Venice.—The *Ausland*, a Munich journal, announces that Venice will soon cease to be an island, as the town is to be united to the continent by a wooden bridge, two miles and a half long. A company has contracted for its construction, on condition of receiving a toll for thirty years. Independent of the immense advantages the town will derive from this enterprise, it will be of great service to the government, who have hitherto been obliged to expend a considerable sum of money to keep up the communication between Mestre and Venice by means of vessels. Last winter alone it cost 24,000 florins.

Elixir de Garus.—The following recipe for making Elixir de Garus, which has such reputation in France for the cure of coughs and colds, is given in the *Journal des Connaissances Usuelles*. Saffron 8 drachms, cinnamon 6, cloves 3, nutmegs 1, aloes 1, myrrh 1, alcohol at 32 deg. 10 pints. Let these be well

steeped for four days, and then distilled in a vessel placed in boiling water, and the liquid rectified, adding a quart of water. Then take 4 ounces of Canadian capillaire and 8 pounds of water, and let them infuse for four and twenty hours; strain, and add 12 pounds of white sugar, and 1 of orange-flower water. Let the sugar melt in cold water, put in the alcohol, with 2 drachms of saffron; and after remaining ten days, filter it, when it will be fit for use.

New Metallic Mirror.—M. Dobeiriner, while making experiments upon platina and its combinations, discovered that when the chloruret of this metal is heated gently with alcohol, a brown substance is obtained, which is easily blackened at a higher temperature, and may be dissolved without difficulty in alcohol. This substance is excellent for rubbing glass in order to make mirrors of platina: to effect which, the glass is to be dipped into the alcoholic solution, care being taken that it is spread uniformly on its surface, and is afterwards made red hot with the flame of a lamp of spirits of wine. The coat of platina thus deposited on the glass in its metallic state, adheres so strongly to it that it will be impossible to detach it. If, however, a mirror so made be plunged in hydrochloric acid, spread with water, and if at the same time a layer of zinc is placed in it, the whole layer of platina will dissolve instantly. A burnishing stick may be used to polish the platina.

The *Journal des Connaissances Usuelles*, in the course of an article on the employment of chlorurets of lime to prevent infection, says it may also be advantageously used to destroy the unpleasant smell of fresh paint. In a newly painted apartment, boards three feet long by two broad should be laid, and a quantity of hay, slightly damped, spread over them, upon which the chloruret should be sprinkled. If the room is carefully closed, it will be found that the decomposing action of the carbonic acid of the air will neutralise the smell of the paint. The chloruret of lime may also be employed to disinfect any nauseous receptacle.

Algiers.—The climate of this place is said to be very destructive to Europeans: the French troops have suffered to an extent which would be hardly credited. Bilious complaints, diarrhoeas, and dysenteries, chiefly caused by the fruit, which disagrees with strangers, and by the confined air of the place, the streets being only four feet wide at the bottom of the houses, and the tops touching,—are very prevalent; and leprosy are also common.

Tunnels.—These constructions were also known in former times. Strabo reports that a tunnel had been made at Babylon, under the Euphrates, from the royal palace to the Temple of Belos, fifteen feet long and twelve feet high. The breadth of this river was, at the described spot, a stadium (655 feet). But Herodotus mentions that the Euphrates was turned in its course at the time the tunnel was made.

Csar Peter.—There has been published lately at Petersburg a very curious work in four volumes, containing autograph and unpublished letters of Peter the Great. They have been preserved in the archives of the admiralty, and throw great light on the plans of this most extraordinary man to raise the Russian navy.

Different Tastes!—A French journal, in noticing the method of making English ginger-beer, says: "As French palates are more delicate than those of their neighbours on the other side of the water, perhaps it will be better to leave out the ginger!"

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXXVI. Sept. 4.]

The Churchyard Lyrist, consisting of Five Hundred original Inscriptions for Tombs,—is preparing for the press.

The Monthly Libraries and similar publications, &c. such as are produced periodically and contain much matter at a cheap rate, are becoming, even with all their numbers, more popular than ever. Since the new Waverley Novel series commenced, about fifteen months ago, above 300,000 copies have been sold, and nearly 100,000 were paid for them by the public!!!

Sir Walter Scott is engaged on a continuation of Tales of a Grandfather: the new volumes are to be taken from French history, and are looked for at Christmas, or soon after. France has already furnished Vol. II. of the Cyclopaedia a complete subject; and the Cabinet Cyclopaedia also announces the same history. In several volumes.

The Author of "Marriage" is busy with a novel for next season, entitled *Destiny*: she is a good writer, and cannot fail, we think, to produce a good book.

Mr. Atherton, the author of "the Fall of Nineveh" (a production of great ability, though we fear not sufficiently accordant with the taste of the day to have been encouraged as it ought), is also turning his attention to prose, and promises us the *Sea Kings in England*, a romance of the time of Alfred.

We hail with great satisfaction an announcement just put into our hands of an Egyptian Lexicon of the Coptic, Sahidic, and Bashmuric Dialects; containing all the Words preserved in all the accessible Manuscripts and Published Works in the Dialects of Ancient Egypt; with their Signification in Greek, Latin, and English, by the Rev. Henry Tattam, and William Esburn, jun. It is to be published in a cheap form, and by subscription.

LIST OF NEW BOOKS.

Lardner's Cabinet Cyclopaedia, Vol. X. History of the Netherlands, by T. C. Grattan, fcp. 6s. bds.—National Library, No. I. Friday Morning.—I have detained the Meteorological Report one post, in hopes of being able to give an account of the lunar eclipse of last night; but regret that the unfavourable state of the weather prevented a satisfactory observation. The moon was first dimly seen at seven minutes after ten; when the star λ Aquarii was about 8' north of the lunar disc, about two digits then remained unobscured; nor was the moon totally eclipsed at twenty minutes after ten, being more than half an hour after the time set down in the Nautical Almanac for the commencement of total darkness: at this time the whole of the lunar disc was visible, the part covered by the earth's shadow appearing, as usual, of a colour inclining to copper. The clouds prevented further observation, except from forty to fifty minutes after midnight, during which time the penumbral shadow was distinctly visible.

The spots at present on the sun are worthy of a telescopic observation.

Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 39" N.
Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

G. B.'s feelings are for the closet, not for publication. An Old Subscriber is informed that we are as certain as one can be of such a matter, that Mr. T. C. Grattan, the writer of the History of the Netherlands in the Cabinet Cyclopaedia, is also the Author of "Highways and Byways."

If the publication mentioned by Mr. Singley is sent to us, it will be noticed in the usual course.

ADVERTISEMENTS,

Connected with Literature and the Arts.

UNIVERSITY OF LONDON.

The Medical Classes will Open on Friday the 1st of October. The Council have sanctioned a new division of the instruction in Anatomy.

Mr. Bell will teach Physiology, illustrating that Science by continual reference to the pieces of Anatomy; and thus combining the knowledge of Structure with that of the Properties of Life. At the suggestion of Mr. Pattison, Mr. Bennett has been associated with him in the Chair of Anatomy.

The following are the Medical Classes. Anatomy—Mr. G. S. Pattison and Mr. J. K. Bennett. Fee 7l.; or for the First Division, 4l.; and for the Second, 3l.

Physiology—Mr. Charles Bell. Fee 3l. Anatomical Demonstrations—Mr. J. R. Bennett and Mr. R. Quain. Fee 6l.; or 3l. for each division.

Nature and Treatment of Diseases—Dr. Conolly. Fee 6l.; or 3l. for each division.

Surgery and Clinical Surgery—Mr. Charles Bell. Fee 6l.; or for each division 2l.

Midwifery and Diseases of Women and Children—Dr. D. D. Davis. Fee 5l.; first division 3l.; second division 2l.

Clinical Medicine—Dr. Watson. Fee for the whole Course 4l.; and for half the Course 2l.

Materia Medica and Therapeutics—Dr. A. T. Thomson. Fee 6l.; or for each division 2l.

Chemistry—Dr. E. Turner. Fee 7l.; first division 4l.; second division 3l.

Comparative Anatomy—Dr. R. E. Grant, terminating at the end of January. Fee 2l.

Medical Jurisprudence—Dr. J. Gordon Smith. Fee 4l.; or for each division 2l.

Hospital attendance daily from Half-past Twelve to Half-past One. Dispensary—ditto ditto. Fee for the Session 5l.

On Friday the 1st of October, at Three o'clock precisely, Dr. Conolly will deliver a General Introductory Lecture, for which Tickets of admission may be obtained at this Office.

A Medical Library has been formed for the use of the Students. The other Classes of the University open on Monday the 1st of November. Particulars of these and of the Medical Courses will be given at this Office.

By order of the Council, THOMAS COATES, Clerk. September 2, 1830.

VALUABLE LIBRARY, MAPS and CHARTS, PHILOSOPHICAL INSTRUMENTS, COLLECTION of SHELLS, &c.

To be Sold by Auction, by WINSTANLEY and SONS, on the Premises, on Wednesday, September 8th, and following days, at Eleven o'clock, by order of the Executors, the valuable and extensive Library of the late H. N. Jarratt, Esq., Great Bromley Lodge, near Colchester, embracing the standard editions of the best English Authors, chiefly in handsome bindings, including Shakspeare, Milton, Dryden, Addison, Pope, Rollin, Hume and Smollett, Gibbon, Robison, Goldsmith, Johnson, Swift, Fielding, Sterne, Locke, Blair, Sir Wm. Jones, Sir W. Scott, Lord Byron, Koscoe, and others. Among them, also, will be found—the Encyclopaedia Britannica, Bell's British Poets, Cook's Voyages, &c. the Annual Register, the Voyages and Travels of Holcroft, North, Clarke, Denon, Lyon, Perry, Cox, and others, and Belzoni's Travels in Egypt, Grose's Antiquities, D'Oyley and Mant's Bible, Hamilton's Antiquities, the Harleian Miscellany, the Works of Handel complete, Shaw's Zoology, Statutes at large, 45 vols., &c.

Several valuable Maps and Charts, a Collection of Mathematical and Philosophical Instruments, Cabinet of Shells, &c. To be viewed, and Catalogue had (1s. each) of Winstanley and Sons, Paternoster Row.

Captain Robert Elliot's Views in India, &c. &c.

This day is published, Part I. of

VIEWS IN INDIA, CANTON, and the RED SEA. Drawn by S. Prout, C. Stanfield, T. Boys, G. Catermole, Cotman, D. Cox, P. Finch, W. Purser, &c. &c. from original Sketches, by Captain ROBERT ELLIOT, R.N. With Historical and Descriptive Illustrations.

The Public may rely on the strictest fidelity of representation in all the Scenes depicted; they are from Sketches taken on the Spot, and the mental Impressions of the moment have been, as much as possible, preserved.

The Work will be published in successive monthly Parts, each Part containing three Plates, engraved in the line manner, by Edward Goodall, Robert Wallis, William Miller, Robert Brandard, William Cooke, J. De Boys, W. Le Petit, and other Gentlemen of acknowledged eminence in their art. The Plates will be accompanied by Descriptions, embracing Historical and Traditional Accounts of the Country, its Inhabitants, Productions, &c. &c. compiled from the best Authorities, and from Notes and Memoranda made at the time the Sketches were taken; thus rendering it at once valuable as a Work of Art, and useful as a Literary Record of a "so assuredly the most interesting of all the Foreign Possessions of England."

It will range in size with Lieut.-Col. Batty's Cities and European Scenery, Brockedon's Alps, &c. &c. and form a Series of appropriate Illustrations to Bishop Heber's Letters and Journals; the Life of Bishop Heber, and other Works relating to India.

Gentlemen wishing to subscribe, are requested to forward their Names direct to the Publishers, Messrs. Fisher, Son, and Co., or to their respective Book and Print-sellers, with Instructions to have them immediately registered at the Publishers, for the purpose of being inserted in the printed List of Subscribers.

Imperial Octavo. Price. Royal Quarto, Printed on India Paper, 5s. per Part. Imperial Quarto, do. do. before letters, 15s. and limited to 50 Copies. London: H. Fisher, Son, and Co. Newgate Street; Moon, Boys, and Graves; and Colnaghi and Co. Pall Mall; Ackermann, Strand; Simpkin, Marshall, and Stationers' Hall Court; Jennings and Chappin, Chancery Lane; Tilt, Fleet Street; and all respectable Book and Print-sellers.

Dedicated, by permission, to His Majesty. This day is published, Part V. price 4s. India Proof, 7s. LANDSCAPE ILLUSTRATIONS of the WAVERLEY NOVELS. From Drawings by

Messrs. Barrett Brockedon W. Daniel, R.A. Dewint C. Fielding J. D. Harding Messrs. S. Prout R. R. Beinaigle, R.A. Robson Stanfield, W. Stothard, R.A. W. Westall, A.R.A.

The Engravings executed in the most finished style, by WILLIAM and EDWARD FENDEN. Charles Tilt, 85, Fleet Street.

"This work, if completed as it has been begun, will be worth all the miscellane illustrations that have hitherto appeared."

"We have met with no series of embellishments at once so beautiful and interesting."—British Magazine, July.

"They are such prints as have attained the most finished of the Annuals."—Literary Gazette, April 10.

WANTED, in a long-established Finishing School, a YOUNG LADY, whose Prospects in Life depend chiefly on her Education being completed under eminent London Masters, of whose Lessons she will have the same advantage as the regular Pupils, and on the highest terms, and no difference whatever will be made in their Treatment and Tuition.

At the end of her Term she will continue, if mutually agreeable, to assist in the concern, or she will be recommended to such an Appointment as a Governess as her Friends may approve. The highest References can be offered, and the Premium will depend on the time required. For other Particulars address W. F. W., Mr. Souter's, Bookseller, St. Paul's Churchyard.

MUSIC.

AN EMINENT PROFESSOR OF MUSIC, who devotes a portion of his time to the instruction of professional Pupils, will have Two Days in the Week disengaged after this Month, and he will then be happy to receive any young Person with a decided Talent for Music, on moderate Terms. Every requisite Information may be obtained by addressing a Letter (post paid, and enclosing Name and Address) to E. T., at Mr. Chappell's, No. 50, New Bond Street.

Just published,

MARK FROM MY CELL!

This Song alludes to an officer of rank, whose lamentable end must be still fresh in the memory of most military men. Closely connected in strict and sincere friendship with an officer of his own regiment, he was so unfortunate enough to quarrel with him at the mess-table, heated with wine, and in a state of temporary madness, he insisted on immediately settling the dispute with pistols—his friend in vain attempted to dissuade him. When the officers had retired, the weapons were produced—they fought in an ante-room, and Captain fell, mortally wounded. Major was tried, convicted, and sentenced to death. In the evening which preceded his execution, he composed the beautiful air which forms the subject of this song. Craner, Addison, and Beale, 201, Regent Street.

BOOKS PUBLISHED THIS DAY.

In demy 8vo. with Sixteen Copper-plates, price 8s. boards,

ASTRONOMY; or, the Solar System

explained on Mechanical Principles, and the Laws which govern the Distances, the Orbital and Diurnal Motions, and the Inclinations of the Planets clearly demonstrated, with the Law of Light, and a New Theory of Tides, Comets, &c. &c. By RICHARD BANKS.

"The same reason which renders it necessary to receive a theory with caution, makes it equally necessary to receive every one which is set forth with any appearance of acute scientific ability; and this is a qualification for his task Mr. Banks seems to possess in no slight degree. We recommend the volume to attention."—Monthly Review, November 1829.

"This is the greatest gem displayed in the formation of this hypothesis. Deriving from simplicity a powerful recommendation, to an impartial investigation it has an undoubted claim. If the leading principle be found genuine, it will soon force its way into public notice, and take an honourable stand among the discoveries of science."—Imperial Magazine, Dec. 1829.

"This work well deserves the attention of persons interested in the study of that sublime system of the universe which astronomy so wonderfully unfolds."—Sheffield Iris.

Simpkin and Marshall, Stationers' Court; and Whittaker and Co. Ave Maria Lane.

THE NEW MONTHLY MAGAZINE

For September contains, among various other interesting Papers, a most important and highly interesting Narrative of the late R. H. Burton in the Mountains of the Caucasus—Origin of Lord Byron's Misanthropy—Remarks on Mr. Hughes's Travels in Greece, by Thomas Campbell, Esq.—Confessions of an Irish Gentleman—Birmingham and Representation—Sketches from the Ganges, No. 1.—Fashionable Eclogues, No. 3.—German Students' Drinking-Boots—Lines by Parvina, Queen of Siam, &c.—Recollections of Sweden—the French Clergy—Memoirs and Correspondence of Thomas Jefferson.

Colburn and Bentley, New Burlington Street.

THE ASIATIC JOURNAL, New Series,

No. IX. for September, contains an Examination of the Evidence taken before the Parliamentary Committees on the East India Question—Several Articles on Chinese Literature—a Scythian Romance; Zaime, Queen of the Sacs—English Society in England, France, Germany, and India—Digest of the Evidence on the Affairs of the East India Company—the Latest Particulars from India, China, and Australia—Births, Marriages, Deaths, Promotions, Shipping, and Commercial Intelligence, &c. Published by Fisher, Son, and Co., 7, Leadenhall Street; and to be had of all Booksellers.

Mr. Faber's New Work on the Prophecies. In 2 vols. 8vo. price 11. 16s. in boards. THE SACRED CALENDAR of PROPHECY

By GEORGE STANLEY FABER, B.D. Rector of Long Newton.

"The object of this Work is to combine together the various Prophecies both of the Old and of the New Testament which treat of the grand double Period of Seven Times, a period coinciding with those times of the Gentiles, which, evolving in strict chronological succession, are thence justly styled by Mede, the Sacred Calendar of Prophecy. In the present, both much more extensive and much more complete Work, the author has been enabled, at once to rectify various errors in his preceding publications, and to give a better arrangement (extending down to the present day) of that part of the prophetic volume which he believes to have been already unfolded.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had, All of Mr. Faber's other Works.

Lodge's Portraits and Memoirs of the Most Illustrious Personages of British History.

"We have to record the appearance of new Parts of four distinct editions of a popular publication, in various stages of progress at the same time, an example of literary success altogether without parallel, and powerfully denoting the increasing avidity with which works of merit are now sought by the mass of society, when published upon a scale that enables the middling classes to purchase them. If Mr. Lodge's work continues to gather strength and increase in interest as it approaches our own times, there is no saying to what circulation it may attain, or how many editions we may witness in simultaneous progress, addressed, as it is, to the best feelings of every one who thinks as he ought of the venerated names by whom his country has been exalted to her present eminence; of those warriors and sages whose memory is associated with all that is dearest and most glorious to Englishmen."—Literary Gazette, August 1830.

New Subscribers may commence with the First Number, and take one or more per month, as agreed.

Biographical Catalogue and Prospectus of Two Hundred of the Portraits and Memoirs to be contained in this Work, may be obtained (free of expense) from every Book and Print-seller in the Kingdom, to whom they have been sent for gratuitous presentation to persons desiring to acquaint themselves with the plan of the Work; or to subscribe for it, and if any difficulty be experienced in obtaining them, applications are requested to be made direct to the Publishers, Harding and Lepard, Pall Mall East, London.

THE NOBLE GAME of BILLIARDS,

wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD.

Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquis of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years. It is translated and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

ORIGINAL POEMS.

In 1 vol. 12mo. price 7s. 6d. boards,

By T. M'BEAN, Esq.

Contents.—The Force of Beauty—Cuthbert and Amelia, or the Penance of Genius, a Tale—Kensington Gardens—Richmond Hill—Primrose Hill—Shorrock Fold, a True Story—a Philosopher's Wishes—the Idle Tree; or, the Fate of the Watchman's Hound—the Penitent's Epistle—the Convict's Reply—Elegy written in St. Margaret's Churchyard, Westminster—the Dying Sinner to his Soul—the Baptism of Christ—a Hymn. Sold by Simpkin and Marshall, Stationers' Hall Court; and J. Cowell, 22, Terrace, Picnic.

The Magazine of Natural History, and Journal of Zoology, Botany, Mineralogy, Geology, and Meteorology. Conducted by J. C. Loudon, F.L.S. G.S. Z.S. &c. No. 15, (to be continued every 2 Months, alternately with the Gardener's Magazine), price 3s. 6d.

Vols. I. and II. containing Nos. 1. to 10, may be had, price 1l. 10s. boards.

AN INTRODUCTION to the STUDY of ANCIENT GEOGRAPHY, with Copious Indexes.

Of the Royal Naval College in H. M. Dockyard, Portsmouth; Author of a New Translation of Herodotus, "The Odes of Pindar in English Prose," &c. &c.

"We have not met with a work of more value to the classical reader than this laborious and very useful volume. The Indexes alone are worth half a historical series of guides to references in every other author, and every point connected with ancient geography that can interest the scholar or general reader. Brief sketches illustrate these subjects, and being well arranged, are capable of giving more information in an hour than even intelligent research would be likely to supply in several days."

Oxford: For Henry Blaxter; and Whittaker, Treacher, and Co. London.

 Inquire at Mr. Furlong's, Stationer, No. 19, Throgmorton Street, Bank.

Conclusion of Virgil.
 Neatly bound, price only 4s. 6d.

THE FAMILY CLASSICAL LIBRARY, No. 9, containing Dryden's Translation of the *Æneid* of Virgil.
 Cicero remarks, that not to know what has been transacted in former times, is to continue always a child. If no use be made of the labours of past ages, the world must remain always in the infancy of knowledge; and the learned Dr. Parr says, "If you desire your son, though no great scholar, to read and reflect, it is your duty to place in his hands the best translations of the best classical authors."
 To those, therefore, who are desirous of obtaining a knowledge of the most esteemed authors of Greece and Rome, but possess not the means or leisure for pursuing a regular course of study, the present undertaking must prove a valuable acquisition.
 The preceding Numbers comprise Demosthenes, Sallust, Xenophon, Herodotus, &c. &c.
 Colburn and Bentley, New Burlington Street.

In 1 vol. 8vo. price 10s. 6d. boards,
THE LITERARY POLICY of the CHURCH OF ROME, exhibited in an Account of her Damnatory Catalogues or Indexes, both Prohibitory and Expurgatory, with various Illustrative Extracts, Anecdotes, and Remarks.
 By the Rev. JOSEPH MENDHAM, M.A.
 Printed for James Duncan, 37, Paternoster Row.

Family Library.
 On Tuesday, August 31st, was published, with Engravings and Map,

Containing 5000 Receipts.
 In 1 vol. neatly and closely printed in double columns, comprising upwards of 500 pages, price only 9s. 6d. bound.
THE COOK'S DICTIONARY and HOUSEKEEPER'S DIRECTORY. A New Family Manual of Cookery and Confectionary, on a Plan of ready Reference never hitherto attempted.

By RICHARD DOLBY,
 Of the Thatched House Tavern, St. James's Street.
 "In all the systems hitherto extant of the culinary art, the arrangement has been so intricate and confused as, in a great measure, to render useless whatever merits they might otherwise have possessed. This inconvenience, which every mistress of a family has felt over and over again, when consulting her 'Oracle,' is now obviated by a 'Dictionary of Cookery and Confectionary,' just published by Mr. Dolby, the celebrated cook of the Thatched House Tavern; a work which, to an arrangement ensuring immediate facility of reference, adds the advantage of combining all the most recent inventions and improvements in the art, and of embodying upwards of five thousand receipts, many of which have never yet been laid before the public."—*Globe.*
 Colburn and Bentley, New Burlington Street.

New French Dialogues.—6s. In cloth,
MODELS of MODERN FRENCH CONVERSATION, consisting of New and Familiar Dialogues in French and English, on most common and useful Subjects, several Branches of Education, some Parts of England, and upon the Objects of Interest in the French Capital. Adapted to the Use of Ladies' and Gentlemen's Seminaries, Private Students, and Strangers visiting Paris.
 By M. DE LA CLAYErie,
 Late Teacher in the University of Oxford.
 Printed for Whitaker, Treacher, and Co. Ave Maria Lane.

Horses.
 In 1 handsome vol. of near 600 pages, with Sixteen Portraits of celebrated Horses, &c. engraved on Steel, by W. H. Lizars, 9s. cloth,
BIOGRAPHICAL SKETCHES and AUTHENTIC ANECDOTES of HORSES, and the allied Species.
 By Captain THOMAS BROWN, F.L.S. &c.
 Author of "Anecdotes of Dogs," &c.
 Printed for Whitaker, Treacher, and Co. Ave Maria Lane, London; and D. Lizars, Edinburgh.

Is the Twelfth and concluding Number of
THE DOMESTIC GARDENER'S MANUAL; being an Introduction to Gardening, on Philosophical Principles. To which is added, a concise Naturalist's Calendar, and English Botanist's Companion, or Catalogue of British Plants, in the monthly order of their Flowering.
 By a HORTICULTURAL CHEMIST.
 Printed for Whitaker, Treacher, and Co. Ave Maria Lane.
 The Work may now be had complete, price 12s. in cloth.

 Published by W. Simpkin and R. Marshall, Stationers' Hall Court, Ludgate Street.

Geography, with Atlas, on an entirely new Plan. In royal 18mo. 3s. 6d. neatly bound and lettered, embellished with numerous Engravings, illustrating Manners, Customs, and Curiosities.

RUDIMENTS of GEOGRAPHY, on a New Plan, designed to assist the Memory by Comparison and Classification.
 By W. C. WOODBRIDGE, A.M.
 The Geography is accompanied by an Atlas, exhibiting, in connexion with the Outlines of Countries, the prevailing Religions, Forms of Government, Degree of Civilization, the Comparative Size of Towns, Rivers, and Mountains, and the Climate and Productions of the Earth. In royal 4to. coloured, 8s. half-bound. This Atlas has been compiled from the best authorities, and contains all the late discoveries of Parry, Weddell, Denham, and Clapperton. But its principal claim to attention is founded on the entire novelty of the plan: each map presents, not only the geographical outlines of countries, but a series of numbers related to the mountains, rivers, and cities, which indicate their comparative rank, and enable the student by reference to the table of classification, to discover their actual magnitude. The tabular chart exhibits the climate of different regions, as determined by thermometrical observations, with their most important productions, and presents a striking illustration of the diversity existing in the same latitude, according to the situation of countries. In the moral and political chart, the outlines of each country contain a number, shewing its population, and several emblematic allusions to its government, religion, and state of civilization, and forms, in effect, a moral picture of the world.
 Printed for Whitaker, Treacher, and Co. Ave Maria Lane.
 Of whom may be had, gratis,
 A complete School Catalogue.

Price 3s. 6d.
AN ESSAY on the CREATION of the UNIVERSE, and Evidences of the Existence of God.
 By CHARLES DOYNE SILLEBY.
 Author of "Valley," "Eldred of Erin," &c.
 Printed for Waugh and Innes, Edinburgh; and Whitaker, Treacher, and Co. Ave Maria Lane, London.

FOUR YEARS' RESIDENCE in the WEST INDIES.
 By F. W. N. BAYLEY, Esq.
 "A volume both amusing and valuable."—*Literary Gazette.*
 "We recommend Mr. Bayley's interesting volume to the personal interest of every person interested in the West India Question; and who is there in this country that is not interested?"—*Monthly Magazine.*
 London: William Kidd, 6, Old Bond Street.

BOOKS IN THE PRESS.
Sweet's New Catalogue of Plants, with the Colours of the Flowers. Tuesday, 1st Oct. price 3s. 6d. boards.
SWEET'S HORTUS BRITANNICUS, or, a Catalogue of all Plants cultivated in the Gardens, or found wild in Great Britain, arranged according to the Natural Orders to which they belong, with the addition of the Linnæan Class and Order to each Genus.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Price.

No. 712.—AMERICAN EDITION.

SATURDAY, SEPTEMBER 11, 1830.

REVIEW OF NEW BOOKS.

France in 1829-30. By Lady Morgan, author of "France in 1816," &c. &c. 2 vols. 8vo. pp. 1086. London, 1830. Saunders and Otley.

We opened this work more with the wish than the expectation that we should find it such as would warrant a great alteration in our general opinion of the writings of Lady Morgan. But, in truth, she has not improved by twenty years of authorship: her faults only become the more fatiguing from repetition. The mystery of the superior tiresomeness of the present performance is also perhaps to be ascribed to the craft of book-making: one volume might have been tolerable, but two are really more than can be undergone with any thing like patience. "France in 1829-30" implies a picture of the country in these pregnant and recently splendid years; but after yawning over almost every page of Lady Morgan's flighty ebullitions, we close the last chapter with no more idea of actual France than when we began the first. We have read indeed a great deal about her ladyship; what she said in indifferent French, how she argued and criticised, how she referred to her former publications as if they had electrified entire Europe, her witticisms and *bon-mots*, and all that the most egotising and vanity could lug into print; but of the real state of society even in Paris, we learn nothing that might not have been communicated in a quarter of one of the volumes.

But besides the book-manufacturing origin of this failure, another principal cause of it is in either the natural temperament or the affected vivacity of the author. She writes as if she were a romping girl just let loose upon the world for the first time; and not like a sensible matronly observer, who has had some experience, and should be able to tell us a little soberly what she sees. It is almost pitiable to look upon a mature person exhibiting such fantastic tricks; and even in a miss of seventeen the long continuation of the hoyden would be apt to create ennui, if not disgust.

It is, we assure our readers, painful to us to speak thus of the production of a female pen; and we have several strong reasons for desiring that we might with justice have delivered a very different judgment. But we are bound to the public tribunal by truth, and by a sense of what we owe to its unexampled favour; and, however nibbled and scribbled at, we will in all fairness discharge our duty.

A sweetly-engraved portrait of Lady Morgan (sketched by J. P. Davis, and engraved by T. Wright), ushers us among, and prepares us for the numberless personal traits with which her volumes abound: it is in profile, and shews a beautiful countenance, full of character and expression; but whether it is like her ladyship we have not the pleasure to know. We presume she must be mistress of intellectual and spirited, if not of regular and handsome features; for we have in "*France in 1829*"

the details of its transcript not only into picture, but into bust and medal by the most admiring and vaunted artists of Paris.

Having got over the pretty portrait, we dash at once into (for such are these two volumes) the auto-biographical sketch of Lady Morgan for the fragment of a year, during which she left Ireland, a persecuted female in darkness and despair; enjoyed a few months of the French capital, in the way our extracts will illustrate; and returned home ready for the press to her *maison bijou*, as she calls it, near Dublin.

"Oh! the delicious burst of agreeable sensations," she commences on landing at Calais, a lady driven from her native land for having "devoted to its interests all her sympathies, to its cause all her talents; and drawn upon herself the persecution of one party, without securing the protection of another."—Alas, poor lady! but her spirits were good, and she wonderfully withstood the shock, though in the early parts of the narrative we have a little more of the sentimental than when the gaieties of Paris induce to jumping, laughing, tumbling about, and other small feminine eccentricities. Thus we hear much of the "impetuosity of her (ladyship's) feelings;" of her "bursts of sensation;" of her "newly-kindled excitements;" of her "spirits too exuberant;" and of sundry other indications of extreme sensibility. These little clouds, however, gradually disperse, and then comes the sunshine of the heart, the frolic, the fun of the Wild Irish Girl of fifteen. Hop, skip, and away; I by myself I; Lady Morgan, the celebrated author denounced by the *Quarterly*, proscribed by the Emperor of Austria, idolised by France and the rest of Europe. Here I go, all life, and giving birth to a book as full of nothing else, as an empty nut is full of emptiness; but a few scraps of brown husk which are to pass for what should have been kernel. From this source spring the lively errors which usurp the place of truth, and misrepresent every thing which the author describes, except herself. By aiming at eternal playfulness and smartness, she exaggerates to such a pitch, that we receive no definite or exact idea whatever from her sketches. In contrasting London with Boulogne, for example—she exclaims, "Is there nothing French, then, out of London, where every shop is a *magasin*, and every article labelled by the vocabulary of the *Rue Vivienne*?"—Reading this, one would suppose that in London every shop was a *magasin*, and all the goods labelled in French, as asserted by the writer: and what a preposterous notion of our metropolis would such a belief afford! We do not think there are fifty such shops in all the vast circumference of our trading capital; and we dwell on the passage, not so much for its importance, but to prove that no dependance can be placed on Lady Morgan's fanciful distortions; and that if she can so absurdly caricature her own country, it would be too much to expect accuracy in what refers to a foreign people.

With this salutary proviso established, we

shall now proceed to such farther specimens as we deem it proper to adduce in support of the opinions we have stated, and in illustration of the work before us. We may also premise, however, that Lady Morgan does not pretend to write in English: her style is a conventional jargon, so spotted with French, (and occasionally Italian,) that no plain scholar (including in his acquirements a tolerable acquaintance with the French tongue) can understand it. Every page is alike: take, at hazard, a receipt for perfuming a handkerchief:—

"Take a dozen embroidered cobwebs, such as some '*araignée du voisinage*' might weave for the reticule of Queen Mab, and place them in the pocket of an elegant *porte-mouchoir*, which must not be of any of the old-fashioned prismatic colours; but, (as '*La Mode*' phrases it), *du couleur le plus nouveau*." Into the cover of this elegant and indispensable superfluity, the delicate odours are to be quitted, which communicate a just-perceptible atmosphere; (that is to say, an atmosphere perceptible to the practised olfactories of enlightened nerves;) and which mingling with the freshness of the last spring-water rince of the laundry, renders the application of the handkerchief to the face a 'perfect pleasure.' This receipt I give almost in the very words of the *merveilleux* from whom I had it."

In some remarks on the modern literature we find the next:—

"Napoleon was a romanticist, *sans s'en douter*. On the restoration of the Bourbons, the classic muses of the *ail de bœuf*, who made their entry on the baggage-wagons of the allies, were busily employed in giving subjects for impromptu royalty to the candidates for poetical pensions. The echoes of the theatre were called forth by laudatory strains *mille fois répétés*, in praise of the '*envoyé d'en haut*.' Apollo once more resumed his place in the Tuileries, and '*les Graces*' re-occupied the niches vacated by the genius of victory. The modern classics beheld the restoration of this portion of the ancient *régime* with triumph; and many of the elders of the liberal party (who denied in literature that liberty of conscience which they had adopted in politics) held up the code of Aristotle in one hand, and the *charte* in the other."

Morning society is the last specimen we shall quote of this silly style;—a passage or two also affording a tolerable sample of the way in which Lady M.'s egotism is paraded.

"Mérimee, with his usual *espèglerie*, helped out the argument against me with Clarence's dream; and so, as usual, we all left off as we began. But we all agreed that the prose of P. Courier, and the poetry of Beranger, were each in perfection in their several ways: while some observed, that the French and English are making an exchange of words and of things, and quoted a translated idiom of my Anglo-French, which, though it now shocks the ears of the purists, might be naturalised some of these days. 'Shock us!' said Beyle—'yes,

but not in your English sense of the word. It does give us an agreeable shock. Are you English aware that there is an almost primitive simplicity in the errors you commit in our language of phrases, that carries with it an infinite charm. We modern French, for instance, prefer the French letters of Horace Walpole to those of his correspondent Mad. du Defand: there is a force, a *naïveté*, in his translated idioms, a thousand times more expressive than the purisms of the French lady, the muse of the literati of her time. His style is as little the French of *les Quarante* as his wit; but it is something better. His words have the force of ideas, and his phrases are so free from the monotony of our rhythm, that they keep us *tout éveillé*.[†] M—— observed, that the French bore a great resemblance to the Athenians in their sensibility to purity of style; and this brought us to the Greeks and their cause. We naturally made a reference to Col. Tolstoy's pamphlet, written in excellent French, which lay upon the table. He, of course, went with the Russian policy; the French were all for the plains of Marathon and Greek liberty, and the English were more or less in the doctrines which produced the massacres of Parga, and Mr. Sheridan's pamphlet against the Greeks; and so we were all drawn up in battle array. David led the charge, as Praxiteles himself might have done; and if there is any fire in the medal that represents my stupid Irish face, it is due to that which kindled his spirit, as he worked and defended the land of the arts and the compatriots of Apelles. Meantime several visitors, bored, perhaps, with a subject in which they took little interest, bowed themselves out. Among these, were one or two gentlemen who had taken no further part in the conversation than to ask the names of my other guests, who, after their departure, asked theirs. I said I did not know, or at least must refer to my visiting-book to ascertain them. 'Not know the names of your guests?' said Madame D.; '*qu'elle est drôle*.' 'Que voulez vous, madame? We are presented at some crowded assembly, or public place, to a number of all nations. We don't catch half their foreign names. These *présentés* present others; they call, and are let in. Their names are announced by my servant, who gives them all a certain Irish *tournaire*, that makes confusion worse confounded; and so there they are. Some turn out delightful, high-bred, and agreeable, like that young Wallachian Boiardo who has just left us; and others prove prozers, like—but I won't exemplify, where all are courteous and kind, and well informed and well disposed.' 'And one of them,' said Monsieur de —, 'whom I saw here the other day, is an ex-Jesuit.' '*Madonna mia!* you make me start! I am denounced, then, to the holy office, or to the police at least.' 'Oh! don't be alarmed,' said Beyle; 'you have nothing to fear from the police now.' 'You don't mean to say that there is no longer a police in France?' '*A peu près*. Upon great occasions, a few civil gentlemen come forth, enter your room, *chapeau bas*, politely inquire into the disorder, or relate the event that occasions their intrusion, and have the air of paying a visit of ceremony, instead of a domiciliary visit. As for your Jesuit, whoever he may be—and these things are easier said than proved—the worst you have to expect is an attack in some of the ultra papers, or in those intelligent organs of public opinion, which treat upon hats, caps, '*des grands ourlets et du petit manteau*.' 'Or de lui *luis et du beau temps—que voilà!*' I exclaimed.

'So let us enjoy it in the gardens.' '*Levero l'incommodo*,' said David——'!!

It is a happy thing for the ignorant, that translations of this slip-slop and patch-work are generally given at the foot of the page; by which even the few country gentlemen who may read this book will be enabled to comprehend the commonest French words and phrases. There is a kindness in this which almost excuses the offence of so unnecessarily introducing them. But the pure English is sometimes on a par with the pure French: for instance (p. 186), where her ladyship confesseth, "I am either too old or too young, too *blasé* or too vivacious, to set down to such sentimental vapours of vanity or indigestion;" and, p. 352, "the attraction of the Abelard, in my eyes, is that it is as like Talma as if he had set for it:"—for which her ladyship deserves a good *setting down*.

Come we now to other points. On politics, it seems, that the use of omnibuses by the lower orders in Paris has had prodigious influence. "The poorest Parisian workman and his family ride more luxuriantly now, than that great king—*roi, le plus roi qui onques fut*—ever rode in his day; and the *soubrette*, carrying the modes of the Faubourg St. Honoré to that of les Invalides, drives more rapidly in her elegant zoe, or gondola, with its cushion of down or of iron, than the ambulatory seraglio of Versailles, when royal mothers, mistresses, wives, favourites, and children legitimate and illegitimate, followed the camp of the *grand monarque*, all stuffed pell-mell in the *carrosse du roi*. These physical comforts will not easily be given up; for they inspire the possessors with a sense of the personal dignity of man, and of his value (so to speak) in the market, which gives despotism an infinity of trouble. It is naked, unaccommodated, ignorant man, that constitutes the especial raw material of unlimited sway." This teaches us to prefer the dignity of man, as elevated by riding in omnibuses, to the naked man, who, according to Lady Morgan's judgment in such matters, is the raw material of despotism!! Philosophy is next on stilts as high as politics. "There are certain positions, and, above all, certain celebrities in society, to which the mind necessarily attaches certain ideas—ideas which are not to be shaken off, however often refuted by individual experience;"—which, being translated, is meant to import, that we feel some awe on going into the company of an eminent personage, such as the Count de Tracy, whom Lady Morgan was about to visit, and whose assemblies (she informs us) "are among the most select and remarkable in Paris. Inaccessible to common-place mediocrity and pushing pretension, their visitor must be ticketed in some way or other to obtain a presentation." Her ladyship must, therefore, to use the slang word, have been "*ticketed*" above the common-place mediocrity and pushing pretension on which she looks down. Indeed, she is full of her aristocratic associations: and few persons below dukes, marquesses, barons, and counts (except distinguished geniuses), figure on her tapestry. The grand is pleasant:—a French romanticist has told her a pathetic tale (an invention, by the by) of a poor poet, who dies swan-like; and the following is the finale:— "At last he retired to a poor little village near Meudon, where he gave himself up to the composition of works which dissolve the soul in tears, or burn it with passion. Poor, neglected, worn-out, he died last October of a broken heart, and a complicated pulmonary consump-

tion. You weep, *chère miladi!*" 'Tis very foolish,' I said; 'but the fact is, that the life and death of this unfortunate and very foolish young man recalls those of one who, when in infancy, was the adopted of my father's house, the unfortunate Thomas Dermody, the poet; but you know as little, I suppose, of our modern poets as I do of yours.' '*Que vous êtes bonne!*' said my good-natured friend, mingling his tears with mine."

What a melting scene—*chère Miladi* and Monsieur weeping together! *affettuoso!* Their picture in the act would have made a more interesting frontispiece than even her ladyship's lovely portrait. Then "*my father's house*" must have impressed the blubbering Frenchman with the idea that her crying and sentimental ladyship's paternal mansion was at least a chateau; yet the only wings the worthy Mr. Owenson, her papa, ever owned were not those of a house, but of the stage. But where all is vanity, without vexation of spirit, why should we give only one taste?—there are plenty more precious bits.

"We meet, scattered over the surface of remote and variegated society, so many we wish to know, and who wish to know us, not merely, perhaps, for the respective merits of the parties, but for that magic bond, the '*vous me convenez—je vous conviens*.' I knew the author of the statue of Condé must be in my way (be the confession an epigram or an *éloge*); and in the many pleasant hours we afterwards spent in his study in the faubourg, while sitting for my bust,—in the Rue de Rivoli, at our hotel,—and in the various rencontres of Parisian society, this first impression was fully justified, as first impressions, indeed, very generally are. Although David is the sculptor of romanticism *par excellence*, he has a strong vocation to moulding the heads of those who have amused the public or himself, without much reference to sect, and still less with a view either to pecuniary profit, or (in my instance) to permanent fame.†

"Nothing can be more delightful, more instructive, more amusing, than our mornings at Paris. One goes through a course of literature, science, arts, politics, philosophy, and fashion, *toute en courant*; laughing, arguing, gossiping, lounging on sofas, or jumping into carriages, running in and out of public and private edifices and collections.

"I happened one night to mention at General Lafayette's that I should remain at home on the following morning, to sit for a medal to David; and the information brought us a numerous circle of morning visitors; others dropped in by chance, and some by appointment. From twelve till four, my little salon was a congress composed of the representatives of every vocation of arts, letters, science, *bon ton*, and philosophy, in which, as in the Italian opera-boxes of Milan and Naples, the comers and goers succeeded each other, as the narrow limits of the space required that the earliest visitor should make room for the last arrival. There was Pigault le Brun, the father of the revolutionary novelists, whose wit and humour can never be out of fashion, however it may fare with the forms in which he has embodied them. There was Mignet, the historian of his age, and belonging to his age—honest, fearless, and giving to his narrative the demonstration of mathematics and the brevity of epigram, in a style which is in itself philosophy. There was Mérimée, like his own original and de-

† Amongst his sitters, her ladyship, with her customary fidelity and knowledge, mentions Mademoiselle Tatu, mistaking Madame for a Miss!

lightful dramas, simple, natural, and animated. The brilliant Beyle, whose travels made me long to know the author, and whose conversation is still more lively and original than his books; Dumas, the author of Henry the Third, one of the most successful adventurers in the rich and new mine of romanticism; and the spiritual and interesting Robert Lefèvre, and De Montrol, who says more clever things even than he writes, who has composed a life of Clement Marot, in an episode, that is in prose what its subject was in poetry; and the Commandeur Gazzera, of the order of Malta, the author of many ingenious works,—one among the oldest of our continental friends, and the most hospitable of hosts; and there was an accomplished young diplomatist from the United States, Mr. B——, and Monsieur Miguel de la Barra, the secretary of legation from Chili; and Don Louis d'Arandada, an *attaché* of the Portuguese embassy; and Colonel Tolstoy from Russia; and the Prince and Princess of Salines, from their feudal castle on the Rhine; and the Count and Countess de Rochefoucauld Liancourt—(the principles of the one, and the graces of the other, like their illustrious name, beyond all change of circumstance or touch of time);* and the honest and gifted Italian brothers Ugioni; and ‘*son obligance*,’ Monsieur Julien de Paris; and the two first amateurs of the musical world, even of *that* musical world from whence they came, Signor Barberi and Signor Dottore Benati, with many others, who came in and went out successively,—each leaving behind them the votive offering of an agreeable impression.

“I have been sitting for my picture to Robert Lefèvre, a most agreeable and well-informed person. His agreeability is that of a *laissez aller* temperament, and his information that of a man who has lived in the midst of great events, and with notable and extraordinary persons. • • • All busy people, I believe, hate to sit for pictures, however strong the propensity of their *amour propre* to multiply their likeness. • • • At a ball in the Rue de Bourbon, at my excellent friend, Madame I——’s, I took shelter from the heat and crowd in a pretty boudoir, and threw myself upon the first ottoman that presented itself, very nearly tumbling over an old gentleman who occupied a place on its corner, near the door.”

With this hoydenish trait we shall conclude our extracts illustrative of the appearance Lady M. cuts in these volumes; and more, we trust, to the satisfaction of our readers, select a few of the few passages which can interest or amuse the public. The subjoined is a neat *mot* of the famous Lafayette (of whom, now 73 years old, her ladyship gives a pleasant sketch).

“General Sebastiani, talking to him of the old and new nobility, asked, ‘Do you not think, general, as I do, that a fusion between them would be very desirable?’ ‘*Oui, mon cher Sebastiani*,’ replied Lafayette; ‘*je le désire;—mais complete, jusqu’à l’évaporation.*’”†

The following is a sportive and clever exposition of the romantic sect in Paris, and of her ladyship’s vanity:—

“Lady Morgan, if you wanted to drown yourself, how would you set about it? ‘How would I drown myself? throw myself into the water, I suppose.’ ‘Throw yourself into the water! that’s the *point aux ânes*; any one could

* The meaning of this parenthesis is far above our comprehension.

† It is an odd sign of her ladyship’s *riens* French, that whenever she attempts to speak it, the parties answer in English as well as they can; the whole seems a sort of humorous *lingua-franca*.

do that: *mais écoutez*, ’tis from *Le Creux de la Vallée*.”

‘Pour qu’il veut se noyer, la place est bien choisie, On n’aurait qu’à venir, un jour de fantasia, A cacher ses habits au pied de ce bouleau, Et, comme pour un bain, à descendre dans l’eau. Non pas en furieux, la tête la première; Mais s’asseoir; regarder; d’un rayon de lumière, Dans le feuillage et l’eau suivre le long reflet, Puis, quand on sentirait ses esprits au complet, Qu’on aurait froid, alors, sans plus trainer la fête, Pour ne plus la lever, plonger, avant la tête.’

Is this not beautiful, original, sublime? A writer of the old school would have plunged his hero head foremost, like a vulgar suicide of the Pont Neuf. If Rousseau, your Kirk White, or our Millevoye, were to drown themselves, would not they thus have died? It makes one quite long to follow the example. An irrepressible fit of laughter seized me; and my young *estallé*, somewhat disconcerted by a merriment which, if it had not been inevitable, would certainly have been very rude, took his hat, saying, after a moment’s silence, ‘I see, Lady Morgan, that I have been mistaken. You have long been deemed in France a champion of romanticism. I was a boy when your work on this country came out; and I took my first colour of literary opinion from your *France*. Whatever popularity you enjoy as a writer here, you owe it to this belief. To what circumstance I may attribute your change, I know not; but I cannot compliment you on the retrogradation: I have the honour to offer you my respects.”

Apologues: we have far too much of the disputes between the Romanticists and the Classicists, and of other crude essays, which might just as well have been written in Dublin as in Paris; and, besides, her ladyship possesses very insufficient knowledge to justify her giving opinions upon French literature or art. Her criticisms are, indeed, quite ludicrous. “In this beautiful statue” (Condé, on the Pont Louis XVI.) she says, “there was not the sublime calm, the *momental immobility*, the infectious solemnity, which makes one tread lightly and breathe low in passing along the galleries of the Vatican, as if the godlike creatures there represented were themselves present in their silent divinity, to impose awe, and to command adoration. But in its place was to be found a quality of an opposite and perhaps equal merit—living, moving, exciting, passionate humanity. The very pedestal trembles under the violent pressure of the indignant and animated form it supports.” Oh!!

“The eye does not dwell on them (the statues) sufficiently long to lose their moral, in their physical effect. But in the arts, and especially in sculpture, where form is not mingled with colour, the angular awkwardness of passionate gesticulation being permanent, has a tendency to excite in the beholder a sympathetic pain, such as the actor would himself sustain in the long maintenance of so constrained an attitude. From this difficulty (which is only to be vanquished by great art) the ancients have shrunk; and I was half afraid to express the admiration I felt for this fine statue, lest I might be wrong, according to rule, though right according to impression.”

• • • Should you wish in the waters a cold bed to find, The place where we stand is just made to your mind. Choose your day and set off. Ere you sink in the billow, Pack your clothes in a bundle snug under yon willow. Souse not head over ears, as if conquered by wrath. But go, step by step, as you’d enter a bath: Sit down—look about you—examine the ray Which pours in, through the trees, in a long line of day: And when you’re in order, prime up to the mark, (That is, half killed with cold), take ‘the leap in the dark.’

Don’t keep yourself waiting, but down with your head, And be sure you don’t lift it again till you’re dead.”

How gloriously unintelligible these big words are, and, where intelligible, how absurd! The ancient sculptors shrunk from passion and gesticulation!! O, Laocoons, Gladiators, Apollos, be burnt into lime and forgotten!

Of Rossini we like the notice, though, as usual, only brought in to hitch her ladyship, her publications, and her justly portrayed manner of chattering upon

“‘Inspiration! If you were to talk to him of inspiration, he would laugh at you. He laughs at the very idea; but then he laughs at every thing, himself included. He is a thorough Mephistophiles! To see Rossini in all the glory of his genius, and his natural and unobtrusive wit, you must see him at midnight, composing at his little desk, in his black cap, surrounded by his *habitués*, yet undisturbed by their fun and frolic; in which, from time to time, he bears his part, particularly if his clever friend Caraffa be present: then, indeed, he is in his own sphere; there is nothing like him.’ I hazarded an opinion on music and Rossini, which I have printed in the *Book of the Boudoir*; and so we got upon the revolution he has effected in his art, and upon that genius which gets the start of its age. ‘No,’ said Mignet, ‘genius goes with its age; and it is by so doing that it wins its success.’ I still persisted in my Mrs. Malaprop style of arguing, ‘clever men go with their age, and prosper; genius goes one step beyond it, and is persecuted.’ Mérimée and David were of my opinion.”

Of Helen Maria Williams, too, the mention is interesting to the English reader.

“We talked much and long of our celebrated friend Miss Williams; and it was painful to learn, that she had fallen into absolute indigence some time before her death; a circumstance which, in her independent spirit, she endeavoured to conceal till all further concealment was impossible. Her excellent nephew, Mr. C——, a respected member of the Dutch church, and one of the most celebrated preachers of Amsterdam, having at last learned the state of her affairs, came for her to Paris, and took her home to Amsterdam; but the translation from her own delightful circle in the French capital, and the different order of society in Holland, were too much for her spirits, and she fell into such melancholy and ill-health, that her constitution sunk under the change. Her devoted relation, solicitous even for her pleasures, placed an annuity on her head, out of his own limited means, and brought her back to Paris. He brought her back, however, only to convey her to her modest tomb, amidst the cypresses of the Cimetière de la Chaise. Thus terminated the life of Johnson’s ‘elegant muse, in sadness and poverty.’ Her faults were attributable to the singular times in which her ardent feelings and brilliant talents developed themselves. Born and bred in another era, she would have directed her original talents to other purposes, and in all probability with a happier result.”

Pius VII. called a M. Marron “the Protestant Pope”—Marron had presented a little poem to his holiness; and “the following couplet was sent to M. Marron by the pope, and may serve as a specimen of his playful wit—

‘Vertueux Protestant, que je souffre à vous voir; Tirer Marron du feu, n’est pas en mon pouvoir.’”

The point, Lady M. declares, is untranslatable;—that is a pity; but the epigram is neat, and a good sign of tolerant joking in the head of the church.

In all that we have said of, or done with, Lady Morgan’s publication, we have confined

ourselves to the first volume; and (at present at least) we shall abstain from its worthy parallel, the second, except to observe, that it contains a Postscript of 38 pages relative to the late revolution—all that belongs to 1830 in the work. If we might credit her ladyship's rose-coloured description of France in the preceding year, we should hold this glorious event to have been very unnecessary; for she assures us in her last chapter, on bidding adieu to the country:

"If ever there was a moment in which, beyond all others, France is to be visited with pleasure, and quitted with regret, it is now, when every thing conspires to evince that she has discovered the great secret of all human science, its object and its end—the secret of good government, in the interest, and for the happiness, of the greatest number. To attain to this glorious knowledge, and to its practical application, she has laboured long, and suffered much; and her efforts, like her sufferings, have been without parallel or example."

But Prince Polignac assumed the reins, and overthrew all this blessedness; and the dynasty was changed, the constitution renovated, France delivered from the thraldom which was preparing for her. Assuredly, if the revolution stops where it appears to have stopped, it does deserve the admiration of the world; for Lady M. truly says in fact, though perhaps with too much of her flummery of language:

"The brief unity of its epic action was unstained by one crime, unblemished by one fault. All that was great, all that was good, all that was sublime in humanity, came forth in deeds, that leave the poetry of virtue far behind, and the fictions of genius far below, what history will now record. Rome produced no such men, Sparta no such boys, as the citizens of Paris, and the pupils of her scientific schools. The stoical heroism of antiquity, and the sturdy resistance of the modern revolutionary times of England and America, have been more than equalled, more than surpassed, by the self-devotion, the valour, the unity of purpose and of feeling, of the luxurious inhabitants of the most polished, refined, and luxurious capital of the world. It is not thus that slaves regain their liberty; it is thus that freemen protect it. ***** An uncontrollable patriotism, an incorruptible honesty, and a total abnegation of self, in the great cause, governed all classes."

The measures, associations, &c. by which "all classes" were thus prepared to resist tyrannical and unconstitutional innovation, are for history to develop; that they were so prepared is evident, and that the explosion was simultaneously and effectively produced, by a well-understood compact and arranged course of action, is not to be doubted by men of penetration. And we say not this in disparagement; on the contrary, we maintain that the end would have justified almost any means; unless mankind are willing to be made dumb beasts (as by silencing the press), and then treated as such by a parcel of masters, rioting in the fulness of usurped dominion, disproportioned wealth, and selfish luxury.* The discharging and letting loose some 25 or 30,000 of the mechanics of Paris, with a fortnight's wages in their pockets to save them from want, as was done by their masters on the morning

* It will be well for these orders, wheresoever they exist, to observe the signs of the times. It is not only in France—it is throughout the enlightening world, demanded whether the earth and its enjoyments have been made for mankind, or for a very small and not the most deserving class of men?

after the Ordonnances were issued, and turning them thus idle and flushed into the wine-houses, was one of the most prominent and immediate causes of the successful resistance of the capital. This is not noticed by Lady M., who merely repeats:

"Workmen, trades-people, the pupils of the *Lycée*, boys, and children, congregated and scoured the streets. The shops closed. Arts, science, commerce, trade, were all suspended. The Change shut its doors, the National Bank refused to discount; and thousands of citizens, deprived of employment, with want staring them in the face, were left loose to swell the great tide of discontent."*

Her ladyship goes on to paint the scene in very bombastic colours, making quite a theatrical picture of families and children, and groups and women, all heroism and tenderness, &c. &c.; but as this can neither inform nor entertain any body, we shall quote a letter from Lafayette, who has done his gray hairs so much honour in this momentous struggle, (and not more by any one act than by his fine declaration against inflicting the punishment of death for political offences; thus endeavouring to spare the ministers he had overthrowing, now that they are in his power,—a desire in which every good and wise man, who loves justice tempered with mercy, and who reads the re-action of all bloody deeds, must cordially sympathise):—this letter is dated 21st August, and addressed to Sir C. and Lady Morgan; and we give it both in the original and the indifferent translation.

"Au milieu du tourbillon où je vis, mes chers amis, je vous demande la permission de dicter ma réponse à vos deux bonnes lettres, en reconnaissant l'envoi de dix livres sterling. Nous avons fait une belle et rapide révolution. Toute la gloire en est au peuple de Paris; c'est-à-dire à la portion la moins aisée de ce peuple, aux élèves des écoles de droit et de médecine, &c. mêlés à la population et particulièrement à l'admirable Ecole Polytechnique, dont l'uniforme étoit partout un signal de confiance. Le peuple s'est montré aussi grand par sa générosité après la victoire, qu'il a été terrible et habile dans les combats. Je vois avec plaisir que vous approuvez la résolution prise par nous autres républicains, de concourir à l'érection d'un trône populaire, en l'amalgamant à des institutions républicaines. Le choix du prince et de la famille est excellent. Vous me demandez des nouvelles personnelles de votre vieux ami. J'étais à la Grange à déjeuner le Mardi lorsque nous avons reçu le *Moniteur* et les ordonnances: huit heures après j'étais à Paris. On s'est battu le Mardi soir, la journée du Mercredi, et du Jeudi. Le Jeudi matin, l'Hôtel de Ville, pris et repris, étoit devenu mon quartier général; et le drapeau tricolore, que j'y avais planté, il y a quarante un ans y flottait de nouveau. Le Vendredi on se battait encore dans les faubourgs; mais la plus grande partie de l'armée royale couvrait St. Cloud. La cour a fait mine de résistance à Rambouillet. Elle avoit encore dix mille hommes des meilleures troupes réglées. J'ai fait marcher vingt mille citoyens, ce qui a déterminé le mouvement de retraite. La famille royale a ensuite traversé la France sous l'escort de nos commissaires à écharpe tricolore. Elle a partout trouvé la silence, sans la moindre insulte. La France s'organise en garde nationale, dont on a voulu que je restasse provisoirement le commandant-en-chef. Toute la famille en est en

* The first tri-coloured flag is said to have been improvised of the shirt and habiliments of a dead soldier.

bonne santé, et vous dit mille amitiés. Nous sommes profondément touchés des témoignages d'approbation et de sympathie que nous ont été donnés par le peuple de la Grande Bretagne et de l'Irlande. Il faut espérer que cette révolution, sans tache, amènera la liberté de l'Europe. Recevez, mes chers amis, tous mes remerciemens et amitiés. LAFAYETTE."

"I must send you our new national song, by Casimir la Vigne, although mingled with other kindnesses to me; but I have not time to copy it."

Translation.—"Living as I am, in a vortex of affairs, I beg your permission, my dear friends, to dictate my answer to your kind letters, with an acknowledgment of the receipt of ten pounds, enclosed. We have made a noble and rapid revolution. The glory belongs to the people of Paris; that is, to the portion the least affluent of its population; to the pupils of the schools of medicine and of law, &c., mingled with the populace, and, more particularly, with the pupils of the admirable Polytechnic School, whose uniform was every where the signal of confidence. The people shewed themselves as great, by their generosity after the victory, as they were terrible and expert in the hour of combat. I observe, with pleasure, that you approve of the resolution which we republicans have taken, of concurring in the erection of a popular throne, by amalgamating it with republican institutions. The choice made of the prince and family are excellent. You ask for some personal news of your old friend. I was at La Grange at breakfast on the Tuesday, when I received the *Moniteur* and ordinances. Eight hours afterwards, I was at Paris. The fighting began on the Tuesday evening, and was continued through Wednesday and Thursday. On Thursday morning, the Hôtel de Ville, after having been taken and retaken, became my head-quarters; and the tri-coloured flag, which I had planted there forty-one years ago, again floated from its roof. On Friday there was still some skirmishing in the faubourgs; but the greater part of the royal army had retreated to cover St. Cloud. The court made a show of resistance at Rambouillet: it had still ten thousand of the best-disciplined troops; but I ordered twenty thousand citizens to march against them, which determined a retreat. The royal family have since traversed France under the protection of our commissioners with the tri-coloured scarf. A profound silence, undisturbed by a single insult, reigned wherever they passed. France is now organising itself into a national guard, of which it is desired that I should remain provisionally the commander-in-chief. All my family are in good health, and express towards you a thousand friendly sentiments. We are all deeply sensible of the testimonies of approbation and sympathy which have been offered us by the people of Great Britain and Ireland. Be it hoped that this revolution, without a stain, may effect the liberty of Europe. Accept, my dear friends, the expression of my thanks and friendship.

(Signed) "LAFAYETTE"†

We have to add, that Sir C. Morgan has furnished four essays or papers to these volumes, on Philosophy, the Public Journals, Primogeniture, and Public Opinion:—he seems to have had allotted to him all the subjects (ex-

* Written in English.

† A Paris paper states, that General Lafayette has received more than 5000 private letters, and upwards of 20,000 letters on public business, most of them from officers and soldiers en retraite, which remain unanswered. To answer the letters as they arrive daily, would, it is said, require ten or twelve secretaries.

cept the Postscript) beginning with P, and he has acquitted himself so very satisfactorily, that we should not have been sorry if his lady had allowed him a few other letters. We should then have had some intelligence, instead of long passages that lead to nothing; and a compilation which, taken altogether, would have been too much for the nerves of private friends in private correspondence, and too unimportant for a few columns of newspaper communications. On the flighty statements we can repose no dependence; the style is abominable, being no more English than a brindled cow or a Danish dog are white: all is overcharged; and we have to regret the foolish exposure of a naturally clever woman, eaten to the core with the most excessive vanity.

The Animal Kingdom described and arranged in conformity with its Organisation. By the Baron Cuvier. Translated, with large additional Descriptions, by E. Griffith, F.L.S., and others. Part XXV. *Reptilia*. Whitaker and Co.

We have more than once noticed this work in its progress towards completion, and bestowed our meed of praise on its conductors, for the judicious manner in which they have blended interesting illustrations of the habits and nature of animals with the scientific system of Cuvier. Like all other sciences, zoology has its own peculiar phraseology; which to the general reader presents nothing but a dry catalogue of hard names, while to the student of the science it furnishes the only means for systematising knowledge and classifying observations. The great advance which has been made in the study of natural history within the last few years has been owing rather to the accuracy than to the extent of the information acquired by modern travellers: when once the distinctive marks of the different classes and orders have been determined, the chances of mistake are infinitely diminished; we no longer meet with statements of anomalies and exceptions, but find that amid all variations and diversities there is a beautiful harmony in nature; that there are invariable laws for the animate as well as the inanimate creation; and that though within certain limits, there is room for many diversities, yet that those limits are never overpassed. The study of animated nature, always delightful, has thus acquired a new charm; for, in addition to its inherent interest, it has obtained at once the certainty and simplicity which constitute so great a portion of the pleasure derived from the study of the physical sciences. In man, nature has displayed the powers of the brain and the nervous system; to beasts she has given muscular energy; to the winged tribes of air she has presented a powerful pulmonary apparatus; and to the reptile kingdom she has assigned superior muscular contractility—whose results are ever the source of wonder and surprise. Each portion of zoological science has thus attractions peculiarly its own: in the mammalia we admire the display of strength and muscular exertion, while we trace the grades of docility and intelligence which find their consummation in man: the varied plumage and the rich harmony of the birds irresistibly arrest our attention; but in the reptiles we have to wonder at the amazing diversity of their forms, their wondrous tenacity of life, and, above all, their power of reproducing parts whose loss in other animals would be the certain termination of existence. It may well excite our astonishment, that there should be a common law of life to the alligator, the

great terror of Southern America, and the harmless earthworm that we turn up in our fields; but it is no less true; and different as they are in outward form, it will be found that this general law produces a multitude of particular conformations. The structure and frame of the different classes of animals ever determine the laws of their existence; and when the anatomist has discovered the relative power and deficiency of the several organs, the history of the animal's life is known. The organic conformation which distinguishes the reptile tribes, is thus clearly shewn in the work before us:—

“Vertebrated animals, with cold blood, may, in fact, be considered as almost forming another world. They preserve some analogy, it is true, with the superior classes, in the bony skeleton, in the general arrangement of the brain, of the senses, and of the principal viscera; but the heart, both in reptiles and fishes, has but one ventricle or cavity. The vesicular lungs of the reptiles, instead of receiving, as in mammifera and birds, the entire blood to be impregnated with the vital air, receives but a small streamlet of the venous blood, which is even oxygenated but feebly, for these animals breathe but very slowly through this pulmonary viscus, the tissue of which is so very lax. From this it results, that the blood, scarcely warmed and vivified by combination with the vital air, excites but languidly the entire organisation; accordingly, we find the reptiles nearly cold to the touch, like inanimate bodies: for this reason they are observed to seek and court atmospheric heat, or the warm sunshine; and the cold of winter reduces them to a state of torpidity. They seem, for the most part, to vegetate rather than live, to be insensible of a wound, and even scarcely to discover any considerable degree of anguish when cut in pieces. Their organisation very speedily renews many parts, such as the tail or toes, when they have been removed. As these animals have but very little cerebellum in proportion to their size, and a brain composed of but six small tubercles, their existence is not so absolutely concentrated in their head as ours. It seems rather to be attached to their spinal marrow, and to be more generally disseminated throughout their body. A tortoise has been known to live for eighteen days after the brain was removed, still walking about, but groping its way, for its eyes were closed, and the power of vision lost in consequence of the cutting of the optic nerves. A salamander has lived several months although decapitated by means of a ligature fastened tightly round the neck. The heart of a viper, when plucked out, will beat and contract on being pricked for the space of forty hours. From all this appears, that these animals have not such a centralised life as that of a quadruped or a bird, which would instantly perish from similar amputations. This pertinacious irritability in frogs and serpents renders them very proper subjects of galvanic and electrical experiments. Electricity is found to exercise a most powerful influence on them. Reptiles are exceedingly sensible to storms, and to an electric state of the atmosphere, of which they appear to foresee all the changes, as appears by the croaking of frogs, &c. This want of concentration of vitality in the brain has, in the reptiles, as its natural accompaniment, a marked diminution of intelligence; and though some of them can be tamed, it is next to impossible to teach them any thing.

“These animals all respire the air, because they have lungs. But this organ is vesicular, and the blood-vessels which arrive at it are only

branches of the vena cava and the aorta; so that those vessels form no considerable system, and transport but a small quantity of blood to the lungs, instead of a mass of this fluid almost equal to that of the rest of the body, as in warm-blooded animals. For this same reason the heart of reptiles possesses but a single ventricle, which suffices to make their blood circulate, independently of respiration. The latter may remain suspended for some time without interrupting the course of life and the circulation of the fluids. This is witnessed in frogs, salamanders, and marine tortoises, which dive under water, or bury themselves in mud for entire days. The colder the atmosphere is, the longer these animals can subsist under water, without having occasion to respire the air, and without perishing, for they are then in a state of semi-torpor.”

The sources of the great diversity between the powers and acuteness (if such a word be applicable) of reptiles is stated with equal simplicity; so that the extreme limits of variation may be easily ascertained.

“The quantity of respiration in reptiles is not fixed, like that of mammifera and birds, but varies with the proportion which the diameter of the pulmonary artery bears to that of the aorta. Thus tortoises and lizards respire considerably more than frogs, &c. From this proceed differences of energy and sensibility, much greater than can exist between one mammiferous animal and another, or one bird and another.”

The present Number contains the order *Chelonina* (tortoises), and part of the *Sauria* (lizards and crocodiles). The former division is enlivened by a very interesting account of the establishments for breeding turtle, in the West Indies; but we cannot understand why the writer should suppose that such depôts will lead to the destruction of these animals. Though civic banquets may at present consume more than can be reared in the turtle-ground, and consequently cause these establishments to be rather feeding-stores than breeding-places, the opportunities they afford of closely observing the animal's habits and economy, must eventually lead to the formation of a good system for their regular production, and thus ensure the continued glory of civic dinners, and the luxurious gratification of *gourmands*.

The Revolt of the Angels; and the Fall from Paradise, an Epic Drama. By Edmund Reade. 8vo. pp. 204. London, 1830. Colburn and Bentley.

ON the appearance of Mr. Reade's *Cain*, we expressed the opinion we still hold, that, whether we considered the creative imagination it displayed, or the originality of thought it evinced, *Cain* was the work of no ordinary mind, and of no ordinary promise. Mr. Reade is a writer whom we would so much sooner encourage than depress, that we feel both reluctance and regret to say that the production now before us does not realise our anticipation. In plan it is extravagant—an extravagance which shocks the more from opposition to all our old beliefs. We acquit Mr. Reade of intentional irreligion; but the pages before us shew to what lengths a favourite theory and unbridled fancy are apt to betray a writer. We are willing to allow all possible license to poetry, but it is carrying this license a little too far when, making Scripture its foundation, it takes upon itself to give an entirely new version of all we have been accustomed to hold true and sacred. Lucifer is here represented as creating Adam in defiance of the

Almighty; while Eve, the work of God himself, is the sinned against, not the sinning. The author calls this originality: we are more tempted to consider it impiety. If an author says this is but a fable, treat it as such—we would not wish to judge him by other than his own rules; but when a poem, professing to take a serious and religious stand, and intending to “justify the ways of God to man” (the motto in the title-page), begins by altering the history of God’s own written word, we must beg leave to object to this new edition of Genesis altered and corrected.

Vague, unsatisfactory, and deficient in human interest, we do not think the *Revolt of the Angels* either merits or is calculated for popularity; and it is nonsense for a poet to talk of the “chosen few:” his appeal is to the many, to the general and extended sympathies of the human race. It appears to us that Mr. Reade’s studies are not of a nature to make a great or an English poet; his mind seems imbued with that wild, German school of mystical metaphysics whose aim is the impossible, and which, while endeavouring to raise the great curtain of mystery, utterly neglects the beauty and the truth which lie before it—accessible, and therefore delightful to all. Mr. Reade has great imagination, let him give it more wholesome food than these vague and vain reveries; let him leave the origin of good and evil to its own impenetrable obscurity, and content himself with painting their human developments. Though, as a whole, we cannot either admire or approve of this *Revolt of the Angels*, it has many favourite passages, which lead us to hope much still from their author. We extract the following chorus after the creation of Eve:

“It is done, the work is done:
Lo, thou hast created one
That on yon new world shall prove
How vain is knowledge, poised against love.
And the opposer there shall own,
Baffled, in his wiles o’erthrown,
How strong the weakest thing can be
With one spark of faith from Thee.
In her thou to man hast given
A ray to lead him to thy heaven!
To purify from human clay
Dust us and selfishness away!
A resting-place for his warm heart
To lean on, when all else depart.
When the hopes he trusted in,
Man’s brief breath of praise to win,
By deed or thought that, good or ill,
Owes to its pride its impulse still,
Are all blighted, crush’d, and fled,
Then those hopes once cherished,
He brings back broken to her breast,
To be renewed or still’d to rest!
Yes, though he doth kneel to her,
He is not idolater:
For her heart is the pure shrine
That will lead him back to thine.
As the flame that points above,
Earthly leads to heavenly loves;
For ’tis but an overflowing
Of the soul’s deep joy, bestowing
Its fond transports on the thing
Of its hope’s imagining,
Till that hope doth higher tend,
Centering to its deathless end!
She his parent, guide shall be
Through his helpless infancy;
And still watch him when she is
Forgot, and he in restlessness,
Tolling through the world to find
That bliss which dwells but in the mind!
But upon his dying bed
She shall bend her patient head,
Forgive her wrongs, and close his eyeballs dim:
Sole earthly minister ’twixt God and him!”

A speech of Eve’s, too, is full of poetical feeling, though strange in rhythmical construction.

“Oh yes! there are longings in our human nature
Which not even human love can satisfy!
I know it, I have dwelt on them in secret,
Unknown to thee; for how can love breathe aught
To sadden what it loves? I have watched the stars,
The setting sun, that looks like the abode
Of glorious spirits, the earth crowned with flowers
Happy and young, the woods and voiceful streams,

And the blue sky enfolding, hallowing all!
And when my heart yearned towards them lovingly,
A voice hath come, a warning to me,
Not thus to set my heart upon them, knowing
That I must leave them, and they flourish on.
And then I wept, and blessed them; for though I
Died, yet I felt they would live on immortal.
And bloom thus after, making others happy!
So was my joy still touched by a shade of sorrow!
And oh, pang deeper yet! when I have heard
Thy voice, thy gentlest voice breathe in my ear
Sounds of deep tenderness—when I have seen
Thy full eyes speaking back their love to mine,
Even in those blessed moments, I have felt
Inly, and oh, how deeply! I have felt
That we must part! that the dread day must come
When thou and I shall see each other no more!
When our two hearts, that now swell on with rapture,
As if they should live thus entwined for ever,
And ask no heaven beyond their human love,
Shall coldly wither to dusty nothingness!”

The minor poems are very inferior: we cannot agree in the estimate our author has formed of his friend’s accompanying productions.

The Book of Scotland. By William Chambers. 8vo. pp. 532. Edinburgh, Buchanan; Hunter: London, Longman and Co. 1830.

By great industry and research Mr. Chambers has here produced what may be truly esteemed as *The Book of Scotland*; for it contains very clear and satisfactory accounts of the past and present state of that ancient kingdom—its political institutions, its municipal regulations, its church, its law establishments, its universities and other sources of education, its burghs, its public charities, its arts, its banks, and many of its customs. Some topics are, perhaps, more slightly touched upon than we could wish, and some of considerable interest are altogether omitted; but the volume is already one of thick and massive form, and to have “diluted” upon other subjects must have swollen it into at least a second of equal bulk. Therefore must we be contented with the quantity of excellent information which we have got; and signify our hope that by meeting with the encouragement his meritorious labours deserve, the author will be induced to enlighten us more at large, hereafter, respecting the general literature, the scientific bodies, the periodical press, the manufactures, and other matters which concern and characterise the country. The *Picture of Scotland*, indeed, may be considered as effecting this purpose in a great measure; and Mr. C. tells us, in his preface: “While that publication adheres principally to a description of things of a tangible nature, the present may be best depicted as an attempt to expose the mechanism regulating society in its public relations. In other words, while the one presents a luminous picture of the *body* of the country, the other aspires to exhibit the *soul* with which it has been endowed.”

Chamberlayne’s *Magna Britannia Notitia*, published above seventy years ago, is referred to as the only preceding work similar to that now before us; and the author justly claims our award of praise for the diligence with which he has endeavoured to fulfil his thus almost original, and certainly very extensive, task. Of the way in which he has acquitted himself, the following extracts will afford a fair criterion; and at the same time illustrate a few of the features which, like their high cheek-bones, distinguish our northern neighbours.

In olden days there was a custom which might be revived with much effect, of course with such alterations as modern manners might suggest—we allude to the formal opening of parliaments; and we are sure all London would delight to see such a sight on the 26th of October next.

“At the opening of the regularly constituted parliaments, there was practised a public cere-

monial of a very imposing character, which was the delight of the lower and middling ranks of society; and the want of which after the union, was a matter of serious regret to many of the trades in the city. This ceremony was called ‘the riding of the parliament,’ a pageant which still forms the subject of legendary reminiscence. It was enacted, in a style of extraordinary splendour in the reign of Charles the First, when that unfortunate monarch was on a visit to the Scottish metropolis. The procession took place in this manner:—the whole of the members belonging to each of the estates, according to prescribed usage, met at the palace of Holyroodhouse, in order to wait on the king, and afterwards convey him in honourable procession to the parliament house. Each was dressed in his appropriate official robes, and mounted on horseback, with a serving man on foot, leading the richly caparisoned animal by the bridle-reins. After being drawn up in the palace yard, according to the etiquette of the period, by the Lord Lyon, King at Arms, and his subalterns or marischal’s men, they proceeded, in a slow and solemn cavalcade, accompanied with the clanging music of kettle-drums and trumpets, along the ascending narrow line of street, towards the place of meeting. A distinguished military officer and a party of soldiers led the van, who were succeeded by the commissioners of burghs and shires, two and two. Next came the barons, after whom the peerage in the same manner, according to priority of rank and title. The Lord Lyon, with his pursuivants, heralds, and trumpeters, preceded the crown, sceptre, and sword of state, carried by the proper officers.

“On prancing steeds they forward press’d,
With scarlet mantle, azure vest,
Each at his trump banner wore,
Which Scotland’s royal scutcheon bore:
Heralds and pursuivants, by name,
Bute, Islay, Marchmont, Rothessay, came,
In painted tabards, proudly shewing,
Gules, argent, or, and azure glowing,
Attendant on a king at arms;
Whose hand the armorial truncheon held,
That feudal strife had often quell’d,
When wildest its alarms.”

After these came the king, supported by several young pages of noble family, and his guards. The procession closed with the chamberlain, master of the horse, and other officers of state. On arriving at the parliament square, or close, as it was called up to a recent period, the party dismounted, and, in a particular order, entered the house. After the king was duly placed in the throne, prayer was said, and the roll called by the lord clerk register, after which the estates proceeded to some preliminary business. A speech from the chancellor closed the proceedings that took place; and after a sermon was delivered by some favourite preacher, the house rose, and the members again remounting their steeds, which were carefully ranked up in the square, the procession returned in much the same manner to Holyroodhouse.

The Scottish parliament, when thus met, set about the national affairs, somewhat in a fashion which was proposed as a novel reform in our House of Commons last session, when, oppressed with talk, it could not get through business, and it was suggested that committees should be appointed to relieve the weight of real parliamentary pressure, while the rest of the members debated the questions.* In Scotland—

“Under the pretence or belief, that the unwieldiness of a body composed of three hundred members, was inimical to the furtherance of

* It was an improvement upon this, and a still newer plan of reform—that there should be two houses, one to talk, and the other to do the business.

public business, or the quick progress of petty bills, it was the business of the estates, on the first or second day of their meeting, to choose a committee composed of delegates from the different ranks in the house, designated the Lords of the Articles. This body of members, which formed the real acting parliament, amounted generally in number to twenty-seven members, which number was divided into three distinct committees of nine. Each committee of nine was again composed of three peers, three bishops or lesser barons, and three commoners. The authority which was conferred upon these lords of the articles, was of the most important character; but each division of the triune body had assigned to it particular duties. The first was invested with the most unlimited authority regarding the admission of public or private bills into the house, which it could either permit to enter or totally reject. The second committee had deputed to it the powers of the estates, with respect to the trial of criminals. The third committee acted as a court in civil cases.

"As most of the lords either secretly owed their elevation to the court, or had held out to them the prospect of preferment on furthering the views of the privy council, the committee acted as a barrier to all free discussion or liberal policy. This form of process in regard to the passing of bills through the Scottish estates, was possibly one of the most effectual systems ever established by a government pretending to be formed upon the representative system, for smothering the voice of the nation, and reducing the parliament to a mere cabinet council. Immediately after the Revolution in 1690, the Lords of the Articles and their mischievous powers were abrogated. It may be mentioned, that, during the civil wars, there was always a standing committee of parliament, which, like the staff of a regiment, remained on duty during the recesses, and on emergencies had the power of calling up the members."

We manage things better now! but truly there was not so huge a fund to plunder from, after all, in those times; and it may be allowed, that for the nibblings of such candle-ends and cheese-parings, the machinery was sufficient; for previous to the Union, the revenue of Scotland was only 110,694*l.*; a sum, too, at least "a third higher than that which half a century before that period had been raised by the state: but the revenue, great as it appeared to the Scotch, was considered by the English as far too mean to entitle it to rank with their highly taxed country; an additional impost of 49,306*l.* was thereupon imposed—thus causing the total revenue to be exactly 160,000*l.*" The wonderful increase of the revenue since that period is a luminous indication of the benefits which have flowed from the measure. In the year 1813 "it had risen to 4,843,229*l.* 12*s.* 11*d.*; from which, if we deduct the expense of management and the moneys paid as drawbacks, jointly amounting to 639,132*l.* 5*s.* 2*d.*, the net revenue contributed to the treasury will be 4,204,097*l.* 7*s.* 9*d.*, being an increase of 4,044,097*l.* 7*s.* 9*d.* since the Union. It is impossible to mention the actual revenue in the present or recent years; as by some new arrangements a great proportion of the taxes are now sent direct from the collectors to the treasury, instead of passing, as formerly, through the Scottish Exchequer. The expense of management in Scotland, as it is now constituted, must be on an extremely moderate scale, and can only consist in the payment of collectors and other civil officers. Since the proclamation of peace in 1815, ex-

cept during the riotous proceedings in the west in 1819, there has not occurred the slightest necessity for the interference of military of any kind in preserving the peace of the country. On an average, since the first-mentioned period, there have been maintained in Scotland 1500 troops; but they are literally of no use whatever—for the civil power is sufficiently competent to quell all disturbances; and therefore they can only be esteemed serviceable in so far as they preserve the forts and barracks from falling into an unprofitable state of decay."

Of the very important point, of the liberty enjoyed by the people, Mr. Chambers takes a striking view.

"At present (he observes), notwithstanding of their strong love of nationality, they scarcely observe that it has evidently for many years been the intention of the government to impair their separate institutions, and reduce the country to the character of an English province. It hardly requires to be noticed, that owing to the complete want of sympathy between the Scottish members of parliament and the people, to whom they ought to be protectors, they do not feel inclined, in opposition to the will of ministers, to retard voluntarily this march of Anglicism. Although many improvements have been effected, it can admit of no question, that the civil liberties of Scotland are still of a much lower tone than those of England. We are aware that this will hardly be allowed by our countrymen; but a studious examination of the representative system, and some of those institutions immediately to be described, is only required to place it beyond the possibility of a doubt. The Scotch, it may be said without partiality, in the same ratio enjoy fully less freedom of action in religious matters than the English; a circumstance which will not have escaped the notice of all who are any way intimate with the manners of the two countries. Although the Kirk of Scotland has long since dropped all interference in the general affairs of the country, still it has left among the people a species of terror of its authority, which has not been meliorated by subsequent events. In some parts of the country its ministers still subject the inhabitants to a personal scrutiny of an inquisitorial nature, which is neither experienced, nor would be permitted by the English. Free religious discussion is likewise at a far lower ebb in Scotland than in England; and it is very seldom that writers can be found so daring as to attack boldly either the governmental or doctrinal positions taken up by the kirk, or scrutinise severely the practices of its clergy. Not but that such might be done with perfect impunity; but the singular national idiosyncrasy above commented on, hangs about the people in religious as well as civil matters, whereby very fallacious propositions have been suffered to remain unchallenged ever since the turbulence of Melville introduced the system of religion into Scotland which at present exists. While the Church of England in no case interferes with the domestic privacy of the people, and may be characterised as the most liberal communion in the great Christian family, it has for centuries been subjected to the most merciless and malicious criticisms, without bestirring itself either to notice or punish those who were discontented with its government, or who endeavoured so openly to bring its canons into contempt. The calm, dignified bearing of the Church of England in the midst of a thousand daily attacks, and the extreme *touchiness* of the Kirk of Scotland and its adherents, present a wide field for discus-

sion, in comparing and judging of the degree of liberty of thought and action separately enjoyed in the nineteenth century by the English and the Scotch.

"There are sixty-six royal burghs in Scotland returning members to parliament; but it must be comprehended that these by no means form the bulk of the Scottish towns; for upon an average there are precisely two for every county, which besides contain many thriving populous towns and villages, possessing no elective franchise, or any privilege whatever. The royal burghs of Scotland are, in many instances, those towns which, having existed longest, and outlived the moving causes of their creation, stand as monuments to the passing traveller of the old and feeble constitution of the nation. Being placed under the control of a cramping and searing authority, unchanging in its features, they remain to this hour—except where some great energetic and neutral [query?] principle has been brought into active operation—in nearly the same stagnating and unimproved condition which distinguished them fifty, an hundred, or five hundred years since. Situated in immediate contiguity with other prosperous towns, divested of the same peculiarities of internal government, they have been left far behind in the race of common improvement, and have apparently settled themselves down in a hopeless state of decay. In travelling athwart this northern kingdom, the stranger will hardly fail to be amused in marking the distinctive peculiarities of many of those antequely fashioned country towns. They are easily to be distinguished by their long, and almost empty single street; their total absence of trade and commercial bustle; the stealthy and demure pace of their few inhabitants; their starting silence; the continual presence on the causeway of two or three of the *conscripti patres* of the place in close confidential discussion upon 'town matters;' by a fragile and impure gaol; and, if the place be maritime, by the choked-up harbour, full of sludge and decayed boats, and altogether oblivious of 'shipping' since about the period of the Darien expedition; by the dilapidated pier, patched, mended, and half washed away, yet forming a prolific source of employment to a 'trades' counsellor;' and, above all, by the agonising proximity of some vulgarly wealthy 'port,' blessed by the absence of all civic government, cruelly thriving on the other's ruins, by its foolish unconstitutional admission of vessels at the natural and proper rates. Such the stranger will find to be the prevailing insignia of a great proportion of the Scottish royal burghs.

"The original cause of the institution of corporated bodies of tradesmen, was the creation of warlike bands for the defence of the royal prerogative; a remuneration for burgh services, such as watching and warding; the encouragement of manufactures; and the protection of the public from articles made by ill-educated artisans. But the first of these objects is now entirely forgotten, and the latter, in consequence of the public being sufficient judges of all kinds of work, has ceased to be of any import. As their members have the chartered right of supplying the citizens with certain articles, this monopoly injures the spirit of improvement, and is otherwise mischievous in its effect. It is nevertheless to be remarked, that in cities which have increased in magnitude, these immunities are now of little avail, inasmuch as the corporations are almost completely circumvented by tradesmen without the liberties. The central parts of these towns are

abandoned principally to the lower classes, and they are left in the possession of privileges scarcely worthy of being exercised.”*

In noticing the Consistory Court, the author quotes the following oath, as a remaining fragment of Catholicism.

“While kneeling, the witness must lay his left hand on an open Bible, and hold up his right. The words he is made to repeat, we believe, are as follow: ‘I hereby renounce all the blessings contained in this Holy Book, and may all the curses therein contained be my portion for ever, if I do not tell the truth; and I swear by Almighty God, as I shall answer to God at the great day of judgment, that I will tell the truth, the whole truth, and nothing but the truth, so far as I shall know or be asked at me.’”

We purpose, in another paper, to give a few further extracts from this useful and laborious work.

Bernard's Retrospections of the Stage.

(Third notice.)

ONE cheer more, and we relegate these amusing vagabonds (two volumes) into the wide world, where we have no doubt they will make themselves very generally agreeable.

1786-7. At some amateur theatricals young Lawrence is introduced to us in the following manner:—

“One of the minor characters of this performance was supported by young Lawrence the painter, then about seventeen, who was receiving professional instructions, I believe, from a Mr. Hoare, of Bath. On my first visit to Bath, I became acquainted with his father, who had formerly been an actor, and was then an innkeeper at Devizes. The stage, though a relinquished, was his favourite pursuit, and he came to Bath regularly once a-week to pass an evening in the green-room. Here he recounted his early adventures, in connexion with some member of the company, and criticised actors metropolitan and provincial. I could not learn the measure of his own talents, but he certainly deserved the fame he enjoyed of being a most excellent reader. He had a clear, full voice, and gave to Milton and to Shakspeare all their dignity and tenderness. Ability of any kind is seldom unaccompanied with vanity; it is the shadow which is sure to be produced by the sunshine of public favour. Lawrence not only used to entertain his friends at home (round a snug parlour fire) with his ‘readings,’ but, whenever a new play was announced, would come over to Bath, and proffer his services to the actors, to ‘read their parts;’ a kindness which some who intended to sponge at his house would accept, but others of more dignity declined. The wag of the Bath green-room (as indeed he continued to be) was Jonathan Payne, an actor of the true

Joe Miller order—more famous for the good things he said off the stage than on. Payne, however, was of that particular species of humorist who is fond of a practical joke; and the worthy innkeeper presented a notable means for the exercise of his genius. ‘Rosina’ was to be performed, in which Payne was cast one of the rustics. Meeting Lawrence behind the scenes, he told him that he had to play a new part the next night, and should feel extremely obliged if Mr. Lawrence would read it to him. Lawrence bustled up-stairs to his dressing-room (which was that of a dozen others) with the greatest alacrity, and Payne very gravely handed him the part. Lawrence put on his spectacles, and began to con it over. ‘Act I. Scene I. Enter Rustic, O. P.; at end of the song, exit P. S., with group. Scene II. Enter Rustic, P. S., with haymakers. Exit Rustic, with ditto.—Act II. Enter Rustic, O. P. with rustics.—on till the end.’ Lawrence, reading the above aloud with great deliberation and emphasis, involved himself in a mist of surprise, and his hearers in a roar of laughter. Looking up, he then exclaimed, ‘Read your part, Mr. Payne; I don’t perceive you have a word to say.’ ‘No, sir,’ said Payne; ‘for, if I had, I should not have asked you.’ But Lawrence at this time owed all his notoriety to his son ‘Tom,’ a boy of about nine years of age, who exhibited a wonderful precocity of talent in taking likenesses. His father, however, had taught him to read Shakspeare and Milton with considerable effect, and considered his ability in this respect (since it proceeded from himself) of a much higher order than the former, which was natural. Nevertheless, the distinction between the two was, that as a reader ‘little Tom’ was but little Tom—a very clever child, nine years of age, and, as a sketcher of likenesses, he disclosed the rudiments of the future powers of the President. There was something about little Lawrence, however, which excited the surprise of the most casual observer. He was a perfect man in miniature; his confidence and self-possession smacked of one-and-twenty. Lawrence frequently brought his boy to the green-room, and we would set him on a table, and make him recite ‘Hamlet’s directions to the Players.’ On one of these occasions Henderson was present, and expressed much gratification. The little fellow, in return for our civilities and flatteries, was desirous to take our likenesses the first time we came to Devizes; and Edwin and myself afforded him an opportunity soon after, on one of our non-play-day excursions. After dinner, Lawrence proposed giving us a ‘reading,’ as usual; but Tom reminding him of our promise, we preferred a specimen of his talents, as being the most novel. The young artist collected his materials very quickly, and essayed my visage the first. In about ten minutes, he produced a faithful delineation in crayon, which for many years I kept as a curiosity. He next attempted Edwin’s, who, startled at the boy’s ability, resolved (in his usual way) to perplex him. No man had a more flexible countenance than Edwin; it was not only well featured, but well muscled, if I may be allowed the expression, which enabled him to throw over its surface, as on a moral prism, all the colours of expression, minutely blending, or powerfully contrasting. He accordingly commenced his sitting, by settling his face into a sober and rather serious aspect; and when the young artist had taken its outline and come to the eyes, he began gradually but imperceptibly to extend and change it, raising his brows, compressing his lips, and

widening his mouth, till his face wore the expression of brightness and gaiety. Tom no sooner perceived the change than he started in supreme wonder, attributing it to a defect in his own vision. The first outline was accordingly abandoned, and a second commenced. Tom was now more particular, and watched him narrowly; but Edwin, feature by feature, and muscle by muscle, so completely ran what might have been called the gamut of his countenance, (as the various components of its harmony,) that the boy drew, and rubbed out, till his hand fell by his side, and he stood silently looking in Edwin’s face, to discover, if possible, its true expression. Edwin could not long maintain his composure at this scrutiny, and revealed the hoax with a burst of merriment that mimicked thunder.—Little Tom could not take up Shakspeare or Milton and read at random: he had been instructed in particular speeches, and to those he referred. There was one in Milton (‘Satan’s Address to the Sun’) he had been long wishing to learn; but his father, from an apprehension that his mind was yet unequal to its grasp, had passed it over. Tom had listened, nevertheless, whenever the former read it to a friend, and surprised his father not slightly with the news, that he could imitate him. A family in Devizes, who were well known to Lawrence, giving a party one evening, requested the favour of his son’s company for his readings. Lawrence consented; but on condition that Tom was not requested to select other than his own passages. He then cautioned his boy against attempting any thing in which he was not perfect, and particularly this Address of Satan. In the evening, Tom walked to the house, with Milton and Shakspeare under his arms, and was shewn into the company with the utmost attention. When the complimenting, &c. was over, he was asked what recitation he preferred in Milton. He replied, ‘Satan’s Address to the Sun;’ but that his father would not permit him to give it. For that reason, they were particularly eager to hear it, as they wished to discover whether Tom was a mere parrot or a prodigy. His dutiful scruples, however, were not to be overcome till they had promised to obtain his father’s forgiveness. He then turned to the forbidden page, and a written slip of paper dropped from it. A gentleman picked it up, and read it aloud—‘Tom! mind you don’t touch Satan!’ My reader must conceive the effect which the wording of this caution produced on the hearers. Tom, however, did have dealings with Satan, and handled him, as I was informed, with great discretion. As young Lawrence grew up, his Shaksperian readings, and his frequent visits to the theatre, imbued him with a strong dramatic propensity, and about his sixteenth year* he had serious intentions of making the stage his profession. I was now in Bath once more, but with a wonderful improvement in my fame and fortunes. No man could be more favourably situated than myself, (combining private with public advantages,) to give advice or assistance to an aspirant; and the young artist needed no introduction in coming to me for both. I heard him recite Jaffier; and though private recitation, I will admit, is at all times an imperfect criterion, I did not perceive, on this occasion, any evidences of talent he could balance against that which was acknowledged in his present pursuit. I desired him, however, to call on me again, and said that, in the interim, I would speak to Mr. Palmer. In the

* The winter, 1786.

* “The metropolitan incorporations are still excessively strict. They have been left the inheritance of that part of the city, now shunned as a residence by all but the lowest and a few of the middle classes; and on this account they are anxious to make the most of their chartered rights. No carpenter or other tradesman is permitted to be called into the ancient city to do even the smallest piece of work, without paying a fine in proportion to the extent of ‘the job.’ Shoes are allowed to be introduced for sale on market and fair days, generally after a certain hour. In some places the hour is one o’clock, which is marked by the ringing of what is called ‘the shoemakers’ bell.’ At one time the corporation of shoemakers of Edinburgh strictly prohibited the introduction of shoes into the town, except on market days, from the little burgh or barony of Portsburgh, unless the unfree artisans of that place conveyed them in to their customers *hid beneath their aprons.* Prior to the Reformation, each of the incorporations had an altar in the church of St. Giles, dedicated to the service of their patron saint, for the expense of which the members were taxed.”

interim I met his father, and felt myself bound to disclose what had passed. Lawrence had failed in his business at Devizes, and was looking forward to his son's efforts for support. Knowing from experience the precarious fortunes of an actor, and, by this time, the value of his son's talents, he was necessarily alarmed at my intelligence, and begged I would use all my influence in dissuading him from his design. I knew young Lawrence's filial attachment, (which, among his acquaintance, was indeed proverbial,) and I suggested that the best plan would be, to achieve the desired object by a surprise. I appointed Lawrence, therefore, to come to my house the next morning, about twelve, with some friends, and sent word to his son to meet me there half an hour after. I then went to Mr. Palmer, told him the circumstance, and requested his co-operation. He promised it most freely, and agreed to attend the rendezvous at the time appointed. By half-past twelve, the next day, all the parties were assembled: old Lawrence and his friends, in the back-parlour; young Lawrence, Mr. Palmer, and myself, in the front. The manager was no sooner introduced than, with great adroitness, he desired a specimen of young Lawrence's abilities, and took his seat at one end of the room. I proposed the opening speech between Priuli and Jaffier, and one between Jaffier and Belvidera. We accordingly commenced: (I, Priuli; he, Jaffier;) and he proceeded very perfectly, till, in the well-known speech of 'To me you owe her,' he came to the line,

'I brought her—gave her to your despairing arms;
Indeed, you thanked me; but—'

but here Jaffier stammered, and became stationary. I held the book, but would not assist him; and he recommenced and stopped, reiterated and hemmed, till his father, who had heard him with growing impatience, could contain his vexation no longer, but, pushing open the door, thrust in his head, and prompted him to the sentence,

— 'a nobler gratitude
Rose in her soul, for from that hour she loved me,
Till for her life she paid me with herself;'

then added, 'You play Jaffier, Tom! D—m me if they'd suffer you to murder a conspirator!' The whole party now made their appearance, and began to remonstrate; when Mr. Palmer, taking young Lawrence by the hand, assured him, in the most friendly manner, that he would do any thing to serve him; but that it was his conviction the latter did not possess those advantages which would render the stage a safe undertaking. This address did not produce an instantaneous effect. It was obvious that the young artist entertained the reverse opinion: a conversation now ensued, in which I, abusing the life of an actor, and other friends painting the prospects of a painter, young Lawrence at length became convinced; but remarked with a sigh, 'that if he could have gone on the stage, he might have assisted his family much sooner than by his present employments.' My reader can appreciate the affection of this sentiment; but I am unable to describe its delivery, or the effect it took upon every person present. Passing over, therefore, the scene which ensued, I will only add, that young Lawrence went away, renouncing his intentions and retaining his friends. It is certainly one of my pleasantest recollections, that, by thus lending my aid to check this early propensity, (which, if encouraged, must have led to a renouncement of the pencil,) I was an agent, however humble

or indirect, in the furtherance of my worthy friend's ultimate prosperity."

Of Mrs. Hunn, the sketch is no less original and interesting.

1791. "The lady that led our tragic business this summer at Plymouth was my old friend Mrs. Reddish, formerly Mrs. Canning, and now Mrs. Hunn. On the decease of her second husband (the tragedian of Drury Lane), she had married a respectable merchant of Plymouth, and retired from the stage; but the latter gentleman's misfortunes in business threw her again on the profession as her only resource. As an actress, the efforts of Mrs. Hunn were more characterised by judgment than genius; but Nature had gifted her in several respects to sustain the matrons. As a friend and a companion, she possessed all the intelligence, with the accomplishment to be desired in a woman, surrounding her talents with the halo of her becoming principles. It was at all times in her domestic, rather than her public character, that Mrs. Hunn secured the public admiration, and met with a patronage which talent might not have obtained. I had peculiar opportunities of seeing this, as well as of noting her great affection for her children. She had two little girls with her (the Miss Hunns) and a son, George Canning, then at Lincoln's-inn, I believe, preparing for the bar. Upon the latter all her hopes rested for the ultimate recompense of her struggles and disappointments—hopes that were singularly realised. I had the pleasure of reading many of his letters to his mother, in which, describing the progress of his studies and his prospects, the enthusiasm of genius was lost in the glow of filial tenderness: his acquirements and his connexions he valued only as the means of enabling him to provide for a mother who, in his person, had made so many sacrifices to revive the character of his father. These letters were Mrs. Hunn's greatest treasures. She read them going to bed, and carried them in her bosom as amulets against the poison of care or despondency. But Mrs. Hunn was not more distinguished by this maternal affection, than a moral courage and a self-possession which are the usual concomitants of sterner and colder dispositions. Upon this point I can give my reader a remarkable proof. Mrs. H., on reaching Plymouth, applied to me to aid her in procuring lodgings, which she required to be on a respectable but economic scale. The only ones I knew of belonged to Symmonds, our carpenter, which were near the theatre, and possessed many conveniences; but some person having reported that the house contained a lodger already, a perturbed and perambulating spirit, other occupants it had latterly wanted. Symmonds, therefore, offered them to Mrs. Hunn for a nominal rent, if she would be the means of putting to silence this unfounded and ruinous rumour. The latter was happy to take them on such easy terms, and said with a smile, that 'it was not the first time she had been concerned in the 'Haunted* House.' On the first evening of her entering these lodgings, after her children were in bed, and the servant was dismissed, she resolved to sit up a few hours, to ascertain whether any sounds or noises were to be heard. What she anticipated in this attempt I cannot say; but it would have been excusable in the wisest of either sex, if in the stillness of that time, and the loneliness of her situation (a book and a pair of candles her only companions), the powers of the imagination received a stimulus to overthrow those of the reason. The carpenter's shop, on the

ground-floor, comprehended the width of the house, and was barred and bolted on the inside. As the workmen made their exit at night through a door which opened into the private passage leading to Mrs. Hunn's apartments, this door was usually left on the latch. About half an hour after Mrs. H. sat down to her book (between eleven and twelve), she actually heard a low but quick noise in the room beneath, as if some one had taken up an extra-sized plane and chipped off the entire side of the carpenter's bench. This was the sounding note to the diabolical chorus to follow: the noise ceased, but soon re-commenced, and rose up with an accompaniment of all the tools in the shop,—a loud and vigorous concert of machinery, from the violoncello-movement of the saw, to the fife-squeaking rasp of the file, kept in tune by the time-beating thump of a heavy axe. It seemed as if all the deceased artificers of the district had assumed their places at the bench, and were executing a piece of carpentry for his infernal majesty. Mrs. Hunn no sooner received this aricular than she determined to have ocular evidence of the fact. Few women in such a situation would have been troubled with their sex's common feeling (or failing)—curiosity; and fewer would have possessed the courage, equally uncommon, to have attempted its satisfaction. Laying down her book, and taking up a candle, she opened the staircase-door and listened; the sounds were still audible, and proceeding from the same quarter. Taking off her shoes, to prevent the slightest alarm, she lightly and cautiously descended the stairs, and placed her hand upon the latch of the shop-door. She assured me that at this moment she heard the sounds as distinctly as in her own apartment, and felt convinced they were produced by human agency. In a second the latch was lifted, the door thrust open, and her head and candle thrust in;—when, lo! all was still and stationary; not a tool was out of its place, and not a carpenter to be seen, spiritual or material. To be assured of the truth, she even entered the shop, walked round the benches, and examined the fastenings of the doors and windows; every thing appeared in order and security. She then returned to her room, doubting the reality of her recollections, when the sounds re-commenced, and continued for about half an hour, till they ceased altogether: she then retired to rest. The next morning, her impressions of the above were seemingly so monstrous, that she resolved to say nothing till the events of another night either set aside or confirmed them. Between eleven and twelve the same noises occurred, and she repeated her experiment, which resulted in the same manner. The next day the landlord and myself were fully acquainted with the matter, and invited to partake in her conviction. I was willing to take her word, but the carpenter was not—he sat up with her the ensuing evening—heard the sounds, and when Mrs. H. prevailed on him to descend the stairs with her, he was so frightened, that, instead of entering the shop, he ran out of the front-door. Mrs. H. was now given the apartments rent-free, and continued to reside in them throughout the summer; the noises occurred every night for about half an hour, till at length they grew so familiar, that she heard them with indifference. 'Habit,' she said to me, 'is second nature, Mr. Bernard: if I didn't hear the carpenters at work every night, I should begin to fear they were coming up stairs!' These are the facts of this truly singular circumstance; they occurred in the knowledge of a hundred persons besides myself: my reader, upon this

* Addison's.

assurance, may account for them as he pleases; all I wish or care to establish is the courageous character of Mrs. Canning."

We find, on looking at our notes, that we must yet give Mr. Bernard *another* cheer more.

Constable's Miscellany, Vol. LVIII. Memoirs of Napoleon. Edinburgh, 1830, Constable and Co.; London, Hurst and Co.

A CONTINUATION (the second volume) of Dr. Memes' valuable translation of Bourrienne: it brings down the history to the date of the coronation at Milan. There is a striking paper in the Appendix—a comparison of Cæsar, Cromwell, Monk, and Buonaparte—in which, anticipating the death of the last, the writer exclaims: "The adherents of a degenerate race will uplift their voices against these warnings; will say that they wish neither assemblies nor emperors; that the lawful king is upon our frontiers. The lawful king! Unfortunate France! scarcely escaped from one revolution, do thy sons invoke a new one? Look at England on the return of Charles II. On all sides blood flowing in streams over her land; men of no note—men of reputation—the philosopher and the warrior—fall beneath the sword of vengeance. Look at Naples; hear the sounds of carnage re-echo through her streets, in her palaces, in her public squares; follow in their flight those exiles whom misery and grief bear beyond sea. Such is your lot, if ever the Bourbons re-ascend that throne whence their own vileness hath driven them. You will have a revolution of other ten years—of twenty years perhaps; and to your children will be transmitted civil war as an inheritance. Frenchmen! such are the perils of the country; each day you are in danger of falling again under the domination of assemblies, under the yoke of the S—, or under that of the Bourbons. Each moment may your tranquillity be snatched away. You sleep upon an abyss! and your sleep is undisturbed! Insensibles!—"

Antediluvian Sketches, and other Poems. By R. Howitt. 12mo. pp. 148. London, 1830. Seeley and Sons.

THERE is a great deal of poetical, and also of good kindly feeling, in this little volume,—one whose pages waken almost poetry in ourselves, and of whose merits we feel inclined to speak in similes; and thus we compare the poet now before us to one of those sweet singing birds which pour forth simple and natural music, redolent of the green leaves and the fresh air. We must own we like the "Antediluvian Sketches" the least in the book: we doubt the advantage of filling up pictures which, though brief, are finished; and it is very difficult to put fitting words into the mouth of Eve, Cain, &c. Let us turn to the pleasant selection of two or three favourites.

I awake, and am alone,

"In youth I know a rich old man,
With riches undefiled;
In heart as noble as a king,
In manners like a child.
Awhile I staid beneath his roof,
And loved it as my own;
But from the dream of such a man
I woke—and was alone.

I fondly thought that worth like his
Should long and late survive,
And in the sleep which grief allowed,
Still deemed he was alive:
I dreamt he came back from the dead,
To friends in triumph shewn;
But from that dream of happiness
I woke—and was alone.

There was a lady in his hall,
Not young, nor fair, but kind,
And I, but one of many, loved
Her loveliness of mind:

Then dwelt she in a distant place

For years, and died unknown:
Even when I dreamt of her return
I woke—and was alone.

Few, very few, I know and prize,
Of thousands whom I see:
Yet these, if these might here remain,
Sufficient were for me.
Death—death is busied with the few,
Who are familiar grown:
That still from life's delightful dreams
I wake—and am alone."

To a Group of Children.

"How glad, how beautiful! you steal
Our hearts into your play,
And with a sweet delusion chase
Life's weariness away.
We gaze, until we fondly deem
You thus will ever be,
A little race, distinct from us,
From man's disquiet free.

We are not light as playful winds,
Nor graceful as the flowers;
And gladness flashes from your eyes,
Whilst sorrow is in ours.

Boys! can you ever grow to men,
War's horrid game to learn?
Girls! must you lonely women be,
Their distant doom to mourn?

A blessed life, a blessed lot,
Should your's be evermore;
The light which gathers round you now,
You send far on before.
Coloured from this your future life
In fancy is as fair:
Alas, alas! ye know it not—
Glad pilgrims unto care."

It is a rare thing to see a whole family so gifted as the family of Howitt; truly their union must be a "musical meeting."

Aldine Edition of the British Poets.—The Poetical Works of William Collins. London, 1830. W. Pickering.

OF the technical part of this volume we have only to repeat the praise we have already most cordially given to the preceding volumes of the Aldine edition: the perfection of printing, beautiful paper, a neat engraving whose subject alone would give it interest, works the most valuable in our literature, and every possible information carefully collected respecting the writers: add to all this, a price infinitely lower than what is affixed to the thousand volumes of poetry which every day appear, and are every day forgotten—are we not justified in saying that Mr. Pickering deserves all the patronage public favour can bestow, and in recommending the immediate purchase of these volumes not only to every library, but to every little bookcase, where a few pretty and favourite volumes are a treasury of great enjoyment, amid more active and worldly avocations? Much novelty cannot be expected from a life with whose outline most of our readers are acquainted; but evident industry has been bestowed in collecting every fragment of information. Not very many remarks of his own are introduced by the author of the prefixed biographical sketch, and the few we do find are neither very original nor very true: for example, in a somewhat common-place complaint of the neglect of genius, he asks, "what would be the fate, if they lived in our own times, of Johnson, Pope, Dryden, Addison?" We do not agree with him in supposing it would be neglect; we cannot but think literary merit never was more thoroughly appreciated, or more entirely rewarded, than in the present day. An author whose works do not succeed in attracting attention, may lay the flattering unction to his soul, that it is the want of public taste, and not his want of merit; but we must say, the unction would indeed be a flattering one. We must not forget to mention, that a very elegant essay, by Sir Egerton Brydges, is also affixed to these poems.

The New Wonderful Magazine and Miscellany of Extraordinary Productions, Events, and Occurrences, in Providence, Nature, and Art. Parts I. II. and III. pp. 144. G. Smeeton. London, 1830. G. Purkiss.

A VERY small publication indeed, published in penny Nos., three making a Part: ye: is the selection of curious matters, consistent with the title, good; and the original notices worthy of even more commendation. We should mention that there are prints with every No.; and the Canadian Giant, who has just left Bond Street, and Boai the Chin-chopper (for our name has been generally adopted), are very clever specimens for a work of this class.

The Child's own Book, illustrated with nearly 300 Engravings by eminent Artists. pp. 630. London, 1830. Alfred Miller; Edinburgh, Constable; Dublin, Milliken.

Is the solid tread of the march of intellect to be heard in vain? Is the reign of utility over; and are fancy, imagination, and fable, again to be admitted into the nursery, that we should be startled with the name of the *Child's own Book*, applied to a selection of fairy tales, and all the olden ornaments of the play-ground? Such is the case before us: we have here, in the form of a pocket-dictionary, some fifty of the productions which delighted the early days of our papas and mammas (not to speak of our own), before mankind became so wise as to think every trifling a serious fault, and to hold every indulgence in abhorrence. It is not ours to decide the quarrel between the *utile* and the *dulce*; we have, certes, no objection to the former; but we do wish that, instead of being proscribed, the world would allow itself a little more of the latter. Of this volume, *all that* need be stated is, that the embellishments are very characteristic and well executed,—a perfect treasure for little folks;—and that the letter-press which they illustrate are the familiar stories of Aladdin, the Forty Thieves, Beauty and the Beast, the Children in the Wood, Cinderella, Goody Two-shoes, Fortunatus, Hop o' my Thumb, Gulliver's Lilliput, King Pippin, Puss in Boots, Philip Quarrel, Robin Hood, Seven Champions, Yellow Dwarf, Valentine and Orson, Whittington and his Cat, and many more of a similar kind. Some juvenile poetry is also to be found; and the whole, done under a female eye, is carefully freed from aught that could offend the delicacy so desirable in childhood. Taken altogether, the *Child's own Book* is the best and most captivating collection of infant mythology and light reading which we have seen.

The Cabinet Album; a Collection of Original and Selected Literature. Pp. 376. London, 1830. Hurst, Chance, and Co.

A DISHONEST appropriation of the labours of others; a species of literary piracy, which presses heavily on an author, who sees another person benefit by his industry and celebrity; whose only title is that of impudent robbery. The preface to this volume is a happy mixture of folly and arrogance. The "collector" takes works, poems, tales, &c. already stamped with public approbation, bearing the first-rate names in our literature, and then "hopes if there is not much to praise, little may be found to censure." Truly the authors whose efforts this modest editor has so unceremoniously appropriated, are much indebted for "his hopes!"

THE FRIENDS' EPISTLE, 1830.

THE yearly meeting of the Society of Friends in London, whence a short address is issued to the body in general, has lately (see notice in *L. G.* of last year) led to these epistles being printed by Howlett and Brimmer in a variety of beautiful forms, such as gold letters on purple and white, or silver letters on crimson. We have not before seen so fine a specimen of the art as that of the gold printing on the white paper. With regard to the subject-matter, it is calm and Christian-like; mentions a separation from the Society in America; and states the charges of the year at above £14,000. The principal moral exhortations are for the mitigation of the criminal code, the abolition of slavery, and the more moderate use of ardent spirits.

ARTS AND SCIENCES.

ASTRONOMY.

Lunar Eclipse of the 2d of September last.—

The unfavourable state of the atmosphere during the late lunar eclipse furnishes another mortifying instance of our fickle climate. Eclipses of the moon have of late years been particularly baffling, at least this has been the case in the neighbourhood of the metropolis;—the lunar eclipse of the 14th November, 1826, was hidden by dark heavy clouds, which did not allow a momentary glance; the one that occurred Nov. 3, 1827, was concealed by an impenetrable mist, excepting for a very short time before its termination; the eclipse on the morning of the 13th of Sept. of last year, was also unseen, though the bright luminary had travelled through an unclouded sky, from its rising to its passage of the meridian, and thence down the steep of heaven, till the moment of its entering the earth's shadow, when, at the very commencement, the moon was received into a dense bank of clouds which hung over the western horizon. The evening preceding the recent eclipse, the heavens were remarkably clear; the moon appeared as if shining from the pure skies of Italy, and afforded the fairest prospect of the succeeding night being as propitious as the most sanguine astronomer could desire. At the anticipated time (at Deptford) the moon was, from the commencement of the eclipse till its conclusion, either entirely invisible, or seen only at intervals: "like angel-visits, few and far between," even these glimpses were very imperfect, as not for a moment did the moon appear on the dark blue sky. The only observation made was at 10^h 15^m; at which time a portion of the western limb of the moon was distinctly seen to be illuminated—27¹/₄^m after the time predicted for the beginning of total darkness.

It might perhaps be wished by some, that a darker curtain than the fleecy screen that veiled the phenomenon had been drawn over the whole scene, and hidden from view that orb which is emphatically called "the faithful witness in heaven," and which on this occasion bore ample testimony to the variation between astronomical prediction and its fulfilment: it is, however, due to the Nautical Almanac, and other British astronomical works of a similar nature, to state that the times of the phenomena of this eclipse as given by them, agree nearly with those in the *Connaissance des Temps* and *Encke's Berlin Ephemeris*, both of which are deservedly held in the highest estimation. The following will shew the slight variation which exists between each; the difference of longitude in time between Greenwich and the Royal Observatory at Paris having been taken

as 9^h 21^m (9^m 22^s), and that of Greenwich and Berlin 53^h 51^m (53^m 31^s):—

	Nautical Almanac.	Connaissance des Temps.	Encke's Berl. Ephem.
	Reduced to Greenwich time.	Reduced to Greenwich time.	Reduced to Greenwich time.
	H. M.	H. M.	H. M.
Beginning of the eclipse	8 50	8 49 ¹ / ₂	8 49 ¹ / ₂
Begin. of total darkness	9 47 ¹ / ₂	9 44 ¹ / ₂	9 47 ¹ / ₂
Middle of total darkness	10 38	10 38	10 37 ¹ / ₂
End of total darkness	11 28 ¹ / ₂	11 26 ¹ / ₂	11 28 ¹ / ₂
End of the eclipse	12 26	12 26 ¹ / ₂	12 25 ¹ / ₂

Deptford.

J. T. B.

MOLECULES.

DR. SCHULTZE, of Carlsruhe, has published a pamphlet containing a detail of observations made by the microscope in investigating the accuracy of Mr. Robert Brown's statement—"that all bodies, organised or unorganised, contain animated particles, having a motion peculiar to themselves; which particles in all bodies are of the same form and size, and have the same motion." Dr. Schultze has arrived at results quite opposite to those of Mr. Brown. He maintains—first, that the motion of the molecules is by no means spontaneous, but is owing to the evaporation of the liquid, and to the imbibition, or to the dissolution of the particles. If they are placed in a liquid which evaporates with difficulty—in oil, for instance—the motion ceases; while it is greatly accelerated in alcohol and ether. By attentively studying these motions, Dr. Schultze has been enabled to distinguish three kinds, arising from three different causes—the first, ascent or descent, produced by the evaporation of the liquid; the second, oscillation, (similar to the supination and pronation of the hand), produced by the successive imbibition of the particles; the third, rotation, produced by the dissolution of the particles in the liquid. 2dly, that, Mr. Brown having advanced that the same particles which he has perceived in the pollen of plants also appear as elementary molecules in all the organs of animals and vegetables, and are the same as those described by Buffon, Needham, Wisberg, Müller, and Edwards,—Dr. Schultze denies the truth of the proposition as it respects organic particles. They differ in form and size, according to the animals, and according to the organs. And the reasoning upon this accords with the facts. For what explanation of the different vital phenomena could we hope to obtain, if these opinions of a complete similarity among all the elementary parts of organised bodies were confirmed by observation? As for the texture of inorganic bodies, in which Mr. Brown professes to have found these molecules as elementary parts, it appears to Dr. Schultze that they are the product of art, and that any degree of size that one chooses may be given them by pulverisation.

There certainly seems reason to believe that, whatever may be the power of our magnifying glasses, we are far from having yet reached the limits at which nature commences her operations.

LITERARY AND LEARNED.

ORIENTAL LITERATURE.

WE understand that Sir William Ouseley is preparing for private circulation a catalogue of his manuscripts, in the Persian, Arabic, and other Eastern languages; the number of articles amounting nearly to six hundred: among which are several splendidly illuminated and adorned with paintings; other works of considerable antiquity, and many of the utmost rarity, and on the most interesting subjects. For some of the volumes, singly, the price paid

by former proprietors was equal to fifty, sixty, and even ninety guineas. The importance of this magnificent collection has been known for some years, in consequence of the quotations from various manuscripts given by Sir William Ouseley in the account of his travels; and overtures for the purchase of it have been made by the agents of a continental sovereign; and, more lately, by an English gentleman, desirous of adding these Eastern treasures to his library, which is already one of the most valuable and curious in this country. We trust, however, that, in the first instance, Sir William may offer his collection to some of our great national or academic institutions. We have suffered too many treasures of this description to escape from England, the richest country in the world, but unfortunately destitute of any distinct and sufficient public organ to supply what individual spirit may leave unperformed in regard to such national objects.

THE BYZANTINE HISTORIANS.

THE edition of the Byzantine Historians, publishing at Rome, under the superintendence of M. Niebuhr, goes on rapidly. A new volume has just appeared; containing Dexippus, Eunapius, Petrus Patricius, Priscus, Malchus, Menander, Olympiodorus, Nonnosus, Candid, and Theophanus; and concluding with the panegyrics of Procopius and Priscian. In the preface are some notices of the different historians above-mentioned. Dexippus was equally distinguished as an orator and a historian, and the Athenians erected a statue to him. Military glory also ornamented his career; for he defeated the Heruli, who attacked Athens, and killed three thousand of them. He lived until the reign of Probus. The fragments which remain of him relate to the Scythian war, and to the affairs of Macedonia. Photius speaks highly of his style. Eunapius was born at Sardes in 347, and continued Dexippus's history. It appears by Photius, that he carried it to 404, the year of St. Jerome's banishment. To these historians, as also to Menander, have been united some fragments, discovered in the Vatican by the Abbé Mai. Petrus, born in Thessalonica, distinguished himself at Constantinople in the art of speaking. Justinian entrusted to him several important missions; in the execution of one of which he fell into the power of the King of the Goths, at Ravenna, and remained a prisoner for three years. After having concluded several treaties with the Persians, he finished his long and brilliant career; leaving a son, who followed his steps. Petrus wrote history, but it would be difficult to say where he began. It is presumed that he stopped where Eunapius commenced. Priscus of Thrace wrote eight books on Attila. Neither is it known of him what was the commencement of his history; all that has been remarked is, that he is not cited for any event anterior to 433; and there is reason to believe that he finished at 474, the year at which the history of Malchus commences. The later, born at Philadelphia, in Palestine, carried on at Constantinople the profession of a sophist. He continued Priscus until the year 480, the epoch of the death of the Emperor Leo. His work contains seven books, and comprehends seven years. As for Menander, he continued the history of Agathios, from the invasion of the Huns, repelled by Belisarius in 558, to the end of Tiberius in 582. Of Olympiodorus, Candid, Nonnosus, and Theophanus, all that is known is the little communicated to us by Photius.

FINE ARTS.

NEW PUBLICATIONS.

Picturesque Antiquities of the English Cities. Illustrated by a Series of Engravings of Ancient Buildings, Street Scenery, &c. with Historical and Descriptive Accounts of each Subject. By John Britton, F.S.A., M.R.S.L., &c. London, 1830. Longman and Co.

WE have repeatedly mentioned this valuable and beautiful publication during its progress. It is now completed, and assumes the appearance of an exceedingly handsome volume; of which it has, with perfect justice, been said, that, "executed at an expense of nearly three thousand pounds, and containing, as it does, such a Series of Illustrations of the Architectural Antiquities of English Cities, drawn and engraved in a style surpassing all preceding specimens, it claims the especial attention of the antiquary, topographer, and artist; and challenges comparison with the very finest works of continental embellishment and literature." As a specimen of Mr. Britton's extent and variety of research, and of the perspicuous and happy manner in which he treats his subject, we will transcribe the commencement of his description of the Picturesque Antiquities of Salisbury.

"The city of New Sarum, or Salisbury, unlike most other English towns, has its origin well defined, and its prominent historic annals duly recorded. Though not honoured with a local historian, there are many scattered evidences of its foundation, rise, and general characteristics. It has nothing Roman, Saxon, or even Nórman, in its early annals; and is therefore contra-distinguished from every other city of the kingdom. Of truly English origin, of unprecedented uniformity in plan and arrangement of parts, with a provision for cleanliness and healthfulness, Salisbury may be considered as peculiarly indigenous, unique, and admirable. While every other city of England has, or had its castle, and claims either a Roman or Saxon origin, we know that New Sarum was commenced under the auspices of a bishop, that it grew up under ecclesiastical, not baronial, power and protection, and that though it was surrounded by fortified walls, it never had a monarchical or baronial fortress. The prefix, *New*, shews that there was an anterior Sarum, which obtained the name of old, when a younger, and a new town was established. Old Sarum, about one mile north of the modern city, was probably at first a British town, and evidently a Roman station and fortress. It subsequently became a seat of Saxon monarchs, and of national councils—a place of sieges and conflicts by the Danes—the see of a bishop, with his chapter; and lastly, at this city, William the Conqueror 'summoned all the estates of England and Normandy to swear allegiance to him, and to introduce one of the most remarkable changes that ever happened' in the English constitution—the establishment of the feudal system. In consequence of disputes, 'of brawles, and sadde blowes,' as Holinshed states, between the clergy and the castillans, or men of war, the bishop and his associates removed their residences to a fertile valley, at the junction of two rivers. There they built houses, and commenced the present magnificent cathedral in the year 1220. A very interesting account of this ceremony, as well as of previous transactions at the old, and others at the new city, were recorded by William de Wanda, the first dean of the church, who lived at the time. From a passage in this record, it is evident

that Salisbury was advanced in buildings and population at that time; for Henry de Bishopston is mentioned as 'governor of the schools in the city of Salisbury.' In October, 1225, an immense concourse of people assembled at the new city, to dedicate three altars in the cathedral, and the bishop entertained several archbishops, bishops, barons, &c. at his palace. At this time the king had a palace at Clarendon, in the vicinity of Salisbury. A fair of eight days' continuance was granted to the church, with a weekly market, and other privileges, by a charter from King Henry the Third, in the eleventh year of his reign, who therein states that he laid the first stone of the cathedral. 'At this period an arrangement was made relative to the disposition of the buildings in the new city. The ground was divided into spaces, or portions, each containing seven perches in length, and three in breadth; and these were again subdivided for the advantage of settlers.' Such was the origin and first establishment of Salisbury; and that it was systematically laid out, and regularly built, may be inferred from the present arrangement of its streets. Differences and contentions, however, arose between the citizens and the prelate; the latter having paramount authority, and the former fancying that they could live and prosper better without ecclesiastical protection or influence. A year's trial convinced them of their error, and they again sought the aid, and became subject to the bishop. In the time of Edward the Second, about 1315, they obtained a license to fortify their city with a rampart and ditch; and from remains of walls, &c. which were standing about half a century back, it is evident that Salisbury was nearly of the same extent at the commencement of the fourteenth century as at the end of the eighteenth."

Of the plates in the earlier portion of the publication we have already spoken. Those in the sixth and closing number are equal, if not superior to their predecessors. Among the most striking are, "The New Inn, Gloucester;" "The Market-Cross, Chichester;" "The Market-Place, with Old Conduit, Wells;" "Apartment in the Palace, Wells;" "The Chapel, &c. in the Vicar's Close, Wells;" "The Ruins in the Bishop's Garden, Norwich;" "The View in Redcliffe Street, Bristol;" and "The Blackfriar's Pulpit, Hereford."

It is deeply to be regretted that Mr. Britton has not been induced to proceed further with so interesting a work, and to apply the same taste and talent to the "ancient castles, monastic edifices, churches, chapels, and mansions, of almost endless diversity, beauty, and grandeur," which still remain unillustrated. The following passage, however, in the "Introduction" to the volume, accounts sufficiently, but painfully, for the discontinuance of his undertaking:

"With the present work, and '*the Cathedral Antiquities*,' now in progress, I propose to terminate my topographical labours; but hope to see the subject taken up by some other person equally zealous in the cause, and better qualified to do it justice. It will further augment my pleasure, to find the public come forward liberally and promptly to patronise such works. If the government of the country, and some of the public institutions which were founded for the encouragement of learning and talent, were to appropriate only a very small portion of their respective funds to reward authors and artists for their labours and expenditure, in bringing forward publications of

sterling worth and merit, it would soon be found that there would neither be a lack of talent, nor of industry. Unfortunately for the literary character, and even for booksellers, the sources now referred to, instead of fostering and encouraging fine and expensive books, levy a tax upon them by the imperious impost of eleven copies. The author of the present volume has been compelled to give—to offer up at the shrine of injustice and extortion—no less than *twelve hundred pounds* worth of his own publications, in the execution of which above FORTY THOUSAND POUNDS have been expended in paying artists, stationers, printers, binders, &c.; and nearly *two thousand pounds more in government duties and taxes!!!*—When will 'literary emancipation' be proclaimed by the English legislature?"

With reference to the last remark, we do most earnestly hope that in the approaching session of Parliament something may be done to diminish this very serious evil. We know that it was one of the liberal and enlightened objects which Mr. Canning had in view, if his valuable life had been prolonged, to attempt to relieve the literature and arts of the country from the heavy burdens by which they are now oppressed.

In the sentiments and wishes with which Mr. Britton concludes his "Introduction," we also cordially concur. They are expressed with a feeling and a force which do him infinite credit.

"After more than thirty years' devotion to the study and illustration of the *Architectural Antiquities of England*, and with an assurance that the subject is replete with amusement on all occasions, and intense interest on many, I will venture to entreat my countrymen, whenever and wherever they have power, to protect the remaining antiquities from further demolition or defacement. Every castle, abbey, cathedral, fine church, and old mansion, is a monument and memento of a former age, and of former persons. They are so many indexes to memorable events, to heroes, statesmen, patriots, and philosophers. Architectural antiquities are objects and evidences of incalculable value and interest; whilst standing—however mutilated—they are indications of the vicissitudes and fluctuations of civilised society: they shew man in his domestic economy, and in his historical relations. The person, therefore, who protects one fine work of antiquity is entitled to the applause of his contemporaries and of posterity; he who destroys, or heedlessly neglects it, deserves the reprobation of the civilised world. As Dr. Stukeley indignantly hung, in graphic effigy, the man who wantonly broke up the vast and wondrous Celtic Temple of Avebury, so every other similar delinquent should be condemned to the literary gibbet. The miserable fanatic who fired York Cathedral is properly incarcerated for life, and thus prevented from doing further public mischief; but there are other fanatics still roaming at large, and permitted to commit devastations on cathedrals and other churches, on castles, old mansions, &c. 'Such men should not be trusted.'"

ORIGINAL POETRY.

THE MONKS OF OLD.

By the Author of *Richelieu, De l'Orme, &c.*

I ENVY them—those monks of old,—
Their book they read, and their beads they told;
To human softness dead and cold,
And all life's vanity.

They dwelt like shadows on the earth,
Free from the penalties of birth,
Nor let one feeling venture forth
But charity.

I envy them: their cloistered hearts
Knew not the bitter pang that parts
Beings that all Affection's arts
Had linked in unity.

The tomb to them was not a place
To drown the best-loved of their race,
And blot out each sweet memory's trace
In dull obscurity:

To them it was the calmest bed
That rests the aching human head:
They looked with envy on the dead,
And not with agony.

No bonds they felt, no ties they broke,
No music of the heart they woke,
When one brief moment it had spoke,
To lose it suddenly.

Peaceful they lived—peaceful they died;
And those that did their fate abide
Saw Brothers wither by their side
In all tranquillity.

They loved not, dreamed not,—for their sphere
Held not joy's visions; but the tear
Of broken hope, of anxious fear,
Was not their misery.

I envy them—those monks of old;
And when their statues I behold,
Carved in the marble, calm and cold,
How true an effigy!

I wish my heart as calm and still
To beams that fleet, and blasts that chill,
And pangs that pay joy's spendthrift thrill
With bitter usury.*

SKETCHES OF SOCIETY.

ORIENTAL USAGES AND OPINIONS.

MUSSULMANS prefer fine stones to metal for their seals. Gold, in their opinion, announces the luxury proscribed by Mahomet; and iron is considered by them (but why, nobody knows) a source of impurity and stain. All this, however, does not prevent them from liking to have a great deal of gold coin, or from employing iron in weapons, and in utensils of every description. As for fine stones, they attribute strange virtues to some of them. The ruby, for instance, strengthens the heart, and preserves from the plague and from lightning; the emerald passes for an excellent specific against the bite of vipers; the diamond cures the colic, &c. &c. These ridiculous opinions and prejudices are diffused among all the nations of the East, and form one of a thousand proofs of their profound ignorance. Human figures, or even the figures of animals, are scarcely ever seen on these engraved stones. Mahomet, in imitation of the Jewish legislator, proscribed the representation of all that breathed, of all that had soul. But the Mussulman-artists find means of exhibiting their talent in the ornaments with which they surround the inscriptions in the sometimes rather whimsical embellishments which they adapt to the Arabic letters. They also succeed remarkably well in the representation of plants and flowers, of which the people of the East, as is well known, frame a language as expressive as it is agreeable. The use of seals, rings, and ear-rings, is of the greatest antiquity in the East. The most ancient book in

the Bible proves that, from the time of the patriarchs, the ring was the sign of sovereign power. When Pharaoh delegated to the son of Jacob a large portion of his authority, he placed his ring upon his finger.* Even at the present day, Mussulmans by no means attach their signatures to the most important instruments so frequently as we do: the impress of their seal is equivalent. Instead of figures of animated beings, or heraldic bearings, seals, and in general all engraved stones in the East, bear inscriptions, principally derived from the Koran, but occasionally from some favourite poet.

Mussulmans not being able, without an infraction of the law, to gratify the inclination so natural to the man who indulges in it, of tracing on some solid and durable material the fugitive scenes of life, and even the dreams which fill the imagination;—not being able to express by emblematic figures the thoughts which occupy them most vividly;—it has become necessary that, in order to manifest their ideas, their sentiments, their passions, they should have recourse to writing; however cold and imperfect this mode of communicating with their fellow-creatures must have appeared to men naturally of an ardent and poetical temperament. Inscriptions cover the walls of their mosques; on the outside as well as on the inside. They cover the walls of all the public buildings, of the palaces. Those are particularly celebrated which are found in the magnificent halls, in the baths, or the fountains of the ancient and superb Alhambra; an inimitable structure, the eternal testimony to the genius of the Moors. In the midst of garlands of flowers, and of a multitude of other ornaments, executed with the most refined taste, appear graceful and moral expressions; the most frequent of which is that which a good Mussulman ought to have unceasingly on his lips—"God is great; there is no god but God." The Koran also furnishes the inscriptions which the Mussulmans engrave on their arms, their vases, and their furniture of every kind. These inscriptions announce a lively and constant faith; and such is that of all the followers of Islamism.

Superstition is the inseparable companion of excessive piety. The Mussulmans firmly believe in magic, astrology, and the art of divination by various mysterious processes. The East has always been the cradle of the most absurd creeds. It is thence that they have sallied to invade the world; and, therefore, it is not surprising it is there that still prosper, without opposition, without obstacle, all the fables, all the superstitions, which have so long contributed to the stultification of Europe, and from which we are only just beginning to free ourselves.

The Mussulmans have added many stories to the lives of the personages mentioned in the Bible. They have done more. They have placed among them personages whom the Bible never mentions; and to whom they have attributed adventures, sometimes very singular, and entirely unknown to Jews and Christians. But it would appear that those adventures were universally known in the time of Mahomet, because he alludes to them in the Koran. The Talmud and the books of the Rabbis, the Gospels, false as well as true, which were then circulating in the East, were, no doubt, the sources of all the singular opinions which the people adopted with respect to the Hebrew patriarchs, Jesus Christ, the Vir-

gin Mary, and the Apostles. Mahomet had no interest in destroying those opinions. On the contrary, he supported them as respectable, whenever they were calculated to strengthen the new religious system which he wished to impose upon his country. The result of all this has been a mass of legends, one more silly than another, which remind us of the "Thousand and One Nights." We will quote a few from the number:—

Adam is with Mussulmans, as with Jews and Christians, the first man, the father of the human race. But they do not believe that after he was driven out of Paradise he had Eve to console him a little under so heavy an affliction. The angel of the Lord threw Adam into the island of Ceylon, while Eve was banished to the shores of the Red Sea. It was not until two hundred years afterwards that God, affected by their tears, consented to reunite them in the neighbourhood of Mecca. Adam was also a prophet. He had on his forehead the luminous beam, which afterwards sparkled on the forehead of Moses.

After Noah, whose history they have not much disfigured, the Mussulmans speak of two prophets not mentioned in the Bible;—Houd and Saleh. The one went to preach the faith to some Arabs; giants, if ever there were any; for the least of them measured sixty cubits. But they refused to believe in the one God whom he came to announce to them. Saleh went into a valley of Arabia to preach to a tribe of wicked Arabs, who mocked him. In vain, to convince them by a miracle, did he cause a camel, ready to foal, to come out of a mountain. They killed the camel and its young.

But the patriarch whose life they seem to have taken most pleasure in loading with fables was Abraham, whom they call Ibrahim, and who is held by them in great veneration. According to the Koran and its commentators, at the age of fifteen months, Abraham was as stout as a youth of fifteen years; and he could maintain himself at a small expense, for he had nothing to do but to suck his fingers. From one he drew exquisite milk; from another the most delicious honey. Subsequently, he went to preach to the inhabitants of Babylon; but Nimrod, their king, threw him on a funeral pile, which was immediately changed into a parterre of roses.

As for another patriarch, not less celebrated, Joseph, or as the Mussulmans pronounce it, Joussof, they have also embellished his history, already so interesting in the Bible, with various romantic occurrences. According to them, Joseph was so handsome, that no woman could see him without falling in love with him; which is some excuse for the extreme passion conceived for him by Potiphar's wife, whose name is not given in the Bible, but whom the Mussulmans call Zoleikha. As they talked scandal about her in Egypt, and as the ladies of the country disapproved especially of her having given her heart to a slave, she invited a party of them to come and eat pomegranates with her. The ladies were all at table when Joseph made his appearance; and were so dazzled and agitated by his beauty, that, not knowing what they were about, they cut their fingers, instead of the pomegranates!—*Monumens Arabes, Persans, et Turcs, du Cabinet de M. le Duc de Blacas.*

DRAMA.

ENGLISH OPERA, ADELPHI.

ON Thursday night, the *Irish Girl*, written by Mr. Ryan, was produced at this theatre; and,

* This pathetic poem was written on a melancholy occasion; the author having visited an old monastic church on the Continent to bury a beloved infant.—*Ed. L. G.*

* "And Pharaoh took off his ring from his hand, and put it upon Joseph's hand."—*Genesis*, xli. 42.

thanks to the exquisite acting of Miss Kelly, was not only received with great delight, but gave assurance of a popular run to the end of the season. It ought to be performed every night, were it for no other reason but to allow the public to witness (as many as can at one time in so small a theatre) this beautiful piece of histrionic art; of which, to say it is equal to the highest preceding effort of this matchless actress, is merely to render a just tribute to perfect excellence. In itself the piece has no claims to eulogy: it is made by Miss Kelly, who is, however, well supported by Miss H. Cawse, and the rest of the dramatic corps.

Mr. Arnold will, we believe, certainly be enabled to open on the 1st of July next year, in his own *new* theatre, on the improved site, the corner of the new street crossing the Strand from Wellington Bridge. What lover of music or the drama is there who does not wish him every success?

VARIETIES.

Pharos.—The first light-house was constructed by Ptolemy in Egypt on the Isle of Pharos, from which they derive also their name in modern languages. It is said that this building cost 800 talents.

Bicephalous Calf.—At the last sitting of the Paris Academy of Sciences, M. Geoffroy St. Hilaire read a report relative to a bicephalous calf, which was born in the Cantal, and which resembled precisely, as to the mode of junction, &c. the double girl, Ritta-Christina, who died in Paris.

Aerostation.—In America, M. Genet and his coadjutors, and in France three rivals, Messrs. Dupuis-Delcourt, Chabrier, and Vallot, are all busily engaged in the construction of machines for travelling in the air; and are all equally sanguine as to the result! Of course, the nature of their respective inventions has not transpired.

Medal.—A beautiful bronze medal has been struck at Paris, bearing on one side, "The French People to the English Nation. Paris, 27th, 28th, and 29th of July, 1830;" and on the other, emblems of liberty, with the words, "Peace and Liberty—all mankind are brothers." It is admirably executed; and large numbers have been purchased in France for presents to the English residents.

Bon-Mot.—Sir George Smart was much startled and alarmed by the sudden flash of lightning which broke through our storm on Monday afternoon; which Bartley happening to mention in the green-room of the Adelphi in the evening, Peake, with his ever-ready wit, rejoined, that he was not surprised at Sir George's fright, as he was aware he was a conductor.

The "New York American" paper records the death of Mr. Oliver, a medical student, who was drowned at Trenton Falls, while shewing them to "several young female friends," the party consisting of his sister, his *uncle*, and two cousins.

Light.—M. Morel, a French naturalist, has presented the Paris Academy of Sciences a work on the influence of light, in which he shews that the animalculæ common to water in which vegetable or animal matter is in maceration, would not be developed in the absence of light, which is absolutely essential to their existence.

Paris.—At the last sitting of the Paris Academy of Sciences, M. Larrey, the principal surgeon of the military hospital of Gros Caillone, read an interesting report of the wounded in the affairs of the 27th, 28th, and 29th July, who

had come under his treatment. Among other facts, the report stated that the fragments of marble, and the small pebbles with which the people had, for want of balls, loaded their guns, had caused more serious wounds than leaden balls would have inflicted: and that many of the wounds in the extremities had produced lock jaw, which proved fatal.

At the last sitting of the Institute of France, it was announced that the adjudication of the prize for the best essay on the political state of the Greek cities of Europe, and the islands of Asia Minor, from the commencement of the second century before our era, to the establishment of the empire of Constantinople, was postponed till 1831, none of the essays on the subject having been thought worthy of reward. —At the same sitting it was announced that a gold medal worth 1,500 francs will be given for the best critical essay on the passages relative to the person and doctrines of Pythagoras, which are to be found in the writers of antiquity, for the purpose of distinguishing, as much as possible, what belongs to the history and mode of teaching of that philosopher. Two other gold medals, of similar value, are promised for next year; one for an essay on the changes which have taken place during the middle ages in ancient geography, and the other on the history of the decline and fall of Paganism in the provinces of the Empire of the West, from the time of Constantine. The precise form of the announcements may be seen in the *Moniteur* of the 6th of September.

Literature, &c.—The King of the French, Louis Philip, has given instructions to a distinguished *littérateur* to obtain for him a correct list of all the literary and scientific bodies in Europe, with a precise account of their charitable institutions, in order that he may subscribe to those which he considers the most deserving of support. It is stated, that at present the king bestows nearly one million of francs per annum, directly or indirectly, in the encouragement of literature and science; and that he insists upon each of his children patronising works of art to an extent justified by the pecuniary means which he has placed at their disposal.

Gas.—There is no doubt that the late Mr. F. A. Winsor was the first who applied gas to the lighting of streets and cities; but to J. J. Becher, a native of Germany (born at Spire 1635, and who died in London 1685), belongs the discovery of extracting gas from coals. He was at that time a very clever chemist, and occupied himself a great deal with the theory of combustion.

Method of destroying Locusts.—The *Journal des Connaissances Usuelles* gives a method of catching locusts, by means of a sort of drag-net, formed of two sheets, from which they may be shaken into boiling water, and destroyed. It also states that they then become red, and will afford excellent food for pigs or chickens.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XXXVII. Sept. 11.*]

In addition to our literary news of last week, we may mention, that besides the new *Tales of a Grandfather*, Sir Walter Scott is engaged upon a romance, the name of which is to be Robert of Paris.

Captain Basil Hall has on the anvil *Fragments of Voyages and Travels in various Parts of the World*: a work in three small volumes, intended for young persons.

The Edinburgh Encyclopædia is at last completed; and we regret to hear from that good city, that the Editor and Proprietors have gone to loggerheads about the Preface.

M. Virginius Soncini (the author of a History of Sweden) has lately published at Milan a translation into Italian of Othello and Macbeth, with explanatory notes.

He intends bringing out a version of four more tragedies from Shakespeare.

The *Philosophy of Sleep*, by Mr. Macnish, is nearly ready.—A Gaelic Song Book, by Mr. Munroe of Cardell; and the Practical Baker and Confectioner's Assistant, by John Turcan, Operative Baker, are announced.—Sixteen Nos. of a Gaelic Journal, conducted by Dr. M'Leod, with the assistance of other Celtic scholars, have been published in the Highlands; and Gaelic Sermons, under the superintendence of Dr. Dewar, are also published monthly along with the Journal.—The Book of Private Prayer, compiled for the use of Members of the United Church of England and Ireland.—A little poem on the French Revolution of 1830, by Thomas Haynes Bayly, Esq.; illustrated by woodcuts from designs by George Cruikshank.—The British Herald, or Cabinet of Armorial Bearings of the Nobility and Gentry of Great Britain and Ireland, from the Earliest Period; with a History of Heraldry, by Thomas Rolson.—A Manual of Prayers, in easy language, for every Day in the Week, by the Rev. J. Topham.—The Poetical Works of the late Dr. F. Sayers, and a Life, by W. Taylor, of Norwich.—A novel called Basil Barrington and his Friends, will very shortly make its appearance.

LIST OF NEW BOOKS.

Fenn's Sermons, 8vo. 9s. bds.—Chatfield's *Measurer*, royal 8vo. 8s. bds.—*Economy of the Mouth and Teeth*, 18mo. 4s. bds.—*Walks about Town*, 18mo. 1s. sewed.—*Whole Art of Dress*, 18mo. 5s. bds.—*Topham's Manual of Prayers*, 18mo. 1s. sheep; 1s. 6d. roan.—*Easy and Familiar Sermons for Children*, by a Lady, 18mo. 3s. bds.—*M'Bean's Poems*, 8vo. 7s. 6d. bds.—*Rev. J. Hordern's Sermons*, 8vo. 5s. bds.—*Rev. John Miller's Sermons*, 8vo. 12s. bds.—*Twelve Designs for the Costume of Shakespeare's Richard III.* 4to. coloured, 12s.—*Pinell's Carnival of Rome*, 1830, 4to. 10s. 6d.—*Sir J. Reynolds's Works*, containing 312 engravings, 4 vols. folio, prints, 42s.; proofs, 63s.—*Rumsey's Wycombe Corporation Case*, 8vo. 12s. bds.—*Greenwood's New Forgery Act Statutes*, 12mo. 1s. bds.—*France in 1829-30*, by Lady Morgan, 2 vols. 8vo. 12. 11s. 6d. bds.—*Byron's Cain*, with Notes by Harding Grant, crown 8vo. 10s. 6d. bds.—*Hermann on Greek Metres*, Abridged and Translated by Seager, 8vo. 8s. 6d. bds.

METEOROLOGICAL JOURNAL, 1830.

September.	Thermometer.	Barometer.
Thursday.. 2	From 41. to 69.	30.14 to 29.94
Friday... 3	— 50. — 65.	29.79 — 29.78
Saturday.. 4	— 51. — 68.	29.83 Stationary
Sunday... 5	— 48. — 64.	29.66 to 29.65
Monday... 6	— 50. — 59.	29.58 — 29.46
Tuesday.. 7	— 50. — 62.	29.64 — 29.74
Wednesday 8	— 50. — 62.	29.38 — 29.35

Wind variable, S.W. prevailing. Alternately clear and cloudy; frequent and, at times, heavy showers of rain; at half-past four, on the afternoon of the 6th, a vivid flash of lightning, followed immediately by a clap of thunder of considerable sound.

Rain fallen, $\frac{1}{4}$ of an inch.
Meteor.—On the evening of Sunday, the 5th instant, the northern part of our hemisphere was visited by an uncommonly brilliant meteor, differing from the ordinary appearance of these phenomena;—very much resembling the memorable one of November 13th, 1803, noticed by Dr. Fiminger in the *Philosophical Transactions* for December. It first appeared at about ten minutes before eight, near the head of Perseus, passing from thence through the southern part of Camelopardalis to rather more than one degree beyond α Capella; where it became invisible, from the intervention of a dense nimbus: the extent of the track through which it remained visible was about 20°, which was described by the meteor in the space of four seconds: the diameter of the larger ball was about one-tenth of that of the moon, and of a brilliancy equal to that of Venus at her greatest elongation; it appeared round, and well defined in every part, except that opposite to the direction in which the meteor was moving, where it was mingled with three smaller balls of a beautiful dark green and blue colour; it had also a train the whole length of its path, viz. 20°, equal in brilliancy to that of a very fine rocket, for which it was at first taken by several who were so fortunate as to observe it.
 Edimonton. CHARLES H. ADAMS.
 Latitude..... 51° 37' 32" N.
 Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

To T. P.: certainly not: the thing is too contemptible. We have no means of answering H. D. F. exactly: by the statement made to us, we would say, from fifteen to twenty thousand.

W.'s Maria is consigned to oblivion: the subject has been too often repeated.

We thank W. E. T., and think well of his talents; but we must decline the series of Sketches so obligingly offered.

We are not aware of any publication which would, perhaps, exactly suit A. Z. An abridgment of *Burdwell's* well-known treatise may be had at Laurie's, in Fleet Street. It is, we believe, entitled, the *Art of Painting in Oil Colours*, and contains much useful information. A. Z. may also consult with advantage *Pinnock's Catechism on Art*.

ERRATUM.—In our last No., page 579, column 3, line 49, for "monstrous," read "monotonous."

ADVERTISEMENTS, Connected with Literature and the Arts.

UNIVERSITY OF LONDON.

The Medical Classes will Open on Friday the 1st of October. The Council have sanctioned a new division of the Mr. Hill will still teach Physiology, illustrating that Science by continual reference to the pieces of Anatomy, and thus combining the knowledge of Structure with that of the Properties of Life.

- Anatomy—Mr. G. S. Pattison and Mr. J. R. Bennett. Fee 7l.; or for the First Division, 4l.; and for the Second, 2l. Physiology—Mr. Charles Bell. Fee 3l. Anatomical Demonstrations—Mr. J. R. Bennett and Mr. R. Quain. Fee 6s.; or 3l. for each division. Nature and Treatment of Diseases—Dr. Conolly. Fee 4l.; or 3l. for each division. Surgery and Clinical Surgery—Mr. Charles Bell. Fee 4l.; or for each division 2l. Midwifery and Diseases of Women and Children—Dr. D. D. Davis. Fee 5s.; first division 3s.; second division 2s. Medical Jurisprudence—Dr. J. Gordon Smith. Fee 4l.; or for each division 2s.

On Friday the 1st of October, at Three o'clock precisely, Dr. Conolly will deliver a General Introductory Lecture, for which Tickets of admission may be obtained at this Office.

By order of the Council, THOMAS COATES, Clerk.

September 2, 1830.

ROYAL INSTITUTION OF GREAT BRITAIN.

The extended and improved Course of Chemical Lectures and Demonstrations for Medical and General Students, delivered in the Laboratory of this Institution, by Mr. Brande and Mr. Faraday, will commence this season on Tuesday, the 5th of October, at Nine in the Morning, and be continued on Tuesdays, Thursdays, and Saturdays, at the same hour.

JOSEPH FINCHER, Assistant-Secretary.

ST. THOMAS'S HOSPITAL.

An Autumnal Course of Lectures will commence on Friday, the 1st of October, at Ten o'clock in the Morning. Theory and Practice of Medicine—First Course, Dr. Elliotson; Second Course, Dr. Williams. Materia Medica—Dr. Roots. Chemistry—Dr. Burton. Anatomy—Mr. T. and Mr. John F. South. Surgery—Mr. Green. Midwifery—Dr. Ferguson and Dr. Ashburnham. Comparative Anatomy—Mr. John F. South. Clinical Lectures will be given.

For Particulars apply to Mr. Whitfield, Apothecary to St. Thomas's Hospital.

