember
The Fifth of November,

when

Guy Fawkes with his companions did conspire
To blow up the Parliament with *gun-pow-der*;

and what would the sport be without Guy in *propria persona*? Our Shakespeare represents him as admirably tutored in his task by previous practice: the following is part of a *tête-à-tête* between his worship and Winter:—

" Winter. You seem rather squeamish and nervous.
Fawkes. Very: I was obliged to take a double dose when I blew up my wife and a bastion together.

Winter. By mistake?

Fawkes. Yes, a puritanical one—on purpose. She had an assignation with a Spanish don: I knew the place of appointment, and blew up her and her spark together: it passed off as a chance medley.

Winter. That, to be sure, was only a countermine, Master Guy. So you peppered your gay young spark?

Fawkes. No; I powdered him.

Winter. And your wife?

Fawkes. It was the last blow up we ever had."

The sparkling wit and brilliant humour which dazzles us in these coruscations are never to be sufficiently panegyrised; but we cannot stop to point out the exquisite passages: they must strike every reader. In the next scene, where all the conspirators meet, they with infinite propriety get a song, or something of the sort, from the Jesuit Garnet, and a company of priests join in the chorus, thus:—

" Thunder of primeval hell!
Burst thy deep imprison'd spell,
And roll a tyrant's funeral knell."

What a fine instrumental accompaniment might be given to this lovely burst of feeling! so lovely that we are astonished at its interruption by Catesby, who steps in, saying,

" Cease these *unmeaning strains*, and let our hate
Be silent as the brooding time of vengeance!"

The party breaks up, and Fawkes and Littleton (a sort of fop) thus conclude the scene—

" Littleton. Adieu! molecular man; when wilt thou worm thy way to the infernal regions?"

Fawkes. When thou fliest on those moth wings to heaven.

Lit. That's a flight above thee, son of Erebus; thou augur and bore of iniquity, the devil surely taught thee the art of sinking.

Fawkes. By which I make others rise, most ineffable!

Lit. Adieu! Want, earth-worm, subterranean man, adieu! diving iniquity, adieu!

Fawkes. Mounting vanity, civet-cat, moth, essence-box, fan-tail popinjay, last feather of a moulted magpie.

Lit. Glimet, most penetrative mud-lark, disturber of worms' dinners, infernal machine, farewell! battering-ram, Tartarean man, adieu!

[Exit Littleton—*manet* Fawkes.]

Which "*manet* Fawkes" is a piece of waggery, as the scene immediately changes to Whitehall; and if he remained there then, he must have stayed there till now.

At Whitehall we have two royal scenes, in which King James (the "*Scottish Solomon*," who was no fool, though called by that name) gives deputations of the Puritans and Catholics very dictatorial receptions. To the former he declaims—

" Yet grieve I more
That ye would strain our free prerogative,
Curtail our privilege, and fain *disbranch*
The sacred honours of our sovereignty;
And make us but a log and scaffold king,
Upon whose backs yourselves may climb to power.

Ye have my answer, gentlemen. Now go,
Lard your lean ruffs with drops of discontent;
Or come again some seven years hence, and then,
Should I be purg'd, *fa, fantastical*,
I chance may grant to ye a Presbytery;
"Twill physic me, and wear me to the bone.

[*Exeunt the Deputation of Puritans, bowing, and placing their hands on their breasts. Archie Armstrong mimics them, by transforming his cap into a Genera hat, &c. &c.*]

By the by, Archie, or the other favourite, Carr, jokes the king about his "*Counterblast*," which did not appear (we opine) till after our friend Shakespeare died; so that, in this single instance, the poet must have been a prophet too. And the jests of the said Archie and Carr are altogether perfect of their kind: for instance, the king "*weeps*" at the idea of being blown up, and asks if it could be possible; when Carr answers:—

" Yes, dad; and the Lord Chancellor riding on his woolpack; and Garter King at Arms, emblazoned; and all the bishops and malds of honour, topsy-turvy, high-gledy-piggledy, head over heels, all in the air at once!

[Archie Armstrong *runs about, imitating the action of flying.*
K. James. What's the fool about?
Arch. Arm. Learning to fly, Nuncky; it is now a necessary accomplishment for us courtiers.]

In our days kings fly, and courtiers are wise enough to stay in their snuggeries!

It might be tedious to go over the minute splendours of this so happily recovered production; yet we cannot tear ourselves from a few more treats. The principal spouter in the *Ercles' vein* is Catesby; but the lady heroines can roar, if need be, like sucking doves—witness one Olivia:—

" Chivalry,
Thy flower is fallen! for there was a time
When truth and *continence* were blazon'd high
Upon the knightly scutcheon; woman's honour
Seem'd its own safeguard, and to be the test,
The *guiding band*, and sacramental head
Of the glaved champion. Yes, there was a time
When swords would *lightly leave their continents*
To 'venge a maiden's wrongs; but virgin in shame
Is now the *brilliant plume*."

This denunciation is more awful, being more

obscure, than Burke's; for, "the age of chivalry is gone," is a poor conceit, when compared with the curiously-wrought imagery of the supposed Bard of Stratford. When continence was blazoned high, woman's honour seem'd its own safeguard, and the guiding (no mistake, for our author employs the ancient word over again) band of the champion, and swords left their *continents* (somewhere?), things were sublimely managed; but, alas! the change—knights' plumes were made of a *material* (virgin shame) which would defy the best art of the best plumassier in our later times.

We think we have noticed—for our imagination is so carried off with this piece, that our memory is uncertain—we have, we think, noticed that Catesby was a rig'lar-built Ercles in his conversation. We should like to illustrate.

—*Soliloquy*—

" Hark! ruin's knell has toll'd—it is the signal—
Now fire the train. 'Tis done—I see the flash!
And now I hear the thunder! Ha! ha! ha!
They gambol in the chambers of the sky,
Death, and the grim combustion, dainty fiends.
I see the royal diadem aloft,
Glancing meteorous through the murky air;
Sceptres and mitres through the lurid heav'n;
See how they puppet, and jostle one another,
Toys and state-poppets, dignities and thrones,
Nobles and priests, and coronals and kings;
Columns and towers, and massy tablatures!
And now they fall! Red ruin's smould'ring shower
Shakes the firm earth, and breaks the crystal bosom
Of the still Thames, whose upheaved billowings
Dash wide their fretted foam! Exulting Death
Rides on the night; and contemplative vengeance
Drinks deep the groans which murmur in the blast."

Poetry can afford no superior passage: none but himself can be his parallel. Some fellows escape to his adversaries, and he raps out:—

" Arm, arm, my friends! the ebbing glass of time
Pours drops of price: these flying grooms may strew
The seeds of *deep battalion'd* rucks around.
Pursue—*setse*—alay. Quick, force some ready outlet;
Pierce through the roof; or instant batter down
These feeble barriers. Bid our muster'd troops
Surround the ruins of the monastery.
Black fute hangs hovering on the march of morn."

* * * * *
" Comrades form
A close compact fronting of retreat."

Oh, splendid Shakespeare! "Supposed?"—Granted! Yet, only fancy the precient bard, in 1616, putting into the mouth of one of his characters to say—"Master Percy, we shall be in the minority: let us resign before we are kicked out."

Yet, lest this, and some pointed allusions to the Catholic claims of last session of parliament, might induce our readers to suspect the authenticity of this play, we shall abstain from farther quotation, and leave them in the certainty we have endeavoured to inspire. They may depend upon it, that

The Gunpowder Plot
Will not be forgot,
So long as Edinborough Castle
Stands on a rock;

and that this immortality is entirely owing to the unequalled picture of it drawn in this superlative drama. Old Sheridan, we have been told, used to read all the d—d plays and

* Elsewhere, he talks of
" The man who stands in danger's giant grasp,
And treads the coming earthquake";
and of "*the embattled sons of Peace*"—(query?); and of "Despair," who

" Waves his red pennons in the face of doom;
And wings of prey are flick'ring round about,
Scouting the coming carnage."

This last flourish follows a still finer flourish of the king himself, who says:—

" On, my friends:
Bring up your rank'd artillery; let it burst;
And pile me of these stones a monument,
To shame the *metaphors of ancient Nile*."

Whereupon a courtier, Lord Suffolk, strangely enough mishearing Egypt for England, exclaims:—

" There spoke the spirit of an *English king*!"

rejected MSS.; on the ground that the worst of them had always something worthy of notice. Had this Shakspearian effusion been resuscitated in his time, how he must have gloated over every sentence! Let us congratulate ourselves that the happiness has been ours; and consign a like enjoyment to the public, by referring them or it (for the plural public is also singular) to *The Fifth of November!*

Essays on interesting and useful Subjects; with a few introductory Remarks on English Composition: designed to assist Youth in the Style and Arrangement of Themes. By E. Johnson. 12mo. pp. 247. London, 1830. Rivingtons.

WERE not the name of Essays unpopular in our day, as predicating something dry—and were not the terms “interesting” and “useful” rather repulsive to the vast mass of readers, who are all agog for the light and entertaining,—we would venture to speak very highly of this excellent and unassuming volume. And even as it is, we must, in justice, say a few words in its favour; for we have been much pleased by its perusal. There are above thirty short papers upon various subjects, and not one of them which does not possess interest and utility. The author *thinks*,—a quality rare in modern writers; and placing his thoughts before us in a neat, concise, and familiar way, we are made to feel that they are well calculated to impress themselves upon the understanding, and particularly upon the minds of the young and intelligent. To this numerous body, therefore, we cordially recommend Mr. Johnson’s production; and, to shew that it deserves our eulogy, beg leave to quote a few of its miscellaneous passages. In an essay on Immoderate Grief we find these just remarks:—

“Some people have been weak enough to harbour their griefs, or, at the least, to keep up an appearance of sorrow, in order to impress others with a belief that they are distinguished by unusual tenderness of heart: but, in the first place, it may be observed, that they are entirely mistaken who suppose selfish sorrow to be an indication of fine feeling; and, secondly, they deceive themselves greatly as to the importance attached to any of their proceedings by the rest of the world. All are too much occupied by their own pursuits of pleasure or of business to pay continued attention to sorrows which do not come home to them. For a certain time *the world*—that is to say, as much of it as composes the society in which an individual happens to move—will sympathise with great good-nature in his afflictions; but if the sufferer do not soon make an effort to emerge from his griefs, and shake off his depression, he is much more likely to be entirely overlooked and forgotten, than to be celebrated for his acute sensibility. Such ostentatious sorrow is one of the many species of affectation, all of which punish themselves, by rendering those who adopt them contemptible and ridiculous; few minds, it is to be hoped, are capable of stooping to such folly. Yet such as encourage grief are not less to blame than those who assume it, and bring even heavier punishment on themselves. To renounce cheerfulness is a voluntary dereliction of duty, which will inevitably be visited by decline of the mental and bodily powers, and, if too long persisted in, will end in their total decay. A sincere participation in the joys and griefs of our fellow-creatures, of those in particular with whom we are most intimately connected, will be found to be the best antidote to intemperate extremes either of depression or of levity. Amongst

these we shall always find subjects of serious meditation to keep mirth within bounds, and motives for cheerfulness sufficient to counteract the influence of melancholy, and check immoderate grief.”

And on Affectation, the following displays an equal knowledge of life and of human character:—

“Among the many vices and follies to which human nature is prone, there is not one that shews its imperfection and inconsistency in so glaring a light as that of affectation. If men only affected such qualities as they might reasonably be desirous of possessing, this failing might not be without its use: the habit of assuming an appearance of virtue and good sense, would, perhaps, lead to the possession of them, or at least engender a certain degree of respect for all that is worthy and estimable; and many people would doubtless discover this very useful fact, that the attainment of excellence is easier than the affectation of it, which can seldom be practised with complete success. But, unfortunately, few take the pains to affect those endowments which, if really possessed, would do them credit. It is to the most childish, the most contemptible habits, that affectation commonly leads; and many a person assumes imperfections and weaknesses that are far from belonging to his character, and which, if he thought seriously on the subject, he would hasten to disclaim. To be free from all pretence, and to maintain, as it is usually termed, a *natural character*, is considered with approval in either sex; and one would therefore suppose, that a commendation so easily deserved would be very generally laid claim to, and that perfect simplicity, that is, the absence of all affectation, must become too universal for remark. Yet we do not find it so: we see people make a great effort to appear easy and natural; but effort only leads them farther from nature, and even simplicity must be the effect of habit. We often hear a man of good education say coarse, blunt things; or a woman who *can* speak rationally, chatter the most puerile nonsense, in order to pass for a *natural character*; forgetting that the propensities natural to one mind are foreign to another; and debasing the nobler nature, to affect that which is mean and insipid. It should be remembered that, by long habit, that which was at first assumed becomes natural; that the drawl, the swagger, the foolish lisp, or the vulgar idiom, adopted at the age of twenty, will be unconquerable at twenty-five; that common sense, however deeply implanted, will not thrive without cultivation; and that he who neglects to use his reason in youth, may be pretty sure of becoming a mere driveller before his hairs are gray. At the first view it appears totally unaccountable how such a vice as affectation can exist, since we see no inducement that any one can have for rendering himself, in any respect, more imperfect than nature has already made him. But a moment’s reflection will shew us, that the main-spring of this, as well as of many other errors, is self-love, which, if not carefully checked, engenders a constant desire to attract notice, no matter by what means; an effort to shine, without ceasing; and a total forgetfulness of a rule admitting of very few exceptions—that the most beautiful objects lose a part of their attraction by being placed in too strong a light. A person with only just sense enough to be *quiet*, will always make a better figure than he who, in his anxiety to obtain applause, suffers his efforts to degenerate into affectation, and, intolerant of neglect, cannot fail to incur ridicule.”

An essay on Generosity and Extravagance takes perhaps too severe a view of the case of debtors, not distinguishing between those made by misfortune or unavoidable circumstances, and those degraded by profligacy and dishonest principles; but there can be no question of the golden and invaluable rule and advice with which it concludes.

“Let every young man (says the writer, in words which ought to be engraven on every young heart, whether of man or woman)—let every young man, who wishes to preserve his conscience pure and his principles untainted, avoid debt as he would a pestilence; it is as difficult to shake off, as fatal in its effects, as widely devastating in its mischief. Let him remember, that every evil is small in its beginning; and let him be careful not to encourage the seeds of mischief, lest to root out the full-grown plant be beyond his strength.”

We differ from Mr. Johnson in some of his opinions on the Pleasures and Dangers of Imagination; but still his deductions are good, and worthy of the consideration of the female world. To them we leave this essay, for the sake of quoting a clever allegory on Patriotism.

“Genuine patriotism is one of the noblest, because it is the most disinterested of affections. The love of our kindred is implanted by nature in our bosoms, and kept alive there by the influence of duty and of habit; and from it spring such a reciprocity of pleasures and advantages, that a man will usually cultivate it for its own sake. But the love of our country, though it be also a natural and habitual affection, less closely involves our selfish comforts and gratifications: the interest of each individual and that of the public are no doubt intimately connected; yet men, in general, may go quietly and carelessly through the world, quite indifferent to every thing beyond their own little circle of cares and interests, perfectly exempt from national partiality, or overweening anxiety for the public good. Even in the most turbulent times, the majority have little else to do than to be quiet; but how many virtues, how many duties (and those not always the easiest of performance), are often comprised in that little phrase, *to be quiet!* Let it not be supposed that those who are loaded with the cares of government, who toil in the senate, command fleets or armies, or otherwise figure on the stage of public life, are the only true patriots: these, indeed, deserve the thanks of their country, in proportion as their efforts in her service are constant and disinterested; but the most obscure individual has also his part to perform; the poorest has his mite to contribute to the general stock of internal peace, probity, and industry, which form the main support of every government, and are the basis of all national happiness and prosperity. Some must be called to the arduous task of conducting the great machine which the mass of the people compose; but every atom does its part to forward or retard the movement. Submission, content, and activity, in the smaller parts, or lower orders, give facility to all its operations, and each may do his part to impede them, by contempt of the laws, or neglect of his own particular function or calling. We seldom make sufficient allowance for the heavy and vexatious responsibility which rests on the higher powers of a state; who are not only answerable for their own, and often for the people’s errors, but are liable to all the animadversions of an ignorant, misjudging populace, incapable of appreciating or even comprehending the motives which actuate their rulers, yet ever ready to condemn piecemeal the measures which they have no means

of judging in the aggregate, and to add murmurs and turbulence to the labours and difficulties of government. Let us imagine the situation of a skillful mechanic, regulating the movements of some complicated piece of machinery (a clock for instance), every part of which we will suppose to be endowed with the power of seeing and reflecting, and a right to speak and act, according to its limited observations on the state of the whole clock. 'Why should I swing to all eternity,' says the pendulum, 'while above us all stands that lazy, sleek dial-plate, that never contributes a finger to the movements of the clock, or so much as looks down on me, who am toiling so far below him?' 'On you!' says the main-spring, 'you are in your proper place, born to drudge, and fit for nothing else; what have you to expect, when the importance of my function is overlooked? I, who have been fashioned with the utmost delicacy, and polished with all the art of man; yet, while all the world gaze upwards on the dial, they forget even the existence of a main-spring.' 'You have, indeed, both reason to complain, neighbours,' says the chain; 'yet your situations are sinecures compared with mine, and I am never thought of, except to be screwed up, almost beyond what I have strength to bear: and look at those idle gilt hands, while we toil to support their elevation, we have nothing better to expect; let us pull them down, or make them work harder, while we take our turn to rest.' 'Lose no time in proclaiming our wrongs,' interposes the bell; 'for my part, I desire no rest until affairs go on better: I will strike no more at their bidding, but use my voice to a better purpose; every pin and screw shall know its grievance, and every wheel be incited to turn its own way.' It must be allowed, that the task of the workman becomes rather arduous. While he tries to regulate the pendulum, out fly pins; while he adjusts the wheel, the chain snaps, and the clapper of the bell rings out an incessant din concerning abuse, liberty, and reform; and all this time the clock stands, or goes wrong. Thus we need not doubt that those who neglect their own calling, or murmur at the burden of their particular station, or stir up the same discontent in others, are not patriots, but, on the contrary, the worst enemies a state can have to contend with."

Here we close our review of a very agreeable little volume, which no one can read without information and improvement.

The Separation: a Novel. By the Author of "Flirtation." 3 vols. 12mo. London, 1830. Colburn and Bentley.

AN interesting story, told with much liveliness of detail, and not much regard to style. It is not one of those novels which demand minute and extraordinary attention; but yet, in point of amusement, rather above its crowd of competitors. We quote a curious anecdote from one of the conversations.

"Mesdames permettez (wrongly spelt for *permettez*), I will recount to you a most extraordinary story, which is related by Rousseau, a Jesuit, who lived in the time of Louis XIV., and who is made mention of in Madame de Sévigné's Letters. He says, that a Dutchman of the name of Vanhelmont placed a toad under a glass, and fixing his eyes on the animal intently, it fell dead. What is this but the spiritual power of the man over the toad?—and in respect of this attractive power, which passed through the eyes, I could say much.' (The ladies smiled, and exchanged glances, for he was a remarkably ugly man.) 'But of this

hereafter; I wish only to make known to you how dangerous it is for any one to mock at this, or any sort of spiritual agency. I was impelled, by a curiosity I cannot account for, to make this experiment myself; and four different times I proved the truth of M. Vanhelmont's assertion. It was in Egypt that I effected this; and a Turk who happened to be present, exclaimed, that I must be a saint, for it was saints only who could have such power over evil spirits. Such is the opinion of the Manicheans, who believe that the evil one alone generates noxious animals. It was in vain that I assured the man I had not the power which he ascribed to me; he persisted in his belief: but had he seen me afterwards, at Lyons, when for the last time I made the dangerous experiment, he would not so have thought. I had a toad procured, and a large company were assembled, to see me perform the feat, in which I had been four times eminently successful; but so far from having power over the reptile, he had this time the power over me. No sooner was this toad put under a very large glass vessel than he turned towards me, and fixing his venomous eyes upon mine, he rose upon his fore feet, standing up, as it were, and swelling himself to a prodigious size, without moving from one spot: he spat and whistled, and I could see sparkles of fire emitted from his eyes, which darted with electric force through my whole frame: then I was seized with giddiness and sickness, and a general debility, that prevented my stirring or speaking; so that I was deemed a dead man. A friend of mine, however, who was versed in extraordinary cases, gave me some *theriaque* (I know not its name in English) and powder of vipers, a foreign remedy, too much overlooked in all, except the Italian, pharmacopœias; and by pouring this down my throat at frequent intervals, I gradually came to life again. The animal itself who committed this mischief, by some means or other, in the hurry and terror occasioned by my extreme danger, contrived to escape; and you may believe that I never repeated an attempt which had nearly proved fatal to me. Let those account for this transaction who can."

We observe in these pages a fault too much seen in works of this kind—careless printing, especially where foreign words are introduced. Surely if it be worth while to write, it is worth while to do it correctly.

Colonel Welsh's Military Reminiscences.

[Fourth and concluding Notice.]

HAVING this week introduced a new Orientalist to our readers, in Mrs. Elwood, and having already devoted three papers to Col. Welsh, we are the more inclined to part with his agreeable Reminiscences with a brief good-bye. His second volume contains much topographical and general information, particularly respecting Cochin, the Malabar coast, the Doab and Marhatta territories; and is also made interesting by the number of military, hunting, and historical incidents, which diversify its pages. We shall simply extract a few brief examples of these, wherewith to conclude our review. Near a place called Wallaat, Col. Welsh saw a curious weapon, of which he gives the following account:—

"In a deep jungle, about two hundred yards to the northward of this house, is a sacred pagoda, the repository of a sword, said to be two thousand years old, which is annually carried in procession, by a Brahmin, down the ghaut, to a pagoda called Tricheracoonah

Chuttrum, where many thousands of pilgrims assemble to behold it. We visited the spot, and examined this ancient weapon, always exposed to the weather in an open building, in a country where fogs, dew, and rain, are continual. It certainly has a most antique appearance, the hilt being of brass, extremely rudely formed, and the blade a mere mishapen mass of old iron, which has been broken and rudely mended near the point; or what should be the point, for it has none at present. In such veneration is this relique held by the natives of Wynaud, that it is left in this open spot in the jungle, without guard, or any security but the superstition of the people; and they attribute such miracles to it, that the ark of the Israelites was not held more holy. Its touch is instant annihilation; and even its appearance, at certain times, is mortal. The Brahmin who carries it down annually must not have even seen man or woman for five days; and any unfortunate wretch who happens to come across him in his holy pilgrimage drops down dead on the spot! Such is the tale which cunning has worked out of ignorance and superstition; and such the veneration paid by these weak wretches to a dirty bit of old rusty iron. Not so our Sepoys; one of whom, a rajahpoot, volunteered to bring the sacred sword out of the sanctuary, for us to look at. He did so; and, I need scarcely add, was none the worse for his temerity."

Another Hindoo superstition, at Bangalore, is thus related:—

"Being invited by the Hindoos of our corps to see the ceremony of walking through the fire, I mounted my horse, accompanied by Captain Pepper, and rode to the spot, in rear of the native lines, where an oblong pit was prepared, eighteen feet by twelve. I am not aware of its depth, because, on our arrival, it was full of live coals perfectly red-hot. A procession then arrived on the opposite side, and every one of them either walked or danced deliberately through the fire lengthways, having only two landing-places in the centre of each of the smallest faces. This fire was actually so intense that we could not approach its margin, but sat on our horses at a few yards distance, watching every motion. I had seen a little, and heard much more, of this strange feat, but never had such an opportunity of positive proof before. It was in the middle of the Hooly feast, and, I understood, the particular ceremony was in honour of the small-pox deity, Mariamah, to whom they sacrifice a cock, before they venture into the furnace. Then, besmeared all over with some yellow stuff, they go back and forward, both quick and slow, without any apparent suffering; and one man carried an infant on his shoulders, which did not even cry. The puppets of this extraordinary show were of all ages; and I saw a very fine boy slip down at the landing-place, and the others pulled him up uninjured immediately. I have now stated the fact from ocular demonstration; it remains for chemists to explore the nature of the stuff with which they are besmeared; for every Christian will at once attribute this apparent miracle to the true cause, and give them due credit for a very subtle trick. I never could get any native to explain this; and I suspect that the Mussulmans, who can have no interest in keeping up the deception, are quite as ignorant of the means used as we are."

A dozen or two of these salamanders would make their fortunes in London as fire kings, à la Chabert: we wish the colonel had sent a sample of them over to us. Our next quota-

tion affords specimens of more natural dexterity :—

“Setting out (says our author) early the next morning, we reached a river at Chewhaut, seven miles on, and crossed a ferry, where I had the pleasure to see a boy, fourteen or fifteen years old, row a boat across the river with one of his feet, while sitting on the stern, and actually make it move, with several people in it, as fast as the one on which I was standing. Here was a resource of unsophisticated nature displayed to advantage; and it recalls to my mind a feat, somewhat similar, which I once witnessed when out snipe shooting, at Pallacottah. A nullah was full from bank to bank, and I observed a naked native child, five or six years old, go up to a buffalo, and, with a small switch, drive it into the stream; and no sooner had the tractable animal taken to the water than the infant driver, laying hold of his tail, kept himself above water till they reached the opposite bank, when they parted company. I have even my doubts whether they were not perfect strangers before this sociable *rencontre*.”

At an entertainment at Canton, we have an extraordinary account of the feats of Chinese actors or tumblers. After a loose sort of pansomime, Col. W. tells us : “The whole performers came forward, tumbling and jumping about with surprising agility; some of them far beyond any I had ever seen exhibit in my life. One man, in particular, thrust out both arms and caught two common-sized tumblers in the midst of a summerset in the air, from opposite sides of the stage: they fell over his extended arms, and remained hanging like towels upon them, whilst he commenced dancing, and twisted himself round and round, as if he were unconscious of any encumbrance. This feat in

itself would have satisfied us; but the next was of such a nature, that I conceived it necessary to obtain the signatures of the other gentlemen who sat at the same table with me, to the sketch, and then requested them to sign my journal. Not being able to obtain the same vouchers to every printed copy, I must even venture a recital, trusting to my character for veracity to bear me out with those to whom I am known; which I trust is pretty generally the case all over India. Four men placed themselves in a solid square, two others then got up and stood upon their shoulders, and one man again upon theirs. The performer I have already mentioned then mounted a ladder, and got on his shoulders, which elevated him as high as the top of the scenes, from whence another man was handed to him, whom he took in his right hand, by the waistband, and held up over his head a considerable time; when, raising one leg, to our utter astonishment, he fairly balanced himself, burden and all, on the other; after which he threw his live lumber, with a sudden jerk, head over heels, among the crowd of actors, who now entirely surrounded the human pedestal, and caught him in their arms; whilst at the same time he made a summerset on the other side, and, descending, disappeared among the crowd. Whether the puppet he held up was a man, or only an image, I had no means of ascertaining; but it certainly appeared a full grown-man, alive and in perfect health; and even the act of balancing themselves, in the two upper persons, was surprising. Our landlord being questioned on the subject, declared there was no kind of deception, and the stage was as distinct as at mid-day.” For the satisfaction of our readers, we quote the sketch as an elucidation of the description.

As we are on eastern exhibitions, we may also mention fireworks in Malabar: among these grand contrivances were “some rockets, which ran on a horizontal line, guided by ropes attached to strong poles, and some of them fast-

ened to figures, which they impelled with surprising velocity; and also some batteries, which, after imitating the roar of cannon and musketry, suddenly exploded, like mines, throwing up a profusion of fire-balls.”

What would Vauxhall do with such attractions?

Col. W. notices a remarkable anomaly in the vegetable world, to which we would direct the attention of our botanical friends.

“There is (he states) a creeping plant here, winding itself round several of the largest trees, and in all sorts of fantastic forms; but how it has contrived to throw itself from tree to tree, I cannot possibly conceive. It is generally the thickness of a stout man’s arm, and at the base measured fifty inches in circumference. The natives call it *sheekat*, or *cheekoy*; the leaves are small and delicate, and the small branches, only, covered with thorns, like fish-hooks. Strange to say, we also found some tall trees of the same species, whilst this one was entirely a creeper.”

Is there no mistake, of an umbrageous parasite for an actual tree? In the following, also very singular story, there is none. At Trichoor “the rajah’s palace is very large, and well built, and has an excellent garden within the fort, which is now in ruins; but the gate and draw-bridge are entire, and by them is the only road to the palace. On one of the bastions stands a teak flag-staff, thirty years’ old, with a banian tree, of twenty years’ growth, half way up it, the roots of which are dangling in the air. This I considered such a curiosity as to make a sketch of it on the spot. I pretend not to account for such a phenomenon, but the fact is as I have stated it; and the staff to which the tree is attached is so solid that I could hardly make any impression on it with a knife.” As this is also very curious, we give the representation of it.

The following medical fact is worthy of attention :—

“I have (the Colonel relates) several times in my life cured the bites of snakes, with various doses of eau de luze, never exceeding half a bottle; and once, in particular, at Ceylon, when an enor-

mous cobra capella bit a sentinel. The man was all but dead, having even a locked jaw; yet half a small wine glassful, in two or three doses, restored him to convalescence; though he spat blood for some time afterwards, from the strength of the medicine. On one occasion, in the field, when nothing stronger could be procured, I administered brandy; and on another, a large quantity of Madeira: but in these cases I forced the patient into action, as a material part of the cure."

With this we take our leave of these volumes; and thank their author for the pleasure they have afforded us.

Beverlac; or, the Antiquities and History of the Town of Beverley, in the County of York, &c. &c. By George Poulson, Esq. Vol. I. 4to. pp. circ. 900. London, 1829, Longman and Co.: Parker, Oxford: Deighton, Cambridge.

WE allow that this book has lain some time upon our table, and been occasionally looked at with a sort of critical affright; for it is a huge and solid antiquarian and topographical tome, and, like all other works of its class, contains so much of what is chiefly interesting to local readers, that we almost always repent of the labour it costs us to wade through that matter for the sake of the quantum which possesses general interest. Having now performed the task, we are bound to bestow great praise on the indefatigable zeal and industry of the compiler, who seems really to have gathered together every particular respecting Beverley; a town of such ancient note and importance as well to merit every research and illustration. It is true there are parts which we think might have been omitted without injury; for example, copies of the oaths commonly taken by the mayor, jurors, coroners, burgesses, constables, &c., which, as they present no peculiarity, only swell the volume, without conveying information worth having. But still there are a multitude of curious matters rescued from oblivion or obscurity by the diligence of Mr. Poulson and the patriotic feeling of Mr. Scaum, for whom the work is published; and it not only throws light upon the early history of Beverley, but upon the habits and manners of the inhabitants of our first rich manufacturing towns,—in which respect it is most valuable to literature. We have also to notice about thirty well-executed and appropriate embellishments, such as the Minster, arms, seals, public buildings, tombs, coins, figures, &c. &c., which reflect credit upon the artists, and shew that *Beverlac* is yet a place of spirit, taste, and enterprise.

The contents are divided into various periods of the town's history, prefaced by notices of the British, Romans, Saxons, and Normans; then follow its civil and political history as a borough; accounts of its churches and of its corporation; and other miscellanea. Beverley, according to our author, dates its origin from about A.D. 700; and he rejects all former traditions as fabulous. It was founded on a mere, or lake, abounding with beavers; and hence its name Βεβρη-λεχ, subsequently *Beverlac*, or the Lake of Beavers; and in the Domesday Book it is stated to have afforded a fishery of 7000 eels. The church having been converted into a Benedictine monastery, we have the records of that religious seat, and afterwards of a charter granted to the town by King Athelstan, about the middle of the tenth century. Beverley is stated to have escaped by a kind of miracle from the desolation with which the Norman conqueror visited this por-

tion of the island, burning, slaughtering, and laying waste a district of sixty miles in extent, only excepting the demesne lands of St. John, and the fugitives who had sought refuge there. Thence the place had risen into some importance in the reign of Henry I., under whom it continued to improve in freedom and wealth. But as we do not intend to follow out the thread of this long narrative, we shall merely notice two or three passages which have occurred to us as worthy of remark, and leave the work to that class which we trust is numerous enough to reward the labours and expense bestowed upon it. So early as the time of Henry II. the burgh of Beverley was distinguished by its trade in dyed cloths; and it is evident that the manufactory of woollens was widely extended over the country. Even beyond this the author quotes a precept to the sheriff relative to the plunder of a vessel bound for Spain with scarlet and other cloth of Beverley, Stamford, and York; which is a strong proof that at this early period England exported her woollens to the nations on the continent!

This novel fact is very remarkable: we had no idea, before, that the staple of England was exported by foreign merchants, and in foreign ships, so early as in the last quarter of the 12th century. And the growth of this traffic at Beverley (and, of course, elsewhere), is shewn by proceedings about seventy years afterwards, in the reign of Henry III. In 1254 a toll granted by the king to the burgesses, gives them, among other articles, a right to levy on wine, ashes, *bags of wool*, cattle of all kinds, *woad*, herrings by the thousand, lutes or pike, and other fish both salt and fresh, skins, carts, bords, millstones, and corn. The wool and woad here enumerated prove the manufactory of cloth; the other articles being for domestic use and consumption.

Eward I. visited Beverley several times, and the details of his measures and entertainment furnish good pictures of the age: how kings, in travelling, were received and fed; what gifts were bestowed on the courtiers, and how the fund was raised to meet these necessary expenses. But as our notice (for it would be impertinent to call it a review), must be limited to a mere indication of the character of this large work, we are obliged to abstain from farther antiquarian records, and to finish with one quotation, which places an etymological as well as mercantile point in an original view. By an act, 37th Edward III., A.D. 1364, the parliament, after setting forth that many merchants, by undue arts, by combinations, fraternities, and guilds, had engrossed all kinds of goods, till they brought enormous prices, ordained that every merchant should make his election before Candlemas, of one particular kind of goods, and should deal in no other. Artificers were in like manner tied down to one occupation, with an exception of *female* brewers, bakers, weavers, spinsters, and other women employed upon works in wool, linen, or silk embroidery, &c. "If this act," observes the author, "had been in the language of the country, the same terms would have been used, as will frequently appear in these pages, namely, *brevester*, *baxter*, *webster*, &c. the termination *ster* signifying a woman (not a man) who brews, bakes, weaves, &c. When men began to invade those departments of industry by which women used to earn an honest livelihood, they retained the feminine appellations for some time, as men-midwives

* This seems to confirm Blackstone's observation, that "women were great favourites of the laws of England."

and men-milliners do now: but afterwards masculine words drove the feminine ones out of the language, as men had driven the women out of the employments. *Spinster* still retains its genuine termination; and the language of the law seems to presume, that every unmarried woman is industriously employed in spinning."* The progress of the language does not appear to us to bear out this inference.

But we must close the book. The notes are replete with information; though, in referring to other authors, Mr. Poulson has not even questioned their errors, but cited them just as he found them. A more learned antiquary would have corrected their mistakes: *ex. gr.* page 5, note 2: the instruments found together with Celts at Skirlaugh, near the Humber, of which the precise use is said to be unknown, are known to have been weapons of offence, and the ring to attach them to the leathern belt of the combatant. Again, page 91, the halbergellum or haubergeon, said (from Grose) to be either of plate or chain mail, without sleeves, was, we believe, the hauber, always of mail and with sleeves. Such matters, however, do not impeach the integrity and research of the text; and we conclude with our cordial approbation of the diligent manner in which this volume has been compiled, and the judicious style in which it has been produced, with its plates, *fac-simile* charters, and other embellishments.

The Boscobel Tracts, relating to the Escape of Charles the Second, after the Battle of Worcester, and his Subsequent Adventures, &c. &c. &c. 8vo. pp. 347. Edinburgh, Blackwood; London, Cadell.

AT the time when a fugitive king sets his foot upon our shore, we read with a strange degree of associated interest this correct and ample record of an event similar in its common results, though so different in all its details. Charles X. has quitted his kingdom without a struggle, surrounded by his family, and allowed free egress by the government which superseded him, and the people. Charles II. fought bravely for his crown; and, after it was lost, escaped, through a series of adventures of the most romantic kind. Never were courage, secrecy, fidelity, and devotedness, exhibited in finer lights than by those who concealed the royal wanderer, and finally effected his retreat; and our author, by collating and reprinting all the best accounts of this memorable event, has rendered a delightful service to our national history and literature. It is the production of a scholar and an able writer; of one who is most competent to adorn any subject he may undertake, and who in the present instance has chosen a theme of undying interest. There is a clever Introduction, followed by a Diary of the king's movements, drawn up from the best sources; then come Extracts from Clarendon's history, with his numerous errors pointed out; a copy of the Letter from a Prisoner at Chester, from the Oxford edition of Clarendon's State Papers; Charles's own account, dictated to Mr. Pepys at Newmarket, 1680;

* Was it to keep up this delusion, that when music became so fashionable with our fair, as to put an end to housewifery, they called their principal instrument the *Spinet*?—Ed. L. G.

† This notice reminds us of a tribute which we owe to a recent publication by Lord Ashburnham, (2 vols. 8vo. Payne and Foss; Baldwin and Cradock), in which the noble author vindicates his ancestor "Jack Ashburnham" from an imputation thrown upon him by Clarendon, that he betrayed his master, Charles I., by persuading him to seek refuge in the Isle of Wight. His lordship's arguments appear to us to be conclusive on this question; and he impeaches Clarendon's History with so much effect, as considerably to lessen our belief in its accuracy.

Boscobel; Whitgreave's Narrative; and other papers. Upon these, we need only say, that they exhaust the history of the extraordinary event, and are given in the very ablest manner.

Divines of the Church of England, Vols. I. II. and III. By the Rev. T. S. Hughes, B.D., &c. London, 1830. A. J. Valpy.

THESE are the first volumes of a series intended to make a complete collection of the best English divines: a clerical library in a very convenient form, and at a very moderate price. The design is excellent, and as far as the execution has gone, we have every reason to anticipate a valuable work. Scattered, and sometimes scarce, publications will here be brought together, and constitute a whole of intrinsic worth, such as must greatly enrich our school of divinity: lives of the authors, summaries, notes, and other editorial adjuncts, complete the plan. These volumes are devoted to the justly celebrated Bishop Sherlock, and merit our entire approbation.

Gibbon's Decline and Fall of the Roman Empire. Complete in one Volume! Double columns, stereotyped pages, 1303. London, 1830, J. O. Robinson; Liverpool, Baynes.

WHAT shall we have next in the art of contriving, printing, and publishing? Here are twelve volumes in one, of good-sized, readable type; a clever portrait of the author, after Reynolds; and a well-written biography by A. Chalmers,—and all for four and twenty shillings. The book indeed is so respectable, that we cannot apply the *multum in parvo* to it; but it is really an extraordinary production of the press, and furnishes the admired and splendid work of Gibbon (and a truly great work it is, with all its imperfections) in a style which must recommend it to an innumerable class of readers.

An Introduction to the Study of Ancient Geography; with copious Indexes. By Peter Edmund Laurent, of the Royal Naval College, Portsmouth, &c. 8vo. pp. 455. Oxford, H. Slatter: London, Whittaker and Co.

WE have not met with a work of more value to the classical reader than this laborious and very useful volume. The *indexes* alone are worth half a historical series, as guides to references in esteemed authors, and on every point connected with ancient geography that can interest the scholar or general reader. Brief sketches illustrate these subjects, and, being well arranged, are capable of giving more information in an hour than even intelligent research would be likely to supply in several days. Upon these grounds we hesitate not to declare (in spite of a few foreign idioms which are distinguishable in the author's language), that a companion to the library more useful (and we do not except Moss) than Mr. Laurent's *Introduction* can no where be found. A word of farther praise is not necessary when we add that upwards of *nine thousand* places are designated or described in this single volume!

Having this author before us, we owe it in justice to him to mention his trustworthy Translation of Herodotus,* and his Odes of Pindar rendered into English prose, with explanatory notes; † both sterling performances,

* 2 vols. 8vo. 1827. Oxford, Slatter: London, Longman and Co.

† 2 vols. 8vo. 1824. Oxford, Munday and Slatter: London, Whittaker.

though, we must again say, with inaccuracies of style. Taylor, indeed, in his Herodotus seems to have had Mr. Laurent's version in his eye, and to have avoided the quaintnesses which the latter appears to have considered the most accurate and characteristic mode of transcribing the ancient Grecian into another tongue: *non nostrum, &c.*, nor in the matter of a reprint of the same author, either, which a *graduate of Oxford* has, we rather suspect, palmed upon that University as a new translation, though it has only a few verbal alterations from the not very celebrated version of our old friend, old Isaac Littlebury (Lond. 1709), and some valuable selections of notes principally from Beloe and Larcher.

We are, however, so accustomed to the apothecary-literary work of pouring out of one bottle into another, and colouring it a little, that we hardly ever think it worth while to trace the process; and, like the world, are content to fancy the last best! Pretty critical guides! we hear it whispered. Alas! we wish it were the least of our imperfections.

A Dissertation on the Geography of Herodotus, with a Map. 8vo. pp. 86. Oxford, 1830. Talboys.

A TRANSLATION from two tracts of Niebuhr, and also contributing to the illustration of Herodotus; particularly with regard to the history of the Scythians, Getæ, and Sarmatians.

POETRY.

THE constant publication of poetical works, many of them presenting beauties of no ordinary cast, and almost all of them displaying abilities and talents which at a former period would have entitled them to more public applause, compels us to resort to a shorter method of noticing them (in order to bring up our arrears) than we should have adopted had their numbers been fewer, or, perhaps, their characteristics more original and striking.

The Poetical Melange, in three vols. and published by G. A. Douglas of Edinburgh, has reached a second edition; and sustains its claim to be an agreeable and various parlour-window compilation, though it must be owned that it is rather of the gravest for that office.

*Lyra Dramatica** is another small selection from popular writers of our day, and a very pleasing melange.

The Pilgrim of the Hebrides, † by the author of "Three Days at Killarney," "a Lay of the North Country," is a descriptive composition, which in a flowing and natural style gives us a tour to the Hebrides, very unlike Dr. Johnson's. The author touches the scenery, the legend, the travelling adventure, with poetical feeling; and his book will be read with pleasure by the admirers of gentle thoughts in smooth versification.

A New Metrical Version of the Psalms, ‡ by W. Wrangham. Very fair, but not superior to versions already in use; and the *Spirit of the Psalms* § is a more successful attempt to adapt select portions of these ancient Hebrew hymns, in a more poetical manner, to Christian worship. The author has made many alterations, and in some cases rather paraphrases than translates: the volume is deserving of farther attention, both from its plan and execution.

* 18mo. pp. 232. By the Rev. J. W. Thomas. London, J. Stephens.

† 12mo. pp. 300. London, Longman and Co.

‡ 18mo. London, Simpkin and Marshall.

§ 12mo. pp. 160. London, Cadell and Rivingtons.

ARTS AND SCIENCES.

SOLAR AND LUNAR ECLIPSES.

[The ensuing Eclipse of the Moon, on Thursday, Sept. 2, will, we trust, add to the interest with which our readers would receive this paper.]

High on her speculative tower
Stands Science, waiting for the hour
The moon is destined to endure
That darkening of her silvery face,
Which superstition strove to chase
Erewhile with rites impure.

IN the ensuing month there will be two eclipses, one of the moon on the 2d day, the other of the sun on the 17th day, the latter invisible to us; that of the moon will be visible from its commencement to its termination, and the greatest eclipse that has occurred, or will occur for some years: its duration will be 3^h 36^m, of which time the moon will be 1^h 40^m 30^s wholly plunged in the earth's shadow, and either invisible, or only emitting a feeble light.