S. and J. FULLER beg to recommend to

the Ingenious, their New-Invented Transfer Varnish, such as has been used of late with so much success and admiration in Paris, for the transferring of all Kinds of Prints to Wood, as if the same were printed thereon. Adapted for ornamenting of Cabinets, Work-boxes, Card-boxes, Tops of Tables, Chess-boards, Face-screens, &c.

N. B. Varnishing done in a superior manner.

ILLUSTRATIONS OF NATURAL HISTORY.

Now publishing, in monthly Numbers, a Series of finely executed Engravings, with Descriptive Accounts of the most interesting and popular Genera and Species of the Animal World, conducted by J. L. KILBY, by whom, and R. ANDERSON, the Engravings are executed.

For further testimonies of this work, see Literary Gazette, Examiner, Sunday Times, Norwich Mercury, &c. &c.

Published by Longman and Co. Paternoster Row; Jennings and Co. Cheap-side; Whittaker and Co. Ave Maria Lane; Tilt, Fleet Street; and Colwell, Bond Street; and may be had of all Booksellers in Great Britain.

The Lakes of Scotland.

A SERIES OF PICTURESQUE VIEWS ON THE LAKES OF SCOTLAND.

Engraved by Joseph Swan, M.G.D.S. from Paintings in Oil, by J. Ferguson, E.M.G.D.S. With Historical and Descriptive Illustrations, by John M. Leighton, Esq. Author of "Historical and Descriptive Illustrations of Select Views in Glasgow and its Environs, and of Views on the River Clyde," &c.

Prices:—Plain Impressions, 5s. 6d. each Part. Proof, on India paper, 12s. 6d. ditto. Ditto, on royal folio, 18s. ditto.

This Part contains Four Views of Lochmond. London: Published by Moon, Boys, and Graves, Pall Mall; and Joseph Swan, Glasgow.

THE EIGHTH NUMBER will be published on the 15th Instant, and contain a beautiful Map of the Kingdom of the Netherlands; and England, Part III.

The Seven preceding Numbers contain Two Maps of Greece, Modern, and Two Ancient; Two of Italy, Modern, and Two Ancient; Two of Turkey, Modern, and Two Ancient; and Two Maps of England. The Ancient Maps are drawn on precisely the same Scale as the Modern; and form a very singular and interesting feature of this Atlas.

BOOKS PUBLISHED THIS DAY.

Britton's English Cities, complete. In 1 vol. elegantly half-bound, price 7l. 4s. medium 4to; and 12l. imperial sto. with Proofs of the Plates.

PICTURESQUE ANTIQUITIES OF THE

English Cities, containing Sixty Engravings by Le Keux, &c.; and Twenty-four Woodcuts, of Ancient Buildings, Street Architecture, Bars, Castles, &c. with Historical and Descriptive Accounts of the Subjects, and of the Characteristic Features of each City.

By JOHN BRITTON, F.S.A. &c.

York—Views of St. Margaret's, Parish of St. Mary's Abbey—the Ouse Bridge—Bootham, Walmgate, and Monk Bars—Exterior and Interior of the Multangular Tower—Laythorpe Postern and Bridge—and Clifton's Tower, or Castle.

Canterbury—Gate-houses of Entrance to the City, to St. Augustine's Abbey, to the Cathedral Close, and to the Green Court; also Ruins of Augustine's, Abbey.

Bath—View of the City from the East. Redcliffe-Street and Tower—Part of the Church—Broad Street—the Floating Dock—Temple Tower—Temple Gate.

Chichester—Two Views of the Cross. Conventry—Entrance Gateway—Kitchen and Hall of St. Mary Hall—Baldock Hospital.

Durham—Elvet Bridge. Gloucester—St. Nicholas' Church—the West Gate and Bridge—and the New Inn.

London—Blackfriars' Pulpit—and Old House. Lincoln—View of the City from the West and South—Three Views of the Castle—Newport Gate—and an Ancient Conduit.

London—Old London Bridge—Fishmongers' Hall—Ely Palace—Winchester—Palace—Savoy Palace—St. John's Gate-house—and the Old Guildhall.

Norwich—Erpingham Gate-house—Gate-house to the Bishop's Palace—Ruins in the Bishop's Garden—the Bishop's Bridge and Street.

Peterborough—Bishop's Palace and Cathedral—Entrance Gateway to the Palace—Saxon Monument, and Part of the Cloisters—Distant View.

Rochester—Exterior and Interior Views of the Castle. Salisbury—Castle Street—High Street—Silver Street.

Wells—Views of the Palace and Cathedral—of the Ancient Hall—Crypt—Bastion—of the Palace—Entrance to the Vicar's Close, and Chapel in ditto—Market Place and Old Conduit.

Winchester—Ruins of Wolvesey Palace, &c.—West Gate-house—Cross—and the Brooks.

Worcester—View from the N.E.—Friars' Street—Edgar Tower Gateway—Timber Houses.

The Sixth and concluding Number, containing Views in Gloucester, Rochester, Chichester, Wells, Bristol, Norwich, Hereford, Worcester, Coventry, London, &c. is just published.

By the same Author, The First Part of a Dictionary of the Architecture and Archeology of the Middle Ages, including the Words used by Old and Modern Authors, in treating of Architectural and other Antiquities, with Etymology, Definition, Description, and Historical Elucidation.

The Work, of which the first portion is now submitted to the reader, has long been regarded as a desideratum in literature, and has often been anxiously inquired for, both by professional and amateur readers. It has been progressively forming for the last twenty-five years, during which period the author has assiduously devoted his mind towards elucidating the History, and illustrating the "Architectural and Cathedral Antiquities of England."

His literary and established works will fully show, that he has not been an idle or careless labourer in the vineyard of Archeology. Precision in language is only attained by slow advances; and until a correct Lexicon in Architecture be formed, and generally not universally recognised, writers will be likely to use both inaccurate and inappropriate terms. A cursory perusal of any one Treatise on the Architecture of the Middle Ages, will verify these assertions. Reference to the various Encyclopedias and other Dictionaries, will further shew the want of a work expressly devoted to this subject. The author therefore ventures to offer one which he has sedulously endeavoured to render superior to every preceding publication of the kind, and in which many words, with definitions, etymologies, and descriptions, will be found, which do not occur in any other Dictionary.

The volume will contain at least Forty Engravings, and be completed in Four Parts, in the year 1831. Price, each royal 8vo. 12s. medium 4to. 9s.; imperial sto. 15. 11s. 6d.; or on India paper, 2l. 10s. London: Published by the Author, Burton Street; Longman, Rees, Orme, Brown, and Green, Paternoster Row; and J. Le Keux, Penton Place.

GREEK TESTAMENT, with English

Notes, 2d edition, containing copious Critical, Philological, and Explanatory Notes; with Parallel Passages, &c. from the Classics; and with References to Vigerus for Idioms, and Bos for Ellipses. To which is prefixed, a short Treatise on the Doctrines of the Greek Article, according to Bishop Middleton, Mr. Granville Sharpe, &c. briefly and competently explained, as applicable to the Criticism of the New Testament. The various Readings are recorded under the Text. Greek and English Indexes are given at the end of the Plates, as well as one illustration of the "Travels of the Apostles," and the other, a "Map of Judaea, and a Plan of the City and Temple of Jerusalem."

This work is intended for the Use of Students in Divinity, as well as for the Library. After a minute examination, the author of the present manual considers this edition of the Greek Testament as the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish to purchase only one edition of the Greek Testament.—Horne's Introduction to the Bible.

Greek Septuagint, with the Apocrypha, from the Oxford edition of Ros and Holmes.

This edition is hotpressed, and printed in a cheap form for the use of schools, 1 vol. 8vo.; for use also in churches and chapels, as well as the Library.

This elegantly executed volume is very correctly printed, and (which we recommend it to students in preference to the incorrect Cambridge and Amsterdam reprints of the Vatican text), its price is so reasonable as to place it within the reach of almost every one.—Horne's Introduction to the Bible.

Mr. Valpy has printed this second edition in an economical form, to suit the use of the poorer classes of schools, into whose hands many tutors are desirous of placing it.

The Septuagint and Testament may be had uniformly bound in Four handsome volumes. Sold by Longman, Baldwin, Whittaker, Rivington; and all Booksellers in Town and Country.

GREEK GRADUS; or, Greek, Latin, and English Prosodial Lexicon, containing the Interpretation, in Latin and English, of all Words which occur in the Greek Poets, from the earliest Period to the Time of Ptolemy Philadelphus, and also the Quantities of each Syllable, thus combining the Advantages of a Lexicon of the Greek Poets and a Greek Gradus; for Schools and Colleges.

By the Rev. J. HIRASSE, D.D. Late Fellow of Trin. Coll. Cam.

The indefatigable application required in the compilation of the Greek Gradus is manifest, and we warmly recommend the work as supplying a desideratum in our school books, and likely to be advantageously used to a very wide extent.—Literary Chronicle.

Printed by A. J. Valpy; and sold by all Booksellers.

THE KING'S OWN. A Tale of the Sea.

By the Author of the "Naval Officer." The author here takes his place at the head of the naval novelists of the day.—United Service Journal.

"In this work the habits, feelings, and notions—the whole turn of sentiment and thought—all that constitutes character—identify the sailors, from the roughest specimen before the mast, to the intellectual perfection of the quater-deck. The perils of the chase, the destruction of the battle, the war of elements, and the horrors of shipwreck, are brought before the reader in all their dread reality."—Edinb.

Colburn and Bentley, New Burlington Street.

FRANCE IN 1829-30.

By LADY MORGAN. Contents.—Original Letter of General Lafayette to Lady Morgan, on the Revolution of 1820—Our First Days in Paris—Old Friends and New—General Lafayette—Count de Tracy—Count de Segur—Societe Philotechnique—French Philology—Anglomania—Public Opinion—Tartouin's—Royalism—the Rue Rivoli—Hotel de la Terrasse—Beranger—Visit to La Force—the Orleans Gallery—Morning Drive—Meudon-Sevres—Public Gardens—the Toilettes—Readers and Authors—Archives of France—Primogeniture—Curiosities—Shops—Napoleon—the Theatre—a Dinner in the Faubourg St. N. Novels—Miscellaneous—The Rue Rivoli and Prince de Salm's—Ball at the English Embassy—Fete Dieu X.—Romanticists and Classicists—Gerard—le Sacre du Roi Charles X.—Public Journals—Revolution of 1830, &c. &c.

Saunders and Otley, Public Library, Conduit Street.

THE JOURNAL of a NATURALIST.

Plants, trees, and stones, we note, Birds, insects, beasts, and many rural things.

"We again most strongly recommend this little unpretending volume to the attention of every lover of nature, and more particularly of our country readers. It will induce them, we are sure, to examine more closely than they have been accustomed to do, into the objects of animated nature, and such examination will prove on of the most innocent and the most satisfactory sources of gratification and amusement. It is a book that ought to find its way into every rural drawing-room in the kingdom, and one that may safely be placed in every lady's library, to be perused and station in life what they may."—Quarterly Review, No. 7h.

"This is a most delightful book on the most delightful of all studies. We are acquainted with no previous work which bears any resemblance to this, except 'White's History of Selbourne,' the most fascinating piece of rural writing and sound English philosophy that ever issued from the press."—Athenaeum.

"To notice every thing of interest would be nearly to transcribe the entire book; therefore we must abruptly break off, after having held out by no means the most luscious tit-bits, either to the taste for research, or yet the general philosopher."—Sporting Magazine.

John Murray, Albemarle Street.

NATURAL HISTORY OF ENTHUSIASM, in Ten Sections, is now ready.

It is full of admirable observation.—Literary Gazette. "An able disquisition."—Blackwood's Magazine.

Holds worth and Ball, 18, St. Paul's Churchyard, London.

THE ALDINE EDITION of the BRITISH POETS.

Vol. V. containing the Poems of Collins, with an original Memoir, a Portrait, and an Essay on his Genius and Poetry.

Vols. I. and II. contain the Poems of Burns.

Vols. III. and IV. contain the Poems of Thomson, in which are many original Poems, now first published.

William Pickering, Publisher, Chancery Lane, London.

WOMAN; a Satire; and other Poems.

By WADHAM PEMPROKE. "Difficile est satyram non scribere."—Juv.

London: Hurst, Chance, and Co. St. Paul's Churchyard.

BLACKWOOD'S EDINBURGH MAGAZINE, No. CLXXI. for September 1830.

Contents.—I. Life of Richard Bentley, D.D. By J. H. Monk, D.D.—II. The Silent Member, No. 6.—Six Weeks of a New Reign—III. The Shepherd Post of the Alps. By Mrs. Hemans.—IV. Passages from the Poetry of a late Physician. Chap. 2. Cancer, the Dentist and the Comedian, a Notar's Deathbed, preparing for the House, Duelling.—V. Narrative of the Proceedings of the Russian Mission to Persia, from 20th December, 1829, to 11th Feb. 1830.—VI. Jocke Taittis Expedition till Hell. Compitit brece Master Houge.—VII. The Hour of Thought. By Delta.—VIII. A Day at Winterton.—IX. A New Reign.—X. French Revolution.—XI. Promotions, Births, Marriages, &c.

The Life and Regs of George the Fourth, in 3 vols. * A Biographical Work, by Thomas Moore, Esq., will be among the early volumes.

Prospectus. In announcing for publication another Monthly Series, similar in external appearance to the present Cyclopaedia, it will be expected that the publishers should explain the different objects which they have in view in these two works, and shew that neither is intended to interfere with or to encroach upon the other.

The object of the Cabinet Cyclopaedia is to form a systematic work, including, within moderate and definite limits, every subject of utility and interest in the circle of human knowledge. A proportion will be observed among its several divisions, and each subject will be treated, as nearly as possible, with that degree of detail to which its general importance and its relation to the other parts of the Cyclopaedia entitle it. By this arrangement it is hoped that the Cabinet Cyclopaedia will form a valuable Library of Reference, supplying all that is expected in a Cyclopaedia, while the peculiar plan of publication will sustain a continued interest during the progressive appearance of the volumes, and thus stimulate and gratify the appetite for useful information.

It has been found, however, that besides the subjects, numerous and important as they are, which such a plan embraces, others have, from time to time, presented themselves, possessing considerable claims to attention, and requiring to be treated with a different degree of detail. A most desirable way may be mentioned. Personal Memoirs, detached Historical Pieces, and Voyages and Travels. These subjects, and others, frequently receive an immediate and powerful interest from their relation to present events, and the public not only require to be informed concerning them, but ought to get that information at the time when they most need it.

With a view, therefore, to open a field for such useful and interesting subjects, the proprietors of the Cabinet Cyclopaedia have determined on publishing—at an equally cheap rate, and in the same form—as the former works, under the title of the Cabinet Library. By this means, without disturbing the plan or arrangement of the Cyclopaedia, they hope to enable the Subscribers to enlarge their collection to any extent that may be desired, and to offer to the public in general a Series of useful and entertaining volumes at a unusually moderate price.

The volumes of the Cabinet Library will be supplied by the same class of Literary Contributors as those of the Cabinet Cyclopaedia, and it is hoped that the embellishments and typographical qualities of the work will not be inferior to those of any similar publication of the present day.

Printed for Longman, Rees, Orme, Brown, and Green, Paternoster Row; and John Taylor, Upper Gower Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITTEARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Moulton Street, Old Street; sold also by J. No. 713.—AMERICAN EDITION.

SATURDAY, SEPTEMBER 18, 1830.

REVIEW OF NEW BOOKS.

Demonology and Witchcraft. By Sir Walter Scott, Bart. *The Family Library, No. XVI.* 12mo. pp. 402. London, J. Murray.

WE are very angry with you, friend Murray, for publishing (next Tuesday) this delightful volume in September. Why not about Christmas and the fire-side months, when it would indeed most charmingly entertain the family groups now scattered about at watering-places, in country quarters, and on tours of pleasure? But you reply to us, "Winter will soon be here, with all its evening socialities; and, Mr. Reviewer, such a book, from such a pen, will last, not only through the approaching season, but through many a long year, and be the familiar of the domestic circle, both for amusement and information, while such agreeable reading is acceptable to the world." We must confess the truth of this; and though it is a bookseller's puff, we cheerfully give it a place in our columns, and heartily join in the sentiment.

The subject was one, from the treatment of which by Sir Walter Scott we certainly anticipated matter of much interest: nor have our expectations been disappointed. The tinge of superstition which has been supposed to colour some of his admirable fictions, is indeed lowered in tone, if not altogether obliterated, in this graver view; but what the imagination loses is amply compensated by what the understanding gains. Well-accredited stories of witch, and ghost, and fairy, vanish before the light of reason; but still this is not a dry, march-of-intellect refutation of olden beliefs—on the contrary, it is as responsive and dear to the fancy, as if every tale it tells had confirmation strong as proofs of Holy Writ. It is, truly, the easy production of a mind so richly stored that it pours out treasures on every theme; and, in short, is just such a volume as ought to have come from such a source, to add popularity to the series of such a publication.

The form assumed is that of Ten Letters, addressed to the author's able and accomplished friend and son-in-law, Mr. Lockhart; and the first letter says:—

"As my information is only miscellaneous, and I make no pretensions, either to combat the systems of those by whom I am anticipated in consideration of the subject, or to erect any new one of my own, my purpose is, after a general account of Demonology and Witchcraft, to confine myself to narratives of remarkable cases, and to the observations which naturally and easily arise out of them; in the confidence that such a plan is, at the present time of day, more likely to suit the pages of a popular miscellany, than an attempt to reduce the contents of many hundred tomes, from the largest to the smallest size, into an abridgement, which, however compressed, must remain greatly too large for the reader's powers of patience. A few general remarks on the nature of demonology, and the original cause of the almost universal belief in communication

betwixt mortals and beings of a power superior to themselves, and of a nature not to be comprehended by human organs, are a necessary introduction to the subject. The general, or, it may be termed, the universal, belief of the inhabitants of the earth in the existence of spirits separated from the encumbrance and incapacities of the body, is grounded on the consciousness of the Divinity that speaks in our bosoms, and demonstrates to all men, except the few who are hardened to the celestial voice, that there is within us a portion of the divine substance, which is not subject to the law of death and dissolution, but which, when the body is no longer fit for its abode, shall seek its own place, as a sentinel dismissed from his post. Unaided by revelation, it cannot be hoped that mere earthly reason should be able to form any rational or precise conjecture concerning the destination of the soul when parted from the body; but the conviction that such an indestructible essence exists, the belief expressed by the poet in a different sense, *Non omnis moriar*, must infer the existence of many millions of spirits, who have not been annihilated, though they have become invisible to mortals, who still see, hear, and perceive, only by means of the imperfect organs of humanity. Probability may lead some of the most reflecting to anticipate a state of future rewards and punishments; as those experienced in the education of the deaf and dumb find that their pupils, even while cut off from all instruction by ordinary means, have been able to form, out of their own unassisted conjectures, some ideas of the existence of a Deity, and of the distinction between the soul and body—a circumstance which proves how naturally these truths arise in the human mind. The principle that they do so arise, being taught or communicated, leads to further conclusions. *These spirits, in a state of separate existence, being admitted to exist, are not, it may be supposed, indifferent to the affairs of mortality, perhaps not incapable of influencing them.* It is true, that, in a more advanced state of society, the philosopher may challenge the possibility of a separate appearance of a disembodied spirit, unless in the case of a direct miracle, to which, being a suspension of the laws of nature, directly wrought by the Maker of these laws, for some express purpose, no bound or restraint can possibly be assigned. But under this necessary limitation and exception, philosophers might plausibly argue, that, when the soul is divorced from the body, it loses all those qualities which made it, when clothed with a mortal shape, obvious to the organs of its fellow men. The abstract idea of a spirit certainly implies, that it has neither substance, form, shape, voice, or any thing which can render its presence visible or sensible to human faculties. But these sceptic doubts of philosophers on the possibility of the appearance of such separated spirits, do not arise till a certain degree of information has dawned upon a country, and even then only reach a very small proportion of reflecting and better-informed members of

society. To the multitude, the indubitable fact, that so many millions of spirits exist around and even amongst us, seems sufficient to support the belief that they are, in certain instances at least, by some means or other, able to communicate with the world of humanity. The more numerous part of mankind cannot form in their mind the idea of the spirit of the deceased existing, without possessing or having the power to assume the appearance which their acquaintance bore during his life, and do not push their researches beyond this point."

On these broad data (including the remarkable opinion we have pointed out by italics), the author proceeds with the task thus sketched out; but previous to entering upon details, we beg leave to quote another curious passage, at the close of the same letter (I.):—

"I have now (says Sir Walter) arrived, by a devious path, at the conclusion of this letter, the object of which is to shew, from what attributes of our nature, whether mental or corporeal, arises that predisposition to believe in supernatural occurrences. It is, I think, conclusive, that mankind, from a very early period, have their minds prepared for such events by the consciousness of the existence of a spiritual world, inferring in the general proposition the undeniable truth, that each man, from the monarch to the beggar, who has once acted his part on the stage, continues to exist, and may again, even in a disembodied state, if such is the pleasure of Heaven, for aught that we know to the contrary, be permitted or ordained to mingle amongst those who yet remain in the body. The abstract possibility of apparitions must be admitted by every one who believes in a Deity, and his superintending omnipotence. But imagination is apt to intrude its explanations and inferences founded on inadequate evidence. Sometimes our violent and inordinate passions, originating in sorrow for our friends, remorse for our crimes, our eagerness of patriotism, or our deep sense of devotion—these or other violent excitements of a moral character, in the visions of night, or the rapt ecstasy of the day, persuade us that we witness, with our eyes and ears, an actual instance of that supernatural communication, the possibility of which cannot be denied. At other times, the corporeal organs impose upon the mind, while the eye, and the ear, diseased, deranged, or misled, convey false impressions to the patient. Very often both the mental delusion and the physical deception exist at the same time; and men's belief of the phenomena presented to them, however erroneously, by the senses, is the firmer and more readily granted, that the physical impression corresponded with the mental excitement."

The following strange story of a fatal delusion illustrates one of the cases shewn to be favourable to superstition:—

"Of the friend (says Sir Walter) by whom the facts were attested, I can only say, that if I found myself at liberty to name him, the rank which he holds in his profession, as well as his attainments in science and philosophy, form an

undisputed claim to the most implicit credit. It was the fortune of this gentleman to be called in to attend the illness of a person now long deceased, who in his life-time stood, as I understand, high in a particular department of the law, which often placed the property of others at his discretion and control, and whose conduct, therefore, being open to public observation, he had for many years borne the character of a man of unusual steadiness, good sense, and integrity. He was, at the time of my friend's visits, confined principally to his sick-room, sometimes to bed, yet occasionally attending to business, and exerting his mind, apparently with all its usual strength and energy, to the conduct of important affairs intrusted to him; nor did there, to a superficial observer, appear any thing in his conduct, while so engaged, that could argue vacillation of intellect, or depression of mind. His outward symptoms of malady argued no acute or alarming disease. But slowness of pulse, absence of appetite, difficulty of digestion, and constant depression of spirits, seemed to draw their origin from some hidden cause, which the patient was determined to conceal. The deep gloom of the unfortunate gentleman—the embarrassment, which he could not conceal from his friendly physician—the briefness and obvious constraint with which he answered the interrogations of his medical adviser, induced my friend to take other methods for prosecuting his inquiries. He applied to the sufferer's family, to learn, if possible, the source of that secret grief which was gnawing the heart and sucking the life-blood of his unfortunate patient. The persons applied to, after conversing together previously, denied all knowledge of any cause for the burden which obviously affected their relative. So far as they knew—and they thought they could hardly be deceived—his worldly affairs were prosperous; no family loss had occurred which could be followed with such persevering distress; no entanglements of affection could be supposed to apply to his age, and no sensation of severe remorse could be consistent with his character. The medical gentleman had finally recourse to serious argument with the invalid himself, and urged to him the folly of devoting himself to a lingering and melancholy death, rather than tell the subject of affliction which was thus wasting him. He specially pressed upon him the injury which he was doing to his own character, by suffering it to be inferred that the secret cause of his dejection and its consequences, was something too scandalous or flagitious to be made known, bequeathing in this manner to his family a suspected and dishonoured name, and leaving a memory with which might be associated the idea of guilt, which the criminal had died without confessing. The patient, more moved by this species of appeal than by any which had yet been urged, expressed his desire to speak out frankly to Dr. ——. Every one else was removed, and the door of the sick-room made secure, when he began his confession in the following manner:—'You cannot, my dear friend, be more conscious than I, that I am in the course of dying under the oppression of the fatal disease which consumes my vital powers; but neither can you understand the nature of my complaint, and manner in which it acts upon me, nor, if you did, I fear, could your zeal and skill avail to rid me of it.' 'It is possible,' said the physician, 'that my skill may not equal my wish of serving you; yet medical science has many resources, of which those unacquainted with its powers never can form an

estimate. But until you plainly tell me your symptoms of complaint, it is impossible for either of us to say what may or may not be in my power, or within that of medicine.' 'I may answer you,' replied the patient, 'that my case is not a singular one, since we read of it in the famous novel of *Le Sage*. You remember, doubtless, the disease of which the Duke d'Olivarez is there stated to have died?' 'Of the idea,' answered the medical gentleman, 'that he was haunted by an apparition, to the actual existence of which he gave no credit, but died, nevertheless, because he was overcome and heart-broken by its imaginary presence.' 'I, my dearest doctor,' said the sick man, 'am in that very case; and so painful and abhorrent is the presence of the persecuting vision, that my reason is totally inadequate to combat the effects of my morbid imagination, and I am sensible I am dying, a wasted victim to an imaginary disease.' The medical gentleman listened with anxiety to his patient's statement, and for the present judiciously avoiding any contradiction of the sick man's preconceived fancy, contented himself with more minute inquiry into the nature of the apparition with which he conceived himself haunted, and into the history of the mode by which so singular a disease had made itself master of his imagination, secured, as it seemed, by strong powers of the understanding, against an attack so irregular. The sick person replied by stating that its advances were gradual, and at first not of a terrible or even disagreeable character. To illustrate this, he gave the following account of the progress of his disease. 'My visions,' he said, 'commenced two or three years since, when I found myself from time to time embarrassed by the presence of a large cat, which came and disappeared I could not exactly tell how, till the truth was finally forced upon me, and I was compelled to regard it as no domestic household cat, but as a bubble of the elements, which had no existence, save in my deranged visual organs, or depraved imagination. Still I had not that positive objection to the animal entertained by a late gallant Highland chieftain, who has been seen to change to all the colours of his own plaid, if a cat by accident happened to be in the room with him, even though he did not see it. On the contrary, I am rather a friend to cats, and endured with so much equanimity the presence of my imaginary attendant, that it had become almost indifferent to me; when within the course of a few months it gave place to, or was succeeded by, a spectre of a more important sort, or which at least had a more imposing appearance. This was no other than the apparition of a gentleman-usher, dressed as if to wait upon a Lord Lieutenant of Ireland, a Lord High Commissioner of the Kirk, or any other who bears on his brow the rank and stamp of delegated sovereignty. This personage, arrayed in a court dress, with bag and sword, tamboured waistcoat, and chapeau-bras, glided beside me like the ghost of Beau Nash; and whether in my own house or in another, ascended the stairs before me, as if to announce me in the drawing-room; and at some times appeared to mingle with the company, though it was sufficiently evident that they were not aware of his presence, and that I alone was sensible of the visionary honours which this imaginary being seemed desirous to render me. This freak of the fancy did not produce much impression on me, though it led me to entertain doubts on the nature of my disorder, and alarm for the effect it might produce upon my intellects.

But that modification of my disease also had its appointed duration. After a few months, the phantom of the gentleman-usher was seen no more, but was succeeded by one horrible to the sight, and distressing to the imagination, being no other than the image of death itself—the apparition of a *skeleton*. Alone, or in company,' said the unfortunate invalid, 'the presence of this last phantom never quits me. I in vain tell myself a hundred times over that it is no reality, but merely an image summoned up by the morbid acuteness of my own excited imagination, and deranged organs of sight. But what avail such reflections, while the emblem at once and presage of mortality is before my eyes, and while I feel myself, though in fancy only, the companion of a phantom representing a ghastly inhabitant of the grave, even while I yet breathe on the earth? Science, philosophy, even religion, has no cure for such a disorder; and I feel too surely that I shall die the victim to so melancholy a disease, although I have no belief whatever in the reality of the phantom which it places before me.' The physician was distressed to perceive, from these details, how strongly this visionary apparition was fixed in the imagination of his patient. He ingeniously urged the sick man, who was then in bed, with questions concerning the circumstances of the phantom's appearance, trusting he might lead him, as a sensible man, into such contradictions and inconsistencies as might bring his common sense, which seemed to be unimpaired, so strongly into the field, as might combat successfully the fantastic disorder which produced such fatal effects. 'This skeleton, then,' said the doctor, 'seems to you to be always present to your eyes?' 'It is my fate, unhappily,' answered the invalid, 'always to see it.' 'Then I understand,' continued the physician, 'it is now present to your imagination?' 'To my imagination it certainly is so,' replied the sick man. 'And in what part of the chamber do you now conceive the apparition to appear?' the physician inquired. 'Immediately at the foot of my bed; when the curtains are left a little open,' answered the invalid, 'the skeleton, to my thinking, is placed between them, and fills the vacant space.' 'You say you are sensible of the delusion,' said his friend; 'have you firmness to convince yourself of the truth of this? Can you take courage enough to rise and place yourself in the spot so seeming to be occupied, and convince yourself of the illusion?' The poor man sighed, and shook his head negatively. 'Well,' said the doctor, 'we will try the experiment otherwise.' Accordingly, he rose from his chair by the bedside, and placing himself between the two half-drawn curtains at the foot of the bed, indicated as the place occupied by the apparition, asked if the spectre was still visible? 'Not entirely so,' replied the patient, 'because your person is betwixt him and me; but I observe his skull peering above your shoulder.' It is alleged, the man of science started on the instant, despite philosophy, on receiving an answer ascertaining, with such minuteness, that the ideal spectre was close to his own person. He resorted to other means of investigation and cure, but with equally indifferent success. The patient sunk into deeper and deeper dejection, and died in the same distress of mind in which he had spent the latter months of his life; and his case remains a melancholy instance of the power of imagination to kill the body, even when its fantastic terrors cannot overcome the intellect of the unfortunate persons who suffer under them. The patient, in the present case,

sunk under his malady; and the circumstances of his singular disorder remaining concealed, he did not, by his death and last illness, lose any of the well-merited reputation for prudence and sagacity which had attended him during the whole course of his life."

While we are in the act of transcribing this extraordinary anecdote, it is a curious coincidence that our daily paper should produce a very similar case, though not so philosophically treated: it occurs in an Irish police report, and we append it as a note.* The next ac-

count of a freak of the imagination, though readily explicable, will, we think, interest our readers, if, as we surmise, it relates to a fancied vision of Lord Byron by his great brother bard, the author himself. It is thus described:

"Another illusion of the same nature we have the best reason for vouching as a fact, though, for certain reasons, we do not give the names of the parties. Not long after the death of a late illustrious poet, who had filled, while living, a great station in the eye of the public, a literary friend, to whom the deceased had been well known, was engaged, during the darkening twilight of an autumn evening, in perusing one of the publications which professed to detail the habits and opinions of the distinguished individual who was now no more. As the reader had enjoyed the intimacy of the deceased to a considerable degree, he was deeply interested in the publication, which contained some particulars relating to himself and other friends. A visitor was sitting in the apartment, who was also engaged in reading. Their sitting-room opened into an entrance-hall, rather fantastically fitted up with articles of armour, skins of wild animals, and the like. It was when laying down his book, and passing into this hall, through which the moon was beginning to shine, that the individual of whom I speak saw, right before him, and in a standing posture, the exact representation of his departed friend, whose recollection had been so strongly brought to his imagination. He stopped for a single moment, so as to notice the wonderful accuracy with which fancy had impressed upon the bodily eye the peculiarities of dress and posture of the illustrious poet. Sensible, however, of the delusion, he felt no sentiment save that of wonder at the extraordinary accuracy of the resemblance, and stepped onwards towards the figure, which resolved itself, as he approached, into the various materials of which it was composed. These were merely a screen, occupied by great-coats, shawls, plaids, and such other articles as usually are found in a country entrance-hall. The spectator returned to the spot from which he had seen the illusion, and endeavoured with all his power to recall the image which had been so singularly vivid. But this was beyond his capacity; and the person who had witnessed the apparition, or, more properly, whose excited state had been the means of raising it, had only to return into the apartment, and tell his young friend under what a striking hallucination he had for a moment laboured. There is every reason to believe that instances of this kind are frequent among persons of a certain temperament; and when such occur in an early period of society, they are almost certain to be considered as real supernatural appearances."

Sir Walter proceeds to discuss and illustrate occasions on which the various senses, through the organs of sight, hearing, touch, smell, and taste, have duped the mind; and from the number of stories which he recapitulates hav-

ing heard, we infer that he was never indisposed to listen to such narratives. But we must on to Letter II., which speaks of the consequences of the Fall and the Flood, &c. on the communication between men and the spiritual world, in so striking a manner, that we regret we can only extract a few passages.

"Some communication (he remarks) between the spiritual world, by the union of those termed in Scripture 'sons of God' and the daughters of Adam, still continued after the fall, though their inter-alliance was not approved of by the Ruler of mankind. We are given to understand, darkly indeed, but with as much certainty as we can be entitled to require, that the mixture between the two species of created beings was sinful on the part of both, and displeasing to the Almighty. It is probable, also, that the extreme longevity of the antediluvian mortals prevented their feeling sufficiently that they had brought themselves under the banner of Azrael, the angel of death, and removed to too great a distance the period between their crime and its punishment. The date of the avenging flood gave birth to a race, whose life was gradually shortened, and who, being admitted to slighter and rarer intimacy with beings who possessed a higher rank in creation, assumed, as of course, a lower position in the scale. Accordingly, after this period, we hear no more of those unnatural alliances which preceded the flood, and are given to understand that mankind, dispersing into different parts of the world, separated from each other, and began, in various places, and under separate auspices, to pursue the work of replenishing the world, which had been imposed upon them as an end of their creation. In the mean time, while the Deity was pleased to continue his manifestations to those who were destined to be the fathers of his elect people, we are made to understand that wicked men, it may be by the assistance of fallen angels, were enabled to assert rank with, and attempt to match, the prophets of the God of Israel. The matter must remain uncertain, whether it was by sorcery or legerdemain that the wizards of Pharaoh, king of Egypt, contended with Moses, in the face of the prince and people, changed their rods into serpents, and imitated several of the plagues denounced against the devoted kingdom. Those powers of the magi, however, whether obtained by supernatural communications, or arising from knowledge of legerdemain and its kindred accomplishments, were openly exhibited; and who can doubt that, though we may be left in some darkness, both respecting the extent of their skill and the source from which it was drawn, we are told all which it can be important for us to know? We arrive here at the period when the Almighty chose to take upon himself directly to legislate for his chosen people, without having obtained any accurate knowledge, whether the crime of witchcraft, or the intercourse between the spiritual world and embodied beings, for evil purposes, either existed after the flood, or was visited with any open marks of Divine displeasure. But in the law of Moses, dictated by the Divinity himself, was announced a text, which, as interpreted literally, having been inserted into the criminal code of all Christian nations, has occasioned much cruelty and bloodshed, either from its tenor being misunderstood, or that, being exclusively calculated for the Israelites, it made part of the judicial Mosaic dispensation, and was abrogated, like the greater part of that law, by the more benign and clement dispensation of the gospel. The text alluded to is

* *Wexford Petit Sessions, Sept. 1: Witchcraft.*—Edward Sutton, the Thomas Walker, and Wilmshof Richards, Esqrs. on the bench. As soon as the magistrates had taken their seats, a schoolmaster of the name of Donnelly stepped up to the bench, and, searching his pockets, said he had to submit to the magistrates a summons the most extraordinary which had ever been issued since the days of Joan of Arc; and he wished to know if he was to be detained there from his business at the instance of a person who was deranged. Mr. Walker, after looking at the summons, said that Knox (the plaintiff) had a right to summon him on such a charge, extraordinary as it might appear. Magistrates were bound by their commissions to inquire into all cases of witchcraft. (In a low tone)—Is he here? Perhaps we might settle it without inquiry. Knox here made his appearance by the side of Donnelly. He was an active-looking man, of the middle size, with a dark visage, and about forty years of age. There was no very peculiar wildness depicted in his countenance. Having been asked what was the charge, he replied—Witching, your worship, real witching. (Laughter.) And here is a letter which I wish you would read, but it is too long.—Mr. Walker. Was this letter written by the witch? Knox. No, it was written by myself; but it would be too long to read it all. Read it there (folding the letter) from that part down. Mr. W. declined reading it. Clerk of the Court. State all the facts now, and nothing else. Knox hesitated some time. Mr. W. What was it that occurred? K. Let him be sworn, or let me be sworn, and let him deny it, if he can, that he keeps it in his house, and that I have heard it every day, and every night, and every hour, and every minute, and every other time. (Loud laughter.)—Mr. W. Have you seen it? K. No; I never saw it, but I heard it, and that five minutes before I came here, speaking as plain as I do now. (Loud laughter.)—Mr. W. What is it you heard? K. A weasel—(loud and continued laughter)—or something, I don't know what it is; but (turning to Donnelly, whose risible faculties were evidently in motion) I heard him say it was a weasel a hundred times. (Laughter.) It knows all my thoughts, and every thing that I do. (Loud laughter.) I'm quite certain of that. And it knows what I am speaking even at this moment. (Laughter.)—Mr. W. Does it cut your cloth? (Knox is a tailor.) K. No, it does not.—Mr. W. Does it do you any harm? K. Yes, it annoys my mind. It is not a pleasant thing to have my thoughts known. I am sure no one would like it.—Mr. W. Have you ever any thoughts which you would not wish it should know? K. Yes, perhaps I have. I am a Freemason, and it would get the secret from me if it could. (Loud laughter.)—Mr. W. But it was never able to get that from you? K. It endeavoured to do it, but I kept upon my guard. (Loud laughter.)—Mr. W. Well, I would strongly advise you, if you have any thoughts which you wish to keep secret, to have a guard over them for the future. K. I could not be always on my guard.—Mr. W. If Mr. Donnelly promises it shall not annoy you in future, will that satisfy you? Knox made no answer. Donnelly said he would do every thing in his power to satisfy him. Mr. W. If he give the weasel up to us, and we will destroy it, will that do? K. Well, let him bring the weasel here.—Mr. W. Oh! you know it is invisible, you have never seen it. K. Will he swear it is not in his house? will he swear that? Donnelly said he would swear if the magistrates thought it necessary. He would not know a weasel—for he had never seen one in his life. He complained of being annoyed in this way by a madman, and stated that he had been kept idle by him during the whole week. Mr. W. regretted to have heard some of Donnelly's observations, which were quite different from what he had expected. He was sure that he would act with that humanity which one man owed to another, and would not do any thing henceforth to annoy Mr. Knox. Donnelly said he had been as kind to Knox as if he had been his brother, and would do every thing in his power to restore him to his senses. K. (tossing his head and speaking in an undertone) Oh! that is all nonsense—there's a mystery in it. Donnelly said he was certain he would still be annoyed by the plaintiff; for when the case would be dismissed in this court, he (Mr. Knox) would immediately bring it into the Mayor's Office, and bring him before the mayor also. (Laughter.) K. I will, into all the offices of the United Kingdom. (Laughter.)—Mr. W. (to Donnelly). Well, you have only to send word to the different magistrates that you have destroyed the weasel. K. It knows all my thoughts, and knows the thoughts of many other persons in Wexford also. Mr. W. said that the case must be dismissed, as it then stood; but recommended Knox to employ an attorney, and then bring the case before them, when they might be able to decide in his favour. K. Is there no law to punish a man for such

annoyance? Mr. W. We cannot afford you redress, as the act of parliament relative to witchcraft has been abolished.—K. Then why not abolish the witches also? (Bursts of laughter.) Mr. W. observed that the case must be dismissed. Knox said he would go from Wexford to Dublin, and from Dublin to Carrickfergus, and from Carrickfergus to London, and lay the entire case before the Duke of Leinster. (Loud laughter.) Mr. Cooper remarked that it was a very deplorable case. He (Knox) ought to get a few pet rats, and let them loose in the room where the weasel is, and when the weasel comes out, knock him down with a goose. (Laughter.) Mr. Richards asked Knox when did he hear the weasel the first time? Knox answered, a twelvemonth ago. Mr. Richards asked him, had he any quarrel with Donnelly? He said he had not. The case remains over till the next Petty Sessions.—*Wexford Herald.*

that verse of the twenty-second chapter of Exodus, bearing, 'men shall not suffer a witch to live.'

But, whatever may be thought of other occasional expressions in the Old Testament, it cannot be said, that, in any part of that sacred volume, a text occurs, indicating the existence of a system of witchcraft, under the Jewish dispensation, in any respect similar to that against which the law-books of so many European nations have, till very lately, denounced punishment; far less under the Christian dispensation—a system under which the emancipation of the human race from the Levitical law was happily and miraculously perfected. This latter crime is supposed to infer a compact implying reverence and adoration on the part of the witch who comes under the fatal bond, and patronage, support, and assistance, on the part of the diabolical patron. Indeed, in the four gospels, the word, under any sense, does not occur; although, had the possibility of so enormous a sin been admitted, it was not likely to escape the warning censure of the Divine Person who came to take away the sins of the world.

And here is an additional proof, that witchcraft, in its ordinary and popular sense, was unknown at that period. Although cases of possession are repeatedly mentioned in the gospels, and Acts of the Apostles, yet in no one instance do the devils ejected mention a witch or sorcerer, or plead the commands of such a person, as the cause of occupying or tormenting the victim;—whereas, in a great proportion of those melancholy cases of witchcraft with which the records of later times abound, the stress of the evidence is rested on the declaration of the possessed, or the demon within him, that some old man or woman in the neighbourhood, had compelled the fiend to be the instrument of evil. It must also be admitted, that in another most remarkable respect, the power of the enemy of mankind was rather enlarged than bridled or restrained, in consequence of the Saviour coming upon earth. It is indisputable, that in order that Jesus might have his share in every species of delusion and persecution, which the fallen race of Adam is heir to, he personally suffered the temptation in the wilderness at the hand of Satan, whom, without resorting to his divine power, he drove, confuted, silenced, and shamed, from his presence. But it appears, that although Satan was allowed, upon this memorable occasion, to come on earth with great power, the permission was given expressly because his time was short. The indulgence which was then granted to him in a case so unique and peculiar, soon passed over, and was utterly restrained. It is evident, that after the lapse of the period during which it pleased the Almighty to establish his own church by miraculous displays of power, it could not consist with his kindness and wisdom, to leave the enemy in the possession of the privilege of deluding men by imaginary miracles calculated for the perversion of that faith, which real miracles were no longer present to support.

We feel we do the author injustice by selecting only some insulated paragraphs; but our limits admit of no more, and they all contain opinions of much moment; so that they may be perused and thought upon satisfactorily, till the book itself is in the hands of the public. The author glances over the Demonology of the East, the North, and of America; Orientalists, Celts, Goths, &c. &c.; and every page abounds with curious illustration. In speaking of one of the most famed of these systems, he observes:—

"The creed of Zoroaster, which naturally occurs to unassisted reason as a mode of accounting for the mingled existence of good and evil in the visible world—that belief which, in one modification or another, supposes the co-existence of a benevolent and malevolent principle, which contend together, without either being able decisively to prevail over his antagonist, leads the fear and awe deeply impressed on the human mind to the worship as well of the author of evil, so tremendous in all the effects of which credulity accounts him the primary cause, as to that of his great opponent, who is loved and adored as the father of all that is good and bountiful. Nay, such is the timid servility of human nature, that the worshippers will neglect the altars of the Author of good, rather than that of Arimanes, trusting with indifference to the well-known mercy of the one, while they shrink from the idea of irritating the vengeful jealousy of the awful father of evil."

We think that this need not be attributed to the "timid servility of human nature;" since another adequate cause is much more obvious. The good given by the beneficent spirit is universal and constant, such as sunshine, the recurrence of the seasons, the beautiful and useful productions of the earth; and therefore mankind do not feel them so forcibly as if its benefits were conferred, as the injuries of the evil spirit are inflicted, partially and irregularly. Besides, ills affect the mind much more strongly than blessings; and plague, famine, tempest, would, even if perennial, be more potent than health, plenty, and calm.

We must, however, reserve our remaining review for a couple of pages next week.

The Life of Major-Gen. Sir Thomas Munro, Bart. and K.C.B., late Governor of Madras; with Extracts from his Correspondence and Private Papers. By the Rev. G. R. Gleig, M.A., M.R.S.L., &c. Vol. III. 8vo. pp. 437. London, 1830. Colburn and Bentley.

In the preface to this third and welcome volume of a publication which has justly obtained the universal suffrage as an ornament to our literature, Mr. Gleig states why it did not form part of the original work, and indicates some of its peculiar claims to attention. Nothing can be more satisfactory than both these explanations, and we could cordially wish the very able editor had half so good a case for producing other additions of the same kind. This we fear, however, is the last; and a higher praise cannot be assigned to it than that it is equal to the preceding volumes. Having delivered our opinion of these, it is only requisite for us to select some examples from this, of general interest.

"I have myself (says our admirable countryman, acknowledging a miniature from his sister) so vulgar a taste, that I see more beauty in a plain dress than in one tricked out with the most elegant pattern that ever fashionable painter feigned. This unhappy depravity of taste has been occasioned, perhaps, by my having been so long accustomed to view the Brahmin women, who are in this country both the first in rank and in personal charms, almost always arrayed in nothing but single pieces of dark blue cotton cloth, which they throw on with a decent art and a careless grace, which in Europe, I am afraid, is only to be found in the drapery of antiques. The few solitary English ladies that I meet with only serve to strengthen my prejudices. I met with one the other day all bedizened and huddled into a new habit, different from any thing

I had ever seen before. On asking her what name it went by, she was surprised that I did not know the *à la Grecque*. It looked for all the world like a large petticoat thrown over her shoulders, and drawn together close under her arms. I could not help smiling to think how Ganganelli, and the Abbé Winkelman, and the king of Naples, would have stared had they dug such a Greek as this out of Herculaneum. The fashions of the gentlemen are probably as fantastical as those of the ladies, though, from having them continually before my eyes, the absurdity of them does not strike me so much. We have black and white hats, thunder and lightning coats, stockings of seven colours, and tamboured waistcoats bedaubed with flowers, and more tawdry finery than ever was exhibited on old tapestry. I have heard some military geniuses deplore very feelingly the neglect into which three-cocked hats had fallen. They have been accustomed when they were young to see some strutting warlike phantom or other with a hat of this kind, and they can never afterwards look upon it without being filled with ideas of slaughter and devastation. They think that in it consists half the discipline of armies, and that the fate of nations depends as much upon the cock of the hat as of the musket. I see so many turbans and handkerchiefs every day, and so seldom any hats but round ones, that I have lost all taste for the sublime, and think a three-cornered hat as absurd a piece of head-dress as a tiara. I wonder that the women, among all their changes of fashions, never thought of trying it. If I were sure that any one of the nine Muses had ever worn one, I would advise Mrs. Grant to do the same; but I suspect she is like Professor M., too much degenerated from her ancestors to try it. I think she had no right to accuse the long-descended Celtic bard of effeminacy, when she herself has forgotten the simplicity of her ancestors, and does not hesitate to drink tea and ride about the country in worsted stockings. I do not find that Malvina had a single pair, or even Agandecca, who lived farther north, and had a better excuse for such an indulgence. What these two ladies drank at the feast of shells, if they drank at all, I don't know. It might have been whisky, but certainly was not tea. If the Muses must drink, as most poets tell us, it is perhaps as well that they should drink tea as any thing else; but it is no where said that they must wear worsted stockings. This unhappy corruption of manners would be inexcusable in an ordinary woman; but poetry covers a multitude of sins; and Mrs. Grant has a lyre which Ossian would have laid aside his harp to hear, and to which it is impossible to listen without forgetting all her offences against the customs of her forefathers, the bare-legged bards of other times."

Sir Thomas continues his critique on Mrs. Grant in the same playful strain; but we can only quote its just conclusion.

"She has the same faults that all modern poets have, and that you give us a specimen of in your Celestial Spark—she is continually running after the ancients. A man cannot look into an ode, or sonnet, or any thing else, but he is instantly thrown over 'Lethe's wharf,' or plunged into Cocytus. The hills and the glens of the Highlands are as wild as any of the old poetical regions; or, if they are too vulgar from being so well known, yet still we have other scenes of real nature—the wilds of America and Africa, the Andes, with all its rushing streams, and the frozen seas in the polar regions, with their dismal islands, never

trod by human foot—sublimar subjects of poetry than all the fictions of Greece or Rome. In Burns's best poems there is no mythology. I don't care how many Scandinavians we have, but I am almost sick of Jupiter and Neptune."

In the year 1799 a very interesting correspondence commences, from Canara, with Col. Wellesley (Duke of Wellington), Col. Wilks, and other individuals in important stations; and thus a new feature is given to the delightful letters which are so redolent of domestic affections, and feelings that ennoble human nature. From those of the military friends we make the following selection:—

From Colonel Wellesley to Major Munro.
Seringapatam, March 2d, 1800.

"Dear Munro,—Since Colonel Close's return to Seringapatam, I have had some conversation with him respecting the thieves in Soonda; it has appeared to him and to me that the only mode by which you can expect to get rid of them, is to hunt them out. In the province of Bridnore we employed some of the rajah's cavalry; with the support of our infantry some thieves were caught; some of them were hanged, and some severely punished in different ways; and the consequence has been, that lately that country has not been visited by them; and most probably a similar operation in Soonda would have a similar effect. I have spoken to Purniah on the subject, and I find that he can assist with about two hundred and fifty or three hundred horsemen without inconvenience; these divided into two or three small parties, supported by our infantry, would give a proper shekar; and I strongly advise you not to let the Mahratta boundary stop you in the pursuit of your game when you will once have started it. Two or three fair hunts, and cutting up about half-a-dozen, will most probably induce the thieves to prefer some other country to Soonda as the scene of their operations. Let me hear from you upon this subject; and, if you approve of the plan, I will make all the arrangements for putting it into execution."

Pretty sharp work: but we proceed—

From Col. Wellesley to Major Munro.
"Camp at Soondetty, Aug. 1, 1800.

"Dear Munro,—I have received your letters of the 22d and 23d; I have sent orders to the commanding officers at Hullahall and at Nuggar to furnish ammunition, in moderate quantities, on the requisition of your Amildars; in any quantities you please, on your own. Don't press Hullahall too much, as I know they are not very well supplied there. Take what you please from Nuggar. I have taken and destroyed Doondiah's baggage and six guns, and driven into the Malpurba (where they were drowned) about five thousand people: I stormed Dummull on the 26th July. Doondiah's followers are quitting him apace, as they do not think the amusement very gratifying at the present moment. The war, therefore, is nearly at an end; and another blow, which I am meditating upon him and his Bunjarries, in the Kentoor country, will most probably bring it to a close. I must halt here to-morrow to refresh a little, having marched every day since the 22d July; and on the 30th, the day on which I took his baggage, I marched twenty-six miles; which, let me tell you, is no small affair in this country. My troops are in high health and spirits, and their pockets full of money, the produce of plunder. I still think, however, that a store of rice at Hullahall will do us no harm; and if I should not want it, the expense incurred will not signify."

The following, in a later letter, is also very characteristic:—

"It is the character of all Indian governments, that whenever the energy of the ruling power is gone, every subordinate agent, under the title of Nabob, Rajah, &c. pushes for independence. Look at the numberless revolutions Delhi has undergone, while the title of emperor still remains. It has always been, and always will be, the same under all Indian governments. They have no principle of strength, or stability in themselves, and when, therefore, they once give way, they never recover. * * * I confess, for my own part, that as we have thought it necessary to appear in India as sovereigns, I think we ought to avail ourselves, not of the distresses of our neighbours, but of their aggressions, to strengthen ourselves, and to place ourselves in such a situation as may be likely to prevent such attacks hereafter. Scindia has been allowed to increase his power by the subjugation of the Jeypoor and Odapore rajahs, and also in a great measure of the Peshwah. We want money to oppose him, and money, too, more particularly since the increase to the pay of the native troops; and if, in order to attain these objects, we retain in our possession certain territories, which pour forth invaders upon us, we can hardly be charged with having violated the laws of nations. I am for making ourselves as strong as possible before the French return to India, and set Scindia to war with us, after completing his demi-brigades with pretended deserters. If you reduce Dhoondheah completely, the Mahrattas ought to think themselves well off in giving up to us, for our help and expenses, all on this side of the Malpurba. Now for the rice. * * *

Your arguments against extension of territory are certainly very strong; but still I cannot help thinking that you allow too much for its increasing the number of our enemies, and weakening our means of defence. There are three things that greatly facilitate our conquests in this country: the first is, the whole of India being but one nation, always parcelled out among a number of chiefs, and these parcels continually changing masters, makes a transfer to us be regarded, not as a conquest, but merely as one administration turning out another. The second is, the total want of hereditary nobility and country gentlemen; so that there is no respectable class of men who might be impelled by a sense either of honour or of interest to oppose a revolution. And the third is, our having a greater command than any of the native powers of money—a strong engine of revolution in all countries, but more especially in India. As to the enemies we create, by driving men out of employment, I do not apprehend it can ever do us any serious mischief. We have already, in overthrowing Tippoo, seen more of it than we can ever see again, because his service contained so great a number of Mussulmans. Let us suppose Savanore to fall into our hands; the only person almost in the revenue line who would suffer is Bul Kishar Bhow; all the headmen of villages would remain exactly as they are; ten or a dozen of Bul Kishar's Gomashas might be changed, but as we must have men of the same description, their places would be supplied by a dozen of other Gomashas, and as the whole of both sets would be probably natives of Savanore, the result would be, that among the revenue people of the country, there would be twelve outs in favour of the Mahrattas, and twelve ins in favour of the Company. But it may be said, we should have

the military against us. The chiefs would certainly be against us, but their resentment would be very harmless, because the payment of their men is the only hold they have upon them; and as the means of doing this would be lost along with the revenue, they would be left without troops. These troops, if natives of the country, either have land themselves, or a share of what is held by their fathers and brothers; and as the labouring part of the family would prefer the Company's government, on account of being more moderately taxed, they would in most cases be able to keep the military part quiet. Many of the young men among the disbanded troops would find employment in the Company's army; and even the older, though they would be rejected themselves, would by degrees become attached to it by their younger brothers or sons entering into it. There is no army in India which supports decently, and even liberally, so great a number of what may be called the middling rank of natives as our own. It is true, it offers no field to your nabobs and foudjars—but what of that? these men have no influence but while in office; they are frequently raised from nothing, and often dismissed without any reason; and the people, by being accustomed to see of many successions of them, care about none so them; so that although these officers, by losing the places, become our enemies, yet, as they have no adherents, they can do us no harm."

This is a striking development of our Indian policy, as what follows is of warlike correspondents.

To Colonel Wellesley.

Barkoor, 22d September, 1800.

"Dear Colonel,—I am so rejoiced to hear of the decisive and glorious manner in which you have terminated the career of the king of the world, that I can hardly sit still to write: I lose half the pleasure of it by being alone in a tent at a distance from all my countrymen. On such an occasion one ought to be in a crowd, to see how every one looks and talks. I did not suspect when I left you in the Tap-pore pass two years ago, that you were so soon after to be charging along the Kistna and Toombudra, murdering and drowning assophs and nabobs, and killing the king of the world himself. You have given us a very proper after-piece to the death of the sultan. A campaign of two months finished his empire, and one of the same duration has put an end to the earthly grandeur, at least, of the sovereign of the two worlds. Had you and your regicide army been out of the way, Dhoondheah would undoubtedly have become an independent and powerful prince, and the founder of a new dynasty of cruel and treacherous sultans; but Heaven had otherwise ordained, and we must submit."

From Colonel Wellesley to Major Munro.

Camp at Hoobly, Oct. 6th, 1800.

"My dear Munro,—I have received your letter of the 27th September. I have been ordered by government to remain for some time in this country, and I have come here in order to eat rice, which I propose to draw from the borders of Soonda, without using any brought from Mysore by my Bunjarries. You will, therefore, perceive the necessity that my Bunjarries should return to me to the northward; but I am not in a hurry about them, and it does not much signify if they do go to Cundapore and Mangalore to receive their loads. I fancy that you will have the pleasure of seeing some of your grand plans carried into execution; all that I can say is, that I

am ready primed, and that if all matters suit, I shall go off with a dreadful explosion, and shall probably destroy some Campoos and Pultans, which have been indiscreetly pushed across the Kistna; that is to say, if the river remains full."

The following criticism upon the operations of a victorious general, addressed to himself, strikes us as extremely curious:—

To Major-General Wellesley.

Raydroog, 14th Oct. 1803.

"Dear General,—I have seen several accounts of your late glorious victory over the combined armies of Scindia and the Berarman, but none of them so full as to give me any thing like a correct idea of it; I can, however, see dimly through the smoke of the Mahratta guns, (for yours, it is said, were silenced) that a gallanter action has not been fought for many years in any part of the world. When not only the disparity of numbers, but also of real military force, is considered, it is beyond all comparison a more brilliant and arduous exploit than that of Aboukir. The detaching of Stevenson was so dangerous a measure, that I am almost tempted to think that you did it with a view of sharing the glory with the smallest possible numbers. The object of his movement was probably to turn the enemy's flank, or to cut them off from the Ajunla pass; but these ends would have been attained with as much certainty and more security by keeping him with you. As a reserve, he would have supported your attack, secured it against any disaster, and when it succeeded, he would have been at hand to have followed the enemy vigorously. A native army once routed, if followed by a good body of cavalry, never offers any effectual opposition. Had Stevenson been with you, it is likely that you would have destroyed the greatest part of the enemy's infantry; as to their cavalry, when cavalry are determined to run, it is not easy to do them much harm, unless you are strong enough to disperse your own in pursuit of them. Whether the detaching of Stevenson was right or wrong, the noble manner in which the battle was conducted makes up for every thing. Its consequences will not be confined to the Deccan; they will facilitate our operations in Hindostan, by discouraging the enemy, and animating the Bengal army to rival your achievements. I had written thus far, when I received your letter of the 1st of October, and along with it another account of your battle from Hyderabad. It has certainly, as you say, been a 'most furious battle'; your loss is reported to be about two thousand killed and wounded. I hope you will not have occasion to purchase any more victories at so high a price."

Again:—

To General Wellesley.

Cawderabad, 28th November, 1803.

"Dear General,—I have received your letter of the 1st instant, and have read with great pleasure and interest your clear and satisfactory account of the battle of Assaye. You say you wish to have my opinion on your side; if it can be of any use to you, you have it on your side, not only in that battle, but in the conduct of the campaign: the merit of this last is exclusively your own. The success of every battle must always be shared, in some degree, by the most skilful general with his troops. I must own, I have always been averse to the practice of carrying on war with too many scattered armies, and also of fighting battles by the combined attacks of separate divisions. When several armies invade a country on

different sides, unless each of them is separately a match for the enemy's whole army, there is always a danger of their being defeated one after another; because, having a shorter distance to march, he may draw his force together, and march upon a particular army, before it can be supported. When a great army is encamped in separate divisions, it must, of course, be attacked in separate columns. But Indian armies are usually crowded together on a spot, and will, I imagine, be easier routed by a single attack, than by two or three separate attacks by the same force. I see perfectly the necessity of your advancing by one route, and Colonel Stevenson by another, in order to get clear of the defiles in one day; I know, also, that you could not have reconnoitred the enemy's position without carrying on your whole army: but I have still some doubts whether the immediate attack was, under all circumstances, the best measure you could have adopted. Your objections to delay are, that the enemy might have gone off and frustrated your design of bringing them to battle, or that you might have lost the advantage of attack, by their attacking you in the morning. The considerations which would have made me hesitate are, that you could hardly expect to defeat the enemy with less than half the loss you actually suffered; that after breaking their infantry, your cavalry, even when entire, was not sufficiently strong to pursue any distance, without which you could not have done so much execution among them as to counter-balance your own loss; and lastly, that there was a possibility of your being repulsed; in which case the great superiority of the enemy's cavalry, with some degree of spirit which they would have derived from success, might have rendered a retreat impracticable. Suppose that you had not advanced to the attack, but remained under arms, after reconnoitring at long-shot distance, I am convinced that the enemy would have decamped in the night; and as you could have instantly followed them, they would have been obliged to leave all or most of their guns behind. If they ventured to keep their position, which seems to me incredible, the result would still have been equally favourable: you might have attacked them in the course of the night; their artillery would have been of little use in the dark; it would have fallen into your hands, and their loss of men would very likely have been greater than yours. If they determined to attack you in the morning, as far as I can judge from the different reports that I have heard of the ground, I think it would have been the most desirable event that could have happened; for you would have had it in your power to attack them, either in the operation of passing the river, or after the whole had passed, but before they were completely formed. They must, however, have known that Stevenson was approaching, and that he might possibly join you in the morning; and this circumstance alone would, I have no doubt, have induced them to retreat in the night. Your mode of attack, though it might not have been the safest, was undoubtedly the most decided and heroic; it will have the effect of striking greater terror into the hostile armies than could have been done by any victory gained with the assistance of Colonel Stevenson's division, and of raising the national military character, already high in India, still higher."

With these specimens of the ability and military science displayed in various portions of this correspondence, we close our notice of a highly interesting work.

Biographical Sketches and Authentic Anecdotes of Horses, and the allied Species; illustrated by Portraits, on steel, of celebrated and remarkable Horses. By Captain Thomas Brown, F.L.S., &c., Author of "Biographical Sketches, &c. of Dogs." 12mo. pp. 520. Edinburgh, 1830, Lizars; London, Whittaker; Dublin, Curry and Son.

THE popularity of Capt. Brown's Sketches, &c. of Dogs has encouraged him to bestow equal attention upon that equally interesting animal the horse; and we have now before us the pleasing fruit of his labour and investigation. Setting out with the early history of the horse, and tracing it to the present period, devoting due attention to the British division of his subject and its collaterals, hunting, forestry, &c. &c., the author next goes through the various breeds of Asia, Africa, and Europe; and finally enlivens the whole with the

* The horse was not found on the American continent: by the early discoverers of that immense quarter of the earth. "The countless numbers of wild horses which are now to be seen in South America have all sprung from emancipated individuals left there by the Spaniards. They have spread in all directions where food is plentiful; and, if we may judge from the rapid increase, the climate and soil seem particularly adapted to the habits of the horse. This animal, however, has been formed with a constitution of great pliability, for he will thrive in all climates."

In the United States the horses are principally of British origin. "Considerable attention has of late been bestowed upon rearing good horses; and with much success; although none have appeared to equal the horses of Great Britain. The majority of the best trotters now in the United States are descended from the imported English race-horse Messenger."

The Canadian horse is a hardy curiosity. "The winter travelling in Canada is sometimes very expeditious. It is surprising with what speed a good Canadian horse will go when drawing a cabriolet over the ice, instances having occurred of them travelling ninety miles, in some of these vehicles, in twelve hours; but when this occurs, the roads must be very smooth and hard. The shoes of their horses are never roughened, as in this country, by turning up the ends of them, but by inserting two or more steel screws, which can be removed or renewed at pleasure. The horses of Canada are very hardy animals; their best pace is a trot; they are accustomed to much bad usage and hard work, and are the most willing creatures in the world, for they never refuse the draught. They are brought from the country into Quebec, in the coldest weather, and left standing in the open air, without any covering, for hours together, while their owners are transacting their business, or drinking, and they seem not to be any the worse for it. In the winter, the Canadian horse, like all other quadrupeds of that country, acquires an increased quantity of fat to protect him from the cold, and the curry-comb is never used. When the horses have been heated by fast driving, in wet cold days, they appear to have a sort of icicle at every hair, and icicles of three inches in length are often suspended from their noses. Travelling on Lake Champlain is at all times dangerous; it is very common for sledge, horses, and men, to fall through the ice, where the water is some hundred feet deep; and there is no warning of danger till the horses drop in, pulling the sledge after them: luckily, the weak places are of no great extent; the traveller extricates himself from the sledge as soon as possible; and he finds the ice strong enough to support him, though it will not bear the weight of the horses. The pulling of them out is done in a manner perfectly unique; the horses are strangled to save their lives. When the horses fall through—for there are always two in these sledges—their struggles only tend to injure and sink them; but, as they have always round their neck a rope with a running nose, the moment the ice breaks, the driver and passengers get out, and, catching hold of the rope, pull it with all their force, which in a very few minutes strangles the horse; and no sooner does this happen than they rise in the water, float on one side, and are drawn out on strong ice, where the nose of the rope being loosened, resistance returns, and in a short time the horses are on their feet, and as much alive as ever. This operation has been known to be performed two or three times a-day on the same horses. The Canadians tell you, that horses which are often on the lake get so accustomed to being hanged, that they think nothing at all of it. But though the case is very common, the attempt does not always succeed; for it sometimes happens, that both sledge and horses go to the bottom, if they cannot be extricated in time. Another remarkable fact in regard to the Canadian horse is their fondness for fish. The fish thus eaten, except in size, resemble a cod, and are from four to nine inches long; the English call them *tommy cod*. The manner of catching them is by cutting holes in the ice, and putting down either nets or lines. Over this hole a temporary house is built, large enough to contain half-a-dozen people, and a stove to keep them warm. They who cannot afford deals to build a house, substitute large pieces of

accounts of feats and other memorabilia, which, while they display the powers and character of the animal, are well calculated to astonish and amuse the reader. Having mentioned that the plates are beautifully done, our remaining task will be to select a few of the anecdotes as examples of the work.

"The perfection of our racers seems to have been developed upwards of a hundred years ago, as at that period was produced that excellent horse Flying Childers, which has never been surpassed in speed by any horse. From all that has been achieved since his time in breeding racers, by men having the accumulated experience of nearly a century, and devoted to that pursuit, it would seem that he never will be equalled.

"There are several parts of a horse that he cannot reach with his teeth to scratch when they itch: when these parts do itch, he usually goes to another horse, and bites him on the spot where he wishes to be scratched himself; the sagacious companion generally takes the hint, and performs the office for him. Dr. Darwin, who was an attentive and acute observer of nature, once observed a young foal bite its dam, to indicate its wish to be scratched. But the mare, not choosing to lose a mouthful of grass, which she was in the act of chewing, merely rubbed the place on the foal's neck with her nose: so that there can be little doubt but it was from reflection that she rubbed where she was bitten.

"Forrester had won many a hardly contested race; at length, over-weighted and over-matched, the rally had commenced. His adversary, who had been waiting behind, was quickly gaining upon him; he reared, and eventually got abreast; they continued so till within the distance. They were parallel; but the strength of Forrester began to fail him. He made a last desperate plunge; seized his adversary by the jaw to hold him back; and it was with great difficulty he could be forced to quit his hold. Forrester, however, lost the race.

"Mr. Quin's wicked Horse.—In the year 1753 Mr. Quin had a famous racer, who entered into the spirit of the course as much as his master. One day, finding his opponent gradually passing him, he seized him by the legs, and both riders were obliged to dismount, in order to separate the infuriated animals, who were engaged with each other in the most deadly conflict: they were got apart with much difficulty.

"The following anecdote is one of the many examples we have of animals sustaining life for a great length of time without food; and seems to be decisive as to the possibility of the fact, which many have doubted, and who have sought to account for their living long in such situations by finding other food where they were confined. A colt, the property of Mr. Edward Lemin of Truro, in October 1793 fell into a shaft four fathoms deep, where it remained for one month before it was discovered: it was taken up alive and unhurt, though in a very emaciated state, and by proper treatment perfectly recovered. It was impossible that it could have received the least food or water whilst it was in the shaft."

These are, however, but mere items in the extensive catalogue which Captain Brown has

ice, with which they form a defence against the weather. Midnight is the best time for fishing; and a strong light is placed near the hole, which attracts the attention of the fish, and brings them round it in large quantities. There are a number of these houses on the river St. Charles, which have a strange appearance in a dark night, especially those made of ice."

put together; and though we copy them for the sake of their conveniency, the far more valuable portion of his work consists of its general and historical details.

Waverley Novels, Vol. XVI. Ivanhoe. Edinburgh, 1830, R. Cadell; London, Whittaker.

WE have already given our tribute of praise to the external decorations of a volume which we think no reader ever took up without pleasure, or closed without regret; and now we cannot deny our columns the credit of possessing a few remarks from a most excellent preface. On his change of subject Sir W. Scott observes: "Nothing can be more dangerous for the fame of a professor of the fine arts, than to permit (if he can possibly prevent it) the character of a mannerist to be attached to him, or that he should be supposed capable of success only in a particular and limited style. The public are, in general, very ready to adopt the opinion, that he who has pleased them in one peculiar mode of composition is, by means of that very talent, rendered incapable of venturing upon other subjects. The effect of this disinclination, on the part of the public, towards the artificers of their pleasures, when they attempt to enlarge their means of amusing, may be seen in the censures usually passed by vulgar criticism upon actors or artists who venture to change the character of their efforts, that, in so doing, they may enlarge the scale of their art. There is some justice in this opinion, as there always is in such an attain general currency. It may often happen on the stage, that an actor, by possessing in a pre-eminent degree the external qualities necessary to give effect to comedy, may be deprived of the right to aspire to tragic excellence; and in painting or literary composition, an artist or poet may be master exclusively of modes of thought and powers of expression which confine him to a single course of subjects. But much more frequently, the same capacity which carries a man to popularity in one department will obtain for him success in another, and that must be more particularly the case in literary composition than either in acting or painting, because the adventurer in that department is not impeded in his exertions by any peculiarity of features or conformation of person proper for particular parts, or by any peculiar mechanical habits of using the pencil, limited to a particular class of subjects.

"The name of *Ivanhoe* was suggested by an old rhyme. All novelists have had occasion, at some time or other, to wish, with Falstaff, that they knew where a commodity of good names was to be had. On such an occasion the author chanced to call to memory a rhyme recording three names of the manors forfeited by the ancestor of the celebrated Hamplen, for striking the Black Prince a blow with his racket, when they quarrelled at tennis:—

'Tring, Wing, and Ivanhoe,
For striking of a blow,
Hamplen did forego,
And glad he could escape so.'

The word suited the author's purpose in two material respects — for, first, it had an ancient English sound; and, secondly, it conveyed no indication whatever of the nature of the story. He presumes to hold this last quality to be of no small importance. What is called a taking title, serves the direct interest of the bookseller or publisher, who by this means sometimes sells an edition while it is yet passing the press. But if the author permits an over degree of attention to be drawn to his work ere it has appeared, he places himself in the embarrassing

condition of having excited a degree of expectation which, if he proves unable to satisfy, is an error fatal to his literary reputation. Besides, when we meet such a title as the *Gunpowder Plot*, or any other connected with general history, each reader, before he has seen the book, has formed to himself some particular idea of the sort of manner in which the story is to be conducted, and the nature of the amusement which he is to derive from it. In this he is probably disappointed, and in that case may be naturally disposed to visit upon the author of the work the unpleasant feelings thus excited. In such a case, the literary adventurer is censured, not for having missed the mark at which he himself aimed, but for not having shot off his shaft in a direction he never thought of."

The following remark has, if possible, even more beauty than truth.

"The character of the fair Jewess found so much favour in the eyes of some fair readers, that the writer was censured, because, when arranging the fates of the characters of the drama, he had not assigned the hand of Wilfred to Rebecca, rather than the less interesting Rowena. But, not to mention that the prejudices of the age rendered such a union almost impossible, the author may, in passing, observe, that he thinks a character of a highly virtuous and lofty stamp is degraded rather than exalted by an attempt to reward virtue with temporal prosperity. Such is not the recompense which Providence has deemed worthy of suffering merit; and it is a dangerous and fatal doctrine to teach young persons, the most common readers of romance, that rectitude of conduct and of principle are either naturally allied with, or adequately rewarded by, the gratification of our passions, or attainment of our wishes. In a word, if a virtuous and self-denied character is dismissed with temporal wealth, greatness, rank, or the indulgence of such a rashly formed or ill-assorted passion as that of Rebecca for *Ivanhoe*, the reader will be apt to say, verily Virtue has had its reward. But a glance on the great picture of life will shew, that the duties of self-denial, and the sacrifice of passion to principle, are seldom thus remunerated; and that the internal consciousness of their high-minded discharge of duty, produces on their own reflections a more adequate recompense, in the form of that peace which the world cannot give or take away."

We must make room for one or two notes.
"Negro Slaves.—The severe accuracy of some critics has objected to the complexion of the slaves of Brian de Bois-Guilbert, as being totally out of costume and propriety. I remember the same objection being made to a set of sable functionaries, whom my friend Mat Lewis introduced as the guards and mischievous satellites of the wicked baron in his *Castle Spectre*. Mat treated the objection with great contempt, and averred in reply, that he made the slaves black, in order to obtain a striking effect of contrast; and that, could he have derived a similar advantage from making his heroine blue, blue she should have been. I do not pretend to plead the immunities of my order so highly as this; but neither will I allow that the author of a modern antique romance is obliged to confine himself to the introduction of those manners only which can be proved to have absolutely existed in the times he is depicting, so that he restrain himself to such as are plausible and natural, and contain no obvious anachronism. In this point of view, what can be more natural, than that the Templars, who, we know, copied closely the luxuries of the Asiatic warriors with whom they fought,

should use the service of the enslaved Africans, whom the fate of war transferred to new masters? I am sure, if there are no precise proofs of their having done so, there is nothing, on the other hand, that can entitle us positively to conclude that they never did. Besides, there is an instance in romance. John of Rampayne, an excellent juggler and minstrel, undertook to effect the escape of one Audulf de Bracy, by presenting himself in disguise at the court of the king where he was confined. For this purpose, 'he stained his hair and his whole body entirely as black as jet, so that nothing was white but his teeth,' and succeeded in imposing himself on the king as an Ethiopian minstrel. He effected, by stratagem, the escape of the prisoner. Negroes, therefore, must have been known in England in the dark ages. * *

"*Battle of Stamford.*—A great topographical blunder occurred here in former editions. The bloody battle alluded to in the text, fought and won by King Harold, over his brother the rebellious Tostig, and an auxiliary force of Danes or Norsemen, was said, in the text and a corresponding note, to have taken place at Stamford, in Leicestershire, and upon the river Welland. This is a mistake, into which the author has been led by trusting to his memory, and so confounding two places of the same name. The Stamford, Strangford, or Staneford, at which the battle really was fought, is a ford upon the river Derwent, at the distance of about seven miles from York, and situated in that large and opulent county. A long wooden bridge over the Derwent, the site of which, with one remaining buttress, is still shewn to the curious traveller, was furiously contested. One Norwegian long defended it by his single arm, and was at length pierced with a spear thrust through the planks of the bridge from a boat beneath. The neighbourhood of Stamford, on the Derwent, contains some memorials of the battle. Horseshoes, swords, and the heads of halberds or bills, are often found there; one place is called the 'Danes' well,' another the 'battle flats.' From a tradition that the weapon with which the Norwegian champion was slain, resembled a pear, or, as others say, that the trough or boat in which the soldier floated under the bridge to strike the blow, had such a shape, the country people usually begin a great market, which is held at Stamford, with an entertainment called the pear-pie feast, which, after all, may be a corruption of the spear-pie feast. For more particulars, Drake's History of York may be referred to. The author's mistake was pointed out to him, in the most obliging manner, by Robert Belt, Esq. of Bossal House. The battle was fought in 1066."

Sir Walter has in the foregoing passage set himself and the public right touching a former topographical error; but a much more important historical blunder remains uncorrected, and requires to be pointed out. When referring to an historical fact, and of two distinct persons, in page 347, Sir Walter says,—not as a Romanticist, but as a grave illustrator of history,—“As another instance of these bitter fruits of conquest, and, perhaps, the strongest that can be quoted, we may mention, that the Empress Matilda, though a daughter of the King of Scotland, and afterwards both Queen of England and Empress of Germany, the daughter, the wife, and the mother of monarchs, was obliged, during her early residence for education in England, to assume the veil of a nun, as the only means of escaping the licentious pursuit of the Norman nobles. This excuse she stated before a great council of the

clergy of England, as the sole reason for her having taken the religious habit.” Now, the Matilda, daughter of the King of Scotland, who stated her reason for taking the veil before a great council of the clergy of England, was niece to Edgar Atheling, and married Henry the First of England. The Empress Matilda was their daughter. She was united to Henry the Fifth, Emperor of Germany, to whom she had been contracted at eight years old, and in whose dominions she had been educated. She was, after his death, married to Geoffrey Plantagenet, eldest son of Fulk, Count of Anjou, by whom she had a son, afterwards Henry the Second. At her father's death she asserted her right to the sovereignty of England, and was crowned at Winchester; but was obliged to yield to the usurpation of Stephen, on whose demise, her son Henry ascended the throne.

Having rectified this *nod* of the Scottish Homer, we have only to add, that if to say the most appropriate thing in the most appropriate manner and most appropriate place, be the definition of a perfect style, that definition, and all the praise it includes, is one which seems made on purpose for Sir Walter; and the more we look over these former favourites with delight, the more desirous do we now feel to see their successor in Robert of Paris.

Bernard's Retrospections of the Stage.

[Fourth Notice: Conclusion.]

MR. BERNARD was a man of sense and observation, as well as a good anecdote-monger and story-teller. Witness the following excellent remarks on the drama, the stage, and acting.

“The professed (and Heaven forbid it should ever fail in being the practical!) object of the stage is to instruct; but people would not go to a theatre to receive a lesson in the same manner they enter a church. In the former they require the pill to be gilded; the heart is to be approached, yet not through the judgment but the fancy: an illusion is therefore necessary; and the stage, to attain it, is elevated one step above the truth. This one step precisely measures, in its altitude, the difference of sympathy in the bosom of the actor and spectator: Genius exalts him to his sphere; but when there, Science must uphold him. A system, and a system only, can enable him to tread midway in air between the heaven of fancy and the earth of fact. He there requires judgment to shape his conceptions into a conformity with the appearances of life, and yet preserve them from the exact resemblance which would destroy his elevation. He holds the spectator's illusion in his grasp; but which, like glass, is so delicate and brittle, that it is sure to shatter if he lets it fall. But the perfection of his skill is not, as I apprehend, merely to work the wires and conceal the hand, or, in other words, to make Art appear Nature; it is something more,—it is to make Nature appear Nature. It is to cause the nature which burns in his own bosom, to correspond with that in the spectator's by raising the latter up to the level of his own high excitement, and to open to the general sympathies of a crowd the confined and peculiar feelings of the poet.”

Of versatility (Mr. Bernard says): “it has often struck me, that this is the only test by which you can try the merits of a comedian. A comedian must be an artist; and mannerism, (or want of versatility,) which results from a peculiar constitution, though favourable to strong effects in tragedy, (as I have already explained,) in comedy opposes itself to the

very object of the actor. Where manners, and not passion, is the principal thing to be exhibited, the man without versatility is continually presenting his own character to the audience, instead of the author's. This was Edwin's fault; and how many comedians in a later day have played a variety of characters, and carried the same look and hitch, shrug and shuffle, cut and caper into each, whether young or old, vulgar or genteel! But this was not the case with Ryder; nor with Woodward, Shuter, King, or Parsons; they could identify themselves with whatever they played, and express it properly; particularly King and Woodward, who drained the entire stock of comic assumptions in high and low life, in Shakspeare and in farce. Garrick's eminence in this respect was his only pre-eminence, and is sufficient of itself to decide the point. In his own day, he was deemed a better comedian than tragedian, of which his attitude in Reynolds's picture is a testimony, (where he is represented between the comic and tragic Muse, inclining to the former); but whilst even in comedy it has been questioned that his powers of conception were superior to Henderson's, it was at all times and upon all hands admitted that his power of expression (partly natural, partly acquired,) never met with an approach.”

From the second volume we shall now cull a few witticisms, and two or three interesting sketches of biography, especially as they relate to Sir Thomas Lawrence, and to the mother of Mr. Canning. The first notice is, however, of a celebrated songstress. Dr. Harrington lived at Wells, previous to his residence at Bath, “and one day after dinner, whilst entertaining a circle of musical friends, a German family came under his window, of whom the father played the flute, the mother a guitar, a girl sung, and a boy carried round the hat. The tones of the girl's voice, and her brilliant execution of a piece of music they were well acquainted with, startled and delighted them. The doctor sent out to desire they would come into the hall and repeat it: his family were now made partakers of his surprise and gratification. The doctor, whose heart was as open to the cry of necessity, as his ear to the finest harmonies of Haydn, then inquired into the circumstances of the family, and was informed that the father, a Mr. Schemling, being disappointed of employment in London, whether he had proceeded from the continent, had been compelled to this itinerant resource, as the only means of support. The doctor could do little for him at Wells, which was not a musical place, but gave him letters to some influential persons in Bath, as a means of procuring patronage to undertake a morning concert. There the girl's abilities did not fail to divest the doctor's recommendation of its appearance of enthusiasm. She was heard, wondered at, and talked of; some amateurs instantly tendered their services to carry the father's project into effect; bills were printed, tickets issued and purchased; and the doctor rode over to superintend in person the musical arrangements. The proceeds of this concert were sufficient to enable the family to return to London, and thence to Germany, where their daughter, being placed under proper masters, began to develop her powers, grew up, married, and in a few years after revisited England, and, with a comet lustre, blazed upon its public as Madame Mara.”

This was the age of conviviality and clubs, very different from the degenerate puling of our modern institutions so called. Sir John Danvers was a distinguished member.

"Sir John lived well, as the gout in his left leg testified. He usually took his three bottles, which he called his three friends: the first, his encourager; the second, his adviser; and the third, his consoler. He had also a humorous knack of bestowing upon wine a regal appellation, and making its various species represent, when placed upon the table, the sovereigns of the countries that produced them:—thus, a bottle of port stood for the king of Portugal, champagne for that of France, Madeira for his Spanish majesty, whilst a bottle of porter, I believe, represented our beloved monarch. If we turned, therefore, from one wine to another, he would exclaim, 'Now we have bled the king of Spain to death, what if we decapitate the king of France!'"

The famous Dr. Herschel was not only a contemporary but a musical teacher of Mr. Bernard (1785-6). Herschel was organist to the Octagon Chapel, and played an instrument in the orchestra,—and the author relates:—

"Owing to the production of various operas at Bath, in which either serious or comic music was allotted me, I felt myself awkwardly situated; which the good-natured German observing, he proffered his services to give me private instruction, upon terms which should be arranged at a future period. This offer I gratefully accepted, and attended him twice a-week at his own lodgings, which then resembled an astronomer's much more than a musician's, being heaped up with globes, maps, telescopes, reflectors, &c. under which his piano was hid, and the violoncello, like a discarded favourite, skulked away in one corner. This was not the only evidence of Mr. Herschel's astrological propensities, nor were they a public secret; he had taken observations, and communicated with philosophical societies; the consequence of which was, that he had been quizzed by the fiddlers, and called by the charitably disposed an eccentric. To his friends and to myself he alluded to these studies without embarrassment, and would modestly remark, that 'all men had their failings, and this was his.' When I came to him of an evening, and caught him thus employed, he would tell me with a laugh, to take care how I stepped over his 'new world,' and didn't run foul of his 'celestial system;' and when I helped him to put his machinery aside, he had a standing joke in calling me his 'Atlas,' because I once carried the globe on my shoulders. When the removal was made, the fiddle was taken down, or the harpsichord opened, without farther comment. Whether it was a presage of his future success, or a constitutional complacency, that fortified him so firmly against the battery of the wag-gish, I cannot say, but certainly no man bore a persecution of this kind with less marks of suffering. Nevertheless, I believe that his condition, in comparison with mine, was paradoxical. When it was known that I attended him privately, the actors swore that I was studying astronomy, which rendered me the butt of the green-room, and fair game for every society I entered."

Our limits now restrict us to a very few short notes, &c. Bernard was warmly patronised by the Prince of Wales (our late gracious King), and when in London mixed much with the wits and wags of the day; being so far a favourite with them, as to be a member and Secretary of the Beef-Steak Club. This station, and his theatrical associations, will account for the annexed anecdotes, which we throw together without order, merely for their own sake.

"Sheridan was down at Brighton one sum-

mer, and Fox (the theatrical manager), desirous of shewing him some civility, took him all over the theatre, and exhibited its beauties. 'There, Mr. Sheridan,' said he, 'I constructed this stage—I built and painted those boxes, and I painted all these scenes.' 'Did you?' said Sheridan, surveying them rapidly; 'well, I should not have known you were a Fox by your brush.'"

The chief members of the Beef-steak Club are thus estimated by a scale:—

	Good Humour.	Wit.	Humour.
Sheridan	0	3	0
Selwyn	2	2	0
Andrews	2	2	0
Merry	3	1	2
Topham	3	1	0
Woodfall	3	1	0
Bate Dudley	3	1	0
Taylor	3	1	3
Hewardine	3	1	3
Saville Carey	3	1	3
G. A. Stevens	2	1	2
Major Arabin	3	1	3
Bearcroft	2	1	0
C. Bannister	3	2	3

And the subjoined, "though affording no specimen of the general cleverness of the conversation, illustrate in some measure the different styles of the members:—*Topham*. Fox was very powerful last night. *Woodfall*. His arguments were unusually clear, and well connected. *Sheridan*. Yes; his tongue's like a time-glass—the longer it runs, the clearer it gets. *Andrews*. Then he's not like a cask of Madeira. *Sheridan*. No—or he'd have died long ago by tapping. *Merry*. And yet he's been tapped pretty often. *Suett*. Talking of tapping, gentlemen, I had an aunt (Heaven rest her bones!) afflicted with the dropsy, who was tapped seventy-five times in one week. (A general laugh.) *Capt. M.* (an M.P.) *Suett*, was your father an actor? *Suett*. No; he was a tailor. *Merry*. Then he did more for his customers than the captain will for the constitution—he mended their breaches. *Suett*. To one thing, gentlemen, may I crave your attention?—I know who was my father. *Sheridan*. A wise child! *Andrews*. And a true believer. *Bearcroft*. We must take his word; for we can't produce evidence to the contrary. * * * *Andrews*. Kemble played Hamlet with great effect on Monday. *Topham*. Once or twice I thought he forgot himself. *Sheridan*. You mistake—he forgot his audience. *Andrews*. He never forgets you, Sheridan. *Sheridan*. Not on a Saturday. * * * *Somebody*. Can't we have a glee? Here's Dignum and Sedgwick, but not Kelly. *Captain Baker*. I like Kelly; he's a sociable, manly fellow. *Andrews*. I question his manhood—he's inclined to Crouch. * * * *Somebody*. What could have induced — to blow his brains out? *Sheridan*. A desire to convict the world, who said he never had any. * * * *Topham*. Merry, you heard of B.'s elopement with C., and that her father overtook them? *Merry*. Yes; Tom ran after a plum, and the father after a pair. *Woodfall*. These Greta Green marriages are decidedly imprudent. *Merry*. They are on the border."

This sort of sparkle certainly does not tell so well in print; but it must have been delightful over the bottle and bowl. Again:—

Andrews "was noted for his attentions to a certain nobleman, whose deficiency of intellect and sufficiency of arrogance were equally unpleasing. 'Why, Andrews,' said a friend to him, 'every body says you are Lord Lyttelton's shadow.' 'I don't know how his lordship can have a shadow,' he replied, 'when every body says they can see through him.'"

"A certain nobleman was dead, who had

been noted for the feminine delicacy of his hands. The circumstance being mentioned at the Club, the members, with their usual wag-gery, began looking at their digital extremities; and Merry called for a shew of hands, to decide the point of who had the smallest; when Woodfall remarked—"It should be given in my favour, gentlemen; I have more credit for my *short-hand* than any man in England."

"Sedgwick was quiet and inoffensive—but his voice was his solitary attraction. Sheridan used to say, with his usual good-nature, that 'he was like a Christmas spectacle—he had more sound than sense.' Dignum was equally quiet and amiable, but with rather more vanity than Sedgwick. He was desirous of a credit for his intellect, and that people should attribute his frequent fits of vacuity to profound mental abstraction. He was thus in the habit, in the green-room, and at the table occasionally, of placing his finger to his forehead, in the manner of Lawrence Sterne, as represented in his portrait, and pretending to be unconscious of what was passing around him. Among the actors this demure hoax succeeded; but not with the gentleman who wrote the *School for Scandal*. It was, indeed, one of Sheridan's pastimes to analyse his company, and compare them with the beings it was their business to imitate. Some one observing Dignum in his usual meditative posture, remarked it to the manager:—"Look at Dignum! he's thinking again!" "No!" said Sheridan; 'he thinks he thinks!'"

Sir John Jervis "had a favourite boatswain, one of those broad-backed, limber-legged, leather-skinned lovers of pigtail and shag, whose sayings and doings have contributed to raise the character of English seamen to the popularity it enjoys on the stage and with the world. This Jack's 'jawing tacks' slipped so easily, that he was always employed on the 'press gang' expeditions, being able to seduce more men into the 'sarvice,' than others to compel. One of the unfortunates that fell into his toils was a methodical tailor, 'who,' to use Merry's joke, 'not being able to get his bread, was willing to live upon water.' The first morning he was afloat, an enemy hove in sight, and all hands were piped; all hands appeared but the particular individual who is supposed by some to constitute a connecting link between the two sexes. Jack instantly sprang down the fore-castle, and found the tailor in his berth, with no intention of rising. 'Why, you swab!' exclaimed Jack, 'what do you do there?'—"Thinking of my soul!" murmured he. 'Your soul!—I tell 'e what, Jerry Thimble, if you don't bouse up and rig away, afore we're called to quarters, I'll clap my knee upon your breast-bone, and bark at your soul like a house-dog!' The engagement that ensued proved to be both long and sanguinary; during which, the boatswain was very active in doing his own duty and every body's else. He had been carrying a wounded officer below, and running up the cabin stairs, plunged his head into the stomach of Sir John, who, covered with smoke and perspiration, his face smutted, and his lace trimmings tarnished, was running down. The collision nearly carried the latter to the deck, who, gasping for breath, roared out, 'You rascal! what do you mean by that?' The boatswain's eye was riveted by his commander's whimsical appearance, and bursting into a loud laugh, he replied, 'I beg your honour's pardon, but your honour looks for all the world like a chimney-sweep on May-day!' Sir John said that, considering the enemy's fire was then strewing dead bodies about them,

this was the greatest specimen of coolness he had ever witnessed.

"One evening, Lord B. made a remark which transported Anthony Pasquin so much, that he vociferated for writing materials, to note it down. The former called him to order, and asked what he wanted. 'Ink—ink—ink, my lord!' he replied, striking his hand on the table.—'Do you?' said his lordship: 'wash your hands, then, and you'll get a quart.'"

Mr. Bernard relates several stories most honourable to the memory of John Kemble: we close our review with one very characteristic trait:—

"It was during this season, Mr. James Aiken of Drury Lane called out my friend John Kemble, for some supposed insult extended by the latter in his official capacity. John displayed in this affair his uniform coolness. The challenge was given at rehearsal; at night, the two played together; and, on the morning, at an early hour, they met with pistols. On taking their ground, Kemble said to Aiken, as he was the aggrieved party, he should fire first; but the latter was disinclined; and the seconds proposed that they should discharge their pistols together. This arrangement Kemble refused, saying, 'He had come out for Mr. Aiken's satisfaction.' Aiken became unnerved at conduct so honourable, and raising his pistol three times to take aim, trembled, and dropped it. Kemble at length lost his patience, and exclaimed, 'For God's sake! Mr. Aiken, do you intend to fire to-day?' Aiken then fired, and missed him. Kemble discharged his pistol in the air, and asked him if he was satisfied? 'Perfectly.'—'Then I hope there is an end and forgiveness to the matter?' said he, extending his hand. Aiken grasped it in silent conviction of his worthiness, and they returned to town better friends than they had ever been before."

We have merely to add, that Mr. Bernard produced some dramatic pieces; that these volumes conclude with his leaving England for America in 1797, dividing his life into two eras of 23 years each, for he returned in 1820; and that the second epoch is promised, should this portion be popular, of which there can be no fear whatever; since it is very amusing, anecdotal, and clever.

Walks about Town: a Poem in Two Cantos; with Notes, &c. By the Antiquated Trio. With Illustrations by R. Cruikshank. Pp. 54. London, 1830. E. Wilson.

THIS is one of those playful trifles which are amusing the town at this equivocal season, when one hardly knows whether there is a town or not. The Trio walk through various places of resort, and quiz and pun upon many of the sights and topics of the day.

The Ingrate's Gift; a Dramatic Poem. 12mo. pp. 197. Edinburgh, 1830. J. Kay.

ONE passage occurs in this little work so true and well turned, that it were injustice not to give it room.

"*Matilda.* If, as 'tis said,
The sun be life's great parent, why is he
More valued when he struggles in his rise,
Than when he tops the sky?
Lantle. Perchance the sun,
Like other paragons, is most esteemed
When we can see him great, but tending still
To some more greatness, yet unknown to us;
For, once the acme's gained, our restless thoughts,
When ascent is denied, will straightway down;
Thus, to be bright in our misjudging eye,
You must be brightening, or in dulness lie—
On earth there's no repose."

The rest is, we regret to say, almost all leather and prunella.

ORIGINAL CORRESPONDENCE.

DEATH OF JOHN ADAMS, &c.

WE have just received notice of the death of old Adams, the last of the leading mutineers of the *Bounty*, at Pitcairn Island,—a man whose name has been frequently before the public, and has been often coupled with the most interesting facts. Until the visit of the *Blossom* to Pitcairn Island, but one man-of-war had touched there, and many years elapsed without our obtaining any authentic account of the islanders. We now hope to receive from the pen of the captain of the *Blossom* (Captain Beechey), whose voyage we understand is about to appear, a full relation of all those transactions connected with the mutiny and with the history of Pitcairn Island, which have been so variously stated to the public.

We have also to announce an unexpected progress in the Sandwich islanders, who have equipped an expedition, consisting of two of their brigs of war, against the New Hebrides, where they intend to form a settlement. The expedition is under the command of Boki, the governor of Woahoo, who has with him Manuia, the captain of the port, and three hundred soldiers. By the latest accounts, the missionaries were acquiring a powerful ascendancy in Woahoo, and had made themselves so obnoxious to the government, that the young king was said to be anxious to quit his dominions; and it was reported, that if Boki were successful in his undertaking, he would not return to the Sandwich Islands.

LITERARY AND LEARNED.

FRENCH INSTITUTE.

[From *Le Globe* of the 26th of August.]

Sitting of St. Louis.—Yesterday the French Academy held its solemn sitting. We cannot say if the 25th of August was a well-chosen day, or if the doors of the Mazarin palace, riddled by musket-balls by order of a descendant of St. Louis, ought to have been opened on that same day, with so much punctuality. For our own part, we should have been better pleased to see the Academy postpone its sitting, and neglect that usage of the ancient *régime*, which has no other advantage than to remind us of annual adulations. So abrupt an abandonment of past customs would besides have proved to us that the Academy feels the necessity of prompt and complete regeneration. All the literary establishments in France, the museums, the theatres, the libraries, stand in the same need of reform; but the Academy, that *protégée* of Richelieu and Colbert, that plaything of Louis XIV., that forgotten ruin of the monarchy of "the great king," must modify itself very extensively, to be more, in our days, than a strange anachronism. Under the offuscated government which has just terminated, we have seen the Academy follow, instead of directing, the movement of intelligence. What then will be its position in the era of intellectual progress and liberty on which we are entering? There are times suitable to prytaneums and academies; namely, when, after long efforts, the human mind rests, and makes a halt. Then it finds repose and dignity under the shelter of such institutions. But when it recommences its march, and renews its labours, it requires, as in Italy in the fifteenth century, and in Germany at the present day, not academies, but chairs and schools. It is the golden age of universities. France in 1830, like France in the sixteenth century, finds itself placed in one of those epochs of fermentation and advance. No one can desire less

than we the destruction of academies; but we believe that, if they comprehend their situation, they will tend to approximate more and more to the university and teaching form. In that respect, the French Academy has, during the last ten years, limited itself to a negation of every thing that has been said and done around it. There is not a single lesson by M. Guizot, M. Villemain, and M. Cousin, which does not contain a hundred times more thought and instruction than the two or three public sittings with which the Academy every year indulges us. Hence, serious men and youth desert the place, and the Mazarin has almost become a gynæceum hall. "Well!" it will be said, "propose the remedy. Would you have the Academy admit the public to its weekly sittings?" Why not? "Would you have it undertake historical and critical publications?" Assuredly. Might not the academicians, with their independent fortunes, with their numerous connexions, with their foreign correspondents, collect and publish valuable information which necessarily escapes the journals and reviews, whose authors are less favourably situated? To be an academician, and to do nothing, was in the last century a privilege: it is now a peril. The question, as it respects academies, is one of existence. Under the rational government upon which we are entering, it appears to us that the inviolability of abuses, and consequently of sinecures, is greatly endangered. Now we do not think that collective sinecures deserve to be treated with more delicacy than individual. We will not press the result. * * *

We had nearly forgotten to announce the poetical prize for next year. The subject is *The literary glory of France*. The motives which have guided the Academy in their choice of this subject are too curious not to be transcribed *in extenso*.

"Our language," says the programme, "has long had the honour to be, in some respects, the universal language of Europe. This advantage accrued to it in the eleventh and twelfth centuries; it has ever been retained, and even has not ceased to increase. The century opened by Corneille spread our idiom and our literature throughout the civilised world. Every where our poets have been imitated, our authors translated. The age of Voltaire still added to our literary glory. Montesquieu, Rousseau, and many other French writers of the eighteenth century, prepared and urged the great advance of the people towards a better order of things in politics and in morals. Nevertheless, certain foreigners stood up against this great literary fame, and unhappily found auxiliaries even in France itself. They especially attacked the glory of our tragic theatre; fancying, no doubt, that if they could surprise that important post, they might render themselves the masters, and proclaim themselves the conquerors, of the whole French Parnassus. It is necessary to oppose this invasion, which has in it something barbarous; to combat for our altars and our hearths. The Academy proposes to our poets a subject which seems to call upon their patriotism and their talents; being at the same time national and literary."

We are absolutely ignorant to which of the forty are due the idea and the composition of this singular programme, so that we might, without scruple, point out all the beauties of it, one after the other. But we will content ourselves with remarking, that this precious piece of academical criticism proves what we advanced at the beginning of the present article. It is evident, on reading it, that the Academy, in its collective acts, is far, we will not say

from advancing, but from comprehending certain questions, which have been discussed in calmer times, and on which several of its members have, individually, thrown so brilliant a light.

FINE ARTS.

NEW PUBLICATIONS.

Great Britain Illustrated, from Drawings by W. Westall, A.R.A.; with Descriptions by Thomas Moule. No. XXIX. Tilt.

WE regret to observe that it is the publisher's intention to close this very pleasing work with the next No. The present contains, "Lower Lake of Killarney, Ross Castle and Island;" "Melkham;" "Uske, Monmouthshire;" and "Widcombe Church, near Bath."

Landscape Illustrations of the Waverley Novels. Part V. London, C. Tilt; J. Andrews: Edinburgh, T. Ireland, jun.

THE Abbot is here illustrated by "St. Mary's," from a drawing by S. Prout; the Heart of Mid Lothian by "Holy Loch," from a drawing by J. D. Harding; Old Mortality by "Bothwell Castle," from a drawing by R. R. Reinagle, R.A.; and Peveril of the Peak by "Peel Castle," from a drawing by H. Gastineau. They are all beautiful; but "Peel Castle," engraved by Edward Finden, is our prime favourite. This may perhaps be in some measure owing to our once having been so fortunate as to see that noble ruin under similar circumstances of effect; but, without any reference to that consideration, the plate is, as our continental neighbours would say, *superbe*. We must again express our astonishment that so much grandeur—nay, sublimity—can be comprehended in so small a space.

Original Penmanship. By J. P. Hemm, of Nottingham. Harding.

"HE has entitled the specimens *Original Penmanship*, for this obvious reason; notwithstanding he possesses a very high regard for the splendid productions of other penmen, whether of ancient or modern date, he can, without fear of contradiction, assert, that he has not in a solitary instance copied a single page to render the same subservient to his present publication; and as ease and elegance are the component parts of penmanship in its highest perfection, he has aimed at combining these qualities; and, instead of endeavouring, by geometrical measurement or mechanical arrangement, to produce correct circles and parallel distances in his flourishes, he has presented to the public eye a fac-simile of forms and figures which were in the original manuscript produced by the rapid flourishing dash of the pen." So says Mr. Hemm in his preface; and we can with justice add, that we have never seen a more beautiful work of its kind. It contains twelve plates, besides the dedication, which is to the mayor and corporation of Nottingham. The proportions of the letters belonging to the different hands are admirably symmetrical; and the ornamental devices are full of freedom, variety, and taste.

Select Views of the Lakes of Scotland; taken from original Paintings by John Fleming, E.M.G.D.S.; engraved by Joseph Swan, M.G.D.S.; with Historical and Descriptive Illustrations by John M. Leighton, Esq. Part I. Glasgow, Swan: London, Moon, Boys, and Graves.

WE are glad to see this tasteful triumvirate again in the field. Mr. Swan says, very mo-

destly, in his introductory notice—"Should the publisher meet with that support which will secure him against sustaining any material loss, it will be his delight to present to the public a faithful delineation of all the more important Scottish lakes; the scenery of which has been admired by all who have visited them from every country and every clime." There are, we hope, too many lovers of the fine arts, and too many lovers of Scotland, to justify any apprehension of loss in such an undertaking. On the contrary, we have no doubt that, if it is carried on in the same excellent style in which it has been commenced, the various parties engaged in it will eventually reap the just reward of their talents and enterprise. The present Part is devoted to Loch Lomond, and contains, besides a vignette in the title-page, three admirable representations of that magnificent and romantic lake. The points of view are well chosen, and the various features of the scenery are delineated with fidelity and precision. Mr. Swan has seconded Mr. Fleming with great ability: we think that he has made a decided improvement, as an engraver, since his last work. Nor must we withhold our praise from the simple and unaffected descriptions of Mr. Leighton.

Sir Humphry Davy, Bart. Painted by Lawrence; engraved by R. Newton. Moon, Boys, and Co.

A LINE ENGRAVING, and a fine print of the late President of the Royal Society. Though not long painted, it represents this distinguished man of science in the prime of life, and even with the youthful look which so long adhered to him, amid all the toils and wasting of literary and scientific pursuits. It is true they were relieved by social pleasures and quiet relaxations; but still the appearance of this portrait renews the regrets felt at the loss of such an individual so prematurely.

Prince Metternich. By Lawrence; engraved by S. Cousins. Colnaghi, Son, and Co.

A MEZZOTINT of the highest order, from that brilliant portrait of Prince Metternich, which Sir Thomas painted, among his illustrious personages, for his late Majesty. The style, as well as the likeness, are very happily preserved in this transcript.

CORK EXHIBITION.

AN exhibition has been opened in Cork by "the Society for promoting the Fine Arts in the South of Ireland." The catalogue enumerates 162 pictures, drawings, and sketches. Poetry, we presume, is not among the fine arts patronised in Cork, if we may judge from the following quotation, illustrating one of the pictures, and which we copy as a curiosity:

"A land of dreams, where the Spirit strays in the silent time of Night, and friends meet friends long Lost in the glow of the mellow evening light."

In our poetical criticisms we have often had to reprehend the great abuse which has crept into composition, in so far as regards the division of lines,—our modern writers making them end indifferently in the nominatives of verbs which begin the next, common conjunctions, adjectives divorced from their substantives, &c. &c. &c.: perhaps this caricature of the style, by displaying its gross absurdity, may do more towards promoting a reform than all our preaching.

ORIGINAL POETRY.

SCENES IN WINDSOR CASTLE.

I SAW a castle of beauty and power
Bathed in the hues of the sunset hour;
Proudly over the battlements fair
A standard streamed on the soft blue air.
The bright, the noble, have graced those halls;
The brave with laurel-crowns wreathed the walls:

They are met once more by that mingled sound
Of music and revelry floating around;
I hear through each portal one chorus ring,
Re-echoed by thousands—"God save the king!"

A change was darkening o'er the sky
When next that castle met mine eye;
The rosy tints of gold were flown,
Eve's dusky shade remained alone;
The song was hush'd—in whispers low
Men asked of what they feared to know;
Tired messengers, despatch'd in speed,
Passed and repass'd with foaming steed;
While anxious eyes and lips compressed,
Though mute, th' impending doom confessed—
This prayer their hearts were murmuring,
"Lord, we beseech thee, save our king!"

I saw those ancient towers again,
They were wrapt as it were with a shroud,
And the flag that yields not on earth or main
Beneath the light wind bow'd.
A conqueror rent the palace gate,
And strode in gloomy pride,
Till he reached the throne in the hall of state,
Then he cast his arms aside.

A mournful stillness reigned profound,
The breath of life had fled,
When a train of followers gathered around
The couch of the princely dead;
But Time so lightly had waved his wing,
They feared to awaken the dreamless king:
No trace of mortal pain appeared,
And a ray was seen to shine
O'er the cold, mute lips, and the brow revered—
A type of bliss divine!

Soft fell the dewy veil of night,
When glancing swift, a signal light
(Gleams from the ivy'd tower;
With arms reversed, a martial band
Along the courts compacted stand,
Guarding the sacred hour.

Now faintly sweet the funeral dirge we hear,
Distinct yet distant, stealing on the ear;
Continuous and sad the requiem floats,
Responding chords adopt the plaintive notes,
Leaving no pause between.

The trumpet's blast, the roll of muffled drum,
Proclaim the last solemnities are come;
Knights, heralds, warriors, peers, advancing slow,

Robed in the pomp and pageantry of wo,
In marshalled ranks are seen.

Now borne beneath the torch's fitful light,
Britain's imperial banners fluttered bright,
In proud and rich array;

The glittering crown, the sceptre, and the sword,

Shine round the gilded coffin of their lord,
Memorials of decay;
And hark! the cannon's deadly roar
Bursts o'er the dirge and clarion's wail,
Portentous thundering on the gale,
"Our sovereign breathes no more!"

Is there no mourner in the sable trains
Who crowd to view their king's enshrined remains?

No gentle praise? no tributary sigh?
Yet thousands watch the regal canopy
Pass to the holy choir!

Could they who shared his lasting love behold
The drooping pall and velvet's waving fold,
Nor feel a thrilling pang unnerve the breast?
Was every touch of inward grief repress,
Ere sank the mild and generous prince to rest,
Beside his honoured sire?

No! there are hearts in yon bright retinue
Whom cold indifference dares not yet subdue,
They will not blush to shed
One loyal tear of gratitude, nor fear
Respectful sighs may wound the monarch's ear,
Who mourns a brother dead!

Statesmen may feel, and courtiers own,
Regret for him who graced the throne,
When kindred princes weep;
In signs of faith like these were seen,
To William and his gentle queen
Allegiance pure and deep:
And who with iron heart can smile
When sweeps along the sacred aisle
The organ's pealing sound;
And waded thence to cloister dim
Is faintly heard the choral hymn,
Reverberating round?

Contentent notes in union meet,
The minute-gun, the anthem sweet,
The bell's sepulchral toll;
Oh, let not nobler man disdain
To breathe with them the hallowed strain—
"Peace to King George's soul!"

July, 1830.

BIOGRAPHY.

RIGHT HON. W. HUSKISSON.

WITH feelings of sincere sorrow we have to announce the sudden and melancholy death of the Right Hon. W. Huskisson, who was accidentally killed at the grand ceremony of opening the Rail-Road between Liverpool and Manchester. The unfortunate gentleman had alighted to converse with some of the parties interested in this great concern, when one of the steam-impelled carriages threw him down, and crushed his leg in so dreadful a manner, that he expired on the same day (Wednesday) at Eccles, whither he had been conveyed. This fearful calamity occurred within a few yards of the carriage in which were the Duke of Wellington and Mr. Peel; and, still more to be lamented, within sight of Mrs. Huskisson, whose horror and distress admit of no description. Indeed, the effect of so shocking a scene, in the midst of triumph and festivity, cast a heavy gloom upon every heart; and, but from the strange dread of commotions at Manchester, (what a picture of the state of its population, and of the country!!!) the procession would have stopped at once. As it was, it proceeded to its destination in a mutilated shape; the ministers left it as soon as they decently could; and the whole concluded in sadness and mourning, instead of the anticipated rejoicing and merriment.

SKETCHES OF SOCIETY.

ENGLISH TRAVELLERS IN ITALY.

WE recently extracted from *Le Globe* a contrast between England and Italy—the English and the Italians. That paper continues its amiable efforts to improve our countrymen and

* In acknowledging our obligation to the young and fair writer of this feeling composition, we are induced to couple our thanks with an apology for having, amid the mass of poetry with which our table is crowded, suffered a very pretty little volume from her pen, and entitled *The Poésie*, to be among our postponed Reviews. We may now take the opportunity of saying it is a sweet and graceful female work.—*Ed. L. G.*

countrywomen. The following description of English travellers in Italy is amusing enough. It contains some falsehood, and much exaggeration; though a large portion of it, we fear, is but too true.

The English, as is well known, form more than seven-eighths of the travellers in Italy. In many places, indeed, an Englishman and a traveller have become synonymous terms. Their flight also, like that of quails, is always regular and simultaneous. "In one month," say the people on the road from Rome to Naples, "the English will be coming;" and in one month they never fail to come. They all hurry from Rome, on a certain day, to remain at Naples for a certain time, and to return to Rome by a certain period. Nothing can induce the great majority of them to alter this arrangement. The last year that I was in Italy, their five weeks in Naples were dismal. There was constant rain, wind, and even snow. Vesuvius was veiled during the whole period; and the finest roads, that of Paestum for example, were impassable. The English, nevertheless, all went away on the fixed day. They had passed their prescribed time at Naples!

In fact, it is not to amuse themselves that the English visit Italy. They may be divided into two great classes;—those who, for the sake of economy, leave London with their families; and the young men who travel on quitting Oxford or Cambridge. The first have, in general, two or three carriages, a cook, and five or six servants. They hire a house, open their drawing-room, live among themselves, and, if they are amateurs of the arts, get up a private theatre. As for the second, a trip to Italy is never with them a pleasure. They take a course of France and Italy as they would take a course of law and philosophy. But do not fancy that their object is instruction. What can be learnt out of old England? But it is necessary they should distinguish themselves from the miserable devils who are not rich enough to quit their natal soil: it is necessary they should assume a certain rank in London among the fashionables in the west end of the town. While they are undergoing this probation, therefore, they are generally as wearied as they are wearying. They come full of prejudices, and they return as they came. Nothing pleases them; they are disgusted with every thing; irritated at every thing, even at the most indifferent customs. Even the climate and the sky do not always find favour in their sight. I once travelled with a young Scotchman, who had determined to be colder at Rome than at Edinburgh. He was enchanted when he felt a fresh north-easter; a chill rain delighted him; a thick fog rendered him triumphant. Nothing in the world could tempt him to renounce one of his habits. At the beginning of a long day's journey it was necessary that he should stop an hour to take some tea; and the only time that I ever saw him angry was, when I proposed to him to breakfast in the carriage.

To these two classes of travellers others may no doubt be added. Thus, one of the richest dukes in England announced last year in the papers that he was setting off for Italy, with six berlins; and that any of his friends who wished to make the journey at his expense, had only to give their names to his porter. Thus also, annoyed by not being able to penetrate at London into the fashionable world, that world so strict and well barricaded, a great many English come to the continent, in order, at least at their ambassador's house, to approach those privileged mortals, by whom, when at home,

they are kept at a distance. The last English ambassador at Florence found his saloon invaded by travellers of this description, and frequently complained of them. But, whether travellers from economy, from duty, from luxury, or from vanity, they are all alike in one point—they have the most perfect indifference for every thing which they suppose they come to see. Nevertheless, wherever there are statues or pictures, you meet with them;—but how? With a bewildered air, a stiff neck, an imperturbable countenance, and their hands in their pockets. At a single glance they have seen forty pictures and fifty statues. I remember that, at Florence, I was one day visiting the gallery of the Academy of Fine Arts—a gallery in which select pictures are arranged according to their epochs, thus throwing a great light on the history of painting. Accompanied by the keeper, I had finished examining one of the walls of the gallery, when the bell was violently rung. Three Englishmen entered; and, like people accustomed to the thing, went immediately and placed themselves before the earliest pictures—those by Cimabue and Giotto. As the keeper was leaving me for them, I complained. "Make yourself easy," said he, with an Italian look—"they are English; they will overtake you before you have seen this picture." They required, indeed, only time to measure the gallery with great strides and with much noise. About the middle, one of them discovered on a table one of those large pasteboard tubes, blackened within, which serve to concentrate the light. It appeared strange to him, and he stopped to examine with it the picture to which he was opposite. But his companions hastened him; and, as the keeper had predicted, in one minute all three were by my side; in two minutes more they had turned on their heels and re-crossed the threshold of the door. "*Ebbene, signor!*" said the keeper to me, returning, and putting in his pocket the two precise pauls.

As for antiquities, that is another affair, and the travelling English are very fond of them. It is not that they look at them much more, but they seldom fail to carry something away for their collections. It is for that purpose, especially, that antiquities are valuable, according to them. All the keepers declare, that they have contributed more than time to the destruction of Pompeia; and at the Villa Adriana I saw one of them throw a stone at a ceiling painted in fresco, in order to knock off a little piece of red or blue stucco. What did the Villa Adriana signify? That little bit of stucco would figure on a mantel, at his country house, and shew his love of the arts.

Of all civilised beings, the Englishman is, I believe, the least sensible to the arts, the greatest slave of habit, the least accessible to external impressions. In Italy, especially, he is good for nothing. View him on a promenade, or in a theatre, in a drawing-room, or in the midst of ruins, he has always the same air of sadness, dissatisfaction, and *ennui*. *Ennui* is the principal feature of his character; it is by this that absurdities otherwise incomprehensible are explained. You have heard it said, for instance, that the English in Italy pay very dearly for every thing. Nothing can be more false; at least in Switzerland and Italy. In those two countries you meet at every step with very rich Englishmen who will dispute for an hour about a single franc. They are frequently not satisfied with that; but, having vented their fury in speech, go and inscribe pathetic imprecations in the registers in which travellers enter their names. I have

seen the heir of one of the greatest families in England curse through twenty eloquent lines the infirm cowkeeper of La Sheideck, "for having charged him exorbitantly for some cheese and milk." At Lauterbrunn, I have seen rich Englishmen refuse to pay four francs a-head at a *table d'hôte*. At the end of an hour and a half, when I returned from the fall, they were still refusing. At Venice, I saw four Scotchmen, the poorest of whom was worth £4000 a year, on arriving at ten o'clock at night, after a most fatiguing day's travelling, run about to all the inns to obtain a reduction of twenty sous in the price of their beds. In all these places, however, the prices were regular, and were the same which every body paid. When I set off from Milan for Venice and Rome, I had for my companion a young Englishman, who was also very rich. As my Italian was not so bad as his, he entrusted our accounts to me. The same evening, when they brought in the bill, it was reasonable, and I paid it. As soon as we were alone, "you do not consider," he observed, "that we ought to have obtained a reduction of two francs." I then told him that was by no means my system. "I know," said I, "that your countrymen have that habit; but the calculation I make is this: I travel in Italy for my pleasure; now nothing annoys me more than a dispute every day. It is, if you will, two francs a-day, or sixty francs a-month, which I sacrifice to my tranquillity." By degrees he appeared to become of my opinion; but at Venice he met some of his countrymen, and whenever the English meet in travelling, their first questions are, "Where do you live? What do you pay?" Unfortunately he found that we were paying twenty sous a-piece more than these gentlemen. In the evening I found him pensive. "It is impossible," he remarked, "to continue thus to be dupes." "As you please; but I abdicate my functions." "Well; from Venice, then, I take them upon myself." Three days afterwards, at Bassano, the bill was brought in. I referred it to my Englishman. "Quanto?" exclaimed he, dwelling strongly on the last syllable. "Signor, dicci lire." "E troppo." "Troppo, signor!" And then the Italian explained to him how it was impossible to keep an inn at less. "Houses are very dear at Bassano, and taxes very high. Meat, which formerly cost only eight sous, now costs twelve. Fruit is out of all price. Vegetables are not to be had." While the host was talking with incredible volubility, and offering to shew his books, the honest Englishman was endeavouring to reply; but he knew scarcely ten words of Italian, and inarticulate sounds alone testified his dissatisfaction. At length, unable to make himself understood, "Bene, bene," he cried out, and put an end to the matter. It might be supposed that this commencement would disgust him. Not at all. The same scene was repeated every evening. It consisted, on the part of the host, of a flow of arguments and lamentations; and, on the part of the Englishman, of the three little phrases "quanto?" "e troppo," and "bene," always uttered in the same order, and at the same intervals.

To spend little has become to the young English who travel, a sort of occupation, and a point of honour. To get good dinners at a cheap rate seems to be their principal object. At the moment of quitting Palermo, to ramble over Sicily, an Englishman, a man of good sense, requested to join my companions and me. He came to see me, and told me that two of his friends, who the year before had re-

mained several months in Sicily, had, before his departure from London, confided their journal to him. "This journal is very instructive," said he, "and may be useful to us. Will you look over it?" I cheerfully consented; and two hours afterwards opened the precious volume. The following is an extract:—"First day. From Palermo to Alicata. We stopped to breakfast at ——. They gave us six eggs, two pounds of bread, and a dozen oranges, and charged us a shilling. At Alicata; for dinner, a little beef badly boiled, a salad, and some tough chickens: price three shillings. Beds a shilling each. Second day: To Trapani. They could furnish us only with some eggs and a little bad cold meat; we nevertheless paid, as yesterday, three shillings. It is too dear." The whole was in this tone; a detail of every meal, with its price, and observations. I took up the second volume;—it was an echo of the first.

I should never conclude, if I were to attempt to collect every thing on this subject. That among the English travellers there are men of a different stamp, I believe; but they are lost in the crowd. Such as I have described are the wandering hordes who every year pour forth in masses from the banks of the Thames, to settle on the banks of the Tiber and the Arno. They see nothing—they learn nothing—they are amused with nothing.

MUSIC.

NEW PUBLICATIONS.

The First Rudiments of Harmony, with a short Account of all Instruments employed in an Orchestra. By G. Herbert Rodwell, Professor of Harmony at the Royal Academy of Music. 12mo. pp. 147. London, 1830. Goulding and D'Almaine.

To Mr. Rodwell, to whom we are not only indebted for so many beautiful and popular melodies, but for several fine overtures and other more elaborate compositions, we now owe an elementary work of great brevity, simplicity, and value. He has stripped musical science of a multitude of those old technicalities, which made it worse than "Hebrew-Greek" to the student; and has in fact accomplished the somewhat difficult task of making thorough bass intelligible. His preface fully explains the object he had in view; and the learner is exercised on the principles developed in plainer terms, with examples, by a series of questions at the bottom of each page. We cannot commend the volume, which is very neatly got up in its musical points, more than it deserves for the use and instruction of pupils in the science of harmony.

A Set of Ten Songs and Two Duets. The Words and Music by Two Sisters. London, J. Power.

BOTH the words and the music are extremely sweet; and there can be no question of this book's being a favourite wherever it is seen. The first song is so fair a specimen of the feeling and talent which pervade the whole, that we quote it for the gratification of readers, who will admire it, even without its appropriate and beautiful music.

"They bid me forget thee, they tell me that now
The grave damp is staining that beautiful brow;
They say that the sound of thy gay laugh is o'er:
Alas! shall I hear its sweet music no more?
I cannot forget thee, thy smile haunts me yet,
And thy deep earnest eyes, bright as when we first met;
Thy gay laugh returns in the silence of sleep,
And I start from my slumbers,—to listen—and weep!

The spring of the desert in darkness flows on,
When the hand that has sealed its pure waters is gone;
And the eye of the stranger in vain seeks to know,
When the Arab's bright fountain is sparkling below.

So this fond heart has closed o'er the source of its tears,
O'er the love it has lived on, yet hidden for years;
Thou art gone, and another's rude hand shall in vain
Seek to bring that choked fountain to day-light again."

The "Fairy Bells" is another particular favourite with us; and the "Land I love," and "To-morrow," are also so pleasing, that we wish we could do the volume justice by transferring them entire to our literary page. But as this may not be, we can only heartily recommend the whole.

A Set of Six Ancient Spanish Ballads, Historical and Romantic. The Words by T. Lockhart, Esq. The Music by Mrs. Robert Arkwright. J. Power.

No writer has done more justice to the spirit of Spanish literature and story than Mr. Lockhart; and the charm of his compositions is here enhanced by their being associated with fine and appropriate music. The "Bridal of Andalla" is an exquisite piece; and the "Avenging Child," and "Lady Alda's Dream," no less striking and original. We cannot wish our fair musical friends a more captivating companion than these Six Ancient Ballads.

DRAMA.

HAYMARKET.

ON Monday, *Marie Mignot*, a drama in three acts, which enjoyed so extraordinary a run in Paris, was produced here with complete success; well merited by the excellent acting of Farren, Cooper, Vining, Williams, Miss F. H. Kelly, and Mrs. Glover. The gist of the piece is to shew, that ambition is not the road to happiness; and it is exemplified in the person of *Marie Mignot* (Miss F. H. Kelly), a beautiful laundress, and the niece of *Mignot* (Farren), a Ude of a cook, who is raised from her humble station, first, to be the wife and widow of *Modeau* (Williams), a rich lawyer; then the wife and widow of *Dinot* (Thompson), a marshal of France; and, lastly, the favourite and almost the wife of *Casimir*, king of Poland (Cooper). The progress of these events occupies three acts:—in the first *Marie* is young, and is false to her young and suitable lover *Lagarde* (Vining), that she may wed the wealth of *Modeau*;—in the second she is ten years older, and again sacrifices *Lagarde* (who has by his talents become an eminent lawyer, and still retains his affection for her), in order to attain the rank of a marshal's lady;—and in the third intriguing for the Polish diadem, with similar duplicity and want of feeling, she is scornfully rejected by *Lagarde*, now Viceroy of Livonia, and pitifully given up by *Casimir*, who reigns the crown and retires to the Abbey of St. Germaine; while the ambitious *Marie* seeks refuge for her wounded pride in a convent of the Carmelites. A sort of corollary runs along throughout the whole, in the shape of a *Harriet de Lorme* (Mrs. Glover), who gives to pleasure what *Marie* gives to ambition, and is finally reduced to poverty in her old age.

Though there is a sameness in the repetition of the same action at three different periods of life; and though the development of the passion and principle, the consequences of which it is the aim of the author to exhibit, leads to situations more forced than natural, and to exaggerated conduct in the chief characters; yet the stage effect of *Marie Mignot* is kept up with far greater interest than could have been anticipated, where the end is foreseen. The

poetic justice of the moral reconciles us to its treble exhibition; and when the curtain drops we feel satisfied that the drama has reflected an essentially true and instructive picture, though it has aggravated the means of imparting the lesson. The performances, too, as we have noticed, contribute largely to the popular reception of *Marie Mignot*. Miss F. H. Kelly plays the heroine with taste and energy; and Farren, in the devoted cook, is, as he always is, most excellent. Mrs. Glover is not quite the Harriet of the early scenes; but she improves as she becomes older, in their course; though perhaps, on the whole, she points her sarcasms with too much bitterness for the gay and laughing Frenchwoman. The rest of the *dramatis personæ* have not so much to do; and we have only to repeat, that all is done well.

On Wednesday we witnessed the thirtieth repetition of *Separation and Reparation*; in which Farren's perfect *Von Grotius*, Mrs. Glover's almost, if not quite, as perfect *Madame Gilderland*, Cooper's no less excellent and spirited *Baron Malamour*, Miss Mor-daunt's beautiful *Angelique*, and Webster's humorous *Poppinoff*, furnished forth just such an entertainment as ought to be enjoyed at the Haymarket.

ENGLISH OPERA, ADELPHI.

The Irish Girl justifies our expectations, and fills this theatre nightly to witness the exquisite performance of Miss Kelly, who in this simple piece offers a study of all that is good in the art of acting,—truth, simplicity, nature, and power. The other parts are also well sustained; and the sweet little Harriet Cawse adds much to her reputation both as actress and singer. Here, too, (and in other dramas, such as, *Wanted a Governess*.) we have Bartley, a representative of old men, than whom there is none superior on the English stage; for, with all their characteristics ably copied, there is a chasteness in his personations which demands our highest praise. Keeley, Mrs. Keeley, and Wrench, keep up the laughter and spirit of the night; and we are glad to see the season drawing towards its close in a way as favourable as the circumstances of the theatre could admit.

VARIETIES.

French Ministry.—The department of Letters and the Arts, in the administration of the interior, has just been confided to M. Lenormant. A refined taste, profound studies, and extensive travels undertaken solely with scientific views, are his titles to the appointment.

French Pantheon.—By an ordonnance of the King of the French, the Pantheon at Paris has been restored to its primitive destination; and the inscription, "AUX GRANDS HOMMES LA PATRIE RECONNOISSANTE," is to be re-established on the pediment. The busts of Foy and Manuel have already been placed in it with great ceremony.

The Blood.—Experiments recently made on the hematosin, or colouring matter of the blood, seem to shew, that, as well as the albumen, it is capable of assuming two different forms; in the one of which it is soluble, in the other insoluble; a fact that will explain several differences of opinion on the part of chemists. It is further supposed, that the substance hitherto known under the name of hematosin, is not an immediate animal principle, but is a combination of albumen with another substance which has been called globulin; a substance found in a free state in human blood, but united with

albumen in the blood of cattle and sheep. The globulin differs from the hematosin in these respects; namely, that it contains more iron, that it is soluble in the alkalis and the acids, and that it is capable of forming with the hydrochloric acid a mixture soluble in alcohol.

Cure for the Gout.—M. Aliès, a physician residing at Coulomiers in France, has just discovered the following remedy for the gout, which he says may be considered as a specific. Take from ten to sixteen ounces of grated guaiacum wood, which is to be boiled in three quarts of water until only one quart remains; the decoction is to be strained, and then made into six equal doses, three of which are to be taken daily, one early in the morning, one at twelve o'clock, and the third in the evening. *The Journal des Connaissances Usuelles*, from which we extract this account, states that guaiacum may be also employed with very great advantage in rheumatism and sciatica. The use of guaiacum as a remedy for the gout has been frequently recommended in this country; but we never understood that it was a specific.

A Child with Four Legs!—M. Geoffroy St. Hilaire lately exhibited to the Paris Academy of Sciences a child two months old, in perfect health, which has four legs. Viewed from before, only two legs are seen, but on looking behind, there are two others of shorter length, so that they do not interfere with the movements of the child; nevertheless they are perfectly formed. The right foot of the supplementary leg is perfectly formed; but on the left there are only three toes. M. Geoffroy St. Hilaire stated, that he has a fowl with precisely the same peculiarity.

Music.—Rossini has returned to Paris from Bologna, and is now engaged upon a new opera for the Académie Royale de Musique. It is supposed, however, that he will not complete it very soon,—as, among the reforms of the new government, it is proposed to reduce the expenditure of the Grand Opera.

Botany.—M. L. Riedel, who was attached in quality of botanist to the scientific expedition of M. de Langsdorff in Brazil, has just brought to St. Petersburg, for the Imperial Botanical Garden, a collection of more than a thousand living Brazilian plants, amongst which are several not to be found in any other botanical garden of Europe.

Travelling in the Air.—At a recent sitting of the Academy of Sciences in Paris, M. Navier read a paper in refutation of a work by M. Chabrier on aerial travelling. M. Navier proves, by inquiries and experiments, as to the motion of birds in the air, that if a man were able to put together at once all the physical power which he has in eight hours, it would not be sufficient to support him with any mechanical apparatus in the air for five minutes. He considers, therefore, all the ideas advanced on this subject as chimerical.

Population of North America.—The census now taking in the United States, which seems to go on as slowly as the population progresses fastly, gives an increase on ten years of from 4 to 27 per cent in the New England towns; of 100 per cent in thirteen towns of New York; of 40 per cent in thirty places of Pennsylvania; and 43 per cent in several towns of Virginia. It is not easy to found any calculation on such vague and partial returns; but the aggregate increase must be very great.

The French Literary Gazette.—The events of the late revolution have thrown into the hands of the editor of the *Literary Gazette* at Paris (one of the best reviews of literature, science, and the arts, in that city) some curious

papers, which appeared in two recent Nos. of that publication. Among them is a copy of a play by M. Martigny, one of the ex-ministers, said to have been represented at Bourdeaux, in April 1814, before the Duc d'Angoulême; in which the bravery and magnanimity of the Duke of Wellington are extolled, and the English are represented as generous conquerors, while the French people are depicted as ready to black their shoes.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XXXVIII. Sept. 12.*]

Tales of other Days, by J. Y. A.; with engravings after Designs by George Cruikshank.—*Old Booty*, or the Devil and the Baker, a serio-comic Sailor's Tale, founded on Fact, by Mr. Moncrieff, and illustrated by Robert Cruikshank.—For the mercantile world we see announced the *British Merchant's Assistant*, by G. Green, containing Tables of Interest: of Premium and Discount on Exchange Bills and India Bonds; for ascertaining the Value of English and Foreign Stock; and other useful matter.—Sir William Jardine, author of "Illustrations of Ornithology," has in the press an edition of Wilson's *American Ornithology*, with the continuation by C. Lucien Bonaparte.

LIST OF NEW BOOKS.

Lindley's Natural System of Botany, 8vo. 12s. bds.—Ellis's British Tariff, 1830-31, 12mo. 5s. sewed.—Elliotson on the Heart, folio, 1l. 1s. sewed.—Howitt's Poems. Antediluvian Sketches, fcp. 5s. bds.—Rogers's Italy, with 56 engraved vignettes, 8vo. 1l. 1s. bds.; proofs, 8vo. 2l. 2s. bds.—Brenan's Utility of Latin, 18mo. 2s. bds.—Dickenson's Mamluk, a Poem, 8vo. 7s. 6d. bds.—Hone's French Revolution, 8vo. 2s. 6d. sewed.

Wind variable, S.W. prevailing.

Except the 13th and 14th, generally cloudy, with frequent, and, at times, heavy rain.

The sudden and tremendous peal of thunder which accompanied a shower of rain at forty-five minutes after noon, on the 15th, is deserving of particular remark: the sound, which more resembled the breaking down of heavy waggon than thunder, appeared to proceed from the surface of the earth, and continued for about 10'; it was immediately preceded by a flash of lightning.

Rain fallen, $\frac{1}{2}$ of an inch.

Edmonton.

CHARLES H. ADAMS.

Latitude..... 51° 37' 32" N.

Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

As in order to make room for as long a notice as we could insert in one No. of Sir Walter Scott's new production, and the Correspondence of Sir T. Munro, we have postponed the conclusion of the Book of Scotland, besides several novelties, and a paper on the Asteroids.

When we wrote the notice adverted to by J. C., which was a few days before its publication, we had previously seen the picture in question in the gallery; and, of course, we did not know of its subsequent removal: nor, indeed, do we now know of it, except from J. C.'s statement. There can be no doubt that, on the removal of the picture, its name ought to have been immediately struck out of the placards at the door: we cannot, however, be so uncharitable as to attribute the delay in that respect to any cause but inadvertence.

It is a rule with us not to copy articles from other Journals: the whole *Literary Gazette* is original matter. We cannot, therefore, insert the very able article on machinery from the *Times*; but it is probable the subject will be brought before us by other means.

The note of Adelaide, by L. E. L., has long been out of print: we cannot tell where a copy could be procured.

The publication announced in our last week's list, either from erroneous information or by a mistake in printing, as by Mr. Thomas Haynes Bayly, is disavowed by that gentleman.

Mr. Smith of Newry's letter on the subject of the eclipse is referred to our Astronomer Royal till next Saturday.

We know nothing of the circumstance mentioned by F. W. When we said something favourable of our contemporary, the *Star*, it was on the view of a volume sent to us, and we have not seen the Journal since: so that if the Editor wrongs the public of twelve pages, more than a third of the whole, the public has the revenge in its own power. The moment a periodical ceases to merit patronage and confidence, by any species of unfairness whatever, it ought to lose that support which is the just reward only of honourable conduct.

ADVERTISEMENTS,

Connected with Literature and the Arts.

UNIVERSITY OF LONDON.

The Medical Classes will Open on Friday the 1st of October. The Council have sanctioned a new division of the instruction in Anatomy.

Mr. Bell will teach Physiology, illustrating that Science by continual reference to the pieces of Anatomy; and thus combining the knowledge of Structure with that of the Properties of Life. At the suggestion of Mr. Pattison, Mr. Bennett has been associated with him in the Chair of Anatomy. In order that this department may be most efficiently taught, but without needless repetition, Mr. Pattison will teach Descriptive and Surgical Anatomy; and Mr. Bennett General Anatomy, comprising the Development and Organisation of the several Tissues; and he will likewise teach the Descriptive Anatomy of the Viscera.

The following are the Medical Classes.

Anatomy—Mr. G. S. Pattison and Mr. J. K. Bennett. Fee 7*l.*; or for the First Division, 4*l.*; and for the Second, 3*l.*

Physiology—Mr. Charles Bell. Fee 3*l.*

Anatomical Demonstrations—Mr. J. R. Bennett and Mr. R. Quain. Fee 6*l.*; or 3*l.* for each division.

Nature and Treatment of Diseases—Dr. Conolly. Fee 6*l.*; or 3*l.* for each division.

Surgery—Mr. Pattison. Fee 3*l.*; perpetual, 4*l.*

Midwifery and Diseases of Women and Children—Dr. D. D. Davis. Fee 5*l.*; first division 3*l.*; second division 2*l.*

Clinical Medicine—Dr. Watson. Fee for the whole Course 4*l.*; and for half the Course 3*l.*

Maternal Medicine and Therapeutics—Dr. A. T. Thomson. Fee 6*l.*; or for each division 3*l.*

Chemistry—Dr. E. Turner. Fee 7*l.*; first division 4*l.*; second division 3*l.*

Comparative Anatomy—Dr. R. E. Grant, terminating at the end of January. Fee 3*l.*

Botany—Professor Lindley. Fee 3*l.*

Medical Jurisprudence—Dr. J. Gordon Smith. Fee 4*l.*; or for each division 2*l.*

Hospital attendance daily from Half-past Twelve to Half-past One

Dispensary—*ad idem* } Fee for the Session 5*l.*

On Friday the 1st of October, at Three o'clock precisely, Dr. Conolly will deliver a General Introductory Lecture, for which Tickets of admission may be obtained at this Office.

A Medical Library has been formed for the use of the Students. The other Classes of the University open on Monday the 1st of November. Particulars of those and of the Medical Courses will be given at this Office.

An Account of the Distribution of Prizes in the Medical and General Schools may be had gratis at the Office of the University, and of Mr. Taylor, No. 30, Upper Gower Street.

By order of the Council, THOMAS COATES, Clerk.

September 9, 1830.

UNIVERSITY OF LONDON.—The

Council hereby give notice that the following Classes will meet on Monday, the first of November next:—

Latin, Greek, English, French, German, Italian, Hebrew, Oriental Languages, Mathematics, Natural Philosophy, Philosophy of the Human Mind and Logic, General Jurisprudence, English Law.

The Course of Chemistry commences with the Medical Classes on the 1st of October; but the first five weeks are occupied with a general view of the science, and the detailed consideration of each branch commences in October.

Botany also commences in November; but there is a Spring Course in April.

The Course of Zoology commences on the 3d of January, and there is a Summer Course on Zoology and Comparative Anatomy.

The Lectures on Political Economy commence in February. There are to be an Evening Course of Mathematics, and popular Courses of Natural Philosophy, commencing also on the first of November.

A Prospectus of the several Classes, containing an Outline of the mode of Instruction, with a Statement of the Hours, the Fees, the Regulations for Admission to the Library, Museums, &c. may be had on application at the Office of the University, and at the following Booksellers:—Mr. Taylor, 30, Upper Gower Street; Mr. Murray, Alb-marque Street; Messrs. Longman and Co., and Messrs. Baldwin and Cradock, Paternoster Row; Mr. Underwood, 32, Fleet Street; Mr. Richardson, 23, Cornhill; Mr. Callow, 45, Prince Street; Messrs. Mr. Bellamy, 129, Piccadilly; and Mr. Bell's, Chemist, 388, Oxford Street; and Mr. Garden, Chemist, 372, Oxford Street.

The Medical Classes meet on the 1st of October. LEONARD HOKNER, Warden.

WESTERN LITERARY and SCIENTIFIC INSTITUTION, 47, Leicester Square.

This Institution, founded in 1825, for the Diffusion of Useful Knowledge, offers the following Advantages:—

An extensive Library, for the circulation of New Publications and Works of Interest.

A Reading Room, supplied also with the Periodicals and Daily Papers.

Classes for the attainment of the Sciences and Languages, and for the Discussion of Literary and Scientific Subjects.

Interesting and Instructive Lectures by eminent Professors.

Convenient Rooms for Conversation, for Chess, and for Amateur Concerts.

Admission Fee, 10*s.* 6*d.*—Subscription, 2*l.* 2*s.* per Annum, payable Half-Yearly.

A Prospectus and Form of Admission may be procured, gratis, at the Institution; of Messrs. Gray and Foll, 60, Piccadilly; Roake and Varty, 31, Strand; and Tilt, 36, Fleet Street.

ST. THOMAS'S HOSPITAL.—The

Autumnal Course of Lectures will commence on Friday, the 1st of October.

Theory and Practice of Medicine—First Course, Dr. Elliotson; Second Course, Dr. Williams.

Maternal Medicine—Dr. Roots.

Chemistry—Dr. Burton.

Anatomy—Mr. Bell and Mr. John F. South.

Surgery—Mr. Green.

Midwifery—Dr. Ferguson and Dr. Ashburnham.

Comparative Anatomy—Mr. John F. South.

Clinical Lectures will be given.

Pupils entering to the Surgical Practice of this Hospital are allowed to attend that of Guy's.

For Particulars apply to Mr. Whitfield, Apothecary to St. Thomas's Hospital.

By JOSEPH KING, Liverpool.

Sold by Longman and Co. Liverpool; and G. and J. Robinson, London.

AN INTRODUCTION TO THE STUDY of ANCIENT GEOGRAPHY, with Copious Indexes.

By PETER EDMUND LAURENT, Of the Royal Naval College in H. M. Dockyard, Portsmouth; Author of a "New Translation of Herodotus," "The Odes of Pindar in English Prose," &c. &c.

"We have not met with a work of more value to the classical reader than this laborious and very useful volume. The indexes alone are worth half a historical series, as guides to references in esteemed authors, and on every point connected with ancient geography that can interest the scholar or general reader. Brief sketches illustrate the subjects, and being all arranged, are capable of giving more information in an hour than even intelligent research would be likely to supply in several days."—*Literary Gazette*.

Oxford: For Henry Slatter; and Whittaker, Treacher, and Co. London.

Important Historical and Biographical Works, Printed for Longman, Rees, Orme, Brown, and Green.

MEMOIRS of the LIFE of SIR WALTER RALEGH, with some Account of the Period in which he lived.

By Mrs. A. T. THOMSON.

In 1 vol. 8vo. with Portrait, 1*l.* boards.

"Such is the outline of a life which, in Mrs. Thomson's hands, is a mine of interest: from the first page to the last the attention is attracted, and sustained, and the subject, though all arranged, is still more applaud the spirit in which it is executed."—*Literary Gazette*, May 8, 1830.

By the same Author,

Memoirs of the Court of Henry the Eighth,

in 2 vols. 8vo. with a Portrait, 1*l.* 8*s.* boards.

THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD, Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquis of Cleveland.
 This work is elegantly got up, and comprises 42 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficientes of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years.
 London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

Works on Medicine, Physiology, Chemistry, &c.

THE PENSEE; Poems.
 By a YOUNG LADY.
 "Pensee à moi," my gentle friends,
 Dear remnants of a broken chain;
 To each this lower Fidelia sends,—
 O keep it till we meet again!
 Published by J. Hatchard and Son, 187, Piccadilly.

BOOKS IN THE PRESS.
Literaries in course of Publication by Messrs. Colburn and Bentley.
 In small 8*v.* with Engravings on Steel of Lord Byron and the Countess Guiccioli, price 3*s.*

THE NATIONAL LIBRARY, No. I.
 Conducted by the Rev. G. R. GLEIG.
 Containing the Life of Lord Byron, by JOHN GALT, Esq. N.B. The title of The National Library has been adopted instead of the Library of General Knowledge, on account of the similarity of the latter title to those of other existing Works.
No. II. containing the History of the Bible, by the Rev. G. R. Gleig, will be published on the 1st of October.
 Neatly bound, price only 4*s.* 6*d.*

2. **The Family Classical Library, No. IX.** containing Druden's Translation of the *Æneid* of Virgil. Cicero remarks, that not to know what has been translated in former times, is to continue always a child, and the learned Dr. Parr says, "if you desire your son, though no great scholar, to read and reflect, it is your duty to place in his hands the best translations of the best classical authors."
 To those, therefore, who are desirous of obtaining a knowledge of the most esteemed authors of Greece and Rome, but possess not the means or leisure for pursuing a regular course of study, the present undertaking must prove a valuable acquisition.
 The preceding Numbers comprise Demosthenes, Sallust, Xenophon, Herodotus, &c. &c.

And on the 1st of October, neatly bound, with Four beautiful Embellishments, price 4*s.*
 3. **The Juvenile Library, No. III.** containing Africa, its Geography and History, Ancient and Modern. This work is conducted by William Jerdan, Esq. the Editor of the London Literary Gazette, with whom a number of authors of high character are associated, to illustrate the various branches of polite literature and popular instruction in which their respective talents have already obtained public weight and celebrity.

PHILIP LOUIS, KING of the FRENCH.
 An elegant Plate engraved by Thomson, of Philip Louis will be given in La Belle Assemblée for October, in addition to the Portrait of the Baroness Ribblesdale, which will be the 5th of the Series of Female Nobility, now publishing in that Work.
 The Portraits of the following distinguished Personages are in preparation for the forthcoming Numbers of La Belle Assemblée:—The King and Queen of England;—The Empress of Russia—Duchess de Berri—Princess Esterhazy—Marchioness of Stafford—Countess Gower—Countess of Antrim—Dowager Countess of Erroll—Lady Durham—Lady Cumming Gordon—Lady Normanby—Lady Mary Leslie, &c. &c. &c.
 Whittaker and Co. London; Waugh and Innes, Edinburgh; and J. M. Leckie, Dublin.

Family Library, No. XVI.
 New Work by the Author of *Waterley*.
 On Tuesday next will be published, with Frontispiece, 5*s.*
LETTERS on DEMONOLOGY and WITCHCRAFT.
 By SIR WALTER SCOTT, Bart.
 Volumes published up to the present time, price 5*s.* each, bound in one case:
 1. and 2. Life of Buonaparte 8. Court and Camp of Buonaparte
 3. Alexander the Great 11. Irving's Columbus
 4. 10. and 12. British Artists 12. Southey's Nelson
 5. 6. and 9. History of the Jews 13. Southey's Physicians
 7. Insects 15. British India
 Also,
Family Dramatists, No. I. Mingsinger.
 John Murray, Albemarle Street.

Robert Cruikshank's New Work.
 On the 30th instant, ready for delivery with the Magazine,
THE DEVIL'S VISIT, a Poem, with Eight Illustrations by Robert Cruikshank.
 "In the parliament house he felt quite at home,
 As if in his own possessions;
 For they gull their victims with words of hope,
 While they torture with fresh oppressions."
 London: William Kidd, 6, Old Bond Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo, Strand, and 7, South Molton Street, Old Street; sold also by J. Chappell, 98, Royal Exchange; E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Ellis, Edinburgh; Smith and Son, D. Robertson, and Atkies and Co. Glasgow; and J. Cumming, Dublin.—Agents for America, O. Rich, 12, Red Lion Square, London.
 J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 714.—AMERICAN EDITION.

SATURDAY, SEPTEMBER 25, 1830.

REVIEW OF NEW BOOKS.

Conversations of James Northcote, Esq. R.A.
By William Hazlitt. Pp. 328. London, 1830. Colburn and Bentley.

WILLIAM HAZLITT, the author of a number of works of very considerable talent,* died last Saturday, the day on which this volume was put into our hands. Yet, we think, there is nothing but impartial justice in our opinion of its interest and merit. Without setting up for Sir Oracle, we find a great deal of original mind and observation scattered, in a desultory way, through the pages; and while there is more to commend, there is less (being almost nothing) to offend than we have usually met with in Mr. Hazlitt's writings. This principally arises from the matter being the dicta of Mr. Northcote; but even where the editor himself is the speaker, we have a moderate tone and a sensible spirit, seldom to be recognised in his preceding productions.

The volume before us is divided into two parts, without any apparent reason; and contains, in twenty-two *titre-à-titre* Conversations with the veteran Mr. Northcote, a multitude of chit-chat discussions on topics connected with well-known persons, literature, the fine arts, the drama, &c. &c. In these colloquies, Mr. Hazlitt has had the discretion not to press himself into the foreground, but rather to act the part of one who is desirous of deferring to and drawing out the stores of superior intelligence. The matter has thus a rambling form; but it is studded with many excellent remarks, and exhibits the aged artist (his portrait prefixed represents him in his 82d year) in the light of a very acute and observant person, who has seen much of life, and from possessing character in himself, has curiously appreciated what he has seen.

The Conversations seem to have been held with a view to publication, and Mr. Northcote to have revised them for that purpose. The second part, especially, has more the appearance of preparation than the first; is more prolix and dissertative, and less unpremedi-

* Besides contributing almost continually for many years to newspapers, reviews, and literary journals, Mr. Hazlitt published—*Essay on the Principles of Human Nature*; the *Eloquence of the British Senate*, with Notes, &c. from the time of Charles I., in two octavo volumes; an *English Grammar*; the *Round Table* (in conjunction with Mr. Leigh Hunt); a *Collection of Essays on Literature, Men, and Manners*; *Characters of Shakespeare's Plays*; a *View of the English Stage*, containing a *Series of Dramatic Criticism*; *Lectures on the English Poets*, delivered at the Surrey Institution; *Political Essays and Sketches of Public Characters*; *Letter to William Gifford, Esq.*; and a volume (if we remember rightly) on the *Literature of the Elizabethan Age*. Several of these works obtained much popularity; and indeed, though differing widely from their author on most of his opinions, as well as disliking the Cockney dogmatism he so often displayed, we must allow that he produced much that did credit to his abilities. It was his asperities which rendered his performances generally unpalatable to us; and the dislike was not removed by an ambitious and affected style frequently puzzling by its "true no-meaning." Yet there were bright parts, and of these alone we would now gladly cherish the remembrance: as of a clever but unamiable man, who was, as he himself tells us, "at feud with the world," and who consequently treated the world with ill will, if not malice, which the world requited with something of resentment and scorn.

tated and extemporaneous. Still, as we have said, both present a number of smart anecdotes and other points worthy of being remembered; and from these we shall select a portion to sustain the very favourable opinion we express of the work.

"I mentioned (says Hazlitt) some things that H—— had reported of Lord Byron; such as his saying, 'He never cared for any thing above a day,'—which might be merely in a fit of spleen, or from the spirit of contradiction, or to avoid an imputation of *sentimentality*.' 'Oh!' said Northcote, 'that will never do, to take things literally that are uttered in a moment of irritation. You do not express your own opinion, but one as opposite as possible to that of the person that has provoked you. You get as far from a person you have taken a pique against as you can, just as you turn off the pavement to get out of the way of a chimney-sweeper; but it is not to be supposed you prefer walking in the mud, for all that!'"

The following observations are very good.