These celestial phenomena have in all ages of the world, and classes of society, had a powerful effect on the mind; and though eclipses are now dismantled of those terrors with which the bewildered imaginations of ignorance and superstition formerly clothed them, still they will always be regarded with intense curiosity, mingled with an indescribable feeling of awe. In the present lunar eclipse, it cannot be devoid of interest to trace the moon from its conjunction with the sun to its opposition,—from the time it is first observed escaping from the solar effulgence, bending its delicate crescent towards the horizon in the autumnal twilight,—approaching to, and receding from, the brightly beaming stars, Mercury, Spica Virginis, Antares, and Jupiter,—night by night expanding, till it attains its full-orbed glory, then, at the moment of its utmost illumination, to observe a mysterious veil gradually obscuring its brightness, till the queen of night either blends with the dark blue sky, or is dimly seen struggling on her way, red and dreary, like a desolated world. No wonder that the designing, or the self-deceived, traced in such awful changes the ruin of empires, and the overthrow of the mighty: the fame and faith of astrology would have been wonderfully strengthened, had the eclipses of next month occurred a few weeks earlier; these signs in the heavens would have been doubtless considered infallible portents of the death of the British and Neapolitan kings, the downfall of Charles the Tenth, and the recent French Revolution.

The following miscellaneous notes on eclipses are introduced, before giving in due course the scientific details of the two in September; it is hoped they will prove both amusing and instructive.

Miscellaneous Notes on Eclipses.

Under the reign of Chou-Kang, Emperor of China, 2,169 years before Christ, happened an eclipse, the most ancient of which we have any records. Hi and Ho, two astronomers charged with composing a calendar for the regulation of husbandry, were put to death because they had neglected, through intoxication, to foretell it.

In China there is a tribunal of astronomy, the business of which is to calculate eclipses, and to present their types to the emperor and mandarins some months before they occur, with an account of the part of the heavens where they will happen, and how many digits the luminary will be eclipsed. When an eclipse is announced, preparation is made at court for the observance of it; as soon as it begins, a *blind man* beats a drum, upon which

the mandarins and great officers mount their horses, and assemble in the great square of the palace.

An eclipse happened during Lord Macartney's embassy to China, which kept the emperor and his mandarins the whole day devoutly praying the gods that the moon might not be eaten up by the great dragon which was hovering about her: the next day a pantomime was performed, exhibiting the battle of the dragon and the moon, and in which two or three hundred priests, bearing lanterns at the end of long sticks, dancing and capering about, sometimes over the plain, and then over chairs and tables, bore no mean part.

The dramatic representation of the eclipse of the moon is thus described by De Guignes:—"A number of Chinese placed at the distance of six feet from one another, now entered, bearing two long dragons of silk or paper, painted blue, with white scales, and stuffed with lighted lamps. These two dragons, after saluting the emperor with due respect, moved up and down with great composure; when the moon suddenly made her appearance, upon which they began to run after her; the moon, however, fearlessly placed herself between them, and the two dragons, after surveying her for some time, and concluding, apparently, that she was too large a morsel for them to swallow, judged it prudent to retire, which they did with the same ceremony as they entered. The moon, elated with her triumph, then withdrew with prodigious gravity, a little flushed, however, with the chase which she had sustained."

Du Halde assures us, that the circumstances of no fewer than thirty-six eclipses of the sun are recorded by Confucius, out of which there are but two that are false and doubtful.

Eclipses, especially of the sun, have been always considered as events of the most portentous kind. Isaiah, and others of the sacred writers, speak of them as indicative of the wrath of the Almighty. Homer, Pindar, Pliny, and many others of the ancients, also make mention of them in a similar way; and it used to be noticed, more particularly by the superstitious, that an eclipse was often accompanied by a national calamity, or an occurrence of a striking nature, the malevolent effects of which were to continue, for the sun, as many years as the eclipse lasted hours, and for the moon as many months. Dionysius of Halicarnassus remarks, that both at the birth and death of Romulus there was a total eclipse of the sun, during which the darkness was as great as at midnight. It is also said that there was a solar eclipse on the day the foundation of Rome was laid, 5th July, 754, B.C.

An eclipse of the moon is mentioned by Ptolemy to have been observed by the Chaldeans at Babylon 720 years before the birth of our Saviour; the middle of the eclipse reducing the time to the meridian of Paris, was 6^h 48^m, March 19th. From this eclipse it is determined that the mean revolution of the moon is 27^d 7^h 43' 5". This is considered the first eclipse of the moon on record.

Thales rendered himself famous by foretelling an eclipse of the sun; he, however, only predicted the year in which it would happen, and this he was probably enabled to do by the Chaldean Saros, a period of 223 lunations. This eclipse is rendered remarkable by its happening just as the armies under Alyattes, king of Lydia, and Cyaxeres the Mede, were engaged; and being regarded by each party as an evil omen, inclined both to make peace: it has been clearly proved that this eclipse oc-

curred 610 years before Christ, September 30th.—Xenophon observes, that the King of the Persians laid siege to the city of Larissa at the time the empire was taken from the Medes, but was not able by any means to make himself master of it; finally, a cloud coming over the sun made it disappear, so that the hearts of the inhabitants failed, and the city was taken. This cloud was, no doubt, the moon eclipsing the sun; for it appears that Cyrus finished the reduction of the Median empire, B.C. 547, in which year there was a great solar eclipse, the centre of which crossed the Tigris, not far from the place where Larissa was situated.

Anaxagoras, who lived about 530 B.C., is said to have predicted an eclipse of the sun, which, according to Thucydides, happened in the first year of the Peloponnesian war.

When the fleet of Pericles was about to proceed to the attack of Peloponnesus, and Pericles himself was on board the galley, there happened an eclipse of the sun, which was considered by the Athenians as a most unfavourable omen; and they were all thrown into the greatest consternation. The result of this would have very probably been a refusal to proceed on the expedition, had not Pericles, who was aware of the cause of the eclipse, explained it by holding up his mantle before the eyes of the pilot, and observing, that the deprivation was occasioned by the interposition of a much larger body in a similar way.

523 B.C., July 16th.—An eclipse of the moon, which was followed by the death of Cambyses.

502 B.C., November 19th.—An eclipse of the moon, succeeded by the slaughter of the Sabines, and the death of Valerius Publicola.

478 B.C.—When Xerxes undertook his expedition against Greece, in marching from Sardis, an eclipse of the sun took place, which so terrified the army, from its being considered an ill omen of their success, that Pytheas, who had a son in the army, entreated of Xerxes that he might be dismissed; which Xerxes not only refused, but ordered the young man to be cut asunder, the two parts of his body to be fixed up, and the army to march between them.

463 B.C., April 30th.—An eclipse of the sun. The Persian war, and the falling off of the Persians from the Egyptians.

431 B.C., April 25th.—An eclipse of the moon. A great famine at Rome. A plague over all the known world.

413 B.C., August 27th.—When Nicias, the Athenian general, had resolved to quit Sicily with his army, and every thing was ready for embarkation, there happened an eclipse of the moon, at which he was so alarmed, that he delayed his departure until it was too late; the consequence of which was, the loss of his army and the death of himself.

394 B.C., August 14th.—An eclipse of the sun. The Persians beaten by Conon in a sea-engagement.

168 B.C., June 21st.—A total eclipse of the moon. The next day, Perseus, king of Macedonia, was conquered by Paulus Emilius. This eclipse was also observed at Rome, and predicted by Q. Sulpitius Gallus.

Seneca, who was born about the commencement of the Christian era, relates from Posidonius, that during an eclipse of the sun a comet was seen, which had before been invisible by being near that luminary.

It is by a lunar eclipse that a mistake has been found in the Christian era; for it is well known that Christ was born when Herod was king of Judea; and Josephus affirms, that

just before the death of this Herod there was an eclipse of the moon on the night between the 12th and 13th of March: but it has been clearly proved that this eclipse happened on the fourth year before what is considered the Christian era; wherefore this era ought to be carried back three years at least.

The darkness that occurred at our Saviour's crucifixion, and which continued three hours, cannot be attributed to an eclipse of the sun, the passover being kept at the time of full moon: had even the two luminaries been in conjunction, the darkness could only have lasted four or five minutes, owing to their apparent diameters being so nearly equal. Dionysius, a judge of Areopagus, being at Heliopolis, and observing this preternatural phenomenon, cried out, that "Nature was either dissolving, or the God of nature suffering." He afterwards embraced the Christian faith, and suffered martyrdom for the truth of it.

A.D. 14.—A total eclipse of the moon, which terrified the Roman troops, and prevented a revolt.

A.D. 59, April 30th.—An eclipse of the sun. This is reckoned among the prodigies, on account of the murder of Agrippinus by Nero.

A.D. 237, April 12th.—A total eclipse of the sun. This was considered to be a sign that the reign of the Gordiani would not continue long. A sixth persecution of the Christians.

A.D. 306.—An eclipse of the sun. The stars were seen, and the Emperor Constantius died.

A.D. 340, May 4th.—A dreadful eclipse of the sun. Lewis the Pious died within six months after it.

A.D. 1009.—An eclipse of the sun. Jerusalem taken by the Saracens.

A.D. 1133, August 2d.—A terrible eclipse of the sun. The stars were visible. A schism in the church, occasioned by there being three popes at one time.

A.D. 1140, March 20th.—A total eclipse of the sun visible at London. Dr. Halley remarks, that though there are necessarily twenty-eight central eclipses of the sun at some part or other of the globe in eighteen years, and that no fewer than eight of these pass over the parallel of London, three of which are total with continuance,—yet from the great variety of elements whereof the calculus of eclipses consists, it has so happened that since March 20th, 1140, there had not been a total eclipse of the sun visible at London, although the shadow of the moon has often passed over other parts of Great Britain.

A.D. 1191, June 22d.—A very large solar eclipse in England. The true sun was seen dimly, with an *apparent one*, but very much obscured.

A.D. 1493.—Christopher Columbus was driven on the island of Jamaica, where he was in the greatest distress for want of provisions, and refused any assistance from the inhabitants; on which he threatened them with a plague, and told them that in token of it there should be an eclipse; which accordingly fell on the day he had foretold, and so terrified the barbarians, that they strove who should be the first in bringing him all sorts of provisions, throwing them at his feet and imploring his forgiveness.

One of the strongest proofs against the veracity of Bruce, the Abyssinian traveller, was connected with a lunar eclipse. In recording his observations of it, he describes the shadow as having advanced some way upon the disc of the moon, at a time when, by calculation, the luminary was several degrees below the hori-

zon, and did not rise till the middle of the eclipse. Bruce's general truth has, however, been confirmed by all later travellers.

The Marchioness of Hastings, when in India, observed that one of her female attendants absented herself during an eclipse of the moon. On inquiry whither she had been, the woman answered, that "she had been paying the cobbler, for that it was quite dark." Not perceiving what connexion the darkness had with the payment, her ladyship naturally required a solution of the mystery. "Oh!" said the simple creature, "it is an old story: a long while ago, they borrowed nails and a piece of leather of a cobbler, to nail over the moon. The cobbler never was repaid; so I have been with the rest to pay our share of money to the priest."

Dean Swift, happening to tell his parishioners, that, on a certain day and hour, an eclipse would be visible, found, to his great amazement, that at the appointed time his house was besieged by the country people, who had imagined that the sight to be seen could only be exhibited by the dean, and exclusively visible from his dwelling. To rid himself of his troublesome visitors, he told them to go home, as the eclipse was put off for a day or two.

The celebrated Bode, author of the *Celestial Atlas*, and other excellent works, was conversing with Professor Encke, on the 23d of Nov., 1826, relative to the eclipse of the sun, of the 29th of that month, when he was surprised by death.

The eclipses which happened about the time of the creation are little more than half way of their ethereal circuit: it will be 4,000 years before they enter the earth any more.

A catalogue of eclipses was calculated, to gratify the curiosity of the French king, who was anxious to know if a total or annular eclipse would soon happen, visible at Paris. From this calculation it appeared, that only one annular eclipse would occur in the nineteenth century, and that it would take place on the 9th October, 1847. The distance of the centres of the two luminaries will be only 10"; the distance of the south limbs, 1' 24"; distance of the north limbs, 1' 4".

Clavius observes, that at the total eclipse of 1560, the darkness at Coimbra was greater, or at least more striking, than that of night; and the birds fell to the earth through terror.

At the solar eclipse of 1699, there was only $\frac{1}{15}$ th of the sun visible at Gripswald in Pomerania; and the obscurity was so great, that the inhabitants could neither see to read nor write. Two of the planets, and two or three of the fixed stars also made their appearance.

In 1706, at Paris, the sun was eclipsed nearly eleven digits; yet, although only one-twelfth of the diameter was visible, every thing could be distinguished as clearly as in the fullest sunshine.

The sky an azure field displayed—
T'was sun-light sheathed, and gently charm'd,
Of all its sparkling rays disarm'd,
And as in slumber laid:
Or something night and day between,
Like moon-shine—but the hue was green.

The grand eclipse of 22d of April, 1715, presented most interesting phenomena; it was observed, and minutely detailed, by Dr. Halley: his description of it is said to be the best that astronomical history affords of this species of phenomenon. During the greatest obscuration, the planets Jupiter, Mercury, and Venus, and not fewer than twenty of the fixed stars, were visible; so that the sky appeared as starry as during the night of a full moon. An observer at Zurich says, "that the birds went to roost, the bats came out of their holes, and

the fishes swam about; a sensation of cold was experienced, and the dew fell on the grass."

The next lunar eclipse (after the ensuing one in September) visible in Britain, will take place Feb. 26th, 1831. Digits eclipsed 8° 18'; the moon will rise eclipsed.

A very small solar eclipse will occur July 27th, 1832. 12' 30", only, of the sun's southern limb will be concealed.

A great solar eclipse, visible in England, will take place 15th May, 1836, when 11° 18' will be covered.

Another considerable eclipse of the sun will occur 15th March, 1858, when 11° 30' will be hidden.

A still more remarkable eclipse of the sun will take place 19th August, 1887, when the whole of the disc will be covered excepting 2'.

A total eclipse, without continuance, will occur 3d Feb. 1916. The apparent diameters will coincide, and, for an instant, there will be a total concealment of the sun's light. This eclipse will be the greatest that will be visible in England till after the year of our Lord 2,000.

Deptford.

J. T. B.

ANATOMY.

To the Editor of the *Literary Gazette*.

Kilkenney, Aug. 9th, 1830.

SIR,—Having seen in the number of your Journal for the 26th of June, an article headed "Human Horns," I beg leave to submit the following analogous description of a preparation at present in the Museum, Park Street, Dublin.

Curious Case of Ramified Bone.—In the month of December 1828, a preparation was presented to the above museum, by a gentleman whose name has escaped my memory. This preparation was considered a great curiosity, on account of the semi-ramified appearance the bones presented at the elbows, where the *decrana* had entirely disappeared: whether they had existed previous to the patient's death I was not able to ascertain satisfactorily. Some weeks after this, my family having gone to reside at Brussels, I accompanied them, where I remained until the 3d of April of the present year. On my return to Ireland, delaying a few days in Dublin, I strolled into Park Street dissecting school to see some of my fellow-students and associates. In the museum I saw a preparation which I thought I had seen somewhere previously; and on examination, discovered it to be the identical preparation which had attracted so much attention in Dec. 1828; but it was now *toute autre chose*: for, although the preparation had been preserved in common whisky, yet ramification had taken place at the elbows, knees, ancles, and the junction between the clavicle and humerus on the left side, and the fibula of the right leg had begun to throw out ramifications also. This is a fact, for the truth of which many creditable witnesses will vouch—need I mention the names of Doctors Colles, Macartney, Barker, Montgomery, &c. &c.?

LITERARY AND LEARNED.

ORIENTAL RESEARCHES.

M. SENKOVSKY, whose *Supplement to the General History of the Huns, Turks, and Moguls*, was severely criticised by M. Hammer, in the *Annals of Literature*, published at Vienna, has taken his revenge, by exposing a number of blunders, which, according to him, M. Hammer has committed in his work on *Les Origines Russes*. It is evident, if M. Senkovsky is

right, that, with a celebrated name, a writer may easily abuse the confidence of his readers, and communicate to them, as knowledge, the results of inquiries by no means conscientious, or at least little enlightened: or, on the other hand, if M. Senkovsky's criticisms are unfounded, that petty jealousies and rivalries may too often stifle all regard to justice and truth among those by whom justice and truth ought to be especially regarded. M. Senkovsky positively asserts, that "almost every line of M. Hammer's translations from the Arabic, the Persian, and the Turkish, is full of inaccuracies, errors, and mistakes, so important, and frequently so ludicrous, as to be altogether beyond the *errata* for which an author may claim, and obtain, the indulgence of his benevolent readers." Among the errors cited, are the Arabic word *ikhtiar*, which signifies, according to M. Senkovsky, *free-will*, of which M. Hammer has made a proper name; and the word *mounfeshian*, which means *voidening*, of which he has made the name of a nation,—the *Mounfeshas*. "It is thus," adds the critic, "that we see figuring away in M. Hammer's work, the *Tamlessans*, the *Andjars*, the *Schefnans*, the *Bourghars*, the *Esroussiyes*, the *Ssafjars*, the *Ssakars*, the *Ashans*, the *Gharaus*, the *Kholeks*, the *Mouharikas*, the *Birkets*, &c., all people of grammatical origin, and born of M. Hammer's pen." A little further, M. Senkovsky says, "the celebrated orientalist of Vienna writes, 'that the Turks are a numerous people, and that their tribes are innumerable; some living in the deserts and plains, and others riding on camels.' The Persian text is, *der djebal nischinend*, that is to say, they are seated, or live in the mountains. The learned orientalist, perplexed with the word *djebal*, which signifies *mountains*, has substituted for it the word *djimat*, which signifies *camels!*" M. Senkovsky adduces many other instances of alleged ignorance and absurdity on the part of M. Hammer.

FINE ARTS.

ENCAUSTIC PAINTING.

IN a recent number of the *Literary Gazette* we mentioned the Portrait of Cleopatra, by Timomachus, which forms one of the principal attractions in Mr. Reinagle's interesting exhibition at the Royal Bazar, in Oxford Street. We strongly recommend the lovers of art to pay their early court to the Egyptian queen, as it may be long before they will have the opportunity of examining a similar production. This remarkable picture was found at Florence, in the year 1822, in clearing out a vast wine-cellar, belonging to the Marquis del Monte, San Maria; and was, at that time, so obscured by dirt, and the effects of time, that the features were scarcely visible. It is certainly one of the greatest curiosities in Europe; because all other discovered works of the same age, with the exception of the Aldobrandini Marriage at Rome, and the paintings in the Royal Museum at Portici, are the decorations of walls, and therefore cannot reasonably be supposed to be the performances of eminent Greek artists. When Timomachus lived, which Pliny tells us was in the reign of Augustus Caesar, the art had been on the decline for considerably more than a century: nevertheless, there is great refinement in the whole contour, the form of the mouth, and the general expression, (evidently that of acute pain and approaching death,) as well as in the action, as far as the limited space has allowed. This picture has been submitted, both in France and in Italy, to a very strict scrutiny, and has

been the subject of no fewer than three treatises in Italian. The Cavaliere Ridolfi, and Signor Tangione, both skilful chemists, (the latter being the Imperial Professor to the Royal Lyceum in Florence,) after removing the varnish with which it had been anciently covered, detached and analysed portions of the colour, and established, beyond all further controversy, that the painting was executed in encaustic; an art disused and lost after the death of Timomachus.

NEW PUBLICATIONS.

Drawing made Easy.—Engelmann and Co. THE various theories of light-and-shade, form, and perspective, are laid down in this little work with brevity and clearness; and are illustrated by plates, which, as far as they go, conduct the learner in the right path. The author states in his preface, that he "has endeavoured to condense a mass of information on the subject of chiaroscuro."—There is not a word, however, on the subject in the whole treatise. We are afraid that he is not aware of the practical distinction between light-and-shade and chiaroscuro; and that he thinks they are convertible terms. The former (as artists well know) has reference to single objects; the latter, to general effect. The light-and-shade in a picture may be unexceptionable, and yet the chiaroscuro be poor and miserable. A knowledge of the one is little more than a mechanical acquisition; the other requires taste, and a painter's feeling. The difference is as great as that between orthography and style, in written composition.

The Landscape Alphabet. Engelmann and Co. A CHILDISH idea, very poorly executed.

A Series of Four Views, to illustrate the Naval Action fought on the First of June, 1813, between the English Frigate Shannon and the American Frigate Chesapeake. Lithographed by W. L. Haghe, from Paintings by J. C. Schelky, Esq., under the inspection of Capt. R. H. King, R.N. 1830. Smith, Elder, and Co.

ONE of the most brilliant, and, for many reasons, one of the most satisfactory, frigate actions that ever distinguished the British flag, is here represented with all a seaman's skill and accuracy, and with every advantage which lithographic art can supply. The four views will afford to sailors a history of this short but decisive battle; and the whole cannot but be gratifying to the public at large. The particulars of the fight are given in a concise but interesting manner; and the publication is dedicated to the hero of the day, Sir P. B. Vere Broke.

The Countess of Verulam. Engraved by Dean, from a Miniature by Hawkins.

THIS portrait of a very lovely woman, and naturally calling forth the best efforts of art, is the 69th of the beautiful series which adorns *La Belle Assemblée*, (and a fine assembly they make). The proof before us is charmingly executed.

The Group of Statues from Tam o'Shanter. J. Dickinson.

THE four figures of the Landlord, Landlady, Souter, and Tam, which form the popular exhibition in Bond Street, are here represented with characteristic truth. The ingenious sculptor, Mr. Auld, has reason to be pleased with the drawing of Miss L. Adams, which so faithfully copies his happy personations, and with W. Sharp's lithographic execution of them.

Earl Grey. Martin Colnaghi. COUSIN'S exquisite mezzotint of Lord Grey, from Lawrence, is one of the most striking likenesses and admirably finished portraits which even the high state of the arts in England has produced. Thus, while the character of the individual will recommend the work to a multitude of admirers, its excellence must make it valued by all.

ORIGINAL POETRY.

FOLLOW ME!^{*}

A summer morning, with its calm, glad light,
Was on the fallen castle: other days
Were here remembered vividly; the past
Was even as the present, nay, perhaps more—
For that we do not pause to think upon.
First, o'er the arching gateway was a shield,
The sculptured arms defaced, but visible
Was the bold motto, "Follow me!" again
I saw it scrolled around the lofty crest
Which, mouldering, decked the ruined banquet-room:
A third time did I trace these characters—
On the worn pavement of an ancient grave
Was written "Follow me!"

FOLLOW me!—'tis to the battle-field—
No eye must turn, and no step must yield;
In the thick of the battle look ye to be:
On!—'tis my banner ye follow, and me.

Follow me!—'tis to the festal ring,
Where the maidens smile and the minstrels
sing;

Hark! to our name is the bright wine potred:
Follow me on to the banquet-board!

Follow me!—'tis where the yew-tree bends,
When the strength and the pride of the victor
ends;

Pale in the thick grass the wild flowers bloom:
Follow me on to the silent tomb!

L. E. L.

THE LEGACY OF THE ROSES.†

OH! plant them above me, the soft, the bright,
The touched with the sunset's crimson light,
The warm with the earliest breath of spring,
The sweet with the sweep of the west wind's
wing;

Let the green bough and the red leaf wave—
Plant the glad rose-tree upon my grave.

Why should the mournful willow weep
O'er the quiet rest of a dreamless sleep?—
Weep for life, with its toil and care,
Its crime to shun, and its sorrow to bear;
Let tears and the sign of tears be shed
Over the living, not over the dead!

Plant not the cypress nor yet the yew;
Too heavy their shadow, too gloomy their hue,
For one who is sleeping in faith and in love,
With a hope that is treasured in heaven above;
In a holy trust are my ashes laid—
Cast ye no darkness, throw ye no shade.

Plant the green sod with the crimson rose,
Let my friends rejoice o'er my calm repose;
Let my memory be like the odours they shed,
My hope like their promise of early red;
Let strangers, too, share in their breath and
their bloom—
Plant ye the bright roses over my tomb!

L. E. L.

THE ASPEN TREE.

THE quiet of the evening hour
Was laid on every summer leaf;
That purple shade was on each flower,
At once so beautiful, so brief.

* "Follow me!" is the motto of the noble race of Bredalbane, and was seen in the way described at their feudal castle in the Highlands.

† A person who died at Barnes left an annual sum to be laid out in roses planted on his grave: authority, Mr. Crofton Croker.

Only the aspen knew not rest,
But still, with an unquiet song,
Kept murmuring to the gentle west,
And cast a changeful shade along.

Not for its beauty—other trees
Had greener boughs, and statelier stem;
And those had fruit, and blossoms these—
Yet still I chose this tree from them.

'Tis a strange thing, this depth of love
Which dwells within the human heart;
From earth below to heaven above,
In each, in all, it fain has part.

It must find sympathy, or make;
And hence beliefs, the fond, the vain,
The thousand shapes that fancies take,
To bind the fine connecting chain.

We plant pale flowers beside the tomb,
And love to see them droop and fade;
For every leaf that sheds its bloom
Seems like a natural tribute paid.

Thus Nature soothes the grief she shares:
What are the flowers we hold most dear?
The one whose haunted beauty wears
The sign of human thought or tear.

Why hold the violet and rose
A place within the heart, denied
To fairer foreign flowers, to those
To earlier memories allied?

Like those frail leaves, each restless thought
Fluctuates in my weary mind;
Uncertain tree! my fate was wrought
In the same loom where thine was twined.

And thus from other trees around,
Did I still watch the aspen tree,
Because in its unrest I found
Somewhat of sympathy with me.

L. E. L.

SKETCHES OF SOCIETY.

[We continue our entertaining and curious miscellaneous extracts from the correspondence of an esteemed friend in Germany.]

Leeches.—During many years a particular honour has been bestowed on these inhabitants of marshes, as they are carried away with all speed, day and night, over a distance of many hundred miles to their destination of blood-sucking. This modern kind of traffic was at first undertaken by some enterprising Frenchmen, in order to provide Paris and a part of France with leeches, which come from the interior of Hungary, and, in particular, from the large estates of Prince Esterhazy. The waggons in which this new merchandise is transported are of a peculiar construction, and contain from 500,000 to 600,000 leeches; and trade is carried on in spring and autumn, when the weather is fresh and wet; and many a week, more than five or six of these waggons hurry through this town (Carlsruhe) on their way to France. To shew how fond the French doctors are of this remedy, the best proof may be, that no less than 8,000 have been sent over to Africa for the Algerine expedition. A great number of these now so fashionable little animals are also exported from France to England, and even to North America; and this explains, in some way, why that country (viz. France) re-exports so many of them, as has been remarked in the *Literary Gazette*, Number 683. There are now in Paris ten leech-mongers, who each sell weekly no less than 10,000 of them; which shews that in that town alone between 5,000,000 and 6,000,000 are annually consumed. They are sold by weight; viz. at two kilograms, and the prices vary from twenty-two or twenty-five to forty or forty-five francs.

Since this article has become so much in request, some inhabitants of this country, and of the kingdom of Wurtemberg, have tried to rear them in large quantities, in which they succeeded very well. They sell them by quintals, each containing 50,000 leeches. In the marshes of Scotland and Ireland, this new branch of industry might, perhaps, also be undertaken with profit.*

Snails.—Not a less important article of trade than the leeches are the eatable snails (*Helix pomatia L.*). In some valleys of the Alps (kingdom of Wurtemberg), and in particular in that called Lautenthal, the rearing of these animals has been carried to a large scale. Towards the end of June they are gathered on fields and in forests by children and the poor people, and sold by the hundred to the snail-mongers for from four to five cruzers (five to seven farthings). They are then put in large grass-gardens, and fed, in rainy weather, with cabbage leaves and other vegetables. When they shut themselves in the month of September, they are sent down the Danube to Vienna and Hungary. Many of the snail-mongers carry more than 80,000 with them. They are sold in the winter for two or three florins the hundred. This new branch of trade might also be tried in Ireland, as there are so many Catholics, who would be glad to eat snails in Lent.

G. Canning.—A German periodical† gives an anecdote of G. Canning, which, I think, is not yet known in England. A treaty having been signed between Great Britain and Sweden, both the ministers of Foreign affairs, viz. Mr. Canning and Baron Ehrenheim, at Stockholm, had to receive, by usage, snuff-boxes set in diamonds, of the value of 1000*l.* sterling. Baron Ehrenheim, however, desired the Swedish envoy in London to give the English minister a hint, that he should prefer receiving the value of the snuff-box in ready money. In case the English government should be surprised at this uncommon demand, he empowered him to divulge his secret motive to Mr. Canning, in confidence, viz. that, as the Swedish province Bohuslaen was labouring under a great want of corn, he intended to alleviate it in some way with this sum. Canning was indeed much surprised at this unusual proposal; but having learnt the reason of it, he said: "Probably Baron Ehrenheim is a very rich man, to be able to make such a present." "Not at all," replied the Swedish envoy; "he has nothing but his salary." "The nobler the action," exclaimed Canning; "I give you my word his wish shall be fulfilled. But I, too, have a favour to ask,—allow me to share in his good action. I entreat you therefore to add the amount of the snuff-box which I have to receive from your government to the sum Baron Ehrenheim has destined for the relief of the province Bohuslaen." It is well known, that Canning was not wealthy.

The Age.—The present time may well be compared to an army in full march. All have decamped, and are on the road. Some, however, cry, Halt! and appoint bounds where they

shall stop. But though a part halts for a moment, and looks back to see what there may be, the bulk still goes on; and, anon, those who stopt at the bounds find themselves deserted, and their words of command vanishing away; for there is no one who understands them any more,—and miserable is their plight. Awhile they may beguile themselves in the company of stragglers; at last, however, they will find themselves left alone, as the Age has passed by, and they are living in a world altogether foreign to them. So it has happened in manufactures, in trade, and also in politics. How often did those who were behind the spirit of the age call out, That manufactures and commerce would be ruined; and, nevertheless, both still subsist, and perhaps to a larger extent than before, although in other channels and in different branches! What fine plans have not our politicians excogitated to silence the spirit of the day, and how often have their designs been frustrated!

Railways.—Within five years three railways have been made in Austria by private companies. The largest of them will be that between the Moldau (a river) and the Danube. Its length already extends to 13,400 cords (a measure equal to six German feet). There can be no better proof how much industry and trade are improving in that country. In no other part of Germany have such roads yet been constructed.

The present Grand Duke of Baden.—It is a curious circumstance, that this prince succeeded his father, Charles Frederick, who came to the throne 1738, ninety-two years after; and before this could happen, three elder brothers, his nephew, and his two sons, died! What a mortality in one family!

Lancasterian Schools.—In no country have these useful schools increased so much as in the kingdom of Denmark. In 1820 there were but 244, and now 2,700. Each school is provided with a lodging for the master, and also with a locality for gymnastic exercises.

DRAMA.

HAYMARKET.

A TRANSLATION of *Le Mariage Impossible* was produced yesterday week, and met with a favourable reception. It is rather coarsely rendered from the French, but lively enough, and, altogether, a much more Hay-marketable commodity than any thing produced this season, with the exception of *Separation and Reparation*. Mrs. Humby played, with great humour and naivete, the part of a little peasant girl, who is compelled to take "a husband at sight"—that husband turning out to be a female. Vining was pleasant as the rakish young nobleman, to prevent whose *mesalliance* this stratagem is resorted to; and Miss Mordaunt and Webster, as the female husband and the major domo intrusted with the conduct of the plot, enacted with spirit and discretion. *A Husband at Sight* was announced for repetition amidst unmingled applause. Mr. Buckstone is, we hear, the adapter.

VARIETIES.

A new German Literary Gazette.—A Dr. C. F. Wurm, at Hamburg, has begun publishing a new German periodical, in imitation of the *London Literary Gazette*, but limiting himself to German literature and manners. The first Numbers are very well done, and worthy of their prototype. The title of this new Gazette is, *Kritische Blaetter der Boersen Halle* (Critical Papers of the Exchange)—as

this periodical is connected with a literary institute established at the Hamburg exchange.

Machinery.—We regret to state, that during the late disturbances in Paris a great deal of machinery was destroyed by the workmen, whose rage appeared to be particularly directed against the machines used for printing. In the printing-office of M. Taillard several were destroyed; and at M. Selligie's the mob broke to pieces a steam-printing machine which cost 30,000 francs. They went next to the office of the *Constitutionnel*, for the purpose of destroying the printing machines; but it being represented to them, that the journal, which was their best friend and advocate, could not appear if thus injured, they desisted.

Charles X.—The French papers state, that on the 27th of July, whilst the troops and the populace were fighting in the streets of Paris, an artist, who had an appointment on that day at the palace, for the purpose of painting a miniature of Charles X., arrived at St. Cloud, almost covered with the brains of a soldier who had been shot near him as he was leaving Paris. The Duchess de Berri, to whom he related what was passing in the capital, urged him to repeat it to the king. He did so; but the latter is stated to have heard the recital unmoved, and to have replied, "*Ce n'est rien—commencez!*" It is added, however, that the painter was too much affected to be able to hold his pencil; and that he left the palace almost immediately.

Algiers.—One of the naturalists who was sent out to Algiers with the French expedition, writes word to Paris, that he has found the country much less interesting to the botanist and horticulturist than could have been imagined. At present, he has not twenty new specimens.

William IV. Landgrave of Hesse, distinguished himself greatly by promoting the study of astronomy. He applied himself closely to this science, and erected an observatory on the top of his palace at Cassel, which he furnished with quadrants, sectants, and various other instruments, and with these he made a great number of observations. He determined the latitude and longitude of 400 stars, which he inserted in a catalogue, rectifying their places to the year 1693. He died in the year 1692. Our William IV., by his munificent patronage, promises to be a like encourager of this noble science.

Prophecy!—Francis Moore, physician, in his astrological predictions for the summer quarter of the present year, has made a happy hit. "We may expect to hear of some eminent mutations, state meetings, conventions, and changes in the municipal laws of some neighbouring nations, which will be effected with much heat and vigour; and some crowned heads will be greatly distressed."

The Press in Spain.—Ferdinand has issued a new decree against the press in Spain, by which imprisonment for two years is declared against minor offences, and the punishment of death awarded to authors and printers who shall publish books containing treasonable or sacrilegious expressions.

The Arts.—Four large paintings, representing scenes of the revolution in 1830, have been ordered by the city of Paris. The painters are to be Messrs. Delaroche, Scheffer, Schnetz, and Stuben.

Lizards.—A friend of mine once assured me, that having struck at a lizard with his whip, he cut a portion of its tail off; the lizard instantly turned round, and seeing the tail wriggling, immediately swallowed it; no doubt mistaking

* It has been tried on a limited scale in garden ponds in this country, and the experiment succeeded very well. Perhaps it has not been persevered in on so extensive a plan as could be wished, on account of the cheap rate at which these creatures are now imported, so as to be bought by medical practitioners at 6*s.* or 7*s.* per hundred. During the latter part of the late war, as much as 3*s.* and 5*s.* 6*d.* for single leeches has been paid in Covent Garden Market. We wonder, on the whole, that some enterprising persons do not turn their attention to the rearing of the genuine brown leech in England.

† Bibliothek der neutenen Weidkunde, 1828. vol. xli. (Library of the newest Osmology).

it for some vivacious insect. From what I know of the habits of these animals, I think it is exactly what a lizard would do.—*From a Correspondent.*

Newfoundland Dog.—Some time ago, I went with a friend to see the garden belonging to a gentleman residing at Monkstown, near Dublin. After walking over the grounds, we found some difficulty in opening a door by which we had entered; as it opened towards us, the difficulty was the greater. A fine Newfoundland dog, that was looking on, seemed impatient, and started off; presently the door was forced in against us, and the dog appeared. It is probable he had often opened the door before for his own convenience.—*Idem.*

Honesty in Switzerland.—It is customary in the canton Wallis, for those who have found any thing lost, even money, to affix it to a large crucifix in the churchyard; and there is not an example on record, of any object being taken away except by the rightful owner.

LITERARY NOVELTIES.

TO CORRESPONDENTS.

Nalsh and Co.'s article (of gloves, see last L. G., p. 530) has not, we are sorry to say, come to hands. We do not advise Mem to reprint his book. Addendum: the fee enclosed for this advice, a pound note, has been sent in the name of Mem to that excellent charity the Literary Fund, where it will help to comfort some destitute author.

The letter from Windsor is illegible, the seal covering part of it.

Our Andover correspondent must excuse our departing from our usual practice in the matter referred. We are ready and willing to oblige; but such calls upon our time would increase the business of a journal like this beyond a twenty-editor's steam power.

We owe it to Mr. Fortunato La Moile to remove any unfavourable impression that might be made by the misconstruction of our Notice to Correspondents in last Gazette. We meant simply to intimate our usual course of criticism; and have now much pleasure in saying, that if he publishes his tour as a Troubadour, we shall regard it with great complacency; and that we anticipate much amusement from its perusal. It is curious that two individuals should have undertaken the same sort of minstrel wandering; and we hope his account will be very different from that of Senor de Vega, with whom we must not confound him.

ADVERTISEMENTS,

Connected with Literature and the Arts.

NATIONAL REPOSITORY,
Royal Mews, Charing Cross—Patron, the KING'S MOST EXCELLENT MAJESTY. The Third Exhibition of this Institution now Open, Daily.
Admittance, 1s.—Catalogues, 1s.
T. S. TULL, Sec.

CARLISLE EXHIBITION—for the promotion of the Fine Arts in the North of England.

Patrons.
The Right Hon. the EARL of LONSDALE, K.G.
The Right Hon. the EARL of CARLISLE.
&c. &c. &c.
Artists are respectfully informed, that the Opening of the Exhibition is postponed until the 15th of September, 1830. Those intending to exhibit are requested to communicate with the Secretary, as early as possible, the size, number, and price, of their productions.

Carrriage by Pickford's Canal Boats.
By Order of the Committee, M. NUTTER, Sec.
Academy Place, Carlisle, Aug. 1, 1830.

MANCHESTER COLLEGE, YORK,
under the superintendance of the Rev. C. WELLBLOVED, Theological Tutor and Principal—the Rev. J. KENRICK, M. A. Tutor in Ancient Languages and History—the Rev. W. HINCKS, F.L.S. Tutor in Mathematics and Philosophy, and Resident Tutor.

The Committee of this Institution are of opinion that the present is a suitable time for calling the attention of parents and of the public at large, to the advantages which it offers for completing a course of liberal education, both on account of the increasing demand for such advantages,—which they believe the spirit of the present times must occasion,—and of their conviction that the successful endeavours lately made to improve the discipline of the College, entitle them to recommend it without hesitation to public confidence.

The plan of instruction embraces a constant attention to the study of the Greek and Latin Classics; an extensive course of Mathematics and Natural Philosophy; Latin and English Composition; Ancient and Modern History; Intellectual, Moral, and Political Philosophy, and Political Economy; and the Evidence of Natural and Revealed Religion. Instruction in the French, Italian, and Spanish Languages, may be obtained from able masters; and German is taught by the Rev. J. Kenrick.

The Students breakfast, dine, and sup at the Table of the Resident Tutor, and have their apartments in buildings immediately adjoining his house, and enclosed in a common gate. The expenses to which they are subjected, independently of the charge for board and lectures, are very small; and the Committee challenge inquiry, both as to the economy of the plan, and the character of the instruction afforded.

The Terms for Lay Students are One Hundred Guineaes per Annum.

The importance of education is now so much felt amongst all classes, that parents must naturally be desirous of affording to their sons opportunities of improvement more extensive than can be enjoyed even at the best schools; and it will be acknowledged to be highly desirable that young men should be prepared for taking their places in the world, by passing a certain time in a situation where, while they are controlled in all essential points by a system of strict discipline, they are no longer treated as children, but learn to act for themselves, and take upon themselves in some degree the management of their own affairs.

To these views the plan of Manchester College has been adapted. It offers the advantages of a college education unfettered by religious tests, and free from the danger of moral corruption; and the Committee feel assured, from an intimate acquaintance with its present state, that it will not disappoint those who approve of its general principles.

The College Session will commence on Friday, the 24th of September.

Applications for Admission of Students may be addressed to the Rev. C. Wellblove, Principal of the College; to the Treasurer, George Wither Wood, Esq. Manchester; or to either of the Secretaries, the Rev. J. Taylor, and S. D. Darbshire, Esq. Manchester.
Manchester, July 1830.

Grindlay's Views in India, completed.
Just published, in atlas 4to. price 2l. 2s. Part VI. of

SCENERY, COSTUMES, AND ARCHITECTURE, chiefly on the Western Side of India.
By Capt. ROBERT MELVILLE GRINDLAY, Of the East India Company's Army, M.R.A.S. &c.

This splendid Part, which completes the Work, contains, with the usual Number of Plates and descriptive Letterpress, a beautifully Illustrated Title-page for the Second Volume, and the Contents, &c. for the whole.
Published by Smith, Elder, and Co. Cornhill.

THE SHANNON and CHESAPEAKE.

Just published, in double elephant folio, price Two Guineaes, an India paper, a Series of Four Views to illustrate the Naval Action fought the 1st of June, 1813, between the English Frigate Shannon and the American Frigate Chesapeake.

Drawn in the most beautiful style of Lithography, from very accurate Paintings by S. C. Schetchy, Esq. under the Inspection of Captain R. H. King, R.N. Accompanied by a Description of the Plates, and a general Account of the Engagement.
Smith, Elder, and Co. Cornhill.

TO BOOKSELLERS and STATIONERS.

To be disposed of, with immediate possession, an Establishment in the above Line, in one of the most fashionable Watering Places in the West of England, with 1000 copies of London, the present Proprietor retiring from Business. The Returns, already considerable, may by attention be doubled; and the Connexion is excellent. The Stock, which is modern and well selected, to be taken at a Valuation.
Letters post-paid, addressed to W. W., care of Hurst, Chance, and Co. St. Paul's Churchyard, will meet with due attention.

PARTNERSHIP.—A Young Man who

has a complete Knowledge of the Bookselling Business, wishes to enter into Partnership with a Gentleman in the same Line, or any Private Gentleman, having no Knowledge of the Business, and who would be willing to advance a small Capital, would find this a very eligible Opportunity, the Advertiser being willing to undertake the principal Management. Most satisfactory References can be given.
Letters addressed to A. B., at Mr. Dunshy's, 86, Ludgate Street, will be immediately attended to.

MUSIC.

New National Songs.

OUR KING is a TRUE BRITISH SAILOR.

"Hard up with the helm, Britannia's sheet flow,
Magna Charter on board will avail her,
And better she sail as the harder it blows,
For her pilot's a King and a sailor."
The Words by Captain MITFORD, R.N.
Dedicated to Her Majesty Queen Adelaide. 2s.

Our Queen is the Wife of a Sailor, written as a Companion to the above, by Captain Mitford. Dedicated to His Majesty. 2s.

Here's a Health to merry England, with additional Stanzas in honour of His Majesty. Composed by John Barnett. 2s.

England, the Home of the World. John Barnett. 2s.

The Pilot. By Thomas Haynes Bayly, Esq. 2s.

The Waterloo Medal. By T. H. Bayly, Esq. 2s.

The public are respectfully informed, that "Our King is a true British Sailor," from the great character of the words and music, will be one of the most popular naval songs since the days of Dibdin. It is dedicated to our most gracious Queen Adelaide, and will, we think, be a decided favourite with the ladies of England.

Published only by Mayhew and Co. 17, Old Bond Street; and to be had of every respectable Music-seller in the United Kingdom.

Just published, by J. Green, 28, Soho Square,
STRIKE, STRIKE the LYRE, to FREEDOM VICTORIOUS! Patriotic Song and Chorus.
Written by J. GREEN.
Price 1s. 6d.

The Gondola, for Four Voices, written by P. W. N. Bayly, Esq. Composed by J. Green. 2s. 6d.

The Pride of the Village; a Bolero Ballad, with elegant Title. Written and composed by J. Green. 2s. 6d.

Green's Guitar Songs, in Classes, Alphabetically arranged, each having several different Accompaniments. All in Class A may be played in One Hour, by any Person before ignorant of the Instrument. 1s. 6d. each.

Little Songs for Little Singers, several Numbers, new editions, 1s. 6d. each.

New Vocal Music.

Published by Willis and Co. Royal Musical Repository, 55, St. James's Street, (opposite Jernyn Street), London, and 7, West-morland Street, Dublin.

THE SAILOR'S LOADSTAR, a Naval Ballad. Dedicated, by special permission, to Her Most Gracious Majesty the Queen.

By Mrs. C. B. WILSON. 2s.

The Messenger Bird, Duet. Words by Mrs. Hemans. Music by her Sister. 2s.

A Set of Six Songs. Words by Mrs. Hemans. Music by John Lodge, Esq. 10s. 6d.

A Third Volume of Tyrolese Melodies, sung by the Rainer Family, with an English Translation, by T. H. Bayly, Esq. Arranged by I. Mocheles. 15s.

My Fair Madeline, Song. Words and Music by Miss E. L. Deacon. 2s.

God Save the King, with an additional Stanza to Her Most Gracious Majesty the Queen. 2d edition, for One, Two, or Three Voices. By Sir J. Stevenson. 2s. 6d.

Peace to thy Shade, departed Monarch! Monody on the Death of His late Most Excellent Majesty King George the Fourth. By James Crick, Esq. 2s.

In the Press.

True Blue, and Old England for ever. Words by T. H. Bayly, Esq. Music by S. Wesley. 2s.

God Save King William and Queen Adelaide, Song. Words and Music by J. Crick, Esq. 2s.

Willis and Co. respectfully inform the Nobility and Gentry, that their Rooms are constantly supplied with a splendid Variety of Piano-Fortes, &c. by the most eminent Makers, at the lowest Manufacturers' Prices.

BOOKS PUBLISHED THIS DAY.

To be had at No. 183, Fleet Street,
A GRAMMAR of the ITALIAN LANGUAGE; or, a Plain and Compendious Introduction to the Study of Italian.
By J. P. COBBETT.

Works on Ireland. Published by William Curry, Jun. and Co. Dublin; and Hurst, Chance, and Co. London. THE NORTHERN TOURIST; or, Stranger's Guide to the North and North-west of Ireland, containing a particular Account of the Towns of Drogheda, Dundalk, Newry, Downpatrick, Belfast, Antrim, Coleraine, Derry, Sligo, Enniskillen, &c. &c.; with a Description of the Giant's Causeway, and every thing remarkable in the intermediate Country.

By P. D. HARDY, M.R.I.A. One pocket volume, with a Map, Ten Views, and a Plan of Belfast. 8s. bound. Ten Views of Picturesque Scenery in the North and West of Ireland, engraved by William Miller, after Drawings by George Petrie, Esq. R.I.A. Subjects: Drogheda from the Bridge—Rostrevor—Narrow-Water Castle—Belfast, from Turf Lodge—the Long Bridge and Carr Hill, Belfast—Carrick-a-Shane—Dunluc Castle—Giant's Causeway—Derry—Lough-Gill, near Sligo—with short Descriptions. 8vo. 7s. 6d.

The New Picture of Dublin; or, Stranger's Guide to the Irish Metropolis, containing a Description of every Public and Private Building worthy of notice, with a Plan of the City, and Sixteen Views. By P. D. Hardy, M.R.I.A. 18mo. 7s. 6d. bound.

Those who intend making a trip to Dublin, would do well to provide themselves with this "Picture." They will find it a correct and useful guide to every thing worthy of notice there; and those who cannot stir so far from home, may gather from it much interesting information, which no person in the habit of mingling with society can well be without.—Scottish Literary Gazette.

Traits and Stories of the Irish Peasantry, containing Ned Keown's Three Wives, or the Little House under the Hill—Shane Fadh's Wedding—Larry McFarland's Ware—the Battle of the Factions—the Funeral—the Party Fight—the Hedge School—the Abduction of Mac Kavanagh—the Station. 2 vols. crown 12mo. with Engravings, price 14s.

Admirable, truly intensely Irish. Never were that strange, wild, imaginative people so contrastively described, and amidst all the fan, frolic, and folly, there is no dearth of poetry, pathos, and passion.—Blackwood's Magazine for May.

Sketches in Ireland, descriptive of interesting and hitherto unnoticed Districts in the North and South, by the Rev. Cesar Otway. Post 8vo. 10s. 6d. boards.

An able and delightful volume, which most certainly, if Ireland were in a tranquil state, would contrast favourably with the annual shoals of picturesque tourists.—Quarterly Review, No. 76.

A History of the Siege of Derry, and Defence of Enniskillen, in 1688 and 1689. By the Rev. John Graham, M.A. &c. &c. New edition, with a Map and Three Plates, 12mo. price 6s.

We can recommend it with the greatest confidence to our readers, assuring them that it is a work of no ordinary importance, and is by far the best history so contrastively described, and amidst all the fan, frolic, and folly, there is no dearth of poetry, pathos, and passion.—Edinburgh's Literary Gazette.

A History of the Rise, Progress, and Suppression of the Rebellion in Wexford, in the Year 1798. By George Taylor. 3d edition, 18mo. 3s. 6d.

It gives a lively picture of the scenes in that rebellious period of which it treats.—Glasgow Free Press.

School Books. A SYNOPSIS of ROMAN ANTIQUITIES; or, a comprehensive Account of the City, Religion, Politics, and Customs, of the Ancient Romans, with a Catechetical Appendix. By JOHN LANKTREE.

2d edition, enlarged and improved, 18mo. 8s. boards. The rapid circulation which the first edition of this little work obtained, has encouraged the author to supply the public with a preparation of the present. Several important additions have been made, especially in the third and fourth books, and the whole subjected to a careful and critical revision.

A Greek Grammar, on a new and systematic Plan, according to the Analytic Method. By the Rev. Thomas Flynn, A.M. 12mo. 3s. bound.

A Spelling Book, on a new Plan, containing all the common Words in the Language; to which is prefixed, an Introduction, in Three Parts, exhibiting—1. The Sounds of the Letters—2. The Quantity of the Syllables—3. A Systematic Classification of Words, with an Appendix, containing several useful Tables. By the Rev. Richard Roe, A.M. 18mo. 1s. 6d.

The First Three Books of Livy, with English Notes. By James Froudeville, Scholar of Trinity College, Dublin. Second edition, corrected and much improved. 18mo. 3s. 6d. bound.

Juvenal, with a Paraphrase and English Notes. By Dr. Hawkesworth, Principal of the Feinagian School, Luxembourg. 18mo. in the press. Dublin: Printed for W. Curry, Jun. and Co.; Hurst, Chance, and Co. London; and Oliver and Boyd, Edinburgh.

WAVERLEY NOVELS. New Edition. Vol. XVI. of this edition, which commences Ivanhoe, with an Introduction by the Author, and illustrated by John Martin and J. Cawse, will be published on 1st September.

All the early Novels are again reprinted, and are to be had of all Booksellers. Printed for Robert Cadell, Edinburgh; and Whittaker, Treacher, and Co. London.

Of whom may be had, The Poetical Works of Sir Walter Scott, Hurst, in 11 vols. 8vo. price 6l. boards; and 11 vols. 18mo. 3l. 3s. boards, with Smirk's Plates, and New Introductions.

Also, The Eleventh Volume separately, in 8vo. price 12s. and 18mo. 9s. to complete former editions. A New Edition of the Lady of the Lake, in small 8vo. price 9s. is just ready.

Also, Mr. Skene's Sketches of the Localities of the Waverley Novels. Nos. I. to XVI. price 1s. and 1s. 6d. each.

Summer Excursions, &c. &c. In a thick 18mo. vol. illustrated by 94 Views and Maps, price 15s. bound. THE GUIDE to all the WATERING and SEA-BATHING PLACES, including the Scotch Watering Places, containing full and accurate Descriptions of each Place, and of the Curiosities and striking Objects in the Environs; and forming an agreeable and useful Companion during a Residence at any of the Places, or during a Summer Tour in quest of Health or Pleasure. With a Description of the Lakes, and a Tour through Wales.

A Description of the Scenery of the Lakes in the North of England. By W. Wordsworth, Esq. A new edition, with Additions, and a Map. Price 5s. 6d.

The Original Picture of London, corrected to the present Time, with a Description of the Environs. Revised and mostly written by J. Britton, F.S.A. &c. In 18mo. with upwards of 100 Views of Public Buildings, in and Maps, Plans, &c. of the Metropolis, and during a Summer Tour in the Country Twenty Miles round London, &c.; with the Maps only, 6s. neatly bound. Printed for Longman, Rees, Orme, Brown, and Green.

Miss Mangnall's Historical and Miscellaneous Questions, &c. A new and improved Edition. In 12mo. price 5s. bound and lettered.

HISTORICAL and MISCELLANEOUS QUESTIONS, for the Use of Young People; with a Selection of British and General Geography, &c.

By H. H. L. M. LANGNALL, Esq. The design of this work is to supply teachers and young persons with a compendium of useful and important information. It comprises a comprehensive abstract of classical, scripture, and general history; a more detailed account of the British Isles, with a sketch of the English Constitution; a select biography of eminent persons; a brief view of classical mythology; a short treatise on the elements of astronomy; besides a great variety of curious and useful miscellaneous matters, relating chiefly to subjects of natural history connected with the domestic arts. The present edition has been carefully revised, and may be recommended as a safe, pleasing, and important assistant to parents and to private and public instructors.

By the same Author. A Compendium of Geography, 7s. 6d. bound. Printed for Longman, Rees, Orme, Brown, and Green.

Just published by John Harris, Corner of St. Paul's Churchyard. THE LITTLE LIBRARY, comprising, in a Series of small Volumes, uniformly printed, a familiar Introduction to various Branches of useful Knowledge.

1. The Mine. This First Volume of "The Little Library" has already reached a second edition, and was written by the late Rev. Isaac Taylor, of Ounces, Essex. Illustrated with 16 Engravings, and a Mineralogical Table. Price 3s. 6d. neatly bound in cloth, square 16mo.

2. The Ship, with 16 Engravings on Steel, by the late Rev. Isaac Taylor, Author of the "Mine." Square 16mo. bound in cloth, lettered, price 3s. 6d.

The following is a brief enumeration of the subjects noticed in this book:—Noah's Ark—Flood on the Rhine—Egyptian Pottery—Indian Paddle Canoes—Boats, Barges, and Lighters—Sailing Canoes—Chinese Junk—The Nautilus—Ancient Vessels—Roman Gallies—British Coracles—Cæsar's Fleet—a Fire-Ship—a Cutter—a Gun-boat—a Bomb Ketch—a Frigate—a Man-of-War, with its Longboat, Pinnace, and Xebec—a Turkish Galley—a Venetian Gallies—a French Gallies—a Zebec, Polacre, and Tartar—a Snow Blander, Schooner, and Dogger—a Sloop, Hoop, and Smack—an East Indian—a Portuguese Carrack—a Spanish Gallies—a Canal Boat—a Wherry and Pleasure Boat—a Funnel—Lord Mayor's State Barge—Venetian Gondola—the Doge's Baccantaur—a Man-of-War, with Descriptive References—Section of a Man-of-War—the Dock yard—the Ship Launch. The Volumes next in succession are,—III. The Forest—IV. The Garden—V. Bunyan's Pilgrim's Progress, which will shortly appear.

3d edition, price 1s. 6d. MR. MORGAN'S LETTER to the BISHOP of LONDON.

"Compare his rules with those that Jesus taught, Let both the systems to this text be brought; That which your reverend bench defends with zeal, And that, who once has seen, must warmly feel." Reprint of Brutus. Hurst, Chance, and Co.; and Effingham Wilson.

Bampton Lectures for 1839. In 8vo. price 12s. in boards. AN INQUIRY into the DOCTRINES of the ANGLO-SAXON CHURCH. In Eight Sermons, preached before the University of Oxford, in the Year 1830, at the Lecture founded by the Rev. John Bampton, M.A. Canon of Salisbury. By HENRY SOAMES, M.A.

Of Ashdon Colledge, and Rector of Shelly, in Essex. Printed for C. J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, London; and sold by J. Parker, Oxford.

Of whom may be had, by the same Author, The History of the Reformation of the Church of England, during the Reigns of Henry VIII., Edward VI., and Queens Mary and Elizabeth. In 4 large vols. 8vo. price 3l. 6s. in boards. Also, An Abridgment of the same Work, for Schools and Young Persons. In 12mo. price 3s. 6d. boards.

Price 2s. THE SCRIPTURAL CHARACTER of CIVIL PUNISHMENT VINDICATED, in a Sermon preached at St. Mary's Church, July 23d, 1809, before Sir James Allan Park, Bart., and Sir John Bernard Bosanquet, Bart., two of His Majesty's Justices of the Court of Common Pleas. By VAUGHAN THOMAS, B.D. Late Fellow of C. C. of Oxford.

"Omnia prena, si iusta, percenti prena est, et supplicium nominat."—Augustinus Retractions, lib. I. c. 2. Oxford: Printed by J. Munday; and sold by H. Statter, High Street; and C. J. G., and F. Rivington, by H. Hatchard and Son, London.

In 18mo. price 5s. 6d. boards, ESSAYS on INTERESTING and USEFUL SUBJECTS, with a few Introductory Remarks on English Composition; designed to assist Youth in the Style and Arrangement of Themes. By E. JOHNSON. Printed for C. J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Works published during the week by Longman, Rees, Orme, Brown, and Green. THE EDINBURGH REVIEW; or, Critical Journal, No. 102. Price 6s.

Contents.—Art. I. Sadler's Law of Population, and Disproof of Human Superfecundity.—II. Monk's Life of Dr. Richard Bentley, Master of Trinity College, Cambridge.—III. Hare and Thirlwall's Translation of Niebuhr's Roman History.—IV. Lady Hall's Life and Public Services of Sir Stamford Raffles.—V. Rise, Progress, and Decline of Commerce in Holland.—VI. Mrs. Gore's "Women as they are, or the Manners of the Day"—VII. Sotheby's Specimens of a New Version of Homer.—VIII. Law Reform; District Courts.—IX. Handolph's Memoirs; Correspondence and Private Papers of Thomas Jefferson, late President of the United States.—X. Library of Useful Knowledge.—XI. Kennedy's Origin and Affinities of the principal Languages of Asia and Europe.—XII. The Ministry, and the State of Parties.—Notices respecting Mr. Brougham's Speech on Colonial Slavery.

Instructions to Young Sportsmen in all that relates to Guns and Shooting; Difference between the Flint and Percussion System; Preservation of Game; getting Access to all kinds of Birds; Specific Directions, with new Apparatus for Wild Fowl Shooting, both on the Coast and in Fresh Water; new Directions for Trout Fishing, and Advice to the Young Sportsman on other Subjects. By Lieut.-Col. P. Hawker. 6th edition, in 2vo. 12s. cloth boards, enlarged and improved, with 30 Plates of Game.

'Colonel Hawker is one of the best shots in England, and his 'Instructions to Sportsmen' the very best book we have on the subject.'—Blackwood's Magazine, August 1830.

Loudon's Hortus Britannicus; a Catalogue of all the Plants Indigenous, Cultivated in, or introduced to Britain.

Part I.—The Linnean Arrangement, in which nearly 80,000 Species are enumerated, with the Systematic Name and of Affinity, Accutention, Derivation of Generic Names, Literal English and Specific Names; Synonyms, Systematic and English, of both Genera and Species; Habit, Habitation in the Garden, Indigenous Habitation, Popular Character, Height, Time of Flowering, Colour of the Flower, Mode of Propagation, Soil, Native Country, Year of Introduction, and Reference to Figures: preceded by an Introduction to the Linnean System.

Part II.—The Jusseuean Arrangement of nearly 4000 Genera, with an Introduction to the Natural System, and a General Description and History of each Order.

Edited by J. C. Loudon, F.L.H.G. and Z.S. In 8vo. price 21s. cloth boards.

The Linnean Arrangement and its Supplement are entirely the work of Mr. George Don; the Natural Arrangement is founded on the System of Lindley, with some additions and alterations rendered necessary by the plan of this Catalogue; and Dr. Crèveville, the profound cryptogamist, assisted in arranging the Cryptogamia.

Travels in Russia, and a Residence at St. Petersburg and Odessa, in the years 1827—1829; intended to give some Account of Russia as it is, and not as it is represented to be, by Edward Morton, M.B. Member of Trinity College, Cambridge. In 2 vols. 18s. cloth boards.

A System of Universal Geography. By M. Maite Brun, Editor of the "Annales des Voyages." Vol. 5, Part I. price 7s. 6d.

Literary Recollections. By the Rev. Richard Warner, F.A.S. Rector of Great Chaldish, Wilts, &c. In 3 vols. 10s. 6d. boards.

"The style is remarkably forcible, chaste, and elegant."—Monthly Review.

A Treatise on the Nature and Cure of those Diseases, either Acute or Chronic, which precede Change of Structure, with a view to the Preservation of Health, and particular History of Organic Diseases. By A. P. W. Philip, M.D. F.R.S.L. and E. &c. In 8vo. 12s. boards.

The Baron, a Romance. By Miss Anna Maria Porter. 3 vols. 12mo. 1l. 7s. boards.

"The descriptions are picturesque even to poetry."—Literary Gazette.

Sir Ethelbert; or, the Dissolution of Monasteries. A Romance. By the Author of "Santo Sebastiano," the "Romance of the Pyreces," &c. &c. In 3 vols. 12mo. price 1l. 4s. boards.

Traditions of Palestine. Edited by Harriet Martineau. In post 8vo. 6s. boards. The Cathedral Antiquities of England. By John Britton, F.S.A. M.R.S.L. &c. No. XLVIII. price 12s. medium 4to.; and 1l. imperial 4to.

This Number, containing Six Engravings, forms the first of the History of Hereford Cathedral. No. II. will be published in October next; and No. III. to complete the volume, in December.

A limited number of Copies is printed in super-royal folio, with Proofs, or with Proofs and Etchings.

The Gardener's Magazine, and Register of Rural and Domestic Improvement. Conducted by J. C. Loudon, F.L.S. H.S. &c. 8vo. No. 27, to be continued every two months, alternately with the Magazine of Natural History, price 3s. 6d. Also may be had,

• Vols. I. to V. price 4l. boards. In 4to. price 1l. 11s. 6d.; or large paper, 2l. 12s. 6d. boards, Part VI. of ILLUSTRATIONS OF ORNITHOLOGY.

By Sir WILLIAM JARDINE, Bart. F.R.S.E., F.L.S., M.W.S., and FRÉDÉRIC JOHN SELBY, Esq. F.L.S., M.W.S., &c. A Part, containing from Fifteen to Twenty Plates, on which will be figured from Twenty to Thirty Species, accurately coloured from Nature, will be published every three or four months.

Published by Longman and Co., and S. Highley, London; Daniel Izard, 5, St. David Street, Edinburgh; and W. Curry, Jun. and Co. Dublin.

DISSERTATION on the MALVERN WATER, with an Inquiry into the Causes, Forms, and Treatment of Scrofulous Diseases and Consumption; together with some Remarks on Local Salubrity.
By WILLIAM ADDISON, Surgeon.
Also, by the same Author, price 2s.

A Letter to William Lawrence, Esq. on the Phenomena of Life and the Mind.
"Mr. Addison's work is scientific and ingenious, and we can with confidence recommend it."—*Quarterly Journal of Science*.
"The best parts of Mr. Addison's book are those where he details the symptoms, causes, and treatment of scrofula."—*Medical Gazette*.

Published by Treuttel and Co. 30, Soho Square.
MEMOIRS of HIS SERENE HIGHNESS ANTHONY, PHILIP D'ORLEANS, Duke of Montpensier, Prince of the Blood.

Written by HIMSELF.
In 1 vol. 8vo. with a fine Portrait, price 9s.
This interesting piece of autobiography contains many curious particulars relative to the present King of the French, and other distinguished individuals who figured in the first French Revolution.

Handsome printed in 1 thick vol. 8vo. with a Portrait, price 18s. canvass boards.
GEORGE IV. Memoirs of his Life and Reign, interspersed with numerous Personal Anecdotes; to which is prefixed an Historical Account of the House of Brunswick, from the earliest Period.

By H. E. LLOYD, Esq.
With a Portrait and Autograph of His Majesty.
Published by Treuttel and Wurtz, Treuttel, Jun. and Richter, 80, Soho Square.

"A simple and honestly written narrative of the principal events in his late Majesty's life and government. It tells the story fairly, in the best of all styles, and is a judicious and philosophical speculation to a period when, perhaps, it can be more truly applied than it could be so near the date of the matters recorded."—*Literary Gazette*.

"Mr. Lloyd is earliest in the field of the various gentlemen whose intentions to assist to the public biographical sketches of our late lamented sovereign have been already avowed. His work is something more than it pretends to be, as the first hundred pages contain an abridged account of the Brunswick family, from its founder, Boniface, Count of Lucca, who flourished about the middle of the eighth century, down to the present time. This, though it may appear to a certain extent irrelevant, is not an uninteresting portion of Mr. Lloyd's book. In the personal memoir which follows, he appears to have availed himself very successfully both of public documents and private sources of information; and we cannot but applaud the spirit in which the work is written, being equally removed from the sins of flattery and prejudice. On some of the more delicate topics connected with this subject, Mr. L. has touch'd lightly, but without any sacrifice of truth or candour; and, while a feeling of loyalty, respect, and regard, for the numerous and princely virtues of the deceased, is apparent throughout, he has not endeavoured to keep out of sight the occasional presence of failings to which humanity is but too prone, and many of which have been, with respect to George the Fourth, so cruelly exaggerated by unprincipled reviewers."—*Courier*.

"Mr. Hannibal Lloyd was, we find, presented to his Majesty at the levee on Wednesday, and laid at his feet a copy of this publication, which does credit both to his talents as a biographer, and his feelings as a man. Not only are the main incidents of the late king's life detailed with fidelity and perspicuity, but the hidden springs and motives of conduct, in many instances, laid open, which have hitherto escaped the penetrating eye of the public. Mr. Lloyd seems to have had access to authentic sources of information, of which he has availed himself, at once with candour and discretion, and we can honestly recommend his work."—*Intelligence*.

"Works like these are in their nature temporary—they are written for the occasion—criticism upon them would be idle; and, after this, we may say fairly that Mr. Lloyd's work is readable, and will have an interest with many persons."—*Athenaeum*.

In 8vo. with Plates and Portrait, price 9s. 6d. boards.
MEMOIRS of the late CAPT. HUGH CROW, of Liverpool; comprising a Narrative of his Life, together with the Sketches of the Western Coast of Africa, particularly of Bonny, &c.; to which are added, Anecdotes and Observations, illustrative of the Negro Character.
Printed for Longman, Rees, Orme, Brown, and Green, London; and G. J. Robinson, Liverpool.

In a handsome and closely printed volume, price 7s. 6d.
THE TREASURY of KNOWLEDGE, and LIBRARY of REFERENCE. Parts I. and II. Second edition.

By SAMUEL MAUNDER.
"If ever the praise of *multum in parvo* was fully accomplished, it certainly has been earned by this undertaking. The book is really a curiosity. An excellent English and a sufficient classical dictionary, a clever grammar, a capital gazetteer, a judicious historical chronology, a remarkable collection of wise saws, interesting tables, measures, an explanation of law terms, and, we believe, fifty other stores of most useful reference, are all compressed into a neat and portable duodecimo, for three half-crowns!"—*Literary Gazette*.

See also the *Atlas, Athenaeum, Spectator, Sun, Globe*, &c.
Specimens of this unique volume may be had (gratis) of the Publisher, 10, Newgate Street, and of all Booksellers.

An Introduction to Blends' Algebraical Problems.
In 8vo. price 7s. boards.

THE ELEMENTS of ALGEBRA, comprising Simple and Quadratic Equations, designed as an Introduction to Blends' Algebraical Problems, and the Higher Branches of Analytic.

By ALEXANDER JAMIESON, A.M. LL.D.
A Key to the above is nearly ready for publication, in which the Solutions to all the Questions will be worked out full length.
London: Printed for Poole and Edwards, (late Boscawen and Lestrange), 14, Ave Maria Lane.

Colonel Welsh's Military Reminiscences.
In 2 vols. 8vo. Illustrated by nearly One Hundred Plates, price 17. 10s. bound in cloth.
MILITARY REMINISCENCES; extracted from a Journal of nearly Forty Years' Active Service in the East Indies.
By Colonel JAMES WELSH, of the Madras Establishment.
Smith, Elder, and Co. Cornhill.

Poster on the Sugar Cane.
In demy 8vo. with Illustrative Plates, price 15s. cloth.
THE NATURE and PROPERTIES of the SUGAR CANE; with Practical Directions for its Culture, and the Manufacture of its various Products; detailing the Improved Methods of Sowing, Retining, and Distilling. Also, Descriptions of the best Machinery; and useful Directions for the general Management of Estates.
By GEORGE RICHARDSON PORTER.

"This volume contains a valuable mass of scientific and practical information, and is, indeed, a compendium of every thing interesting relative to colonial agriculture and manufacture."—*Intelligence*.

"We can altogether recommend this volume as a most valuable addition to the library of the home West India merchant, as well as that of the resident planter."—*Literary Gazette*.

"This Work may be considered one of the most valuable books that has yet issued from the press connected with colonial interests; indeed, we know no greater service we could render West India proprietors, than in recommending the study of Mr. Porter's volume."—*Spectator*.

"The work before us contains such valuable, scientific, and practical information, that we have no doubt it will find a place in the library of every planter and person connected with our sugar colonies."—*Monthly Magazine*.
Smith, Elder, and Co. Cornhill.

University of London.

Price 17. 1s.
THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD, Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.
This work is elegantly got up, and comprises 48 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of the illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years.
London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catherine Street, Strand; and to be had of all Booksellers.

SATURDAY, AUGUST 28, 1830.

REVIEW OF NEW BOOKS.

The Life of Lord Byron. By John Galt. 12mo. pp. 372. London, 1830. Colburn and Bentley.

A MORE original, profound, or correct view of a character as interesting as it was intricate,—one whose seeming contradictions were at once such materials for theories, and such temptations to erect them,—was never taken than in the volume before us. Mr. Galt's plan is a history of Lord Byron's mind rather than of himself; a condensation of events and effects according as they bore upon works whose attraction was at once derived from, and afterwards reflected on their author. Few persons have been more unfortunate in those circumstances over which they have no control, such as birth, fortune, education, &c. than Byron. No distinctions take a stronger hold on the mind than hereditary ones. We have not time to discuss the justice of the pride of birth; but it is a pride so sanctified by time, as to seem rather innate than acquired,—one administered to by the legends told for the amusement, and the annals read for the information, of youth; one to which the respect conceded seems of a higher order than that given to riches, inasmuch as it is more disinterested. Pride of birth is one of the most influential of those feelings which go towards forming a character. It was one of the keys to Byron. Secondly, poverty: it is easy to declaim philosophically on the folly of luxury, the needlessness of many wants and certain appliances; but while wealth commands the consideration no one can deny it does in our present state of society, the absence of that wealth will be keenly felt, not for its luxury, but for its power: the privations of poverty are nothing to its mortifications. There can be no doubt, that the loss of what his family pride held to be necessary to its dignity, was another great source of that bitterness, and that affectation of reserve, which, under the name of dignity, was some wounded feeling shrinking into its own shadow: we deceive no one so much as we deceive ourselves. Thirdly, temper: and every page of Mr. Galt's work bears us out in our long-established belief of the great influence Lord Byron's bad temper exercised upon his life. Now, we must own, good temper is one of those qualities we like rather than either respect or admire,—a compound usually the result of cowardice and indolence, or, at best, of animal spirits: it is very difficult for a person of warm affections and vivid imagination, which so exaggerates the impressions it receives, to be a good temper, whose grand secret is, after all, indifference. But we draw a wide distinction between one of those worrying, peevish, dissatisfied dispositions, whose miseries are as petty as the mind which makes them, and indulgence in which is a positive enjoyment to the proprietor; and one whose sensibility is too keenly awakened, and whose feverish anxiety for the opinion it covets, keeps up that state of morbid excitement which must have a re-action of gloom. We

had better expressed our meaning by calling Byron's an over-susceptible temper. But these three, pride of birth, poverty, and a sensitive temper, were the great influences which made his character. Of the judgments formed of that character, we shall only observe, people are desirous of seeing a man of genius; they are disappointed if he is like themselves, and discontented if he is not. The faults we indulge in ourselves we least easily excuse in others, and vanity is one of those faults too general to be generally pardoned. Personally acquainted with Lord Byron, a man of genius himself, Galt, like Moore, brings much of previous qualification to the task; and it is curious to observe how little they have trenched on each other's ground.* Galt's is a literary and philosophic view: no one can possess this volume without having a just idea of the man and the poet, an analysis of character as accurate as it is original, and a condensation of all the events of a very varied life. It is valuable as in itself a compendium of his history; but it is invaluable as a commentary on all that have gone before—it is a finished cabinet picture. We would not, however, lose one preceding fragment relating to an individual whose history affords such great insight into human nature, and whose intrinsic interest will survive all the little gossipings and small disputes of the hour. The subject is too exciting not to lead to the expression of some sentiments of our own; but we do both the public and Mr. Galt injustice, in delaying to enter on pages so replete with charm and information. The following admirable delineation of genius shews the true feeling with which the author enters on his work.

“Genius of every kind belongs to some innate temperament; it does not necessarily imply a particular bent, because that may possibly be the effect of circumstances; but without question, the peculiar quality is inborn, and particular to the individual. All hear and see much alike; but there is an undefinable though wide difference between the ear of the musician, or the eye of the painter, compared with the hearing and seeing organs of ordinary men; and it is in something like that difference in which genius consists. Genius is, however, an ingredient of mind more easily described by its effects than by its qualities. It is as the fragrance, independent of the freshness and complexion of the rose; as the light on the cloud; as the bloom on the cheek of beauty, of which the possessor is unconscious until the charm has been seen by its influence on others; it is the internal golden flame of the opal; a something which may be abstracted from the thing in which it appears, without changing the quality of its substance, its form, or its affinities.”

How just, again, are the remarks on the influence of scenery!—

“He was, undoubtedly, delicately suscep-

* We reserve the preface, in which Mr. Galt delivers his opinion of Mr. Moore's Memoirs, for future discussion; that preface contains also other matter well worthy of our consideration.—Ed. L. G.

tible of impressions from the beauties of nature, for he retained recollections of the scenes which interested his childish wonder, fresh and glowing, to his latest days; nor have there been wanting plausible theories to ascribe the formation of his poetical character to the contemplation of those romantic scenes. But, whoever has attended to the influential causes of character, will reject such theories as shallow, and betraying great ignorance of human nature.

“The views of the Malvern hills recalled to his memory his enjoyments amidst the wilder scenery of Aberdeenshire. The recollections were reimpresed on his heart and interwoven with his strengthened feelings. But a boy gazing with emotion on the hills at sunset, because they remind him of the mountains where he passed his childhood, is no proof that he is already in heart and imagination a poet. To suppose so, is to mistake the materials for the building. The delight of Byron in contemplating the Malvern hills was not because they resembled the scenery of Lochynagar, but because they awoke trains of thought and fancy, associated with recollections of that scenery. The poesy of the feeling lay not in the beauty of the objects, but in the moral effect of the traditions, to which these objects served as talismans of the memory. The scene at sunset reminded him of the Highlands; but it was those reminiscences which similar scenes recalled that constituted the impulse, which gave life and elevation to his reflections. There is not more poesy in the sight of mountains than of plains; it is the local associations that throw enchantment over all scenes, and resemblance that awakens them, binding them to new connexions: nor does this admit of much controversy; for mountainous regions, however favourable to musical feeling, are but little to poetical. The Welsh have no eminent bard; the Swiss have no renown as poets; nor are the mountainous regions of Greece, or of the Appennines, celebrated for poetry. The Highlands of Scotland, save the equivocal bastardy of Ossian, have produced no poet of any fame, and yet mountainous countries abound in local legends, which would seem to be at variance with this opinion, were it not certain, though I cannot explain the cause, that local poetry, like local language, or local melody, is, in proportion to the interest it awakens among the local inhabitants, weak and ineffectual in its influence on the sentiments of the general world. The ‘Rans de Vaches,’ the most celebrated of all local airs, is tame and commonplace,—unmelodious, to all ears but those of the Swiss ‘forlorn in a foreign land.’”

The following observations on Byron's feeling of love are as just as they are original.

“It is singular, and I am not aware it has been before noticed, that, with all his tender and impassioned apostrophes to beauty and love, Byron has in no instance, not even in the freest passages of *Don Juan*, associated either the one or the other with sensual images. The extravagance of Shakspeare's Juliet, when

she speaks of Rome being cut after death into stars, that all the world may be in love with night, is flame and ecstasy compared to the icy metaphysical glitter of Byron's amorous allusions. The verses beginning with

* She walks in beauty like the light
Of eastern climes and starry skies,

is a perfect example of what I have conceived of his bodiless admiration of beauty and objectless enthusiasm of love. The sentiment itself is unquestionably in the highest mood of the intellectual sense of beauty; the simile is, however, any thing but such an image as the beauty of woman would suggest. It is only the remembrance of some impression or imagination of the loveliness of a twilight applied to an object that awakened the same abstract general idea of beauty. The fancy which could conceive in its passion the charms of a female to be like the glow of the evening, or the general effect of the midnight stars, must have been enamoured of some beautiful abstraction, rather than aught of flesh and blood. Poets and lovers have compared the complexion of their mistresses to the hues of the morning or of the evening, and their eyes to the dew-drops and the stars; but it has no place in the feelings of man to think of female charms in the sense of admiration which the beauties of the morning or the evening awaken. It is to make the simile the principal. Perhaps, however, it may be as well to defer the criticism to which this peculiar characteristic of Byron's amatory effusions give rise, until we shall come to estimate his general powers as a poet. There is upon the subject of love, no doubt, much beautiful composition throughout his works, but not one line in all the thousands which shews a sexual feeling of female attraction—all is vague and passionless, save in the delicious rhythm of the verse."

We much like the ensuing.

"The supposition that poets must be dreamers, because there is often much dreaminess in poesy, is a mere hypothesis. Of all the professors of metaphysical discernment, poets require the finest tact; and contemplation is with them a sign of inward abstract reflection, more than of any process of mind by which resemblance is traced, and associations wakened. There is no account of any great poet whose genius was of that dreamy cartilaginous kind which hath its being in haze, and draws its nourishment from lights and shadows; which ponders over the mysteries of trees, and interprets the oracles of babbling waters. They have all been men—worldly men, different only from others in reasoning more by feeling than induction. Directed by impulse, in a greater degree than other men, poets are apt to be betrayed into actions which make them singular, as compared by those who are less imaginative; but the effects of earnestness should never be confounded with the qualities of talent."

We have chosen these more abstract remarks to shew the style and spirit of Mr. Galt's biography. We shall now turn to such incidents as are either new in themselves, or possess some new inference drawn by the writer.

His Childhood.—"His schoolfellows, many of whom are alive, still recollect him as a lively, warm-hearted, and high-spirited boy, passionate and resentful, but withal affectionate and companionable: this, however, is an opinion given of him after he had become celebrated; for a very different impression has unquestionably remained among some, who carry their recollections back to his childhood.

By them he has been described as a malignant imp; was often spoken of for his pranks by the worthy housewives of the neighbourhood as "Mrs. Byron's crookit deevil;" and generally disliked for the deep vindictive anger he retained against those with whom he happened to quarrel."

It is remarkable that, though the faults of our childhood are comparatively slight and unimportant, yet they are always those most deeply remembered and brought against us in after life. The next anecdote we select as one to redeem many darker specks.

"Towards his nurse he evinced uncommon affection, which he cherished as long as she lived. He presented her with his watch, the first he possessed, and also a full-length miniature of himself, when he was only between seven and eight years old, representing him with a profusion of curling locks, and in his hands a bow and arrow. The sister of this woman had been his first nurse; and after he had left Scotland he wrote to her, in a spirit which betokened a gentle and sincere heart, informing her with much joy of a circumstance highly important to himself. It was to tell her that at last he had got his foot so far restored as to be able to put on a common boot, an event which he was sure would give her great pleasure: to himself it is difficult to imagine any incident which could have been more gratifying."

Much has been said of the weakness of thus dwelling on a personal deformity; but we do think only those who suffer under such a misfortune can tell its bitterness. The wrong and falsehood of such a style of poetical criticism as the *Edinburgh Review* indulged in, is most justly reprobated. We cannot but observe how completely almost all its predictions of poetical fame have been falsified, and how all our great English poets have made their way in defiance of criticism as flippant as unjust. Byron, Wordsworth, Coleridge, Montgomery, alike had in their onset to contend with the same bitter and frivolous attacks. These are now standard names in our literature: but where there is no feeling, there can be no appreciation.

"He was then just come of age, or about to be so; and one of his objects in this visit to the metropolis was, to take his seat in the House of Lords before going abroad; but, in advancing to this proud distinction, so soothing to the self-importance of youth, he was destined to suffer a mortification which probably wounded him as deeply as the sarcasms of the *Edinburgh Review*. Before the meeting of parliament he wrote to his relation and guardian, the Earl of Carlisle, to remind him that he should be of age at the commencement of the session, in the natural hope that his lordship would make an offer to introduce him to the house; but he was disappointed. He only received a formal reply, acquainting him with the technical mode of proceeding, and the etiquette to be observed on such occasions. It is therefore not wonderful that he should have resented such treatment; and he avenged it by those lines in his satire, for which he afterwards expressed his regret in the third canto of *Childe Harold*. Deserted by his guardian at a crisis so interesting, he was prevented for some time from taking his seat in parliament, being obliged to procure affidavits in proof of his grandfather's marriage with Miss Trevannion, which having taken place in a private chapel at Carhais, no regular certificate of the ceremony could be produced. At length, all the necessary evidence having been obtained, on

the 13th of March, 1809, he presented himself in the House of Lords alone,—a proceeding consonant to his character, for he was not so friendless nor unknown, but that he might have procured some peer to have gone with him. It however served to make his introduction remarkable. On entering the house, he is described to have appeared abashed and pale. He passed the woolack without looking round, and advanced to the table where the proper officer was attending to administer the oaths. When he had gone through them, the chancellor quitted his seat, and went towards him with a smile, putting out his hand in a friendly manner to welcome him; but he made a stiff bow, and only touched with the tip of his fingers the chancellor's hand, who immediately returned to his seat. Such is the account given of this important incident by Mr. Dallas, who went with him to the bar; but a characteristic circumstance is wanting. When Lord Eldon advanced with the cordiality described, he expressed with becoming courtesy his regret that the rules of the house had obliged him to call for the evidence of his grandfather's marriage. 'Your lordship has done your duty, and no more,' was the cold reply, in the words of Tom Thumb, and which probably was the cause of the marked manner of the chancellor's cool return to his seat.

"Among other remarkable characters pointed out to us, was a nobleman in the pit, actually under the ban of outlawry for murder. I have often wondered if the incident had any effect on the creation of *Lara*; for we know not in what small germs the conceptions of genius originate."

The following is an example (and there are many others) of the great care with which Mr. Galt observed minute facts with reference to their poetical influence on Lord Byron's mind.

"But the most important occurrence of that evening arose from a delicate observance of etiquette on the part of the ambassador. After carrying us to his box, which was close to that of the royal family, in order that we might see the members of it properly, he retired with Lord Byron to another box, an inflection of manners to propriety in the best possible taste—for the ambassador was doubtless aware that his lordship's rank would be known to the audience, and I conceive that this little arrangement was adopted to make his person also known, by shewing him with distinction apart from the other strangers. When the performance was over, Mr. Hill came down with Lord Byron to the gate of the upper town, where his lordship, as we were taking leave, thanked him with more elocution than was precisely requisite. The style and formality of the speech amused Mr. Hobhouse, as well as others; and, when the minister retired, he began to rally his lordship on the subject. But Byron really fancied that he had acquitted himself with grace and dignity, and took the jocularly of his friend amiss—a little banter ensued—the poet became petulant, and Mr. Hobhouse walked on; while Byron, on account of his lameness, and the roughness of the pavement, took hold of my arm, appealing to me, if he could have said less, after the kind and hospitable treatment we had all received. Of course, though I thought pretty much as Mr. Hobhouse did, I could not do otherwise than civilly assent, especially as his lordship's comfort, at the moment, seemed in some degree dependent on being confirmed in the good opinion he was desirous to entertain of his own courtesy. From that night I evidently rose in

his good graces; and, as he was always most agreeable and interesting when familiar, it was worth my while to advance, but by cautious circumvallations, into his intimacy; for his uncertain temper made his favour precarious. The next morning, either owing to the relaxation of his abstinence, which he could not probably well avoid amidst the good things of the ambassadorial table; or, what was, perhaps, less questionable, some regret for his petulance towards his friend, he was indisposed, and did not make his appearance till late in the evening. I rather suspect, though there was no evidence of the fact, that Hobhouse received any concession which he may have made with indulgence; for he remarked to me, in a tone that implied both forbearance and generosity of regard, that it was necessary to humour him like a child. But, in whatever manner the reconciliation was accomplished, the passengers partook of the blessings of the peace. Byron, during the following day, as we were sailing along the picturesque shores of Sicily, was in the highest spirits; overflowing with glee, and sparkling with quaint sentences. The champagne was uncorked and in the finest condition. Having landed the mail at Girgenti, we stretched over to Malta, where we arrived about noon next day—all the passengers, except Orestes and Pyllades, being eager to land, went on shore with the captain. They remained behind for a reason—which an accidental expression of Byron let out—much to my secret amusement; for I was aware they would be disappointed, and the anticipation was relishing. They expected—at least he did—a salute from the batteries, and sent ashore notice to Sir Alexander Ball, the governor, of his arrival; but the guns were sulky, and evinced no respect of persons; so that late in the afternoon, about the heel of the evening, the two magnates were obliged to come on shore, and slip into the city unnoticed and unknown. At this time Malta was in great prosperity. Her commerce was flourishing; and the goodly clusters of its profits hung ripe and rich at every door. The merchants were truly hospitable, and few more so than Mr. Chabot. As I had letters to him, he invited me to dinner, along with several other friends previously engaged. In the cool of the evening, as we were sitting at our wine, Lord Byron and Mr. Hobhouse were announced. His lordship was in better spirits than I had ever seen him. His appearance shewed, as he entered the room, that they had met with some adventure, and he chuckled with an inward sense of enjoyment, not altogether without spleen—a kind of malicious satisfaction—as his companion recounted, with all becoming gravity, their woes and sufferings, as an apology for begging a bed and morsel for the night. God forgive me! but I partook of Byron's levity at the idea of personages so consequential wandering destitute in the streets, seeking for lodgings as it were from door to door, and rejected at all. Next day, however, they were accommodated by the governor with an agreeable house in the upper part of Valetta; and his lordship, as soon as they were domiciled, began to take lessons in Arabic from a monk—I believe one of the librarians of the public library. His whole time was not, however, devoted to study; for he formed an acquaintance with Mrs. Spencer Smith, the lady of the gentleman of that name, who had been our resident minister at Constantinople: he affected a passion for her; but it was only Platonic. She, however, beguiled him of his valuable yellow diamond-ring. She is the Florence of Childe Harold, and merited the poeti-

cal embalment, or rather the amber immortalization she possesses there—being herself a heroine. There was no exaggeration in saying that many incidents of her life would appear improbable in fiction. Her adventures with the Marquess de Salvo form one of the prettiest romances in the Italian language; every thing in her destiny was touched with adventure: nor was it the least of her claims to sympathy that she had incurred the special enmity of Napoleon."

There is much probability in the assertion, that Ali Pasha was the model which suggested many of the most remarkable features in his heroes.