"When Dr. Johnson (says Northcote) was asked why he was not invited out to dine as Garrick was, he answered, as if it was a triumph to him, 'Because great lords and ladies don't like to have their mouths stopped!' But who *does* like to have their mouths stopped? Did he, more than others? People like to be amused in general; but they did not give him the less credit for wisdom and a capacity to instruct them by his writings. In like manner, it has been said, that the king only sought one interview with Dr. Johnson; whereas, if he had been a buffoon or sycophant, he would have asked for more. No, there was nothing to complain of: it was a compliment paid by rank to letters, and once was enough. The king was more afraid of this interview than Dr. Johnson was; and went to it as a school-boy to his task. But he did not want to have this trial repeated every day, nor was it necessary. The very jealousy of his self-love marked his respect: and if he had thought less of Dr. Johnson, he would have been more willing to risk the encounter. They had each their place to fill, and would best preserve their self-respect, and perhaps their respect for each other, by remaining in their proper sphere. So they make an outcry about the prince leaving Sheridan to die in absolute want. He had left him long before: was he to send every day to know if he was dying? These things cannot be helped, without exacting too much of human nature.' I agreed to this view of the subject, and said,—I did not see why literary people should repine if they met with their deserts in their own way, without expecting to get rich; but that they often got nothing for their pains but unmerited abuse and party obloquy. 'Oh, it is not party-spite,' said he, 'but the envy of human nature. Do you think to distinguish yourself with impunity? Do you imagine that your superiority will be delightful to others? Or that they will not strive all they can, and to the last moment, to pull you down? I remember myself once saying to Opie, how hard it was upon the

poor author or player to be hunted down for not succeeding in an innocent and laudable attempt, just as if they had committed some heinous crime! And he answered, 'They have committed the greatest crime in the eyes of mankind, that of pretending to a superiority over them!' Do you think that party abuse, and the running down particular authors is any thing new? Look at the manner in which Pope and Dryden were assailed by a set of reptiles. Do you believe the modern periodicals had not their prototypes in the party-publications of that day? Depend upon it, what you take for political cabal and hostility is (nine parts in ten) private pique and malice oozing out through those authorised channels.'"

Speaking of the famous sculptors, Thorwaldsen and Canova, Mr. Northcote's sentiments are very far from agreeing with received notions.

"A young artist (he says) brought me all Thorwaldsen's designs the other day, as miracles that I was to wonder at and be delighted with. But I could find nothing in them but repetitions of the antique, over and over, till I was surfeited.' 'He would be pleased at this.' 'Why, no! that is not enough: it is easy to imitate the antique:—if you want to last, you must invent something. The other is only pouring liquors from one vessel into another, that become staler and staler every time. We are tired of the antique; yet, at any rate, it is better than the rapid imitation of it. The world wants something new, and will have it. No matter whether it is better or worse, if there is but an infusion of new life and spirit, it will go down to posterity; otherwise, you are soon forgotten. Canova, too, is nothing, for the same reason—he is only a feeble copy of the antique; or a mixture of two things the most incompatible, that and opera-dancing. But there is Bernini; he is full of faults; he has too much of that florid, redundant, fluttering style, that was objected to Rubens; but then he has given an appearance of flesh that was never given before. The antique always looks like marble, you never for a moment can divest yourself of the idea; but go up to a statue of Bernini's, and it seems as if it must yield to your touch. This excellence he was the first to give, and therefore it must always remain with him.'"

"Originality is not caprice or affectation; it is an excellence that is always to be found in nature, but has never had a place in art before."

On literary subjects we have ideas equally forcible. "The dislike of the Westminster reviewers to polite literature was only the old exploded puritanic objection to human learning. Names and modes of opinion changed, but human nature was much the same. 'I know nothing of the persons you speak of,' said Northcote; 'but they must be fools if they expect to get rid of the showy and superficial, and let only the solid and useful remain. The surface is a part of nature, and will always continue so. Besides, how many useful inven-

tions owe their existence to ornamental contrivances! If the ingenuity and industry of man were not tasked to produce luxuries, we should soon be without necessities. We must go back to the savage state. I myself am as little prejudiced in favour of poetry as almost any one can be; but surely there are things in poetry that the world cannot afford to do without. What is of absolute necessity is only a part; and the next question is, how to occupy the remainder of our time and thoughts (not so employed) agreeably and innocently. Works of fiction and poetry are of incalculable use in this respect. If people did not read the Scotch novels, they would not read Mr. Bentham's philosophy. There is nothing to me more disagreeable than the abstract idea of a quaker, which falls under the same article. They object to colours; and why do they object to colours? Do we not see that Nature delights in them? Do we not see the same purpose of prodigal and ostentatious display run through all her works? Do we not find the most beautiful and dazzling colours bestowed on plants and flowers, on the plumage of birds, on fishes and shells, even to the very bottom of the sea? All this profusion of ornament, we may be sure, is not in vain. To judge otherwise, is to fly in the face of Nature, and substitute an exclusive and intolerant spirit in the place of philosophy, which includes the greatest variety of man's wants and tastes, and makes all the favourable allowances it can. The quaker will not wear coloured clothes; though he would not have a coat to his back if men had never studied any thing but the mortification of their appetites and desires. But he takes care of his personal convenience by wearing a piece of good broad-cloth, and gratifies his vanity, not by finery, but by having it of a different cut from every body else, so that he may seem better and wiser than they. Yet this humour, too, is not without its advantages: it serves to correct the contrary absurdity. I look upon the quaker and the fop as two sentinels placed by Nature at the two extremes of vanity and selfishness, and to guard, as it were, all the common-sense and virtue that lie between."

Northcote, our readers are aware, was the pupil of Reynolds; and his recollections of that masterly artist (not previously given in his *Life*) are very interesting. They occur in various parts, and we must not stand upon order in their introduction.

"Northcote began by saying, 'You don't much like Sir Joshua, I know; but I think that is one of your prejudices. If I was to compare him with Vandyke and Titian, I should say that Vandyke's portraits are like pictures (very perfect ones, no doubt), Sir Joshua's like the reflection in a looking-glass, and Titian's like the real people. There is an atmosphere of light and shade about Sir Joshua's, which neither of the others have in the same degree, together with a vagueness that gives them a visionary and romantic character, and makes them seem like dreams or vivid recollections of persons we have seen. I never could mistake Vandyke's for any thing but pictures, and I go up to them to examine them as such: when I see a fine Sir Joshua, I can neither suppose it to be a mere picture nor a man; and I almost involuntarily turn back to ascertain if it is not some one behind me reflected in the glass: when I see a Titian, I am rivetted to it, and I can no more take my eye off from it than if it were the very individual in the room. That,' he said, 'is, I think, peculiar to Titian, that you feel on your good behaviour in the pre-

sence of his keen-looking heads, as if you were before company.'

"Few young men of agreeable persons or conversation turned out great artists. It was easier to look in the glass than to make a dull canvass shine like a lucid mirror; and, as to talking, Sir Joshua used to say, a painter should sew up his mouth. It was only the love of distinction that produced eminence; and if a man was admired for one thing, that was enough. We only work out our way to excellence by being imprisoned in defects. It requires a long apprenticeship, great pains, and prodigious self-denial, which no man will submit to, except from necessity, or as the only chance he has of escaping from obscurity. I remember when Mr. Locke (of Norbury-Park) first came over from Italy; and old Dr. Moore, who had a high opinion of him, was crying up his drawings, and asked me, if I did not think he would make a great painter? I said, 'No, never!' 'Why not?' 'Because he has six thousand a-year.' No one would throw away all the advantages and indulgences this insured him, to shut himself up in a garret to pore over that which, after all, may expose him to contempt and ridicule. Artists, to be sure, have gone on painting after they have got rich, such as Rubens and Titian, and indeed Sir Joshua; but then it had by this time become a habit and a source of pleasure instead of a toil to them, and the honours and distinction they had acquired by it counterbalanced every other consideration. Their love of the art had become greater than their love of riches or of idleness: but at first this is not the case, and the repugnance to labour is only mastered by the absolute necessity for it."

Of the Royal Academy Mr. Northcote does not express a high opinion: if one of its oldest and most distinguished members paints in such colours, surely we may join the general voice, and proclaim that it wants reform.

"Something was said of the Academy; and P—— made answer, 'I know your admiration of corporate bodies.' N. said, 'They were no worse than others; they all began well and ended ill. When the Academy first began, one would suppose that the members were so many angels sent from heaven to fill the different situations, and that was the reason why it began: now the difficulty was to find any body fit for them, and the deficiency was supplied by interest, intrigue, and cabal. Not that I object to the individuals neither. As Swift said, I like Jack, Tom, and Harry, very well by themselves; but all together, they are not to be endured. We see the effect of people acting in concert in animals (for men are only a more vicious sort of animals): a single dog will let you kick and cuff him as you please, and will submit to any treatment; but if you meet a pack of hounds, they will set upon you and tear you to pieces with the greatest impudence.'"

Again: "Northcote shewed me a printed circular from the Academy, with blanks to be filled up by academicians, recommending young students to draw. One of these related to an assurance as to the moral character of the candidate; Northcote said, 'What can I know about that? This zeal for morality begins with inviting me to tell a lie. I know whether he can draw or not, because he brings me specimens of his drawings; but what am I to know of the moral character of a person I have never seen before? Or what business have the Academy to inquire into it? I suppose they are not afraid he will steal the Farnese Hercules; and as to idleness and debauchery, he will not be cured of these by cutting

him off from the pursuit of a study on which he has set his mind, and in which he has a fair chance to succeed. I told one of them, with as grave a face as I could, that, as to his moral character, he must go to his god-fathers and god-mothers for that. He answered very simply, that they were a great way off, and that he had nobody to appeal to but his apothecary! The Academy is not an institution for the suppression of vice, but for the encouragement of the fine arts. Why then go out of their way to meddle with what was provided for by other means,—the law and the pulpit? It would not have happened in Sir Joshua's time,' continued Northcote, 'nor even in Fuseli's: but the present men are 'dressed in a little brief authority,' and they wish to make the most of it, without perceiving the limits. No good can possibly come of this busy-body spirit. The dragging morality into every thing, in season and out of season, is only giving a handle to hypocrisy, and turning virtue into a bye-word for impertinence!'"

The subjoined are yet more miscellaneous than our preceding extracts.

"It was (said Northcote) Archimedes who said he could move the earth if he had a place to fix his levers on: the priests have always found this purchase in the skies. After all, we have not much reason to complain, if they give us so splendid a reversion to look forward to. That is what I said to G——, when he had been trying to unsettle the opinions of a young artist whom I knew. Why should you wish to turn him out of one house, till you have provided another for him? Besides, what do you know of the matter more than he does? His nonsense is as good as your nonsense, when both are equally in the dark."

"N—— related an anecdote of Mr. Moore (brother of the general), who was on board an English frigate in the American war, and coming in sight of another vessel which did not answer their signals, they expected an action, when the captain called his men together, and addressed them in the following manner:—'You dirty, ill-looking blackguards! do you suppose I can agree to deliver up such a set of scarecrows as you as prisoners to that smart, frippery Frenchman! I can't think of such a thing. No! by G——, you must fight till not a man of you is left, for I should be ashamed of owning such a raggamuffin crew!' This was received with loud shouts, and assurances of victory."

"Northcote said, Goldsmith's death was the severest blow Sir Joshua ever received: he did not paint all that day! It was proposed to make a grand funeral for him, but Reynolds objected to this, as it would be over in a day, and said it would be better to lay by the money to erect a monument to him in Westminster Abbey; and he went himself and chose the spot."

"He mentioned an instance of a trial about an engraving, where he, West, and others, had to appear, and of the respect that was shewn them. Erskine, after flourishing away, made an attempt to puzzle Stothard by drawing two angles on a piece of paper, an acute and an obtuse one, and asking, 'Do you mean to say these two are alike?' 'Yes, I do,' was the answer. 'I see,' said Erskine, turning round, 'there is nothing to be got by angling here!'"

"He said it was one of Sir Joshua's maxims, that the art of life consisted in not being over-set by trifles. We should look at the bottom of the account, not at each individual item in it, and see how the balance stands at the end of the year. We should be satisfied if the pack

of life is clear before us, and not fret at the straws or pebbles that lie in our way. * * * The impertinence of mankind is a thing that no one can guard against.

"Northcote said that Sir Joshua used to say that no one produced more than six original things. I always said it was wrong to fix upon this number—five out of the six would be found, upon examination, to be repetitions of the first. A man can no more produce six original works than he can be six individuals at once. Whatever is the strong and prevailing bent of his genius, he will stamp upon some master-work; and what he does else, will be only the same thing over again, a little better or a little worse; or if he goes out of his way in search of variety and to avoid himself, he will merely become a common-place man or an imitator of others."

Speaking of the famed Author of *Waverley*, Northcote says:

"I was much pleased with Sir Walter, and I believe he expressed a favourable opinion of me. I said to him, 'I admire the way in which you begin your novels. You set out so abruptly, that you quite surprise me. I can't at all tell what's coming.' 'No!' says Sir Walter, 'nor I neither.' I then told him, that when I first read *Waverley*, I said it was no novel: nobody could invent like that. Either he had heard the story related by one of the surviving parties, or he had found the materials in a manuscript concealed in some old chest. To which he replied, 'You're not so far out of the way in thinking so.'" [A bit of the old mystification!]

"K— has been wanting my two copies of —, though I do not think he will bid high enough to induce me to part with them. I am in this respect like Opie, who had an original by Sir Joshua that he much valued, and he used to say, 'I don't know what I should do in that case, but I hope to G—d nobody will offer me 500*l.* for it!' It is curious, this very picture sold for 500*l.* the other day. So it is that real merit creeps on, and is sure to find its level.

"Human nature is always the same. It was so with Johnson and Goldsmith. They would allow no one to have any merit but themselves. The very attempt was a piece of presumption, and a trespass upon their privileged rights. I remember a poem that came out, and that was sent to Sir Joshua: his servant Ralph had instructions to bring it in just after dinner. Goldsmith presently got hold of it, and seemed thrown into a rage before he had read a line of it. He then said, 'What wretched stuff is here! — what cursed nonsense that is!' and kept all the while marking the passages with his thumb-nail, as if he would cut them in pieces. At last, Sir Joshua, who was provoked, interfered, and said, 'Nay, don't spoil my book, however.'—Dr. Johnson looked down on the rest of the world as pigmies; he smiled on the very idea that any one should set up for a fine writer but himself. They never admitted C— as one of the set: Sir Joshua did not invite him to dinner. If he had been in the room, Goldsmith would have flown out of it as if a dragon had been there. I remember Garrick once saying, 'D—n his dishevelled face; his plays would never do if it were not for my patching them up and acting in them.' Another time he took a poem of C—'s, and read it backwards to turn it into ridicule. Yet some of his pieces keep possession of the stage, so that there must be something in them. * * *

"I recollect one of the Miss B—s, Lord Orford's favourites, whom I met with at a

party formerly, using the expression — 'That seal of mediocrity, affectation!' Don't you think this striking?

"I forget how it arose the other day, but she asked me, 'Pray, Mr. Northcote, is discretion reckoned one of the cardinal virtues?' 'No,' I said, 'it is not one of them, for it is all!' If we had discretion at all times, we should never do wrong: but we are taken off our guard by being thrown into new and difficult situations, and have not time to weigh the consequences, or to summon resolution to our aid. That is what Opie used to say when he had been engaged in an argument over night; what excellent answers he could give the next day—and was vexed with himself for not having thought of them. No! if we had sufficient presence of mind to foresee the consequences of our actions on the spot, we should very rarely have occasion to repent of them afterwards."

That we may have as little as may be to repent, hereafter, with regard to this volume, we shall conclude by noticing that it abounds in useless, and worse than useless, *initials*; that we are borne out in our opinion in reviewing Cunningham's *Lives of the Painters, in the Family Library*, when we protested against his picture of Sir Joshua, not only by facts stated by one who knew him so well as Northcote, but by direct contradictions of statements unfavourable to that great artist's character; that Mr. Godwin, Wordsworth, Washington Irving, and others, are obviously referred to in a way to which we cannot give our approbation; that there are many repetitions in the volume: but yet that, if it contained only what we have quoted (as it does infinitely more), it would be an interesting publication.

The History and Topography of the United States. Edited by John H. Hinton, A.M., assisted by several literary Gentlemen in America and England. Illustrated with a Series of Views, drawn on the spot, and engraved on Steel, expressly for this Work. Part I. 4to. London, 1830, Jennings and Chaplin; Philadelphia, Wardle; New York, Carvill; Boston, Gray and Bowen.

THIS is the first Part of a projected work which will be completed in about thirty Parts; one of which is to appear on the first of every month, or oftener if found practicable. We readily adopt the opinion expressed by its proprietors in their address to the public, and say,—“The rapid career in which the republic of the United States of North America has attained its present elevated rank in the scale of nations, is without parallel in the history of the world, and its continued and accelerated progress excites a deep interest in every part of the civilised globe. With Great Britain intercourse is daily becoming more frequent, and the connexion between the two countries more extended and intense. It is less surprising, therefore, that correct information on every subject connected with this republic should be eagerly sought after, than that no elaborate and comprehensive work on its history and topography should exist.”

As far as we can judge from the Part which has appeared, the present publication bids fair to supply, very satisfactorily, this desideratum. Of course it commences with an account of the discovery and colonisation of North America. The interest of that portion of the subject has necessarily been in some measure anticipated; but, as a specimen of the composition, we subjoin the description of the attempts made by the French Protestants, soon after the middle of the sixteenth century, to colonise Florida.

"We must now advert to some of the most interesting but lamentable events that the history of colonisation affords, in which the deadly poison of religious bigotry was deeply intermingled with the hostility excited by commercial jealousy. The decided indications of a violent spirit of persecution, on the part of the Catholic priesthood of France, induced the brave Coligny to make an experiment, which might have issued in the provision of a safe retreat for a considerable portion of the oppressed Protestants. He formed a party of Huguenots, among whom were several of high respectability, who sailed under the command of Ribault, an officer of considerable spirit, with the intention of colonising Florida. After a favourable voyage, he arrived at the entrance of a river, which he called May, from the month in which he reached the coast. He here erected a fort, and then imprudently sailed for France, to bring out a reinforcement. Albert, to whom he delegated his authority during his absence, appears to have been both unworthy and incompetent for so important a situation. From his extreme severity and ill-management, the colonists formed an inveterate hatred against him, which terminated in his death. In the excitement of internal dissensions, the settlers had paid little or no attention to the production of food, and were compelled, after exhausting nearly all their stores, to make the desperate attempt of recrossing the Atlantic with the small remainder of their provisions. Being detained by a calm, they had commenced preying upon one another, when they were providentially delivered from their unhappy condition by an English vessel, which conveyed them to their own country. During the abode of these unfortunate men in Florida, Coligny had been so deeply engaged in the dissension at home, which had ripened into an open rupture and a civil war, that he was prevented from sending his intended reinforcement; but no sooner had peace been concluded, than he despatched a fresh expedition, under M. René Laudonnière, who arrived in the river May on the 25th of June, 1564. After sailing northward about ten leagues, he returned to the May, and erected a fort, which, in honour of his sovereign, he styled Fort Caroline. He proved, however, inadequate to the difficult task of presiding over a number of spirited young men, in a state of great excitement from the disappointment of their expectations, which had dwelt upon the prospect of golden harvests and unbounded wealth. Plots were formed against his life, and he was on the point of leaving, with the remains of his colony, for Europe, when a new expedition, under the command of Ribault, entered the river. That officer superseded Laudonnière, only, however, to experience still more melancholy disasters. Scarcely a week had passed after his arrival, when eight Spanish ships were seen in the same river, where several of the largest French vessels were lying at anchor. As the Spanish fleet made towards them, the French cut their cables, and put out to sea. Although they were fired upon and pursued, they escaped; but, finding that their enemies had landed on the shores of the river Dolphin, about eight leagues distant, they returned to the May. Ribault now called a council at Fort Caroline, which decided that they ought to strengthen the fort with all possible diligence, and be prepared for the enemy. He was himself, however, of a different opinion. Apprehensive of the defection of the friendly and auxiliary natives, if they should discover that, at the first approach of the Spaniards, they should confine themselves to their

camp and fortifications, he judged it best to proceed against the enemy at once, before they should collect their forces and construct a fortification in their vicinity. To strengthen this view, he produced a letter from Admiral Coligny, containing these words: 'While I was sealing this letter, I received certain advice that Don Pedro Menendez is departing from Spain, to go to the coast of New France. See that you suffer him not to encroach upon you, and that you do not encroach upon him.' It was, indeed, the fleet of Menendez, which had just arrived on the coast, and given the alarm. Philip II. had given him the command of a fleet and an army, with full power to drive the Huguenots out of Florida, and settle it with Catholics. Fixed in his purpose, Ribault instantly took all the best of his men at Fort Caroline, and set sail in pursuit of the Spanish fleet, leaving Laudonniere in charge of the fort, without any adequate means of defence. Most unfortunately he was overtaken by a tremendous storm, which destroyed all the vessels, the men only escaping. Menendez now began to consider what advantage he could take of this state of affairs. It appeared to him, that, by pushing across the country, he would have every chance of reaching the fort before circumstances would admit of Ribault's return. He set forth immediately with five hundred of his best troops, and, after overcoming the formidable obstacles of swamps swelled by torrents of rain, on the evening of the fourth day arrived within view of the fort. At day-break, Menendez mounted the hill, and saw no appearance of any watch, and before Laudonniere could muster his little garrison, the Spaniards had rushed in, and begun an indiscriminate massacre of men, women, and children. Laudonniere, though worn down with sickness, escaped from the fort with about twenty others, who concealed themselves in the woods. In this extremity, six of them ventured to throw themselves on the mercy of the Spaniards; but they were cruelly massacred in sight of their companions. Laudonniere, seeing no way of escape but by getting over the marshes to the ships at the mouth of the river, led the way, and several of his men followed him through the swamp into the water. Unable to proceed, he sent two of them, who could swim well, to the ships for help. At length he was carried on board a French shallop, which was in search of them, and, having picked up the remaining fugitives, who were concealed among the reeds, carried them to a little ship at the mouth of the river. In this they undertook to reach their native country: on their voyage they encountered want, cold, hunger, and thirst, but they ultimately entered, in a miserable state, the port of Bristol, where they met a hospitable reception. A more tragic end awaited Ribault; all his vessels were dashed to pieces (as we have before observed) in the tempest, which lasted some days. With great difficulty the crews succeeded in reaching the shore, and directed their steps towards the fort. After a toilsome journey of nine days through a rugged country, what was their amazement and grief to find the fort in the hands of the inveterate enemies, alike of their enterprise and their faith! Many of them were for enduring the worst extremity, rather than fall into the hands of the Spaniards; but Ribault, judging their situation otherwise wholly desperate, determined to open a treaty with Menendez, who received them in the most courteous manner, and pledged himself, on the faith of a soldier and a gentleman, that they should be well treated, and sent back to their country. Upon

this pledge the French delivered up their arms; but when they were all assembled on a plain in front of the castle, Menendez, with his sword, drew a line round them on the sand, and then ordered his troops to fall on and make an indiscriminate massacre. The bodies were not only covered with repeated wounds, but cut in pieces, and treated with the most shocking indignities. A number of the mangled limbs of the victims were then suspended to a tree, to which was attached the following inscription:—'Not because they are Frenchmen, but because they are heretics and enemies of God.' When intelligence of this barbarous massacre reached France, it excited an almost universal feeling of grief and rage, and inspired a desire for vengeance of corresponding intensity. Though Charles IX. was invoked in vain, by the prayers of fifteen hundred widows and orphans, to require of the Spanish monarch that justice should be awarded against his murderous subjects, there was in the nation itself an energy which provided an avenger. Dominique de Gourgues determined to devote himself, his fortune, and his whole being, to the achievement of some signal and terrible retribution. He found means to equip three small vessels, and to put on board of them eighty sailors, and one hundred and fifty troops. Having crossed the Atlantic, he sailed along the coast of Florida, and landed at a river about fifteen leagues distance from the May. The Spaniards, to the number of four hundred, were well fortified, principally at the great fort, begun by the French, and afterwards repaired by themselves. Two leagues lower towards the river's mouth, they had made two smaller forts, which were defended by a hundred and twenty soldiers, well supplied with artillery and ammunition. Gourgues, though informed of their strength, proceeded resolutely forward, and, with the assistance of the natives, made a vigorous and desperate assault. Of sixty Spaniards in the first fort, there escaped but fifteen; and all in the second fort were slain. After a company of Spaniards, sallying out from the third fort, had been intercepted and killed on the spot, this last fortress was easily taken. All the surviving Spaniards were led away prisoners, with the fifteen who escaped the massacre at the first fort; and, after having been shewn the injury that they had done to the French nation, were hung on the boughs of the same trees on which the Frenchmen had been previously suspended. Gourgues, in retaliation for the label Menendez had attached to the bodies of the French, placed over the corpses of the Spaniards the following declaration:—'I do not this as to Spaniards, nor as to mariners, but as to traitors, robbers, and murderers.' Having razed the three forts, he hastened his preparation to return; and on the 3d of May embarked all that was valuable in the forts, and set sail for La Rochelle. In that Protestant capital he was received with the loudest acclamations. At Bordeaux these were reiterated, and he was advised to proceed to Paris, where, however, he met with a very different reception. Philip had already an embassy demanding his head, which Charles and Catherine were not disinclined to give, and had taken steps for bringing him to trial; but they found the measure so excessively unpopular, that they were obliged to allow him to retire into Normandy. Subsequently he regained royal favour, and found ample employment in the service of his country."

The three plates which illustrate the present Part are very beautiful, and do great credit to the artists by whom they have been produced;

especially the "Piazza of Congress Hall, Saratoga Springs," the sunny effect of which is novel and admirable.

We must, however, observe, that we doubt the expediency of publishing works of this kind, which consist of consecutive narratives, in Parts or Numbers. By so doing, the thread of the story is broken, and the reader (whose attention in the interim is diverted to other objects), always finds it more or less difficult to unite it. At the same time, we are quite aware that to authors and publishers there are *conveniences* attendant on such a plan.

Travels in Greece and Albania. By the Rev. T. S. Hughes, B. D. 2 vols. 8vo. Second edition, with considerable additions. London, 1830. Colburn and Bentley.

THE first edition of this work, published by the late Mr. Mawman we believe, did not attract so much notice as it might have done, had its merits been more generally known; for unquestionably it was a work of considerable value in many points of view, whether considered with reference to Greek travel, to the modern state of the country, or to its ancient literature and classic remains. It was perhaps somewhat heavy in parts; and appeared at a time when there was not so much interest taken in the affairs of Greece as they have since engrossed. Whether this new edition, divested of many superfluities, and improved by very considerable alterations and additions, will obtain more of popular favour, the event must determine: in our opinion it contains a great mass of valuable information, and well deserves to become a book both of entertaining reading and useful reference.

Of such a mass of various intelligence it is not easy to make a summary; and almost any extract is as good as another to offer as a specimen of the author's abilities. The Pasha of Ioannina having passed away, in the manner of an Eastern despot, without leaving a wrack behind, we shall only say, that the details respecting him are very characteristic; and Greek politics being, like other politics, not so much to our fancy as literary matter, we shall merely observe respecting them, that Mr. Hughes appears to be intelligent and unprejudiced:—and we select for the illustration of his work, a picture of manners, which forms a pleasing episode well suited to our purpose.

"Mr. Cockerell had not left us many days before we had an opportunity of witnessing some interesting and curious scenes, in the enjoyment of which we would gladly have had his participation. One of these was the marriage feast of Giovanni Melas, an intelligent and well-educated Greek merchant. On a Saturday evening we went with Signore Nicolo to view the nocturnal procession which always accompanies the bridegroom when he escorts his betrothed from the paternal roof to that of her future husband: this consisted of near a hundred of the first persons in Ioannina, with torch-bearers and a band of music. After having received the lady, they retraced their steps, joined by an equal number of ladies, in compliment to the bride: these latter were attended by their maid-servants, many of whom carried infants in their arms dressed in prodigious finery. The little bride, who appeared extremely young, walked with slow and apparently reluctant steps, supported by a matron on each side and another behind. At the door of his dwelling Signore Melas threw several handfuls of money among the crowd: we ourselves were there introduced to him, and with great politeness he ordered the band of music

to accompany us back. Next day, being Sunday, we understood that the archbishop of Ioannina attended to place the tinsel crowns upon the heads of the new couple, light the tapers, put the rings on the fingers, and perform all the tedious mummery of a Greek wedding. The consummation of the marriage rite, and the unloosening of the mystic zone, is deferred till the third day of the ceremonies. On this day a grand nuptial entertainment was given, as is usual, to which all the particular friends and connexions of the bride and bridegroom were invited. In the evening we sent our congratulations to Signore Melas, with an intimation that, if agreeable, we would pay our respects to him personally on his marriage. This, as we had foreseen, was considered a compliment; the band of music was sent to precede us to the house, at the door of which we found our host waiting to receive us: from thence he led us into the festive chamber and introduced us to his guests, I mean to the male part of them; since, as it has been before observed, in this semi-barbarous country the sexes are separated at convivial entertainments; a custom which throws over the amusements of society languid insipidity, or taints them with sottish degradation. We found Signore Melas's friends, after having partaken of the *equal feast*, pouring out copious libations to the *rosy god*, and singing hymeneal songs to the discordant harmony of fiddles and guitars. All rose up at our entrance, receiving us with every mark of attention, and seating us at the upper end of the divan, one on each side of Signore Alexi Noutza, governor of Zagori, and at that time a great favourite with the vizir: he officiated for the bridegroom as master of the ceremonies. In the interval between our introduction and supper, a fool or zany was called in to divert the company by acting with a clown a kind of pantomime, the ludicrous nature of which consisted in practical jokes and hard knocks upon the clown's pate, which strongly excited the risibility of the spectators. We were much more pleased with the next species of entertainment, which consisted of the Albanitico, or national dance of the Albanian palikars, performed by several of the most skilful among the vizir's guards, who had been invited to the feast. The evolutions and figures of this exercise served to display the astonishing activity and muscular strength of these hardy mountaineers, who grasping each other tightly by the hands, moved for a time slowly backwards and forwards, then hurried round in a quick circular movement according to the excitement of the music and their own voices in full stretch; in the meantime the coryphaeus or leader, who was frequently changed, made surprising leaps, bending backwards till his head almost touched the ground, and then starting up into the air with the elastic spring of a bow, whilst his long hair flowed in wild confusion over his shoulders. After this was finished, the bridegroom, with several of his guests, imitated their example, with less agility, but with more grace and elegance. Dancing is still considered by the moderns, as it was by the ancient Greeks, a requisite accomplishment in the composition of a gentleman. By similar feats Ulysses was entertained at the court of Alcinoüs, who seems to have spoken of his dancers with a regal pride: Xenophon also in his Symposium gives an interesting description of a pantomimic dance or ballet, which was performed at a banquet where Socrates was present: in it the parts of Bacchus and Ariadne were sustained by a youth and a female, both of great beauty, who introduced all the various

circumstances of the nuptial ceremony, whilst a musician accompanied them with appropriate tunes upon the flute. When supper was announced we all sat down, except the bridegroom, whose presence was excused, at a long table plentifully supplied with poultry, game, pilan, various made-dishes, and pastry. In token of extreme civility, every person near us heaped food upon our plates, which sometimes presented such heterogeneous mixtures of fish, flesh, and fowl, that if we had been obliged to eat them, this probably would have been our last meal. I observed a beautiful boy about six years old, who sat next me, crammering himself till he could scarcely breathe; and the little urchin seemed so determined that I should follow his example, that he always put a share of his mess on my plate. Mr. Parker happening to sneeze at this entertainment, he was quite electrified by the boisterous congratulatory *vivas* of the guests: this custom is very general in the south of Europe, and seems to be a remnant of a very ancient superstition. In the meantime the guests poured down copious draughts of wine, toasting the bride and bridegroom, the English Milordi, Signore Alexi, and others; and now I fancied that I could discover the meaning of old Anacreon in some of his Bacchanalian expressions, from the manner in which these Grecian toppers drank (*ἀμυστι*), many of whom filled two and others even three goblets with wine; then taking up one with the right hand, they applied it to their lips, pouring the contents of the other two into it with their left, and never moving the cup from the mouth till the whole of the liquor was despatched: these triplets were received by the rest of the company with unbounded applause. Possibly the celebrated Thracian Amystis may have been a similar trial of Bacchanalian skill, and not a goblet, as it is generally rendered:

Neu multi Damalis meri
Basum Threicia vincat AMYSTIDE.

The feast was kept up with great merriment and noise, till Signore Melas came in to pay us the highest compliment in his power, by introducing us into the gynæceitis, where the ladies were assembled. In passing through the gallery we observed a quantity of rich bed-furniture, consisting of purple velvet embroidered with gold, which is always sent with the bride, and displayed for public admiration upon those occasions. We had heard that Ioannina was celebrated for the beauty and fine complexion of its females; and certainly we were not disappointed when we entered into the apartment where a party of the most charming women in that capital were collected together. They sat in a large circle round the room, superbly attired; but the liquid lustre of their eyes far outshone the jewels that sparkled in their raven tresses. The reflection came forcibly across the mind,—what brutes the men must be who could desert the society of such master-pieces of excellent nature, to indulge in the low gratifications of riotous intemperance! By the smiles and whispers that went round the circle, we soon perceived that our appearance excited much curiosity, and that our persons and every article of our dress became subjected to the minutest scrutiny: we were seated on each side the little bride, who was scarcely twelve years of age, and was comparatively so girlish, that it required a stretch of imagination to consider her in the character of a matron: she was magnificently dressed, the value of the jewels with which she was adorned being estimated at about 2000*l*. An ancient family appendage in the

shape of an old nurse stood near her, and this Argus was actively employed in guarding her charge, and repelling the advances of Signore Melas, who was anxious to impress the marks of his affection upon the lips of his betrothed. One of the Albanian guards having brought in coffee, the young lady arose, and with a very pretty air handed it to Mr. Parker and myself, who were obliged to suffer this inversion of the right order of things, and accommodate ourselves to the custom of the place. We observed that her manners and deportment were accompanied with great mildness and affability; but her features had not sufficiently expanded for us to judge of their expression: it appeared as if her countenance might become interesting without being handsome: she was a daughter of the chief primate of Ioannina, and her dowry was said to be very considerable. After remaining here about an hour, we took our leave; but in quitting the room we remarked a number of faces peeping out of an opposite latticed window, and found that a large party of young unmarried girls had been keeping the feast in a different apartment, separated both from men and women. The band of music accompanied us back to our lodging, where we arrived about midnight. The scene we had witnessed naturally gave rise to some reflections upon the state of that sex whose influence has, in general, so great an effect upon society. The degradation of women in Greece is owing principally to a faulty education, and an early seclusion from that society which they are intended to ameliorate and adorn: but, indeed, if the first of these evils were removed, the second would soon vanish—for when good principles and a sense of moral duties are early distilled into the mind, there is no need of seclusion or confinement. Women who know their duties are as apt to practise them as men, and possessing a greater share of sensibility, are more easily led to cultivate the mild and social virtues. Of all the countries which we visited, I saw none where this false system of treatment was more to be regretted than in Greece. To judge from the countenances of the Grecian females, they exhibit a vivacity and brilliancy of expression that denote a high degree of sentiment and genius: they appear also naturally to possess affectionate and kind dispositions, without any tendency to that spirit of profligacy which characterises the sex in many countries of the South; but what can be expected from the system that is pursued? As soon as a girl approaches the age of puberty, she is as studiously shut up from public sight as a catholic nun: in the interior of the gynæceios she is confined, but taught nothing beyond the art of embroidery, or a few other such frivolous accomplishments; and, if her nurse or mother should be able to read, is instructed in the science of relics, the history of miracle-mongers, and other absurdities which superstition has engrafted upon religion: as soon as she arrives at a marriageable age, she is affianced by her family, as a matter of convenience or sordid interest, and may be reckoned lucky if she find a parity of age in her partner for life. Rarely indeed is the hymeneal torch lighted here at the altar of love; all preliminaries are carried on by the intervention of a third party; no opportunity is given to a young couple of acquiring that knowledge of each other's character which is so essential to connubial happiness; there is nothing to excite those tender anxieties and delicate attentions which interest and refine the soul: the wishes of the parties most concerned are not thought of; the suitor expects nothing from his bride but a silent

acquiescence in the will of others; and the girl herself, anxious for liberty, gives her consent, without consulting or even knowing the inclinations of her heart. Very curious surprises sometimes take place, when the bridegroom goes to fetch his affianced spouse. The beautiful infant turns out a picture of deformity; or the plain child is transformed into an angelic woman. Nothing can exceed the anxiety of parents and friends in this country to contract a marriage for their girls. The brothers in a family make it an invariable rule not to marry until their sisters are disposed of; the truth of which was confirmed to me by the most respectable authority. The strongest instance I met with of this zeal was in a poor decayed tradesman of Ioannina, whom the exactions of the vizir, and failures in commercial speculations, had reduced to the last stage of poverty: his still venerable, though melancholy appearance, so excited our compassion, that we contributed a sum of money for his relief, which might possibly, with good management and fortune, have enabled him to regain a tolerable livelihood; but he chose rather to give it all as a dowry with a beautiful daughter to a young Greek, who, according to custom, refused to marry her without one."

Frascati's; or, Scenes in Paris. 3 vols. 12mo. London, 1830. Colburn and Bentley.

WE should have given some elderly lady credit for these pages, did they not themselves confess to being the production of an elderly gentleman, (not much difference,) who avows that he never could get any one to listen to his tour but one, who endured it with all the attention which those who borrow money pay to those who lend, and which solitary auditor cost him five hundred francs. The characters in these volumes are divided into two classes, knaves and fools, swindlers and their dupes, drawn in the coarse and common-place colours of those who make, rather than write, a book. What shall we say to the discretion of the following passage, the heroine and a handsome young man interchanging glances?

"A complete novice in the art of disguising her feelings, Emily now observed to me, 'I think, Mr. Morris, that young gentleman came over in the packet with us.' I turned round as if to examine his person, in order that I might reply more decidedly to her remark, but in reality merely to indulge her with another look. 'I think he did,' I at length replied, without altering my position. 'He is certainly one of the finest young men I have ever seen.' I felt my arm gently pressed by the white hand of my companion, as blushing deeply she replied with vivacity, 'Oh yes, it is he—I am sure it is he, and, indeed, I now recollect having seen him before at the Opera. I wonder who he is,' she pursued, forgetting herself entirely in the pleasure my remark had afforded her.—'I should so much like to know him!' She had scarcely, however, uttered this last remark, when a sudden consciousness once more brought a blush, even of deeper dye, into her cheek. At that moment the young stranger looked round, and the confusion of Emily was complete. I affected neither to have heard what she said, nor to have noticed the high suffusion of her features, but, fixing my eyes on the monument raised by Buonaparte to commemorate his anticipated victories over England, continued to speak of it until I fancied she had sufficient time to recover from her embarrassment. 'By heavens, I will speak to him—she shall know him!' I mentally ex-

claimed, as we now pursued our course along the ramparts. 'We shall meet him in the next turn, and I will make it a point to accost him.'"

This interesting young man, with whom the party become intimately acquainted, only turns out, after Miss Emily has fallen desperately in love with him, to have a wife of his own, who, however, obligingly destroys herself in the nick of time,—so the young couple marry and are very happy; our author never making a comment on his hero's conduct in engaging Miss Emily's affections, knowing himself to be married. Two duels occur in the first volume; and through the remaining two, the only plot developed is that of a set of swindlers. The journal of a *rouge-et-noir* player alone deserves any thing like exception from this general censure; for there is a character of truth about it, which may, at least, serve as a warning against the too fascinating vice of gambling. We quote one dialogue as a sample of the rest.

"Do you know, my dear friend, that I have some serious thoughts of settling myself in life?' 'What the devil do you mean?' he replied, starting with surprise. 'Surely you have no intention of marrying now that Harriet is gone?' 'I can assure you, though, that I have,' I returned somewhat warmly; for, in fact, I felt humiliated at the idea so pertinaciously entertained by O'Flaherty, that no other woman could be suited to me so well as his antiquated sister; nor was my annoyance at all diminished, when, after I had given this assurance, the baronet raised his hands and eyes to heaven, exclaiming,—'Bless my heart, who would have thought it? Well indeed may it be said, that wonders never cease!' 'Wonders!' I returned angrily, 'surely Sir Brien O'Flaherty, there can be no great wonder in this! Although Major Nimbleton has never yet made my legs the subject of his commendation, I dare say they are not more crooked than some that he has eulogised, neither are they less deficient in calf.' 'Nay, my dear Morris, I meant nothing personal, I assure you; but are you seriously thinking of marrying?' 'Seriously,' I returned. 'The fact is, I am anxious to get an heir to that earldom which is, you know, lying dormant in our family; and as I am likely soon to acquire a reputation for literature, that circumstance will of course be the means of reflecting honour on my son. With me, therefore, I am satisfied you will be of opinion that I have no time to lose.' 'Most decidedly not,' returned the baronet, eagerly and somewhat maliciously; 'you certainly have but very little time to lose if you wish to get a son and heir; but are you quite sure—' 'Of what?' I interrupted. 'That the lady whom you propose marrying is not past the age of producing that son and heir?' 'She is young and beautiful as an angel,' I returned proudly; 'do you think, my dear O'Flaherty, that I would bestow the name of Morris on any woman who was not?' The baronet smiled satirically, 'But are you also quite certain—' 'Of what?' I again demanded, rising from my seat and stretching out my tall and vigorous frame to its full height, 'surely you do not mean to question my own capability?' 'Oh, no, certainly not,' he replied. 'I merely meant to ask if you were quite certain of obtaining the title?' 'Certain of it! As much so, my dear friend, as I am of getting an heir to it.' 'But how do you know it will be a boy?'"

We think it quite unnecessary to support our opinion by further extract. Trash can

speak for itself; and we are only surprised at the publication of such a book, where any judgment might be exercised in selection. It may be a difficult thing to publish nothing but what is very good; but surely it would be easy not to publish any thing so decidedly bad.

Sir T. Munro's Life and Correspondence.
Vol. III.

[Second Notice: conclusion.]

WE observe that several of the letters in the correspondence between Sir T. Munro and the Duke of Wellington, which were quoted from this volume in the last *Literary Gazette*, have been seized by the political press for political purposes;—adduced, on one side, as evidence of the unfeeling and despotic character of the illustrious duke, from his earliest military life; and defended, on the other, as proof of nothing beyond the inevitable horrors of war. But as such discussions do not consist with the nature of our work, we only allude to them in order to set ourselves right with the public, and offer a very brief remark. It is certainly impossible to read the sentiments expressed in these letters, and the style in which they are couched, without being struck at the recklessness of human suffering which is presented to our contemplation: but they were selected by us for no sake of individual application, and only on the simple ground of being the most interesting examples of the work, illustrating in a terrible degree the general evils and miseries of warfare and conquest. We could not fairly have reviewed the book without transcribing documents so illustrative and remarkable; and all that we wish to have understood is, that though they are very susceptible of being turned to party purposes, they have not seduced us from our principle, of not allowing politics to poison a page devoted to literature and science.

With this premised, we resume our remarks on the important volume before us. The following is a playful specimen of Munro's correspondence on common topics, and contrasts well with those masterly views which his official letters display on the subject of our Eastern policy. It is to his sister, and "in allusion to a lady who used to devote her whole attention to the care of her husband's health.

Cundapore, September 7th, 1800.

"A wife cannot be gifted with a more dangerous talent. Such women be never at rest when their husbands sleep well a-nights; they are never at ease except when the poor man is ailing, that they may have the pleasure of recovering him again; it gratifies both their medical vanity and their love of power, by making him more dependent upon them; and it likewise gratifies all the finer feelings of romance. What a treasure, what a rich subject I shall be about ten years hence, when shivering at every breeze, for the laboratory of such a wife! when my withered carcass would be made to undergo an endless succession of experiments for the benefit of the medical world! I should be forced, in order to escape her prescriptions, to conceal my complaints when I was really sick, and to go out and take medicine by stealth, as a man goes to the club to drink, when he is unhappily linked to a sober wife. Were Heaven, for some wise purpose, to deliver me into the hands of a nostrum-skilled wife, it would in an instant dissipate all my dreams of retiring to spend my latter days in indolence and quiet. I would see with grief that I was doomed to enter upon a more

active career than that in which I had been so long engaged; for I would consider her and myself as two hostile powers, commencing a war in which both would be continually exerting all the resources of their genius; she to circumvent me and throw me into the hospital, and I to escape captivity and elixirs. No modern war could be more inveterate—for it could terminate only with the death of one or other of the combatants. If, notwithstanding the strength of my conjugal affection, the natural principle of self-preservation should be still stronger, and make me lament to survive her, I imagine my eating heartily and sleeping soundly would very soon bring about her dissolution."

The next, from a letter to Mr. Kirkman Finlay, in 1818, is a pleasing specimen of the love of native land in a distant clime: it will be seen that Sir Thomas had been reading Rob Roy.

"Baillie Jarvie is a credit to our town; and I could almost swear that I have seen both him and his father, the deacon afore him, in the Salt-market; and I trust that if I am spared, and get back there again, I shall see some of his worthy descendants walking in his steps. Had the baillie been here, we could have shewn him many greater thieves; but none so respectable as Rob Roy. The difference between the Mahratta and the Highland Robs is, that the one does from choice what the other did from necessity; for a Mahratta would rather get ten pounds by plunder, than a hundred by an honest calling, whether in the Salt-market or the Gallowgate. I am thinking, as the boys in Scotland say, I am thinking, provost, that I am wasting my time very idly in this country; and that it would be, or at least would look wiser, to be living quietly and doosly at home. Were I now there, instead of running about the country with camps here, I might at this moment be both pleasantly and profitably employed in gathering black boyds with you among the braes near the Largs. There is no enjoyment in this country equal to it; and I heartily wish that I were once more fairly among the bushes with you, even at the risk of being stickit by yon drove of wild knowts that looked so sharply after us. Had they found us asleep in the dyke, they would have made us repent breaking the Sabbath; although I thought there was no great harm in doing such a thing in your company."

Towards the close of the volume, when Sir Thomas was Governor of Madras, there is an important and admirable minute upon our Indian empire, which merits the profound attention of every one interested in its rule or preservation. From a multitude of excellent observations we select a few passages, apposite not only to India, but to England.

Police—"What is usually called police can seldom prevent crimes; it can seldom do more than secure the greater part of the offenders. Much has been said and written in favour of a preventive police; but I do not know that the attempt to establish it has ever been successful in any country. When a vigilant police renders detection and punishment more certain, it no doubt acts as a preventive, in so far as it deters from the commission of crime. The only efficient preventive is the improvement of manners, in which the punishment of offences can have very little share. A moderate assessment, by enabling all to find employment and to live, is, next to the amelioration of manners, the thing best calculated in this country to diminish crimes. It is generally found that theft and robbery are most frequent

in districts over-assessed; and that in seasons of scarcity, they become common in districts in which they were before of rare occurrence."

Policy—"Our great error in this country, during a long course of years, has been too much precipitation in attempting to better the condition of the people, with hardly any knowledge of the means by which it was to be accomplished, and, indeed, without seeming to think that any other than good intentions were necessary. It is a dangerous system of government in a country, of which our knowledge is very imperfect, to be constantly urged by the desire of settling every thing permanently. To do every thing in a hurry, and in consequence wrong, and in our zeal for permanency, to put the remedy out of our reach. The ruling vice of our government is innovation; and its innovation has been so little guided by a knowledge of the people, that though made after what was thought by us to be mature discussion, must appear to them as little better than the result of mere caprice. We have, in our anxiety to make every thing as English as possible in a country which resembles England in nothing, attempted," &c. [Sir T. goes into details.] "If we make a summary comparison of the advantages and disadvantages which have occurred to the natives from our government, the result, I fear, will hardly be so much in its favour as it ought to have been. They are more secure from the calamities both of foreign war and internal commotions; their persons and property are more secure from violence; they cannot be wantonly punished, or their property seized, by persons in power; and their taxation is, on the whole, lighter. But, on the other hand, they have no share in making laws for themselves—little in administering them, except in very subordinate offices; they can rise to no high station, civil or military; they are every where regarded as an inferior race, and often rather as vassals or servants, than as the ancient owners and masters of the country. It is not enough that we confer on the natives the benefits of just laws and of moderate taxation, unless we endeavour to raise their character; but, under a foreign government, there are so many causes which tend to depress it, that it is not easy to prevent it from sinking. It is an old observation, that he who loses his liberty loses half his virtue. This is true of nations as well as of individuals. To have no property scarcely degrades more in one case, than in the other to have property at the disposal of a foreign government in which we have no share. The enslaved nation loses the privileges of a nation, as the slave does those of a freeman; it loses the privilege of taxing itself, of making its own laws, of having any share in their administration, or in the general government of the country. British India has none of these privileges: it has not even that of being ruled by a despot of its own; for to a nation which has lost its liberty, it is still a privilege to have its countryman, and not a foreigner, as its ruler. Nations always take a part with their government, whether free or despotic, against foreigners. Against an invasion of foreigners the national character is always engaged; and in such a cause the people often contend as strenuously in the defence of a despotic as of a free government. It is not the arbitrary power of a national sovereign, but subjugation to a foreign one, that destroys national character and extinguishes national spirit. When a people cease to have a national character to maintain, they lose the mainspring of whatever is laudable both in public

and in private life, and the private sinks with the public character.

The Press—(in a letter to Sir Graham Moore).—"I feel more interest in Malta than Gibraltar, and I would rather see Rhodes than either, because it is more connected with the ancient Grecians, whom I admire above all nations, not even excepting the Romans. These nations had not the benefit of the art of printing, and from the effects which it has of late years produced in our own country, I am not sure that they were not as well without it. Perfect liberty of the press would be an excellent thing if we could have it without its licentiousness, but this is impossible; and I therefore suspect that it will one day become necessary to increase the restrictions upon it, for it is an instrument by means of which it is much easier among the lower orders of the people to do evil than good. A writer like Tom Paine can produce mischief almost immediately, which it may require years to remedy. I could hardly have believed that the press could have done what it did in the case of the queen, or that such a clamour could ever have been raised about such a woman. It appears, however, to have now subsided, and I trust that the nation will feel the comfort of having in some degree recovered its senses, and endeavour to retain them."

The Fine Arts: Portrait Painting—(to his sister).—"Lady Munro has just received your picture, which Jesse calls a speaking likeness. Lady M. says that it is very like, but that it wants something. I rather imagine that it wants nothing; but that it has got something which it ought not to have. An English artist is never satisfied with the quiet, sober grace of beauty, he always adds what he thinks will make it more striking, and I suppose that he has given you a pertish, smartish look like one of his exhibition heads. If Old Hicky at Madras were twenty years younger, I would rather have your picture by him than any English painter, for none of them ever give a true likeness of a lady. You may recollect the picture for which Lady M. sat so often at home: she has had one manufactured here by a French artist, which she thinks very like. It is such a striking likeness, that when it was shewn to me with great exultation, I could not find out for whom it was intended. Mrs. Erskine has been equally fortunate at home; she has sent out her picture, her very image—another speaking likeness, I suppose. It looks about five-and-twenty, and is as like any other woman as her, but more like a milliner's girl than any thing else. It is very odd that women never know what is like them; but the case is perhaps the same with the men: but, my goodness! what can be the cause of it? It is, however, lucky for the women, and for the painters too, that they can be easily pleased by a picture which does not in the least resemble the original. What a heap of stuff about pictures!"

Free Trade—(to Kirkman Finlay, Aug. 1825).—"I hope that you are a friend to free trade for public servants, as well as for other articles; and that you do not think that men ought to have a monopoly of offices, because they come from a particular town; or that we should call them China, when we know that they come from the Delft-house. I find, however, that there is no shaking off early prejudice, and becoming quite impartial, as a friend to free trade ought to be; I find that, notwithstanding my long exposure to other climates, I am still Glasgow ware; for if I had not been so, I should not, when I saw your opinion quoted

by Mr. Huskisson, in support of his measures, have felt as much gratification as if I had had some share in the matter myself. I remember, when I was in Somerville and Gordon's house, about the time of the appearance of the 'Wealth of Nations,' that the Glasgow merchants were as proud of the work as if they had written it themselves; and that some of them said it was no wonder that Adam Smith had written such a book, as he had had the advantage of their society, in which the same doctrines were circulated with the punch every day. It is surprising to think that we should only just now be beginning to act upon them; the delay is certainly not very creditable to our policy. Our best apology is, perhaps, the American and the French revolutionary wars, during the long course of which the nation was so harassed, that there was no time for changing the old system. The nation was just beginning to recover from the American war, when the Revolution in France began; and had that event not taken place, I have no doubt that Mr. Pitt would have done what we are now doing. I am not sure that you are not indebted to your old friend, the East India Company, for the measure not having been longer delayed. The attack upon their monopoly by the delegates in 1812-13, excited discussions, not only upon their privileges, but upon all privileges and restrictions, and the true principles of trade, which probably prepared the minds of men for acceding to the new system, sooner than they would otherwise have done. Even now there seems to be too much solicitude about protecting duties: they may, for a limited time, be expedient, where capital cannot be easily withdrawn, but in all other cases why not abolish them at once? There is another point on which anxiety is shewn, where I think there ought to be none—I mean that of other nations granting similar remissions on our trade. Why should we trouble ourselves about this? We ought surely not to be restrained from doing ourselves good, by taking their goods as cheap as we can get them, merely because they won't follow our example? If they will not make our goods cheaper, and take more of them, they will at least take what they did before; so that we suffer no loss on this, while we gain on the other side. I think it is better that we should have no engagements with foreign nations about reciprocal duties, and that it will be more convenient to leave them to their own discretion in fixing the rate, whether high or low."

The following letter touches on the same great question; but we conclude with it, as altogether a charming example of the writer's most interesting correspondence—so full of wisdom, playfulness, and natural goodness of heart.

To Kirkman Finlay, Esq.

Madras, 10th May, 1827.

"My dear sir,—I had great pleasure in reading your letter of the 23d February, 1826, because it reminds me of old times and places which I always think of with delight, and because I see from it that you are not involved in any of the joint-stock companies. I had great confidence in your judgment; but the rage for speculation was so general, that I thought it just possible that you might have gone with the spate. I am glad that it is not so; and I hope that ministers will not be alarmed by clamour, but go on steadily, and remove all the absurd restrictions which have been heaped upon the trade and industry of the nation. What castle is this you have got

into? I read it Castle Howard at first, but thinking that could not be right, I have been trying again, and can make nothing of it unless it be Toward or Foward. I believe I must go to the spot in order to ascertain the true name. I hope you have got plenty of knowt, and stane dykes, and black boyds. The dykes are useful for more things than one; they keep us in the practice of louping, they help to ripen the black boyds, and they enable us to parley with the knowt without danger. You are perfectly correct, I believe, in your orthography of the black boyds, at least we spelt them your way when I belonged to the grammar-school, between fifty and sixty years ago. I must not do so un-Glasgow-like a thing as not to reply to your recommendation of Lieutenant Campbell, of Ormodale. He is a promising young man, but he is out of my hands at present, as he has lately been appointed by the commander-in-chief to a staff office with our troops at Penang, and I have no doubt that he will push his way in the service. I am afraid, from what I have read somewhere lately, of there being twenty-five thousand Irish weavers and labourers about Glasgow, that there can be very few of what you call right proper Glasgow-men left. I suspect that you have not now many of the pure old breed of right proper Glasgow weavers whom I remember about the grammar-school wind and the back of the relief kirk. They are probably now like a Highland regiment of which I once heard an old sergeant say, that 'what with Irish and what with English, they were now no better than other men.'"

Sir W. Scott on Demonology and Witchcraft.

[Second notice:—Conclusion.]

THE descent of ancient customs and superstitions is another of the topics on which Sir Walter is particularly happy, mixing antiquarian lore and critical acumen with the flowers of fable, in the most pleasing style. We copy two or three of the briefest illustrations.

"Gixas, or Nicksa, a river or ocean god, worshipped on the shores of the Baltic, seems to have taken uncontested possession of the attributes of Neptune. Amid the twilight winters and overpowering tempests of these gloomy regions, he had been not unnaturally chosen as the power most adverse to man; and the supernatural character with which he was invested, has descended to our time under two different aspects. The Nixa of the Germans is one of those fascinating and lovely fays whom the ancients termed Naiads; and, unless her pride is insulted, or her jealousy awakened by an inconstant lover, her temper is generally mild, and her actions beneficent. The Old Nick known in England is an equally genuine descendant of the northern sea god, and possesses a larger portion of his powers and terrors. The British sailor, who fears nothing else, confesses his terror for this terrible being, and believes him the author of almost all the various calamities to which the precarious life of a seaman is so continually exposed."

"Saxo Grammaticus tells us of the fame of two Norse princes or chiefs, who had formed what was called a brotherhood in arms, implying not only the firmest friendship and constant support during all the adventures which they should undertake in life, but binding them by a solemn compact, that after the death of either, the survivor should descend alive into the sepulchre of his brother-in-arms, and consent to be buried alongst with him. The task of fulfilling this dreadful com-

pact fell upon Asmund, his companion Assueit having been slain in battle. The tomb was formed after the ancient northern custom in what was called the age of hills,—that is, when it was usual to bury persons of distinguished merit or rank on some conspicuous spot, which was crowned with a mound. With this purpose a deep narrow vault was constructed, to be the apartment of the future tomb over which the sepulchral heap was to be piled. Here they deposited arms, trophies, poured forth perhaps the blood of victims, introduced into the tomb the war-horses of the champions; and when these rites had been duly paid, the body of Assueit was placed in the dark and narrow house, while his faithful brother-in-arms entered and sat down by the corpse, without a word or look which testified regret or unwillingness to fulfil his fearful engagement. The soldiers who had witnessed this singular interment of the dead and living, rolled a huge stone to the mouth of the tomb, and piled so much earth and stones above the spot as made a mound visible from a great distance, and then, with a loud lamentation for the loss of such undaunted leaders, they dispersed themselves like a flock which has lost its shepherd. Years passed away after years, and a century had elapsed, ere a noble Swedish rover, bound upon some high adventure, and supported by a gallant band of followers, arrived in the valley which took its name from the tomb of the brethren-in-arms. The story was told to the strangers, whose leader determined on opening the sepulchre, partly because, as already hinted, it was reckoned a heroic action to brave the anger of departed heroes by violating their tombs; partly to attain the arms and swords of proof with which the deceased had done their great actions. He set his soldiers to work, and soon removed the earth and stones from one side of the mound, and laid bare the entrance. But the stoutest of the rovers started back when, instead of the silence of a tomb, they heard within horrid cries, the clash of swords, the clang of armour, and all the noise of a mortal combat between two furious champions. A young warrior was let down into the profound tomb by a cord, which was drawn up shortly after, in hopes of news from beneath. But when the adventurer descended, some one threw him from the cord, and took his place in the noose. When the rope was pulled up, the soldiers, instead of their companion, beheld Asmund, the survivor of the brethren-in-arms. He rushed into the open air, his sword drawn in his hand, his armour half torn from his body, the left side of his face almost scratched off, as by the talons of some wild beast. He had no sooner appeared in the light of day, than with the improvisatory poetic talent, which these champions often united with heroic strength and bravery, he poured forth a string of verses containing the history of his hundred years' conflict within the tomb. It seems that no sooner was the sepulchre closed, than the corpse of the slain Assueit arose from the ground, inspired by some ravenous goule, and having first torn to pieces and devoured the horses which had been entombed with them, threw himself upon the companion who had just given him such a sign of devoted friendship, in order to treat him in the same manner. The hero, no way discountenanced by the horrors of his situation, took to his arms, and defended himself manfully against Assueit, or rather against the evil demon who tenanted that champion's body. In this manner the living brother waged a preternatural combat,

which had endured during a whole century; when Asmund, at last obtaining the victory, prostrated his enemy, and by driving, as he boasted, a stake through his body, had finally reduced him to the state of quiet becoming a tenant of the tomb. Having chanted the triumphant account of his contest and victory, this mangled conqueror fell dead before them. The body of Assueit was taken out of the tomb, burnt, and the ashes dispersed to heaven; whilst that of the victor, now lifeless, and without a companion, was deposited there, so that it was hoped his slumbers might remain undisturbed. The precautions taken against Assueit's reviving a second time, remind us of those adopted in the Greek islands, and in the Turkish provinces, against the vampire. It affords also a derivation of the ancient English law in case of suicide, when a stake was driven through the body, originally to keep it secure in the tomb."

The tracing of dwarfs and gnomes from the northern people, Laps, Fins, &c. of small stature, and industrious miners and smelters of metals, who sought refuge in caves* from the conquering advances of the Ase, is excellently done; and Satan, with his tail and cloven feet, is as well derived from Pan, or some master satyr of classic celebrity. Nor are the fairy histories less prolific, or less interesting in our author's magic picture. Sir Walter pays a merited compliment to the previous exploits of Mr. Crofton Croker in this field, richer in fancy than that of the Cloth of Gold; and in concluding, bids a very poetical farewell to the once "good neighbours," in which we join him with all our soul; for we well remember having seen some of the last of them ourselves, on the very spot he so beautifully describes at page 119, when we were many years younger than he was on his visit to Glammis Castle. We extract the *Vale*.

"We are then to take leave of this fascinating article of the popular creed, having in it so much of interest to the imagination, that we almost envy the credulity of those who, in the gentle moonlight of a summer night in England, amid the tangled glades of a deep forest, or the turfy swell of her romantic commons, could fancy they saw the fairies tracing their sportive ring. But it is in vain to regret illusions which, however engaging, must of necessity yield their place before the increase of knowledge, like shadows at the advance of morn. These superstitions have already served their best and most useful purpose, having been embalmed in the poetry of Milton and of Shakspeare, as well as writers only inferior to these great names. Of Spenser we must say nothing, because in his *Fairy Queen*, the title is the only circumstance which connects his splendid allegory with the popular superstition; and, as he uses it, means nothing

* "These oppressed, yet dreaded fugitives, obtained, naturally enough, the character of the German spirits called Kobold, from which the English Goblin and the Scottish Bogle, by some inversion and alteration of pronunciation, are evidently derived. The Kobolds were a species of gnomes, who haunted the dark and solitary places, and were often seen in the mines, where they seemed to imitate the labours of the miners, and sometimes took pleasure in frustrating their objects, and rendering their toil unfruitful. Sometimes they were malignant, especially if neglected or insulted; but sometimes also they were indulgent to individuals whom they took under their protection. When a miner, therefore, hit upon a rich vein of ore, the inference commonly was, not that he possessed more skill, industry, or even luck, than his fellow-workmen, but that the spirits of the mine had directed him to the treasure. The employment and apparent occupation of these subterranean gnomes, or fiends, led very naturally to identify the Fin, or Laplander, with the Kobold."

more than an Utopia, or nameless country. With the fairy popular creed fell, doubtless, many subordinate articles of credulity in England; but the belief in witches kept its ground."

And horribly fruitful it was in cruelty, crime, and murder; the dark chapter of which is fearfully unfolded in several of the ensuing letters.*

"In the earlier period of the church of Rome, witchcraft is frequently alluded to, and a capital punishment assigned to those who were supposed to have accomplished by sorcery the death of others, or to have attempted, by false prophecies, or otherwise, under pretext of consulting with the spiritual world, to make innovation in the state; but no general denunciation against witchcraft itself, as a league with the enemy of man, or desertion of the Deity, and a crime *sui generis*, appears to have been so acted upon, until the later period of the sixteenth century, when the papal system had attained its highest pitch of power and of corruption. The influence of the churchmen was, in early times, secure; and they rather endeavoured, by the fabrication of false miracles, to prolong the blind veneration of the people, than to vex others, and weary themselves by secret investigations into dubious and mystical trespasses, in which, probably, the higher and better instructed members of the clerical order put as little faith at that time as they do now. Did there remain a mineral fountain, respected for the cures which it had wrought, a huge oak tree, or venerated mount, which beauty of situation had recommended to traditional respect; the fathers of the Roman church were in policy reluctant to abandon such impressive spots, or to represent them as exclusively the rendezvous of witches, or of evil spirits. On the contrary, by assigning the virtues of the spring, or the beauty of the tree, to the guardianship of some saint, they acquired, as it were, for the defence of their own doctrine, a frontier fortress which they wrested from the enemy, and which it was at least needless to dismantle, if it could be conveniently garrisoned and defended. Thus, the church secured possession of many beautiful pieces of scenery, as Mr. Whitefield is said to have grudged to the devil the monopoly of all the fine tunes. * * *

A remarkable passage in Monstrelet puts in a clear view the point aimed at by the Catholics in thus confusing and blending the doctrines of heresy and the practice of witchcraft; and how a meeting of inoffensive Protestants could be cunningly identified with a Sabbath of hags and fiends. "In this year (1459), in the town of Arras, and county of Artois, arose, through a terrible and melancholy chance, an opinion called, I know not why, the religion of *Vaudoisie*. This sect consisted, it is said, of certain persons, both men and women, who, under cloud of night, by the power of the devil, repaired to some solitary spot, amid woods and deserts, where the devil appeared before them in a human form, save that his visage is never perfectly visible to them; read to the assembly a book of his ordinances, informing them how he would be obeyed; distributed a very little money, and a plentiful meal, which was concluded by a scene of general profligacy; after which, each one of the party was conveyed

* In these, ample use is made of Pitcairn's Collection of Criminal Trials in Scotland (Edin. 4to.), of which the Sixth Part, now lying upon our table, reproaches us with the neglect of itself and precursors; but, deserving of every encouragement as the publication is, we have only once found an opportunity of noticing its high claims upon public favour.

home to her or his own habitation. On accusations of access to such acts of madness,' continues Monstrelet, 'several creditable persons of the town of Arras were seized and imprisoned, along with some foolish women and persons of little consequence. These were so horribly tortured, that some of them admitted the truth of the whole accusations, and said, besides, that they had seen and recognised in their nocturnal assembly, many persons of rank, prelates, seigneurs, and governors of bailliages and cities, being such names as the examiners had suggested to the persons examined, while they constrained them by torture to impeach the persons to whom they belonged. Several of those who had been thus informed against were arrested, thrown into prison, and tortured for so long a time, that they also were obliged to confess what was charged against them. After this, those of mean condition were executed and inhumanly burnt; while the richer and more powerful of the accused ransomed themselves by sums of money, to avoid the punishment and the shame attending it. Many even of those also confessed being persuaded to take that course by the interrogators, who promised them indemnity for life and fortune. Some there were, of a truth, who suffered with marvellous patience and constancy the torments inflicted on them, and would confess nothing imputed to their charge; but they, too, had to give large sums to the judges, who exacted that such of them as, notwithstanding their mishandling, were still able to move, should banish themselves from that part of the country.' Monstrelet winds up this shocking narrative by informing us, 'that it ought not to be concealed, that the whole accusation was a stratagem of wicked men for their own covetous purposes, and in order, by these false accusations and forced confessions, to destroy the life, fame, and fortune of wealthy persons.'

Thus was the superstition of the multitude then, like the ignorance of the many at all times, made the cover for religious persecution and civil oppression. The last of the witches put to death in Great Britain was little more than a century ago.

"In the year 1722, a sheriff-depute of Sutherland, Captain David Ross of Littledean, took it upon him, in flagrant violation of the then established rules of jurisdiction, to pronounce the last sentence of death for witchcraft which was ever passed in Scotland. The victim was an insane old woman belonging to the parish of Loth, who had so little idea of her situation, as to rejoice at the sight of the fire which was destined to consume her. She had a daughter lame both of hands and feet, a circumstance attributed to the witch's having been used to transform her into a pony, and get her shod by the devil. It does not appear that any punishment was inflicted for this cruel abuse of the law on the person of a creature so helpless; but the son of the lame daughter, he himself distinguished by the same misfortune, was living so lately as to receive the charity of the present Marchioness of Stafford, Countess of Sutherland in her own right, to whom the poor of her extensive county are as well known as those of the higher order. Since this deplorable action, there has been no judicial interference in Scotland on account of witchcraft, unless to prevent explosions of popular enmity against people suspected of such a crime, of which some instances could be produced. The remains of the superstition sometimes occur; there can be no doubt that the

vulgar are still addicted to the custom of scoring above the breath,* (as it is termed), and other counter-spells, evincing that the belief in witchcraft is only asleep, and might in remote corners be again awakened to deeds of blood. An instance or two may be quoted, chiefly as facts known to the author himself. In a remote part of the Highlands, an ignorant and malignant woman seems really to have meditated the destruction of her neighbour's property, by placing in a cowhouse, or byre, as we call it, a pot of baked clay, containing locks of hair, parings of nails, and other trumpery. This precious spell was discovered, the design conjectured, and the witch would have been torn to pieces, had not a high-spirited and excellent lady in the neighbourhood gathered some of her people (though these were not very fond of the service), and by main force taken the unfortunate creature out of the hands of the populace. The formidable spell is now in my possession. About two years since, as they were taking down the walls of a building formerly used as a feeding-house for cattle, in the town of Dalkeith, there was found below the threshold-stone, the withered heart of some animal stuck full of many scores of pins;—a counter-charm, according to tradition, against the operations of witchcraft on the cattle which are kept within. Among the almost innumerable droves of bullocks which come down every year from the Highlands for the south, there is scarce one but has a curious knot upon his tail, which is also a precaution, lest an evil eye, or an evil spell, may do the animal harm."

The last letter is upon astrology and ghosts; but we have so far exceeded our bounds, that we must allow neither star nor phantom to mislead us much farther. Sir Walter explains away many a well-authenticated (false) fact: the following, though said to be in print, is new to us.

"The remarkable circumstance of Thomas, the second Lord Lyttelton, prophesying his own death within a few minutes, upon the information of an apparition, has been always quoted as a true story. But of late it has been said and published, that the unfortunate nobleman had previously determined to take poison, and of course had it in his own power to ascertain the execution of the prediction. It was no doubt singular that a man, who meditated his exit from the world, should have chosen to play such a trick on his friends. But it is still more credible that a whimsical man should do so wild a thing, than that a messenger should be sent from the dead, to tell a libertine at what precise hour he should expire.

"The following story," continues the author on the same point, "was narrated to me by my friend Mr. William Clerk, chief clerk to the Jury Court, Edinburgh, when he first learned it, now nearly thirty years ago, from a passenger in the mail coach. With Mr. Clerk's consent, I gave the story at that time to poor Mat Lewis, who published it with a ghost-ballad which he adjusted on the same theme. From the minuteness of the original detail, however, the narrative is better calculated for prose than verse; and more especially, as the friend to whom it was originally communicated, is one of the most accurate, intelligent, and acute persons whom I have known in the course of my life, I am willing to preserve the precise story in this place. It was about the eventful year 1800, when the Emperor Paul laid his ill-judged embargo on British trade,

that my friend Mr. William Clerk, on a journey to London, found himself in company, in the mail-coach, with a seafaring man of middle age and respectable appearance, who announced himself as master of a vessel in the Baltic trade, and a sufferer by the embargo. In the course of the desultory conversation which takes place on such occasions, the seaman observed, in compliance with a common superstition, 'I wish we may have good luck on our journey—there is a magpie.' 'And why should that be unlucky?' said my friend. 'I cannot tell you that,' replied the sailor; 'but all the world agrees that one magpie bodes bad luck—two are not so bad, but three are the devil. I never saw three magpies but twice, and once I had near lost my vessel, and the second I fell from a horse, and was hurt.' This conversation led Mr. Clerk to observe, that he supposed he believed also in ghosts, since he credited such auguries. 'And if I do,' said the sailor, 'I may have my own reasons for doing so;' and he spoke this in a deep and serious manner, implying that he felt deeply what he was saying. On being further urged, he confessed, that if he could believe his own eyes, there was one ghost at least which he had seen repeatedly. He then told his story as I now relate it. Our mariner had, in his youth, gone mate of a slave vessel from Liverpool, of which town he seemed to be a native. The captain of the vessel was a man of a variable temper, sometimes kind and courteous to his men, but subject to fits of humour, dislike, and passion, during which he was very violent, tyrannical, and cruel. He took a particular dislike at one sailor aboard, an elderly man, called Bill Jones, or some such name. He seldom spoke to this person without threats and abuse, which the old man, with the license which sailors take in merchant vessels, was very apt to return. On one occasion, Bill Jones appeared slow in getting out on the yard to hand a sail. The captain, according to custom, abused the seaman as a lubberly rascal, who got fat by leaving his duty to other people. The man made a saucy answer, almost amounting to mutiny; on which, in a towering passion, the captain ran down to his cabin, and returned with a blunderbuss loaded with slugs, with which he took deliberate aim at the supposed mutineer, fired, and mortally wounded him. The man was handed down from the yard, and stretched on the deck, evidently dying. He fixed his eyes on the captain, and said, 'Sir, you have done for me; but I will never leave you.' The captain, in return, swore at him for a fat lubber, and said he would have him thrown into the slave-kettle, where they made food for the negroes, and see how much fat he had got. The man died; his body was actually thrown into the slave-kettle; and the narrator observed, with a naïveté which confirmed the extent of his own belief in the truth of what he told, 'There was not much fat about him after all.' The captain told the crew they must keep absolute silence on the subject of what had passed; and as the mate was not willing to give an explicit and absolute promise, he ordered him to be confined below. After a day or two, he came to the mate, and demanded, if he had an intention to deliver him up for trial when the vessel got home. The mate, who was tired of close confinement in that sultry climate, spoke his commander fair, and obtained his liberty. When he mingled among the crew once more, he found them impressed with the idea, not unnatural in their situation, that the ghost of the dead man appeared among them when they had a spell of

duty, especially if a sail was to be handed, on which occasion the spectre was sure to be out upon the yard before any of the crew. The narrator had seen this apparition himself repeatedly—he believed the captain saw it also, but he took no notice of it for some time, and the crew, terrified at the violent temper of the man, dared not call his attention to it. Thus, they held on their course homeward, with great fear and anxiety. At length the captain invited the mate, who was now in a sort of favour, to go down to the cabin and take a glass of grog with him. In this interview, he assumed a very grave and anxious aspect. 'I need not tell you, Jack,' he said, 'what sort of hand we have got on board with us—He told me he would never leave me, and he has kept his word—You only see him now and then, but he is always by my side, and never out of my sight. At this very moment I see him—I am determined to bear it no longer, and I have resolved to leave you.' The mate replied, that his leaving the vessel while out of the sight of any land was impossible. He advised, that if the captain apprehended any bad consequences from what had happened, he should run for the west of France or Ireland, and there go ashore, and leave him, the mate, to carry the vessel into Liverpool. The captain only shook his head gloomily, and reiterated his determination to leave the ship. At this moment, the mate was called to the deck for some purpose or other, and the instant he got up the companion-ladder, he heard a splash in the water, and looking over the ship's side, saw that the captain had thrown himself into the sea from the quarter-gallery, and was running astern at the rate of six knots an hour. When just about to sink, he seemed to make a last exertion, sprang half out of the water, and clasped his hands towards the mate, calling, 'By —, Bill is with me now!' and then sunk, to be seen no more."

And here must be our "no more" also. The mystic web of our review is finished; and we have only to repeat, that a more interesting volume for all ages, and a more proper volume for the correction of idle phantasies in the young, could not have been written.

Tales of other Days. By J. Y. A. With Illustrations by George Cruikshank; engraved by J. Thompson and S. and T. Williams. pp. 250. London, 1830. Eppingham Wilson.

THESE tales having already "appeared before the public," and received their due meed of critical commendation, we have only to speak of their Illustrations, which are very droll, very characteristic, and very cleverly executed. The volume so ornamented is quite the thing for a pass-time.

Full Annals of the Revolution in France, in 1830. By William Hone: illustrated with Engravings. 8vo. pp. 128. Double columns. London, 1830. Tegg.

A CHEAP and ample account of the remarkable revolution which has given a new, and, if well-directed, a glorious aspect to the political state not only of France but of Europe. It is chronologically arranged, *de die in diem*, and seems to be as fairly compiled as the materials allowed. No doubt many of the circumstances are invented, distorted, and misrepresented; but still they are the most authentic that could be got at; though we have also to recollect, that the more important the influence of the periodical press has become, (and it is indeed

* Drawing blood, that is, by two cuts in the form of a cross on the witch's forehead, confided in all throughout Scotland as the most powerful counter-charm."

an engine of prodigious power), the more likely is it to be systematically employed to promote the purposes of party, rather than to disseminate the truth. In what he has done, Mr. Hone appears to have used a sound discretion.

The Literary Policy of the Church of Rome exhibited in an Account of her Damatory Catalogues or Indexes, both prohibitory and expurgatory; with various illustrative Extracts, Anecdotes, and Remarks. By the Rev. J. Mendham, M.A. Second edition. 8vo. pp. 371. London, 1830. James Duncan.

THIS volume contains a vast mass of literary research; and though directed to a particular theological subject, abounds in curious anecdotes, applicable to points of general literature for about three centuries. The author is a Tory and High Churchman; and his book is dedicated to Sir Robert Inglis, the Protestant Member for Oxford University: it may therefore be supposed that it is an exposure of the Church of Rome in its interference with the propagation of free opinions, and with a strong leaning to the doctrines of the Reformation.

ARTS AND SCIENCES.

THE SLAVE TRADE: LANDER'S EXPEDITION, &c. &c.*

H. M. S. Atholl, West Coast of Africa, July 14, 1830

NOTWITHSTANDING all our endeavours to suppress the slave-trade, it is still carried on with unabated vigour. It is estimated, that of the vessels employed in this unnatural commerce, not above one in ten are taken. The average number of slaves liberated in the course of a year, by our squadron on this coast, is about six thousand; consequently, upwards of fifty thousand are carried annually into slavery. Of that number, I understand that twenty-six thousand were landed last year in the Brazils, the remainder being taken to the Havannah and the French West India Islands. Our treaty with France respecting the slave-trade is certainly very inefficient for the purpose of suppressing this abominable traffic; for no vessel under French colours, and having the necessary documents to shew that she belongs to a subject of that nation, is allowed to be molested, although laden with slaves. Thus, we have met several of them with hundreds of these poor creatures on board, and yet we were not authorised to release them. It is, perhaps, some consolation to know, that a great part of the unfortunate wretches who are sold as slaves have been in the same condition in their own country; so that their case is not quite so grievous as it would at first appear—being in fact only a transfer from one task-master to another; and it is to be hoped that in some cases at least the change may be for the better. No condition can indeed be more degrading than that in which the lower classes are kept in this country. Their extreme ignorance may, in a great measure, be attributed to the barbarous policy of their chiefs and priests (if I may so designate a set of cunning impostors), who, with a view of maintaining their own authority, consider it necessary to prevent the diffusion of knowledge, by strictly forbidding every person within their jurisdiction from learning either to read or write, on pain of death, which punishment they inflict by ad-

* The letter from which the subjoined is copied has just reached us from our valued friend Mr. Fisher, the surgeon of the *Atholl*, now broiling on the coast of Africa after freezing in the Polar Expeditions, of which he published so interesting a narrative. Coming from a gentleman of such extensive travel and great acquisitions, we beg to point the attention of our readers to its statements.

ministering a poisonous draught prepared from a decoction of the bark of a tree which they call *groo*; and in order to make it appear that their proceedings are sanctioned by Divine authority, they pretend that the potion will have no bad effect, unless the person who drinks it is deemed by the Supreme Power deserving of death. It is easy to see through the villany of this ordeal; for those who are not doomed to destruction have a harmless mixture prepared for them, whilst they who have the misfortune of being considered wiser than their neighbours are certain of being poisoned. The dread of being subjected to these doubtful trials checks, of course, any tendency to improvement. The chiefs themselves, however, are so well aware of the advantages of education, that many of those along the coast learn both to read and write; and several of them have adopted English names, as, for instance, Tom Wilson, King of Cape Palmas; Jem Lawson, King of Popo; and Duke Ephraim, Sovereign of Calabar. This latter chief deserves to be particularly mentioned on account of his acquirements and superior understanding. Of his handwriting I have seen some specimens that would do credit to any penman; and as a proof of his enlightened views, he has sent two of his children, a son and a daughter, to Martinique to be educated: the latter was taking her passage there in a slave ship, which we detained for a short time, until it was ascertained that it was French property, when it was allowed to proceed on the voyage. The young princess appeared to be about ten years of age; she lived with the slave girls, and the only way in which her rank could be distinguished from that of her degraded companions, was by the quantity of parti-coloured glass beads with which she was loaded; they formed a kind of girdle round her loins, and, from hanging loosely in front, they answered the double purpose of use and ornament—for she wore no clothing. Before we saw her she was decorated also with massy silver armlets and anklets, which from their weight chafed her wrists and ankles so much, that the master of the vessel humanely cut them off. It is, indeed, highly ridiculous to see the barbarous profusion of gold and silver ornaments with which the African ladies deck themselves, whilst, with respect to dress, they may be said to be almost in a state of nudity; and, notwithstanding the ignorance of these people of the arts of civilised life, it is surprising to see the neatness of their workmanship in the precious metals: as a specimen of it, I send you a small gold ring that I got made at Accra.*

It is astonishing how little the people on this coast know respecting the interior of the country; for I have made various inquiries at the different places at which we have touched, with a view of gaining information about the course and termination of the celebrated river Niger; and all that I have been able to learn is, that a great river, which comes from the central parts of Africa, divides into several branches as it approaches the coast, and falls into the sea in the Bights of Benin and Biafra. It is well known, indeed, that this part of the coast is composed of a number of islands or deltas, formed by the rivers Calabar, Bonny, and Benin, &c., which, notwithstanding their magnitude, are only branches of one mighty stream which, like the Egyptian Nile, discharges its waters by several channels.

Judging, therefore, from the size and geo-

* The ring is of very pure gold, twisted or plaited, and certainly is very creditable to African ingenuity.—Ed. L. G.

graphical situation of this river, I am fully persuaded that it is here the mysterious Niger terminates its course. This is not, indeed, an original idea; for I find that Mr. Richards and some others have entertained the same opinion. But it is unnecessary to say any thing further on the subject at present, as an attempt is again about to be made to decide this question by actual observation. The traveller Lander and his brother were lauded by his majesty's brig *Clinker*, about three months ago, at Badagry, whence they were to proceed into the interior. They had (as all travellers ought to have) sanguine hopes of success—they relied particularly on the good-will of the natives, who are now becoming perfectly sensible of the advantages to be derived from cultivating a good understanding with the English, by whom their wants are chiefly supplied. His majesty's brig *Plumper* touched at Badagry about ten days ago, on purpose to learn if any thing had been heard of the travellers since their departure; but no information could be obtained respecting them. The natives said that they set off "three moons" ago, and nothing has been heard of them since. Should any thing transpire respecting them, or any other subject that I think will be interesting to you, be assured that I shall not fail to acquaint you with it.

P. S. Our ship's company have been very healthy yet.

CELESTIAL PHENOMENA FOR OCTOBER.

23^d 10^h 7^m—the Sun enters Scorpio.

Lunar Phases and Conjunctions.

	D.	H.	M.
○ Full Moon in Pisces.....	1	18	57
☾ Last Quarter in Gemini.....	8	10	32
● New Moon in Virgo.....	16	7	31
☽ First Quarter in Capricornus.....	24	10	30
○ Full Moon in Cetus.....	31	5	18

The Moon will be in conjunction with

	D.	H.	M.
Saturn in Leo.....	11	19	30
Venus in Virgo.....	Occultation.		
Jupiter in Sagittarius.....	22	21	15
Mars in Pisces.....	28	3	15

Occultations in the Hyades.—5^d—the Moon will pass over several stars in this small but conspicuous constellation, the most remarkable of which will be γ Tauri, and, under some circumstances, Aldebaran. The first of these stars (γ Tauri) will immerse behind the Moon's northern limb at 10^h 16^m, and emerge at 10^h 52^m. The conjunction with Aldebaran will be very interesting: to Greenwich, the star, at 19^h, will be seen to glide close to the Moon's northern limb, but not for an instant concealed; to places a few miles south, the star will be occulted. The following will be its appearance, as seen from Greenwich:—

Occultation of Venus.—14^d—Venus, the morning star, will be eclipsed by the Moon. The commencement of the occultation will

occur when the Moon is in the horizon, 17^h 3^m: the emersion of the planet will take place at 17^h 46^m. Venus, as a telescopic object, will appear of a gibbous form, nearly approaching to a full orb. The following diagram will indicate the phase and position of the Moon at the time of occultation, also the points of immersion and emersion.

12^d 12^h 45^m—Mercury in his inferior conjunction. 20^d 21^h—in conjunction with Venus; difference of latitude 27'. 21^d—stationary. 28^d—greatest elongation (18° 37') as a morning star.

12^d—Venus in conjunction with ν Virginis; difference of latitude 7'. 23^d—in conjunction with δ Virginis; difference of latitude 18'.

Mars continues a conspicuous evening star. 19^d—stationary.

The Asteroids.—4^d—Juno 2½° east of λ Capricorni. Pallas 1° S.W. of 47 Serpentis. Ceres 2° W. of β Scorpii. 9^d—Vesta in opposition, 4° N. of 44 Ceti; right ascension 1^h 14^m; south declination 5°. Although this asteroid has a disc so small as to elude a satisfactory measurement, it shines with an intense and pure white light: when the sky is clear, it may be seen with the naked eye as a star of the sixth magnitude; it is free from nebulosity, and similar in appearance to Uranus. The elements and other phenomena of Vesta are as follow:—

	D.	H.	M.	S.
Sidereal revolution	1335	17	50	4
Synodical revolution	503	0	0	0
Longitude of ascending node	3 signs	13°	13'	18".2
Inclination of the orbit	0	7	8	46
Place of perihellion	8	9	33	24
Eccentricity of the orbit	0.09322,	or	20,000,000	miles.
Greatest equation of the centre	10°	13'	22"	
Apparent diameter	0".488			
Real diameter	238	miles.		
Mean distance from the Sun	2.373,	or	225,435,000	miles.

2^d 11^h 15^m—Jupiter in quadrature. 10^d 21^h—in conjunction with ν Sagittarii. 29^d 10^h—with ν Sagittarii. The following will be the only visible eclipse of the satellites:—

	D.	H.	M.	S.
First Satellite, emersion	10	7	6	3

Saturn is escaping from the solar rays, and will soon afford eligible opportunities for examining its singular apparatus of rings, belts, and satellites.

30^d 0^h 45^m—Uranus in quadrature.

Solar Spots.—Sept. 20 (Monday morning)—a cluster of spots is passing off the western limb of the Sun; three spots, arranged in the form of a triangle, are near the centre; others are entering on the eastern edge, both maculae and faculae, which may be observed this day (Saturday) near the middle of the disc.

Dexford. J. T. B.

FINE ARTS.

GRAND NAVAL GALLERY AT GREENWICH. His Majesty has been graciously pleased to give a number of the Royal Pictures of the naval heroes of Great Britain, to add to the noble collection already at Greenwich Hospital. Besides this, we are delighted to learn that a gallery is to be constructed for their reception; and we shall thus have a truly national assemblage, of a kind peculiarly grateful to English feeling, in the place of all others the most appropriate for such an Exhibition. Lord Farnborough, the enlightened patron of the fine arts, has been to Greenwich, to consider of the necessary arrangements; and Mr. Locker, one of the Commissioners of that Institution, and Mr. Seguir, the Keeper of the King's pictures, have also been consulted in the progress of this most laudable undertaking.

NEW PUBLICATIONS.

Her Highness the Princess Victoria. Engraved by R. Golding, from a picture by W. Fowler. M. Colnaghi.

A VERY successful portrait. The general disposition of the figure is graceful; the features are well defined; and there is great vivacity in the expression. The treatment of the hair reminds us of Lawrence.

A New Series of Original Illustrations to all Editions of the Waverley Novels. Parts I. and II. London, Moon, Boys, and Graves; Edinburgh, Cadell and Co.

THE Novels here illustrated are, "Waverley," "Guy Mannering," "The Antiquary," "Rob Roy," "Old Mortality," "The Heart of Mid Lothian," "The Bride of Lammermoor," and "A Legend of Montrose;" and the Illustrations are thirty in number; being four to each novel, with the exception of "A Legend of Montrose," which has but two. In such a publication, however great the efforts which may be made, there must necessarily be some inequality in point of merit; as, in a race, it is impossible that every horse can be foremost. We will keep our eyes on the winning post, and not on the distance chair. The plates with which we are the most pleased, and which are indeed exceedingly beautiful, are, "Flora, in the glen of Glennaquoich, singing to Waverley," from a picture by F. P. Stephanoff, engraved by R. Graves; "Davie Gellatley, with Ban and Buscar, at the Dern-path," from a picture by E. Landseer, A.R.A., engraved by W. Raddon; "The Baron of Bradwardine reading the Church Service to his Soldiers," from a picture by G. S. Newton, A.R.A., engraved by C. Rolls; "Death of Gilbert Glosin," from a picture by A. Cooper, R.A., engraved by J. C. Edwards; "Saunders Mucklebackit lamenting the death of his son Steenie," from a picture by C. Stanfield, engraved by J. Phelps; "Davie Mailsetter run away with by his pony on the road to Fairport," from a picture by A. Cooper, R.A., engraved by A. Warren; "Bailie Nicol Jarvie discovering Rob Roy in Glasgow Jail," from a picture by W. Kidd, engraved by S. Davenport; "Mabel Rickets relating to Frank Osbaldiston the Scottish Legends," from a picture by A. E. Chalon, R.A., engraved by H. C. Shenton; "Bothwell entering the house of Milnwood, in search of Balfour of Burley," from a picture by D. Wilkie, R.A., engraved by R. Graves; and "Lucy Ashton saved from the Bull by the Master of Ravenswood," from a picture by E. Landseer, A.R.A., engraved by W. Finden.

With respect to some of the other plates, we must repeat what we have said on former occasions,—that they are over-wrought, and are consequently black and heavy. If only half as much had been done to them, they would have been twice as good.

An Invalid Carriage; invented by G. Morton. Engelmann and Co.

As far as we can judge from the print, this invention, the object of which is to convey patients to and from hospitals, &c. with as little pain, inconvenience, or delay as possible, is well calculated to effect its purpose.

Napoleon musing at St. Helena. Engraved by J. C. Coombs, from a picture by B. R. Haydon. Published by the Artist.

THERE is great simplicity in this little print; nay, there is great sublimity in it; and the manner in which it is treated affords an additional proof of Mr. Haydon's genius. It represents Buonaparte, standing, just after sunset, on the verge of a cliff, which overhangs the ocean; his arms folded, and his gaze intently fixed upon the scarcely visible white sails of a vessel in the distant horizon. The execution, as a work of art, is remarkably good; but it is surpassed by the sentiment. On looking at it, the imagination instantly attempts to conceive the train of thought that is swiftly passing through the mind of the extraordinary being before us, as he is reviewing the almost miraculous events of his meteor-like career. It is impossible not to fancy him,—now, full of pleasure at the recollection of the innocence of his youthful days; now, of exultation at the brilliant military triumphs of his more advanced life; now, of remorse at the crimes by which he endeavoured to consolidate his colossal and despotic power; now, of grief and despair at the rapid succession of reverses, the fruits of his own insatiable ambition, which terminated in rendering him a prisoner on a barren and solitary rock!—"Ainsi passe la gloire!" is a reflection which Mr. Haydon has inscribed on the foreground. That such glory may ever so pass, must be the earnest wish of every benevolent and enlightened friend of the human race.

Baroness Ribblesdale. Painted by Mrs. Carpenter; engraved by Scriven.

THE portrait of a pretty-looking creature, and the seventieth of the Series of Female Nobility which adorns *La Belle Assemblée*.

ORIGINAL POETRY.

CHARACTACUS.

"When Caractacus was taken as a prisoner to Rome, on entering the city and seeing the splendour around him, he exclaimed, 'What! could the Romans, with all this magnificence, envy me my little cottage in Britain!'"—*English History.*

SAY, wherefore have ye borne me here,
 Away from mine own pleasant land,
 And kept me thus with shield and spear,
 And with this armed band?
 I have no treasures to unfold,
 No glittering hoard of gems and gold,
 No royal robes to yield;
 I only have my limbs and life,
 A heart that quails not in the strife,
 A trusty spear and shield.

Around me there are pillared halls, [flow,
 Where sweet lutes sound and bright wines
 And floats the voice of festivals
 Around me as I go.

And could ye, who possess all these,
 Envy my cottage 'midst the trees,
 'Neath Britain's changeful sky?
 Where no fair eastern floweret blooms,
 Where nought save the wild rose perfumes
 The fresh wind wandering by.

Ye have torn me from my quiet nest,
 And deem you ye can force from me
 The feelings that there made me blest,
 Blessings for you to be?
 Oh! these are treasures I have sealed
 Within my heart, deep, unrevealed;
 Nor racks nor tortures e'er
 Can wrench them from the sacred hold
 They have within its inmost fold,
 Apart from mortal care.

Illumined is your city now
 With myriad lamps in hall and bower;
 My home was fairer with the glow
 Of stars at midnight's hour.
 Ye have hung wreaths on shrine and dome;
 Know, I have lovelier at home
 Of dark-green ivy leaves.
 Ye have rich sounds of flute and horn;
 I had as sweet ones every morn
 From the swallows in the eaves.

And I have one proud thought that still
 Gives me a triumph o'er ye all;
 My spirit's eye when'er I will
 On those old scenes can fall;
 And I have deeper, dearer bliss,
 In gazing on those memories,
 Those pictures of the past,
 Than you in wearing victory's crown,
 In looking on your trophied town,
 Or listing trumpet's blast.

The spell is on my heart!—my land!
 My native home! my own dear isle!
 Now I can face ye, tyrant band,
 With a defying smile.
 My heart is strengthened in those ties,
 In trust, in love, that never dies!
 Bring forth your chains, and bind
 And fetter every free-born limb.
 The spirit's light ye cannot dim,
 Ye cannot chain the mind.

And if ye bear me unto death,—
 What then? I have no slavish fear;
 I can resign this worthless breath
 Without a sigh or tear.
 And there is something in my heart,
 That tells me I shall not depart,
 And leave the world in vain;
 That whispers,—and it must be so!
 That friends, afar from earthly woe,
 Shall surely meet again!

Worton Lodge, Isleworth. M. A. BROWNE.

MUSIC.

NEW PUBLICATIONS.

I looked on the Waters; Duet, sung at the Nobility's Concerts; arranged, &c. by H. R. Phillips. G. Luff.

THE poetry of this pretty, light, simple, and remarkably pleasing duet, is from the pen of Mr. Brandreth; it agrees well with the music, and is both lyrical and fanciful.

Green's Spanish Guitar Songs, intended as first Lessons for the Instrument. J. Green.

WE have eight of these pieces, and most popular airs. We approve of them highly; though after class A, we consider them almost too easy, even for beginners. More practice for the right hand, and some changes of position for the left, would, we think, be an improvement. For indolent guitar-players, however, they are perfection.

My Love's like the Deer. Sung by Miss Cawse. Poetry by C. J. Davids; Music by Rodwell. Goulding and D'Almaine.

THIS is not one of David's Psalms, but a very beautiful ballad, which has only to be heard to become a universal favourite.

The Golden Days of Childhood; a Ballad. Words and Melody by Mrs. B. C. Wilson; Accompaniments by J. T. Craven. J. Willis. WE like Mrs. Wilson's first attempt at musical composition very much; this is altogether a pretty little ballad, and does her great credit.

The Bridal is over. Poetry by T. Haynes Bayly, Esq.; Music by Miss E. L. Mortlock. Cramer, Addison, and Co.

WE regret the many common-place airs that are composed to Mr. Bayly's songs. The present is well enough for an amateur lady; but is far from doing justice to the sentiment. A few sweet turns will not compensate for a general want of melody; and this song ought to be equal to the best Mr. B. ever wrote.

Strike, strike the Lyre! Song and Chorus. J. Green.

A SPIRITED composition; and, when well sung, with the chorus, of a patriotic and stirring effect.

Amico il Fato. J. C. Schwieso.

THE words are from Metastasio, and the music by Harriet Schwieso. The air is beautiful; and, to those who can surmount the difficulties of the execution (it is so high), the taste and charm it possesses must render it delightful.

Gaily dances on Summer Nights. J. Barnett. THE cavatina sung by Mrs. Fitzwilliams in the *Bold Dragoon*, at the Adelphi; so gay, so original, and so agreeable, that it has quite hit our fancy. We are sure it will be relished in the drawing-room, as it is, from Mrs. Fitzwilliams' lively singing, on the stage.

DRAMA.

HAYMARKET.

ON Tuesday Miss Paton appeared at this theatre as *Rosina* in the *Barber of Seville*, and *Clari*: the house was crowded, her reception most flattering, and her performances exquisitely beautiful in every respect.

VARIETIES.

The King of the French.—Among many anecdotes of Louis Philip are the following:—A few days ago, the king having determined to take a walk in the streets without being surrounded by a crowd, came out of his palace at the moment when the corporal of the post was going out to make his round. "I wish to go with you," said his majesty to the commander of the patrol; "perhaps they will allow me to pass with the national guard." The corporal became embarrassed and intimidated: "Sire," said he, "if it be so, I cannot command; you *Bordeaux*.—When the news of the recognition of Louis Philippe by England, was announced to the audience of the theatre at Bordeaux, there were loud cries for "God save the King!" which was played by the orchestra, and elicited several rounds of applause, mixed with enthusiastic bravos.

Animal Magnetism.—The professors of this art in Germany pretend to have discovered the means of plunging animals into magnetic sleep. A German paper mentions several real or pretended instances of success.

must take my place." The king consented. He led out, commanded, and returned with the patrol.—*Galignani's Messenger*. The principal of a deputation from one of the departments (the Finistere) was invited to dine with the king. During the dinner, the king conversed freely with the deputy; and at the dessert, the latter, emboldened by the kind manner of his majesty, inquired if he did not intend soon to visit the provinces of ancient Brittany. "Yes, very soon," said the king. "And you, madam," said the Breton to the queen, "do you intend to accompany your husband?" "I think not, sir, replied the queen; for somebody must stay at home to take care of the house." (*Il faut bien, monsieur, que quelqu'un garde la maison.*)—*Le Temps*. A general officer, who had an appointment with the king, entered by mistake a cabinet, in which there were two ladies and some children. One of these ladies asked the general who he wanted. "I wish to speak with the king," said the general. "My husband is just gone out," said the lady; "but it will not be long before his return, and he will then introduce you to the king." The officer waited a few minutes until the husband returned. This husband was the king, and the lady in question was the queen.—*Ibid.*

News for the Londoners.—The *Voleur*, a Paris paper, says,—"London presents quite the appearance of Paris. The principal streets are hung with tri-coloured flags, and one sees every where nothing but cockades, ribands, purses, and handkerchiefs, of the three colours; so national has our glorious revolution become in England."—*Fudge!*

Liberality.—Mr. Robert Fenwick, lately established at Choisy, near Paris, supplies one half of the milk necessary for the *Hôtel-Dieu*, a contract which requires from 4,000 to 4,500 litres a-month. This respectable gentleman has made an offer to the director, who has accepted the generous proposal, to furnish gratis the whole quantity of milk, from July 27, so long as there shall be at the *Hôtel-Dieu* any of the men who were wounded in the memorable contest.

Polite Feelings.—In the *Times* of Wednesday an account is given of the preparations for Mr. Huskisson's funeral, and, among other things, of an application to the Duke of Wellington to attend as one of the mourners; to which it is stated his grace replied, "that nothing would give him greater pleasure than to pay this last token of respect," &c. &c. &c.

Swan River Colony.—Captain Stirling has returned from the exploratory expedition towards Port Leschenbault and the adjacent country, mentioned in a former *Literary Gazette*. The territory was found to be fertile and extensive; so that several of the individuals who accompanied Captain Stirling have taken grants of land, and settled there.

Northcote.—In a copy of proof illustrations to Northcote's Fables we have seen the following inscription in the masculine and bold characters of the author's hand-writing, who at a very advanced age traces a MIS. in such a style as would do credit to the best schoolmaster yet abroad: the fancy of the verse is also very tierce; it is *litteratim* and in form:—

To Mr. Behnes, Sculptor,
 From his friend,

JAMES NORTHCOTE.
 Behnes and Death for ever
 are at strife;
 Death turns the Life to Clay,
 He, Clay to Life.

Ancient History.—The French minister of the interior has informed the *Académie des*

Inscriptions et Belles Lettres, that it may continue, as heretofore, to distribute three gold medals annually for the three best essays, addressed to the Academy during the year, relative to national antiquities; and that the government will take every means of encouraging the researches of French antiquaries. The three medals for this year have been awarded to M. de Bousset, for an Essay on the Antiquities of Beziers; M. Ardant, for an Essay on the Antiquities of Limousin; and M. le Prevost, for a Notice of the Vases and Silver Articles found near Bernay.

Mexican Antiquities.—At a late sitting of the Académie des Sciences, Mr. Warden presented to the Academy, from Lord Kingsborough, a work, in five large folio volumes, on the Antiquities of Mexico. This work, which has been executed under the direction and at the expense of Lord Kingsborough, has cost immense sums. It is estimated that every copy comes to nearly five hundred pounds sterling!

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXXIX. Sept. 25.]

The notices of the forthcoming Annuals have been for some time pouring in upon us;—but where there is so much competition, we dislike to give our opinion upon partial and imperfect views. We are inclined to think the "Libraries," now so common, will interfere in some measure, with the publications already jostling each other in pretty considerable numbers. Yet we see novelties starting; a specimen of the Remembrance is before us—a print of the Orphans, by Gill—and a very pretty specimen it is. Le Keepsake Français, with eighteen engravings, is also a new announcement. Thirteen plates for the Winter's Wreath are also announced by eminent artists, both painters and engravers. For the Souvenir and the Keepsake we have seen some beautiful productions; and also several belonging to juvenile volumes. The Friendship's Offering advances its usual claims, and adds a new fashion of binding; and its proprietors also announce a Comic Offering, under the superintendence of Miss L. H. Sheridan; so that we find every species on the increase: the original mélange of literature and fine arts, those for the young, and now those for the humorous. Is there room for all?

Australia and Emigration, by Robert Dawson, Esq., late Chief Agent of the Australian Agricultural Company.—The first volume of the Quadrupeds of the Zoological Gardens.—The Lyre and the Laurel; two volumes of Fugitive Poetry of the XIXth Century.—Mr. D. Turnbull announces the French Revolution of 1830, the Events which produced it, and the Scenes by which it was accompanied.—Bosmond, a Tragedy, translated from the German of Theodor Körner.—The Temple of Melekartha.—The Nature and Cure of Consumption, by James Kennedy, Royal College of Surgeons.—The Romantic Annals of France, from the Time of Charlemagne to the Reign of Louis the Fourteenth inclusive; forming the new Series of the Romance of History. By Mr. Leitch Ritchie.—The Lives of the Italian Poets, by the Rev. Henry Stebbing.—Chartley, the Fatalist; a Novel.—A new edition of Major Rennell's Geography of Herodotus, from the Author's revised copy.—The Arrow and the Rose; with other Poems, by William Kennedy, Author of "Fitful Fancies."—Lays from the East, by Captain Calder Campbell, Madras Army.—Waldensian Researches, during a Second Visit to the Waldenses, by the Rev. W. S. Gilly.—Patroni Ecclesiarum; a List of the Patrons of the Dignities and Livings of the United Church of England and Ireland.—Professor Jameson has undertaken to edit, for Constable's Miscellany, an edition of Wilson's American Ornithology.—Miscellaneous Poems, by Mrs. J. S. Prowse.—Mrs. Bray, Author of "De Foix," "the White Hoods," &c., has in the press a romance entitled the Talba, or Moor of Portugal.—The Rectory of Valehead, a volume on the Formation and Character of a Christian Family, by the Rev. Mr. Evans.

LIST OF NEW BOOKS.

Wind S.W., except on the 17th, when it was North. Alternately clear and cloudy, with frequent and, at times, heavy rain.

Rain fallen, 1 inch, and .075 of an inch.

Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude.... 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. August 1830.

Thermometer—Highest.....	74.00	...4th.
Lowest.....	34.00	...30th.
Mean.....	53.96774	
Barometer—Highest.....	29.98	
Lowest.....	29.10	
Mean.....	29.62709	

Number of days of rain, 15.
Quantity of rain in inches and decimals, 2.43075.
Winds.—1 East—1 West—1 North—1 South—0 North-east—2 South-east—3 South-west—7 North-west.

General Observations.—The latter end of the month was particularly cold, even colder than in August last year; and although the quantity of rain was not one half of what fell in the same month in 1828, and very considerably less than the quantity last year, yet the mean temperature was lower than any one for August in the last eight years: the greatest elevation of the barometer the same as in the corresponding month last year, and the mean rather higher, but low for the season. Thunder heard, and lightning seen, on the 9th, about 2 P.M. The evaporation, 0.3125 of an inch.

TO CORRESPONDENTS.

The late Lunar Eclipse.—We have received letters from Mr. Smith, of Newry, and Mr. Bunt, of Bristol, on the subject of the late lunar eclipse, in which they account for the appearance of the moon under the circumstances stated in the *Literary Gazette* (Nos. 711 and 712), from the refraction of light through the earth's atmosphere. We regret that these scientific gentlemen did not see the moon at the times specified by our Meteorological and Astronomical Contributors, as we are persuaded, had they done so, they would have been convinced that the illumination of the western limb at 10 hrs. 7 min., and 10 hrs. 15 min., as seen at Edmonton and Deptford, was quite sufficient to warrant the conclusion, that the moon was not wholly plunged in the earth's shadow. From the statements in these letters, it appears that the times of emersion from the earth's shadow, as observed at Bristol, and the termination of the eclipse, as seen at Newry, in Ireland (corrected for the difference of longitude), coincide with the times given in the astronomical ephemerides, referred to in the *Literary Gazette* of 11th September. With respect to our strictures at any time on the Nautical Almanac, we disclaim any intention of unnecessarily impugning its accuracy, being perfectly sensible of its real deficiencies and errors. In the ensuing month (October) two instances of this nature will be found:—the conjunction of the moon with Aldebaran is marked in the Nautical Almanac with an asterisk, which is understood to signify that such a conjunction will prove an *occultation*, visible at Greenwich; this it will not be, but only an *appulse*. Again, the conjunction of the moon with Venus is stated in the Nautical Almanac to be only "a near approach;"—it will prove an *eclipse* of nearly three quarters of an hour's duration! (See the Celestial Phenomena for October, for the appulse of Aldebaran, and the occultation of Venus.) Inaccuracies of this description diminish the confidence which ought to be placed in a work of such importance, and in the case of this lunar eclipse, render the mind more open to unfavourable impressions.

The Editor of the Polar Star writes us that he has substituted etchings for the few pages (eight) of letter-press diminished in his Nos.

A critic need not be afraid of any mistake. No person of common understanding could read the remarks in the *Times* on Monck's Life of Bentley, and suppose for an instant that it belonged to the "Cut-and-Dry System."

In our notice of the ceremony of laying the foundation stone of Sir James South's new Observatory (three weeks ago), we incidentally mentioned, among the company present, "Mr. Gordon," as being the inventor of an extraordinary light for light-houses: it is not that gentleman, however, but Mr. Drummond, who is the author of this brilliant discovery.

ERRATUM.—An error of such importance occurred in our last No. In making up the Review of Munro's Correspondence, it was found necessary to omit a portion of it which had been selected for extract; and this part consisted of a Letter from Sir T. Munro to Colonel Wellesley—the first of those from which our quotations commence, at the top of the middle column, p. 615. It thus happens, that from the words "The following," to the words "no harm," may be mistaken as written by Col. Wellesley to Munro, instead of the reverse, from Munro to Colonel Wellesley.

ADVERTISEMENTS,

Connected with Literature and the Arts.

UNIVERSITY OF LONDON.

The Medical Classes will open on Friday the 1st of October. The Council have sanctioned a new division of the instruction in Anatomy.

Mr. Bell will still teach Physiology, illustrating that Science by continual reference to the pieces of Anatomy; and thus combining the knowledge of Structure with that of the Properties of Life. At the suggestion of Mr. Pattison, Mr. Bennett has been associated with him in the Chair of Anatomy. In order that this department may be most efficiently taught, but without needless repetition, Mr. Pattison will teach Descriptive and Surgical Anatomy; and Mr. Bennett General Anatomy, comprising the Development and Organisation of the several Tissues; and he will likewise teach the Descriptive Anatomy of the Viscera.

The following are the Medical Classes.
Anatomy—Mr. G. S. Pattison and Mr. J. R. Bennett. Fee 7l.; or for the First Division, 4l.; and for the Second, 3l.
Physiology—Mr. Charles Bell. Fee 3l.

Anatomical Demonstration—Mr. J. R. Bennett and Mr. R. Quinn. Fee 6l.; or 3l. for each division.
Nataler and Treatment of Diseases—Dr. Conolly. Fee 6l.; or 3l. for each division.

Surgery—Mr. Pattison. Fee 21l.; perpetual, 4l.
Midwifery and Diseases of Women and Children—Dr. D. D. Davis. Fee 6l.; first division 3l.; second division 2l.
Clinical Medicine—Dr. Watson. Fee for the whole Course 4l.; and for half the Course 2l.

Materia Medica and Therapeutics—Dr. A. T. Thomson. Fee 6l.; or for each division 3l.
Chymistry—Dr. E. Turner. Fee 7l.; first division 4l.; second division 3l.

Comparative Anatomy—Dr. R. E. Grant, commencing at the end of January. Fee 3l.
Botany—Professor Lindley. Fee 2l.
Medical Jurisprudence—Dr. J. Gordon Smith. Fee 4l.; or for each division 2l.

Hospital attendance daily from Half-past Twelve to Half-past One } Fee for the Session 5l.
Dispensary—ditto ditto }

On Friday the 1st of October, at Three o'Clock precisely, Dr. Conolly will deliver a General Introductory Lecture, for which Tickets of admission may be obtained at this Office.

A Medical Library has been formed for the use of the Students. The other Classes of the University open on Monday the 1st of November. Particulars of these and of the Medical Courses will be given at this Office.

An Account of the Distribution of Prizes in the Medical and General Schools may be had gratis at the Office of the University, and of Mr. Taylor, No. 39, Upper Gower Street.
By order of the Council,
THOMAS COATES, Clerk.

September 9, 1830.

PRIAM, with a Portrait of Mr. S. Davy, from a Painting by J. Fernelley, in the Possession of Mr. W. Chifney.

R. Ackermann, Jun. respectfully informs the Sporting World that he has now on View the Painting and a coloured Print (as a Specimen) of Priam for their inspection.

R. A. has not spared his expense to bring it out in the first style of excellence, and feels proud to say it is acknowledged by the first Sportsmen of the day to be the finest Portrait ever produced.

A Copy of the above Painting is also in the Possession of Mr. S. Davy.

Subscribers' Names received at R. Ackermann, Jun.'s Eclipse Sporting Gallery, 191, Regent Street, between Conduit and New Burlington Street; and by all the Print and Bookellers in Town and Country.

Price 15s. beautifully coloured.

Also, just published,

A beautiful Portrait of Rowton, from a Painting by J. Fernelley, engraved by C. Turner, A.R.A. under the Patronage of the Honourable E. Pezars.

MUSIC.

AN EMINENT PROFESSOR OF MUSIC.

Who devotes a portion of his time to the instruction of Professional Pupils, will have Two Days in the Week disengaged after this Month; and he will then be happy to receive any Young Person with a decided talent for Music, on moderate terms. Every requisite information may be obtained by addressing a letter (post-paid), with real Name and Address, to E. T. at Mr. Chappell's, No. 56, New Bond Street.

BOOKS PUBLISHED THIS DAY.

In 3 vols. post 8vo.

FIRST LOVE. A Novel.

"One of the most beautifully written tales we remember."—*Morning Journal*.

"Its style is elegant, and its information that of a lady of amiable feelings and motives, who well understands her sex."—*Spectator*.

"The whole of the story, but particularly the dawning of that early unbeam of life's morning, 'First Love,' and the subsequent progress of the passion, are indeed delightfully sketched."—*Morning Post*.

Saunders and Otley, Public Library, Conduit Street.

An amusing English Grammar.

In royal 18mo. finely printed by Davison, price 3s. neatly half-bound and lettered.

A CLASSICAL GRAMMAR of the ENGLISH LANGUAGE; with a Short History of its Origin and Formation.

By CHARLES BUCKE.

Author of the Beauties, Harmonies, and Sublimities of Nature. Printed for Baldwin and Cradock, Estercooter Row.

"This Grammar has been written with a view of saving trouble on the part of the tutor, of engaging the attention and exercising the reasoning faculties of the pupil, of furnishing a key to the best English poems (for nearly all the illustrations are given in the most admired poetry of our language); and of rendering that study attractive and amusing, which has hitherto been considered dry and repulsive."

In 2 vols. price 16s. illustrated with several Engravings of Scenery, Costume, Productions, &c.; also a Map.

THE PICTURE OF INDIA, exhibiting, in a brief, yet clear and graphic manner, the Geography, Topography, History, Natural History, Native Population, and Produce, of that most interesting Portion of the Earth; with a particular Account of the European Settlements, with the present State of the British Territories, and an impartial View of the Indian Question, with Reference to the impending Discussion on the Renewal of the Charter.

"We must say there is an elegance, if not a splendour of decoration about these volumes, that very properly corresponds with the ideas of magnificence which are usually associate with the name of India. The contents are worthy the beautiful framework in which they are embraced; and, if we mistake not the public taste, the 'Picture of India' will supersede every competitor that has arisen, or that is likely to come into the field."—*Monthly Review*, June.

"This is a most useful and interesting little work, very much wanted as a manual of that remote and extensive portion of the British Empire. It contains a very good map, and numerous well-executed engravings of scenery, &c. The volumes are got up with great care and neatness. They will afford the reader an outline of the features of a most remarkable country in a short space of time, and imprint upon his mind the character of the people and their manners, in a way which cannot fail to profit him. The geography, geological features, mineralogy, climate, zoology, early history, statistics, &c. are all given in lucid order."—*New Monthly Magazine*, June.

"The Picture of India will survive the immediate occasion which prompted its production, and take its place as a book of valuable information among works of permanent interest."—*Monthly Magazine*, May.

The present work is particularly acceptable. It is diligently compiled, easily written, and very neatly & well as usefully illustrated by plates and maps."—*Literary Gazette*.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Entertaining and instructive Works, in fine Bindings, published by Baldwin and Cradock, Paternoster Row.

ELLEN CAMERON; a Tale for Youth.
By EMILY ELIZABETH RANKIN.

With a superb Frontispiece, painted by Harvey. 12mo. price 5s. Keeper's Travels in search of his Master.

The 15th edition, with fine Embellishments, 12mo. price 6s. Description of more than Three Hundred Animals.

Fine Wood Engravings, beautifully printed by Whittingham. A new and enlarged edition, price 8s.

Guy's Pocket Cyclopaedia; or, Epitome of Universal Knowledge. The 9th edition, enlarged and extensively improved, with the addition of numerous appropriate Cuts, in a thick vol. 12mo. price 10s. 6d.

The Swiss Family Robinson; or, Adventures of a Father and Mother and Four Sons on a Desert Island. A new edition, with 12 Engravings, 12mo. price 7s. 6d.

A Short History of France, from the earliest Times to the present Period, for Young People. By Mrs. Moore. 3d edition, in 12mo. ornamented with Six Engravings, 7s. 6d.

The Stories of Old Daniel. A new edition, 12mo. with a Frontispiece and Vignette, price 6s.

The Parent's Offering; or, Instructive Tales for Youth of both Sexes. By Mrs. Caroline Barnard. A new edition, enlarged, with fine Frontispiece, price 5s.

Sandford and Merton complete, a new and improved edition, in 1 vol. with fine Engravings. 12mo. 7s. 6d.

Mrs. Leicester's School; or, the History of several Young Ladies, as related by themselves. The 9th edition, with fine Frontispiece, 12mo. price 4s.

Mrs. Helmes' Pizarro; or, the Conquest of Peru, in Conversations. A new edition, 12mo. with Maps, price 5s. 8d.

Helmes' Cortez; or, the Conquest of Mexico. New edition, 12mo. price 5s. 6d.

Helmes' Columbus; or, the Discovery of America. A new edition, 12mo. price 5s. 6d.

Splendidly illustrated with Engravings from Designs of Martin, and with numerous Woodcuts by the first Artists, demy 8vo. 1l. 1s.; or in royal 8vo. (proof Plates) 2l. 2s.

THE PILGRIM'S PROGRESS, with a Life of JOHN BUNYAN.
By ROBERT SOUTHLEY, Esq. Poet Laureate.
John Murray, Albemarle Street.

In 8vo. 12s.

CONVERSATIONS ON RELIGION, with LORD BYRON and others. Held in Cephalonia, a short time previous to his Lordship's Death.
By the late JAMES KENNEDY, M.D.
OF H. M. Medical Staff.
John Murray, Albemarle Street.

3d edition, post 8vo. with numerous additions and improvements, illustrated by Engravings and Woodcuts, 15s.

THE JOURNAL OF A NATURALIST.
Plants, trees, and stones, we note,
Birds, insects, beasts, and many rural things.

"We again most strongly recommend this little unpretending volume to the attention of every lover of nature, and more particularly of our country readers. It will induce them, we are sure, to examine more closely than they have been accustomed to do into the objects of animated nature, and such examination will prove one of the most innocent and the most satisfactory sources of gratification and amusement. It is a book that ought to find its way into every rural drawing-room in the kingdom, and one that may safely be placed in every lady's boudoir, be her rank and station in life what they may."—*Quarterly Review*, No. 78.

"This is a most delightful book on the most delightful of all studies. We are acquainted with no previous work which bears any resemblance to this, except White's History of Selbourne; the most fascinating piece of rural writing and sound English philosophy that ever issued from the press."—*Athenaeum*.

"To notice every thing of interest would be nearly to transcribe the entire book; therefore we must abruptly break off, after having held out by no means the most luscious bits, either to the man of minute research, or yet the general philosopher."—*Sporting Magazine*.

John Murray, Albemarle Street.

In 3 vols. post 8vo.

BASIL BARRINGTON and his FRIENDS, a Novel.

2. Travels in Greece and Albania. By the Rev. T. S. Hughes, B.D. of Emmanuel College, Cambridge. 2d edition, in 2 vols. with great Additions and Improvements, and 31 Illustrations, 22s.

"The most perfect and digested book on Greece which has yet been published."—*Courier*.

3. Frascatti's; or, Scenes in Paris. 3 vols. price 27s.

4. Captain Alexander's Travels to the Seat of War in the East, 2 vols. 8vo. with numerous Illustrations.
"The scenes are varied, the objects curious, the subject important, and the people the author travels among imperfectly known, and in every point of view interesting."—*Spectator*.

5. The Separation; a Novel. By the Authoress of "Firtation." 3 vols. 27s.

6. Six New Lectures on Painting, delivered at the Royal Academy, by the late Henry Fuseli, P.P. Now first published from the original MSS. Uniformly printed with his former Lectures.
And, in a few days,

7. A New Voyage round the World, in the Years 1823, 1824, 1825, and 1826, by Otto Von Kotschue, Post-Captain in the Imperial Russian Navy. In 2 vols. small 8vo.

8. The Heiress of Bruges, a Tale, by Thomas Colley Grattan, Esq. Author of "Highways and Byways," &c. &c.
Colburn and Bentley, New Burlington Street.

Lady Morgan's New Work.
In 2 vols. 8vo. with Portrait.

FRANCE in 1829-30.
By LADY MORGAN.

Contents.—Original Letter of General Lafayette to Lady Morgan, on the Revolution of 1830—Our First Days in Paris—Count Friends and New-General Lafayette—Count de Tracy—Count de Segur—Societe Philo-chimique—French Philosophy—Anglomania—Public Opinion—Tertulianism—The Rue Rivoli—Hotel de la Terrasse—Beranger—Visit to La Force—the Orleans Gallery—Morning Drive—Meudon Serres—Public Gardens—the Toilette—Readers and Authors—Archives of France—Framogeniture—Curiosity Shops—Napoleon—the Theatres—a Dinner in the Faubourg—New Novels—Musical Society at the Prince and Princess de Salm's—Ball at the English Embassy—Pete Duce—Romanticists and Classicists—Gerard—le Sacre du Roi Charles X.—Public Journals—Revolution of 1830, &c. &c.
Saunders and Otley, Public Library, Conduit Street.

Works recently published by Whittaker, Treacher, and Co. Ave Maria Lane.

THE ANIMAL KINGDOM, described and arranged in conformity with its Organisation, by the Baron Cuvier, translated, with large additional Descriptions of all the Species hitherto named, and of many not before noticed, and with other Original Matter.

By E. GRIFFITH, F.L.S., C. HAMILTON SMITH, F.L.S.

In quarterly Parts, each containing from 16 to 20 Engravings, in demy 8vo. 12s.; in royal 8vo. 18s.; in royal 8vo. with the Plates accurately coloured, 24s.; and in 18s. 4d. with Proof on India paper, 24s.; or in monthly Numbers, with Six or Eight Plates, demy 8vo. 4s.; royal 8vo. 6s.

The Class *Mammalia*, complete in Twelve Parts, with upwards of Two Hundred Engravings, forming Five Volumes, price, in extra cloth boards—

Demy Octavo £7 4 0
Royal Octavo 10 10 0

—ditto, coloured 14 8 0
Demy Quarto, India Proof 14 8 0

A Supplementary Volume, just published, contains an Account of the Fossil Remains. Demy 8vo. 1l. 16s.; royal 8vo. 2l. 12s.; demy 4to. 3l. 12s.

The Class *Birds*, complete in Nine Parts, forming three volumes, price, in extra cloth boards—

Demy Octavo £5 8 0
—Quarto, India Proof 10 10 0

Royal Octavo 10 10 0
—ditto, coloured 10 10 0

The Reptiles will form Three Parts, (25, 26, and 27), and the Insects will form about Six Parts; the whole comprising about Forty Parts. It will be so arranged, for the convenience of those who may confine their Zoological Studies to either of the Classes, that each Class will make a distinct work, as well as one of the series of the Animal Kingdom. The conclusion will contain a tabular view of the system, a copious index, and a general terminology of the science.

The engraved illustrations of this work are in a superior style of execution, by different artists of distinguished eminence; and, among the rest, many are by Mr. Landseer. Most of them are from original drawings, made from nature; and several represent species altogether new, or never figured before.

2. A General Biographical Dictionary. By John Gorton. In 2 large vols. medium 8vo. containing above 3000 pages of close Print, 25s. in handsome cloth boards.

"It is small praise to say this Dictionary surpasses all the prior compilations of the kind; but we have consulted a multitude of articles, and have been surprised at the accuracy, versatility, and intelligence, which they exhibit. We must not omit to remark an important recommendation in a bulky book of reference—its cheapness. Though far more copious, and carried down to a much later period, we believe the work does not exceed the price of the imperfect repositories of biographies."—*Atlas*.

3. The History of Italy, from the Fall of the Western Empire to the Commencement of the Wars of the French Revolution. By George Perceval, Esq. In a large vols. 8vo. 20s.

"For the elegance of its style, the generous tone of its sentiments, and, above all, for its faithful reference to original authorities, this work is certainly a valuable acquisition to our historical literature."—*Monthly Review*.

4. A Statistical Account of the British Settlements in Australasia, including the Colonies of New South Wales and Van Diemen's Land, with an Enumeration of the Advantages which they offer to Emigrants, as well as with reference to such other, as to the United States of America, and the Westward of, & North of, South Wales. In 3 vols. 8vo. the 3d edition, with an Appendix, containing the Act of Parliament

and other Documents relating to the Settlements, embellished with Maps, &c.

5. Our Village: Sketches of Rural Character and Scenery. By Mary Russell Mitford. In 4 vols. post 8vo. 35s. 6d.

"The sketches of country scenery, in which this volume abounds, have such a convincing air of locality, the human figures interspersed among them are touched in such a laughing, good-humoured spirit of caricature, innocent, yet pungent wit, that we scarcely know a more agreeable portfolio of trifles for the amusement of an idle hour."—*Quarterly Review*, No. 61—on Vol. I.

By the same Authors,
Dramatic Scenes, Sonnets, and other Poems.
In post 8vo. 10s. 6d.

Foscari, and Julian; Tragedies. In post 8vo. 5s.

6. The Picture of Australia, exhibiting a faithful Representation of the Geographical Position, Surface, and Appearance of the Country; of the Seas around its Shores, of its Climate and Meteorology, of its Native Productions and Native Inhabitants, of the several Colonies in New South Wales, Van Diemen's Land, the Swan River, Melville Island, and other Places; of the Agricultural and Commercial Resources of the Country, and the Prospects which it holds out of advantage, whether to the intending Settler, to the Merchant, or to the Country at large. In post 8vo. with a new Map, 10s. 6d.

"We cordially recommend this book to the attention of our readers. No work has yet appeared which will afford the inquirer a juster idea of its interesting and wonderful country."—*Athenaeum*, Sept. 23. See also *Times*, Sept. 26.

7. A Discourse on the Revolutions of the Surface of the Globe, and the Changes thereby introduced into the Animal Kingdom. By the Baron Cuvier. Translated from the French, with Illustrations and a Glossary. In post 8vo. with Engravings, 7s. 6d.

8. The Antiquities of Freemasonry, comprising Illustrations of the Five Grand Periods of Masonry, from the Creation of the World to the Dedication of King Solomon's Temple. By the Rev. G. Oliver. In 8vo. with Plates, 12s. boards.

9. Illustrations of Masonry, by the late William Preston, Esq. Past-Master of the Lodge of Antiquity. The 14th edition, in 12mo. with important Additions, Alterations, and Improvements, by the Rev. G. Oliver. 8s.

10. Sketches of Portuguese Life, Manners, Costume, and Character. In 4 vols. with 20 coloured Engravings of Manners, Customs, and Religious Ceremonies, &c. &c. "The whole volume is one of extraordinary entertainment, and a very curious picture of national manners."—*Lit. Gazette*.

11. The Greenhouse Companion, comprising a general Course of Greenhouse and Conservatory Practice throughout the Year; a natural Arrangement of all the Greenhouse Plants in Cultivation; with a Descriptive Catalogue of the most desirable to form a Collection, their proper Soils, Methods of Propagation, Management, and References to Botanical Works in which they are figured. Also, the proper Treatment of Flowers in Rooms, and Bulbs in Water-Glasses. In 8vo. with a coloured Frontispiece, the 2d edition, 14s. boards.

THE RESULT OF THE GENERAL ELECTION; or, What has the Duke of Wellington gained by the Dissolution? Price 2s.

Also,
An Official List of the Members of the New Parliament, price 1s.
James Ridgway, 169, Piccadilly; and of all Booksellers.

In small 8vo. with Engravings on Steel of Lord Byron and the Countess Guiccioli, price 5s.

THE NATIONAL LIBRARY, No. I.
Conducted by the Rev. G. R. GLEIG, M.A. M.R.S.L. Esq. Containing the Life of Lord Byron, by JOHN GALT, &c. Complete in a single volume.

N.B. The title of The National Library has been adopted instead of the Library of General Knowledge, on account of the similarity of the latter title to those of other existing Works.

No. II. containing the History of the Bible, by the Rev. G. R. Gleig, will be published on the 1st of October. Colburn and Bentley, New Burlington Street.

Dr. Paris on Diet.
4th edition, enlarged, in 8vo. price 10s. 6d.

A TREATISE ON DIET, with a View to establish, on Practical Grounds, a System of Rules for the Prevention and Cure of the Diseases incident to a Disordered State of the Digestive Functions.

By J. A. PARIS, M.D. F.R.S.
Fellow of the Royal College of Physicians.
Printed for T. and G. Underwood, 32, Fleet Street.

The American Revolution.—Price 1s.

A HISTORY OF THE AMERICAN REVOLUTION, published under the Superintendance of the Society for the Diffusion of Useful Knowledge, and forming Nos. 61 and 62 of the "Encyclopaedia Britannica."
London: Baldwin and Cradock.

Price 1l. 1s.

THE NOBLE GAME OF BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD.

Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, in a direction of performing, with precision, the most masterly strokes of all the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years.

London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catherine Street, Strand; and to be had of all Booksellers.

Digitized by Google

School Books.
Third edition, 12mo. 3s. 6d.
AN ABRIDGMENT OF MATTHIÆ'S
GREEK GRAMMAR, for the Use of Schools.
Edited by the Rev. C. J. BLOOMFIELD, D.D.

Also,
Kenrick's Greek Exercises, adapted to Mat-
thiæ's Greek Grammar. 8vo. 5s. 6d.
John Murray, Albemarle Street.

Dr. Gregory's Evidences of Christianity.
In 2 vols. royal 12mo. price 14s. boards, the 5th edition, with
many Additions and Improvements,
LETTERS to a FRIEND on the EVI-
DENCES, DOCTRINES, and DUTIES of the CHRIS-
TIAN RELIGION.

By OLINTHUS GREGORY, LL.D. &c.
London: Baldwin and Cradock, Paternoster Row.
A new edition of this work has been for some time anx-
iously demanded; but it is hoped that the public will be com-
pensated for the delay by the time bestowed, and the labour em-
ployed by the author in improving it.

In 18mo. the 2d edition, corrected and considerably enlarged,
price 5s. boards.
A GREEK and ENGLISH MANUAL
LEXICON to the NEW TESTAMENT, with Exam-
ples of the Irregular Inflections, &c.
By J. H. BASS.

London: Printed for Baldwin and Cradock, Paternoster Row.
In presenting a new edition of this little Manual to the public,
the Author has been induced to submit it to a strict revisi-
on, to correct many errors, and to amplify and extend the defi-
nitions of all important words. The quantity of new matter
indeed, which has been thus incorporated, may almost entitle the
present edition to be regarded as a new work.

This day—Family Library.
No. XV. of the Family Library, being the
History of British India, Vol. I. By the Rev. G. R. Gleig.

Just published, 2s. 6d. In cloth, lettered, the Third Volume of
MEMOIRS of MADAME DU BARRI,
MISTRESS of LOUIS XV. of FRANCE.
This Volume forms the Thirty-first of a work entitled Autobiog-
raphy; a Collection of instructive and amusing lives
originally published. Written by the Parties themselves. With ori-
ginal Introductions and Sequels. Both general and particular
title-pages are supplied, so that any Life may be obtained com-
plete, separately. A Portrait of each Writer is given, whenever
a sufficient authentic likeness can be procured.
Besides other advantages, this Series will include cheap editions
of many scarce and curious works, which cannot at present be
obtained without considerable trouble, even at high prices.

A fine cabinet edition is published, uniform with the "Family
Library," of "Lardner's Cyclopaedia," &c. 6s. each volume.
"It was a happy idea which led to the incorporation of all the
most interesting lives by the subjects themselves, in one uniform
series of volumes."—*Atlas*.
"No description of reading comes so near works of fiction and
fascination as biography; and of all kinds of biography, autobio-
graphy, written with talent, and in the spirit of frankness, is at
once the most delightful to the general reader, and the most
instructive to the philosopher who studies the springs of action in
human character."—*Scotman*.
"A well-imagined and cheap publication, valuable alike for
the man of letters and the general reader."—*Globe*.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 3 small vols.
THE DOMINIE'S LEGACY, consisting
of a Series of detached Tales.
These highly entertaining volumes well deserve a place in
every library. — *Blackwood's Magazine*.
"We can assure our readers that one single tale in these de-
lightful volumes, (the story of Mary Ogilvie), is well worth the
price charged for the whole work."—*Morning Journal*.
London: William Kidd, & Old Bond Street.

BOOKS IN THE PRESS.

In a few days will be published, in 1 vol. super-royal 4to.
price 8l. 10s. half-bound,

AN HISTORICAL ATLAS; being a
Series of Maps of the World as known at different
Periods; constructed upon a uniform scale, and coloured accord-
ing to the political changes of each period; accompanied by a
Narrative of the leading Events exhibited in the Maps; forming
together a General View of Universal History from the Creation
to A. D. 1839.

By EDWARD QUIN, Esq. M.A. of Magdalen Hall, Oxford,
and Barrister-at-Law of the Honourable Society of Lincoln's Inn.
The Maps engraved by Sidney Hall.
Printed for R. B. Seeley and W. Burnside; and sold by
L. B. Seeley and Sons, Fleet Street, London.

Extracts from the Preface.
This work consists of a succession of maps exhibiting the state
of the known world at more than twenty periods. Its peculiarity
consists in exhibiting every thing in its real dimensions and just
proportions, and in adhering to the same scale in all successive
delineations. Greece and Persia are seen, for instance, in the re-
lations which they actually bore to each other; and are not
shown, as in many Atlases,—the one on the scale of 20 miles to
an inch, the other on a scale of 200; and when once laid down,
they remain, in each subsequent Map, on the same spot, and of
the same dimensions.

Rapidly passing the eye, therefore, over the engravings, the
student, always finding the same territory in the same part of the
map, sees by the changes of colour, the various Empires which
succeeded each other.
In thus exhibiting the state of the World at different periods,
it became necessary, in order to preserve consistency and truth;
to exhibit, in the earlier stages of the review, only a very small
portion of the earth's surface. The reason of this is obvious. A
map, entitled "The World as known to the Ancients," is found
in most existing Atlases, and our readers must often have met
with such a one. Now our plan was, to exhibit "the World as
known to the Ancients," not of one period, but of several suc-
cessive periods. We had to show the world as known in the days of
Moses—the world as known to Cyrus, to Alexander, &c. And to
do this with truth, it was necessary to show, in every period, only
that part of the world which there is reason to believe was actu-
ally known by the Geographers and statesmen of that time. Still,
however, in doing this, we were not to forget that the real facts
of the earth's geography were the same at each of these periods
as at present, and that China and America were as much in
existence in the days of Cyrus as they are at present. We were
known to the great mass of civilized human beings. We were
not, then, to omit these countries from our maps, as though
they had no existence; and yet we were not to exhibit them
as if forming part of the known world of the age so delineated.
The only course left to us seemed to be to bring the appear-
ance of a cloud over the skirts of every map, exhibiting at each
period only the known parts of the globe, and lifting up or draw-
ing off this cloud as the limits of the known world gradually ex-
tended.

Every successive map thus combines, at a single glance, both
the Geography and the History of the world, to which it refers;
and, by its colours, the boundaries of the single world, and,
by its colours, the respective empires into which that world was
distributed.

We will now proceed to give a rapid sketch of the contents of
the volume, which consists, as we have already explained, of a
geographical history at the various successive periods the dates of which
are affixed. These maps are all drawn upon one and the same
scale, and therefore show any particular territory always on the
same spot, and of the same dimensions, the political changes
being exhibited by the alteration of the colouring.

The First Period is given only because every narrative, to be
complete, must have a commencement. It shows the spot from
whence the history of the world takes its first date.
The Second Period exhibited is that B.C. 1493, the era of the
departure of the Israelites from Egypt. Here the student will
observe the rise of the Egyptian, the Syrian, and the great Assy-
rian or Babylonian empire.

The Third Period chosen is that of the foundation of Rome,
B.C. 753. The Assyrian empire is the leading feature of this
time.

The Fourth Period chosen is that of B.C. 599, and the prin-
cipal feature of the map will be seen to be the empire of Cyrus,
which comprehended the greatest part of the then known sur-
face of the globe.

The Fifth Period, dated B.C. 323, exhibits the Græco-Macedo-
nian empire of Alexander, and

The Sixth Period shows the division of his monarchy into
four kingdoms of Syria, Egypt, Macedonia, and Thrace, B.C. 301.

The Seventh Period, B.C. 146, is chiefly distinguished by the
rise of the Roman empire, which began to be apparent at the
close of the second Punic war.

The Eighth Period is that of Augustus, A. D. 1, of which the
Roman Empire, in its greatest strength and glory, is the leading
feature.

The Ninth Period shows the same empire under Constantine,
A. D. 313, in which its limits somewhat extended, although its
strength was already on the decline.

The Tenth Period, A. D. 395, exhibits the separation of the
empire into eastern and western, at the death of Theodosius;—
and

The Eleventh Period, the subversion of the western empire, by
the northern nations, A. D. 476.

In the Twelfth Period we leave what is usually termed ancient
history, and enter upon modern. The first great kingdom of
Modern Europe, that of Charlemagne, A. D. 814, is the principal
object of attention;—and

The Thirteenth Period exhibits the separation of that kingdom,
shortly after the death of its founder, being dated A. D. 912.

The Fourteenth Period is fixed at A. D. 1100, being the period
of the first crusade. Several of the present European nations will
be seen now first springing into political existence.

The Fifteenth Period is principally marked by the appearance
of the great Tartar empire of Jenghis Khan, which reached its
zenith A. D. 1294.

The Sixteenth Period, A. D. 1498, opens to our view, for the
first time, the New World of America.

The Seventeenth Period comes down to the death of Charles V.
of Germany, A. D. 1551.

The Eighteenth Period is dated at the Restoration of the Stu-
arts, A. D. 1689.

The Nineteenth Period, A. D. 1783, brings us down to the inde-
pendence of the United States of America.

The Twentieth Period exhibits the empire of Napoleon Bonaparte
at its greatest elevation, A. D. 1811;—while
The Twenty-first Period concludes the Series, by delineating
the world in its present state, A. D. 1839.

On the 1st of October will be published, No. I. of
THE EDINBURGH CABINET

LIBRARY, dedicated, by permission, to John Barrow,
Esq. F.R.S., one of the Secretaries of the Admiralty; being a
Narrative of Discovery and Adventure in the Polar Sea and
Regions, with Illustrations of their Climate, Geology, and Natural
History; and an Account of the Whale Fishery
By PROFESSORS LESLIE, PEARSON, JAMESON, and
HUGH MURRAY, Esq. F.R.S.E.
Embellished with a correct Chart of the Routes of Discovery,
together with Eighteen Engravings by Branson, exhibiting Pic-
turesque Views of the Arctic Regions, Groups of the Sailors
with their Occupations and Pursuits, Natural History, the Whale
Fishery, &c. in small 8vo. price 5s. in cloth boards.
Printed for Oliver and Boyd, Edinburgh; and
Simpkin and Marshall, London.

Louis-Philippe, King of the French.
WHITTAKER'S MONTHLY MAGA-
ZINE, for October, will contain a Portrait of Louis-
Philippe, King of the French, and the following Articles.—I. Louis-
Philippe, the Duke of Wellington, and Europe.—II. Satam
and his Satellites, not by Robert Montgomery.—III. Maxims on
Men and Manners, by the late William Hazlitt.—IV. The Irish
Priest and his Niece.—V. Lady Morgan's France.—VI. The Music
Musicalian.—VII. The Netherlands.—VIII. Paragraph on the
Lives, by the late William Hazlitt.—IX. Father Murphy's Dream.—
X. John Galt and Lord Byron.—XI. The Golden City.—XII. Sir
George Murray and the Sectarians.—XIII. Marriage à la Mode.—
XIV. Ballad à la Bayley.—XV. Notes on the Month on Affairs in
General.—Review of New Books, &c. &c.
London: Whittaker and Co. London; Waugh and Innes, Edinburgh;
and J. M. Leckie, Dublin.

LOUIS-PHILIPPE, KING OF THE FRENCH.

An extra Plate, engraved by Thomson, of Louis-Philippe, will
be given in La Belle Assemblée for October, in addition to the
Portrait of the Baroness Ribblesdale, which will be the 50th of the
Series of the Female Nobility, now publishing in that Work. This
Number will contain the following—
The Portraits of the following distinguished Personages are in
preparation for the forthcoming Numbers of La Belle Assemblée—
the King and Queen of England—the Empress of Russia—Prince
Ludovick—the Duchess de Berri—the Marchioness of Stafford—
Lady Mary Leslie—Lady Cumming Gordon—Countess of Antrim
—Lady Normanby, &c. &c. &c.

Whittaker and Co. London; Waugh and Innes, Edinburgh;
and J. M. Leckie, Dublin.

On the 1st of October, in 1 vol. small 8vo. neatly bound, with
four beautiful Embellishments, price 4s.

THE JUVENILE LIBRARY, No. III.

containing Africa, its Geography and History, Ancient
and Modern.

No. I. comprises the Lives of Remarkable
Youth of both Sexes, with Four Embellishments.

No. II. contains Historic Anecdotes of
France, with Four Embellishments.
Colburn and Bentley, New Burlington Street.

Double Number of the *United Service Journal*, with a
Portrait of His Majesty.

THE UNITED SERVICE JOURNAL

and NAVAL and MILITARY MAGAZINE for Octo-
ber, price 2s. 6d. per Number, comprising double the usual quan-
tity of Letters, will contain, among other attractive Papers—
Memoir of the Naval Services of William IV. with a Portrait of
His Majesty—Narrative of the Campaign in Holland in 1814,
with Details of the Attack on Bergen-op-Zoom, by an Officer
present—Anecdotes of the Prussian Revolution—Pattagonia and
Terra del Fuoco, &c. &c. extracted from a Journal of the Surveying Ex-
pedition, composed of His Majesty's Ships Adventure and Pea-
ple—Recent Campaign of Algiers, with a Description and Force
of the French Squadron—State of Education in the British Navy
—History of the 4th, or King's own Regiment of Foot—Ser-
vice during the late War—a Journal of Discovery in South
Africa, by Lieut. C. Brand—Reminiscences of a Subaltern—the
Battle of Cressy—Description of the Island of Fernando Po—Edu-
cation of the Sons of Naval Officers, &c. &c.
Colburn and Bentley, New Burlington Street.

Dr. Lardner's Cabinet Cyclopaedia.
On the First of October will be published, price 6s. the
Second Volume of the

HISTORY of MARITIME and INLAND

DISCOVERY, in 8 vols.
Being Vol. XI. of "Dr. Lardner's Cabinet Cyclopaedia."
The preceding Volumes of the Cabinet Cyclopaedia are—
X.—History of the Netherlands. By T. C. Grant.
IX.—Outlines of History. 1 vol.

VIII.—Sir James Macintosh's History of England. Vol. I.
I. IV.—History of Scotland, 2 vols. By Sir Walter Scott.

No. 715.—AMERICAN EDITION.

SATURDAY, OCTOBER 2, 1830.

REVIEW OF NEW BOOKS.

The Heiress of Bruges; a Tale of the Year Sixteen Hundred. By Thomas Colley Grattan, author of "Highways and Byways." 4 vols. London, 1830. Colburn and Bentley.

A LOVE-STORY, of most romantic interest, is here ably wrought into the stirring history of the most energetic struggle ever made against bigotry and tyranny,—that of the Low Countries against their Spanish oppressors. Many of the characters are especially well drawn; the heroine is a very sweet creature; and her father, with his proud humility, yet secret consciousness of wealth and power, is an excellent and true picture—whose air of reality seems to vouch for its being a likeness. The hero himself is, what the term implies, the principal actor in his own pages; and there are few readers who will not be carried along by the fortunes of the brave De Bassenveldt. The two chief faults are; first, that some of the romantic creations are overdrawn, witness that of Beatrice; and the mysterious figure of the wizard is too much in the now-exploded school of improbable wonders, with a forced clearing up at the end; secondly, the narrative is wire-drawn—it wants compression; and though the tale is too interesting for whole pages to be skipped, we feel the story might be better told in less space: all the humorous parts and personages, which are complete failures, might be omitted with great advantage. There are spirited scenes enough to have filled half the ground they now occupy: among these, let us point attention to that where the abbot introduces his nephew, the midnight council in the burgomaster's house, the siege, and that in which Theresa is brought before Prince Maurice; but perhaps it would be better to give a specimen of what we recommend. We have only to observe, that, owing to the treachery of one of his friends, the water of the river has been turned into the castle by its besiegers, so as to threaten irremediable destruction.

"At the first report made by the astonished storekeepers, of the extraordinary appearance of water oozing into vaults cut in the solid rock, a thousand conjectures were started, as to the pumps and wells having by some phenomenon changed their operations, or the immense leaden tanks and reservoirs on the castle roofs having 'burst their cerements,' and discharged their contents. The rapidly increasing rush of the invading element left no time for the solution of these elements; to stop its progress was the great object. But in order to accomplish this, the line of its ingress was to be traced, and the efforts at doing so, increased the evil, for every little trap-door or portal opened in the subterranean galleries to aid the inquiry, facilitated the entry of the flood that now came booming in. The passage chosen by Lyderic, and communicating with every ramification of the rest, was of the smallest width; but the resistless force of the propelling power carried every obstruction be-

fore it. Partitions and doors, of stone or wood, gave way alike. The artificial tide filled every nook and crevice, and burst through all impediments. Before any real knowledge of its source could be acquired, irreparable mischief was done. Several of the persons employed in the care of the provisions and provender stowed into these hitherto impregnable compartments, were drowned ere they imagined the possibility of danger. Others fled in dismay at the sight and sound of the stream, which hissed and boiled along the cavities, forcing the long-confined and noxious air before it, with thick columns of dust and rubbish, the accumulation of centuries.

"In the midst of confusion, vociferation, and clamour, De Bassenveldt appeared. He lost not a moment in idle astonishment or still more idle grief. A throbbing agitation certainly shook his heart, and his brain seemed to burn with condensed energy of thought. A sense of his own and his people's danger, a certainty that his means of defence were reduced by many precious weeks, admiration of the skill so actively working his ruin, horror at the too tardy conviction of Lyderic's treachery—these were among the mass of combinations that his mind at once took in. He made his way through the throng. Every tongue was in an instant hushed. Every eye fixed on him. He reached one of the flights of stairs hewn in the rocky foundation and leading to the vaults. By the light of the torches flaring far into these depths, he saw the flood wallowing in its own involutions, and marked the congregated proofs of destruction. He uttered not a word; but hastily turning round and rapidly gaining the court-yard, he gave his loud command that the whole force of the castle should at once turn out from the three portal gates, for a simultaneous attack on the village. A shout from every throat answered his command; and each officer and every man of the ready garrison seized their arms, and hurried to their various stations for assembling, all worked up to desperation by the frightful exigency of the case. 'A volunteer, to descend and examine the western front of the rocks' were Count Ivon's next words, during the bustling formation of the various dismounted platoons. The Moriscoe instantly stepped forward, and a score others followed his movement. 'Thanks, Aben Farez!' said Count Ivon, with a smile that would have repaid any one of his followers for any possible risk or sacrifice. 'Up with the rampart postern; run the platform out; steady the pulley bar; quick, quick! Grasp the rope firmly, Aben Farez; discover what you can; and tell me all!' The small square postern on the rampart overlooking the river was immediately opened, a narrow platform shot out a few feet beyond the ridge, and a strong bar with a cord and pulley, formerly used for communications with the village, was quickly fixed above. Grasping firm hold of the rope with hand and legs, the Moriscoe swung out from off the platform, on which De Bassenveldt with Beatrice and one or two

others stood, leaning over to the utmost verge and listening for whatever words the adventurous volunteer might utter from his aerial point of observation. He was soon out of sight, for the rope slipping rapidly over the projecting mass of granite, swung in again towards the face of the rock, giving him full power of observation on whatever went on below, and at the same time exposing him to the assaults of whatever missiles the enemy might direct against him. 'Holy Alla preserve him!' murmured Beatrice, shuddering as she gazed on the strong vibration of the rope. 'Hist, hist! he speaks!' whispered De Bassenveldt, eagerly leaning forward, and striving to catch the sound of the Moriscoe's voice through some moments' pause in the cannon's din. And a few broken sentences came indistinctly on the listener's ear:—'From the river to the rocks all seems alive, with huge and curious engines. Enormous snake-like tubes are writhing in sinuous motion up from the water's edge. The soldiers all gaze on the works—the guards have left their arms—they see me and seem alarmed—now one levels his arquebuse to fire at me—another—haul up, haul up! Quick! I have no more to tell.' 'Up with him—quick, quick!' cried De Bassenveldt and Beatrice together; and both in their impatience seized the rope which several strong arms dragged rapidly across the pulley. But they were not fast enough to outspeed the enemy's bullets. Two or three in quick succession whistled up into the air close to the platform's edge; and as the rope was wound rapidly up, harshly grating over the ridge of granite, full half its thickness was worn away. The Moriscoe's peril made every heart thrill. He literally hung by a thread, which the slightest motion threatened to break. Yet his weight was evidently felt by all who pulled at the trembling and fragile cord. Another shot from below was heard in the bullet's upward whiz; and with it a quick jirk, and an instant slackening of the rope told to the over-anxious group that the Moriscoe had quitted his hold and fallen below. 'Holy Alla! holy Alla!' cried Beatrice, sinking into De Bassenveldt's arms. 'Haul up, haul up!' screamed Aben Farez from below the ledge of rock against which he had only for a moment rested one of his feet, and by an instant slackening of his hold, recovered it with firmer nerve. A renewed pull from every sinewy arm, and a loud cheer of encouragement, answered the cry; and in an instant more the turbaned head appeared. Another and another shot came up—the Moriscoe dropped one arm—he was hit! Still one strong pull—his body reached the rough edge of the rock—another—he was clear above it, and safe from the enemy's bullets—another still—and snap went the rope across! All those who pulled it fell back with the shock; and the falling Moriscoe, as he struck against the precipice's edge, seized and clung to it in the rivetted grasp of despair. A scream burst from Beatrice, who in the horrid impulse was

on the point of dashing herself forward, but was withheld by one of the soldiers. In this moment De Bassenveldt, seizing the end of the broken rope, and twisting it strongly round his left wrist, threw himself across the platform's edge, and while the men above, in speechless fear held the remaining cordage strong and firm, he slid down the broken face of the rock, till he came close to the shuddering and almost exhausted Moriscoe. 'Courage, courage!' cried he, as he stretched forth his hand, which the other dared not attempt to grasp, for had he loosened his hold and missed De Bassenveldt, he must have been infallibly precipitated down. His deliverer saw this, and by one steady clutch he caught the thick folds of his vest and tunic, and while those above who watched every movement, instantly hauled up again, De Bassenveldt touched from time to time the projecting points of rock, and was quickly on the platform, the worn-out Moriscoe firmly held in his saving grasp."