Of all Lord Byron's works, Mr. Galt gives the preference to those which treat of Greece: this we think admits of more than a query; but as it is a mere point of taste, taste is too debatable ground for us now to enter on. The whole history of these travels, however, quite supports Mr. Galt's assertion, that the scenes through which Byron past, and the various incidents and individuals he encountered, are the canvass he afterwards coloured, and the figures he introduced, and that his poetry was never so great as when founded on actual occurrence, reality being at once his material and his inspiration. This is true, for it is the part of genius to apply more than to invent, to exhaust this world rather than to imagine new. Our belief of how much he felt the straitness of circumstances is confirmed by the following:—

"I thought he was in that short space something changed, and not with improvement. Towards Mr. Hobhouse he seemed less cordial, and was altogether, I should say, having no better phrase to express what I would describe, more of a captain grand than improved his manners, and more disposed to hold his own opinion than I had ever before observed in him. I was particularly struck with this at dinner, on the day after my arrival. We dined together with a large party at the consul's; and he seemed inclined to exact a deference to his dogmas, that was more lordly than philosophical. One of the naval officers present, I think the captain of the Salsette, felt, as well as others, this overweening, and announced a contrary opinion on some question connected with the politics of the late Mr. Pitt with so much firm good sense, that Lord Byron was perceptibly rebuked by it, and became reserved, as if he deemed that sullenness enhanced dignity. I never in the whole course of my acquaintance saw him kith so unfavourably as he did on that occasion. In the course of the evening, however, he condescended to thaw, and before the party broke up, his austerity began to leaf, and hide its thorns under the influence of a relenting temperament. It was, however, too evident—at least it was so to me—that without intending wrong, or any offence, the unchecked humour of his temper was, by its caprices, calculated to prevent him from ever gaining that regard to which his talents and freer moods, independently of his rank, ought to have entitled him. Such men become objects of solicitude, but never of esteem. I was also on this occasion struck with another new phase in his character; he seemed to be actuated by no purpose—he spoke no more of passing 'beyond Aurora and the Ganges,' but seemed disposed to let the current of chances carry him as it might. If he had any specific object in view, it was something that made him hesitate between going home and returning to Athens when he should have reached Constantinople,

now become the ultimate goal of his intended travels. To what cause this sudden and singular change, both in demeanour and design, was owing, I was on the point of saying, it would be fruitless to conjecture; but a letter to his mother, written a few days before my arrival at Smyrna, throws some light on the sources of his unsatisfied state. He appears by it to have been disappointed of letters and remittances from his agent, and says: 'When I arrive at Constantinople, I shall determine whether to proceed into Persia or return—which latter I do not wish if I can avoid it. But I have no intelligence from Mr. H., and but one letter from yourself. I shall stand in need of remittances, whether I proceed or return. I have written to him repeatedly, that he may not plead ignorance of my situation for neglect.' Here is sufficient evidence that the cause of the undetermined state of his mind, which struck me so forcibly, was owing to the incertitude of his affairs at home; and it is easy to conceive that the false dignity he assumed, and which seemed so like arrogance, was the natural effect of the anxiety and embarrassment he suffered, and of the apprehension of a person of his rank being, on account of his remittances, exposed to require assistance among strangers."

We suspect the word *kith* will puzzle some of Mr. Galt's southern readers. Another anecdote confirms, if confirmation were needed, how much his genius was struck by a passing circumstance:—

"While the Salsette lay off the Dardanelles, Lord Byron saw the body of a man who had been executed by being cast into the sea, floating on the stream, moving to and fro with the tumbling of the water, which gave to his arms the effect of scaring away several sea-fowl that were hovering to devour. This incident he has strikingly depicted in 'The Bride of Abydos.'"

Again:—"Both the Fare-thee-well, and the Anathema on Mrs. Charlemont, are splendid corroborations of the metaphysical fact which it is the main object of this work to illustrate, namely, that Byron was only original and truly great when he wrote from the dictates of his own breast, and described from the suggestions of things he had seen. When his imagination found not in his subject uses for the materials of his experience, and opportunities to embody them, it seemed to be no longer the same high and mysterious faculty that so ruled the tides of the feelings of others. He then appeared a more ordinary poet—a skilful verse-maker. The necromancy which held the reader spell-bound became ineffectual; and the charm and the glory which interested so intensely, and shone so radiantly on his configurations from realities, all failed and faded; for his genius dealt not with airy fancies, but had its power and dominion amidst the living and the local of the actual world."

The inference that in *Manfred* there was no intention of implying that the hero had a guilty passion for his sister is too ingeniously drawn to be omitted.

"There has always been, from the first publication of *Manfred*, a strange misapprehension with respect to it in the public mind. The whole poem has been misunderstood, and the odious supposition that ascribes the fearful mystery and remorse of the hero to a foul passion for his sister, is probably one of those coarse imaginations which have grown out of the calumnies and accusations heaped upon the author. How can it have happened that none of the critics have noticed that the story is

derived from the human sacrifices supposed to have been in use among the students of the black art?"

Here is quoted a beautiful fragment, of which we subjoin only the last lines, for connexion:—

"I loved her and—destroy'd her—
Witch. With thy hand?"

Manfred.
Not with my hand, but heart, which broke her heart.
It gazed on mine, and wither'd. I have shed
Blood, but not hers, and yet her blood was shed;—
I saw, and could not stanch it."

There is in this little scene, perhaps, the deepest pathos ever expressed; but it is not of its beauty that I am treating; my object in noticing it here is, that it may be considered in connexion with that where *Manfred* appears with his insatiate thirst of knowledge, and manacled with guilt. It indicates that his sister, *Astarte*, had been self-sacrificed in the pursuit of their magical knowledge. Human sacrifices were supposed to be among the initiate propitiations of the demons that have their purposes in magic—as well as compacts signed with the blood of the self-sold. There was also a dark Egyptian art, of which the knowledge and the efficacy could only be obtained by the novitius procuring a voluntary victim—the dearest object to himself, and to whom he also was the dearest; and the primary spring of *Byron's* tragedy lies, I conceive, in a sacrifice of that kind having been performed, without obtaining that happiness which the votary expected would be found in the knowledge and power purchased at such a price. His sister was sacrificed in vain."

But surely these arguments are overthrown by one line in *Manfred's* own speech—

"Though it were
The deadliest sin to love as we have loved."

We must confess, that the Italian confederacy for the *Liberal* places *Mr. Hunt* in a meaner point of view, to our judgment, than *Mr. Galt* seems to consider him—in three pithy sentences the whole is well characterised.

"Vanity was mingled with their golden dreams. *Lord Byron* mistook *Hunt's* political notoriety for literary reputation, and *Mr. Hunt* thought it was a fine thing to be chum and partner with so renowned a lord. After all, however, the worst which can be said of it is, that, formed in weakness it could produce only vexation."

If any one doubts the justice of the following, they have only to read the pages whose author states such conviction.

"I have never been able to understand why it has been so often supposed that *Lord Byron* was actuated in the composition of his different works by any other motive than enjoyment: perhaps no poet had ever less of an ulterior purpose in his mind during the fits of inspiration (for the epithet may be applied correctly to him and to the moods in which he was accustomed to write), than this singular and impassioned man. Those who imagine that he had any intention to impair the reverence due to religion, or to weaken the hinges of moral action, give him credit for far more design and prospective purpose than he possessed. They could have known nothing of the man; the main defect of whose character, in relation to every thing, was in having too little of the element or principle of purpose. He was a thing of impulses; and to judge of what he either said or did, as the results of predetermination, was not only to do the harshest injustice, but to shew a total ignorance of his character. His whole fault, the darkest course of those flights and deviations from propriety which have drawn upon him the severest an-

madversion, lay in the unbridled state of his impulses. He felt, but never reasoned. * * *

"One day, as a friend of mine was conversing with his lordship at the Casa Saluzzi, on the moral impressions of magnificent scenery, he happened to remark, that he thought the view of the Alps in the evening, from Turin, the sublimest scene he had ever beheld. 'It is impossible,' said he, 'at such a time, when all the west is golden and glowing behind them, to contemplate such vast masses of the Deity without being awed into rest, and forgetting such things as man and his follies.' 'Hunt,' said his lordship, smiling, 'has no perception of the sublimity of alpine scenery; he calls a mountain a great impostor.'"

Mr. Galt enters into less detail of opinion respecting *Don Juan* than any other work. We think a curious and interesting parallel might be drawn between that and the *Pilgrimage*: *Don Juan* is *Childe Harold* undeidealised; he goes over the same ground, but in how different a spirit! What once excited enthusiasm now gives scope for ridicule—sarcasms take the place of illusions; and if ever man felt that "a glory was departed from the earth," *Lord Byron* was the man.

We now bid farewell to *Mr. Galt*, though with the intention of again recurring to his pages; but we cannot defer to another week the expression of our most cordial approbation. Good sense, good feeling, and good taste, go far towards making a good biographer: he possesses them all. We have read his work with great delight—we close it with mingled regret and admiration. It is now only necessary to speak of its mechanical parts: it is handsomely printed, has two beautifully engraved portraits of *Byron* and the *Countess Guiccioli*, and is most moderate in price. It forms the first volume of the *National Library*; and is a foundation on which the highest expectations may be formed of that undertaking.

Retrospections of the Stage. By the late *John Bernard*, Manager of the American Theatres, and formerly Secretary to the Beef-Steak Club. 12mo. 2 vols. Colburn and Bentley. A PUBLICATION of this kind needs little introduction: like the theatrical hero whose memoirs it contains, it walks upon the stage in character, and introduces itself. If we dislike it, we hiss; and if we approve of it, we applaud.

To continue our comparison,—the present *début* is a hit. It revives a host of pleasant recollections of by-gone times; it re-opens some of the stores of wit which have been forgotten; and it renews the life of many a gay companion, whom death has long since snatched from the scene of jest, conviviality, and humour. In reading, our enjoyment is often chastened into a deeper tone of feeling, and our laughter at the joke or *bon-mot* checked by a recollection of the fate of him who uttered it. They do not come like shadows, so depart; but, on the contrary, with all the amusement of a book of drollery, biographical anecdote, and the exhibition of society half a century old, these *Retrospections* possess a higher claim to public regard. In all that respects the drama they are admirable chronicles; and they place vividly before us many of those favourites of the stage in whom our fathers delighted, in their habits as they lived. When an estimate of dramatic talents is offered, or when opinions are given upon subjects connected with the stage, there is a degree of judgment displayed which we consider to be of the highest order. A few of the stories, it is true, have slipped into pub-

licity before; but they are not very numerous, and the compensation of original matter is abundant. On the whole, we have been infinitely more entertained by these volumes than by any of the works of the same class (no matter how attractive the names of their authors) that have appeared within the last half dozen years.

We wish to illustrate this; and we cannot go wrong. There is little occasion for selection; fall in where we may, the critic, like a cat, is sure to fall upon his feet. For the reviewer at the dull season; for the loungee at a watering-place, or in snug country quarters; for the reader and the idler every where, (and we say it not in disparagement of its better qualities,) this is *the* book. But we will open its hitherto poor, poor dumb mouth, and bid it speak for itself.

Mr. Bernard was born, in 1756, at Portsmouth (whence, perhaps, he always manifested a good deal of Point); and very soon evinced an invincible predilection for the science of acting. His parentage was respectable, and of course averse to this spirit of vagabondising; but no art could stop the course of nature, and he ran from schools and clerkships the most instructive and promising, to indulge in phantasies the most visionary and unprofitable. Yet *Mr. Bernard* was not exposed to the protracted continuation of strolling, shifting, and starving: some supplies from home, the display of early talent, and a marriage with a clever actress, enabled him soon to surmount the initiatory difficulties of his profession, and to advance into comparative popularity and comfort. Such being the case, we need not enter upon his first theatrical efforts, when the only difference between him and a fowl was, that he was killed within the barn, and the fowl at the door, and that the latter was the better fed of the two. Incidents of strolling, though amusing, have acquired a sameness, from repetition, which hardly admits of a novelty, and we pass over those of our author:—let us see! may not the following be exceptions?

"The same day (says our young *Roscus*) I was given *Romeo* to study to *Mrs. Osborne's Juliet*. This lady had that kind of originality in her style, which not merely disclaimed a resemblance to any other person's, but was altogether unlike any thing else in human nature. In the performance of the play, owing to the limited number of our corps, we were reduced to many shifts—the most humorous of which was, *Romeo's* having to toll the bell, and *Juliet* the dead to sing her own dirge."

At a loss for a play, when the absence of some actor had rendered it impracticable to perform that which had been announced (at *Stow Market*, it was):—

"After canvassing the merits and peculiarities of twenty pieces, 'The Orphan' appeared to be the least difficult, and we fixed upon it. Two other queries were now to be considered; whether, and how, we should acquaint the public with a change. *Mr. Osborne* remarked, that as we expected a full house to the comedy,—(the title, as well as that of a 'Bold Stroke for a Husband,' being very attractive in small country towns, where there are a great many unmarried young people)—he feared that the announcement of a tragedy would turn money from the doors; and as that event was less desirable to the company than the public enlightenment, it was decided on *nem. con.* that 'The Orphan' should be represented instead of the 'Bold Stroke,' but without any promulgation; thus leaving it to

the critical acumen of our audience to distinguish between Thalia and Melpomene! The night came—the house filled—the curtain went up—the play went on—moreover, it went down: not a whisper was breathed—not a fan agitated—not a hand struck its fellow: one would have thought not a heart beat—all was observation and quiescence as usual—‘dead and deep,’—the spectators gazing upon us as though we were certain unearthly appearances, or more exactly like the people of a city in the ‘Arabian Nights,’ who were suddenly converted into stone: the same raising of the brow, dropping of the jaw, propping of the chin, and settling of the eye, continuing from the commencement to the close of the act. On this occasion, however, we were not inclined to murmur at their silence, fearing, on the contrary, that the first exclamation would be to our detection, and, consequently, the rousing of the sleeping lion to our disgrace. But fate willed it otherwise. The play proceeded—the actors went on and off—and nothing occurred to disturb either the looks or positions of the audience, till in the midst of the fourth act, when I, (as Castalio,) addressing Monimia’s maid, exclaimed, in reply to her refusal to admit me—

‘By heaven! I’ll scale the window, and get in by force,
Let the glad consequence be what it may!’

at which an old maiden lady, in a high-crowned critical cap, with spectacles on her nose, and her peaked chin propped on an ivory-headed cane (who had sat as mute and motionless all the evening as the rest) suddenly relaxed her fixidity, and exclaimed, giving three emphatic taps with her staff—‘Bravo, young man—bravo—that’s a bold stroke for a wife,’ indeed!’—Whether it was the example of so respectable a person, or a general concurrence in the justice of her criticism, I know not—but the impulse was electrical—the train was fired; tongues, hands, and heels, were loosened to their welcome office, and a universal explosion of approbation took place.

“Thornton (a manager) was the person who originated the joke of a man going a journey and putting on six shirts; so that when he wanted a clean one he took one off. He had a favourite Scotch dress given to him by Lee Digges, which he was in the habit of wearing on all occasions, and once introduced in Stedfast in the ‘Heir at Law,’ compelling Henry Moreland to say that they had been wrecked on the coast of Scotland, instead of America, where his old friend lost his own, and was forced to assume the national habiliments. His system of acting was not founded upon the principle of suiting the word to the action, but the action to the word. In Macheath (which he invariably played for his benefit), he accordingly gave the lines—‘Some men are killed by rope,’ (mimicking the Newgate ceremony), ‘or gun’ (levelling his aim like a musket), ‘and others by the doctor’s pill’ (rolling the little ball in the palm of his hand, and pretending to swallow it).

“Glastonbury was our next destination, where we were patronised by a great eccentric, of the name of Shroud. The business becoming very bad, we were driven to all kinds of expedients to recruit it; and this gentleman hit upon one that proved successful. As a mere frolic, he proposed to myself and some others of the company who were supping with him, to fly a kite some dark and windy night from the Torr-hill, when the wind set in the direction of the town. This kite was to be of extraordinary dimensions, and to have a large tom-cat and a stable-lantern appended to its

tail. As we could contemplate no evil results from such a joke, we agreed. The kite was accordingly constructed. A suitable evening came, windy and tenebrous; and being an ‘off-night,’ we repaired to the hill with the captain, and our materials in a cart. Arrived at a convenient spot, the cat and lantern were securely swathed to the tail, and the kite was raised. It was six feet in height, and required nearly six men to hold it. Sweeping over the town, it performed various curious evolutions, owing to the gusty, unsteady nature of the wind (very favourable, by the by, to our design); and the feline aeronaut, beginning to exert his lungs, surpassed the finest strains of a modern professor. As the body of the kite was painted black, the light only was visible, and a very supernatural aspect it had, resembling nothing so much as the gambols of some aerial demon. The first effect that we noticed was the rushing up of all the cats of Glastonbury to the house-tops, who, sympathising with their friend, lifted up their tails and voices, and yelled together loud enough to have scared all the devils in Milton’s Pandemonium. Next came out all the old women and young children, who, grouped at the corners of the street, silently contemplated, like so many statues, the inexplicable phenomenon above them. When we had amused ourselves in this way about two hours, the kite was taken in; and confiding it to the care of the captain’s servant, we descended to the town to enjoy (though rather wickedly) the alarm we had given rise to. It would have filled a pretty thick volume (and not unamusingly) could I have penned down the explanations we received of the ‘apparition in the air,’ each of which varying with the grade and intellect of the object, was equally distant from a suspicion of the truth. The panic lasted throughout the night, and on the morrow communicated to the surrounding villages. People flocked in from all quarters, and the town was quite full. The captain’s sagacious head had foreseen this result, and perceived in it an opportunity of retrieving our affairs. He accordingly proposed to write a play on the subject, to be called ‘The Fiend in the Air, or the Glastonbury Apparition!’ which we should get a house-painter in the town to illustrate with a view of the Torr-hill, &c. This was agreed to; and an imaginary likeness of the ‘fiend’ was constructed by the company, to be worked by wires, composed of pasteboard and red flannel, with an illumined head, and a cracker at his tail. The piece was written, rehearsed, and acted; each one had a part. Two gentlemen of the town gave imitations at the wings of the congregated cats; whilst the captain, positioned above, manoeuvred and yelled for the fiend individually. This experiment succeeded so well with the country-people, who had not witnessed the phenomenon, but came to the theatre (as people always should) to be instructed, that we performed it four nights, and the receipts were sufficient to take us out of town with respectability.”

At Norwich, the green-room (1774) “contained three or four individuals it may be worth while to notice. Mrs. Ross (afterwards Mrs. Brown), a comedian whose merit will be sufficiently attested by the fact, that she was the acknowledged prototype of Mrs. Jordan; the latter lady having imbibed the idea that she could play comedy from seeing the former perform a hoyden.

“When she appeared at Covent Garden (in Miss Prue, I believe), the audience were delighted; but the critics in the pit exclaimed, ‘It’s a pity she imitates Mrs. Jordan!’ which

reminds me of the story of a silk-mercier, who had associated with Shuter till he caught, not only all his best jokes and ditties, but the very manner in which they were given. The latter, hearing this, determined to visit a club one evening, which this gentleman frequented, and see what would be the effect of his good things at first hand, which had told so well at second. He did so; but soon lost both humour and temper, at hearing the worthy cits, whenever he attempted to be funny, respond with mingled wonder and delight, ‘How like Tom Bennet!’

“Mrs. Ibbot used to relate to me many whimsical illustrations of dramatic life; and among others, once said, that about the period of her entering the profession (1740), she was present at the performance of an old Roman play, in a gentleman’s barn in Norfolk, when the principal actor came forward to deliver the prologue (which then in the country used generally to be an epitome of the plot), and having to say, ‘When Hannibal and Scipio first waged war, they took a circumference to Africa,’ he enunciated—‘When Han-ni-bawl and Ski-pi-o first wag-ged war, they took a kirk-kum-ferrence round to Afri-ca.’”

At Norwich:—“The character of the good people who reside in this part of the world, whilst laying claim to as great a portion of integrity and generosity as any others in Christendom, is (or was) nevertheless distinguished for a peculiar simplicity. It was quite common for a servant who would come to the box-office to learn what was the play, and being informed ‘the Beaux Stratagen’ and ‘the Virgin Unmasked,’ to go home and say we intended to do ‘the Boar Strangled’ and ‘the Virgin Mary!’ A grazier who had got into the theatre and seen Griffiths play Richard, on one occasion waited upon the manager the next morning, to say, that if the gentleman who wanted a horse on the previous evening held his mind, he had got an abundance of cattle in his meadows, and should be happy to deal with him. Bowles took me to a club one evening, where the subject of public speaking being debated, a gentleman asked his friend what he thought of Mr. Hopkins’ style; who replied, that he considered it to be very troublesome, and wished it was broken down—as he had to get over it every morning in going to his farm, at the hazard of dislocating his hip. I believe the joke is pretty well known of the Norwich alderman, who being called on at a public dinner, when the cloth was removed, to give a toast, said he would propose one which he had had the honour of hearing Sir Edward Aflick deliver at the breaking up of a party—‘Here’s bon repos, gentlemen!’ But one infinitely more whimsical than this occurred during my stay at a dinner given by the ‘body corporate’ to Sir Thomas Jerningham, the member. One of that illustrious number being asked (at a late hour in the evening) to name as a toast the finest demirep in Norwich! filled his glass, and, rising with formal politeness, replied—‘Here’s Sir Thomas Jerningham, gentlemen!’”

At Plymouth:—“Mrs. Bernard on her benefit-night received an unexpected compliment. We were playing ‘the Chances,’ in which my wife enacted the ‘second Constantia;’ and when repeating the soliloquy upon her escape from Antonio, she exclaimed—‘Well! I’m glad I’ve got rid of that old fellow, however; and now, if any handsome young man would take a fancy to me, and make me an honest woman, I’d make him the best wife in the universe!’ A middy in the slips, who

had never seen a play before, and took a deep interest in the scene, immediately started up, and leaning over the box in a manner which made him conspicuous to the whole house, clapped his hands, and cried out—'I'll have you, ma'am; I'll have you; d—n my eyes, if I don't. I have three years' pay to receive, besides prize-money!'"

These tales we shall close with one of Jemmy Whitely, an eccentric manager of a travelling corps.

"Jemmy was not particular, in poor communities, as to whether he received the public support in money or in 'kind.' He would take meat, fowl, vegetables, &c., value them by scales, &c., and pass in the owner and friends for as many admissions as they amounted to. Thus his treasury very often, on a Saturday, resembled a butcher's warehouse rather than a banker's. At a village on the coast the inhabitants brought him nothing but fish; but as the company could not subsist without its concomitants of bread, potatoes, and spirits, a general appeal was made to his stomach and sympathies, and some alteration in the terms of admission required. Jemmy accordingly, after admitting nineteen persons one evening for a shad a-piece, stopped the twentieth, and said—'I beg your pardon, my darling—I am extremely sorry to refuse you; but if we ate any more fish, by the powers! we shall all be turned into mermaids!'"

But as our hero got onward, and became acquainted with better-known folks than the Jemmy Whitelys of the barns and fish-money, he picked up and has preserved some anecdotes which are still more interesting and amusing. The following, of the celebrated Quin, have not excited our spleen—but *rice versa*.

"Quin and Foote associated with the best company; and Quin, like Foote, was distinguished for a certain contempt for a portion of the society he courted, namely, the more noble but less intelligent. Dining one day at a party in Bath, Quin uttered something which caused a general murmur of delight. A nobleman present, who was not illustrious for the brilliancy of his ideas, exclaimed—'What a pity 'tis, Quin, my boy, that a clever fellow like you should be a player!' Quin fixed and flashed his eye upon the person, with this reply—'What would your lordship have me be?—a lord!' Quin was also distinguished for his attachment to the society of females; though the accounts which have been handed down of his rugged habits and propensities may have led my reader to the contrary supposition. Where ladies were present one evening, the subject of conversation was the doctrine of Pythagoras. Quin remained silent. One of the party (remarkable for the whiteness of her neck) asked Quin his opinion—'Do you believe in the transmigration of souls, Mr. Quin?' 'Oh, yes, madam!' 'And pray may I inquire, what creature's form you would prefer hereafter to inhabit?' 'A fly's, madam.' 'A fly!' 'Yes, that I might have the pleasure, at some future day, of resting on your ladyship's neck.' There was infinite delicacy in the following:—Being asked by a lady why it was reported that there were more women in the world than men, he replied—'It is in conformity with the arrangements of nature, madam: we always see more of heaven than earth!' The measure of his devotion to the fair could only be equalled by his detestation for those creatures of his own sex who mimicked the former's accent and daintiness. Taking his soup one day at a coffee-house in Bath, two gentlemen came in and blocked

the fire-place, one of whom appeared to be a walking compound of wig, lace ruffles, rose-water, and the Bath Directory. The room was rather full, and for this reason the latter person commenced a detail of his fashionable connexions and advantages. Quin immediately desisted from eating, looked up, and made wry faces. The sprig of jessmine was pleased, however, with the notice he excited, and continued in an effeminate tone sufficiently audible to disturb and disgust all around him, whose expressions he construed as the tokens of wonder or envy. Quin rose up and walked about the room; the lady-like creature paid no attention to this, but entered into a list of his weekly engagements, and numbered the peers who would be of the parties. Quin could contain himself no longer, and rang the bell furiously. 'Waiter,' said he, 'bring me a basin.' 'A basin, sir!' 'A basin—I'm going to be sick.' Away flew the waiter; and Quin, stepping up to the obnoxious person, begged he would delay his conversation a few minutes. The object stared as though thunderstruck, but was silent. The eyes of the company were now directed to Quin in inquisitive surprise: the waiter returned; Quin took the basin and placed it on the table near his soup; he then unbuttoned his coat, loosened his cravat, and, leaning his head over the utensil, exclaimed—'Now, sir, proceed when you like—I'm ready!' His design and action convulsed the room in an instantaneous roar of laughter, which answered the desired end; for the 'young gentleman,' becoming incensed, uttered a loud 'demme,' and made a speedy retreat.

"Quin played Cato very well, which I attribute to some constitutional resemblance between the two. He was generally 'as cool (to use a vulgarism) as a cucumber.' Some person whom he had offended, met him one day in the street, and stopped him. 'Mr. Quin,' said he, 'I—I understand, sir, you have been taking away my name!' 'What have I said, sir?' 'You—you—you called me a scoundrel, sir!' 'Keep your name,' replied Quin, and walked on. Quin in his old age, every one knows, became a great gourmand, and, among other things, invented a composition, which he called his 'Siamese soup,' pretending that its ingredients were principally from the 'East.' The peculiarity of its flavour became the topic of the day. The 'rage' at Bath was Mr. Quin's soup; but as he would not part with the recipe, this state of notice was highly inconvenient; every person of taste was endeavouring to dine with him; every dinner he was at, an apology was made for the absence of the 'Siamese soup.' His female friends Quin was forced to put off with promises; the males received a respectful but manly denial. A conspiracy was accordingly projected by a dozen *bons vivans* of Bath, against his peace and comfort. At home he was flooded with anonymous letters; abroad, beset with applications under every form. The possession of this secret was made a canker to all his enjoyments. At length he discovered the design, and determined on revenge. Collecting the names of the principal confederates, he invited them to dinner, promising to give them the recipe before they departed—an invitation, as my reader will suppose, which was joyfully accepted. Quin then gave a pair of his old boots to the housemaid to scour and soak, and when sufficiently seasoned, to chop up into fine particles, like minced meat. On the appointed day, he took these particles, and pouring them into a copper pot, with sage, onions, spice, ham, wine, water,

and other ingredients, composed a mixture of about two gallons, which was served up at his table as his 'Siamese soup.' The company were in transports at its flavour; but Quin, pleading a cold, did not taste it. A pleasant evening was spent, and when the hour of departure arrived, each person pulled out his tablets to write down the recipe. Quin now pretended that he had forgot making the promise; but his guests were not to be put off; and closing the door, they told him in plain terms, that neither he nor they should quit the room till his pledge had been redeemed. Quin stammered and evaded, and kept them from the point as long as possible; but when their patience was bearing down all bounds, his reluctance gave way. 'Well, then, gentlemen,' said he, 'in the first place, take an old pair of boots!' 'What! an old pair of boots!' 'The older the better;—(they stared at each other)—'cut off their tops and soles, and soak them in a tub of water'—(they hesitated)—'chop them into fine particles, and pour them into a pot with two gallons and a half of water.' 'Why, d—n it, Quin,' they simultaneously exclaimed, 'you don't mean to say that the soup we've been drinking was made of old boots!' 'I do, gentlemen,' he replied, 'by G—d! my cook will assure you she chopped them up.' They required no such attestation; his cool, inflexible expression was sufficient: in an instant, horror and despair were depicted on each countenance, in the full conviction they were individually poisoned. Quin, observing this, begged them not to be alarmed, since he could contemplate no dangerous results from their dinner; but if they thought it would sit uneasy on their stomachs, there was an apothecary's shop in the next street. The hint was taken: an idea of personal safety subdued the rising throbs of indignation. Seizing their hats, away flew the whole bevy down the stairs, and along the street to the place advised, where ipecacuanha and other provocatives were speedily procured, and the 'Siamese soup' (and all its concomitants) was speedily disgorged."

From these diverting volumes we shall continue our extracts next week.

Instructions to Young Sportsmen in all that relates to Guns and Shooting. By Lieut.-Col. Hawker. Sixth edition, corrected, enlarged, and improved. 8vo. pp. 460. London, 1830. Longman and Co.

TWICE already have we reviewed this work (No. 397, August 28, 1824, and No. 448, August 20, 1825); and now comes the sixth edition, so much enlarged and improved as to deserve the name of a new publication; at least, we can say, the additions comprise more pith of information than is contained in many entire original volumes which come under our inspection. It is dedicated, by his royal permission, to the King.

In our last Number we celebrated the *Fifth of November*; but for explosions, we presume to think the *First of September* must, upon the long run, take a higher interest in national feeling. It is this which gratifies us so much with Colonel Hawker: the subject and occasion are the most generally important within the whole circle of the yearly revolution; and here is the Nimrod of the age, the Mentor and guardian angel of sportsmen, blazing forth upon it with such a quantum of the useful as would set up an Oracle, and in such a style as would amuse a Heracitus. Indeed, as we have declared and almost sworn, this is a book of books for country quarters, and for townsmen

who have the felicity to be invited into rural enjoyments.

Next Wednesday, should the birds not be previously frightened to death by anticipating the eclipse of the moon on Thursday—next Wednesday, the harvest being pretty forward, and the season auspicious, there will be much powder burnt, much shot wasted, a great number of birds, and, probably, a few shooters, killed, by the guns which will be out that day. Even to the last-mentioned we would recommend an early reading of Col. Hawker: it will do them good! Let us run over its new matter, and the whole world will perceive how.

After a flourish respecting the crack gun-makers in the trade, the author confesses a far more favourable opinion of detonators than he formerly maintained. From improvements in the method of boring, which causes them to detain the shot longer, till the powder is more effectually ignited—and of new waddings, which clean the gun from the leading deposited when there is much firing—he is now inclined to think they are superior, in some respects, and nearly equal in all, to the olden flint-gun. Copper caps, which have crept into pretty general use, are also mentioned as valuable innovations; but care should be taken in their selection.*

On the question of elevation there are some udicious remarks; the result of which is, that "the longer the gun, the higher must be the elevation." The colonel prefers the fine cylinder powder, with the copper-cap percussion guns, and tells us, in his own quaint manner, "the gunmakers are by far the best deputy powder-merchants, and take great pains in the management of their powder; because on that the killing of their guns must depend; and therefore we must readily forgive any innocent little bit of 'lam' as putting their own names to it, &c. This is all fair; and it is really a charity to let them earn a trifle, now that they have been half-ruined by getting caught in their own trap—the detonating guns; and then sadly troubled with the 'shorts,' from gentlemen finding it impossible to 'cash up,' owing to the failure of their farming tenants."

With regard to wadding, a novelty is spoken of as forthcoming; but, in the interim, "anoined wadding" is pronounced to be best upon the powder; and thin pasteboard, cut by a dented punch, upon the shot. Cartridges in wire are not found to answer in common sporting, though, in particular cases, they make very long shots.

In the art of shooting it appears a grand *requisite* to be good tempered, and not to fume and fret about missing.

"When a good shot (observes the author) misses, from being nervous, it generally occurs through his left hand dropping as he pulls the trigger; and if it happens that his gun should miss fire, he will immediately detect this, by seeing that the muzzle has fallen below the line of aim. The best way to remedy this is to make a firm resolution to fire full high, and firmly grasp the stock for a few shots; and, as soon as a few birds have fallen handsomely, he will, most likely, recover his nerves and his

* "I need hardly add (says the colonel), that having the caps of bad quality has perhaps doubled the number of accidents. For instance, French caps, being now to be had for about two francs a thousand, are frequently imported to England, and sold at an immense profit; and, although these may do very well with *weak French powder*, yet they are so unfit to be trusted with *our powder*, that the loss of many sportsmen's eyes has been the consequence. I know one gunmaker who recommended them for no other purpose than to ruin the copper-cap guns, and thereby improve trade." A pretty rascal, to wish to improve trade by knocking people's eyes out. He must have been worse than an oculist.—*Ed.*

shooting. I have luckily felt just enough of this annoyance to enable me to prescribe a little remedy for it; as I well know the unpleasant feelings of a shooting sportsman when deprived of his usual skill:—he becomes, like one with gout, *love*, or sea-sickness,—cruelly tormented, and laughed at into the bargain."

The song says, "just like love is yonder rose;" and now we learn that shooting badly is also "just like love." It puts one in a tremble, we suppose, and he can no more pop the question than he can pop off a partridge! There is, however, a way of getting at the game, like to which we know nothing (except it may be to fly a passionate letter) in affairs of the heart: it is, "to fly a paper kite, regularly painted like a bird of prey, at about thirty yards above the ground, and with a very long string, so as for the man who flies and walks on with it, to be at a distance; while the shooter and his dog approach behind the kite."

In the usual mode of sporting, the following new observations in Col. Hawker's volume will be found of service to our friends next week and throughout the season:—

"In walking up to your dogs, in turnips or high stubble, when birds are wild, lift your legs high; and by thus making less noise, you will get twice as near to your game. In an open country, where the stubble is thin, advance as quick as possible, tread light, and crouch your body as low as you can. Why does a pointer sometimes get within ten yards, when the birds fly up from the shooter at above 100? Because a dog is so low the birds cannot see him, and rapidly advances on them without making a noise. The sceptic may fancy this an 'old woman's story'—but, for all that, he'll get beat by the man who attends to it. * * * In beating a narrow strip of turnips, with two shooters, when birds are wild and run, let one of them enter the croft about eighty yards in front of the other, and walk on in *echelon*, as the man in advance will then have the wild ones coming to him, and his partner the tame ones, if some of the birds happen to lie well. * * * Much game as I have seen killed in a September day, I do not recollect one solitary instance of any thing extraordinary being done very early in the morning. Many people tell me about killing ten and even twenty brace before breakfast; but I never yet had the fortune to see the chance for such a performance; because the dew is seldom off before eight or nine o'clock. It would be bad manners to doubt their word; so I will conclude that they mean before some *déjeuné à la fourchette* at 12; or perhaps before their breakfast on the following day. * * *

After a storm, as soon as the ground is dry, or the next day, birds will lie in a calm; and after a calm they will lie in windy weather. Birds are frequently as much on the listen as on the watch; and this is why, towards the end of the season, we sometimes do best in boisterous weather. * * * If an obstinate dog will not come out of cover when repeatedly called, be silent; then he will begin to listen for you, and through fear of being left behind, will most likely come sneaking out, so as to be caught for a timely flagellation. * * *

If you owe a greedy shooter a grudge, give his dog, in hot weather, a *carte blanche* at a large tub of buttermilk, just before he takes the field. He will then have many points—but few birds. * * * If you have reason to expect a gang of poachers that may be too strong for your keepers, let some one go through your covers, and thrash away at all the trees till he has driven the pheasants from

their roost. Having then spoiled the night's sport, you may go home and sleep in peace. This was the plan of my friend, the late Mr. Ponton, who, with only one regular keeper, had plenty of pheasants in the midst of poachers."

At pages 292-3, the reader will be taught several methods of dissolving Indian rubber, for making shoes, trousers, or any thing else, waterproof; and the annexed gives ample information on a still more tender and touching point—*corns*.

"To walk with corns, and without torture, get a piece of chamois leather, spread with diachylon plaster. Cut, with your wadding-punch, as many rounds as will form a sufficient thickness to prevent the boot or shoe from pressing your stocking on the corn; for the reception of which you must punch a small hole through the centre. By this simple contrivance, I have known many a dot-and-go-one gentleman start off as bold as a dog just uncoupled."

The following is also a secret worth knowing:—

"To preserve Gunning-clothes from the Moth.—To keep your gunning-dresses, and indeed all other cloths, furs, &c. free from the moth, let them be sewed up in a bag of brown holland, or other linen, which, if sewn tight, and kept dry, will rarely ever fail to preserve them. But, if you wish to be doubly sure, you may put in the bag with them, equal quantities of camphor and carbonate of ammonia. A bladder filled with turpentine is another good remedy."

Upon the subject of dog-stealing we have some most curious intelligence: so curious, that it may stand for a sketch of a particular class of society which does not court much public notice in our strange metropolis; and we quote the whole.

"Penalty for Stealing Dogs.†

"By 7 and 8 Geo. IV. c. 29, the offender, on conviction before a justice of peace, to forfeit, for the first offence (over and above the value of the dog), a sum not exceeding 20*l*. For the second offence, to be imprisoned (with hard labour) not exceeding twelve calendar months, and whipped, at the discretion of the justice. Sect. 31. Persons found in possession of a stolen dog, or the skin thereof (knowing them to be stolen), are liable to the same penalties. Sect. 32."

"Such is here the inefficiency of the law, that dog-stealing in London has now become the regular trade of men calling themselves 'the Fancy;' and of whom there are, at least, fifty leading characters, besides their spies and outposts. These fellows, by way of a blind to avoid suspicion, either assume the character of plasterers, carpenters, &c. &c., and carry the very tools in their hands, or hawk about oranges, hardwares, and other little articles for sale. They have dens in the neighbourhood of Whitechapel, Shoreditch, Tottenham-court Road, and Westminster; outposts about Greenwich, Ball's Pond (a noted place on the right of the North Road), Lisson Grove, and Paddington; and a rendezvous in Long Acre for drinking and business. I have been told that

* Of one of these recipes, the colonel, in his characteristic language, states: "It has, after six years' trial, proved to answer so well, that I have no doubt if it had been disguised, and 'set a going' by some gentleman who was a 'dab' at preaching, pulling, and wall-chalking, he might soon have made a little fortune by it, and set up for an E-s-q.; with his 'cad,' and his 'cab,' and his—, &c."

† "N.B. This law holds good also for (as the act says) 'any beast or bird ordinarily kept in a state of confinement,' &c.; and in sect. 32 it says—'That if any such dog, or any such beast, or the skin thereof, or any such bird, or any of the plumage thereof, shall be found in the possession, or on the premises, of any person, and the person shall know the same to have been stolen,' &c. &c.—'liable to the same penalties.'"

their chief consul is an old stager of forty years' standing, who is nearly blind and worn out; but of this I cannot answer for the truth. Their system is brought to such perfection, that if your dog only turns round a corner, out of your sight, he is liable to be instantly enticed away, at a rapid pace, by the never-failing means of ———. Their plan is to take the dog off to one of the most distant of the dens from where the robbery is committed, and there keep him, in safe and close confinement, till the 'customer,' as they term it, shall advertise a reward amounting to what they think rather more than half the value; or, to use their own words, 'chanted' at a price that will 'fetch' him. On this being offered, you will generally recover your dog; because their agent of the district, who is always on the look-out for 'chants,' will either go or send to you with the joyful tidings of your favourite; pretending, at the same time, with an oily tongue and pious face, that he gets nothing by it, 'except *not* your honour will be pleased to give' him 'for' his 'trouble,' in addition to the advertised reward. But the man who actually steals the dog never appears in the business; by which he avoids all risk of being 'had up.' The club find that this plan answers much better, and is less liable to detection, than offering the dogs for sale; particularly as they frequently get possession of the same dog several times. There have been instances of their being paid fifteen guineas, in successive rewards, for one lady's lap-dog that was perhaps not worth ten shillings. If a dog is not 'chanted' before he becomes all but starved, they kill him and sell the skin; unless it should so happen that they have orders from 'gentlemen'!! for dogs—an opportunity of starting him for Scotland, Ireland, &c.—or can find an immediate purchaser, who will give a few shillings more than the skin would produce. If 'hard up' for 'blunt,' however, some of them will go and sell the dogs in the streets as soon as possible after they have caught them; but, of course, in a diametrically opposite part of the town from where they found them. Here they sometimes cheat their own society: but of this they think nothing, and will even rob one another. 'Dog rob dog' is their slang, and standing motto. All thieves have the knack of instantly quieting even the fiercest watch-dogs by throwing them a kind of narcotic ball—this they call 'puddening' them—by means of which recipe some of the 'Fancy' go journeys to execute particular orders at a long distance from London. Be very cautious, therefore, before whom you boast about the goodness of your dogs; or what you feel a pride in, may be the very means of your losing them; because when 'fancy men,' in any line of 'business,' have orders to execute, they will assume all trades and disguises, and thus ingratiate themselves with the very servants of your household, in order to 'suck' them for information. The following circumstance is a specimen of their town manoeuvres:—In the month of May last, Mr. Lang, of the celebrated shooting gallery and excellent gun repository in the Haymarket, lost a favourite setter. He posted handbills, offering two guineas reward; on hearing of which, a man came and told him the reward was not enough; but that if he would make it four guineas, he could find his dog; and the amount must be deposited in the hands of a landlord, who would procure him a ticket-card. He should then be met, to his appointment, in some private field, where he would receive his dog—on condition that no questions

should be asked. Mr. Lang sent his shopman, about half-past ten at night, to White Conduit Fields to meet the parties, who, on receiving the ticket, delivered up the dog. But there was great hesitation in transacting this affair, in consequence of the dog having on a lock to a steel chain collar with Mr. Lang's name; and which therefore induced them to proceed with extreme caution, through fear, as they supposed, of detection for felony. The whole amount paid for recovering this setter was 4*l.* 17*s.*;—2*l.* 10*s.* of which went to the man who had him. The rest was divided among others of the 'Fancy.' The same person who gave Mr. Lang the information said, that if ever he lost a dog and applied to him, he could undertake to get him back again within thirty-six hours, provided he would make it worth his while to do so; because all dogs taken by the 'Fancy' are brought to their office and regularly booked by the secretary. But if a word is said about law, the dog is immediately put to death, and either buried skin and all, or sent to the bottom of a pond. As an instance of this, a gentleman who had lost a dog offered twenty guineas to recover him, and twenty guineas more for the apprehension of the thief, or even the name of any one concerned in the robbery. In consequence of the latter part of the advertisement, the dog was instantly destroyed. Whereas, had nothing but the first clause been placarded, the dog would have been restored without loss of time. On destroying this dog, one of the 'Fancy' observed to his associates—'Vot's the wally of twenty pound compared to a man's life?' (under an idea, it is presumed, that the theft was aggravated by some very strong case.) If any one of the society was known to be untrue to his comrades, or, as they call it, not 'blue' to his trade, he would be marked; and, if he was discovered in getting any of them apprehended, they would, sooner or later, 'settle his hash.' It is somewhat extraordinary, among so many opulent people who have been thus robbed, that no one should have ever set a trap for some of these worthies:—because nothing could be more easily done, by risking a few useless dogs and expending a little money, without which, of course, no business can be executed in a workmanlike manner. A quarto volume might be filled with anecdotes, specimens of the 'march of intellect'—the fruits of 'a little learning'—under this head. But having now relieved our attention from the dry subject of the *law* by a momentary glance at the manoeuvres of the *lawless* (and I trust a sufficient one to make young sportsmen look sharp after their dogs, now that the season is approaching), I will proceed with my other gleanings from the chaos of technical jargon."

There are also some remarks well worthy of attention on hydrophobia and mad dogs. The canine madness so frequent in London is ascribed to the want of a supply of water for the animals; thus, though Lisbon and Paris, in warmer climates, escape the malady, it prevails every season more or less in the British capital. We have no desire, however, to dilate on this topic in the Review of a sporting book; and the less so, as we perceive that the occurrence of any public event of sufficient interest to attract the newspapers and the people, always puts an end to the raging of hydrophobia and all the horrible cases by which it is consummated. For example, there never was a more dreadful season for the disease than the present; and the journals teemed with hospital deaths, men, women, and children, bitten in every corner,—and, in short, we all seemed

to be becoming rapidly rabid, when it so happened that our gracious monarch died, there was a succession, a royal funeral, levees, reviews, entertainments, and a revolution in France, which events have acted as a complete specific for hydrophobia—not a single case has occurred since. Perhaps the faculty will take this into their sapient consideration, and when the disorder appears again, prescribe another revolution in France, a coronation, or some such remedy, to put an end to it. It will certainly be more efficacious than cutting out the part, cauterising, causticising, water-deluging, or any other prescription yet submitted.—Q. E. D.

Travels to the Seat of War in the East, through Russia and the Crimea, in 1829: with Sketches of the Imperial Fleet and Army, Personal Adventures, and Characteristic Anecdotes. By Captain J. E. Alexander, (late 16th Lancers), K.L.S., M.R.A.S., Cor. Mem. S.A.E. and M.G.S., Author of "Travels in Ava, Persia, and Turkey." 2 vols. 8vo. London, 1830. Colburn and Bentley.

WHEN Lieutenant Alexander, now Captain with a regiment of letters after his name, published his travels in 1827, we (*L. G.* 343, *et seq.*) spoke of them as slight in substance, but a "plain and interesting account" of the cursory observations he could make on such a Mæzappa-like journey. We added, "where there was nothing to be told, he has told nothing; where preceding travellers had exhausted the *lions*, he has not been tedious; and where there really was any thing to observe and record, he has communicated his views in a pleasant and gentlemanlike manner."

On the present occasion we may repeat our words; for these new volumes resemble the old one in every respect. In May, 1829, the author sailed for Hamburg; and in little more than nine months he was back in London with his two octavos, having traversed, as he tells us, "through fire, frost, and plague," part of Germany, the Baltic, a considerable portion of Russia, the south coast of Crimea, the seat of the war then waging between Russia and Turkey, Russia (again as a prisoner), Finland, Sweden, Denmark, Hanover, the Netherlands, and the north of France. He is a very human Puck, and his travels circle round the earth in (say) eight days. Well might Dr. Busby write,

"When enervising objects men pursue,
What are the wonders that they can do!"

Per ardua experti, indeed;—if Captain Alexander does not become the greatest of travellers that ever travelled, it will be because he quotes the proverb, that practice makes perfect.

But it was impossible for any ordinary servant, and intelligent individual, to be a countryman, to visit many of the scenes he describes, without acquiring a good deal of curious information; and accordingly we find in those pages of his book which relate to the least known places, and particularly to the state during the sanguinary contest, that he was a partial witness, a fund of valuable reading. To the second volume, where, after his long route, he is upon the ground than throughout his first, he is once, and open at Sevastopol, which he ordered to proceed and join the Russian army for the Russians shewed themselves jealous of every foreign presence.

"There was (says Capt. A.) a large force engaged in the war, a large force engaged

heights behind Sevastopol. Some of the Turkish prisoners were employed in constructing new batteries towards Quarantine Bay. I saw them dragging materials on low waggons through the streets, and they naturally looked 'unutterable things' as they shuffled along in their petticoat trousers and slippers."

From Sevastopol Capt. A. navigated the Black Sea in a brigantine with some Russian troops on board; and on the voyage gathers some facts concerning the fall of Varna, which he asserts did not fall through treachery, as is believed. Having established himself in the admiral's ship (the distinguished and justly-esteemed Greig, commander-in-chief in the Black Sea) the author enumerates the fleet,—2 of 110, 4 of 84, 6 of 74, 3 of 60, 5 of 44 guns, besides smaller vessels,—and gives the following notice of the sailors and service.

"It is quite astonishing to think of the docility of the Russian.* It frequently happens that not till the age of five-and-twenty is he taken, a rough peasant with a bushy red beard, from his village, and put on board ship, to which and the sea he has hitherto been an entire stranger. He is immediately made to go aloft, and in six months is as good a sailor as needs be. The messes consist of five and twenty men each; and, after a glass of grog, they stand round a wooden vessel hung by cords from the beams, and sup with their wooden spoons *casha* (millet) and butter, on alternate days with soup and meat. This food, so superior to what the soldiers get, and which the admiral by his exertions obtained for his sailors, shewed itself in their appearance, and also made them more forward in action. Every evening a party of the men used to assemble at the gangway to sing their national airs; and two excellent bands played by turns at the admiral's table. Sundays were distinguished by the lamps being lighted before a silver screen, on which were paintings of the virgin and saints. The priests and their congregation were as devout as their brethren on shore: still it was singular to see hundreds of sailors between decks, kneeling behind one another, and amongst the engines of death, and crossing themselves, and praying before their iconas."

After detailing some striking naval actions in the Black Sea, Capt. A. mentions the taking of Silistria.

"Success in every quarter was now beginning to crown the arms of Russia. Silistria fell after a vigorous resistance, and Diebitch obliterated the recollections of the disasters of last campaign; there was none greater than that sustained after the Russians were obliged to raise the siege of this important place in the end of 1828. Thirty thousand men, on the retreat, died from the severity of the weather, and the destruction of their provisions. I formerly mentioned that the bread of the soldiers is packed in mat sacks, which cannot resist rain; consequently when the winter set in, with continued wet weather, the consequences were dreadful: the general in command of the above forces, and a few of his officers, alone escaped; but he afterwards committed suicide."

* "Docility" is not perhaps the best word to describe the adroitness and rapidity with which the Russians improve in their naval tactics and discipline. An able British naval officer assured us, that the Russian fleet at Navarino, from being the most awkward and unseamanlike in every respect, within three months of their junction with the English and French, whose conduct they saw and imitated, became so expert in every manœuvre, so clever in handling their sails, so clean and orderly, and, in short, so excellent both in the interior of their ships, and in their general management, that he was quite astonished at the change.

The Russian fleet, in co-operating with the land forces, sailed along the coast, bombarding and taking many places, such as Misenvria, Ahielo, &c. These operations were somewhat different from European warfare; and we read the accounts with curiosity. For example:—

"In the Gulf of Burgas there is a very picturesque monastery on the rocky island of Anastasia: this was defended by a battery; and from the precipitous character of the shore, it might have held out for many days; however, after a few rounds from the fleet, the Turks displayed the signal of surrender, and the commandant came on board the *Paris*. The admiral immediately recognised him as an old Varna acquaintance, and asked him why he had not held out longer, and made a better defence?—He answered: 'You remember you gave me my liberty after Varna fell into your hands. I immediately went to the south, and got another command; but again driven from that by the rapid advance of your troops, I became the *binbashee* (colonel) of the troops in Anastasia. It is true that we could have held out many days, for we had guns, ammunition, and provisions in abundance; but of what use would it have been, and of what advantage is it for us to contend against our destiny? You have got to the south of the Balkan. We are driven from place to place: our holy prophet (with whom be peace!) is offended at us for the change of dress and the drill introduced by the sultan. He will not intercede for us with the great Ullah. But our punishment will not last for ever; and Ullah kerim! (God is merciful!) we may some day find rest for the soles of our feet; but now, if you send me away, I will, ere long, again become your prisoner; if in the mean time Azrael, the angel of death, does not summon me to my final account.'"

With the following d—c picture of war we conclude (at least this week, when works of more mind demand our attention) this slight notice of Captain Alexander's book. We read it, and we ask ourselves whether are mankind mad-men or fiends?!

"One night I happened to sleep in a Turkish house, in the next apartment to a very intelligent young officer, Baron Schilling de Courland, of the regiment of Azoff: we soon became intimate, and he related to me many anecdotes of his service during the campaign. He said, 'It is generally supposed, that after *Schooumla* was left in a state of blockade, and the Balkan turned by the pass of the *Kempchek*, that the Turks gave up the contest and fled on every occasion, after a mere show of resistance: this, however, was not the case. Certainly they did not generally fight with the determined valour which they evinced at *Brailow*, *Silistria*, *Varna*, &c.; yet, on many occasions, their fanaticism and confirmed hatred of the *Gioiirs* induced them still to oppose manfully the progress of the invaders; and to prefer joining their blessed prophet sooner than remain on earth, defiled as it was by the triumphs of the infidel over the sons of the faithful. I shall now relate an instance of this spirit of resistance in a small body of Turks. The division of the army to which I belonged was advancing over a broken country at the foot of the Balkan. The Cossacks sent in advance to reconnoitre reported that a village of a few hundred houses was occupied by the enemy; and shortly afterwards, on ascending an eminence, we observed the village below us, in a narrow valley, and completely surrounded by hills. There were enclosures and gardens about it; and the dark green of graceful poplars set off the dazzling

whiteness of a tapering minaret. But no smoke or signs of life appeared in the secluded village, until, looking more attentively through my glass, I descried two or three white turbans watching our movements from a detached house near us. As the village had not the defence of walls, and as two or three roads led into it through the hedges of the gardens, it was imagined that the Turks would immediately surrender on being summoned. To make sure of them, a strong party made a detour to the other side, and thus they were completely hemmed in. A flag of truce was then sent down to those we had seen: they allowed the flag, with the escort, to approach and parley. Their reply to the summons was, 'We spit on the beards of the *Gioiirs*, and set them at defiance. We have sent away our old men, wives, and children, to a place of safety; and there are three hundred of us here who have sworn on the *Koran* i sherry never to leave the place alive. Carry this our answer to your chief, and tell him to choose another road; for his lies not through this village, except over our bodies!' This insulting answer, to such an overpowering force, was immediately followed by the simultaneous advance of several parties of Russian infantry by the different roads which led into the village; but the moment that the head of each of the columns was sufficiently exposed, a sharp volley was sent from the houses on each side, which caused many of the Russians to bite the dust, and the rest to fall back. Again they rallied, and endeavoured to penetrate into the village, under the fire of covering parties posted in the gardens; but every man who exposed himself was shot dead; and the troops were compelled to keep out of the fatal aim of the Turkish *tophaicks*. The general, enraged that his men should be thus repulsed by so small a number, gave orders to fire the village at all risks: a few Cossacks accordingly crept with their usual cunning towards the wall of a house, and succeeded in setting fire to the roof of it: the wind aided their efforts; the flames rapidly spread over the village, and the black smoke curled over the trees. Every one was prepared to intercept the Turks, when they should attempt to make their escape from their burning habitations. The fire continued to rage: one by one the roofs fell, and sent up clouds of sparks into the air; but still no Turks appeared. The avenues were strictly guarded, but in vain; the whole village was now a smoking heap of ruins, and every man looked at his neighbour, and inquired what could have become of the defenders of it. A few blackened corpses attested the fact that this gallant band of three hundred preferred a horrible death on their own hearths, to gratifying the Russians by suffering themselves to be bayoneted as they fled."

O Marathon! what are thy glories? O victors! what are your victories?

Italy; a Poem. By Samuel Rogers. 8vo. pp. 284. London, 1830. Jennings and Chaplin; Cadell; Moxon.

WHEN *Italy* made its original appearance, which was in duodecimo, in the year 1822, it became the subject of a critical notice in the *Literary Gazette*, concluding with the declaration, "that its excellence so far outweighed its defects, that we must commend it as one of the sweetest and most pleasing little volumes published for a long period." Again, June 7, 1828, when Part II. made its appearance, we did our duty towards that publication, though we considered it far inferior to its precedent. It has now assumed a more important shape—has

been augmented by a number of new pieces—has been printed with singular elegance—and has received every splendid decoration which the united efforts of the pencil and the graver could impart. Of that portion of the volume which has been already before the public, we shall merely say that it appears to have been carefully revised and considerably enriched. On comparing it with the first edition, the *lima labor* is evident throughout. The versification is in many places rendered much more correct and harmonious; and several of those colloquial expressions to which we objected, have been divested of their ultra-familiarity, without injuring their simplicity; although we own that we think some phrases still remain which would advantageously admit of a little ennobling.

From the poem entitled *Rome*, we make a quotation in addition to the notice in our No. 594.

Thou art in Rome! the city that so long
Reigned absolute, the mistress of the world;
The mighty vision that the prophets saw,
And trembled; that from nothing, from the least,
The lowliest village (what but here and there
A reed-roofed cabin by a river side?),
Grew into every thing; and, year by year,
Patiently, fearlessly, working her way
O'er brook and field, o'er continent and sea,
Not like the merchant with his merchandise,
Or traveller with staff and scrip exploring,
But hand to hand, and foot to foot, through hosts,
Through nations numberless in battle array,
Each behind each, each, when the other fell,
Up and in arms, at length subdued them all.

Thou art in Rome! the city where the Gauls,
Entering at sun-rise through her open gates,
And, through her streets silent and desolate,
Marching to slay, thought they saw gods, not men;
The city, that, by temperance, fortitude,
And love of glory, towered above the clouds,
Then fell—but, falling, kept the highest seat,
And in her loneliness, her pomp of woe,
Where now she dwells, withdrawn into the wild,
Still o'er the mind maintains, from age to age,
Her empire undiminished."

We have seldom met with so delightfully interesting a picture as that comprehended in the closing lines of "The Fountain."

"It was a well
Of whitest marble, white as from the quarry;
And richly wrought with many a high relief,
Greek sculpture—in some earlier day perhaps
A tomb, and honoured with a hero's ashes.
The water from the rock filled, overflowed it;
Then dashed away, playing the prodigal,
And soon was lost, no longer unseen, unheard,
Through the long grass, and round the twisted roots
Of aged trees; *discovering where it ran*
By the fresh verdure. Overcome with heat,
I threw me down; admiring, as I lay,
That shady nook, a singing-place for birds,
That grove so intricate, so full of flowers,
More than enough to please a child a-Maying.
The sun had set, a distant convent-bell
Ringing the *Angelus*; and now approached
The hour for stir and village-gossip there.

Soon I heard
Footsteps; and lo, descending by a path
Trodden for ages, many a nymph appeared,
Appeared and vanished, bearing on her head
Her earthen picher.

At length there came the loveliest of them all,
Her little brother dancing down before her;
And ever as he spoke, which he did ever,
Turning and looking up in warmth of heart
And brotherly affection. Stopping there,
She joined her rosy hands, and filling them
With the pure clement, gave him to drink;
And, while he quenched his thirst, standing on tiptoe,
Looked down upon him with a sister's smile,
Nor stirred till he had done,—fixed as a statue."

The graphic truth of the first, and the beautiful iteration in the second, of the passages which we have marked with *italics*, must be evident to every reader.

There are great satirical force, and much sound philosophy, in "A Character:"

"One of two things Montrioli may have,
My envy or compassion. Both he cannot;
Yet on he goes, numbering as miseries
What that least of all he would consent to lose,
What most indeed he prides himself upon,
And, for not having, most despises me.
At morn the minister exacts an hour;

At noon the king. Then comes the council board;
And then the chase, the supper. When, ah when,
The leisure and the liberty I sigh for?
Not when at home; at home a miscreant crew,
That now no longer serve me; mine the service.
And then that old hereditary bore
The steward, his stories longer than his rent-roll,
Who enters, quill in ear, and, one by one,
As though I lived to write, and write to live,
Unrolls his leases for my signature."

He clanks his fetters to disturb my peace.
Yet who would wear them, and become the slave
Of wealth and power, renouncing willingly
His freedom, and the hours that fly so fast,
A burden or a curse when misemployed,
But to the wise how precious—every day
A little life, a blank to be inscribed
With gentle deeds, such as in after-time
Console, rejoice, whenever we turn the leaf
To read them? All, wherever in the scale,
Have, be they high or low, or rich or poor,
Inherit they a sheep-hook or a sceptre.
Much to be grateful for; but most has he,
Born in that middle sphere, that temperate zone,
Where Knowledge lights his lamp, there most secure,
And Wisdom comes, if ever, she who dwells
Above the clouds, above the firmament,
That Seraph sitting in the heaven of heavens.

What men most covet, wealth, distinction, power,
Are baubles nothing worth, that only serve
To rouse us up, as children in the schools
Are roused up to exertion. The reward
Is in the race we run, not in the prize;
And they, the few, that have it ere they earn it,
Having, by favour or inheritance,
These dangerous gifts placed in their idle hands,
And all that should await on worth well tried,
All in the glorious days of old reserved
For manhood most mature or reverend age,
Know not, nor ever can, the generous pride
That glows in him who on himself relies,
Entering the lists of life."

Having thus quoted some of the poetical ornaments of this volume, we shall proceed to transcribe some of the prose; confining ourselves, however, to two compositions, strongly contrasted to each other. The first is distinguished by its pathos and elegance.

"Caius Cestius.

"When I am inclined to be serious, I love to wander up and down before the tomb of Caius Cestius. The Protestant burial-ground is there; and most of the little monuments are erected to the young men of promise, cut off when on their travels, full of enthusiasm, full of enjoyment; brides, in the bloom of their beauty, on their first journey; or children borne from home in search of health. This stone was placed by his fellow-travellers, young as himself, who will return to the house of his parents without him; that, by a husband or a father, now in his native country. His heart is buried in that grave. It is a quiet and sheltered nook, covered in the winter with violets; and the pyramid that overshadows it, gives it a classical and singularly solemn air. You feel an interest there, a sympathy you were not prepared for. You are yourself in a foreign land; and they are for the most part your countrymen. They call upon you in your mother-tongue—in English—in words unknown to a native, known only to yourselves: and the tomb of Cestius, that old majestic pile, has this also in common with them. It is itself a stranger among strangers. It has stood there till the language spoken round about it has changed; and the shepherd, born at the foot, can read its inscription no longer."

Our last extract shall be an amusing tale told by an old cardinal, and entitled "The Bag of Gold;" the point of which will bear a comparison with any of the admirable instances of sagacity exhibited by Sancho Panza, in his government of Barataria.

"There lived in the fourteenth century, near Bologna, a widow-lady of the Lambertini family, called Madonna Lucrezia, who, in a revolution of the state, had known the bitterness of poverty, and had even begged her bread; kneeling day after day like a statue at

the gate of the cathedral; her rosary in her left hand, and her right held out for charity; her long black veil concealing a face that had once adorned a court, and had received the homage of as many sonnets as Petrarch has written on Laura. But fortune had at last relented; a legacy from a distant relation had come to her relief; and she was now the mistress of a small inn at the foot of the Appennines, where she entertained as well as she could, and where those only stopped who were contented with a little. The house was still standing when in my youth I passed that way, though the sign of the White Cross,* the cross of the Hospitaliers, was no longer to be seen over the door; a sign which she had taken, if we may believe the tradition there, in honour of a maternal uncle, a grand-master of that order, whose achievements in Palestine she would sometimes relate. A mountain-stream ran through the garden; and at no great distance, where the road turned on its way to Bologna, stood a little chapel, in which a lamp was always burning before a picture of the Virgin, a picture of great antiquity, the work of some Greek artist. Here she was dwelling, respected by all who knew her, when an event took place which threw her into the deepest affliction. It was at noon-day in September that three foot-travellers arrived, and, seating themselves on a bench under her vine-trellis, were supplied with a flagon of Aleatico by a lovely girl, her only child, the image of her former self. The eldest spoke like a Venetian, and his beard was short and pointed after the fashion of Venice. In his demeanour he affected great courtesy, but his look inspired little confidence: for when he smiled, which he did continually, it was with his lips only, not with his eyes, and they were always turned from yours. His companions were bluff and frank in their manner, and on their tongues had many a soldier's oath. In their hats they wore a medal, such as in that age was often distributed in war; and they were evidently subalterns in one of those free bands which were always ready to serve in any quarrel, if a service it could be called, where a battle was little more than a mockery; and the slain, as on an opera-stage, were up and fighting tomorrow. Overcome with the heat, they taw aside their cloaks, and, with their gloves under their belts, continued for some earnest conversation. At length the Venetian thus address his hostess. 'Excellent lady, may we let your roof, for a day or two, this bag 'You may,' she replied gaily, 'but we fasten only with a latch. Bars we have none in our village, and where would be your security?' word, lady.' 'But what if I died where would it be then?' said she. 'The money would go to the church could claim it.' Perhaps you will with an acknowledgment.' 'If you it.' An acknowledgment was wringing, and she signed it before Mr. the village-physician, who had just chance to learn the news of the delivered (those were the words) no to two—but to the three; words viced by those to whom it belonged, they knew of each other. The just released from a miser's che and they were now on a scent more. They and their shadows departed, than the Venetian re

* La Croce Bianca.

'give me leave to set my seal on the bag, as the others have done;' and she placed it on a table before him. But in that moment she was called away to receive a cavalier, who had just dismounted from his horse; and, when she came back, it was gone. The temptation had proved irresistible; and the man and the money had vanished together. 'Wretched woman that I am!' she cried, as in an agony of grief she fell on her daughter's neck, 'what will become of us? Are we again to be cast out into the wide world? Unhappy child, would that thou hadst never been born!' And all day long she lamented; but her tears availed her little. The others were not slow in returning to claim their due; and there were no tidings of the thief; he had fled far away with his plunder. A process against her was instantly begun in Bologna; and what defence could she make—how release herself from the obligation of the bond? Wilfully or in negligence she had parted with the gold; she had parted with it to one, when she should have kept it for all; and inevitable ruin awaited her. 'Go, Gianetta,' said she to her daughter, 'take this veil which your mother has worn and wept under so often, and implore the Counsellor Calderino to plead for us on the day of trial. He is generous, and will listen to the unfortunate. But, if he will not, go from door to door. Monaldi cannot refuse us. Make haste, my child; but remember the chapel as you pass by it. Nothing prospers without a prayer.' Alas! she went, but in vain. These were retained against them; those demanded more than they had to give; and all bade them despair. What was to be done? No advocate, and the cause to come on to-morrow! Now Gianetta had a lover, and he was a student of the law, a young man of great promise, Lorenzo Martelli. He had studied long and diligently under that learned lawyer, Giovanni Andreas, who, though little of stature, was great in renown, and by his contemporaries was called the Arch-doctor, the Rabbie of Doctors, the Light of the World. Under him he had studied, sitting on the same bench with Petrarch; and also under his daughter Novella, who would often lecture to the scholars when her father was otherwise engaged, placing herself behind a small curtain, lest her beauty should divert their thoughts; a precaution in this instance at least unnecessary, Lorenzo having lost his heart to another. To him she flies in her necessity; but of what assistance can he be? He has just taken his place at the bar, but he has never spoken; and how stand up alone, unpractised and unprepared as he is, against an array that would alarm the most experienced? 'Were I as mighty as I am weak,' said he, 'my fears for you would make me as nothing. But I will be there, Gianetta; and as the Friend of the friendless give me strength in that hour! Even now my heart fails me; but, come what will, while I have a loaf to share, you and your mother shall never want. I will beg through the world for you.' The day arrives, and the court assembles. The claim is stated, and the evidence given. And now the defence is called for—but none is made; not a syllable is uttered; and, after a pause and a consultation of some minutes, the judges are proceeding to give judgment, silence having been proclaimed in the court, when Lorenzo rises and thus addresses them: 'Reverend Signors, young as I am, may I venture to speak before you? I would speak in behalf of one who has none else to help her; and I will not keep you long. Much has been said; much on the sacred nature of the obli-

gation—and we acknowledge it in its full force. Let it be fulfilled, and to the last letter. It is what we solicit, what we require. But to whom is the bag of gold to be delivered? What says the bond? Not to one—not to two—but to the three. Let the three stand forth and claim it.' From that day (for who can doubt the issue?) none were sought, none employed, but the subtle, the eloquent Lorenzo. Wealth followed fame; nor need I say how soon he sat at his marriage-feast, or who sat beside him."

We believe that Mr. Rogers first came before the public as an author so long ago as the year 1786. We rejoice thus to see him still amusing himself at his leisure with literary recreations. In truth, they are the only pleasures which never satiate; and which, while life endures, continue to afford the purest and most delightful gratification to those who by nature, education, and habits, are qualified to enjoy them.

A notice of the fifty-six exquisite vignettes with which the volume is ornamented, will be found in another part of our number. Justly, indeed, has the author observed in his preface: "With regard to the embellishments of this volume, they require no praise of his. The two artists,* who have contributed so much to give it a value, would have done honour to any age or country."

The Devil's Progress; a Poem. By the Editor of the "Court Journal." The Illustrations designed by R. Seymour, and engraved by Evans and Welch. 12mo. pp. 67. London, 1830. Lupton Relfe.

THIS is not written by the Editor of the *Court Journal*. The author is a clever man, though we think his production altogether too grave and saturnine for a *jeu d'esprit*. There are, indeed, a few flashes of humour; but the general tenor of the poem, and the notes, display more ability than playfulness. The dedication is "To His Majesty's Attorney General, to testify the author's approbation of his judicious and persevering efforts in the cause of its hero;" and some prefatory matter jokes away upon Mr. Colburn and his publications. Even in jest, we must say that we were startled, and certainly not gratified, by the earlier parts of the poem, where the Devil's outfit is described: the introduction of characters whom we have known in life, as is here done, is calculated to shock the feelings, rather than inspire drollery. As a specimen, however, we quote a passage the least liable to cavil.

"One sent a suit that in the Court
Of Chancery had been worn;
But the suit was very much too long,
And the pockets were stripped and torn;
The coat was out at the elbows, and seemed
As if bill-hooks had slashed the sleeves;
And the trousers looked as the wearer
Had fallen among thieves!
A courier sent a full court dress,
Which fitted the Devil with ease;
But Satan is proud, and the breeches
Were threadbare about the knees!
Machiavel politely lent
A coat of many colours;
But the Devil is far too wise to ape
The habits of earth's rulers!
A letter for Prince Metternich
Was in the waistcoat-pocket,
And, 'per favour the Devil,' to 'his grace the duke,
A new-planned C**g**ve rocket;—
(In his ancient calling, that worthy knight
Had laboured long and well,
And perfected his instrument
In the crucibles of Hell!)
Of these packets the Devil took charge with a grin,
As also of another,
From Dagon, the Regent-duke of Hell,
To the regent-duke his brother!

* Stothard and Turner!

A letter from Cardinal Belial
To his holiness the Pope;
And Governor *** sent back to his son
The old ancestral rope!
Prince Moloch to N***e's duke
Sent overtures to sell
Two snug close boroughs of his own,
Near to the fire, in Hell;
He said, too, that as earth was crammed
With over-population,
There were pleasant tracts, amongst the damned,
Most fit for emigration;
The soil, he said, had long been drained
To any heart's desire,
And each man might sit down at once
Beside his own warm fire;
For the surplus vagabonds of earth
No fitter vent could be;
And the duke and Michael Sadler
Were asked to come and see!"

But, as we have noticed, the writer's talent is far more clearly discernible in the higher walk of composition than in the satirical or humorous. Witness the mock-heroic of the Devil's flight after alighting from his own domains at the foot of Etna.

"Away, away, on rushing wings,
His northward flight takes he—
A shadow in the air, that flings
No shadow on the sea!
The deep ægean all that night
Saw neither star nor moon;
The scents fell, *withered*,* back to earth,
And the birds sang out of tune;
The watchmen-owls, in their hollow trees,
Were afraid to call the hour;
And all the becr in the Cycloades
In a single night grew sour!
As he paused above those ancient isles
Where the Devil and the Turk
Had played so many pleasant tricks,
And done each other's work,
In every isle, on every height,
Fell down a nameless fear,
As the 'evil days' were come again,
And the Mussulmen were near!
But peace and hope about them hung,
In a glorious rainbow blent,
One arm was over Arta flung,
And one on Volo leant; †
And the Devil knew it was a spell
Too strong for Istamboul—or fiell!

"Away—across the broad blue moat
That girdles England's strand,
Till he landed where no enemy
But himself had dared to land!
Awhile he hovered high to gaze
On Ocean's fairest daughter;
But the Devil was tired of his airy flight,
And quoth he, 'I'll go by water!
So he put his bundle in his hat,
And spread one wing for a sail,
And steered himself, like a water-rat,
With his disencumbered tail!
He passed by many a shepherd's plain,
And many a ploughman's ridge,
By the shallows of the 'Isle of dogs,
And the rapids of London Bridge;—
Till he saw a huge mist-mantled dome,
Like a mighty mystery, wrapped in gloom;
And on his ear came a holy chant;
So he planged with a sudden souse
And rose beside his ancient haunt,
Where holy sounds were rather scant—
The site of C***'s House!"

The writer is here gradually gliding into the comic; and to enable our readers to judge of his performance, we pursue the extract.

"And much he saw to feed his pride,
And much to move his mirth:—
How the manners of his ancient court
Were copied upon earth.
Prince Mammon, his ambassador,
Had pleasant things to tell;
How he found himself as much at home
As if he were in Hell;
How his levees was attended
By commoners and peers;
And how all subscribed to keep the ways
Of Satan in repairs;
How he had got his private friends
Into most of the public places,
And a little devil to attend
As page to each of the 'Graces';

* A bad epithet, and inapplicable to scents.—*Ed. L. G.*
† "The boundary line from Arta to Volo—including Acarnania and a part of Ætolia, together with Candia and some other islands, all of which lie without the line marked by the course of the Aspro-Potamos—(though not that intended for the new Greek state by the guaranteeing powers)—is actually in the full and peaceable possession of the Greeks, and has been purchased for them by the blood of some of their noblest martyrs."

In every government-office a clerk,
 And a porter in most of the halls,
 And scribes to chalk his puffs in the dark
 Along the public walls:
 How he played *carte* with the duke,
 And taught the duke 'a thing
 Or two—till the duke, like a shuffler good,
 Could always *turn the king!*
 The Devil saw sycophants in power,
 And honesty in rags;
 And bishops' consciences—in their sleeves,
 And lawyers—in their bags;
 Old usurers, licking up all around,
 Like a dying flame in a socket;
 And pensioners keeping their fingers warm
 In the heat of the public pocket:
 And demireps who rode and railed
 Over women of the town;
 And slanderers darkening others' names
 In honour of their own:
 And judges, known from the thieves they hanged
 By virtue of the gown;
 And lowly courage bending down
 Beneath some lordly bully;
 And a deal of gambling going on
 'Twixt the king and Mr. Gully!
 The Devil only feared that earth
 So proud in its vice had grown,
 It would soon be a hell itself, and choose
 A devil of its own!

"The Devil went to the Opera House
 At eight on Saturday night,
 And many things there he both saw and heard,
 That tickled his ear and sight!
 The manager's clock struck the hour of twelve
 Just as the ballet was done;
 So the Devil's watch must have been too fast—
 For it pointed nearly one!
 Oh! sweetest, in the Devil's eye
 Is the sin that is covered with a lie;
 And dearest those who take his road,
 Like monks of old, in the name of God!"

We have in these quotations copied what appeared to us to be the best passages, and the least open to objection; and we have only again to say, that we wish the author's talents had been employed on a more suitable topic. The quiet humour, the *raciness*, and the brevity, of the original *Devil's Walk*, gave it popularity; which none of its imitators have derived from the same qualities. The woodcuts which adorn the present little book are extremely well done.

The Waverley Novels. New Edition. Vol. XVI. Ivanhoe. Edinburgh, Cadell.

We have received this volume so late that we can only say it has a very interesting preface, explaining the author's reasons for altering his series, from the Scottish novels to a new class, commencing with *Ivanhoe*; and some excellent remarks on authorship and publishing in general. The frontispiece is a splendid one, from Martin, by Portbury; and the vignette full of character (Garrath and Wamba), from J. Cawse, by J. Taylor.

The Family Library, No. XV. History of British India (3 vols.), Vol. I. Pp. 365. By the Rev. G. R. Gleig, M.A., M.R.S.L., &c. London. J. Murray.

INFINITE pains have been taken with this small but striking volume, both by its popular author and by its spirited publisher. In literary matter it is excellent, and in embellishments beautiful. Such a work is well calculated to render the history and actual condition of our eastern empire more generally familiar to the people of this country than they have hitherto been (for a strange apathy has prevailed concerning this unparalleled colony); and that, too, at a time when the discussion of the most essential questions relative to its future commerce and legislation are coming thickly forward. The first volume sets out with the early history of the Hindoos, goes over the Mahomedan wars and conquests; and traces the intercourse with Europe, the Portuguese, Dutch, and English settlements, till the latter obtained

their charter, in a plain and perspicuous manner. But the work, from its character, is so unfavourable to extracts, that we can offer none within our limits which could give the least idea of its merits, and must therefore be satisfied with heartily commending it to the public. A neat map, a portrait of Lord Clive, and five Indian subjects of temples and scenery, are its becoming ornaments.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR SEPTEMBER.

16^d 14^h 28^m—The Sun eclipsed, invisible to the British isles; the disc will be partially concealed to Nova Zembla, the northern regions of Asia, the sea of Anadir and Kamschatka. The greatest obscuration will be 4½ digits.
 23^d 1^h 51^m—The autumnal equinox.

Lunar Phases and Conjunctions.

☉ Full Moon in Aquarius	D. H. M.
☾ Last Quarter in Taurus	9 1 58
● New Moon in Leo	16 14 28
☽ First Quarter in Sagittarius ..	24 18 62

The Moon will be in conjunction with

Mars in Cetus	D. H. M.
Saturn in Leo	8 20 0
Venus in Leo	14 8 0
Venus in Leo	14 11 45
Mercury in Virgo	18 23 40
Jupiter in Sagittarius	25 8 15
Mars in Aquarius	30 30 0

Lunar Eclipse, 2^d (next Thursday).—The following are the particulars (see also the *Literary Gazette* of last week)—

Beginning of the eclipse	H. M. S.
Beginning of total darkness	8 50 0
Ecliptic opposition	9 47 45
Middle of the eclipse	10 37 30
End of total darkness	10 38 0
End of the eclipse	11 28 15
Digits eclipsed 21° 40' 30" from the northern side of the earth's shadow.	12 26 0

This eclipse will occur in the River of Aquarius, and commence when the Moon is south-east, at an altitude of 18° above the horizon. It will pursue its course through an arc of about 25° of its apparent revolution, totally eclipsed: it will begin to emerge from its gloom half an hour before it arrives at the meridian; and at twenty minutes after will have entirely escaped from the earth's shadow.

The eclipse will be wholly visible to Europe and Africa, and nearly so to Asia and America—comprehending the greatest portion of the habitable world.

In observing the eclipse, the following are some of the interesting phenomena to which the attention may be directed. The first appearance of the penumbra on the Moon's eastern limb—the entrance of the Moon into the umbra, or true shadow of the earth—the progress of the lunar spots into the shadow—whether, when the Moon is wholly plunged in the shadow, it is totally concealed, or only dimly seen—if visible, the degree and colour of the light emitted.

The most eligible spots by which to trace the progress of the eclipse, are the following:—Kepler, Copernicus Mare* Humorum, Tycho and Mare Crisium. The first of these spots (Kepler) is not far from the eastern limb of the moon; it is an annular elevation, on the summit of which is a circular range of small rocks, having a mountain in its centre. Copernicus is to the west of Kepler; this spot is very luminous, and has numerous rocks and

* A singular taste seems to have governed some astronomers who have given names to the lunar spots: thus we find the Lake of Sleep, the Lake of Dreams, the Lake of Death, Bay of Epidemics, Land of Putrefaction, &c. Schreuter excels in this vitiated nomenclature:—a long irregular spot in the southern hemisphere of the Moon, is by him called Hell!

mountains scattered on the north-east of it. Mare Humorum is south of the former two; it is a dark, well-defined spot, and bounded with rocks and ridges on its north-east extremity. Tycho is in the southern hemisphere, and the most conspicuous spot on the Moon's surface; from it proceeds, in every direction, elevated ranges of mountains, which appear like brilliant radiations: in the centre of this circular bright spot is an insulated mountain. Mare Crisium is a dark spot, of an oval form, near the western edge of the moon; its central parts seem elevated; it has a ridge of rocks at its north-east boundary.

About half an hour after the commencement of the eclipse, the Moon will be in conjunction with λ Aquarii. This conjunction will prove an occultation to the southern parts of the kingdom. To London, the star will appear about 10' to the north of the Moon. This circumstance adds considerably to the interest of the eclipse.

17^d—Mercury at his greatest elongation (26° 30'), and visible as an evening star.
 18^d 12^h—In conjunction with Spica Virginis.
 30^d—Stationary. Venus, the morning star, is approaching the Sun. 12^d 18^h—In conjunction with Saturn: difference of latitude 14'.
 14^d 9^h—In conjunction with Regulus; difference of latitude, 32'. 26^d—In conjunction with χ Leonis; difference of latitude, 1'.

19^d 3^h 15^m—Mars in opposition, and the most conspicuous object in the heavens, being at his nearest to the earth, and appearing under his greatest angle. The situation of this planet is near 30 and 33 Piscium.

The Asteroids. 4^d—Vesta 2° west of 58 Ceti; Juno 3° north-west of Ancha in Aquarius; Pallas 1½ east of 7 Serpentis; Ceres 1½ north of 26 Libræ.

4^d—Jupiter stationary. The following are the visible eclipses of the satellites:—

	D. H. M. S.
First Satellite, emersion	1 8 30 64
Second Satellite	24 8 46 13
Third Satellite immersion ..	27 8 22 26
Fourth Satellite emersion ..	6 9 34 50

29^d 1^h—Saturn in conjunction with Regulus.
 Uranus continues visible in Capricornus.
 Deaford. J. T. B.

FINE ARTS.

NEW PUBLICATIONS.

Fifty-Six Engravings, illustrative of Italy; a Poem by Samuel Rogers, Esq. Jennings and Chaplin.

IN a former part of our Number we have noticed the literary portion of the work of which these engravings form the splendid embellishments. We are really unacquainted with any volume of a similar size and character, on which so much expense has been liberally and tastefully bestowed in the way of illustration. The very manner in which the prints have been introduced into the text must have been attended with considerable technical difficulty and labour.

The publication, the title of which stands at the head of the present article, consists of proof impressions, on large paper, of these beautiful plates; and a more charming collection of gems has never come under our observation. Of the fifty-six designs from which the plates have been executed, no fewer than forty-four are from the pencils of Turner and Stothard; and, without meaning to derogate from the merits of the remaining plates, it is certainly to those forty-four that the collection is in-

debted for its chief attractions. The subjects which have been chosen by Mr. Turner are,—The Lake of Geneva, William Tell's Chapel, St. Maurice, Hospice of the Great St. Bernard (two views), Marengo, Aosta, Martigny, Hannibal passing the Alps, the Lake of Como (two views), Venice, Florence, Galileo's Villa, Villa Madama by moonlight, Rome, The Forum, The Campagna of Rome, Tivoli, Banditti, Naples, Pastum, Amalfi, A Villa on the Night of a Festa di Ballo, and Perugia. Mr. Stothard's subjects are,—Jorasse, Travelling Musicians, Cristina, The Brides of Venice, A Tomb, A Tournament in St. Mark's Place, Ginevra, A Rural Entertainment, Buondelmonte, The Pilgrim, The Pilgrim's Return, An Arrival, The Death of Raphael, Taking the Veil, The Fountain, The Travelling Monks, The Tarantella, Children on the Sea-shore, and The Blind Harper.—Of course it will be impossible for us, in such a constellation, to do more than point out a very few of the stars which appear to shine the most brightly. And first, with regard to Mr. Turner's productions. *A Villa on the Night of a Festa di Ballo.* Engraved by E. Goodall.—Rich and glowing in its effect; and finely embodying the description in the text :—

" 'Twas where o'er the sea
Delicious gardens hung; green galleries,
And marble terraces in many a flight,
And fairy-arches flung from cliff to cliff,
Wildering, enchanting; and, above them all,
A palace, such as somewhere in the east,
In Zenistan, or Araby the blest,
Among its golden groves and fruits of gold,
And fountains scattering rainbows in the sky,
Rose, when Aladdin rubbed the wondrous lamp;
Such, if not fairer; and when we shot by,
A scene of revelry, in long array:
As with the radiance of a setting sun,
The windows blazing."

The Hospice of the Great St. Bernard, Plate I. Engraved by W. R. Smith.—A complete contrast to the last. Alpine peaks, the house "the highest in the ancient world," all clad in the garb of eternal winter, while

" Just beneath it, in that dreary dale,
If dale it may be called, so near to heaven,
A little lake, where never fish leaped up,
Lies like a spot of ink amid the snow."

The Lake of Como, Plate I. Engraved by E. Goodall.—Certainly one of the most fascinating and miraculously executed realisations that imagination can conceive of the poet's beautiful lines :—

" The morning air
Plays on my cheek how gently, flinging round
A silvery gleam; and now the purple mists
Rise like a curtain; now the sun looks out,
Filling, o'erflowing with his glorious light
This noble amphitheatre of hills;
And now appear, as on a phosphor-sea,
Numberless barks, from Milan, from Pavia;
Some sailing up, some down, and some at rest,
Lading, unlading at that small port town
Under the promontory—its tall tower
And long flat roofs, just such as Gaspar drew,
Caught by a sunbeam slanting through a cloud;
A quay-like scene, glittering, and full of life,
And doubled by reflection."

Pastum. Engraved by J. Pye.—A suitably-treated representation of those ancient temples which

" Stand between the mountains and the sea;
Awful memorials! but of whom we know not."

Galileo's Villa. Engraved by E. Goodall.—As tranquil as the last was full of elemental strife :—

" Sacred be
His villa (justly was it called the gem!),
Sacred the lawn, where many a cypress threw
Its length of shadow, while he watched the stars."

But we must now attend to Mr. Stothard. *The Brides of Venice.* Engraved by C. Rolls.—Replete with grace and elegance :—

" through the city, in a stately barge
Of gold, were borne with songs and symphonies
Twelve ladies young and noble. Clad they were

In bridal white, with bridal ornaments,
Each in her glittering veil; and on the deck,
As on a burnished throne, they glided by."

Children on the Sea-shore. Engraved by G. H. Robinson.—The grace and elegance of the Brides of Venice were courtly; the grace and elegance of this charming group are rustic. It is a delightful specimen of Mr. Stothard's taste and feeling.

The Tarantella. Engraved by G. H. Robinson. *Buondelmonte.* Engraved by D. Allen. Grace and elegance still; though exhibited in different shapes. The former

" displays
The gentle arts and witcheries of love;

The latter is indeed a

" pearl of heavenly light."

Travelling Monks. Engraved by D. Allen.—Here we have an amusing exhibition of Mr. Stothard's humour :—

" Their bridle-bells
Ring merrily; and many a loud, long laugh
Re-echoes."

A Tournament in St. Mark's Place. Engraved by E. Goodall.—A gorgeous, spirited, and well-imagined scene.

The Death of Raphael. Engraved by H. Robinson.—We want words to express our admiration of this splendid and affecting composition, in which all the highest and finest qualities of art are displayed. Small as it is, it would of itself be sufficient to establish the lasting fame of any artist. The lines of the poet, though sufficiently descriptive for their purpose, have gone but a little way to furnish the mind of the painter with the images which he has here so beautifully developed :—

When all beheld
Him, where he lay, how changed from yesterday!
Him, in that hour cut off, and at his head
His last great work; when, entering in, they looked
Now on the dead, then on that master-piece,
Now on his face, lifeless and colourless,
Then on those forms divine that lived, and breathed,
And would live on for ages—all were moved;
And sighs burst forth, and loudest lamentations."

If we might venture to regret any thing in so fine a performance, it is that the "Transfiguration" has not been kept somewhat more in the back-ground. At present it enters into competition with the living figures. But we are compelled to restrain ourselves, to pass without remark much that is worthy of high praise; and to conclude, by repeating our unqualified approbation of this delightful assemblage of art.

ORIGINAL POETRY.

THE SICILIAN GIRL TO THE MADONNA.

MADONNA, I have gathered flowers,
And wreathed them round thy shrine;
And every rose I offer thee
Is wet with tears of mine.

Madonna, I am kneeling here;
Yet will they not depart,
The earthly hopes and earthly fears
That war within my heart.

I strive to only pray for peace,
To only think of thee;
Alas! my wild and wandering thoughts
Ill with my words agree.

Madonna, 'tis in vain to strive;
My lips may move in prayer,
But thou canst read my inmost soul,
And other thoughts are there.

Thou knowest all my wretchedness,
Thou knowest all my love;
Oh! mother dear, look down on me,
I dare not look above,

Mother, though not on that pure brow
One earthly shade appears,
That radiant head has been bowed down,
Those eyes been filled with tears.