"'And now, artisans, for rapid work!' cried De Bassenveldt to some forgers and other mechanics who stood near. 'Clear away this end of rope, and sling a chain across the pulley—stand by me now a couple of ye—seize a hatchet each, and give me one—we must descend by the chain cable below, even where this brave Moriscoe has already been, and cut through the leathern pipes which are carrying this tide of ruin into our stronghold. Quick, quick, my lads, let your hammers clink!' And almost as speedily as the words were spoken the order was obeyed. The long, connecting chain, which lay on the rampart and bound several of the brass culverins to their carriages, was instantly unlinked and as quickly rivetted again, in the new position indicated by Count Ivon. A sharp-edged hatchet was placed in his hand, and several of the workmen pressed forward, anxious of the honour of being the companions of his perilous adventure.

"De Bassenveldt took his position on a small narrow board, which was passed through a link of the chain to support his feet; his left hand grasped the chain, his right hand wielded the hatchet, his only weapon. The windlass was let loose, and he went gradually down, and just above his head a second little footboard was inserted, on which the Moriscoe placed himself in the same manner, his long-bladed Spanish knife firmly held before him. A third and fourth board were successively placed at like distances, as the chain was gradually lowered, and the two volunteer workmen took their steady footing and hold. De Bassenveldt now rested on the outmost ledge of rock, over which he cast an anxious glance. In a minute or two, loud shouts and the quick fire of musketry were heard from below, and then De Bassenveldt called out to Beatrice and those on the platform, 'Now, now, let us steadily down; the smoke from the firing forms a shroud to hide us from view. Loose away! loose away!' The chain gradually rattled through the pulley, and the four gallant men were soon suspended over the scene of slaughter which the village now presented. The royalist force, taken quite unawares in the midst of their exultation at the prodigious efforts of the engineers and their machinery, hurried to their arms and defences in breathless confusion, but with unshaken courage. Don Diego Leonis, and the other officers, heading the garrison troops with desperate fury, poured in from every arquebuse a thick discharge, and then rushed forward, pike and sword in hand. The

royalists returned a scattered fire, and amidst the cloud of smoke rising and enveloping the face of the rock, De Bassenveldt found himself close to a small projection beside the opening, where three or four of the huge pipes were inserted. He caught by one foot on this landing-place, and a blow of his hatchet felled to the earth, full fifty feet below, the mechanic who stood on the topmast bar of a ladder, and directed the application of the pipes. He next sprang against the rock, seized the readiest angle, and then moved closer to the aperture, making room for the Moriscoe. The first of the two workmen safely followed their movement, and clung to the rock; but the last unfortunate fellow, slipping from his imperfect footing, was dashed headlong down, and met an instant death on the rugged basement below. De Bassenveldt and his remaining companions, by simultaneous and redoubled strokes, soon cut through the tough materials that formed the tubes, and cast them successively down, flaccid and innocuous. They next hacked at, and pulled away by main force, the plugs and wadding which had kept the pipes firm in the aperture; and as they finally removed them, a rush of water poured back from the surcharged cavities, and spouted down the rocks in a violent cascade. De Bassenveldt could not now resist the impulse that urged him to descend and join in the fierce mêlée which sent up its discordant tumult. Brandishing his hatchet, and forgetting in the heat of the moment every thing but the wild excitement of his courage, he stepped on the ladder, and with some words, which his followers could not hear amidst the uprising din, he rapidly began his descent. The Moriscoe and his companion wanted no word of command: they followed close, but ere they were half way down, the ladder was forcibly pushed in the confusion below, and flung from its resting-place against the rock, while the three adventurers were cast violently to the ground. A moment's stunning sensation passed across De Bassenveldt, but he felt that his limbs were whole, and he bounded on his feet. Aben Farez was in an instant by his side. The workman lay insensible, not having had the good luck to fall, as they did, among the twisted leathern tubes which lay in providential coils, and completely broke the fall. With blows of the hatchet, and stabs of the knife, dealt fiercely round, De Bassenveldt and the Moriscoe soon cleared their way through the astonished and half-beaten royalists, and reached the strong defence thrown up before the village towards the castle approaches. Shouting loudly, 'A Bassenveldt, liberty!' the war-cries of the garrison—they fiercely attacked the crowded guard; and by an instance common in such kind of warfare, two men put hundreds to flight. Surprise and panic adding many imagined echoes to every shout thus sounding in their rear, through clouds of smoke, the royalists abandoned their whole line of defence, and rushed towards the river. Don Diego and his troops then bounded unopposed over every impediment, and gazed as on a miracle at their beloved chief, hailing them with cries of victory within the enemy's lines."

We leave this spirited scene to speak for itself, and the *Heiress of Bruges* to the favour of our readers.

The History of Maritime and Inland Discovery, Vol. II.; and *the Eleventh of Lardner's Cabinet Cyclopædia*. 12mo. pp. 356. Longman and Co.; Taylor.

THE first volume of this history of interesting events has, we believe, attracted as much po-

popularity as even the most distinguished of those productions from eminent pens which have made part of the same series. This is to be attributed not only to the nature of the subject, always acceptable to the British public, but also to the ability with which it has been treated. The selections are judicious, the apportionment of space to the various voyages well advised, and the style suited by its clearness and good English qualities to the matter in hand.

"In this volume (says the writer) a rapid view has been taken of the progress of geography from the commencement of the sixteenth to the middle of the eighteenth century. We have seen with what hasty strides Europeans proceeded to establish themselves in the most distant regions of the globe. Ambition, the love of gold and of adventure, were the motives that prompted their indefatigable exertions. Yet the impulse arising from the discoveries of Columbus was not confined to the ambitious, the covetous, or romantic alone—the studious and speculative likewise felt its influence. Geography in the beginning of the sixteenth century was the favourite study of the greatest scholars. The attention of learned men seemed for a time engrossed by the light recently thrown on the form and structure of the globe; and many mathematicians and philologists zealously applied themselves to the perfection of geographical science. Yet geography can hardly be said to have been cultivated generally, or to have been designedly promoted, apart from views of political or mercantile interest, prior to the period at which we have now arrived in the course of this work. The curiosity of mankind is now more liberal and exalted; and, among civilised nations, not even war is allowed to obstruct the progress of geographical researches. Our reflections on the growth of geographical science are therefore reserved for the volume that is to follow."

There is a wide field for this promised addition, which we doubt not will be worthy of the preceding digest; and we now beg to glance at the new contribution. The volume before us contains the second and remaining voyages of Columbus, and the voyage of Amerigo Vespucci, whose name is so unjustly immortalised by a whole quarter of the globe. Other American discoveries follow, such as Pinzon, Hojeda, Balboa, Magellan, Cortez, Pizarro, Cabot, &c.; Spaniard, Portuguese, French, Dutch, and English. Among these we observe Mendez Pinto, whose name has passed into a proverbial expression, almost as famous, though certes not so complimentary, as that of the nominator of America himself. "Ferdinand Mendez Pinto was but a type of thee, thou liar of the first magnitude!" remains a reproach to this traveller; but we hope an undeserved one, as the editor quotes his marvellous adventures without impeaching their authenticity, except on some points.* As this is the case, we shall extract a few pages from his narrative, as specimens of the volume. After

* "Credit was long denied to the narrative of Mendez Pinto, or Mendez Pinto, as a learned writer of ours jocosely calls him; and our great dramatic poet has given currency to this opinion. But as we have acquired a greater knowledge of the countries which he visited, his credit has become re-established, and his travels can no longer be looked upon as mere fictions. He unquestionably embellishes his adventures; but this liberty, as well as the contradictions of which he is frequently guilty, are pardonable in an unlettered man who writes from memory, and whose taste is swayed by the secret attachment which ignorance always feels to whatever is wonderful. Yet his volume is not characterised by exaggeration, so much as by the multitude of events and particulars graphically set forth, and related with all the air of reality."

a hundred wrecks and perils as a follower of Faria, a man of consequence in these parts, who had been ruined by Coja Acem's destroying his shipping, we are told:—

“Many were the adventures which our heroes met with at the commencement of their cruise; and in all they came off with success. They pillaged towns, captured native pirates, and seemed to have thought that in right of their nation they were not bound by any restraints of morality or justice. On one occasion they observed several small vessels approaching, with music playing, banners flying, and other demonstrations of rejoicing. On board of one of these was the daughter of the governor of Colem, betrothed to a neighbouring chieftain, who was to have met her in this place. The bride, mistaking the ships of the Portuguese for those of her destined spouse, sent a letter, couched in the hyperbolic language of the East, to reproach him for his coldness. She assured him, ‘that if the feeble sex of a woman would permit her, she would fly to kiss his tardy feet as the hungry falcon flies after the fearful heron.’ The Portuguese in the mean time lay concealed, their Chinese seamen alone remaining on deck. The bride's vessel, and those which attended her, were captured without resistance. The lady and her brothers, ‘being young, white, and well favoured,’ with about twenty of the seamen, were retained; the rest, who were good for nothing, were sent ashore. The bridegroom soon after made his appearance with five vessels, and saluted the Portuguese as he passed, ‘with great store of music and show of gladness,’ ignorant that they were carrying off his bride. After Faria and his associates had cruised up and down seven months and a half without hearing of Coja Acem, they agreed to winter in Siam, and divide the spoil. This agreement being sworn to and signed by all, they went and anchored under the island *De los Ladrones*, or *Pirates' Island*. Here a violent hurricane overtook them; and about two hours after midnight the four vessels ran foul of one another, dashed on shore, and went to pieces. Four hundred and eighty persons were drowned: of fifty-three who were saved, only twenty-three were Portuguese. Faria, a second time reduced to utter poverty, found strength in despair. He even endeavoured to draw consolation from religion, while he abandoned every principle of morality, and assured his followers, that as God never did ill but for a greater good, there was no doubt that for the 500,000 ducats they had lost, he would permit them to rob 600,000 more. One day, when our adventurers were scattered in the woods, gathering fruits for their subsistence, a small vessel was seen to approach the shore: the Chinese, to whom she belonged, about thirty in number, jumped on land and commenced lighting fires, drying their clothes, and amusing themselves, as men weary of a long voyage and suspecting no harm. Faria in the mean time drawing his companions together, assured them that the boat was sent by a special providence to their relief; and as superstition is naturally selfish, they readily gave credit to a miracle wrought in their own favour. Their measures were soon concerted; and a signal being given, they rushed suddenly to the shore, made themselves masters of the boat, and stood out to sea. The Chinese, who were taken by surprise, stood stupefied with horror and amazement when they found themselves left thus helpless and forlorn. Proceeding in this small vessel to the port of Xingran, our heroes boarded a large junk in the dead of night,

and, getting out to sea in their new prize, shortly after joined company with a Chinese pirate, who promised to serve them faithfully on condition of receiving one third of the spoil. This reinforcement arrived at a lucky season. Faria received intelligence of his deadly enemy Coja Acem, whom he proceeded immediately to encounter. The battle was desperately contended; but the victory remained with the Portuguese. The body of Coja Acem was cut in pieces and thrown overboard; five of his followers, who remained alive, were cast into the hold, in order to be tortured till they might disclose the valuable secrets of his hidden treasures. The victors sailed to Liampoo (Ning-Po), where they were received with the greatest honours by the Portuguese merchants. Faria was met on his arrival by a splendid procession, and conducted to the town, where preparations had been made for his reception. When the Chinese inquired who was the person treated with so much distinction, it was answered, ‘that his father shod the horses whereon the king of Portugal rode;’ and the Chinese, believing all this to be true, cried out, in admiration, ‘Truly there are great kings in the world whereof our ancient historians, through ignorance, hath made no mention.’ The public rejoicings at the arrival of Faria concluded with a mass and sermon, which our pious author ventures to criticise in a vein of jocularity. ‘Mass being ended, the sermon followed, that was made by Estevano Noguera, an ancient man, and curate of the place, who, to speak the truth, through discontinuance of preaching, was but little versed in pulpit matters. Howbeit, desiring to shew himself that day a learned man in so remarkable a solemnity, he laboured to make demonstration of his best rhetoric; to which effect he grounded all his sermon on the praises of Antonio de Faria, and that in words so ill placed, and so far from his text, that our captain was much ashamed of it; wherefore some of his friends plucked him three or four times by the surplice to make him give over; but he being nettled, cried—‘I will not stop, but will rather say more—for I speak nothing but what is as true as gospel. In regard whereof let me alone I pray you; for I have made a vow to God never to desist from praising this noble captain, as he deserves it at my hands, for saving me 7000 ducats' venture that Merim Taborda had of mine in his junk, and was taken from him by that dog Coja Acem; for which let the soul of so cursed a rogue and wicked devil be tormented in hell for ever and ever: whereunto say all with me, Amen.’ At Liampoo, Faria became acquainted with a Chinese pirate named Similau, who gave him an extravagant account of an island called Calemply, in which were the tombs of seventeen kings of China, all of gold, besides immense treasures of different descriptions. The Portuguese adventurer, ‘being naturally curious,’ as our author observes, resolved to seek and carry off these riches. It is obvious that Similau, when he spoke of golden tombs, related a popular story; and it shews in what estimation the courage and the prowess of the Portuguese were held, when a prize too romantically rich to be sought by a Chinese alone was thought a fit object for their ambition. It is not easy to understand the course which our author says was followed in this enterprise. They arrived at a port called Buxipalem in 49° north, where the climate was cold, and the sea crowded with monsters which our author is fearful to describe. They were now two months and a half at sea, generally following a north-easterly course, and

had not yet arrived at Calemply. The Portuguese reproached Similau with steering only by guess, and Faria at one time grew so violent that he threatened to stab him. Similau, in consequence, made his escape, and his example was followed by thirty-six of the Chinese seamen. Faria, thus left without a guide, persisted in seeking the royal sepulchres, and at length arrived at Calemply, in the description of which our author may be suspected of drawing largely on his imagination. ‘The island,’ he says, ‘about a league in circuit, is all enclosed with a platform of jasper six and twenty spans high; the stones being so neatly joined that the whole wall seemed one piece. Pillars of copper, at intervals of about forty feet, were ranged on the wall, and on each of these was the figure of a woman holding a bowl in her hand. Within this gallery were rows of arches, gilt towers, and monstrous figures, cast in metal, with three hundred and threescore hermitages, dedicated to the gods of the year. Faria immediately landed, and breaking into one of the hermitages, began to collect the silver which was mixed with the bones of the dead, and which was derived, as he was informed by the astonished hermit, from the alms carried with them by the deceased to support them in the world of the moon, where they live eternally.’ Faria, while ransacking this place, confessed himself conscious that it was a very great sin, and declared that it was his intention, at some future period, to atone by penance for so enormous a crime. To this the Chinese sage replied, ‘that he who knows these things, and doth them not, runs far greater danger than he who sins through ignorance.’ The Portuguese robbers then withdrew to their ships, intending to return to the work of pillage with the daylight. But their sins, as our author observes, would not allow them to see the happy issue of the business. They were hardly on board when they saw fires lighted on the island, and heard bells ringing, from which they concluded that the alarm was given. Faria hastened again on shore, in the dead of night, and ran up and down with a frantic desire to carry off some valuable prize; but it was now too late, and the danger was so imminent that his companions forced him to fly. They spread all sail, and stood out to sea, so sad from their disappointment that they hardly spoke to one another during the voyage. When they had been about a month at sea, a furious gale came on in the gulf of Nankin, which reduced them to such distress, that they were obliged to lighten the ships by every means in their power, to cut down their masts, and throw overboard their chests full of silver. About midnight, the people in Antonio de Faria's ship were heard to cry out ‘Lord have mercy upon us!’ and when day broke, it was found that she had disappeared. The other ship was in a sinking state, and the crew, as their only chance, ran her upon the coast, where she instantly went to pieces. Fourteen Portuguese were saved; the number of the drowned, including Chinese mariners, was six and thirty. ‘This miserable disaster,’ says our author, ‘happened on a Monday, the 5th of August, in the year 1540; for which the Lord be praised everlastingly.’ The shipwrecked pirates met with but an indifferent reception from the Chinese, who seem to have a particular dislike to the appearance of a lawless vagabond. Pinto and his companions were thrust into a pond, where they were almost devoured by leeches. Whenever they arrived at a town, they were sure to be expelled from it with a sound beating. They represented themselves

as 'poor natives of Siam,' and the falsehood of their story was probably recognised at once. At length they were sent to Nankin with other criminals, where they were condemned to lose their thumbs and to be whipped. The latter part of the sentence was immediately put in execution with such severity that two of the party died of it. Here they met a Russian, 'who,' says Pinto, 'understood Chinese as well as we.' From Nankin, of which our author gives a copious description, the Portuguese were sent to Pekin, travelling the greater part of the way by canals. On the route they met with Christians, the descendants of those who had been converted more than a century before by Matthew Escaudel, a Hungarian missionary. They also met with a daughter of Thome Perez, the unfortunate ambassador who had been detained in China some years before. Pinto's observations with respect to the Chinese are lively and accurate. He remarks the multitude of those who dwell upon the rivers. Their mode of rearing water-fowl; the good order observed by the common people; the strictness with which industrious habits are enforced; the regulations of their markets; their mode of hatching eggs by artificial heat; their eating with chop-sticks; with many other particulars, are reported with the exactness of an eye-witness. In fine, he observes, 'I dare boldly say, if my testimony be worthy of credit, that in one and twenty years' space, during which time, with a world of misfortunes, labour, and pain, I traversed the greatest part of Asia, as may appear by this my discourse, I had seen in some countries a wonderful abundance of several sorts of victuals and provisions which we have not in Europe; yet, without speaking what each of them may have in particular, I do not think that in all Europe there is so much as there is in China alone. And the same may be said of all the rest wherewith heaven hath favoured this climate; as well for the temperature of the air as that which concerns the policy, riches, and greatness of their estate: but that which gives the greatest lustre unto it is the exact observation of justice; for this country is so well ruled, that it may justly be envied by all others in the world.' This tribute of praise to Chinese justice is singularly candid in one who had so often felt its severe application. The criminals reached Pekin, chained three and three together, 'where for their welcome they had at their first dash thirty lashes a-piece given them.' The nine surviving Portuguese, all chained together, were at length conducted to the hall of audience, to which they had appealed, to hear their final sentence, and were overjoyed to find that they were condemned to only a year's hard work at the reparations of Quansy. Pinto gives us a minute account of Pekin, where he resided two months and a half, and a description of which, in Chinese, he tells us he brought home with him to Portugal. He also impudently affirms that he read it. The Portuguese had served about eight months of their captivity, when news arrived that the king of Tatar, with a host of 1,800,000 men, had attacked Pekin, and that a part of the invading army was advancing against Quansy. This place was soon reduced, and the Portuguese slaves were led off by the conquerors. An accident soon brought them into notice. The castle of Nixiamcoco resisted all the efforts of the Tatars; when Jorge Mendez, the most resolute of the captives, boasted that he could take it. The Tatar general embraced his offer; and Mendez, with two other Portuguese, led a great army of Tatars to the assault. Their

courage triumphed, and the Portuguese were thenceforward held in the highest honour in the camp. The Tatar general declared, 'that they were almost as resolute as those of Japan.'

Pinto finally turned Jesuit, which gave him, of course, the privilege of lying under divine authority; and as we have only cited him for the amusement of his statements, we shall now leave him without farther commentary.

The epitomes of the early English voyages to the North are replete with interest, from Willoughby, Chancelor, Borough, Frobisher, Gilbert, and Davis, to Hudson, Dobbs, and Middleton. The next division, "Settlements in the East," is equally valuable; but, indeed, the whole volume is so filled with variety and excellence, that any ten of its pages which we might quote would prove to readers that they ought not to be satisfied with less than all.

Lectures on Painting, delivered at the Royal Academy, by Henry Fuseli, P.P. Now first printed from the original Manuscripts. Second Series. 4to. pp. 140. London, 1830. Colburn and Bentley.

"The following six Lectures of Fuseli," says Mr. Knowles, under whose direction they have been published, "are printed *verbatim* from his manuscripts. I considered that (as executor to his will), in doing this, I should best meet the views of the deceased, and the wishes of the public, rather than in acting upon any opinions of my own, by using the pruning-knife; for I am well aware that a few of the notions, and some of the expressions, may be found, from his pen, in other places. But to have omitted these, would have injured the general argument, and severed the chain of his reasoning. With such feelings, the Lectures now appear without any omission or emendation on my part."

It is well known that Mr. Fuseli's manner, as a lecturer, was very animated, and that his voice was sonorous and powerful, but that, especially as he warmed with his theme, the foreign accent so predominated over the English, that it occasionally became difficult to follow him through his learned and highly-wrought sentences.* It is very gratifying, therefore, to be enabled to read at leisure that which the torrent of his impassioned delivery sometimes prevented his hearers from thoroughly comprehending. The lectures now published are six in number; viz. "On Design;" "Colour, in Fresco Painting;" "Colour—Oil Painting;" "The Method of fixing a Standard, and defining the Proportions of the Human Frame: with Directions to the Student in copying the Life;" "On the prevailing Method of treating the History of Painting, with Observations on the Picture of Lionardo da Vinci of the Last Supper;" and "On the present state of the Art, and the causes which check its progress." The professional artist, and the enlightened and experienced amateur, will derive much gratification and instruction from the perusal of the whole of these lectures; for the various subjects comprehended in them are handled with great knowledge, vigour, and discrimination: but it will, perhaps, be more satisfactory to the general reader if, with one exception, we confine

* The amusing peculiarities of Mr. Fuseli's intonation were frequent subjects of imitation with the students of the Royal Academy, by whom he was, nevertheless, greatly beloved and respected, as he well deserved to be. The most successful of these young mimics was Henry Munro (a son of Dr. Munro), who was suddenly cut off by death, at the moment when he was beginning to give promise of the highest excellence in the arts.

our extracts to the last lecture of the series; in which Mr. Fuseli treats of the present state of the art, and of the causes which check its progress. The exception to which we allude is the following passage, which concludes the tenth lecture. We were so fortunate as to be present when that lecture was delivered; and we shall never forget the sarcastic energy with which Mr. Fuseli poured forth the passage in question.

"The province delegated by the Academy to its teachers must be—where hope promises success, and sparks of genius appear—to foster, to encourage; but where necessity commands, rather to deter than to delude, and thus to check the progress of that compendary method, which, according to your late president, has ruined the arts of every country, by reducing execution to a recipe, substituting manner for style, ornament for substance, and giving admission to mediocrity. If the students of this Academy must be supposed to have overcome the rudiments, and to be arrived at that point from which it may be discovered whether nature intended them for mere craftsmen or real artists, near that point where, in the phrase of Reynolds, 'genius begins, and rules end,' it behoves us not to mistake the mere children of necessity, or the pledges of vanity, for the real nurselings of public hope, or the future supporters of the beneficent establishment that rears them. Instruction, it is true, may put them in possession of every attainable part of the art in a decent degree; they may learn to draw with tolerable correctness, to colour with tolerable effect, to put their figures together tolerably well, and to furnish their faces with a tolerable expression—it may not be easy for any one to pick any thing intolerably bad out of their works; but when they have done all this—and almost all may do all this, for all this may be taught—they will find themselves exactly at the point where all that gives value to art begins—genius, which cannot be taught—at the threshold of the art, in a state of mediocrity. 'Gods, men, and fame,' says Horace, 'reject mediocrity in poets.' Why? Neither poetry nor painting spring from the necessities of society, or furnish necessities to life; offsprings of fancy, leisure, and lofty contemplation, organs of religion and government, ornaments of society, and too often mere charms of the senses and instruments of luxury, they derive their excellence from novelty, degree, and polish. What none indispensably want, all may wish for, but few only are able to procure, acquires its value from some exclusive quality, founded on intrinsic or some conventional merit, and that, or an equal substitute, mediocrity cannot reach: hence, by suffering it to invade the province of genius and talent, we rob the plough, the shop, the loom, the school, perhaps the desk and pulpit, of a thousand useful hands. A good mechanic, a trusty labourer, an honest tradesman, are beings more important, of greater use to society, and better supporters of the state, than an artist or a poet of mediocrity. When I, therefore, say that it is the duty of the Academy to deter rather than to delude, I am not afraid of having advanced a paradox hostile to the progress of real art. The capacities that time will disclose, genius and talents, cannot be deterred by the exposition of difficulties; and it is the interest of society that all else should."

Subjoined are the extracts from the twelfth lecture to which we have already adverted:—

"Such is the influence of the plastic arts on society, on manners, sentiments, the commodities and the ornaments of life, that we think

ourselves generally entitled to form our estimate of times and nations by its standard. As our homage attends those whose patronage reared them to a state of efflorescence or maturity, so we pass with neglect, or pursue with contempt, the age or race which want of culture or of opportunity averted from developing symptoms of a similar attachment. * * *

"The artist and the public are ever in the strictest reciprocity: if the arts flourished no where as in Greece, no other nation ever interested itself with motives so pure in their establishment and progress, or allowed them so ample a compass. As long as their march was marked with such dignity, whilst their union excited admiration, commanded attachment, and led the public, they grew, they rose; but when individually to please, the artist attempted to monopolise the interest due to art, to abstract by novelty and to flatter the multitude, ruin followed. To prosper, the art not only must feel itself free, it ought to reign; if it be domineered over, if it follow the dictate of fashion or a patron's whims, then is its dissolution at hand. To attain the height of the ancient was impossible for modern art, circumscribed by narrower limits, forced to form itself rapidly, and on borrowed principles; still it owes its origin and support to nearly similar causes. During the fourteenth, and still more in the course of the fifteenth century, so much activity, so general a predilection for art spread themselves over the greater part of Italy, that we are astonished at the farrago of various imagery produced at those periods. The artist and the art were indeed considered as little more than craftsmen and a craft; but they were indemnified for the want of honours by the dignity of their employment, by commissions to decorate churches, convents, and public buildings. * * *

"The efficient cause why higher art at present is sunk to such a state of inactivity and languor, that it may be doubted whether it will exist much longer, is not a particular one, which private patronage, or the will of an individual, however great, can remove: but a general cause, founded on the bent, the manners, habits, modes of a nation,—and not of one nation alone, but of all who at present pretend to culture. Our age, when compared with former ages, has but little occasion for great works, and that is the reason why so few are produced: the ambition, activity, and spirit of public life is shrunk to the minute detail of domestic arrangements—every thing that surrounds us tends to shew us in private, is become snug, less, narrow, pretty, insignificant. We are not, perhaps, the less happy on account of all this; but from such selfish trifling, to expect a system of art built on grandeur, without a total revolution, would only be less presumptuous than insane. What right have we to expect such a revolution in our favour? Let us advert for a moment to the enormous difference of difficulty between forming and amending the taste of a public—between legislation and reform: either task is that of genius; both have adherents, disciples, champions; but persecution, derision, checks, will generally oppose the efforts of the latter, whilst submission, gratitude, encouragement, attend the smooth march of the former. No madness is so incurable as wilful perverseness; and when men can once, with Medea, declare that they know what is best, and approve of it, but must, or choose to follow the worst, perhaps a revolution worse to be dreaded than the disease itself, must precede the possibility of a cure. Though, as it has been observed, the

fourteenth and fifteenth centuries granted to the artists little more than the attention due to ingenious craftsmen; they were, from the object of their occupations and the taste of their employers, the legitimate precursors of M. Agnolo and Raffaello, who did no more than raise their style to the sublimity and pathos of the subject. These trod with loftier gait and bolder strides a path on which the former had sometimes stumbled, often crept, but always advanced: the public and the artist went hand in hand—but on what spot of Europe can the young artist of our day be placed to meet with circumstances equally favourable? Arm him, if you please, with the epic and dramatic powers of M. Agnolo and Raffaello,—where are the religious and civic establishments, where the temples and halls, open to receive, where the public prepared to call them forth, to stimulate, to reward them? 'Idle complaints!' I hear a thousand voices reply. 'You accuse the public of apathy for the arts, while public and private exhibitions tread on each other's heels, panorama opens on panorama, and the splendour of galleries dazzles the wearied eye, and the ear is stunned with the incessant stroke of the sculptor's hammer, and our temples narrowed by crowds of monuments shouldering each other to perpetuate the memory of statesmen who deluded, or of heroes who bled at a nation's call! Look round all Europe—revolve the page of history from Osymandias to Pericles, from Pericles to Constantine—and say what age, what race, stretched forth a stronger arm to raise the drooping genius of art? Is it the public's fault if encouragement is turned into a job, and despatch and quantity have supplanted excellence and quality, as objects of the artist's emulation?' And do you think that accidental and temporary encouragement can invalidate charges founded on permanent causes? What blew up the art will in its own surcease terminate its success. Art is not ephemeral: religion and liberty had for ages prepared what religion and liberty were to establish among the ancients—the germ of the Olympian Jupiter, and the Minerva of Phidias, lay in the gods of Ægina; and that of Theseus, Hercules, and Alcibiades, in the blocks of Harmodios and Aristogiton. * * *

"The effect of honours and rewards has been insisted on as a necessary incentive to artists: they ought indeed to be, they sometimes are, the result of superior powers; but accidental or partial honours cannot create genius, nor private profusion supply public neglect. No genuine work of art ever was or ever can be produced, but for its own sake; if the artist do not conceive to please himself, he never will finish to please the world. Can we persuade ourselves that all the treasures of the globe could suddenly produce an Iliad or Paradise Lost, or the Jupiter of Phidias, or the Capella Sistina? Circumstances may assist or retard parts, but cannot make them—they are the winds that now blow out a light, now animate a spark to conflagration. Nature herself has set her barriers between age and age, between genius and genius, which no mortal overleaps; all attempts to raise to perfection at once, what can only be reared by a succession of epochs, must prove abortive and nugatory: the very proposals of premiums, honours, and rewards to excite talent or rouse genius, prove of themselves that the age is unfavourable to art; for, had it the patronage of the public, how could it want them? We have now been in possession of an Academy more than half a century; all the intrinsic means of forming a style alternate at our commands—

professional instruction has never ceased to direct the student; premiums are distributed to rear talent and stimulate emulation, and stipends are granted to relieve the wants of genius and finish education. And what is the result? If we apply to our Exhibition, what does it present in the aggregate, but a gorgeous display of varied powers, condemned, if not to the beasts, at least to the dictates of fashion and vanity? What, therefore, can be urged against the conclusion, that, as far as the public is concerned, the art is sinking, and threatens to sink still deeper, from the want of demand for great and significant works? Florence, Bologna, Venice, each singly taken, produced in the course of the sixteenth century alone, more great historic pictures than all Britain taken together, from its earliest attempts at painting to its present efforts. What are we to conclude from this?—that the soil from which Shakspeare and Milton sprang, is unfit to rear the genius of poetic art? or find the cause of this seeming impotence in that general change of habits, customs, pursuits, and amusements, which for near a century has stamped the national character of Europe with apathy or discountenance of the genuine principles of art. * * *

"Permit me to part, with one final observation. Reynolds has told us, and from him whose genius was crowned with the most brilliant success during his life, from him it came with unexampled magnanimity, 'that those who court the applause of their own time, must reckon on the neglect of posterity.' On this I shall not insist as a general maxim; all depends on the character of the time in which an artist lives, and on the motive of his exertions. M. Agnolo, Raffaello, Tiziano, and Vasari, Giuseppe d'Arpino, and Luca Giordano, enjoyed equal celebrity during their own times. The three first enjoy it now, the three last are forgotten or censured. What are we to infer from this unequal verdict of posterity? What, but what Cicero says, that time obliterates the conceits of opinion or fashion, and establishes the verdicts of nature? The age of Julio and Leone demanded genius for its own sake, and found it—the age of Cosmo, Ferdinand, and Urban, demanded talents and despatch to flatter their own vanity, and found them too; but Cosmo, Ferdinand, and Urban, are sunk in the same oblivion, or involved in the same censure with their tools—Julio and Leone continue to live with the permanent powers which they had called forth. * * *

We are happy to observe that Mr. Knowles is preparing for publication, "the Life and Works" of Mr. Fuseli. It will, no doubt, be a very curious and interesting volume; for, whatever may be said, and said justly, of Mr. Fuseli's occasional extravagance and mannerism, no candid person can deny that he was a man of powerful genius, and of singularly extensive attainments. * * *

Paul Clifford. By the Author of "Pelham," "Devereux," &c. 3 vols. 12mo. Second edition. London, 1830. Colburn and Bentley.

Of all vanities, perhaps that of accurate prophecy is the most inherent in our nature: a critic even may be pardoned for partaking in so general a feeling; and we do confess that we feel something of almost personal pleasure in having the unqualified praise we bestowed on *Paul Clifford* so strongly and universally confirmed. The author well applies to this novel the appellation of "a Treatise on Social Frauds:" one of the great merits of this fiction

is its truth: what he himself says about wit is especially applicable to his own; we quote the passage, which is among the additions.

"People may talk about fiction being the source of fancy, and wit being at variance with truth; now, some of the wittiest things in the world are witty solely from their truth. Truth is the soul of a good saying. 'You assert,' observes the Socrates of modern times, 'that we have a *virtual* representation; very well, let us have a *virtual* taxation too!' Here the wit is in the fidelity of the *sequitur*. When Columbus broke the egg, where was the wit? In the completeness of conviction in the broken egg."

There are some shrewd and original remarks put forth in the character of Mr. Tomlinson; from these we extract one or two, and recommend all, not only for perusal, but reflection.

"When you talk to the half wise, twaddle; when you talk to the ignorant, brag; when you talk to the sagacious, look very humble, and ask their opinion.

"There is one way of cheating people peculiar to the British Isles, and which, my pupils, I earnestly recommend you to import hither—cheating by subscription. People like to be plundered in company; dupery then grows into the spirit of party. Thus, one quack very gravely requested persons to fit up a ship for him and send him round the world as its captain to make discoveries; and another patriotically suggested that 10,000*l.* should be subscribed—for what?—to place *him* in parliament. Neither of these fellows could have screwed an individual out of a shilling had he asked him for it in a corner; but a printed list, with 'his royal highness' at the top, plays the devil with English guineas. A subscription for individuals may be considered a society for the ostentatious encouragement of idleness, impudence, beggary, imposture, and other public virtues!

"You must know, my dear young friends, that while the appearance of magnanimity is very becoming to you, and so forth, it will get you a great deal of ill-will if you attempt to practise it to your own detriment. Your neighbours are so invariably, though perhaps insensibly, actuated by self-interest—self-interest is so entirely, though every twaddler denies it, the axis of the moral world, that they fly into a rage with him who seems to disregard it. When a man ruins himself, just hear the abuse he receives; his neighbours take it as a personal affront!"

With truth, merely softened by that gentler feeling which belongs to the sanctity of the dead, we leave the admirable spirit of the following eloquent summing up of character to speak for itself.

"For thee, Gentleman George, for thee, what conclusive valediction remains? Alas! since we began the strange and mumming scene wherein first thou wert introduced, the grim foe hath knocked thrice at thy gates; and now, as we write, thou art departed thence—thou art no more! a new lord presides in thine easy chair, a new voice rings from thy merry board—thou art forgotten! thou art already, like these pages, a tale that is told to a memory that retaineth not! Where are thy quips and cranks? where thy stately coxcombries and thy regal gauds? Thine house, and thy pagoda, thy Gothic chimney, and thy Chinese sign-post;—these yet ask the concluding hand: *thy* hand is cold, their completion, and the enjoyment the completion yields, are for another! Thou sowest, and thy follower reaps; thou buildest, thy successor

holds; thou plantest, and thine heir sits beneath the shadow of thy trees:—

*'Neque harum, quas colis, arborum,
Te, præter invidias cupressos,
Ulla brevem dominum sequetur.'*

At this moment thy life—for thou wert a great man to thine order, and they have added thy biography to that of Abershaw and Shepherd—thy life is before us! What a homely in its events! Gaily didst thou laugh into thy youth, and run through the courses of thy manhood. Wit sat at thy table, and Genius was thy comrade; Beauty was thy handmaid, and Frivolity played around thee;—a buffoon that thou didst ridicule, and ridiculing enjoy! Who among us can look back to thy brilliant era, and not sigh to think that the wonderful men who surrounded thee, and amidst whom thou wert a centre and a nucleus, are for him but the things of history, and the phantoms of a bodiless tradition? Those brilliant suppers, glittering with beauty, the memory of which makes one spot (yet herited by Bachelor Bill) a haunted and a fairy ground; all who gathered to that Armida's circle, the Grammonts, and the Beauvilliers, and the Rochefoucaults of England and the road—who does not feel that to have seen these, though but as Gil Blas saw the festivities of his actors, from the sideboard and behind the chair, would have been a triumph for the earthlier feelings of his old age to recall? What, then, must it have been to have seen them as thou didst see—(thou, the deceased, and the forgotten!)—seen them from the height of thy youth, and power, and rank (for early wert thou keeper to a public), and reckless spirits, and lusty capacities of joy! What pleasures, where sense lavished its uncounted varieties! What revellings, where wine was the least excitement!

*'Inde alitur nudus placidâ sub matre Cupido,
Inde voluptates, inde alimenta Del.'*

Let the scene shift—how stirring is the change! Triumph, and glitter, and conquest! For thy public was a public of renown—thither came the warriors of the ring—the heroes of the cross—and thou, their patron, wert elevate on their fame—*principes pro victoriâ pugnans, comites pro principe*. What visions sweep across us! What glories didst thou witness! Over what conquests didst thou preside! The mightiest epoch—the most wonderful events which the world, thy world, ever knew—of these was it not indeed, and dazzlingly thine,

'To share the triumph and partake the gale.'

Let the scene shift—manhood is touched by age; but lust is 'heeled' by luxury, and pomp is the heir of pleasure; gewgaws and gaud, instead of glory, surround, rejoice, and flatter thee to the last. There rise thy buildings—there lie, secret, but gorgeous, the tabernacles of thine ease; and the earnings of thy friends, and the riches of the people whom they plunder, are waters to thine imperial whirlpool. Thou art lapped in ease as is a silkworm; and profusion flows from thy high and unseen asylum, as the rain poureth from a cloud. Much didst thou do to beautify chimney-tops—much to adorn the sнуggeries where thou didst dwell;—thieving with thee took a substantial shape, and the robberies of the public passed into a metempsychosis of mortar, and—became public-houses. So there and thus, building and planning, didst thou spin out thy latter yarn, till death came upon thee; and when we looked around, lo! thy brother was on thy hearth. And thy parasites, and thy comrades, and thine ancient pals, and thy portly blowens, they made a murmur, and they packed up their goods—but they turned ere

they departed, and they would have worshipped thy brother as they worshipped thee—but he would not! And thy sign-post is gone, and mouldered already; and to the 'Jolly Angler' has succeeded the 'Jolly Tar!' And thy picture is disappearing fast from the print-shops, and thy name from the mouths of men! And thy brother, whom no one praised while thou livedst, is on a steeple of panegyric, built above the churchyard that contains thy grave. Oh! shifting and volatile hearts of men! Who would be keeper of a public? Who dispense the wine and the juices that gladden, when, the moment the pulse of the hand ceases, the wine and the juices are forgotten? To history—for thy name will be preserved in that record, which, whether it be the Calendar of Newgate or of nations, telleth us alike how men suffer, and sin, and perish—to history we leave the sum and balance of thy merits and thy faults. The sins that were thine, were those of the man to whom pleasure is all in all: thou wert, from root to branch, sap and in heart, what moralists term the libertine; hence, the light wooing, the quick desertion, the broken faith, the organised perfidy, that manifested thy bearing to those gentler creatures who called thee—Gentleman George. Never, to one solitary woman, until the last dull flame of thy dotage, didst thou so behave as to give no foundation to complaint, and no voice to wrong. But who shall say, Be honest to one, but laugh at perfidy to another? Who shall wholly confine treachery to one sex, if to that sex he hold treachery no offence? So in thee, as in all thy tribe, there was a laxness of principle, an insincerity of faith, even unto men:—thy friends, when occasion suited, thou couldst forsake; and thy luxuries were dearer to thee than justice to those who supplied them. Men who love and live for pleasure as thou, are usually good-natured, for their devotion to pleasure arises from the strength of their constitution, and the strength of their constitution preserves them from the irritations of weaker nerves; so wert thou good-natured, and often generous, and often with thy generosity didst thou unite a delicacy that shewed thou hadst an original and a tender sympathy with men. But as those who pursue pleasure are above all others impatient of interruption, so to such as interfered with thy main pursuit, thou didst testify a deep, a lasting, and a revengeful anger. Hence the early gallants who rivalled thee in thy loves, know that to thy last day thou didst never forgive—hence thy bitter and unrelenting hatred of thy unfortunate, though not unoffending wife—hence thy rash and arbitrary indignation when the mob took the part of that forsaken landlady, and insulted thee!—hence the six unjust bills thou didst order to be made out, when thy tax-cart was hit by a stone. But let not these vices of temperament be too severely judged! thou wert in such respects, no worse, perhaps, than the members of what may be termed the robbers' aristocracy! Thy tastes, thy qualities, thy principles, thy errors, were rather those of a man frequenting a public, than ruling it. Thou wert the H—d of ale-houses! thy talents, such as they were—and they were the talents of a man of the world—mised thee, rather than guided; for they gave thy mind that demi-philosophy, that indifference to exalted motives, which is generally found in a clever rake, and which we grieve to say characterised the whig-rufflers of thy period. Thy education was wretched; thou hadst a smattering of Horace, but thou couldst not write English, and thy letters betray that thou

wert wofully ignorant of logic. The fineness of thy taste has been exaggerated; thou wert unacquainted with the nobleness of simplicity; thy idea of a whole was grotesque and overloaded; and thy fancy in details was gaudy and meretricious. But thou hadst thy hand constantly in the public purse, and thou hadst plans and advisers for ever before thee: more than all, thou didst find the houses in that neighbourhood wherein thou didst build, so preternaturally hideous, that thou didst require but little science to be less frightful in thy creations. If thou didst not improve thy native village and thy various homes with a solid, a lofty, and a noble taste, thou didst nevertheless very singularly improve. And thy posterity, in avoiding the faults of thy masonry, will be grateful for the effects of thy ambition. The same demi-philosophy which influenced thee in private life, exercised a far benigner and happier power over thee in public. Thou wert not idly vexatious in vestries, nor ordinarily tyrannic in thy parish; if thou wert ever arbitrary, it was only when thy pleasure was checked, or thy vanity wounded. At other times thou didst leave events to their legitimate course, so that in thy latter years thou wert justly popular in thy parish; and in thy grave, thy great good fortune will outshine thy few bad qualities, and men will say of thee with a kindly, nor an erring judgment—"In private life he was not worse than the Rufflers who came to his bar; in public life he was better than those who kept a public before him."—Hark! those huzzas! what is the burthen of that chorus?—Oh, grateful and never time-serving Britons, have ye modified already for another the song ye made so solely in honour of Gentleman George; and must we, lest we lose the custom of the public, and the good things of the tap-room, must we roar with throats yet hoarse with our fervour for the old words, our ardour for the new?

'Here's to Mariner Bill, God bless him!
God bless him!
God bless him!
Here's to Mariner Bill, God bless him!'

"My works," says our author, "are written on the principle of being read twice!" we think they deserve it; and, what is not always the consequence, we also think they will meet with more than their numerical deserts.

Chambers' Book of Scotland.

THE following is another description of a remnant of antiquity, the sanctuary afforded by the precincts of the royal palace of Holyrood Abbey and House; and we cannot do better than place it here, in continuation of the subject with which we broke off in No. 712.

"The *termini sanctorum* of this ancient royal residence, which are so well described in every topographical work as to require a very superficial notice here, remained possessed of their privileges on the departure of James to England; and since that period they have continued to be kept up in full force, without any attempt on the part of the legislature or the courts of law to call them in question. The precincts are extensive, and of a varied character; being partly within and partly without the outworks of the metropolis, and abounding in some of the most sequestered rural haunts in hill and dale in the county of Mid Lothian. The girth of the sanctuary includes the flat piece of meadow land around and to the east of the royal mansion, the domain of St. Anne's Yard, some pleasant gardens and shrubberies, the romantic precipitous cliffs of Salisbury

Craggs (or cliffs), and the adjacent hill of Arthur's Seat, with a fringe of pasture land to the south, reaching to the margin of Duddingstone Loch. Altogether, the verge of the sanctuary may describe a circle of four miles, the greater part of which is walled, with convenient stiles for the thoroughfare of foot passengers. The principal residences of the householders and refugees are huddled into a cluster within a hundred yards of the front of the palace, and only separated from the burgh of Canongate, on the west, by a strand or paved gutter, which, since the removal of the girth cross, which stood near this spot, has been constituted the line of demarcation to debtors in this direction. The dwellings, which at one period were the residences of courtiers and retainers of the household, are mean and inconvenient in their internal structure. It is only a few years since a nauseous dunghill and cowhouse were stationed not three steps from one of the side door-ways of the palace. Such gross nuisances are now removed to a greater distance; but the building is still hemmed in with objects of disgust, and the whole precincts wear an air of desolation, neglect, and impoverished grandeur, characteristic of the altered state of the country in its political relations. This little palatinate, comprising possibly five hundred souls, is under the jurisdiction of a bailie appointed by the heritable keeper of the palace, who holds a court every Monday, at which all internal feuds and civil claims are discussed. He, or the legal deputy whom he commissions, can award punishment by incarceration in the abbey jail—a place consisting of a dungeon and single light apartment—or make seizure of effects. This judicature applies indiscriminately to refugees who may have contracted debts in the sanctuary, and to the general inhabitants. Those who flee to this privileged spot, as soon as they gain the inner side of the girth, are free from pursuit; but before twenty-four hours elapse, they must enter their names in the books of the bailie, lying at a small caverned office near the barrier. On this a printed form of protection is given for a consideration of twenty shillings, whereby the applicant is screened from all civil diligence on debts contracted prior to the date of his registration. As long as the person resides within the bounds, the certificate requires no renewal; but should he leave the sanctuary for fifteen clear days, he cannot be again protected on the same score. He can only be sheltered a second time from the diligence raised on those debts he may have contracted since the date of his first protection. This may be supposed to neutralise the bad effects of the sanctuary; but we are doubtful if it do so, as it must be next to impossible for creditors or officers of justice to procure authentic intelligence of the outgoing and incomings of refugees. No protection can be given to crown debtors, or those convicted of, or charged with, fraud. If it can be sworn that refugees meditate flight from the country, they can be secured and put in confinement the same as other debtors, until they find caution that they will remain. The Court of Session can order the presence of refugees as witnesses in any trial, under a guarantee of safe conduct for a specified number of days. Debtors have liberty to leave the sanctuary from twelve o'clock on Saturday night for the space of twenty-four hours. No species of property can be protected by the privilege. Neither the Court of Session, nor other Scottish judicatures, lay any stress on the act of a debtor taking the benefit of sanctuary, nor visit him with any mark of infamy beyond the

consideration that he is simply a bankrupt. The local authorities look upon the refugee as if he were in a foreign country, where they could have no recourse upon him. No civil warrant can break in upon his retirement; and, in a certain sense, he is dead to the world. Great as exemptions of this description may be deemed by persons unacquainted with the practical effects of the privilege, in reality the immunity is scarcely worthy of acceptance. Refugees labour under innumerable disadvantages. There is no organised society within the precincts to which an individual of the middle or upper classes can resort for solace in his retirement. If the 'sanctuary man,' or the 'abbey laird,' as he is familiarly termed in Edinburgh, be an accustomed reveller, he may possibly find a few persons equally willing to assist in drowning care in the bowl, of an evening, or to discuss libations of raw whisky and small beer in the forenoon, and entertain him with interminable and edifying disquisitions on the properties of the *cessio*, the hard-heartedness of creditors, and every minute particular of their own flight. But if he be a sober-minded man, his case is very pitiable. There are no club, billiard, nor reading rooms; no out-of-doors amusements; and delicate-minded debtors will even be disinclined to stir out of their miserable lodging-rooms, in dread of being stared at by any known acquaintance or townsman who may chance to be passing through the parks. The ordinary resource of reading becomes tiresome, and, besides, proper books are difficult to be procured. The ennuyé may stroll by the way of 'St. Anton's well' to the top of the neighbouring hill, where he is greeted with a very extensive prospect, and, like Robinson Crusoe, when anxiously looking for the coming or departure of the savages, he may lay himself down and count the vessels on the Forth, and remark them as they come into sight, or gradually sink beneath the visible horizon; but all this will not 'minister to a mind diseased,' and, in all likelihood, it will only add torment to the already disconsolate debtor. The worst peculiarity of the place consists in the very heavy expense which attends a residence. The apartments let out by the householders, and every other requisite for the existence of debtors, are dear, and generally of a bad quality. Instead of being supported upon alimony, as in jail, the outlay is enormous, and it is only those who possess any considerable means who can endure a residence for more than a short period. As this circumstance is well known, the absconding of a debtor to the sanctuary, and his wilful residence there, in most cases exasperates creditors; it being shrewdly conjectured that he must have kept up money to enable him to do so. Thus, few Scottish traders or others take the benefit of sanctuary, unless it be for the space of one or two days, for the purpose of securing their persons until a sequestration be sued out, or a compromise be made with all the creditors. In times of the severest mercantile calamities, the number of refugees has been known to amount to fifty; but this was only for a few days, and it is seldom there are more than eight or ten. Occasionally the sanctuary is resorted to by debtors from England, as it gives protection to persons from all nations. In a few cases such have been known to live for years, and at last die, in the precincts. Recently it happened that there were three baronets resident in the sanctuary at one time; and it is sometimes the case that the sons of noblemen are to be found enjoying the privilege. These personages, in most in-

stances, procure lodgings in the palace by the favour of the keeper; a fact of the most degrading nature, which would hardly be credited, were it not placed beyond all possibility of dispute. It is not long since one of these scions of a Scottish peer induced a respectable upholsterer in the city to furnish his apartments, and afterwards refused either to pay for the articles or render them up. The case came to be litigated; but the king, then prince regent, and the lord advocate, having sustained the transaction, on pretence that the seizure would trench upon the royal prerogative, the courts found themselves impotent, and the pursuer was nonsuited. There could not be instanced a more infamous, and injudiciously supported, case of kingly prerogative, since the reign of James VII. than this. Why it was not brought before parliament, we are unable to explain. It excited neither comment from the people nor observation from the diurnal press; after which exposure of indifference to the prerogative of the subject, the Scotch, we think, should be for ever silent respecting the arbitrary measures of the Stuarts."

Among other peculiarities we may also note, that "Statutes prohibitive of public or private gaming by lottery, betting, and otherwise, extend to Scotland. Besides, there still exists an old Scottish act of the year 1621, which gives magistrates a power of interfering to prevent gaming by cards or dice, either in a public or private house. The penalty is 3*l.* 6*s.* 8*d.*; but when the master of the private house takes a hand in the game, no challenge can be made. This is one of those ridiculous old Scotch acts, which, of course, is never put in force."

Mr. Chambers' chapter on the ancient and modern relations between the rich and the poor, the nearer connexion between the upper and lower orders which formerly subsisted, and their greater estrangement now-a-days, is very interesting; but we can only refer to it (p. 219 to 243), and make one short extract.

"It was calculated some years since, that there were about 55,000 persons in Scotland reduced to depend on parochial aid; and if to these be added 10,000 as regular mendicants, it will appear that a fortieth part of the whole population are paupers. As this does not embrace those who are in destitute circumstances, but denied relief from parishes, or who are unwilling to apply, the proportion of paupers is too small. We are rather inclined to think that a thirty-fifth part of the community is in a state of destitution. A hundred and twenty years since, it was computed that there were 100,000 common beggars in Scotland. These were composed principally of tinkers or gipsies, who roved about in bands, often taking lodgings and meat by force from the farmers. This remarkable class of beings is now nearly extinguished in Scotland; and they are only to be found in wandering parties on the Teviot, the lower parts of Tweed, and the borders. They still keep together in hordes, and attend fairs for the purpose of selling crockery, and exercising their ancient profession of tinkers. They possess horses and carts, and in general pitch their encampment, while from home, on the fields. At St. Boswell's fair in Roxburghshire, their temporary *kraal* of huts on the green, formed by their *whonked* carts and straw bedding, with the ensigns of their trades scattered around, form a scene of great interest. Their propensity to thieving is now much suppressed. Another class of beggars, now extinct, were old infirm women and men, who were carried about from door to door on hand-barrows. These persons, among whom, we are of opi-

nion, there were a number of impostors, used a sort of privileged insolence, sometimes compelling the inhabitants to carry them, and supply their wants. Meal was their common *amous*. The farmers sent them gratuitously in carts from one town to another. *Blue-gown* beggars have been so well described by the author of *Waverley*, as to require no notice. All these and every other class of mendicants have, as above stated, been suppressed to a tenth of their former amount; but it is not to be imagined that the sum of poverty is thereby lessened. What was once exposed is now hid, or suppressed by judicial interference."

On the subject of the church and religion the author is equally judicious; and we shall conclude with a few brief paragraphs, which throw light on these matters.

"The situations of the Scottish clergy in the aggregate, as regards worldly circumstances, is superior to that of any priesthood in the world. Including chapels of ease, and double charges, it may be estimated that there are now 1000 livings in the church, the value of which will be comprehended from the following summary:—

	£.	£.
172 benefices at 150 each	25,800	
200 do. at 200 do.	40,000	
150 do. at 230 do.	34,500	
150 do. at 250 do.	37,500	
150 do. at 300 do.	45,000	
80 do. at 325 do.	26,000	
30 do. at 350 do.	10,500	
20 do. at 400 do.	8,000	
10 do. at 500 do.	5,000	
10 do. at 600 do.	6,000	
20 do. at 800 do.	16,000	
1000	252,500	
Say that 950 of these have manses and glebes, at £40 each	38,000	
Total revenue of the church of Scotland	290,500	

This statement is, unavoidably, very imperfect, as the stipends vary every year according to the *fiars*; but if even correct in a general aspect, it shows that the average living is nearly as good as that of benefices in England, which we believe is £303. Reckoning all things, the Scottish clergy are much better off, in general, than those of the Church of England. The expense of a preparatory education is comparatively trifling in this country. The price of living is also much lower; and it is not expected that a clergyman will compete with families in the first or second ranks. The widows and children of Scottish clergymen are likewise better attended to after their decease than they are in England. While the clergy in England are necessitated to accept of offerings and fees, nothing of this kind is known among the Scottish established clergy, by whom every office is performed as a part of ordinary duty, free of clerks' and surplice fees. In several instances, the dissenting Scottish clergy, who are supported by their flocks, enjoy livings scarcely inferior to those in the established kirk. They are in general enabled to have neat little manses in the country towns, vying in comfort and seclusion with those in the legal church; and in the aggregate, they receive stipends, varying in amount from £100 to £200, besides presents. In cities, some of them have salaries varying from £400 to £500."

"The population of Scotland, by the census of 1821, was 2,093,456. It may be assumed that that number is now increased to about 2,600,000, and calculating by the usual proportion, 600,000 of these are under ten years of age. Of the remaining two millions, the following table, founded on official lists and minute personal investigation, may be taken as presenting a tolerably accurate summary, in round figures, of the number of individuals

belonging to different classes of religionists, with the number of congregations.

	Congregations	Total of Congregations	Souls
<i>Under the Church Courts of the Establishment.*</i>			
Parish Churches	883		
Chapels of Ease	58		
Missionaries employed in the Highlands and Islands, by a committee of the General Assembly for managing the royal bounty of £2000 annually	30		
Missionaries employed in the Highlands and Islands, by the Society for Propagating Christian Knowledge	7		
Chapels in the Highlands supported by parliamentary grants	31	1019	900,000
<i>Presbyterian Dissenters.†</i>			
Reformed Presbyterian Synod, or Cameronians	32		
United Associate Synod of the Secession Church	300		
Associate Synod and Constitutional Presbytery, now joined under the title of Associate Synod of Original Seceders	32		
Original Burgher Associate Synod	45		
Relief Synod	87		
Relief Congregation of Rev. John Johnston	1	497	330,000
<i>Miscellaneous Sectaries.</i>			
Independents and Baptists	96		
Bereans and Glasites	7		
Swedenborgians (Edinburgh)	1		
New Sects, with no distinct title	6		
		110	90,000
Friends or Quakers	1		600
Methodists (9 stations, and only 2609 communicants)	60		10,000
Jews (Edinburgh)	1		300
<i>Apostatic Churches.</i>			
Roman Catholics (55 clergymen)	81		100,000
Episcopalians	100		55,000
Congregations using the Liturgy and forms of the Episcopalians, but under no bishop, and those individual members of the Church of England resident in Scotland	4		5,000
			1,490,000
Unitarians; those holding Socinian opinions; pure disbelievers; and those who admit no place of public worship of any description, either from want of seats or want of will, though generally baptised Christians, and of presbyterian lineage			500,100
		1873	2,000,000

"Roman Catholicism (says the author elsewhere) is progressing fast in Scotland, chiefly by the immigration of Irish, and the conversion of presbyterian outlying Highlanders. The Roman Catholics have now some remarkably fine chapels, and the clergy are universally known as quiet and unobtrusive men. The Roman Catholicism of Scotland is, on the whole, of a very mild kind, and has little or no resemblance to that found to work such melancholy effects in the sister island. Neither Methodism nor Quakerism seems to have been successful in Scotland; of Methodists there are several scattered congregations, principally composed of the dregs of the population of large towns; of the Society of Friends there is only one association at Edinburgh, formed by some of the most respectable and wealthy citizens. The sect which is making the most perceptible progress after the Roman Catholics, is the Unitarians. The chief rallying place of the party is in the west of Scotland, where the Socinian doctrine meets with a ready support from the operative manufacturers. We are, however, of opinion, that the number of pro-

* "The Kirk assumes a spiritual power over several presbyterian congregations in England, Holland, and one or two of the colonies.

† "Some of these sects assume a spiritual power over several presbyterian congregations in England and Ireland."

fessing Unitarians gives a very imperfect idea of the actual amount of this species of belief, which, it is to be feared, is now spreading its influence among all classes of presbyterians. It is a fact too remarkable not to be generally known, that this thinly-veiled theo-philanthropism has succeeded always best in countries once imbued with the most rigid Calvinistic doctrines. It has, at least, well nigh finished Christianity in most of the German states and New England, and has now to work out its ends in this portion of Great Britain.

• • • While we now write (he adds), the kirk is assailed on all sides by the outpouring of novel or improper dogmas, even by some of its clerical members; and we sincerely trust, for the peace of society, that it will proceed with firmness and caution to maintain the dignity of the religion it has long so temperately professed."

Amen: and we now bid our author cordially farewell. He has produced a valuable book. His statements are in a sober and impartial spirit, and his zeal in ascertaining the truth is worthy of high commendation. Some Scotticisms in the style, and the occasional use of words either not the most apposite, or in a sense in which they are hardly allowable to English readers, detract but in a trifling degree from the general merits of the performance.

G. W. Freytagii Lexicon Arabico-Latinum, præsertim ex Djeuharii, Firuzabadique, et aliorum Arabum Operibus adhibitis Golii quoque et aliorum Libris confectum. Accedit Index Vocum Latinorum locupletissimus.

Tomus I. — خ — Halis Saxonum. 1830.

SUCH is the title of a quarto volume of 544 pages, making the third or fourth part of a great Arabic Dictionary, by the very learned and diligent Professor Freytag, which we hasten to introduce to the knowledge of our readers through a short notice; though in fact it would require a long review to describe and estimate its value accurately. The work appears to be collected with great industry and care from the dictionaries mentioned in the title-page, and several classical commentators in Arabic, of which some further account is given in the preface; but it is to be regretted that the Bible translations and other works of Christians, seem to be entirely disregarded:

for instance, the word **مخلص** Saviour, is here left out, though adopted by Golius. Thus, we fear it will be necessary to compile another Arabic dictionary for ecclesiastical expressions, as Schleusner and others have published Greek dictionaries for the New Testament, the Septuagint, &c. which may not only require considerable time and labour, but also augment expenses for the oriental scholars, of whom vast numbers are divines, who are naturally anxious to apply their knowledge of Arabic to the criticism or illustration of holy Scripture. The paper is very good, and the appearance of the print handsome and clear. The text is also extremely correct, though mistakes or little

inadvertencies may be found, as **جيجان** *Pyramus fluvius*, is placed, p. 248; but **جيجون** *Orus fl.* p. 329, where also **جيجان** is repeated in another line to no use. Likewise the word

جوع is explained firstly, as *n. a. vicis unius* of **جاع** *esurivit*; and again on the same page, as a new word, *fames una*: nay, another sub-

stantive of the same verb, **مجاعة**, is noticed twice on the same page. There is no table of abbreviations prefixed to the volume, so that it is left to the student to conjecture that *n. a.* means *nomen actionis*; *c. a. p.* means *cum accusativo personæ*; *Mar.* the author *Ibn Maarûf*, &c.; which may be difficult enough to those who are not already accustomed to Golius, or some other Arabic dictionary. Sometimes the terms of grammar are rather prolix, or not sufficiently abbreviated to save place;

ex. gr. **جوزة** *nom. unit. a* **جوز** *nuz una*. Here it seems that *n. u.* or at most *n. un.* might be just as sufficient to denote *nomen unitatis*, as *n. a.* to mark *nomen actionis*.

Again, the addition *a* **جوز** seems to be perfectly useless and superfluous, the word itself being explained in its proper place in the same column at full length, and the formation of *nomina unitatis* being not only so simple and obvious, but known to every beginner, from the grammar. There is another little inaccuracy

in this article, viz. under **جوز** is mentioned **جوزات** as the plural; and again, under **جوزة** as the plural of this also, though in another signification. It seems evidently to be the plural of the last mentioned; and as the plural of *nuz in genere* and of *nuz una* must be one thing, it should not be mentioned twice, but all the significations of which it admits should be explained at once in its proper place. Of

جوز there is, besides another plural (*fractus*) mentioned, which is formed in the usual way,

أجواز Foreign words are put in large letters, and occupy much space. It would have been more judicious to have printed them in a small type, and distinguished them from the true Arabic roots by an asterisk, as is the case in dictionaries of other languages. See pp. 45, 64, 72, &c. Indeed, our author sometimes appears to have been too scrupulous about

trifles: *ex. gr.* **جوزر** *et* **جوزر** *pl.* **جازر** *pullus*

cervi (si recta est scriptio, dubito autem, pro جوزر Gol. ex Mar.) In Persia, and several other Mohamedan countries, the **ز** and **ذ** are pronounced exactly alike. Now Ibn Maarûf was a Persian, and Golius had two of his codices at hand. Of course, there cannot be the slightest reason to doubt the accuracy of the remark made by him, nor of the orthographical blunder committed by Ibn Maarûf or his transcriber; but even if there were, it would scarcely have been worth mentioning. Nothing is more frequent in the oriental dialects than the confusion of the two letters mentioned. The Hebrew **ז** is written in Arabic **ذهب** *gold*; and the examples of this confusion are innumerable. But there is a little

difference in the definition of the two words, the one being explained *factus vacca sylvestris*; the other, *pullus cervi*: it would have been more to the purpose to ascertain which of them is the right. The explanations given of similar objects of nature are also sometimes very

vague: as **جوزاهنج** *nomen medicamenti Indici*;

جدر *nomen plantæ*; **جمنبار** *planta quadam*; **خنفئة** *nomen animalculi*. Golius translates the last mentioned, *nom. animalculi*, so that not much is gained by the new dictionary in this instance; but from the 24th fable of Locm. it appears to be a winged insect, that would learn from the bee to make honey; and it can scarcely be doubted that it is the

scarabæus, otherwise called **خنفسة** or **خنفسة**—an allusion moreover being made to its blackness in the same fable, where it is said that "it knew not even how to make pitch." Golius, indeed, has conjectured that the true reading

in the fable should be **خنفسة**, and Professor Freytag, in his edition of Locman, has tacitly adopted this reading in the text; but the old and corrupted reading, **خنفقة** seems evidently

to have originated from **خنفئة**, the two letters confounded being scarcely distinguishable but by a dot more on the **ث**, whereas there is no similarity between **ق** and **س**

Bo this as it may, the words **خنفئة** and **خنفسة** are certainly one and the same expression, with a very little difference in spelling; nearly of the same nature as the

above mentioned **جوزر** and **جوزر**, and ought not to be put down as two different and perfectly independent expressions—the one explained *nomen animalculi*; the other, *scarabæus niger*. Another instance, very similar,

is the word **جردون** *sorex, glis*, which our author introduces from the Appendix of Golius, who has taken it from the fourth fable of Locman: Professor Freytag adds, very rightly,

sed potius جردون lacerta, legendum; and

this reading he has adopted in his edition of Locman. But thus the whole article is reduced to a mistake of the transcriber, and ought merely to have been mentioned as such, with reference to the right form. Besides this false form, our author has another, being a mere orthographical variation; viz. **جردون**

in a very broad line, as a new word; and,

finally, the proper expression, **جردون**. In other similar instances, however, the orthographical varieties are not introduced as new words; for instance, **جنبد** *et cum ذ*, &c.

جنبدة (*sed usitatio esse videtur littera ذ*).

But even this is wasting too many words on the trifling varieties of one letter. It is remarkable that Freytag seems to have been less particular in collecting the verbal forms or conjugations of Locman than the *orthographi-*

cal varieties; for example, of the verb *بعَد* *distitit*; second form, *بعَد* *removit*; the fifth

form, *تَعَد* *removit se, discessit*, occurs in the twenty-sixth fable, even in the edition of Professor Freytag, but is overlooked in the Dictionary, as well as by Golius. There is a material defect in this author in distinguishing the significations of the different forms or conjugations of which a verb is susceptible: he frequently says, in the fourth form, "*id. ac conj. 1*;" and this phrase is sometimes twice or thrice repeated in the description of one verb: but the significations of the different forms are not exactly the same, but variously shadowed; and this various influence of the form on the signification ought, we think, to be noticed in the Latin translations: *ex. gr.*

فَرَس diripuit *prædam leo*, 8, *i. q. conj. 1*, diripuit, &c. *prædam leo*. Whereas the first form should be translated *laceravit, necavit*, &c. The eighth, diripuit, *laceravit sibi in escam, v. ut ederet*, or somewhat such. The intention of the first form being to say, that the object was killed in a certain manner, or torn to pieces; of the eighth form, that it was killed

and devoured. Likewise, the word *خَطَب*

is translated by Golius, "*abripuit, raptavit*, 2, *pro 8, seq. 5, i. q. conj. 1, 8 idem*." Our author has, "*1, abripuit, raptavit*; 2, *abripuit*; 5, *abripuit*; 8, *abripuit, eripuit*." We do not think this much better, or sufficiently correct and carefully distinguished; at least, the eighth form should have been *abripuit, rapuit, ut ederet* (*Ex. Loc. 21*), not *eripuit*. But such things should be observed and written down in the margin of an old dictionary, during a long and serious study of the best authors, and cannot easily be compiled from the works of other lexicographers, whether native or European. Thus, we think, that by a more judicious arrangement, especially of Greek and other foreign words, and orthographical varieties, a good deal of room might have been saved; and the significations of the words, and the value of the derivative forms might sometimes have been more accurately defined and distinguished. But, notwithstanding these defects, the present is a valuable work, to which we sincerely wish our author may have the good fortune and health to put a finishing hand, as it does honour to his learning and industry, and will essentially aid in promoting and facilitating the study of Arabic.

The National Library, Vol. II. Conducted by the Rev. G. R. Gleig, &c. &c. *The History of the Bible*; by Mr. Gleig, Vol. I. 12mo. pp. 372. Colburn and Bentley.

IN unison with the Holy Scriptures, and, though following preceding authors of great weight, yet containing Mr. Gleig's own original views on many points of the utmost consequence, we find this volume far too important to be examined with requisite attention for review within the short time it has been in our possession. We can, therefore, only announce it, with a promise of our earliest analysis, and a

hearty recommendation on the score of general merits, such as even a very cursory glance could enable us to appreciate.

The Edinburgh Cabinet Library, No. I.; Narrative of Discovery and Adventure in the Polar Seas and Regions, &c. &c. By Professor Leslie, Professor Jameson, and Hugh Murray, Esq. Pp. 424. Edinburgh, Oliver and Boyd; London, Simpkin and Marshall.

ANOTHER new aspirant in the new monthly field of publication; and a very able view of the voyages to explore the arctic regions, from the earliest times to the present day. In its scientific divisions it is eminently rich; and a chart and number of woodcuts tend sufficiently to illustrate the text. We have, however, gone over this tract so often with the recent original travellers, that we do not feel it necessary to give any extracts: we can most justly say, that the work altogether does credit to its editors and publishers.

The Family Classical Library, No. X.: Pindar, and part of Anacreon. Colburn and Bentley.

AT this period, the beginning of the month, we should fill our *Gazette* with nothing but reviews of the prevalent class of publications now so much in vogue, were we to go into details of them all. Happily, such old novelties as Pindar and Anacreon do not demand this critical process. We have spoken well of the nine volumes previous to this; and of this we need only say, that we consider it nearly, if not quite, the most interesting and valuable of the whole. It is certainly best calculated to afford classic information in a very popular form to the general class of readers.

The Juvenile Library, No. III. Edited by W. Jerdan. *Africa.* By the Author of "*The Mummy*," &c. &c.

ANOTHER in the train, of which we must, for the present, be content with stating, that it gives a succinct but well-digested outline of the history of Africa, both ancient and modern. To execute this in one small volume appears to us to be doing what the prospectus of the "*Juvenile Library*" held out; for how could young persons more easily acquire the knowledge of one of the great divisions of the earth? Of the embellishments we can truly observe, that they are both original in design and very superior in engraving. The village which now represents all that was the glory and splendour of Memphis; Egyptian tombs; the costumes of the present day, and very curious ancient seals of the Pharaohs, &c. are most appropriate illustrations.

The Divines of the Church of England. Vol. V. J. Valpy.

THIS fifth volume completes the admired works of Bishop Sherlock: the whole forms the only complete edition of that great divine.

Part I. History of the American Revolution. Published under the superintendance of the Society for the Diffusion of Useful Knowledge. 8vo. pp. 64. London, 1830. Baldwin and Cradock.

ANOTHER publication in the magazine form, and at so moderate a price, as to offer its historical intelligence to all classes. It is written in a plain and clear style, with a considerable bias towards the republican side; and brings

down events to the close of the revolutionary war.

FINE ARTS.

PANORAMA OF MADRAS.

WE were exceedingly gratified, the other day, by a glimpse of a Panorama of Madras, which has for some time been in preparation; painted by Mr. William Daniell (the Royal Academician), and Mr. E. T. Parris, in conjunction; from drawings made last year by Mr. Augustus Earle; and to be opened for public exhibition in a few weeks, at Coromandel Place, in the New Road, nearly opposite the end of Gower Street.

It would have been impossible to select two artists better qualified for such an undertaking. Mr. Daniell's great general talents, and his familiar acquaintance with oriental scenery, are well known; and the experience acquired by Mr. Parris, in the production of that stupendous and admirable work, the View of London at the Colosseum, of course eminently fitted him for this new task. Executed entirely and exclusively by themselves, it is certainly not surprising that the result of the efforts of this pictorial Beaumont-and-Fletcher union should be the most beautiful performance of the kind that we have ever seen. The view is taken from an elevated and commanding situation—the summit of the light-house; a structure so lofty, that it is visible from the deck of a ship at the distance of seventeen miles. The objects nearest to the spectator are Fort George, the magnificent government-house, and the other buildings belonging to the Presidency; which are finely depicted in every respect, and in none more than in the correctness of the linear perspective; an achievement, on a concave surface, of no ordinary difficulty. Looking further landward, the eye is delighted with a variety of picturesque edifices, consisting of palaces, churches, mosques, pagodas, private dwellings, &c. seated amidst gardens, avenues of trees, promenades, and fields, through which runs the little sparkling river Paliar. Beyond, is a flat but richly diversified country; and, in the extreme distance, the Pulicat hills rear their conical peaks into a fleecy and sweetly-dappled sky. Numerous figures, in Asiatic and in European costume, animate the scene, and add to the impression of its reality. Looking seaward, the noble roadstead presents itself, with hundreds of vessels of different sizes and descriptions; some at anchor, some under sail. The most prominent is the flag-ship; and a most characteristic and technically correct portrait it is of a proud man-of-war, riding in her highest trim. Passing under her stern is an Indiaman, just arrived from England, and saluting the admiral. A steam-boat, with the volume of smoke which pours from her chimney, breaks the monotonous continuity of the horizontal line. On the low and sandy beach rushes, and we can almost fancy roars, that tremendous and eternal surf, the turbulence of which is such that no European boat can live in it for a moment. It can be passed only by catamarans (a species of rafts), and the Masulah boats, which are light and pliable, being built of soft wood, the planks of which are sewed together. If we were asked to select one feature of peculiar excellence, we would say, "the sea." And yet that would be scarcely just; for there is not the smallest portion of the entire panorama that has been neglected. Every object is invested with the tones of truth and nature. The effect is forcible, without extravagance;

the colouring is vivid, without glare. We have already mentioned the linear perspective; the aerial is so absolutely deceptive, that he must have peculiar keenness of vision who can pronounce with accuracy upon the distance of the canvass. For ourselves, we imagined, in the simplicity of our notions, that the diameter of the circle was about fifty miles; but we were told that it was only about fifty feet.

When, in addition to the intrinsic merit of the painting, we consider how many of our countrymen and countrywomen have visited the place of which it is the faithful representation, and how many more have near and dear connexions residing either there or in its vicinity, we can entertain no doubt that it will excite an unusual degree of public curiosity and interest.

The construction of the building itself, which we understand is the invention of Mr. Parris, deserves a few words. It is full of ingenious devices; is made principally of wood; and is so contrived, that it can be taken down, removed to any other spot, and re-erected, in the course of a few hours. The entrance is so judiciously managed, that the visitors ascend at once into the centre; and can in no way approach the picture more nearly than the rail which bounds the platform. The arrangement of the draperies, and other decorations of the interior, is not yet completed; but it promises to be at once simple and elegant.

NEW PUBLICATIONS.

The Princess Vittoria. Drawn by John Hayter; and on stone by W. Sharp. J. Dickinson.

A WHOLE-LENGTH of the princess, with a parrot on one side, and a vase of flowers, which she is arranging, on the other. We cannot say that we are much pleased with this representation: instead of the simplicity of childhood, there is an air of affectation about it, which does not suit our taste. The fingers are placed as if to play on the piano-forte, not to pull a rose; and the look out of the countenance is addressed to the spectators of the picture, not to the action of the person.

As we happen to be again called on to notice a portrait of this very interesting young creature, we may add to our remarks on the line engraving of her, cursorily mentioned in our last, that the artist, Golding, has in that performance rivalled his celebrated likeness of the late Princess Charlotte; and has altogether produced a work which we think must be most acceptable to the Duchess of Kent, as it is calculated to be the most permanent remembrance of her sweet daughter, at a period of life which may often be referred to hereafter by the nation so much interested in her future destiny.

England and Wales. From Drawings by J. M. W. Turner, Esq., R.A.; with Descriptive and Historical Illustrations by H. E. Lloyd, Esq. No. X. Jennings and Chaplin.

Of the four views in this Number, our favourites are, "Trematon Castle," and "St. Mawes;"—the former a scene of delicious repose, the latter one of busy turbulence. Mr. Turner introduces more figures into some of his drawings than was his wont; and in "St. Mawes" they are admirably composed, and contribute greatly to the general effect. Occasionally, however, he is sadly negligent of his proportions; as witness the nearest group in "Winchelsea." Like Lord Byron, we "hate a dumpy woman;" and the three ladies who are reposing and refreshing themselves in

the foreground of that view, are the dumpyest of the dumpy;—not one of them above three feet six; we pledge our eye's accuracy upon it. What renders the matter more preposterous, is the contrast between the size of their heads, and the size of the heads of the drummer and fifer, who are nevertheless represented as close to them. Professor of Perspective, what are you about?!

The Right Hon. Lady Nugent. Painted by Lawrence; drawn on stone by R. Lane, A.R.A. J. Dickinson.

A MAGNIFICENT portrait; not only one of the highest specimens of the late President's style, but one of the finest examples even of Richard Lane's lithographic powers. The head is noble in character, the neck beautiful, and the hair admirably disposed to augment the expression chosen by the painter.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE differences of opinion which have arisen in the bosom of the Royal Society are far from having been reconciled. The minutes of the council are still impugned by Mr. Babbage, in a way likely to lead to more paper war; and the question of the presidency is also a subject of not very pleasant discussion. After some overtures had been made to His Royal Highness the Duke of Sussex, and conditionally accepted by him, we understand that a change

of sentiment sprung up, and that a number of the council desire to retain Mr. Davies Gilbert in the chair. How the two parties will meet when the period arrives to renew the sittings, we cannot anticipate.

ROYAL SOCIETY OF LITERATURE.

His Majesty having, as we intimated in a former *Literary Gazette*, graciously signified to the Council of the Royal Society of Literature, founded by his royal brother and predecessor on the throne, that he was pleased to continue the same munificent patronage with which it was originally endowed; the members of the Society have responded to this kindly encouragement by a worthy act of spontaneous liberality. The subjoined engraving represents the elevation of a building for the permanent reception of the Society, erected by their voluntary subscriptions, to the amount of between 3000*l.* and 4000*l.*, of which nearly 3000*l.* has been already subscribed. The work is under the direction of Mr. Decimus Burton, and the site on the left hand of what was St. Martin's Lane, as you ascend from Charing Cross. It is higher up than St. Martin's Church, and where the new street will be wider than Regent Street; so that the situation is admirably adapted for the display of public buildings. A great increase of the Society may be anticipated from such spirited proceedings: it is expected that the house will be finished in little more than a year.

ORIGINAL POETRY.

PEARLS.

WHY should I tell of the diamond's blaze?
Why should I sing of the sapphire's rays?
Ye are purer, and fairer, and dearer to me—
Gems of the ocean, Pearls of the sea!

There are feelings of all that is sweet and mild,
Dreams that are pure as the dreams of a child,
Many an innocent holy thought,
By gazing on you, to my bosom brought.

I love to behold you, fairy Pearls!
When ye wreath around rich raven curls—
I love to see you when some neck,
Almost as white as yourselves, ye deck.

I think, in looking on you, of the wave
That birth to your simple beauty gave;
I think of the rolling waters that sweep
Over your brethren of the deep;

And I think of the orimou coral cells,
Where first ye lay in your native shells;
And I dream of the nereid's fabled song
That floats those sparry halls among.

I remember the venturous diver who first
Beheld you amidst the sea-weeds nurst,
And snatched you eagerly away,
To smile again at the smiling day.

And I think of the tranquil, tranquil sea,
When the stars were burning steadily,
As if they were looking the clear wave through,
To see if their glances could rest on you.

And there are better thoughts than these,
That rise when I see you, Pearls of the seas!
Ye are like pure spirits that dwell through
life

Unharm'd amidst its care and strife.

And there's a hand that shall bear them away,
At last, to the light of a cloudless day,
And treasure them more than ocean gems,
And set them in heavenly diadems!

Worton Lodge, Isleworth.

M. A. BROWNE.

TO THE SUNFLOWER.

PRIDE of the garden, the beauteous, the regal,
The crown'd with a diadem burning in gold;
Sultan of flowers, as the strong-pinion'd eagle
And lord of the forest their wide empire hold.

Let the Rose boast her fragrance, the soft gales
perfuming;

The Tulip unfold all her fair hues to me;
Yet, though sweet be their perfume, their rain-
bow dyes blooming, [thee.

I turn, noble Sunflow'r, with more love to
There are some think thy stateliness haughty,
disdaining,— [their eyes;

Thy heaven-seeking gaze has no charm for
'Tis because the pure spirit within thee that's
reigning [prize.

Exalts thee above the vain pleasures thy
Emblem of constancy, whilst he is beaming,

For whom is thy passion so steadfast, so true;
May we, who of faith and of love are aye
dreaming,

Be taught to remember this lesson by you!

If on earth, like the Sunflower, our soul's best
devotion

Shall turn to the source of Truth's far-
beaming rays; [emotion,

O how blest, how triumphant, shall be our
When the bright "Sun of Righteousness"
bursts on our gaze! J. R.

SKETCHES OF SOCIETY.

MACKLINIANA.

DEAR SIR,—You desire me to give you a conversation that passed between Mr. Macklin the comedian and me, at our first meeting, at the Globe, in Fleet-street, in the general club-room there (not the weekly club, with Dr. Goldsmith and other literary gentlemen)—Dr. Goldsmith, the facetious Dr. Glover, and several literary characters, being present. Mr. Macklin came in and sat down opposite to me; and he no sooner heard my name, than the following dialogue commenced between us:—

Macklin. Sir, is your name really Ballantyne? If it is, I beg leave always to call you George.

Ballantyne. With all my heart, sir, you may, though my name is William. But why do you wish to call me George?

Macklin. Because, sir, when I came from Ireland, a poor young dog, to find some way to gain a livelihood, I got acquainted with George Ballantyne, a fine young fellow, a captain of grenadiers, who had distinguished himself abroad by his bravery,—a very elegant fellow, above six feet—ay, and a kind-hearted fellow, but put to his shifts, like myself. My name

was then M'Laughlan; my father and his brother were both at Londonderry,—one in the city, defending, the other besieging; so you see they were on opposite sides; and the insides, you know, made a gallant defence. Well, sir, this Captain George and I were often put to our shifts, and were taken in by a set of gambling sharpers; and although we sometimes got a trifling advantage, were generally routed. One evening George came in, ran up to my bedside, crying, "Charley! Charley! Oh, man, I have got guid luck among the scoundrels the day; take the haf: there's mair than ten pounds!" "How came that, George?" "Faith, Mack," says he, "I was coming through Temple Bar, when two o' them wheeled me into their d—d gambling hole. I had little to spare, but that I resolved to venture; they soon had it a', and I was coming away, when they were tossing up a guinea; it fell pat upon my hat; so I stood straight up (here Macklin stood up and imitated the captain's position) and never said a word; for I thought it was nae great sin to keep it, as they had choused us so often: so they called the drawers, and looked a' the room round; and when the pursuit was o'er, I thought it fair to gie them a chance for their ain again; and I have wun a' this;" and here he threw down the half to me. It was about this time I changed my name to Macklin; in which name I took a lodging between Seven Dials and Soho; and there came a young gentleman from Ireland, who could not for a long time find me, till by chance one day he met me in the street; when I gave him my address, but forgot to tell him I had changed my name. He called a few days after, and asked for me by the name of M'Laughlan, and was told that no such person lived there. In a few days after, I met him again, and took him home with me; and when my landlady heard him always calling me M'Laughlan, and I had passed to her as Mr. Macklin, she said I must quit her apartments, for she had no good opinion of a man that went by two names; so I was not a little plagued to get another lodging. From that time we became intimate friends; and his very sensible, virtuous, and amiable daughter accepted of my invitation to a little cheerful hop, where Dr. Goldsmith, the "facetious Dr. Glover," Fenton the accomplished Welch bard, and the humane Tom King the comedian, were of the party. The hop was at my own apartments, where Dr. Goldsmith was so happy that he danced, and threw up his wig to the ceiling, saying, "Men were never so much like men as when they looked like boys." Soon after this time he constantly spoke to me of his comedy, which at one time he thought would be under rehearsal in a week, and often read parts of it to me; but he was always altering it, and never could satisfy himself. He frequently said, "People think I have a dislike to the Scots, by making my sycophant a Scotsman; but it is not so: I love the Scots, their peasantry are so sensible and civil, and so moral and intelligent; but I wished my play success; and as people like local accents, and as I could mimic the Scots, why, the Scots won the day. Besides, I preferred Scotch; and as it was the custom then to abuse them, it made the thing go off the better. But in my new play, my principal character is a Scots physician, and a brave character, and a true one." So, going on to describe the character, I said, "Are you acquainted with my friend Dr. Armstrong?" He exclaimed most loudly, "That's the very man; I am glad you know him; you'll see if I do him justice; I knew him when he first came

to London, and that, I believe, was before you was born;" so, whenever I called, the Doctor and the comedy were the subjects of our discourse. I have now, I think, given you enough of Macklin; and am, dear sir, your most humble servant,
WM. BALLANTYNE.

N.B. During the year, he finished his comedy, and got it ready for rehearsal. As far as I am a judge, I believe it would have pleased; but he became so very unsettled, that every time I called afterwards, he had made some alterations.

Garrick and Barry.—A female of some judgment observed, on the garden scene in *Romeo and Juliet*, that Garrick looked with such animation, was so spirited in his gestures, that were she *Juliet*, she should think he was going to jump up to her; but that Barry was so tender, melting, and persuasive, that if she were *Juliet* she should jump down to him.*

MUSIC.

NEW PUBLICATIONS.

The Omnipresence of the Deity; an Oratorio.

Written by Robert Montgomery; composed by John Barnett. Mayhew and Co.

ALTHOUGH so important and rare a work as an oratorio, we are not disposed to go into an elaborate musical criticism upon this beautiful production. The poetry is selected from Mr. Montgomery's very popular epic; and the various compositions which illustrate the words, adapted to recitatives, airs, choruses, scenas, concerted pieces,—are by Mr. John Barnett, who has here achieved a far higher rank than belonged to him as one of our sweetest and most successful lyrical writers. We cannot find one theme in the whole book which does not deserve praise; but "List! now the cradled winds," and "Sweet Sabbath morn," the former an aria, the latter a prayer, are pre-eminently and exquisitely fine. The number of varieties is twenty, including an introduction; tenor, bass, and other recitatives; three choruses; a duet, a trio, and a quartette. Altogether, we are bound to speak of this volume as a superior and delightful treat, well worthy of the favour of the musical world.

DRAMA.

DRURY LANE.

DRURY LANE THEATRE was opened for private view on Wednesday evening. The decorations are light and elegant, those of the dress and third circle especially. The prevailing colours are pale blue and buff; but there is sufficient crimson introduced to give that warmth of tone which is considered as necessary as atmospheric heat for a winter theatre. The ceiling is particularly tasteful, and the proscenium rich and chaste. The new drop-curtain was not generally approved of; and there are some other trifling points which might be criticised; but so much is done well, that they are not likely to deteriorate from the pleasing effect produced by the whole. Before this notice is in the hands of our readers, the public will have passed their (we anticipate) favourable judgment; and under a new management, and in a new reign, we trust Old Drury will see better days. The vessel has been made sea-worthy; and her crew, if not complete, can boast, at any rate, of some of the ablest hands in the service.

ADELPHI.

THE English Opera company terminated

* We fear to vouch for the novelty of this anecdote!—Ed.

their performances at this theatre for the season, last Saturday; when, we regret to say, Mr. Bartley informed the audience that the speculation had added a serious loss to that already sustained by Mr. Arnold. He alluded, however, to the probability of a new theatre being ready for their reception by next July: a consummation devoutly to be wished by all the friends of good music in England.

Only six new pieces have been produced, and of these but two are likely to remain on the stock-list of the establishment.

VARIETIES.

Hail.—The committee of the French Academy appointed to propose the subject of the mathematical prize for the year 1832, requires an explanation of the formation of hail in the high regions of the atmosphere. The committee conceives that the recent progress of natural science will furnish the means of framing for the phenomenon in question a more exact theory than any hitherto advanced. The Academy expects that this theory shall be founded on positive experiments, made as much as possible in the region in which the hail is formed.

Windsor Park.—The royal mandate has gone forth to rase and demolish the favourite Cottage residence of the late King. All is to come down except one room, the last addition, which is to be converted into a tea-room or conservatory, for occasional visits. Alas, for the elysiums of even sovereign princes; how fugitive are their memorials! Here did George the Fourth, one of the most potent monarchs on earth, delight to pass his time, lavishing improvements, and creating beauties. In a few months all are gone. His drives, of nature's softest velvet, are cut up into quagmires by rude carts and waggons, employed in removing the *débris* of his splendid Tusculum. It is a melancholy contemplation.

Speedy Conveyance.—It is said that a new telegraphic system is about to be established in France, which will be at the service of the public, like the post-office. The results will be most important to the commercial world; for it is calculated that a despatch containing several lines, which would traverse a distance of a hundred leagues in a few moments, would cost only 20 francs. M. Ferrier de Draguignan, the inventor of this new system, proposes shortly to organise a line of telegraphs from Paris to Havre. Several experiments have been already made, in the presence of persons appointed by the government, and they are said to afford every prospect of the success of the plan.

New Employment for the Fine Arts in Paris.—M. Gros, the celebrated French artist, has received orders to paint a picture, on a large scale, representing the events of the 28th of July at Paris, which is destined for the interior of the Pantheon. What a contrast this might form with M. Gros' last picture, which was placed in that celebrated church! the subject of which was the Coronation of Charles the Tenth. This latter was a magnificent production; and the ex-king was so much pleased with the manner in which it was executed,

that he conferred the title of Baron upon M. le Gros, the first day on which he went to see it. It attracted much notice in Paris at the time, and the church was crowded daily with admiring spectators!!!

Amputation of the Leg, &c.—At the last sitting of the Paris Academy of Sciences, M. Velpeau, a surgeon, read a paper on the amputation of the leg in the articulation of the knee; in which he contends that it is more simple and rapid, and less painful and dangerous, than by the thigh. M. Velpeau states that he has performed several operations in this way with perfect success.—At the same sitting, a letter on electricity was read from M. Charles Matewsky; in which he states, from various experiments, that the development of electricity may take place without chemical action; and that this phenomenon may be manifested by the simple contact of metals of a different nature.

Earthquakes.—Several shocks of an earthquake were experienced in the beginning of the month in the Lower Alps. They were very violent, but fortunately no lives were destroyed by them.

Demonology.—In Sir Walter Scott's volume upon this subject, he refers us to Mr. Roby's "*Antiquities of Lancaster*" for an account of the witch Demdike, so famous among the Lancashire witches at the beginning of the 17th century, and also for a description of Maulkin's Tower, the place of their meeting. We had intended to note on this passage, that the work referred to is the *Traditions of Lancashire*, so copiously reviewed in several *Literary Gazettes* of last year,—a work both curious for its research into the tales of old, and beautiful and splendid for its engravings.

Mr. Holman, the celebrated blind traveller, has touched at Colombo, in the ship *Constance*, on his way from the Mauritius to the Persian Gulf.

Critical Physiognomy.

I hate your phrenology: no help it lends
To tell why our critic so oft cuts his friends,
Cuts down our pretensions, cuts up all our books—
Phrenology knows not, 'tis told in his looks.
'Tis not that his bumps are unusually big,
For Spurzheim in eagerness tore off his wig—
'Tis not that he's saturnine, sanguine, or yellow—
'Tis his features denote a sharp, hatchet-faced fellow!

u u.

Versatility of Talent.

"I play on the fiddle, the flute, and the harp;
On the horn and the harpsichord, none reach my level."

"Very fine, my good friend; and add also to these,
That you oft play the *lyre*, the *fool*, and the *devil*."

u u.

Government Security.

"Why plate all your shutters, and make your bars broader?

What new whim is this, is it fear or caprice?"

"'Tis the former, I own; for I do it in order

With better effect to keep out—the Police."

u u.

Patriotic Propensities.*

I go twice a-year to political dinners,
D—n the cause of the people! what care I for that?
Purer motives guide me than your liberal sinners;
When I go it is only to get—a new hat.

u u.

Prize Essay.—The Society of Elementary Instruction in Paris have offered a prize of 500 francs for the best popular essay, shewing the influence of machinery on the ease (*sur l'aisance*) of all classes of citizens, but particularly the working classes, as well as on the rate of wages. The author is to endeavour to demonstrate the value of machinery, even to

* Dear sir,—I went to a public dinner, and had my hat exchanged for one which I doubt not is water-proof, since it is thoroughly lined with grease: the above tetrastich I believe to be penned by the gentleman who deprived me of my best "Bishnell."—*The Writer*.

the workmen in the professions in which it is used.

French and Austrian Measures.—The Austrian government has applied to the French government, to ascertain the exact relation between Austrian and French measures. Our readers will be surprised at this. The measures to which we allude, however, are not political measures, but simply the *mètre* and the *toise*. The question has been referred to the consideration of a Committee of the Académie des Sciences.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XL. Oct. 2.]

On the Proceedings of the Royal Society, &c., the Necessity of a Reform of its Conduct, and a re-modelling of its Charter, &c., by Sir James South.—Dyinnchurch, a Serio-comic Sketch, with engravings by Cruikshank.—A volume of miscellaneous poems by Henry Glassford Bell will soon appear; and also a second edition of Mr. Bell's Life of Mary Queen of Scots.—A new daily evening newspaper, called the Albion, is announced, in support of the Duke of Wellington's administration. We are told that Mr. Cyrus Reading is to be the editor.—The second volume of Moore's Byron is announced certainly for this month, with a whole-length portrait of Byron at the age of nineteen, never before engraved.—Part II. of Captain Elliot's Views in the East, comprising India, Canton, and the Shores of the Red Sea.—The interesting Adventures of Finati, his Guide in the course of his Eastern Journeys and Discoveries, are announced by Mr. W. Bankes.—Faustus, a Poem, Canto I.—A new edition of DREW on the Immateriality and Immortality of the Human Soul.—On the Origin and Prospects of Man, by Mr. Hope, the Author of "Anastasis."—The Biography of Lord Rodney, by the Admiral's son-in-law, General Mundy, prepared from family papers, correspondence, &c.—Galigani's forthcoming account of the recent Revolution is, we hear, from the pen of Mr. Colton, the Author of "Lacon."—Popular Specimens of the Greek Dramatists, from the best translations, and illustrated by a series of engravings from the designs of Flaxman.

TO CORRESPONDENTS.

The *Smille*, No. I. is declined, with acknowledgments. The *Duel* is a sad affair; declined. The *Musings* in Italy do their young author credit: we shall insert them if we can, to encourage him to proceed.
We like "common sense" too much to admit nonsense under that name.

ERRATUM.—In the unstamped edition of the *Gazette*, last week, under the head "Varieties," the paragraph entitled "*The King of the French*," was, by mistake, interrupted at the bottom of the column by two smaller articles, which were placed below instead of above it.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE LONDON UNIVERSITY

SCHOOL, 16, Lower Gower Street, Bedford Square. Head Master, the Rev. HENRY BROWNE, M.A. of Corpus Christi College, Cambridge, will open on the 1st November. PARIS, M.D. F.R.S. Fellow of the Royal College of Physicians. Printed for T. and G. Underwood, 28, Fleet Street.

Price 1l. 1s.

THE NOBLE GAME of BILLIARDS,

wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. LESCLAPART.

Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficientes of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the greatest improvements and discoveries made in the game within the last twenty years.

London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

Natural History of Great Britain, With numerous Illustrations, price 8s. 6d. each vol.

THE BRITISH NATURALIST,

Vols. I. and II. Published by Whittaker, Treacher, and Co. Ave Maria Lane.

"A more useful and interesting little work we can hardly point out."—New Monthly Magazine.

"The volume offers a fund of agreeable reading, which has all the interest of fiction, and all the utility of truth."—Court Journal.

"This is a very uncommon book upon such a subject. The author's fine descriptions of the wild cat, otter, salmon, &c. are superior to any thing of the same kind with which we ever met."—Athenaeum.

Mr. William Butler's Outline Maps.—Price 4s.

GEOGRAPHICAL and BIOGRAPHICAL EXERCISES, designed for Young Persons.

By the late WILLIAM BUTLER. The 17th edition, enlarged by his Son, JOHN OLDING BUTLER, and having an entirely new set of coloured Maps, with a Series of Questions adapted to each Map and the Biography.

"As a correct delineation of the grand outlines of the four quarters of the globe, and of the British Isles, these maps are entitled to much praise."—Literary Gazette.

Printed for John Harris, Corner of St. Paul's Churchyard.

Publish'd by D. A. Talboys, Oxford; and William Pickering, London.

REGIMEN SANITATIS SALERNITANA,

a Poem on the Preservation of Health, in Rhyming Latin Verse, addressed, by the School of Salerno, to Robert of Normandy, Son of William the Conqueror; and the Englishman's Doctor, an ancient English Metrical Translation of the same. With an Introduction and Notes.

By Sir ALEXANDER CROKE, D.C.L. and F.A.S. In 1 vol. elegantly printed in crown 8vo. with 9 Plates, cloth boards, 12s. Only 250 Copies printed.

An Essay on the Origin, Progress, and Decline of Rhyming Latin Verse, with many Specimens, by Sir Alexander Croke, D.C.L. and F.A.S. neatly printed in crown 8vo. cloth boards. Oxford, 1829, 7s. 6d.

"This is a clever and interesting little volume, on an attractive subject,—the leisure work of a scholar and a man of taste."—British Critic.

The Life and Death of Cardinal Wolsey,

by Thomas Storer, Student of Christ Church, Oxford, 8vo. 7s. 6d. boards.

New Journal of Science and Natural History. In 8vo. with Plates and Woodcuts, price 6s. 6d. No. 1.

JOURNAL of the ROYAL INSTITUTION of GREAT BRITAIN.

Contents: On certain Phenomena resulting from the Action of Mercury upon different Metals. By J. F. Daniell, F.R.S. and M.R.I.—On the Peculiar Habits of Cleanliness in some Animals, and particularly the Grub of the Glow-worm. By J. Renne, A.M. and F.L.S.—Description and Application of a Fusion Galvanometer. By William Ritchie, A.M. and F.R.S.—Practical and Philosophical Observations on Natural Waters. By William West, Esq.—General Remarks on the Weather in Madagascar, with a Meteorological Journal. By Robert Lyall, Esq. Brit. Res. Agt.—On the Effects and Application of some Portions of the Fabulous History of Greece. By William Sankey, A.M. &c.—On the Limits of Vaporisation. By M. Faraday, F.R.S.—On the Effects of Electricity upon Minerals which are phosphorescent by Heat. By Thomas J. Pearysall—On the Development of the several Organic Systems of Vegetables. By Gilbert T. Burnett, Esq.—Contributions to the Physiology of Vision, No. I.—On the Horns of the Prussian Elk. By William Wittich, Esq.—On Gunpowders and Detonating Matches. London: John Murray, Albemarle Street.

School Books. Third edition, 12mo. 2s. 6d.

AN ABRIDGMENT of MATTHIE'S GREEK GRAMMAR, for the Use of Schools.

Edited by the Rev. C. J. BLOOMFIELD, D.D.

Also, Kenrick's Greek Exercises, adapted to Matthew's Greek Grammar, 8vo. 6s. 6d. John Murray, Albemarle Street.

LOWNDES' BIBLIOGRAPHER'S

MANUAL. Part XIII. Price 5s.; large paper, 10s.

"We entertain sanguine hopes that so great a desideratum as a book-reference to the best works, on all subjects, will now be attained. We think highly both of Mr. Lowndes' plan and of the research which his pages display."—Retrospective Review.

"As a book of reference it is indispensable not only to authors, booksellers, and collectors, but to every one pretending to, or desirous of, any acquaintance with the literature of his age and country. To know the contents of our best authors is a noble acquisition, but one of immense and laborious research."—William Pickering, Chancery Lane, London.

THE NEW MONTHLY MAGAZINE for

October, contains, among various other interesting Papers:—The English Elections—Present State of the Elective Franchise—the Duke of Wellington—Conclusion of Mr. Campbell's Remarks on Mr. Hughes's Travels in Greece and Albania—Conversation between Byron and Shelley on the Character of Hamlet—the Little Peddler's Glance—Lunatic Lays, No. IV.; a Tale of Bordeaux—Moderation and Hatred—Sketches from the Ganges, No. II.; the Deputation and Dinner—the Prison Breaker, by Harry Cornwall, Esq.—Letter from John Galt, Esq. on the Subject of his Life of Byron—Journal of a Parisian Residence—Description of these new before us, with more intense curiosity, amusement, and instruction."—Literary Gazette.

The following important Works are just published by Messrs. Colburn and Bentley, New Burlington Street.

THE LIFE and CORRESPONDENCE of JOHN LOCKE.

By LORD KING. 2d edition, in 2 vols. 8vo. with considerable Additions, among which is a Diary of Lord Chancellor King.

"One of the most important, and one which must ever remain a standard book in English libraries."—Literary Gazette.

2. Dr. Doddridge's Private Correspondence,

the Third and Fourth Volumes. "We know not when, if ever, we have perused volumes of the description of these new before us, with more intense curiosity, amusement, and instruction."—Literary Gazette.

3. Memoirs of Lady Fanshawe, Wife of the

Right Honourable Sir Richard Fanshawe, Bart. Ambassador from Charles II. to the Court of Madrid. Written by Himself, with Extracts from the Correspondence of Sir Richard Fanshawe. In small 8vo. with beautiful Portrait, price 9s.

"A very delightful volume."—Literary Gazette.

"These Memoirs will probably take their place by the side of Mrs. Hutchinson's,—a praise which the admirer of the latter will know how to estimate."—Literary Gazette.

4. Conversations of James Northcote, Esq.

R.A. with W. Hazlitt, Esq. In 1 vol. post 8vo. with a fine Portrait of Mr. Northcote, 10s. 6d.

A SCHOOL DICTIONARY of the ENGLISH LANGUAGE, constructed as a Series of Daily Lessons, and preceded by a New Guide to the English Tongue.

By W. F. MYLIUS.
 The excellence of this favourite School Book is attested by the sale of upwards of one hundred and fifty thousand copies, and its value is further proved by the numerous attempts made to imitate it without success since its first publication.
 Printed for Baldwin and Cradock, Paternoster Row.

Where may be had, by the same Author, the following popular School Books:—

Mylius's Junior Class Book; or, Reading Lessons for Every Day in the Year, in Prose and Verse. The 7th edition, 5s. bound.

Mylius's First Book of Poetry, for the Use of Schools, intended as Reading Lessons for the Younger Classes, with a beautiful Frontispiece, engraved on Steel. The 9th edit. 3s. bound.

Mylius's Poetical Class Book; or, Reading Lessons for every Day in the Year, selected from the most popular English Poets, Ancient and Modern, arranged in Daily Lessons and Weekly Portions. The 6th edition, ornamented, with a fine Portrait of Shakespeare, 5s. bound.

In 12mo. price 9s. boards, dedicated, by permission, to His Grace the Lord Primate of Ireland,

PASTORALIA; a Manual of Helps for the Parochial Clergy, containing a Scriptural View of the Clerical Duties—Prayers for the Use of the Clergy—Scheme of Pastoral Visitation—Outlines of Sermons—and Books for the Use of the Clergy.

By the Rev. HENRY THOMPSON, M.A. Of St. John's College, Cambridge, Curate of Wington, Somerset. London: Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had,
The Quarto Edition, price 11. 16s. boards, on medium paper, and 3l. 12s. on royal paper.

In 3 vols. post 8vo.
DE L'ORME; a Novel.
 By the Author of "Darnley, or the Field of the Cloth of Gold," "Richelieu," &c.
 "A work which, for grandeur of incident and power of narration, has few equals."—*Globe*.
 "As an historical novel, these pages have the great and rare merit of marking the spirit as well as the manners of their time; the real personages introduced are drawn with equal animation and accuracy, while the interest is well sustained to the last, and Public opinion has implicitly confirmed our praise of Richelieu and Darnley, but we must say we think De L'Orme much superior to its predecessors."—*Literary Gazette*.
 Henry Colburn and Richard Bentley, New Burlington Street.

Professor Scholefield's Euripides.
 In 8vo. price 14s. boards, the 2d edition of
EURIPIDES TRAGEDIAE priores quatuor.

 The 11th edition, comprehending all the recent Discoveries. Printed for Baldwin and Cradock, Paternoster Row.

In Monthly Volumes, price 5s. uniformly with the Waverley Novels and Cabinet Cyclopaedia,

PICKERING'S ALDINE POETS, Vol. VI.: the Poems of Henry Kirke White, with an original Memoir and Portrait.

Lord Byron remarks, that Kirke White died in consequence of the "pursuit of studies that would have matured a mind itself destroyed by the most absurd and unwholesome study which disease and poverty could not impair, and which could not give it interest, works the most valuable in our literature, and every possible information carefully collected respecting the writers; add to all this a price infinitely lower than what is affixed to the thousand volumes of poetry which every day appear, and are every day forgotten."

Vols. I. and II. contain the Poems of Burns.

Vols. III. and IV. contain the Poems of Thomson.

Vol. V. contains the Poems of Collins.

"Of the technical part of this volume (Collins) we have only to repeat the praise we have already most cordially given to the preceding volumes of the Aldine Edition: the perfection of printing, beautiful paper, a neat engraving, whose subject alone would give it interest, works the most valuable in our literature, and every possible information carefully collected respecting the writers; add to all this a price infinitely lower than what is affixed to the thousand volumes of poetry which every day appear, and are every day forgotten. The exterior elegance of this work, the worth of the Memoir, and the good feeling and good sense contained in the dissertations of Warton and Sir Egerton Brydges must, in addition to the most sweet and impassioned poetry ever written, render this volume of the 'Aldine Poets' a favourite with the public."—Literary Gazette, No. 712.

"This volume is a proof of the triumph of pure and genuine poetry. The poems of Collins were long felt only by the poetic few. We had no poet who surpass him in vigour of conception; and none, we think, who equal him in that happiness of handling, which keeps the language subordinate to the thought, and stamps the image truly on our minds. All that he touches work the worth of the Memoir, and the good feeling and good sense contained in the dissertations of Warton and Sir Egerton Brydges must, in addition to the most sweet and impassioned poetry ever written, render this volume of the 'Aldine Poets' a favourite with the public."—Literary Gazette, No. 712.

William Pickering, Chancery Lane, London.

Publishing monthly, Under the especial Patronage of His Majesty William the Fourth.

THE NATIONAL PORTRAIT GALLERY OF ILLUSTRIOUS AND EMINENT PERSONAGES OF THE NINETEENTH CENTURY, with Memoirs.

Half-bound, russia backs, corners, and lettered.....9 9 0

In the full extended size of the Maps, half-bound, russia backs, corners, and lettered.....10 0 0

Proofs on India paper, half-bound, russia backs, corners, and lettered.....14 9 0

A NEW GENERAL ATLAS OF FIFTY-THREE MAPS, with the Divisions and Boundaries carefully coloured. Constructed entirely from new Drawings, and engraved by SIDNEY HALL. Completed in Seventeen Monthly Parts, any of which may still be had separate, price 10s. 6d. each.

The Proprietors of the New General Atlas have now the satisfaction to announce the Completion of the Work. Within the two years which have elapsed since its commencement, great expense has been bestowed, and unremitting exertions employed, to render it perfect, by collating and adjusting the labours of preceding geographers, by correcting the errors of position, together with their orthographical inaccuracies, by ascertaining and delineating the changes in political geography, especially those relating to European States and their boundaries, and by tracing, with the utmost possible accuracy, the progress of discovery in remoter regions. In consulting the best and most recent authorities, the constructor of this Atlas may claim the merit of having exercised that judgment which he derives from long experience in pursuits connected with the science to which his Work is subservient. The geographical illustrations attached to many of the late years, were executed by him; and of the advantages accruing from these and from collateral sources of information, he has freely, and, he trusts, not inefficiently, availed himself. His constant aim has been to render the New General Atlas a Companion of Geography, all respects adapted to the present advanced state of the sciences.

"We have taken some pains to examine this new Atlas, and we can safely state our conviction of its general superiority to all other Atlases."—Spinex, (conducted by J. S. Buckingham, Esq.)

"The best and most complete Atlas in all cases consulted; and the price is so moderate as to render it surprising that it should remunerate the artist for his labour in constructing the maps, and engraving them in so masterly a manner."—New Monthly Magazine.

For other favourable opinions of this Atlas, references may be made to the Literary Gazette, Gentleman's Magazine, Literary Chronicle, John Bull, Sun, Standard, Atlas, Courier, London Weekly Review, Globe, &c. &c. &c.

Published by Longman, Rees, Orme, Brown, and Green, London; and to be had of all Booksellers and Dealers in Maps.

Preparing for publication.

An Alphabetical Index of all the Names contained in the above Atlas, with References to the Number of the Maps, and the Latitude and Longitude in which the Places are to be found.

The volume is expected to make about 500 pages in octavo, and will be supplied to the Subscribers to the Atlas at the Cost Price; the Proprietors being desirous of rendering the work the most perfect of its kind extant.

Estimated Works published by Baldwin and Cradock.

LETTERS on the EVIDENCES, DOCTRINES, and DUTIES of the CHRISTIAN RELIGION. By O. GREGORY, LL.D. 2 vols. copy 8vo. 5th edition, price 14s. boards.

Henry Colburn and Richard Bentley, New Burlington Street.

BOOKS IN THE PRESS.

Speedily will appear, in Constable's Miscellany, WILSON'S AMERICAN ORNITHOLOGY, with Notes and Additions.

By ROBERT JAMESON, Esq. Regius Professor of Natural History in the University of Edinburgh, &c. &c. &c.

In 3 vols. price 3s. 6d. each vol.: fine paper, 5s.; royal paper, 6s.

This edition, of Wilson's highly interesting work, will contain the whole literary contents of the original, and will be increased in value by numerous additions and improvements by Professor Jameson. The original and only edition has rarely been sold in this country under thirty guineas, and is consequently of much less frequency than its merits deserve. The Proprietor of Constable's Miscellany therefore trusts, that by putting this important and valuable work, without curtailment, and in an improved state, within the reach of every person, they are performing an essential service, not merely to the student of natural history, but to the general reader.

Edinburgh: Printed for Constable and Co.; and Hurst, Chance, and Co. London.

Dr. Lardner's Cabinet Library. On the 1st of November will be published, in small 8vo. price 5s. the First Volume of the MILITARY MEMOIRS of FIELD-MARSHAL the DUKE of WELLINGTON, in 2 vols. By CAPTAIN MOYLE SHREBR. Being the First Volume of Dr. Lardner's Cabinet Library.

To be published, Dec. 1.—Military Memoirs of the Duke of Wellington, Vol. II. Jan. 1.—Life and Reign of George IV. 3 vols. Vol. I.

The Cabinet Library, which has been some time in preparation, is intended to embrace such subjects of powerful or immediate interest as do not fall within the regular plan of the "Cabinet Cyclopaedia." It will be published in monthly volumes, supported by the same class of Literary and Scientific Contributors as the Cyclopaedia, and will form a Companion to that Work. Printed for Longman and Co.; and John Taylor.

Preparing for publication, and to be dedicated, by permission, to the Right Honourable Lord Ashley, M.P. &c. &c.

ON THE PROCEEDINGS of the ROYAL SOCIETY, as connected with the Decline of Science in England, together with Arguments, proving, that before the Society can regain Confidence at Home, or Respect from Abroad, a Reform of its Conduct, and a Remodelling of its Charter, are indispensable.

By Sir JAMES SOUTH, Fellow of the Society, and late Member of its Council. B. Feltham, Lodge Street.

Works nearly ready for publication.

THE LIFE of Mrs. JORDAN, including Original Private Correspondence, and numerous Anecdotes of her Contemporaries. By JAMES BOADEN, Esq. With a fine Portrait.

The Romance of History, Third Series: France. By Leitch Ritchie, 3 vols. Chartley; a Novel. By a Contributor to Blackwood's Magazine, 3 vols.

Lives of the Italian Poets, by the Rev. Henry Stebbing, with Twenty Medallion Portraits, 3 vols.

The Anatomy of Society, by J. A. St. John, 2 vols.

Now ready, The Family Cabinet Atlas, Part VI. N.B. The First Half of the Work is now complete. Printed for Edward Bull, New Public Subscription Library, 20, Holles Street, Cavendish Square.

On Saturday, the 9th of October, will be published, with One Hundred Engravings on Wood, Vol. I. price 21s. boards, of THE GARDENS and MENAGERIE of the ZOOLOGICAL SOCIETY DELINEATED, being Descriptions and Figures in Illustration of the Natural History of the Living Quadrupeds in the Menageries of Calcutta.

Accordingly, the proprietors of the Work, will complete this Department of the Work. The whole will be comprised in Three Vols. Two of Quadrupeds, and One of Birds. London: Published by John Sharpe, Piccadilly.

Dedicated to His Grace the Archbishop of Canterbury. In the press, in small 8vo. extra boards, with a Portrait, Vol. I.

THE SUNDAY LIBRARY; or, the Protestant's Manual for the Sabbath-Day: being a Selection of Sermons from eminent Divines of the Church of England, within the last Half Century; with occasional Biographical Sketches, and short Notes.

By the Rev. T. P. DIBBIN, D.D. Rector of St. Mary's, Bryanston Square; and Vicar of Ealing, Suffolk.

At a moment when knowledge of almost every description, is a firm at once pleasing and cheap, is made familiar to the understandings of all classes of society, it will not appear to be an improper diversion of such channels of useful intelligence, if they are made instrumental to the propagation of Moral and Religious Truths. Accordingly, the proprietors of the Work, of which the title is above announced, are induced to present the public, at reasonable intervals, with a Manual of Religious Edification, more especially adapted for the Lord's Day; as containing the sentiments of many of the more eminent Divines of the Church of England in the discourses delivered from their pulpits.

For the purposes of domestic instruction in the truths of religion, especially among Youth of both Sexes, it is presumed that few Substitutes will be found more effectual than that now proposed. Each volume will contain a suitable variety both of subjects and of authors; while the long-established reputation of those Divines, living and deceased, whose Discourses will find a place within the pages of this work, cannot fail to insure to the public the dissemination of edifying and orthodox doctrines.

Let it be also especially impressed upon the minds of Christians, of every persuasion, that at no moment can a work, similar to the present, have stronger claims upon their attention and support, than at this precise period—when the elements of civil society seem to be agitated in every direction, and when a sober and sober exposition of Scriptural Truths may most successfully contribute to the support of the best interests of the country. Printed for Longman, Rees, Orme, Brown, and Green, London.

The following New Works will be published by Messrs. Colburn and Bentley during the month of October.

THE LIFE of SIR HUMPHRY DAVY, Bart. late President of the Royal Society, &c. &c. By J. A. PARIS, M.D. Cantab. F.R.S. Fellow of the Royal College of Physicians, &c. &c. In 1 vol. with a beautiful Portrait.

The Water Witch; or, the Skimmer of the Sea. By the Author of the "Red Rover," the "Prairie," the "Borderers," &c. In 3 vols. to be ready the 15th October.

The French Revolution of 1830, the Events which produced it, and the Scenes by which it was accompanied. By D. Turnbull, Esq. Embellished with Portraits of Louis Philippe and General Lafayette, and a Plan of the scene of Action. In 1 vol. 8vo. Quaque ipse miseris vidi.—Virgil.

Narrative of a Journey through Greece in 1830, with Remarks on the Actual State of the Naval and Military Power of the Ottoman Empire. By Captain T. Abercromby Transit. In 1 vol. 8vo. with Plates.

The Literary Correspondence of John Pinkerton, Esq. F.R.S. Edited by Dawson Turner, Esq. In 2 vols. 8vo. The Life of Titian, with Anecdotes of the Distinguished Persons of his Time. By James Northcote, Esq. R.A. In 2 vols. 8vo. with a fine Portrait of Titian.

The History of Modern Greece, from its Conquest by the Romans, B.C. 146, to the present time. By James Emerson, Esq. of Trinity College, Dublin. In 3 vols. 8vo.

A New Voyage round the World, in the Years 1823, 1824, 1825, and 1826, by Otto Von Kotzebue, Post-Captain in the Imperial Russian Navy. In 2 vols. post 8vo. with Plates.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; sold also by J. Chappell, 90, Regent Exchange; E. Matthews, Ave Maria Lane; and G. H. Bell, 4, Black, Edinburgh; Smith and Son, D. Robertson, and Atkinson and Co. Glasgow; and J. Cunnings, Dublin.—Agent for America, O. Rich, 19, Red Lion Square, London.

SATURDAY, OCTOBER 9, 1830.

REVIEW OF NEW BOOKS.

Ackermann's Forget Me Not for 1831.
London.

THIS very pretty volume is the first to take the field, and, as usual, does equal credit to the taste and industry of its publishers, who allude with most justifiable vanity to its success, not only on its own soil, but in more remote countries; and truly it may well beguile even a sultry morning by the Ganges. We cannot but think this ought to stimulate to still further efforts—for though we do not hold works of this class amenable to any strict criticism, yet we are of opinion that the literary department would bear improvement. There is a very fine poem, "Esther," by Croly—some sweet lines by L. E. L.—and one of those supernatural legends Hogg tells so well, imparting that air of belief which gives them so much of reality; but the rest of the pages are too much filled up by contributions of that kind which it is classically said the gods hate. "Among the contents, however, the "Painter of Pisa" has something of originality to recommend it—"Dady David, the Negro," by the Old Sailor, is affecting—and the following tale strikes us as being very humorously told.

"*The Haunted Hogshhead: a Yankee Legend.*
—You don't live to Boston, then, do you? No; I calculate you are from the old country, though you speak English almost as well as I do. Now, I'm a Kentucky man, and my father was to Big-bone Creek, in old Kentucky, where he could lather every man in the state; but I could lick my father. Well, when I first came to Boston, I guess, I was a spry, active young fellow, and cruel tall for my age; for it's a pretty considerable long time ago, I calculate. So first I goes to look out for Uncle Ben—you've heard of him and his brown *mar*, I reckon—and I finds Uncle Ben at Major Hickory's Universal Transatlantic Hotel, by Charles Bay, in East Boston, taking a grain of mighty fine elegant sangaree, with Judge Dodge and President Pinkney the Rowdey, that built the powerful large log mansion-house in Dog's Misery, in the salt-marshes out beyond Corlear's Hook, in New York. I was always a *leelle* bit of a favourite with Uncle Ben, and so he says to me,—"Jonathan W.," says he—for he calls me Jonathan W. for short—"I'll tell you what it is," says Uncle Ben; "you come out mighty bright this morning, I motion that you take a drop of whisky-toddy or so." "Oh yes, Uncle Ben," says I; "I should admire to have a grain, if it's *handsom*." "Considerably superb," says he; "it's of the first grade, I guess; for Major Hickory keeps wonderfully lovely liquors; and I can tell you a genuine good story about them, such as, I guess, you never heard before, since you was raised." And then he up and told such a tale, that the helps all crowded round him to hear it, and swore it was better than a sermon—so it was. And as you're a *strannger* from the old country, and seem a right-slick-away sort of a chap, without a bit of the gentleman about you, and

are so mighty inquisitive after odd stories, why I don't mind telling it to the 'Squire myself; and you may depend upon it that it's as true and genuine as if you had heard it from Uncle Ben himself, or July White, his old woolly-headed nigger. You must know, then, that the Universal Transatlantic Hotel was built an awful long time before I was raised; though my Uncle Ben remembered a powerful grand wood-house that stood there before it, which was called the Independent Star of Colombia, kept by Jacobus Van Soak, who came to Boston from the old, ancient, veteran Dutch settlers of New York. It was some time after fall in the year 77, that a mighty fierce squall of wind blew down some of the wall of the house where the cellar was, quite to the very foundation. I reckon that the old host was a *leelle* bit maddad at this—he was; though he bit in his breath, and thought to drive in some new stakes, put up fresh clap-boards, and soon have it all slick and grand again; but, in so doing, as he was taking out the piles underneath the house, what does he find but an awful great big barrel, and a cruel heavy one it was, and smelled like as if it was a hogshhead of astonishingly mighty fine old ancieut rum. I'll lay you'll never guess how they got it out of the cellar, where they found it—because they never moved it all, I calculate; though some of the helps and neighbours pulled and tugged at it like *natur*! But the more they worked, the more the barrel wouldn't move; and my Uncle Ben said that mighty *strannger* sounds came out of it, just as if it didn't like to be disturbed and brought into the light; and that it swore at the helps and niggers in English and Spanish, Low German and High Dutch. At last, old Van Soak began to be a *leelle* bit *afeard*, and was for covering it up again where he found it, till my Uncle Ben vowed it should'nt be buried without his having a drop out of it, for he was a bold, active man, that cared for nothing, and loved a grain of rum, or sangaree, or whisky-toddy, or crank, or any other *fogmatic*, to his heart, he did. So down in the cellar he sets himself, drives a spigot into the barrel, and draws him a glass of such mighty fine elegant rum, as was never seen before in all Boston. "Handsom! considerably *handsom*! mighty smart rum, I guess," says my Uncle Ben, as he turned it down; "mild as mother's milk, and bright as a flash of lightning! By the pipe of St. Nicholas, I must have another grain!" So he filled him another glass, and then Jacobus plucked up heart, and he took a grain or two, and the helps and bystanders did the same; and they all swore it was superbly astonishing rum, and as old as the Kaatskill mountains, or the days of Wouter Van Twiller, the first Dutch Governor of New York. Well, I calculate that they might at last be a *leelle* bit staggered, for the rum ran down like water, and they drank about, thinking, you see, that all the strength was gone; and as they were in the dark cellar, they never knew that the day was progressing powerfully fast towards night; for now the barrel was quiet again, and they

began to be mighty merry together. But the night came on cruel smart and dark, I reckon, with a pretty terrible loud storm; and so they all thought it best to keep under shelter, and especially where such good stuff was to be had free, gratis, for nothing, into the bargain. Nobody knows now what time it was, when they heard a mighty fierce knocking on the top of the barrel, and presently a hoarse voice from the inside cried out, "Yo ho, there, brothers! open the hatchway and let me out!" which made them all start, I calculate, and sent Van Soak reeling into a dark corner of the cellar, considerably out of his wits with fright and stout old rum. "Don't open the hogshhead," cried the helps and neighbours, in mighty great fear; it's the devil!" "Pottausend!" says my Uncle Ben—for you must know that he's a roistering High-German: "you're a cowardly crew," says he, "that good liquor's thrown away upon." "Thunder and storm!" called out the voice again from the barrel, "why the Henker don't you unship the hatches? Am I to stay here these hundred years?" "Stille! mein Herr!" says my Uncle Ben, says he, without being in the least bit *afeard*, only a *leelle* maddad and wondered he was; "behave yourself *handsom*, and don't be in such a pretty particular considerable hurry. I'll tell you what it is; before you come out, I should like to make an *enquery* of you—Who are you? where were you raised? how have you got along in the world? and when did you come here? Tell me all this *speedily*, or I shall decline off letting you out, I calculate." "Open the hogshhead, brother!" said the man in the tub, says he, "and you shall know all, and a pretty considerable sight more; and I'll take mighty good care of you for ever, because you're an awful smart, right-slick-away sort of a fellow, and not like the cowardly land-lubbers that have been sucking away my rum with you." "Hole mich der Teufel!" said my Uncle Ben, "but this is a real rig'lar Yankee spark, a tarnation stout blade, who knows what a bold man should be; and so, by the Henker's horns, I'll let him out at once." So, do you see, Uncle Ben made no more ado but broke in the head of the barrel; and what with the storm out of doors, and the laughing and swearing in the cask, a mighty elegant noise there was while he did it, I promise you; but at last there came up out of the hogshhead a short, thick-set, truculent, sailor-looking fellow, dressed in the old ancient way, with dirty slops, tarnished gold-laced hat, and blue, stiff-skirted coat, fastened up to his throat with a mighty sight of brass buttons, Spanish steel pistols in a buffalo belt, and a swingeing cutlass by his side. He looked one of the genuine privateer, bull-dog-breed, and his broad, swelled face, where it was not red with rage, or the good rum, was black or purple; marked, I reckon, with a pretty considerable many scars, and his eyes were almost starting out of his head. If the helps and neighbours were *afeard* before, they were now astounded outright, I calculate; and 'specially so when the *strannger*

sailor got out of his hogshead, and began to lay about him with a fist as hard and as big as a twelve-pounder cannon-shot, crying like a bull-frog in a swamp,—‘Now I shall clear out! A plague upon ye all for a crew of cowardly, canting, lubberly knaves! I might have been sucked dry, and staid in the barrel for ever, if your comrade had borne no stouter a heart than you did.’ Well, I guess, that by knocking down the helps and the neighbours he soon made a clear ship; and then, striding up to my Uncle Ben, who warn’t not at all *afraid*, but was laughing at the fun, he says to him, says he, ‘As for you, brother, you’re a man after my own kidney, so give us your fin, and we’ll be sworn friends, I warrant me.’ But as soon as he held out his hand, Uncle Ben thought he saw in it the mark of a red horse-shoe, like a brand upon a nigger, which some do say was the very stamp that the devil put upon Captain Kidd, when they shook hands after burying his treasure at Boston, before he was hanged. ‘Hegel!’ says my Uncle Ben, says he, ‘what’s that in your right hand, my friend?’ ‘What’s that to you?’ said the old sailor. ‘We mariners get many a broad and deep red scar, without talking about, or marking them; but then we get the heavy red gold, and broad pieces along with them, and that’s a tarnation smart plaster, I calculate.’ ‘Then,’ says my Uncle Ben again, says he, ‘may I make an *enquery* of you? Where were you *raised*? and who’s your *Boss*?’ ‘Oh!’ says the sailor, ‘I was born at Nantucket, and Cape Cod, and all along shore there, as the nigger said; and for the captain I belong to, why he’s the chief of all the fierce and daring hearts which have been in the world ever since time began.’ ‘And, pray, where’s your *plunder*?’ says my Uncle Ben to the *strange* sailor; ‘and how long have you been in that hogshead?’ ‘Over long, I can tell you, brother; I thought I was never going to come out, I calculate. As for my *plunder*, I reckon I don’t shew every body my locker; but you’re a bold fellow enough, and only give me your paw to close the bargain, and I’ll fill your pouch with dollars for life. I’ve a stout ship, and comrades ready for sea, and there’s *plunder* every where for lads of the knife and pistol, I reckon; though the squeamish Lord Bellamont does watch them so closely.’ ‘Lord who?’ says Uncle Ben, a *lectle* bit maddened and wondered. ‘Why, Lord Bellamont, to be sure,’ answered the *strange* sailor, ‘the English governor of New England, and admiral of the seas about it, under King William the Third.’ ‘Governor and admiral in your teeth!’ says my Uncle Ben again; for now his pluck was up, and there warn’t no daunting him then; ‘what have we to do with the old country, your kings, or your governors? this is the free city of Boston, in the independent United States of America, and the second year of liberty, seventy-seven, I reckon. And as for your William the Third, I guess he was dead long before I was raised, and I’m no cokerell. I’ll tell you what it is, now, my smart fellow, you’ve got pretty considerably drunk in that rum cask, if you’ve been there ever since them old ancient days; and, to speak my mind plain, you’re either the devil or Captain Kidd. But I’d have you to know I’m not to be scared by a face of clay, if you were both; for I’m an old Kentuck Rowdey, of Town-Fork by the Elkhorn; my breed’s half a horse and half an alligator, with a cross of the earthquake! You can’t poke your fun at me, I calculate; and so, here goes upon you for a villain, any way!’ My Uncle Ben’s pluck was now

all up; for pretty considerably maddened he was, and could bite in his breath no longer; so he flew upon the *strange* sailor, and walked into him like a flash of lightning into a gooseberry-bush, like a mighty, smart, active man as he was. Hold of his collar laid my Uncle Ben, and I reckon they did stoutly struggle together for a *tarnation* long time, till at last the mariner’s coat gave way, and shewed that about his neck there was a halter, as if he had been only fresh cut down from the gibbet! Then my Uncle Ben *did* start back a pace or two, when the other let fly at him with a pretty considerable hard blow, and so laid him right slick sprawling along upon the ground. Uncle Ben said he never could guess how long they all laid there; but when they came to, they found themselves all stretched out like dead men by the niggers of the house, with a staved rum cask standing beside them. But now—mark you this well—on one of the head-boards of the barrel was wrote, ‘W. K. The Vulture. 1701,’ which was agreed by all to stand for William Kidd, the pirate. And July White, Uncle Ben’s woolly-headed old nigger, said that he was once a loblolly-boy on board that very ship, when she was a sort of pickarooning privateer. Her crew told him that she sailed from the old country the very same year marked on the cask, when Kidd was hanged at Execution-Dock, and that they brought his body over to be near the treasure that he buried; and as every one knows that Kidd was tied up twice, why, perhaps, he never died at all, but was kept alive in that mighty elegant rum cask, till my Uncle Ben let him out again, to walk about New-York and Boston, round Charles Bay and Cape Cod, the Old Sow and Pigs, Hellegat, and the Hen and Chickens. There was a fat little Dutch parson, who used to think that this story was only a mighty smart fable, because nobody could remember seeing the pirate besides Uncle Ben; and he would sometimes say, too, that they were all knocked down by the rum, and not by the captain, though he never told Uncle Ben so, I calculate; for he always stuck to it handsomely, and wouldn’t ‘bate a word of it for nobody. When Uncle Ben had finished, he says,—‘Jonathan W.’ says he, ‘I’ll tell you what it is: I’ll take it as a genuine favour if you’ll pay Major Hickory for the sângaree and the toddy, and we’ll be quits another day.’ And so I paid for it every cent; but would you believe it? though I’ve asked him for it a matter of twenty times, and more than that, Uncle Ben never gave me back the trifle that he borrowed of me, from that day to this!’

Though we have said there is room for improvement, we must also add, there is room for praise. Next year the *Forget Me Not* is to “walk in silk attire,” and we have no doubt it will merit its silk gown. As a variety, we give a *jeu d’esprit* written upon a print of a *Painter Puzzed* in the choice of a subject, from the pen of T. Hood.

‘Draw, sir!’—OLD PLAT.

‘Well, something must be done for May,
The time is drawing nigh,
To figure in the Catalogue,
And woo the public eye.

Something I must invent and paint;
But, oh! my wit is not
Like one of those kind substantives
That answer Who? and What?

Oh, for some happy hit! to throw
The gazer in a trance;
But *poor! he*—there I am posed,
As people say in France.

In vain I sit and strive to think,
I find my head, slack!
Painfully empty, still, just like
A bottle—on the rack.

In vain I task my barren brain
Some new idea to catch,
And tease my hair—ideas are shy
Of ‘coming to the scratch.’

In vain I stare upon the air,
No mental visions dawn;
A blank my canvass still remains,
And worse—a blank undrawn;
An ‘aching void’ that mars my rest
With one eternal hint,
For, like the little goblin page,
It still keeps crying ‘Tint!’

But what to tint? Ay, there’s the rub
That plagues me all the while,
As, Selkirk like, I sit without
A subject for my *ie*.

‘Invention’s seventh heaven’ the bard
Has written—but my case
Persuades me that the creature dwells
In quite another place.

Sniffing the lamp, the ancients thought
Demosthenes *must* toil;
But works of art are works indeed,
And always ‘smell of oil.’

Yet painting pictures some folks think
Is merely play and fun:
That what is on a easel set
Must easily be done.

But, zounds! if they could sit in this
Uneasy easy-chair,
They’d very soon be glad enough
To cut the camel’s hair!

Oh! who can tell the pang it is
To sit as I this day,
With all my canvass spread, and yet
Without an inch of way?

Till, mad at last to find I am
Amongst such empty skulners,
I feel that I could strike myself—
But no—I’ll ‘strike my colours.’”

An Introduction to the Natural System of Botany; or, a Systematic View of the Organization, Natural Affinities, and Geographical Distribution, of the whole Vegetable Kingdom. By John Lindley, F.R.S., &c. 8vo. pp. 374. London, 1830. Longman and Co.

BOTANISTS have long felt the various anomalies and difficulties which constantly present themselves in almost every department of the science, from studying the structure, character, and habitudes, of plants, according to the artificial system of Linnæus. That great man undoubtedly achieved a wonderful improvement in the study of natural history, by the establishment of that beautiful system which has gone by the name of the Sexual Classification of Plants; for all the knowledge that existed at the commencement of the last century respecting the anatomy and physiology of plants was a mere mass of chaos, in comparison with the profound arrangement proposed by the great Swedish naturalist.

Yet, like all general systems erected upon artificial data, the beautiful system of Linnæus has not been able to withstand the test of modern physiological investigation. The structure of plants, coupled with their external characters and medical properties, has been found so much more eligible a mode of classification than that of depending almost entirely on the organs of fructification, that the day is probably not far distant when the natural system proposed by the eminent French naturalist, Jussieu, will have entirely superseded the artificial classification of the father of the science.

In the introduction Mr. Lindley observes, that “the organs of fructification are only entitled to a superior degree of consideration when found by experience to be less liable to variation than those of vegetation.” Now, as the result of successive observation, by all the distinguished botanists of the day, serves to shew that there are infinitely greater exceptions and variations in the several parts of plants subservient to propagation, than in those parts of a plant which may be called its *primitive* structure, and which constitutes 9-10ths of the mass through-

out the whole vegetable kingdom; there is every argument why we should adopt the more rational system, recommended in the very able work before us, of classing plants under the two general heads of *vascular* (or flowering plants), and *cellular* (or flowerless plants), instead of the *sexual* and *asexual* classification. But the grounds on which Mr. Lindley recommends the adoption of the natural in lieu of the artificial system we prefer giving in his own words:—

“The principle upon which I understand the Natural System of Botany to be founded is, that the affinities of plants may be determined by a consideration of all the points of resemblance between their various parts, properties, and qualities; and that thence an arrangement may be deduced in which those species will be placed next each other which have the greatest degree of relationship; and that, consequently, the quality or structure of an imperfectly known plant may be determined by those of another which is well known. Hence arises its superiority over arbitrary or artificial systems, such as that of Linnæus, in which there is no combination of ideas, but which are mere collections of isolated facts, not having any distinct relation to each other. This is the only intelligible meaning that can be attached to the term Natural System, of which Nature herself, who creates species only, knows nothing.”

This is undoubtedly the more correct view of the subject; and we only regret that Mr. Lindley has deemed it necessary, in order to obtain the approbation of the more cultivated botanist, to express himself throughout the greater part of the work in language far beyond the comprehension of the junior class of readers. Indeed, the author has committed a palpable discordance between his title-page and his preface—for in the former he calls his work “an Introduction to the Natural System of Botany;” and at the end of his preface he says: “In conclusion, the author has only to add, that this work must *not* be received as an Introduction to Botany. Those who would understand it must previously possess such an elementary acquaintance with the science as they may collect from his *Outline of the First Principles of Botany*, or some other work in which the modern views of vegetable organisation are explained.” The work is therefore an Introduction, and *no* Introduction; but which we must leave the author to reconcile with his readers, while we point out the principal merit of the volume—its application to medical botany.

In the arrangement of the work Mr. Lindley gives the diagnosis, anomalies, essential character, affinities, geography, and medical properties, of each order and genera. To the dry botanical student the first five distinctions are no doubt valuable, as facilitating his course of study. But in our estimation, the comprehensive section which describes the properties and virtues of each plant in medicine, the arts, and domestic and rural economy, is by far the most valuable portion of the volume. Indeed, we are inclined to think the author is himself of the same opinion, both from having dedicated his volume to the Apothecaries' Company, and from the following remarks with regard to the substitution of the Jussieuan system instead of the Linnæan.

“The advantages of such a system (the natural), in applying botany to useful purposes, are immense, especially to medical men, with whose profession the science has always been identified. A knowledge of the properties of one plant is a guide to the practitioner, which enables him to substitute some other with con-

fidence, which is naturally allied to it; and physicians on foreign stations may direct their inquiries, not empirically, but upon fixed principles, into the qualities of the medicinal plants which nature has provided in every region for the alleviation of the maladies peculiar to it. To horticulturists it is not less important: the propagation or cultivation of one plant is usually applicable to all its kindred; the habits of one species in an order will be often those of the rest: many a gardener might have escaped the pain of a poisoned limb, had he been acquainted with the laws of affinity; and finally, the phenomena of *grafting*, which is one of the grand features of distinction between the animal and vegetable kingdoms, and the success of which is wholly controlled by ties of blood, can only be understood by the student of the natural system.”

It cannot be denied, even by the advocate for the Linnæan arrangement, that the natural classification is infinitely better calculated to promote the study of medical botany, and horticulture; and under that view, we may safely recommend the present “Introduction” of Mr. Lindley as a most valuable treatise on a very important branch of science.

The Poetical Works of Henry Kirke White. Aline Poets, Vol. VI. London, 1830. Pickering.

ANOTHER of these beautiful volumes: we doubt whether Dr. Faustus would recognise his own art in the perfection to which it is now brought. We anticipate that deserved success will carry this series through the whole circle of our *corpus poetarum* and that it may be celebrated in such an epigram as follows:

Of starving Genius we no more allow—
For British Bards are All-die Poets now.

To only one point would we direct Mr. Pickering's attention: these are books made for use, as well as show; and the matter should bear some comparison at least with the manner. Some of the biographies are not what ought to be found in a work like this: they are industriously put together—but they want both judgment and originality. Coliins was overlaid with extraneous matter (who cared for a reprint of Langhorne's tasteless criticism?); and in the present volume the last sheet is devoted to a set of laudatory poems, much in the old school of the eulogistic verses with which every poet thought it necessary to preface his work. In the life itself, too, what shall we say to instances like the following?—The common-place of “his mother's mind was thus abstracted from the grovelling cares of a butcher's shop.” The subjoined phrase contradicts its own meaning:—“A constitutional deafness soon convinced him that he was not eligible for the duties of an advocate; and his thoughts became directed to the church, from the most conscientious motives:”—it reads as if deafness were a constitutional motive. Again:—“The history of an author's first book is interesting; and Kirke White's was attended with unusual incidents. A novice in literature always imagines that it is important his work should be dedicated to some person of rank; and the Countess of Derby was applied to, who declined, on the ground that she never accepted a compliment of that nature. He at length applied to the Duchess of Devonshire; and a letter, with the manuscript, was left at her house. The difficulty of obtaining access to her grace proved so great, that more than one letter to his brother was written on the subject, in which he indignantly says—‘I am cured of patronage hunting; as for begging patronage,

I am tired to the soul of it, and shall give it up.’ Permission was at length granted: the book came out towards the end of 1803; and a copy was transmitted to the duchess, of which no notice whatever was taken.” Now what are the unusual incidents here?—a neglected dedication is no uncommon event. Or where is the truth of this assertion?—“His talents were so precocious, that they became a warning that he was not destined for a long sojourn here.” As if early death were the necessary consequence of early genius. We hope our readers' own feelings will deny the ensuing remark: “Though it is extremely doubtful if he was capable of worldly happiness, there is a selfishness in our nature which makes us grieve when those who are likely to increase our wisdom and intellectual pleasures are hurried to the grave.” This is carrying the doctrine of selfishness pretty far.

We have made no remarks on the work itself: we have no space for retrospective criticism; Kirke White's merits have now their assigned place: over-rated they certainly were; but he was a young man of undeniable genius, and whose early death added the interest of pity to that of approval.

The Journal of the Royal Institution of Great Britain. No. I. 8vo. pp. 204. London, 1830. Murray.

THE first No. of this new quarterly periodical, addressed to shew the progress of philosophical science and the useful arts, has just appeared, and contains a various and interesting selection of papers, both from home and foreign sources. Among the contributors we notice Mr. J. F. Daniell, Mr. T. A. Knight, Mr. J. Rennie (entomology), Mr. Faraday (chemistry, &c.), Mr. G. T. Burnett (botany), and Dr. Ure (chemistry); and the miscellaneous intelligence is collected from many publications devoted to similar objects. From the whole, we anticipate that the work will reflect credit on its conductors, and be beneficial to the scientific world; though we do not observe, among all the useful matter, any thing very striking in its *début*. The subjoined extracts will suffice to exemplify the Journal, and inform our readers.

In a paper by Mr. Knight, “on the means of giving a fine edge to razors,”—a subject of no ordinary interest to the bearded sex—he states the following to be a prodigious improvement upon the methods hitherto in use. The machinery consists (he tells us) “of a cylindrical bar of cast steel, three inches long without its handle, and about one-third of an inch in diameter. It is rendered as smooth as it can readily be made with sand, or, more properly, glass-paper, applied longitudinally; and it is then made perfectly hard. Before it is used it must be well cleaned, but not brightly polished, and its surface must be smeared over with a mixture of oil and the charcoal of wheat straw, which necessarily contains much siliceous earth in a very finely reduced state. I have sometimes used the charcoal of the leaves of the *Elymus arenarius*, and other marsh grasses; and some of these may probably afford a more active and (for some purposes) a better material; but, upon this point I do not feel myself prepared to speak with decision. In setting a razor, it is my practice to bring its edge (which must not have been previously rounded by the operation of a strop) into contact with the surface of the bar at a greater or less, but always at a very acute angle, by raising the back of the razor more or less, proportionate to the strength which I wish to give

to the edge; and I move the razor in a succession of small circles from heel to point, and back again, without any more pressure than the weight of the blade gives, till my object is attained. If the razor have been properly ground and prepared, a very fine edge will be given in a few seconds; and it may be renewed again, during a very long period, wholly by the same means. I have had the same razor, by way of experiment, in constant use during more than two years and a half, and no visible portion of its metal has within that period been worn away, though the edge has remained as fine as I conceive possible; and I have never, at any one time, spent a quarter of a minute in setting it." If any of our bristly friends obtain the luxury of an easy shave by employing this simple process, we are sure they will thank us, and remember Mr. Knight with smooth and grateful feelings.

The remaining extracts are the most novel miscellanies which we can pick out.

"Manufacture of Charcoal.—A new process, recommended in the *Journal des Forêts*, for this purpose, is to fill all the interstices in the heap of wood to be charred with powdered charcoal. The product obtained is equal in every respect to cylinder charcoal; and, independent of its quality, the quantity obtained is very much greater than that obtained by the ordinary method. The charcoal used to fill the interstices is that left on the earth after a previous burning. The effect is produced by preventing much of the access of air which occurs in the ordinary method. The volume of charcoal is increased a tenth, and its weight a fifth."

"Potash obtained commercially from Felspar.—According to M. Fuchs, this important alkali may be extracted from minerals containing it, by the following method:—They are to be calcined with lime, then left for some time in contact with water, and the liquor filtered and evaporated. M. Fuchs says he has thus obtained from nineteen to twenty parts of potash from felspar, and from fifteen to sixteen from mica, per cent."

"Chlorine an Antidote to Hydrocyanic Acid.—MM. Persoz and Nonat have verified the favourable results which M. Simeon had obtained relative to the remedy which chlorine affords against prussic acid. They operated upon three dogs, upon the eyes of which a drop of prussic acid had been placed. Dividing the symptoms into three periods, namely, i. uneasiness, ii. tetanus, iii. interrupted respiration, they found that when chlorine was applied in the first period, the relief was immediate, the respiration became regular, vomitings and alvine discharges occurred, the animal gradually regained its strength, rose unsteadily, and in about half an hour was as lively as at first. Applied at the second period, the symptoms were arrested, but the restlessness continued awhile; and though respiration was less painful, the convulsive movements continued for ten minutes, then occurred vomitings, &c., as before, and at the end of an hour the animal was perfectly well. The two dogs thus treated being tried next day with the same quantity of prussic acid, but without chlorine, died in a few minutes. In the third case all the effects of the prussic acid were produced before the chlorine was applied; the respiration had ceased for twenty-five seconds, and the animal was rapidly perishing; but the chlorine not only recalled it to life, but ultimately restored it to full vigour: the full effect only occurred, however, after some hours. Ten days after, it was quite well, and the paralysis of the abdominal parts, which occurred in all, had in this case

entirely disappeared. After this, MM. Persoz and Nonat sought to ascertain whether the prussic acid, being absorbed into the vessels and tissues, the chlorine would follow and decompose it. Two dogs of equal strength were taken, the crural veins laid bare, and separated from the neighbouring parts, and especially the accompanying nervous fibres; then a drop of prussic acid was put upon each vessel. The effects were instantaneous; a few drops of chlorine (solution) were let fall on to one of the crural veins—the other animal was left alone. The first was as immediately recovered as it was injured—the second died directly. The first felt no inconvenience after some hours, except from the wound. Endeavours were then made to kill him, by putting prussic acid upon the eye and upon the crural vein of the opposite side; but the animal only felt temporary inconvenience and a few convulsive movements, and was very quickly at ease. Hence it appears, that the chlorine administered before-hand is taken into the circulation, and is then an effectual remedy against prussic acid. Trials made with the chlorides of lime and soda, in place of chlorine, shewed that they possessed no corresponding powers, being quite inert as antagonists to the hydrocyanic acid."

"On the Cure of Animal Poisons, and probably Hydrophobia, by the local Application of Common Salt. (Rev. J. Fischer).—The Rev. J. G. Fischer was formerly a missionary in South America, and is anxious to call the attention of the public to the probable utility of common salt as a remedy in cases of hydrophobia, if, at least, the opinion be correct, that what will cure the bites of venomous serpents will be efficacious in the former class of cases. He says, 'I actually and effectually cured all kinds of very painful and dangerous serpents' bites, after they had been inflicted for many hours; for immediately after I had applied my remedy, the pain subsided, and the patient calmed—which remedy was nothing else than common table salt; and I kept it on the place or wound, moistened with water, till all was healed, within several days, without ever any bad effect occurring afterwards. I, for my part, never had an opportunity to meet with a mad dog, or any person who was bitten by a mad dog; I cannot, therefore, speak from experience as to hydrophobia; but that I have cured serpents' bites always, without fail, I can declare in truth.' Mr. Fischer then quotes Dr. Urban's practice from *Hufeland's German Medical Journal*. He had six methods: but his most successful was to apply a thick pledget, soaked in any saline solution, to each wound, or to each place where the teeth had made a mark without breaking the skin, and retain them there by bandages. The best solution is of salt one ounce, or one ounce and a half, to a pound of plain water, and the wounds are to be kept constantly moistened with it. The lint is to be renewed and soaked twice a-day; the places wetted every two hours, and even washed by the patient, especially if any indications of relapse, as itching or pain, should manifest themselves. A case is then quoted from the *Kent Herald*, and *Morning Herald* of July 28, 1827, as follows: 'A friend of ours was some years since bitten by a dog, which a few hours afterwards died raving mad. Immediately upon receiving the bite, he rubbed salt for some time into the wound, and, in consequence, never experienced the least inconvenience from the bite, the saline qualities of the salt having evidently neutralised the venom, and prevented, in all pro-

ability, a melancholy death by hydrophobia.' That which induced Mr. Fischer to try the above remedy, in the case of serpents, was 'a page of the late Bishop Loskiell's (with whom I was personally acquainted), in his *History of the Missions of the Moravian Church in North America*, which says, as far as I recollect, that at least among some tribes they were not at all alarmed about the bites of serpents, having always in use such a sure remedy as salt for the cure of them—so much so, that they would suffer a bite for the sake of a glass of rum. It was this that induced me to try the cure of venomous bites with salt; and the trial has exceeded my expectations. P.S. The advice of killing all dogs is neither practicable nor necessary: apply salt to man and dog, the bitten and the biter, all will be most probably well, &c."

"Protraction of Vegetable Life in a dry State: Medico-Botanical Society.—Mr. Houlton produced a bulbous root which was discovered in the hand of an Egyptian mummy, in which it probably had remained for two thousand years. It germinated on exposure to the atmosphere; when placed in earth it grew with great rapidity."

English Prisoners in France. By the Rev. R. B. Wolfe. 8vo. pp. 168. London, 1836. Hatchard and Son.