Thou knowest the bitterness of grief,
The mortal pang and strife
Of hopes that look beyond the grave,
Of ties that bind to life.

I feel the damp upon my brow,
The flush upon my cheek;
My languid pulse, my failing breath,
More weary and more weak.

Ah! little should she think of love
Whose steps are on the grave;
Of love, the almighty to destroy,
The powerless to save.

It is in vain; I cannot pray,
And yet not think his name;
It may be silent on my lips,
'Tis in my heart the same.

The love of happy childhood's years,
The love of youth's first vow;
The same through sickness, grief, and wrong,
May not be banished now.

I know no more my evening song
Will rise at twilight dim;
I know this is my latest prayer,—
Well, let it breathe for him.

His sails are spread; Madonna, keep
The tempest from the sky;
Bless thou the bridal which he seeks—
And let me go and die! L. E. L.

VARIETIES.

Silos.—The invention of the subterranean preservation of corn has been reclaimed by the French, as made by them; others contended that it was formerly known to the Romans. But the following quotation from Tacitus shews that this mode of preserving corn was first practised by the Teutonians :—"Solent et subterraneos specus aperire, eosque multo insuper firmo onerant, suffugium hiemi et receptaculum frugum, quia rigorum frigorem ejusmodi loca molliunt, et si quando hostis advenit, aperta populatur; abdita autem et defossa aut ignorantur aut eo ipso fallunt, quod quaerenda sunt."

Public Entertainments.—Even at this dull season, when London ought to be empty, but that Royalty still keeps a decent sprinkling in town and the vicinity, we have occasional novelties in the way of sight-seeing. Among these we have this week visited with gratification a very pleasing exhibition in Leicester Square, called the Udorama, and representing some of the most striking and romantic scenery of Switzerland, with the effects of sunrise, night, &c. upon the mountains and glaciers. It is well worth a call, and especially to our more juvenile friends.

We also anticipate a grand display of archery, and other olden-fashioned sports, at the manor grounds, Chelsea, on Thursday, where Mr. Harrison gets up a pageant and amusements after the model of the May-day games of the time of good Queen Bess.

Formation of Stone.—Near to Kingston Harbour, in Ireland, large masses of the high gravelly bank fall on the beach, and are gradually turned into a hard solid substance, called pudding stone. The formation may clearly be observed in its different stages. The cement that binds the stones together appears to be of the same nature and matter that shells are composed of.

Sagacity of the Indian Hornet.—While engaged in reading in my bungalow, at Bellary, in India, a large wasp, or hornet, of very beautiful form and colour, flew into the room where I was seated, bearing a small green caterpillar in his claws. He immediately commenced burrowing in the dry clay floor; but in proportion as he threw up the fine sand behind him, it formed a sort of hill or cone, and fell into the hole again, giving him fresh trouble to throw it out. The hornet did not like or understand this; and he repeatedly flew towards me in an angry and menacing manner, much too near my face to be agreeable. At last, after repeatedly running round the little sand-hill, he found out the cause of all his trouble, and throwing himself on his side in rear of it, he struck away with his forepaws at the base, until he cleared it all away. He then set to mining afresh, without further impediment, and deposited his game.—*Correspondent.*

Potato Cheese.—In many parts of Saxony cheese is made in the following manner from potatoes:—Take the best potatoes and boil them; when cold, beat them in a mortar into a pulp, adding a pint of sour milk to 5lbs. of potatoes. Keep the mass covered for three or four days, and then beat it again. Make it into small cheeses, which are to be placed in baskets, to let the superfluous moisture escape. Dry them in the shade, and then pile them on each other for 15 days; after which they may be put away in any manner in a dry place. They have a very pleasant flavour, and will keep good for years, improving with age.

The French Academy of Sciences sat on the 2d of August (we have received a considerable arrears of literary and scientific periodicals from Paris during the last ten days): but nothing of any literary or scientific interest has occurred.

Virtuosi.—The Musical Society of classical composition in Paris intends publishing, this year, a biographical lexicon of the most renowned virtuosi, from the time of Handel down to Rossini. Amongst them will be 709 Bohemians, 701 Italians, 517 Germans, 308 Russians, 134 Hungarians, 134 Frenchmen, 128 Englishmen, 78 Greeks, 18 Spaniards, 18 Danes, 16 Swedes, 9 Portuguese, and 3 Turks.

Artists in Rome.—The number of German artists living at Rome last spring amounted to 85; viz. from Prussia 37, from Austria 13, from Saxony 11, from Bavaria 6, from Wurtemberg 6, from Mecklenburg 3, from Hesse-Cassel and Darmstadt 3, from Baden 2, and from the Hanseatic towns and some other little states 4. From other parts of Europe there are 133; viz. French artists 45, English 19, Russians and Poles 16, Danes 14, Swiss 13, Spaniards 10, Dutch 9, Portuguese 4, Swedes 3. Besides, there are from the different parts of Italy 491. The total number of artists living at Rome, in the beginning of this year, therefore, amounted to 709.

Bulls, &c.—All the bulls in the world are not made in Ireland. A clever little weekly contemporary of ours, published under the name of *Spirit of Literature*, in its No. of Saturday, August 14, tells us of a "remarkable coincidence," which is no less than that "on the twenty-seventh of August 1789, the Duke of Brunswick issued a supplement to his celebrated manifesto," &c.; and "on the same day of the same month of 1830, Charles X. issued the ordinance annulling" the charter, &c. This was a droll coincidence to discover a fortnight before the last date arrived!—Penny play-bills are sold about our theatres, which, besides the bills of the evening, contain notices, such as they are, of the performances and other

amusements. One of these, of last Monday, advises its readers to drop in at the Western Exchange, to see a correct representation of his late majesty's remains lying in state, and all his favourite places of resort, including Windsor, Virginia Water, and "the Royal Vault:" a favourite place of resort! quere?—The *Court Journal*, a prodigious authority in its own gabble, enlightens the fashionable world with an essay on titles, &c., by which it appears that "the highest title of nobility amongst us, that of duke, was the last introduced into England, in 1335;" in spite of which, however, the first marquess created in England was Robert de Vere, in 1385! Fine chronologists!

To the Editor of the London Literary Gazette.
SIR,—At ten o'clock this night, during a remarkably clear star-light, while scanning a cloud could be seen, except a low one of the stratus kind, stretching along the horizon from the north to the west, my attention was suddenly drawn to the N.W. by the appearance of numerous pillars, or columns, of white light, reaching from behind the cloud I have mentioned, through the clear sky, up to various altitudes—some half-way towards the zenith. There were continual variations in the intensity of the lights; but those variations (unlike the usual coruscations of the Aurora Borealis) occurred so slowly, that to the eye the lights appeared perfectly steady, and shewed very like the beams which on a showery day we often behold extending from the partially clouded sun—except that the latter proceed all from one point, while the former stood in a line. This beautiful phenomenon lasted about a quarter of an hour, and the pillars of light then gradually melted away into one uniform cloud-like mass of white light. Such is the appearance which I witnessed at ten o'clock. A nearly similar phenomenon was observed here at half-past nine this evening.—I am, sir, &c.
Redruth, August 29th, 1830. R. E.

TO CORRESPONDENTS.

☞ The pressure of new and interesting books published, or on the eve of publication, this week, has induced us to enlarge our reviewing department, at the expense of our miscellaneous heads. We trust the matter will sufficiently excuse the encroachment; and we promise the articles necessarily postponed with all speed. We are sorry to disappoint H.'s ambition. We regret to be obliged to reject D. E. L.'s fine lines; but we have a disinclination to insert personal tributes, however justly due: it would lead us into a wide field.

ADVERTISEMENTS,

Connected with Literature and the Arts.

MANCHESTER COLLEGE, YORK, under the superintendance of the Rev. C. WELL-BELOVED, Theological Tutor and Principal—the Rev. J. KENRICK, M.A. Tutor in Ancient Languages and History—the Rev. W. HINCKES, F.L.S. Tutor in Mathematics and Philosophy, and Resident Tutor.

The Managers of this Institution are of opinion that the present is a suitable time for calling the attention of parents and of the public at large, to the advantages which it offers for completing a course of liberal education, both on account of the increasing demand for such advantages, which they believe the spirit of the present times most occasion; and of their conviction that the successful endeavours lately made to improve the discipline of the College, entitle them to recommend it without hesitation to public confidence.

The plan of instruction embraces a constant attention to the study of the Greek and Latin Classics; an extensive course of Mathematics and Natural Philosophy; Latin and English Composition, Ancient and Modern History; Intellectual, Moral, and Political Philosophy, and Political Economy; and the Evidences of Natural and Revealed Religion. Instruction in the French, Italian, and Spanish Languages, may be obtained from able masters; and German is taught by the Rev. J. Kenrick.

The Students breakfast, dine, and sup at the Table of the Resident Tutor, and have their apartments in buildings immediately adjoining his house, and enclosed in a common gate. The expenses to which they are subjected, independent of the charges for board and lectures, are very small; and of the committee challenge inquiry, both as to the economy of the plan, and the character of the instruction afforded.

The Terms for Lay Students are One Hundred Guineas per Annum.

The importance of education is now so much felt amongst all classes, that parents must naturally be desirous of affording to their sons opportunities of improvement more extensive than can be enjoyed even at the best schools; and it will be acknowledged to be highly desirable that young men should be prepared for taking their places in the world, by possessing a certain amount of a situation where, while they are controlled in all essential parts by a system of strict discipline, they are no longer treated as children, but learn to act for themselves, and take upon themselves in some degree the management of their own affairs.

The plan of Manchester College has been adapted. It offers the advantages of a college education unfeignedly by religious tests, and free from the danger of moral corruption; and the Committee feel assured, from an intimate acquaintance with its present state, that it will not disappoint those who approve of its general principles.

The College Session will commence on Friday, the 26th of September.

Applications for Admission of Students may be addressed to the Rev. C. Wellbeloved, Principal of the College; to the Treasurer, George William Wood, Esq. Manchester; or to either of the Secretaries, the Rev. J. J. Taylor, and S. D. Darbishire, Esq. Manchester.

Manchester, July 1830.

ST. GEORGE'S HOSPITAL.—The

following Courses of Lectures will be given in the Theatre of the New Hospital during the ensuing season:—
Theory and Practice of Physic—by Dr. Chambers and Dr. Macleod.

Theory and Practice of Surgery—by Mr. Brodie and Mr. Cressel.

Materia Medica—by Dr. Macleod and Dr. Seymour.

Midwifery and Diseases of Women and Children—by Mr. Stone, alternately with Dr. Henry Davies.

Botany—by Mr. Gilbert Burnett.

These Lectures will be given gratuitously to the Pupils of the Hospital; by Dr. Hewett, Dr. Seymour, Mr. Brodie, and Mr. Hawkins; and Lectures on Pathology, by Dr. Wilson.

The Pupils will also have the advantage of a Library and Museum.

A YOUNG LADY wishes to obtain a

Situation as Governess in a Private Family, or a School; she is competent to teach the usual branches of Education, and has no objection to take the entire charge of Two, or more, Young Ladies under the age of Fourteen, without the assistance of Masters. The most respectable references can be given.

Address, post-paid, to C. J. H., to the care of Mr. Wrightson, Bookseller, Birmingham.

Captain Robert Elliot's Views in India, &c. &c.

This day is published, Part I. of

VIEWS IN THE EAST; comprising India,

Canton, and the Shores of the Red Sea. Drawn by S. Prout, C. Stanhield, T. Boys, G. Cattermole, J. S. Cotman, D. Cox, F. Finch, W. Purser, &c. &c. from original Sketches by Capt. ROBERT ELLIOT, R.N. With Historical and Descriptive Illustrations.

The Work will be published in successive monthly Parts, each Part containing three Plates, engraved in the line manner, by Edward Goodall, Robert Wallis, William Miller, Robert Brandard, William Cooke, J. Du Boys, William Woolnough, P. Heath, G. Hanbury, W. Le Petit, and other Artists of acknowledged talents. The Plates will be accompanied by Descriptions, embracing Historical and Traditional Accounts of the Country, its Inhabitants, Productions, &c. &c. compiled from the best Authorities, and from Notes and Memoranda made at the time.

Persons wishing to subscribe, are requested to forward their Names direct to the Publishers, Messrs. Fisher, Son, and Co., or to their respective Book and Printers, with Instructions to have them immediately registered at the Publishers, for the purpose of being inserted in the printed List of Subscribers.

Imperial Octavo 5s. per Part.
Royal Quarto, Proofs on India 10s.
Imperial Quarto, do. do. before letters 15s.
and limited to 50 Copies 15s.

London: H. Fisher, Son, and Co. Newgate Street; and Whitaker, Treacher, and Co. Ave Maria Lane.

ILLUSTRATIONS of NATURAL

HISTORY. Now publishing, in monthly Numbers, a Series of finely executed Engravings, with Descriptions, Accounts of the most interesting and popular Genera and Species of the Animal World. Conducted by J. LE KEUX, by whom, and R. SANDS, the Engravings are executed. Each Number contains six finely engraved Subjects, on Steel, and at least Sixteen Pages of Letterpress, price 1s. The first volume is just completed.

"The exhaustless varieties of nature, For ever seen and yet for ever new," are likely from the specimens of this work we have seen, to be brought more completely home to the reader than they have ever yet been. The engravings are remarkably spirited and true to life. These alone would give the work value; but the accompanying descriptions and anecdotes of animals are particularly entitled to notice, as, while conveying to the mind important information, they are as amusing as an Arabian Tale. — *Sunday Times*.

For further testimonies of this work, see *Literary Gazette*, *Examiner*, *Sunday Times*, *Norwich Mercury*, &c. &c. Published by Longman and Co. Paternoster Row; Jennings and Co. Cheapside; Whittaker and Co. Ave Maria Lane; Tilt, Fleet Street; and Rodwell, Bond Street; and may be had of all Booksellers in Great Britain.

Under their Majesties' special sanction and patronage, Part V. on the 1st of September, to be completed in seven more Monthly Parts, each containing Eight Plates, from Engravings on steel by Mr. T. Sturges, price 2s. 6d. plain, or 3s. 6d. finely coloured.

THE FAMILY LIBRARY CABINET ATLAS,

Constructed upon an Original Plan, and embracing many important new features. "This Atlas corresponds in size with those popular publications to which it will form so useful an addition—namely, 'The Family Library,' 'The Classical Library,' and 'Cabinet Cyclopaedia'—and is, in every respect, a most valuable and interesting work. Its very ingenious method of arrangement secures to the geographical student the information for which hitherto he has been obliged to resort to works of the largest dimensions." — *Athenaeum*.

"This miniature and beautiful Atlas is likely to supersede, for general purposes, maps of a more expensive and elaborate character." — *Atlas*.

"The workmanship is among the best of the kind we have ever witnessed." — *Examiner*.

"This Atlas far surpasses any thing of the kind which we have seen." — *Monthly Review*.

Published, for the Proprietors, by Mr. Bull, Holles Street, Cavendish Square; supplied also by every Bookseller in the Kingdom.

VALUABLE LIBRARY, MAPS and CHARTS, PHILOSOPHICAL INSTRUMENTS, COLLECTION of SHELLS, &c.

To be Sold by Auction, by WINSTANLEY and SONS, on the Premises, on Wednesday, September 28th, and following days, at Eleven o'clock, by order of the Executors, the valuable and extensive Library of the late H. N. Jarrett, Esq., Great Bromley Lodge, near Colchester, embracing the standard editions of the best English Authors, chiefly in handsome bindings, including Shakespeare, Milton, Dryden, Addison, Pope, Rollin, Hume and Smollett, Gibbon, Robertson, Goldsmith, Johnson, Scott, Fielding, Sterne, Locke, Blair, Sir Wm. Jones, Sir W. Scott, Lord Byron, Roscoe, and others. Among them, also, will be found—the Encyclopaedia Britannica, Bell's British Poets, Cook's Voyages, &c. the Annual Register, the Voyages and Travels of Holcroft, Nardin, Clarke, Beaman, Lyon, Parry, Coxe, Burchardt, and Belzoni; Curtius's Botanical Works, Grew's Antiquities, D'Obry and Mant's Bible, Hamilton's Antiquities, the Harleian Miscellany, the Works of Handal complete, Shaw's Zoology, &c. &c. at large, 45 vols., &c.

Several valuable Maps and Charts, a Collection of Mathematical and Philosophical Instruments, Cabinet of Shells, &c. To be viewed, and Catalogues had (1s. each) of Winstanley and Sons, Paternoster Row.

BOOKS PUBLISHED THIS DAY.

THE LIFE of LORD BYRON.

By JOHN GALT, Esq. Forming the First Volume of the National Library. Conducted by the Rev. G. R. GLEIG. * * * The Publishers beg leave to announce that "The National Library" has been adopted instead of that originally proposed, (the Library of General Knowledge), from the similarity of the latter to those of several other existing Works. Colburn and Bentley, 8, New Burlington Street.

Under the special Patronage of His Majesty William the Fourth.

THE NATIONAL PORTRAIT GALLERY, No. XVII.

published this day, contains Portraits and Memoirs of Sir Abraham Hume, Bart. F.R.S.; Lieutenant-General Sir Thomas Picton, G.C.B.; and the Right Hon. Wm. Howley, D.D. Lord Archbishop of Canterbury. London: Fisher, Son, and Co.; Moon, Bays, and Graves, Printers, to the King; and Colnaghi and Co.

Works on Gardening, Rural Economy, &c. Printed for Longman, Rees, Orme, Brown, and Green.

THE GARDENER'S MAGAZINE, and Register of Rural and Domestic Improvement.

Conducted by J. C. LUDLOW, F.L.S. H.S. &c. Corresponding Member of the Agricultural and Horticultural Societies of Paris, of the Hort. Soc. of Berlin, and Hon. Mem. of the Hort. Soc. of New York. In 8vo. No. 27, to be continued every two Months, alternately with the Magazine of Natural History, price 3s. 6d.

Also may be had, Vols. I. to V. price 4s. boards.

The English Flora, by Sir James E. Smith, M.D. F.R.S. President of the Linnæan Society, &c. &c. New edition, 4 vols. 8vo. 2l. 8s. boards.

By the same Author, A Compendium of the English Flora, 12mo. 7s. 6d. cloth boards.

The same Work in Latin, 5th edit. 12mo. 7s. 6d. boards.

A Grammar of Botany, illustrative of Artificials as well as Natural Classification, with an Explanation of Jussieu's System. 2d edition, 8vo. 12s.; or coloured, 1l. 11s. 6d.

An Introduction to the Study of Physiological and Systematical Botany. 8vo. 4th edition, with 15 Plates, price 14s. plain; or coloured, 1l. 2s. boards.

The British Flora, containing a Description of the Flowering Plants and Ferns of the British Islands, arranged according to the Linnæan System. By Wm. Jackson Hooker, LL.D. F.R.S. &c. &c. Regius Professor of Botany in the University of Glasgow. In 1 vol. royal 12mo. Nearly ready.

The plan of the above work will be similar to that of the first part of Mr. Hooker's "Flora Scotica." The Mosses, and the rest of the Cryptogamia, will be published by the same Author, and form a distinct volume, corresponding with the "English Flora" of the late Sir James Smith, and will be sold either as the last volume of that work, or separately, and as the completion of the "British Flora."

Muscologia Britannica, containing the Mosses of Great Britain and Ireland, systematically arranged and described, with Plates illustrative of the Characters of the Genera and Species. By Wm. Jackson Hooker, LL.D. F.R.S. &c. &c., and Thomas Taylor, M.D. M.R.I.A. and F.L.S. &c. 2d edition, corrected and enlarged, 8vo. 1l. 11s. 6d. plain, and 2l. 2s. coloured Plates.

LODGE'S PORTRAITS and MEMOIRS of the MOST ILLUSTRIOUS PERSONAGES of BRITISH HISTORY.

"We have to record the appearance of new Parts of four distinct editions of this popular publication, in various stages of progress at the same time, an example of literary success altogether without parallel, and powerfully denoting the increasing avidity with which works of merit are now sought by the mass of society, when published upon a scale that enables the middling classes to purchase them. If Mr. Lodge's work continues to gather strength and increase in interest as it approaches our own times, there is no saying to what circulation it may attain, or how many editions we may witness in simultaneous progress, addressed, as it is, to the best feelings of every one who thinks as he ought of the venerated names by whom his country has been exalted to her present pre-eminence: of those warriors and sages whose memory is associated with all that is dearest and most glorious to Englishmen."—Literary Gazette, August 1830.

New Subscribers may commence with the First Number, and take one or more per month, as agreeable. A Biographical Catalogue and Prospectus of Two Hundred of the Portraits and Memoirs to be contained in this Work, may be obtained (free of expense) from every Book and Printseller in the Kingdom, to whom they have been sent for gratuitous presentation to persons desiring to acquaint themselves with the plan of the Work, or to subscribe for it; and if any difficulty be experienced in obtaining them, applications are requested to be made direct to the Publishers, Harding and Lepard, Pall Mall East, London.

THE UNITED SERVICE JOURNAL, and NAVAL and MILITARY MAGAZINE, for September, price 2s. 6d.

Contents: Tactics of Napoleon—The Expedition to Moscow—Manuscripts found among the Papers of a Deceased Naval Officer—Extraordinary Events which took place at St. Petersburg on the 14th of December (O.S. 1829)—The Bio Verde—System of Naming His Majesty's Ships—Letters from Gibraltar, No. V.; by the Author of the Military Sketch Book—First Steam Communication with India—The Affair at Queen's Town—Observations in reply to Sir Robt. Seppings; by the Editor of Remarks, &c. of a Flag-Officer in an Impressive Incident at Sea—A popular View of Fortification and Gunnery, No. V.—Biographical Notice of Captains Philip and Thomas Saumarez, R.N.—On the Aim and Exercise of Artillery; by Sir Samuel Bentham—Lisbon in 1608; or, the Royal Exiles—Old England, the King, and Blue Jackets, for ever!—On some additions to the Sextant; by Lieut. Peter Le Count, R.N.—Evidence of Sir Herbert Taylor before the Select Committee of the House of Commons, concluded—Hints for the Education of the Sons of Naval Officers—Narrative of the late Events in Paris, by an Eye-Witness—Foreign Miscellany—General Correspondence—Editor's Portfolio—General Orders, Circulars, &c.—Distribution of the entire Naval Force of Great Britain, on the 1st of September, 1830—Monthly and Naval Register—Changes in the Stations of Corps—Military Promotions, &c. Colburn and Bentley, 8, New Burlington Street.

DISSERTATION on the MALVERN WATER, with an Inquiry into the Causes, Forms, and Treatment of Scrofulous Diseases and Consumption; together with some Remarks on Local Salubrity.

By WILLIAM ADDISON, Surgeon. Also, by the same Author, price 2s. A Letter to William Lawrence, Esq. on the Phenomena of Life and the Mind.

"Mr. Addison's work is scientific and ingenious, and we can with confidence recommend it."—Quarterly Journal of Science. "The best parts of Mr. Addison's book are those where he details the symptoms, causes, and treatment of scrofula."—Medical Gazette.

BOJARDO and ARIOSTO, ORLANDO INNAMORATA e FURIOSO; with Notes and Illustrations, in English.

By ANTONIO PANIZZI. "To the general reader these pages present much attraction; the analysis of the stories is amusing, the criticisms are excellent, and enlivened by much of shrewd observation and witty remark; but to the Italian student the disquisition is invaluable. No library, where Ariosto, Tasso, &c. are favourites, should be without this, their fitting companion."—Literary Gazette. William Pickering, Publisher, Chancery Lane.

THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD.

Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficient of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which may be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years. London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

THE LITTLE LIBRARY, comprising, in a Series of small Volumes, uniformly printed, a familiar Introduction to various Branches of useful Knowledge.

London: Printed for Sherwood, Gilbert, and Piper, Paternoster Row.

BOOKS IN THE PRESS.

Publishing in single volumes, pocket size, price 3s. 6d. each, in boards. BIBLIOTHEQUE PORTATIVE des DAMES; ou, Collection des meilleurs Ouvrages Français du Dix-neuvieme Siecle. Dirigee par M. de ROULLON. This Work will be divided into SIX SERIES. First—Essayists and Moralists, &c. Second—History, Biography, Memoirs, &c. Third—Dramatic Works. Fourth—Novels, Tales, &c. Fifth—Poetry. Sixth—Miscellaneous, Literary History, &c.

Vol. I. of the Third Series is published. Vol. I. of the First Series is nearly ready. Conditions.—One volume of each Series will appear successively. Each volume will contain about 350 pages. Each work will be preceded by a biographical and literary sketch of the author, with the different criticisms which have been made on the work. Each volume may be had separately, without subscribing for the remaining volumes of the Series, or even for the work to which the volume may belong. The paper, the type, the size (8mo.), the price, the facility of procuring any volume of the collection, induces a hope that this edition may be approved by the public; by the numerous admirers of the French language, and more particularly by those to whom the care of education is committed. London: Longman, Rees, Orme, Brown, and Green; and John Stacey, Old Haymarket, Norwich.

Will be ready the 1st of September, price 8s. 6d. post 8vo. half-bound, lettered, embellished with 140 coloured Illustrations, THE INFANT'S OWN BOOK.

London: D. Carvalho, 74, Chiswell Street, Finsbury Square; and may be had of every Bookseller in the United Kingdom. Prospectuses on application. On the 14th of September will be published, price 6s. demy 8vo. oblong, The Child's Own Drawing-Book. By G. W. Davies.

Under the Superintendance of the Society for the Diffusion of Useful Knowledge. On Tuesday, August 31st, will be published, price 2s.

THE MENAGERIES, Vol. II. Part I.; being the Thirteenth Part of the Library of Entertaining Knowledge.

Volumes published, price 4s. 6d. each, bound in cloth, Vol. I. Menageries. II. Timber Trees—Fruits. III. Insect Architecture. IV. Pursuit of Knowledge. V. The New Zealanders. VI. Insect Transformations. London: Charles Knight, Pall Mall East.

Family Library. On Tuesday, August 31st, will be published, with Engravings and Map,

NO. XV. of the FAMILY LIBRARY; being the History of British India, Vol. I. By the Rev. G. R. GLEIG, F.R.S.

Also, nearly ready, No. XVI., being Letters on Demonology and Witchcraft, by Sir Walter Scott, Bart.

In a few days, 5s. The Family Dramatists, No. II., being Vol. II. of the Works of Philip Massinger, illustrated with Explanatory Notes, and adapted to the Use of Families and Young Persons, by the omission of exceptional Passages. John Murray, Albemarle Street.

THE COURT JOURNAL and GAZETTE of the FASHIONABLE WORLD.

The Court Journal of Saturday next, Sept. 4, No. 71, (which will be a double one, without extra charge), will exhibit a complete picture of the Court of St. James's; comprising—1. A List of the Persons who will be secured places during the New Reign—2. A List of all the Persons who have been present at Almack's during the present season—3. A List of all the Persons holding Offices in the Household of the King and Queen respectively—4. A List of all the Military and Naval Promotions of the New Reign. Those who wish to secure copies of these interesting documents, should therefore give their orders early to their respective Newsmen to prevent disappointment. Published, for Henry Colburn, by W. Thomas, at the Office, No. 19, Catherine Street, Strand; and sent, postage-free, to all parts of the Kingdom.

FRASER'S MAGAZINE for TOWN and COUNTRY, price 2s. 6d. each Number, published Monthly, by James Fraser, 215, Regent Street; John Boyd, Edinburgh; and Grant and Co. Dublin.

The Publisher has returned his thanks to the Public for the patronage which it has bestowed on his "Town and Country Magazine." When this publication was first started by him, the general opinion amongst his brother publishers, and even amongst some of his ground men, was, that the undertaking could never succeed, as the ground men, who he had secured in advance, which would be vain to enter into competition. The Publisher, however, considered this opinion as the result of prejudice; he had too high an estimate of the understanding of the British Public to suppose that it would continue to support any publication, however widely it might be circulated, and however acknowledged its merits, to the total exclusion of any similar work, which might also boast of its share of undoubted originality, talent, and vigorous composition. He was, therefore, induced to commence the "Town and Country Magazine;" and he is proud of the reflection that his confidence in British undertakings was neither miscalculated nor misplaced. This work has succeeded to his wishes, and his efforts will continue to be directed towards increasing the high tone of its criticisms, and the independence and force of its political articles. The assistance, from the first literary and political characters of which this country can boast, which he has already received, and which every month continues to receive, is of the most flattering and encouraging description.

Seven Numbers of his Magazine have been published already. Contents of No. VII. to be published on Wednesday the 1st of September: Hebert—The Bishop Hebert—Stanzas—Elegram; the Beggar, the Cook, and the Idiot—Idem Latin Redutum—On the March of Intellect, and Universal Education—Church Bells, heard at Evening—The Uncertainty Witness, by the Etirick Shepherd—Cut Bono—Fables I., 2, 3, 4—Hon. Miss Norton's "Undying Objects of the Ministry—Savage Life in America—Disasters of Jan Nadeltrier—The Shepherd's Lament, from the German of Goethe—East India Question, No. IV.—Mr. Buckingham's Last Humbug—The Fate of the Colonies—Gallery of Illustrious Literary Characters; Samuel Rogers, Esq., being a full Portrait, with Literary Illustrations—The French Revolution of 1830—Our own Election Dinner!!!

LA BELLE ASSEMBLEE, for September, will be embellished with—I. A splendid Engraving of the Right Hon. Countess of Verulam—II. Two elegant Figures, representing the most fashionable London Costume for September—III. Seven Figures, exhibiting the most recent Continental Dresses. The Descriptions accompanying these Engravings are derived from the most authentic sources.

The Literary Department consists of—I. An illustrative Memoir of the Right Hon. Countess of Verulam—II. Rights of Woman re-asserted—III. Tales of the Badgwick, No. 1.—IV. Robert Brown, V. The Duke of Devonshire, and others, which will be found the usual variety of Original Poetry, Reviews of Books, Fine Arts, Theatres, Melanges, &c. &c. The Portrait of Her Royal Highness the Duchess of Cumberland embellished the August Number. Printed by Whittaker, Treacher, and Co. Ave Maria Lane. The Proofs by M. Colnaghi, Cockspur Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Moulton Street, Oxford Street; sold also by J. Chappell, 98, Royal Exchange; E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Kice, 47, Bebbington Street; W. B. Roberts, 10, Abchurch Lane; and Co. Glasgow; and J. Cunningham, Dublin.—Agents for America, O. Rich, 13, Red Lion Square, London. J. MOYSE, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Price.

No. 711.—AMERICAN EDITION.

SATURDAY, SEPTEMBER 4, 1830.

REVIEW OF NEW BOOKS.

The Cabinet Cyclopædia. Vol. X. History of the Netherlands. By Thomas Colley Grattan. Longman and Co.; John Taylor. London, 1830.

NEVER did work appear at a more fortunate period: a History of the Netherlands, at all times a desideratum, is peculiarly so now that public attention is fixed on the revolutionising spirit which is at this moment disturbing the country. The volume before us is a compressed but clear and impartial narrative; it has neither the dramatic power which gives such life-like reality to Sir Walter Scott's pages, nor the philosophic spirit of enlightened deduction which characterises those of Sir James Macintosh; but it is marked with much industry: Vander-vynct and Schiller* are its principal *matériel*; but sufficient attention has been paid to other authorities. The latter part of the work affords the chief novelty of quotation.

“*The Restoration of the House of Orange.*—

The population of Amsterdam was reduced from 220,000 souls to 190,000, of which a fourth part derived their whole subsistence from charitable institutions, whilst another fourth part received partial succour from the same sources. At Haerlem, where the population had been chiefly employed in bleaching and preparing linen made in Brabant, whole streets were levelled with the ground, and more than 500 houses destroyed. At the Hague, at Delft, and in other towns, many inhabitants had been induced to pull down their houses, from inability to keep them in repair or pay the taxes. The preservation of the dykes, requiring an annual expense of 600,000*l.* sterling, was every where neglected. The sea inundated the country, and threatened to resume its ancient dominion. No object of ambition, no source of professional wealth or distinction, remained to which a Hollander could aspire. None could voluntarily enter the army or navy to fight for the worst enemy of Holland. The clergy were not provided with a decent competency. The ancient laws of the country, so dear to its pride and its prejudices, were replaced by the Code Napoleon; so that old practitioners had to recommence their studies, and young men were disgusted with the drudgery of learning a system which was universally pronounced unfit for a commercial country.

“A people inured to revolutions for upwards of two centuries, filled with proud recollections, and urged on by well-digested hopes, were the most likely to understand the best period and the surest means for success. An attempt that might have appeared to other nations rash, was proved to be wise both by the reasonings of its authors and its own results. The intolerable tyranny of France had made the population not only ripe but eager for revolt. This disposition was acted on by a few enterprising men, at once partisans of the house of Orange and patriots in the truest

* We instance these as embracing the most interesting part of the history.

sense of the word. It would be unjust to omit the mention of some of their names, in even this sketch of the events which sprang from their courage and sagacity. Count Styrum, Messieurs Repelaer d'Jonge, Van Hogen-dorp, Vander Duyn van Maasdam, and Changuion, were the chiefs of the intrepid junta which planned and executed the bold measures of enfranchisement, and drew up the outlines of the constitution which was afterwards enlarged and ratified. Their first movements at the Hague were totally unsupported by foreign aid. Their early checks from the exasperated French and their over-cautious countrymen would have deterred most men embarked in so perilous a venture; but they never swerved nor shrank back. At the head of a force, which courtesy and policy called an army, of 300 national guards badly armed, 50 citizens carrying fowling-pieces, 50 soldiers of the old Dutch guard, 400 auxiliary citizens armed with pikes, and a cavalry force of 20 young men, the confederates boldly proclaimed the prince of Orange, on the 17th of November, 1813, in their open village of the Hague, and in the teeth of a French force of full 10,000 men, occupying every fortress in the country.

“In this crisis it was most fortunate that the French prefect at the Hague, M. de Stassart, had stolen away on the earliest alarm; and the French garrison, of 400 chasseurs, aided by 100 well-armed custom-house officers, under the command of General Bouvier des Eclats, caught the contagious fears of the civil functionary. This force had retired to the old palace, a building in the centre of the town, the dépôt of all the arms and ammunition then at the Hague, and, from its position, capable of some defence. But the general and his garrison soon felt a complete panic from the bold attitude of Count Styrum, who made the most of his little means, and kept up, during the night, a prodigious clatter by his twenty horsemen; sentinels challenging, amidst incessant singing and shouting, cries of ‘*Oranje boven!*’ ‘*Vivant Oranje!*’ and clamorous patrols of the excited citizens. At an early hour on the 18th, the French general demanded terms, and obtained permission to retire on Gorcum, his garrison being escorted as far as the village of Ryswyk by the twenty cavaliers who composed the whole mounted force of the patriots.”

“Still the wind continued adverse to arrivals from the English coast; the Cossacks, so often announced, had not yet reached the Hague, and the small unsupported parties in the neighbourhood of Amsterdam were in daily danger of being cut off. In this crisis the confederates were placed in a most critical position. On the eve of failure, and with the certainty, in such a result, of being branded as rebels and zealots, whose rashness had drawn down ruin on themselves, their families, and their country, it required no common share of fortitude to bear up against the danger that threatened them. Aware of its extent, they calmly and resolutely opposed it; and each seemed to vie with the others in energy and

firmness. The anxiety of the public had reached the utmost possible height. Every shifting of the wind was watched with nervous agitation. The road from the Hague to the sea was constantly covered with a crowd of every age and sex. Each sail that came in sight was watched and examined with intense interest; and at length, on the 26th of November, a small boat was seen to approach the shore, and the inquiring glances of the observers soon discovered that it contained an Englishman. This individual, who had come over on a mercantile adventure, landed amidst the loudest acclamation, and was conducted by the populace in triumph to the governor's. Dressed in an English volunteer uniform, he shewed himself in every part of the town, to the great delight of the people, who hailed him as the precursor and type of an army of deliverers. The French soon retreated before the marvellous exaggerations which the coming of this single Englishman gave rise to. The Dutch displayed great ability in the transmission of false intelligence to the enemy. On the 27th, Mr. Fagel arrived from England with a letter from the prince of Orange, announcing his immediate coming; and, finally, the disembarkation of 200 English marines on the 29th, was followed the next day by the landing of the prince, whose impatience to throw himself into the open arms of his country, made him spurn every notion of risk, and every reproach for rashness. He was received with indescribable enthusiasm. The generous flame rushed through the whole country. No bounds were set to the affectionate confidence of the nation; and no prince ever gave a nobler example of gratitude. As the people every where proclaimed William I. sovereign prince, it was proposed that he should every where assume that title. It was, however, after some consideration, decided that no step of this nature should be taken till his most serene highness had visited the capital. On the 1st of December the prince issued a proclamation to his countrymen, in which he states his hopes of becoming, by the blessing of Providence, the means of restoring them to their former state of independence and prosperity. ‘This,’ continued he, ‘is my only object; and I have the satisfaction of assuring you, that it is also the object of the combined powers. This is particularly the wish of the prince regent and the British nation; and it will be proved to you by the succour which that powerful people will immediately afford you, and which will, I hope, restore those ancient bonds of alliance and friendship which were a source of prosperity and happiness to both countries.’ This address being distributed at Amsterdam, a proclamation, signed by the commissioners of the confederate patriots, was published there the same day: it contained the following passages, remarkable as being the first authentic declaration of the sovereignty subsequently conferred on the prince of Orange:—‘The uncertainty which formerly existed as to the executive

power will no longer paralyse your efforts. It is not William the sixth stadtholder whom the nation recalls, without knowing what to hope or expect from him; but William I., who offers himself as sovereign prince of this free country.' The following day, the 2d of December, the prince made his entry into Amsterdam. He did not, like some other sovereigns, enter by a breach through the constitutional liberties of his country, in imitation of the conquerors from the Olympic games, who returned to the city by a breach in its walls: he went forward borne on the enthusiastic greetings of his fellow-countrymen, and meeting their confidence by a full measure of magnanimity. On the 3d of December he published an address, from which we shall quote one paragraph.—'You desire, Netherlanders! that I should be entrusted with a greater share of power than I should have possessed but for my absence. Your confidence, your affection, offer me the sovereignty; and I am called upon to accept it, since the state of my country and the situation of Europe require it. I accede to your wishes. I overlook the difficulties which may attend such a measure; I accept the offer which you have made me; but I accept it only on one condition,—that it shall be accompanied by a wise constitution, which shall guarantee your liberties, and secure them against every attack. My ancestors sowed the seeds of your independence: the preservation of that independence shall be the constant object of the efforts of myself and those around me.'

We select one or two anecdotes. "It does not appear that Friesland possessed any large towns, with the exception of Staveren. In this respect the Frisons resembled those ancient Germans who had a horror of shutting themselves up within walls. They lived in a way completely patriarchal; dwelling in isolated cabins, and with habits of the utmost frugality. We read in one of their old histories, that a whole convent of Benedictines was terrified at the voracity of a German sculptor who was repairing their chapel. They implored him to look elsewhere for his food; for that he and his sons consumed enough to exhaust the whole stock of the monastery.

"The spirit of constitutional liberty and legal equality which now animated the various provinces, is strongly marked in the history of the time by two striking and characteristic incidents. At the death of Philip the Bold, his widow deposited on his tomb her purse, and the keys which she carried at her girdle in token of marriage; and by this humiliating ceremony she renounced her rights to a succession overloaded with her husband's debts. In the same year (1404) the widow of Albert count of Holland and Hainault, finding herself in similar circumstances, required of the bailiff of Holland and the judges of his court permission to make a like renunciation. The claim was granted; and to fulfil the requisite ceremony, she walked at the head of the funeral procession, carrying in her hand a blade of straw, which she placed on the coffin. We thus find that in such cases the reigning families were held liable to follow the common usages of the country. From such instances there required but little progress in the principle of equality to reach the republican contempt for rank, which made the citizens of Bruges in the following century arrest their count for his private debts."

Curious Party Titles.—"We must not omit to notice the existence of two factions, which, for near two centuries, divided and agitated the whole population of Holland and Zealand.

One bore the title of *Hoeks* (fishing-hooks); the other was called *Kaabeljauws* (cod fish.) The origin of these burlesque denominations was a dispute between two parties at a feast, as to whether the cod-fish took the hook, or the hook the cod-fish? This apparently frivolous dispute was made the pretext for a serious quarrel; and the partisans of the nobles and those of the towns ranged themselves at either side, and assumed different badges of distinction. The Hoeks, partisans of the towns, wore red caps: the Kaabeljauws wore grey ones. In Jacqueline's quarrel with Philip of Burgundy, she was supported by the former; and it was not till the year 1492 that the extinction of that popular and turbulent faction struck a final blow to the dissensions of both."

Splendour of the Ancient Flemings.—"At a repast given by one of the counts of Flanders to the Flemish magistrates, the seats they occupied were unfurnished with cushions. Those proud burghers folded their sumptuous cloaks and sat on them. After the feast they were retiring without retaining these important and costly articles of dress; and on a courtier reminding them of their apparent neglect, the burgomaster of Bruges replied, 'We Flemings are not in the habit of carrying away the cushions after dinner!'

A similar story is told of Robert duke of Normandy.

"The meetings of the different towns for the sports of archery were signalised by the most splendid display of dress and decoration. The archers were habited in silk, damask, and the finest linen, and carried chains of gold of great weight and value. Luxury was at its height among women. The queen of Philip the Fair of France, on a visit to Bruges, exclaimed, with astonishment not unmixed with envy, 'I thought myself the only queen here; but I see six hundred others who appear more so than I.'"

After commemorating the escape of Grotius by the heroic efforts of his wife, Mr. Grattan says, it "only found a parallel in European history after a lapse of two centuries. We allude to the escape of Lavalette from the prison of the Conciergerie, in Paris, in 1815, which so painfully excited the interest of all Europe for the intended victim's wife, whose reason was the forfeit of her exertion." Our author owed it to his countrywomen to have remembered a similar act of affectionate devotion performed by Lady Nithsdale, who effected her husband's escape, and remained in his place, when the Scotch lords suffered for their attachment to the ill-fated Stuart cause.

Excerpta Historica; or, Illustrations of English History. Part II. pp. circ. 100. S. Bentley.

THIS Number has followed its predecessor after a longer interval than was intended by the editors, according to their first announcement. A perusal of its pages, however, will perhaps account for the delay, since they bear internal evidence of the care and research with which the subjects of the several papers have been investigated, as well as of the ability with which they are edited. In a work intended to be entirely illustrative of English history, despatch is not so much an object as accuracy. The promise held out by Part I. is realised in the present; for if the articles are not so numerous or various, they are of equal merit, and will amply gratify the curious and learned. It commences with the conclusion of the last article in the former, entitled "Privy-purse expenses

of Henry VII." Many of the extracts relating to the royal expenses and disbursements are remarkable as well as interesting; and we hope to see the publication of such papers encouraged, which are not only valuable in confuting or confirming points of history, but in bringing us acquainted with the manners and habits of the times. The notes and illustrations are also laudable additions, and furnish the result of much reading.

The next article is the "Will of Sir William Walworth," well known as a distinguished citizen of the fourteenth century, and twice Lord Mayor of London. The particulars relating to Sir William, prefixed, and the bequests of the will, are curious and numerous—those relating to his books are particularly so; and the extent of his collections shew that the good citizens of those days were not altogether indifferent to learning, though some portion of their time may have been devoted to banqueting. Next follows some state papers and original letters in the reign of Richard II. and Henry VI., with introductory notices. The fourth article is attractive, and relates to the issue of Catherine Roelt, wife of John of Gaunt, by her first husband. Some doubts were entertained as to the legitimacy of her son, Sir Thomas Swynford; and we have here the letters patent of King Henry IV. certifying his legitimacy. This article contains an account of the children of Catherine Roelt by John of Gaunt, who were legitimated by King Richard II., in 1397, and in confirmation of which, letters of legitimation were granted by Henry IV.; and upon this subject we have some facts entirely new, respecting the exception which these patents have been generally said to contain against the accession to the throne of the children of John of Gaunt by Catherine Roelt.

"It has been generally considered, that the instrument by which the Beauforts were legitimated contains a special exception with respect to the royal dignity; but a very remarkable fact has been recently discovered on the subject. The patent, as originally granted, contains no such reservation, nor was it introduced into the copy which was entered on the rolls of parliament when it received the sanction of the legislature; but when Henry IV. exemplified and confirmed the grant of Richard to the Earl of Somerset in 1407, the words, '*excepta dignitate regali*,' appear to have been added to the enrolment of the grant on the patent rolls; for those words occur on it as an interlineation, and from the difference in the colour of the ink, are presumed to have been inserted at a subsequent period, though the hand is very nearly the same. In the exemplification by Henry IV. in 1407, the words are inserted; and the following explanation of the circumstance is probably not far from the truth. Henry IV. was the son of John of Gaunt, and finding that the grant to his father's issue by Katherine Swynford might authorise them to assert a claim to the throne, on the failure of his own issue, as representatives of the line of Lancaster, probably thought it prudent to prevent such an occurrence by assuming a power which would now be held illegal, of adding a reservation to the grant of his predecessor, and obliging one of the grantees to receive a confirmation of that grant with the exception introduced into it, as if it had formed part of the original document. It escaped Henry, however, that the grant had become an act of parliament, and that even if he had the right, of his own authority, to qualify a former grant, he could not interpolate a statute; so that in a

legal view the addition to the patent of the 20 Rich. II. on the patent rolls is of no effect. From this singular fact it may be concluded, that as the issue of John of Gaunt were recognised by parliament as being legitimate, and as being capable of possessing all honours, dignities, pre-eminences, &c. without any reservation whatever, Henry VII. was, as he described himself, the lineal heir of John of Gaunt, and the representative of the house of Lancaster. If however, as is not impossible, though the dates render it improbable, John Beaufort, the eldest son of John of Gaunt by Katherine Swynford, was born before Henry IV., the king's motive for introducing this exception into the patent is still more obvious, because without such a reservation a question might have arisen whether Beaufort, as the eldest son, had not, by that instrument, a prior right to the crown to Henry himself, supposing any legal claim to the throne could have been derived from John of Gaunt, whilst descendants remained of his elder brothers."

To this paper follow some verses alluding to political parties about the year 1449: they are singular, from the circumstance of each individual referred to being designated by his badge, or heraldic device, which has led to the identity of the persons intended. The article in the former Number on "Standards" is then continued; and the Part concludes with "an account of the celebrated tournament between Lord Scales and the Bastard of Burgundy;" an article of high historical interest, and affording abundant proof of the research and care with which, as we have already stated, this publication appears to us to be conducted. Independently of the interest which the subject itself will excite with many persons, the fact, that historians have assigned wrong causes and dates to this memorable combat, will be sufficient to render the present narrative not only an acceptable but valuable addition to our historical collections.

The assertion of most historians, that this combat occurred in honour of the marriage of Margaret, the king's sister, is shewn to be unfounded; and the cause is related in the following extract:—

"It was a short time before his [Lord Scales's] sister's coronation that the singular adventure happened, with which the ancient narrative of this tournament begins. On Wednesday in Easter week, being the 17th of April, 1465, in the fifth year of Edw. IV., Anthony Lord Scales was at high mass, probably in the chapel of the palace at Richmond, then called Shene; on his return from which, he was surrounded by the ladies of the court, who placed a gold collar on his thigh, with a flower of souvenance, made of jewellery, which he immediately understood was to be the prize of some chivalrous exploit. He was then about twenty-four years of age, and in high esteem as a most accomplished nobleman. Delighted with the idea of this enterprise, on the next day he wrote a long letter from the palace to the Count de la Roche, commonly called the Bastard of Burgundy, challenging or requesting him to perform a feat of arms in October following. On Friday, in the presence-chamber, the king gave permission to Lord Scales to accomplish the enterprise, and to send Chester Herald with the message to the Bastard; which was attested by the high constable, under his seal, at London, on the following Monday. Chester began his voyage without delay, and entered Brussels on the 30th of April, where he executed his commission; and after having been entertained in the most honourable man-

ner, took his leave on the 10th of May, bearing with him a letter to Lord Scales."

The Bastard of Burgundy accepted, as is known, the challenge; and the detail of the proceedings, from its origin to the close of the tournament, will be found in this article, which is very minute, and consequently of considerable length. The sources whence the memorials of this transaction have been derived are stated, together with many particulars relating to Lord Scales and the Duke of Burgundy. To the narrative itself, we recommend our readers' attention, assuring the learned and the curious in the early periods of our history, that they will be fully repaid for the time they bestow upon it.

The Alexandrians; an Egyptian Tale of the Fourth Century. 2 vols. 12mo. London, 1830. Whittaker, Treacher, and Co.

AN interesting tale, and which has the advantage of being placed at a period which embraces historic ground as yet but little trodden, though rich in varied events and picturesque accessories. Perhaps the following chariot-race is as fair a specimen as we can select without breaking in upon the narrative.

"Menodorus was awakened one morning at early dawn by so considerable a clamour, that he feared another revolution was taking place in the city; but found the streets covered with men dressed in the gayest colours and holding banners, while every one seemed shouting The red! the white! or the green! with a vociferation that seemed to threaten destruction upon any one who did not join in their own cry. The election of a consul at Rome could hardly have given more animation to the countenances of men, who seemed ready to devote their lives for the glorious object they had in view; but Menodorus knew that the racing factions were heating up for partisans for the grand exhibition, which was to take place that day in the circus, and that the supplies of coloured strips of linen or silk were presented to the mob according as each declared himself a favourer of a certain colour. The wealthy were canvassed in a different manner. The charioteers themselves, generally belonging to the middle or lower classes, who often acquired great wealth, and were as often ruined, had previously insinuated themselves by personal address, or by the influence of their particular supporters, into the favour of the principal people. By personal address they were able often to prevail, for these men were frequently admitted into the society of the dissipated nobles, who were especially absorbed with the pursuits of horse-racing, and consequently more peculiarly at home in the conversations of their charioteers. These nobles often possessed chariots, and employed party-men as drivers; but not unfrequently they would take the reins themselves. They would also act as canvassers among the rest of the town, and thus not only spent considerable sums themselves, but induced even their tradespeople to contribute to the prize of the party colour; for the rewards were sums of money or presents, entirely dependent on the subscription of the day. The party of the civil and military rulers advanced to the opposite side of the circus, where they descended from their horses, and took their seats in the gallery under a splendid canopy, immediately over the dens or starting places of the chariots. No one else had the privilege of entering through the arena, but ascended to their seats from the exterior, the lower rows being the most distinguished; and at the top of

all, the common people stood *en masse*. Awnings to the south sheltered the company from the burning sun, and a fine prospect to the north took in the sea, the palace, and the groves extending towards the Canopian shore. The crowded circus was now agitated with impatience for a trial of the three factions, for which greater expectations had been raised than for any that had already occupied the attention of the day. The chariots for the match were already ranged along according to lot. Syrianus patronised the green, and had made great exertion towards reviving his popularity, by considerable donations among this powerful faction,—which might almost be considered as an Arian party, so much were doctrinal disputes intermixed with their amusements,—and the equipage about to start for the present match was his own. The garment of his charioteer, of the characteristic colour, was nearly covered with gold leaves; his legs were bare, and on his golden sandals blazed the richest jewels. The carriage itself was of the same costume as the man, and the whole trappings of the horses adorned with gold. Next stood a chariot exquisitely elegant in form, so thickly studded, that it seemed to be made of ivory and silver. The beautiful gray horses, less fiery than their neighbours, appeared of that noble disposition which prompts them to sacrifice themselves to their master's ambition, who held them at the most complete command. He, a figure of delicate proportion, whose silvery tunic was like the dress of Gany-mede, owned not the slavish birth of his rivals, while his pointed cap was more than ordinarily covered with jewels. It was Oresander, the rich, the gay, the man of taste, who hoped for more than glory at this day's conquest; for Euphemia at last had been brought to give her applause to the white, and had promised, after a long series of playful scorn and provocations, to reward him as he deserved, if he risked his neck at this competition. Though Euphemia never meant to give him more than the most complete contempt, she by no means chose to consider her words as insincere, for by them she intended as her good sense made her judge. Indolent by nature, and surrounded by a host of admirers, she seemed roused to exertion only by the spirit of sarcasm, levelled principally at the disconsolate victims in the shape of twisted compliments or double-meaning assurances, who, as often as they complained, were certain of having from her a complete justification and proof of what she termed her sincerity, and of their blind credulity or vanity. There was in Euphemia something better than this ridicule and flirting mania, and sometimes she surprised others, and even herself, by proofs of good sense from a girl who generally talked in the most trifling manner, and whose idleness seemed to favour the greatest ignorance. The red faction, peculiarly hostile to Syrianus, had its equipage on the other side of the white, and, rivalling its competitors in magnificence, excelled both in the force and fire of its horses, whose eager eyes anticipated the space before them. The arbiter who stood before the goal, on the spina, or raised place running down the centre of the oblong arena, adorned with three ancient obelisks, now dropped a handkerchief: at the signal the ropes across the horses were let fall, and the chariots flew. As if no restraint had ever bound them, the young horses of the red chariot dashed along, devouring the ground; the others kept behind in equal pace, and seemed to be reserving their powers. On passing the place where Euphemia sat, Oresander

all, the common people stood *en masse*. Awnings to the south sheltered the company from the burning sun, and a fine prospect to the north took in the sea, the palace, and the groves extending towards the Canopian shore. The crowded circus was now agitated with impatience for a trial of the three factions, for which greater expectations had been raised than for any that had already occupied the attention of the day. The chariots for the match were already ranged along according to lot. Syrianus patronised the green, and had made great exertion towards reviving his popularity, by considerable donations among this powerful faction,—which might almost be considered as an Arian party, so much were doctrinal disputes intermixed with their amusements,—and the equipage about to start for the present match was his own. The garment of his charioteer, of the characteristic colour, was nearly covered with gold leaves; his legs were bare, and on his golden sandals blazed the richest jewels. The carriage itself was of the same costume as the man, and the whole trappings of the horses adorned with gold. Next stood a chariot exquisitely elegant in form, so thickly studded, that it seemed to be made of ivory and silver. The beautiful gray horses, less fiery than their neighbours, appeared of that noble disposition which prompts them to sacrifice themselves to their master's ambition, who held them at the most complete command. He, a figure of delicate proportion, whose silvery tunic was like the dress of Gany-mede, owned not the slavish birth of his rivals, while his pointed cap was more than ordinarily covered with jewels. It was Oresander, the rich, the gay, the man of taste, who hoped for more than glory at this day's conquest; for Euphemia at last had been brought to give her applause to the white, and had promised, after a long series of playful scorn and provocations, to reward him as he deserved, if he risked his neck at this competition. Though Euphemia never meant to give him more than the most complete contempt, she by no means chose to consider her words as insincere, for by them she intended as her good sense made her judge. Indolent by nature, and surrounded by a host of admirers, she seemed roused to exertion only by the spirit of sarcasm, levelled principally at the disconsolate victims in the shape of twisted compliments or double-meaning assurances, who, as often as they complained, were certain of having from her a complete justification and proof of what she termed her sincerity, and of their blind credulity or vanity. There was in Euphemia something better than this ridicule and flirting mania, and sometimes she surprised others, and even herself, by proofs of good sense from a girl who generally talked in the most trifling manner, and whose idleness seemed to favour the greatest ignorance. The red faction, peculiarly hostile to Syrianus, had its equipage on the other side of the white, and, rivalling its competitors in magnificence, excelled both in the force and fire of its horses, whose eager eyes anticipated the space before them. The arbiter who stood before the goal, on the spina, or raised place running down the centre of the oblong arena, adorned with three ancient obelisks, now dropped a handkerchief: at the signal the ropes across the horses were let fall, and the chariots flew. As if no restraint had ever bound them, the young horses of the red chariot dashed along, devouring the ground; the others kept behind in equal pace, and seemed to be reserving their powers. On passing the place where Euphemia sat, Oresander

elevated his reins, as if dedicating them to her. And now the applause for the red redoubled, and the conductor of the green urged forward his noble steeds: still Oresander kept by his side without provoking on his horses; it seemed as if the generous creatures wanted not even to be reminded of their duty, so lightly did their master hold the reins, such confidence did he place in the faithful animals. Three pillars had already been taken down at the extremity of the spina out of the seven which marked the number of courses; when the horses of the red, fired with the tumult and appearance of the multitudes, flew with increasing rapidity: with over-arching necks, with starting and fixed eyes, they no longer saw the scene which had alarmed them, but giving up themselves to ungovernable fury, the friends of the party feared their victory would be paid for at a terrible price. Another goal was cleared, and the space of half the circus left behind the rivals—the horses ran nearer and nearer to the spina—in vain did the charioteer exert his utmost energies to make them take a wider circle: arrived at the extremity, they dashed with violence against the wall, and horses, man, and chariot, were strewn upon the dust. But little pity was heard among the deafening shouts for the two remaining competitors. The champion of the green now urged on his horses to the utmost speed, and Syrianus already congratulated himself on the victory, and the consequent approbation of the mob. Oresander for the first time condescended to lash his noble steeds, but gently, as if he were in play, while with careless grace he stood, holding the reins so slightly in his hand as would Apollo in his car, when the celestial horses know the circles of their master. No continued urging is required, at the touch they fly; with no violence, with no excess of exertion, they outstrip the straining speed of their rivals. The difficulty was to avoid the scattered fragments and kicking animals of the unfortunate conductor of the red. Syrianus's chariot had cleared well the obstructed point; but by the time he approached the approving patron, Oresander had gained his side, who, cutting off the succeeding goal from his antagonist's horse, so closely passed his chariot in front of their heads, that his rival involuntarily checked them for an instant. Again, however, he drives on with more rapidity than ever, but is left far behind, and the acclamations of the circus proclaim the patrician conqueror. Borne upon a golden shield of triumph, he was carried round the arena, flowers were showered on his head, and even Euphemia exerted herself to throw a garland, which he caught, and flung over his white neck. The duke placed a golden crown on his head, which he had brought for the victorious charioteer, and complimented him in flattering strains. The money was then placed in Oresander's hand; he immediately threw it on the arena.

A very beautiful character of St. Athanasius is introduced: Euphemia is an exceedingly lively sketch, and well contrasted with Hermione. The note in the preface about St. Athanasius' Creed might as well have been omitted: it conveys an erroneous impression of the contents of the future pages, as giving an opening to religious controversy, for which a novel seems to us a most unfitting vehicle.

The National Library, No. I. Galt's Life of Byron.

THE complaints made of Moore's *Life of Byron*, as they are referred to in the preface of the volume before us, may be summed up

in two objections; first, that it was too private; and secondly, too favourable. The phrase, "intrusion into private life," appears to us mere cant, as applied to a public character. Those who come openly forward to place the great stake of their lives on opinion, must expect its exercise; and the interior of a great man's life is almost as much general property as his external, inasmuch as the one influences the other; and it is unfair to repine, that the curiosity he himself has excited, he himself must gratify. A poet speaks of feelings, sorrows, and experience; and in exact proportion to his popularity will be the desire to learn how much of these were truly his own. Those are the very Canutes of fame, who would say to the tide of popular interest, Thus far shalt thou go, and no farther. As matter for deep reflection, as means of solving the great problem of human nature, both as warning and as encouragement, all relating to a man like Byron is public property. Praise has its penalty; and neither he nor those connected with him have a right to claim that domestic privacy, from which themselves first and voluntarily stepped forth. To drag those from retirement, which they have in no instance voluntarily quitted, is as reprehensible as it is indelicate; but a man who courts fame, which is built on opinion, must expect to be canvassed by the tribunal to which he appeals. Secondly, as to Moore's likeness being too favourable: we must say, that the conclusions we draw from Galt's account, taken by a stricter hand, and in darker colours, have yet left on our minds an impression decidedly in Byron's favour. His childhood was peculiarly unfortunate—unfortunate in wanting that wholesome restraint which is the great principle both in laws and education. At this period, too, was doubtless received the impression of shame and horror at his personal deformity. Mr. Galt mentions that the neighbours used to call him "Mrs. Byron's crookit devil." He himself records the agony he felt on hearing his mother tauntingly allude to it. Now whether we blame, regret, or regard it as of no consequence, we all must admit, that the notice given to children, and in which they all delight, is universally attracted by their beauty: "bless your pretty face!" is as common a phrase in the lower, as "what a little angel!" is in the upper ranks. We have often thought, that a most pathetic essay might be written on the sorrows of ugly children. A child has quick perception, but no discrimination,—a faculty only to be acquired by the comparisons made by experience; and the idea of his defect being repulsive, once suggested, this idea would naturally be seized on by his susceptible temper, to account for whatever he might encounter of neglect or mortification; and on the importance and indelibility of childish impressions no one need enlarge. Of his school days we shall quote one anecdote, and the heroism of the conduct it records may speak for itself.

"While Lord Byron and Mr. Peel were at Harrow together, a tyrant a few years older, whose name was * * * * * claimed a right to fag little Peel, which claim (whether rightly or wrongly, I know not) Peel resisted. His resistance, however, was in vain: * * * * * not only subdued him, but determined to punish the refractory slave; and proceeded forthwith to put this determination in practice by inflicting a kind of bastinado on the inner fleshy side of the boy's arm, which during the operation was twisted round with some degree of technical skill, to render the pain more acute. While the stripes were succeeding each other, and poor Peel writhing under them, Byron saw

and felt for the misery of his friend, and although he knew that he was not strong enough to fight * * * * * with any hope of success, and that it was dangerous even to approach him, he advanced to the scene of action, and with a blush of rage, tears in his eyes, and a voice trembling between terror and indignation, asked very humbly if * * * * * 'would be pleased to tell him how many stripes he meant to inflict?' 'Why,' returned the executioner, 'you little rascal, what is that to you?' 'Because, if you please,' said Byron, holding out his arm, 'I would take half.'"

His marriage was the rock on which his whole after-life wrecked: to use Lockhart's expressive words,— "If there be one curse which comes to earth direct as the crow flies, with all the steam of hell hot about it, it is an ill-assorted marriage." It seems to us a most affected delicacy, which in such a case would abstain from seeking grounds whereon to form an opinion, or expressing it when formed. Lord Byron was all his life before the public eye; and those who shared his celebrity, must share it whether as matter of vanity or annoyance. We think there is no sort of reproach to be thrown on Lady Byron's actual conduct; but the explanation of the whole is, that she had no love for her husband,—none of that kindly and feminine affection which makes all the excellence it finds, and softens away the very faults it discovers. The very fact that, on such slight grounds as those of late, she has not hesitated to throw the most odious imputations on the dead, shews at least how little of attachment or forgiveness enters into a temper whose seeming at least is cold and unforgiving. Mutual indulgence is the only safety of domestic content: such a wife might be perfectly irreproachable; but there are few men who would not be tempted to exclaim, Thank Heaven she is not mine! Beyond the chilling vanity of conquest, she seems to have neither appreciated nor admired his genius, and certainly had no love for himself: but the last summing up of conclusions is in the words of his servant Fletcher, "that her ladyship was the only woman who could not manage him."

The time of Lord Byron's departure from England is one, we hold, of extreme hardship: his separation from his wife was a sufficiently sore point, without all the blame being laid upon himself; and now that much of party cant and clamour has died away, few will deny the bitterness which the extreme injustice of the sentence endeavoured to be passed on his literary fame must have excited. He could not but know, he had erected a noble and lasting monument in the literature of that very country he was being accused of endeavouring to destroy and corrupt; and whatever may be said of the immorality of his writings after he left England,* it must be bigotry, not criticism, that would apply that reproach to his previous works. This leads us to the warfare between him and Southey, which Mr. Galt slightly dismisses, by saying his lordship was the first aggressor. True; but the revenge seems very disproportioned to the offence. The very worst that can be said of the lines in the *English Bards and Scotch Reviewers*, is, that they were the hasty and ill-judged effusion of an angry

* We cannot but consider the tone and spirit of much of Lord Byron's later writings as calculated to do injury, when we reflect on the multitude of readers, who, having no opinions of their own, are content to take so many on trust: an influential writer should, we think, rather err on the side of overcaution. That irreverent style in speaking of religion, and of greatness as respects morals, may be palliated, but surely not defended.

and young writer, himself smarting under injustice; and the violence of Mr. Southey's own youth ought to have taught him indulgence towards another: but really the evil and unrelenting spirit in which this early offence was resented, was equally malignant, rancorous, and ill-judged. We admire Mr. Southey's talents—we respect his private character; unfortunately, his public course is peculiarly open to censure, and attractive to the satirist. As George III. said of another accommodating gentleman, "You may change opinions, but not principles:" and true; for our opinions depend on circumstances, which may alter; but our principles, on that immutable sense of right and wrong, which can never vary. And when youth, generally speaking the season of our best impulses and truest feelings, acknowledges that its whole course has been evil and unjust, this seems but a bad foundation for future character: like the Turks, we are inclined to think that he who has made a bad Christian will make but an indifferent Mussulman. This is the rule to which, however, we admit Mr. Southey has been the exception: we wish all changes were as much for the better as his have been: he is among the great and useful ornaments of our literature; and all in this dispute we could have wished him was, a better memory and a little more moderation.*

The whole affair of the *Liberal* was one of Byron's greatest faults and greatest mistakes: a production equally levelled against the government and religion of his country, was as bad in design as it was wretched in execution. With regard to his connexion with Hunt, we blame Lord Byron for the folly which led to it: whose toucheth pitch must be defiled. Even allowing that he looked forward to profit, we see no cause for reprehension: a man's talents are as much his property as his estate; and his disgust towards Leigh Hunt strongly manifested itself before it could have resulted either from their journal's loss or gain. And when we consider the mingled meanness and insolence, the vulgarity, the ingratitude, the ludicrous vanity of the groundling, we cannot wonder at the existence of such a feeling.

On his Greek expedition we have only to say, there were plenty to make jobs out of loans, silly speeches about the press and ancient glories, which had nothing to do with present necessities, without Lord Byron. It was a forlorn hope, led on against notoriety; and he wilfully allowed his imagination to blind him, both to the extent of the services he could render, and to their concomitant advantages. With one brief regret we close this summary: the great misfortune of Lord Byron's life was its want of serious and well-grounded religious faith: great and good men too have doubted; and all we say is, that he who wants that religious principle which will support in life and soothe in death, we will not take upon ourselves to blame, but we most sincerely pity.

We have reserved for this number a series of miscellaneous extracts, to which we now proceed.

* We cannot refrain from observing the difference between the line of conduct pursued by Mr. Southey and Mr. Moore. Under a much more aggravated offence, what frankness, good humour, and kindly feeling, did the latter evince. The one pursued the weak and violent conduct of the recluse, exaggerating the importance of a literary quarrel, and expecting all the world to take up his cause: the other, aware of how little society cares, beyond the gossiping of the moment, for what interferes not with itself, treating the matter as it deserved, asking redress openly, receiving apology generously, and throwing into the whole a portion of his own playful spirit.

"The wetness of the weather obliged them to remain several days at Keratéea, during which they took the opportunity of a few hours of sunshine, to ascend the mountain of Parné in quest of a cave, of which many wonderful things were reported in the country. Having found the entrance, kindled their pine torches, and taken a supply of strips of the same wood, they let themselves down through a narrow aperture; creeping still farther down, they came into what seemed a large subterranean hall, arched as it were with high cupolas of crystal, and divided into long aisles by columns of glittering spar, in some parts spread into wide horizontal chambers, in others terminated by the dark mouths of deep and steep abysses receding into the interior of the mountain. The travellers wandered from one grotto to another until they came to a fountain of pure water, by the side of which they lingered some time, till observing that their torches were wasting, they resolved to return; but after exploring the labyrinth for a few minutes, they found themselves again close beside this mysterious spring. It was not without reason they then became alarmed, for the guide confessed with trepidation that he had forgotten the intricacies of the cave, and knew not how to recover the outlet. Byron often described this adventure with spirit and humour. Magnifying both his own and his friends' terrors; and though of course there was caricature in both, yet the distinction was characteristic. Mr. Hobhouse being of a more solid disposition naturally, could discern nothing but a grave cause for dread in being thus lost in the bowels of the earth; Byron, however, described his own anxiety as a species of excitement and titillation which moved him to laughter. Their escape from starvation and being buried alive was truly providential. While roaming in a state of despair from cave to cell; climbing up narrow apertures; their last pine-torch fast consuming; totally ignorant of their position, and all around darkness, they discovered, as it were by accident, a ray of light gleaming towards them; they hastened towards it, and arrived at the mouth of the cave." * * *

His Mother's Death.—"Notwithstanding her violent temper and other unseemly conduct, her affection for him had been so fond and dear, that he undoubtedly returned it with unaffected sincerity; and from many casual and incidental expressions which I have heard him employ concerning her, I am persuaded that his filial love was not at any time even of an ordinary kind. During her life he might feel uneasy respecting her, apprehensive on account of her ungovernable passions and indiscretions; but the manner in which he lamented her death clearly proves that the integrity of his affection had never been impaired. On the night after his arrival at the Abbey, the waiting-woman of Mrs. Byron in passing the door of the room where the corpse lay, heard the sound of some one sighing heavily within, and on entering found his lordship sitting in the dark beside the bed. She remonstrated with him for so giving way to grief; when he burst into tears, and exclaimed, 'I had but one friend in the world, and she is gone.' Of the fervency of his sorrow I do therefore think there can be no doubt; the very endeavour which he made to conceal it by indifference, was a proof of its depth and anguish, though he hazarded the strictures of the world by the indecorum of his conduct on the occasion of the funeral. Having declined to follow the remains himself, he stood looking from the hall-door at the procession,

till the whole had moved away; and then, turning to one of the servants, the only person left, he desired him to fetch the sparring-gloves, and proceeded with him to his usual exercise. But the scene was impressive, and spoke eloquently of a grieved heart;—he sparring in silence all the time, and the servant thought that he hit harder than was his habit: at last he suddenly flung away the gloves, and retired to his own room."

Speaking of his peculiar temperament, Mr. Galt observes:

"Lord Byron possessed these sort of irrepresible predilections—was so much the agent of impulses, that he could not keep long in unison with the world, or in harmony with his friends. Without malice, or the instigation of any ill spirit, he was continually provoking malignity and revenge. His verses on the Princess Charlotte weeping, and his other merciless satire on her father, begot him no friends, and armed the hatred of his enemies. There was, indeed, something like ingratitude in the attack on the regent—for his royal highness had been particularly civil; had intimated a wish to have him introduced to him; and Byron, fond of the distinction, spoke of it with a sense of gratification. These instances, as well as others, of gratuitous spleen, only justified the misrepresentations which had been insinuated against himself; and what was humour in his nature, was ascribed to vice in his principles. Before the year was at end, his popularity was evidently beginning to wane: of this he was conscious himself, and braved the frequent attacks on his character and genius with an affectation of indifference, under which those who had at all observed the singular associations of his recollections and ideas, must have discerned the symptoms of a strange disease. He was tainted with an Herodian malady of the mind; his thoughts were often hateful to himself; but there was an ecstasy in the conception, as if delight could be mingled with horror. I think, however, he struggled to master the fatality, and that his resolution to marry was dictated by an honourable desire to give hostages to society against the wild wilfulness of his imagination."

His Grecian expedition.—

"Had Lord Byron never been in Greece, he was undoubtedly one of those men whom the resurrection of her spirit was likeliest to interest; but he was not also one fitted to do her cause much service. His innate indolence, his sedentary habits, and that all-engrossing consideration for himself, which in every situation marred his best impulses, were shackles upon the practice of the stern bravery in himself which he has so well expressed in his works. It was expected when he sailed for Greece—nor was the expectation unreasonable with those who believe imagination and passion to be of the same element—that the enthusiasm which flamed so highly in his verse was the spirit of action, and would prompt him to undertake some great enterprise. But he was only an artist; he could describe bold adventures and represent high feeling, as other gifted individuals give eloquence to canvass, and activity to marble; but he did not possess the wisdom necessary for the instruction of councils. I do, therefore, venture to say, that in embarking for Greece he was not entirely influenced by such exoterical motives as the love of glory or the aspirations of heroism. His laurels had for some time ceased to flourish, the sear and yellow, the mildew and decay, had fallen upon them; and he was aware that the bright round of his fame was ovalling from

the full, and shewing the dim rough edge of waning."

On his religion:—

"Lord Byron had but loose feelings in religion—scarcely any. His sensibility and a slight constitutional leaning towards superstition and omens, shewed that the sense of devotion was, however, alive and awake within him; but with him religion was a sentiment, and the convictions of the understanding had nothing whatever to do with his creed. That he was deeply imbued with the essence of natural piety—that he often felt the power and being of a God thrilling in all his frame and glowing in his bosom—I declare my thorough persuasion; and that he believed in some of the tenets and in the philosophy of Christianity, as they influence the spirit and conduct of men, I am as little disposed to doubt; especially if those portions of his works which only trend towards the subject, and which bear the impression of fervour and earnestness, may be admitted as evidence. But he was not a member of any particular church, and, without a re-construction of his mind and temperament, I venture to say he could not have become such; not in consequence, as too many have represented, of any predilection, either of feeling or principle, against Christianity; but entirely owing to an organic peculiarity of mind. He reasoned on every topic by instinct, rather than by induction or any progress of logic; and could never be so convinced of the truth or falsehood of an abstract proposition, as to feel it affect the current of his actions. He may have assented to arguments, without being sensible of their truth; merely because they were not objectionable to his feelings at the time. And, in the same manner, he may have disputed even fair inferences, from admitted premises, if the state of his feelings happened to be indisposed to the subject. I am persuaded, nevertheless, that to class him among absolute infidels were to do injustice to his memory, and that he has suffered uncharitably in the opinion of 'the rigidly righteous,' who, because he had not attached himself to any particular sect or congregation, assumed that he was an adversary to religion. To claim for him any credit as a pious man would be absurd; but to suppose he had not as deep an interest as other men 'in his soul's health' and welfare, was to impute to him a nature which cannot exist. Being altogether a creature of impulses, he certainly could not be ever employed in dogologies, or engaged in the logomachy of churchmen; but he had the sentiment which at a tamer age might have made him more ecclesiastical. There was as much truth as joke in the expression, when he wrote,

"I am myself a moderate Presbyterian."

A curious fact is stated in the preface. "I cannot conclude without offering my best acknowledgments to the learned and ingenious Mr. Nicolas, for the curious genealogical fact of a baton sinister being in the escutcheon of the Byrons of Newstead. Lord Byron, in his pride of birth, does not appear to have been aware of this stain."

The ensuing note, too, is worth quotation:

"Gibbon says that St. George was no other than the Bishop of Cappadocia, a personage of very unecclesiastical habits, and expresses some degree of surprise that such a person should ever have been sanctified in the calendar. But the whole story of this deliverer of the Princess of Egypt is an allegory of the sufferings of the church, which is typified as the daughter of Egypt, driven into the wilderness, and exposed to destruction by the dragon, the ancient em-

blem, over all the East, of imperial power. The Bishop of Cappadocia manfully withstood the attempts of the emperor, and ultimately succeeded in procuring an imperial recognition of the church in Egypt. We have adverted to this merely to shew the devices in which the legends of the church were sometimes embodied; and the illuminated missals,—even the mass-books, in the early stages of printing,—abundantly prove and illustrate the opinions expressed."

We should do scant justice to Mr. Galt were we not to quote a few passages more especially his own. Each of the ensuing little extracts has struck us as possessing either some original thought or some beauty of expression.

"A few traces of terraces may yet be discovered—here and there the chump of a column, and niches for receiving votive offerings, are numerous among the cliffs; but it is a lone and dismal place; Desolation sits with Silence, and Ruin there is so decayed as to be almost Oblivion."

"The genii that preside over famous places have less influence on the imagination than on the memory. The pleasures enjoyed on the spot spring from the reminiscences of reading; and the subsequent enjoyment derived from having visited celebrated scenes, comes again from the remembrance of objects seen there, and the associations connected with them."

"I passed through the ruins of a considerable Turkish town, containing four or five mosques, one of them a handsome building still entire: about twenty houses or so might be described as tenable, but only a place of sepulchres could be more awful: it had been depopulated by the plague—all was silent, and the streets were matted with thick grass. In passing through an open space, which reminded me of a market-place, I heard the cuckoo with an indescribable sensation of pleasure mingled with solemnity. The sudden presence of a raven at a bridal banquet could scarcely have been a greater phantasma."

"What a strange thing is glory! Three hundred years ago, all Christendom rang with the battle of Lepanto, and yet it is already probable that it will only be interesting to posterity as an incident in the life of one of the private soldiers engaged in it. This is certainly no very mournful reflection to one who is of opinion that there is no permanent fame, but that which is obtained by adding to the comforts and pleasures of mankind. Military transactions, after their immediate effects cease to be felt, are little productive of such a result. Not that I value military virtues the less by being of this opinion; on the contrary, I am the more convinced of their excellence. Burke has unguardedly said, that vice loses half its malignity by losing its grossness; but public virtue ceases to be useful when it sickens at the calamities of necessary war. The moment that nations become confident of security, they give way to corruption. The evils and dangers of war seem as requisite for the preservation of public morals as the laws themselves; at least it is the melancholy moral of history, that when nations resolve to be peaceful with respect to their neighbours, they begin to be vicious with respect to themselves."

We are rather curious to know how the fair sex come to rank so low in Mr. Galt's estimation; he rarely mentions them without some little sneer. We quote the two or three ensuing examples for their especial benefit.

Wives.—Ali Pasha asked, among other questions, "if I had a wife; and being answered in the negative, he replied to me himself in Ita-

lian, That I was a happy man; for he found his very troublesome."

Evils of Matrimony.—"My visits became few and far between, owing to nothing but that change in a man's pursuits and associates which are among some of the evils of matrimony."

"The house of a shoemaker, near his lordship's residence in St. Samuel, was burnt to the ground, with all it contained; by which the proprietor was reduced to indigence. Byron not only caused a new but a superior house to be erected, and also presented the sufferer with a sum of money equal in value to the whole of his stock in trade and furniture. I should endanger my reputation for impartiality if I did not, as a fair set-off to this, also mention that it is said he bought, for five hundred crowns, a baker's wife. There might be charity in this, too."

We shall conclude with a chance note or two of some circumstances observed in their travels:—

"After supper, the officer washed his hands with soap, inviting the travellers to do the same, for they had eaten a little with him; he did not, however, give the soap, but put it on the floor with an air so remarkable, as to induce Mr. Hobhouse to inquire the meaning of it; and he was informed that there is a superstition in Turkey against giving soap: it is thought it will wash away love."

"After dinner, as there happened to be a contract of marriage performing in the neighbourhood, we went to see the ceremony. Between the contract and espousal two years are generally permitted to elapse among the Greeks; in the course of which the bride, according to the circumstances of her relations, prepares domestic chattels for her future family. The affections are rarely consulted on either side, for the mother of the bridegroom commonly arranges the match for her son. In this case, the choice had been evidently made according to the principle on which Mrs. Primrose chose her wedding gown; viz. for the qualities that would wear well. For the bride was a stout household quean; her face painted with vermilion, and her person arrayed in uncouth embroidered garments. Unfortunately we were disappointed of seeing the ceremony, as it was over before we arrived. This incident led me to inquire particularly into the existing usages and customs of the Athenians; and I find in the notes of my journal of the evening of that day's adventures, a memorandum of a curious practice among the Athenian maidens when they become anxious to get husbands. On the first evening of the new moon, they put a little honey, a little salt, and a piece of bread, on a plate, which they leave at a particular spot on the east bank of the Ilissus, near the Stadium, and muttering some ancient words, to the effect that Fate may send them a handsome young man, return home, and long for the fulfilment of the charm. On mentioning this circumstance to the travellers, one of them informed me, that above the spot where these offerings are made, a statue of Venus, according to Pausanias, formerly stood. It is, therefore, highly probable that what is now a superstitious, was anciently a religious rite."

"The rites which succeed the baptism of a child are still more recondite. Four or five days after the christening, the midwife prepares, with her own mystical hands, certain savoury messes, spreads a table, and places them on it. She then departs, and all the family, leaving the door open, in silence retire to sleep. This table is covered for the

Miri of the child, an occult being, that is supposed to have the care of its destiny. In the course of the night, if the child is to be fortunate, the Miri comes and partakes of the feast, generally in the shape of a cat; but if the Miri does not come, nor taste of the food, the child is considered to have been doomed to misfortune and misery; and no doubt the treatment it afterwards receives is consonant to its evil predestination."

We now close this very delightful volume, cordially recommending it to all readers,—to those who desire information, equally to those who require amusement. It appears to us as impartial a judgment as it is possible for one man to form of another; and as a composition, must elevate the already high literary character of Mr. Galt.

Bernard's Retrospections of the Stage.
(Second Notice.)

IN continuing our extracts from these entertaining volumes, we copy the next paragraph, both on account of its noticing the progenitor of a distinguished actor of our own day, and of its exhibiting the most striking grammatical use of the parenthesis which we remember to have seen.

"Another member of our corps at Richmond was a Mr. Fawcett (father of the present comedian),* an understrapper at Drury Lane, who went on for such characters as a conspirator in *Venice Preserved*; worthy old servants, who look intelligent but say nothing; or dignified dukes, whose nobility consists in wearing ermine robes and sitting at the top of a table. Fawcett, though a wretched actor, was a very pleasant fellow in company; he was another of that numerous class of persons on the stage, who are capital comedians in private life. Fawcett and Bowles were our green-room battledores, keeping the laugh up between them with equal adroitness; but of all the things Fawcett repeated (and his head was the repository of not a few), those told the best which told against himself."

The Bowles mentioned was a great piscator, and used to send a doctor, at Richmond, who kindly attended his sick wife, a dish of his catchings now and then, by way of acknowledgment. "At the end of the season, Bowles, not having a sufficiency of coppers to carry him out of the town, addressed a very lachrymose letter to the physician, entreating his patience till enabled, at some future day, to answer his demand. The humane man returned him a note to this effect: 'Dear Sir—With my sincere sympathy in your present situation, and best wishes for your future good fortune, I beg to enclose you the sum of one guinea, being the balance due to you as per bill annexed.' The bill was as follows:—

	£	s.	d.
Mr. Bowles to Doctor	6	1	0
By perch at sundry times	7	2	0
Balance due to Mr. Bowles	1	1	0"

We should have stated in right order, that Mr. Bernard prepared the MS. whence these volumes are printed under the able editorship of his son,† on his return from America in 1820, and that they present the remembrances of forty-six years. This will prepare our readers for some distant dates; and we transcribe a few, rendered interesting by the future celebrity of the parties named.

* It means that Mr. Fawcett, the father, was an understrapper, &c., not Mr. Fawcett, the son, who took his leave last season: instead of a parenthesis, therefore, it might be called a *parenthetical*.—*Printer's Dialect*.

† We can but off as good a parenthesis as any author.—*Critic L. G.*

1772. "During my stay in the metropolis, I went frequently to the theatres. At Drury Lane I remember seeing 'Jane Shore,' on the evening that a Mrs. Canning, the widow of an eminent counsellor, made her *début* in the heroine. She was patronised by numerous persons of distinction, and the house was very favourable towards her. But, independently of the personal interest which attended her attempt, Mrs. Canning put forth claims upon the approbation of the critical. One thing, however, must be admitted; she was wonderfully well supported: Garrick was the Hastings, and Reddish (her future husband) the Dumont. I little thought, as I sat in the pit that night, an ardent boy of sixteen, that I then beheld the lady who was destined, at some fifteen years' distance, to become the leading feature in a company of my own; nor that, in the *Gloster* of the night (admirably acted by Jefferson), I beheld my partner in that management—Plymouth. I should puzzle myself to little purpose if I were to attempt, in this place, to say any thing that was new or amusing upon Mr. Garrick's merits; for since their character became the property of history, every writer seems to have made his memory a kind of 'intellectual tumuli,' and thrown his own 'stone' on it to enlarge its dimensions; but I should wish to be permitted a word in regard to Reddish (upon whose first wife, being a very masculine woman, Foote made the ungallant pun of 'horse-radish'), for the reason that he was one among many of Garrick's contemporaries, who foundering in the stream of time, instead of going down with it, deserves to be 'lightered' up to the surface.

1774. "Amongst other communications at the post-office, he (a country manager, going to play in Essex) received one from Holcroft, the author, who applied for an engagement, embracing every good part in the cast-book, from Alexander the Great down to Scrub. Strange as it may appear, this letter was so deficient in orthography and etymology, that the manager sent back the brief reply, that 'he would treat with no person to become a member of his company who could neither read nor write!' As Mr. Holcroft has left behind him works which attest his powers not only as a man of genius, but a critic, it is by no means an absurd conjecture to attribute to the very letter in question some portion of the stimulus which was necessary to have drawn those powers forth. Scorn or ridicule has, in more than one instance, driven a man of proud spirit into the discovery of a hidden talent, when seeking either for the means of retaliation, or to obtain an armour against its shafts.

"At Needham, our next remove, I became acquainted with Miss Macklin, the actress, who had retreated to this little haven from the troubled element of public life, to live upon the income she had accrued by her professional labours. She was an admirable reader (with a true Shakspearian attachment), and her voice and figure led me to perceive some of the grounds upon which she had founded her popularity. She was not at this time upon good terms with her father, which was owing to a domestic occurrence; but their original disagreement, as she informed me, grew out of a reading in *Portia*—she always said that 'mercy was mightiest in the mightiest,' but, he maintaining it 'was mightiest in the mightiest,' shewed her no mercy, but instantly renounced her."

At York—"Whilst here, Stephen Kemble came to rehearsal one morning without his coat. Mr. Hughes, who was rather particular,

inquired the cause. 'Sir,' said he, 'the landlord of the house where I was reading the London paper, charged me double for my ale. I told him he had cheated me, and would not pay him. He seized me, and pulled off my coat; so, rather than submit to his extortion, I came away without it.' 'But, Mr. Kemble,' said the manager, 'walk through the streets without your coat!' 'But, Mr. Hughes,' said Stephen, 'pay sixpence for my ale!' 'But your coat, Mr. Kemble!' 'Curse my coat, sir; think of my feelings!' Hughes sent and released his coat; but Stephen was quizzed a good deal for this independency; his last words, indeed, became a saying in the West of England, where, whenever a man determined to set appearances at naught, he would invariably exclaim, 'Oh, curse my coat, think of my feelings!' The reader will smile at this; but I hope he may also be induced to give some credit to Stephen's character, since the above affords one of the strongest indications of that manly and independent spirit which pervaded him from childhood."

Mr. Bernard rose to favour on the Bath boards, then the grand criterion of theatrical talent; and he tells a curious story of the "School for Scandal."

1777-8. "The first and greatest novelty of the season was the production of the 'School for Scandal'; to superintend the rehearsals of which, the author came down in person. This was no slight compliment to the judgment of the Bath audience, who were to confirm or cavil at the verdict passed upon the merits of his composition in London. We were certainly not a body of clumsy or ignorant people in the Bath theatre; but such was Sheridan's particularity, that he took a fortnight to get up the play, and drilled all the servants and underlings himself: nothing, however, could be more pleasant or polite than his manner of doing so. In his sensitiveness as an author, he never lost sight of his propriety as a gentleman. The person that gave him the most trouble was Edwin, who was continually forgetting his business, making wrong exits, entrances, and crossings. Sheridan, with the utmost good humour, put him right every morning. On the play-day, it was expected every gentleman would be *au fait* to the mechanism of his character as the words;—every one was but John, who had been out to supper the previous evening, and spunged away, with the punch he had drunk, nearly all the remarks upon the 'book and volume of his brain' Sheridan had made. The latter could not now restrain his feelings, but, at the first lapsus shouted out, 'Good God! Mr. Edwin, there you go again!—you've lost your situation, sir!' Mr. Palmer was on the stage, and Edwin, cocking his eye on him, replied, 'I hope I'm not discharged!' The success of this comedy's production amply compensated for the trouble thus bestowed."