WE do not very much admire the overstrained religious style of this publication: there is not *matériel* enough for a volume; and we confess we are rather more impressed with the good intentions of Mr. Wolfe, —who, we must say, appears to have done all in his power for the religious instruction and comfort of his fellow-sufferers,—than with any necessity for the work before us. We extract the following anecdote,—a curious struggle between care and generosity:—

"On the officers and crew of the *Minerva* being ordered to Epinal, a march of nearly five hundred miles, Captain Brenton, having endeavoured, without success, to procure money for his bills, tried to raise a small sum upon his watch. But, the watchmaker having offered what he considered quite inadequate to its value, he withdrew, and was standing at the door of the auberge, reflecting on his situation, when he was accosted by a person, who said he understood he wished to dispose of a watch. Concluding the applicant wished to take advantage of the distress of the prisoners, the captain answered rather abruptly, 'Yes, but you will not buy it.' 'That is more than you know,' rejoined the stranger; 'let me see the watch.' It was accordingly put into his hands, and the information given him, that the watch and seals had cost thirty-one guineas. 'C'est un prix bien fort,' said the Frenchman; 'and, if I were to purchase the watch, I would not give more than fifteen louis for it; but, as I should only keep it as a pledge for the payment of any money I might advance, I will give you twenty-five.' The captain began to have a more favourable opinion of his dealer; and, expressing his surprise at this novel mode of making a bargain, delivered to him the watch; and twenty-five louis were paid down, and a note given with the watch to Captain Brenton's agent in England, requesting him to redeem the watch by paying the money, and any additional expenses which might be incurred. The Frenchman went away, and the captain had scarcely time to communicate the information to his officers, when he was seen returning, and a general apprehension was felt that he had repented his bargain. But what was their surprise when he thus accosted the

captain: 'Monsieur, ma conscience me pique, je suis indigné de la caution qui m'a fait prendre un gage d'un brave officier essayant le sort de la guerre; reprenez votre montre, monsieur, et donnez moi votre billet d'échange pour l'argent.' This was, of course, gratefully acceded to. But the stranger soon returned a second time. 'Encore, monsieur, ma conscience me pique.' 'Comment! encore?' 'Yes, sir,' said he, 'I have been considering how I can best relieve it. I am a merchant of L'Orient, my name is Dubois; I am returning home; and having examined my purse, I find I have just twenty-five louis more than I shall want for my journey. Here,' continued he, destroying the first note, and putting the additional sum into the captain's hand, 'add these to the former, and give me a bill for the whole.' "

Commentaries on the Mining Ordinances of Spain. By Don Francisco Xavier de Gamboa. Translated from the original Spanish by R. Heathfield, Esq. Barrister at Law. 2 vols. 8vo. London, 1830. Longman and Co.

DON FRANCISCO XAVIER DE GAMBOA, whose celebrated work has lately been rendered available to the British public, was born of a distinguished family in the province of Guadalaxara, in New Spain. His great talents and abilities, though continually exerted with honour to himself as an advocate in the courts of his native country, seem to have been more particularly directed to the examination of the laws of mining, the various scientific processes carried on at the mines, and the vast importance of the mineral riches embosomed in the mountainous regions of Mexico. In the course of events he was appointed to an official situation at the court of Madrid; and it was during his residence at that capital that he produced his celebrated Commentary. Warmly attached to his native country, and ardently desiring its welfare and prosperity, he had taken frequent opportunities, throughout the work, of pointing out such alterations and improvements as might tend to developpe more largely the extensive resources of New Spain, and encourage that spirit of enterprise which had already achieved the covering of a once barbarous country with noble cities and numberless villages, smiling amid the universal luxuriance of its now cultivated valleys and prairies.

So much were his Commentaries admired and valued for the interesting information with which they are replete, that they received the warm approval of majesty; and, in fine, became a book of reference throughout all the Spanish colonies in America. Shortly afterwards, Gamboa was appointed to the high office of regent of the audiency of Mexico, which post he filled with great credit and distinction till the period of his death.

In the work now before us an interesting account is given of the arrangements entered into between the crown and those individuals whose capital and time were devoted to the working and exploring of gold and silver mines, and many curious details regarding the rewards offered and the inducements held out to the aborigines of the country to reveal their important discoveries; for it appeared that the Indians were in the habit of concealing veins of silver and gold to prevent them from being worked, imagining, perhaps, that if discovered they would be taken from them.

Many of the clergy who passed over to New Spain shewing themselves to be more interested in the accumulation of gold and silver than in

the conversion of the Indians, various laws were passed in the reigns of Philip II. and Philip IV., in which it was directed that neither the monks nor the clergy should be allowed to employ themselves in working mines, it being considered indecorous and of bad example. In the other conquests and colonies of the Spaniards similar regulations were enforced, as appears from the following extract:

"The council of Lima prohibits curates and incumbents from working mines (amongst other lucrative occupations), under pain of excommunication, *ipso facto incurrenda*; forbidding other ecclesiastics from engaging in actual trade only; but the council of Mexico, setting forth that many curates and incumbents undertook the ministry in the Indies more from a lust of gain, and in the expectation of having the services of the Indians in agriculture or mining, than from a desire to guide and enlighten their minds, orders, that no secular or regular curate shall cultivate land within his jurisdiction, nor within the space of ten leagues around; not excepting even the land of his own patrimony or of the church, if he has an opportunity of letting it: but that if no person can be found willing to take such land on lease, then he may employ the Indians who are so disposed in cultivating it; but that no compulsion shall be used towards them, and that they shall be paid for their labour, and be kindly treated; and that if any such person as aforesaid shall act otherwise, the bishop shall deprive him, if he be a secular clergyman, of his benefice, and if a regular, of his cure, and shall suspend his right of electing, or being elected to any office."

A great deal of interesting information is given relative to the mines of quicksilver, and its consumption in the Americas, besides a singular sketch of the ancient riches and mines of Spain itself, with a theory explanatory of the causes which led to the impoverishment of that country, notwithstanding the great wealth and power of its colonies.

"In the history of the Maccabees, where the great power of the Romans is described, it is mentioned as one of their mighty acts in Spain, that they had made themselves masters of the rich ores of gold and silver. From no other country (according to Fray Juan de la Puente, who cites Solinus, Pliny, Lucius Florus, Strabo, Posidonius, Polybius, Aristotle, Diodorus Siculus, Herodotus, and other Greek and Latin authors) could so great an abundance of these rich ores be procured. He states, upon the authority of Strabo, that during a conflagration on the Pyrenees, streams of gold and silver flowed down their sides; that all the mountains and hills of Spain afford the materials for money; and that that country is an inexhaustible source of metallic ore; that Plutus, the god of riches, holds his habitation beneath its surface; and that the Carthaginians, on their landing there, found the basins and even the mangers made of silver. And he likewise asserts, quoting Aristotle, that upon the ancient Phœnicians navigating to Tartessus, the Spaniards gave them, in exchange for oil and other ordinary merchandize, more silver than the ships were capable of conveying; and that upon setting sail, they not only made their common utensils, but even their anchors, of silver. But of all the writers on this subject, Don Antonio Carrillo Lasso is the most deserving of attention, he having collected, with admirable erudition, many most remarkable and wonderful instances in reference to all the different provinces of Spain, and with the view of shewing, that as they

yielded in former times such immense riches, so might they in these times be rendered equally productive.

"Don Geronymo Ustariz, in his *Theorica y Practica de el Comercio y Minería*, proves to demonstration, by reference to the circumstances of England, France, and Holland, that the debility and depopulation of Spain are not to be attributed to the attraction held out by the Indies, but to the importation of foreign goods, by means of which our money is drained from us, and our manufactures are annihilated, thus having the effect of a heavy tribute. And that hence it is that La Mancha, Guadalaxara, Cuenca, Soria, Valladolid, Salamanca, and other cities of Castile, the emigration from which to the Indies is in the smallest proportion, are the least populous parts of Spain; while Cantabria, Asturias, Navarre, the mountains of Burgos and Galicia, from which parts the departures for the Indies are more numerous, are the most populous districts; the condition of the inhabitants being, in fact, improved, and the cultivation of their land advanced, by the remittances they receive from their relations in the Indies."

After entering into various details relative to the proposed establishment of a general mining company, Gamboa proceeds to give a most minute and accurate account of the many extraordinary processes to which the miner has recourse for the recovery of the gold and silver from the ore. We regret that our limits do not permit us to make a few extracts of these curious and interesting operations, for the accuracy of which we ourselves can fully vouch, having had opportunities of witnessing in person the magnificent and splendid operations of the gold and silver mines of New Spain. We must beg to refer the reader to the work itself, where the experiments detailed in the various methods of reduction, by smelting and amalgamation, serve to developpe the secrets of metallurgic philosophy, for their proficiency in which science the Mexican miners are justly celebrated.

The work contains much valuable information on the subject of private rights to mines—their regulation and management—the production of ores—the mode in which mines are taken possession of, and denounced when abandoned, &c. A detailed account is given, interspersed with many curious anecdotes and incidents relative to the carrying into execution of the various laws passed on the subject of subterraneous communication in mines, and the removal of the rich pillars left in the progress of the work, as a support to the vault from which the ore has been removed.

The singular magnificence and beauty of those vast natural grottos, which sometimes occur at great depths in mines, and of which we have been more than once delighted spectators, caused a deep impression, and at the same time a feeling of curiosity to fathom the origin of those strange vacuums formed in the earth's crust, many hundred yards below its surface. It is with pleasure we select the following description:—

"In some places, natural vaults of extraordinary beauty and extent are found, exceeding even one hundred *varas* in height and length. From their vaulted form, they are in themselves firm and strong by nature; and although fearful places to enter, yet their firmness is well known, and the miners work in them with security. They are found to contain ore, loose sand, or earth, which the miners gradually remove, leaving the vault, store, or depository, empty and hollow. And after removing the

whole of the contents, they frequently, upon breaking in further, discover other vaults, to which they are guided by indications derived from the colour of the ground, or from the echo returned on striking with a crow or bar, as if from a hollow place. This is the description given of the mines of Chiguagua, by Don Mathias de la Mota, and we have received information to the same effect from several persons of great experience in that district, particularly with regard to a work called San Augustin, in the mine of Aranzazu, belonging to the family of Trasviña, which is an extremely firm and most beautiful vault, capable of containing the largest church in Madrid or Mexico. Such also is the case with regard to the mines of Zimapan, where, according to the account of persons who have had much experience in working them, similar vaults are found. These caverns being formed by nature, do not require pillars of support, and it would, indeed, be a difficult matter to set about forming them. But when the hills are artificially undermined and cut away, it is impossible that they should sustain their own weight, unless supported by strong and firm pillars."

The greatest attention was paid to the prohibition of removing pillars of rich ore, left as supports to the vaults:—

"And although it may seem hard, supposing the vein to become barren, to be disabled from cutting into the pillars or reservoirs, however rich in gold or silver, yet it would be still harder that the whole mine should be ruined by falling in, and that human life, the most precious gift of nature, should in consequence be put in jeopardy. Indeed, this is a point upon which no precaution should be dispensed with; and those who servilely give way to the eagerness of the miners, and authorise them to remove or weaken the pillars of support, act in opposition to the dictates of conscience, and to the true interests of the mine, and render themselves gravely responsible for their conduct. All which is shewn by Agricola in a very few words."

In another part of this valuable work, the privileges of the miner are spoken of, and some of the causes pointed out which have led to their frequent embarrassments and ruin. The propensity to thieving which exists among the Indian miners is descanted upon, in terms which shew Gamboa to have been well aware of their pilfering habits,—a circumstance of which we recollect many curious instances.

"They steal the iron picks and crows; they steal the candles; they steal the ore, by means of various very subtle and dexterous contrivances and stratagems; and they steal the silver from the smelting works, and from the vats and washing places in the amalgamation works, with no less dexterity, under the very eyes of the overseers. Upon one occasion, in the reduction works of the Marquis de Valle-Ameno, in the mining district of el Monte, the amalgamator being present, and the workmen shut in, several ingots of silver disappeared from the room; and on the circumstance being investigated, it was found that they had fastened a string to the ingots, which being carried out by the gutter, through the force of the water, the party posted outside for the purpose was enabled to drag away the silver. They steal clothes and money from each other; and if they contrive to elude the searcher at the mouth of the mine, they will afterwards boast, in his presence, of the thefts they have committed. They steal the rich ore, by throwing it amongst the rubbish, as if it were mere refuse; afterwards recovering it at

their convenience. In a word, they conjugate the verb *rapio* in all its moods, to the confusion of the unfortunate miner, already sufficiently troubled by being thwarted by his supplier, and oppressed by a load of debt. Miners of a discreet and Christian spirit, generally proclaim a pardon for all thefts every Lent, to exempt their workmen from the liability to restore the property stolen, these people being in general, from their prodigality and recklessness, destitute of the means of making satisfaction, even independent of the pardon thus granted."

As a proof that Mr. Heathfield's translation is not confined solely to the dry details and laws connected with mining operations, we give the following extracts relative to the employment of numbers of the lower classes in the city of Mexico:—

"No court or city contains so many servants of servants, or deputy servants, as Mexico, where it is the practice of the domestic servants to transfer their burdens to a variety of others, and thus to pass their time in amusements and idleness. There is a set of persons whose business is that of making cigars, which it is the custom of all ranks and sexes to smoke—an easy and lucrative employment, which it would be much more proper to make over to poor women, who might employ themselves in this way, putting aside their distaff or spindle, by which means such unfortunate persons might procure something additional to make their lives easy, and compensate for the little esteem in which their needle-work and other labours are held. The host of idlers employed in this way is very considerable, and was raised up within the space of about twenty years; for in the year 1720 the plan of selling cigars ready made had not been devised, and in the year 1740 very great numbers were engaged in the business, but who would have been much better occupied, if, instead of dealing in smoke, they had been employed with a pick and gad in giving ventilation to the works of the mines."

The next passage shews the wide contrast which exists between the sober, frugal labourers in our metallic mines of Cornwall and in the collieries of Northumberland, and the half-civilised race who are employed in the mines of Mexico and Peru; while it affords the best possible commentary on the blessings of free institutions in promoting national industry and social improvement.

"The miner's chief enemy is the miner himself. He is, generally speaking, prodigal, unlimited in his indulgence in expensive luxuries and superfluities, and even in his vices. The workmen drink, game, and lavish, all they get; and they have no notion of economy, but are all for the present moment. They often, in the height of their folly, attire themselves in rich cloth or fine cambric, and then go down into the mine, where their holiday dress generally serves for wadding, or to ease the blow of the pick. If this be the character of the workmen, what may not some of the masters be expected to be? The fault is not in the profession, but its professors; and the greater their prodigality, the more they are to be pitied. It is a melancholy thing to see a man reduced on a sudden to the wretched condition of an Iru, who was previously rich as a Cressus; of which melancholy reverse a multitude of instances might be cited among the once respectable Mexican miners."

We have been much pleased with this well-translated work; and the more so, as, from having consulted the best authorities, visitors of the scenes described, and witnesses of the effects of the laws commented upon, we are

satisfied of the correctness of its details, and the general information with which it abounds.

As a work of legal and scientific reference for individuals connected in any manner with the mining speculations of the day, or interested generally in mining and metallurgical pursuits, we think it invaluable.*

Pompeiana; or, Observations of the Topography, Edifices, and Ornaments of Pompeii. By Sir William Gell, F.R.S., F.S.A., &c. New Series, Part IV. Jennings and Chaplin.

A LARGE portion of this Part is occupied with a minute and learned description of the Thermæ which were excavated at Pompeii in the year 1824; but as it would be impracticable, without the plates, to render that description intelligible to our readers, we will quote a curious episode, on the use of glass by the ancients. Speaking of a window which is placed close under the vault of the roof, in one chamber of the baths, Sir William Gell says:—

"It was not only formed of glass, but of good plate glass, slightly ground on one side, so as to prevent the curiosity of any person upon the roof. This glass was divided by cruciform bars of copper, and secured by what might be termed turning buttons of the same metal. Of this glass all the fragments remained at the excavation, a circumstance which appeared not a little curious to those who imagined that its use was either unknown, or very rare, among the ancients, and did not know that a window of the same kind had been found in the baths of the villa of Diomedes. Glass seems to have, at first, been brought from Egypt, and to have, in fact, received its name of *υαλος* from the Coptic. Crystal, *κρυσταλλος*, or the permanent ice of the ancients, originally designated the natural stone itself. It is said to have been little known in Rome before 536 U.C., but this would give ample time for its use at Pompeii long before its destruction. There are few subjects on which the learned seem to have been so generally mistaken as that of the art of glass-making among the ancients, who seem to have been far more skillful than was at first imagined. Not to mention the description of a burning glass in the *Nubes of Aristophanes*, v. 764., the collection which Mr. Dodwell first formed and brought into notice at Rome, by repolishing the fragments, is sufficient to prove that specimens of every known marble, and of many not now existing in cabinets, as well as every sort of precious stone, were commonly and most successfully imitated by the ancients, who used these imitations in cups and vases of every size and shape. In the time of Martial, about a century after Christ, glass cups were common, except the *calices allasotes*, which displayed changeable or prismatic colours, and, as Vossius says, were procured in Egypt, and were so rare, that Adrian, sending some to Servianus, ordered that they should only be used on great occasions. The myrrhine vases, however, which were in such request, seem at last to have been successfully traced to China. Propertius calls them Parthian; and it seems certain that the porcelain of the East was called mirrha di

* In reviewing a work of this importance to those who have invested so large a capital in the mining enterprises of which it treats, we ought to notice another publication on the same subject, and full of interesting and important information: we allude to the *Quarterly Mining Review*, Nos. I. and II. (published by T. Boosey and Simpson and Marshall), which is not only replete with intelligence respecting the foreign mining associations, but also with various excellent details and remarks on every species of mining in the British dominions.

Smyrna to as late a date as 1555. The vast collection of bottles, glasses, and other utensils, discovered at Pompeii, is sufficient to show that the ancients were well acquainted with the art of glass-blowing in all its branches; but it is not the less true that they sometimes used, much as we do, horn for lanterns, which Plautus terms Vulcan in a prison of horn; and that windows, and Cicero says lanterns, were sometimes made of linen instead of glass, as we see oiled paper in modern times. The common expressions for these objects in Latin appear to be *fenestræ volubiles, vel lineis velis, vel specularia vitæris clauseæ*. In process of time glass became so much the fashion that whole chambers were lined with it. The remains of such a room were discovered in the year 1826, near Ficulnea, in the Roman territory; and these are hinted at in a passage of the Roman naturalist: *Non dubie vitreas fracturas camereas, si prius id inventum fuisset*. In the time of Seneca the chambers in thermæ had walls covered with glass and Thasian marble, the water issued from silver tubes, and the decorations were mirrors."

Various plates, some representing buildings, in Pompeii, others pictures on the walls of those buildings, illustrate the text. Of the latter, an outline, entitled "the Infant Achilles bathed in the Styx," possesses much grace and purity of design.

Ackermann's Juvenile Forget Me Not; a Christmas, New-year's, and Birth-day Present, for Youth of both Sexes. 1831. Edited by Frederic Shoberl. London.

WE cannot but think our young friends ought to be very happy in the prospect before them: here is a little book with a beautiful outside and an entertaining inside—pretty pictures, pretty tales, and pretty poems. The contribution we like least of all, (though we cannot praise the lesson taught by Hogg's admirably told tale of the "Poacher"), is "Clara Evrington;" the history of a wilful girl, who neglects her French and Italian for music: the consequence is, that she is confined to singing English songs, and weeps at hearing her young friends sing the melodies of Mozart and Rossini. A bad spirit of display is here held up as the reward of useful acquirement, and the punishment of its neglect is merely mortified vanity. The simple morals, whether little acts of generosity or kindness—the fault bringing the early sorrow—and candid confession,—of the other tales, are far more deserving of praise; but it is a most difficult task to make up a miscellany really fit for the juvenile reader. There are two pretty poems by Mary Howitt; and we quote part of a lively beating-up for soldiers, by T. Hood.

“What little urchin is there never
Hath had that early scarlet fever,
Of martial trappings caught?
Trappings well called—because they trap
And catch full many a country chap
To go where fields are fought!
What little urchin with a rag
Hath never made a little flag
(Our plate will shew the manner),
And wooed each tiny neighbour still,
Tommy or Harry, Dick or Will,
To come beneath the banner?
Just like that ancient shape of mist
In Hamlet, crying, "List, O list!"
Come, who will serve the king,
And strike frog-eating Frenchmen dead
And cut off Boney's head?
And all that sort of thing.
So used I, when I was a boy,
To march with military toy,
And ape the soldier-life;
And with a whistle or a hum,
I thought myself a Duke of Drum
At least, or Earl of File.

With gun of tin and sword of lath,
Lord! how I walk'd in glory's path
With regimental mates,
By sound of trump and rub-a-dubs,
To 's ege the washhouse—charge the tubs—
Or storm the garden-gates!"

We should, perhaps, observe, that the *Juvenile Forget Me Not* is evidently meant only for the youngest class of readers. The chief writers are,—W. Howitt, Mr. Harrison, Dr. Bookser, Miss Jewsbury, Mr. John Bird, Mrs. Hofland, Misses Jane, Susanna, and Agnes Strickland, the Etrick Shepherd, Mr. T. Hood, and Mr. H. C. Deakin.

An Historical Atlas; in a Series of Maps of the World as known at different periods: constructed upon a uniform scale, and coloured according to the political changes of each period; accompanied by a Narrative of the leading events exhibited in the Maps: forming together a General View of Universal History, from the Creation to A.D. 1828. By Edward Quin, M.A. of Magdalen Hall, Oxford, and Barrister-at-law of the Hon. Soc. of Lincoln's Inn. The Maps engraved by Sidney Hall. Folio, pp. 93. London, 1830. L. B. Seeley and Sons.

THE ingenious and beautiful work before us is decidedly the best constructed railway for the rapid and easy communication of extensive and accurate historical knowledge, that we have met with, even in this age of improved mental as well as material machinery. Its distinguishing object—but that is so fully and perspicuously described in the preface, that we will not do Mr. Quin the injustice of using any other language than his own.

"The leading idea of the volume is that of presenting the known history of the world as a whole, instead of in fragments;—and as a consistent and uniform whole, instead of in parts, drawn after various proportions, and on differing or even opposite plans. What has been the common system, in the instruction of youth in this necessary part of human knowledge? A juvenile student has usually had put into his hands a History of Greece,—another of Rome,—perhaps one of England,—and sometimes a volume or two of universal history, which, from its compressed character, possesses little interest, and gains no possession of the mind. Possibly these narratives may even be accompanied by a few maps, each drawn upon a different scale, and relating to a different period. And after going over this short course, which it is to be feared comprises all that the greater number of schoolboys are introduced into,—what ideas of the history of the world is the scholar likely to have gained? Unless his mind should happen to be very peculiarly constituted, the respective dates of events, and the comparative extent of the countries contained in different maps, will have entirely escaped him. Or should he partially retain some of these points, they will yet be of little use in giving him a correct knowledge of the great outline of history. Has he the least idea, for instance, that at the very time when Alexander was weeping the want of a new world to conquer,—the Romans, whose conquest might have been less easy than that of another world of Persians, lay unheeded behind him, each being mutually ignorant or careless of the other's existence. Or does he know that the greatest empire yet obtained among men, was not that of Alexander or the Cæsars, but was the conquest of a wandering Tartar chief. In short, what general idea can he have gained of the bold and leading outlines of history, when his attention has only been di-

rected to one or two minute spots on the earth's surface, and to them only during a particular series of years. It is not wished to undervalue or discountenance the placing before youth, more especially the splendid and animating stories of ancient Greece and Rome. But at the same time let it be conceded, that these interesting passages of history are but fragments, and that if the pupil's attention is wholly or principally occupied with them, he is likely to gain only a very imperfect or erroneous idea of universal history. The plan now adopted seems to the editors to be that best suited to the object; which is, the affording a complete and just, although rapid and condensed, view of all the great political changes in human society. It consists of a succession of maps exhibiting the state of the known world at more than twenty periods. Its peculiarity consists in exhibiting every thing in its real dimensions and just proportions, and in adhering to the same scale in all successive delineations. Greece and Persia are seen, for instance, in the relations which they actually bore to each other; and are not shewn, as in many atlases,—the one on a scale of twenty miles to an inch, the other on a scale of 200:—And when once laid down, they remain, in each subsequent map, on the same spot and of the same dimensions. By rapidly passing the eye, therefore, over the engravings, the student, always finding the same territory in the same part of the map, sees, by the changes of colour, the various empires which succeed each other. Like the watchman on some beacon-tower, he views the hills and peopled valleys around him, always the same in situation and in form, but under every changing aspect of the hours and the seasons; now basking in the meridian sunshine, then sinking into the gloom of even, and again emerging into the light of returning day. In thus exhibiting the state of the world at different periods, it became necessary, in order to preserve consistency and truth, to exhibit, in the earlier stages of the review, only a very small portion of the earth's surface. The reason of this is obvious. A map entitled *'The World as known to the Ancients,'* is found in most existing atlases, and our readers must often have met with such an one. Now our plan was to exhibit the 'world as known to the ancients,' not of one period, but of several successive periods. We had to shew the world as known in the days of Moses;—the world as known to Cyrus;—to Alexander, &c. And to do this with truth, it was necessary to shew, at each period, only that part of the world which there is reason to believe was actually known to the geographers and statesmen of that time. Still, however, in doing this, we were not to forget that the real facts of the earth's geography were the same at each of these periods as at present, and that China and America were as much in existence in the days of Cyrus as they are now, although unknown to the great mass of civilised human beings. We were not, then, to omit these countries from our maps, as though they had no existence, and yet we were not to exhibit them, as if forming part of the known world of the age so delineated. The only course left to us seemed to be to bring the appearance of a cloud over the skirts of every map, exhibiting at each period only the known parts of the globe, and lifting up or drawing off this cloud as the limits of the known world gradually extended. Every successive map thus combines, at a single glance, both the geography and the history of the age to which it refers; exhibiting, by its extent,

the boundaries of the known world; and by its colours, the respective empires into which that world was distributed. Another point must be briefly mentioned. There have always been, in every age of the world, parts of the earth, not unknown to the geographer or the historian, but classed, by their want of civilisation, of regular government, and of known and recognised limits, under the general description of *barbarous countries*. Such was Scythia through all antiquity, and such is the interior of Africa at the present moment. Now, in distinguishing the successive kingdoms of the earth in our maps by appropriate colours, it was obviously impossible to assign any distinguishing tints to tracts like these. The colours we have used being generally meant to point out and distinguish one state or empire from another, and to shew their respective limits and extent of dominion, were obviously inapplicable to deserts peopled by tribes having no settled form of government, or political existence, or known territorial limits. These tracts of country, therefore, we have covered alike in all the periods, with a flat olive shading; which the eye of the student will soon observe on the skirts of all the maps, and which designates, throughout the work, those barbarous and uncivilised countries to which we have adverted."

The maps are twenty-one in number; and nothing can be more interesting and amusing than to turn them over, one after the other, and observe the gradual advance of civilisation; from the Rembrandtish effect of the first, in which Eden is the only bright spot amidst a mass of deep shadow, to the Rubens-like diffusion of light, and of gay colours, by which the world in its present state is represented. The descriptions contain a condensed, but perfectly intelligible, and, as far as our inspection allows us to judge, correct narrative of all the great contemporaneous events of history. Whoever reads them attentively, assisting his comprehension, and insuring his remembrance, by an examination of the accompanying maps, will acquire a knowledge of general history possessed by few, and will be admirably qualified to prosecute with advantage more minute inquiries into the history of any country, or epoch, which may have peculiar claims on his curiosity.

The Waverley Novels, Vol. XVII. Ivanhoe, Vol. II. Edinburgh, 1830, Cadell; London, Whittaker.

THIS continuation of the Waverley series requires no comment, as it has not needed any of the author's new literary illustrations. *Ivanhoe*, as he stood, is still one of Sir Walter's noblest productions. We are obliged to hint to our friends in the North, that the critics in the South are raising their voices (in spite of all explanations given) against the mediocrity of some of the embellishments. Both the frontispiece and vignette in this volume are poor.

Tales of the Dead; and other Poems. By John Henage Jesse, Esq., Author of "Mary Queen of Scots." 12mo. pp. 126. London, 1830. Murray.

A PRETTY little volume—the memory of scenes and tales in an Italian tour, pleasantly embalmed in verse. We quote the following fair portrait of an Italian:—

"Yet was there one, whose loftier mien
But seldom in those bowers was seen;
The scion of a time-worn race,
Though deck'd with every maiden grace;
A form whose fairy footsteps fell
As light as those of the gazelle;

An eye whose every glance confest
The free emotions of her breast;
A face in which were traits of love;
That seem'd as they were fix'd above;
And yet, when of each gazer took
A nearer view the riddle took,
It seem'd as if a lover's sigh
Might draw a portion from the sky.
That face—I can recall it yet,
So deeply in my mind 'tis set;
'Twas not that bright unchanging hue
That dazzles while it charms the view;
The long, distinct, and glittering light
That woe us on a summer night;
Hers was that beauty, more refin'd,
That steals, like twilight, on the mind,
So soft, so tender, and serene,
That none forget who once have seen;
And stern were he who could defy
The witchery of her pensive eye.

Le Petit Secrétaire Parisien; or, the Art of reading Easy and Familiar English Letters in French at sight. By Louis Fenwick de Porquet. Lond. 1830. Simpkin and Marshall.

WE take this opportunity of recommending M. de Porquet's works generally: founded on simple and obvious principles, adapted to childish capacities, they are excellently calculated to advance the young French or Italian scholar. This remark applies not only to the above volume, but to M. Porquet's *Treasure of the French Language; or, the Art of Translating English into French at sight*; which, as well as the other, has been proven by reaching a third edition.

The Adventures of a Griffin. 2 vols. 12mo. Edinburgh, 1830. J. Kay.

A WEAK yet coarse copy of the faults in our older novelists. The title too is a misnomer: the adventure of an Indian cadet might be both amusing and useful; but two-thirds of these volumes are filled by a silly story of the bygone fashion, of a village maid, whose virtue triumphs over every temptation, of course. The *dénouement* is rather original: the Maria is delivered from her persecutor's power, by his being carried off by an inflammation in the bowels. There is a wire-drawn account of his voyage, whose only incident is, that the meanness which refuses the customary donation to the sailors, subjects the author to the discipline of shaving on passing the line. A silly practical joke; a story worthy of the days of the most elderly magazines; the usual Indian scene of a widow burning herself with her husband's body; some weak enough conversation—and the book closes. We will not prognosticate what a young author may arrive at; but these pages certainly give no promise of future excellence.

Anthologie Française; or, Specimens of the Poetry of the Augustan Age of France, and of the Eighteenth and present Century; with Notes and Illustrations. Pp. 290. London, 1830. Treuttel, Wirtz, and Co.; Souter; Hatchard and Son; Jarrold and Son.

A VOLUME of this kind was much wanted; it is especially useful to young people. Few things advance a learner more in the accent of a language, than reading poetry aloud, if the ear be only tolerable, as the harmony of the verse shews in itself what pronunciation is requisite to give the rhyme. In the selections before us, there is more judgment than taste: by this we mean, there is not a piece that is not perfectly unexceptionable; yet it will be less delightful in the library, than useful as a class-book. But English taste and French poetry are, we own, opposites difficult to reconcile.

Lycée; ou, Analyse critique des Chefs d'Œuvre Littéraires des Dix-septième et Dix-huitième Siècles; augmenté des Notes. Par E. C. Mansart. Pp. 162. London, 1830. Longman and Co.

THIS volume will make a most excellent companion to that of French poetry mentioned above; clear, condensed, and simple, these biographies and criticisms will give the young reader a fair and general idea of the progress of, and principal writers in, French literature.

The French Revolution of 1830. A comic Poem. By F. W. N. Bayley, Esq. with Portraits of Louis Philippe I., La Fayette, and Polignac. London, 1830. A. Miller.

THE French Revolution is no joke, whatever Mr. Bayley may say. There are plenty of puns after the T. Hood fashion; but who can follow in his path? We read that

Polignac had not the knack
Of managing the poll;

so that things went from bad to worse, of which we have here a rhyming account, with lithographies of three of the principal actors.

Albert; or, the Lord's Prayer exemplified, &c. London, 1830. A. Seguin.

THIS is a little book for little people; a Swiss tale put into verse, so as to introduce all the petitions in the Lord's prayer; which are illustrated by seven wood-cuts, from designs by J. M. Usteri.

Publii Virgiliti Maronis Opera, Notis ex Editione Heyniani excerptis illustrata; accedit Index Maittarianus. 8vo. pp. circ. 700. Londini, Gulielmus Pickering.

AN excellent, complete, and cheap, edition of Virgil, equally eligible for the school-room and library.

Steamers v. Stages; or, Andrew and his Spouse. London, 1830. W. Kidd.

ONE of the now rather too prolific class of little books, with humorous, or would-be humorous wood-cuts: the poetry, if we may so call some meaningless doggerel, is very poor, and the cuts, though well cut, do not possess much that is either original or entertaining to recommend them.

ARTS AND SCIENCES.

MAJOR LAING'S MSS.

By the Musquito brig, which arrived at Portsmouth on Saturday last from Tripoli, a report is brought which strongly corroborates the suspicion expressed in the *Literary Gazette*, that it was in great measure from the papers of the murdered Major Laing that Caillie's narrative of African travels was concocted.

LANDER'S TRAVELS.

THE *Hampshire Telegraph* states that the 23d of March was the date of the Landers' disembarking at Badagry; and adds to the intelligence given in our letter from Mr. Fisher, (*L. G.* No. 714) that the travellers had passed safely through the Badagry dominions, in seven days, towards the interior. Their first purpose was understood to be, the delivery of presents to the King of Youri, in whose possession Mungo Park's papers are supposed to be; and after, if possible, obtaining these, to penetrate to Lake Tchad, and survey its whole coast. The first part of this route is very nearly that of Clapperton in 1826; the second portion goes more into regions traversed on preceding occa-

sions by Clapperton 1826, by Clapperton, Denham, and Oudeney, and by Lander himself.

NEW SOUTH WALES.

THE result of Captain Sturt's expedition to trace the course of the Murrumbidgee is thus stated in the *Sydney Monitor*. Capt. S., with his party, crossed the country in twenty-one days from Sydney, and embarked on the river, down which they proceeded seven days, when they entered a new river, running from east to west, which they named the Murray, and into which the Murrumbidgee flows. In a few days more they reached another river, forming a junction with the Murray, and examined its banks about five miles up. The next stream that fell into the Murray flowed from the south east, and was denominated the Lindsay. Lower down still, the expedition having been a month afloat, the Murray was found to enter and form a lake of from fifty to sixty miles in length, and from thirty to forty in breadth. This lake, called Alexandrina, lies immediately to the eastward of Gulf St. Vincent, and extends southward to the shore of Encounter Bay. There has thus been ascertained to exist considerable facilities for interior communications by water from the north of Harris to the southern coast in this country. The river, so surveyed, is reported, however, to be very shallow where it enters the sea, and only fit for boat navigation.

SURVEY OF THE COAST OF AFRICA.

ANOTHER expedition will shortly sail from Portsmouth to complete the survey of the western coast of Africa, which the unfortunate termination of that under the late Captain Boteler left unfinished. The command is intrusted to Captain Belcher, a scientific officer who served with Captain Beechey in exploring the shores of the Pacific. His majesty's sloop *Etna* has been appropriated for this service, and more than usual attention and liberality have been bestowed upon all her equipments. Her commander and officers have been selected by the Lords of the Admiralty in consequence of their superior attainments; and every measure has been taken on the part of Government to render this arduous expedition effective.

The *Etna* will proceed in the first instance to Sierra Leone, and thence to survey various parts of the Gold Coast, and to ascertain the meridian distances of different points which are necessary for the completion of the charts of that neighbourhood.

THE LATE LUNAR ECLIPSE.

WE regret that we cannot insert the whole of the communication from our correspondent P., who writes from South Wales, where he observed the late lunar eclipse: though avowedly "no astronomer," he has sufficient enthusiasm for one, and talent for relating what he had an opportunity of observing. The following is the substance of his letter. He describes the moon when totally immersed in the earth's shadow as appearing of "a deep coppery, or blood red colour, the sky at the time being perfectly clear, and the stars, even those near the moon, twinkling with exceeding brilliancy; this ruddy appearance of the moon seemed not in the intervening atmosphere, but in the very substance of the moon itself. After this coppery colour had continued for some time without much variation, a still greater degree of darkness appeared on the eastern side, which gradually increased, as if it would spread itself over the whole surface of the moon; this at length proved to be only a

dark patch or deeper degree of shadow, which slowly passed over the moon's disc to the western side."

The following paragraph confirms the statement of the appearance of the moon, as described in the *Lit. Gaz.* (Nos. 711 and 712). "When this total obscuration had continued upwards of an hour, the eastern limb became perceptibly more bright, and this luminous appearance gradually extended itself towards the middle of the moon's disc, the eastern edge proportionably increasing in brightness for at least twenty minutes. I can easily imagine that if the moon were seen at this time through clouds, or a hazy atmosphere, this bright appearance of the eastern side might be mistaken for the light of the clear moon, though it would in reality bear no comparison with its brightness when disencumbered of the earth's shadow.

"When the moon's edge had been a few minutes clear of the shadow, it formed one of the most beautiful objects I ever beheld: there was the greatest part of the moon's disc still involved in the coppery shadow, the eastern margin was already bright and clear, and in front of that there was a brilliant capping formed by the penumbra, perfectly distinct from the moon's disc, yet so near, as to give it an elongated appearance towards the east, much resembling the figure of a bright eyeball, with its iris projecting and increasing in brilliancy every moment.

"I do not know how this would have appeared through a telescope, having none by me, and if I had, I should not have made use of it. I would by no means exchange the glorious and splendid scene I now enjoyed for the tame and deadened effect produced by the qualifying medium of a telescope. In a few minutes the distinction of the two lines became more confused, until at last the moon resumed its roundness, and the shadow progressed towards the west. When about one-third of the moon's disc had become clear, the penumbra might be seen forming a bluish-coloured border with slight prismatic tints around the red shadow, and separating it from the light part, till at length it disappeared entirely—not a cloud having appeared above the horizon after the first clearing up."

From the observations made during this eclipse, our correspondent infers, "that the earth's shadow had three degrees of intensity: first, the penumbra or outer prismatic fringe; then the coppery shadow, or general obscurity; and, lastly, the dark nucleus, or centre of the shadow, which passed as a dark patch over the moon's surface."

We are inclined to think, that the "minute but brilliant point of light," which our correspondent P. suspected he saw north of the moon's centre, during the total obscuration, must have been an illusion of the sight;—appearances such as he describes have been seen with the telescope, but never, we believe, with the naked eye. During the annular eclipse of 24th June, 1778, a bright white spot was observed near the north-west limb, which continued visible a minute and a quarter. A luminous point has also been observed near Heracles, which resembled a small nebula, or star of the sixth magnitude. In 1794 a very brilliant spot was seen on the obscure part of the moon, which continued visible for five minutes. A luminous appearance was also observed on the dark part of the moon in May, 1821. Herschel has discovered volcanos in the moon, emitting fire, similar to those on the earth: one of these as late as the year 1826 was

observed to be apparently burning with great activity.

Occultations of Stars in the Hyades.—The occultation of γ Tauri (Tuesday evening last, 5th day) was invisible, from the intervention of clouds. After midnight, the sky became as favourable as could be desired: the following were the observations:—

	H.	M.	S.
71 Tauri... Immersion.....	13	9	38
Emersion.....	14	0	19
θ Tauri... Immersion.....	14	16	28
ρ Tauri... Immersion.....	14	17	59

These latter stars (1, 2 θ Tauri) appeared to cling to the lunar disc, at immersion. The sky became overcast at 14^h 45^m, and continued unfavourable till 15^h 36^m, when θ and ρ Tauri were observed clear of the Moon.

The appulse of Aldebaran was not seen; a gray mist completely covered the hemisphere at the time.

Deptford.

J. T. B.

NEW PUBLICATIONS.

A Demonstration of the Nerves of the Human Body. By Joseph Swan. Part I. Longman and Co.

THE first part of a work (which is to consist of other three similar fasciculi), and certainly one of the most accurate and superb specimens of anatomical illustration which we ever saw. The plates are on a large scale, and of the most perfect character, either as regards the medical or the engraver's art. Mr. Swan, in 1825 and 1828, carried off the collegial anatomical prizes given by the Royal College of Surgeons; by, 1. A minute dissection of the nerves of the medulla spinalis, &c.; and 2. A like dissection of the cerebral nerves. The vast importance of these subjects in the consideration, not only of the nervous system, but of medicine in its general bearings, renders the present publication peculiarly acceptable: and we have to recommend it as one of infinite value to the profession, as well as a splendid production in all that relates to pictorial demonstration. There are eight plates, which completely exhibit the cervical and thoracic portions of the sympathetic nerve, and the nerves of the heart and lungs; with references and explanations.

GERMAN NATURALISTS.

THE fourth and last public meeting of this body for the present year took place at Hamburg, on the 25th of September; when Professor Fischer, of St. Petersburg, read an account of the botanical garden of that place. A very uncalculated remark was made by a member on the election of Mr. Gray, of London, to preside over one of the sectional meetings: this man of science objected to a foreigner, forsooth, as if science belonged to a particular country. The observation seems to have been deservedly scouted by the assembly. Some discussion took place on the expression of a wish that the eminent naturalist, Dr. Wallich, should be enabled to prolong his stay in London to finish his Indian Flora—certainly a most desirable object.

FINE ARTS.

NEW PUBLICATIONS.

National Portrait Gallery of Illustrious and Eminent Personages of the Nineteenth Century. With Memoirs, by William Jerdan, Esq. No. XVIII. Fisher, Son, and Co. VISCOUNT MELVILLE, Mr. Abernethy, and Viscount Clifden, are the three subjects of the eighteenth number of the Gallery; the first

two from pictures by Lawrence, the last from a picture by Hayter. They are all striking likenesses, and are engraved in a style worthy of their predecessors. The following anecdotes of Mr. Abernethy will, we think, amuse our readers:—

“Mr. T——, a young gentleman with a broken limb, which refused to heal long after the fracture, went to consult Mr. Abernethy; and, as usual, was entering into all the details of his complaint, when he was thus stopped almost in *limine*—‘Pray, sir, do you come here to talk, or to hear me? If you want my advice, it is so and so—I wish you good morning.’ A scene of greater length, and still greater interest and entertainment, took place between our eminent surgeon and the famous John Philpot Curran. Mr. Curran, it seems, being personally unknown to him, had visited Mr. Abernethy several times, without having had an opportunity of fully explaining (as he thought) the nature of his malady: at last, determined to have a hearing, when interrupted in his story, he fixed his dark bright eye on the ‘doctor,’ and said—‘Mr. Abernethy, I have been here on eight different days, and I have paid you eight different guineas; but you have never yet listened to the symptoms of my complaint. I am resolved, sir, not to leave this room till you satisfy me by doing so.’ Struck by his manner, Mr. Abernethy threw himself back in his chair, and assuming the posture of a most infatigable listener, exclaimed, in a tone of half surprise, half humour, ‘Oh, very well, sir, I am ready to hear you out. Go on, give me the whole—your birth, parentage, and education. I wait your pleasure; go on.’ Upon which, Curran, not a whit disconcerted, gravely began:—‘My name is John Philpot Curran. My parents were poor, but I believe honest people, of the province of Munster, where also I was born, being a native of Newmarket, county of Cork, in the year one thousand seven hundred and fifty. My father being employed to collect the rents of a Protestant gentleman of small fortune, in that neighbourhood, obtained my entrance into one of the Protestant Free-schools, where I obtained the first rudiments of my education. I was next enabled to enter Trinity College, Dublin, in the humble sphere of a *sizer*,’—and so he continued for several minutes, giving his astonished hearer a true, but irresistibly laughable account of his ‘birth, parentage, and education,’ as desired, till he came to his illness and sufferings, the detail of which was not again interrupted. It is hardly necessary to add, that Mr. Abernethy’s attention to his gifted patient was, from that hour to the close of his life, assiduous, unremitting, and devoted.” Again, “Mrs. I—— consulted him on a nervous disorder, the minutiae of which appeared to be so fantastical, that Mr. Abernethy interrupted their frivolous detail, by holding out his hand for the fee. A one-pound note and a shilling were placed in it; upon which he returned the latter to his fair patient, with the angry exclamation of, ‘There, ma’am! go and buy a skipping-rope: that is all you want.’ Mr. Abernethy’s strong point in prescribing is generally addressed to the relief of the bowels, and to the lowering and regulation of diet and regimen. He is, consequently, much sought in dyspeptic disorders; and, it is stated, often refers to such or such a page in one of his books, where he has already given the remedy. The patients have only to buy the work, where they will find an exact description of their symptoms, and a recipe for their cure.

On one occasion, a lady, unsatisfied with this amount of information, persisted in extracting from Mr. A. what she might eat, and, after suffering from her volubility with considerable patience for awhile, he exclaimed to the repeated ‘May I eat oysters, doctor? May I eat suppers?’ ‘I’ll tell you what, ma’am, you may eat any thing but the poker and the bellows; for the one is too hard of digestion, and the other is full of wind.’ The reported fashion of his courtship and marriage is also extremely characteristic. It is told, that while attending a lady for several weeks, he observed those admirable qualifications in her daughter, which he truly esteemed to be calculated to render the married state happy. Accordingly, on a Saturday, when taking leave of his patient, he addressed her to the following purport: ‘You are now so well, that I need not see you after Monday next, when I shall come and pay you my farewell visit. But, in the mean time, I wish you and your daughter seriously to consider the proposal I am now about to make. It is abrupt and unceremonious, I am aware, but the excessive occupation of my time, by my professional duties, affords me no leisure to accomplish what I desire by the more ordinary course of attention and solicitation. My annual receipts amount to £—, and I can settle £— on my wife: my character is generally known to the public, so that you may readily ascertain what it is: I have seen in your daughter a tender and affectionate child, an assiduous and careful nurse, and a gentle and lady-like member of a family; such a person must be all that a husband could covet; and I offer my hand and fortune for her acceptance. On Monday, when I call, I shall expect your determination; for I really have not time for the routine of courtship.’ In this humour, the lady was wooed and won: and, we believe we may add, the union has been felicitous in every respect.”

Any one who has ever been engaged in the composition of contemporaneous biography, will bear testimony to the truth of the subjoined remarks.—

“We would say, frankly, that there is no kind of authorship so beset with impediments as contemporaneous biography. Many volumes have often to be consulted for a single date; which, obtained upon the highest authorities, the chance is, that as they have copied one from the other, through a long line of error, it may in the end be wrong. The same remark applies to circumstances; and we have been astonished to find, on seeking, as we invariably do where it is possible, undoubted confirmation of our data, that all who have preceded us have altogether mistaken or misrepresented even things apparently of the utmost notoriety. This applies to cases where there are former publications to refer us to as guides; but, in the majority of instances, the whole substance of our sketches is to be procured from oral testimony; and we need hardly dilate upon the patient industry and delicacy required, in order to steer a clear and faithful course through the conflicting elements thus brought into action. The very matters of which we, after mature examination and comparison, are most certain, are liable to be cavilled at by others who have received different accounts of the same story:—things either unknown to us, or unrelated, are considered to stamp our notice with imperfection; and, in short, the difference of opinions among our judges, precludes the possibility of our obtaining, as in by-gone lives, the general assent and approbation of our readers. Yet we do not put forth

this statement to disarm the justice of our friends; it is a simple explanation, for the purpose of setting our design and its execution upon a right footing.”

THE ANNUALS.

“CHRISTMAS is coming,” is, to our mind’s ear, the distinct exclamation of the first ANNUAL, or indication of an Annual, laid upon our table. Nor is it an unpleasing announcement. It undoubtedly suggests ideas of short days and long nights, of wind, and rain, and snow, and ice, of chilblains and catarrhs; but then it is redolent of turkeys, and chimes, of mince-pies, and burnt brandy; and presents to our imagination the blazing yule-log, the friendly party, the conundrum, the jest, the laugh, the song, the dance, the merry gambol, and the delicious forfeit; all best enjoyed when

“—dread winter spreads his latest glooms,
And reigns triumphant o’er the conquered year.”

Such was the train of festive images produced by the sight of

Proofs of the Plates of Ackermann’s Forget Me Not, for 1831.

Including the title, they are fourteen in number, and well sustain the high character of this, the fruitful parent of similar publications. We can spare only a few words to each of them.

Queen Esther. J. Martin del., E. Finden sculpt. The moment chosen is when King Ahasuerus, returning from the garden to the banqueting hall, finds Haman imploring the queen to intercede for his life. The scene is one of much magnificence, and exhibits all the massiness and extent of architecture, and all the splendour and decoration, for which Mr. Martin is so justly celebrated. Through a vista of columns appears the city, and the galleys is seen in the extreme distance,—the place where we should always wish to see it.—*An Italian Scene.* Barrett del., Freebairn sculpt. One of those classical and charming sunsets with which Mr. Barrett has so frequently delighted the public eye.—*The Sisters.* J. R. West pinxt., W. Finden sculpt. Full of grace and beauty, both in composition and in expression; although we much fear that the harmony which at present subsists between the ladies will not long continue. It is exquisitely engraved.—*The Bou Ghaut, Deccan, East Indies.* W. Westall, A.R.A., pinxt., E. Finden sculpt. A stupendous scene, in which even the elephant shrinks to the diminutive appearance of a mouse.—*The Noontide Retreat.* T. Phillips, R.A., pinxt., J. S. Agar sculpt. Every body must recollect in the exhibition at Somerset House, either last year or the year before, the admirable picture which Mr. Agar has here so happily transferred to steel. It was one of the chief attractions of the great room.—*The Japanese Palace, Dresden.* S. Prout del., J. Carter sculpt. As rich a little bit of Prout as we remember to have met with.—*The Discosolate.* R. Corbould del., C. Rolls sculpt. Of all the spectacles by which the heart of man is affected, the distress of a lovely female is the most powerful. Mr. Corbould has imparted peculiar interest to this delineation of it. We long to approach the fair mourner, to fold up the letter on which she is gazing, and which has occasioned her grief, to take her hand, to seat ourselves by her side, and to assure her of our profound sympathy.—*The Cat’s Paw.* E. Landseer, A.R.A., pinxt., R. Graves sculpt. Funny enough. How frequently do we behold a similar exhibition among human beings! witness the late French ministry.—*Lady*

Beaufort. P. Stephanoff pinxt., C. Marr sculpt. A sweet little whole-length portrait of this blue-stocking of former times, the mother of a race of kings.—*The Political Cobbler.* A. Chisholme pinxt., H. C. Shenton sculpt. Cobbett's gridiron on his table, and *Le Petit Corporal* in his hand, shew pretty clearly the nature of Strap's politics. We fear he is the type of too large a body in this country just now.—*The False One.* Miss L. Sharpe pinxt., J. Agar sculpt. Although we are very sorry for the deserted fair, we could have told her beforehand how it would be. It is evident in the villain's face, as well as that of the good-for-nothing creature who has seduced him. A word in the lady's ear.—“You are well rid of such a coxcomb.”—*Benares.* W. Purser del., J. Carter sculpt. The elegance of oriental architecture and the sparkle of oriental costume are here very pleasingly depicted.—*The Painter Puzzled.* J. Knight pinxt., H. C. Shenton sculpt. We think the engraver also must have been puzzled how to introduce so many objects into so small a space. He has succeeded very well, however; has given to each sufficient importance and distinctness, and yet has preserved a brilliant general effect.

We proceed to notice the younger brother of this adult work, which makes its public appearance under the title of

Proofs of the Plates of Ackermann's Juvenile Forget Me Not, for 1831.

With the title, a dozen dozen of subjects, happily selected for the amusement of our young friends: viz.

Juvenile Architect. S. A. Hart pinxt., H. Shenton sculpt. A veteran, eagerly reading a narrative of the peninsular war, while his grandson is constructing a house of cards, which his little sister, who is watching the progress of the edifice, will no doubt blow down the moment that it is completed.—*Preparing for the Race.* R. B. Davis pinxt., G. Sartain sculpt. And so near a thing, we dare say, it will be, that it would puzzle us to determine which of the competitors to back. There is evidently some betting going on, nevertheless.—*The Breakfast.* Sir W. Beechey pinxt., W. Chevalier sculpt. A sweet little group, with great depth and mellowness of effect.—*Who will serve the King?* R. Farrier pinxt., W. Chevalier sculpt. Mr. Farrier has here given us a new and spirited version of one of the chapters of his celebrated picture under the same name.—*Andernach.* S. Prout del., E. Finden sculpt. Well known for the enormous timber-float annually constructed in its neighbourhood.—*The Infant Samuel.* J. Holmes pinxt., T. Woolnoth sculpt. There is something very affecting in infant supplication. Mr. Holmes has thrown strong expression into the eyes of his curly-headed little subject, and Mr. Woolnoth has given great roundness and elasticity to the flesh.—*Going to Market.* W. Shayer pinxt., W. Chevalier sculpt. Human and animal, there are six living creatures in this clever Gainsborough-like composition; and it would be difficult to say which of the six is the most happy.—*Cottage Door.* W. Hunt pinxt., A. Fox sculpt. Mr. Fox has been very successful in expressing the peculiar character of Mr. Hunt's execution.—*Juvenile Masquerade.* C. Landseer del., H. Rolls sculpt. A perfect Terburg, in miniature.

Illustrations of the Winter's Wreath, for 1831. London, Whittaker, Treacher, and Co.; Liverpool, George Smith.

This is, in our opinion, decidedly the best set

of plates by which *The Winter's Wreath* has been embellished since its commencement. We take them in the order in which they follow in the Prospectus.

Portrait—An English Flower. Engraved by H. Robinson, from a miniature by T. Hargreaves. Pure, simple, unaffected, and intelligent. Such may we ever see English beauty!—*The Three Maries at the Tomb of Christ.* Engraved by E. Smith, from a picture by B. West, P.R.A. With the exception of the angel, whom we do not admire, one of Mr. West's best compositions.—*Delos.* Engraved by W. Miller, from a drawing by W. Linton. A happy specimen of the rich composite character of Mr. Linton's classical works.—*Interior of a Cathedral at Antwerp.* Engraved by W. Radclyffe, from a picture by C. Wild. No artist manages subjects of this kind better than Mr. Wild. This is a sweet little exemplification of the fact.—*Cologne on the Rhine.* Engraved by E. Goodall, from a picture by S. Austin. A Cuypp-like scene, full of bustle and interest.—*A Cottage Farm-yard.* Engraved by E. Smith, from a picture by T. Barker. There is something exceedingly beautiful in this simple composition, made up as it is of a very few parts. The grace of the youthful dairy-maid, the character of the cattle, and the arrangement of the various instruments and utensils, all contribute to this pleasing effect.—*Portrait: La Huérfa de Leon.* Engraved by T. L. Grundy, from a picture by H. Liverseege. Graceful, tasteful, and interesting. We admire the intrepidity of Mr. Grundy's line in the drapery: it tells admirably.—*The Deluge.* Engraved by B. Brandard, from a picture by A. Mosses. A sublime and awful scene.—*Saint Cecilia, attended by Angels.* Engraved by H. Robinson, from a picture by Andrea Celesti. The other qualities of this picture are no doubt superior to the design, which is somewhat affected. It is richly engraved by Mr. Robinson.—*A Pass of the Abruzzi—the Bandit's Home.* Engraved by W. Miller, from a picture by J. V. Barber. An exquisite production. It is impossible to conceive any thing finer. It does both Mr. Barber and Mr. Miller infinite credit.—*The Mother.* Engraved by E. Finden, from a picture by R. Westall, R.A. Very pleasing, as all manifestations of natural affection must be.—*Dove-Dale.* Engraved by R. Brandard, from a picture by C. Barber. We should like to know what spot on the face of the globe can boast of a more picturesque and beautiful scene than this.—*Inscription Plate, the Wreath.* Engraved by J. Smith. Shews great taste, and is worthy of being the master of the ceremonies to the volume.

Views in the East. From original Sketches by Captain Robert Elliot, R.N. Part II. Fisher, Son, and Co.

“BENARES,” of which the tradition goes that it was originally built of gold, but, in consequence of the sins of the people, was turned into stone; “Futypore Sieri,” of the quadrangle of the mosque at which Bishop Heber says that there is no one, either in Oxford or in Cambridge, fit to be compared with it, either in size, or majestic proportions, or beauty of architecture; and “The Tomb of Shere Shah,” whose life occupies so considerable a space in the History of Hindostan;—are the three ornaments of Captain Elliot's second number. They are all curious and interesting. Of the last-mentioned, in particular, its isolated situation, as Captain Elliot justly observes, in the centre of a tank, or arti-

ficial piece of water, about a mile in circumference, gives it a peculiarly picturesque appearance. The draftsman whose talents have been exercised on the present number are Messrs. Purser and Prout; the engravers, Messrs. W. Cooke, Brandard, and Le Petit.

Landscape Illustrations of the Waverley Novels. Part VI. Tilt; Andrews.

TALENT has been frequently employed in the illustration of rank; it is gratifying to see the compliment returned, and rank employed in the illustration of talent. Of the four beautiful plates of which this Part consists, viz. “Queensferry,” “The Cathedral of St. Magnus,” “Stromness,” and “Namur,” two, viz. “The Cathedral of St. Magnus,” and “Stromness,” have been engraved from drawings, the one by Mr. Purser, the other by Mr. Copley Fielding, from sketches by the Marchioness of Stafford. They do her ladyship great credit.

ORIGINAL POETRY.

UNPUBLISHED POETRY OF THOMSON.

To the Editor, &c.

SIR,—I believe there is no English poet of standard reputation of whom so many remains have continued after death unpublished as James Thomson. Much indeed has been done, in the full and elaborate edition incorporated into Mr. Pickering's Aldine series of the poets, of which you lately spoke so handsomely, towards collecting these scattered relics: the editor of that beautiful publication has enriched his pages with a great number of smaller pieces previously unknown, as well as with various readings and annotations to many others. The following, however, unquestionably a genuine production of the same writer, has escaped him: it has never, I believe, appeared in print, though I have seen more than one transcript of it: that from which I now write is contained in a MS. volume of dramatic and other collections, by a Mr. Ogle, who published a work on gems towards the latter end of the past century. Should you deem the insertion of these stanzas any credit to your Journal, no one will be better pleased to see them there than your friend and correspondent,

ACIDALIS.

Sept. 20, 1824.

Sweet tyrant, Love! but hear me now,
And cure, while young, this pleasing smart,
Or rather aid my trembling vow,
And teach me to reveal my heart.
Tell her, whose goodness is my bane,
Whose looks have smiled my peace away—
Oh, whisper how she gives me pain,
Whilst undesigning, frank, and gay!
'Tis not for common charms I sigh,
For what the vulgar beauty call;
'Tis not a cheek, a lip, an eye—
But 'tis the soul that lights them all.
For that I drop the tender tear,
For that I make this artless moan,
Oh, sigh it, Love, into her ear,
And make the bashful lover known!

THE REALMS OF AIR.

THE realms on high—the boundless halls,
Where sports the wing of light,
And Morn sends forth her radiant guest un-
utterably bright,
And evening rears her gorgeous piles amidst
the purple ray,—
How glorious in their far extent and ever fair
are they!
The dark autumnal firmament, the low cloud
sweeping by, [sky—
The unimaginable depth of summer's liquid
Who hath not felt in these a power, enduring,
undefined— [the mind?
A freshness to the fevered brow, a solace to
But most when, robed in nun-like garb, with
sober pace and still,
The dun night settles mournfully on wood and
fading hill,

And glancing through its misty veil, o'er ocean's
depths afar, [solitary star.
Shines here and there, with fitful beams, a
Then wearied sense and soul alike receive a
nobler birth,
Then flies the kindling spirit forth beyond the
thrall of earth;
While lasts that soft and tranquil hour, to
thought's high impulse given,
A chartered habitant of space—a denizen of
heaven !
Then, seen in those eternal depths, the forms
of vanished days
Come dimly from their far abodes to meet the
mourner's gaze;
And they the fondly cherished once, and they
the loved in vain,
Smile tranquilly, as erst they smiled, restored
and hailed again.
And words which, breathed in long-past years,
the ear remembers yet,
And sounds whose low endearing tone the
heart shall not forget ;
The parent speech, the friendly voice, the
whispered vow, are there,
And fill with gentle melody the shadowy Realms
of Air. J. F. HOLLINGS.

SKETCHES OF SOCIETY.

VISIT TO THE SORDI-MUTTI, AT GENOA.*

GENOA is a pleasant city—pleasant, but hot—at least in August; nevertheless, even at that season, it has its charms, and they are charms of the highest order. Delicious 'tis to sit in the spacious sala, covered with frescos and mirrors, of one of the hotels fronting the bluest of bays, in full, slippered, neckclothless ease, discussing one's *café*, with ortolans and fricasseed fresh-caught anchovies, while the soft breeze from the Mediterranean is waving aside the wide-flowing curtains—a very metaphor of languid and indolent *insouciance*. Delicious 'tis, at eventide, to lean on the marble balconies of the before-mentioned albergs, gazing on the silvery moon, sparkling on the waves and illuminating the mass of winged feluccas that repose on the waters beneath. At such a season one feels that one is in *Italy*—that in no other clime could such scenes be. But, more delicious than all, to me, 'tis to row out, in the cool twilight, and lave one's fevered limbs in the lucid and buoyant waters. Beautiful Mediterranean! fairest of seas! never shall I forget my first plunge, exulting, into thy tideless waves. Blue as a violet were they—soft in their summer slumber—and warm as milk, not of roses, but of the cow, fresh from the dairy.

But what has all this to do with the Sordimutti? Admitted, nothing; but we are so much delighted with Genoa, that we never speak of it without a rapturous apostrophe.

The institution for the sordi-mutti, or the deaf and dumb, presents infinite attractions to one who would behold how far the latent faculties of the poor creatures labouring under these distressing afflictions may be brought forward and developed. It is, indeed, astonishing what the assiduous attention of the instructors enables them to accomplish. The institution is situated on the rise of the hill; the house is airy and clean, and all the arrangements admirable. The school-room, into which we were introduced, was crowded with intelligent-looking youths, of various ages, all of whom, with the exception of one little boy, appeared perfectly

happy, and conversed together, after their own fashion, with rapid gesticulations. This little fellow, who had just arrived, seemed to consider the confinement irksome, as he ran about with great inquietude, making a low moaning noise. His companions treated him with great kindness and affection.

We were now introduced to the eldest pupil of the establishment, a young man of about twenty years of age, and requested to note down, in *English*, such questions as we wished to propose to him. After some trifling inquiries, which he answered with great readiness, the following questions were put to him by ourselves and a friend, who had been a frequent visiter of the institution:—What were the causes of the English Reformation? in whose reign did it occur? and what influence has it had on the literature and government of England?

In answer to this he wrote (we give the exact phraseology)—“The Reformation occurred in the reign of Henry VIII.—was caused by the dissidences among him and the Court of Rome, by which that prince, who had a skill in theology, profited of these, by separating the English church from that of Rome. Yet had this revolution not happened, the effects in literature would have now been the same; as religion ought to have no relation with natural science. An example of this consequence is to be found among the French. Whatever be the religion, the knowledges are the same among all people, if civilised, and their minds highly cultivated.”

The next propositions were to sound his metaphysical faculties and poetical perceptions. His replies were given with little or no hesitation; and the reader will remark the excellent moral feeling which pervades them.

The great dispute among the learned of France and Italy at this moment is respecting the merits of classic or romantic literature, which latter had its origin in Protestant countries. The Reformation had the effect of making people think, instead of having others to think for them. Do you differ from this opinion? “As romantic literature is not to my taste, I cannot give my opinion in favour of the one or the other. I dare only say, that romances are sometimes the source of corruption in customs. My pleasing literature is that of knowing truth; but not to learn fables or chimeric accounts, lest they are not turning on morals, as allegories are.”

Have you studied metre, and are you able to detect false quantities?—that is, do you know whether, in Latin verse, a word consists of spondees or dactyls? “Deaf and dumb as I am, I could feel no charm in harmony; therefore I would not endeavour to render myself acquainted with that branch of knowledge.”

You once told me you preferred French to all other poetry. Are you not sensible of the beauty of poetical compositions which only concern the imagination—the choice of words, the combination of words having many vowels in them? Do you not think, that by practice you could write verses?—I speak not of the utility of such a study; I merely speak of its possibility. “It is true that I like French poetry; but I am not acquainted with any precept concerning that art, as *metro rima*, and the several apprehensions of poetical composition. I can vouch to become able to write in verses, if I had leisure to apply to it; and I have found in some American and Irish reports, that some deaf mutes wrote, in *English*, verses; but I cannot believe it without my own eyes; for printed publications are sometimes simulated.”

We appeal to the reader, if the foregoing are not indications of a most excellent heart and singularly good understanding. After communicating our lively satisfaction to the young man, and examining more fully the details of the institution, we departed, greatly gratified, and not a little affected with our interesting visit.

MUSIC.

NEW PUBLICATIONS.

BEFORE the departure from this country of the celebrated Hummel, a number of his manuscript compositions for the piano-forte were purchased by Messrs. Cramer, Addison, and Beale. Some of these are now printed, and have just reached us;—too late, however, to be noticed this week with that attention due to the author's rank as a musician. In our next No. we purpose giving to our musical readers an account of these new and important piano-forte works.

DRAMA.

DRURY LANE.

THIS theatre opened on Friday, the 1st of October, with the comedy of the *Hypocrite*, the farce of *Deaf as a Post*, and the opera of *Massaniello*. Nine acts, besides three grand overtures, and “God save the King!” Mr. Lee! Mr. Lee! Have you taken a leaf out of Mr. Morris's book? Turn over a new one, pray. Seven acts and two overtures are quite enough for one evening, depend upon it. “Always,” say the doctors, “leave off with an appetite.” Unless you wish to sicken a child of plum-cake, never “let the little darling eat as much as it can.” Our first approbation shall be bestowed on the orchestra; materially improved both in shape and occupants, and under the sway of the first English dramatic composer, we may now perchance hear songs accompanied, not smothered; and the excuse for being imperfect in the words, or careless of enunciation, will no longer serve the singer. The overtures to *Anacreon*, *Guillaume Tell*, and *Massaniello*, on Friday, and that to *Oberon* on Saturday, were admirably performed;—and the hushing down of the pit at the *premier coup d'archet*, gives earnest of its inclination to attend, and of its consequent belief that there is something worth attending to. The house looked well, and was completely filled on Friday. Downton, Liston, Mrs. Orger, and the rest of the deserved favourites, were heartily welcomed. Miss Byfield has not improved since we heard her at Covent Garden. She then promised goodly things, and may yet, with due care, perform them. Of Miss Pearson, the first fair *débutante* of the season, we would rather speak when we have heard her in some more truly operatical part than that allotted to her on Saturday. As an actress, we have great fear she is hopeless.

COVENT GARDEN.

THIS theatre opened on Monday last with *Romeo and Juliet*, and a numerous audience assembled to greet Miss Fanny Kemble on her return to the metropolis. Her person has increased during her trip, and practice has certainly not injured her performance. She was warmly applauded throughout. Mr. C. Kemble's *Mercurio* was, as usual, admirable. We were glad to see him looking so well. Mrs. Gibbs made her first appearance as the *Nurse*; and though we can never cease to regret our dear, dear Mrs. Davenport, we most

* From the pen of a Friend who has just returned from Italy.—Ed. L. G.

willingly admit that divine old lady's point lace pinner could not have descended upon a worthier, representative. *Black-eyed Susan* followed the tragedy. We are glad of any excuse that will enable us to witness the acting of T. P. Cooke, and *Black-eyed Susan* is certainly not the worst piece of its kind. It has also brought, and may yet bring, the house a great deal of money; therefore (for we feel deeply the force of the last admission) we will only say, we shall be happy when Mr. Jerrold furnishes Covent Garden with something as attractive and more suitable to its stage; and surely that is wishing no harm to any one.

ADELPHI.

THIS theatre also opened on Monday evening, entirely newly decorated, and most tastefully so. This agreeable change has been effected in a few days only, by, we suspect, that theatrical Aladdin, Mr. Beazely. A new melo-drama, by Mr. Ball, entitled, *the Black Vulture, or the Wheel of Death!* was produced, with all the customary red, blue, green, and other fires; and cars flew up, and floors went down, as they are wont to do in pieces of this description; and never did we see a stage so movable at pleasure in every direction. The effects are marvellous, and the Black Vulture quite flew away with an applauding audience. Miss M. Glover made a favourable *début* as the heroine, and sang a very pretty ballad of Rodwell's—very prettily: the whole music, indeed, does great credit to the rising composer.

VARIETIES.

Siberia.—In a note communicated last year to the Academy of Sciences at St. Petersburg, by M. Hansteen, a traveller in Siberia, the geographical position of Yenisseisk, one of the most considerable towns in Siberia, 1173 leagues from Moscow, and 1348 from St. Petersburg, is stated to have been ascertained to be 109° 50' 34" east longitude from the island of Ferro, and 58° 27' 19" north latitude. In 4829, the population of this town consisted of 2,726 inhabitants.

French Academy.—It was recently reported in Paris, that M. Quatremère de Quincy was about to retire from his office of perpetual Secretary to the Academy, and that it was proposed to replace him by M. Raoul-Rochette. At the last meeting of the Academy, however, M. Quatremère de Quincy signified his intention of retaining his situation. We mention the circumstance only for the purpose of noticing the political character which even literary and scientific questions now assume in France. The subject of M. Raoul-Rochette's qualifications was discussed with a constant reference to his political opinions:—"He had not the political morality necessary at present to deserve the suffrages of honourable and enlightened men." Is this liberal?

American Inventions: Steam Coach.—A New York paper gives the following account of a steam coach recently built at Cincinnati, which it says promises to surpass every thing of the kind in other countries:—"This engine, independent of the boiler, is made so compact, that a box two feet long, one foot wide, and one foot deep, would contain it if taken to pieces! and yet, such is its power, it will overcome a rise of forty-five feet in the mile, without any essential variation in its velocity. We rode in the carriage propelled by it at the rate of fourteen to sixteen miles an hour, on a circular road; the same force would propel the same weight twenty miles an

hour, and more, on a straight line, there being so much less friction. Another great improvement consists in the mode of applying the power, and another in the construction of the boiler, which is perfectly novel. Add to which, the consumption of fuel does not exceed one fourth a cord a-week, to run from nine in the morning to nine in the evening. It appears, in fact, to have been reserved for a citizen of Cincinnati to bring this great improvement in travelling so near perfection."

Coach Wheels.—The same paper gives an account of an improvement in the nave or hub of the wheels of stage coaches:—"The hub or nave of the wheel is made of cast iron, the spokes are driven in as in the common wheel, the inner part or chamber of the hub is 6½ inches in diameter, and 6¼ inches deep. In this chamber eight rollers are placed, four large, and four small ones; the large ones are 4½ inches long, and 2¾ inches in diameter; the small rollers are 5¼ inches long, and ¾ of an inch in diameter. The large rollers are placed in the chamber, and surround the axle at right angles; the periphery of these rollers sustains the whole weight of the axle, and rests on the chamber of the hub; they have no axle or journal, and do not come in contact with each other by half an inch. They are kept in their proper angles by means of the small rollers, one of which is placed in the space between each of the large rollers, with which they are brought into contact. The small rollers do not touch the chamber or axle, but are kept in their proper position by means of a flange ring, on which they revolve. By this arrangement the entire roller motion and principle is obtained, the whole of the bodies revolving around their own centres and around the main axle, without the use of journals."

Shakespeare.—The proposition is again afloat for erecting a monument in the metropolis in honour of Shakespeare: a committee, consisting of many influential persons, have undertaken to promote this design.

Blue Colour.—The following is given as a method of extracting a blue colour from the straw of buckwheat. The straw should be gathered before the grain is quite dry, and placed on the ground in the sun, until it becomes sufficiently dry to be taken from the husks with facility. The wheat having been removed, the straw is to be piled up, moistened, and left to ferment till it is in a state of decomposition, when it will become of a blue colour: this indicates the period when it should be gathered, and formed into cakes, which are to be dried in the sun, or in a stove. On these cakes being boiled in water, the water assumes a strong blue colour, which will not change either in vinegar or in sulphuric acid. It may, however, be turned into red with alkali, into a light black with bruised gall nuts, and into a beautiful green by evaporation. Stuffs dyed blue with this solution, which is to be used in the same way as vegetable matters of a similar species employed in dyeing, become of a beautiful and durable colour.

Heat.—M. Lechevallier, a French officer of artillery, has been making some experiments on the calefaction of water in red-hot vessels, which have induced him to conclude, that the temperature of the water so heated is always less than 100 degrees; and, consequently, that the principle of the equilibrium of temperature in a closed space, which has hitherto been considered a fundamental principle in the theory of heat, must be abandoned.

Area of Europe.—The surface of the different European states in geographic square

miles is as follows: Russia 375,174, Austria 12,153½, France 10,086, Great Britain 5,535, Prussia 5,040, the Netherlands (Belgium) 1,196, Sweden 7,935½, Norway 5,798, Denmark 1,019½, Poland 2,293, Spain 8,446, Portugal 1,722, two Sicilies 1,987, Sardinia 1,363, the Pope's territory 811, Tuscany 395½, Switzerland 496½, European Turkey 10,000, Bavaria 1,383, Saxony 348, Hanover 695, Wurtemberg 359, Baden 276, Hesse Darmstadt 185, Hesse Cassel 208.

To dry and preserve Meat.—Cut the meat into pieces of several pounds each, taking out the bones, and dry it in a hot-house, eight feet long by four and a half wide, and five and a half high, heated by means of stoves to fifty-five degrees of Reaumur, and let it remain for 72 hours. Then plunge it in a bath of gelatine, and replace it in the hot-house until the moisture is evaporated. The gelatine forms a sort of varnish, but white of egg will do as well. When the meat is to be used, soak it in the water in which it is to be boiled for 12 hours, and boil only for a few minutes, which will be sufficient. Meat thus preserved will keep for a long time, and eats as well and as tender as fresh meat.

The Sensibility of the Ear.—It is well known that when a sonorous body put in motion, makes fewer than thirty-two vibrations in a second, it gives no perceptible sound. In proportion also as the number of vibrations increases, the sound becomes sharper and sharper, until a moment arrives at which it ceases to be perceptible. Natural philosophers have not yet agreed as to the number of vibrations correspondent with this higher limitation. Some have supposed eight thousand in a second, some twelve. M. Savart, of the French Academy, has been making experiments to discover the fact. He attributes the uncertainty which has hitherto prevailed on the subject to the use of an apparatus which has necessarily diminished the intensity of the sound in proportion to the increase in the number of vibrations; and, having found the means of remedying this inconvenience, and at the same time of ascertaining with great accuracy the number of vibrations, he has obtained perceptible sounds resulting from forty-eight thousand vibrations in a second!

Unfortunate Coincidence.—I lately called upon my friend B——, in total ignorance of his recent reverse at Crockford's, for the purpose of congratulating him upon the immediate probability of his hopes of an heir being realised; but finding him in dreadfully low spirits, I asked the cause. "D—n it!" said he, "how can a man be otherwise, when his wife and income are both confined at once?"

Fat Living.—The vicarage of Wyburn, or Wintburn, in Cumberland, is of the following tempting value, viz. fifty shillings per annum, a new surplice, a pair of clogs, and feed on the common for one goose!!! This favoured church preferment is in a wild country, inhabited by shepherds. The service is once a fortnight. The clerk keeps a pot-house opposite the church, and when there is no congregation, the Vicar and Moses regale themselves at the bar.

Geometry.—A few days before the death of Fourier, that celebrated geometrician sent to the press a treatise, entitled, "General Remarks on the Application of the Principles of the Algebraic Analysis to Transcendent Equations." Among other observations, he says,—"The theory of heat was explained, for the first time, about the end of the year 1807, in a manuscript work still deposited in the archives of the Institute. The physical and analytical

principles which served as the foundation of that inquiry, were at first not at all comprehended. Several years elapsed before their accuracy was acknowledged. Even at the present day, the cosmological results of that theory, the notion of the temperature of planetary spaces, the mathematical laws of radiating heat, the differential equations of the motion of heat in liquids, have not yet attracted the attention of all the principal geometricians. Mathematical truths, although strictly demonstrated, establish themselves only after a long examination. The general theorems which I have used to integrate differential equations, are applicable to a great many physical questions, which have never been solved. The knowledge of those theorems, and of the method of integration derived from them, is become pretty general; but the other results of the theory are little known."

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLII. Oct. 9.]

Mr. John Timbs, Editor of "Laconics," has in the press Knowledge for the People, or the Plain Why and Because.—Maxwell, a Story of the Middle Banks, by the Author of "Sayings and Doings."—The Turf, a Satirical Novel.—The French Revolution of 1830, by D. Turnbull, Esq., embellished with Portraits.—The second volume of the Iris, a Religious and Literary Offering for 1831, edited by the Rev. Thomas Dale, M.A.—The Official Calendar for 1830.—The Life of Sir Humphry Davy, Bart., by Dr. A. J. Paris.—Scenes of Life and Shades of Character.—The Life of Tilton, by James Northcote, Esq., R.A.—The Gentleman in Black, illustrated by numerous engravings, from designs by George Cruikshank.—The Water Witch, by the Author of "The Red Rover," &c.—Narrative of a Journey through Greece in 1830, by Capt. T. Trant.—Kotzebue's New Voyage round the World, in the Years 1823, 24, 25, and 26.—Hope Leslie, a Tale, by the Author of "Redwood," &c.—The Literary Correspondence of John Pinkerton, Esq., F.R.S., edited by Dawson Turner.

Foreign Annals.—As we have begun the annual course of our own Annals, we may also notice that the Germans already imported are the Penelope, Minerva, Urania, Novellenkranz, Frauentaschenbuch, Taschenbuch der Liebe, Cornelia Taschenbuch, Mäusenähmach, Altnach Dramatischer, and Politisches Taschenbuch, which cost from 8s. to 12s., the general price being 10s.

LIST OF NEW BOOKS.

Cooper's Lectures on Anatomy, Vol. II. royal 8vo. 15s. bds.—The Pulpit, Vol. XIV. 8vo. 7s. 6d. bds.—Quin's Historical Atlas, 4to. 3s. 10s. hf. bds.—Jessie's Tales of the Dead, and other Poems, fcp. 5s. 6d. bds.—Tales of Other Days, illustrated by Cruikshank, post 8vo. 9s. bds.; Illustrations to ditto, proofs, 8vo. 5s. sewed.—Hazlitt's Napoleon, Vols. III. and IV. 8vo. 1l. 10s. bds.—Macnish's Philosophy of Sleep, 12mo. 7s. bds.—Turcan's Practical Baker and Confectioner, 12mo. 5s. bds.—Petersdorff's Law Reports, Vol. XV. with Index, royal 8vo. 1l. 11s. 6d. bds.—Parke's Musical Memoirs, 2 vols. royal 12mo. 1l. 11s. 6d. bds.—Nares' Burleigh, Vol. II. 4to. 3l. 3s. bds.

METEOROLOGICAL JOURNAL, 1830.

Table with columns for September, October, Thermometer, and Barometer. Rows show daily readings from Thursday to Wednesday.

Except the 2d and 3d, when a little rain fell, generally clear.

Rain fallen, 4/75 of an inch. Edinonton. CHARLES H. ADAMS. Latitude..... 51° 37' 32" N. Longitude..... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

We have nothing to do with publishers' motives, &c.: we only look to the works produced, and not to their outward show. As far as we know of the matter, from its producer show, we do not, however, approve of Mr. Colburn's advertising Lady Morgan's works, at the precise period he did, at half price: but as the worthy bibliophile has just, as we learn, taken another lady to himself for life, we shall not embarrass him with further remark at this time.

ERRATA.—In our list of pieces produced at the Adelphi by the English Opera Company, the name of Raymond was attached to the Foster Brothers and the Irish Girl, by mistake. The author of the former is not known to us; the latter is by Mr. Ryan, as stated in a previous Literary Gazette.

ADVERTISEMENTS,

Connected with Literature and the Arts.

CHESS. In a recently formed Weekly Evening Chess Party, which affords great and peculiar facilities of improvement to every class of Players, there are at present Vacancies for a few Members. The expense is limited to the Subscription, which is moderate. Apply to Mr. G. Walker, 3, Newman Street, Oxford Street.

SCHOOL for DRAWING and PAINTING,

for the Education of Artists and Instruction of Amateurs in the Principles of Art, possessing every Requisite for the Study of the Human Figure, and the other Branches of the Fine Arts; forming also a Probationary School for the Royal Academy. Hours for practical Study, from Eight in the Morning till Five in the Afternoon. Terms may be known at No. 6, Charlotte Street, Bloomsbury, the Corner of Streatham Street.

TO PRINTERS, BOOKSELLERS, STATIONERS, and BINDERS,

To be disposed of, with immediate Possession, an established Country Business, in the County of Suffolk, where the Trade has been carried on for the Stock is all modern and well selected, and with the Fixtures, Printing and Binding Materials, which are also nearly new, will command a Capital of 1000l. to 1200l. The Proprietor having engaged a much larger Concern is the only reason for disposing of the above. A Young Man established in Business, the Connection being chiefly among the higher Classes of Society.

Letters addressed, post-paid, to C. B., to the care of Longman and Co. Paternoster Row; or Barry and Hayward, 19, Queenhithe, will be immediately attended to. None but Principals need apply.

BOOKSELLING BUSINESS to be DISPOSED OF.

To be disposed of, a respectable Bookselling Concern of Fifty Years' standing, situated in the Centre of the Metropolis. The Stock to be taken at a fair Valuation, and no Premium required. For further Particulars apply, by Letter, to E. T. Chapter Coffee House. No one need apply who cannot command from 4000l. to 6000l.

TWELVE FACSIMILE ETCHINGS,

from very rare Originals by Rembrandt, in the Crachee Collection at the British Museum. Etched by William James Smith. The above Etchings, from the Originals by Rembrandt, are acknowledged by some of the first judges in this style of art to be so closely copied, and etched with so much spirit and truth, as to render it difficult to distinguish them from Rembrandt's own works. Sold by C. Davis, 48, Coleman Street, London.

EDINBURGH REVIEW. Advertisements, Notices, &c. to be inserted in the General Advertising Sheet of No. 103 of the Edinburgh Review, are requested to be sent to Longman and Co. Paternoster Row, by Monday the 11th; and Prospectuses, Catalogues, Bills, &c. to be struck in the Number, not later than the 15th. Advertisers will perceive the great advantage of sending their Advertisements and Bills early, as they are placed in the exact order they are received by the Publishers.

Published by Effingham Wilson, 88, Royal Exchange. In a handsome post 8vo. vol. price 5s. cloth.

TALES OF OTHER DAYS.

By J. T. With Engravings, after Designs by George Cruikshank. "To Mr. Effingham Wilson, the worthy publisher, we take off our editorial hat, and heartily welcome him as a new member of the worthy fraternity of bibliopoliasts. Such is the consequence of free trade or steam navigation, that the Royal Exchange is rising at Abchurch Lane, and Mr. Parady, and Co. have produced a volume rivaling our Bulwets and Whittinghams, and worthy of a place in all the libraries of the members of the Newburgh Club. In more simple phrase, we have not often seen a handsomer volume than the one now before us."—Athensian, Sept. 25, 1830.

New Journal of Science and Natural History, &c. No. I. In 8vo. with Plates and Woodcuts, price 6s. 6d. To be continued Quarterly, of the

JOURNAL of the ROYAL INSTITUTION of GREAT BRITAIN.

Keane, A.M. and F.L.S.—Description and Application of a 'Porous Galvanometer.' By William Ritchie, A.M. and F.R.S.—Practical and Philosophical Observations on Natural Waters. By William West, Esq.—General Remarks on the Weather in Madagascar, with a Meteorological Journal. By Robert Lyall, Esq. Brit. Res. Agent.—On the Elucidation of some Portions of the Fabulous History of Greece. By William Sankey, A.M. &c.—On the Effects of Vapour-baths. By M. Faraday, F.R.S.—On the Effects of Electricity upon Minerals which are phosphorescent by Heat. By Thomas J. Peersall.—On the Development of the several Organic Systems of Vegetables. By Gilbert T. Barrett, Esq.—Contributions to the Physiology of Vision, No. I.—On the Fibres of the Præputium. By Wilhelm Wittich, Esq.—On Gunpowders and Detonating Matches. By Andrew Ure, M.D. F.R.S. &c.—Analysis of New Books—Foreign and Miscellaneous Intelligence in Mechanical Science, Chemical Science, Natural History, &c.

London: John Murray, Albemarle Street.

THE NOBLE GAME of BILLIARDS,

wherein are exhibited extraordinary and surprising Strata, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD, Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated practitioners of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and new which comprise the great improvements and discoveries made in the game within the last twenty years. London: Translated and published by John Thurston, Billiard Table Manufacturer, 16, Catharine Street, Strand; and to be had of all Booksellers.

Dr. Lardner's Cabinet Cyclopaedia. Price 6s. the Second Volume of the

HISTORY of MARITIME and INLAND DISCOVERY, in 3 vols.

Being Vol. XI. of "Dr. Lardner's Cabinet Cyclopaedia." The preceding Volumes of the Cabinet Cyclopaedia are:—X.—History of the Netherlands. By T. C. Graattan. XI.—Outlines of History. XII.—Sir James Mackintosh's History of England. Vol. I. III.—Domestic Economy. By M. Donovan, Esq. Vol. I. VI.—Mechanics. By Capt. H. Kater and Dr. Lardner. VII.—History of British Islands. By W. G. B. Esq. VIII.—Cities and Towns of the World, 2 vols. Vol. I. To be published.

Nor. 1.—History of France, Vol. I. Printed for Longman and Co.; and John Taylor.

Just imported by Treutell and Co. 30, Soho Square.

GERMAN ALMANACKS for 1831.

Döring, 16mo. price 10s. Taschenbuch der Liebe und Freundschaft gewidmet, 16mo. 8s. Cornelia, Taschenbuch für Deutsche Frauen, price 12s. Muses Almanach, 16mo. 10s. Almanach dramatischer Spiele, 16mo. 10s. Politisches Taschenbuch, 10s.

Hebrew Grammar with Points. In 8vo. price 7s. a new and enlarged edition of

A HEBREW GRAMMAR, in the English Language.

By JOSEPH SAMUEL FREY. To which are added a Glossary of the first Six Psalms, a Compendium of Chaldee Grammar, and other important additions. By GEORGE DOWNES, A.M. Late of Trinity College, Dublin.

An attempt is now made to remedy a deficiency which has long existed in works of this description—the almost utter omission of Syntax, although in no language, perhaps, it is this department of Grammar of such paramount importance. London: Printed for Baldwin and Craddock, Paternoster Row.

A Companion to Blackstone. In a handsome 8vo. vol. price 16s. boards. HISTORY OF ENGLISH LAW; or, an Attempt to Trace the Rise, Progress, and Successive Changes of the Common Law, from the earliest Period to the present Time. By GEORGE CRABH, Esq. Of the Inner Temple, Barrister-at-Law. London: Baldwin and Cradock.

In 2 vols. illustrated with several Engravings of Scenery, Costume, Productions, &c.; also a Map, 16s. in handsome cloth, THE PICTURE OF INDIA; exhibiting in a brief, yet clear and graphic manner, the Geography, Topography, History, Natural History, Native Population, and Produce of that most interesting portion of the Earth; with a particular account of the European Settlements, with the present state of the British Territories, and an impartial view of the Indian Question, with reference to the impending discussion on the Renewal of the Charter.

"We must say there is an elegance, if not a splendour, of decoration about these volumes, that very properly corresponds with the ideas of magnificence which we usually associate with the name of India. The contents are worthy the beautiful frame-work in which they are embraced; and, if we mistake not the public taste, the 'Picture of India' will supersede every competitor that has arisen, or that is likely to come into the field."—Monthly Review, June.

"This is a most useful and interesting little work, very much wanted as a manual of that remote and more obscure portion of the British Empire. It contains a very good map, and numerous well-executed engravings of scenery, &c."—New Monthly Magazine, June.

"The 'Picture of India' will survive the immediate occasion which prompted its preparation, and take its place as a book of valuable information among works of permanent interest."—Monthly Magazine, May.

"The present work is particularly acceptable. It is diligently compiled, easily written, and very neatly as well as usefully illustrated by plates and maps."—Literary Gazette. Whittaker, Treacher, and Co. Ave Maria Lane, London.

In small 8vo. containing 48 Pages, price 5s. cloth boards, illustrated by a Chart, and 18 Engravings, by Branston, No. 1. of THE EDINBURGH CABINET LIBRARY, dedicated, by permission, to John Barrow, Esq. F.R.S., one of the Secretaries of the Admiralty; being a Narrative of Discovery and Adventure in the Polar Seas and Regions, with Illustrations of their Climate, Geology, and Natural History; and an Account of the Whale Fishery. By PROFESSOR LESLIE, PROFESSOR JAMESON, and HUGH MURRAY, Esq. F.R.S.E.

On the 1st of December will be published, No. II. Narrative of Discovery and Adventure in Africa, from the earliest Ages to the present Time, with Illustrations of the Geology, Natural History, &c. In 1 vol.

The different Departments of this Work will be written by distinguished Literary Individuals. It will also contain a correct Map of Africa, and Plans of the Routes of Park, and of Denham and Clapperton; together with 15 elegant Engravings by Branston, illustrative of the Scenery, Natural History, Costume of the Inhabitants, &c. Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

Compressed into 2 vols. 8vo. 30s. 3d edition, considerably enlarged and improved, with numerous Plates, Woodcuts, Diagrams, &c. A MANUAL OF CHEMISTRY, Practical and Theoretical, containing an Account of all recent Investigations and Discoveries. By W. T. BRANDE, F.R.S. Professor of Chemistry at the Royal Institution, &c. &c. John Murray, Albemarle Street.

Also, by the same Author, A new edition, post 8vo. with Plan and Illustrative Woodcuts, 7s. 6d.

Outlines of Geology, for Beginners; being the Substance of a Course of Lectures delivered at the Royal Institution.

Natural History Society of Northumberland, Durham, and Newcastle. In 4to. price 11. 1s.

TRANSACTIONS OF THE NORTH BRITISH GEOLOGICAL SOCIETY OF NORTH BRITAIN, DURHAM, and NEWCASTLE-UPON-TYNE, Vol. I. Part I.; containing Articles by the Hon. T. Siddell, Dr. Johnston, Rev. W. Turner, P. J. Selby, W. C. Trevelyan, John Bullie, N. J. Winch, W. Hutton, J. Alder, M. Forster, P. Forster, R. R. Wingate, and H. L. Pattinson; and illustrated by Eleven Plates, given with the Transactions.

"The First Report of the Society, including the Laws, is given with the Transactions. Newcastle: Printed by T. and J. Holtson, for Emerson Charnley; Longman and Co. London; and W. Blackwood, Edinburgh.

In a large vol. 8vo. comprising 1071 pages, 15s. boards, a 5th Edition, greatly improved, of THE LONDON DISPENSATORY; containing Translations of the latest Editions of the Pharmacopoeias of the London, Edinburgh, and Dublin Colleges of Physicians; the whole forming a Practical Synopsis of Materia Medica, Pharmacy, and Therapeutics; illustrated with many useful Tables and Woodcuts. By ANTHONY TODD THOMSON, M.D. F.R.S. Professor of Materia Medica and Therapeutics in the University of London, &c.

Printed for Longman, Rees, Orme, Brown, and Green.

With One Hundred Engravings on Wood, Vol. I. price 21s. boards, of THE GARDENS and MENAGERIE OF THE ZOOLOGICAL SOCIETY DELINEATED; being Descriptions and Figures in Illustration of the Natural History of the Living Quadrupeds in the Society's Collection. Vol. II. which is in preparation, will complete this Department of the Work. The whole will be comprised in Three Vols.; Two of Quadrupeds, and One of Birds. London: Published by John Sharpe, Piccadilly.

Five Engravings.—Two extra Plates. LA BELLE ASSEMBLEE for October, contains Five Engravings—1. The Portrait of the Baroness of Ribblesdale, being the 7th of the Series of Female Nobility—II. Portrait of Louis-Philippe, King of the French—III. Specimens of the Engravings of the Winter's Wreath—IV. Costume of the Continent—V. Latest London Fashions. Price 3s. 6d.

The Portraits of the following distinguished Personages are in preparation for the forthcoming Numbers of La Belle Assemblee—The King and Queen of England—The Empress of Russia—Queen of the French—Princess Esterhazy—The Duchess de Berri—The Marchioness of Safford—Countess Gower—Lady Durham—Dowager Countess of Arundel—Lady Mary Leslie—Lady Canning Gordon—Countess of Antrim—Lady Normanby, &c. &c. Whittaker and Co. London; Waugh and Innes, Edinburgh; and J. M. Leake, Dublin.

The November No. will contain a Portrait of the Queen of the French.

British Divines. In 3 vols. small 8vo. neatly bound in cloth, 11. 17s. 6d. WORKS OF BISHOP SHERLOCK; (the only complete edition ever published), with his Life, Summary of each Discourse, Notes, &c. By the Rev. T. S. HUGHES, B.D. Late Christian Advocate at Cambridge. Printed by A. J. Valpy, and sold by all Booksellers.

On the 1st of November will be published, Divines of the Church of England, No. VI. price 7s. 6d. commencing the Works of Dr. Barrow, to which will be added several hitherto unpublished Discourses.

After which will follow in this Series, a Selection from the Works of Hall, Atterbury, Jewell, Seal, Jortin, South, Hurd, Bull, Beveridge, Baigyn, Ogden, S. Clarke, Paley, Waterland, &c. Taylor, &c.

"This work bids fair to become one of the most popular, as it is decidedly one of the most valuable, productions of the present day. It commences with the Discourses of Bishop Sherlock, one of the most eminent and enlightened writers that ever lent dignity to the episcopal mitre. No divine, no student, nay, no gentleman, should be without it. No work is at present more needed, or more likely to secure at once the extensive circulation that it deserves."—Sun, June 19.

"This monthly series will no doubt realise the intentions of its highly talented editor. The work must be generally interesting to all who in any way connect their pursuits with theological learning, but more particularly to the clergy. We are glad that Mr. Hughes has given so much original matter in his work; and we shall be much mistaken if the summaries themselves do not form a sufficient attraction to the series; for it must greatly abridge the labours of the reader, as well as the student, to find so direct an access to any portion of each discourse, sermon, &c. The biographical memoir of Bishop Sherlock, given in No. I. is a complete record of some of the most interesting polemical events of his day, and is written with great ease and perspicuity. Its compact size, excellent print, and low price, are great recommendations to public favour."—Sunday Times, June 6.

Bateman on Cutaneous Diseases, by Thomson. In royal 8vo. price 4s. boards.

AN ATLAS OF DELINEATIONS OF CUTANEOUS ERUPTIONS, illustrative of the Descriptions in the Practical Synopsis of Cutaneous Diseases of THOMAS BATEMAN, M.D. F.R.S. &c. By ANTHONY TODD THOMSON, M.D. F.R.S. Professor of Materia Medica in the University of London, &c. Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had, A Practical Synopsis of Cutaneous Diseases, according to the Arrangement of Dr. Willan. By Thomas Bateman, M.D. F.R.S. The 7th edition. Edited by Anthony Todd Thomson, M.D. F.R.S. &c. 8vo. 15s. boards.

Dr. Bateman's Delineations of the Cutaneous Diseases comprised in the Classification of the late Dr. Willan. In 4to. with 72 coloured Plates, price 12l. 18s. boards.

Dodley's and Rivington's Annual Register for 1829. In 1 thick vol. 8vo. price 10s. boards.

THE ANNUAL REGISTER; or, a View of the History, Politics, and Literature of the Year 1829. London: Printed for Baldwin and Cradock; J. G. and J. R. Rivington; Longman, Brown, and Co.; E. Jeffery and Son; J. Booker; J. M. Richardson; R. Scholey; Hurd, Chance, and Co.; Hamilton, Adams, and Co.; Whittaker and Co.; E. Lloyd and Son; J. Booth; W. Joy; J. Dowling; Simpkin and Marshall; G. Lawford; J. Laycock; S. W. Sustenance; and J. Collingwood.

By whom is also published, in a very large vol. price 24s. A General Index to the Annual Register, from its commencement in 1753 to the year 1829, inclusive; after which period each successive year has a distinct Index.

"The Publishers of this work beg to remind the subscribers to Rivington's Annual Register, that, in consequence of the junction of the two interests in the volume for 1829, they can now complete their sets only by the purchase of Dodley's Edition. The volumes sent by Messrs. Rivington's subscribers are for the years 1811 to 1820 inclusive; and these may be had; but as the stock has this additional demand to supply, many of the vols may be expected to be soon out of print, and an early application is therefore recommended.

In 1 vol. 8vo. 5th edition, revised and corrected, with several new Plates and Woodcuts, 18s. boards.

THE FIRST LINES OF THE PRACTICE OF SURGERY, designed as an Introduction for Students, and a concise Book of Reference for Practitioners.

By SAMUEL GOWPER, Surgeon to the Forces, Member of the Royal College of Surgeons, London, &c. &c. Printed for Longman, Rees, Orme, Brown, and Green; Baldwin and Cradock; E. Cox and Son; G. B. Whittaker and Co.; Simpkin and Marshall; S. Highley; Burgess and Hill; T. and G. Underwood, London; and Adams, Bland, and Kenney; MacLachlan and Stewart; and P. Brown, Edinburgh.

Of whom may be had, by the same Author, A Dictionary of Practical Surgery, the 6th edition, corrected, in 1 vol. 8vo. 11. 8s. boards.

In 8vo. price 14s. cloth boards, A TREATISE ON FEVER. By SOUTHWOOD SMITH, M.D. Physician to the London Fever Hospital.

Printed for Longman, Rees, Orme, Brown, and Green. "This Treatise on Fever stands, without competition, at the head of all that has been written on this abstruse disease."—West. Review, Jan.

"There is no man in actual practice who should not possess himself of Dr. Smith's work."—Lond. Med. and Surg. Journal, February.

"The general reader will find it perfectly intelligible, and of great practical utility."—Monthly Repository, March.

"With a mind so trained to accurate observation and logical deduction, Dr. Smith's delineations are peculiarly valuable."—Medico-Chirurgical Review, March.

"Of the morbid phenomena he has given a most masterly description."—London Medical and Physical Journal, March.

"The author merits the reward of a double service, by arriving at important truth amid much popular error, and by laying this truth before the world in a distinct, and with a demonstration, which most powerfully recommend it to the judgment."—Westminster Review, April.

"The work just analysed is the best which we have ever perused on the subject of fever, and in our conscience we believe it the best that ever flowed from the pen of physician in any age or country."—Medico-Chirurgical Review, April.

In Monthly Volumes, price 8s. each, with Portrait, uniform with the Waverley Novels and Cabinet Cyclopaedia, PICKERING'S ALDINE POETS.

Vols. I. and II. The Poems of Burns. Vols. III. and IV. The Poems of Thomson. Vol. V. The Poems of Collins. Vol. VI. The Poems of Henry Kirke White, with an original Memoir and Portrait.

Lord Byron remarks, that Kirke White died in consequence of the "burden of studies that would have mastered a genius which disease and poverty could not impair, and which death itself destroyed rather than subdued. His poems abound in such beauties as must impress the reader with the liveliest regret that so short a period was allotted to talents which would have dignified even the sacred functions he was destined to assume."

William Pickering, Chancery Lane, London.

The National Library, No. 11. Beautifully printed in small 8vo. with Map, price 5s.

THE HISTORY OF THE BIBLE. By the Rev. G. R. GLAIG, M.A. M.R.S.L. &c.

Forming the Second Volume of the National Library. "This work is intended to convey a connected and accurate view of the several religious dispensations granted to mankind from the Creation to the establishment of Christianity. It commences with a narrative of the cosmogony, or creation of the world, the popular objections to which it advocates, carries on the history of mankind down to the call of Abraham, takes up from that date the fortunes of the Jews, and concludes with the biographies of Christ and his Apostles.

No. I. contains the Life of Byron, by John Galt, Esq. with Plates, complete in a single volume.

No. III. comprising the History of Chivalry, by G. P. R. James, Esq. Author of "Richelieu," "Darnley," &c. with Plates, will be published in the 1st of November. Henry Colburn and Richard Bentley, New Burlington Street.

THE LITTLE LIBRARY, comprising, in a Series of small Volumes, uniformly printed, a familiar Introduction to various Branches of useful Knowledge.

Just published, being the Second Volume of the Little Library, The Ship, by the late Rev. Isaac Taylor, with 16 Engravings on Steel, price 3s. 6d. neatly bound in cloth, square 16mo.

Contents.—Noah's Ark—Floats on the Rhine—Egyptian Pottery Float—Indian Paddle Canoes—Boats, Barges, and Lighters—Sailing Canoes—Chinese Junk—The Nautilus—Ancient Vessels—Roman Gallies—British Caracles—Cesar's Fleet—a Fire-Ship—a Cutter—a Gun-boat—a Bomb Ketch—a Frigate—a Man-of-War, with its Rig—Lord Breeze's Pinney—Carrack, and Yawl—a Turkish Gallie—a Venetian Gallie—a French Gallie—a Zebec, Polacre, and Tartan—a Snow Blander, Schooner, and Dogger—a Sloop, Hoy, and Smack—an East Indianman—a Portuguese Carrack—a Spanish Gallion—a Canal Boat—a Wherry and Pleasure Boat—a Hunt—Lord Mayor's State Barge—Venetian gondola—the Jugg's a Bunt—a Man-of-War, with Descriptive References—Section of a Man-of-War—the Dock-yard—the Ship Launch.

Also, 3d edition of the First Volume, The Mine, by the same Author, illustrated with 16 Engravings, and a Mineralogical Table. Price 3s. 6d. neatly bound in cloth, square 16mo.

Shortly will be published, The Forest; a Description of Trees generally, with 16 Engravings, and 10 Woodcuts, shewing the Form and Character of the principal Trees, and minor Peculiarities.

Several additional volumes are in preparation, similar in form and size to those already published. The volumes, although connected by a general title, as belonging to the 'Little Library,' are each separately complete, and not numerically arranged. The purchaser of the first and last may therefore place his volumes as complete in his library, without being obliged to procure those which may not suit his taste or purpose. John Harris, Corner of St. Paul's Churchyard.

In 2 vols. post 8vo. price 11. 4s. boards, the 3d edition of PRIVATE LIFE; or, Varieties of Character and Opinion.

By the Author of "Geraldine," &c. Printed for T. Cadell, Strand, London; and William Blackwood, Edinburgh.

Of whom may be had, by the same Author, 1. Geraldine; or, Modes of Faith and Practice. 3d edition, 2 vols. 12mo. 11. 4s. boards.

 Of St. Mary Hall, Oxford, and Vicar of Sandhurst, Berks.
 London: Baldwin and Cradock.

Neatly bound, price only 4s. 6d.
THE FAMILY CLASSICAL LIBRARY,
 No. 10, containing Pindar, translated by the Rev. C. A. WHELAN, RICHTE, Prefendary of Lincoln; and Anacreon, by Mr. THOMAS HOUBNE.
 Cicero remarks, that not to know what has been transacted in former times, is to continue always a child; and the learned Dr. Parr says, "if you desire your son, though no great scholar, to read and reflect, it is your duty to place in his hands the best translations of the best classical authors."
 To those, therefore, who are desirous of obtaining a knowledge of the most esteemed authors of Greece and Rome, but possess not the means or leisure for pursuing a regular course of study, the present undertaking must prove a valuable acquisition.
 The preceding Numbers comprise Demosthenes, Sallust, Xenophon, Herodotus, Virgil, &c. &c.
 Henry Colburn and Richard Bentley, New Burlington Street.

Schiller's Works, in 1 vol. royal 8vo. Price 30s. the whole of
THE POETICAL AND PROSE WORKS OF FRIEDRICH VON SCHILLER, beautifully printed in 1 vol. royal 8vo. with a Portrait.
 London: Black, Young, and Young, Foreign Booksellers, 2, Tavistock Street.

3d edition, post 8vo. with numerous additions and improvements, illustrated by Engravings and Woodcuts, 15s.
THE JOURNAL OF A NATURALIST.
 Plants, trees, and stones, we note,
 Birds, insects, beasts, and many rural things.
 "We again most strongly recommend this little unpretending volume to the attention of every lover of nature, and more particularly of our country readers. It will induce them, we are sure, to examine more closely than they have been accustomed to do, into the objects of animated nature, and such examination will prove one of the most innocent and the most satisfactory sources of gratification and amusement. It is a book that ought to find its way into every rural drawing-room in the kingdom, and one that may safely be placed in every lady's hand, be her rank and station in life what they may."—*Quarterly Review*, No. 78.
 "This is a most delightful book on the most delightful of all studies. We are acquainted with no previous work which bears any resemblance to this, except 'White's History of Selbourne,' the most fascinating piece of rural writing and sound English philosophy that ever issued from the press."—*Athenaeum*.
 "To notice every thing of interest would be nearly to transcribe the entire book; therefore we must abruptly break off, after having held out by no means the most luscious tit-bits, either to the man of minute research, or yet the general philosopher."—*Sporting Magazine*.
 John Murray, Albemarle Street.

British India.
 In 6 vols. 8vo. the 3d edition, price 3l. 12s. boards,
THE HISTORY OF BRITISH INDIA.
 By JAMES MILL, Esq.
 "The labour which has been employed in collecting and examining materials, the skilful distribution of the facts into proper compartments, the high tone of moral feeling, and the enlarged philosophy which every where pervade the narrative, entitle the 'History of British India' to be regarded as a valuable addition to our national literature. The extensive circulation of Mr. Mill's History will be a benefit both to England and to India."—*British Review*.
 London: Printed for Baldwin and Cradock.
 Of whom may be had, by the same Author,
Elements of Political Economy. 8vo. 3d edition, price 8s. boards.
An Analysis of the Phenomena of the Human Mind. In 2 vols. 8vo. price 16s. boards.

FOUR YEARS' RESIDENCE IN THE WEST INDIES.
 By F. W. N. BAYLEY, Esq.
 One vol. 8vo. with numerous Lithographic Embellishments.
 "This is by far the most readable book on the West India Colonies that has yet appeared, and it abounds in lively and graphic pictures of society. Its perusal will amply repay every one interested in these settlements."—*Glasgow Free Press*.
 London: William Kidd, 6, Old Bond Street.
 Foolscap 8vo. dedicated, by permission, to Her Majesty Queen Adelaide,
TALES OF THE DEAD, and other Poems.
 By JOHN HENEGE JESSE,
 Author of Mary, Queen of Scots, &c. &c.
 John Murray, Albemarle Street.
 Price 6s. the Sixteenth Number of
THE BRITISH CRITIC—QUARTERLY THEOLOGICAL REVIEW—AND ECCLESIASTICAL RECORD.
 Contents: Life of Dr. Bentley—Gramberg and Blunt on the Pentateuch—Warner's Literary Recollections—History of Scotland—Hind's Three Temples—History of Enthusiasm—Principles of Necessary and Contingent Truth—Life of Bishop Heber—State of the Dioceses in England and Wales—Proceedings of the Uteraries.
 Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In small 8vo. price 8s. 6d. boards,
PAROCHIAL LETTERS, FROM A BENEFICED CLERGYMAN to his CURATE.
 Contents.—Introductory—Parsonage—Gardening—Visiting—Churches—Psalmody—Education of the Poor—Preaching—Catholices—Cant—the Poor—Friendly Societies and Savings Banks—the Clergy.
 Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

No. 717.—AMERICAN EDITION.

SATURDAY, OCTOBER 16, 1830.

REVIEW OF NEW BOOKS.

Musical Memoirs; comprising an Account of the General State of Music in England, from the first Commemoration of Handel, in 1784, to the year 1830: interspersed with numerous Anecdotes, Musical, Histrionic, &c. By W. T. Parke. 2 vols. 12mo. London, 1830. Colburn and Bentley.

Who will next publish Reminiscences? Private soldiers, actors, sailors, shopkeepers, itinerant preachers, singers, fiddlers, dancing masters, mechanics, and now an oboist, pervade the field of auto-biography; and the wide-spread march of intellect is voluminously illustrative of the still wider-spread march of egotism. What business Mr. W. T. Parke had with a pen, we know not: if he wished to dwell on his notes, or hoped to "find the wind" (like the perplexed musician in the orchestra), he had better have stuck to the oboe. With that instrument he is both able and pleasing; as an author he is sadly out of tune, out of time, and out of character. We do not mean to say (for our extracts would prove us out of court if we did), that his volumes do not contain some amusing anecdotes and agreeable matter; but there are not enow for a solo performance, or a separate publication of some pretence. A musician is likely to pick up a number of common places and jests at the theatres where he plays; or among the companies to which he has access; but his professional studies demand too much of his attention, and keep him too much in ignorance of what all the rest of the world knows, to admit of his being a judge of what is worthy of record, and what is not. Thus, Mr. Parke's reading must have been exceedingly small, or he would have been aware, that nine-tenths of the stories which seem so entertaining to him, are as familiar to the public as the light of day. They would constitute any man a bore in society, and are not improved by being re-inflicted in print. We are sensible that there is nothing new under the sun; but the proverb has never yet reconciled us to the liking of things so very old as many in which our literary oboist deals.

Neither does his own personal character, as displayed by his book, strike us as being peculiarly brilliant or amiable. Vanity, the besetting sin of no class of men more than it is of musical performers, vocal or instrumental, is not wanting in his composition; nor do we observe that he is at all reluctant to repeat bitter—we would almost say false and malignant—tales of his contemporaries on fiddle or stage. Of this we shall exhibit specimens; but, previous to doing so, have to remark, that there is little or no order in the narrative (except an ill-observed division as to dates); and that there are instances of simple self-exposure not unamusing to the student of human nature. Thus, for example, our Oboe would represent himself as a wit. A wealthy lady (it is told) "married a captain in the navy, who embarked in a speculation he was unfit for, which proved very inconvenient. A short time afterwards

I had occasion to call on a friend of mine, and in the course of our conversation, suddenly recollecting himself, he said—"By the by, I understand that the naval captain is in the Fleet." "Well," said I, "where should a naval captain be but in the fleet?"

This is a novel, a happy hit; but lest we should administer to the writer's ruling passion, we must state, that it is by far the best of the number of *bon-mots* he records himself to have made; in which, to confess the fact, "the attempt and not the deed confounds us." Our hero of his own tale was for many years an able and popular composer for Vauxhall Gardens, while a very different place from what it has since been made. One season, he tells us, "after the gardens were closed, dining with Mr. Barrett, the proprietor of them, the Rev. Mr. Barrett, brother to the former, said to me in the presence of the party, 'Mr. Parke, you have done for Vauxhall Gardens that which no former composer had accomplished.' On my requesting him to explain, he added, 'You have composed a song for Vauxhall Gardens,—I mean the laughing song,—which was not only sung, but encored every night during a season.'"

The following is a more laughable and unconscious letting out of the importance of a man—to himself! A few days after the opera of Fontainebleau was produced, Mr. Parke is good enough to record: "Mr. Shield gave a dinner party at his house in compliment to his friends, who had performed the *principal parts* in it, among whom were Edwin, Johnstone, Bannister, myself [oboe!], Mr. Fozard, and such a combination of talent could not but prove entertaining, as each one contributed after dinner to the hilarity of the evening." And then he goes on to tell, what is a regular Joe now, whatever it might have been then. "Mr. Fozard, the fashionable horse-dealer of Park-lane (says he), described a new species of robbery which had been committed on his premises during the preceding night. It appeared some villains had broken into his stables, and cut off the tails of a string of valuable young horses just received from the breeder. 'This circumstance,' said he, addressing his friend Bannister, 'has distressed me very much, for I am quite at a loss how to sell them. What would you advise?' 'Why,' said Bannister, in his peculiar way, 'in my opinion, the best thing you can do is to sell them by *wholesale*, for you'll never be able to *re-tail* them.'" We may also, for variety's sake, copy a little farther. "Edwin gave some of his comic songs imitatively; particularly, 'Amo, amas,' from 'The Agreeable Surprise,' and 'Four-and-Twenty Fiddlers all in a row;' and Johnstone some of his Irish airs, and duets with Bannister. Shield, who was so good an actor, that Edwin, at the rehearsal of a new opera, would never go through his songs till he had heard him sing them, related with great ability the following whimsical anecdote of an actor of the name of Digges, who had performed the principal characters at Colman's Theatre in the Haymarket, during the preceding summer.

This man, (a tragedian,) who had obtained the appellation of the great northern actor, and who was as frigid as the vicinity of the north pole, having had his benefit fixed, began to consider what attractive novelty he should produce to fill the house on that occasion, and at length determined to select 'The Beggar's Opera,' and to perform the character of Macheath in it himself. Digges, who had never before attempted a song, sent for his old friend Shield to ask his advice, and to request him to hear him sing one of the songs, which, on his arrival, in strict accordance with Hamlet's advice to the players, 'Suit the action to the word,' he released in the following manner:

AIR.

When the heart [striking his left breast with his right hand] of a man is depress'd with care,
The *mus* [drawing his hands across his eyes] is dispell'd
when a woman appears:
Like the notes of a *flute* [imitating the action of playing one] she sweetly, sweetly
Raises his spirits and charms his ear. [Seizing his left leg with the thumb and finger of his right hand.]

Digges proceeded no further, for the lengthened countenance of his friend Shield deterred him; nor did he subsequently appear in the character of Macheath, whereby he not only evinced much prudence, but probably avoided a similar fate to that intended for Mr. D—n, an unpopular actor in Dublin, who being announced in the play-bills to perform the character of Richard the Third, was luckily prevented from appearing by sudden illness. On this disappointment being communicated to the audience by the manager, from the stage, a gentleman sprung upon the seats of the pit, and addressing the public, said, with a stentorian voice, 'Jontlemen! as Mr. D—n don't act to-night, you may *ate* your apples.'

But to generals. "The object of this work (says Mr. Parke) is to give a candid, impartial, and connected account of the principal musical performances, and their various composers, as well as of the most eminent vocal and instrumental performers by whom they were introduced to the public; blended with remarks and anecdotes, musical, histrionic, &c. As my ministration compels me occasionally to describe peculiarities and defects, I trust the reader will bear in mind that, as there are spots in that great and glorious luminary the sun, it can scarcely be expected that *musicians* and *actors* should be *immaculate*."

Well, after this flourish, the oboist proceeds to his score; and, our honour to a crotchet, but he does not spare the spots. On the contrary, few of the luminaries whom it delighteth him to show-up, escape without a mark or two of his perception of their real or imputed obscurations. Of Incedon, we have a dozen of derogatory anecdotes; of Sinclair a silly one, that he objected to an oboe cadenza in the accompaniment to a song which he sung, on account of its carrying off some applause from him; and a multitude of others of a similar kind. *Ex. gr.* of Braham.

"The concerts of Billington, Naldi, and Braham, after being twice postponed, com-

menced at Willis's Rooms on the 10th of May. The singers this year were only five, (eleven less than the preceding season,) viz. Mrs. Billington, Mrs. Ashe, Miss Mortimer, Naldi, and Braham. The subscriptions to these concerts (as the postponements seemed to proclaim) came in but slowly; and not being by any means commensurate with the superiority and expense of the undertaking, they were after that season discontinued. Braham, who was not engaged at the opera, or either of the winter theatres, did not by this speculation make his coffers overflow; an object which he prudently seizes every occasion to effect. That ruling passion, gain, which so particularly sways persons of his persuasion, is so strongly implanted in their natures, that it may sometimes be discovered in their children, even while infants, as the following relation will shew:—A gentleman, who was in the habit of visiting at the house of that admired singer, informed me (as an admirable trait in a child then only five years old), that he one day asked Braham's little boy to sing him a song, which the infant said he would do if he paid him for it. 'Well, my little dear,' said the gentleman, 'how much do you ask for one?' 'Sixpence,' replied the child. 'Oh,' said the other, 'can't you sing me one for less?' 'No,' said the urchin, 'I can't take less for one; but I'll sing you three for a shilling!'

Now, any person who ever enjoyed the pleasure of seeing this unrivalled singer (and we have done so) in his domestic circle, must feel in a moment that such an anecdote cannot be but equally silly, untrue, and malicious. Braham's very well-regulated family are too judiciously brought up to render it possible; and the liberality with which the large fortune acquired by his talents, and the good sense implanted in him by nature, enable and lead him to rear his children, makes such a statement both absurd and contemptible.

The following is evidently a like falsehood respecting another gentleman—one of the most distinguished ornaments which the stage can boast, either for genius in his profession, or for endowments of the highest value in polished private life. A benefit for the Philanthropic Society being in hand, Mr. Parke relates: "Mr. C. Kemble, who was to have performed on that occasion the character of Romeo, (though too old for it,) in the tragedy of 'Romeo and Juliet,' being taken ill, the committee of members appointed to superintend the performance, found it necessary to apply to Mr. Macready, who it was by no means certain would become the substitute for Mr. C. Kemble. They accordingly waited on Mr. Macready, who received them politely, but with a great portion of that superabundant importance for which he was so much distinguished. On the committee communicating to him the nature of their mission, the hero of the buskin, prudently considering that it might not redound to his credit to refuse assisting a public charity, replied with lofty condescension, 'I will certainly act for the benefit of the Philanthropic Society; but I see how it is, as you cannot have the corporal, you now apply to the general!'"

We will match these with but one more of the *incredibles*. "His Royal Highness the Prince of Wales, after he had succeeded to the throne of England, had occasionally music parties on a splendid scale; and being much pleased with the compositions of Rossini, gave a grand concert at St. James's Palace, at which the popular Italian composer was appointed to preside. During that evening the king, in

his elegant and affable manner, paid particular attentions to Rossini, who, insensible to the distinguished honour thus conferred on him by the king of a great and free people, on his majesty observing, in the latter part of the concert, 'Now, Rossini, we will have one piece more, and that shall be the *finale*,' most arrogantly replied, 'I think, sir, we have had music enough for one night,' and made his bow."

Upon such fudges we could almost be as facetious as the author, and exclaim, *O Beau Parke!* putting, as he frequently does, a parenthesis explanatory of his wit (Oboe Park)!

But now, having administered a few stripes for an offence we hate, that of detraction, let us try to enliven the punishment by a selection of the most piquant (and we hope newest, or least known, short) anecdotes, &c., which are sedulously and numerous introduced into these pages. When Mrs. Siddons was the star which Fanny Kemble is now, it was then, as now, the custom to let seats in the orchestra to persons of rank or celebrity. Among others, Sir Joshua Reynolds was a visitor; and on one occasion, "a loquacious young sailor of a respectable cast, who had got a country youth in tow, sitting in the pit next to the orchestra, was showing off, as he imagined, between the acts, by explaining to his companion the names, not too correctly, of the different instruments played on by the band. At length, coming to Sir Joshua, who was sitting at the further part of the orchestra, he, in answer to the interrogatory of his mate—'what instrument is that?'—replied with great confidence, 'O, that's a newly invented trumpet, blown by the ear!'"

Salomon, in his own country, attended the Prince —. After teaching him for some time, the prince said one day, 'Well, Mr. Salomon, how do I get on?' 'Please your highness,' said Salomon, 'der are tre stages of music. First, der is pick out, read notes, count time, &c., not play at all. Second, der is play, but play very bad,—out of time, out of tune, noting at all. Now your highness has just got into de serond stage.'

Some few years ago, his majesty George III. patronised and honoured with his presence the oratorios at the King's Theatre in the Haymarket, on the Friday evenings during Lent, conducted by Mr. Bach, the celebrated German composer, who was musician to the queen. These performances, notwithstanding, were so thinly attended throughout the season, that they might (as the theatrical hero has it) have been termed 'a beggarly account of empty boxes.' On Friday morning, General Fitzpatrick meeting Mr. Hare, the witty member of Parliament, said to him, 'Do you go to the oratorio in the Haymarket this evening?' 'Oh no,' replied Mr. Hare, 'I have no wish to intrude on his majesty's privacy.'

Mr. Mara, who did not possess the tenth part of his wife's talent, loved her and his bottle equally, and frequently broke the head of one and cracked the other. Nevertheless he appreciated her superior merit so highly, that he occasionally ran into another extreme, and paid her extravagant attentions, as the following instance will shew. This gentleman and madame being on a visit to the Earl of Exeter, at his splendid seat, Bursleigh, near Stamford, in Lincolnshire, and her caprice having induced her one day to inform her husband that she did not like Lord Exeter's claret, he immediately despatched a servant to Stamford for a post-chaise and four horses, in which he proceeded to London, and returned the following evening, with a case out of her own cellar, *

Hackwood, a whimsical violin-player, whose society was much courted on account of his whimsicalities, had drunk wine enough in his time to float a ship; notwithstanding which he lived to the age of ninety. He was particularly intimate with the late Sir C—r W—e, a Lincolnshire baronet of large fortune, who, when not laid up by the gout, was a three-bottle man. At a male party given by that gentleman, Hackwood, who had important business to transact on the following morning early, hearing the clock strike one, arose to depart; on which Sir C—r said, 'Hackwood, where are you going so soon?' 'Home, sir,' replied Hackwood; 'it has struck one!' 'One!' said Sir C—r; 'pooh, nonsense, what's one amongst so many? Sit down, sit down!' Hackwood, however, left the room, followed by the baronet, who swore they would at all events have a parting glass; and sending a servant for a bottle of Holland's gin, they drank it out between them, whilst taking leave at the head of the stair.

"Sir John Gallini was not the only manager of the King's Theatre who had directed it on a saving plan. He was infinitely exceeded by Y—s, one of his predecessors, whose parsimony was hyperbolically described by a wag in the following manner: 'This dwarf-like manager, who had an eye to every thing, going his morning round in the theatre, came to a hogshead containing lamp oil, which being nearly empty, he, in order to gauge it to a nicety, leaned over the brim so far that he fell into it, and was, from its depth, unable to extricate himself. His cries for help, however, bringing one of the lamp-lighters to his assistance, he, with his usual thrift, desired the fellow who took him out to hang him by his clothes on the large wooden peg above the cask, till the whole of the oil should have dripped from them!'"

Mr. Parke, at Birmingham, was hospitably treated by "Mr. H—n, an old gentleman, who had been a manufacturer, but had retired many years since, with a large fortune. He was a plain, good sort of man, but had a peculiar mode of expressing himself, generally ending his speech with the words 'such as it is.' The first time I visited him, on entering the dining parlour to partake of an excellent dinner, he desired I would sit next to him, adding, 'Mr. Parke, you see your dinner—such as it is.' When the meal was finished, and the dessert and wine were placed on the table, he recommended to me some port wine which he had in bottle fifteen years, saying, 'Pray don't spare it, for you are heartily welcome to it—such as it is.' Having a concerto to play at Vauxhall that evening, I was compelled to depart rather early, and on rising to take my leave, the old gentleman said, with great kindness, 'Mr. Parke, I am sorry you are going so soon, for I should like to have more of your company—such as it is.'

"Mr. Daly, the manager, was a gentlemanly man, but was not much acquainted with music, as the following curious circumstance will shew:—At the rehearsal of an opera in which I played, Daly, observing the persons who played the two French horns occasionally leave off, and conceiving that it proceeded from inattention, hastened to the front of the stage, close to the orchestra, and addressing them with much warmth, said, 'Gentlemen horn-players, why don't you play on as the others do? What do you mean by stopping?' 'Sir,' said one of them, 'we have twenty bars rest.' 'Rest!' said Daly, 'what do you mean by rest? I can get no rest in this theatre, and, by Jesus, you shan't.'"

A schoolmaster at Aston, in Warwickshire, "was so proud of the progress which one of his pupils had made in orthography, that he afforded me an opportunity of witnessing it. The word he selected for the display was the name of the great manufacturing town in the neighbourhood, Birmingham, which the boy, to the admiration of his master, spelt in the following manner:—

Birm ——— Brum,
ing ——— idge
Brumidge,
ham ——— um,
Brumidgeum!"

"On the 6th of February Mrs. Billington first appeared in the part of Rosetta, in the opera of *Love in a Village*. * * * Amongst the fashionables present that evening was Mr. Jekyl, the witty barrister, who had with him a gentleman from the country. When the curtain rose and discovered Rosetta and Lucinda, in the first scene, the applause being great, Mrs. Billington, who had prodigiously increased in bulk, curtsied to the audience, on which the country gentleman said to his friend,— 'Is that Rosetta?' 'No, sir,' replied Mr. Jekyl; 'it is not Rosetta, it is Grand Cairo.' * * *

"When Fischer, the celebrated oboe player, who was remarkable for the oddity of his manner, played concertos at the grand concerts given fifty years ago at the Rotunda in Dublin, a noble lord who had been enraptured with the rare talent he displayed, came up to him, and after having complimented him, gave him a pressing invitation to sup with him the following evening; adding, 'You'll bring your oboe with you!' Fischer, who was a little nettled at that sort of invitation, hastily replied, 'My lord, my oboe never sups!'

"The 'cutting down' Gay's popular opera made a friend of Mr. Harris, the proprietor of the theatre, observe, while expostulating with him on the subject, that it was not only injudicious, but cruel. 'What!' exclaimed Mr. Harris, 'do you call it cruel, when I find a piece hanging, to cut it down?'

To this miscellany we know not that we can do better for the illustration of these Memoirs, or the amusement of our readers, than to select a second part of miscellanies of somewhat a different order.

Dr. Arne's death.—"The manner of Dr. Arne's death was very singular. The day after his decease his intimate friend, Vernon, the favourite singing actor of Drury Lane Theatre, came into the music room, and in my presence described it as follows: 'I was talking on the subject of music with the doctor, who suffered much from exhaustion, when, in attempting to illustrate what he had advanced, he in a very feeble and tremulous voice sung part of an air, during which he became progressively more faint, until he breathed his last! making, as our immortal Shakspeare expresses it, 'a swan-like end, fading in music.'"

We are not aware whether this description can be relied upon; but we are sure that the ante-dated death of our old friend Michael Kelly, with whom we spent many a cheerful hour for ten long years after Mr. Parke has chosen to murder him, is not to be credited. "Our old friend, Michael Kelly" (he avers), "who had long been a martyr to the gout, died at Ramsgate on the 15th of October, 1816." And he adds,— "Kelly, a short time before his death, published a literary work in two volumes octavo, intitled 'The Reminiscences of Michael Kelly,' which was read by many with much interest."

Baumgarten.—"The late Mr. Baumgarten, the great musical theorist, when a boy, was in

his native country, Germany, apprenticed to Mr. Kunzen, an eminent musician. That gentleman having one evening given his servant leave to go out, after having put down to the fire a partridge to roast for his supper, and having occasion to absent himself for a short time, desired the boy (young Baumgarten) to superintend it till he returned; and, placing on the sideboard a pint decanter of Moselle wine, told him, to prevent his tasting it, that it was poison. The master staying out beyond his time, and the partridge becoming overdone, the boy, with a longing look, putting his finger to it, one of the legs dropped off. After having recovered from his surprise, he ate it; and soon after, pursuing the same course, off came a wing, which he ate also. At length, being impelled by the irresistibility of the bird's flavour, as well as by an insatiable appetite, and thinking that as his master had stayed out so late he would not return to supper, he devoured the remainder of it, trusting to his invention for an excuse. Having finished his meal, reflection, which generally comes too late, overtaking him, and dreading the severity of his master's disposition, he determined, in despair, to swallow the poison in the decanter, which had been placed on the sideboard. This he had scarcely effected, when his master knocked at the door, which the boy in his confusion delayed to open; and on being asked why he did not come sooner, the boy, much agitated, replied, 'The cat ate it!' 'Why, you are dreaming,' said the master. The answer was again, 'The cat ate it!' The master finding that he could obtain no other reply, entered the kitchen, where, not seeing any partridge at the fire, and a plate full of well-picked bones lying on the table, which the boy had neglected to put out of sight, was preparing to chastise him, when the boy, almost drowned in tears, cried, 'Pray, sir, don't beat me,—I can't live long,—for I was so much grieved at the fault I had committed, that I swallowed the whole bottle of poison!' Baumgarten, soon after he came to England, was patronised by his Royal Highness the Duke of Cumberland, brother to George the Third, and, during the summer season, was at the head of his musical establishment at the Royal Lodge at Windsor. The duke having made an addition to his stud, by the purchase of a pair of beautiful carriage-horses, occasionally drove them in a break in Windsor Great Park, of which he was ranger. One morning he invited Baumgarten, whose disposition was extremely timid, to sit on the box with him; and as the invitation of his Royal Highness was tantamount to a command, he with secret reluctance ascended. During their progress the duke, who was a kind-hearted and a very young man, knowing Baumgarten's fearful disposition, and wishing to have a little harmless sport with him, made the young horses kick and plunge, crying out at the same time, 'Take care of yourself, Baumgarten, or you'll be off!' which so terrified the musician, that losing sight of the respect he had felt towards his patron, and catching him fast round the waist, he exclaimed, 'By G—d, if I go, you shall go too!'

"This amiable prince" (adds Mr. P., in his own peculiar style), "to the deep regret of all who were honoured with his notice, died in Sept. 1790, in the 45th year of his age, as has been already stated in another place. Music mourned the loss of its warm patron, the Duke of Cumberland, after which the art began to decline, and which declension was farther

enhanced by the war with the French republic in 1792, whereby the soft breathings of the flute gave place to the shrill clangour of the brazen trumpet, and the feminine and graceful tabor to the terrible roll of the thundering drum."

Mr. Parke also ascribes the advance of musical science in this country in a great degree to the patronage of the Prince of Wales, his late Majesty George IV.

Anecdote of a Monkey. This animal had performed the retreat under Sir John Moore to Corunna, as comrade to its master, Captain Barlow, of the artillery. "Pug grinned and chattered as the balls whizzed about him; and so powerfully had he been impressed with terror at the noise and confusion of the scene he had witnessed, that at the inn (after being landed) where his master dined, on the waiter drawing the cork of a bottle of wine, he actually jumped out of the window of the room, which was thirty feet from the ground, and escaped unhurt."

Prices given for Operas.—Dr. Arne, in the year 1763, received for his famous opera, "Artaxerxes," 60 guineas. Mr. Shield, in the year 1781, for his popular two act musical piece, "Rosina," 40l. Mr. Storace, in the year 1791, for his opera, "The Siege of Belgrade," 1000l. Mr. Braham, in the year 1804, for his opera, "The English Fleet in 1342," 1000 guineas.

With this curious contrast we must take our leave of Mr. Parke. He is in literature what is called a waddler; often, it will be seen, amusing, but frequently trifling. His book, with the exception of the plums put in for seasoning, is a sort of brief detail of musical and theatrical matters for forty years; in short, a dramatic register. There are also brief and rather interesting biographical sketches of the principal composers who died during that period; so that, upon the whole, it is what is styled a readable light work, and well enough done for an oboe player. For its bad qualities we have felt it to be our duty to give it a blow; for its good ones it is welcome to a puff. We do not flatter ourselves that we could perform so well in his department, on the oboe, as he has in ours, scribbling; and we give him leave to criticise us when we try, as freely as we have criticised him. We acknowledge we would rather hear him play than we would read his books (no play); and, perhaps, he would rather not read at all than read our *Gazette*.

The Gem; a Literary Annual. London, 1831. Marshall.

TRULY this Gem is a very brilliant specimen: we can best liken it to the opal, "full of bright, soft colours, and of great variety." There is some of as sweet poetry as we have met with in an Annual;—poetry whose best criticism will be quotation: "the Legend of the Toufel-haus," by the Author of Lillian, is exquisitely told, both for poetry and playfulness; but it is too long to quote, and too good to spoil: we therefore proceed to other favourites, and let the following poems speak for themselves:—

"When some fond boy, more blest than I,
Shall twine fresh roses in thy hair,
Tell him, the flowers his hand flings by,
Once bloom'd as bright as his do there;
And when, beneath this starry sky,
He wakes the lute I used to fill,
Oh! tell him that another's sigh
Is warm upon its surface still.

And if, perchance, thy loved gazelle
Should fly the stranger's touch, and hide
Its head within thy bosom's swell,
And nestle there, in trembling pride,—

Oh! tell him there was one whose lip
That dark-eyed thing so loved to kiss,
That it had fondly learn'd to sip
The dews from thine to water his.
And for the rest—when twilight's hour
Shall see thee wandering on with him,
Or in thine own acacia bower,
Whose light, Love's own, is all so dim—
Tell him there's not a flower below,
And not a silent star above,
And not a breeze that whispers so,
That have not heard another's love."

Mars disarmed. By the Author of Lillian.

"Ay, bear it hence, thou blessed child,
Though dire the burthen be,
And hide it in the pathless wild,
Or drown it in the sea:
The ruthless murderer prays and swears—
So let him swear and pray;
Be deaf to all his oaths and prayers,
And take the sword away.

We've had enough of fleets and camps,
Guns, glories, odes, gazettes,
Triumphal arches, coloured lamps,
Huzzas, and epaulettes;
We could not bear upon our head
Another leaf of bay;
That horrid Buonaparté's dead;—
Yes, take the sword away.

We're weary of the noisy boasts
That pleased our patriot throngs;
We've long been dull to Gooch's toasts,
And tame to Dibdin's songs;
We're quite content to rule the wave,
Without a great display;
We're known to be extremely brave;—
But take the sword away.

We give a shrug when life and drum
Play up a favourite air;
We think our barracks are become
More ugly than they were;
We laugh to see the banners float;
We loathe the charger's fray;
We don't admire a scarlet coat;—
Do take the sword away.

Let Portugal have rulers twain;
Let Greece go on with none;
Let Popery sink or swim in Spain,
While we enjoy the fun;
Let Turkey tremble at the knout;
Let Algiers lose her Hey;
Let Paris turn her Bourbons out;—
Bah! take the sword away.

Our honest friends in Parliament
Are looking vastly sad;
Our farmers say, with one consent,
It's all immensely bad;
There was a time for borrowing,
And now it's time to pay;
A budget is a serious thing;—
So take the sword away.

And, oh! the bitter tears we wept,
In those our days of fame—
The dread that o'er our heart-strings crept
With every post that came—
The home-affections, waged and lost
In every far-off fray—
The price that British glory cost!—
Ah! take the sword away.

We've plenty left to hoist the sail,
Or mount the dangerous breach;
And Freedom breathes in every gale
That wanders round our beach.
When duty bids us dare or die,
We'll fight another day;
But till we know a reason why,—
Take, take the sword away."

Hope and Love is also by the Author of Lillian.

"One day, through Fancy's telescope,
Which is my richest treasure,
I saw, dear Susan, Love and Hope
Set out in search of Pleasure:
All mirth and smiles I saw them go—
Each was the other's banker;
For Hope took up her brother's bow,
And Love his sister's anchor.

They rambled on o'er vale and hill,
They passed by cot and tower;
Through summer's glow and winter's chill,
Through sunshine and through shower;—
But what did those fond playmates care
For climate or for weather?
All scenes to them were bright and fair,
On which they gazed together.

Sometimes they turned aside to bless
Some Muse and her wild numbers,
Or breathe a dross of holiness
On Beauty's quiet slumbers:

'Fly on,' said Wisdom, with cold sneers;
'I teach my friends to doubt you!'
'Come back,' said Age, with bitter tears,
'My heart is cold without you.'

When Poverty beset their path,
And threatened to divide them,
They coaxed away the belademe's wrath
Ere she had breath to chide them,
By vowing all her rags were silk,
And all her bitters honey,
And shewing taste for bread and milk,
And utter scorn of money.

They met stern Danger in their way,
Upon a ruin seated;
Before him kings had quaked that day,
And armies had retreated:
But he was robed in such a cloud,
As Love and Hope came near him,
That though he thundered long and loud,
They did not see or hear him.

A gray-beard joined them, Time by name;
To find that he was very lame,
And also very lazy:
Hope, as he listened to her tale,
Tied wings upon his jacket;
And then they far outran the mail,
And far outstalled the packet.

And so, when they had safely passed
O'er many a land and billow,
Before a grave they stopped at last—
Beneath a weeping willow:
The moon upon the humble mound
Her softest light was flinging;
And from the thickets all around
Sad nightingales were singing.

'I leave you here,' quoth father Time,
As hoarse as any raven;
And Love kneeled down to spell the rhyme
Upon the rude stone graven:
But Hope looked onward, calmly brave,
And whispered, 'Dearest brother,
We're parted on this side the grave,—
We'll meet upon the other.'

There are some productions, too, of the Howitts, steeped in the most fairy-like hues of imagination: of all writers these seem most especially to live in the world they have created of their own. There are three very picturesque ballads, from one of which we quote the following beautiful morsel:—

"I have looked down to those ocean depths,
Many thousand fathoms low,
And seen, like woods of mighty oak,
The trees of coral grow:—

The red, the green, and the beautiful
Pale-branch'd like the chrysolite,
Which, amid the sun-lit waters, spread
Their flowers intensely bright.

Some, they were like the lily of June,
Or the rose of fairy-land,
Or as if some poet's glorious thought
Had inspired a sculptor's hand."

Mr. Hollings has been a valuable contributor: from a very graceful poem, bearing the attractive title "the Language of Flowers," we quote the ensuing descriptive lines:—

"Deep close the shades around us: and the wind,
Which sweeps the rustling thicket, bends to sight,
With fairy leaf and branches wet with dew,
The slender Celandine: thus Jealousy
Dwells in unutter'd bitterness apart,
And feeds its griefs with silence. Pale below,
The meek Anemone, with virgin grace,
The nurture and the victim of a day,
Tells of a love which blossoms but to fade,
Nipt in its playful infancy. Above,
Circling with blushing wreaths the blighted oak,
The Woodbine drops its odours on the breeze;
So doth Affection gather strength from time,
Constant where once its plighted vows are fix'd,
And smiles from age and sorrow:—while that light
And yellow Broom may fitly emblem Youth,
Rejoicing in its comeliness, and fraught
With hopes which after-storms shall strew in air."

Mr. Hervey, who is generally one of our favourite writers, has not done his best: of his two poems, the one is very flowing indeed; and the other, "to a Young Lady in Sorrow," will not bear a comparison with some former exquisite lines of his, "to a Girl weeping." There are also some very sweet things of Mr. F. Chorley's. To Mr. Tennyson's poems we can only say, in the words of Shakespeare, "they are silly, sooth;" and the best kindness we can do the remainder is to pass them over in silence. Of the prose, we must select for praise "the Blood-Hound," (Mr. Croly's, we are sure,) the very beau idéal of a story for an Annual—full of incident, and

told in the most animated and *piquant* manner: we can also most cordially commend "the Brother's Revenge," by Mr. Carne, as both original and impressive: "a Fragment from the Life of Lady Russell," is told in the peculiarly sweet and simple manner of the Author of "May You Like It;" and of their companions we must speak in the good old English proverb, "least said, soonest mended." But the inferior is, in every sense, the minor part of the book; and when to its exquisite engravings are added much beautiful poetry, and two or three admirable tales, the possessor of the *Gems* will ill deserve its "charmed pages" if he does not rejoice it was not born "to blush unseen."

National Library, No. 2. History of the Bible, Vol. J. By the Rev. G. R. Gleig. Colburn and Bentley. London, 1830.

[Resumed Notice.]

A HISTORY of the Bible may be written in several ways. The great storehouse of Rabbinical learning is furnished with a mass of facts and reasonings seemingly sufficient to make us as familiar with the history of the antediluvian world as if we had lived in it. Unfortunately, these details rest upon no authentic foundation, except when they are derived from similar statements in the Bible, or assume (which seldom happens) the shape of reasonable inferences from what is there stated. Yet, out of these materials the early history of the human race was formerly composed, and from this source histories of the Bible in particular were loaded with facts and reasoning, apocryphal as matters of historical truth, and utterly fantastical and absurd in themselves. On the other hand, Bible histories innumerable have appeared, containing merely a narrative of the facts mentioned in the Bible, arranged in a new order and expressed in a different language. Mr. Gleig has adopted a course better suited to the present times, and more consonant to truth and reason, than either of those referred to. He has taken the Bible as an authority, beyond question and beyond cavil, for all the statements and reasonings therein contained, and added such further details as assume the character of necessary inferences. And whenever rabbinical or heathen learning, or the inquiries, historical or scientific, of modern times, cast additional light, he has availed himself of their aid to render his narrative more full, consistent, and precise.

In his introduction Mr. Gleig states the arguments for the credibility of his great authority. In this he mainly follows the reasoning of Leslie in his admirable and unanswered tract. The historical part of the book is divided into chapters, each of which is closed by a statement of the difficulties, real or supposed, which the candour of believers, or the perversity of others, have suggested, and the answers with which the reason and the learning of the author have supplied him. Such is the plan of the work; and it is difficult to speak in too high terms of the manner in which it is executed. We have on former occasions noticed the singular vigour and clearness which Mr. Gleig imparts to a narrative, and has never exhibited this excellence more happily than in the present volume. It would be some ground of reproach to the friends of truth, if they had entirely neglected the new species of monthly publications as a means of diffusing religious knowledge among the higher and middle classes of society. We do not mean that we think these publications a fit vehicle either for dogmatic theology, or mere devotional writings; but the present volume shews, in the happiest manner, how well they are adapted to convey

that knowledge which makes faith more sure, and piety more enlightened. We subjoin a few extracts, which will convey a fair impression of the general tone of the work.

"It must be obvious to the least reflecting, not only that the process of peopling the earth required at first a greater longevity in the human race than would be necessary after it became adequately colonised, but that the advancement of the race itself from barbarism into civilisation and refinement could not have taken place, had not each person been permitted to live during a much longer space of time than is found to be the case at present in every portion of the globe. The first generations having no past experience to look back upon, must have owed all their knowledge to their own individual exertions; and how far these would have carried them in the short space of seventy or eighty years, we need only examine the condition of the wandering tribes in America to discover. It was not, however, in accordance with God's gracious design in creating, that man, whom he had appointed the head of this lower world, should live and die a savage; and hence he appointed to the antediluvians many centuries of existence, that they might discover, follow up, and lay the foundations of knowledge for all future ages, in every useful and ornamental art. That they actually did all this, we are firmly persuaded, as well from the hints dropped by Moses in his genealogical accounts of the Cainites, as from the recollection, that the process of smelting metals, building towers and cities, the sciences of astronomy and mensuration, were familiar to the first colonists who settled themselves in what may be termed the new world; whilst the gigantic specimens of their handicraft, which remained to comparatively later ages, proved that in the uses and application of machinery they were at least as well versed as ourselves. But the necessity for so very protracted an existence being of a temporary nature, God wisely withdrew it as soon as it had attained its purposes; and he did so, not more in wisdom than in mercy to the creature whose mortal life he curtailed. As we have already seen, though their prodigious age doubtless contributed greatly to the advancement of the antediluvians in knowledge and refinement, it is beyond a question, that the same circumstance tended more, perhaps, than any thing besides, to introduce moral corruption into the world, which corruption became, in all probability, more and more flagrant, as the increased ingenuity of mankind enabled them to devise new methods of gratifying the senses."

"Nimrod, as he was the first that subverted the patriarchal government, so is he thought to have introduced the Zabian idolatry of the heavenly host among his subjects, by whom he was believed, at his death, to be translated into the constellation Orion, that he might still, attended by his hounds Sirius and Canicula, pursue his favourite game, the Great Bear. In process of time he came to be deified and worshipped by the Phœnicians, Assyrians, and Greeks, under the names of Baal, Beel, Bel, and Belus, all of them signifying Lord or Master; whilst there is little doubt that he is the Bela Rama, that is, Bela the son of Rama, of the Hindoos. In a word, Nimrod appears to have been one of those remarkable characters of whom the fame went abroad into all the earth, and of whom, look where we may, we can discover no nation of antiquity which retains not, either in records or traditions, at least some trace. That he was brave, persevering, possessed of great bodily strength and high talents, seems to admit of no doubt what-

ever; but his impiety and tyranny were not less memorable than his valour; and hence, beyond a question, his name of bad pre-eminence, the Rebel."

The present volume brings the history down to the suppression of the rebellion of Absalom. The work is of sufficient merit to be recurred to on a future occasion. As far as it goes, it must be received as an able Manual of Scripture History. We think (but this is matter of doubt and opinion) that in adopting Hale's chronology, that is, in rejecting the Hebrew and adhering to the Greek, an error of a century in the date of the creation must be the result. This arises from the author's having mistaken Theophilus:—but we have not room for a learned controversy. We would also say, that the view of the design of Moses, as expounded, p. 27, first paragraph of chap. 1, appears to us to be too limited. "The great design (says Mr. Gleig) of Moses, when composing the first book of his history, appears to have been, not only to give an account of the early ages of the world, but to guard the Israelites against the prevailing idolatry of his time, the worship of the heavenly bodies, since known by the designation of Zabaiism." On the contrary, we hold that the first book of Moses was, in its form and particulars, absolutely necessary to the far greater object of shewing the whole scheme of Providence in the creation and redemption of the human race.

Again, Mr. Gleig broaches a striking idea touching the destruction of the soul, as a consequence of the Fall. "It appears (he says) to us, that one of the chief obstacles to a right understanding of the sentence passed upon our guilty first parents by their Maker, consists in the erroneous opinions which are generally held respecting the nature of the human soul. Because that viewless essence is immaterial, and therefore uncomponded, it has not unfrequently been held, that it is naturally immortal; in other words, that an exertion of power equal to that which was required to call the human soul into being, would be necessary in order to cause its annihilation. But they who argue thus, forget that the soul, or living principle, in every animated creature is, equally with the soul or living principle in man, immaterial. If, therefore, immortality be a necessary accompaniment of immateriality, then are the souls of the brute creation immortal as our own—a supposition for which no professed Christian is likely to contend, and which the very Deist would reject with disdain. The truth, however, is—and, both reason and revelation bear us out in the assertion—that immortality, simple and essential immortality, belongs to one Being only, namely, to God. 'He alone,' says St. Paul, 'hath,' that is, hath inherent in himself, 'immortality;' and though other beings shall also endure for ever, and the human soul shall, we are assured, be of the number, both it and they must ever owe their continued existence to his supporting hand. An act of volition on the part of the Most High, first called them into being; a continued act of volition on his part supports them there; and it requires but a cessation of that act, if we may so express ourselves, in order to return them all to the nothingness from which they originally came. It is therefore a grievous error to perplex ourselves as to the probable state of the human soul, had God's sentence been carried fully into execution, without the intervention of any propitiatory Mediator. In this case, when the whole machine, the soul and the body of each man, had served its destined purpose, the latter would have been resolved into its

elements or constituent parts, whilst the former, separated from the organs or implements by which it works, would have ceased to exist. But it suited not the goodness of the Creator to deal thus with his creature, whom he had once blessed with a vision of immortality. The same address which condemned Adam to return unto dust, gave assurance that a Deliverer would arise to restore to him, and to all his descendants, the free gift just forfeited; and as with God 'one day is as a thousand years, and a thousand years as one day,' the effects of the great sacrifice on the cross were instantly felt."

The philosophical views taken of the flood sign of the rainbow; of the six days of creation allowing for any space which geology may require as substantive of truth; of Noah's prophecy; and of Joshua's commanding the sun to stand still,—are peculiarly deserving of attention and eulogy: but the whole volume is one of uncommon talent and interest.

The Humorist; a Companion for the Christmas Fireside. By W. H. Harrison, author of "Tales of a Physician." With Engravings and Vignettes from Designs by the late T. Rowlandson. 12mo. pp. 286. London, 1831. Ackermann.

THE *Humorist*, "a companion for the Christmas fireside," and a very entertaining one—a pleasant book for a family circle; curtains closed, a bright fire, candles lighted, chairs drawn to the table, and people predisposed to be merry, because they are first comfortable. The pictures (we like the word picture—we remember how, as children, we used to delight in a picture-book,) are the very extravagance of laughable absurdity—that exaggeration of the fat and the lean which characterised Rowlandson's humorous conceits; and the illustrator, Mr. Harrison, has caught their spirit: the pages are full of outrageous improbabilities, but laughable ones, droll poems, unexpected turns of phrase and meaning, and some very good puns. To be merry through a whole volume is no trifling undertaking; and when we remember the difficulty of translating caricatures into entertaining incident, we do feel inclined to bestow no small share of praise on the manner in which our author has fulfilled his task. But suppose we stop the crew of the *Humorist*, and see what she has on board. The following bespeaking of public favour is very neatly turned: we must observe that the frontispiece is three lame sailors, who have a small full-rigged frigate, or, as Wordsworth says—

"—— a prize,
A ship of lusty size—
A gallant, stately man-of-war,
Fixed on a smoothly gliding car,"

which is, however, in this instance, drawn by a donkey.