The following is also a remarkable account of the way in which at least one spurious copy of this play was produced; and gives a singular, and to us a new, reason for the author's conduct with regard to the sale of its copyright, and consequent publication.

1778-9. Exeter: "The School for Scandal' was then the general theme of conversation: it was the one topic in dramatic circles, and its appearance formed a sort of epoch in dramatic history. Its success at Bath had dispersed its fame about the West of England; and it was highly probable, that if the play were produced at Exeter, it would run a number of nights to full houses. But the comedy

was not yet published, and the managers who had copies of it had obtained them on condition that they did not permit the same to become the parents of others. This was a precaution of Sheridan's, not with any view of emolument, but in order to preserve his language from mutilation, and prevent the play being produced at any theatre where the proper attention could not be paid to its 'getting up.' Under these circumstances, I offered to attempt a compilation of the comedy, if Mr. Hughes would give me his word that the manuscript should be destroyed at the end of the season. This was agreed to, and I set about my task in the following manner. I had played Sir Benjamin at Bath, and Charles at Richmond, and went on for Sir Peter one or two evenings when Edwin was indisposed—thus I had three parts in my possession. Dimond and Blisset (Joseph and Sir Oliver) transmitted their's by post, on conveying the assurance to them which Mr. Hughes had to me. Old Rowley was in the company; and my wife had played both Lady Teazle and Mrs. Candour. With these materials for a groundwork, my general knowledge of the play, collected in rehearsing and performing in it above forty times, enabled me in a week to construct a comedy in five acts, called, in imitation of the original, the 'School for Scandal.' This comedy Mr. Hughes introduced to the public (without any explanation of the above), and it drew us crowded houses twice a-week, to the end of the season.

"I now (continues Mr. Bernard) became acquainted with the celebrated Doctor Jackson, and commenced an early and lasting intimacy with that 'son of song,' Charles Inledon; an intimacy continued in England twenty, and renewed in America forty years afterwards. Inledon was at this time a thin, lanky youth, giving some promise of his future powers, but more noted for a disposition like that of a Newfoundland dog—compounded of courage, gratefulness, and love of the water. All the stories in circulation respecting him were illustrative of one or the other of these qualities. The most well-known features of his early life, I believe, are his rumpus at school, and departure to sea; over which I willingly pass, to record a circumstance more in honour of his character, and neither well known nor insignificant. Some aquatic sportsman of Exeter had offered a considerable sum to any man who would swim down the river a certain distance, to a boat moored, with a rope round his middle, and bring back to his starting-point another. Several had attempted this feat, and failed. Young Inledon accomplished it; but this was not his ground of glory—he took the entire amount of his reward to a poor widow in the city, who had occasionally been kind to him, and was now fallen into distress. When Doctor Jackson heard of the circumstance, he was naturally alarmed lest his pupil should have contracted a cold which might injure his voice; but when Inledon explained the manner in which he had appropriated the money, the benevolent man was immediately subdued, and dismissed him with these words:—'Well, Charles, I'm not angry at what you've done; for if your lungs should be affected, your heart's in good order.' The companion of Inledon, as all the world knows, was Davy the composer. Doctor Jackson, who communicated the above, gave me also the history of the latter person's origin and musical precocity, which as I do not think is generally known, I may as well introduce here, to conclude my chapter. Davy, it appears, was an orphan

child, left to the care of a poor relative, a weaver, at Crediton. This man was a humble musician, teaching the science of psalmody to the village, and playing the bas-viol at church. He had an old spinet in his house, (the gift of a wealthier relative,) upon which he used to practise his tunes. Young Davy was always by his side on such occasions, and whenever he went away would mount his stool, and strike the instrument, in the endeavour to distinguish the notes. This amusement, however, not benefiting the spinet, it was locked up; and the young musician, thus thrown upon his own resources, invented an instrument. He was at this time about six or seven. Next door to the weaver's was a blacksmith's shop, into which young Davy was continually running to watch the operations of the modern Cyclopes. He was thus enabled, unperceived and unsuspected, to convey away at different periods a number of horse-shoes, which he secreted in the unoccupied garret of the weaver's dwelling. Then procuring a piece of wire (from the same magazine), he attached it to two cross-beams, and on this suspended the shoes, assigning each its place in succession, and graduating a correct scale by the strength of his ear. He then obtained two sticks to strike them with, in imitation of the handbells which he had no doubt seen, as they were very prevalent in that part of England. So engrossed did he become in this new employment, that he not only gave up all his customary sports, but neglected his lessons and the family errands. He had sagacity enough, however, to keep the cause a secret, and fortune assisted him, till one day the weaver's wife going up-stairs to search among the lumber that the upper room contained, heard musical sounds, and stopping to listen, distinguished the outline of a psalm tune. However extraordinary the diversion, she could only attribute it to the presence of the devil, and her fright had nearly the effect of precipitating her to the bottom of the stairs. Her husband was at home, and to him she descended and made known this mysterious circumstance. He had less superstition than herself, and ascended the stairs more boldly. The same sounds were audible, and peeping up, he perceived the young musician perched on a rickety, broken-backed chair, with his legs tucked under him, and his tiny hands thumping the horse-shoes, in the endeavour to form the same tunes he had heard his relative play. The weaver was too pleased and astonished at this discovery either to chide or disturb him, but retired with his wife, and after some cogitation, determined to go over to Exeter and tell Doctor Jackson his boy's story, presuming that if he had abilities for music, that would be a better business for him than weaving, and knowing the doctor's character to be as eminent for generosity as musical science. The following day was accordingly devoted to the walk. The doctor heard his narrative with mingled pleasure and surprise, and agreed to ride over to Crediton and witness the phenomenon. He did so, and was introduced by the weaver to his house and staircase, where the same sight presented itself as on a former occasion. The youngster was seated on his chair, thumping his horse-shoes, and distinguishing their sounds. The doctor could not control his transports, but sprang up into the garret, seized little Davy in his arms, and exclaimed—'This boy is mine!' My reader can imagine the scene that ensued: this was good fortune, far above the poor people's expectations. Young Davy was then taken home to Exeter, and regularly apprenticed to

his patron: his subsequent career is well known."

The latter portion of the first volume is dedicated to a dramatic trip to Ireland, and is full of characteristic traits; but we have far exceeded our just boundaries, and can only promise our readers at least another entertainment from the miscellaneous contents of these truly amusing volumes. In the meantime we may introduce one or two of the Hibernian characteristics.

At Mallow: "On returning to the inn, we were struck for the first time with the sign, which was a red, round-faced Hibernian, grasping a punchbowl, and saying these words—'Pay to-day, and trust to ———.' As this seemed to involve rather an important contradiction to us who were travellers, we required an explanation of the landlord, (a bald-headed, bandy-legged little fellow, with a mouth which, when unclosed, explained the clown's idea of an open countenance), and were informed, that when his old sign of the 'Man and Punchbowl' was worn out, Mr. Mic M'Cormick, a friend of his, had agreed to paint him a new one; but he being desirous that the latter should contain some motto or general rule of his establishment, as a guide to the traveller who gazed on it, he agreed with Mr. Mic M'Cormick that the words 'Pay to-day and trust to-morrow' should be inserted; the artist to be paid at the rate of twopence a word. When the sign was completed, Mr. M'Cormick had brought it home, but with the deficiency of the word 'morrow,' as above, which was owing to a want of room. The worthy host was not then, it appeared, so much concerned at this alteration, or rather destruction of his meaning, as about the settlement of the question, whether 'to-morrow' was to be considered one or two words—upon that fact depending the number of twopences he was to pay. After some argument between themselves, an umpire was called in, who deciding that 'to-morrow' was but one word, the painter was deducted twopence, and the sign was put up."

Irish Travelling.—"The first day of our journey passed over without much event; but we derived sufficient amusement from the peculiarities of the carman, a mop-headed, lark-limbed beauty, whose clothes were so ragged, that as he strode along, with his coat, shirt, and breeches fluttering behind him, he put us in mind of a persevering ship making its way against a head-wind. This gentleman never whipped his horses when they were low-spirited and lazy, but reasoned with them, as though they had been a pair of the Houynhms, mentioned by Gulliver, or intelligent Christian beings. 'Arrah, Barney,' he'd say to the leader, 'arn't you a pretty spalpeen to suffer your own brother Teddy to lug the car up the hill by himself? Haven't I set you before him as an example? Have you any heart to forgit a friend bekase you don't see him? Oh! bad luck to your faalings! Arrah, Teddy (to the other), don't you see, my darling, what Barney is at? he wants to rin away from you, and get to the little shebeen-house half a mile off, and ate up all your corn before you come. Hurry, hurry, my darling, or divil the mouthful will he lave you!' Strange as it may seem, these addresses produced the desired effect; and Barney and Teddy, as shaggy as a pair of lions, would pluck up courage, and pull along like a couple of camels. Observing that one of them was lame, we noticed this to their owner, as an infringement of our contract. 'Lame, your honour!' he replied; 'no sich thing—the boy's quite perfect; only, you see, it's a way

he has of resting one leg till the other three are tired.'

"Isaac, or Iky Sparks as he was commonly termed, lodged on one occasion in a house with a Scotch doctor, who amused his leisure hours by learning to play the fiddle. These gentlemen, it must be remarked, were not upon the most amicable terms; the Scotchman turning up his nose at Sparks as a 'vogabond pleactor;' and the latter retorting by calling him a 'legal vampire,' since he lived by the death of other people. The doctor made it an invariable rule to rise at daylight to practise, about which time the convivial Mr. Sparks was getting into his first nap. As their rooms were adjoining, it was a necessary result that Sparks lost his sleep; and it soon became another, that he should lie awake to meditate revenge. He did not like to leave the house (perhaps he could not); but he resolved, if possible, to expel this fiddling Macbeth 'who murdered sleep,' and was instrumental to his annoyance. One morning, he heard Mr. M'Intosh the doctor desire Judy the servant, who waited on both of them, to go out and buy him a pennyworth of rosin for his 'feedle;' and as she passed his door, he called her in, and inquired her errand. 'Sure I'm going to get some ros'n, Mr. Sparks, for Mr. M'Intosh's fiddle. 'Ros'n, ros'n, you crachur!' said Sparks; 'and isn't ros'n you are going to ax for, Judy, arrant nonsense?' 'Arrah, Mr. Sparks!' 'Ros'n's Latin, my jewel: the shopkeeper won't understand you!' 'Latin! och sure, Mr. Sparks, I know naughting of Latin; will your honour tell me what am I to ax for?' 'Say you want a piece of stick-brimstone, darling; that's English to spake, and good Irish in the bargain.' The girl complied with his direction, procured the brimstone, and returning to Mr. M'Intosh, presented it to him. 'You dom b——h!' exclaimed the Scotchman, 'what ha' ye broot me?—what do ye ca' this?' 'Brimstone, sirr!' 'Broomstun! did I na send ye for roosin?' 'Plase your honor, and so you did; but Mr. Sparks tould me that brimstone was the raal thing to ax for.' Foaming with rage, away flew the doctor into Isaac's room (who was listening to the result), and demanded of him how he dared to interfere with another person's affairs, and alter his commands to the servant? 'Why, Mr. M'Intosh,' said Isaac, very coolly, 'what did you send for?' 'Roosin, sirr—roosin for my feedle, and be domm'd to ye.' 'Well,' replied Sparks, 'I always thought brimstone was rosin for a Scotch fiddle!'

"At the Castle Inn in Sligo we put up; and the landlord, having been formerly an actor, paid us great attention. His house contained the Sligo assembly-room, the wainscot of which I observed to be perforated in numerous places with bullet-holes, under which were written different names. I naturally requested an explanation; and my host informed me, that this room being the 'largest and natest in the town,' whenever its gentlemen fell out, here they took occasion to fall in, and settle their differences in a gentlemanly way. I need not point out the advantages of such a place for such a purpose over the open field, both as respected its retirement and security, and the means it afforded the parties of recording their claims to honour. I would merely assure my reader hereby, that the old joke of 'pistols and coffee for two' originated in a very serious truth."

MRS. ELWOOD'S JOURNEY, &c.

HAVING, in a former *Gazette*, gone at rather considerable length into the principal points which our fair countrywoman's journey to the East presented for critical notice, we do not find much in her residence in India and return home by the usual sea course, to demand our particular attention. As before, the narrative is easy, feminine in character, and pleasing. There are no novelties of much value to interest us; and at the end of our task we can lay down the volumes without a sigh, having been amused by their agreeable contents, though not much better informed than previous writers had left us. We shall therefore insert only two or three brief miscellaneous quotations farther from the second volume, to complete our review.

Mazagong House, near Bombay, was the residence of "Mrs. Draper, the Eliza and the fair correspondent of the whimsical and sentimental Sterne. She was born at Anjengo, and was the wife of Mr. Daniel Draper, who was a counsellor at Bombay, and in 1775 chief of the factory at Surat. She was in England for the recovery of her health, when she became acquainted with Sterne, probably not the best friend and adviser that a young and romantic woman could have chosen. His letters were addressed to her shortly before she sailed for India, April 3d, 1767, where, fortunate it would have been for her, had she attended to the admonition of her *soi-disant* Brahmin,—'Be cautious only, my dear, of intimacies.' After her return to Bombay she had the weakness, of which Sterne seems almost to have had a presentiment, to listen to the persuasions of a base seducer, and to leave an affectionate husband, sacrificing her fair fame and station in society, to elope with a man who but poorly repaid her, as she soon afterwards died, somewhere on the coast, a victim to his prodigate arts."

In travelling Mrs. E. "came to Veerole Puttan, famed for pirates, and to Mhadapore, in the Poorbunder territories, where the ancient Dwaraca is said to have originally stood, till swallowed up by a *cataclysm*, or bursting forth of the ocean. It is here that a singular web-footed bird, something resembling a sea-gull in appearance, but totally dissimilar to any of the indigenous tribes, annually rises from the foam of the ocean, at the beginning of the monsoon. Its appearance is anxiously expected, it is hailed with great joy, and its arrival announced with due ceremony to the Brahmans, who go down to meet it on the sea-shore, and bring it in triumph to their deity, before whom it pecks grain, dances, plays, and dies, precisely as it did in the time of Alexander, whose historians mention the circumstance. From its colour, and other circumstances, the Brahmans are enabled to predict the nature of the coming monsoon; and the first kind of grain of the numerous sorts offered, which it voluntarily eats, it is supposed will be peculiarly plentiful during the ensuing year."

From a bird that rises like the May-fly, we go to another (in Cutch), which resembles the harpies of the ancient classics.

"The whirring, leather-winged bat used to pay us nightly visits; and the vultures, so common in tropical climates, seemed to know by instinct at what time we dined, and were ever punctual to the hour. They are bold and impudent birds, and they not unfrequently attack servants in their way from the cooking room, which is always in India quite distinct from the bungalow, and carry off the provisions

in triumph ere they reach their place of destination."

With these short morsels we conclude; only adding, that Mrs. E. visited and describes some parts of India not very generally known, and that an Appendix affords useful hints to all who may contemplate a journey overland.

The Library of Entertaining Knowledge. Vol. 7. Part 1., The Menageries—Quadrupeds; Vol. 2. Part XIII. London, 1830. Knight. THIS new Part has just reached us; and for a week we can hardly say better of it than that it is as pleasantly illustrative of the popular subject, the natural history of animals, as the preceding volume.

The Patriot Father: an Historical Play. Adapted from the German of Kotzebue, by Frederic Shoberl. 12mo. pp. 60. London, 1830. R. S. Kirby.

WE agree with Mr. Shoberl, that Kotzebue has not been well treated: it is somewhat hard to be robbed and then abused. The subject of this little drama is the siege of Naumburg, which the Hussites were on the point of destroying, when their anger was turned aside, and their compassion excited, by a procession of the children, who went in a body to supplicate, and obtained, the mercy of the conquerors. It is a cheap, neat little volume; and the following short passage is a fair specimen of the general style.

"Yes, I do love the sounds of artless joy,
Pour'd for the ample treasures Nature yields,
When all the wide campaign a golden sea
Of undulating ears, full-grain'd and low
Depending toward the teeming earth, displays;
And to the grateful songs of busy reapers
The glist'ning sickles are in concert plied.
I love, too, this deep silence and repose,
This solemn stillness, which pervades the town,
When nought is heard but the shrill cricket's chirp,
Or the dull distant step; when nought is seen
Save here and there the furrow'd face of Age
With spectacles on nose, from door or window
Advanced with aspect wise to note the weather;
No playful children gambol in the street,
They too are gone to glean the straggling ears.
But, when the welcome tones of vesper-bell
Summon at eve the sunburnt reaper home
From fields his toil hath bared—ah! then 'tis sweet
To hear the jocund train with hearts elate
Strike up the harvest-song; the brimming bowl
They raise alternate to their thirsty lips,
And sportive mirth and glee reign uncontroll'd."

The preface says: "It is a singular fact, that the appearance of this play produced a warm discussion among the literati of Germany, on the question whether Naumburg had ever been really threatened by the Hussites, and delivered by the expedient here described, according to the received tradition, apparently confirmed by the customs practised at the festival called *Kirschfest* (Cherry-feast) still held there annually; or whether the whole story was to be considered as a fiction."

Traditions of Palestine. Edited by Harriet Martineau. Pp. 148. Longman and Co. THIS is a very beautiful volume, founded on Scripture, and supposed to be a sketch of scenes at Jerusalem, during the early progress of our religion. We recommend it to our young readers.

Bombastes Furioso; a Burlesque Tragic Opera. By W. Barnes Rhodes; with Eight Designs by G. Cruikshank. Pp. 34. T. Rodd; T. Griffiths.

G. CRUIKSHANK'S eight designs have embodied the real spirit of this burlesque, which has caused so much hearty laughter on the stage, in the hands of Mathews, Mr. and Mrs. Liston, Taylor, and other popular performers. It

is a merry *jeu d'esprit*, written by a man of talent; and, got up in this appropriate style, is likely to be very generally sought, both for its literary whim and its humorous illustrations. We like it so much, that we are glad to see *Tom Thumb*, the *Mayor of Garratt*, and some other dramas, announced for publication in the same manner. If as well done, as we doubt not they will be, they will form a nice volume or set altogether.

ARTS AND SCIENCES. KENSINGTON OBSERVATORY.

IN one of our recent Nos. we noticed the distinction conferred by his Majesty on Sir James South, and the appropriation of 300*l.* per ann. to that gentleman for the encouragement of astronomical science in this country. Sir James South is too enthusiastic a lover of astronomy to suffer such a grant to be received as a mere mark of royal favour. He immediately abandoned every project that had been engendered by the patronising offers of foreign states, and the apparent indifference of our own government; and not only resolved that his unequalled glasses and apparatus should remain in England, but that he would erect a new Observatory, fit for their reception and application to the observance of the most interesting celestial phenomena, either for verifying dubious problems, or for discovering new objects. Agreeably to this intention, a distinguished party of his friends, and the friends of science, were invited to Kensington on Saturday to witness the laying of the foundation-stone of the new Observatory. It is a circular building, (as we see by the foundation traced out), and situated on the west of that building in which Sir James has already done so much to promote our knowledge of the heavenly bodies. After waiting some time for the Duke of Wellington, who was expected, (but was, we believe, at Walmer), the ceremony of placing the stone was performed by Lord Ashley; and three cheers were given to the prosperity of this liberal and patriotic undertaking; which certainly reflects great honour on the individual to whose zeal and public spirit it is due. The company then retired to a handsome collation, and spent several hours in an agreeable manner;—toasting, at the close, the health of the King, as the patron of science and literature; and of the ministers, who had shewn themselves to be actuated by similar feelings upon this occasion. The health of Lord Ashley was also drank, not only as an earnest promoter of the measures which had led to this meeting, but as an enlightened friend to scientific pursuits in general. His lordship returned thanks, and gave the health of Sir James South, who briefly and appropriately acknowledged the compliment. Other toasts were cheerfully proposed and accepted; but as the refection, though late for a *fouchette* breakfast, was too early for a dinner, and there were ladies around the table, it may be imagined that they partook less of reality than is usual with convivial associates when set down for the evening. They were very gratifying, notwithstanding, to the company; and the thanks expressed by Mr. Struve, the celebrated Russian astronomer from Dorpat, and of Mr. Troughton, the venerable dean of the science in England, (both of whom were present), contributed much to enhance the good humour and interest of the scene. Besides the noble and eminent persons already mentioned, we observed Lady Guildford, Lady Glenall, Lord Dudley and Lady Dudley Stuart (the daughter of Lucien Buo-

naparte), General Sir Rufane Donkin, Admiral Sir Thomas Hardy, Sir John Franklin, Mr. Pond, the astronomer royal, Capt. Beaufort, Capt. Shireff, Mr. Babbage, Mr. Baily, Mr. Gordon,* and others well known to the world for their skill and enterprise in various scientific pursuits.

LITERARY AND LEARNED.

SENKOVSKY V. VON HAMMER.

To the Editor, &c.

SIR,—In the *Literary Gazette* of the 21st ult. I observe that some correspondent has furnished you with an extract from the *Revue Encyclopédique*, in which a M. Senkovsky makes merry at the expense of my friend, Von Hammer. It is not the first time that certain *savans* of Paris have eagerly evinced the little respect which they entertain for their own literary credit, and the utter destitution of really liberal principles under which they labour, by venting their jealousy against the scholars of other countries. It is quite enough for them that M. von Hammer should possess equal claims to esteem as an Orientalist with a De Sacy and a Rémusat; he must be dragged down, *à tout prix*, from his lofty eminence; and the single-hearted devotion of forty years of toilsome investigations to the maturing of his acquaintance and our own with the treasures of eastern philology and science must be represented as a long dream of floundering idiocy. To those who have the means of appreciating M. von Hammer's inestimable labours, any appeal against the misrepresentations of party spirit must appear a work of supererogation. But the general reader has no such safeguard against the ensnaring of his opinions; and I am bound, therefore, in justice to him, as well as to my esteemed and enlightened friend, to mention, that M. von Hammer has answered his assailant, first by candidly avowing his inadvertencies where they occur in the work assailed, and then by convicting M. Senkovsky of ascribing blunders to him which are wholly the creatures of his own imagination, and of dealing with Oriental texts in a manner for which there is no apology but ignorance and presumption, and which can sway with those only who are utterly unacquainted with them.

Such is the adversary who has ventured to "fasten his idle blows" upon a scholar whose attainments are derived, not from the mere meditations of the closet, but from the consecration of a whole life to studies, prosecuted under eastern skies, or to official avocations exclusively connected with eastern courts and nations. I have the honour to be, sir, &c.,

NEW PUBLICATIONS.

National Portrait Gallery of Illustrious and Eminent Personages of the Nineteenth Century. With Memoirs, by William Jerdan, Esq. No. XVII. Fisher, Son, and Co.

TASTE and the social virtues, piety and learning, patriotism and bravery, have all their

* The gentleman alluded to in our pages several months ago for the extraordinary invention of a light for light-houses, so intense as almost to exceed credibility. It has since been adopted by the Trinity House; and if it can penetrate fogs so as to be seen where the existing lights fail, it will be of very great value in the saving of lives and shipping. The effect is produced by dropping a small bit of chalk lime at the jet, or conjunction of two flames obtained from different gases, and impelled towards each other. The brilliancy is so prodigious, that it casts shadows at the distance of ten miles and more!!

appropriate and honourable representatives in the present Number, which contains portraits and memoirs of Sir Abraham Hume, the Archbishop of Canterbury, and the late Sir Thomas Picton. With reference to the first it is observed: "While we highly approve that praiseworthy ambition which prompts men to seek power for the purpose of exerting it for the welfare of the state and the benefit of the community—while we admire the valour and heroism which secure the independence and lead to the glory of our country,—let us not overlook those milder virtues, which, by the diffusion of kindness and benevolence, smooth many of the rugged paths of life, and at the same time fulfil those holy injunctions which were given to us as the guide of our conduct towards each other." Of the second it is said: "Mild and temperate in his Christian career, he has also mingled inflexible integrity and steadiness of purpose with his candid allowances towards those who differed from him: neither zealot nor bigot, he has been both ardent and unalterable in his support of religion, and in his attachment to that church in whose tenets he was brought up: and among all the venerable names upon the bench, there is not one which has acquired greater lustre in these days of change and trouble than that of Dr. Howley, whose calm and dignified adherence to what his conscience dictated, exacted the applause even of those whose views were most opposite and hostile." "The life and death of this gallant soldier," it is remarked, in speaking of the lamented Picton, "possess an uncommon degree of interest; for the one was filled with strange adventure, and the other was most glorious to himself and to his country. If he sought for a brilliant ending to his career, he assuredly found it where all the noble deeds of a long and splendid war were consummated, and he fell in the achievement of a triumph that fitly crowned the series of immortal victories to which his talent and bravery had so prominently contributed." The portraits are all finely engraved; that of Sir Abraham Hume from a picture by Edridge, that of the Archbishop from a picture by Owen, and that of Sir Thomas Picton from a picture by Beechey. The last is rendered peculiarly interesting by the circumstance of its having been executed only a fortnight before his death. To the present Number is prefixed a dedication to His Most Gracious Majesty William IV., expressive of grateful acknowledgment for "the frank and condescending manner with which the royal patronage has been conferred upon the publication."

Views in the East; comprising India, Canton, and the Shores of the Red Sea. Drawn by S. Prout, C. Stanfield, T. Boys, G. Cattermole, J. S. Cotman, D. Cox, F. Finch, W. Purser, &c. from original Sketches by Captain Robert Elliot, R.N. With Historical and Descriptive Illustrations. Part I. Fisher, Son, and Co.

ALTHOUGH, with a due recollection of the beautiful representations of Asiatic scenery which have proceeded from the pencil of Mr. Daniell, it cannot be said that this is an entirely new mine of the picturesque, yet it is evidently one which is so far from being exhausted, that taste and talent may long be advantageously employed upon it for the gratification of the European public. The specimens which this, the first Part of Captain Elliot's projected publication contains, are all of them admirable. They consist of the "Tomb of Humaioun," who was "the son of Baber,

the founder of what is called the Mogul dynasty, the last remnant of which is still lingering in the ancient and famous capital of the Mahomedan empire of Hindoostan; the "Taj Mahal," which "is justly celebrated as the finest piece of oriental architecture that remains to exhibit the power and magnificence of the Mahomedan rulers, and to display the skill and industry of the people of Hindoostan;" and "Tiger Island," a bold rock, at the mouth of the Bocca Tigris, the passage of which was so undauntedly forced in the year 1816, by Captain Maxwell, in the Alceste. The draughtsmen, Messrs. Purser, Prout, and Stanfield, and the engravers, Messrs. Miller, Wallis, and Goodall, have done Captain Elliot's sketches great justice. "Tiger Island," especially, is a singularly spirited little plate. We look forward with much expectation of pleasure to the succeeding portions of this clever work.

A Series of Views, illustrative of Pugin's Examples of Gothic Architecture. Sketched from nature, and drawn on stone by Joseph Nash, Pupil to Augustus Pugin; with Letter-press Descriptions, by W. H. Leeda. Part II.

ON the appearance of the first Part of this pleasing publication (the interest of which is far from being confined to the architect or the antiquary), we spoke of it with the praise which it appeared to us to deserve. The second Part is well worthy of its predecessor; and it is still richer in the introduction of figures belonging to the "days of auld lang syne." For instance, the Banqueting Hall of Eltham Palace is peopled with the gay court of Harry the Eighth; and dames and cavaliers, with the air and in the costume of the fifteenth century, are promenading before the principal front of Thorpland Hall. Some of these figures remind us of Retsch; others of Bonington. The effect is admirable. To get rid of the "formal cut" of modern habiliments would of itself be an excellent thing; even if the change were not so happily appropriate and picturesque as it is.

Illustrations of Natural History; embracing a Series of Engravings, and descriptive Accounts of the most interesting and popular Genera and Species of the Animal World. Conducted by J. Le Keux: the Engravings by Le Keux and R. Sands. Parts IV., V., VI., VII., and VIII. Longman and Co.

THESE Parts complete the first volume of a publication, which in point of cheapness and neatness of execution ranks with any of the numerous works of the present day, the laudable object of which is to diffuse useful knowledge. The volume contains all the different quadrupeds which are comprehended in the two great classes of hoofed, and simply digitated. The plates, which are forty-two in number, each embracing several subjects, although not in a laboured style of art, are very sweetly engraved, and are full of character; the descriptions are ample, perspicuous, and entertaining. To young persons, especially, we cannot conceive a more delightful and acceptable present.

THE OCTORAMA.

THE family of the Ramas is already large, but it will soon increase to an extent which no verbal Malthus will be able either to limit or to predict, if its members are to be distinguished, like the streets of Washington, by numeral prefixes. The ingenious authors of

that entertaining production, the *Rejected Addresses*, gravely tell their readers that

"The Albion, as its name imports, is white."

In imitation of their example, we beg to inform ours, that the exhibition of the Octorama, "as its name imports," consists of eight pictures. They comprehend representations of all the prominent occurrences of the French expedition to Algiers, from the equipment of the fleet in the harbour of Toulou, to the triumphal entry of the army into the African capital; and have been executed from drawings made by artists who were appointed by the French government to accompany the expedition. As subjects of curiosity, they are well worth seeing; but we cannot speak highly of them as works of art.

ORIGINAL POETRY.

TO THE EARTH.

Πόρνα Χθόν,
Μελαππιτυγών ματέρ' ὄνυρον.

EUR.

MY mother! from whose fostering breast

This weak and fleeting substance came,
And where these limbs are doomed to rest

When thou reclaim'st the dying frame;
Within thy regions lone and deep

What wild and sullen horror dwells,
And how doth shapeless Mystery keep
His watch beside those viewless cells!

There slumber they, the sons of might—
Titanic forms—thine earliest mould,
Who dared the vollied thunder's flight,
And cleft the towering hills of old;
And chiefs who marked the battle bleed
When Time his infant course began;
And they, the Assyrian Hunter's seed,
The shielded kings, whose prey was man.

There in its tideless fury shed
For ever on those steadfast shores,
Bituminous and darkly spread,
The eye enduring ocean roars;
And mutters, bound and fettered fast,
The earthquake in its sullen ire;
And lurks the power whose sulph'rous blast
Enrobes the rending mount with fire.

Thou hast thy treasures—jewelled caves,
With sanguine rubies richly dight,
And emeralds green as ocean's waves,
And diamond rocks like veins of light,
And sapphires whose unshaded blue
Seems drank from summer's cloudless skies,
And opals, as the iris hue,
Where morn's deep-tinctured glances rise.

Thou hast thy beauties—realms unknown,
Where murmuring music soft and low,
O'er onyx, and the sardine stone,
The cold petrific waters flow;
And sparry chambers dimly lit,
And shining groves and fretted bowers,
Where dreamy Silence loves to sit,
And Fancy proves her myriad powers.

Thou hast thine habitants—the horde
Of swarthy gnomes in vesture bright,
And elves who forge the mystic sword
And ebon panoply of night;
And black-winged dreams whose legions sweep
Embattled through the realm of rest;
And Phantasy, dim child of Sleep,
The Proteus of the slumbering breast.

Yet not for these thy sacred name
I breathe, and on thy presence call,
For thou dost boast a higher claim,
Time hallowed aid and home of all!

Thou pourest forth thy golden birth,
As Heaven's own quickening influence free,
And blesset, in thy bounteous mirth,
The meanest hand that waits on thee.

The shades which mark this fleeting lot,
Man's trust or pride, with thee are vain;
The weak, the low, thou scornest not,
The feeble limb and captive's chain:
Thou callest, and our feverish woes,
Scared at thy parent-voice, depart,
And hushest in thy deep repose
The weary and the worn in heart.

And who shall view thee, even as now,
While fraught with life thy features lie,
With verdure on that sunny brow,
And gladness as a veil on high,
Nor think of what must briefly be,
In that stern hour of good or ill,
When Thou shalt urge the dread decree,
And whisper to the breast—Be still!

J. F. HOLLINGS.

SKETCHES OF SOCIETY.

ENGLAND—ITALY.

NATIONS, like individuals, ought to listen to admonition. It is not from the flattery of friends, it is from the strictures of the hostile, or at least of the indifferent, that we must expect to derive that greatest of all benefits,—hints for correcting the errors of our character. Even where the censor is imperfectly informed, and is perhaps prejudiced, he may still say something justly to diminish our self-love, and to lead us to form a truer estimate of the value of others. In this point of view, and as a lesson, we extract the following comparison of England with Italy,—the English with the Italians,—which appeared in a recent notice in *Le Globe* of M. de Custines' "Mémoires et Voyages."

"England passes for being very picturesque, and is tolerably so in fact; but, with few exceptions, it is an insignificant and poor picturesqueness. Whatever route you pursue, and in whatever county you be, every where fine green turf, pretty clumps of trees, pleasant houses, and, in the midst of all this, a good road, winding like a gravel walk in a garden. But the sky is cloudy; but the undulations of the ground are monstrous; but there rarely appears one of those grand accidents of nature, one of those splendid spectacles which affect the mind and rouse the imagination. In a word, the landscape is more fresh than magnificent, more pretty than beautiful. In Italy, on the contrary, every thing is magnificent, every thing is beautiful. Do you behold, extending itself under a grand sky, between two noble seas, that land, which, from one extremity to the other, is furrowed by a long chain of mountains? What dazzling spectacles! What varied and sublime prospects! Here, broad valleys, embellished with all the luxury of a southern vegetation; there, gloomy passes, confined between a double range of gigantic and grotesque rocks; then, admirable views of the sea, with their deep and sinuous gulfs, with their islands, carved out like the scene of a theatre;* and always (thanks to the sun) transparent air, outlines clearly defined, warm and brilliant colours. Really, if in countries so dissimilar the people were to resemble, it would be a miracle.

"As for towns, that is another affair. Towns are built by men, and ought to reveal a portion of their character and manners. Now, in England the towns have an air of regularity

* Is not this a genuine French simile?—Translator.

and tameness, of insipidity and convenience. Whatever effort the memory may make, it finds it impossible to distinguish Worcester from Gloucester, Coventry from Shrewsbury. No where the deep shadows of architecture, except perhaps in some old cathedrals. It might almost be said that there is but one town in the country, and but one house in the town. In Italy there are no two towns which do not differ; there is not one in which, either with or without success, art has not attempted original efforts. Public monuments, private habitations, every thing has a character; every thing shews a people who love and seek the beautiful.

"This is the first difference between the Englishman and the Italian; a difference which the commonest observer cannot fail to remark. The beautiful is the passion of the one; the useful of the other. But if we examine them more closely, many other differences will strike us. In the language of the physiologists, we would say that the Englishman is a compound of the athletic and the phlegmatic; the Italian, of the bilious and the sanguine. Thus the Englishman is cold and constrained, the Italian ardent and volatile. Look at them walking, if only for a moment, hear them talking, if only for a minute, and you will know them immediately. Have you ever seen two horses; the one long-shanked, hard-mouthed, with out-stretched neck, trotting fast and roughly, difficult to put in motion, but, once off, difficult to check,—the other, rather short and thick, sensible of the slightest touch, leaping more than he runs, and prancing on the same spot until completely exhausted? Behold the Englishman and the Italian!

"People frequently laugh in Italy at the English, and at the accounts which they give of Italy on their return to England. Those accounts are what they must be. To judge, it is necessary to comprehend; now how can two individuals, whose organisations are so opposite, that they have not an idea alike, a common sentiment, comprehend each other? They might live for a century, side by side, without piercing the folds which conceal the one from the other. The Italian leaves himself in general to be guided by his impressions; the Englishman moves by certain rigoros, and, in some respects, established rules. In the one country, as M. de Castines has very well remarked, every body imposes upon himself the obligation of being in all respects like his neighbour; in the other, every body is what nature has made him, and follows his own fancies. Thus an Englishman is incessantly apprehensive of the criticism of all who surround him; which renders him timid and grave, stiff and silent. In the most numerous assembly, an Italian thinks himself alone, which renders him bold and simple, supple and noisy. Hence, in England, uniformity in the smallest things; in Italy, diversity even in the greatest: excessive, perhaps, and inconvenient, on both parts.

"Let us now pass in review every thing which can characterise the two countries; institutions, morals, habits, tastes; and every where we shall find analogous differences. Whatever is to be obtained by choice, an Englishman possesses: no one, for example, has more improved and developed industry; no one has more speedily established political liberty. On the contrary, whatever a happy and excitable organisation can confer, is enjoyed by the Italian: no one feels more strongly the value of the arts; no one devotes himself to them with greater success. But, as a balance,

the Englishman is troubled with *ennui*; and the Italian is a slave. We will say nothing of religion; that is too grave a subject to be treated in a cursory manner. However, in Italy still, religion shews itself to us as a pageant, in England as a propriety. Take away external worship, and few Italians will remain devotees: dissolve the alliance of church and state, and a great many English will become free-thinkers. In a single word, religion pleases the one because it is beautiful, the other because it is useful; and here the double character of the two nations is stamped, as it is elsewhere. As for morals, there can be no doubt that when submitted to regulation, they must be better than when abandoned to personal impressions: nevertheless, the Italians do not appear to us to be so corrupt, nor the English so virtuous, as they are said to be; and this we will one day endeavour to prove.

"To sum up. There is no man whose life is more arranged and enchain'd beforehand than the Englishman's; there is no man whose life is more independent and unpremeditated than the Italian's. It is, therefore, with very different sentiments that the two nations are visited. What strikes you in England is an order, perhaps factitious, but grand; it is the spectacle of numerous efforts voluntarily concurring to the same end; it is a prodigious development of human power: it is, in a word, a fertile and energetic social principle, which penetrates every where, animates all. What offends you is the coldness and symmetry of every thing; the convention every where substituted for impulse; the despotic and inevitable empire of fashion,—not that light and frivolous queen whose throne is in France; but a sad and inflexible sovereign, with severe countenance and leaden sceptre;—in fine, that boundless devotion to the useful, which excludes almost every other thought, every other sentiment. On the contrary, what pleases in Italy is the universal feeling of the beautiful, which mingles itself as it were with the air; the originality of characters and the frankness of impressions; the total absence of affectation and formality; the life entirely abandoned to emotions, under a serene sky and in a smiling land. What displeases is the deplorable relaxation of all social and family ties. However, we know by experience, that a journey to Italy leaves behind it a much more lively desire to repeat the undertaking than a voyage to England. It is, no doubt, curious to look at machines; but all machines are similar, and we soon become tired of them. It is interesting to study a vast and powerful political organisation; but this study soon becomes a labour rather than a pleasure. And besides, without seeing England, one may form a notion of it in one's mind; but who can adequately conceive the enjoyments which Italy, with its climate and its arts, is capable of conferring? They are of a kind which never weary."

DRAMA.

HAYMARKET.

At this theatre the *First of April* was produced on the 31st of August: it is from the pen of Miss Boaden, and a broad bit of practical farce. The jokes seemed to be fully as effective upon the stage as they ever are when played off upon the credulous in actual life; the audience laughed,—and as nothing more is wanted at the Little Theatre, the piece was completely successful. The scene is laid in Dover Castle; and the chief character, a Sir

Bumpkin Pedigree, is played by Farren with infinite discrimination and humour. His servant and imitator, *Roughhead*, is also admirably performed by Mr. Webster; and the other parts well supported by Mrs. Humby, Mr. Vining, &c.

ENGLISH OPERA, ADELPHI.

NOVELTY and activity are here the order of the night: witness two new dramas in one week. The first, the *Deuce is in her*, by Mr. Raymond, is a pleasant trifle, which provokes no criticism; and the second, the *Foster Brothers*, a vaudeville, is yet a slighter production, and with less to recommend it to praise.

PARISIAN THEATRICALS.

At almost all the minor theatres of Paris pieces have been brought out, having for their subjects the late memorable events in that capital. One of the most successful is a little vaudeville at the Théâtre des Variétés. Thanks to their physician, the Marquess and Marchioness de la Jobardière have slept during the three days of conflict. On awaking, the husband and wife recount to one another their dreams—delicious dreams, full of images of the revival of the ancient régime. But, lo! the patriotic journals arrive—the servants of the house are in arms—the physician appears in the uniform of the National Guard—the marquess's daughter wears a tricoloured scarf—her lover is one of Fayette's aides-de-camp! The poor people are in utter amazement. "What!" exclaims the marquess, "have we been asleep for a hundred years?" "Only for three days," is the reply. Eventually, he obtains a place, and is as happy as every body else.

VARIETIES.

Chemistry.—An Italian, named Baffi, has discovered that the lakes of natron in Egypt contain a considerable quantity of saltpetre, which may be prepared without fire, the rays of the sun causing a sufficient evaporation.

Royal Hunting.—A Paris paper states, that the hunting expenses of the ex-King of France, including the salaries of the master of the hounds and the other huntsmen, groom, &c., were 695,957 francs per annum. Thus, during the reign of Charles X., which lasted five years, the country paid 3,500,000 francs, merely for his pleasures of the chase.

Greece.—The following curious statistical details relative to the Peloponnesus are taken from a French paper:—The Morea is separated into four provinces—Romania, Achaia, Messenia, and Lavonia. Romania includes the territories of Napoli, Argos, Corinth, Tripolizza, and the eight townships of Zaonia. Achaia comprehends the territories of Patras, Vostizza, Calavrita, and Gastuni. Messenia comprises the territories of Navarino, Modon, Coron, Andruasa, Calamata, Leonardari, Caritania, Janar, and Arcadia. Laconia is composed of the territories of Malvoisia, Mistra, Bordugna, Chielefa, Passava, and Zarnata. The following is the number of the inhabited towns:—Romania 255, Achaia 419, Messenia 564, Lavonia 260, total 1,498. The number of the villages which have been destroyed is in Romania 80, 100 in Achaia, 72 in Messenia, and in Lavonia 50; total, 302. Of monasteries there are 41 in Romania, 30 in Achaia, 23 in Messenia, and 33 in Lavonia; total, 135. In Romania there are 9,557 families, Achaia 11,445, Messenia 13,488, and Laconia 11,717, making a total of 46,207. The total of the

population of Romania is 40,829 souls, Achaia 49,491 souls, Messenia 54,073, Lavonia 46,260; total, 190,653.

Literature.—The recent events in France appear to have had a material effect upon the book trade. The number of works on scientific and general subjects published in Paris during the last month is stated not to have been half what it was in the corresponding month of the last year. People in Paris seem to have no time for any other reading than politics.

Respect for the Arts.—Several instances of respect for the arts among the lower orders of Paris, during the late troubles, have been related: the feeling seems to have extended itself even to the ignorant boors of the Netherlands. An English baker at Brussels had his house attacked by the mob, because he was biscuit-baker to the king, and "therefore a royalist." A painting of the royal arms over his door, which was the performance of an artist of considerable talent, was torn down, and on the point of being destroyed, when one of the mob, observing that it was well executed, called out, "*Respectez les arts*;" and the painting was restored uninjured.

Tartar of Wine.—M. Berzelius has lately discovered in the tartar of wine an acid which differs sensibly from tartaric acid in the form of its crystallisation, while in other respects it resembles the latter in all its combinations. This instance of two acids having identical chemical properties and a different crystallisation, is not unique in the science. Among others, the phosphoric and the stanic acids present the same peculiarity.

Public Works in Paris.—It has been stated in the Paris papers that large sums of the public money are to be appropriated to the employment of the workmen in Paris, who might otherwise disturb its tranquillity. A private letter says, that with this view several of the streets in Paris are to be widened, the Chamber of Deputies is to be much improved, new vaults are to be constructed in the church of St. Denis, and the triumphal arch of the Barrière de l'Etoile is to be proceeded with in great style. The sum to be immediately applied to this purpose is 1,225,000 fr. thus divided:—

Chamber of Deputies.....	500,000
Triumphal Arch of the Barrière de l'Etoile.....	150,000
Royal Library.....	75,000
Ecole des Beaux Arts.....	100,000
Church of La Madeleine.....	200,000
Establishment for Deaf and Dumb.....	50,000
Garden of Plants.....	50,000
Church of St. Denis.....	100,000
	1,225,000