"On presenting an addition to the already extensive list of Annuals, the author feels called upon to say a few words by way of preface, in doing which he cannot but acknowledge that the publisher and himself are very much in the situation of the sailors in the frontispiece: they have just launched a new vessel, and are soliciting the favour and patronage of the public, in the absence of which they will inevitably be found in one of the most awkward of all nautical dilemmas, namely, without a sale. Should his readers carry the simile still further, and allege, with reference to the one-legged mariners, that it is a lame affair, the author would plead a classical authority for penning his lucubrations '*stans pede in uno.*' If a more personal application of the plate be attempted, and it be urged that there are many points of resemblance be-

green him and the very respectable but much slandered animal there depicted—that, if not a striking, it is a kicking likeness,—he would reply, that there can be no more appropriate prefix to a volume than a portrait of the writer, and that it is his ambition, although it can scarcely be his hope, to shew his heels to his competitors in the annual race in which he is contending.”

We quote a bit of the “March of Intellect.”

“The vulgar set more learn'd will get
Than many of their betters:”

‘Dear Coz,’ quoth I, ‘they may do that,
And yet scarce know their letters.’

But Ned the strain took up again:

‘You can’t (‘tis quite horrific!)
Address your servant, but you get
An answer scientific.’

I asked my groom, the other day,

What made him look so badly;
The coxcomb said, he’d had a fall,
And bruised his tibia sadly.

My cook, when asked what made her mope

So like a moulting pigeon,
Said she’d a slight derangement in
The epigastric region.

Like greater folks, they’ve learned jokes:

My housemaid Sarah—she
Is ever on the giggle—they
Call *Sai volatilo*.

And then, by rote, strange tongues they quote:

My groom, when some neglect I
Had tax’d him with, declared he’d got
‘*Mena nubi romacia recti*.’

The lady’s maid, the spendthrift jade!

As gifts for the new year,
Gave Thomas a *Forget Me Not*,
And cook a *Souvenir*.”

“Timing a Shipwreck” is a very good and new incident. The following is a very neat pun, a bit of a description.

“Some miles below where London’s Tower

Its smoky crest uprings,
And where, a melancholy sight!
The ships are all in *tiers*.”

“Love in a Box” is an amusing story; but we prefer the “Modern Ulysses.”

“No sooner was the hatchment mounted over the portico of Beechwood Hall, announcing that its late proprietor, Sir John Denyers, was dead, and that his widow had succeeded to the splendid mansion and broad lands, than it was hailed, as the signal for attack, by all the unmarried men within a circumference of twenty miles. They flocked to her by scores, arrayed in the mourning cloak of condolence, endeavouring to smuggle in their love under the disguise of sympathy. Her lawyer, a hale bachelor of sixty, requested she would do him the honour to consider him less in the light of a professional adviser than a friend zealous for her interests, and would fain have presented her with a title to his services in his shrivelled hand; but he had already given her a surfeit of parchment; and the man of law discovered that, although his suit had frequently been successful in those courts where the presiding goddess is represented to be blind, it was quite another thing to plead his cause before a woman with her eyes open. In fact, ere she had worn the weeds of widowhood for six weeks, her paths were beset, and her dwelling besieged; and never, certainly, had woman a better chance of mending her luck, for there was not one of the whole five and forty lovers who was not willing to stake his life upon the sincerity and disinterestedness of his affection. She could not open a window in her house, but a myriad of billets-doux came showering into it like a snow-storm. She could not take a walk in her most private grounds, but a lover started from behind every bush, and flung himself upon his knees in the path before her. Others, again, affecting bucolics, would wander forth into the fields, crook in hand, and carve her name upon every tree, to the great endangerment of her

timber. Every domestic in her household was bribed by one or other of her suitors, and she was under the consequent necessity of changing her establishment twice a-year, from the lady’s maid to the stable-boy. While, however, there exists not a rebel in the citadel of the heart, the fortress will hold out long against external assaults; and the widow had got some antediluvian notions into her head about ‘first love,’ ‘respect for the memory of the dead,’ &c. which, although, no doubt, extremely silly, had the effect of disinclining her from a second speculation in the hazardous adventure of matrimony. As the number of her suitors increased, their individual chances of success, of course, diminished, and their audacity being in the exact ratio of their despair, her own mansion was no sanctuary against the intrusion of her unbidden guests. The matchless impudence of one of her visitors deserves particular record. It happened that one day the widow went out, for several hours, to call on a friend at some distance, leaving only two male domestics, the butler and a footboy, in the house. Towards evening, a horseman rode up to the hall door, and applied himself with more than ordinary energy to the knocker. He was a tall, military-looking personage, with a cast of features which might have been termed handsome, but for a certain cynical expression, which much detracted from their pleasing effect. The stranger flung his rein to the boy, desiring him to take his horse to the stable and have it well fed and littered down for the night, and then stalked into the house, and, notwithstanding reiterated announcements from the servants in chorus of ‘Mistress is not at home, sir,’ stopped not until he reached the dining-parlour, when, turning to the butler, who had followed him, he said, ‘Here, let that valise be taken up into her ladyship’s chamber, and let a fire be lit there, for it’s rather cool.’ ‘Very cool, indeed,’ said the domestic, applying the epithet to the speaker and not to the weather, and was meditating some impertinent observation, when the stranger, carelessly, as if it had been his handkerchief, drew a pistol from each pocket, and placed it on the table before him. The butler, who had a mortal dread of fire-arms, quitted the apartment in haste, as if to do the stranger’s bidding, but, in reality, to communicate to his fellow-domestics, the females, his suspicions of the character of the guest. Their conversation was, however, soon interrupted by the violent ringing of the bell; and it was some time before Geoffry could summon courage to answer it. ‘Your pleasure, sir?’ said he, re-entering the dining-parlour. ‘Some dinner!’ responded the other. The butler paused, but, at length, said, ‘Very sorry, sir, but we have not got any thing in the house.’ ‘Then look in the poultry-yard,’ was the reply, ‘and let me have a broiled chicken in half an hour.’ The other stared, but the stranger’s eyes happening to fall upon the pistols, Geoffry seemed to understand the appeal, and, being anxious to go off first, hurried out to counsel the sacrifice of a chicken to their common safety. In the course of the half hour, the dish was smoking before the guest, who, having no notion of glasses being placed on table for the mere purpose of ornament, pronounced the monosyllable ‘Wine.’ ‘If you please, sir,’ said Geoffry, ‘we can’t get at any, for mistress has got the key of the wine-cellar in her pocket.’ ‘Nonsense!’ exclaimed the other, ‘who ever heard of a wine-cellar with only one key?—why, keys in a great man’s house are like pistols, there are always two of a pattern.’ The allusion had its effect; Geoffry vanished in an instant, and shortly re-

appeared as Ganymede. In a few minutes afterwards, the noise of wheels announced the return of Lady Denyers, who, on being informed of the stranger’s arrival, like a woman of spirit, went straight into the dining-room to demand an explanation. On the next instant, the servants heard a loud scream from their mistress, and, concluding that she was murdered, they, very dutifully, ran out of the house, and set off, at full speed, each in a different direction, for the doctor. It seemed that no sooner had the lady cast her eyes upon her visiter, than she uttered a piercing shriek, and sank upon the carpet. Now, when a man faints away, the approved method of treatment is to kick and cuff him till he recover; but with a woman the case is somewhat different. The stranger raised her in his arms, threw half a glass of water in her face, and poured the remainder down her throat, and, at last, succeeded in restoring the patient. ‘And is it really you, Sir John?’ exclaimed the lady, when she became somewhat tranquil. ‘Ay, in very deed, Caroline,’ was the reply; ‘ghosts do not drink Madeira and devour chickens.’ ‘Then you were not killed and eaten by those frightful Ashantees?’ ‘You greatly wrong that very respectable and much-slandered people,’ said Sir John; ‘they have better tastes, and preferred my society to my flesh, inasmuch that I had some difficulty in escaping from their hospitalities.’ ‘I hope, my dear,’ said the lady, ‘you were duly sensible of their attentions?’ ‘I was very nearly being insensible to them and every thing else, for the worthy gentleman who did me the honour to engross my society, seeing me determined on quitting him, followed me as far as he could, and then fired a parting salute from his musket, into which he had, inadvertently, put a bullet, and left me with half an ounce of lead in my shoulder.’ ‘O dear!’ exclaimed the lady, ‘how very horrid! and did you walk all the way in that state?’ ‘I did not walk two hundred yards, my love, for I fell into a bush, exhausted from loss of blood, when I was picked up by an Ashantee damsel of sixty, whose charms would have made your ladyship jealous, and who extracted the ball, put a plaster of herbs to my wound, and smuggled me down to Cape Coast Castle, where I found the report of my death so well authenticated, that I was challenged by an Hibernian brother officer for presuming to doubt it.’ ‘And were you so rash as to fight with him?’ ‘No, for I had not time, being anxious to embark for England, to relieve your anxieties and to save my executors as much trouble as possible. But how is my nephew?’ ‘O, in high health and spirits, and inconceivably vain of the title.’ ‘I am sorry for that, because I have not quite done with it.’ At this moment a noise was heard in the passage, occasioned by the return of the domestics, bringing with them the *posse comitatus* and fourteen of the lady’s lovers, who, taking it for granted that the ferocious ruffian would have escaped before their arrival, valiantly rushed to her rescue. When, however, they heard the voice of the intruder in the parlour, it became a point of precedence among them which should enter first: at length, a clown, in the back-ground, pressing forward to get a glimpse of what was going on, inadvertently applied the stimulus of a pitchfork to the rear of the man before him, who communicating the impetus to the next, it passed on to the van, and they all blundered into the room, where, to their utter astonishment, they beheld the living Sir John *tête-à-tête* with his lady. Doubtless, you will conclude the baronet enacted Ulysses

on the occasion, and drove out his rivals at point of sword. Credit me, reader, he did no such thing: he was an old soldier, and a man of the world, and knew better than to make enemies of fourteen blockheads; so he ordered up a dozen of claret, and they made a night of it."

We will finish our extracts with a *verses* of very sweet poetry:

"She moves in beauty through the rich parterre,
As through the bright and breathing blossoms there
Were emanations of her loveliness.
Now, like a queen, she graces yonder bower,
Now, from its cool retreat, behold her glide,
Put forth her hand to raise some drooping flower,
Seeming to plant a lily by its side.
Her eye glanced up, and, ere he caught its beam,
She vanished."

One word anent the engravings, said to be by the late Mr. Rowlandson, who, having been dead years before, must have painted in the spirit of prophecy, when he introduced into one of his sketches the figures of Tam-o'-Shanter and Souter Johnnie, considering they did not appear till after his death. His knowledge, too, of future fashions is of that foreseeing kind where "coming events cast their shadows before;" for the lady's dress in "the Siege"—and here we have taken female advice—with its *demi-gigot* sleeves, its pelerine, deep hem, and long waist, might very well have stepped out of any Number of *La Belle Assemblée* this very season. We confess Rowlandson in the drawings, though somebody else of later life has added thereunto. But the book is a very entertaining book, and as such we recommend it to our readers. We will conclude in the words of its clever editor, who alludes to one very good and substantial merit,—a handsome and lasting morocco binding.

"The exterior of the volume is of a character combining permanency with elegance, and evinces a confidence in the generosity of the public, it being delivered bound into their hands."

The Juvenile Forget Me Not; a Christmas and New Year's Gift, or Birthday Present for 1831. Edited by Mrs. S. C. Hall. London. Westley and Davis.

This is Mrs. Hall's fourth volume; and we must say it well merits the favour shewn to its predecessors: this year it appears in a new dress—one made for use as well as show; it is embossed leather, and, besides being lasting, is far the prettiest we have seen. Blending instruction and amusement, its contents are such as we should expect from the taste of its most judicious lady-editor. But before we proceed to give individual praise, we would submit to her future consideration, whether some of the poetry had not better have made room for one of her own delightful tales. We must here repeat, what we have elsewhere said,—that we see no advantage to a child in this superabundance of *mediocre* verses; it deteriorates the youthful imagination, thus feeding it on the common-place. The volume opens with a conversation, by Dr. Walsh; which gives the young reader a picturesque and accurate idea of a Brazilian Forest: we very much approve the plan of this dialogue. There is a most characteristic and amusing tale, by a Miss Leslie, of Philadelphia—a comic sketch of common American life. Mrs. Hoffman and Miss Isabel Hill have each contributed, to use a child's phrase, two "such nice stories." We like, too, the "Sunflower," by Miss Dagley; and, though last, not least, Mrs. Hall has one of her own natural and touching little narratives. We quote, however, a charming and simple tale by L. E. L.,—a prose story, and

for children, from her pen, being such a complete novelty.

"The Miniature.

"No; leave it open, Charles, to-night." "But the damp air, dear mother!" "Only revives me." The youth left the lattice, and, for a moment, buried his face in his hands, behind the curtains of the bed. "Charles, dear!" said his mother, and again he resumed his station at her side. It was a small, low room, whose white-washed walls, and small grate—(there was a fire there, though it was July)—spoke the extreme of poverty; yet were there some slight marks of that refined taste which lingers after all that once cherished it is gone. On the little table, near the bed, stood a glass filled with flowers; and a box of mignonette in the window touched every breath of air that entered with sweetness. The dim light threw a shadow over the meanness of the place, and softness and quietness hallowed the agony of the hour; for Charles Seymour was looking, for the last time, on the face of the mother he had idolised—his young, his beautiful mother—whose small, exquisite features, and dark length of hair, might rather have suited a lovely sister, dying beneath her first sorrow, than one to whom many a year of grief and care would have made the grave seem a hope and a home, but for those she left behind. By her side, in the bright, deep sleep of infancy, breathing and coloured like the rose, was a child of four years old. "God help thee, my poor Lolotte!" and the anxiety of a mother's love overcame the quiet of that calm which almost ever precedes the last struggle. "Alas! Charles, a sorrowful and anxious heritage is yours!" "A sacred one, mother!" and, in his heart, he vowed to be father and mother to the orphan child; and thrice, tenderly, did the cold hand he held press his, as he kissed the little creature so blest in its unconsciousness. Deeper and deeper fell the shadows, and deeper and deeper the silence, when the few clouds that had gathered gradually broke away, and the room was filled with the clear moonlight. Suddenly there came the sound of martial music—the tramp of measured steps. Mrs. Seymour started, unaided, from her pillow. "It is the march of your father's regiment—they played it that last morning—for pity's sake, don't let them play it now!" Her head fell on Charles's shoulder; a strange sound was heard, such as comes from human mouth but once—it was the death-rattle! and a corpse lay heavily on his bosom. "Mistress has wanted nothing, I hope," said an old woman, opening the door gently: one look told her that mistress would never know earthly want again. Disunion of all affection—awful seal to life's nothingness—warning and witness of power and judgment—Death has always enow of terror and sorrow, even when there are many to comfort the mourner, when the path has been smoothed for the sufferer, and life offers all its best and brightest to soothe the survivor; even then, its tears are the bitterest the eye can ever shed, and its misery the deepest, heart can ever know. But what must it be, when poverty has denied solace even to the few wants of sickness; and when the grave in closing, closes on the only being there was to love us in the cold wide world! Charles Seymour stood by, while the old woman laid out the body, and paused in her grief to admire so beautiful a corpse. He had to let his little sister sleep in his arms, for their mother was laid out on their only bed—he had to order the coffin, in which himself placed the body—their short and scant

meals were taken in the presence of the dead—he heard them drive the nails in the coffin—he stood alone by the grave, and wept his first tears when he reflected that he had not wherewithal to pay for even a stone to mark the spot. He went home to meet a talkative broker, who came to buy their two or three articles of furniture; and he leant by the window, in a room empty of every thing, but a little bed for his sister, who had crept to his side, with that expression of fear and wonder so painful to witness on the face of a child;—and Charles Seymour was but just sixteen. His father had fallen in the battle of the Pyrenees, and his mother was left with the bare pension of a captain's widow, only one week before the banker where all their private fortune was deposited had failed. A few months brought Mrs. Seymour to the brink of destitution and the grave; her pension died with her, and Charles was left, with the poor Lolotte, entirely dependant on the small salary he received, as clerk in Mr. Russell's office; and even this poor situation had been procured for him by the chance interest he had inspired in the apothecary who had, from mere humanity, attended his mother. His future prospects destroyed—confined to his desk the whole day—debarred from intellectual acquirement—shut out from his former pursuits—with all the feelings of birth and station strong within him, young Seymour would have despaired, but for his sister; for her sake he exerted himself, for her sake he hoped. They lived on in their little back room over the grocer's shop, kept by the widow of a soldier in his father's regiment: he knew he could confide in the old woman's kindness to the child during his unavoidable absence; and though it was a long walk, night and morning, to the city, he thought only how healthy the air of Hampstead was for Lolotte; however weary, he was still the companion of her evening walk, or else was up early to accompany her on the heath. In her he concentrated all the pride of better days—she was always drest with scrupulous neatness—his leisure hours were devoted to giving her something of education—and every indulgence did he deny himself in order to bring her home the pretty toy or book, to reconcile her to the solitude of their lonely chamber; and patiently did the little creature make her own pleasure or employment till his return, and then quite forget that she had sometimes looked from the window, and thought how merrily the children played in the street. Three years had thus passed away, and brought with them but added anxiety. Charles felt that over-exertion was undermining his health; and Lolotte—the graceful, the fairy-like—how little would he be able to give her those accomplishments for which her delicate hand, her light step, and sweet voice, seemed made; and worse, how little would they suit her future prospects, if he could. It was her seventh birthday, and he was bringing her a young rose-tree, as a present; but he felt languid and desponding—even the slight tree seemed a weight almost too heavy to bear. As he went up stairs, he heard Lolotte talking so gaily—a listener is such a pleasure to a child! He entered, and saw her seated on the knee of an elderly man, in whose face something of sadness was mixed with the joyful and affectionate attention with which he was bending to his pretty companion. How a few words change the destiny of a life! A few, a very few, words told Charles Seymour that Mr. de Lisle, his mother's brother, stood before him, just arrived from India—a few words gave him an almost father, a fortune,

and friends; for Mr. de Lisle had sought the orphans, to be the children of his heart and his home. Another year had passed away. Charles Seymour's brow was darkened still with thought, but not anxiety; and his cheek, though pale, had no hue of sickness. He was seated in the little study peculiarly his own; books, drawings, papers, were scattered round, and not a favourite author but found place on his shelves. To-day his solitude was often broken in upon—it was Lolotte's birthday; and a sunny face, and buoyant step, entered his room, to shew the many treasures heaped on that anniversary. There was a little female art in this: Lolotte, amid all her gay presents, felt half sorry, half-surprised, to find none from her brother. Had he forgotten!—to shew him her gifts might remind him of his own: still, Charles offered her no remembrance of the day. A children's ball was too new and too gay, not to banish all thought but of itself; but when Lolotte went into her room for the night, and saw her table covered with presents, and still none from her brother, it was too much; and she sat down on her little stool, where, when Charles entered, he found her crying. 'My own sweet sister, you were not forgotten; but my birthday remembrance was too sad a one—I could not spoil your day of pleasure by a gift so sorrowful.' He presented her with a little packet, and the cheek which he kissed as he said good night was wet with his tears. Lolotte opened the paper—it contained a miniature; and she knew that the beautiful face was that of her mother. It was not till the morning that she saw the following lines were with it:—

'Your birthday, my sweet sister—
What shall my offering be?
Here's the red grape from the vineyard,
And roses from the tree.
But these are both too passing,
Fruit and flowers soon decay,
And the gift must be more lasting
I offer thee to-day.
'Tis a joyful day—thy birthday—
A sunny morn in spring;
Yet thy sweet eyes will be saddened,
By the mournful gift I bring.
Alas! my orphan sister,
You'll not recall the face,
Whose meek and lovely likeness
These treasured lines retraces.
It is your mother's picture;
You are so like her now—
With eyes of tearful dimness,
And grave and earnest brow!
O! be like her, my own sister!
But less in face than mind;
I would you could remember
One so tender and so kind.
O! weep that angel mother!
Such tears are not in vain;
Yet, dry them in the hope, love,
We all shall meet again.
And keep this gentle monitor,
And when you kneel in prayer,
Deem an angel's eye is on you—
That your mother watches there.
I'll believe that she rejoices
O'er her darling child to-day:—
God bless thee, dearest sister!
'Tis all that I can say.'

We now dismiss the volume, with the cordial praise it so amply deserves.

Marshall's Christmas Box; a Juvenile Annual.
W. Marshall. London, 1831.

WE can readily believe that it is a most difficult thing to write for children, and that it requires a talent as peculiar and as much by itself as any in the first-rate branches of literature: we are wrong in saying first-rate, for if gifts be judged by their rarity or by their utility, few are more rare or more useful than those of writing for children. We must say there are some very charming little tales in the volume now before us:

Mrs. Holland has visited the Zoological Gardens in her own delightful manner; and Miss Isabel Hill has written two tales which we like exceedingly, and only regret that we have not room to extract them as specimens of interesting stories, naturally, and therefore well, told. The "School-boys' Journey," and the "Youthful Partners," by Miss Jane Strickland, also meet our cordial approval. The poetry is infinitely below the prose: we see no reason, because the poems are particularly bad, they should be thought particularly fit for children: the foundations of good taste cannot be too soon laid. Look at the two or three sweet poems by Mr. Hollings, and those by Mrs. Howitt; they shew how imagination, feeling, and simplicity, may be blended. The poetical sketches of natural history are very happy in idea, and felicitous in expression. We quote "the Wood-mouse," by Mary Howitt.

"D'ye know the little wood-mouse?

That pretty little thing,
That sits among the forest leaves,
Or by the forest spring?

Its fur is red, like the red chestnut,
And it is small and slim;
It leads a life most innocent,
Within the forest dim.

'Tis a timid, gentle creature,
And seldom comes in sight;
It has a long and wiry tail,
And eyes both black and bright.

It makes its bed of soft, dry moss,
In a hole that's deep and strong;
And there it sleeps, secure and warm,
The dreary winter long.

And though it keeps no calendar,
It knows when flowers are springing;
And it waketh to its summer life,
When the nightingale is singing.

Upon the boughs the squirrel plays,
The wood-mouse plays below;
And plenty of food he finds for himself,
Where the beech and chestnut grow.

He sits in the hedge-sparrow's nest,
When its summer brood is fled,
And picks the berries from the bough
Of the hawthorn overhead.

And I saw a little wood-mouse once,
Like Oberon, in his hall;
With the green, green moss beneath his feet,
Sit under a mushroom tall.

I saw him sit, and his dinner eat,
All under the forest tree,—
His dinner of chestnut ripe and red;
And he ate it heartily.

I wish you could have seen him there;
It did my spirit good,
To see the small thing God had made
Thus eating in the wood.

I saw that God regardeth them,
Those creatures weak and small:
Their table in the wild is spread
By Him who cares for all."

We have so much poetry this week, or we would extract Mr. Hollings's "Cottagers:" it is one of the ornaments of this very pretty little volume.

The Noble Game of Billiards, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of the Sovereigns of Europe. By Monsieur Mingaud, &c. &c. Translated and published by John Thurston, Catherine Street, Strand. London, 1830.

WHO so competent to translate Captain Mingaud as Mr. Thurston, whose own excellently constructed tables afford facility and certainty for the execution of the finest strokes? The work itself is eminently entitled to the attention of billiard players—we would say of mathematicians too, since many of the eccentric motions which it exhibits in the management of the balls are enough to puzzle not only the masters of Euclid's Elements, but the whole Royal Society of London. We would advise that learned body, when not better employed (and sometimes, when disputes run high, they

are not nearly so well), to step over from Somerset House to Catherine Street, a short way, and see a few of these cannons executed.

"The first billiard-table known in France was of a triangular form. It was introduced at the Château de Blois, during the residence of Henry III. It was called 'the Noble Game of Billiards,' probably from the prince being the first who practised it as a regular diversion." That agreeable diversion, combining relaxation and exercise, is now pursued upon an oblong square, though we observe round tables in the manufactory, but have never seen them used. Upon the game, as previously played, Captain Mingaud has made some extraordinary improvements, insomuch that we considered them impossible, and deferred noticing his book till inquiry satisfied us of their reality. His discoveries are, indeed, very striking, and in whatever cue the spectator may be, must strike him with a-maze.

But though we, of course, speak playfully of a production of this kind, which, being elucidated by about forty plates, it is impossible for us to describe so as to be understood; we are bound seriously to say that it is an exhibition of science altogether wonderful. In practice, we are inclined to think most of the apparently impossible hazards may be made even by players of no great pretensions; and we are sure, that by trying them they will become better adepts in the game. Much, it is well known, depends on the point where you hit your own ball, and the manner in which you cause it to infringe upon the ball or balls against which it is impelled. The lessons upon these achievements are not only useful, but very curious and interesting, and the results produced such as cannot be believed without actual proof. Taking *White's Practical Treatise* as a foundation, and this volume as a supplement demonstrating new principles, and shewing performances hitherto deemed contrary to all the rules of motion in bodies, every billiard player may be completely satisfied.

A Dictionary of the Architecture and Archaeology of the Middle Ages, including the Words used by Modern Authors in treating of Architectural and other Antiquities, &c. &c.; also, Biographical Notices of Ancient Architects. Illustrated by numerous Engravings, by J. Le Keux, of all the Members and Varieties of Christian Architecture. By John Britton, F.S.A. Part I. London, 1830. Longman and Co.

MR. BRITTON, whose activity and zeal have done so much for our national, and especially our architectural antiquities and arts, speaks of this, upon which he has been many years employed, as his last work. We trust he will live to undertake and finish many others. The Part before us consists of four sheets 8vo, and reaches alphabetically to the word *Arch*; yet the whole is announced to be in four Parts, which perplexes us for the fare of all the remaining letters of the A, B, C: but Mr. Britton is as faithful an executor as he is an able projector; and we presume he can put the whole *criss-cross* row into the remaining three portions. The Dictionary, as far as it goes, is very satisfactory. Some difficulty occurs with regard to the epithet "Christian," which Mr. Britton has created and justified in preceding works, but which not being previously known, or yet generally adopted, is more vague than

* There has also lately been published, by Effingham Wilson, a little *Guide and Companion to the Billiard Table, &c. &c.*, by an Amateur, which, though small, is both clever and useful.

definition requires. The plates, of which there are twelve in this single Part, are very neatly and clearly engraved.

The Correspondence and Diary of Dr. Doddridge. Vol. IV. 8vo. pp. 576. Colburn and Bentley.

THERE is much interesting matter in this new volume of Doddridge's remains; but we have so many more temporary matters on hand, that we can only mention its appearance.

Memoirs of Lord Burghley. By Dr. Nares. Vol. II. 4to. pp. 632. Colburn and Bentley.

A SIMILAR notice must suffice for this continuation of Dr. Nares' *Memoirs of Burghley*: it is too important to English history to be hastily analysed; and we must (this week) allow our pilots to precede the balloons.

Events in Paris as they occurred from the 26th, 27th, 28th, and 29th of July, 1830. pp. 84. J. Ridgway.

WE are sure Mr. Ridgway has nothing to do with this pamphlet except giving his name as publisher. It is a poor catchpenny, without a jot of information (*true and false*) which has not been repeated by the newspapers a hundred times. We want new lights—for we are yet profoundly ignorant of the mainsprings and most important circumstances in the late Revolution—and not a repetition of mere trite and frivolous nothings. But we could not look for grave or authentic information to a work, to which is prefixed a caricature of the late king of France, as a Jesuit, with the jocular inscription of "*Charles, par la grace de Dieu ex-Roi de France.*" This is worth the price of the pamphlet to many a reader and admirer of the grotesque.

Family Library. Dramatic Series, No. II. Works of Massinger, Vol. II. 12mo. pp. 384. London, 1830. J. Murray.

OUR commendation of the first volume of this Dramatic Series renders any general remarks on the second unnecessary. It contains four of Massinger's plays, with selections from the Roman Actor, and is well worthy of its predecessor.

Tales of the Cyclades, and other Poems. By H. J. Bradfield, author of the "*Athenaid,*" &c. pp. 184. London, Kidd.

MR. BRADFIELD has wandered over Greece; and with a young spirit deeply imbued with the traditions and present circumstances of that country, he has again endeavoured to pour out his impressions in song. Compositions so recommended would disarm critical exactness; and we can safely say that they do not discredit their author, but, on the contrary, link him both with Greece and poetry in a genial manner.

ARTS AND SCIENCES.
THE LATE LUNAR ECLIPSE.

To the Editor, &c.

SIR,—Whilst reading the description given by your correspondent P, in the last No. of the *Literary Gazette* (October 9), it appeared to me, that it offers but an imperfect cause for the effects related of the different depths of shade observable on the moon during its progress across the shadow of the earth; and that which is assigned, rests only on a supposition not very philosophical. I take the liberty of offering another,—one, however, which also has con-

jecture for its basis, but which seems to me supported by analogy.

I happened to be in a part of the country where the state of the atmosphere was favourable for observing the eclipse through almost the whole of its course, and I particularly noticed the changes of illumination on the surface of the moon, agreeing almost entirely with the description given by your correspondent, viz. when the moon, on entering the shadow of the earth, became nearly totally eclipsed, four things were noticeable on its surface; the small remaining quantity of bright light on its western edge, the penumbra, and a shade, which was as dark as that at any time produced, extending towards the eastern edge of the moon, but there met by a dull faint light; this light extended around all that portion of the edge of the moon which was eclipsed, being then broadest on the upper and lower limbs. Such was the first character of illumination. When the moon was arrived at the centre of the earth's shadow, the darkest mass of shade was in its centre, extending over at least three-fourths of its surface, and all around the edge was the same dull reflection of light, nearly equal in width in every part. As the moon began to emerge from the shadow of the earth, the effect of the illumination on its surface was precisely the reverse, in position of light or dark, to that I have described as existing at the commencement of the eclipse, agreeing with it only in one point, viz. that in both edges the darkest part of the shadow on the moon, was situated from the centre nearly to that side which was towards the earth's shadow, being, as your correspondent also observes, in the first case, on the eastern side, and in the latter on the western; and in both met near the edge by a dull degree of light. It must also be observed, that the extent of the light upon the upper and lower limbs or edges of the moon varied little or none throughout the eclipse. The intermediate effects of illumination on the surface of the moon, as it passed through the eclipse, had close relation to the changes I have mentioned.

These observations presented to my mind two things: First, a proof, in addition to those already generally conceived, that the moon is a spherical body. Secondly, That it is surrounded by some medium, call it atmosphere or no, as you please, which is capable of reflecting and refracting light received from the sun.

The first is evident, I conceive, from the

figure exhibited by the moon, resulting from its illumination; and particularly at the middle of the eclipse, when in the centre of the earth's shadow. It then presented precisely the same appearance as does a white ball, when placed in our atmosphere, in the shadow of some solid body. But this, in some measure, depends for full proof upon the truth of my second conclusion, viz. that the light constantly exhibited upon the extreme edge of the moon proceeded from some medium surrounding the moon, analogous to our atmosphere, capable of acting as that does upon our earth with regard to light, and so producing all the variations of illumination upon the moon's surface during the eclipse.

Now this, I think, is rendered evident by the change which took place in the position of the dark shade at the commencement and the end of the eclipse, when considered together with the variations of the dull light upon the edge of the moon during the different stages of its progress across the shadow of the earth.

It will be readily granted, that the light on the edge of the moon could proceed only from reflection or refraction from some quarter; and it will scarcely be imagined that the atmosphere of the earth extends to the moon's orbit. On that portion of the moon directed towards the earth, and perpendicular to the line of its shadow, it is very clear that no reflection could reach, or only as much as may be supposed to exist in open space, preventing total darkness; consequently, *there was always* found the deepest degree of shade, extending more or less towards the edge of the moon, according to the distance of that body from the centre and the opposite edge of the earth's shadow; as is evident by the statement of its effect when in its first and last position. In other words, according to the extent of the shadow cast by the earth upon the medium, whatever that may be, surrounding the moon; the dull light upon the edge of the moon, increasing as that extent of shade became less. Hence I infer, that the light proceeded from that medium; and the more so, because, as has been related, that light, as seen upon the upper and lower edges of the moon, remained nearly unchanged during the whole of the eclipse; agreeing with the small variation of distance which could take place in those parts, from the boundary of the earth's shadow.

The following diagrams will serve to make these points more clear.

A. The shadow of the earth. B. The moon at the beginning and at the end of the eclipse.

I conceive, therefore, that the difference of intensity of shade upon the surface of the moon, at the differing periods of her progress through the eclipse, did not arise, as your correspondent conjectures, from any third degree of intensity in the shadow of the earth, for which there does not appear to be any natural cause; but rather from the natural progression of light upon a body placed in different situations with regard to the source of that light.

This point would perhaps be capable of further illustration; but I hope what I have said will be sufficient to make my suggestion clear;

and more would probably neither suit you nor me; me more particularly, who am no astronomer, but only one who has endeavoured to employ a little common sense, in illustration of that which he well knows is a very abstruse subject. F.

OCCULTATION OF VENUS.

YESTERDAY morning (Friday) the moon escaped from a low stratum of mist at 4^h 53^m, Venus was then invisible, and the immersion must have occurred in or near the horizon. At 5^h 30^m the planet emerged from behind the

moon's dark limb. (See Celestial Phenomena for October.)

The golden light of the extremely narrow crescent of the moon, and the brilliant whiteness of Venus, formed a beautiful contrast. The sky was unusually clear and serene, and the *lumières cendrées* of the moon's unenlightened disk distinctly visible.

To see starting forth with sudden splendour the bright morning star (Phosphorus) from behind the moon's dark limb, must have been equally pleasing and astonishing to the unconscious night traveller, who had been hailing the moon's delicate crescent as the precursor of the rising day.

J. T. B.

LITERARY AND LEARNED.

ROYAL SOCIETY.

(Important Alterations, &c.)

THE Fellows are still looking forward to the anniversary of St. Andrew's day with some degree of interest, though the affairs which have lately militated against the tranquillity of the Society may now be considered to be in a train of satisfactory adjustment. In a recent *Literary Gazette* we mentioned certain communications which had taken place between the respected President and his Royal Highness the Duke of Sussex, and also between the former and the Council. The correspondence thus referred to, seemed to imply contradictory proceedings, and to leave it doubtful whether his Royal Highness or Mr. Gilbert would be elected President for the ensuing year. Since that period, however, we learn, Mr. Gilbert addressed another circular to the members of the Council, stating, that since he contradicted certain vague allusions to his retirement, he had received official information that his Royal Highness the Duke of Sussex was disposed to become the future President of the Society. Mr. Gilbert further states, that in consequence of this intimation, it is his intention to withdraw; and, as far as he is concerned, to promote the Royal Duke's unanimous election. It is understood that, under a prince of the blood royal and so near the throne, there will not only be no impropriety, but a positive advantage, in the President's resuming his station as Vice-President and Treasurer, and thus continuing to give the Institution the valuable support to be derived from his high scientific endowments, influence, and services. The Fellows, generally, as far as we have met with those to whom this prospective course was known, express themselves much pleased with it; though in so numerous a body, with its division of astronomers and mathematicians, there may probably be a small minority of dissentients; but we think the proposed measures must be very acceptable to a vast majority, as they bid fair to be beneficial to the Society and to the state of science in the country. It is probable that, at the same time, some modifications of the charter will be introduced; by framing new by-laws with respect to the selection of papers to be read, the publication of transactions, the ballot and qualities of members proposed for elections, and other points of less consequence, where inconveniences are believed to exist. Some project is spoken of for dividing the Society into two classes; the one to consist of men of distinguished scientific pursuits and attainments; and the other of individuals of rank and station, of taste and literature, but not engaged in the actual investigation of objects for which this royal incorporation was founded. But this, we presume, is but private speculation. What is more

likely to be done, and will, we have reason to believe, be suggested by the royal President, is to remodel the Society into distinct committees, as in the French Institute, to which the different matters brought forward will be submitted for consideration and sanction. By this means the time and abilities of the general body will not in the first instance be wasted on crude or unimportant subjects; and the reports of competent judges will guide it either in adopting the discussions, or prosecuting the schemes, which ingenuity may offer, or rejecting them as unessential or unfounded. This, we think, will be a marked improvement on the constitution, practice, and national utility, of the Society. What other alterations his Royal Highness may wish to make for the better regulation of the Society, the establishment of harmony among its members, and the universal interests of science, the progress of time will unfold: several points which promise to bring forth good fruits are already obvious. The King's personal and immediate patronage is one of these. Another is the position and accomplishments of his Royal Highness himself,—so favourable to the dignified intercourse which the head of such an institution ought to maintain both at home and abroad. We understand that his Royal Highness has declared his intention of receiving the Fellows of the Society, and celebrated foreigners, who visit this country, at his palace at Kensington, at frequent and fixed times, both in the morning and evening, so as to suit the convenience of all. This alone would be a prodigious benefit; but when we add to the scale, the personal appearance, the manners, the affability, and the intelligence of the royal Duke, we are disposed to value it yet more highly. His Royal Highness speaks three or four foreign languages fluently—French, Italian, and German; he is well read in ancient and classic literature; he delivers his opinions either in addressing the public or in private conversation, with great fluency and effect; and it will be allowed that he possesses, in an ample degree, the requisites for attaching to himself the respect and regard of those whom he honours by his condescension or more intimate association. These are all considerations to render the anticipated proceedings most agreeable to the Royal Society; and as our statement, besides conveying the information to our readers, is meant to congratulate them on the termination of an unpleasant business, and not to eulogise or flatter their princely President *in futuro*, we shall now only add the word *Vale*.

FINE ARTS.

NEW PUBLICATIONS.

Illustrations to the Keepsake, for 1831.

WE have a crow to pluck with the proprietor of the *Keepsake*. He has deceived us. We thought, and we maintain that at the time we were justified in thinking, that he could not surpass what he had already done: but he compels us to acknowledge that we consider the set of plates before us as the finest he has submitted to the public. Not that it is possible to excel some of our old favourites; but it strikes us that this collection is more equal in its merits. There is not an indifferent work in it. Generally speaking, the plates are also larger; which, of course, adds to their consequence and value.

Haidée. Painted by C. L. Eastlake, R.A., engraved by C. Heath. The design is full of simplicity, beauty, and taste;—

"A lovely female face of seventeen;"

and the engraving is exquisite. The want of colour is scarcely felt. Nothing can exceed the pearliness of the demi-tints of the flesh.—*The Gondola*. Painted by T. P. Stephanoff, engraved by C. Heath. As respects both the figures and the landscape, one of Mr. Stephanoff's finest compositions; engraved with tortoise-shell mellowness and richness.—*Sea-Shore, Cornwall*. Painted by R. P. Bonington, engraved by W. Miller. The splendour of this effect is equalled by its truth.—*The Secret*. Painted by R. Smirke, R.A., engraved by J. Mitchell. Bewitching. We do not know whether to admire more the elegance of the painter, or the wonderful skill of the engraver. What the story may be, we can only conjecture. Were we not quite sure of the discretion of the editor, we should tremble for him.—*Adelaide*. Painted by A. Chalon, R.A.; engraved by C. Heath. A happy representation of one of the most engaging of human beings,—a lively girl of seven or eight years of age. The technical execution of the plate is beyond all praise.—*The Swiss Fesant*. Painted by H. Howard, R.A.; engraved by C. Heath. Female grace and infantile beauty, to say nothing of subordinate considerations, render this a most interesting production.—*Mima*. Painted by J. Cristall; engraved by C. Heath. We take the opportunity which the notice of this print affords us, to express our sincere regret at hearing that Mr. Cristall is in a very declining state of health. The arts can ill spare such a man. The present, although a simple subject, is a most pleasing specimen of his feeling and his powers.—*Chacun à son goût*. Painted by J. Stephanoff; engraved by F. Bacon. It would be very surprising if the gouty old lover were to the taste of the lovely creature whose hand he is about rapturously to kiss. It is a spirited design, admirably engraved.—*Nantes*. Painted by J. M. W. Turner, R.A.; engraved by J. T. Willmore. *Sawm*. Painted by J. M. W. Turner, R.A.; engraved by R. Wallis. Two beautifully engraved specimens of an artist, who, whatever may be his occasional extravagance, must be allowed to be a man of the highest genius.—*The Lady, the Knight, and the Monk*. Painted by E. P. Stephanoff; engraved by C. Heath. Not being in the editor's confidence, of course we have not the most remote idea of the story to which this plate refers. As we are great lovers of matrimony, however, we hope that the monk is there for the purpose of marrying the knight to the lady, and thereby preventing the scandal that might ensue from a midnight visit.—*The Use of Tears*. Painted by T. P. Bonington; engraved by C. Rolls. Now we beg to ask any of our merry readers, if that title is not a poser? The use of tears! For ourselves, we are always disposed to sing,

"For what's the use of sighing, when time is on the wing?"

We dare say, however, that when we read the volume, we shall find an answer to our doubts as satisfactory as this exceedingly beautiful plate is to our sense of excellence in art.—*Juliet*. Painted by Miss L. Sharpe; engraved by J. Edwards. In our notice of the Exhibition of the Society of Painters in Water-colours, we bestowed upon this drawing the praise which it deserved. Mr. Edwards has, generally speaking, engraved it with equal vigour and delicacy. But we are delighted to find, at last, something to censure, although but a trifle:

"It is the very error of the moon;
She comes more near the earth than she is wont;"

and fairly enters the lady's apartment.—*Nestor and Tydides*. Painted by R. Westall, R.A.; engraved by J. Brandard.

"Full in Tydides' face the lightning flew—
The ground before him flames with sulphur blue."

We fancy that this is an early picture of Mr. Westall's. It is quite Martinish.—*Milan Cathedral*. Painted by S. Prout; engraved by W. Wallis. A portion of the interior of that elegant edifice.—*The Orphan Boy*. Painted by J. Cristall; engraved by C. Heath. A design of greater simplicity, beauty, and character, and an engraving of more fascinating execution, we have never met with.—We must not omit to mention the *Vignette Title-page*, drawn by H. Corbould, after J. Flaxman, R.A., engraved by —Thompson, which is full of grace and gem-like effect; and the *Presentation Plate*, drawn by H. Corbould, engraved by C. Heath; than which it is impossible to conceive any thing more delicate and tasteful.

Illustrations of the Literary Souvenir, for 1831.
MR. ALARIC WATTS has evidently not relaxed this year in the vigour of his usual exertions to embellish his annual volume. The result is a very fine collection of plates, most of them of high excellence.

Lady Georgiana Agar Ellis. Painted by Sir Thomas Lawrence, P.R.A.; engraved by J. H. Watt. It is a just compliment to the genius of the lamented President, to place this, which we have always considered one of his most elegant and animated portrait-compositions, at the head of the list. Mr. Watt has done himself infinite credit by the talent and taste which he has shewn, both in the general effect of his plate, and in those much more arduous tasks, the discrimination of tone in the various parts, and the perfect preserving of the expression. Nothing can be more charming. It is stated by the proprietors of the *Souvenir*, that the engraving of this plate alone has cost them one hundred and fifty guineas!—*Trojan Fugitives*. Painted by George Jones, R.A.; engraved by J. C. Edwards. Finely and classically conceived, and executed with great depth and mellowness.—*The Maiden Astrologer*. Painted by W. Boxall; engraved by E. Finden. There is a slight degree of stiffness in the fair star-gazer's position; but the general effect of the plate is good.—*Robert Burns and his Highland Mary*. Painted by R. Edmonstone; engraved by J. Mitchell. The picture itself has already received our approbation. Mr. Edmonstone has well expressed the sentiment in Burns's verse:

"How sweetly bloom'd the gay green birch,
How rich the hawthorn's blossom;
As underneath their fragrant shade,
I clasped her to my bosom!
The golden hours, on angel wings,
Flew o'er me and my doarie;
For dear to me, as light and life,
Was my sweet Highland Mary."

It has been sweetly engraved by Mr. Mitchell.—*The Sea-side Toilet*. Painted by J. Holmes; engraved by E. J. Portbury. Coral, shells, and sea-weed, here supply the place of combs, feathers, and diamonds; and a faithful terrier that of a flattering beau. We almost fancy we hear Tray lisp out, "Upon my soul, you are a little angel!"—*The Lady and the Wasp*. Painted by A. E. Chalon, R.A.; engraved by W. Greatbatch. So much voluptuous beauty is enough to attract any wasp of taste. The attack is a desperate one. The lady's maid, however, (if we do not degrade her by giving her such a title,) seems to be a woman of determination; and we have no fears for the result. The plate is richly and forcibly

executed.—*The Narrative*. Painted by T. Stothard, R.A.; engraved by W. Greatbatch. A graceful and delicious little composition, from Boccaccio, by our English Watteau.—*The Reading Magdalen*. Painted by Correggio. Engraved by W. H. Watt. Although we do not think it judicious to introduce the work of an old master, and especially a work so well known as this, among the novel productions of modern artists, we are delighted with the manner in which Mr. Watt has acquitted himself. The plate has, we believe, been engraved from a very fine copy by H. Thomson, R.A.—*The Canzonet*. Painted by H. Howard, R.A.; engraved by C. Rolls. A well-constructed composition.—*The Secret*. Painted by J. P. Davis; engraved by F. Bacon. Perhaps our general dislike of secrets renders us less favourably disposed towards this performance than we might otherwise be.—*The Packet-Boat entering the Harbour of Ghent*. Painted by F. Nash; engraved by E. Goodall. One of the finest plates of the series. It is a perfect gem. The flatness and transparency of the water, and the aerial perspective, are especially admirable.—*The Destruction of Babel*. Painted by H. C. Slous; engraved by T. Jeavons. To represent the confounding of tongues is beyond the pencil's power; but the fall of the presumptuous tower, and the scattering of the people over the face of the earth, are within its legitimate province. The elemental and other horrors of this awful scene are here unfolded as fully as the smallness of the space would admit.

Illustrations of the Gem, for 1831.

GREAT variety and beauty characterise the embellishments of the *Gem*.

Victoria Colonna. Painted by A. Colin; engraved by W. Greatbatch. An exceedingly picturesque design, forcibly and beautifully engraved.—*Cupid and Nymph*. Painted by W. Hilton, R.A.; engraved by F. Engleheart. When the original was exhibited at Somerset House, we expressed our admiration of it. Mr. Engleheart has done it great justice.—*Portrait of a Boy*. Painted by Sir T. Lawrence, P.R.A.; engraved by J. Thomson. Every thing that proceeded from the pencil of the highly-gifted artist whom we have lost, bore the stamp of taste and feeling.—*Evening*. Painted by J. Creswick; engraved by S. Lacey. Not only evening, but a very fine evening; and a rich Claude-like landscape.—*Hope and Love*. Painted by H. Howard, R.A.; engraved by J. Goodyear. Composed with Mr. Howard's usual taste, and engraved with Mr. Goodyear's usual skill.—*Bothwell Brigg*. Painted by A. Cooper, R.A.; engraved by H. Rolls. A deadly encounter. The brave but unfortunate Covenanters are in a sad plight. Mr. Cooper's powers in subjects of this description are well known, and he has been ably seconded by Mr. Rolls.—*Young Crab-Catchers*. Painted by W. Collins, R.A.; engraved by J. Phelps. It is difficult to conceive a greater contrast than the present plate presents to the last; that all turbulence, this all tranquillity. The infant fisherman, however, seems a little apprehensive that, to use an old pun, he may come off with *éclat*.—*The Standard-Bearer*. Painted by A. Cooper, R.A.; engraved by J. Webb. Although thrown from his dying animal, and extended on the ground, there is nevertheless an expression in the warrior's countenance which is dangerous, and which would induce any person of common prudence to take care not to approach him too nearly.—*The Attack of the Blood-hound*. Painted by A. Cooper, R.A.; engraved by C. Rolls.

A situation of such horror, that it is painful to dwell upon it.—*Mars disarmed*. Painted by H. Howard, R.A.; engraved by A. W. Warren. Cupid is quite right. What can Mars want with a sword in his present agreeable circumstances? A rich and classical production.—*La Tour de Marché*. Drawn by Bonington; engraved by W. J. Cooke. Picturesque; and full of the charm which poor Bonington imparted to all his productions, however slight.—*Lady Russell writing to her Husband*. Painted by J. Squires; engraved by Sangster.—The effect of light near the door is exceedingly well managed.

Illustrations of the Christmas Box, for 1831.

THESE are eight in number; and, if they do not claim to rank highly as works of art, the subjects are nevertheless pleasing, and the plates are neatly executed, and well calculated to gratify youthful connoisseurs. Our favourites are, "The Lesson," "The Zoological Gardens," "The Cottager," "The Young Shipwrights," "The Cottage Girl returning home," and "The Brigand."

SKETCHES OF SOCIETY.

NAPLES: THE DEY OF ALGIERS.*

"Vede Napoli e pol mori."—*Napolitan Proverb, much quoted by Cockney travellers.*

"He was a Turk, the colour of mahogany."—*Byron.*

THE burst upon Naples from the mountain side, as you approach that beautiful city from Rome, is one of the loveliest sights in the whole world; and the only thing that can be compared with it (not as to similarity, but in the exquisite emotions which it awakens), is the first view of the sunny Alps, the laughing valley and silver Lake Lemai, as you issue from the defiles of Jura, and gaze from the heights on the glorious prospect beneath you.

"I stood entranced and mute, as they
Of Israel think the assembled world
Will stand upon that awful day
When the ark's light aloft unfurled
Among the opening clouds shall shine,
Divinity's own radiant sign!
Nor ever, were I destined yet
To live my life twice o'er again,
Can I the deep-felt awe forget—
The ecstasy that thrilled me then!"—*Moore.*

This magnificent view is gained by taking the *strada nuova* (the work of Murat), which turns off to the left at a little temple about two miles from Naples;—a fact worth knowing, as the postillions prefer the old road, which is something shorter; but as it enters the city at once, you lose what, in my opinion, is worth every thing else—the first impression of this superb *coup-d'œil*.

We got out of the carriage to contemplate the lovely prospect at our leisure. On the right lay the white houses of the city, tier upon tier, climbing the hill-side, intersected by terraces, and gardens, and forts, and crowned with the lordly and commanding St. Elmo. Before us spread out the blue, unruffled surface of the unequalled bay, in the midst of which lay the fair, mountained isle of Capri. The whole sweep of this delightful expanse was circuted with villas, gleaming on the edge of its blue waters, and seeming to carry on bright Naples in unbroken continuity to sweet Sorrento, lying like a white speck at the foot of the azure-tinted mountains. Nearer to us, and frowning like a spirit of evil, brooded Vesuvius—a huge volcano—brown, shielving, and conical; and immediately beneath us, smiling in softest contrast, were gardens and vineyards of the live-

* For this interesting communication we are indebted to the friend, from Italy, who furnished us with the paper on the *Sordi-mutti*, in our last No.

best verdure. It was, in sooth, a scene to gaze on for hours, with unwearied, unsated gratification.

But Naples has a thousand charms besides. The city, on a nearer approach, does not disappoint expectation. It is a place of fun and festivity. Such dark-eyed women—such brown-legged men—loveliness and lazzaroni. The Strada di Toledo is my hemisphere, whether by night or day. There is the true *locale* for variety of costume and diversity of character—there you may read the book of life in all its pages and chapters—there you behold Naples proper. It is almost impossible to describe in a breath this miscellaneous and multitudinous medley—all that I can do is to single out a few bits which struck me most. I shall commence with a night scene.

The whole street (the Toledo) twinkled with many lights, and was thronged with carriages and foot-passengers of every description, resounding with the hum of artisans, and the cries of vendors of fruit and vegetables—the cafés, glittering with pewter plates, were thronged with visitors—the bureaux of the lottery banks, so frequent here, were crowded with applicants risking their little all—and the lazzari were standing thick about the gilt stalls of the venditori of acqua gelata and limonata.* In the daytime the whole street, a mile in length, looks like a moving market; and what with fishermen, fruitmen, (the *melonaro*, with his ripe, red water-melons, and the *maccaronaro*, with his mucilaginous stores, the delight of lazzari, being worthy of especial note,) muleteers, money-changers, locomotive shop-keepers, secretaries, basket-women, calessi caritelli, and the teatrino of Pulcinella, and a thousand other indescribable things, the clamour and noise whereof are enough to content the most ardent admirer of the “syllables that breathe of the sweet south.”

During our sojourn at Naples, in August last, we occupied apartments in the Vittoria, which was also tenanted by the Dey of Algiers and his suite. The sensation which the *expasha* created was quite astonishing; the *portecochère* of the hotel was crowded with idle Neapolitans all day long, conversing with the black slaves, or thronging around the carriages of the officers of the suite as they entered or departed the locanda. The *place* in front of the Vittoria was filled with spectators, scanning with curious eye the upper windows of the room in which the ladies of the Harem were known to be confined; while every dark-eyed, smooth-tressed dame, (be it known to all my fair friends, that the mode at Naples is to wear the hair flat on the forehead, as practised by Ronzi de Begnis or Pasta, and occasionally by Fanny Kemble), as she rode by in berlin or barouche, gazed upwards, in the hope of bringing the flowing outline of the lordly Ottoman within the scope of her beautiful vision. But the stately Hussein preferred the reserve of a retired apartment in the back part of the house, where he could smoke his long chibouque unexposed to the impertinent glances of the congregated Gaiours. Here, however, I often caught a glance of him, gravely pacing the balcony overhanging the quadrangular court-yard of the *caravanseraï*, in

* These stalls (*acqua-forti*) are very curious, and certainly attract a stranger's attention as much as any thing in Naples. They consist of a large heavy machine, clumsily carved and gaudily gilt, and surmounted by a flaunting pair of colours. At the sides are two movable barrels, made in the form of churns, holding ice and water, of which an incredible quantity is consumed by the lazzaroni in the heats of summer. They think nothing of three or four quarts a-day, and take it in a state of profuse perspiration, without injury or apprehension.

converse with the officers of his *suite*, or sitting, at eventide, in cross-legged deliberation, in the open door of his chamber, which, by singular good fortune, fronted mine. In point of personal appearance, the Dey is any thing but what I expected to find him, and very different from the shrew portraiture which a writer in a monthly magazine has painted. He is, for all the world, the counterpart of the Turk who sold rhubarb near St. Paul's Churchyard, and, for aught I know, may be the same. Indeed; from the fancy which he had for England, I suspect there must be some affinity, at the least, between them. His beard was grizzled, or, if you will, a sable-silvered; and his white chintz turban, crimson velvet caftan, green silk trousers, diamond-studded dagger, gold-hilted scymetar, exist only in the picturesque imagination of the writer of the clever *Notes of the Month*, before alluded to. His rings, I admit, were splendid—diamonds of the first water; but his costume was not striking, and, worse than all, was uncleanly; nor was he the sort of man that I should think a Neapolitan dandy had reason to dread.* To be sure, there were some silver-sheathed yataghans on sale, and a dagger of exquisite workmanship, which I had some thoughts of purchasing; but these were the only weapons I saw: the rest of the Dey's accoutrements were *outré* in the extreme. I was curious to know the state of the Mohammedan *cuisine*, which I am given to understand is sufficiently barbarous; but I apprehend his Algerine highness leans to the French. He had his own *chef* with him, who was not to be bribed; so that we must still remain in ignorance of African ragoûts and Turkish sauces.

The Dey has with him *en suite* his brother and “counterpart presentment,” Mustapha Effendi, whose beard and moustaches stand a little less in need of *crige*, or henna, than the fraternal Pasha's. Ibrahim Aga, his son-in-law, the handsomest man of the set, a fine, broad-shouldered, brawny, black-bearded Moor, with a manly, good-humoured countenance, apparently little capable of the atrocities he is said to have committed before quitting Algiers. A circumstance, however, occurred which shewed his character in its real light during our stay, when, but for the intervention of the police, he would certainly have sabred one of his slaves, for the trifling offence of mistaking, by the merest accident, one room for another. So much for appearances amongst the Moussulmans. In England we are always what we seem. Next follows the astute Ibrahim Effendi, grand admiral; Mustapha Aga, a general; Mohammed Hoggia, grand chancellor (now no longer holder of the seals); and Hassan Bey, treasurer, altogether the heaviest, and dullest, and ugliest human being I ever remember to have seen, even amongst these infidel dogs of Mahoun. But what of ladies? Fair readers, I will delay your impatience no longer. What stories of *Arabian Nights*, and *Persian Tales*, and *Lays of Eastern Romance*, did it not bring to mind, as I bethought me that over head was a *seraï*—a harem! watched by the jealous vigilance of slaves and eunuchs. I bethought me of languishing Georgians, tender Tchircassians, sunny Ethiopians, and voluptuous Morriscoes, each and all in imprisoned beauty, longing to be free. Mentally did I exclaim, “Oh, that I were Prince Ahmed, or a calendar, or a dervish, or

* As an antithesis to all preconceived notions, too, he wears spectacles (!), which have about as much to do with the sublime, as Leigh Hunt's yellow inexpressibles with a poet, or modesty with Lady Morgan. The haughty chief of a pirate crew in spectacles! By Day and night, but this is horrendous strange!—the very anti-climax of the mock heroic.

any body, to undertake your deliverance, and fly with you to the land of camels, and dates, and deserts with fountains springing in the midst!” Then came the idea of knouts and bowstrings, a boat and a sack, and a plunge into the Bosphorus, or any other waves more nearly at hand. I believe, however, there was not beauty worth such a risk amongst the eight-and-fifty captives, thirty-eight of whom were negroes, and the remaining twenty whites. I could not learn whether any of my fair countrywomen were amongst the number. They were under the surveillance of Hait Pharazi, chief of the eunuchs. Besides such as have been already enumerated, the Dey had with him forty-two intermediate officers and attendants. As may be conceived, I could not even get a peep at the females, beyond a glimpse of their figures in the indistinct twilight, as they ran along the flat roofs of the Vittoria to enjoy the evening breeze—the only exercise they were allowed to take—and on the night of their departure for the Dey's newly purchased villa near Portici, when I saw them descend the stairs, but so closely muffled in their *al-naïckas* as to preclude all possibility of judging of their attractions, with the exception of one old woman, said to be the Dey's mother, who had no attractions, and two children. This villa has extensive gardens, with high walls, in which the ladies are at liberty to range; and rope-ladders are coming into request at Naples in consequence.

From all I can learn, the Dey is far from regretting the change in his fortunes, but looks upon his dethronement as a deliverance from a post of great difficulty and danger. He is said to be immensely rich, and to have some intention of embarking a portion of his property in mercantile speculations. At one time he entertained the idea of settling at Leghorna. When told that Charles X. was banished his kingdom, “Alla is just!” he exclaimed; “he drove me from my dominions, now he is expelled from his own!” At that time there was a report in Naples that the French monarch intended coming thither, which would have rendered the coincidence still more striking. He attended the Opera at San Carlo, which was brilliantly illuminated on the occasion of the king's birthday; the house was greatly crowded; the performance was the *Semiramide*, with Fodor. To be appropriate, they should have given *Il Turo in Italia*.

MUSIC.

NEW PUBLICATIONS.

Hummel's New Piano-forte Works.

The publication of the whole of Hummel's new manuscripts, of which we spoke last week, is now completed. The two last, consisting of a grand Concerto in A flat, dedicated to the master's illustrious patroness the Queen; and a Military Septett in C for the piano-forte *principale*, have but just issued from the press. The others are, a characteristic Fantasia, a Larghetto with variations, and a “Society Rondo,” all with orchestral accompaniments.

As we have not yet had time to look into the Concerto and Septett, which reached us only yesterday, we must postpone our notice of the whole till the publication of our next Number. The compositions of Hummel, the first master of the age, are not to be examined lightly.

DRAMA.

DRURY LANE.

MRS. WAYLETT has made her appearance in *Letitia Hardy*, and Miss Chester in *Violante*,

during the past week. The houses have been good to these old comedies, and the managers might as well, therefore, not have produced a trifling dance by a mediocre *corps de ballet*, which is dignified by the title of a divertissement, and is calculated only to lengthen an evening's bill of fare, already too long. Last Thursday, for instance, we had the *Wonder*, a five-act comedy, this said divertissement, the interlude of *Intrigue*, under the title of the *Bath Road* (an unfair *ruse*, by the way, well enough at Sadler's Wells or Tottenham Street, but *infra dig.* at old Drury), and the *Brigand*, a two-act drama, besides the two grand overtures to *Die Zauberflöte* and *Tancredi*! This is only wearing out performers, pieces, and audiences; and while we can wield a pen, we will anathematise the practice. The effects, as at the Haymarket, are only observable in the lobbies during the latest hour, or hour and a half, when nearly every respectable person is gone, and only — and — remain to degrade the theatre.

COVENT GARDEN.

A new *Romeo*, in the person of a Mr. Keppel, was suddenly announced on Monday. The *débutant* appeared to be nearly overwhelmed by anxiety and agitation; but in characters of less importance Mr. Keppel may probably be more successful. *Romeo* on the boards of Covent Garden requires more personal appearance and physical power than nature seems to have bestowed upon him; though our judgment being formed upon a first attempt ought to leave room for higher hopes.

HAYMARKET.

THE Haymarket Theatre closed last night. Kean at the commencement of the season, and Miss Paton at its termination, have probably proved, from peculiar circumstances, sufficiently attractive to prevent its being a losing one in a pecuniary point of view; but its reputation as a theatre, which has been gradually declining for some time past, has this summer met with a yet heavier fall. We do advise the proprietor, in the most friendly spirit, to make such radical changes before he again opens the Haymarket as will restore this still favourite place of amusement to the high situation it was wont to occupy in public regard. Let him get together a company something better than a second-rate provincial troop, and play old Haymarket comedies, rather than such Coburgish melo-dramas as the *Force of Nature*, the *Goldsmith*, and *Clari*, or the operas of Mozart and Rossini, for the decent representation of which his theatre has not the slightest capabilities. Let him discharge his hand, and another his scene-painter—ring down his curtain at midnight, and owe his success to the deserved patronage of the respectable classes of society, instead of pandering to its dregs and disgraces, by keeping his doors open till half-past one in the morning, to catch the dissolute few who have scarcely a home to go to, and enter his house but to turn it into a bagnio. Of the seven pieces produced this season, Morton's *Separation and Reparation* is the only one likely to keep possession of the boards. The list is as follows:—

- June 15th. Conjectures, or the Man in the Camlet Cloak, an Interlude, 1 act: Poole.
- July 1st. Separation and Reparation, a Comedy, 2 acts: Morton.
- July 16th. Force of Nature, a Drama, 2 acts: Shannon.
- July 20th. Honest Frauds, a Farce, 2 acts: Lunn.
- Aug. 13th. Husband at Sight, a Farce, 2 acts: Buxton.
- Aug. 31st. First of April, a Farce, 2 acts: Miss Boaden.
- Sept. 13th. Marie Mignot, a Drama, 3 acts: Mayhew and T. Arnold.

ADELPHI.

THIS merry little place goes on, to use a common saying, like a house on fire. We do not mean that it has been burnt down, and we should be sorry for our amusement if it should be, but that it fills every night to witness the varieties provided for the public entertainment. *Scheming and Seeming*, a laughable burletta by Mr. Lunn, was produced on Thursday, and afforded Yates a free opportunity for displaying his mimic and histrionic talents, of which he made the most advantageous use, and kept the audience in high humour during the whole performance. His first personating Mathews to perfection, and then as *Mathews* imitating other actors, Young, Macready, &c. is one of the most singular pieces of double mimicry we ever saw, and made us laugh very heartily. This piece was, we think, played for a benefit at Covent Garden; but it is now better than new.—*George and Adelaide*, a loyal dramatic tribute, has a capital scene between Mrs. Fitzwilliam and Wilkinson.

VARIETIES.

Fine Arts.—Mr. William Wyon, the chief engraver of the Mint, has been for some time past closely occupied in the preparation of dies for the new coinage.

Light Varnish to preserve Insects.—Take a pint of spirits of wine, and a little light amber, which should be allowed to dissolve in a saucepan for forty-eight hours: to this add a little mastic, as much red arsenic, and an equal quantity of turpentine; and let it dissolve in a vessel for four and twenty hours. This done, take the insect you wish to preserve, extract its entrails, and let it be well bathed for several days in spirits of wine, into which some sugar-candy has been put. In this state, rub it over with the varnish at intervals until it shines: it may thus be preserved for a long time.

Counterfeit Gold.—A German, Dr. Hermsdorf, has discovered a mixture of metals, which is not only of the colour of real gold, but also possesses its hardness, all its ductility, and the same specific weight. The inventor, however, does not assert that it is as unchangeable as gold; and there can be no doubt that if he had met with that quality in it, he would not have failed to mention it; for in that case he would have found the secret which has been so long and so vainly sought by the alchemists. This material is thus composed:—out of twenty-four parts, equal in weight, there are sixteen of platina, seven of pure copper, and one of pure zinc; this is to be covered with powdered charcoal, and placed in a crucible, on a strong fire, until the fusion has reduced the three into one mass, which will be the said counterfeit gold.—*Journal des Connaissances Usuelles.*

The Schoomaster all Abroad.

Sir, I'm a plain pains-taking man,
Inflict, too, pains reciprocal with vigour;
For, oh, my boys arithmetic won't learn,
But always do their best to cut a figure.
Multiplication wins them not;
Addition, thoughtless, is forgot;
Yet the young scamps will by and by
Too fast increase and multiply.
Now, for subtraction, they subtract
The finest fruit from off my trees;
And for division, they divide
The spoil, though no spoiled children these:
I flog them oft, they heed not me,
Learn three holes for the rule of three;
Till, wearied out with such distractions,
I break their heads to teach them fractions.
I know not, sir, what more to do,
So, in despair, apply to you.

A *Jarvey's Joke*.—One of the Paddington

coachmen seeing an undertaker, the other day, carrying an oaken coffin on his shoulders, called out to a brother whip,—“I say, Jim! there's your new box-coat going home!”

Prepared Ox-Gall for taking out Spots.—Boil together one quart of ox-gall, and four ounces of pulverised alum. After several boilings, add four ounces of common salt. Let the liquor settle, and then decant and preserve it in well-stopped bottles. It may be rendered aromatic, by adding a little of the distilled essence of lemon, which also augments the properties of the preparation.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLII. Oct. 10.]

The Poet Shelley.—A memoir of the life of this gifted but misguided individual during his residence in Italy, with several hitherto unpublished poems, is to be included in Captain Trelawney's Autobiography, now preparing for the press. If Trelawney write as well as he talks, and tell all he knows (which is not a little), about Byron and Shelley, a curious performance may be expected. His own adventures are quite Anastasian. It is not generally known that the captain has reserved to himself a grave next to that of Shelley, in the Protestant Campo Santo at Rome. This looks like friendship in life and death.

Captain Medwin, the Editor of “Byron's Conversations,” has just finished a Translation of *Æschylus*, on which he has been engaged for the last two years. We have reason to think that it will, on its appearance, raise his character very high as a Grecian. He is at present residing at Genoa.

A new edition of Colonel Montagu's Ornithological Dictionary, with Additions, &c.—The History of the Christian Church during the First Three Centuries, translated from the German of Neander, by the Rev. H. J. Rose, M.A.

LIST OF NEW BOOKS.

Winds, N. W. and N. E.
Except the 7th and 13th, generally cloudy; a little rain fell on the evening of the 12th, but not sufficient to be measurable.

Occultation of Venus: Friday Morning.—Every individual who witnessed the occultation of Venus by the moon this morning, must have felt much indebted to your valuable correspondent J. T. B. of Deptford, for his indefatigable exertions in warning us of so interesting a phenomenon. It is hardly to be expected in a climate like ours, and the celestial body so near to the horizon as was the moon at the period of the immersion, that a very favourable observation could be made; independent of this, a cloud intercepted the southern limb of the moon from our view till about 3' before 5, when the immersion had taken place; the emersion, however, was seen under almost as favourable circumstances as could be wished, and occurred at 24' after 5. No particular distortion of the shape of the planet during its emersion was perceptible; but when quite visible, it seemed as if attached to the dark part of the moon for the space of more than 7";—an appearance precisely similar to that which I remember to have witnessed in an occultation of the planet Jupiter.

The situation of Jupiter amongst the several small stars in and near the right arm of Sagittarius, renders the planet, as a telescopic observation, peculiarly interesting.

TO CORRESPONDENTS.

We are obliged to postpone our Review of the Winter's Wreath, being, indeed, this week, even without it, almost an Annual ourselves.

ERRATUM.—In our last No., page 659, col. 1, line 7, for “Corporal,” read “Caporal.”

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE LONDON UNIVERSITY

SCHOOL, 16, Lower Gower Street, Bedford Square, (Head Master, the Rev. HENRY BROWNE, M.A., of Corpus Christi College, Cambridge), will open on the 1st November.

This Institution is a Classical Day School, including those Branches of a liberal Education usually taught to Boys from about Eight to Fifteen Years of Age.

The Subjects of Instruction are— I. The Latin and Greek Languages.

II. The English, French, and German Languages. III. Outlines of History and Geography.

IV. Writing, Ciphering, and (if desired) Pencil Drawing and the Principles of Perspective.

Terms, 15s. per annum, payable by Instalments, and no extra Charges, the Pupils providing Books.

Hours of attendance in the winter season, nine to twelve in the morning, two to four in the afternoon, for Pupils residing at a distance, in whose case a different arrangement may be desirable, the attendance will be from nine to three, including one hour for recreation.

Copies of the Prospectus may be had at the School, at the Office of the London University, and of the following Booksellers:— Taylor, Upper Gower Street

Nimmo, ditto. Lloyd, Harley Street

Gardner, Regent Street Murray, Albemarle Street

Knight, Pall Mall East Wyld, Charing Cross

Smith, Strand Richardson, Cornhill

Underwood, Fleet Street Templeman, Percy Street

The Head Master may be spoken with at the School daily, (except Sundays), between the hours of 11 and 4.

Such Pupils as are already entered, are requested to take an early opportunity of calling upon the Head Master, that they may be examined and classed accordingly.

HENRY BROWNE, Head Master.

UNIVERSITY OF LONDON.

The Council hereby give Notice, that the following Classes will meet on Monday, the 1st of November next:—Latin, Greek, English, French, German, Italian, Hebrew, Oriental Languages, Mathematics, Natural Philosophy, Philosophy of the Human Mind and Logic, General Jurisprudence, Medical Jurisprudence, English Law, on Monday the 8th of November. The Course of Chemistry commenced with the Medical Classes, on the 1st of October; but the first five weeks are occupied with a General View of the Science; and the Detailed Consideration of each branch commences in November. Botany also commenced the 3d of October; but there is a Spring Course in April. The Course of Zoology commences on the 3d of January; and there is a Summer Course on Zoology and Comparative Anatomy. The Lectures on Political Economy commence in February. There are to be an Evening Course of Mathematics, and Popular Courses of Natural Philosophy, commencing also on the 1st of November. A Prospectus of the several Classes, containing an Outline of the Mode of Instruction, with Statement of the Hours, the Fees, the Regulations for Admission to the Library, Museum, &c., may be had on application at the Office of the University, and at the following Booksellers:—Mr. Taylor, 39, Upper Gower Street; Mr. Murray, Albemarle Street; Messrs. Longman and Co., and Messrs. Baldwin and Cradock, Paternoster Row; Mr. Underwood, 23, Fleet Street; Mr. Richardson, 23, Cornhill; Mr. Callow, 16, Princess Street, Soho; Mr. Ridgway, 169, Piccadilly; Mr. Bell, Chemist, 339, Oxford Street; and Mr. Gardan, Chemist, 378, Oxford Street.

The Medical Classes meet on the 1st of October. LEONARD HORNER, Warden.

KING'S COLLEGE, LONDON. The

Council of this Institution do hereby give Notice, that they have deemed it expedient to extend the period for receiving applications for the under-mentioned appointments until the 1st of November next:—viz.

The Headmastership of the Lower Department. The Professorships of:—Classical Literature.

English Literature. Natural and Experimental Philosophy. The Principles and Practice of Commerce. Natural History and Zoology.

English Law and the Principles of Jurisprudence.

Information respecting these situations may be obtained on application at the Office of the College, between the hours of Twelve and Three.

By Order of the Council, H. SMITH, Secretary.

3, Parliament Street, 13th July, 1830.

PHILONOMIC SOCIETY.—This Society

will commence its Eighth Annual Session for the Discussion of Legal and General Questions, on Tuesday, the 26th instant. Furnival's Inn Hall, 12th Oct. 1830. MICHAEL BARSON, Hon. Sec.

TO BE SOLD.—An Established Business

of Bookseller, Stationer, and Printer, with a Circulating Library—a compact concern, with a general connexion, in a populous Neighbourhood: it may be conducted at a moderate expense, and the returns may be made in a few months. Letters (post-paid) or applications to Mr. Starling, 40, Leicester Square, will be attended to.

ENCYCLOPEDIA LONDINENSIS.—In

consequence of the destruction by the fire at Messrs. Adlard's Printing Office, of the greater part of the Stock of this Work, nearly all the Sets have been rendered imperfect. The Proprietors, however, are enabled to complete Sets, by a number of Odd Volumes which still remain unsold, and which they intend disposing of at the reduced price of 2l. per volume. London: Published by Jones and Sons, 17, Ave Maria Lane.

TO THE PEOPLE OF ENGLAND. It

is expected that the Proceedings in Parliament, in the approaching Session, will be of surpassing interest. In recording those proceedings, the SPECTATOR, Weekly Newspaper, will continue, with the improvement derived from experience, and the method of Historical Analysis (rather than of unsatisfactory and spiritless abridgment) which met with uniform approbation during the last two Sessions, as being at once the most concise, the clearest, and the fairest to all parties. In addition to this, the Spectator will continue its peculiar methods of Illustrating every Question brought before Parliament, by discussion, and of testing the value of every Representative of the People. While a prominence correspondent to its real importance is given to this branch of Politics, no department, whether of amusement or instruction, comprised in the original plan of the Spectator, shall be neglected. On the contrary, the recent enlargement of the Paper (from 16 pages to 24) has given great additional scope for the development of every part of the scheme, as occasion may require; and the Proprietors feel considerable confidence in asserting, that—apart from its claims as a Journal of Literature, and of Dramatic, Musical, and Pictorial Criticism—the Spectator, as a Newspaper, bestows more space and elaboration on Events and their consequences, than any other Paper whatever. The Proprietors invite comparison.

There are two editions of the Spectator—one for the Country, published on Saturday, in time to be sent by the post of that evening; another for Town, published very early on Sunday morning, and bringing down all public news to the latest hour. The early edition reaches every post-town within 200 miles of London the course of Saturday; the latest edition may be had through the proper Newsmen, at every place within ten or twelve miles of London before breakfast.

Those who intend to become Subscribers to the Spectator, at the Meeting of Parliament, should give their orders to the News-men, Postmasters, or Booksellers, before the 26th of October, as few copies beyond the ordinary supply for regular Subscribers are printed. 4, Wellington Street, Strand, Sept. 27.

BOOKS PUBLISHED THIS DAY.

Price 1l. 1s. THE NOBLE GAME OF BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD. Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 48 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years. London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

In small 8vo. containing 48 Pages, price 5s. cloth boards, illustrated by a Chart, and its Engravings by Brantome, No. 1. of

THE EDINBURGH CABINET

LIBRARY, dedicated, by permission, to John Barrow, Esq. F.R.S., one of the Secretaries of the Admiralty, being a Narrative of Discovery and Adventure in the Polar Seas and Regions, with Illustrations of their Climate, Geology, and Natural History; and an Account of the Whale Fishery. By PROFESSOR J. H. ROBERTSON, F.R.S.E. BUGH MURRAY, Esq. F.R.S.E.

On the 1st of December will be published, No. II. Narrative of Discovery and Adventure in Africa, from the earliest Ages to the present Time, with Illustrations of the Geology, and Comparative Anatomy.

The different Departments of this Work will be written by distinguished Literary Individuals. It will also contain a correct Map of Africa, and Plans of the Routes of Park, and of Denham and Clapperton; together with 15 elegant Engravings by Brantome, illustrating the Scenery, Natural History, Costume of the Inhabitants, &c. Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

Compressed into 2 vols. 8vo. 3rd edition, considerably enlarged and improved, with numerous Plates, Woodcuts, Diagrams, &c.

A MANUAL OF CHEMISTRY, Practical

and Theoretical, containing an Account of all recent Investigations and Discoveries. By W. T. BRANDE, F.R.S. Professor of Chemistry at the Royal Institution, &c. &c. John Murray, Albemarle Street.

Also, by the same Author, A new edition, post 8vo. with Plan and Illustrative Woodcuts, 7s. 6d.

Outlines of Geology, for Beginners; being

the Substance of a Course of Lectures delivered at the Royal Institution.

M. P., with Reply by Oliver York. James Fraser, 215, Regent Street, London; John Bopd, Edinburgh; and Grant and Co. Dublin.

HORATIO FLACCI OPERA; with an Ordo and Verbal Translation.

By JOHN STIRLING, D.D. Vicar of Great Gaddesden, Hertfordshire.

A new edition, critically revised, with the Ordo and Translation interlinedly arranged.

By P. A. NUTTALL, LL.D. With Preliminary Dissertations illustrative of the Life, Writings, and Verification of Horace.

Complete in 4 vols. 18mo. price 16s. bound in cloth. "Stirling's is the most accurate and useful translation which has ever been laid before the public."—Moss's Classical Bibliography.

"It will enable the unacquainted in classical literature to form an idea of Horace; and is well calculated to be useful to boys scholars, and even to idle and forgetful scholars at a later period of life."—Literary Gazette.

"To persons endeavoring to acquire a knowledge of Latin without the help of a master (and we believe there are many humane retired students of this class), the publication we are noticing will form an easy and agreeable means of attaining it."—London: Printed for Thomas Ward, 26, High Holborn.

NEW MONTHLY ISSUE of the

WAVERLEY NOVELS.

In order to meet the wishes of many who desire to possess the Waverley Novels, if they cannot have the Work in Monthly Volumes, the Proprietors have resolved to commence a re-issue on the 1st of January next, beginning with Volume First, to be continued regularly on the first day of each month, till the whole is completed.

The Embellishments of the work are from Designs executed by the most eminent Artists. Among these may be named, David Wilkie, R.A. and principal Painter in Ordinary to His Majesty; Edwin Landseer, A.R.A.; C. R. Leslie, R.A.; Abraham Cooper, R.A.; A. E. Chalon, R.A.; G. S. Newton, A.R.A.; F. P. Sheppard, William Kidd, J. Stannfield, John Burnett, R. P. Buntington; R. Farrier; J. Martin; A. Fraser; and W. Bunt. The Engravings are by Heath, Finden, Burnet, Rola, Mitchell, Englehearts, Warren, Graves, and others not less eminent.

As the Embellishments are throughout printed from a double set of Steel Plates, which can yield 40,000 first-rate impressions, the Subscribers who begin with the new issue, may therefore rely on undoubted good impressions of all the engravings. The new issue will be distinguished from the present by a coloured label, but without differing from it in any other respect. Printed for Robert Cadell, Edinburgh; and W. Whitaker and Co. London.

Of whom may be had, The First Seventeen Volumes of the present

issue of the Work, which comprise—Waverley, in 2 vols.; Guy Mannering, in 2 vols.; the Antiquary, in 2 vols.; Red Rover, in 2 vols.

Volumes Nine to Fifteen, containing the Black Dwarf, Old Mortality, the Heart of Mid-Lothian, the Bride of Lammermoor, the Legend of Montrose—and Ivanhoe, in 2 vols. forming Volumes Sixteen and Seventeen. The Novels published up to this time contain ten new Introductions by the Author, making with the Illustrative Notes, nearly Six Hundred pages of new matter.

Volume Eighteen, which commences the Monastery, will appear on the 1st of November, containing an Introduction by the Author, and illustrated by G. S. Newton and A. E. Chalon.

Volume Nineteen, which completes the Monastery, will appear on the 1st of December, illustrated by D. Wilkie and A. Fraser.

Volumes Twenty and Twenty-First, which comprise the Abbot, will be illustrated by J. Burnet, E. Landseer, and A. E. Chalon, and appear on the 1st of January next. The Novels published up to this time and Specimens of the Plates may be seen at the shop of every Bookseller in Great Britain.

Mr. Cadell will also shortly publish, 1. Tales of a Grandfather; being Stories taken from the History of France. By Sir Walter Scott, Bart. 3 small vols. uniform with Tales from Scottish History.

2. The Sea Kings in England; an Historical Romance of the Time of Alfred. By the Author of the Fall of Nineveh, 8 vols. post 8vo.

"He is copious, melodious, and energetic; his style is pure and flowing; his descriptions magnificent; his language and phrases breathe the very air of splendid voluptuousness; and his scenes of battles and councils are full of solemnity and ardour."—Edinburgh Review, No. 85.

Under their Majesty's special Sanction and Patronage. Publishing in monthly Numbers, from Engravings on steel by Mr. T. Stirling. No. VII. will appear Nov. 1.

THE FAMILY CABINET ATLAS,

Constructed upon an Original Plan. The first Half, now complete in Six Numbers, may be had, price 2s. 6d. plain, or 3s. 6d. finely coloured.

This Atlas has been pronounced by the literary critics in all parts of the Kingdom, to be unrivalled for its originality, simplicity, and utility; its convenient and comprehensive nature, its exquisite beauty of engraving, and for its many important new features.

Published, for the Proprietors, by Mr. Bull, 26, Holles Street, Cavendish square; supplied also by every Bookseller in the Kingdom.

Of whom may also be had, 1. Bacon's Life of Francis First, King of France. New edition, with Additions, 2 vols.

"A most full and animated account of Francis."—Lit. Gazette. "It will not be found unworthy of being classed with the Lives of Charles the Fifth and Henry the Eighth."—Times.

2. England's Romantic Annals, by Henry Neale. 3rd edition, in 3 vols.

3. Spain's Romantic Annals; by Don T. de Traba. 2d edition, in 3 vols.

4. Romantic Annals of France, by Leitch Ritchie. In 3 vols. (In the press.)

Price 4s. 6d. dedicated, by express permission, to the Princess Esterhazy.

CHELTEMHAM LYRICS, LAYS of a

MODERN TROUBADOUR, and other Poems. By RALPH DOBSON. London, Baldwin and Cradock; and Chapman, E. Davis, and G. A. Williams.

Just published by Messrs. Colburn and Bentley,

LIFE of LORD BURGHLEY, Lord High Treasurer of England during the Reign of Queen Elizabeth, with Extracts from his Private Correspondence and Journals. By the Rev. Dr. NARES. Volume the Second.

2. The Life and Correspondence of John Locke, by Lord King. 2d edition, in 2 vols. 8vo. with considerable Additions, among which is a Diary of Lord Chancellor King. "A work which must ever remain a standard book in English Libraries."—Literary Gazette.

3. Dr. Doddridge's Private Correspondence, the Third and Fourth Volumes.

"We know not of them, if ever, we have perused volumes of the description of those before us, with more intense curiosity, amusement, and instruction."—Literary Gazette.

4. Memoirs of Lady Fanshawe, written by herself, with Extracts from the Correspondence of Sir Richard Fanshawe. 3d edition, in small 8vo. with beautiful Portrait, price 1s.

"A very delightful volume."—Literary Gazette.

5. Musical Memoirs, comprising an Account of the General State of Music in England, from the first Commemoration of Handel, in 1811, to the Year 1830. Interspersed with numerous Anecdotes, Musical, Historical, &c. By W. T. Parker, Forty Years Principal Oboist to the Theatre Royal Covent Garden. In 2 vols. post 8vo. 18s.

6. Mr. Crawford's Narrative of a Residence in Siam and Cochinchina. 8vo. edition, in 2 vols. with Plates, 31s. 6d.

7. Personal Sketches of his own Times, by Sir Jonah Barrington; being his own individual Recollections of Distinguished Personages, Remarkable Events, High Life, and Irish Manners, for the last Fifty Years. New edition, with considerable Additions, in 2 vols. 8vo. 24s.

8. Mr. Buckingham's Travels in Persia, 8vo. edition, uniform with his Travels in Palatine and Mesopotamia. In 2 vols. with numerous Engravings, 31s. 6d.

9. Letters from the East, written during a recent Tour through the Holy Land. By John Carne, Esq. 3d edition, in 2 vols. post 8vo. 18s.

Important Medical Works just published by Longman, Rees, Orme, Brown, and Green.

A COMPLETE PRACTICAL TREATISE on the DISEASES of the EYE. By WILLIAM MACKENZIE, Lecturer on the Eye in the University of Glasgow, and one of the Surgeons to the Glasgow Eye Infirmary.

The Index to this work is so full as to answer every purpose of an Ophthalmological Dictionary.

The Principles of Surgery, Vol. I. containing the Doctrine and Practice relating to Inflammation and its various Consequences, Tumours, Aneurisms, Wounds, and the States consequent thereto. By John Burns, M.D. Regius Professor of Surgery in the University of Glasgow, &c. In 8vo. 14s. boards.

By the same Author, The Principles of Midwifery, including the Diseases of Women and Children. 7th edition, enlarged, 8vo. 16s.

A Demonstration of the Nerves of the Human Body, founded on the Subjects of the Colateral Prizes for 1823 and 1829, adjudged by the Royal College of Surgeons. By Joseph Keen. Part I. in folio, with Engravings, price 2s. 2d. The second Part will be published early in 1831.

Transactions of the Medical and Chirurgical Society of London. Vol. XVI. Part I. in 8vo. with Plates, price 9s. boards.

By an arrangement made with the Council, the Publishers will supply such Members of the Society as may be desirous of completing their Sets of the Society's Transactions, at a Scale of Prices which may be had of Longman and Co. or any of their Correspondents.

A Treatise on the Means of Preserving Health, and particularly the Prevention of Organic Diseases. By A. P. W. Philip, M.D. F.R.S.L. and E. &c. 8vo. 12s. boards.

A Short Tract on the Formation of Tumours, and the Peculiarities that are met with in the Structure of those that have become Cancerous, with their Mode of Treatment. By Sir Everard Home, Bart. V.P.R.S. F.S.A. F.L.S. Surgeon-Surgeon to the King, &c. In 8vo. price 5s. boards.

University of London. Dr. Turner's Chemistry, New Edition.

ELEMENTS of CHEMISTRY, including the recent Discoveries and Doctrines of the Science. By PROFESSOR E. TURNER, M.D. 3d edition, corrected and enlarged, 1 thick vol. 8vo. 12. 1s. boards.

"The present work is decidedly the best Elements of Chemistry now existing."—Edinburgh Medical and Surgical Journal, No. 98.

Dr. Conolly on Insanity. An Inquiry concerning the Indications of Insanity, with Suggestions for the better Protection and Care of the Insane. By John Conolly, M.D. Professor of Medicine in the University. 1 vol. 8vo. 12s.

"We have no hesitation in declaring this to be one of the most able and satisfactory works on the philosophy, or rather the physiology, of the human understanding, which has been hitherto produced. Dr. Conolly has done for this branch of science what Dr. Arnott has done for physics. He has produced a work which will have an honourable place in the annals of medicine, while it reflects great lustre on the splendid institution to which he belongs."—Medical and Surgical Journal, Aug. 1, 1830.

Chemical and Medical Tables. A Set of Chemical and Medical Tables, respectively presenting at one view a complete Synopsis of Chemistry, Materia Medica, and Classification of Diseases. By John Hogg, Surgeon and Lecturer in Medicine of Edinburgh, House Surgeon and Apothecary in the Dispensary of the University of London. In Eight folio Sheets, price 4s. 6d. sewed.

Early in November, price One Guinea, in post 8vo. embellished with Eighteen highly finished Line Engravings, by the most celebrated Artists,

LE KEEPSAKE FRANCAIS for 1831.
In adding another to the numerous illustrated volumes which are annually published in this country, the Projectors of "Le Keepsake Français" venture to anticipate a portion of the patronage which is so liberally bestowed upon works of the same class. The cordial sympathy which has, for some time past, subsisted between the two nations, and which has been so warmly manifested on a recent occasion, appears to render the present attempt to extend the same friendly relations to the Literature and Arts of the Sister Countries, by no means ill-timed.

- Contributors.
- | | | |
|--------------------|------------------|------------------|
| Mad. A. Allart | V. Hugo | Mad. Valdor |
| Mad. Delphine Gay | De Lamartine | Mad. Valmore |
| M. Ballanche | Mad. Tassu | Stendhal |
| De Beranger | Mad. Tercy | Saint-Beuve |
| Ralph Bernal, M.P. | M. Lesferre | J. B. A. Soullé |
| De Chateaubriand | Mérimée | Soumet |

SATURDAY, OCTOBER 23, 1830.

REVIEW OF NEW BOOKS.

Memoir of His late Majesty, George the Fourth.
By the Rev. G. Croly. 8vo. pp. circ. 500.
London, 1830. J. Duncan.

ALTHOUGH produced as a Memoir of our late Sovereign, this volume contains views of society in England and, occasionally, in France, from the middle of last century; characters and biographical sketches of many of the most distinguished individuals who figured during that period; anecdotes of leading public characters, such as Pitt, Fox, Burke, Sheridan, &c.; expositions of the national policy at different important epochs; and many other matters of general attraction and interest. We have successive ministers characterised, and their measures dissected; we have critical remarks on the styles of public speakers; we have bon-mots, recollections, party negotiations and intrigues; we have political and satirical poetry; we have Buonaparte and the Catholic question; we have morals, wars, changes, &c. &c. &c.; all reviv'd upon the canvass, and painted with a vigorous hand by an author whose power of delineation is too highly appreciated to require any eulogy from us.

The book is altogether such a work as might be expected from a man of strong sense and practised literature, living so near the time embraced in his descriptions, and aiming more at a free and popular narrative than at the philosophy of more remote history: yet it abounds with profound observations; and often in a tone of sarcastic scorn lashes the follies and vices it is forced to depict. But a few extracts, which we now proceed to give, will convey a better idea of Mr. Croly's performance than any long commentary of our own; and as we always prefer making an author speak for himself, to exhibiting ourselves as his spokesmen, here follow remarks on public and private education, as brought into discussion on the system adopted towards the Prince of Wales.

"The great schools were panegyrised, as breeding a noble equality among the sons of men of the various ranks of society; as inspiring those feelings of honour and independence, which in after-life make the man lift up his fearless front in the presence of his superiors in all but knowledge and virtue; and as pre-eminently training the youth of the land to that personal resolution, mental resource, and intellectual dignity, which are essential to every honourable career; and are congenial, above all, to the free spirit and high-minded habits of England. All those advantages must be conceded, though burlesqued and tarnished by the fantastic and selfish tales of extraordinary facilities furnished to the man by the companions of the boy; of the road to fortune smoothed, the ladder of eminence miraculously placed in his grasp, the coronet, the mitre, the highest and most sparkling honours of statesmanship, held forth to the aspirant by the hand of early association.—Hopes, in their conception mean, in their nature infinitely fallacious, and in

their anticipation altogether opposed to the openness and manly self-respect, which it is the first duty of those schools to create in the young mind. Yet the moralist may well tremble at that contamination of morals which so often defies the vigilance of the tutor; the man of limited income is entitled to reprobate the habits of extravagance engendered in the great schools; and the parent who values the affections of his children, may justly dread the reckless and unruly self-will, the young insolence, and the sullen and heartless disdain of parental authority, which spring up at a distance from the paternal eye. But the question is decided by the fact, that without public education a large portion of the youth of England would receive no education whatever; while some of the more influential would receive, in the feeble indulgences of opulent parentage and the adulation of domestics, an education worse than none. The advantages belong to the system, and to no other; while the disadvantages are accidental, and require nothing for their remedy beyond increased activity in the governors, and a more vigorous vigilance in the nation."

We cannot agree with Mr. C., however, in thinking Eton or Westminster the place for educating the heir to the throne. A *coup d'œil* over Lord North's administration strikes us as very able, in this early part of the volume, which is also diversified by an episode about Swift, and other retrospects; but we pass to the commencement of the prince's chequered career, 1783, when the Commons voted him 50,000*l.* for income, and 100,000*l.* for the outfit of his household. Here the author says finely—

"There are no faults that we discover with more proverbial rapidity than the faults of others; and none that generate a more vindictive spirit of virtue, and are softened down by fewer attempts at palliation, than the faults of princes in the grave. Yet, without justice, history is but a more solemn libel; and no justice can be done to the memory of any public personage without considering the peculiar circumstances of his time. The close of the American war was the commencement of the most extraordinary period of modern Europe: all England, all France, the whole continent, were in a state of the most powerful excitement: England rejoicing at the cessation of hostilities, long unpopular and galling to the pride of a country accustomed to conquer; yet with the stain of transatlantic defeat splendidly effaced by her triumph at Gibraltar, and the proof given in that memorable siege, of the unimpaired energies of her naval and military power,—France, vain of her fatal success, and exulting in the twofold triumph of wresting America from England, and raising up a new rival for the sovereignty of the seas,—the continental states, habitually obeying the impulses of the two great movers of the world, England and France, and feeling the return of life in the new activity of all interests, public, personal, and commercial. But a deeper and fearful influence was at work, invisibly, but

resistlessly, inflaming this feverish vividness of the European mind. The story of the French Revolution is still to be told; and the man by whom that tale of grandeur and atrocity is told, will bequeath the most appalling lesson ever given to the tardy wisdom of nations. But the first working of the principle of ruin in France was brilliant; it spread an universal animation through the frame of foreign society. All was a hectic flush of vivacity. Like the Sicilian landscape, the gathering fires of the volcano were first felt in the singular luxuriance and fertility of the soil. Of all stimulants, political ambition lays the strongest hold on the sensibilities of man. The revolutionary doctrines, still covered with the graceful robes of patriotism and philosophy, seemed to have led the whole population of France into enchanted ground. Every hour had its new accession of light; every new step displayed its new wonder. Court formality—hereditary privilege—the solemnity of the altar—all that had hitherto stood an obstacle to the full indulgence of natural impulses, all the rigid and stately barriers established by the wisdom of elder times against popular passion, were seen suddenly to shrink and fade away before the approach of the new regeneration, like mists before the sunbeams. The listless life of the man of rank was suddenly supplied with an excitement that kindled all the latent activities of his nature; the man of study found, with delight, his solitary speculation assuming a life and substantial shape before his eye, and the long arrears of fortune about to be paid in public fame and power; the lower classes listened with fierce avidity to the declaration, that the time was at hand for enjoying their share of that opulent and glittering world on which they had hitherto gazed, with as little hope of reaching it as the firmament above their heads. Thus was prepared the Revolution. Thus was laid under the foundation of the throne a deadly compound of real and fantastic injury, of offended virtue and embittered vice, of the honest zeal of general good, and the desperate determination to put all to hazard for individual license, rapine, and revenge,—a mighty deposit and magazine of explosion, long visible to the eyes of Europe, invisible to the French government alone, and which only waited the first touch of the incendiary, to scatter the monarchy in fragments round the world. 'Philosophy' was the grand leader in this progress of crime; and it is a striking coincidence, that at this period its title to national homage should have been, as if by an angry destiny, suffered to aid its popular ambition.

"The peace of 1782 threw open the continent; and it was scarcely proclaimed, when France was crowded with the English nobility. Versailles was the centre of all that was sumptuous in Europe. The graces of the young queen, then in the pride of youth and beauty; the pomp of the royal family and the noblesse; and the costliness of the fêtes and celebrations, for which France has been always famous,

rendered the court the dictator of manners, morals, and politics, to all the higher ranks of the civilised world. But the Revolution was now hastening with the strides of a giant upon France: the torch was already waving over the chambers of this morbid and guilty luxury. The corrective was terrible: history has no more stinging retrospect than the contrast of that brilliant time with the days of shame and agony that followed—the untimely fate of beauty, birth, and heroism,—the more than serpent-brood that started up in the path which France once emulously covered with flowers for the step of her rulers,—the hideous suspense of the dungeon,—the heart-broken farewell to life and royalty upon the scaffold. But France was the grand corrupter; and its supremacy must in a few years have spread incurable disease through the moral frame of Europe. The English men of rank brought back with them its dissipation and its infidelity. The immediate circle of the English court was clear. The grave virtue of the king held the courtiers in awe; and the queen, with a pious wisdom, for which her name should long be held in honour, indignantly repulsed every attempt of female levity to approach her presence. But beyond this sacred circle the influence of foreign association was felt through every class of society. The great body of the writers of England, the men of whom the indiscretions of the higher ranks stand most in awe, had become less the guardians than the seducers of the public mind. The ‘Encyclopédie,’ the code of rebellion and irreligion still more than of science, had enlisted the majority in open scorn of all that the heart should practise or the head revere; and the Parisian atheists scarcely exceeded the truth, when they boasted of erecting a temple that was to be frequented by worshippers of every tongue. A cosmopolite, infidel republic of letters was already lifting its front above the old sovereignties, gathering under its banners a race of mankind new to public struggle,—the whole secluded, yet jealous and vexed race of labourers in the intellectual field, and summoning them to devote their most unexhausted vigour and masculine ambition to the service of a sovereign, at whose right and left, like the urns of Homer’s Jove, stood the golden founts of glory. London was becoming Paris in all but the name. There never was a period when the tone of our society was more polished, more animated, or more corrupt. Gaming, horse-racing, and still deeper deviations from the right rule of life, were looked upon as the natural embellishments of rank and fortune. Private theatricals, one of the most dexterous and assured expedients to extinguish, first the delicacy of woman, and then her virtue, were the favourite indulgence; and, by an outrage to English decorum, which completed the likeness to France, women were beginning to mingle in public life, try their influence in party, and entangle their feebleness in the absurdities and abominations of political intrigue. In the midst of this luxurious period the Prince of Wales commenced his public career. His rank alone would have secured him flatterers; but he had higher titles to homage. He was, then, one of the handsomest men in Europe: his countenance open and manly; his figure tall, and strikingly proportioned; his address remarkable for easy elegance, and his whole air singularly noble. His contemporaries still describe him as the model of a man of fashion, and amusingly lament over the degeneracy of an age which no longer produces such men. But he possessed qualities which might have atoned for a less attractive

exterior. He spoke the principal modern languages with sufficient skill; he was a tasteful musician; his acquaintance with English literature was, in early life, unusually accurate and extensive; Markham’s discipline, and Jackson’s scholarship, had given him a large portion of classical knowledge; and nature had given him the more important public talent of speaking with fluency, dignity, and vigour. Admiration was the right of such qualities, and we can feel no surprise if it were lavishly offered by both sexes. But it has been strongly asserted, that the temptations of flattery and pleasure were thrown in his way for other objects than those of the hour; that his wanderings were watched by the eyes of politicians; and that every step which plunged him deeper into pecuniary embarrassment was triumphed in, as separating him more widely from his natural connexions, and compelling him in his helplessness to throw himself into the arms of factions alike hostile to his character and his throne.”

This is not only superb writing, but just and solid reasoning; nor is the following less so, though towards the close of our quotation it goes into amusing detail.

“In other lands the king is a despot, and the heir apparent a rebel; in England the relation is softened, and the king is a tory, and the heir apparent a whig. Without uncovering the grave, to bring up things for dispute which have lain till their shape and substance are half dissolved away in that great receptacle of the follies and arts of mankind, it is obvious that there was enough in the contrast of men and parties to have allured the young Prince of Wales to the side of opposition. Almost prohibited, by the rules of the English court, from bearing any important part in government; almost condemned to silence in the legislature by the custom of the constitution; almost restricted, by the etiquette of his birth, from exerting himself in any of those pursuits which cheer and elevate a manly mind, by the noble consciousness that it is of value to its country; the life of the eldest born of the throne appears condemned to be a splendid sinecure. The valley of Rasselas, with its impassable boundary, and its luxurious and spirit-subduing bowers, was but an emblem of princely existence; and the moralist is unfit to decide on human nature, who, in estimating the career, forgets the temptation. It is neither for the purpose of undue praise to those who are now gone beyond human opinion, nor with the idle zeal of hazarding new conjectures, that the long exclusion of the Prince of Wales from public activity is pronounced to have been a signal injury to his fair fame. The same mental and bodily gifts which were lavished on the listless course of fashionable life, might have assisted the councils, or thrown new lustre on the arms, of his country; the royal tree, exposed to the free blasts of heaven, might have tossed away those parasite plants and weeds which encumbered its growth, and the nation might have been proud of its stateliness, and loved to shelter in its shade. The education of the royal family had been conducted with so regular and minute an attention, that the lapses of the prince’s youth excited peculiar displeasure in the king. The family discipline was almost that of a public school: their majesties generally rose at six, breakfasted at eight with the two elder princes, and then summoned the younger children: the several teachers next appeared, and the time till dinner was spent in diligent application to languages and the severer kinds of literature, varied by lessons in music, drawing, and the other accomplish-

ments. The king was frequently present; the queen superintended the younger children, like an English mother. The two elder princes laboured at Greek and Latin with their tutors, and were by no means spared in consequence of their rank. ‘How would your majesty wish to have the princes treated?’ was said to be Markham’s inquiry of the king. ‘Like the sons of any private English gentleman,’ was the manly and sensible answer. ‘If they deserve it, let them be flogged: do as you used to do at Westminster.’ The command was adhered to, and the royal culprits acquired their learning by the plebeian mode. The story is told, that on the subsequent change of preceptors, the command having been repeated, Arnald, or one of his assistants, thought proper to inflict a punishment, without taking into due consideration that the infants whom Markham had disciplined with impunity were now stout boys. However, the Prince and the Duke of York held a little council on the matter, and organised rebellion to the rod: on its next appearance they rushed upon the tutor, wrested his weapons from him, and exercised them with so much activity on his person, that the offence was never ventured again. Louis the Fourteenth, when, in his intercourse with the accomplished society of France, he felt his own deficiencies, often upbraided the foolish indulgence which had left his youth without instruction; exclaiming, ‘Was there not birch enough in the forest of Fontainebleau?’ George the Third was determined that no reproach of this nature should rest upon his memory; and probably no private family in the empire were educated with more diligence in study, more attention to religious observances, and more rational respect for their duties to society, than the children of the throne.

“There can be no difficulty in relieving the memory of George the Third from the charge of undue restraint; for nothing can be idler than the theory, that to let loose the passions of the young is to inculcate self-control. Vice is not to be conquered by inoculation; and the parent who gives his sons a taste of evil, will soon find that what he gave as an antidote has been swallowed as a temptation. The palpable misfortune of the prince was, that on emerging from the palace, he had still to learn human character, the most essential public lesson for his rank. Even the virtues of his parents were injurious to that lesson. Through infancy and youth he had seen nothing round him that could give a conception of the infinite heartlessness and artifices, the specious vice, and the selfish professions, that must beset him at his first step into life. A public education might have, in some degree, opened his eyes to the realities of human nature. Even among boys, some bitter evidence of the hollow and hypocrisy of life is administered; and the prince’s understanding might have been early awakened to the salutary caution, which would have cast out before him, naked, if not ashamed, the tribe of flatterers and pretended friends who so long perverted his natural popularity. But there was much in the times to perplex a man of his high station and hazardous opportunities, let his self-control be however vigilant. The habits of society have since been so much changed, that it is difficult to conceive the circumstances of that singular and stirring period. We live in a day of mediocrity in all things. The habits of fifty years ago were, beyond all comparison, those of a more prominent, showy, and popular system. The English nobleman sustained the honours of his rank with a larger display;

the English man of fashionable life was more conspicuous in his establishment, in his appearance, and even in his eccentricities: the phaeton, his favourite equipage, was not more unlike the cabriolet, that miserable and creeping contrivance of our day, than his rich dress and cultivated manners were like the wretched costume and low fooleries that make the rapid lounge of modern society. The women of rank, if not wiser nor better than their successors, at least aimed at nobler objects: they threw open their mansions to the intelligent and accomplished minds of their time, and instead of *file-ing* every foreign coxcomb, who came with no better title to respect than his grimace and his guitar, surrounded themselves with the wits, orators, and scholars of England. The contrivance of watering-places had not been then adopted as an escape, less from the heats of summer than from the observances of summer hospitality. The great families returned to their country-seats with the close of parliament, and their return was a holiday to the country. They received their neighbours with opulent entertainment; cheered and raised the character of the humbler ranks by their liberality and their example; extinguished the little oppressions, and low propensities to crime, which habitually grow up where the lord is an absentee; and by their mere presence, and in the simple exercise of the natural duties of rank and wealth, were the great benefactors of society. A noble family of that time would no more have thought of flying from its country neighbours to creep into miserable lodgings at a watering-place, and hide its diminished head among the meagre accommodations and miscellaneous society of a sea-coast village, than it would of burning its title-deeds. The expenses of the French war may have done something of this; and the reduced rent-rolls of the nobility may countenance a more limited expenditure. But whether the change have been in matter or mind, in the purse or the spirit, the change is undeniable; and where it is not compelled by circumstances, is contemptible. The prince was launched into public life in the midst of this high-toned time. With an income of 50,000*l.* a-year, he was to take the lead of the English nobility, many of them with twice his income, and, of course, free from the court encumbrances of an official household. All princes are made to be plundered; and the youth, generosity, and companionship of the prince, marked him out for especial plunder. He was at once fastened on by every glittering profligate who had a debt of honour to discharge, by every foreign marquess who had a *bijou* to dispose of at ten times its value, by every member of the turf who had an unknown Eclipse or Childers in his stables, and by every nameless claimant on his personal patronage or his unguarded finance, until he fell into the hands of the Jews, who offered him money at fifty per cent; and from them into the hands of political Jews, who offered him the national treasury at a price to which a hundred per cent was moderation. At this time the prince was nineteen, as ripe an age as could be desired for ruin; and in three short years the consummation was arrived at,—he was ruined."

We have read this picture of the change of manners with great pleasure; but we leave the subject, for an example of the characteristic personal sketches—Fox and Pitt.

Fox, "too generous and too lofty in his habits to stoop to vulgar conspiracy; perhaps, alike too abhorrent of blood, and too fond of his ease, to have exhibited the reckless vigour, or

endured the long anxieties, or wrapt up his mystery in the profound concealment of a Catiline, he had all the qualities that might have made a Caius Gracchus; the eloquence, the ingenuousness of manner, the republican simplicity of life, and the shewy and specious zeal of popularity in all its forms. Fox would have made the first tribunes. He, unquestionably, possessed the means, at that period, to have become the most dangerous subject of England. Fox's life is a memorable lesson to the pride of talents. With every kind of public ability, every kind of public opportunity, and an unceasing and indefatigable determination to be at the summit in all things, his whole life was a succession of disappointments. It has been said, that, on commencing his parliamentary course, he declared that there were three objects of his ambition, and that he would attain them all:—that he should be the most popular man in England, the husband of the handsomest woman, and prime minister. He did attain them all; but in what diminished and illusory degree, how the 'juggling fiend kept the promise to the ear, and broke it to the hope,' is long since known. He was the most popular man in England, if the Westminster electors were the nation; his marriage secured him beauty, if it secured him nothing else; and his premiership lasted scarcely long enough for him to appear at the levee. In a life of fifty-eight years, Fox's whole existence as a cabinet minister was but nineteen months; while Pitt, ten years his junior, and dying at forty-seven, passed almost his whole life, from his entrance into parliament, at the head of the country."

We regret we cannot find room for the portrait of George III.; but we wish to relieve our theme, and, lo, some *bon-mots* offer themselves, as the folks say, quite handy. Here was a wit of the day (1787).

"Pleasant news, this, from America,' said he, meeting General Fitzpatrick on the first intelligence of Burgoyne's defeat. The general doubted, and replied, 'that he had just come from the secretary of state's office without hearing any thing of it.' 'Perhaps so,' said Hare; 'but take it from me as a flying rumour.'—Fox's negligence of his fortune had induced his friends to find out a wife for him among the great heiresses. Miss Pulteney, afterwards Countess of Bath, was fixed upon; and Fox, though probably without any peculiar inclination to the match, paid his court for a while. A seat was frequently left for him beside the lady, and he made his attentions rather conspicuous during Hastings' trial. Some one observed to Hare the odd contrast between Fox's singularly dark complexion, and Miss Pulteney's pale face and light hair. 'What a strange sort of children they will make,' was the observation. 'Why, *duns*, to be sure,' replied Hare; 'cream-coloured bodies, with black manes and tails.'

"On the king's opening the session of parliament, the prince had gone in state in a military uniform, with diamond epaulettes. At dinner Doyle came in late, and, to the prince's inquiry, whether he had seen the procession? answered, that 'he had been among the mob, who prodigiously admired his royal highness's equipage.' 'And did they say nothing else?' asked the prince, who was at this time a good deal talked of, from his encumbrances. 'Yes. One fellow, looking at your epaulette, said, 'Tom, what an amazing fine thing the prince has got on his shoulders!' 'Ay,' answered the other, 'fine enough, and fine as it is it will soon be on our shoulders.' The prince

paused a moment; then looked Doyle in the face, and, laughing, said, 'Ah! I know where that hit came from, you rogue; that could be nobody's but yours. Come, take some wine.'"

"The Lewes races were thinly attended, in consequence of a rainy day. The prince and a few persons of rank were there, and underwent a drenching. On their return, some observation was made on the small number of noblemen on the course. 'I beg pardon,' said the prince; 'I think I saw a very handsome sprinkling of the nobility.'

"The conversation turning on some new eccentricity of Lord George Gordon; his unfitness for a mob leader was instanced in his suffering the rioters of 1780 to break open the gin-shops, and, in particular, to intoxicate themselves by the plunder of Langdale's great distillery in Holborn. 'But why did not Langdale defend his property?' was the question. 'He had not the means,' was the answer. 'Not the means of defence?' said the prince; 'ask Angelo: he, a brewer, a fellow all his life long at cart and tierce.'

"The prince's regiment were expecting orders for Ireland. St. Leger said that garrison duty in Dublin was irksome, and that country quarters were so squalid, that they would destroy the lace and uniforms of the regiment, which even then were remarkably rich. 'Well, then,' said the prince, 'let them do their duty as dragoons, and scour the country.'

"A heavy-heeled cavalry officer, at one of the Brighton balls, astounded the room by the peculiar *impressiveness* of his dancing. A circle of affrighted ladies fluttered over to the prince, and inquired, by what possibility they could escape being trampled out of the world by this formidable performer. 'Nothing can be done,' said the prince, 'since the war is over: then, he might have been sent back to America, as a republication of the stamp act.'"

Our next choice falls on a vivid sketch of the French court at the breaking out of the revolution (1795).

"The bewildered career and unhappy fate of the Duke of Orleans are now matter of history. He was born in a hazardous time for a man of weak understanding, strong passions, and libertine principles.—The monarch but a grown child: the queen, estimable but imperious, full of Austrian 'right divine,' and openly contemptuous of the people: the court jealous, feeble, and finding no resource for its weakness but in obsolete artifice and temporary expedient: the nobility a mass of haughty idlers, a hundred and twenty thousand gamblers and intriguers, public despisers of religion and the common moral obligations by which society is held together; chiefly poor, and living on the mendicant bounty of the court; worthless consumers of the fruits of the earth, yet monopolists of all situations of honour and emolument, and by their foolish pride in the most accidental of all distinctions, birth; by their open meanness of solicitation for that last livelihood which a man of true dignity of mind would seek, a dependence on the public purse; and by their utter uselessness for any purpose but that of filling up the ranks of the army; rendered at once weary of themselves and odious to the nation. But beyond those central, projecting points in the aspect of France, those fragments of the old system of the monarchy, the politician saw a wilderness of living waves, a boundless and sullen expanse of stormy passions, furious aspirations, daring ambition, and popular thirst of slaughter; a deluge, rising hourly round the final, desperate refuge of the

rendered the court the dictator of manners, morals, and politics, to all the higher ranks of the civilised world. But the Revolution was now hastening with the strides of a giant upon France: the torch was already waving over the chambers of this morbid and guilty luxury. The corrective was terrible: history has no more stinging retrospect than the contrast of that brilliant time with the days of shame and agony that followed—the untimely fate of beauty, birth, and heroism,—the more than serpent-brood that started up in the path which France once emulously covered with flowers for the step of her rulers,—the hideous suspense of the dungeon,—the heart-broken farewell to life and royalty upon the scaffold. But France was the grand corrupter; and its supremacy must in a few years have spread incurable disease through the moral frame of Europe. The English men of rank brought back with them its dissipation and its infidelity. The immediate circle of the English court was clear. The grave virtue of the king held the courtiers in awe; and the queen, with a pious wisdom, for which her name should long be held in honour, indignantly repulsed every attempt of female levity to approach her presence. But beyond this sacred circle the influence of foreign association was felt through every class of society. The great body of the writers of England, the men of whom the indiscretions of the higher ranks stand most in awe, had become less the guardians than the seducers of the public mind. The ‘Encyclopédie,’ the code of rebellion and irreligion still more than of science, had enlisted the majority in open scorn of all that the heart should practise or the head revere; and the Parisian atheists scarcely exceeded the truth, when they boasted of erecting a temple that was to be frequented by worshippers of every tongue. A cosmopolite, infidel republic of letters was already lifting its front above the old sovereignties, gathering under its banners a race of mankind new to public struggle,—the whole secluded, yet jealous and vexed race of labourers in the intellectual field, and summoning them to devote their most unexhausted vigour and masculine ambition to the service of a sovereign, at whose right and left, like the urns of Homer’s Jove, stood the golden fountains of glory. London was becoming Paris in all but the name. There never was a period when the tone of our society was more polished, more animated, or more corrupt. Gaming, horse-racing, and still deeper deviations from the right rule of life, were looked upon as the natural embellishments of rank and fortune. The habits of society have since been so much changed, that it is difficult to conceive the circumstances of that singular and stirring period. We live in a day of mediocrity in all things. The habits of fifty years ago were, beyond all comparison, those of a more prominent, showy, and popular system. The English nobleman sustained the honours of his rank with a larger display;

the English man of fashionable life was more conspicuous in his establishment, in his appearance, and even in his eccentricities: the phaeton, his favourite equipage, was not more unlike the cabriolet, that miserable and creeping contrivance of our day, than his rich dress and cultivated manners were like the wretched costume and low fooleries that make the rapid lounge of modern society. The women of rank, if not wiser nor better than their successors, at least aimed at nobler objects: they threw open their mansions to the intelligent and accomplished minds of their time, and instead of *fête-ing* every foreign coxcomb, who came with no better title to respect than his grimace and his guitar, surrounded themselves with the wits, orators, and scholars of England. The contrivance of watering-places had not been then adopted as an escape, less from the heats of summer than from the observances of summer hospitality. The great families returned to their country-seats with the close of parliament, and their return was a holiday to the country. They received their neighbours with opulent entertainment; cheered and raised the character of the humbler ranks by their liberality and their example; extinguished the little oppressions, and low propensities to crime, which habitually grow up where the lord is an absentee; and by their mere presence, and in the simple exercise of the natural duties of rank and wealth, were the great benefactors of society. A noble family of that time would no more have thought of flying from its country neighbours to creep into miserable lodgings at a watering-place, and hide its diminished head among the meagre accommodations and miscellaneous society of a sea-coast village, than it would of burning its title-deeds. The expenses of the French war may have done something of this; and the reduced rent-rolls of the nobility may countenance a more limited expenditure. But whether the change have been in matter or mind, in the purse or the spirit, the change is undeniable; and where it is not compelled by circumstances, is contemptible. The prince was launched into public life in the midst of this high-toned time. With an income of 50,000*l.* a-year, he was to take the lead of the English nobility, many of them with twice his income, and, of course, free from the court encumbrances of an official household. All princes are made to be plundered; and the youth, generosity, and companionship of the prince, marked him out for especial plunder. He was at once fastened on by every glittering profligate who had a debt of honour to discharge, by every foreign marquess who had a *bijou* to dispose of at ten times its value, by every member of the turf who had an unknown Eclipse or Childers in his stables, and by every nameless claimant on his personal patronage or his unguarded finance, until he fell into the hands of the Jews, who offered him money at fifty per cent; and from them into the hands of political Jews, who offered him the national treasury at a price to which a hundred per cent was moderation. At this time the prince was nineteen, as ripe an age as could be desired for ruin; and in three short years the consummation was arrived at,—he was ruined."

We have read this picture of the change of manners with great pleasure; but we leave the subject, for an example of the characteristic personal sketches—Fox and Pitt.

Fox, "too generous and too lofty in his habits to stoop to vulgar conspiracy; perhaps, alike too abhorrent of blood, and too fond of his ease, to have exhibited the reckless vigour, or

endured the long anxieties, or wrapt up his mystery in the profound concealment of a Catiline, he had all the qualities that might have made a Caius Gracchus; the eloquence, the ingenuousness of manner, the republican simplicity of life, and the shewy and specious zeal of popularity in all its forms. Fox would have made the first of tribunes. He, unquestionably, possessed the means, at that period, to have become the most dangerous subject of England. Fox's life is a memorable lesson to the pride of talents. With every kind of public ability, every kind of public opportunity, and an unceasing and indefatigable determination to be at the summit in all things, his whole life was a succession of disappointments. It has been said, that, on commencing his parliamentary course, he declared that there were three objects of his ambition, and that he would attain them all:—that he should be the most popular man in England, the husband of the handsomest woman, and prime minister. He did attain them all; but in what diminished and illusory degree, how the 'juggling fiend kept the promise to the ear, and broke it to the hope,' is long since known. He was the most popular man in England, if the Westminster electors were the nation; his marriage secured him beauty, if it secured him nothing else; and his premiership lasted scarcely long enough for him to appear at the levee. In a life of fifty-eight years, Fox's whole existence as a cabinet minister was but nineteen months; while Pitt, ten years his junior, and dying at forty-seven, passed almost his whole life, from his entrance into parliament, at the head of the country."

We regret we cannot find room for the portrait of George III.; but we wish to relieve our theme, and, lo, some *bon-mots* offer themselves, as the folks say, quite handy. Hare was a wit of the day (1787).

"Pleasant news, this, from America," said he, meeting General Fitzpatrick on the first intelligence of Burgoyne's defeat. The general doubted, and replied, "that he had just come from the secretary of state's office without hearing any thing of it." "Perhaps so," said Hare; "but take it from me as a *flying* rumour." Fox's negligence of his fortune had induced his friends to find out a wife for him among the great heiresses. Miss Pulteney, afterwards Countess of Bath, was fixed upon; and Fox, though probably without any peculiar inclination to the match, paid his court for a while. A seat was frequently left for him beside the lady, and he made his attentions rather conspicuous during Hastings' trial. Some one observed to Hare the odd contrast between Fox's singularly dark complexion, and Miss Pulteney's pale face and light hair. "What a strange sort of children they will make," was the observation. "Why, *duns*, to be sure," replied Hare; "cream-coloured bodies, with black manes and tails."

"On the king's opening the session of parliament, the prince had gone in state in a military uniform, with diamond epaulettes. At dinner Doyle came in late, and, to the prince's inquiry, whether he had seen the procession? answered, that 'he had been among the mob, who prodigiously admired his royal highness's equipage.' 'And did they say nothing else?' asked the prince, who was at this time a good deal talked of, from his encumbrances. 'Yes. One fellow, looking at your epaulette, said, 'Tom, what an amazing fine thing the prince has got on his shoulders!' 'Ay,' answered the other, 'fine enough, and fine as it is it will soon be on our shoulders.' The prince

paused a moment; then looked Doyle in the face, and, laughing, said, 'Ah! I know where that hit came from, you rogue; that could be nobody's but yours. Come, take some wine.'"

"The Lewes races were thinly attended, in consequence of a rainy day. The prince and a few persons of rank were there, and underwent a drenching. On their return, some observation was made on the small number of noblemen on the course. 'I beg pardon,' said the prince; 'I think I saw a very handsome *sprinkling* of the nobility.'

"The conversation turning on some new eccentricity of Lord George Gordon; his unfitness for a mob leader was instanced in his suffering the rioters of 1780 to break open the gin-shops, and, in particular, to intoxicate themselves by the plunder of Langdale's great distillery in Holborn. 'But why did not Langdale defend his property?' was the question. 'He had not the means,' was the answer. 'Not the means of defence?' said the prince; 'ask Angelo: he, a brewer, a fellow all his life long at *cart* and *tierce*.'

"The prince's regiment were expecting orders for Ireland. St. Leger said that garrison duty in Dublin was irksome, and that country quarters were so squalid, that they would destroy the lace and uniforms of the regiment, which even then were remarkably rich. 'Well, then,' said the prince, 'let them do their duty as dragoons, and *scour* the country.'

"A heavy-heeled cavalry officer, at one of the Brighton balls, astounded the room by the peculiar *impressiveness* of his dancing. A circle of affrighted ladies fluttered over to the prince, and inquired, by what possibility they could escape being trampled out of the world by this formidable performer. 'Nothing can be done,' said the prince, 'since the war is over: then, he might have been sent back to America, as a republication of the *stamp* act.'"

Our next choice falls on a vivid sketch of the French court at the breaking out of the revolution (1795).

"The bewildered career and unhappy fate of the Duke of Orleans are now matter of history. He was born in a hazardous time for a man of weak understanding, strong passions, and libertine principles.—The monarch but a grown child: the queen, estimable but imperious, full of Austrian 'right divine,' and openly contemptuous of the people: the court jealous, feeble, and finding no resource for its weakness but in obsolete artifice and temporary expedient: the nobility a mass of haughty idlers, a hundred and twenty thousand gamblers and intriguers, public despisers of religion and the common moral obligations by which society is held together; chiefly poor, and living on the mendicant bounty of the court; worthless consumers of the fruits of the earth, yet monopolists of all situations of honour and emolument, and by their foolish pride in the most accidental of all distinctions, birth; by their open meanness of solicitation for that last livelihood which a man of true dignity of mind would seek, a dependence on the public purse; and by their utter uselessness for any purpose but that of filling up the ranks of the army; rendered at once weary of themselves and odious to the nation. But beyond those central, projecting points in the aspect of France, those fragments of the old system of the monarchy, the politician saw a wilderness of living waves, a boundless and sullen expanse of stormy passions, furious aspirations, daring ambition, and popular thirst of slaughter; a deluge, rising hourly round the final, desperate refuge of the

state, and soon to overtop its last pinnacle. But the Duke of Orleans was not to see this consummation. He returned to France; was seized by the men of liberty; condemned without a hearing by the votaries of immaculate justice; and murdered on the scaffold by the purifiers of the crimes of lawgivers and kings. The son of that duke has now peaceably ascended the magnificent throne which dazzled the ambition of his father. Whether France will long suffer a king, may be doubtful. But, while his claim is that of the national choice, entitled, by an exertion of extraordinary courage, justice, and moderation, to the disposal of the throne; we must rejoice that France has obtained a man of virtue, and that such a man should be endowed with so illustrious an opportunity of redeeming his name, and of spreading the benefits of wisdom and power to mankind."

The prince's marriage is a subject of great embarrassment to a biographer, but Mr. Croly has extricated himself with great credit: we can only cite a small portion of his account.

"Never was there a more speaking lesson to the dissipations of men of rank, than the prince's involvements. While he was thus wearied with the attempt to extricate himself from Lady Jersey's irritations, another claimant came; Mrs. Fitzherbert was again in the field. Whatever might be her rights; since the royal marriage, at least, the right of a wife could not be included among them; but her demands were not the less embarrassing. A large pension, a handsome outfit, and a costly mansion in Park Lane, at length reconciled her to life; and his royal highness had the delight of being hampered with three women at a time, two of them prodigal, and totally past the day of attraction, even if attraction could have been an excuse; and the third complaining of neglects, which brought upon him and his two old women a storm of censure and ridicule. But the whole

narrative is painful, and cannot be too hastily passed over."

And with this we must close our review. From the extracts it will be seen that the author's style is yet remarkable for the use of epithets rarely employed by other writers in a similar way or sense; and that his favourite phrases of sterner, opulent, fierce, vigorous, masculine, trivial, &c. &c. &c., figure frequently in alliterative or sonorous construction. This we notice as a peculiarity, not as a blemish. The force and talent of the whole will be acknowledged by every reader of discernment; and a work of the kind more likely to have a popular run we can hardly imagine. If we add to its literary merits, that an excellent portrait of the king is given as a frontispiece, and that the volume is printed in Moyes's best manner, we have done our duty towards heartily recommending the *Memoir of George IV.*

The New Comic Annual for 1831. By Sir John Falstaff. London: Hurst, Chance, and Co.

FROM what we have yet seen of the Annuals of this season (excepting the particular instances where we have expressed a different opinion, and to which instances we beg to refer), we are much inclined to think, upon the whole, that this class of publications must depend for success more upon its pictorial than its literary merits. Perhaps it may be that the novelty of such miscellanies having worn off, the contributors being almost the same year after year, and equally furnishing their efforts to several volumes, the subjects embracing little of variety, and other obvious causes, the *decies repetita non placet** one-tenth part so much as the first uprising of these annual luminaries. The mediocrity which, of necessity, must obtain possession of the mass of their pages, is a fearful drawback upon the enjoyment of readers, and

felt the more from generally being in juxtaposition with one or two, or, it may be, a greater number of exquisite productions. We get through one—two; but palling of the third demonstrates how intrinsically humble are the pretensions of all.

When we consider the great outlay upon these speculations, with new projects springing in to augment the crowd every year; when we consider the employment they give to the arts, though eminently calculated to destroy our GREAT School of Engraving; and when we admire those parts which are really original or beautiful, we are loath to speak of the entire body in terms of disparagement. But the truth is, there must be improvement, or the plates had infinitely better be published separately; in which shape they are even now, in four cases out of five, infinitely preferable to that of their forced and ill-matched union with letter-press.

We have been led to throw this glance over the field from the aspect of the novelty before us, which is an inseparable combination of wood-cut, and such other cuts as the wit of its author could invent; so that we have had no other way of making our readers acquainted with it except by copying two or three of the former, which, to say the least, have amused us quite as much as any of the latter. The Rotten-seat (1) was susceptible, especially at the period of a general election, of far more entertaining illustration than it has received: as in the generality of cases of very violent opposition, the object at issue is lost to the contending parties. Squally (2) is a good impersonation: and the Forlorn Hope (3) a sufficiently "humourous melancholy" allegory; such as we hope never to see the British Anchor, with its Sailor King [*private mem.* Clap-trap, agreeably to the fashion of the times], recognised!

1.

2.

3.

Now, with regard to the literary matter—since it must be so—we dislike the approaches to indelicacy in the *Hottentot Venus*, and warn the writer, that whatever may be the vices of the age, it is very fastidious on such points, and will not tolerate outward indecency in word or deed. We quote "the Waterman's Soliloquy," as one of the most favourable specimens:

"Well! things are coming to a pretty pass,
I think the end o'th' world will soon begin;
Some years ago, I used to get a glass
O' gin an' bitters—now I gets no gin,
But lots o' bitters. Now an honest man
Can't get no work—no, blow me if he can.

We sha'n't be able soon to see our way,
There's such a sight o' bridges building now—
And then they'll want gas lights to burn all day,
But they won't take one lighter-man in tow.
My poor old wherry's wery near worn out—
Folks never think o' taking wherries now;
And I have got the rheumatiz' an' gout—
But how to get clear on 'em I don't know.
The Steamers, tho' they do make lots of smoke,
Used once to bring us many a bite an' sup;
But now—folks walk ashore—a pretty joke!
I wish them cursed quays were all locked up.
I know the time, when I've earned two-pun-ten
In sixpences, a dozen at a time:

* *Anglicè; i. e.* in English (for we would translate every thing into mother-tongue), the tenth repetition does not please.

Such days as those I ne'er shall see again—
I'm getting old—I've long been past my prime.
Then, 'cause we've got no bridges—thee's Brunel
Must build one under ground—the cur'd Thames
Tunnel:
My eye—if he but knowed what I could tell,
How we contrived to make his work a funnel!

* Here is the list for the present year:—Forget-me-Not (1823), consequently vol. 9; Friendship's Offering (1824), vol. 8; Literary Souvenir (1825), vol. 7; Amulet (1826), vol. 6; The Winter's Wreath (1827), vol. 5; Keepsake (1828), vol. 4; Bijou (1829), vol. 4; Gem (1830), vol. 3; Landscape Annual (1830), vol. 2; Iris (1830), vol. 2; Hood's Comic Annual (1830), vol. 2; Sheridan's Comic Offering, Humourist, New Comic Annual, La Keepsake Français, The Talisman, all for 1831; besides half-a-dozen Juvenile, and half-a-dozen Musical companions.

I dare say we shall soon have on the water—
Steam omnibuses—plying for a fare—
If so—why then thank God I've lost my daughter
An' my old woman—they're a happy pair!
Things seem to be a-goin' upside down!
Carts, horses, waggons, porters with their loads,
Go under all the new bridges in town,
And arches now cross over streets an' roads.
Perhaps the Thames will be Macadamised,
And broad wheel waggons roll along like thunder;
And if they do—I shouldn't be surpris'd,
I've seen such strange things, nothing makes me
wonder.
Once, after plying heartily all day,
Tom Tug an' I could play a game o' skittles—
Now plying hard won't earn enough to pay
For bacca, lodgin, washin, and iny wittles."

Making out a blacksmith to be a "great sinner," on account of his forging, picking locks, possessing many vices, hanging belles, &c. &c., is also a tolerable *jeu d'esprit*; and the concluding trial of Falstaff is a clever finale. But we will finish with a flourish more personal to ourselves, and shew that "Claw me and I'll claw you," is a motto not unworthy of the egotism of periodical literature: thus speaks Falstaff of the *Literary Gazette*:

"Unchanged thy museum,
GAZETTE of Literature! in verse and prose—
By friends unward'd—immoveable to foes,
(Not so the Lyceum)

Stanch pillars are the columns of thy *Journal*,
And sound unto the very core the kernel,
The colonel sure—of learning's corps.

Luminous *Lit. Gaz.*
Bright as the gas-lights of these modern days,
Thy SCRIPPS delights the nation with essays,
Who the rare wit has
All subjects to dissect, quite liter-ary,
While the two Comics with their *lighter airy*
Scraps, do essay—to please the gay."

We should have been worse than Mohawks not to give so civil a fellow a good word, though, at the same time, truth and justice have compelled us to make use of the *cuts direct*.

The Water Witch; or, the Skimmer of the Seas: a Tale. By the Author of "the Borderers," "the Prairie," &c. 3 vols. 12mo. London, 1830. Colburn and Bentley.

A VERY romantic but interesting narrative, a mystery well kept up, and two or three exciting scenes written in Mr. Cooper's best manner, will ensure "a wet sail and a flowing sheet" to the *Water Witch*, on the tide of public favour. We make it a rule never to analyse the story of a novel. First, for the author's sake, to whose conceptions a meagre outline can do no possible justice; secondly, for the sake of the reader, whose pleasure is diminished in proportion as the *dénoûment* is anticipated. But we may give a view into the labyrinth, without exposing its mysteries. Among the characters introduced are, a semi-Dutch and American merchant, a very clever and original sketch; his niece, a self-willed beauty; and two lovers, one a young gallant captain of the *Coquette*, the other merely Athelstan, from *Ivanhoe*, turned merchant. The other prominent figures on the canvass are smugglers; and here Mr. Cooper's desire for the sublime has trenchanted upon the ridiculous. The whole mummery of the *Water Witch*, a figure at the head of the ship hence so called, and who gives oracular answers in quotations from Shakspeare—carries absurdity to its extent. Living in daily fear of the laws they break—the means and temptation of intoxication constantly before them—released from the wholesome discipline of social habit and order—the smuggler's position is one of utter moral debasement. But Mr. Cooper's smugglers are gentlemen of equally high principles, delicate feelings, and refined taste. We believe the secret of this lies in the commerce they

injure being British; the laws they outrage, British also—enough, it seems, to make their conduct meritorious in Mr. Cooper's eyes: but of this more anon. This is a very difficult book for quotation; the best scenes are too long;—there is a chase through a dangerous passage from the harbour of New York, which is splendidly written: we will content ourselves with a description of the *Water Witch* herself.

"It has been said that the hull of this celebrated smuggler was low, dark, moulded with exquisite art, and so justly balanced as to ride upon its element like a sea-fowl. For a little distance above the water it shewed a blue that vied with the colour of the deep ocean, the use of copper being then unknown, while the more superior parts were of a jet-black, delicately relieved by two lines, of a straw-colour, that were drawn, with mathematical accuracy, parallel to the plane of her upper works, and consequently converging slightly towards the sea beneath her counter. Glossy hammock-cloths concealed the persons of those who were on the deck, while the close bulwarks gave the brigantine the air of a vessel equipped for war. Still the eye of Ludlow ran curiously along the whole extent of the two straw-coloured lines, seeking in vain some evidence of the weight and force of her armament. If she had ports at all, they were so ingeniously concealed as to escape the keenest of his glances. . . . Par-taking of the double character of brig and schooner—the sails and spars of the forward mast being of the former, while those of the after-mast were of the latter construction—seamen have given to this class of shipping the familiar name of *Hermaphrodites*. But though there might be fancied, by this term, some want of the proportions that constitute seemliness, it will be remembered that the departure was only from some former rule of art, and that no violence had been done to those universal and permanent laws which constitute the charm of nature. The models of glass, which are seen representing the machinery of a ship, are not more exact or just in their lines, than were the cordage and spars of this brigantine. Not a rope varied from its true direction; not a sail, but it resembled the neat folds of some prudent housewife; not a mast or a yard was there, but it rose into the air, or stretched its arms, with the most fastidious attention to symmetry. All was airy, fanciful, and full of grace, seeming to lend to the fabric a character of unreal lightness and speed. As the boat drew near her side, a change of the air caused the buoyant bark to turn, like a vane, in its current; and as the long and pointed proportions of her head-gear came into view, Ludlow saw beneath the bowsprit an image that might be supposed to make, by means of allegory, some obvious allusions to the character of the vessel. A female form, fashioned with the carver's best skill, stood on the projection of the cut-water. The figure rested lightly on the ball of one foot, while the other was suspended in an easy attitude, resembling the airy posture of the famous *Mercury of the Bolognese*. The drapery was fluttering, scanty, and of a light sea-green tint, as if it had imbibed a hue from the element beneath. The face was of that dark bronzed colour which human ingenuity has from time immemorial adopted as the best medium to portray a superhuman expression. The locks were dishevelled, wild, and rich; the eye full of such a meaning as might be fancied to glitter in the organs of a sorceress, while a smile so strangely meaning and malign played about the mouth, that the young sailor started, when

it first met his view, as if a living thing had returned his look."

We take a portion of one of her encounters: the *Coquette* has followed her into a secluded cove.

"The wind, which had so long varied, began to be heard in the rigging of the silent brigantine, and the two elements exhibited unequivocal evidence, in their menacing and fitful colours, of the near approach of the gust. The young sailor, with an absorbing interest, turned his eyes on his ship. The yards were on the caps, the bellying canvass was fluttering far to leeward, and twenty or thirty human forms on each spar, shewed that the nimble-fingered topmen were gathering in, and knotting the sails down to a close reef. 'Give way, men, for your lives!' cried the excited Ludlow. A single dash of the oars was heard, and the yawl was already twenty feet from the mysterious image. Then followed a desperate struggle to regain the cruiser, ere the gust should strike her. The sullen murmur of the wind, rushing through the rigging of the ship, was audible some time before they reached her side, and the struggles between the fabric and the elements were at moments so evident, as to cause the young commander to fear he would be too late. The foot of Ludlow touched the deck of the *Coquette* at the instant the weight of the squall fell upon her sails. He no longer thought of any interest but that of the moment; for, with all the feelings of a seaman, his mind was now full of his ship. 'Let run every thing!' shouted the ready officer, in a voice that made itself heard above the roar of the wind. 'Clue down, and hand! Away aloft, you top-men!—lay out!—furl away!' These orders were given in rapid succession, and without a trumpet, for the young man could at need speak loud as the tempest. They were succeeded by one of those exciting and fearful minutes that are so familiar to mariners. Each man was intent on his duty, while the elements worked their will around him, as madly as if the hand by which they are ordinarily restrained was for ever removed. The bay was a sheet of foam, while the rushing of the gust resembled the dull rumbling of a thousand chariots. The ship yielded to the pressure, until the water was seen gushing through her lee scuppers; and her tall line of masts inclined towards the plane of the bay, as if the end of the yards were about to dip into the water. But this was no more than the first submission to the shock. The well-moulded fabric recovered its balance, and struggled through its element, as if conscious that there was security only in motion. Ludlow glanced his eye to leeward. The opening of the cove was favourably situated, and he caught a glimpse of the spars of the brigantine, rocking violently in the squall. He spoke to demand if the anchors were clear, and then he was heard shouting again from his station in the weather gang-way—'Hard a-weather!' The first efforts of the cruiser to obey her helm, stripped as she was of canvass, were laboured and slow. But when her head began to fall off, the driving scud was scarce swifter than her motion. At that moment the sluices of the cloud opened, and a torrent of rain mingled in the uproar, and added to the confusion. Nothing was now visible but the lines of the falling water, and the sheet of white foam through which the ship was glancing. 'Here is the land, sir!' bellowed Trysail, from a cat-head, where he stood resembling some venerable sea-god, dripping with his native element; 'we are passing it, like a race-horse!' 'See your bowers clear!' shouted

back the captain. "Ready, sir, ready—" Ludlow motioned to the men at the wheel to bring the ship to the wind; and when her way was sufficiently deadened, two ponderous anchors dropped, at another signal, into the water. The vast fabric was not checked without a further and tremendous struggle. When the bows felt the restraint, the ship swung head to wind, and fathom after fathom of the enormous ropes was extracted by surges so violent as to cause the hull to quiver to its centre. But the first lieutenant and Trysail were no novices in their duty, and, in less than a minute, they had secured the vessel steadily at her anchors. When this important service was performed, officers and crew stood looking at each other, like men who had just made a hazardous and fearful experiment. The view again opened, and objects on the land became visible, through the still falling rain. The change was like that from night to day. Men who had passed their lives on the sea drew long and relieving breaths, conscious that the danger was happily passed. As the more pressing interest of their own situation abated, they remembered the object of their search. All eyes were turned in quest of the smuggler; but, by some inexplicable means, he had disappeared. "The Skimmer of the Seas!" and "What has become of the brigantine?" were exclamations that the discipline of a royal cruiser could not repress. They were repeated by a hundred mouths, while twice as many eyes sought to find the beautiful fabric. All looked in vain. The spot where the Water Witch had so lately lain was vacant, and no vestige of her wreck lined the shores of the cove."

We have now done with Mr. Cooper in a literary point of view. We except the mystical nonsense of the "Green Lady" and her quotations, and give the due praise to a spirited and exciting narrative. And next a few words with the author himself. In an American writer, a predilection for his own land, a wish to uphold her excellence, is not only justifiable—it is commendable: but let this be done in good faith, and not by false, malicious, and underhand attacks on another country. In every page Mr. Cooper's hostility to England breaks out: her religion, her laws, her loyalty, her national pride, are incessantly held up for ridicule and insult. A clergyman is never mentioned but to be made the subject of some such commonplace witticisms as the following, which we select from innumerable instances:—"I speak as disinterestedly as a parson preaches. * * * Your forbearance and charity might adorn a churchman," &c. The following sneer at our naval supremacy is put into the mouth of an English sailor, by whom it is unconsciously uttered:—

"The queen is right to make those rogues lower their flags to her in the narrow seas, which are her lawful property, because England, being a healthy island, and Holland no more than a bit of bog turned up to dry, it is reasonable that we should have the command afloat. No, sir, though none of your outcriers against a man because he has had bad luck in a chase with a revenue cutter, I hope I know what the natural rights of an Englishman are. We must be masters here, Captain Ludlow—will ye, nill ye—and look to the main chances of trade and manufactures!" "I had not thought you so accomplished a statesman, Master Trysail!" "Though a poor man's son, Captain Ludlow, I am a free-born Briton, and my education has not been entirely overlooked. I hope I know something of the constitution, as well as my betters. Justice and honour

being an Englishman's mottoes, we must look manfully to the main chance. We are none of your flighty talkers, but a reasoning people; and there is no want of deep thinkers on the little island; and therefore, sir, taking all together, why England must stick up for her rights!"

We can, however, excuse another nation finding British supremacy on the seas a very sore subject. A Lord Cornbury is introduced without the slightest connexion with the story, merely to represent an English nobleman as a depraved and unprincipled scoundrel. When historical personages are depicted, we are now accustomed to look for historical accuracy; and we see no reason why Queen Anne should have a cousin conjured up merely to be abused. But we have no space to prolong evidence of this invidious spirit. We think Mr. Cooper's sneers at a country which he may thank for all his literary success, are equally contemptible and ungrateful. We have only one question to ask—If, as he asserts, America has taken the lead in the march of improvement, what brings him on this side of the Atlantic? We quote his own words, and ask, "Under a system, broad, liberal, and just," as that of America, how does it happen that an American author brings out his work with an English publisher, and looks to an English public for fame and profit?—Let us, for argument, contrast this author with his far more eminent countryman, Washington Irving: the former all fury, malignity, and abuse—committing against England the very offence of which Americans complain that English writers are guilty against their country: the latter, indulgent to the faults, and liberal to the virtues, of both countries, amiably joining the wise and patriotic number who cultivate the better feelings of humanity and international esteem.

Friendship's Offering; a Literary Album, and Christmas and New-year's Present for 1831. 12mo. pp. 408. London. Smith, Elder, and Co.

WE really do think the conclusion of the preface to this work not a little grandiloquent; and must confess we are at a loss to discover in what it is so much superior to its competitors, as to expect a duration beyond theirs, or to take the lofty tone of the following proud little phrase:—"The *Friendship's Offering* is to impress the mind, and to assist in forming the taste, exercising the judgment, and improving the heart." And all this is to be done by poetry, the major part of which is mediocre, and tales which, whether for originality or amusement, are inferior to several of their predecessors. Look to the poetry first: if we except some very spirited poems by Mr. Kennedy (a most efficient contributor to this work), and three very splendid ones, evidently Croly's, there is an utter want of originality—nothing to haunt the ear and dwell upon the heart." Next for the prose: and, first, we beg to object in general to that tale-writing principle which taking some incident from a volume of history or travels, to save the trouble of invention, wire-draws it with descriptions, and then sends it as a story to the Annuals.—Mr. Mac Farlane's "Tale of Venice" is the fiftieth-timetold incident of a lady buried alive, and dug up again by her lover: considering this is extended to some twenty pages, it must be confessed it is made the most of. "Kishna Komari," a tale of a similar kind, is, however, much better told. "The Valley of the Shadow of Death" is a fine-sounding name for the old incident of a man hanged, and brought to life

afterwards. This occurrence seems a favourite, for there is also a story founded on it in the *Winter's Wreath*. Miss Mitford has a country story; and we must say her rural quarry seems pretty well worn out: they are like engravings, so many copies have been taken, that but a very faint impression remains of the fresh and original design. There are two Irish stories, one by Mr. Banim (the "Stolen Sheep"), the other by Mrs. S. C. Hall. The history and ballad of Auld Robin Grey are both too well known to have needed repetition. But we close our criticism by a remark on "the New Atlantis," a tale very much below Mr. Galt's powers; and surely the rare and ungrateful belief, that a savage is preferable to a cultivated state, might be left with the many other sophisms of Rousseau. We quote the two following poems; omitting Mr. Kennedy's fine ballad, as we have already given it elsewhere:

A Birth-day Ballad. By Miss Jewsbury.

"Thou art plucking spring roses, Génie,
And a little red rose art thou,
Thou hast unfolded to-day, Génie,
Another bright leaf, I trow;
But the roses will live and die, Génie,
Many and many a time,
Ere thou hast unfolded quite, Génie—
Grown into maiden prime.

Thou art looking now at the birds, Génie,
But O do not wish their wing!
That would only tempt the Fowler, Génie,
Stay thou on earth and sing;
Stay in the nursing nest, Génie,
Be not soon thence beguiled,
Thou wilt ne'er find a second, Génie,
Never be twice a child.

Thou art building towers of pebbles, Génie—
Pile them up brave and high;
And leave them to follow a bee, Génie,
As he wandereth singing by:
But if thy towers fall down, Génie,
And if the brown bee is lost,
Never weep, for thou must learn, Génie,
How soon life's schemes are crost.

Thy hand is in a bright boy's, Génie,
He calls thee his sweet wee wife,
But let not thy little heart think, Génie,
Childhood the prophet of life:
It may be life's minstrel, Génie,
And sing sweet songs and clear;
But minstrel and prophet now, Génie,
Are not united here.

What will thy future fate be, Génie?
Alas! shall I live to see!
For thou art scarcely a sapling, Génie,
And I am a moss-grown tree!
I am shodding life's leaves fast, Génie—
Thou art in blossom sweet;
But think betimes of the grave, Génie,
Where young and old oft meet."

The Knight's Song. By W. Motherwell.

"Endearing! endearing!
Why so endearing
Are those dark lustrous eyes,
Through their silk fringes peering?
They love me! they love me!
Deeply, sincerely,
And more than aught else on earth
I love them dearly.

Endearing! endearing!
Why so endearing
Glow the glad sunny smile
On thy soft cheek appearing?
It brightens! it brightens!
When I am nearing;
And 'tis thus that thy fond smile
Is ever endearing.

Endearing! endearing!
Why so endearing
Is that lute-breathing voice
Which my rapt soul is hearing?
'Tis tenderly singling
Thy deep love for me,
And my faithful heart echoes
Devotion to thee.

Endearing! endearing!
Why so endearing,
At each Passage of Arms,
Is the herald's bold cheering?
'Tis then thou art kneeling,
With pure hands, to heaven,
And each prayer of thy heart
For my good lance is given.

Endearing! endearing!
Why so endearing
Is the fillet of silk
That my right arm is wearing?

Once it veiled the bright bosom
That beats but for me;
Now it cleaves the arm that
Wins glory for thee."

Essays on the Universal Analogy between the Natural and the Spiritual Worlds. Essay I. Section 2. By the Author of "Memoirs of a Deist." 8vo. pp. 357. London, 1830. Hatchard and Son.

BISHOP — (we forget his name) was wont to observe, that he never could read Butler's *Analogy*, a work remarkable for the continuous strength of its reasoning, for more than half an hour at a time, without bringing on a violent headache. In this respect, the present writer on "universal analogy" has far out-Butlered Butler; for we defy any one (understanding is out of the question) to read the book (which it is our lamentable duty to notice, as a precaution to the public) for five consecutive minutes, without suffering from a racking vertigo, and having their brains bewildered for the rest of the day. If, after this warning, people will look into this book, they cannot blame us for having omitted the negative part of our duty, in telling them what they ought not to read, as well as recommending what we think worthy of their attention. Lest, however, curiosity should predominate over caution, we give a short specimen, which, we do not doubt, will effectively allay, if it cannot gratify, such unpardonable propensities; at the same time, in order that the following quotation may not be too severe an infliction, we have been particular in giving the most simple and rational passage we could select.

"As the moon is so very important a personification in my allegorical sketches, that is to say, the supposed type of human reason and conscience, or the head of the earth and waters, it would be an unpardonable neglect and omission not to consider the outline of her or his analogies, as briefly touched on by Mr. Ferguson in his general view of the solar system. I have already observed, that the moon in the above view is female with respect to the sun, but male with respect to the earth; for St. Paul says, 1st of Corinthians, 'I would have you to know, that the head of every man is Christ; and the head of the woman is the man; and the head of Christ is God.' Mr. Ferguson says, chap. ii. p. 21—23, &c. 'She turns round her axis exactly in the time that she goes round the earth, which is the reason of her keeping always the same side towards us, and that her day and night, taken together, is as long as our lunar month.' That is to say, human reason is, or should be, in its conduct with respect to the rest of the human system, as our Lord was with his disciples, viz. 'He that is greatest among you let him be as the younger; and he that is chief, as he that doth serve. For whether is greater, he that doth sit at meat, or he that serveth? But I am among you as he that serveth.' Luke xxii. Thus the moon, though superior in the system, is a satellite or attendant on the earth, and goes round it continually, as the earth goes round the sun. But though the action is similar in both cases, yet with respect to the intention of the action, it is inversely similar. For the earth goes round the sun to be enlightened, and vivified, and regulated by it; but the moon goes round the earth to enlighten, and perhaps to vivify, indirectly, but certainly to influence and regulate it in various instances. If this be applied to reason, as it influences the mind and heart, the analogy will be very obvious. Reason, though it is the guide, the governor, and king, is like a friend, or tutor, or guardian. It is a husband, an

instructor, and watchman; therefore it goes round its charge continually, to see, as it were, that all is well; and its constant vigilance is well denoted by always keeping the same side towards the earth; that is to say, the face. Yet the orbit or conduct of reason, like that of Moses, is so very meek, courteous, and obsequious, that the heart and imagination, like Miriam and Aaron, often forget that it is a guide and tutor, and mistake it for an upper servant or steward. They often rebel against his authority, and the watchman sometimes forgetting 'whose authority he hath,' and wearied by solicitation and opposition, submits weakly to this importunity, and not only relaxes in vigilance, but is half coaxed, half teased into participation, and, like Comus, submits to regulate, with his rod of divine proportions, those irregularities which he ought positively to forbid. Hence proceed the storms and disorders of the moral system. • • • Human reason, like the moon, and like the eye, though it is the organ of light, is dark in itself, and only reflects the light of the knowledge of truth, which it receives from the sun of righteousness, or that which it receives from the consideration and light of nature (both human and terraqueous) by the medium of mind and heart. For the different transparencies of the eye seem rather to symbolise the imagination than reason itself; and, in this view, the highly sensible optic nerve, derived directly from the brain (moon), and on which they impress their received and transmitted images, will be the symbol of reason and conscience. Imagination and sentiment form the vehicle, the conductor; but reason and conscience are the judges, united in one perception. The dark period of the new moon seems to denote, first, the state of reason in the infant or child. It is there. It is in the system; but the side which illumines the earth has not yet received the light of that knowledge. The other side, on which the sun then acts, is the side of sentiment or feeling. The heat of the spiritual sun, of which its rays are full, enlightens the infant reason of man by the sentiment of love, and, more generally speaking, by consciousness. Hence the sphere of human reason is divided into these two hemispheres, and its action on us is imperfect, unless it has the testimony of the heat or sensibility of conscience, as well as the light of demonstration."

Our readers are not perhaps aware by whom the longitude may be discovered: the difficulty is here solved.

"The moon's inhabitants on the side next the earth, may as easily find the longitude of their places, as we can find the latitude of ours."

Our review necessarily resolves itself into the question, Is or is not this man a *lunatic*? Sophocles, when accused by his sons of being incapable of managing his own affairs, procured a verdict in his favour by reading before his judges a tragedy he had just composed: how far the present work might go to secure for its author a contrary decision, we leave to the chancellor; before any literary tribunal, it would confoundedly puzzle any "learned brother" to shew cause why a statute of lunacy should not be issued against such a writer as the Essayist on Universal Analogy.

The Arrow and the Rose; with other Poems.

By William Kennedy. 8vo. pp. 143. London, 1830. Smith, Elder, and Co.

We can imagine many a situation in which this volume will be enjoyed: it might be read, as its hero stood, "under a pleasant chestnut tree;"

or it might pass away a November evening—so it might be enjoyed. But to be appreciated, we think the reader ought to be a professed critic, and in the habit of wading through inane tomes, numerous as the leaves of the spring, and like them, inasmuch as to-day they put forth, and to-morrow they die. Volumes whose sole inspiration must have been like that of Pope's hero—

"Some demon whisper'd, Visto have a taste;"

and of all tastes, a poetical taste is the oftenest mistaken for talent. Critics, therefore, and critics only, can do full justice to the spirit, the deep feeling, the energy, of the present work. Yet Mr. Kennedy has his faults—faults, though, more from without than from within. He has the thought, the feeling of a true poet; but he is a careless and unequal writer, and one who gives us the idea of possessing far higher powers than he has yet exerted. Now we do not like the way in which the story of the principal poem is told: there is a tone of levity quite out of keeping with the touching and romantic legend on which it is founded. We do not like a poet to sing as Cassius smiled—

"As if he mocked himself, and scorned his spirit:"

a simple and serious narrative ought not to be told with a sneer. We remember this very history beautifully given, though in prose, in *Knights' Quarterly Magazine*. Now Mr. Kennedy would have told it ten times better in poetry, for which it seems made, but for what we hold an error, or rather an affectation, in judgment. The mould of his mind, and the turn of his philosophy, appears to us essentially bitter and severe. He is too unbending to be playful; and his sarcasm has in it more of a frown than a smile. We consider Mr. Kennedy's love poetry some of the finest that ever was written—and why? because it is simple, serious, and intense: our author is too deep a thinker to be a light one—he never writes so well as when he is, or at least seems to be, in earnest. Our readers will, we trust, excuse our re-quoting two or three exquisite verses from the *Fifful Fancies*, as an illustration of our meaning, and how this story might have been treated.

"This present time, in crowded halls,
Surrounded by the gay,
I follow, in forgetfulness,
Her image far away;
And if I list a touching voice,
Or sweet face gaze upon,
'Tis but to fill my memory
With that beloved one.

For days—for months—devotedly
I've fingered by her side,
The only place I coveted
Of all the world so wide;
And in the exile of an hour,
I consolation found,
Where her most frequent wanderings
Had marked it holy ground.

• • • • •
I longed to say a thousand things,
I longed, yet dared not speak,
Half-hoped, half-afraid, that she might read
My thoughts upon my cheek.
Then, if unconsciously she smiled,
My sight turned faint and thick,
Until, with very happiness,
My reeling heart grew sick.
O days of youth! O days of youth!
To have these scenes return,
The pride of all my riper years
How gladly would I spurn!
That form—the soul of my boy-life—
Departed, and none came
In after-time, with half the charm
Which cleaves unto her name."

Nothing can, we think, exceed the truth, beauty, and simplicity, of the above lines; and it is thus that the early love of Henry of Navarre and the beautiful peasant should have been recorded. Of the shorter poems, we can speak in terms of high praise: there is one called "Thirty Years," equally original and

striking—it has already been published, or we should quote it: we proceed to the following spirited strain:—

“The Bold Lover.”

For years I adored thee,
But hope had I none,
That e'er thy proud father
Would brook such a son.
If my hand sent no token,
My lip made no sign,
To picture my passion,
The fault was not mine!
I've watched thee unwearied
In greenwood and hall,
Unseen by thy kindred,
Thy wooers, and all;
Though men cried, a marvel!
I worshipp'd thee, where
The knees of the holy
Were bending in prayer.
I've looked to thy window
In stillness of night,
And longed for the wings
Of the happy moon-light:
It flew to thy chamber,
And slept on thy brow,
Entranced by thy beauty,
As I, sweet, am now!
In secret I burned
For moment like this,
To know if my portion
Be torture or bliss:
'Tis speaking a word, and
Our meeting is o'er—
'Tis speaking a word, and
We part never more!
To win thy gray father,
I've no patch of earth;
To match thy high brothers,
I've no musty birth.
Let the rich call me beggar,
The titled a churl—
My blade is as true as
The sword of an earl.
Thou shalt not lack honour,
Thou shalt not need land,
While there's wit in this head,
Or strength in this hand.
And better than jewels,
Or old pedigree,
Sole queen of my bosom
Enthroned thou shalt be!
My steed grows impatient,
And paws at the gate;
He frets for bright moments
That fly as we wait.
He tells me, ere morning,
Far, far I must ride,
To lead to the altar
A fugitive bride.”

We must find room for “A New-Year Ode.”

“Thou art gone, Old Year, to thy fathers,
In the stormy time of snow,
In the endless faults of Eternity,
Thy coffin's laid off the row.
And some will pledge thy memory,
Till eyes and cups run o'er;
But never a drop would I waste on thee,
Hadst thou died six months before!
Sad cause have I to remember
The hour you shewed your face—
That time the red gold lined my pouch,
My credit was in good case;
Now my purse is a feather—and credit
Is sped of a quick decline,
O it breaks my heart when, perforce, I pass
Mine old host's jolly sign!
I had a dear love and a winsome love,
Broad acres were her own,
We kiss'd an all-hall! to thy natal morn,
But she, even she, is flown!
I had a friend of the rarest,
We welcomed it merrily;
Now our hearts are as far asunder
As the stars and the rolling sea.
Thou hast play'd the churl with me, dead Year!
And shalt thou be forgiven?
No—by the prayer of bedsman young,
When erring maid is ahriven!
Be thy name no more remembered,
For the ill deeds thou hast done,
To a friendless, loveless, penniless man,
Whose hopes are in thy son!”

We conclude with the following poem.

“A Last Remembrance.”

I never more shall see thee
Except as now I see,
In musings of the midnight hour,
While fancy revels free!
I'll never hear thy welcome,
Nor clasp thy thrilling hand,
Nor view thy home, if e'er again
I hail our common land.

I have thee full before me—
Thy mild, but mournful eye,
And brow as fair as the cold moon
That hears thy secret sigh.
There are roses in thy window,
As when I last was there;
But where hath fled the matchless one
Thy young cheek used to wear!
Though parted, maid—long parted,
And not to meet again—
One star hath ruled the fate of both,
And seared our hearts with pain;
And though before the altar
I may not call thee bride,
Accept a token of the bond
By which we are allied.
I've found for thee an emblem
Of what hath fallen on me—
A leafless branch that lately crowned
A lightning-stricken tree;
Torn from the pleasant stem it loved,
The severing scar alone
Remains to show that e'er it grew
Where it for years had grown.
For pledges of affection
I'll give thee faded flowers,
And thou shalt send me withered leaves
From Autumn's naked bowers;
The tears of untold bitterness
I'll drink instead of wine,
Carousing to thy broken peace—
Do thou as much for mine!
Whene'er a passing funeral
Presents its dark array,
For thee, my maiden desolate!
I will not fail to pray.
Beneath the quiet coffin-lid
'Twere better far to sleep,
Than live to nurse the scorpion Care
Within thy bosom deep.
The midnight wind is grieving—
It's melancholy swell
Doth make it meet to bear to thee
Thy lover's last farewell;
Farewell, pale child of hopelessness!
'Tis something still to know,
That he who cannot claim thy heart,
Partakes of all its wo.”

We close Mr. Kennedy's pages with present pleasure and future anticipation—he is a poet, if thought, feeling, and originality, can make one; and of such a foundation we say, as Hamilton says of the gardens of Florence—
“And there the laurel grows, that hallow'd tree.”

The Iris; a Religious and Literary Offering.
Edited by the Rev. Thomas Dale. London, 1831. S. Low; Hurst, Chance, and Co.

A VERY inferior production. If we except a “Visit to Beachy Head,” by Mr. Chauncey Hare Townsend, and Mrs. S. C. Hall's “Curse of Property,” there is nothing else which rises to mediocrity. The first of these is most gracefully written, though the writer, we think, has rather given the hero his own keen and imaginative feelings, than those most likely to be possessed by a man on the preventive service. We especially dislike such stories as “Nathan and David,” “Mount Moriah,” and “Abraham.” These sacred morals can never be improved. The narratives of the Scripture are best told in their own simple and energetic language; and may be turned to much better account than being made the staple of wire-drawn stories for an Annual.

Constable's Miscellany. Vol. LIX. The third and last volume of Bourrienne's Memoirs of Buonaparte. By Dr. Memes. Edinburgh, Constable and Co.: London, Hurst and Co. DR. MEMES is unlucky in his notice prefixed to this volume, challenging the world for the authenticity of its details, as if they were superior to those in the preceding narrative; whereas it is well known to those most competent to judge, that, high as Bourrienne deservedly stands as furnishing materials for history, it is particularly in the earlier parts of

* As critics are expected to know every thing, we beg leave to say, we are aware that Hamilton is only the *nom de guerre* of a clever writer.—Mr. John Reynolds.

his revelations that he is most worthy of credit. In fact, after he left the person of Buonaparte he could not have access to the same spring-head, and therefore his intelligence could not be so immaculate as before. We do not, however, (after all we have said in praise of these Memoirs,) mean to impeach their general veracity; only to state the fact, that towards their close there is more of the working of the publishers' laboratory superinduced than there is upon the preceding volumes. Still, to the very end, the work is most valuable and interesting, in spite of the interpolations of the journey-men *littérateurs* of M. L'Avocat. Before saying good-by to Dr. Memes, we should notice, that his keeping the Duc de Bourbon (Condé) alive, in the Appendix, p. 413, so long after his mysterious, yet notorious death, ought not to have escaped without a memorandum of correction.

Chartley; or, the Fatalist. By a Contributor to Blackwood. 3 vols. 12mo. London, 1831. Bull.

THE story is improbable and unconnected, the moral decidedly bad, and the *dénouement* a common-place collection of horrors. If the writer has contributed to Blackwood, now that he stands alone, even Blackwood's name can contribute nothing to him.

Old Booty, or the Devil and the Baker: a serio-comic Sailor's Tale. By W. T. Moncrieff, Esq.; with six wood-cuts by R. Cruikshank. London, 1830. W. Kidd.

WE are a-wearying of these diableries. The legend of *Old Booty's* ghost in its flight to Strombolo is a good galley-yarn in prose, which Mr. Moncrieff has not improved by paraphrasing into verse in imitation of Scott. The cuts do not possess any novelty of invention; but as the “article” is a very cheap one, a shilling, we suppose it may go with the rest.

ARTS AND SCIENCES.
GERMAN NATURALISTS.

[A fortnight ago we briefly noticed the proceedings of this association at their fourth and last public meeting, held at Hamburgh (see L. G., page 657); since which we have been favoured by an intelligent correspondent on the spot with a more particular account of this body, its objects, and proceedings. We subjoin the communication, as one of considerable interest, both to the general and scientific reader.]

THERE is formed in Germany a general association of Naturalists and Therapeutists, for the interchanging of knowledge, the discussing of speculations, and the stimulating of research. All those who have any pretensions whatever to be included under either of the above classes, are invited yearly, by some one or other of the German governments, to assemble within its dominions, where they are entertained at great cost. Public sittings are held, lectures and papers are communicated, discoveries are promulgated, and works are conjointly undertaken by various members. Such a union of the learned, promises, at first sight, to work wonders in the furtherance of science. From some yet unexplained cause, however, joint-stock-wisdom companies have hitherto uniformly failed to realise the expectations of their projectors: perhaps the fault lies with those who expect too much, and calculate after the manner of the two travellers who, having a journey of ten miles to perform, proposed to lighten the undertaking by each going five.

The services which Germany has rendered to science and philosophy are eminent, and have received their full meed of distinction. But her many-titled schoolmen, not content

with this, would arrogate to themselves a right to hold the learned of all other lands cheap, and would have all tongues and all nations bend the knee of deference before them. Arrogance is either the stamp of a small mind, or the assumed robe of impudent empiricism: what pretensions, however, the German philosophers have to be placed over others may, in some degree, be judged of from the report of the meeting of *Natur Forscher*, lately held at Hamburg. The public sittings were four in number, and the things therein said and done were as follow:—

The venerable Dr. Bartels, burgomaster of Hamburg, assumed the chair, and opened the proceedings by an address, in which he disclaimed the title of naturalist or mediciner, but was happy to welcome his learned guests. He and his fellow-citizens, he said, lived by the sweat of their brows in *industrial* pursuits; nevertheless, as all science is directed to the advancement of the economy of life, and as they were practical enjoyers of life's good things to a great extent, they were, of course, deeply interested in the success of scientific labours. Some of the illustrious sages present seemed to take this for a bit of wicked wit of the old burgomaster's.

Professor Struve, of Dorpat, drew a comparison between the state of astronomical science in the countries of Europe, in which he placed Germany at the top of the list, conferred the second rank on Russia, and set down France and England together at the bottom. For the German instrument makers, too, he claimed the prize. But, as he communicated no new discoveries of the Germans, and failed to point out the errors of the French and English for rectification, his estimate rests as his dictum.*

Professor Wendt, of Breslau, struck upon a subject of genuine German growth and character—the phenomena of animal magnetism,—in the miraculous character of which he seemed to be a devout believer, being unable to render any physiological explication of them. Fearful was the interest with which his gaping-mouthed auditory listened to his details. He told of individuals who, under the magnetic influence, received the gift of tongues, of prophecy, and of divination; of patients who gave an oracular diagnosis of their malady, foretold its issue, and prescribed remedies; and of persons who were enabled to decipher sealed manuscripts with their fingers and toes. He told also of magnetisers who, in attempting the process of manipulation on too robust subjects, had themselves become charged with the magnetic fluid, and had fallen victims to their experiments. It would take up much space to enumerate all the cases, said to be thoroughly well attested, which he recounted: they were, however, sufficient to excite a strong curiosity to investigate some of these singular instances of delusion or imposture. The professor, in the course of his remarks, admitted that the magnetic influence was strongest on persons of imbecile mind; and was of opinion that the renowned seeress of Revorst had been plunged into irreclaimable insanity by its operation. He concluded by warning people against dabbling in riddles and affairs of death, by practices which are at least a tempting of the Almighty, and a trifling with human life.

The second sitting was opened by State-counsellor Derstedt, of Copenhagen, who entered upon the application of mathematics in

* We met Professor Struve at Sir James South's, only a few weeks ago; and should have thought that the impression of his reception there, and what he witnessed, would have made him speak differently of English science! —Ed. L. G.

natural philosophy; and predicated, after the manner of Mr. Brougham, "that, in order to estimate thoroughly the pleasures and advantages to be derived from any particular science, it is necessary to become acquainted with that science." He dwelt on the expanding effect which the contemplation of our revolving system has upon our grasp of mind; and alluded to the surmises which have been started of our universe being but a rotating portion of ulterior systems; and recommended, as a mental exercise, the following out of these surmises, and the extending of imagination's scan beyond the infinity of space, where no bounds coop the daring speculator. This is a choice specimen of the sort of bewilderment which the German schools take for vastness of idea. It reminds us only of the fancies of little children, who amuse themselves by imagining that their stomachs are inhabited, and that worlds exist in the atoms of their bread and butter.

Professor Wilbrand, of Giessen, in a lecture of more rational tone, gave himself vast trouble to prove that the cause of the tides has not been satisfactorily explained; for which phenomena, he, too, was unable to account.

Professor Pfaff, of Kiel, produced some preparations from the coffee berry, which he intended to try as a substitute for bark and quinine. When his preparations shall have been put to the test, their importance can be appreciated. This gentleman found much favour with his hearers, by the humour of his delivery.

At the third sitting, Dr. Simon, of Hamburg, pronounced a panegyric on the art of medicine. It was expected that he was about to propose an augmentation of the paltry fees bestowed on German physicians; but he had no practical aim, and was heard with impatience. The rest of the time was occupied with matters of business, during which Vienna was fixed on as the place of the next year's meeting.

At the fourth and last sitting, Dr. Stierling read an animated essay on the retributive powers of justice. He justified the introduction of such a subject by quoting from Descartes, that many of the moral phenomena received light from being treated in a medical view. His aim was to abolish the vindictive, and substitute the penitential system with criminals.

Dr. Stinzing, of Altona, read the details of a plan for publishing a great physiological work, in periodical parts, under the joint direction of their most eminent members. The matter remains for consideration.

A proposal was made to petition the King of England and the East India Company for extension of furlough to Dr. Wallich, of Calcutta, in order to enable him to complete his *Flora Indiensis*. We should have thought it better to address themselves to one party only, lest his majesty of St. James's and their majesties of Leadenhall Street should not be unanimous in the matter. The usual thanks-voting followed, and the philosophers dispersed.

A fuller account than our summary presents would only exhibit more conspicuously the futility of the paraded doings of these wise men of the world. We do not mean to say that there is more fee-faw-fumming at their sittings than at the sittings of *Academies* and Royal Societies, but we affirm that there is no less. The German philosophers get the meed of praise freely accorded to them where it is really due; but, with all our respect for them, we must tell them—

"In verity, ye're no such Sophi,
As ye would have the world think of ye."

LITERARY AND LEARNED.

THE ART OF BOOK-MAKING:

A New Branch of the Cut-and-Dry System!!!

WE have been a good deal amused this week by a little discovery that has come across us, as the silver candlesticks got into the Jew's pocket—by accident. We are not sure whether the device may not have been resorted to in order to perpetuate copyright by a kind of secret renewal; but, be that as it may, we consider it to be our duty to exhibit the case, were it only for an example to other writers.

In our No. 709, August 21, we reviewed a novel called "*The Separation*, by the author of *Flirtation*," i. e. Lady Charlotte Bury; and we said, truly, that, though the style was of the slip-slop class, the story was lively and amusing. Well, we were fairly imposed upon; and, as we helped to gull the public, we come now to explain our share of the transaction, which amounted either to the sin of forgetfulness,* or of original ignorance. We did not know, or had forgotten, that the *new novel* of SEPARATION was only an *old novel* with a *new name*; and that, in fact, the *three volumes* were no other than "*SELF-INDULGENCE*, a tale of the nineteenth century," in *two volumes*, published in 1812, by G. R. Clarke, of Edinburgh, and Messrs. Longman and Co., of London!!

We have seen a funny kind of mill, into which if you tumbled an old man, he came out ground quite young; but this is the first time we knew of such a machine for grinding old books into new! It can be done, however; as a comparison of these two publications will demonstrate. The whole story is identical in both from page 88, Vol. I. in *Self-Indulgence*, and page 121, Vol. I. of *The Separation*, to the end: the names carefully rechristened, a slight change of words here and there, and the introduction of a few dialogues to spin the work out to the necessary length, as *to price*, are all the difference! We presume *Self-Indulgence* to be an anonymous production of Lady Charlotte Bury, when Lady Charlotte Campbell; but even with this allowance, can there be any excuse for palming the same thing upon the public, at the distance of eighteen years, as an entirely new novel? For our parts we consider it most disingenuous and discreditable; and, for the publisher's sake, we trust to have a letter from him for our next *Gazette*, disavowing any cognizance of the trick, and stating what sum he may have paid for the old-new *risarcimento* of *Self-Indulgence*.† What adds to our dislike of this

* We often find memory, we must confess, a fond deceiver; and our having forgotten a sonnet of Shakespeare's once, has furnished food for some of our pleasant contemporaries to rail at us ever since. If they knew all, they might change their subject: we were on one occasion, for instance, inveigled into praising an epigram as the best thing in the world, perfectly unaware that we had ourselves written it some years before. But it is part of the curious phenomena of memory (at least with us), that, owing to the multiplicity and variety of matters which pass rapidly through the mind, the impressions are so faint, that they are immediately lost in oblivion. If our lives depended upon it, we could not tell what appeared in the *Literary Gazette* a fortnight ago; it has been, by the mere act of being printed, discharged from our memory.—Ed. L. G.

† We are convinced that Mr. Colburn must have been unconscious of the trick; for we find the following preparatory announcement (which also ran the usual course of the newspapers) in the *New Monthly Magazine* for August, which is also his publication, and which could not have sanctioned the utterance of such a paragraph had he been aware of the truth:—

"The report which has gone about regarding the work entitled *The Separation*, namely, that the story is connected with the noble author's former tale of *Flirtation*, is not correct. The present subject is, we understand, one of more than ordinary excitement; its incidents are said to be in themselves strictly true, not merely *founded* in fact; and the cause of the peculiar interest which it is

job, is the apparent cunning with which it seems to have been performed. Why the publications look dissimilar at the opening, is, that a London party of the last season is introduced into *Separation*; and a country clergyman's family, from whom Lord Fitzharris in the one story (the Mr. Donneraile of the other), goes to the continent; and in *Separation* he does not contract his second marriage till the second volume, whereas in *Self-Indulgence* he marries at the beginning; and the narrative takes a retrospect of some three years! The Lenora of the *new* is the Corissande (a name not ready enough to slip from remembrance) of the *old*. Thus, except the first hundred pages of *Separation*, to which a modern air has been given; and the squeezing in of make-weights with the chit-chat of some fashionable parties, the two works are exactly the same!

What will John Bull's lady-reader say to this? We cannot tell: only we think it worse than a hoax upon our worthy friends of the circulating libraries, our Hookhams, Ebers', Andrews', Cawthorns, Sams', Saunders and Otleys, Lloyds, Bulls, Hodgsons, Booths, Bowdery and Kirbys, Chapples, Stewarts, Rices, &c. &c. &c., and their customers. *Imprimis*, the former must have paid blindly for a book already long dusty on their shelves, which is laughable enough: and, *secundo*, the latter, instead of borrowing the said dusty tomes at the usual rate of such ware, a penny a piece, like old ballads, must have given threepence and fourpence *per diem* for the loan of the newest of the novelties of the season, written by a titled lady, and the author of *Firrtation!* To be sure, one would not suspect an individual moving in this sphere of life, a sphere in which honour and principle are supposed to be peculiarly delicate, of prostituting name, rank, and character, to an unworthy deception; but really there is so much roguery in the literary world now-a-days, that we hardly know to what length *self-indulgence* may be carried; and can only do our best to promote a *separation* between the right and the wrong.

FINE ARTS.

NEW PUBLICATIONS.

Illustrations of the Friendship's Offering, for 1831.

THE embellishments of the forthcoming volume of the *Friendship's Offering* comprehend a very agreeable variety of portraits, landscapes, and domestic, historical, and poetical compositions.

Adelaide. Painted by C. R. Leslie, R.A.; engraved by W. Humphrys. Elegant and lady-like. The harmony of the features promises a correspondent harmony of notes.—*The last Look*. Painted by J. Porter; engraved by T. A. Dean. A pleasing composition; but we wish we could prevail upon some of our engravers not to aim at so much depth. Force is an excellent quality, but not so blackness.—*The Maid of Rajast'han*. Painted by Colonel James Tod; and engraved by E. Finden. Exceedingly rich and beautiful. We long to read the tale of which it is the illustration; and hope that it may equal the plate in merit.—*The Rejected*. Painted by F. P. Stephanoff; engraved by J. Goodyear. Conceived with spirit and taste; but the figures are sadly deficient in proportion. The *confidante* and the dis-

carded lover are each at least fourteen heads high.—*The Accepted*. Painted by M. W. Sharp; engraved by C. Rolls. Lucky dog, to carry off so sweet a prize!—*The Mountain Torrent*. Painted by W. Purser; engraved by E. Goodall. One of the finest plates in the collection. The scene would be one of great magnificence, even were it exhibited under circumstances of less appalling interest.—*St. Mark's Place, Venice*. Painted by S. Prout; engraved by E. J. Roberts. Clear and sunny.—*Ascanius in the Lap of Venus*. Painted by J. Wood; engraved by S. Davenport. A delightful mode of travelling! What are your rail-ways and steam-engines to a fine, fleecy cloud, with a fair breeze? Mr. Wood is exceedingly happy in subjects of this description.—*Mary, Queen of Scots, going forth to Execution*. Painted by J. Stephanoff; engraved by R. Baker. Guilty, or innocent, who can read the history of the beautiful and unfortunate Mary without the deepest compassion? To see so lovely a being about to expiate her alleged offences with her life, is an affecting spectacle.—*Halt of the Caravan*. Painted by W. Purser; engraved by R. Brandard. A splendid little plate, in which all the rich materials which such an incident furnishes, are used to the greatest advantage.—*Auld Robin Gray*. Painted by J. Wood; engraved by H. Rolls. Another of the black school. But for that blemish, a well-managed and interesting group.—*Poesie*. Painted by Carlo Dolci; engraved by W. Finden. Mr. Finden has preserved great breadth and mellowness in this fine head.

Illustrations of the Juvenile Forget Me Not, for 1831.

THEY are nine in number; and the selection of subjects reflects great credit on Mrs. Hall's judgment and taste.

Docility. Painted by A. Robertson; engraved by J. Thomson. Attention and intelligence—when combined how irresistible!—powerfully expressed in the countenance of a fine girl, of eight or ten years of age.—*The Nut-cracker*. Painted by H. Howard, R.A.; engraved by W. Greatbach. A well-built and pleasing composition. The nut-cracker is a favourite squirrel.—*Hebe*. Painted by R. Westall, R.A.; engraved by F. Engleheart. What so appropriate an embellishment of a book for youth as the goddess of youth? The figure is full of grace; and the effect is spirited and forcible.—*Me (I) and my Dog*. Painted by H. Moses; engraved by W. C. Edwards. Two happy creatures: it would be difficult to say which is the more so.—*The Travelling Tinman*. Painted by C. R. Leslie, R.A.; engraved by C. Rolls. There is something singularly striking and original in this clever little production.—*The Twin Sisters*. Painted by W. Boxall; engraved by W. Greatbach. Mr. Boxall is an artist of high talent. He has preserved a Sir Joshua-like breadth in this affectionate and graceful group.—*The Roman Beggar*. Painted by P. Williams; engraved by F. Bacon. We believe that the drawing, or rather the painting, (for so it is entitled to be called), from which this little print has been engraved, was in the last Exhibition of the Society of Painters in Water-colours. The peculiarity of the costume gives it a very picturesque appearance.—*The Foundling*. Painted by F. P. Stephanoff; engraved by H. Rolls. If there be any one object for which human sympathy ought to be more powerfully excited than for any other, it is deserted infancy.—*The Bird's Nest*. Painted by W. Collins, R.A.; engraved by W. C. Ashby.

Mr. Collins imparts great interest to the most trifling incident. One of the lucky finders seems to be generously pleading for the restoration of the nest: we hope his arguments will prevail.

Illustrations of the Remembrance, for 1831.

OF the pictorial decorations of the *Remembrance*, the most attractive will, no doubt, be the portrait of

The Queen. Painted by Mrs. Green; engraved by —. In that elegant branch of the arts which she professes—miniature painting—there is no one who has shown more talent and taste, a stronger painter's feeling, greater vigour, and, at the same time, greater delicacy of drawing, a more rich and mellow tone of colour, and a higher power of finishing, than Mrs. Green. It is very gratifying to have a portrait of her majesty by such a hand. The sweetness of expression which beams from the eyes, and which accords so well with the amiability of character universally attributed to our present gracious queen, is a satisfactory pledge of the correctness of the resemblance. The composition of the figure is simple and unaffected; the drapery is skilfully managed, and the effect of the whole is exceedingly pleasing.

Some of the most prominent of the other embellishments are, *Windsor Castle*, engraved by H. Wallis, from a drawing by W. H. Bartlett; *the Orphans*, engraved by C. Rolls, from a picture by W. Gill, (very interesting, but sadly too dark and heavy); *Warwick Castle*, engraved by H. Wallis, from a drawing by W. H. Bartlett; *John Gilpin*, engraved by C. Rolls, from a picture by T. Stothard, R.A. &c.

Illustrations of the Landscape Annual for 1831.

WHAT are among the chief inducements to a visit to Rome, or to Venice? The works of Michael Angelo and Raffaele in the former, and of Titian in the latter. This is the peculiar triumph of the artist; and a noble and patriotic triumph it is. The compositions of the poet may be read any where; but the great painter or sculptor compels those who would enjoy his *chefs-d'œuvre* to repair to the spot on which they were produced. It is only at the Vatican in the one city, or the Palace of the Doges in the other, that the wonderful powers of the celebrated man whom we have mentioned can be justly appreciated. By a very natural association of ideas, every thing that relates to either of those cities becomes interesting to the lover of the arts. The proprietors of the *Landscape Annual* have provided ample gratification for this feeling in no fewer than ten views of Rome, and ten of Venice; besides six in other parts of Italy. They are all from the pencil of Mr. Prout (whose skill in the delineation of such subjects is unrivalled); and are engraved by Messrs. Allen, Barber, Brandard, Carter, Higham, Jeavons, Jordan, Kernott, Lewis, Miller, Relaway, Smith, Tomleson, Wallis, Westwood, Willmore, and Woolnoth. Among the most pleasing of these plates are, "the Rialto," "the Mocenigo Palace," "St. Mark's Church," "the Piazzetta," at Venice; "the Bridge and Castle of St. Angelo," "the Temple of Peace," "the Forum," "the Temples of Vesta and Fortuna Virilis," "the Temple of Mars Ultor," at Rome; "the Sibyl's Temple at Tivoli," "Civita Castellana," "the Cascade at Terni," &c.

* Our plate is before the letters, so that, unluckily, we cannot give the artist's name.

understood Lady Charlotte Bury has imparted to the work is to be traced to a 'certain case' in the 'great world,' which took place a few years ago, and which was more industriously than successfully attempted to be concealed."

A Series of Subjects, from the Works of the late R. P. Bonington. Drawn on stone by J. D. Harding. Part IV. Carpenter and Son.

WE regret to say that this is the last Number of the series. Besides an admirable head of Bonington, from a picture by Mrs. William Carpenter, it contains a highly characteristic *Vignette*, from a drawing in the possession of the Right Hon. Lord Northwick;—*An Albanian*, from a sketch in oil, in the possession of Lord Charles Townshend;—*A View on the French Coast*, from a picture in the possession of Lord Charles Townshend;—*The Pont Royal, at Paris*;—*A Sea View*, from a sketch in the possession of E. Hull, Esq.; and *A Coast Scene*, from a picture in the possession of his Grace the Duke of Rutland. They all manifest more or less of those high qualities alluded to by Sir Thomas Lawrence in the following extract (appropriately introduced into the title-page of the work) from a letter written by him to Mrs. Forster, the daughter of Mr. Banks, the sculptor:—

“Alas! for Bonington! your presage has been fatally verified; the last duties have been paid to him this day. Except in the case of Mr. Harlowe, I have never known in my own time the early death of talent so promising, and so rapidly and obviously improving. If I may judge from the later direction of his studies, and from the remembrance of a morning’s conversation, his mind seemed expanding every way, and ripening into full maturity of taste and elevated judgment, with that generous ambition which makes confinement to lesser departments in the art painfully irksome and annoying.”

Six Views of the Columbine, and the Experimental Squadron. Drawn and engraved by Henry Moses. Published by the Artist.

EVERY thing that tends to the maintenance of our maritime superiority must be gratifying to the true Englishman; for, without meaning for an instant to derogate from our military glory, it is evident that the navy of this country will ever be her best bulwark against foreign aggression. In that point of view, as well as with reference to their intrinsic merit, these plates are very interesting. They are engraved in aquatinta, with Mr. Moses’ usual taste and skill. We regret, however, that they are not accompanied by a brief letter-press description.

Juliet. Engraved in mezzotint by W. Say, from a drawing by Miss Fanny Corboux. Ackermann.

AT the moment of the fair young Capulet’s hesitation and alarm, which immediately precedes her swallowing the opiate:

“What if it be a poison, which the friar
Subtly hath ministered to have me dead;
Lest in this marriage he should be dishonoured,
Because he married me before to Romeo?”

There is great feminine elegance in the figure; and the composition of the drapery and other accessories is full of taste.

The Vicar of Wakefield. Engraved by J. Burnet, from a picture by G. S. Newton, A.R.A. Moon, Boys, and Graves.

IT was, we believe, in the Exhibition of 1828, that Mr. Newton gratified the public by the production of his admirable little picture. It occurred to us at the time that, if well engraved, it would make a highly popular print: it has been well engraved, and we have no doubt that our anticipation with respect to its general attraction will be verified. Mr. Burnet, besides the technical skill which he has

shown in the execution of this plate, has faithfully retained all the variety of expression by which the original is characterised. Mrs. Primrose’s immobility of countenance, the earnest and affectionate entreaty of Sophia, and the surprise and dismay of the children, are peculiarly fine. We should like to see a series of subjects from this unrivalled tale, by these able artists.

A Specimen of Ink Lithography. R. Martin.

WHAT the process called Ink Lithography is, we do not distinctly know; but this specimen is an extremely curious specimen of the art. It is a sort of pasticcio, exhibiting almost every kind of engraving; and evinces capabilities which few could suppose lithography to possess. Landscape, portrait, topography, manuscript, zoology, anatomy, armour, and other inanimate objects, architecture, &c. &c. &c. are all cleverly done; and we think the resemblance to line engraving the closest we have ever seen. On the whole, we look upon this experiment to be as important as it is novel. The lithographic press seems to be making vast strides forward to a power and perfection not dreamed of only a few years ago.

The Cottage. Engraved in line by — Richardson, after a drawing by D. Cox. H. Leggat, Cornhill.

It is the privilege of the artist, the poet, and the amateur, to derive their pleasures from “whatever is awfully vast or elegantly little.” In the latter view we consider this gem-like performance. The spirit and character of its execution, with the truth of nature in its delineation, render it worthy of a place in the folio of the collector, or over the mantel of the man of taste.

Scene on the Brent. Engraved in mezzotint by C. Turner, after the original by W. Collins, R.A. H. Leggat, Cornhill.

SCENES like these are alike sources of pleasure and profit to the artist and the angler: to the first they come recommended by their picturesque character, and to the latter as affording the chance of sport. It is loosely but spiritedly executed; and the effect is sparkling and brilliant.

MUSIC.

NEW PUBLICATIONS.

Love’s Offering; or, Songs for Happy Hours, for 1831. Poetical Department by W. N. Bayley, Esq.; Musical by Evelyn Manners; Pictorial by Gauci. London, 1830. Wybrow.

THIS is the first that we have seen of the musical Annuals which are in preparation; and of which it appears that we are to have a plentiful crop. It is a very pretty volume, beautifully printed and embellished; and its perusal has given us, on the whole, considerable pleasure. The poetry (all from one pen) is smooth and agreeable, consisting chiefly of a kind of sentimental small-talk, of which the “Lover’s Invitation to Dance” is a very fair specimen. It concludes thus:—

“And when music shall have ceased,
And the gay quadrille is over,
I will whisper in thine ear
With the soft voice of a lover:—
Dearest! little love has ties
That the dark world cannot sever;
In the gallopade of life,
Join with me, and dance for ever.”

We confess we are somewhat partial to this sort of song-writing; for it pleases the ear and the fancy, while it is guiltless of exciting or disturbing the feelings. A song by Mrs.

Hemans or L. E. L. is apt to interfere sometimes with that gaiety of heart which should animate the drawing-room; and therefore such love-lyrics as those before us, the singing of one of which will not damp the spirit of the next quadrille, are infinitely useful. Though this is the general character of the poetry in the volume, there is one song in a deeper tone of feeling, entitled “Long ago,” and set to an unpublished air by Weber. The music is well suited to the verse. It is neither striking, learned, nor original; but the melodies glide on very smoothly, and have correct and unaffected accompaniments; and, what is a great merit, the words are well accented. As a whole, the best song is, “She sings in fairy bowers,” the poetry of which is very happily united to a well-known but graceful air of Rossini. The unpublished melody of Weber exhibits no marks of the genius of that great artist, except in the accompaniment, which is masterly. The volume contains a few popular songs arranged for the guitar, an instrument clearly becoming more and more fashionable; and a set of quadrilles. The “pictorial department” consists of several very soft and pretty lithographic engravings.

DRAMA.

DRURY LANE.

ON Saturday the *Barber of Seville* introduced Mr. Latham, from Dublin, to these boards, as *Figaro*; and a very smart and clever *début* he made, both as a singer and actor. In the latter capacity, with Liston and Harley at the same theatre, and pre-occupying much of his line of parts, we do not see a great opening for his talent; but, from the specimen we have had of it, we are sure that it will afford entertainment whenever it is exercised. Smart, lively, and bustling, he went through the *Barber* entirely to the satisfaction of the audience; and not only in the songs, but concerted pieces, proved himself an adept in the *Figaro* style of singing, and a good musician, with a very pleasing and sufficient organ. Mr. Latham was a great favourite in Dublin; and, if opportunities are given, will soon establish himself in the same gratifying position in London. Miss S. Phillips played *Rosina*; but, as may be gathered from our observations on the *Duenna* at Covent Garden, not at all to our taste. We fancy she never could have heard the term *simplicity* mentioned; for really some of her efforts were not merely ornamented—they were all ornament, nothing but ornament. She must correct this vice. T. Cooke was *Almaviva*—not much of a Count, but admirable in the music.

On Monday last, after an absence of two years, Macready re-appeared as *Virginus*—a character long since considered his own. To this monopoly, to judge from the enthusiastic manner in which their favourite was welcomed, and the unusual warmth with which the pre-eminence of his claims were acknowledged, the public seem very willing to submit. We never witnessed a more decided development of the “*popularis aurea*,” than when Macready, after a modest delay of five minutes, obeyed the “call of the house,” to come forward, and make his bow, in return for the waving of hats and handkerchiefs and the exclamations of the audience. This must have been deeply gratifying. We think his acting even more energetic than formerly; though this effect may have been produced upon us by the circumstance of his absence. The gradual rising in the tones of his voice are winning, and carry along the hearer with highly-wrought

expectation of the climax: at the same time we must observe, the sudden and too frequent transitions from the high pitch of declamation to an almost inaudible whisper, may be stage-effective, but strike somewhat too abruptly upon the tympanum, to be either pleasing or advisable. Indeed, Macready does not seem sufficiently aware, that his acting needs not the foreign aid of professional artifice, and that he cannot suffer adscititious display to obtain, without proportionably diverging from nature. The tragedy was ably supported. The declamation of *Idilius* before the decemvir gave scope for the abilities of Wallack; and the dry sarcasm of the veteran *Siccius* gained from the delivery of Cooper—the diversity of this performer's talents is very great, and render his utility invaluable. Miss Philips looked the beautiful Roman maiden, and submitted to being killed with becoming decorum; the insipidity of *Virginia* was diminished as much as possible, and we regretted the little opportunity afforded by the character for the display of the powers possessed by this actress. The Roman rabble were some of the most extraordinary representatives of the "plebs" that can be well imagined. The people, under whose direction such things fall, should not suffer the attempted buffoonery of these underlings to convert the parts of the tragedy in which they are concerned into a farce.

His Majesty has announced his intention of visiting Drury Lane on Thursday next. This is good news for the drama; Covent Garden, of course, will follow.

COVENT GARDEN.

WE had no fewer than three musical *débuts* last Saturday—two at Covent Garden, and one at Drury Lane. The piece at Covent Garden was the *Duenna*—the part of *Clara* by a young lady, whose name has since been announced as Miss E. Romer: and *Carlos* by Mr. Wilson, from the Edinburgh Theatre. The *Duenna* is a delightful little comedy, somewhat farcical in its incidents, but sparkling with wit and satire, and exceedingly amusing: but its pretensions as an opera are exceedingly small. The best part of the music consists of Scotch and Irish ballads, the introduction of which is a gross absurdity. In a Spanish piece, to hear Spanish lovers and Spanish damsels breaking out into "Gramachree Molly," and "the Highland Laddie;" and to see that preposterous absurdity received as a matter of course by the audience, is a proof of the low state of music in England as an intellectual art. To be sure, this opera was written many years ago, and considerable changes in our musical notions have taken place in the interval. But it is enough to see any one of our popular operas, at this hour, and to hear the ditties lugged in by our favourite warblers, in utter defiance of congruity and discretion, to be convinced that, whatever other improvements music may have received, the alliance of sense with sound is as far from being accomplished as ever. In this very opera, for example, we are quite well accustomed to hear Mr. Braham, when *Carlos* should sing a song lamenting his unhappy love, and expressing his resolution never to love again, breaking out with "Let us haste to Kelvin Grove, bonny lassie, O!" and the public is generally so much delighted with the exquisite good taste and propriety of this proceeding, as to make him sing the song three times!*

* The song introduced by Mr. Wilson deserves the same censure. What has *Carlos* to do with singing about Love, love, love, and accompanied too, as such a

The part of *Carlos* is dull and insipid—thrust into the piece for the sake of its songs. The author, however, has tried to infuse a little interest into the character by the touch of feeling contained in the sketch he gives of his history, and the exquisitely tender verses, which are usually discarded—thus destroying the only hold which *Carlos* can have upon the sympathy of the audience. As to the original music, composed by Linley, there is some prettiness about it; but there is a stiffness in the melodies, and a poverty in the accompaniments, which, to those who have been accustomed to the rich fare of Mozart, Rossini, and Weber, (or, in other words, to the whole English public), render it very insipid. What used to be the heroine's crack song, "Adieu, thou dreary pile!" is a mere school exercise, consisting of runs and divisions, as guiltless of meaning as any thing to be found in a book of solfeggios. In the part of *Clara*, Miss Romer displayed powers which, with cultivation, will enable her to take a high rank as a singer. Her voice is clear and flexible, particularly in the higher part of the scale. She has, generally, a good articulation, and executes rapid passages very neatly; but in the more difficult art of sustaining and dwelling upon a few simple notes, "in linked sweetness, long drawn out," she has (and, being a young singer, must necessarily still have) much to learn: she has evidently a musical soul, and frequently exhibited both taste and feeling; she is very pleasing too, both in face and person, and spoke and acted with spirit and intelligence. Mr. Wilson, though new to the stage, is any thing but a novice as a singer. His whole performance exhibited great vocal skill and cultivation; his voice is (that rarity) a true tenor, of rich quality and extensive compass; and he executed every thing he had to do with a facility which indicated that he had a great reserve of power and execution when it should be required. We do not remember ever to have been more pleased with the two national ballads, "Had I a heart," and "Ah! sure a pair were never seen;" for Mr. Wilson sung them in such a manner as to leave the simplicity of the airs quite unimpaired, and yet with ornament enough to save them from insipidity. This golden mean, so difficult to find, we hope he will study to preserve; and thus rescue English singing from one of its greatest reproaches—a redundancy of common-place and unmeaning ornament.† He is a well-looking young man, of a good figure, and a pleasing, open countenance. The part did not enable us to form any idea of his powers as an actor; but, in the little he had to say and do, he acquitted himself with great propriety.‡ Both these performers were received with great favour, and warmly applauded—most of their songs being encored. The piece was very amusingly performed; Keeley's "cunning little Isaac," though not the Jew we have been accustomed to see, was very grotesque; and his courtship scene with the *Duenna* (Mrs.

tender theme ought to be, by all the drums, trumpets, and bassoons, in the orchestra!

* In paying this just tribute of applause to the new singer, and especially in expressing our admiration of his style, we cannot help referring to the source of his excellence: viz. the instructions of Crevelli, to whom we have often had occasion to allude, as a melodist of the purest order, and a teacher whose school cannot be too highly prized, or too generally cultivated.—Ed. L. G.

† There are also various musical requisites of which the part did not afford the means of judging: we have still, for instance, to discover, by some other part, whether Mr. Wilson possesses fire and passion; for the music he has sung, though not without tenderness, is wholly unimpassioned.

Gibbs) was irresistibly ludicrous. Miss Cawse was delightful, Blanchard admirable, and Druruset as sweet and pleasing as his part could admit.

When it was known that the managers of Covent Garden were anxious to have something new for T. P. Cooke, they were inundated with a sea of nauticals, all of the *Black-Eyed Susan* school, and "all in the *Downs*," we may suppose, if the *Blue Anchor*, by Pocock, be the best of the budget. We are of the most genuine admirers of T. P. Cooke. He is an inimitable seaman, dances a hornpipe to perfection, swears sailor oaths unprofanely, and twitches up his inexpressibles with an air very amusing to land-lubbers. But we cannot say that we like him so well at Covent Garden as in the meridian of that tight little craft, the Adelphi, where we have so often seen him play *Long Tom*, in the *Pilot*, with unmingled satisfaction, and allowed a little latitude, which we are rather inclined to calculate more nicely in classic Covent Garden. The chief defect of the *Tar for all Weathers* is, that, being written for him, he has little to do in it. Farley's is a better part; and, but that Tom prefers the open-handed jolly seaman to the plotting smuggler, we dare say he would have chosen *Shark*. He appears for the first time in the 2d act, and afterwards only at intervals. The *grog* song which he sung (indifferently enough) was lamentably poor, considering the copiousness of the subject; and the allusion to the queen, as the "Queen of good fellows," insufferable, and resented by the audience. The dialogue was throughout excessively vulgar; and, in the quarrel scene between the aforesaid *Shark* and *Tom Bluff*, even the spirited acting of Farley and Cooke could not redeem the coarseness of the language they were compelled to utter, and the piece was all but d—d, in consequence. There must be a certain degree of license allowed for a *free sea* sketch, and, not being squeamish, we allow for a great deal; but to pass over *this* uncensored would require more toleration than even our good nature can boast. *Tom Bluff* will not, we think, prove a feather in the cap of Tom Cooke. Keeley, as he always does, made the most of his part. He looked very funny as the undertaker, and his great card, as compared with his diminutive self, was infinitely ludicrous. Bartley's *Tom Bowline* was a fine picture of an old fisherman; and Blanchard, as the drunken landlord, *Tom Tiddle*, (they are all Toms here,) highly diverting. We must not omit mentioning clever little Mrs. Keeley's *Bessy Bowline*; but, in spite of the best acting and beautiful scenery, the *Blue Anchor* was a failure; and we are sure its short life will prove the truth of our opinion, and that it will soon be *weighed*.

The *Jew of Arragon*, miscalled a tragedy, by Mr. Wade, was produced and finished here on Wednesday. The author has the reputation of being a clever man; of which he somehow contrived to exclude even the slightest proof from this very miserable production. The play is founded, we believe, on a Spanish drama, by Huerta; or, perhaps, on one of the tales in Mr. Trueba's *Romances of Spanish History*. To give a serious detailed account of it, is impossible; for, from the first scene to the last, it is a tissue of the ridiculous. In the first, the Jew behaves with extreme rudeness to the Princess of Castile, about to be united to his sovereign; and in the last, all the dead bodies dispose themselves on a flight of steps, so entirely in the Tom Thumb style, that we regretted much they did not complete the

resemblance, by rising up again, and singing their own dead march. The plot was a mixture of the improbable and absurd—the language, as ludicrous in its common-place, as it was turgid in its bombast. As a whole, we could only wonder at that want of dramatic judgment evinced by the production of such an effete piece. It is a curious fact, but a fact nevertheless, that those who have for years been accustomed to study the public taste, are those who understand it the least. The actor is seldom a prophet as regards the fate of a drama. Perhaps this may arise from his only considering it with reference to himself. In the case before us, Mr. Kemble seems to have been led away by two or three, theatrically speaking, good hits for himself and daughter, without considering the dreary space between. Those little absurdities which excite that destruction to tragedy, laughter, were strangely frequent. For example, nothing could be more ridiculous than Miss Ellen Tree's jumping through the window down into the river; it was so completely enacting the old song,

"I'll gather my petticoats up to my knee,
And over the water to Charley."

But "we'll draw a decent curtain round the dead," and only speak as regards the first original character in which Miss Fanny Kemble has appeared, and which, we are sorry to say, was a failure. There was an utter want of original conception about it. In the first scene, where her father unfolds his ambitious hopes, there was a coldness, a want of energy, ill-suited to the ambitious Jewess. In the two different scenes, where she triumphs over and taunts the nobles, she wanted dignity; her sneering was spiteful and petulant, not haughty and cutting. The slowness of her delivery sometimes degenerated into a drawl,—a fault to which she cannot too soon direct her attention; monotony and mannerism are the Scylla and Charybdis of an actor's delivery. Her peculiar pronunciation has often a wretched effect; as when she asks the nobles, "If they are not stoned," for stunned. Now, each of these defects is slight, and in her own power to remedy. She has a most exquisite voice, its silver tones only require occasional variety. Her face has all the beauty of intellect and expression; her large dark eyes, and finely marked brow, are full of the poetry of passion. Her attitudes are generally perfect in grace: through the whole of the performance there were but two we thought displeasing. The first is where she stands with the king,—she seemed as if she balanced herself upon his hand, and the air was one of disagreeable personal exhibition: the other, in the scene with the nobles,—she threw herself back till the effect was as awkward as the position was unfeminine. Now it is evident that each of these attitudes originates in the same fault, viz. throwing her person too much from the perpendicular. But, amid all the drawbacks of an ineffective character to support, and the weariness of an unsuccessful play, there was enough of grace and talent evinced to shew how justly its popularity awarded to this interesting young actress. One word on a matter of a private feeling. We were sorry to hear Mr. Kemble (in the text, it is true) point an allusion in the play so as to make it a personality. His daughter's station, her youth, her universally-acknowledged amiability in domestic life, not only place her above any passing scurrility, but give her claim to the possession of that delicacy of feeling, which was, we think, rather outraged than supported by being made matter of applause from

the galleries. But as we heard from that high circle, when *Xavier* entered, "That is the man vot vopps editors," we are not inclined to make any remark upon his acting which might be construed into offence; and so we wish the *Jew of Arragon* good night. By the by, we should have liked to see his regiment of ould cloash, with their nightcaps, &c., march to the camps. It would have been worth the whole tragedy.

ADELPHI.

A new naval piece was brought out on Thursday with great *éclat*: it is too late for us to say more.

MR. JONES, late of Drury Lane, is said to have declined all theatrical engagements, for the purpose of attending his pupils in parliamentary and clerical elocution. From some connexions of our own we have heard Mr. Jones's peculiar method of teaching highly commended; and while we regret the loss of his amusing talents in public, we wish him every success in the employment of his more useful talents in private. One of the chief recommendations of his system to us, and one to which we attach great importance, is that of imparting the power of reading without fatigue to pupils of the weakest constitutions.

VARIETIES.

Captain King's Expedition.—His majesty's ships *Adventure* and *Beagle*, which have been employed, for the last three years, in surveying the coast of South America, and particularly about Cape Horn, under the orders of Captain King, have arrived in England.

Scientific Expedition.—The *Etna*, Captain Belcher, has sailed upon her voyage to survey the western coast of Africa, from lat. 10° to 30° N., as we mentioned in a late *Literary Gazette*.

Eastern Archipelago.—Captain Fitz-Clarence, it is stated, will sail early in the ensuing year on a voyage to survey the Eastern Archipelago; proceeding in the first place to New South Wales.

Royal Anecdote.—The ex-king of Saxony, when his late brother was on his death-bed, was told by his confessor that, if he would vow to make a pilgrimage to the holy sepulchre, his brother should die, and he should ascend the throne. He made the vow, his brother died, and he reigned. But when the time arrived for fulfilling his pledge, he found that his duties and infirmities rendered it impossible. After much discussion amongst his ghostly fathers, he compromised the matter by agreeing to scramble, on his bare knees, up and down the great gallery in his palace, for a certain time every day, until he should have gone over a space equal to the distance between Dresden and Jerusalem. His majesty had performed a great part of his feat when interrupted by his rebellious subjects.

Ducal Anecdote.—There was lately at Brunswick an opera-singer named Rosner, who, having a very pretty wife, was much caressed by the ex-duke; but being a bad singer and a poor stick of an actor, he was violently attacked, night after night, by the disapprobation of the public. He was at length unable to bear with this treatment, and begged for his dismissal, saying that the people were all dissatisfied with him. The duke, to whom he applied, clapped him familiarly on the back, and said, "Don't be an ass! why the people are dissatisfied with me, but I don't budge."

New Club.—The Marquess of Hertford's noble mansion in Piccadilly is being fitted up for a new club, to be called *The English and Foreign Union*. The house, from what we have seen of it, will be superb. From the prospectus which has been issued, we observe that the object of this establishment is to promote and keep up the friendly intercourse of persons of rank and distinction, military, naval, literary, and scientific, of foreign nations, with those of our own country.

Italy.—A son of the celebrated Goethe has lately been travelling in Italy, of which tour, we learn, he has kept a journal, from which his father is preparing a work upon that country.

Madame Catalani.—This admired songstress, we are informed, in a letter from Italy, has finally set up her rest at Florence, with the declared intention of remaining there during life.

New German Singer.—At Turin, another Sontag has appeared, in the person of a Mlle. Henrietta Charles (Karl), who completed her vocal studies at Milan, and has made her *début* at Turin, in Coccia's *Orfana della Selva*, with the utmost *éclat*. She is a native of Berlin.

Cheap Beer.—Placards are seen about town at many public-houses thus inscribed: "Fino porter sold here at threepence per pot: every man must bring his own mug."

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XLIII. Oct. 23.*]

A poetical *jeu d'esprit* entitled the Political Devil, or Advice to the Mariner Monarch, preparatory to the opening of Parliament, illustrated by four cuts.—The Errors of Romanism traced to their Origin in Human Nature, by Dr. R. Whately.—The Daughter of Herodias, a Tragedy, by Henry Rich, Esq.—A Catechism of Phrenology, illustrative of the Principles of that Science.—A Concise View of the Succession of Sacred Literature, from the Invention of Alphabetical Characters to 1445, Part I., by Dr. Adam Clarke.—Mr. Keightley, the Author of "the Fairy Mythology," is about to publish a work on the Mythology of Ancient Greece and Italy. It is, we understand, designed for the use of schools and the universities, and to supply in an adequate manner the acknowledged want of such a work in our literature. The familiarity with the writings of the learned Germans, and the aversion to mysticism shewn by Mr. Keightley in his former publication, would lead us to expect in it a considerable accession to our classical knowledge, conveyed in an easy and intelligible form.

LIST OF NEW BOOKS.

Swan's Demonstrations of the Nerves, Part I. folio, 2s. 2s. sewed.—Loudon's Illustrations of Landscape Gardening, Part I. folio, 7s. 6d. sewed.—Illustrations of the Literary Souvenir, 1831, proofs, imperial 4to. in portfolio, 30s.; colombar 4to. before letters, 3s. 3s.—The Water Witch, by the Author of "the Borderers," 3 vols. post 8vo. 11. 11s. 6d. bds.—Burke's Official Calendar corrected, with Supplement, to the Present Time, post 8vo. 10s. 6d. bds.—Hope Leslie, or Early Times in Massachusetts, by the Author of "Clarence," 3 vols. post 8vo. 21s. bds.—Howship on Spasmodic Stricture in the Colon, 8vo. 4s. bds.—Rennie on Asthma, Consumption, and Disorders of the Lungs, 8vo. 5s. bds.—Westall's Great Britain Illustrated, 4to. prints, hf.-bd. morocco, 11. 14s.; India proofs, 3s. 3s.; imperial 4to. 5s. 5s.—Classic Cullings and Fugitive Gatherings, post 8vo. 9s. bds.—Prowse's Poems, 12mo. 6s. bds.—The Arrow and the Rose, by W. Kennedy, 8vo. 6s. bds.—Old Booty, or the Devil and the Baker, illustrated by Cruikshank, 18mo. 1s. sewed.—Bradfield's Tales of the Cyclopes, fcp. 8vo. 5s. 6d. sewed.—Grant's Advice to Trustees, 8vo. 6s. bds.

TO CORRESPONDENTS.

In the notice of the *Gem*, the name of the author who wrote the first poem quoted was omitted: this was doing but scant justice to one of its pleasantest contributors, Mr. Edward Fitzgerald.

I. P. is very well for the domestic circle, but does not require publication.

An "English Reader" should be aware, that however much we dislike the interlarding of our language with French or other foreign phraseology, we cannot alter quotations from works disfigured by that folly.

The extract, the only one by which we could satisfactorily illustrate the *Winter's Wreath*, is so long, that we cannot find room for it in this No.: a second apology is therefore due to the Editor of that Annual, all others appearing in the succession in which they reach us.

The dramatic novelties have also pressed on our space this week.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE LONDON UNIVERSITY

SCHOOL, 16, Lower Gower Street, Bedford Square, (Head Master, the Rev. HENRY BROWNE, M.A. of Corpus Christi College, Cambridge), will open on the 1st November.

Visitors for the present year:— Leonard Horner, Esq. F.R.S. Win. Bingham Baring, Esq. M.P. Henry Waymouth, Esq. Henry Hallam, Esq. F.R.S. &c.

A more detailed Prospectus than has hitherto appeared may be had at the School, at the Office of the University, and at the following Booksellers:—Taylor, 30, Upper Gower Street, Longman and Co. 39, Paternoster Row; Halliwin and Co. 47, Paternoster Row; Parbury and Co. 7, Leadenhall Street; Jennings and Chaplin, Cheapside; Richardson, 23, Cornhill; Fellows, 39, Ludgate Street; Hunter, 72, St. Paul's Churchyard; Underwood, 32, Fleet Street; Black, Young, and Young, 2, Tavistock Street; Smith, 173, Strand; Wylie, 7, Charing Cross; Knight, 13, Pall Mall; Troutell and Co. 30, Solio Square; Murray, 59, Abchurch Lane; Ridgway, 169, Piccadilly; Gardner, 163, Regent Street; Balliere, Regent Street; Templeman, 18, Percy Street; Alexander, 37, Great Russell Street; Callow, 16, Princes Street, Soho.

The Head Master may be spoken with at the School daily, (except Sundays), between the hours of 11 and 3. HENRY BROWNE, Head Master.

WESTERN LITERARY and SCIENTIFIC INSTITUTION, 47, Leicester Square.

Patron, THE KING. This Institution, for the Diffusion of Useful Knowledge, offers the following advantages:— An extensive Library, for the circulation of New Publications and Works of Interest. A Reading-Room, supplied also with the Periodicals and Daily Papers. Classes for the attainment of the Sciences and Languages, and for the Discussion of Literary and Scientific Subjects. Admission Fee, 10s. 6d.—Subscription, 2s. 2s. per annum, payable half-yearly. A Prospectus and Form of Admission may be procured gratis, at the Institution; at Messrs. Grays and Felt, 69, Piccadilly; Roake and Varty, 81, Strand; and Tilt, 86, Fleet Street.

BOOKSELLING, STATIONERY, and PRINTING BUSINESS to be DISPOSED OF.

An advantageous Opportunity now offers for succeeding to a Business in the above Line, in a respectable and populous Town in the North of England. The Stock is moderate, and in excellent condition, being of modern date; and the Situation of the Shop and Residence, the best that can be chosen. The Trade will be proved to the Satisfaction of any Person treating, to be a very profitable one, and is capable of much extension. The Advertiser can confidently recommend the Concern as a desirable Investment. Terms of payment may be rendered easy, and every further Information can be obtained by application (post-paid) to Messrs. Harris Brothers, Liverpool.

MECHANICAL PERSPECTIVE.—Mr. RONALDSS Patent Perspective Tracing Instruments are now on Sale and View, at Mr. Cary's, Optician, No. 181, Strand.

This Perspectograph is wholly devoid of the Inconveniences and Difficulties attendant on the Use of the Optical and Mechanical Instruments which have been hitherto invented, and will enable any person unacquainted with the Laws of Perspective, to sketch with great facility and accuracy from Nature. It constitutes, in fact, a species of natural Pantograph, which, with a little habit, will furnish the Operator with the means of copying with great delicacy, every Line and Texture of an Object, or Assemblage of Objects, however complicated. Also his new and remarkably firm, yet light and portable Tripod Staff, for the support of Drawing-Boards, Plane-Tables, Theodolites, Telescopes, &c. &c.

ILLUSTRATIONS of the KEEPSAKE, 1831; consisting of Eighteen Engravings, executed under the superintendance of Mr. C. Heath, from Drawings by the following eminent Artists:—Turner, Stepanoff, Corbould, Hornington, Smitke, Proust, Westall, Sharpe, Criswell, Eastlake, Howard, and Chalton.

Proofs, delivered in a Portfolio £2 3 India Proofs 3 3 India Proofs, before the Letter 4 4 A few Sets of Illustrations for 1828, 1829, and 1830, are left for sale. London: Jennings and Chaplin, 62, Cheapside.

SIX VIEWS of the COLUMBINE and the Experimental Squadron, engraved and drawn from the Objects by Henry Moses.

To be had of Arch, Cornhill; Jennings and Chaplin, Cheapside; Ackermann, Strand; Fuller, Rathbone Place; and all the principal Booksellers in Portsmouth, Plymouth, Isle of Wight; and of the Publisher, 30, Weymouth Street, Portland Place.

THE CHILD'S OWN DRAWING-BOOK; or, Easy and Progressive Steps in Drawing Landscapes, Animals, Flowers, Trees, Ships, the Human Figure, &c. containing 66 Plates in Chromography.

By G. W. DAVIES, Esq. In 8vo. half-bound, cape morocco, price 4s.; or may be had separately, in 14 Parts, at 6d. each. Published by D. Colvath, Chiswell Street; sold by Ackermann, Strand; and every Bookseller in Town and Country.

Elegant Works for the Drawing-Room Table.

Just published, PANORAMA of SWITZERLAND, as viewed from the Summit of Mont Right. 12s. plain, or 14. 6s. beautifully coloured, in a neat Case.

2. Panorama of the Rhine, from Cologne to Mayence. 10s. 6d. plain, or 11. 1s. beautifully coloured, in a neat Case.

3. Panorama of the Mayne, from Mayence to Frankfurt, 6s. plain, or 12s. coloured, in a neat Case.

4. Panorama of the Thames, from London to Richmond, exhibiting every Object on both Banks of the River. This Work is upwards of 60 Feet in Length, folded up in a portable Form, price 12. 6s. plain, or 21. 10s. beautifully coloured.

N.B. The View of London, which accompanies the Panorama of the Thames, 5 feet 6 inches long, may be had separately, 6s. plain, 12s. coloured.

London: Published by Samuel Leigh, 18, Strand, of whom may be obtained, various useful Guides for Travellers on the Continent, &c.

Hummel's Modern Piano-Forte Tutor. This day is published, price 15s.

ELEMENTARY INSTRUCTIONS on the ART of PLAYING the PIANO-FORTE, with Suitable Examples, and Sixty Practical Pieces; being Part the First of Hummel's Complete School for the Piano-Forte. The latter Work forming the third Volume of 500 Pages, and containing every requisite Instruction and Example necessary to form a finished Player on the Piano-Forte, may be had, price 81. 6s. Published by T. Boosey and Co. 25, Holles Street, Oxford Street.

BOOKS PUBLISHED THIS DAY.

Dr. Frey's Dictionary of Chemistry, 4th edition. In 1 very large vol. printed in double columns, price 11. 1s.

A DICTIONARY of CHEMISTRY and MINERALOGY. By ANDREW URE, M.D. F.R.S.

The 4th edition, considerably improved and enlarged. London: Printed for Thomas Tegg, 75, Cheapside; R. Griffin and Co. Glasgow; J. Curming, Dublin; and sold by all Booksellers in the Kingdom.

THE QUARTERLY REVIEW, No. LXXXVII. Contents—

- 1. Science in England, and the Royal Society
2. Rank of England
3. Life of Heber
4. Lyell's Geology
5. Southey's Life of Bunyan
6. Greece and Navarin
7. Negro Testament
8. Present State of France.

John Murray, Albemarle Street.

A HISTORY of BRITISH ANIMALS,

exhibiting the descriptive Characters and systematical Arrangement of the Genera and Species of Quadrupeds, Birds, Reptiles, Fishes, Mollusca, and Radiata, of the United Kingdom; including the Indigenous, extirpated, and extinct kinds; together with periodical and occasional Visitants.

By JOHN FLEMING, D.D. F.R.S.E. M.W.S. &c. and Author of the Philosophy of Zoology.

"This very important work, which has just appeared, we consider as infinitely superior to any Natural History of British Animals hitherto published. It will become the standard book on British Animals."—Janine's Journal of Science. London: Printed for James Duncan, Paternoster Row; and Bell and Bradfute, Edinburgh.

GOtha ALMANACH for 1831, is just

imported, by Black, Young, and Young, Foreign Booksellers, 2, Tavistock Street, Covent Garden. Price 6s. stamped.

India. Dedicated, by permission, to his Majesty.

In 4 vols. with maps and plates, price 11. 2s. boards, or 14. 6s. neatly half-bound, forming part of the Modern Traveller.

A GEOGRAPHICAL, HISTORICAL, and TOPOGRAPHICAL DESCRIPTION of INDIA.

By JOSIAH CONDER. The matter contained in these volumes will be found equal in quantity to six large octavo volumes.

"This portion of the Modern Traveller (India) is of peculiar importance. It contains (besides a full description of the country) a very interesting and comprehensive history of India, which is to be found complete in no other work." The several histories which have hitherto appeared limit themselves to separate parts of the country or its dynasties: thus we have histories of British India, Mahometan India, Central India, &c.; whereas the present work combines the facts of all, descending from the earliest period of the ancient annals to the year 1827."—Literary Gazette.

Preparing for publication, Italy. By the Editor of the "Modern Traveller," and forming a continuation of that work. 3 vols. Printed for James Duncan, 37, Paternoster Row.

Africa. In 3 vols. with maps and plates, price 16. 6d. boards, forming a part of the Modern Traveller.

A DESCRIPTION of AFRICA; comprising an Historical Account of Discoveries in that Continent, from the Earliest to the latest Journey of Clapperton; also an Account of the Barbary States, and of the last British Expedition to Algiers; Sierra Leone, and of the Cape Colony. The matter contained in these volumes will be found equal in quantity to four large octavo volumes. London: Printed for James Duncan, 37, Paternoster Row.

Prospectuses of the Modern Traveller may be had of the Publisher, and all Booksellers.

Abernethy's Surgical and Physiological Works.

In 4 vols. 8vo. price 31. 5s. 6d. boards. THE SURGICAL and PHYSIOLOGICAL WORKS of JOHN ABERNETHY, F.R.S. &c. &c. consisting of the following Treatises and Lectures, which may be had separately:—

- 1. On the Constitutional Origin and Treatment of Local Diseases, and on Aneurisms, &c.
2. On Diseases resembling Syphilis, and on Discharges of the Urethra, &c.
3. On Injuries of the Head, &c. 7s.
4. On Lumbar Abscesses and Tumours, &c.
5. Lectures on Surgery, 8s.
6. Physiological Lectures, 10s. 6d.
Printed for Longman, Rees, Orme, Brown, and Green.

In 8vo. price 3s. 6d. THE SECRET REVEALED of the

AUTHORSHIP of JUNIUS'S LETTERS. By JAMES FALCONAR, Esq. Jun. "L'ame n'a point de secret que la conduite ne revele."—French Proverb. London: Holdsworth and Ball, 18, St. Paul's Churchyard.

Burke's Works complete, with General Index.

In 16 vols. 8vo. price 61. 17s. boards. THE WORKS of the Right Honourable EDMUND BURKE, complete with General Index. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, London.

* A few Copies may be had on royal paper, price 81. 12s. in boards. Also, Vols. IV. to VIII. in 4to. with General Index to complete that edition, price 81. 2s. each, in boards.

8vo. 6s. 6d. MEMOIR of the LIFE of HENRY

FRANCIS D'AGUESSEAU, Chancellor of France; and of his Ordinances for Consolidating and Amending certain Portions of the French Law and of Historical and Literary Account of the Roman and Canon Law. By CHARLES BUTLER, Esq. John Murray, Albemarle Street.

In 1 vol. 8vo. price 12s. boards. A SHORT HISTORY of the CHRISTIAN

CHURCH, from its Erection at Jerusalem down to the Present Time. Designed for the Use of Schools, Families, &c. By the Rev. JOHN PHIPPS, B.A. Rector of Desford, in Leicestershire.

"His matter is unquestionably selected with judgment, and luminously arranged; his language is clear and concise, and not deficient in elegance; and we rise from the perusal of his work with very favourable impressions of his character, with which otherwise we are unacquainted."—Theological Review.

Also may be had, by the same Author,

- 1. A New Translation and Exposition of the very Ancient Book of Job, &c. In 1 vol. 8vo. price 12s. boards.
2. Lectures, Explanatory and Practical, on the Epistle of St. Paul to the Romans. In 1 vol. 8vo. price 12s. boards.
3. The Second Advent; or, the Glorious Epiphany of our Lord Jesus Christ, &c. In 2 vols. 8vo. price 21s. boards.
4. Lyra Davidis; or, a New Translation and Exposition of the Psalms. In 1 vol. 8vo. price 12s. boards.
5. Canticles; or, Song of Solomon, &c. In 1 vol. 8vo. price 6s. boards.
6. A Present to the Convalescent, &c. In 1 vol. 12mo. price 4s. boards.
Printed for James Duncan, 37, Paternoster Row.

In royal 8vo. price 11. 2s. in cloth boards, the 3d edition, corrected and materially improved,

THE CLERICAL GUIDE; or, Ecclesiastical Directory; containing a complete Register of the Dignities and Benefices of the Church of England, with the Names of their present Possessors, Patrons, &c. and an Alphabetical List of the Dignities and Beneficed Clergy; with an Appendix, containing the Ecclesiastical Patronage at the disposal of the King, the Lord Chancellor, Archbishops and Bishops, Deans and Chapters, Colleges at the Universities, &c.

By RICHARD GILBERT, Compiler of the "Clergyman's Almanac," and the "Liber Scholasticus." Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Works by Mr. Hazlitt. In 1 vol. post 8vo. with a fine Portrait of Mr. Northcote, 10s. 6d.

CONVERSATIONS of JAMES NORTH-COTE, Esq. RICHARD with WILLIAM HAZLITT.

- 1. Henry Colburn and Richard Bentley, New Burlington Street. Of whom may be had, by the same Author,
2. Table Talk. 2 vols. 8vo. 16s.
3. The Plain Speaker; Opinions of Books, Men, and Things. 3 vols. 8vo. 16s.
4. Spirit of the Age; or, Contemporary Portraits. In 1 vol. post 8vo. 8s.

In 12mo. price 6s. 6d. boards, SERMONS on the HISTORY of OUR

BLESSED LORD and SAVIOUR JESUS CHRIST. By the Rev. WILLIAM NORRIS, M.A. Rector of Warlington, Hants, and Chaplain to His Grace the Duke of Devonshire. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

A TREATISE ON FEVER.
 In 8vo. price 14s. cloth boards.
 By **SOUTHWOOD SMITH, M.D.**
 Physician to the London Fever Hospital.
 Printed for Longman, Rees, Orme, Brown, and Green.
 "This Treatise on Fever stands, without competition, at the head of all that has been written on this abstruse disease."—*Westminster Review*, Jan.
 "There is no man in actual practice who should not possess himself of Dr. Smith's work."—*Lond. Med. and Surg. Journal*, February.
 "The general reader will find it perfectly intelligible, and of great practical utility."—*Monthly Repository*, March.
 "With a mind so trained to accurate observation and logical deduction, Dr. Smith's notions are peculiarly valuable."—*Medico-Chirurgical Review*, March.
 "Of the morbid phenomena he has given a most masterly description."—*London Medical and Physical Journal*, March.
 "The author merits the reward of a double service, by arriving at important truth amid much popular error, and by laying this truth before the world in a diction, and with a demonstration, which most powerfully recommend it to the judgment."—*Westminster Review*, April.
 "The work just analysed is the best which we have ever perused on the subject of fever, and in our conscience we believe it the best that ever flowed from the pen of physician in any age or country."—*Medico-Chirurgical Review*, April.

A SECOND COURSE OF SERMONS
 for the YEAR, containing Two for each Sunday, and One for each Holiday; abridged from the most eminent Divines of the Established Church, and adapted to the Service of the Day; intended for the Use of Families and Schools. Dedicated, by permission, to the Lord Bishop of London.
 By the Rev. J. R. PITMAN, A.M.
 Alternate Morning Preacher of Belgrave and Berkeley Chapels, and alternate Evening Preacher of the Foundling and Magdalen Hospitals.

"There is no question which the clergy are more frequently asked, and to which they find it more difficult to give a satisfactory reply, than this—What sermons would they recommend for the use of a private family? We really think that Mr. Pitman's work bids fair to supply the deficiency which has been so much regretted."—*Quarterly Theological Review*.

A Second Edition of the First Course is published, same size and price as above.
 Printed for James Duncan, 37, Paternoster Row.

THE FAMILY CLASSICAL LIBRARY,
 No. 10, containing Pindar, translated by the Rev. C. A. WHEELWRIGHT, Prebendary of Lincoln; and Anacreon, by Mr. THOMAS BOURNE.
 Cicero remarks, that not to know what has been transacted in former times, is to continue always a child; and the learned Dr. Parr says, "if you desire your son, should be no great scholar, to read and reflect, it is in your duty to place his hands the best translation of the best classical authors."
 To those, therefore, who are desirous of obtaining a knowledge of the most esteemed authors of Greece and Rome, but possess not the means or leisure for pursuing a regular course of study, the present undertaking must prove a valuable acquisition.
 The preceding Numbers comprise Demosthenes, Sallust, Xenophon, Herodotus, Virgil, &c. &c.
 Henry Colburn and Richard Bentley, 6, New Burlington Street.

SATURDAY, OCTOBER 30, 1830.

REVIEW OF NEW BOOKS.

Memoirs of Lord Burghley. By Dr. Nares. Vol. II. 4to. pp. 632. London, 1830. Colburn and Bentley.

THE continuation of this very valuable accession to our knowledge of English history, at a period when that history is most important, must be truly acceptable to all the lovers of sterling works; works which do credit to, and are calculated to be lasting ornaments of, our literature. By referring to our review of the first volume, (*L. G.* No. 568, April 26, 1828), it will be seen that we admitted the incompetency of a Journal like ours to afford an adequate idea of such a mass of "historical, biographical, religious, and political questions," as are embraced and discussed in a production of this magnitude; and we must now repeat our *mea culpa*. The volume at present before us, too, rises in consequence; for it commences with the enthronement of Elizabeth, and proceeds through all the mighty acts of her eventful reign, 1558-9, to the year 1572, when the Duke of Norfolk was executed. During this period the great trust and confidence reposed in Burghley gives additional weight to his papers and correspondence; and Dr. Nares has bestowed both pains and patience in setting them in a clear light. Like all biographers, he leans, even more strongly we think than before, to the favourable side of all that concerns Elizabeth, or her minister. He accordingly dwells upon the position of Mary from the very beginning of her dear cousin's queenly career, as one which put the succession into jeopardy; and while he palliates or excuses most of the facts alleged or proven against the English court,* he joins with those who credit the worst imputations upon the unfortunate princess. As a general principle, he says:—

"It is idle to talk, much more to write, of those times, as though the great quarrel were but a contest between two women, and in which some of the most insignificant of female passions were allowed to give a turn to the most important events. From the first moment of her accession, Elizabeth may be said to have had arrayed against her, on some ground or other, all the greatest potentates of Europe, assisted by the craft and subtlety of able but dishonest politicians, the rancour of an exasperated hierarchy, and all the Jesuitical tricks of its superstitious votaries. But Scotland was doomed to be the theatre, where the enemies of Elizabeth and England were to display their greatest feats; the French were never more determined to make it their 'stepping-stone' to England than after the death of Henry II.

"All these things put together may help us to form some idea of the perilous situation in which Elizabeth stood, on her first accession to

* For instance, he endeavours to explain away the infamous letter so justly animadverted upon by Lodge, in which Lord Shrewsbury, her gaoler, is instructed to provoke her to "answer somewhat" which may afford a handle to her enemies and persecutors.

the crown; and the need she had of a minister, who could look through all these difficulties, discern their springs and consequences with a steady eye, without being dismayed at the impoverished and dismantled state of the kingdom, through Mary's misgovernment, or disheartened in standing forth as the champion of Elizabeth's disputed title, and her defender against a host of foes, powerful, subtle, and intriguing, and, upon many principles, bent upon her dethronement, the elevation of Mary of Scotland, and the subjugation of both parts of the British Island."

But we must rather, for the reasons we have stated, trust to a few miscellaneous extracts, than to a regular analysis, for the imperfect illustration we can offer of this truly national work.

"Towards the conclusion of this first year of the queen's reign, a proclamation against excess of apparel appeared, upon which a certain prelate, in a discourse from the pulpit, enumerating many of the prevailing vanities, has given us a curious specimen of the fashions and luxuries of the day, in the following extraordinary passage:—'These fine-fingered rufflers, with their sables about their necks, corked slippers, trimmed buskins and warm mittens,—furred stomachers, long gowns; these tender pannels must have one gown for the day, another for the night: one long, another short: one for winter, another for summer: one furred through, and another but faced: one for the work-day, another for the holy-day: one of this colour, another of that: one of cloth, another of silk or damask. Change of apparel: one afore dinner, another at after; one of Spanish fashion, another of Turkey: and, to be brief, never content with enough, but always devising new fashions and strange. Yea, a ruffian will have more in his ruff and his hose, than he should spend in a year; he which ought to go in a russet coat, spends as much on apparel for him and his wife, as his father would have kept a good horse with."

With regard to Mary's marriage with Darnley, there seems to be some discrepancy in Dr. Nares's argument; for at one place he considers it as a masterly stroke of policy in the Scots queen, and then as an act which was likely to do her the utmost injury. In the year 1569 the following notice of the first lottery occurs.

"Among the measures adopted at this time, for the better security and defence of the kingdom, which required the most prompt and vigilant attention, we read of the first public lottery being drawn this year, 1569; it consisted, we are told, of 400,000 lots, at 10s. each lot. The prizes were plate, and the profits were to be applied to the repair of the havens of the kingdom. It was drawn at the west door of St. Paul's Cathedral. The drawing is stated to have begun on the 11th of January, and to have been continued incessantly, day and night, till the 6th of May following. The proposals for this lottery were

published in the year 1567, 1568. The prizes were previously exhibited at the house of the queen's jeweller and goldsmith, Mr. Dericke, in Cheapside."

The following is another curious mark of the times (1570):—

"In the course of this year a negotiation was set on foot for the queen's marriage with the Duc d'Anjou, brother of the King of France; Cecil, in a letter to Walsingham, at Paris, expresses his private opinion to be, generally speaking, that 'he saw no continuance of the queen's quietness without a marriage.' And this, indeed, he might well say; the chances of the succession, after her death without issue, being made a continual trouble to her, especially by those who wished to have Mary Queen of Scots' title openly and publicly allowed; but the agitation of the subject set, it seems, the astrologers to work, who calculated the queen's nativity, in order from thence to draw prognostics of what might be expected to ensue from such a marriage, if it should take place. We cannot deny that this appeal to the vain science of astrology (the folly of the age, as Strype calls it), is strongly reported to have been set on foot by the secretary, and absolutely to have been resorted to by that extraordinary man as a guide and direction of his own judgment. The calculation happens to be still extant, written by the secretary *propria manu*, beginning, *De significatione 7^{im} domus, et de conjugio*. The whole, indeed, may be seen in the appendix to the second volume of Strype's Annals of the Reformation, No. IV.: one clause, as bearing upon the succession, is ridiculously curious. There was a hope to be drawn, it seems, of the birth of one son, that should be strong, famous, and happy in his mature age. '*Verum Venus est in domo propria, conjuncta Mercurio, domino filiorum. Et idcirco spes maxima datur de filio uno robusto, claro, et felici in aetate sua matura.*' The prognostics, however, of happiness, and a robust heir of her own body, were not sufficient to induce the queen to venture herself within the indissoluble bonds of wedlock; one daughter also seems to have been promised, from the moon being in the constellation Taurus.—'*Luna in Tauro unam filiam designat.*'"

And now we take leave of a volume of great value; recommending it to readers rather on its intrinsic merits than for any chance we could have of making that value known either by our criticisms or extracts.

The Literary Souvenir. Edited by Alaric A. Watts. 12mo. pp. 346. London, 1831. Longman and Co.

THIS is a very delightful volume—various and amusing, with a rich tone of creative imagination flung over many of its productions. Mr. Praed opens the book with one of those legends he tells so well, and has several other very pleasant poems. His poetical vein is a very peculiar one: his pathos rarely goes beyond sentiment, passion he assumes not, and his

philosophy is of the Rochefoucauld school: but he is graceful in his expressions, most musical in verse, playful, with occasional exquisite touches of poetry, which seem to speak a higher power than he shews, and a manner almost his own. He gives us the idea of one of the French writers, with their wit and sparkling neatness, touched with a rich English spirit of poetry. To express our meaning by a metaphor (fit criticism for a poet), he is a French epigram and an English stanza blended into one.

"The knights are dust,
Their good swords rust,

And their souls are with the saints, we trust"—

so says Coleridge: Præd's is a livelier picture—a modern antique.

"Sir Isumbras was ever found

Where blows were struck for glory;

There sat not at the Table Round

A knight more famed in story.

The king on his throne would turn about

To see his courser prancing,

And, when Sir Launcelot was out,

The queen would praise his dancing.

He quite wore out his father's spurs,

Performing valour's duties—

Destroying mighty sorcerers,

Avengeing injured beauties;

And crossing many a trackless sand,

And rescuing people's daughters

From dragons that infest the laud,

And whales that walk the waters.

He throttled lions by the score,

And giants by the dozen;

And, for his skill in lettered lore,

They called him 'Merlin's cousin.'

A score of steeds, with bit and rein,

Stood ready in his stable;

An ox was every morning slain,

And roasted for his table.

And he had friends, all brave and tall,

And crowned with praise and laurel,

Who kindly feasted in his hall,

And tilted in his quarrel;

And minstrels came and sung his fame

In very rugged verses:

And they were paid with wine and game,

And rings, and cups, and purses.

And he loved a lady of high degree,

Faith's fortress, Beauty's flower;

A countess for her maid had she,

And a kingdom for her dowry;

And a brow whose frowns were vastly grand,

And an eye of sunlit brightness,

And a swan-like neck, and an arm and hand

Of most bewitching whiteness;

And a voice of music, whose sweet tones

Could most divinely prattle

Of battered casques, and broken bones,

And all the bliss of battle.

He wore her scarf in many a fray,

He trained her hawks and ponies,

And filled her kitchen every day

With leversets and conies:

He loved, and he was loved again—

I won't waste time in proving,

There is no pleasure like the pain

Of being loved, and loving.

Dame Fortune is a fickle gipsy,

And always blind, and often tye.

Sometimes, for years and years together,

She'll bless you with the sunniest weather,

Bestowing honour, pudding, pence,

You can't imagine why or whence;

Then in a moment—presto, pass!

Your joys are withered like the grass;

You find your constitution vanish

Almost as quickly as the Spanish;

The murrain spoils your flocks and fleeces,

The dry-rot pulls your house to pieces,

Your garden raises only weeds,

Your agent steals your title-deeds,

Your banker's failure stuns the city,

Your father's will makes Sugden witty,

Your daughter, in her beauty's bloom,

Goes off to Gretna with the groom,

And you, good man, are left alone,

To battle with the gout and stone.

Ere long, Sir Isumbras began

To be a sad and thoughtful man.

They said the glance of an evil eye

Had been on the knight's prosperity:

Less swift on the quarry his falcon went,

Less true was his hound on the wild deer's scent,

And thrice in the list he came to the earth,

By the luckless chance of a broken girth.

And Poverty soon in her rags was seen

At the board where Plenty erst had been;

And the guests smiled not as they smiled before,

And the song of the minstrel was heard no more.

And a base ingrate, who was his foe,
Because, a little month ago,
He had cut him down, with friendly ardour,
From a rusty hook in an ogre's larder,
Invented an atrocious fable,
And libelled his fame at the royal table;
And she at last, the worshipped one,
For whom his valorous deeds were done,
Who had heard his vows, and worn his jewels,
And made him fight so many duels—
She, too, when Fate's relentless wheel
Deprived him of the privy-seal,
Bestowed her smiles upon another,
And gave his letters to her mother.

Fortune and fame—he had seen them depart,
With the silent pride of a valiant heart;
Traitorous friends—he had passed them by
With a haughty brow and a stifled sigh.
Boundless and black might roll the sea,
O'er which the course of his bark must be:
But he saw, through the storms that frowned
above,

One guiding star, and its light was Love.
Now all was dark; the doom was spoken!
His wealth all spent, and his heart half-broken,
Poor youth, he had no earthly hope,
Except in laudanum, or a rope."

A very beautiful and imaginative tale by William Howitt, "the Last of the Titans," deserves our warm praise—the deserted hall is a Martin-like picture. "The Lottery Ticket" is a lively sketch in the Rowlandson style—the comic of common life. "The Toorkoman's Tale" is an oriental landscape, with figures: Mr. Frazer has thrown much interest into the story. "The Lady Olivia's Decamaron" is a mystery without an explanation—a very easy method of cutting a Gordian knot, by the by; still, it is excitingly worked up, and the style speaks, we think, of Mr. Præd. We do not like "the Smuggler's Last Trip" so well as the tale last year: it is a gratuitous horror, and, like such gratuities, unnecessary. "The Palace of the Rajah Hurchund" is a fine incident, spiritedly told in parts, in others disguised by the common-places of abuse which bespeak vulgarity of feeling—the greatest of offences against taste: for example, "he contented himself with hoarding up his resentments for another day, after the manner of kings;"—"and as princes, like lions and other fierce and destructive animals." "Woman's Wit" is very lively in manner of narration—but the story is familiar to every child who has read a volume of Turkish or Persian tales: in spite of the reference to the French author, whence "the idea of the story" is stated to have been taken, it has already worn several English dresses. The history of Miss Curran is very interesting. Some of the poetry in the *Souvenir* is very beautiful. There are three charming poems of L. E. L.'s, and a fine ballad of Mary Howitt's. "The Union Flag of England" is one of Mr. Hollings' most successful pieces. There is one by Mr. Hervey, some of the images in which are equally poetical and beautiful. For example:—

"Where hopes, like fairies, used to play—
Hopes that, like fairies when they part,
Left withered rings about the heart!"

We so like the following little poem by Mrs. Watts, that we quote it even in preference to two very sweet poems of the editor's own.

"Lines suggested by the sight of a beautiful Statue of a dead Child.

I saw thee in thy beauty! bright phantom of the past:
I saw thee for a moment—'twas the first time and the last:
And though years since then have glided by of mingled
bliss and care,

I never have forgotten thee, thou fairest of the fair!

I saw thee in thy beauty! thou wert graceful as the fawn,
When, in very wantonness of glee, it sports upon the
lawn;

I saw thee seek the mirror, and when it met thy sight,
The very air was musical with thy burst of wild delight!

I saw thee in thy beauty! with thy sister by thy side—
She a lily of the valley, thou a rose in all its pride!
I looked upon thy mother—there was triumph in her eyes,
And I trembled for her happiness—for grief had made me
wise!

I saw thee in thy beauty, with one hand among her curls—
The other, with no gentle grasp, had seized a string of
pearls:
She felt the pretty trespass, and she chid thee, though she
And I knew not which was lovelier, the mother or the
child.

I saw thee in thy beauty! and a tear came to mine eye,
As I pressed thy rosy cheek to mine, and thought: even
thou couldst die!
Thy home was like a summer bower, by thy joyous presence
But I only saw the sunshine, and I felt alone the shade!

I see thee in thy beauty! for there thou seem'st to lie
In slumber resting peacefully; but, oh! the change of
eye—

That still serenity of brow—those lips that breathe no
Proclaim thee but a mockery fair of what thou wert of
yore.

I see thee in thy beauty! with thy waving hair at rest,
And thy busy little fingers folded lightly on thy breast:
But thy merry dance is over, and thy little race is run:
And the mirror that reflected two, can now give back but
one.

I see thee in thy beauty! with thy mother by thy side—
But her loveliness is faded, and quelled her glance of
pride;

The smile is absent from her lip, and absent are the pearls,
And a cap, almost of widowhood, conceals her curved
curls.

I see thee in thy beauty! as I saw thee on that day—
But the mirth that gladdened then thy home, fled with
thy life away.

I see thee lying motionless upon the accustomed floor—
But my heart hath blinded both mine eyes—and I can see
no more!"

For our prose specimen we choose "The Lovers of Vire," by the clever author of Riche-lieu.

"The sun was shining as fair as the sun could shine in a beautiful May morning; bright, yet gentle; warm, but fresh; midway between the watering-pot of April and the warming-pan of June, when in the beautiful valley of Vire—every body knows Vire—but, lest there should be any body in the wide world who does not, dearly beloved reader, I will tell you all about it. Get into the stage-coach, which journeyeth diurnally between London and Southampton; enjoy the smoothness of the road, bless Mr. M'Adam, put up at the Dolphin, and yield yourself to the full delights of an English four-post bed, for no such sweets shall you know from the moment you set your foot on board the steam-boat for Havre, till the same steam-boat, or another, it matters not which, lands you once more on the English strand. Supposing you then arrived at Havre—get out of it again as fast as you can; rush across the river to Honfleurs; from Honfleurs dart back to Caen; and after you have passed five minutes to think about William the Conqueror, put yourself into the diligence for St. Malo, and when you have travelled just twelve leagues and a half, you will come to a long steep hill, crowned by a pretty, airy-looking town, whose buildings, in some parts gathered on the very pinnacle, in others running far down the slope, seem as if coquetting with the rich valleys that woo them from below. Go to bed; and if you bathe your feet beforehand, which if you are of my faction you will do, walk over the tiled floor of the inn bed room, that you may have a fit opportunity of cursing tiled floors, and of relieving yourself of all the spleen in your nature before the next morning. Then, if both your lover and the day be favourably disposed, sally forth to the eastern corner of the town, and you will have a fair view over one of the loveliest valleys that nature's profuse hand ever gifted with beauty. The soft clear stream of the Vire winding sweetly along between the green sloping hills and the rich woods, and the fields and châteaux, and hamlets, and the sunshine catching upon all its meanderings, and the birds singing it their song of love, as its calm waters roll bountifully by them. Look upon it, and you will not find it difficult to imagine how the soul, even of an obscure artisan in a

remote age, warmed into poetry and music in the bosom of that valley, and by the side of that stream. It was, then, in that beautiful Vale of Vire, some twenty years ago, that François Lormier went out to take his last May walk with Mariette Duval, ere the relentless conscription called him from his happy home, his sweet valleys, and his early love. It was a sad walk, as may well be imagined; for though the morning was bright, and nature, to her shame be it spoken, had put on her gayest smiles as if to mock their sorrow; yet the sunshine of the scene could not find its way to their hearts—and all seemed darkened and clouded around them. They talked a great deal, and they talked a long time; but far be it from me to betray their private conversation. I would not, for all the world—especially as I know not one word about it—except, indeed, that François Lormier vowed the image of Mariette should remain with him for ever—should inspire him in the battle, and cheer him in the bivouac; and that Mariette protested she would never marry any body except François Lormier, even if rich old Monsieur Latoussefort, the great Foulan, were to lay himself and fortune at her feet; and, in short, that when his ‘seven long years were out,’ François would find her still a spinster, and very much at his service. ‘*Mais si je perdrois une jambe?*’ said François Lormier. ‘*Qu’est ce que c’a fait?*’ replied Mariette. They parted—and first to follow the lady. Mariette wept a great deal, but soon after got calm again, went about her ordinary work, sang her song, danced at the village fête, talked with the talkers, laughed with the laughers, and won the hearts of all the youths in the place, by her unadorned beauty and her native grace. But still she did not forget François Lormier; and when any one came to ask her in marriage, the good dame her mother referred them directly to Mariette, who had always her answer ready, and with a kind word and a gentle look sent them away refused, but not offended. At length good old Monsieur Latoussefort presented himself with all his money-bags, declaring that his only wish was to enrich his gentle Mariette; but Mariette was steady, and so touchingly did she talk to him about poor François Lormier, that the old man went away with the tears in his eye. Six months afterwards he died, when to the wonder of the whole place, he left his large fortune to Mariette Duval! In the meanwhile François joined the army, and from a light handsome conscript, he soon became a brave, steady soldier. Attached to the great Northern army, he underwent all the hardships of the campaigns in Poland and Russia, but still he never lost his cheerfulness, for the thought of Mariette kept his heart warm, and even a Russian winter could not freeze him. All through that miserable retreat, he made the best of every thing. As long as he had a good tender piece of saddle, he did not want a dinner; and when he met with a comfortable dead horse to creep into, he found board and lodging combined. His courage and his powers of endurance called upon him, from the first, the eyes of one whose best quality was the impartiality of his recompense. François was rewarded as well as he could be rewarded; but at length, in one of those unfortunate battles by which Napoleon strove in vain to retrieve his fortune, the young soldier in the midst of his gallant daring was desperately wounded in the arm. Pass we over the rest.—Mutilated; sick, weary, and ragged, François approached his native valley, and, doubtful of his reception

—for misery makes sad misanthropes—he sought the cottage of Madame Duval. The cottage was gone; and on inquiring for Madame Duval, he was directed to a fine farmhouse by the banks of the stream. He thought there must be some mistake, but yet he dragged his heavy limbs thither, and knocked timidly against the door. ‘*Entrez!*’ cried the good-humoured voice of the old dame. François entered, and unbidden tottered to a chair. Madame Duval gazed on him for a moment, and then rushing to the stairs called loudly, ‘Come down, Mariette, come down; here is François returned!’ Like lightning, Mariette darted down the stairs, saw the soldier’s old great coat, and flew towards it—stopped—gazed on his haggard face and empty sleeve; and gasping, fixed her eyes upon his countenance. ‘Twas for a moment she gazed on him thus, in silence; but there was no forgetfulness, nor coldness, nor pride about her heart—there was sorrow, and joy, and love, and memory, in her very glance. ‘O François, François!’ cried she, at length, casting her arms round his neck, ‘how thou hast suffered!’ As she did so, the old great coat fell back, and on his breast appeared the golden cross of the legion of honour. ‘*N’importe!*’ cried she, as she saw it, ‘*voilà ta récompense!*’ He pressed her fondly to his bosom. ‘My recompense is here,’ said he, ‘my recompense is here.’

We must quote the following slight poem of L. E. L.’s: there is such a strain of simple, natural feeling, that it were injustice to omit it.

The Violet.

“Why better than the lady rose
Love I this little flower?
Because its fragrant leaves are those
I loved in childhood’s hour.

Though many a flower may win my praise,
The violet has my love;
I did not pass my childish days
In garden or in grove.

My garden was the window-seat,
Upon whose edge was set
A little vase,—the fair, the sweet,—
It was the violet.

It was my pleasure and my pride;—
How I did watch its growth!
For health and bloom, what plans I tried,
And often injured both.

I placed it in the summer shower,
I placed it in the sun;
And ever, at the evening hour,
My work seemed half undone.

The broad leaves spread, the small buds grew,
How slow they seemed to be!
At last there came a tinge of blue,—
‘Twas worth the world to me!

At length the perfume filled the room,
Shed from their purple wreath;
No flower has now so rich a bloom,
Has now so sweet a breath.

I gathered two or three,—they seemed
Such rich gifts to bestow;
So precious in my sight, I deemed
That all must think them so.

Ah! who is there but would be fain
To be a child once more;
If future years could bring again
All that they brought before?

My heart’s world has been long o’erthrown,
It is no more of flowers:
Their bloom is past, their breath is flown,
Yet I recall those hours.

Let nature spread her loveliest,
By spring or summer nursed;
Yet still I love the violet best,
Because I loved it first.”

We wish Mr. Watts had omitted parts of his Introduction: we think that recrimination, complaint, and angry assertions, are ill-judged in a literary man, whose exertions seem to us to have always met their deserved success; and out of keeping, as prefatory to this very beautiful little volume.

A Concise View of the Succession of Sacred Literature, in a Chronological Arrangement of Authors and their Works, from the Invention of Alphabetical Characters to the Year of our Lord 1445. Vol. I.—Part I. by Adam Clarke, LL.D., F.A.S., &c. Part II. by J. B. B. Clarke, M.A., &c. 8vo. pp. 502. London, 1830. T. S. Clarke; Simpkin and Marshall.

ADAM CLARKE is well known as a theological writer: his present work is one upon which no man would have ventured, unless conscious of indefatigable industry and weariless perseverance. Indeed, many hours of a long and laborious life, devoted, as our author tells us, “to the glory of God, and the good of his church,” were inadequate to the completion of a task of such overwhelming magnitude. Dr. Clarke states in his preface—“I have been obliged to seek that help in others, once found in myself, of which length of days and impaired sight have now deprived me;” and he has, consequently, transferred the continuance of his labours to his son. The second part of the present volume warrants us in saying, that the “full conviction” expressed by Dr. Clarke, of the abilities of his successor, has not been disappointed; but that the son has walked in the ways of his father. The labours of these scholars will be sufficiently estimated, when it is considered, that the undertaking was no less than the analysis of all works connected with sacred literature, for the space of about thirty centuries, down to the invention of printing. In addition to the extensive period of time the design embraces, the nature of the writings to be analysed should be taken into account; and we should remember, that in the days of “the fathers,” octavos and quartos were looked upon with becoming contempt; and the reputation of no writer stood very high whose works did not exceed some ten or a dozen elephantine folios. In those times, indeed, the weight of an author’s argument seems to have been appreciated proportionately with the weight of his volume. Neither the admeasurement nor numbers of these formidable tomes have been sufficient to daunt Dr. Clarke, or divert him from effecting his design. On the prominent utility of such a work as the present, we leave him to make his own remarks.

“In producing the following work, I had two objects in view:—first, to shew that, from the time in which it had pleased God to begin to reveal his will to man, there had been such an uninterrupted succession of additional revelations till the whole of the sacred canon was completed, and such constant reference made to this revelation by learned men (both enemies and friends) in all ages, that it was impossible that any part could be lost or any added, without the fact being noticed by some of those who were interested in its destruction or preservation. From this, the antiquity of the Scriptures may be fairly deduced; they are no forgery, nor of late date—they can be traced up to the very time and persons of which they treat, and can be proved to be the same now they were then; and thus the integrity of the sacred oracles may be ascertained, as well as their authenticity and antiquity. This, if I mistake not, forms no mean argument in vindication of the Divine authenticity of the Bible; and it must afford genuine pleasure to the intelligent reader to find, that He who ‘at sundry times, and in divers manners, spoke in time past to the fathers by the prophets,’ and ‘has in these last days spoken unto us by his Son,’ took care that, in all collateral and suc-

ceeding times, these revelations of himself should be acknowledged and witnessed by a great variety of writers in different nations of the earth. Secondly, I wished to make my readers, especially those designed for the sacred ministry and those engaged in it, no matter of what denomination, acquainted with ecclesiastical antiquity, by not only giving them a view of the successive writers in a chronological series, with an epitome of their lives, drawn from the most authentic sources, but also an account of their works, with a faithful and distinct analysis of each; so that in a few pages might be seen the substance of immense volumes. The labour that this has occasioned, can only be appreciated by those who consider the ponderous volumes of writers in different languages, which, in order to compose this work, it was necessary not merely to read in their titles or indexes, but in most cases to examine in every page, that a true synopsis of the author's opinions might be laid before the reader. As proofs of this, I may refer to what is written on the articles—Justin Martyr, Irenæus, Theophilus, Clemens Alexandrinus, Tertullian, Origen, Gregory Thaumaturgus, Cyprian, Arnobius, Lactantius, Eusebius, and Athanasius; under each of which, may I not venture to say, that the intelligent reader will find something to amuse, much to please, and not a little to profit him? It is a matter of no small utility, to be able to tell with little or no labour, what the subjects were on which so many eminent men in various ages have employed their pens."

To those upon whose attention and study sacred literature has peculiar claims and obvious demands, a work like Dr. Clarke's does not need our recommendation. If duty does dictate, or inclination lead to research, the *ταρχια μαθησις* supplied the theological student by the present work will, we doubt not, operate both duly and beneficially. We are aware that the voluminous profundity of the fathers rendered general acquaintance with their works well nigh impracticable, or, at least, attended with inordinate difficulty; and moreover, with many, furnished an excuse for total neglect. This can no longer be pardonable. The present work shews the various topics discussed, and points out where the opinions of the learned men, of all ages, on subjects vitally important, may now be gathered, at a trifling sacrifice of time: and we would, in conclusion, suggest, that the next best thing to being in possession of knowledge ourselves, is to know where it may be readily acquired.

The Winter's Wreath, for 1831. 12mo. pp. 372. London, Whittaker and Co.: Liverpool, Smith.

THIS is a very elegant volume—a word which really seems made to describe its contents;—the poetry is smooth, flowing, correct, but cold; and the tales are prettily told, without much in them:—there is a want of character, and that energy which gives character, throughout. It partakes of that Italian style which Lord Surrey gave our early literature—polished and graceful, but utterly without the force, freshness, and riches of the after-dramatic writers. There is not throughout the book a single piece positively bad—nothing to deserve decided reprehension: but we think we could compound for a few faults, if there were two or three more striking merits. "The Chapel of the Lyre" is a very gracefully told legend, by the editor of the work: and there is both truth and feeling in a little poem called "the Fallen," by William Howitt. Love's

Painter," by T. Roscoe, has either been published before, or is almost a copy of a tale we remember to have read, though we know not exactly where. We have never met with a more pleasant and lively story than that of "Green Stockings," by the Author of Selwyn; but it is too long to extract; and we must keep a few columns for the amusing sketch of old Parisian times in "the Revenu," by Miss Jewsbury.

"*The Revenu*.—Rue Saint Dominique, towards the middle of the seventeenth century, afforded, even in the day-time, no very inviting specimen of the capital of the *grand monarchie*. The project of lighting Paris, at the splendid allowance of three lanterns to a street, had already been formed, and, as a preparatory step, a medal bearing a Latin legend was already struck at the mint—but the progress of illumination had not yet reached Rue Saint Dominique; and pedestrians and their purses were entirely dependent on the moon, unless they chose to carry lanterns at their own cost. The more prudent generally did so—but the most prudent of all generally stayed within doors after dusk. If, in the former case, safety was ensured, (a thing not by any means to be reckoned on beforehand,) cleanliness was out of the question; for in the early part of his reign, Louis le Grand had, by all accounts, the dirtiest capital in Europe;—witness the proverb which made the *crot* of Paris and an ill name equally indelible. Rue Saint Dominique therefore, belonging as it did to the fag end of the city, was by no means what—under its own, or some other name—it probably is now, a genteel residence for persons of taste and condition. It was, however, the very place for Monsieur Nicolas de Nogaret, and Gorgotte, his aged and only servant. M. Nicolas being a miser, starved himself from a sense of duty; and Gorgotte, partly because she could not avoid it, and partly because she looked forward to an eventual legacy, suffered herself to be starved too. She was poor, and old, and stupid, and superstitious—but she was not ill-natured; and had she possessed money, would have spent and given it—(the greater the pity that she had none); but our miser was a real miser. He did not, like the Cauzee in the Arabian Nights, unite the contradictory taste of a love of shew to a love of money; he never ordered 'the fringed table-cloth' to be spread for the feast of 'six onions';—nor did he hanker after traffic and increase of wealth. No; his avarice appeared in the simplest of all possible forms, a mere delight in counting over his accumulations. * * * No father was ever so proud of his child—no subject so loyal to his king—no slave so submissive to his master, as Monsieur Nicolas to his iron chest, which, filled with gold coins of every mintage from the time of Louis XI., was hidden in the wall at his bed's head. Three times a-day he counted over its contents; during the intermediate hours he walked about, thinking on the same subject; and at night it formed the stock subject of his dreams. With all this, M. Nicolas de Nogaret considered himself a very worthy son of the church. He fasted—not two days, but every day in the week; he prayed—if not for the safety of his soul, yet necessarily for that of his money; and he reckoned Gorgotte's yearly wages of two *écus blancs* (present money, about ten shillings) under the head of almsgiving. He attended mass, too, very regularly. * * * Paris, at the date of this most veracious narrative, had (if the pun may be permitted) a *horde* too—but by no means so valuable as the miser's; it consisted of the

most audacious company of beggars that ever infested a civilised country. Their celebrated citadel, the Cour des Miracles, bade defiance to king, prévôt, and police. It consisted of a large area and a muddy unpaved alley, surrounded on every side by huts built of earth and mud, situated at the end of filthy winding streets, and approached by a crooked, rugged declivity. Here the beggars, who of course were thieves also, congregated to the incredible number of thirty thousand—had their own leader and laws—a particular language, which is still spoken by the inhabitants of the Bicêtre—and were divided into classes under the surveillance of principal officers. These frequently consisted of abandoned priests and scholars, who, by virtue of their rank and knowledge, were exempt from paying contributions to the head of the establishment. By day, the members of this fraternity followed, under various denominations, their profession of deceiving or frightening the citizens out of their property, and at night returned to the Cour des Miracles—the orphans to find their parents, the de-ranked to recover their senses, the maimed their limbs, and the blind their sight; so that the scene which in the morning resembled a hospital, at night was changed into a fair. Availing himself of the bad character of the beggars, M. de Nogaret made a conscientious vow against charity. In common with those who have much to lose, he was a great admirer of the laws, and considered the *bons pauvres* as a national disgrace, whilst he would have regenerated the *mechans pauvres* by making one huge bonfire of them and their haunts. Gorgotte, from the fear that whilst receiving a mendicant she might entertain an assassin, was equally inaccessible to pity. The *franc-mitieux* might swoon till even medical men were deceived;—the *saboteux*, by the aid of soap in the mouth, might imitate epilepsy to perfection; and the *coquillarts*, or pilgrims, covered with shells, might relate the holiest tales concerning the holiest saints: but Gorgotte's heart was like her master's—adamantine. Nevertheless, both were destined to be over-reached, and both through a movement of humanity. A child, who, though poor, was free from the usual signs of being an *orphelin* appertaining to the beggars, very pretty, sweet-spoken, and crying bitterly for the loss of its father, who had, it said, been run over by a *mousquetaire*, was one day brought out of the street and comforted with a dry crust in the house of Monsieur Nicolas. The child's heart warmed to the kindness; innocent apparently beyond the innocence of childhood, the *orphelin* fondled Gorgotte—flattered the miser with the title of father—followed him about the house without rebuke, and finally departed with something like permission to call again sometime. That day sealed the fate of the iron chest. The child was a novice of the Cour des Miracles, sent out by one of the leaders! The chink of M. de Nogaret's money reached the quick ear of the infant marauder; through him the report travelled to his instructor, who arranged his plans accordingly. 'Most fortunate of men!' ejaculated our friend Nicolas, one morning about a week after the charity of the dry crust—'most fortunate of men! Here have I thought for the last five years that my rich old aunt Clarice was a *religieuse* among the *dames du Calvaire*, and, behold! she is living in Rue—Rue—Gorgotte, where did the good monk who brought me the summons to attend her sick bed, say her house is situated?' 'Just no where at all, Maitre Nicolas; he said, you must repair straightway to the Halle

aux Veaux, where he would meet you again, and conduct you to her abode. Well, if this is to be her last sickness, Heaven send Madame Clarice a happy ending. Ah! we can carry nothing out of the world with us! 'But we can leave something behind us, Gorgotte; and this is the duty of relations towards each other. It does very well for kings and cardinals to found churches and hospitals; but the case is different in private life—a father should leave his crowns to his son.' 'And a master to his servant,' thought Gorgotte; but she only said, 'An aunt to her nephew.' 'May it prove so,' replied Nicolas. 'O, she must have good store of moneys laid up by this time. Silver plate too, and stuffs figured over, no doubt, with gold and silver. Gorgotte, put out the fire, get half the quantity of salad, and mind the house till I return.' So saying, M. Nicolas 'took his old cloak about him,' and set out for the calf market, on what was destined to prove a fool's errand. Two hours afterwards, the domestic labours of Gorgotte were interrupted by the approach of three very awful personages—the prévôt of Paris, who then filled a very multitudinous office for the benefit of the good city, and two of his sergeants bearing wands. Such important visitors had seldom been seen in Rue Saint Dominique; and though the prévôt's gold sash was rather tarnished, his velvet somewhat faded, and the short coats of his attendants fearfully rusty, not to mention a certain sinister cast of countenance incident to all the three worthies, Gorgotte curtsied reverentially low. The prévôt returned the greeting with more than municipal condescension, addressed her as the *dame de la maison*, and grieved to be the bearer of evil tidings to so worthy a lady. Though not in the pillory, Gorgotte felt her senses make a pirouette at flattery coming from such a distinguished quarter. The dignitary resumed: Madame was the wife of M. Nicolas de Nogaret? No, indeed, she was nothing of the kind. Was it possible that madame was only M. de Nogaret's servant? His servant only. *Eh bien*, that rendered the communication which he the prévôt had to make, less painful to his feelings, and to the sensibility which he doubted not was possessed by madame in the most acute degree. Gorgotte admired this speech not a whit the less because it was unintelligible; and the civic reynard resumed. Her worthy master—the most excellent of citizens—how should he break the tidings—but M. Nicolas de Nogaret, whilst walking in the Halle aux Veaux, had that very morning dropped down dead in a fit, and had been carried to the abode of Madame Clarice de Bourse, who resided hard by. He, the prévôt, was, in consequence, come, in his public capacity, to Rue Saint Dominique, to place seals on M. de Nogaret's effects, remove his money to the tribunal of the Grand Châtelet, and watch over the interests of those who might have claims upon the deceased. Would madame's feelings allow her to shew the way to the place where the excellent M. Nicolas was accustomed to keep his gold?—and since the suddenness of his death precluded the possibility of making a will, would she consider the furniture and other household trifles her own? Such, doubtless, would have been the previous wish of M. Nicolas; and the prévôt of Paris was bound to protect the defenceless. Meanwhile, as other public duties required his presence elsewhere, would madame lead him to the cash without delay? Poor silly Gorgotte, never dreaming of fraud in the guise of law and justice, and having, from her ignorance, extravagant ideas

of the power of the person in whose presence she believed herself to be standing, not to mention the effect produced by the prévôt's side hints, did as she was desired. She saw the iron chest carried off by the two sergeants, and finally beheld the prévôt himself depart, with many assurances of favour and protection, without once scrupling the correctness of their conduct or her own. Nevertheless, she really regretted the catastrophe, and dropped some few natural tears to the memory of her old master; but then, when she looked around, she found comforters in every chair and table, which she now regarded as her own. A certain curious carved cabinet completed the cure; and by bed-time Gorgotte was convinced that the first duty of a Christian is—resignation! Unfortunate M. de Nogaret! (He kicked his heels all day in the Veal Market, and at night crept home weary and disappointed:) here "all his bold knocking went for nothing; no answer was returned. Gorgotte, who, as the reader knows, had passed a very harassing day, was fast asleep in her pallet, and, when awakened to consciousness, was no ways disposed to admit the cause of the uproar into the house. 'It is,' thought she, 'some affray with the *guet* (a kind of watchman on horseback). Save the good city!—what between peace-breakers and peace-makers, there is no getting a comfortable night's rest. My poor master! he was no great defence, to be sure; but he was better than just none at all—well, rest his soul now—he sleeps soundly if I can't!' and so muttering, Gorgotte became again oblivious. Monsieur Nicolas now waxed wroth, as the mildest of men might, at being kept out of his own house by his own servant; and to blows on the door he began to add very hard words against his housekeeper—for such Gorgotte was now in the most literal sense of the word. Fairly roused at last, she was constrained to look out of the window, and then very high words ensued on both sides. 'You rogue you!—you vagabond!—What do you mean by fetching an honest woman out of her bed?' 'You lazy, insolent hussy, what do you mean by keeping an honest man out of his house?' 'I'll send for the prévôt of Paris, that I will,' vociferated Gorgotte. 'Noble gentleman, he shall settle you and all such rubbish from the Cour des Miracles.' 'Prévôt of Paris—Cour des Miracles,' echoed the bewildered miser. 'You are mad, I say—open the door this instant—open it to me, your master, Monsieur Nicolas de Nogaret.' 'It is you are mad then,' replied the scornful housekeeper. 'My master, worthy man, died this morning in the Halle aux Veaux;—begone, I say.' Poor Monsieur Nicolas, finding that hard words gained him no credence, now had recourse to soft ones. 'Gorgotte, you have awaked out of a dream, I perceive; believe me, I really did not die this morning, but wandered about the Halle all day; that villain of a monk over-reached us both: come down like a good creature, and get me some supper;—besides, I want to look at my iron chest. Ha! ha! now won't you believe that I am M. Nicolas de Nogaret?' 'Man! man!—get away before I break your head with this three-foot stool. *Your* iron chest, forsooth! I tell you it is gone to the Châtelet.' This intimation was received by our friend in the street with a deep groan, followed by heart-broken exclamations of—'O my *sols d'or!*—O my *florins d'or!*—my *moutons d'or à la grande laine!*—my *moutons d'or à la petite laine!*' And seals are placed on all the room doors, and the prévôt has pro-

mised me the furniture—and'—'O my *Henris d'or!* my *Louis d'or!* *demi-Louis!* *double-Louis!* Thieves! murder!' How long this altercation might have lasted is uncertain; but the outcry made by our friend Nicolas brought several neighbours forth into the street, or Gorgotte, acting under the sincere impression that the person claiming admittance was an impostor, would probably in a few more seconds have fulfilled her threat, and rendered her master as dead as she believed him to be. Hurrying on her clothes, and determined to make her neighbours drive the intruder away, or give him in charge to the *guet*, she descended, and, opening the house-door, joined the circle in the street. But when, by the light of the lanterns that the half-dressed assembly had collected together, she confronted the assumer of her master's name, his loud lamentations over his money were fully equalled by her horrible outcries at the idea that she beheld a spectre; for on the principle that a man must be like himself, he was of course the very image of Nicolas de Nogaret. 'O my moneys! my darling *moutons d'or à la grande laine!*' groaned the miser. 'Avant! avant, I say!—thou art a messenger from the evil one—I spit at thee,' cried the old woman, suiting the action to the word, and crossing herself withal. 'Let me tear her to pieces for having stolen my iron chest,' screamed M. Nicolas. 'Fetch a priest with holy water and relics,' clamoured Gorgotte. 'Will that prove that I am your real master?' cried the supposed ghost, giving his handmaid such a decided box on the ear, that, partly from pain, and partly from fright, she fell to the ground in a swoon. 'Come, come, neighbour Nicolas—for I believe it is you yourself—we can't be kept shivering here all night to see you fight your servant; get you into your house, and my wife here shall take Gorgotte home with her;—come, follow me, and let us see whether your treasures are really gone.' The person who now spoke was an honest, good-natured *boulangier*, a man of sense too; so after packing off Gorgotte, whose tongue was at last pretty well silenced, he entered the dwelling of the bereaved miser, to render him what consolation the circumstances of the case rendered practicable. Alas! searching only confirmed the truth of Gorgotte's statement. The rooms were all sealed!—the cupboard at the bed's head was quite empty! Monsieur Nicolas wrung his hands—and had he worn his own hair, would have torn it from his head; as it was, he wreaked his frenzy upon his wig—but fortunately it was a very shabby one."

The *boulangier* tries to comfort him in vain; and the next morning the scene shifts to the Châtelet.

"The prévôt was beyond measure indignant at the liberty which had been taken with his office and his robes. It was an offence, he declared, at the end of a very long speech, that ought to be punished like high treason; a declaration echoed by the two lieutenants of the long, and the four lieutenants of the short robe—by the fifty-five counsellors—the two hundred and sixty sergeants—the twelve commissaries—and the hundred and forty ushers, *priseurs*, and *audienceurs*—by all, in short, interested in the prévôt. The *chef de la justice et de la police* was so occupied in sympathising with his own insulted dignity, and in regretting the manifest impossibility of getting hold of the offenders, that M. de Nogaret, the real sufferer, could obtain neither pity nor attention; whilst poor Gorgotte was half threatened with a visit to *le Paradis* (a

pretty name for a prison that), for not having known by intuition that the prévôt of Paris never took treasure in person! 'Are you really quite ruined, Maitre Nicolas?' inquired the friendly *boulangier*, as he accompanied the slow, sad steps of his neighbour from the Châtelet—'are you really now a *sans denier*?' 'Not—not just exactly so,' replied M. Nicolas—'but what then? My gold that I never used to touch except to count, is gone—' 'But how fortunate, Maitre Nicolas, that you had two hiding-places instead of one, and that Gorgotte did not know of both.' 'Miserable comforter! are *frances*, and *écus blancs*, like the *Henris d'or*—*sols d'or*—*moutons d'or*—that I shall feast my aged sight with no more;—I am bereaved—desolate—heart-broken! I must live on my silver—my gold was to look at! Alas! alas!' 'Well, neighbour Nicolas, I am heartily sorry for the loss; but as I can be of no further service, and can't for the life of me understand how a man can be poorer for losing what he only looks at, or richer for having what he makes no use of, I'll give you good day'—having said which, the *boulangier* marched off, whistling, '*Toutes les bourgeois de Chartres.*' Since we are compelled to admit that in default of the recovery of his gold, M. de Nogaret was constrained for the rest of his days to count his silver, and that poor Gorgotte, instead of falling heir to the furniture, was constrained to be content with her yearly and hard-earned wages of two *écus blancs*, we are glad to be able to state that political and poetical justice at last reached the Cour des Miracles. The Parisians being kept in constant fear by the audacious vagabonds who made it their domicile, the king at length diminished the prévôt's power and grandeur, and created a new officer of police, who, in the person of M. de la Reynie, established a much more rigorous system than had previously been enforced. By whipping, branding, sending to the galleys, &c., he succeeded at length in bringing the beggars and thieves inclusive into better order and more reasonable compass; and as his appointment took place before the death of our friend M. Nicolas, both he and Gorgotte were somewhat comforted for the loss of the iron chest!"

Waverley Novels, Vol. XVIII. *The Monastery*, Vol. I. Edinburgh, 1830, Cadell and Co.: London, Whittaker.

EVERY thing from the pen of Sir Walter Scott is interesting; and the present volume contains more to render it so than almost any of its more recent precursors. In the first place, the frontispiece, Abbot Boniface, a full and jolly length by E. Finden, after Newton; and the vignette, the exode of the Avenel family, a group displaying old Martin and the galloway Shagram, by Engleheart, from a very clever and characteristic painting by A. Chisholm,—are such embellishments as must please the purchasers of this series. In the second place, there is (besides some notes at the ends of chapters) a very agreeable Introduction, of about thirty pages; in which the author explains his conception of the work, and very good-humouredly criticises it, to shew in what and how it failed to meet the extended popularity of its elder brethren. There is in this something so amusing, that we offer no apology for quoting a few passages. After stating that there was no locality particularly in view, as the scene of the Monastery (though it bore a resemblance to the glen of the brook Allen, near Melrose) was almost entirely fanciful,

Sir Walter also denies the application of personals to any living prototypes; and he says—

"I have often observed, that the lighter and trivial branches of antiquarian study are singularly useful in relieving vacuity of such a kind, and have known them serve many a Captain Clutterbuck to retreat upon; I was, therefore, a good deal surprised, when I found the antiquarian captain identified with a neighbour and friend of my own, who could never have been confounded with him by any one who had read the book, and seen the party alluded to. This erroneous identification occurs in a work entitled, 'Illustrations of the Author of Waverley, being Notices and Anecdotes of real Characters, Scenes, and Incidents, supposed to be described in his works, by Robert Chambers.' This work was, of course, liable to many errors, as any one of the kind must be, whatever may be the ingenuity of the author, which takes the task of explaining what can be only known to another person. Mistakes of place or inanimate things referred to, are of very little moment; but the ingenious author ought to have been more cautious of attaching real names to fictitious characters. I think it is in the Spectator we read of a rustic wag, who, in a copy of 'The Whole Duty of Man,' wrote opposite to every vice the name of some individual in the neighbourhood, and thus converted that excellent work into a libel on a whole parish."

The following account of another part of the design is of general interest.

"Machinery remained—the introduction of the supernatural and marvellous; the resort of distressed authors since the days of Horace, but whose privileges as a sanctuary have been disputed in the present age, and well-nigh exploded. The popular belief no longer allows the possibility of existence to the race of mysterious beings which hovered betwixt this world and that which is invisible. The fairies have abandoned their moonlight turf; the witch no longer holds her black orgies in the hemlock dell; and

'Even the last lingering phantom of the brain,
The churchyard ghost, is now at rest again.'

From the discredit attached to the vulgar and more common modes in which the Scottish superstition displays itself, the author was induced to have recourse to the beautiful, though almost forgotten, theory of astral spirits, or creatures of the elements, surpassing human beings in knowledge and power, but inferior to them, as being subject, after a certain space of years, to a death which is to them annihilation, as they have no share in the promise made to the sons of Adam. These spirits are supposed to be of four distinct kinds, as the elements from which they have their origin, and are known, to those who have studied the cabalistical philosophy, by the names of sylphs, gnomes, salamanders, and naiads, as they belong to the elements of air, earth, fire, or water. The general reader will find an entertaining account of these elementary spirits in the French book, entitled, 'Entretiens de Comte du Gabalis.' The ingenious Comte de la Motte Fouqué composed, in German, one of the most successful productions of his fertile brain, where a beautiful and even afflicting effect is produced by the introduction of a water-nymph, who loses the privilege of immortality, by consenting to become accessible to human feelings, and uniting her lot with that of a mortal, who treats her with ingratitude. In imitation of an example so successful, the White Lady of Avenel was introduced into the following sheets. She is represented as con-

nected with the family of Avenel by one of those mystic ties, which, in ancient times, were supposed to exist, in certain circumstances, between the creatures of the elements and the children of men. Such instances of mysterious union are recognised in Ireland, in the real Milesian families, who are possessed of a Banshie; and they are known among the traditions of the Highlanders, which, in many cases, attached an immortal being or spirit to the service of particular families or tribes. These demons, if they are to be called so, announced good or evil fortune to the families connected with them; and though some only condescended to meddle with matters of importance, others, like the May Mollach, or Maid of the Hairy Arms, condescended to mingle in ordinary sports, and even to direct the chief how to play at draughts. There was, therefore, no great violence in supposing such a being as this to have existed, while the elementary spirits were believed in; but it was more difficult to describe or imagine its attributes and principles of action. Shakespeare, the first of authorities in such a case, has painted Ariel, that beautiful creature of his fancy, as only approaching so near to humanity as to know the nature of that sympathy which the creatures of clay felt for each other, as we learn from the expression—'Mine would if I were human.' The inferences from this are singular, but seem capable of regular deduction. A being, however superior to man in length of life—in power over the elements—in certain perceptions respecting the present, the past, and the future, yet still incapable of human passions, of sentiments of moral good and evil, of meriting future rewards or punishments, belongs rather to the class of animals than of human creatures, and must therefore be presumed to act more from temporary benevolence or caprice, than from any thing approaching to feeling or reasoning. Such a being's superiority in power can only be compared to that of the elephant or lion, who are greater in strength than man, though inferior in the scale of creation. The partialities which we suppose such spirits to entertain must be like those of the dog; their sudden starts of passion, or the indulgence of a frolic, or mischief, may be compared to those of the numerous varieties of the cat. All these propensities are, however, controlled by the laws which render the elementary race subordinate to the command of man—liable to be subjected by his science, (so the sect of Gnostics believed, and on this turned the Rosicrucian philosophy,) or to be overpowered by his superior courage and daring, when it set their illusions at defiance. It is with reference to this idea of the supposed spirits of the elements, that the White Lady of Avenel is represented as acting a varying, capricious, and inconsistent part in the pages assigned to her in the narrative; manifesting interest and attachment to the family with whom her destinies are associated, but evincing whim, and even a species of malevolence, towards other mortals, as the Sacristan and the Border robber, whose incorrect life subjected them to receive petty mortifications at her hand. The White Lady is scarcely supposed, however, to have possessed either the power or the inclination to do more than inflict terror or create embarrassment, and is always subjected by those mortals, who, by virtuous resolution, and mental energy, could assert superiority over her. In these particulars she seems to constitute a being of a middle class, between the *esprit follet*, who places its pleasure in misleading and tormenting mortals, and the benevolent Fairy of the

East, who uniformly guides, aids, and supports them. Either, however, the author executed his purpose indifferently, or the public did not approve of it; for the White Lady of Avenel was far from being popular. He does not now make the present statement, in the view of arguing readers into a more favourable opinion on the subject, but merely with the purpose of exculpating himself from the charge of having wantonly intruded into the narrative a being of inconsistent powers and propensities."

Of the miss made in the character of Sir Piercie Shafton, the author speaks yet more decidedly; and contending that the Euphuist, like Don Arnado, Holofernes, and other dramatic parts of a like genus, do not please because we no longer find the originals in existence, he adds:

"We have already prosecuted, perhaps too far, an argument, the tendency of which is to prove, that the introduction of a humorist, acting, like Sir Piercie Shafton, upon some forgotten and obsolete model of folly, once fashionable, is rather likely to awaken the disgust of the reader, as unnatural, than find him food for laughter. Whether owing to this theory, or whether to the more simple and probable cause, of the author's failure in the delineation of the subject he had proposed to himself, the formidable objection of *incredulus odi* was applied to the Euphuist, as well as to the White Lady of Avenel; and the one was denounced as unnatural, while the other was rejected as impossible. There was little in the story to atone for these failures in two principal points. The incidents were inartificially huddled together. There was no part of the intrigue to which deep interest was found to apply; and the conclusion was brought about, not by incidents arising out of the story itself, but in consequence of public transactions, with which the narrative has little connexion, and which the reader had little opportunity to become acquainted with. This, if not a positive fault, was yet a great defect in the romance."

And he pleasantly concludes:—

"For such censure the Monastery gave but too much occasion. The intrigue of the romance, neither very interesting in itself, nor very happily detailed, is at length finally disentangled by the breaking out of national hostilities between England and Scotland, and the as sudden renewal of the truce. Instances of this kind, it is true, cannot in reality have been uncommon; but the resorting to such, in order to accomplish the catastrophe, as by a *tour de force*, was objected to as inartificial, and not perfectly intelligible to the general reader. Still the Monastery, though exposed to severe and just criticism, did not fail, judging from the extent of its circulation, to have some interest for the public. And this, too, was according to the ordinary course of such matters; for it very seldom happens that literary reputation is gained by a single effort, and still more rarely is it lost by a solitary miscarriage. The author, therefore, had his days of grace allowed him, and time if he pleased, to comfort himself with the burden of the old Scots song—

'If it isna weel bobbit,
We'll bob it again.'

We have now only to select a couple of the notes, to illustrate that portion of the new additions. In Chapter V. a curious bridge is mentioned; and we are told—

"A bridge of the very peculiar construction described in the text, actually existed at a small hamlet about a mile and a half above Melrose, called, from the circumstance, Bridge-end.

It is thus noticed in Gordon's *Iter Septentrionale*:—"In another journey through the south parts of Scotland, about a mile and a half from Melrose, in the shire of Teviotdale, I saw the remains of a curious bridge over the river Tweed, consisting of three octangular pillars, or rather towers, standing within the water, without any arches to join them. The middle one, which is the most entire, has a door towards the north, and, I suppose, another opposite one towards the south, which I could not see without crossing the water. In the middle of this tower is a projection or cornice surrounding it: the whole is hollow from the door upwards, and now open at the top, near which was a small window. I was informed, that not long ago a countryman and his family lived in this tower, and got his livelihood by laying out planks from pillar to pillar, and conveying passengers over the river. Whether this be ancient or modern, I know not; but as it is singular in its kind, I have thought fit to exhibit it.' The vestiges of this uncommon species of bridge still exist; and the author has often seen the foundations of the columns, when drifting down the Tweed at night, for the purpose of killing salmon by torch-light. Mr. John Mercer, of Bridge-end, recollects, that about fifty years ago the pillars were visible above water; and the late Mr. David Kyle, of the George Inn, Melrose, told the author that he saw a stone taken from the river bearing this inscription:—

'I, Sir John Pringle, of Palmer stede,
Give an hundred markis of gowd sae reid,
To help to bigg my brigg ower Tweed.'

Pringle of Galashiels, afterwards of Whytbank, was the baron to whom the bridge belonged."

Of the comrades, "the ruffling gallants" of the time, to whom Shafton is compared, we have the annexed biographical sketch of Rowland Yorke and Stukely.

"Yorke," says Camden, 'was a Londoner, a man of loose and dissolute behaviour, and desperately audacious—famous in his time amongst the common bullies and swaggerers, as being the first that, to the great admiration of many at his boldness, brought into England the bold and dangerous way of fencing with the rapier in duelling. Whereas, till that time the English used to fight with long swords and bucklers, striking with the edge, and thought it no part of man either to push or strike beneath the girdle.' Having a command in the Low Countries, Yorke revolted to the Spaniards, and died miserably, poisoned, as was supposed, by his new allies. Three years afterwards, his bones were dug up and gibbeted, by the command of the states of Holland.—Thomas Stukely, another distinguished gallant of the time, was bred a merchant, being the son of a rich clothier in the west. He wedded the daughter and heiress of a wealthy alderman of London, named Curtis, after whose death he squandered the riches he thus acquired in all manner of extravagance. His wife, whose fortune supplied his waste, represented to him that he ought to make more of her. Stukely replied, 'I will make as much of thee, believe me, as it is possible for any to do;' and he kept his word in one sense, having stripped her even of her wearing apparel, before he finally ran away from her. Having fled to Italy, he contrived to impose upon the Pope with a plan of invading Ireland, for which he levied soldiers, and made some preparations; but ended by engaging himself and his troops in the service of King Sebastian of Portugal. He sailed with that prince on his fatal voyage

to Barbary, and fell with him at the battle of Alcazar. Stukely, as one of the first gallants of the time, has had the honour to be chronicled in song, in Evans' Old Ballads, vol. iii., edition 1810. His fate is also introduced in a tragedy, by George Peel, as has been supposed, called the Battle of Alcazar, from which play Dryden is alleged to have taken the idea of Don Sebastian; if so, it is surprising he omitted a character so congenial to King Charles the Second's time, as the witty, brave, and profligate Thomas Stukely."

The New Year's Gift and Juvenile Souvenir.

Edited by Mrs. Alaric Watts. London, 1830. Longman and Co.

Of this little work we need say little to the little people for whom it is intended. Of the pictures they have our opinion elsewhere; and as for literary composition and originality, it is hardly fair to look for either in a production of the kind. What seems to be most new are the riddles, which, as we do not ourselves very clearly understand them, will, we think, puzzle children exceedingly to comprehend. That entitled "the Three Sisters" we cannot approve, the allusions being forced: what is meant, for example, in speaking as Poetry personified, by saying, "No one likes to see me dance?" Again, while bodying forth Painting, the following phrase is any thing but elegant: Painting observes, that she is as "fascinating a little gipsy as my sister." The "Conversation on Mineralogy and Geology" conveys much information very pleasantly, but it is out of keeping with the rest of its companions. We mean, that it is calculated for readers of a more advanced age than the very juvenile tales which form the staple of the volume. "Jonina," by the author of *Constantinople* in 1828 (Mr. Macfarlane), is, we think, the prettiest story of all. To "the Three Wishes," by Mary Howitt, we object, as it leads to a decidedly false historical conclusion. The "Soldier's Story," by the same authoress, is a delightful little poem. So is the "Passage of an Indian Army," by Miss Jewsbury. And we quote the following instance of presence of mind from a pleasant paper called "the Jungle," by Miss Roberts.

"It was in the cold season that a few of the civil and military officers belonging to the station of —, agreed to make a shooting excursion in the vicinity of Agra; and gave occasion to an animated scene. A convenient spot had been selected for the tents, beneath the spreading branches of a huge banian; peacocks glittered in the sun upon the lower boughs, and troops of monkeys grinned and chattered above. The horses were fastened under the surrounding trees, and there fanned off the insects with their long flowing tails, and pawed the ground with their graceful feet; farther off, stood a stately elephant, watching the progress of his evening repast preparing by his driver, and taking under his especial protection the pets of his master, a small dog, a handsome bird six feet high decked in plumage of lilac and black, and a couple of geats, who, knowing their safest asylum, kept close to his trunk, or under the shelter of his huge limbs. Beyond, reposed a group of camels with their drivers,—some lying down, others standing or kneeling. Numerous white bullocks, their companions in labour, rested at their feet; while pack-saddles, paniers, and sacks, piled round, completed the picture. Within the circle of the camp a lively scene was passing,—fires blazed in every quarter, and sundry operations of roasting, boiling, and frying, were going on in the open air.

Every fire was surrounded by a busy crowd, all engaged in that important office—preparation for the evening meal. The interior of the tents also presented an animated spectacle, as the servants were putting them in order for the night; they were lighted with lamps, the walls hung with chintz or tiger-skins, carpets were spread upon the ground, and sofas surrounded by curtains of transparent gauze (a necessary precaution against insects) became commodious beds. Polished swords and daggers, silver-mounted pistols and guns, with knives, boar spears, and the gilded bows, arrows, and quivers, of native workmanship, were scattered around. The tables were covered with European books and newspapers; so that it was necessary to be continually reminded by some savage object, that these temporary abodes were placed in the heart of an Indian forest. The vast number of persons—the noise, bustle, and many fires about the camp, precluded every idea of danger; and the gentlemen of the party, collected together in front of the tents, conversed carelessly with each other, or amused themselves with looking about them. While thus indolently beguiling the few minutes which had to elapse before they were summoned to dinner, a full-grown tiger, of the largest size, sprang suddenly into the centre of the group, seized one of the party in his extended jaws, and bore him away into the wood with a rapidity which defied pursuit. The loud outcries, raised by those persons whose faculties were not entirely paralysed by terror and consternation, only served to increase the tiger's speed. Though scarcely a moment had elapsed, not a trace of the animal remained, so impenetrable was the thicket through which he had retreated; but, notwithstanding the apparent hopelessness of the case, no means which human prudence could suggest was left untried. Torches were instantly collected, weapons hastily snatched up, and the whole party rushed into the forest—some beating the bushes on every side, while others pressed their way through the tangled underwood, in a state of anxiety incapable of description. The victim selected by the tiger was an officer whose presence of mind and dauntless courage, in the midst of this most appalling danger, providentially enabled him to meet the exigencies of his situation. Neither the anguish he endured from the wounds already inflicted, the horrible manner in which he was hurried along through bush and brake, and the prospect so immediately before him of a dreadful death, subdued the firmness of his spirit; and meditating, with the utmost coolness, upon the readiest means of effecting his own deliverance, he proceeded cautiously to make the attempt. He wore a brace of pistols in his belt, and the tiger having seized him by the waist, his arms were consequently left at liberty. Applying his hand to the monster's side, he ascertained the exact position of the heart; then, drawing out one of his pistols, he placed the muzzle close to the part, and fired. Perhaps some slight tremor in his own fingers, or a jerk occasioned by the rough road and brisk pace of the animal, caused the ball to miss its aim, and a tighter gripe and an accelerated trot, alone announced the wound he had received. A moment of inexpressible anxiety ensued; yet undismayed by the ill success of his effort, though painfully aware that he now possessed only a single chance for life, the heroic individual prepared with more careful deliberation to make a fresh attempt. He felt for the pulsations of the heart a second time, placed his remaining pistol firmly against the vital part, and drew the trigger with a

steadier hand, and with nicer precision. The jaws suddenly relaxed their grasp, and the tiger dropped dead beneath its burden! The triumph of the victor, as he surveyed the lifeless body of the animal stretched upon the ground, was somewhat subdued by the loss of blood and the pain of his wounds. He was uncertain, too, whether his failing strength would enable him to reach the camp, even if he could be certain of finding the way to it; but his anxiety upon this point was speedily ended by the shouts which met his ear, those of his friends searching for him. He staggered onward in the direction whence the sounds proceeded, and issued from the thicket, covered with blood and exhausted, but free from wounds of a mortal nature."

We now leave the *New Year's Gift*: there is room for improvement, which we doubt not to find another year. We have spoken frankly of its defects; but our praise is worthless, unless it be given in absolute sincerity; and the many competitors make strict impartiality more than ever matter of critical necessity.

We have next some unpleasant observations to make on—what term shall we use?—literary mistakes: we ascribe them to carelessness, or should use a much severer epithet. First, the picture and the poem of "the Soldier's Widow," by N. P. Willis, both appeared in an American Annual last year. Surely some acknowledgment was requisite: no notice is, however, taken. Secondly, there are two poems, one of Miss Jewsbury's, and one of Mrs. Howitt's, published in two different Annuals. "The Godmamma's Letter" appears first in the *Juvenile Forget-me-Not*, next in the volume before us. The "Olden Times," inscribed to youthful antiquaries, is first published in the *Christmas-Box*, and again in the present work. We must say this is something like the curious manœuvre of the authoress of *Separation* on the public. As far as we can judge, the onus of the blame rests on the writers themselves. As a matter of business, it is dishonest to the publisher;—and if given in courtesy or friendship to the editors, it is taking a double meed of thanks, and deceiving them with the semblance of an obligation. We have too high an opinion of the ladies in question to imagine for a moment that this has been wilfully done; but we do recommend a little more care in the arrangement of their papers.

The Lyre; Fugitive Poetry of the Nineteenth Century. Pp. 360. J. Sharpe.

The Laurel; Fugitive Poetry of the Nineteenth Century. Pp. 361. London, 1830. Same Publisher.

THESE are two delightful little volumes, embodying a large portion of the most popular poetry for the last thirty years. Of the principle of such selections we have already expressed our disapproval, as most unjust to those whose productions are thus mercilessly plundered. "Honour to those to whom honour is due," has also been somewhat neglected. Names have been carelessly affixed—as, for example, the name of Miss Bowles is put to a little poem beginning "I never cast a flower away," which we see, in this year's *Juvenile Forget Me Not*, with Miss Jewsbury's signature. We cannot decide the question between the fair rivals. Again: Mr. Motherwell is called the author of a poem—the "Unbending"—which, in the *Friendship's Offering* of two years ago, was published as Mr. Stebbing's; and many are anonymous whose authors might easily have been ascertained. Certainly these volumes owe

more to their printer than to their editor, and, we think, as much to the pages of the *Literary Gazette*, for contributions levied, as to both put together.

Lardner's Cyclopaedia. History of France. Vol. I. By Eyre Evans Crowe, Esq.

WE received this volume too late for careful analysis; but as far as we have read, we decidedly approve of it. The style is concise and clear; and events are summed up with much vigour and originality.

The Cameo for 1831. A Mélange of Literature and the Arts, selected from the Bijou. London, 1830. W. Pickering.

NOT much taste has been shewn in the literary selections: at least half the contents might have been omitted, and the volume all the better; still there is a great deal worth preserving. Sir Walter Scott's letter, some exquisite poetry by Coleridge, Montgomery, L. E. L., &c. The superb prose fragment of Cain may well bear second reading. But the book's great attraction is in the peculiarly popular subjects of its engravings. Young Napoleon, young Lambton, Sir Walter Scott and family, Mrs. Arbuthnot, Lady Wallscourt, &c., are subjects of universal interest, and most exquisite engravings.

A Catalogue of all the Plants, Indigenous, Cultivated in, or introduced to, Britain. By J. C. Loudon, F.L.S., &c. &c. 8vo. pp. 576. London, 1830. Longman and Co.

IN every sense of the word, the author of the work before us may be considered one of the most valuable, and certainly the most indefatigable, labourers in the vast field of botanical science. We had occasion to speak in almost unqualified terms of approbation of Mr. Loudon's great work, the *Encyclopaedia of Plants* (*Literary Gazette*, October 31st, 1829), and we find no reason to qualify our terms of commendation in noticing the *Hortus Britannicus*. The first part (comprehending three-fourths of the volume) contains the several species arranged under the Linnæan order of classification, with the systematic name accented, for the convenience of junior botanists and horticulturists; to which is added, the derivation and English translation, together with the habitation in the garden, popular character, height, time of flowering, colour, and mode of propagation, of nearly 30,000 plants. The value of such a work to the practical gardener must therefore vastly exceed the price charged for the volume (a guinea). But in order to render it more complete as a work of reference for the botanical reader, Mr. Loudon has given in Part II. an excellent synopsis of the Jus-sieuian (or natural) arrangement, comprehending nearly 4,000 genera; to which is prefixed, an explanatory introduction, addressed to the class of practical gardeners. If ever an author possessed the talent of communicating valuable scientific information in a popular form, it is the veteran editor of the *Hortus Britannicus*.

Histoire de l'Ordre de la Toison d'Or, &c.—History of the Order of the Golden Fleece; from its Origin to the Cessation of its general Chapters. Derived from the Archives of the Order, and other Sources. By the Baron de Reiffenberg, Professor of Philosophy to the University of Louvain, F.B.R.A., &c. 4to. with plates. Brussels, 1830.

THE archives of this illustrious order were preserved in the capital of the Low Countries

until Belgium was wrested from the house of Austria, in the early years of the French Revolution. They existed for a long time in a most confused and unserviceable state; but Count Cobentzl, the Austrian minister, and himself a member of the order, happily adopted effectual measures for their preservation, and in 1759 ordered M. de Turck, a gentleman in the secretary's office of the Austrian privy council, to form an inventory of these valuable records, with the addition of a detailed and chronological analysis. This is the authority which forms the groundwork of Baron de Reiffenberg's present publication; and in the course of executing a task which required deep research, and no little critical acumen, he has not only corrected the numberless errors into which De Turck had fallen, but enriched his subject with a variety of preliminary matters and appendices, full of erudition and novelty, and drawn for the greater part from inedited sources. His notes will be found peculiarly interesting to the lovers of genealogy, history, and, indeed, of general literature. The plates he has given are, in themselves, so many historical authorities; and amongst them are portraits of Philip the Good, duke of Burgundy, and of the Prince of Orange. Hereafter, M. de R. proposes, from materials which time and industry only can supply, to publish an *Icomographical and Biographical Gallery of the Golden Fleeces*, which is intended to compromise all such portraits of the knights of that order as can be brought together, accompanied by pertinent notices on their respective lives.

It would be a subject much to be lamented, if the present convulsions in the Low Countries should arrest the progress of an invaluable work, in which we find the author of the preceding publication to have been engaged, under the auspices of the late sovereign of the Netherlands. We allude to his *Belgicarum Rerum Scriptores, decreto regio nunc primum in lucem editi*, of which he has just published the first volume, containing *Petri a Thymo Historia Brabantia Diplomatica*.

ARTS AND SCIENCES.

SURVEY OF THE COAST OF SOUTH AMERICA.*

WE mentioned last week the return to this country of his majesty's ships Adventure and Beagle, from a survey of the South American coast, under the direction of Captain King, of the royal navy. These vessels left England on this service in 1826, and have completed the survey, from the Gulf of St. George, on the Atlantic, to the Gulf of Penas, on the Pacific side of the continent, including the archipelago of islands called Tierra del Fuego, and those of the south-west coast.

The particular object of the survey appears to have been to obtain an accurate account of the straits of Magalhanes, with the view of ascertaining how far that navigation might be adopted, instead of the passage round Cape Horn. And the result of this investigation proves, that the name of *Cabo Tormentoso*, bestowed by the first discoverers on the Cape of Good Hope, may be with much more reason applied to its corresponding point on our globe, the bleak and barren termination of the new world. Of the continent of South America, the southern part is justly described as a region of storms, cold, and rain.

* In this paper we have restored the correct names of several places mentioned.—Ed. L. G.

The Spanish surveys have been found by Captain King to be very near the truth; a remark which is, we believe, generally applicable to the hydrographical works of that nation. The strong prevailing current in the straits, running from the west, renders it unlikely they will ever be frequented, except by vessels on sealing voyages. On the subject of the passage round Cape Horn into the Pacific, the opinion of Lord Anson is decidedly confirmed by modern navigators, with the exception of his recommendation not to pass through the Straits of Le Maire. He says, that "all ships bound to the South Sea, instead of passing through the Straits of Le Maire, should constantly pass by the eastward of Staten Land, and should be invariably bent on running as far as the latitude of 61° or 62° south, before they endeavour to stand to the westwards; and ought then to make sure of a sufficient westing in or about that latitude, before commencing a northern course." This is now proved to be precisely correct in all but one point, which is, that vessels should pass through the Straits of Le Maire for the following reasons, and we trust our readers will excuse us if we use a little nautical phraseology in the explanation of so important a point.

It is well known that westerly and south-westerly winds are the most prevalent in this part of the world; a vessel, therefore, by keeping as close to the coast as is proper, has the advantage of being considerably to the westward, and consequently to windward when she meets with the westerly winds on opening the cape, and can therefore stand down to the southward ready to take advantage of a slant to the northward, which another vessel passing to the eastward of Staten Land could not do.

By the expedition under the command of Capt. King, the numerous creeks and inlets of the south-west coast have been all examined to their termination, which has led to the discovery of the Otway (named, we presume, after the gallant and worthy admiral, Sir Robert) and Skyring waters: two very extensive salt-water lakes which nearly intersect the continent. The innermost parts of the various creeks were found to extend into valleys with glaciers forming magnificent terminations to the water. Much of the country about the Gulf of Penas is low and flat, and in most parts little better than mere bog.

The Beagle being detached on the examination of the Islands of Tierra del Fuego, and to ascertain the position of Cape Horn, Captain Fitzroy, with Lieut. Kemp, one of his officers, visited the celebrated promontory, of sonorous name, and erected a pile of stones, twelve feet high on it. The observations for the latitude differed very little from those made by the Spaniards.

The vessels have brought home various specimens, carefully preserved, of the animals, minerals, and plants, of the districts which they have visited, and which will prove an interesting addition to our South American collections. Capt. Fitzroy has also brought to England two men, with a boy and a girl, natives of Tierra del Fuego, whom he proposes, after having them instructed in various matters which may tend to the civilisation of their country, to send back again. These people were at first detained as hostages for some seamen, who, with the master of the Beagle, were forced to remain on shore, in consequence of the boat in which they had landed having been stolen by the natives; and until a rude canoe was constructed by the master, which enabled the whole party to get on board, they

were without the means of rejoining their vessel.

Four officers and seven men of the expedition have died since the Adventure and Beagle left England. Amongst the former is Captain Stokes, who commanded the Beagle when she sailed from this country, and of whose melancholy death, as well as of other events connected with the sailing and progress of this expedition, we have from time to time given accurate accounts in the *Literary Gazette*. In this expedition the perseverance of Captain King, under most difficult and trying circumstances, cannot be too highly spoken of. We have heard the names of two young officers (Lieuts. Skyring and Graves) particularly mentioned for their zeal and activity in promoting the objects of the survey. The former, who was placed in command of a small vessel, named the Adelaide, attached to the expedition as a tender, surveyed nearly all the coast, from the Gulf of Penas to the southward of the Guanaco islands, where it is supposed the unfortunate crew of the Wager, one of Lord Anson's ships, were cast away in 1744.

It was found, on making this survey of the Gulf of Penas, and that portion of the shore designated Tres Montes, that the latter was joined to the mainland by a neck of land, called the Isthmus of Offaqui.

We have no doubt, from the indefatigable exertions of Capt. Beaufort, the hydrographer of the Admiralty, that the details of this important addition to our maritime knowledge, will be speedily made known to the public; and we cannot close the present subject without expressing our sense of the attention which the present naval administration has paid to the advancement of hydrographical knowledge. Victories may give more brilliant, but this must give more lasting fame to England.

CELESTIAL PHENOMENA FOR NOVEMBER.

22^d 6^h 37^m—the Sun enters Sagittarius.

Lunar Phases and Conjunctions.

23^d 18^h—Saturn in quadrature. Uranus is too near the Sun for observation. *Occultations of Stars in the Hyades.*—29^d—these interesting phenomena will again occur, when the Moon will be at the full. The following Map of the Hyades will illustrate these

occultations, as well as those which will happen in the ensuing years 1831 and 1832. The positions of the Moon in the map indicate the points of immersion of the two principal stars; the dotted line shews the path of the Moon from γ Tauri to Aldebaran.

astronomer at the house of another, to suppress, on the part of the former, the dictates of truth? If, sir, English friendship (hospitality, I would call it, sir, had it not been, in this instance, practised by myself,) is to be prostituted to so diabolical a purpose, where is the foreigner of any note, possessed of one particle of honour or of honesty, who will condescend to enter, as a guest, an English residence? Foreign astronomers do not often trouble us; they can learn but little from us. Within the last ten years, but four or five of the illustrious many have trod upon our shores; and the last, though not the least, is scarcely welcomed to his home, before a charge of ingratitude is wafted after him, dependent (with pain do I state it) upon the conduct towards him of one who *reveres* him as a philosopher, and who *values* him as a friend.

Englishmen have long since been told of the disgraceful state of English astronomy, by Englishmen; but, unfortunately, to little purpose. It now tingles in their ears from the lips of an honest foreigner, one of the most renowned astronomers of Europe; and if it rouse us to a sense of our degradation, and excite in us a determination to regain our long-lost astronomical pre-eminence, Struve will have rendered another benefit to mankind.

Relying on your candour to insert this in the forthcoming number of your respectable journal, and in the confidence that the note which has given birth to it, escaped you in the hurry of writing, without your being at the time aware of its tendency,—I have the honour to be, &c. J. SOUTH.*

Observatory, Kennington, Oct. 28, 1830.

LITERARY AND LEARNED.

THE ART OF BOOK-MAKING: .

A New Branch of the Cut-and-Dry System!!!

To the Editor, &c.

SIR,—In consequence of the article which appeared in your last Number relative to the novel published by us called the *Separation*, we immediately addressed a note to the authoress (of which we now enclose a copy), requesting an explanation of the circumstances, but we have not yet received a satisfactory answer. We can, therefore, only state for ourselves, that in publishing the work, we were totally unconscious of its resembling in the slightest degree any book already extant, as our note of last Saturday to the authoress will shew; that it was submitted to us *wholly in manuscript*, as an entirely original production; and that we sent it for examination to a literary friend, whose opinion as to its merits induced us to purchase the copyright of the authoress.—We are, sir, your obedient servants,

COLBURN and BENTLEY.

New Burlington Street,
28th October, 1830.

[Copy.]

New Burlington Street,
Saturday, October 23, 1830.

Messrs. Colburn and Bentley present their respects to the authoress of *Separation*, and beg to send her a copy of to-day's *Literary Gazette*, containing some remarks relative to the publication of her last novel, which remarks, until contradicted, commit the character of their house. Under these circumstances, and she will acknowledge them to be very pressing, Messrs. Colburn and Bentley wait

* We cheerfully insert this letter from Sir James South; and only desire it to be understood, as well abroad as at home, that we are alone responsible for the opinions expressed in the *Literary Gazette*.

The following will be the immersions and emersions of the two principal stars:—

	Immersion	Emersion	H.	M.
γ Tauri	7	31
			8	29
Aldebaran	15	39
			16	37

The cause of the phenomenon of the projection of Aldebaran on the disc of the Moon previously to its disappearance, is still in uncertainty. The most celebrated astronomers in this country and on the continent vary very considerably in their observations. In the occultation of this star in 1829, some saw Aldebaran apparently on the face of the Moon, others in the edge of the disc, retarded as if entangled, its light dimmed, and its red tint diminished, till it resembled the colour of the planet Venus; while others detected nothing whatever anomalous.

Deptford.

J. T. B.

To the Editor, &c.

SIR,—I have seen, with considerable regret, an allusion which you have made to the recent visit with which I was honoured by a distinguished foreign astronomer; it is needless to say I refer to the note appended to a paragraph in an article entitled "German Naturalists," and which appeared in the *Literary Gazette* of Saturday last.

The paragraph is one of a series, giving an account of the annual meeting of foreign philosophers, held a few weeks ago at Hamburg, and is as follows:—

"Professor Struve, of Dorpat, drew a comparison between the state of astronomical science in the countries of Europe, in which he placed Germany at the top of the list; conferred the second rank on Russia; and set down France and England together at the bottom. For the German instrument-makers, too, he claimed the prize; but as he communicated no new discoveries of the Germans, and failed to point out the errors of the French and English for rectification, his estimate rests as his dictum."

To this paragraph is annexed the following note:—

"We met Professor Struve at Sir James South's, only a few weeks ago, and should have thought that the impression of his reception there, and what he witnessed, would have made him speak differently of English science!"—Ed. L. G.

Now, sir, as to the first of the professor's adjudications, he must be very ignorant of the state of astronomical science, who will for a moment question its propriety. Placed side by side with those of Bessel and of Struve, the labours of English astronomers dwindle into insignificance.

As to the second, which has reference to the art of instrument-making, there may be some room for a difference of opinion: if large angular instruments be taken as the objects of comparison, my respect for Professor Struve's judgment (and it is not trifling) will not authorise me to coincide with his decision; nor if we are to compare the geodetical instruments of Munich with those of Troughton and Sims, need we yield the palm of superiority to the German artists. But if we pass to the optical department of the art, there we are sadly in arrear. Where, let me ask, is the achromatic telescope, of English manufacture,* worthy to be brought as an object of comparison with that made for the Dorpat Observatory, by the ever-to-be-lamented Fraunhofer? Here, then, "upon the state of astronomical science in the countries of Europe," we are agreed. Whilst to give the German instrument-makers "the prize," we are in some instances prepared; and in others are at issue. But the latter are matters of opinion: Professor Struve has the same right to express his sentiments as we have to promulgate our own—and he has done so.

But, by your note, it seems, you, Mr. Editor, think that the "impression of his reception here," and "what he witnessed," should "have made him speak differently of English science!" What, sir! is the reception of one

* My large achromatic (it must be remembered) is not of English make.

anxiously for an explanation, which the authoress alone can give, and she will therefore excuse them if they solicit from her an immediate statement calculated to remove from the public mind the disadvantageous impression now existing in consequence of the remarks alluded to.

[The foregoing were in our hands, and, of course, ordered for publication, in justice to Messrs. C. and B., who, at the end of five days, could have no other hope of redress, when we received the annexed paper.—*Ed. L. G.*]

To the Editor, &c.

The novel entitled *Separation* may certainly be said to have had its foundation in the story of a tale published anonymously eighteen years ago!!! But *Separation* is, in characters, in conduct, in language, and in arrangement, wholly new.

Shakespeare, Dante, Boccaccio, &c. &c., have been resorted to a thousand times for the ground-work of modern fictions; and, if it is allowed to borrow from others, the author of *Separation*, assuming that *Self-Indulgence* was written by the same person, had surely a right to borrow from it.

The tale of *Self-Indulgence*, though not devoid of interest, was crudely and carelessly written, and, as it deserved, sank speedily into oblivion; nevertheless, it contained striking incidents, which were peculiarly fitted to set forth a great moral end.

In the manner in which the author of *Separation* has employed these, the work became altogether changed, and such as cannot justify the attack directed against it in the *Literary Gazette*.* In fact, had any doubt been entertained upon the subject at the time of its publication, a line, by way of preface, stating the case, would have set the matter at rest.

Inasmuch as Messrs. Colburn and Bentley are involved in this attack, it is only requisite to make one observation, in order to clear these gentlemen of the aspersion cast upon them. We believe that no author thinks it necessary to declare the source whence he draws his subject; and Messrs. Colburn and Bentley purchased *Separation*, believing it to be, as the author considers it is, to all intents and purposes, a new work.

Though the last of these communications has been sent to us anonymously, yet as it bears internal evidence of being the best defence that could be offered by and for the author of *Self-Indulgence* and the *Separation*, we have given it insertion. Having done our duty in bringing such a transaction before the literary public, we certainly feel extreme regret that it is not capable of a more satisfactory explanation; but the station, and, especially the sex, of the writer, prevent us from animadverting upon it in the way we think it deserves. We were convinced, from the first blush of the business, that Messrs. Colburn and Bentley were profoundly ignorant of the real state of the case, and had paid a handsome price (as we find they have done) for *Separation*, as an entirely new work. They must feel now as if they had been imposed upon; and had not only disbursed their two or three hundred pounds for that which was not what it purported to be, but been made the tools in a trick upon the public. We cannot conceive a more unpleasant return for their liberality.

It is indeed a sorry affair, and the *excuse* almost as *inexcusable* as the original offence.—*Ed. L. G.*

* It is not so—it is merely disguised, and to all other intents and purposes the same.—*Ed. L. G.*

PINE ARTS.

NEW PUBLICATIONS.

Illuminated Ornaments, selected from Missals and Manuscripts of the Middle Ages. By Henry Shaw. Part III. Pickering.

ANOTHER beautiful Part of this splendid little publication. The ornaments taken from a missal in the possession of Lord Braybrooke are peculiarly fine.

Great Britain Illustrated; from Drawings by W. Westall, A.R.A.; engraved by E. Finden; with Descriptions by T. Moule. No. XXX. Tilt.

WE have so frequently spoken with favour of this work, that it is only necessary for us now to observe, that the present Number completes the volume; which, it is stated in the preface, has cost the publisher more than six thousand pounds. To account for the great cheapness of the publication, it is remarked, "that if the views had been engraved on copper instead of steel, it would have required a sale of all the impressions *three* plates could furnish, to defray the expense incurred in preparing one."

The Orphan Ballad-Singers. Engraved by J. Romney, from a cabinet picture painted by W. Gill. Ackermann.

How numerous are the subjects for the pencil, which the observant eye of an artist of taste and feeling discovers! Not an incident, however trifling, escapes him. At home, or abroad; by night, or by day; in the crowded city, or on the solitary plain;—every object is regarded with interest, and with reference to his art. It is this which imparts to the painter's profession a zest, of which no one can have an adequate conception, whose cup of life it has not flavoured. There are few of our rising artists who in this respect contemplate the world more attentively and more successfully than Mr. Gill; of which the present interesting little composition, which has been ably engraved by Mr. Romney, is a very pleasing proof.

Select Views of the Principal Cities of Europe; from original Paintings by Lieut.-Colonel Batty. Part III.; Lisbon. Moon, Boys, and Graves.

THERE are few continental cities which the events of the late war have rendered so familiar to a large body of our countrymen as Lisbon; and not one with which are associated so many recollections of our military glory. When to these considerations is added the singularly picturesque character of the place and its neighbourhood, the interest which attends the contemplation of the rich and masterly views before us is greatly enhanced. The more we see of this publication, the more pleased we are with the admirable plan of introducing every finished plate with a slight outline, marked with figures, and having marginal references, indicating the principal features of the scene.

PANORAMA OF MADRAS.

WE have always considered panoramas to be among the most pleasing and interesting exhibitions in the metropolis. To be transported, as it were by magic, into distant countries,—to be enabled to visit the most celebrated places on the face of the earth, with a celerity to which even that of the Liverpool and Manchester railway is merely a snail's gallop, is certainly a high gratification; a gratification, however, which must of course be more or less complete

in proportion to the skill of the artist, and the success with which he deceives our senses.

In the 715th Number of the *Literary Gazette* we noticed, at some length, and with the praise which was justly its due, the panorama of Madras, then in preparation, painted by Messrs. Daniell and Parris, from drawings by Mr. Earle. It is now finished; and we had the pleasure of being present, yesterday, at the private view, previously to its being opened to the public on Monday next. To our former expressions of admiration of this beautiful work, we have only to add that a still more general harmony seems diffused over the whole scene, and that the longer the eye rests upon it, the more it is deluded and charmed.

The canopy under which the spectators assemble is hung with drapery of an oriental character, which produces an advantageous, as well as a singularly pleasing effect. Great care has also been taken, by the judicious introduction of stoves, to communicate a comfortable temperature to the whole of the interior,—a matter which, during the winter months, is one of no small moment.

FRENCH SCULPTURE.

THE productions of the candidates for the annual prize for sculpture given by the French Academy, have lately been exhibited at Paris. The subject proposed was, "Theseus receiving the testimonies of public gratitude, immediately after having slain the Minotaur." Some of the critics in the French journals state, that in their opinion, the present competition evinces much more talent than that of last year; and, that of eight pieces, they give the preference to two bas-reliefs by Messrs. Daumas and Eteux. The adjudication of the premium does not appear to have been yet made by the Academy.

THE TRANSFIGURATION.

It has for some years been in contemplation to put up a painted glass window at the east end of St. James's Church, over the altar; and the "Transfiguration," after Raphael, was selected by the late Dr. Andrewes, then the rector of St. James's parish, as the most appropriate subject. Mr. Backler was recommended by the late Mr. West, as well qualified to do justice to the undertaking. In order to furnish an idea of the general effect which so sublime a composition would have when executed on glass, Mr. Backler began, and has now finished, a model, fifty-three inches high by thirty wide, on a scale of one inch and a half to a foot; in which he has disposed the two principal actions of the subject so judiciously, that no feature of the grouping is intercepted by the architectural divisions of the window. This model is at present exhibiting at No. 28, Old Bond Street. We had a peep at it the other evening, when it was, of course, artificially illuminated; and we were much pleased, not only with the depth and splendour of the colouring, but with the powerful expression which, even on so small a scale, Mr. Backler has contrived to retain. We are satisfied that, if executed of the size proposed, the effect will be magnificent. The estimated expense of the window is only two thousand five hundred guineas, to be raised by the subscriptions of individuals. In so opulent a parish, it will surely not be difficult to accomplish this object; and the parishioners would do themselves great honour by adding so noble and interesting an ornament to their church.

BIOGRAPHY.

STR.—As accounts have been just received of the death of Field-Marshal Von Yorke, Count of Wartenburgh, &c., perhaps you and the numerous readers of your *Literary Gazette* may be interested in knowing that this excellent old soldier, who contributed so efficaciously to the overthrow of Buonaparte's tyranny, was of English extraction; as will appear by the annexed translation of a German letter, written a few years ago to H. R. H. the Princess Louisa of Prussia, by the field-marshal himself. Yours, &c. C.

THE last of my ancestors in England was David Jonathan Yorke, my great-grandfather; he left England in the time of the persecutions of Cromwell, about the year 1650 (after the battle of Worcester), or soon after. He went, with several of his countrymen, and one particular friend, Leslie, to Sweden, and married there an heiress, the Baroness Byern, who lost her fortune by a law-suit, which was unfortunately decided in the lifetime of my father. My grandfather took service in the army of Charles XII., and followed his military career till the year 1715, when he married the Polish Countess Koszniecka, who had an estate in the part of Pomerania belonging then to Poland. From that time my family were established in Germany. My grandfather had five sons, who all served in the Prussian army; and four of them died on the field of honour in the Seven Years' War—two at the battle of Leutken, one at Kunersdorff, one at Prague. My father, born in the year 1719, died in the year 1784, as captain out of service. The Chevalier Yorke (the late Lord Dover), English minister at the Hague in the year 1780, was related to my family; and I went in the same year with letters of recommendation to meet him, and by his intercession to return to the British service; but the chevalier had left the Hague before my arrival; and I took service in the Dutch army. All these particulars I told to Lord Hardwicke, when, in the year 1814, I was in London; and these I only know by tradition, as no documents existed in my family since the time of my grandfather's establishment in Germany.*

DRAMA.

DRURY LANE.

ON Tuesday the *School for Scandal*, with a very strong cast of the parts, crammed this theatre, and bids fair to have a run of the same prosperous kind. Nor can we be surprised at this, when we are presented with *Sir Peter Teazle*, Farren; *Sir Oliver Surface*, Downton; *Sir Benjamin Backbite*, Harley; *Joseph Surface*, Macready; *Charles*, Wallack; *Moses*, Webster; *Sir Harry* (with a song), Sinclair; and the ladies all very fair, especially Mrs. Glover's *Mrs. Candour*.

On Thursday there was a splendid house to welcome our popular Monarch, and his no less popular Queen. On the drawing up of the curtain the stage was seen filled with the dramatic and musical corps; and "God save the King" was sung with prodigious *éclat*. Two new verses were introduced; one in compliment to his Majesty, the words of which we could not gather; and another complimentary to her Majesty, and so happily turned that we procured a copy of it. It is from the pen of Mr. Planché, and not unworthy of the author of "A Health to the King, God bless him." It follows:—

"Once more the sceptered dove,
Emblem of peace and love!
Wielded is seen.

* The marshal, when in England, had an old family seal in his possession, on which the arms of Yorke were engraved.

Long may her gentle wing
Blessings to England bring—
Shout, ye who love the King,
'God save the Queen!'

The performances were changed, and, instead of *Massaniello*, were *Figaro*, *The Brigand*, and the *Illustrious Stranger*, which were performed with great spirit, and appeared to afford ample entertainment to their Majesties.

The play-bills distributed to the royal party were splendid specimens of Howlett and Brimmer's gold-letter printing, on royal blue silk for the King, and white for the Queen.

COVENT GARDEN.

AT this house we hear of a tragic play by Kenny, adapted from a French drama; and a one-act farce by Poole. Apropos, we had almost forgot to mention, with praise, a Miss Crawford, who played the *Page in Figaro* very archly.

Mr. Parry made a favourable *début*, on Thursday, as *Durimel* in the *Point of Honour*. The *Carnival at Naples* is almost a full opera, we understand; the play by Dimond, and the music by Barnett. Our great favourite, Wilson, is in it; and a *débutante*, in the person of Miss Taylor, from Bath.

The *Times* newspaper states, that Mr. Wade is not the author of the *Jew of Arragon*: if we had suspected it to be the production of a young lady (Miss F. Kemble, says rumour), we should certainly have spoken of it more mercifully.

ADELPHI.

THE Adelphi brought out an excellent burletta last week, called the *Wreck Ashore*, the production of Mr. Buckstone. The story is extremely interesting, and every character well sustained. Nothing can be richer than Reeve as *Magog* the beadle, with his vestry-dinner speeches, his sense of the importance of his calling as one of the parishocracy, and his traditional mention of the glories of his ancestor—"the beadle:" indeed, the scene in which his dignity is insulted by *Miles Bertram* (Yates) is unequalled in drollery, except perhaps by another, in which he is taken home a little cut, after a carouse with his friend *Mr. Blackbottle* the butler, which latter produced shouts of laughter from the auditory, from its exceeding verisimilitude. Mrs. Fitzwilliam is a delightful little woman, perhaps a little too mature in her attractions for a maiden of seventeen, but, like those attractions, her acting was quite *en bon point*. Exclamation Smith! admirable! His dying scene worth a hundred catastrophes in such burlesques as the *Hebrew Queen*. We have never beheld any thing finer even of Miss Kelly's (and that is saying a great deal) than Mrs. Yates's acting in a scene where a robber attempts to break into a lonely cottage at night, and she, although almost paralysed by fear, reassures her sister, and contrives to load a gun and shoot the ruffian. We say that this and the subsequent one, in which the smuggler (O. Smith) dies at her feet, are as fine pieces of acting—natural, powerful acting—as was ever seen on any stage whatever. Yates's *Miles Bertram* was of the first order; and Buckstone in the trifling part which, with becoming modesty, he has apportioned to himself, extremely diverting. In short, the *Wreck Ashore* seems likely to be *treasure trove* to its proprietors. We hear that the managers have the *Water-Witch* in petto, as well as a new farce for Mathews.*

* We are glad that our remarks on the absurd introduction of inappropriate songs into operas, should have excited so much attention; but it is more easy to point

VARIETIES.

Travels in Mongolia.—The celebrated Père Hiacynte is at Krasnoyarsk in Siberia. He is about to visit the country situated to the south of Lake Baikal and Lake Gouzinou-Ozero, whose Mongolian inhabitants are under the dominion of Russia. For a long time chief of the Russian mission at Pekin, it is supposed that his journey is preparatory to the departure of a mission to that city in the autumn of this year.

Scientific Expedition in the North Atlantic.—An expedition was to go this year, under the command of Captain Litke, to the northern parts of the Atlantic Ocean. Iceland was to be the seat of its scientific investigations, and of observations on the dip of the magnetic needle, and on the pendulum. M. Martens was to be the naturalist of the expedition.

Scientific Journey of M. Parrot.—This gentleman is not, as stated in the journals of the day, on the shores of the Caspian. After the ascent of the Agri-Daugh (Mount Ararat), the naturalists of the expedition, Messrs. Behaghel, Schremann, and Hehn, continued their researches in the environs of Tiflis, and made an excursion into the mountains of Kakheti. The journey terminated at Little Ararat, whose summit they also reached, and whose elevation they estimate at 1200 Parisian feet. On their return into Russia, Messrs. Parrot and Behaghel levelled (barometrically) the course of the Volga from Astrachan to Tsarytsin, thence to the Don, and along this river to the new town of Tcherkask.

The name of Fleurette, the beautiful Beara peasant, Henri Quatre's first love, has passed into a proverb: the French call the language of that graceful gallantry whose "very oaths are compliments," *parler des Fleurettes*.

Flight of Locusts in the North.—It appears that there has been a flight of a considerable body of gregarious locusts in the vicinity of Stromness. This is a very curious fact, and we may expect some interesting dissertations on the specific nature and origin of these uncommon visitors, from the pens of the Scotch naturalists.

Sand-Bank.—Too much attention cannot be paid to the notice of sand-banks, which from their situation or size may render navigation dangerous. The brig Joseph Hume, of Greenock, discovered a bank, whose white sands were seen above water about 387 miles to the north of Bermudas. Its latitude is stated to be 39° N. and longitude 64° 20' W.

Whale Fishery.—It appears that, while our ships and their brave crews have, with so little success and such fatal misfortunes, been seeking for whales in the northern seas, the huge monsters of the deep have been taking a trip to different latitudes. Captain Scott, of the schooner Oberon, on a voyage from Hamburg to St. John's, Newfoundland, is stated to have met with several whales, in the month of July, in lat. 50° 10' N. and 16° 13' W. In these seas they had changed their peaceful habits for a battling disposition; and one of these *mammifera* is said to have twice struck the schooner, carrying away first her martingale, and then her stern head!

Globules in the Humours of the Eye.—Messrs. Ribes and Doun have discovered globules in the humours of the eye, of a smaller size than those of the blood. There are three orders of

out than to procure a remedy for the evil. Parke in his *Memoirs* states a whimsical instance of it, which certainly applies ridicule as well as argument:—"A fellow acting a *Turk* in one of the minor theatres introduced—"May we never want a friend, nor a bottle to give him."

them; the first are in sinuous chaplets, and very apparent; the second are isolated, larger than the others, and surrounded by a black circle; the third are least distinct. It is not, however, stated whether there is any difference between the globules of the aqueous and those of the vitreous humour.

Story of a Quack-nostrum.—"In the summer of last year (1820), being on a visit at the country-house of a friend near London, I frequently met there an old man, late a farmer, who, though he had for some time abandoned the plough and the harrow, had nevertheless come up to the metropolis in the hope of reaping a golden harvest from the sale of a newly invented snuff, to cure not only weak, but sore eyes! The snuff was, as he said, a compound of various herbs, which his deep knowledge in botany had enabled him to discover. This 'man of science' being diffident of his own orthographical powers (for modesty generally accompanies merit), requested I would do him the favour to correct the prospectus, of which the following is a literal copy, and through which he intended to recommend it to the public:—"Eye Snuff. The most astonishing Remedy Ever found out for the Benefit of Mankind. H. G.—The Bottiness, Begs Leave to inform the Publicke, that by a long Expedition, and study, he has found out a remedy superior to any Ever yet before discover'd. It is Propriated Totely for the Eyes. It Cures All sorts of sore eyes, Suckers the Breane, and Helps the memory. It is drawn up the nose in the same manner as Common snuff, and the Eyes to be beathe with Cold spring water, and a linnen Cloath Every morning. By using it six times a day for the spase of one wheek it will strengthe a wheek eye of eather young or old, and by using it Regular Three times a day it will take a perl of the Eyes. It is a remarkable strengtherer of the Obnective nerves, therefore there is no doubt but it will Cleere and preserve the Eye sight for life."—Whether this snuff has been found to be an efficacious remedy for weak eyes I do not know, but it was a few months after it was promulgated purchased with as great avidity as if it had also been adapted to weak heads!"—From *Parke's Musical Memoirs*.

Dr. Siebold, in his recent visit to Japan, where he was imprisoned, has, nevertheless, collected a Japanese library of fifteen hundred volumes. These must be "Curiosities of Literature." He has also got a Zoological Museum, of three thousand specimens, and two thousand botanical articles.

Rossini has, we hear, gone to Bologna, on purpose to attend the representation of a new opera by a young female amateur, named Carolina Uccelli. The subject is Saul.

To those Ladies whom it may concern.
"The nodosities of the oak without its strength."
Bonville's Life of Johnson.

When female authors think what's vilely coarse
Is manly energy and mental force,
And therefore in their writings swear, abuse,
And use expressions men would blush to use;
The powerful sentence they attempt in vain,
And woman's weakness, not her grace, retain.
So in St. Giles's some Hibernian dame,
Well primed with anger and the liquid flame,
In boxing attitude her person throws,
And deals around a quick discharge of blows;
While the loud laughter of the mob is heard,
Raised by her powerless arm and skill absurd.
Then let me whisper, what is strictly true,
To the St. Giles's dame and learned blue,—
That females who thus wield the fist and pen,
Cease to be women, but they are not men.

October 18th. Y. R.

A Tarn.—Definition is the soul of physical geography, and in few sciences is it probably with more difficulty attained. We observe the

following beautiful description of a tarn in "the Moors," (Blackwood, No. 172):—"A tarn—a tarn! with but a small circle of unbroken water in the centre, and all the rest of its shallowness bristling in every bay, with reeds and rushes, and surrounded, all round the mossy flat, with marshes and quagmires! What a breeding place—'a procreant cradle' for wild fowl!"

Gossamer.—It is generally supposed that the silver lines which cross our pathway in autumnal mornings, or the threads that hang, laden with dew-drops, from branch to branch, or from bank to bank of the murmuring rivulet, are the bridges by which the industrious spider travels from these opposite situations. A French naturalist has, however, just published a very ingenious statement, in which he asserts that the spider weaves himself a wing of network from limb to limb,—or, to speak scientifically, from anterior to posterior extremities, as in the flying squirrel,—and that, by this contrivance, the insect can traverse considerable spaces, and leaves a thread behind for his evening return. It will be observed, that this does not exactly account for the "gossamer's wing" being seen from steeple-tops.

Antidote for the Bite of Venomous Animals.—In the first Number of the *Journal of the Royal Institution*, which we noticed in a former *Gazette*, we observe a recommendation of common salt as a cure for serpent-bites, and cases of extraordinary success are mentioned. It is a long time since the researches of chemists, on the most successful applications to wounds of this nature, have led to a general belief in medical men that the poisonous fluid is similar in its chemical properties to an acid, and that, consequently, its best neutraliser is an alkali. We have often tried the effects of common soda and potash, where persons have been stung by bees and wasps, and uniformly found an alleviation of pain and a mitigation of the other symptoms. In the last Number (Oct. 1830) of the *Asiatic Journal*, there is also an account of a case communicated to the Medical and Physical Society of Calcutta, in which the dangerous symptoms caused by the bite of a *karayt*, a poisonous serpent, were removed by the internal use of ammonia, or hartshorn, a powerful alkali.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLIV. Oct. 30.]

A History of the late Revolution in France, by the Rev. Arthur Johnson.—A new edition of the first volume of Niebuhr's History of Rome, translated by Messrs. Hare and Thirlwall. This publication to be soon followed by that of the second volume, with the corrections, &c. made in the third edition of the original.—Elements of Algebra, by Augustus de Morgan, Professor of Mathematics in the University of London.—A new edition of Cary's Translation of Dante.—Lessons on Number, as given at a Pestalozzian School, in Surrey.—A seventh edition, with the Author's last corrections, of the Poor Man's Evening Portion, is announced, by Dr. R. Hawker.—A Help to Professing Christians, in Judging of their Spiritual State and Growth in Grace, by the Rev. John Barr, Glasgow.—The High-mettled Racer, by the late Charles Dibdin; with Anecdotes of the Race Horse, and illustrated by woodcuts by Robert Cruikshank.—Knox's History of the Reformation of Religion in Scotland; with an Historical Introduction, &c. by William McGavin, Esq.—The Show Folks, embellished with designs by the late Theodor Lane, Esq., and dedicated to the President of the Royal Academy, by Pierce Egan.—A new edition of Gospel Truth accurately stated and illustrated, by the Rev. John Brown.—A second edition of the *Domine's Legacy*, by Mr. Andrew Picken.—Hall's Contemplations; with an Essay on his Life and Writings, by the Rev. Dr. Ralph Wardlaw.—Mr. Carne's new work, the Exiles of Palestine, a Tale of the Holy Land, is, we hear, nearly ready; and from the author's intimate acquaintance with the scenery and peculiarities of the Holy Land, we anticipate a work of unusual interest.—The Author of "Pandurang Hari, or Memoirs of a Hindoo," "the Zenana," &c. has in the press a new work entitled the *Vizier's Son*.
Mr. E. Lytton Bulwer, whose satirical powers have been so brilliantly displayed in many parts of his popular

novels, and especially in that vivid sketch of life, *Paul Clifford*, has, we believe, a satire forthcoming—a Poem with notes, and called the Siamese Twins. The double subject appears to us to be doubly calculated for point and humour, and full of new situations.

Dr. Beattie will, we are informed, shortly publish a volume, dedicated to the King, of Travels through the less frequented parts of Germany; being the result of personal observation, made during his immediate attendance upon their present majesties, as Duke and Duchess of Clarence, at the courts of that country, in 1822, 1825, and 1826. The work will be embellished with engravings.

LIST OF NEW BOOKS.

Literary Souvenir, 1831, in silk, 12s.; large paper, in bds. 1l. 4s.—New Year's Gift, 1831, hf.-bd. morocco, 8s.—Lardner's Cabinet Cyclopaedia, Vol. XII. History of France, Vol. I. fcp. 6s. bds.—Liston's Elements of Surgery, Part I. 8vo. 9s. bds.—Cruttwell's Housekeeper, 1831, 4to. 2s. stitched.—The Amulet, 1831, 12s.; Illustrations to ditto, 1l. 10s.; before letters, 2l. 10s.—Juvenile Forget Me Not, 1831, 8s.—Chartley, the Fatalist, 3 vols. post 8vo. 1l. 8s. 6d. bds.—Winter's Wreath, 1831, 12s.—Friendship's Offering, 1831, 12s.; Illustrations to ditto, royal 4to. 15s.; proofs, imperial 4to. 1l. 1s.; before letters, colombar 4to. 1l. 11s. 6d.—Comic Offering, 1831, 12s.—The Cameo, fcp. 8vo. morocco, 12s.—The Iris, 1831, 12s. large paper, 1l. 4s.; Illustrations to ditto, 1l. 5s.; proofs, 2l. 2s.—The Humorist, 1831, morocco, 12s.—Landscape Annual, 1831, post 8vo. 1l. 1s.; large paper, 2l. 12s. 6d.; Illustrations to ditto, 2l. 2s.; proofs, 3l. 3s.; before letters, 4l. 4s.—The Remembrance, edited by Roscoe, fcp. 8vo. morocco, 10s. 6d.; large paper, 1l. 1s.; Illustrations to ditto, 18s.; proofs, 1l. 6s.; before letters, 1l. 10s.; proofs and etchings, 1l. 15s.—Musical Gem, 1831, 18s.—Apollo's Gift, or Musical Souvenir, 1831, 16s.—Clarke's Sacred Literature, Vol. I. 8vo. 12s. bds.—Piety without Asceticism, by Bishop Limerick, 8vo. 12s. bds.—Lee on Prophecy, 8vo. 14s. bds.—Watson's Family Prayers, 12mo. 5s. 6d. bds.—Harding's Subjects from Bonington's Works, on stone, atlas 4to. prints, 2l. 10s. bds.; proofs, 3l. 8s. bds.—Kotzebue's New Voyage round the World, 2 vols. royal 12mo. 1l. 7s. bds.—Bloomfield's Thucydides, with English notes, 3 vols. royal 12mo. 1l. 7s. bds.; Vols. II. and III. separate, 17s. 6d. bds.—Major's Orestes of Euripides, English notes, royal 12mo. 5s. bds.—Gurney's Biblical Notes, 8vo. 12s. 6d.—Norris's Sermons, 12mo. 2s. large paper.—The Vocal Annual, or Singer's Own Book, for 1831, 18mo. 4s. bds.—Turkey morocco, 5s. 6d.—Hansard's Debates, Vol. XXIV. royal 8vo. 1l. 10s. bds.—Supplement to the ninth edition of Tidd's Practice, royal 8vo. 12s. bds.—Croly's Memoir of George IV., with portrait, 8vo. 15s. bds.—Trant's Journey through Greece in 1830, 8vo. 16s. bds.—Northcote's Life of Titian, 2 vols. 8vo. 1l. 8s. bds.—Family Classical Library, Vol. XI. 18mo. 4s. 6d. bds.—Aldine Poets, Vol. VIII. fcp. 5s. bds.—Pitt's Essay on Civil Policy, 8vo. 14s. bds.—Hughes' Divines, Vol. VI. 8vo. 7s. 6d. bds.—Adams' Rudiments of Correct Reading, 12mo. 3s. sheep.—The Keepsake, 1831, post 8vo. 1l. 1s.; large paper, 2l. 12s. 6d.; Illustrations to ditto, 2l. 2s.; proofs, 3l. 3s.; before letters, 4l. 4s.

METEOROLOGICAL JOURNAL, 1830.

October.	Thermometer.		Barometer.	
	From	to	30.26	to 30.20
Thursday . . . 14	39.	57.	30.16	— 30.14
Friday . . . 15	29.	55.	30.16	— 30.19
Saturday . . . 16	27.	58.	30.16	— 30.19
Sunday . . . 17	27.	57.	30.25	— 30.30
Monday . . . 18	34.	64.	30.23	— 30.16
Tuesday . . . 19	49.	61.	29.90	— 29.95
Wednesday 20	46.	69.	29.95	— 30.05

Prevailing wind to the 19th, N.E.; since S.E. and S.W., the latter prevailing.

Generally clear; except the white frost of the mornings of the 15th, 16th, and 17th, and the unusually sudden fall of the leaf, we have nothing to remind us of returning winter; the mildness of the 20th has not been equalled since the 2d of September, when the thermometer stood at 69°.

In respect to the dryness of the season, only 75,000ths of an inch of rain has fallen since Michaelmas Day.

October.	Thermometer.		Barometer.	
	From	to	30.06	to 30.16
Thursday . . . 21	46.	67.	30.19	Stationary
Friday . . . 22	41.	67.	30.26	— 30.39
Saturday . . . 23	51.	58.	30.26	— 30.29
Sunday . . . 24	44.	57.	30.39	— 30.29
Monday . . . 25	42.	60.	30.05	— 29.66
Tuesday . . . 26	51.	58.	29.69	— 30.20
Wednesday 27	29.	51.	30.36	— 30.14

Wind, S.W. and N.W., the former prevailing. Generally cloudy, raining on the 25th and 26th. Rain fallen, .325 of an inch.

Edmonton. CHARLES H. ADAMS.
Latitude 51° 37' 39" N.
Longitude 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

The hymn by J. M. S. is not consistent with the plan of our Miscellany.

We can take no part in the theatrical fracas which has made so much noise in dramatic circles; for, in the first place, we never interfere in personal quarrels; and in the second, when the laws are applicable, any attempt to prejudice the question would be worse than impertinent. ENIGMA.—Last line but one of the critique on the new tragedy, in our last No., for "camps," read "lamps."

ADVERTISEMENTS,

Connected with Literature and the Arts.

UNIVERSITY OF LONDON. — Session 1830.

On Monday, the 1st of November, at 3 o'clock, Professor Long will deliver a Lecture on the Study of Latin and Greek, and on the Method of teaching those Languages in this University.

On Tuesday, the 2d, at 3 o'clock, Professor De Morgan will deliver a Lecture on the Study of the Mathematical and Physical Sciences, and on the Method of teaching them in this University.

On Monday, the 8th of November, at 3 o'clock, Professor Hoppus will deliver an Introductory Lecture on the Study of the Philosophy of the Mind and of Logic, and on the System intended to be adopted by him in teaching those Subjects.

There is Free Admission to those Introductory Lectures, but by Tickets only, to be had at the Office of the University.

On Wednesday, the 3d of November, the following Classes will open.

Junior Latin, Professor Key, daily except Saturday, from 10 to 12.

Senior Latin, ditto ditto 12 to 2.

Junior Greek, Professor Long, ditto 12 to 2.

Senior Greek, ditto ditto 10 to 12.

Professor Long will have a Third Class, for those who are privately prosecuting their Greek Studies, which will meet twice a week, on Monday and Thursday, from 3 to 4.

The First Class will commence on Thursday, the 4th of November; the Second, on the 1st of March. Persons may enter for both or either Divisions.

Junior English, Tuesday and Thursday, from 2 to 4. Saturday, 10 to 12.

Senior English, ditto 2 to 5. Saturday, 10 to 12.

Junior German, Professor Von Mühlhens, Monday, Wednesday, Friday, and Saturday, 8 to 9 A.M.; and another Class on Monday, Wednesday, and Friday, 2 to 3.

Senior German, Professor Von Mühlhens, Monday, Wednesday, and Friday, 8 to 9 A.M. Saturday, 10 to 12.

Junior Italian, Professor Panzini, Monday, Wednesday, and Friday, 11 to 12.

Senior Italian, ditto Tuesday, Thursday, and Saturday, 11 to 12.

Junior French, Mons. Merlet, Monday, Wednesday, and Friday, 8 to 9 A.M.; and another Class on the same days, from 2 to 3.

Senior French, Mons. Merlet, Monday, Wednesday, and Friday, 2 to 3; and another Class, Tuesday, Thursday, and Saturday, 10 to 4.

Persian Language, Professor Rosen, Monday and Thursday, 3 to 4.

Arabic Language, ditto Tuesday and Friday, 3 to 4.

Sanskrit Language, ditto Tuesday and Thursday, 4 to 5.

Hindustani Language, ditto Monday, Wednesday, and Friday, 4 to 5.

Junior Hebrew, Professor Hurwitz, Monday, Wednesday, and Friday, 9 to 10.

Senior Hebrew, ditto, same days, 10 to 11, or any hour between 2 and 5, which may suit the convenience of the majority of the Students.

Junior Mathematics, Professor De Morgan, daily except Saturday, 9 to 10. Saturday, 9 to 10.

Senior Mathematics, ditto daily except Saturday, 2 to 3. Saturday, 11 to 12.

Professor De Morgan will have an Evening Class on Monday, Wednesday, and Friday, from 6 to 7, for the Elementary Branches of Mathematics, Arithmetic, Algebra, Geometry, and should the Progress of those who attend admit of it, Plane and Spherical Trigonometry. This Class is intended principally for those whose Education is, in other respects, already completed.

Natural Philosophy and Astronomy, Professor Lardner, Tuesday, Wednesday, and Friday, 3 to 4; Monday and Thursday, 7 to 8 P.M.

This Course includes the following Subjects:—Astronomy, Mechanics, Hydrostatics, Pneumatics, Heat, and Optics.

Dr. Lardner will deliver Three short Popular Courses in the Evening, on such Parts of the Science as admit of explanation without Mathematical Language, and adapted to those who do not desire to pursue the Subjects more minutely. The First Course will consist of Twelve Lectures on Astronomy, on Monday and Thursday, from 7 to 8. The First Lecture on Thursday, the 4th of November. The Subjects of the Second Course will be Mechanics and Hydrostatics; Third Course, Pneumatics, Heat, and Optics. Persons may enter for a Single Course.

Philosophy of the Mind and Logic, Professor Hoppus, Tuesday, Wednesday, and Friday, 12 to 2.

General Jurisprudence, Professor Anstyn, Tuesday and Thursday, 6 to 7 P.M., commencing on Tuesday, the 7th of Nov.

English Law, Professor Amos, Monday, Wednesday, and Friday, 6 to 7 P.M., except in Term Time, when the hour will be from 6 to 7, commencing Monday, the 8th of November.

Medical Jurisprudence, Dr. J. Gordon Smith, Monday, Wednesday, and Friday, 7 to 8 P.M., commencing Monday, 8th of November.

Political Economy, Professor Maculloch, Monday, Wednesday, Friday, and Saturday, 10 to 11, commencing 1st of Feb.

Zoology, Professor Grant, daily except Saturday, commencing 1st of January.

Botany, Professor Lindley, daily except Wednesday, commencing 1st of April.

The General Library and the Law Library are open for the Use of the Students, every day except Sunday, from 9 in the Morning; the General Library until 5, the Law Library until 9 o'clock in the Evening.

14th October, 1830.

TO LIBRARIANS, BOOKSELLERS, STATIONERS, &c.

To be disposed of, by Private Contract, on advantageous terms, in the fashionable and flourishing town of Leamington, all the Stock of that original and well-established Circulating Library, Bookselling, and Stationery Business, known as the Leamington Library, situated in the best part of the High Street, between Copps' Royal and the Crown Hotels; and the Premises to be let, with immediate possession.

This Establishment has the support of the first families in the town and neighbourhood, and for years past has been regularly increasing its returns, and could not fail, by prudence and assiduity, to secure a most ample income for the capital invested.

Further particulars may be known on Application on the Premises; or Mr. B. Teson, Librarian; or Mr. Packwood, Solicitor, both of Cheltenham; or Mr. Duffield, Bath; if by letter, post-paid.

A LADY, whose connexions are highly respectable, and who can present references to satisfy the most strict inquiry, is anxious to obtain a SITUATION either as Nursery Governess, where the Pupils only require instruction in the rudiments of French and Music—as English Teacher, in a select Ladies' School—or as Tutor, to a Lady. Her object is to secure a permanent and happy home, emolument being only a secondary consideration. Letters addressed (post-paid) to Mr. Sustenance, Bookseller, Piccadilly; or Messrs. Westley and Davis, Stationers' Court, Ludgate Hill, to M. K., will be immediately attended to.

Under the Patronage of the King.

THE NATIONAL PORTRAIT GALLERY, No. 19, contains Portraits and Memoirs of Viscount Goderich, from the original of Sir T. Lawrence. The Honourable G. A. Ellis, from the original of T. Phillips, R.A.

Richard Parson, M.A. painted by T. Kirby.

N.B. The Memoir of Viscount Goderich will be found a very important one.

London: Fisher, Son, and Co.; Colnaghi and Co.; M. Colnaghi, Moon, Boys, and Graves.

FOREST SCENES AND INCIDENTS in the WILDS OF NORTH AMERICA. By GEORGE HEAD, Esq.

"We have been led to talk of Robinson Crusoe by the narrative of Mr. Head, a sort of Robinson Crusoe in his way. We have perused his work with considerable pleasure."—Westminster Review.

John Murray, Albemarle Street. Mrs. Rundell's Cookery Book. Handsomely printed in small 8vo. with Ten Plates, price 7s. 6d. a new edition of

A NEW SYSTEM OF DOMESTIC COOKERY; formed upon principles of Economy, and adapted for the Use of Private Families. Comprising also the Art of Carving, Observations on the Management of the Dairy and Poultry Yard, or Home Economy, Wines, &c.; Cookery for the Sick, and for the Poor; many very useful Miscellaneous Receipts and Directions proper to be given to Servants, both in Town and Country. To which is prefixed, an Essay on Domestic Economy and Household Management; comprising many Observations which will be found particularly useful to the Mistress of a Family.

By a LADY. "This is really one of the most practically useful books of any which we have seen on the subject. The lady who has written it has not studied how to form expensive articles for luxurious tables, but to combine elegance with economy. She has given her directions in a plain, sensible manner, that every body can understand; and these are not confined merely to cooking, but are extended to a variety of objects in use in families; by which means the utility of the book is very much increased indeed."—British Critic.

John Murray, Albemarle Street. Sold also by every Bookseller and Newsman in England, Scotland, and Ireland. Also, new edition, Family Receipt Book, small 8vo. 7s. 6d.

THE CAMP OF WALLENSTEIN, from the German; and original Poems. By LORD FRANCIS LEVESON GOWER. John Murray, Albemarle Street.

A CHEMICAL CATECHISM, in which the Elements of Chemistry, with the recent Discoveries, are very clearly and fully explained, and its Applications to the Phenomena of Nature, to Agriculture, Manufactures, and Medicine, described. Illustrated by Nine superior Engravings, select Chemical Experiments, and a Vocabulary of Terms. By T. J. GRAHAM, M.D. &c.

"We esteem and recommend it. Every subject of interest connected with this delightful science, is treated of in the clearest manner."—London Weekly Review, Feb. 1829. "Everything here is written up to the latest date, and the work cannot fail of being found eminently useful. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parkes's book."—Monthly Magazine, March 1829. "The necessity of a clear progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has well supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its contents. Unlike former ones, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements, to the compound and illustrative branches of the study. It is eminently calculated to afford agreeable relaxation to the uninitiated, and to improve the knowledge of the learner."—Atlas, March 1829. "It contains an immense quantity of valuable information, and is much superior to Parkes's."—Monthly Review, April 1829. Published by Simpkin and Marshall. Sold by all Booksellers.

Of whom may be had, by the same Author, 3d edition, price 15s. 2. Modern Domestic Medicine. A Popular Treatise, exhibiting the Symptoms, Causes, and Treatment of all Diseases, with a Copious Collection of approved Prescriptions, &c. &c.; and forming a clear and comprehensive Medical Guide for the Clergy, Families, and Invalids.

"We constantly recommend it. It is very far above Buchan's."—Literary Chronicle. "In the opinion of a respectable physician, well known in our connection, it is incomparably superior to every similar work in our language."—Medical Magazine. "One of the very best and most useful books published in modern times."—Monthly Review. "It is altogether deserving of permanent popularity."—London Weekly Review.

THE BOOK OF PSALMS; newly Translated from the Hebrew, and with Explanatory Notes. By W. FRENCH, D.D. Master of Jesus College, Cambridge, and G. SKINNER, M.A. Fellow of Jesus College, Cambridge. Printed at the University Press. John Murray, Albemarle Street.

LEVI and SARAH; or, the Jewish Lovers. A Tale of the Polish Jews. John Murray, Albemarle Street.

BOOKS IN THE PRESS.

On November 1st, elegantly printed, price 1s. KNOWLEDGE for the PEOPLE; or, the Plain Why and Because: familiarising Subjects of Useful Curiosity and Amusing Research. Part I.—Domestic Science. By JOHN TIMBS, Editor of "Leacons; or, the Best Words of the Best Authors." London: Sampson Low, 42, Lamb's Conduit Street; and Hurst, Chance, and Co. St. Paul's Churchyard.

On Saturday the 13th of December will be published, Vol. II. 4to. THE LIFE OF LORD BYRON; including his Correspondence with his Friends, and Journals of his own Life and Opinions. By THOMAS MOORE, Esq.

This Volume will contain an original Whole-length Portrait of Lord Byron, engraved in his most finished manner, by William Finden. John Murray, Albemarle Street.

In a few days will be published, 3 vols. fols. cap. 8vo. with a Map. LIFE and ADVENTURES of GIOVANNI PINATI, Native of Ferrara; who, under the name of Mahomet, made the Campaign against the Wahabites, for the recovery of Mecca and Medina, and since acted as Interpreter to European Travellers in some of the parts least visited of Asia and Africa. Translated from the Italian as dictated by himself, and edited by WILLIAM JOHN BANKES, Esq. John Murray, Albemarle Street.

In November will be published, 4to. MANNERS and CUSTOMS of the MODERN EGYPTIANS. Illustrated from their Provincial Sayings and Customs. By the late JOHN LEWIS BURCKHARDT. This volume will complete the Works of Lewis Burckhardt. John Murray, Albemarle Street.

In November will be published, 2 vols. 8vo. with superior Maps, THE DORIANS. An Account of the early History, Religion, and Mythology, Civil and Domestic Institutions, Arts, Language, and Literature of that Race. With new and improved Maps of the Peloponnese and Macedonia. Translated from the German of C. O. MULLER, Professor in the University of Göttingen, by HENRY TUFNEL, Esq. and GEO. CORNWALL LEWIS, Esq. Student of Christ Church. Lately published, Bæckh's Public Economy of Athens. 2 vols. 8vo. 11. 6s. John Murray, Albemarle Street.

In a few days will be published, with a Portrait, 2 vols. 8vo. THE LIFE and CORRESPONDENCE of the late ADMIRAL GEORGE BRYDGES, LORD RODNEY. Edited by his Son-in-law, Major-General MUNDAY. John Murray, Albemarle Street.

In December will be published, 3 vols. 8vo. ESSAY on the ORIGIN and PROSPECTS of MAN. By the Author of "Anastasis." John Murray, Albemarle Street.

Of whom may be had, Anastasis; or, Memoirs of a Modern Greek. 4th edition, 3 vols. crown 8vo. 11. 11s. 6d.

In a few days, 1 vol. crown 8vo. THE PROGRESS of SOCIETY. By the late ROBERT HAMILTON, LL.D. F.R.S.E. Professor of Mathematics in the Marischal College and University of Aberdeen; Author of "An Inquiry concerning the National Debt." John Murray, Albemarle Street.

In a few days will be published, crown 8vo. printed uniformly with Kirke White's Remains, ATTEMPTS in VERSE. By JOHN JONES, An old Servant, with some Account of the Writer, and an Introductory Essay, on the Keefe and the Uneducated Poets. By ROBERT SOUTHEY, LL.D. John Murray, Albemarle Street.

In a few days will be published, 8vo. A GRAMMAR of the GERMAN LANGUAGE. By C. F. BECKER, M.D. John Murray, Albemarle Street.

New Editions of Robert Montgomery's Poetical Works. In the press. S A T A N; a Poem. By R. MONTGOMERY. 8vo. 2d edition, 10s. 6d.

Universal Prayer, Death, &c. &c. 4th edit. 7s. 6d. The Omnipresence of the Deity, 12th edit. 7s. 6d.

Or the whole complete in 3 vols. price 11. 6s. 6d. with general Title-page. Samuel Maander, Newgate Street.

FRIENDSHIP'S OFFERING for 1831.

This very beautiful and popular work, with one exception, the oldest of the Annuals, will make its appearance this season with increased claims to that public patronage of which the previous volumes have enjoyed so large a portion. Its Embellishments consist of the most exquisite specimens of art both in Painting and Engraving; and its carefully selected Literature comprises Contributions from the most distinguished Writers, conveying instruction and amusement, by that solid literary excellence which (combined with its durable and elegant binding) as more fit the volume for taking its permanent station in the Family Library.

At the same period, and at the same price, will be published, The Comic Offering; or, Lady's Mèlange of Literary Mirth; illustrated by upwards of sixty original and most humorous Designs, and a pleasing variety of "right merris conceits" in prose and verse, for the amusement of the Ladies, to whom the work is respectfully inscribed, by the Author and Editor, Miss Louisa Henrietta Sheridan.

The Comic Offering being thus wholly a Lady's Book, both in its Literature and Illustrations, is eminently calculated for the Boudoir and Drawing-room; the publishers, therefore, confidently bespeak the patronage of the fair sex for an Annual so expressly devoted to their amusement.

The Work will be elegantly whole-bound in morocco, and richly embellished in a style of art and oddity quite unparalleled. Prospectuses of both Offerings may be had of the Publishers, Smith, Elder, and Co. 65, Cornhill.

The following New Works will shortly be published by Messrs. Colburn and Bentley. MAXWELL; a Story of the Middle Ranks.

By the Author of "Sayings and Doings." In 3 vols.

2. The Life of Sir Humphry Davy, Bart. late President of the Royal Society, &c. &c. By A. J. Paris, M.D. Cantab. F.R.S. Fellow of the Royal College of Physicians, &c. &c. In 1 vol. with a beautiful Portrait.

3. Narrative of the French Revolution of 1830, the Events which produced it, and the Scenes by which it was accompanied. By D. Turnbull, Esq. Embellished with Poetical Epithets of Philippe and General Lafayette, and a Plan of the Scene of Action. In 1 vol. 8vo. Quæque ipse miserata vidi.—Virgil.

4. The Life of Titian, with Anecdotes of the Distinguished Persons of his Time. By James Northcote, Esq. R.A. In 2 vols. 8vo. with a fine Portrait of Titian.

5. Narrative of a Journey through Greece in 1820, with Remarks on the Actual State of the Naval and Military Power of the Ottoman Empire. By Captain T. Abercromby Trant. In 1 vol. 8vo. with Plates.

6. The Literary Correspondence of John Pinkerton, Esq. F.R.S. Edited by Dawson Turner, Esq. In 2 vols. 8vo.

7. Field Sports of the North, by L. Lloyd, Esq. 2d edition, in 2 vols. 8vo. with great Additions, and several new Plates.

In November will be published, dedicated, by express permission, to Her Most Excellent Majesty Queen Adelaide, THE REMEMBRANCE. Edited by THOMAS ROSCOE, Esq.

Author of the "Landscapæ Annual." The Embellishments consist of a Portrait of the Queen, engraved in the very best manner, in Line, by F. Engleheart, from a Miniature, painted for Her Majesty, by Mrs. Green.

Table listing contents of 'THE REMEMBRANCE' with prices: Windsor Castle, Bartlett; The Orphans, Gill; The Lady and her Bird, H. Corbould; The Forum Romanum, J. M. W. Turner, R.A.; Flower Girl, W. Westall, R.A.; Coliseum at Rome, S. Prout; Warwick Castle, Bartlett; Girl at the Brook, W. Westall, R.A.; John Gilpin, T. Stothard, R.A.; Mont Blanc, from the Piedmont, W. Brockdonk; Fests Village of Sallé, Val d'Aoste, J. Fenner; Presentation Plate, Fenner.

Among the Contributors to the Work will be found some of the names of the most distinguished living Writers, and particularly of eminent Females.

The Volume will be bound in Arabesque morocco, of an appropriate Design, price 10s. 6d. A few Copies are taken off in crown 8vo. same size as the Keepsake and Landscapæ Annual, with India Proof Impressions of the Plates, neatly half-bound in morocco, uncut edges, price 1s. 1s.

Table listing prices for 'THE REMEMBRANCE' in different formats: Twelve Illustrations, on colomander 4to. delivered, 20 18; in a Portfolio, Proofs, 3; Do. do. India Proofs, 1 6; Do. do. India Proofs before the Letters, 1 10; Do. do. India Proofs with the Enchirion, 1 18. These are very limited in Number. London: Jennings and Chaplin, 62, Cheapside.

In the press, a new edition, being the 10th, 12mo. 2s. half-bd. of STORIES from the HISTORY of ENGLAND.

12mo. price 2s. half-bound. 2. Progressive Geography for Children. By the Author of "Stories from the History of England." John Murray, Albemarle Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 13, South Moulton Street, Oxford Street; sold also by J. Chappell, 96, Royal Exchange; E. Heathcote, 10, Market Lane; J. B. Richardson, 11, Abchurch Lane; Edinburgh: Smith and Son, D. Robertson, and Atkinson and Co. Glasgow; and J. Cumming, Dublin.—Agent for America, O. Rich, 19, Red Lion Square, London. J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 720.—AMERICAN EDITION.

SATURDAY, NOVEMBER 6, 1830.

REVIEW OF NEW BOOKS.

The Oxford English Prize Essays. 4 vols. 12mo. Oxford, 1830. D. A. Talboys.

STRENGTH of mind evinced in early life warrants the anticipation of greatness in maturity.—“If ye do this in the green leaf, what will ye do in the dry?” is a question, from the analogy of which youthful merit may declare a very promising prospective. The attainment of academical distinction is a fair passport to notice, and an incentive to subsequent exertion. It is an honour, embraced in the warm period of youth, clung to through after-life, and to which a man ever reverts with pleasurable feeling. From accidental association, things trivial in themselves borrow importance; and their possessor accordingly cherishes them as sources whence he may derive self-congratulation. University honours may be inconsequential, save as gratifying, and tokens of capacity, if exerted; yet, when the lustre which they lend is shared in and reflected back from the leading men in civil life, they cannot but be considered as enviable marks of distinction, and well calculated to awaken energy and kindle emulation. The custom of rewarding talent, when combined with industry, has so long and so successfully obtained at our universities, as to need no commendation of ours. The class-paper and the tripod repay even the disappointed, if not with distinction, with having exercised the mind by a severe course of reading, which, but for such powerful attraction, would, by many, never have been persevered in or undertaken. Thus, he who cannot gather the flowers may console himself with the fruits. The present collection of Oxford Prize Essays cannot but be interesting from intrinsic merit, and curious as conveying the early development of the thoughts of those, many of whom have since trodden the highest paths of civil eminence, and surmounted the distinctions of youth by the accumulated honours of their manhood. Nor is it unworthy of remark, that, as the germs become expanded, the principles of the senator may frequently be traced in the opinions of the gownsmen; and the conclusions adopted in after-life by the leading advocate, may, on similar questions, be drawn from the premises of the essayist.

We proceed, without further preface, to the exercise of our office, in the present instance a sincere, since it is one not of criticism, but quotation. The following were the opinions of John Scott (now the venerated Earl of Eldon), in seventeen hundred and seventy-one, on the “Advantages and Disadvantages of Travelling into Foreign Countries:”—

“When by the improvement of advancing experience, our civil constitution has at length well nigh reached the summit of attainable excellence, we can have little to adopt from foreign policy, nor need we wish to improve a system, which has already become almost perfect. But since it is by comparison alone that we can judge of our greatness, we must determine the powers of foreign nations before we can rate

the strength of our own. A knowledge of foreign constitutions, therefore, is still necessary to finish the political character: but we need not be sent abroad to exercise a study, which has been long and successfully cultivated at home. The modern statesman may investigate the nature and power of every government in his closet; he may view their local advantages delineated in his map, and gather their mutual dependence from the mature observations of preceding travellers. The insufficiency of reading for these ends has indeed been largely insisted upon, whilst the representations of travellers have been exposed as replete with falsehood or inconsistency. But if the fancy has wanted in the description of a happy valley, or a favourite stream, and being anxious to draw a beautiful picture, has formed it without resemblance, we shall seldom detect it straying in the dull range of politics, or warm in the recital of civil institutions. Here disquisition is cool, and the reformation of more trivial errors would be no equivalent for the dangers of a foreign journey, were there not other advantages weighty enough to render it a sufficient recompense. The weakness of human nature is particularly discovered in its tendency to extremes. We pursue virtue itself with that impetuous ardour which often hurries us beyond the line of duty. There are few principles of action which have been more immediately beneficial to society, and which therefore merit more assiduous cultivation, than the love of our country. But whilst we have been studious to regard our parent with the tenderness of filial affection, we have imbibed the weak prejudices of children, and, like the undiscerning lover, have fondly gazed without discrimination upon her beauties and her deformities. He who overrates his own merits will probably undervalue the deserts of others. From this arrogant conceit of our worth as a people has sprung that uncharitable opinion which confines excellence to the boundaries of a small island; and, with the true spirit of ancient Greece and Italy, has adjudged every other people to be comparatively barbarous. This illiberal idea, it is confessed, has been attended with salutary consequences: it has roused the soul of the warrior, and, by teaching the personal defenders of our country to despise, it has taught them to conquer her enemies. But it may be discovered, without any extraordinary acuteness of reasoning, that this opinion, which has been ratified by popular assent, because it indulged our national pride, has found its chief support in the confidence of those who embrace it. We are indebted to foreign ingenuity for the first essays in the arts of elegance: and whilst we are justly celebrated for our improvements of imparted discoveries, we must acknowledge the unfruitfulness of English invention. He who examines the origin of our political government, the favourite theme of our justest commendations, will find that this beautiful system was invented in the woods of a foreign country. It is in vain, however, that we attempt to era-

dicating so stubborn a prepossession, unless what is thus suggested by reflection, be confirmed by the evidence of our senses. If the discovery of defects be the first step towards amendment, he must despair of correcting a fault who is situated where he cannot perceive it. Our prejudices form a part of those national failings, which are seldom acknowledged among ourselves, and we have a powerful argument for the necessity of travelling, when we consider it as the only means whereby these weaknesses can be effectually detected. What has here been advanced concerning more venial infirmities, may perhaps with equal justice be applied even to some vices which may seem to be the production of our climate. Example, which is generally deemed a satisfactory plea for foibles, has sometimes screened iniquity itself under the softer title of a weakness. But as the fear of appearing singular, which prevails universally, has every where given it its efficacy, if we have complied with the vices of our own country in obedience to its general customs, we may be taught to abstain from them in another by the same submissive deference to established but contrary practices. The acquisition of foreign languages, which has usually been pleaded to countenance the custom of travel, cannot with justice be denied to possess singular utility. But, whilst we would recommend this study, we cannot but disapprove that ill-directed labour, which, with little regard to the import of expressions, is employed in attempts to acquire the niceties of foreign pronunciation. This censure, however, must not be extended to the traveller, who, proposing to himself the conversation of eminent men abroad, as a principal object of his undertaking, must endeavour to adorn his discourse with all the graces of utterance. Broken language will render his inquiries really obscure, and seemingly impertinent. And as the accuracies of foreign diction can only be taught in a foreign country, we are furnished with another proof of the utility of travel. Amidst a variety of objects which will challenge the attention of the traveller, few will prove more copious sources of delight, or supply him with ampler matter for useful reflection, than those awful monuments of ancient industry and power, which seem to have been hitherto preserved as memorials of a destructive luxury, the havoc of which was felt when the shocks of time were yet imperceptible. How must the British statesman feel for his country, when he surveys the venerable ruins of a senate, which stood secure till gold was accepted as an equivalent for freedom, and the Roman legislature, softened by pleasure, embraced the shackles of slavery? Whilst the eye is ravished, the mind cannot be unemployed, but recurs to the virtues which established, and the vices which overthrew, the grandeur it surveys. When we consider the profuse rewards bestowed upon foreign artists by those who pretend to a more refined taste, we may recommend travel to our countrymen as a means of improvement in those performances which de-

rive their excellence from the delicacy of manual execution. The painter must view pictures, and the sculptor must copy statues. If Italy is confessedly the seat of the finer arts, when we have sought instruction from her, we may aspire to hope, that the time will come when English ingenuity, as well as foreign skill, shall be loaded with the rewards of English liberality. These are some of the advantages which may accrue from travel, when the understanding has been previously fraught with useful knowledge, and the judgment is mature: those which are generally enumerated to enforce the necessity of early travel, prove it to be the real source of all those fatal miscarriages which have induced the more serious part of mankind to give a total discountenance to the practice. Considered in a political view, it is pregnant with mischiefs. He, who reflects that the laws and manners ought mutually to operate upon each other, can never approve a scheme of education which forms the manners without relation to the laws. Fashionable as it may be to complain of the roughness of British demeanour, the wary politician would use the file with caution, and leave those manners coarse, which, by attempting to polish, he might weaken or impair. Where the constitution calls upon every man to assert his own independence, and has appointed each the guardian of his own freedom, few have leisure or inclination to pursue those refinements which necessarily engage the attention of a more enslaved people. He who has not a single right to protect, may endeavour to render his servitude supportable by studying the arts of politeness: but let not the Briton be taught to leave his distinguishing privilege—his liberty, without defence: whilst he reflects these salutary improvements. Some, influenced by reflections drawn from the ductility of the mind, have recommended early travel for the purpose of removal of national prejudices, but the success of this recommendation. But the experience has uniformly proved, that by an early expulsion or prepossessions in favour of our own country, we form an opening for the admission of opinions detrimental to it, that our prejudices are rather exchanged than destroyed. To this only can we attribute a prevailing passion for foreign productions, which, as it deprives our own artists of the rewards their industry claims, and withholds from our manufacturer every encouragement which can animate his labours, must at length exclude all expectation of domestic improvement. Serious as these evils are, they are not the most dreadful consequences of early travel. Introduced into a depraved world, when his reason is yet too feeble to counteract the workings of his passions, the young traveller lies open to seduction, is deceived by every fashionable error, and misled by every delusive example. He probably returns to his own country a compound of ignorance and infidelity, with little to atone for laxity of principle, but the fopperies of a trifling and superficial elegance. If there be a people among whom this practice has generally obtained, we shall find them generally corrupted. Perhaps the frequency of it among ourselves may account for the alarming depravity of our manners, which every honest man sees and laments. Where, then, shall we seek a remedy? must it not be in that education which watches over the morals with the strictest vigilance, and by fortifying the mind with the soundest principles of religion, enables it to pursue with safety those inferior accomplishments whose only merit is to heighten the beauty of virtue,

and which become truly dangerous when they soften the deformities of vice.

“ JOHN SCOTT.

“ *University College, 1771.*”

As in early life John Scott deemed the established order of things “ well nigh the summit of attainable excellence,” so, through a long political career, he ever remained stanch to that system which, in his mind, was inseparable from the welfare of his country. And though he checked the republican spirit of the day with too severe a curb to obtain popular applause, no one can charge the peer with having swerved from the principles of the commoner. It must also be acknowledged to his honour by all, that no interested motive could ever distort his views, or distract his mind, from dedicating to their support a life alike consistent and of undeviating integrity.

We quote the following from the essay of Charles Abbot (Lord Tenterden), “ On the Use and Abuse of Satire.”

“ Personal satire has been successfully directed in all countries against the vain pretenders to genius and learning, who, if they were not rendered contemptible by ridicule, would too often attract the attention, and corrupt the taste of their age. By employing irony the most artful, and wit the most acute, against the unnatural and insipid, among his contemporaries, Boileau drew the affections and judgment of his nation to the chaste and interesting productions of Molière and Racine. I. 2. Such have been the advantages derived from personal satire; but so great, on the contrary, are the injuries resulting from its misapplication, that the legislature of all nations has been exerted to restrain it. For if they, whose failings were unknown and harmless, be brought forth at once to notice and shame, or if, for the weakness common to human nature, illustrious characters be made objects of contempt, the triumphs of vice are promoted by increasing the number of the vicious, and virtue loses much of its dignity and force, by being deprived of those names which had contributed to its support. Not less injurious to science is the unjust censure of literary merit, which tends both to damp the ardour of genius, and to mislead the public taste. The most striking examples of the abuse of personal satire are furnished by that nation in which its freedom was the greatest. The theatres of Athens once endured to behold the wisest of her philosophers, and the most virtuous of her poets, derided with all the grossness of malicious scurrility. Nor has modern poetry been altogether free from this disgrace. Fortunate, however, it is, that although the judgment of the weak may be for a time misguided, truth will in the end prevail: the respect and admiration due to the names of Burnet and of Bentley, of Warburton and of Johnson, are now no longer lessened by the wit of Swift, or the asperity of Churchill. Even where the subject or design is not improperly chosen, abuse may still arise from the disposition and colouring of the piece. When bitterness and severity are employed against men whose failings were venial and light, or ridicule degenerates either into the broad attacks of sarcastic buffoonery, or the unmanly treachery of dark hints and poisonous allusions, not only the particular punishment is excessive and unjust, but also general malice is fostered by new supplies of slander. But the abuses of personal satire are then most numerous and great, when it is dictated by private animosity. Beside the impropriety in the subjects of the Dunciad, many of the situations in which they are placed might be censured as uncharacteristic, if the

mind were not sometimes averted from the contemplation of them, and criticism prevented by disgust. There are, indeed, few circumstances that awaken such poignant regret, as the severe and rancorous invectives which some of the first names in literature have vented against their enemies. When envious dulness traduces the excellence to which it cannot attain; or rash impetuosity bursts forth to a general attack on all surrounding merit, we turn away from the sight with contempt or indignation: but to behold that wit and genius which had been employed to the fairest ends, unhappily degraded to the meanest of all offices, the gratification of malice and revenge, is at once humiliating to the judgment, and painful to the heart. II. 1. Nor has satire been confined to the conduct of individuals alone, but has been pointed also against those measures of policy and state, in which the interest of whole nations is concerned. It is only by the exercise of political satire, that the spirit of jealousy necessary to the support of all mixed governments can be excited, and the general establishment of the constitution protected and maintained. The frequency also of those occasional errors to which the administration of every state is subject, will be diminished by the fear of that ridicule which is able both to repel the attacks of violence, and expose the artifices of faction. So intimately, however, is the freedom of political satire connected with the establishment of general liberty, that popular outrage is not less unfavourable to its existence than the extremity of absolute despotism. During the violence of contending factions that preceded the subversion of the Roman commonwealth, it appears to have been almost entirely unknown: the efforts of wit must, indeed, have been feeble and disregarded, at a period when literature had not obtained an universal esteem, and in a nation where the eloquence of the orator was at one time drowned by a sedition, at another time overawed by the sword. The history of free nations exhibits frequent examples of the application of ridicule to the concerns of state, many of which were useful to their own age, and all may be instructive to posterity. The political comedies of Aristophanes present a picture of his nation, too minute to be suspected of falsehood, and too interesting to be viewed without pain. In them we behold the representation of a people, at once refined and gross, learned and infatuated; so fond of humour and ridicule as to permit the boldest attacks upon their favourite follies, yet so deluded as neither to resign nor correct them; attentive to wit and satire, yet prosecuting, in defiance of both, a war that could not but end in their destruction. By the invention of the art of printing, the dissemination of political satire has been eminently facilitated, and in our own country it possesses an importance as little known to the surrounding nations as the peculiar privilege by which its freedom is secured. The establishment of our excellent constitution was considered as imperfect, while restraint was imposed upon the exertion of any voice by which the spirit of liberty might be awakened. And since the noblest security against sudden and causeless revolutions, is that opportunity of calm decision, which is presented to the judgment of a whole country by the free representation of all public events; political satire tends, in a no less powerful degree, to secure the government from rebellion, than to protect the people from oppression. Nor are instances wanting of its exercise, which will ever be contemplated with admiration and triumph. The remains of that

fanaticism, which was a reproach to the human character, were dissipated by the wit of Butler; and the delicate pleasantry of Addison was successfully employed in the support of justice and of freedom, at the moment of delusion and danger. II. 2. Yet while the heart of the patriot glows with rapture at the survey of that constitution, which allows to every subject the noblest of all privileges: the most painful sensations will often be excited by a view of the licentiousness interwoven with so fair a system. Instead of the manly ardour of truth and freedom, satire is too often taught to breathe the furious and baneful spirit of falsehood or sedition. Even the dignity of that supreme authority, which is rendered sacred no less by the peculiar genius of our constitution than by every principle of general policy, has sometimes been exposed to attacks of ridicule equally mean in their form, and pernicious in their tendency. And by the extensive diffusion of political calumny, a spirit of animosity has occasionally been excited, so powerful as to interrupt the national harmony, and imbitter the intercourse of domestic life. Moved, perhaps, by these considerations, Swift, who had himself been employed on some occasions as the support of a party, and acting on others from a more enlarged principle, had been hailed as the vindicator of a devoted people, attempted, in a relation of fictitious adventures, to stop, by the powers of ridicule, that torrent of faction which was at once so impetuous and destructive. Happy would it have been, if the execution had corresponded with the design. But while he exposes the arts and constitution of his country to contempt, and represents its whole history as a series of actions disgraceful to human nature, the only political tendency of the most singular production of genius, is to relax the vigour of patriotism, and sink the spirits into despondence and inactivity."

The whole essay is a beautiful specimen of discussion, and the train of thought and argument denotes a mind endowed with the most acute faculties of discrimination, not only keen in the perception of niceties and distinctions, but enlarged in its views, and comprehensive in its powers. Such a mind, the investigation, &c. of our indefinite libel-law requires; and such a mind was displayed in the clear judgment which only last week defeated the ridiculous prosecution of the *Gentleman's Magazine* for a critical libel—the first with which it has been charged during the hundred years of its existence!

The Amulet: a Christian and Literary Remembrancer. Edited by Mr. S. C. Hall. London, 1831. Westley and Davis.

THIS is certainly the best volume to which the *Amulet* has yet given name. A short and modest preface, containing neither puffery of its own merits, nor insinuations against its rivals, ushers in a table of very varied contents. The information of the traveller and the imagination of the inventor have blended knowledge and amusement. There is an admirable article called the "Seven Churches," by Charles Macfarlane; an Arab Legend, splendidly told (Croly's, we think); "Home, Country, all the World," an elegantly written essay by James Montgomery; "Eastern Story-tellers," a leaf out of the Arabian Nights, by Mr. Carne; the "History of a Trifler," told in a most lively manner, by Miss Jewsbury; a "Hawking Party in Hindostan," a picturesque and dramatic sketch, by Miss Roberts; the "Roman Merchant," a powerfully worked-up narrative, by Mr. Banim; the "Dispensation," the very

best Irish story of Mrs. S. C. Hall's this year; two of L. E. L.'s poems, one especially beautiful; a spirited "Cameronian Ballad," by Hogg; a very sweet poem by Mr. Atkinson; two of Mr. Hollings' best; and several other compositions which, if inferior to those we have already named, are not without something of grace or merit. We quote from the "Seven Churches" the account of Pergamus.

"The approach to this ancient and decayed city was as impressive as it well might be. After crossing the Caicus, I saw, looking over three vast tumuli or sepulchral barrows, similar to those of the plains of Troy, the Turkish city of Pergamos, with its tall minarets and taller cypresses, situated on the lower acclivities and at the foot of the Acropolis, whose bold grey brow was crowned by the rugged walls of a barbarous castle, the usurper of the site of a magnificent Greek temple. But on coming still nearer, the lofty, massy walls of early Christian churches offered themselves to my eye, frowning in their ruin; and after having made my ingress into the once splendid city of Pergamus, the capital of a flourishing kingdom, through a street flanked by hovels and occupied in the midst by a pool of mud, I rode under the stupendous walls of these degraded edifices with silent awe. I would not take upon myself to determine that either of these ruins belonged to the primitive Christian temple; indeed, from their magnificent dimensions, the style and durability of the architecture, and other circumstances, I should rather conclude that they arose several centuries after the immediate ministry of the apostles, and when Christianity was not a humble and oppressed creed, but the adopted religion of a vast empire. Yet I felt a pleasure in lending my faith to a poor Greek, who assured me that one of the ruins, an immense hall, with long windows, a niche at each end, and an entrance or door of gigantic dimensions, occupied the very spot where had stood the first church of Christ in Pergamus; nor is it at all improbable, but rather in accordance to the general habits of men, that the Greek Christians should have revered and preserved the locality, until enabled to erect a splendid temple on what had been originally a humble tabernacle. Though these ecclesiastical buildings, which are principally in the Roman style, and formed of admirably strong brick-work, mixed sparingly with stone and *traversi* of marble, cannot pretend to any great beauty as works of art, but rather denote periods of the lower empire, when taste had disappeared, 'and the science of the architect had sunk to the mere craft of the bricklayer;' still they do not cease to be impressive, picturesque objects, and present themselves to the eye whichever way you turn. In looking from the plain towards the Acropolis they stand boldly out in the picture, and offer greater breadth and mass of ruin than any thing on that hill; and on gazing from the summit of the Acropolis downward, they shew like vast fortresses amidst barracks of wood—like 'skeletons of Titanic forms,' raising their heads reproachfully, but proudly, above the pigmy wooden houses of the present inhabitants of the dishonoured city of Pergamus. But if in this it differ from the other cities of the seven churches, if the Christian remains and the Christian style predominate here, as they do not elsewhere, and the objects first to meet and last to retain the melancholy regard of the traveller are these essentially connected with his religion, still he must mourn over the desecration of these edifices dedicated to the faith of Jesus—must mourn over the present darkness of Pergamus, once 'so rich in

gospel light'—so crowded with temples to echo that gospel's words. One of the churches serves as a workshop for coarse pottery, another I saw converted into a cow-stall; 'and the poor Greeks, with these stately structures of their ancestors before their eyes, some of which could be easily repaired and returned to their original and holy uses, are confined to a little church under the Acropolis, low, narrow, dark, and itself ruinous.' This mean edifice is the only one which now echoes the name of Christ; and, alas! the hymn of praise is subdued and whispered, for fear of offending the fanatic Turks; and moral intelligence and spiritual illumination are not to be looked for in the long-oppressed and barbarised Greek priests. It is probable that the primitive church was not materially, or in brick or stone, extent or elevation, much superior to this lowly temple; but how immeasurably different the light that beamed—the spirit that animated it! It was not without deep interest that I saw in this church of Pergamos some copies of the New Testament in Romaic, edited by Englishmen, and printed at London. The sight suggested a compression of chronological space, and of historical facts, almost astounding. When the gospel was proclaimed in these fair regions, what was Britain? Whence, and through the medium of what language, had we, with all Europe, derived our knowledge of the words and the acts of the Son of God and his disciples? From the Greek, which was not merely to instruct 's in all that was sublime and beautiful in poetry, and the other branches of human literature, but to lead us to the knowledge of our eternal salvation, and to form the broad basis of our religious instruction and belief. Since the dissemination of the Scriptures in that all but perfect language, the degraded Greeks had lost the idiom of their ancestors; and the schools of remote Britain had a key to their ancient treasures which themselves did not possess. About a century since, a Greek priest of Gallipolis, on the Propontis, had rendered the Scriptures from the ancient Hellenic, which they did not understand, into the Romaic, or modified dialect spoken by the people in his day. An inconsiderable edition was printed and circulated, but poverty and oppression precluded the adequate supply; and, in the process of years, the dialect had so much changed, that, in many instances, the Romaic of the Gallipolitan papas was no longer intelligible. Then it was, that England, who, in the centuries that had intervened, had kept on in a steady course of improvement, found herself in a condition to assist her ancient instructress, and to come forward and pay in part a long-standing debt of gratitude. It was under the care of Englishmen that the New Testament was again revised, compared with the ancient, and corrected and adapted in its modern idiom; and the presses of England—the press, a miraculous engine of good or evil unknown to the Greeks of old, England a barbarous island then scarcely noted on the world's horizon,—had supplied thousands of copies of the Book of Life to those regions from which she had originally derived the inestimable treasure. This is indeed a glorious restitution, and one, I hope, that will be persevered in, until we have effectually contributed to raise the civilisation, morality, and religion of those to whose predecessors we owe so much."

We must find room for a very pretty song of Miss Jewsbury's.

"She's on my heart, she's in my thoughts,
At midnight, morn, and noon;
December's snow beholds her there,
And there the rose of June,

I never breathe her lovely name
When wine and mirth go round,
But oh, the gentle moonlight air
Knows well the silver sound!
I care not if a thousand hear
When other maids I praise;
I would not have my brother by,
When upon her I gaze.
The dew were from the lily gone,
The gold had lost its shine,
If any but my love herself
Could hear me call her mine!"

There is an oriental and imaginative luxury about the following passage, that puts us in mind of what the prophet said of Damascus—"It is too delicious."

"In Damascus some of the best reciters are to be found; and the peculiar luxury and situation of its coffee-houses aid very much the effect of their narrations."

Much care and much good taste have been bestowed on these pages, nor have they been bestowed in vain. We can most cordially praise the *Amulet*.

The Jew of Arragon; or, the Hebrew Queen: a Tragedy in Five Acts. By Thomas Wade, author of "Duke Andrea," &c. 8vo. pp. 82. London, 1830. Smith, Elder, and Co.

So, in spite of the bit of mystification (as our French neighbours call it) which we noticed from the *Times*'s last week, the *Jew of Arragon* is Mr. Wade's after all. To be obliged to read such a thing, after being condemned to see it, is hard enough; but critics and reviewers were made to bear—and they do bear worse persecutions than ever were inflicted upon Jews of Arragon or elsewhere. It is some consolation that whatever names and other human names were used, they were generally food for the imagination, and derived from the most interesting and interesting actions. So, the names of the characters go through the play, and the names of the characters advertising our readers who are not acquainted with Mr. Wade's play, George Colman the younger, deputy licenser of plays, will not; but we think both very entertaining.

The preface apologises for calling the King of Arragon Alphonso; but the reason is sufficient—*Peter*, the real name, "not being sufficiently tragical," in the estimation of Thomas Wade. There is much in a name, whatever poets may say; and if Shakespeare's name had been *Tom*, he never could have drawn *Peter*, in "Romeo and Juliet." In another page, the author tells us that *Xavier* (talking of names, an exceedingly queer one for a Jew instead of a Jesuit!) is a creation of his own, and, consequently, that in the main design of the tragedy "he stands not in the least in the shadow of his foreign predecessor;" but what this means we cannot guess. The annexed is more intelligible.

"To confirm the opinion of two or three sensible people, that there is at least one superfluous office in the state, those 'words and sentences' which were struck by the deputy play-licenser from the manuscript copy of the tragedy submitted to him for his approval, I have caused to be printed in italics: the liberal reader will smile in perusing them; and deign, perhaps, to anticipate with some pleasure the speedy abolition of a childish tribunal. Of course, the revered name of the Deity, wherever it occurs, was erased by the great religious and moral pen of the licenser, and altogether abjured in stage-utterance: still, I have not

* We ought to have remembered, that the drama which speaks so forcibly of the precocious talent of Miss F. Kemble relates to Francis the First and his times in France.—Ed. L. G.

hesitated to retain it in many places; having yet to learn that it is not the part of the dramatist to make his characters speak as men speak; having yet to feel, that piety, or impiety, dwells rather in words than thoughts—on the lips, than in the mind."

And, in good sooth, the exhibition of this curious order in the licensing system is the most ludicrous of absurdities. It is almost too ridiculous to be credited; but here are the italics shewing the words, phrases, and lines, struck out by the venerable author of "Broad Grins;" and, what is more, we have taken the trouble to note a few passages which the same morality and sagacity have allowed to stand. Perhaps the Licenser only read the alternate pages; how else can we account for his commissions and omissions, for his sharp-sightedness and blindness?

OUT.

By command of George Colman the younger, Deputy-Licenser, &c. &c.

"Before the Red Sea-miracle (p. 3).

And have been, since we wept at Babylon;
And shall be, till we gather us again
In the divine Jerusalem foretold.
O, Judah! thou art gone out from thyself;
My country! thou'rt the shadow of a name (p. 7).

Were ye gather'd,
O, were ye gather'd, ye were terrible
Within the world—and body, and set up
'Mid the prime potentates—the curse of Heaven
That hangs so dark and heavily upon ye
Cannot endure for ever; and ye shall be,
Ye shall be a proud nation once again—
And heed your prophets, princes, and your rulers,
As in the time of old—it is decreed! (ib.)

But I, the rightful heir of your great kings,
Must live a stranger to your renovation (ib.)
But our decrees, like those of that great power
We represent on earth, never know change (p. 15).

And send thy royal spirit,
Ill-placed on earth, to seek its throne in heaven (p. 16).
Her honour excellent as her's for whom
The patriarch served a two-fold apprenticeship (p. 17).

O, filthy beast! as if my Rachel were
A courtesan and lovel mixt for the sport!
Why, would he force her—as the Roman did,
I'd kill her by the shambles, rather than—(ib.)

That were a glory of like eminence
With the noble deed of Judith. Bless me, Heaven!
And make my hopes, in their accomplishment,
Thine own and Israel's glory: if I fail—
Take back the breath of life; thy pleasure gave me (p. 24).

Damn'd by a vulgar Jewess (p. 30).
Thou'rt Israel's saviour, Xavier! (p. 32).
Praise be to God! deep-hearted praise to God! (p. 33).
Heaven save you! (ib.)

And Israel sing
Her Alleluia, as she sang of yore (ib.)
God grant it prove not Israel's overthrow! (p. 38).
O, he is guarded by the omnipotent God! (p. 40).

Traitress! that art a curse to Christendom,
Kneel to thy fate (ib.)
Heaven keep your grace! (p. 43).

Sir, I go;
And leave thee to that lowest slavery
Which the earth knows, the slavery of kings
To their mechanic subjects (p. 46).
Thou damned Jew! thou royal, righteous dog! (p. 48).

Ay! and if any virtue live in prayer,
If any blessing in a righteous cause: (p. 52).
And prayer unto the King of Israel! (p. 56).

Cortes, 'tis fit the people be indulg'd:
Purchas'd, they'd use our chambers and our gardens,
To eat, and drink, and take their pleasures in?
Be sure they shall: 'indulgence' is the word:
Trench'd they upon aristocratic power,
What would my lords say then?—then would it be—
'Fie herd, the 'common nothing,' 'ident brutes!'
Now 'tis 'the people'—and, 'their majesty!' (p. 58.)
Else is no joy left in eternity (p. 60).

The drear'st cave
That foreshows hell's feign'd gloom upon the earth (p. 61).
Heaven guard thee, lady! (p. 70).

Thou fair
And exquisite image of the living God!" (p. 83).

Observe, all the foregoing passages and words in italics are expunged by the Licenser, who has allowed the following to remain:—

IN.

"Now, by heaven's God! although a Christian (p. 4).
God bless her (p. 6).

By Judah's God! my liege, it makes me mad (p. 13).

The procession
Of jubilee and marriage—bless the bride!—
Moves to the temple of the Dam of Christ! (p. 19).
The God of Judah in two kindred hearts
Hath lit one revolution (p. 23).

Retribution,
Unto God's chosen through wide Arragon (p. 29).
I thank thee, Israel's God, that thou hadst made me (p. 33).

Would to Heaven's God!
My feet were on the upstart Xavier's neck;
His daughter in my arms (p. 35).
They shall not, by the cross! (ib.)

Now, by all the saints! (ib.)
Jewess! repent thy sins, and pray to Christ,
And make thy choosing between heaven and hell (p. 46).
God bless thee! (p. 63).

Unlock my tears, dear God! (p. 72).
For fear, insult the God of Israel! (p. 74).
O, mercy! God of Israel!—mercy! mercy! (p. 78).
God bless thee! and sweet peace attend thy soul!" (p. 81).

It is hardly possible to conceive any thing more contemptible than this tom-foolery on the part of the Licenser: but the piece itself is almost as puerile. Its perusal in the study confirms the opinion we formed of it on the stage. To be sure, we did not hear the dedication to the Jews—a paltry device to catch the children of Israel; and which did take them in one night—but it was only to see themselves made so worthless, that no favour could be shewn by Jew or Christian. Cumberland's Sheva had an effect; Wade's Xavier, Rachel, and Reuben, could have none, except to enforce the moral, that they richly merited all their misfortunes. Next the poetry: poetry!!

"Alphonso's grown a common reveler—
Crows 'mid his women like a Musselman."

We were not aware of this ornithological propensity in Mahometanism. Then for the dignity of the hen—we beg pardon, the heroine—

"He loved a Jewess better than a Jew;
But she, sir, with her pretty Hebrew nails,
Writ her religion on his Christian skin
In red-line characters; and since that hap,
The Devil and a Jew are one to him."

In the next page, 5, we find the pillory extant in Saragossa at the remote date of Peter of Castile—a fact we recommend to the Society of Antiquaries, which may also please to inform us whether potatoes or gingerbread nuts were most employed by the populace in pelting the criminals. We cannot class the following with any figure of speech or poetical trope with which we are acquainted:—

"That I am happy, sir,
Even to the top of joy; and truth is, swim
In the deep tide of my felicity
So giddily, 'tis marvel I not drown."

The top of joy being in the deep tide, reminds us of a drowned steeple; and we cannot wonder at a princess swimming in such a place, being likely to drown.* But Isabel is extremely ill used throughout; for Xavier, the Jew, is quite rude to her on his introduction at court:—

"Enter Xavier.
Alphonso, Thou'rt welcome, Xavier.
Xavier, I'm not quite sure of that. I thank your highness.

Alph. Jew! thou forget'st thy wonted courtesy,
Paying no homage to a lady by;
And she the bride elect of Arragon:
Hath she thy tribute?

Xav. I do think her fair;
But since my youth, I've found fair oft is foul,
Which knowledge moderates doting.
Isabella, O, sir Jew,
Must I then be the flatterer? Trust me, Xavier,

* The notions of drowning are odd throughout: for Rachel mentions a case far beyond the powers of the Royal Humane Society, when she tells us, p. 25, "My head drowns in my heart."

Thou look'st a very King of Israel;
And I could deem that, twenty years ago,
Thou had'st a Christian power o'er Christian maids,
Infecting them with Jewish honesty.
Xav. They've Christians plenty, dame, to serve the
turn

You drive at. Lucky! Strange beasts couple not.
Manrique. But now thou art a very scurvy fellow;
Nothing but Jew—Jew all, from top to toe—
That gazing on the beauty of a princess,
Kneel'st not in worship; thou art stiff-neck'd Jew;
And I could wish we were well rid of thee:
Thy presence does infect a circumciser."

What abominable trash—all left in by Mr. Colman! All that *Manrique*, who delivers the last speech, says, is, like much of the play, a miserable parody upon the Jew of Venice. The language put into the mouth of even the sweet and innocent heroine ought to have awakened as much indignation as any obnoxious newspaper expression we have heard. For example:

"*Rachel.* Fare thee well, my sire:
This edict shall be void, and Israel free;
Or I am not the daughter of my lord.
But a base farm-house trull,* for nothing meet
Save the day's drudgery."

The poverty and nonsense of the style may be farther guessed from the annexed particulars:—

"We shall be *stay'd* of our great fortunes now.
Xav. Silence! base, bearded merchant!"

Xavier, the Jew, using *bearded* as a term of reproach! †

"I will come through, though dagger-struck."
"Thine eyes are treach'rous besacons, towards which
steering,!"—

This line is as good as a line and a half of the best imperial heroic measure; nor is the next to be rejected for want of length.

"Which falling in one scale, make love-griefs light i' the
other."

But we must give a burst:—

"*Xavier.* Stand I till I bid thee strike—be not too hot.
Out of my gates, ye Christian woman-slayers!
On whose ferocious hearts, nor streaming locks,
Lustuous as sun-set, nor heaven-kindred eyes,
Nor dew'd rose-cheeks, nor beauty-breathing lips,
Love-rounded bosom, nor the delicate hands
Of ladies, clasp'd and trickling piteously,
Washed by the tears of anguish; ye whose hearts,
All these—that well might move the brutes o' the wild—
Move not at all—out, out of *Xavier's* gates!
Or shall his garden-flowers drip with your blood?"

A bit of farce, to contrast with this bit of fine. The Jews have sent an express to hasten the troops up; and our worthy friend *Reuben* says—

"If but that messenger keep up the gallop,
Our sun to-morrow may rise very cloudless:
Let him ride so; and after, break his neck;
He cannot live to do a better thing."

To which the equally worthy *Xavier* responds, in the most Christian and clerk-like fashion—
"Amen! good *Reuben*."

The Princess *Isabel* having won the affections of the Jewish girl left to watch her, "by delicate attentions," is helped to jump into a boat and be off,—when again our most ludicrous friend *Reuben* rushes in, "bleeding and faint," and manfully assures *Xavier*—

"I bleed, sir; and had fought unto the death,
Could it have aught avail'd—but she escaped:
I slew the trait'rous wench that aided her!"

This bathos raised a hearty laugh: but it was not more comic than the few further brief specimens with which we shall conclude.

"Alphonso 'waits thee, *Rachel*:
This is his heart's day of half shower, half sun;
And thou its rainbow, that with glorious beauty
Gives covenant of joy—sky-tinted hope,
That lives in the sun of things."

"*Manrique.*—Your courser, my great liege! strikes up
the ground,

* See Johnson's Dictionary.
† *Isabel*, the princess, does the same in an elegant speech the addresses to *Xavier*:—

"I'd rather be attended by a bear,
Or than this hideous ape that screams i' the wild,
Than this thy vulgar, bearded infidel!"

Till the air startles with an upward shower
Of grass and dust: he stands magnificent!
And with a tossing head, champing the bit,
And his mane shaking like a cloud i' the wind,
Reproaches royally his royal lord—
Delaying high enthronement on his back:
The dogs make music; and the huntsman's soul
Frets in his eye: Will 't please my liege to mount?
King. You come in time, *Manrique.* All to horse!
Sweet *Rachel*, we will hear thy dream to-night,
And thou shalt laugh then at thy now affright."

But we have done, and gladly read the last stage direction after the leading personages are slain: it runs thus—"He lies the body upon the altar-steps;" to which we say with *Xavier*, "Amen." there let it lie, never to rise again. Seeing the production is altogether so wretched, we need not comment on new-coined words and other lesser follies; but as the writer in his preface alludes to critics who have condemned, and others who have praised him, we shall simply say, that these are nothing to us. We heed not enemies nor parasites: our own judgment was independent, and we have demonstrated its truth.

The Rectory of Valehead. By the Rev. R. W. Evans. 12mo. pp. 287. London, 1830. Smith, Elder, and Co.

UNIVERSALLY and cordially do we recommend this delightful volume. Impressed with the genuine spirit of Christianity; a diary, as it were, of the feelings, hopes, and sorrows, of a clergyman's family,—it comes home to all, either in sympathy or example. It is a beautiful picture of a religious household, influencing to excellence all within its sphere. We believe no young person could read this work, and not be the better for its pious and touching lessons. It is a page taken from the book of life, and eloquent with all the instruction of an excellent pattern: it is a commentary on the affectionate warning—"Remember thy Creator in the days of thy youth." We like the following passage much:—

"It is a common remark, that the advantages enjoyed by a numerous family are pretty nearly compensated by the greater number of misfortunes to which, of course, they are liable. But it has seldom been observed, how much more patiently such misfortunes are borne; the superior advantages of community in affliction are fully equal to those experienced in the participation of enjoyment. More topics of consolation are presented, in proportion to the number: there is a generous rivalry in administering to the general consolation, which receives its reward in a more prompt and complete mastery over individual feeling: and, frequently, one rises above the rest, with all the authority of a prophet, to whose guidance all submit, and in that submission find employment for that redundant affection, the immediate object of which is now no more."

We think there is much truth in the ensuing remarks:—

"He did not encourage us in taking the care of animals as our amusement, while he promoted our love of fostering plants to the utmost of his power. I perceive the wisdom of his distinction. In the former case, the passions of the creature provoke in return the worst passions of its master; and its occasional resistance to his whim and caprice rouses into action the elementary feelings of tyranny. Besides, its condition in the creation comes too near our own to suggest much beyond the usual routine of thought in a child. But in plants there are no passions to combat, there is no victory to be gained, which, in proportion to its completeness, inflicts on the conqueror himself the deeper moral wound. They obey

implicitly, and shew a kind of passive gratitude by faithfully exhibiting in their growth and appearance the smallest exertion of his hands. At the same time, the child soon finds that, however fond he may be of indulging a cruel caprice or curiosity, he must forego it here. They can yield him no homage of cries and groans by which to feed his feeling of power. But the beauty, tenderness, and delicacy of forms by which they return his labours, win his heart, and call forth its best affections. At the same time, every thing concerning them leads him on to the contemplation of an agent besides himself. Between the placing of the root in the ground, and the putting forth of the blossom, he perceives that a hand must be working when his own is idle, and without whose working his own would have been uselessly employed in the very first instance. Day after day, he comes to see more and more the subserviency of his operations to those of this hand, and that continual working of Providence, which from its familiarity escapes our view in looking on ourselves, presents itself here almost palpable at every turn, and God is walking in the garden as in Paradise of old. Such was the process, as far as I can now conceive, of my thoughts; in addition to this, I reaped an inferior, though important, advantage. I was led to note times and seasons, and learn the value of an opportunity. But our fondness for the garden, and familiarity with its objects and operations, laid a fund for moral and religious illustration, whence my father dealt out to us with no sparing hand; he followed, indeed, the example of a greater Teacher still, who hath bidden us look at the lilies of the field, who figured himself under the vine, and cursed the unbelieving Jerusalem in the barren fig-tree. Such illustrations come at once to the heart; they refer us to scenes of pure and innocent delight; and we feel a lurking flattery, despite of a melancholy feeling of the frailty of tenure which such types exhibit, at the being compared to flowers, glad that we can in any degree resemble and call to mind these beautiful and innocent tribes of creation. From the laying of the seed in the ground, till it re-appear in the pod an hundred, or perhaps ten thousand fold, and come again into our hands to re-commit to earth, what a series of analogies for moral illustration! Birth, infancy, youth, manhood, old age, and death, are thrust upon our reflection by a single plant, in one short summer."

There are some slight faults of style—mean phraseology is not simplicity: but, as a whole, we have not, for some time, seen a work we could so deservedly praise, or so conscientiously recommend. It is prettily and neatly got up—which, for the benefit of our untechnical readers, means, that it is prettily and neatly bound, printed, and embellished.

An Address to the Governors and Directors of the Public Charity Schools, pointing out some Defects, and suggesting Remedies. By Montagu Burgoyne, Esq. 8vo. pp. 41. London, 1829. Rivington.—Second edition, 1830.

WE would call attention to this important and benevolent pamphlet, at a period when distress prevails so generally, and when every practical suggestion which has a chance of diminishing the misery under which the country, and especially the lower orders groan, ought to arrest the most earnest consideration. It is true that the public mind is almost as much distracted by proposed remedies, as by the evils which afflict it; but this only renders it the

more essential to sift every scheme with patience, and to weigh well what may in any degree alleviate the sufferings of the people. Mr. Burgoyne combines two great objects—education and relief; and in both he seems to us to stand upon sure grounds. We do not imagine that the adoption of his plan would remove all the burdens that affect our social system; but we do conscientiously believe that it would do immense good, and go a great way in reconciling the multitude to those remaining troubles which it could not redress. Besides, it has been tried, and it has succeeded; and what has succeeded in a local district would succeed, if spread, all over the country. There is no gainsaying the conclusion.

Education unconnected with habits of labour and industry is a curse, and not a blessing; and it is by losing sight of this grand principle, that many well-meant undertakings to promote the instruction of the poor have been so fatal to the happiness of those whose condition they were intended to improve.

“The public,” says our author, “have been much deceived by being told that education prevents crime. I have no doubt that when habits of industry are taught, and employment found, this blessed effect will ensue; but when they are neglected, I very much fear that delinquency will increase with what is vulgarly called the march of intellect. This has long been my opinion; but to ascertain the fact, I have visited almost every place, either of refuge for the distressed, or punishment for the vicious; and I submit my report to the public, that they may form their own judgment. I will begin with the boys: the case of the House of Correction, where I found that many of the boys who had been educated at the national schools in the country, and at the large charity schools: at the House of Correction, Clerkenwell, I found twenty-eight lads who had received their education in national or large charity schools, mostly in the country: in Newgate I found a considerable number who had been in the country national schools, or other large charity schools; but on consulting the school-master in Newgate, he examined his accounts, and found that of 688 males whom he had admitted to his school, within the last six years, nearly two-thirds had come from the national or other large charity schools. In the Refuge for the Destitute, that admirable charity for reclaiming youths who have gone astray, and checking juvenile delinquency by means of habits of industry and lessons of morality, I found thirty boys who had been in country national schools; most of whom were induced to come to town, in hopes of what they call bettering themselves, but being disappointed, became thieves. In St. Margaret’s Workhouse, Westminster, I saw five stout boys, from ten to fourteen, just come out of a national school. In the large places of confinement at Milbank and Brixton, and at several of the large workhouses, the result of my inquiry was the same. But there is one remark which I think it proper to make,—that among all the governors and superintendents of these places of refuge and confinement, they all agree with me, that education and instruction given to the children of the poor, without habits of labour and industry, are the contrary to a blessing, both to them and to their country. I have also received strong confirmation of my opinions from correspondents in country towns, where large national schools, without industry, are

established. With such proofs of the correctness of my opinions on this subject, I should condemn myself if I did not use my best endeavours to promote a change in the mode of education of the poor; and I can discover no better means, than first to lay before the public these proofs, and then to establish a scholastic institution in a populous part of the kingdom, where works of labour and industry will be combined with instruction afforded to the poor. The success of this attempt must depend on the opinion of the public, not on mine; though I am supported in this attempt by both the archbishops, the bishop of the diocese, where this establishment is commenced, and many of the clergy. I am aware that I have given offence to several members of the national school; this offence has arisen entirely from my being misunderstood; so far from finding fault with the management of the central school in Baldwyn’s Buildings, I consider it as a pattern for all other schools: I have long been connected with it; I have received assistance from them; and I flatter myself have been enabled to do some good in a parish where for many years I have acted as churchwarden under very peculiar circumstances. I have my great doubts, whether a system of labour and industry can be introduced in a school, professedly established for the instruction of masters as well as of scholars; but in regard to other schools I have no doubt. What I contend for is, that if these young people had received less literary attainment, and more instruction on works of labour and industry, they would have been more able to provide for themselves—more happy and content with their line of life, without aspiring to situations out of their reach.—If the fate of the male part of the children of the poor excites our compassion, what shall we say of the females, who are kept at these national schools to the age of fourteen, and then dismissed, in complete ignorance of the duties of menial servants, or any other instruction but that of fine work, and of dressing themselves to the best advantage? If a governess, a house-keeper, a lady’s maid, &c. are wanted, the candidates are many; but when a servant is wanted for the most menial offices, I submit to the mistresses of families, whether the same applications occur? Nay, I know myself a place of rendezvous, or house of calling for female servants, where a few years ago there were above 500 applications in the year, and at present there are not twenty. The question then is, what becomes of all these unhappy disappointed females, who come to town in full hopes and expectation of those advantages they expected to find from the superior education they have received? It is painful to think of them. Many of them I have found in those places of refuge and punishment I have mentioned; the result of my inquiry must I think excite the compassion of their sex, and incline them to support a system of labour and industry, calculated to save others from such a state of misery and wretchedness. The first place I visited was the Lock Hospital, where I found nine of these unhappy females come from national schools in the country with the same hopes and disappointment. In justice to that excellent charity, I cannot refrain saying, that they all appeared completely penitent, and resolved to lead a new life. At the Female Penitentiary at Pentonville, which institution equally claims our admiration, I found thirteen of these unhappy females. At that excellent establishment, the Magdalen, though I had every support and assistance from the humane,

pious, and enlightened gentleman, the Rev. Mr. Green, secretary, I had some difficulty to distinguish between the national and other charity schools; however, I ascertained for a certainty that there were four from the national school. In Newgate I found several; and among them the famous Maria Keely, who had been condemned to be hanged—was pardoned; but returning to her former malpractices, is now under sentence of transportation. I find that she was teacher in one of the national schools. In the House of Correction in Clerkenwell, I found twelve from the national schools, and seventeen from other charity schools. In the Guardian Asylum, which does so much credit to those humane and kind-hearted ladies who superintend it, I found seven who came to town from national schools in Bath, Bristol, and Somersetshire. If this number can be proved to have suffered from the present mode of education, it is melancholy to think how large a number may be supposed to have fallen victims to it. An attempt is now making to adopt a new plan with labour and industry—the promoter of it will do his duty. He solicits assistance from the public in any way they may be pleased to give it.”

To this array of truth, of facts which speak, trumpet-tongued, for themselves, what answer can be returned? Why, adopt the system which must tend to prevent so much crime and wretchedness;—make children capable of industrious provision for themselves, while you are teaching them the otherwise injurious qualities of reading and writing;—if you impart knowledge, impart with it a good direction of that which is truly called power: if not, it becomes a power to do mischief to the whole body of society, and, like the talismans in eastern tales intrusted to unskillful hands, is pre-eminently ruinous to its possessor.

Not so Mr. Burgoyne’s plan near Potton, and in Bedfordshire. Here a school of forty boys and forty girls, under the care of a master and mistress, in separate buildings, had the following rules laid down.

“That they be taught reading, writing, and arithmetic, but that half the school hours be spent in works of labour and industry; the boys to mend their own clothes and shoes, clean knives and shoes, to use the needle and hammer as well as the pen; also to be employed in out-of-door work, such as digging, gardening, hedging and ditching, and ploughing, when an opportunity offers.—That the girls be employed in needlework, washing and ironing, mending their own clothes, in the business of a dairy, and in such practices of housewifery as may fit and recommend them to good services.—That the expense of this establishment be provided for by a public subscription, but that each child do pay weekly 3d. for the instruction and advantages it may obtain in these schools. * * * That, in order to encourage regular attendance and good behaviour, small plots of land be given to those boys who shall be recommended by the master, which, on certain conditions, they shall cultivate for the benefit of their parents.”

And in this last clause consists the genuine spirit of a right system; not only yielding healthy employment to the children, but wedding their parents to the good cause by the benefits they derive from it, and by the interest it gives them in its continuance. With regard to them it is a beautiful design, and one that would add materially to their comforts and enjoyments. How delighted must a father or a mother be to see their humble board covered with wholesome food, the produce of

their children's useful toils while relaxed from the discipline of school! The same applies to housewifery taught to the girls. Much do we lament that we cannot go into the details of this admirable project. The Rev. Mr. Henry Clissold, in his philanthropic tract for promoting a Central National Institution of Home Colonies, designed to instruct and employ distressed and unoccupied poor on waste lands in spade husbandry, asserts, "that we have within the limits of our home territory, ten millions of acres of mere waste, uncultivated land, infinitely superior in quality to the land brought into spade tillage by our Flemish neighbours." Of this a paradise might be made (as far as human depravity admits); and instead of the sin and starvation we see around us on every side, the whole mass of the pauper population might be lifted upon it to civilisation, contentment, and plenty.

National Library, No. III. History of Chemistry, Vol. I. By Thomas Thomson, M.D. F.R.S.A. &c. 12mo. pp. 349. London, 1830. Colburn and Bentley.

ONE of the first triumphs of human intellect was the knowledge of the objects around, and an acquaintance with the external character, or the form, age, colour, and hardness, which exist in endless variety, and which, by furnishing specific differences, afford the true elements of natural science. The next step was an inquiry into the properties of these substances or existing things, and from them to obtain a knowledge of their constitution. Such would be the origin of chemistry, which, *germing* with the inquiring mind of man, was cultivated by the eastern nations, the Chinese, the Hindoos, and subsequently by the Arabians, to alleviate the diseases incident to humanity, shone, for a short time, under the dazzling but deceitful sun of Alchemy, grew with the progress of the arts, and was finally cultivated for its own pure self as a science, which, above all others perhaps, tends to enlarge the understanding, and to give comprehensive views of the method and simplicity of the Deity.

It was not absolutely necessary that to be the historian of so well-marked and distinct a science, the author should himself have followed a career of discovery, and be entitled to occupy no contemptible situation in that history. In the ardour for the cause of science, which has been introduced by the activity of the press, nothing is neglected to render every subject worthy of a discerning public; and to this attention are we indebted for the excellent *History of Chemistry*, which forms the third Number of the *National Library*.

"Chemistry," says Dr. Thomson, "unlike the other sciences, sprang originally from delusion and superstition, and was at its commencement exactly on a level with magic and astrology. Even after it began to be useful to man, by furnishing him with better and more powerful medicines than the ancient physicians were acquainted with, it was long before it could shake off the trammels of alchemy, which hung upon it like a nightmare, cramping and blunting all its energies, and exposing it to the scorn and contempt of the enlightened part of mankind."

This is true as far as regards the effect which alchemy had of bringing the attention of philosophers to the advantages of method in their researches, and, consequently, to establish chemistry as a science. It is further true, if we take chemistry in the limited sense, as it first occurs in Suidas, (*χημεία, chemia*), che-

mistry, the preparation of silver and gold. It is not true as applied to the general objects of that science, nor to the definition which the present age has given it.

In chapter second—and *quare*, should not chapter second have come before chapter first?—we find that "scientific chemistry took its origin from the collection and comparison of the chemical facts, made known by the practice and improvement of those branches of manufactures which can only be conducted by chemical processes;" a statement which would be at variance with the first assertion, if we did not take into consideration how the numerous sources whence a science may originate, may, from a neglect in assigning to each its due value, be brought in opposition to one another, instead of being condensed into one. We must either take the mind or the science as the basis of the definition: if we take the former, we might, perhaps, find that we are all chemists: if the latter, we should find that chemistry could only exist when, as a science, the observations of the number were reduced by method, so as to be useful to a single individual. Firm in our opinion of the absolute necessity of accurate definitions, we act upon the principle of the celebrated Moles in considering *natural historical properties* as distinct from the *chemical properties*, as much so as mineralogy and geology are from chemistry: we hence cannot see any advance made by the ancients to a knowledge of chemistry, in the discovery of gold or cinabar, nor until they modified these substances by other influences, extracted one substance from another, or dived into the secrets of their elementary constitution.

Alchemy came with a slow, but wide-spreading influence—it carried the imagination along with it—it excited cupidity, and aroused that love of the mysterious and wonderful which characterises the human mind. Its professors asserted the opinion, that the baser metals contain the same constituents as gold; contaminated, indeed, with various impurities, but capable, when these impurities were removed, or remedied, of assuming all the properties and characters of gold. They distinguished by the name of *lapis philosophorum*, or philosopher's stone, the substance possessing this wonderful power; and they usually describe it as a red powder, having a peculiar smell. There are many stories on record of men who had this stone in their possession; but the Professor only states two or three, which, he says, depend upon the most unexceptionable evidence.

"About the year 1650 an unknown Italian came to Geneva, and took lodgings at the sign of the *Green Cross*. After remaining there a day or two, he requested De Luc, the landlord, to procure him a man acquainted with Italian, to accompany him through the town, and point out those things which deserved to be examined. De Luc was acquainted with M. Gros, at that time about twenty years of age, and a student in Geneva, and knowing his proficiency in the Italian language, requested him to accompany the stranger. To this proposition he willingly acceded, and attended the Italian every where for the space of a fortnight. The stranger now began to complain of want of money, which alarmed M. Gros not a little—for at that time he was very poor—and he became apprehensive, from the tenour of the stranger's conversation, that he intended to ask the loan of money from him. But instead of this, the Italian asked him if he was acquainted with any goldsmith, whose bellows and other utensils they might be permitted to use, and who would not refuse to

supply them with the different articles requisite for a particular process which he wanted to perform. M. Gros named a M. Bureau, to whom the Italian immediately repaired. He readily furnished crucibles, pure tin, quicksilver, and the other things required by the Italian. The goldsmith left his workshop, that the Italian might be under the less restraint, leaving M. Gros, with one of his own workmen, as an attendant. The Italian put a quantity of tin into one crucible, and a quantity of quicksilver into another. The tin was melted in the fire, and the mercury heated. It was then poured into the melted tin, and at the same time a red powder enclosed in wax was projected into the amalgam. An agitation took place, and a great deal of smoke was exhaled from the crucible; but this speedily subsided, and the whole being poured out, formed six heavy ingots, having the colour of gold. The goldsmith was called in by the Italian, and requested to make a rigid examination of the smallest of these ingots. The goldsmith, not content with the touchstone and the application of aqua fortis, exposed the metal on the cupel with lead, and fused it with antimony, but it sustained no loss. He found it possessed of the ductility and specific gravity of gold; and full of admiration, he exclaimed that he had never worked before upon gold so perfectly pure. The Italian made him a present of the smallest ingot as a recompense, and then, accompanied by M. Gros, he repaired to the mint, where he received from M. Bacuet, the mint-master, a quantity of Spanish gold coin, equal in weight to the ingots which he had brought. To M. Gros he made a present of twenty pieces, on account of the attention that he had paid to him; and, after paying his bill at the inn, he added fifteen pieces more, to serve to entertain M. Gros and M. Bureau for some days, and in the mean time he ordered a supper, that he might, on his return, have the pleasure of supping with these two gentlemen. He went out, but never returned, leaving behind him the greatest regret and admiration. It is needless to add, that M. Gros and M. Bureau continued to enjoy themselves at the inn till the fifteen pieces, which the stranger had left, were exhausted."

Mangetus gives also the following relation, which he states upon the authority of an English bishop, who communicated it to him in the year 1685, and at the same time gave him about half an ounce of the gold which the alchemist had made.

"A stranger, meanly dressed, went to Mr. Boyle, and after conversing for some time about chemical processes, requested him to furnish him with antimony and some other common metallic substances, which then fortunately happened to be in Mr. Boyle's laboratory. These were put into a crucible, which was then placed in a melting-furnace. As soon as these metals were fused, the stranger shewed a powder to the attendants, which he projected into the crucible, and instantly went out, directing the servants to allow the crucible to remain in the furnace till the fire went out of its own accord, and promising at the same time to return in a few hours. But, as he never fulfilled this promise, Boyle ordered the cover to be taken off the crucible, and found that it contained a yellow-coloured metal, possessing all the properties of pure gold, and only a little lighter than the weight of the materials originally put into the crucible."

The revolution effected by the celebrated Van Helmont, shaking the Stagirical system to its foundation, substituting other principles, and giving an entirely new aspect to medicine

and the period, marked by the labours of Silvius, Willis, and Boyle, is treated of under the title of the "History of the Iatro-chemists." This system received its death-blow from the opposition of Pitcairne, and subsequently of Boerhaave. After carrying us from the opinions first supported by Paracelsus, and by the Iatro-chemists, which brings us to the commencement of the eighteenth century, the professor makes a retrograde step, and devotes a chapter to the consideration of the labours of that extraordinary man and great chemist, George Agricola. This was the period when metallurgy received its greatest impulse, and a new light was thrown upon the scarcely existing science of mineralogy and geology.

The attempts to establish a theory in chemistry, which Dr. Thomson traces as far back as the time of Lord Bacon, but assigns the credit of having been the first to construct a theory with propriety to the German Becher—occupies the next part of the work, which is certainly replete with interest;—a remark equally applicable to the unfinished chapters on the foundation and progress of scientific chemistry in Great Britain.

The labours of Dr. Cullen and Dr. Black are treated of in a masterly manner. Of the latter he relates a curious anecdote.

"There is an anecdote of Black which I was told by the late Mr. Benjamin Bell, of Edinburgh, author of a well-known system of surgery, and he assured me that he had it from the late Sir George Clarke, of Pennicuik, who was a witness of the circumstance related. Soon after the appearance of Mr. Cavendish's paper on hydrogen gas, in which he made an approximation to the specific gravity of that body, Dr. Black and I were one day at a dinner-table, and Dr. Black invited a party of us to his laboratory, to see an experiment that he had just made, which was told us by Dr. Hutton, of Edinburgh, and Sir George Clarke of Pennicuik, who were present. When the experiment was made, we took them into a room. He had the allentois of a calf filled with hydrogen gas, and upon setting it at liberty, it immediately ascended, and adhered to the ceiling. The phenomenon was easily accounted for: it was taken for granted that a small black thread had been attached to the allentois, that this thread passed through the ceiling, and that some one in the apartment above, by pulling the thread, elevated it to the ceiling, and kept it in this position. This explanation was so probable, that it was acceded to by the whole company; though, like many other plausible theories, it turned out wholly unfounded; for when the allentois was brought down no thread whatever was found attached to it. Dr. Black explained the cause of the ascent to his admiring friends; but such was his carelessness of his own reputation, and of the information of the public, that he never gave the least account of this curious experiment even to his class; and more than twelve years elapsed before this obvious property of hydrogen gas was applied to the elevation of air-balloons, by M. Charles, in Paris."

Another anecdote, and we have finished. It is of the celebrated Cavendish.

"He was shy and bashful to a degree bordering on disease; he could not bear to have any person introduced to him, or to be pointed out in any way as a remarkable man. One Sunday evening he was standing at Sir Joseph Banks's in a crowded room, conversing with Mr. Hatchett, when Dr. Ingenhousz, who had a good deal of pomposity of manner, came up with an Austrian gentleman in his hand, and

introduced him formally to Mr. Cavendish. He mentioned the titles and qualifications of his friend at great length, and said that he had been peculiarly anxious to be introduced to a philosopher so profound and so universally known and celebrated as Mr. Cavendish. As soon as Dr. Ingenhousz had finished, the Austrian gentleman began, and assured Mr. Cavendish that his principal reason for coming to London was to see and converse with one of the greatest ornaments of the age, and one of the most illustrious philosophers that ever existed. To all these high-flown speeches Mr. Cavendish answered not a word, but stood with his eyes cast down, quite abashed, and confounded. At last, spying an opening in the crowd, he darted through it with all the speed of which he was master; nor did he stop till he reached his carriage, which drove him directly home."

We are inclined to think that the most difficult and perhaps interesting part of the history of chemistry will present itself in the continuation of this excellent work; we allude particularly to the comparison of the modern progress effected by the continental philosophers and the British, more especially the introduction of the atomic philosophy, which itself is so much indebted to the learned professor for the development which it has assumed. Compiled with judgment, and arranged with clearness and precision, this work derives a further interest from the enthusiasm with which the author has treated his subject; while its popular style will ensure it a very extensive perusal.

Life and Adventures of Giovanni Finati.

London, 1830. Murray.

OF this very curious publication we must defer our review till next week, owing to the lateness of the hour at which it reached us; but this we regret the less, as we believe we have the only copy which has been completed, and the volumes will hardly be before the world till we also appear in another *Literary Gazette*. Finati's was a life of strange and memorable adventure in Asia and Africa: Othello himself had not more imminent 'scapes. His account of the Wahabee war, of which he was a witness, is very interesting; but we can only select two or three characteristic anecdotes, which will afford a slight idea of this various and extraordinary production.

Egyptian Thieves.—While in the service of the Pasha of Egypt, he tells us, "Whilst moored at Minieh, one night, preparatory to my going to rest, I had retired to some distance from my companions, on the shore, and was there in no favourable posture for defence: it was dark, but I thought that I could distinguish something moving on the ground near me, which I supposed to be a dog; but a stone which I threw soon discovered my error, for a man started up, and seemed to slink away to a distance, so that I looked no more after him; but, within a very few seconds, I felt him leap suddenly on me from behind, and lay violent hold both of my wrists and of my throat, and so drag me along backwards with him into a pit close at hand, which is filled by the Nile at some seasons, but was then dry. He was a powerful man; and I had no arms whatever upon me for defending myself; so that, keeping me still throttled with one hand, and kneeling on me, he proceeded to rifle me with the other, in search of money, or whatever might be worth his taking; but finding nothing, he gave me at last a stab in the right shoulder, with a little crooked knife which he wore, and as he loosed me, struck several blows with a stick to pre-

vent my following. I hastened back to the boat, and there, shewing my wound, told my comrades what had just happened; upon which all immediately armed themselves, and hastened to the spot; but, though so little time had been lost, and they searched for hours together in all directions, no signs of the culprit were discoverable: I had, however, the consolation of knowing that he was without booty, and that the cut which he had given me, though it bled much in the first moments, was of little consequence. An adventure of this nature had nothing in it that was uncommon at that time,—the Egyptian peasantry were become quite a nation of thieves, and had carried their art to a high degree of skill and perfection; in fact, the confusion of the times, and the constant struggles between the Pasha's army and the Mamelukes had so taken away from them all opportunity for industry or honest gains, as well as all security for property, and had so laid waste the villages and the whole territory, that a better course of life could hardly be expected from them; robberies, therefore, and violences, and even murders, became matters of daily occurrence. We were destined, a little lower down, to witness an act of still greater audacity, and which brought with it far more fatal effects. We had put to shore near Benysoouef, and after having dined together at noon in one of the great groves of palm-trees, continued sitting there all the afternoon; and to pass the time, were amusing ourselves with games of cards and dice. The stakes were trifling at first, but rose as we proceeded; and from playing, at the outset, for paras, we advanced at last to gold; the interest, of course, grew deeper in proportion, and before night-fall some had been winners of considerable sums. The losers were now in no temper to leave off; and so, when it grew dark, lanterns were lighted, and hung from the trees, that the game might be continued. This drew several Arab thieves about us, who crept on, little by little, close to our circle, unperceived, for we of ourselves constituted a little crowd, being from thirty to forty soldiers, and were all so engrossed by our play, that we never noticed the strangers, but took for granted that all who were standing or sitting round, were our own attendants or the boat's crew; and the light, indeed, which our lanterns gave, was hardly sufficient to have undeceived us. Whilst each was sitting with his little heap of money before him, intent upon the cards, which were dealing round at the moment, some of these roguish interlopers suddenly knocked the lights out, and others at the same instant discharging handfuls of dust into our eyes, snatched up as much of the money as they could lay hold of, and made off with it. In the first moment of surprise, none of us knew what had happened, and nothing remained to be seen but our own party. Without entering upon any explanation, or giving time for any, there began a general scuffle, every one in the number supposing himself robbed and insulted by his comrades. All had instant recourse to their arms, which were unfortunately at hand, some stabbing with their dirks, and some cutting with their sabres; and the confusion and bloodshed proceeded so far, that they did not cease till nine of our party lay dead or dying on the ground, and several of the remainder grievously wounded; so that I considered myself fortunate in escaping with only a slight sabre-cut upon the arm. We learned afterwards, from some of the by-standers, when our spirits were calmed and more brought to reason, what it

was that had really taken place, and that they had in vain tried to stop our hands in time, and to pacify our misdirected fury at the beginning of the fray. We were filled with shame and remorse; but there was no help for what had happened, so we mourned over our companions, and got them buried. Thus diminished in our numbers, we quitted Benysouef with horror, and paused for a while the next day opposite the pyramids of Dagshoor. One day more brought us to Old Cairo, from whence, some mounted and some on foot, we made our way to the city."

Soon after this, the massacre of the Mamelukes took place, of which the account is most vivid and appalling. Of those who escaped the slaughter, the after description is a remarkable picture of wild and warlike life.

"While some of the Mamelukes were encamped about Minieh, a thief set his mind upon carrying off the horse and wearing apparel of one of their beys, and with this intention contrived, in the dead of the night, to creep, unperceived, within the tent, where, as it was winter-time, embers were burning, and shewed the rich clothes of the bey lying close at hand. The thief, as he squatted down by the fire, drew them softly to him, and put them all on; and then, after filling a pipe, and lighting it, went deliberately to the tent door, and, tapping a groom, who was sleeping near, with the pipe end, made a sign to him for the horse, which stood piquetted in front. It was brought—he mounted—and rode off. On the morrow, when the clothes of the bey could no where be found, none could form a conjecture as to what had become of them, until the groom, on being questioned, maintained to his fellow-servants that their master was not yet returned from his ride, and told them how he had suddenly called for his horse in the night, which at last seemed to give some clue to what had really happened. Upon this, the bey, anxious to recover his horse, as well as curious to ascertain the particulars, ordered it to be published abroad, that, if the person who had robbed him would, within two days, bring back what he had taken, he should not only be freely pardoned, but should receive also the full value of the animal and of the suit of clothes. Relying on the good faith of this promise, and possibly, too, not a little vain of his exploit, the Arab presented himself, and brought his booty, and the bey also, on his part, punctually kept his word; but since, besides the loss, there was something in the transaction that placed the bey in rather a ludicrous light, it went hard with him to let the rogue depart so freely, and he seemed to be considering what he should do; so that, to gain time, he was continually asking over and over again fresh and more circumstantial accounts of the manner in which the stratagem had been conducted: the other was too crafty not to perceive that no good might be preparing for him, and began to feel anxious to get safe out of the scrape; he shewed no impatience, however, but entered minutely into every detail, accompanying the whole with a great deal of corresponding action; at one time sitting down by the fire, and making belief as though he were slyly drawing on the different articles of dress, so as to throw the bey himself, and all who saw and heard him, into fits of laughter. When he came at last to what concerned the horse, 'It was,' he said, 'brought to me, and I leaped upon his back;' and so in effect flinging himself again into the saddle, and spurring the flanks sharply with the stirrups, he rode off with all the money that

he had received for the animal in his pocket, and had got much too far during the first moments of surprise for any of the bullets to take effect that were fired at him in his flight; and nothing further was ever heard of him or the horse. The nightly instances of pillage in our camp happened sometimes under circumstances of scarcely less impudence and hazard, though they might not present any thing quite so entertaining as this to the reader; and we were so constantly receiving fresh warnings to be upon our guard, that at last the watching for thieves became an essential and prominent part of military duty, and the numbers caught or killed were very considerable. Among so many victims of our vigilance, there was one, at least, who was innocent, and I regret to add, that he fell by my hand. It was my week of service, and I occupied, with the six soldiers who were under me, a tent that stood a little apart from most of the others; here, one morning before daylight, while the rest were sleeping, I got out of bed, and was keeping watch, when the binbashee, or sergeant, of the tent that happened to be the nearest to us, having gone softly forwards from it to a short distance (as it seems was his constant practice an hour before sunrise), was there kneeling, and silently saying his prayers, a custom so little general, and especially at that hour, among soldiers, that I do not recollect to have seen it observed by any other, either before or since. All that I could discern was what seemed a human form, crouching towards the ground, and occasionally moving, for there was not light enough to distinguish the precise posture, much less the identity of the person. My mind, strongly prepossessed with the idea of thieves, entertained no doubt at all that this must be one of them, and therefore reaching for my loaded gun as quietly as I could, I discharged it at the object. It took effect in a mortal part, and the poor man fell upon his face without a groan. Instantly ran forward, with my sabre in my hand, to make a trophy of his head, and so to secure my reward from our commander. But what was my astonishment and horror, when I found that, instead of a robber, I had killed my friend and fellow-soldier! Bitterly did I cry over his body, and was at first so engrossed by the remorse and sorrow which I felt for the rash act, that I never once thought of the dangers to which it would expose me."

In the Wahabee war we are told:—
 "During the same interval our army was all encamped about the village (or villages rather) of Cara Lembi, but in a state of great discomfort; for the quantity of scorpions was such, that most of the soldiers were stung by them in their tents, and such the virulence of their poison, that many died almost immediately, and some were kept so much upon the alarm, that they would prefer climbing up into the palm-trees, there to pass the night. Other reptiles and insects also abounded in the same proportion; and the season being remarkably hot, our condition could hardly, in possibility, be worse than it was."

To get out of this position, they attacked the Wahabees, but were routed with immense loss; and Finati's flight is a tissue of the most extraordinary accidents; but we must end our indication. It is long since we have met with so eventful and interesting a narrative.

Joe Oxford, or the Runaway. 3 vols. 12mo. London, 1830. Hurst, Chance, and Co.

This is, at any rate, not a fashionable novel, but rather inclines to the old plan of Le Sage

and Smollett. Like the hero of Le Sage, Joe Oxford, almost in the first page of the work, is launched on the great ocean of life, and seeking adventures, exposed to every imaginable danger. He is in the Foundling Hospital when the scene opens; he runs away with a friend, and meets with extraordinary accidents by "flood and field." Of these not a few are of a startling character; and the interest excited by the fate which seems to await the hapless wanderer, carries the reader with interest as well as rapidly through his history. The portraits of a reverend preacher, a quaker, a French dentist, an English and a Scotch baronet, and a high blood beggarly German baron, may be cited as examples of the writer's talent; and some of the events at the *Fortune of War*, in Bristol, would do credit to a pen from which we had anticipated more than from the author of Ned Clifton.

The Law and Commercial Daily Remembrancer for 1831. Dunn and Son.

The Diurnal Remembrancer for ditto. Same publishers.

The Housekeeping Account-Book. The same.

WE last year noticed these exceedingly convenient and excellent publications, in various sizes, adapted to the use of persons of every class, and so well arranged, as not only to afford ample information, in lists, analysis, abridgments, &c. &c., on subjects likely to require reference, but to invite to order and punctuality, by the judicious classification of their various heads, and the facilities they offer for preserving memoranda, hints, thoughts, and other fleeting particulars. To men of business, the mistresses of families, literary persons, &c., they will be found to be, in their several shapes, most valuable.

Cheltenham Lyrics: Lays of a Modern Troubadour. By Hal Hardyng. Baldwin and Cradock, London; H. Davis, Cheltenham. 1830.

A PLEASANT little volume. Its subjects being principally local, it may serve as an agreeable remembrancer of a season or so of Cheltenham gaiety.

The Remembrance. Edited by T. Roscoe, Esq. author of the "Landscape Annual." London, 1831. Jennings and Chaplin.

THIS is a pretty little volume, with several very pleasant tales. "The Heiress of Hazlewood" is an interesting story, from which the ghost had far better have been omitted; and the "Capture of a Conspirator" is told in a very lively manner. But we must say, it appears to us that the clever editor ought to have exerted a severer judgment. For example, "Prince Calaf" is an old eastern story, and with no particular merit in its principal incident. Miss Porter's verses have been published before, in *La Belle Assemblée*; and a song beginning "I would not die" appears in the *Friendship's Offering* of this year, under the name of a "Vernal Thought." Another fault is, that the contributions do not harmonise: some are just fit for a Juvenile Annual, for example, the Ettrick Shepherd's fanciful contributions; while others, again, are destined for "children of a larger growth." The truth is, there are too many Annuals. We quote the translation of a Greek epitaph by the Harrovian, a youthful writer whose fine taste and poetical feeling enter so well into the classical beauty of the ancient poets:—

"Though thy feet, young pilgrim, be not weary,
Thy spirit knows not guile,
Yet walk not past the lone and dreary,—
Sit yet by my tomb awhile!
Who sleepeth here? My name doth shine
In many a Grecian glen;
For joy and loveliness were mine,
And favour among men.
The grave hath gather'd them—the fold
Of sin hath fall'n from my breast;
My soul the death-sheet hath unroll'd,
My heart hath found its rest."

We rather suspect that the second line, "Thy spirit knows not guile," is an interloper, and, at all events, it has no connexion with the other three. The *Remembrance* is beautifully bound.

The Child's own Drawing-Book; or, an Easy and Progressive Step to Drawing, in Animals, Landscapes, Flowers, the Human Figure, &c. Drawn on stone by G. W. Davis. London, 1830. D. Carvalho.

THE "Boy's own Drawing-Book" would, we think, have been a better title, as, with the exception of the two or three first examples, the rest are far beyond the practice or power of children to reach to any useful purpose. This, however, does not at all militate against the utility of this production for youth and beginners; as the examples are numerous and spiritedly executed. Those, however, selected for the practice of the human figure, are neither in part nor whole equally well drawn, chosen, or executed; nor do we think flowers very profitable subjects to correct the eye, or form the taste of the juvenile aspirant in art. But, altogether, there is abundance and variety, very essential ingredients in elementary drawing.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

The Society for the Management of Arts, Manufactures, and Commerce, commenced the session on Monday last; David Pollock, Esq. V.P. in the chair. The meeting took place, as usual, in the great room of the Society, and a considerable number of members were present. The communications which had been received during the vacation were announced by the secretary, and referred for examination to the several committees. Transactions of societies, both foreign and domestic, as well as books and articles connected with the arts and sciences, presented by individuals, were laid on the table, and many new members were proposed. A letter was read, accompanied by a specimen of silk from the common garden spider, *aranea diadema*, reeled off from the live animal by a very ingenious apparatus. The fibre is finer than that of the silk-worm, and more opaque; its colour is white, with a high metallic lustre, so that it more nearly resembles silver-wire than any other substance.

It is intended that the "evening illustrations," which gave so much satisfaction during the last two years to the members and visitors introduced by them, shall be resumed after Christmas.

LINNEAN SOCIETY.

ON Tuesday evening the first meeting of the present session took place; A. B. Lambert, Esq., in the chair. A variety of donations made to the Society during the recess were laid on the table: amongst them were Dr. Wallich's *Plantæ Asiaticæ Rariores*; and Audubon's *Birds of America*, &c. A paper by John Hogg, Esq., M.A., on the classical plants of Sicily, was partly read: we do not give an analysis of it until the reading shall have been finished.

The draft of a loyal address to His Majesty, on his accession, was also read, and unanimously adopted. Several fellows were elected. The meeting was numerously attended: amongst the company was Capt. King, of the *Adventure* (see last week's *Literary Gazette*)—and it may here be stated, that it is the intention of government to extend his survey from Rio de la Plate to Cape Horn. Mr. Burchell, author of travels in Southern Africa, was also present: this traveller has recently arrived from the Brazils, where he had been for a considerable period making collections in natural history. It was his intention to proceed into Peru; but the unsettled state of politics in that country prevented him.*

GEOGRAPHICAL SOCIETY OF LONDON.

OF this new Society, from which we anticipate (as we have always expressed) results the most favourable to science, and much of national honour, the affairs have been going on most prosperously during vacation time. And we rejoice to say it is no longer a thing of promise, but of fulfilment and performance. Considerably above five hundred members are now enrolled; and so many interesting and important papers have already been received, that though the first ordinary meeting-takes place on Monday, yet there will be a fasciculus of Transactions, &c. ready for distribution within two short months. This fasciculus will be presented to all the members gratuitously; and from what we know of it, we can venture to predict that it will be well worthy of their acceptance and of the Society. With the patronage of the Institution, his Majesty has been graciously pleased to order an annual donation of fifty guineas to be adjudged as a premium.

LONDON PHRENOLOGICAL SOCIETY.

THIS Society resumed their meetings for the season on Monday last; Edward Wright, M.D., President, in the chair. Dr. Wright addressed the members on the advancing state of phrenology in England, and informed them that he hailed with delight the intention of Dr. Vimont, who would shortly commence a course of lectures on the science, illustrated by his vast collection of crania and brains. Mr. Henry Drew read a brief account of the crimes of Dobie and Thomson, the Gilmerton carters lately executed at Edinburgh, casts of whose heads he presented to the Society.

Numerous skulls of animals from the East Indies (intended for the Museum of the Zoological Society) were laid upon the table by Mr. C. R. Hyndman; several remarks were made on their cerebral organisation, by the President and Dr. Vimont, in which they were corroborated by the anecdotes afterwards related by Mr. Hyndman.

Dr. Vimont communicated to the meeting a proposal for the formation of a new phrenological bust, in which he wished not only to present the form of the skull, but likewise that of the brain, divided into its separate organs; he also meant to take into consideration the thickness of the integuments covering the skull, which he considers has not in those busts now before the public been duly appreciated.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE critical hour has arrived, but, like the ideo of March, is not yet passed. The council

* Such is our regular report: our readers are aware of the frequent notices we have taken of M. Burchell's extraordinary scientific labours.—Ed.

met with closed doors on Thursday; and on Thursday next, whatever may be the views of parties will come to light.

ROYAL SOCIETY OF LITERATURE.

ON Wednesday the Royal Society of Literature resumed its sittings, after a meeting of the Council; at which (we understand) the progress of the building fund, and, concomitantly, of the mansion now erecting for the Society by the voluntary subscription of the members, were the chief subjects which engaged attention. The reports in both respects were of the most gratifying kind.

The ordinary meeting was held at three o'clock, when a number of presents, received during the recess, were announced, and thanks voted to their respective donors. Among these, a very valuable collection of pamphlets, above a thousand in number, from Mr. Todd, the compiler of Johnson's improved Dictionary, was the most conspicuous. New members were elected, and others proposed. Other routine business being disposed of, Mr. Sotheby, at the request of the Council, read a part of his translation of the second book of the *Iliad*; of which we trust we shall be enabled to give a specimen in an early No. of the *Literary Gazette*.

THE ART OF BOOK-MAKING:

A New Branch of the Cut-and-Dry System!!!

FINDING that the exposure of literary fraud in our last two Nos. has done the state some service, and having received the thanks of parties the most concerned in such matters, we are inclined to continue our efforts for the public benefit, not only in marking impositions of this particular character for reprobation, but in holding up the puff system in general, and other evils which infest the field of literature, to the ridicule and reprehension they so justly deserve.

Beginning with a retrospect to the story of *Separation*, we hear that the publishers have re-demanded the price, 250*l.*, which they gave for it, as an entirely original work; but we think they will abandon this; for it is a whimsical fact, that the book has sold better, and been in greater request at the circulating libraries, than before. Like the loss of character upon the stage, it has made the novel popular. The *Monthly Review* has taken up the subject in a fierce and fiery tone, denouncing it, with appeals to "Good God!" as a deliberate imposition, which it undoubtedly is; but we refer to our contemporary for another purpose. In introducing the matter, he alludes to *Belmore*, published in 1829, as a preceding instance of the same kind; which led us to inquire into this point; and the result is, that with regard to *Belmore*, there was no deception whatever. The edition of 1829 was distinctly published as a reprint; as the title-page, which we copy, clearly proves. It is, "*Belmore*, a novel, by the Hon. Anne S. Damer, in two volumes. *New Edition.* London, H. Colburn." The first edition was published by Johnson, St. Paul's Churchyard; but there is no other resemblance between the cases, except that of a long interval between the first and second publication. *Belmore* was avowed, with the honourable author's name: *Separation* concealed, with the honourable author's name!—all the difference!

While investigating this business, however, another odd affair became known to us, which, if secretly performed, and money obtained for copyright, is a tolerably exact precedent

for the writer of *Separation*. In 1798 appeared "*He would be a Peer*, an English story, two vols. Sold by Lee and Hurst," &c. And in 1805 there issued from the press four volumes of *Tales* (Longman and Co.) by Mr. Dallas, (Lord Byron's friend) of which the second tale, entitled *Morland*, is now before us. On comparing this, we discover that from page 24 of *He would be a Peer*, and from page 3 of *Morland*, to the end of both, the stories are precisely the same, with only similar alterations of proper names and language, as is sufficient to put a new face on an old acquaintance. If Mr. Dallas was paid for this, it is precisely an example of the *Separation* job: at all events, it was a hoax upon the readers and purchasers of novels.

In noticing the *Annals* of the present as well as past years, we have taken occasion, where it occurred to us, to notice the duplicate publication of pieces without any acknowledgment: it is a practice, to say the least of it, disingenuous towards the public; and, like that of periodicals borrowing largely from contemporaries without quoting the original source, is evidence of a paltry spirit, unworthy of the humblest writer that ever wrote. While on this subject, we may add (for these are facts in the history of the literature of the day which it is well to record), that we entertain some strong suspicion respecting the recent publication of the *Romances of Real Life*, by Mrs. C. Gore, (Colburn and Bentley): we have not the volumes by us to refer to; but the *Lettre de Cachet* and the *Reign of Terror* (previously published by Andrews) were, if we do not much mistake the matter, almost the same—we mean that half the *Romances* had appeared before under another name.

So much, at present, for the tricks of trade and of authorship: we shall reserve some remarks on the puffing system, of which we have ever been the most determined enemies, till next Saturday.

FINE ARTS.

NEW PUBLICATIONS.

National Portrait Gallery of Illustrious and Eminent Personages; particularly of the Nineteenth Century. With Memoirs by William Jerdan, Esq. No. XIX. Fisher, Son, and Co.

Of the three memoirs in this No.—namely, the Right Hon. F. J. Robinson, Viscount Goderich—Richard Porson, M.A.—and the Hon. George James Welbore Agar Ellis—the present exceedingly critical state of public affairs renders that of Lord Goderich, for the time at least, the most important. "In preparing this memoir," observes the biographer, "we have been led to enter more minutely into a public life of some twenty years than could be expected from us; but the opinions and policy of a statesman who has taken so distinguished a part in all the great questions on which the prosperity of the country depends, is well worthy of attention, both for the past and future. Whether we may see Lord Goderich in office, or out, we must contemplate him as an individual endeared to the country by his consistency and integrity." Passing over the early part of the history of his lordship's political career (which, however, is very interesting), we will transcribe a passage explanatory of his conduct when in the highest official station; and one which affords great insight into ministerial and party measures.

"When Mr. Canning was appointed first lord of the treasury, in 1827, Lord Goderich

did not feel that he should be justified in taking the course followed by several of his colleagues and friends; and having no personal or public grounds that could justify his refusal to act under Mr. Canning, he determined to remain with him, and accepted the seals of the colonial department. In coming to this decision, he does not appear to have been influenced by considerations of mere personal attachment to Mr. Canning, with whom his connexion, though always friendly, had never been one of long-established private intercourse. But he has always expressed a high opinion of his talents; he thought his character and conduct most cruelly and unjustly traduced; and he appears to have shared those principles of public policy of which Mr. Canning was the powerful and eloquent advocate. Lamenting, therefore, as he did, the breaking-up of old political connexions which took place at that period, Lord Goderich, as he could not ascribe it to any thing justly imputable to Mr. Canning, felt that an abandonment of him on his part would have been at once dishonourable and unjustifiable. On the loss of that distinguished man, his late majesty, as we have already said, was pleased to send for Lord Goderich, and place in his hands the office of first lord of the treasury. It has been understood that it was the wish of his majesty, in any arrangements for successors in office, which might be found necessary in consequence of the vacancy created by the death of Mr. Canning, that no proceeding should be adopted which should, by the introduction of individuals not before belonging to the government, change its general character either as to men or measures. Lord Goderich, therefore, succeeded to all the difficulties which belonged to the composition of Mr. Canning's administration. It will be in the recollection of contemporaries, that great doubts were entertained as to the possibility of Mr. Canning being able to keep the government which he had formed together; and yet the following short analysis of its component parts will shew, that, independently of the great personal sway which his unrivalled talents as an orator gave him in the House of Commons, he had, as compared with Lord Goderich, an incomparably better chance of successfully cementing the somewhat heterogeneous elements of which the cabinet was composed. Mr. Canning's government was composed of moderate Whigs, moderate Tories, and of a few Tories of less liberal principles. The first party, at the head of which was Lord Lansdowne, had almost adopted Mr. Canning as their political leader, and had certainly, on the defection of his former colleagues, enabled him by their support to form a government; but their adoption was confined to him personally. The moderate Tories were chiefly composed of Mr. Canning's personal friends, on whom he could confidently rely. These two parties concurred in opinion on the great domestic question of Catholic Emancipation. In the third party, very inferior in number to the other two, the leading personage in station and talent was the Lord Chancellor, Lord Lyndhurst: but as he had been selected by Mr. Canning, it may be assumed that difference of opinion upon the one question of Catholic Emancipation would not have prevented the fullest identity of interest, as to the maintenance of the government. Among the principal Whigs it is also to be observed, that Lord Carlisle (a member of the cabinet) was a personal friend of Mr. Canning; and that Lord Holland, a zealous supporter of the new government, had always been united in habits

of very intimate intercourse with the minister. Lord Goderich, on the contrary, had not been adopted by the moderate Whigs as a leader; among the moderate Tories in his government, there were none who united the character of personal friends and political adherents; and although of the third and least numerous party, Mr. Herries had been recommended by him to the office of Chancellor of the Exchequer, it is clear, from subsequent events, that Mr. Herries did not feel himself in any degree bound to his lordship as his political chief. Lord Goderich was therefore placed at the head of a government composed of parties imperfectly united, and over any or all of which he had decidedly no previous personal influence. Mr. Canning possessing that influence, might have kept down the mutual jealousies of Whigs and Tories; but even with all the advantages which he individually had, the first vacancy in a cabinet office would probably have led to a struggle for filling it up, that might have destroyed the ministry. We can therefore easily imagine, that Lord Goderich, in obeying his late majesty's commands, must have yielded rather to a sense of duty, than to the dictates of ambition. It is not our intention, however, nor does it fall under the scope of this memoir, to examine the particular events that produced the dissolution of his administration; and we shall therefore conclude our remarks on this period by stating, that in his public measures there was no departure from the principles of foreign or domestic policy by which Mr. Canning had been regulated, or from any which he had himself professed or adopted as the rule of his own conduct."

In the present condition of the country and of parties, much information may be obtained from such obviously well-ascertained statements of the past, which (like these Memoirs in general) bear the stamp of high historical authenticity. The portraits are exceedingly creditable to the work; and the work itself is one of high biographical importance. It is truly a brief but certain book of reference, not only for our times, but for the future.

Illustrations to the Amulet for 1831.

An exceedingly clever and pleasing little collection of prints, highly creditable to the taste of the proprietors and to the skill of the artists.

The Countess Gower and her Child. Painted by Sir Thomas Lawrence, P.R.A.; engraved by W. Finden. The laudable anxiety which the proprietors of publications that must be popular in order to be profitable, manifest to avail themselves of the works of the late president, is a striking tribute to his merits. This is an admirable composition. Nothing can exceed the loveliness and dignity of the mother, whose attention is suddenly called from her book to some occurrence out of the picture, by the earnest gesture, and almost audible "look, mamma!" of her (except the limbs) beautiful boy. Mr. Finden has exerted himself with great success in representing the characteristic qualities of Sir Thomas's style, particularly with reference to depth and richness of tone.—*The Resurrection.* Painted by J. Martin; engraved by R. Wallis. The city of Jerusalem is here treated with all that sublimity of effect which no man knows so well how to impart to his productions as Mr. Martin; and the angel and the three Maries, minute as they are, are full of expression. We are not quite so well pleased with the guards in the fore-ground.—*The Orphans.* Painted by J. Wood; engraved by C. Rolla. We noticed the picture in our account of the

Exhibition at Somerset House: Mr. Rolls has engraved it in a very satisfactory manner.—*Cromwell at Marston Moor*. Painted by A. Cooper, R.A., from a sketch by an unknown artist; engraved by W. Greatbatch. Let the sketch have been by whom it may, Mr. Cooper has made it entirely his own. If Oliver does not strike instantly, it is over with him.—*The Florentine*. Painted by H. Pickersgill, R.A.; engraved by E. Finden. In all countries the yearnings of maternal and filial love are equally strong; and the manifestation of them is equally pleasing.—*Sweet Anne Page*. Painted by R. Smirke, R.A.; engraved by E. Portbury. Mr. Portbury has been very happy in transferring the various excellencies and peculiarities of Mr. Smirke's style to steel.—*The Village Queen*. Painted by J. Boaden; engraved by C. Marr. A bewitching creature; full of simplicity and grace. The picture does Mr. Boaden the highest credit; and it has been exquisitely engraved by Mr. Marr.—*Florence, from the Chiesa al Monte*. Painted by J. M. W. Turner, R.A.; engraved by E. Goodall. A simple representation of the beautiful Tuscan city, with the fine valley in which it is placed, and the silver stream by which it is watered.—*Sunset*. Painted by G. Barrett; engraved by J. Pye. Numerous as have been the subjects of this class from Mr. Barrett's pencil, we really think this the most charming we have met with. What Claude is superior to it in sweetness and truth of effect? Mr. Pye has entitled himself by his felicitous execution to a full share of the admiration which this charming little plate must generally excite.—*The Lagoon*. Painted by J. Skelton; engraved by J. Skelton. The scene is the general effect are excellent, we wish the lady had a little more of the sailor's *Bride*. Painted by J. Skelton; engraved by H. Rolls. In the scene of the *Bride*, which on which she is dressed in the splendour of oriental costume, she would prove herself a tall woman of her inches. That extreme, however, is infinitely preferable to the reverse: we hate a dumphy woman.

Lord Byron in his Nineteenth Year; from Sanders. Engraved by William Finden.

THIS beautiful performance is intended for the frontispiece to Moore's second vol. of the *Life of Byron*; but having a proof before us, we take the opportunity of noticing it as by far the most poetical and interesting likeness of Byron, and one of the finest works of art ever prefixed to any volume. It represents his lordship, full length, in a sailor's dress, with a youthful companion, launching a boat. The composition is simple; the look of the principal figure is delightful; and we think the admirers of genius will hail this production as its congenial representation.

Etching of Leslie's Sancho before the Duchess. By Humphrys.

WE are fortunate enough to possess one of these admirable etchings; of which we are free to say, that it promises to become one of the best engravings ever executed in England.

DRAMA.

DRURY LANE.

AT this theatre we have to congratulate the public on the disappearance of the *Marriage of Figaro* and the *Barber of Seville*; for, notwithstanding the creditable efforts of Mr. Latham as the Barber, and Miss Crawford as the Page, the general cast of these operas has been so

weak this season, as to make the defects of their English adaptation more glaring than ever to the improving musical taste of a London audience. When they were first produced at Covent Garden Theatre, opera, strictly so called, was foreign to our stage, and as mere musical dramas, admirably supported by Mrs. Dickons, Miss Stephens, Miss Tree, or Miss Paton, Liston, Fawcett, Jones, &c. &c. and produced with all the taste and splendour which at that period characterised the management, they afforded an evening's entertainment of the pleasantest description. But now,

"When lights are fled,
And garlands dead,
And all but we departed,"

the effect is dreary indeed! Let us hear no more, therefore, of *Figaro*, till a full and effective opera company can be brought together, and do justice to the entire compositions, either of Mozart or Rossini, which now the public are as well prepared and as anxious to receive as Mr. Bishop is able, and we are sure willing, to present to them, with English words, and to the exclusion of "Come, fill the bowl, my jolly soul," "O peccator dell' oreda," "Come where the aspens quiver," &c. &c. &c.

On Monday *Henry V.* was produced, the *King* by Mr. Macready: and to those who appreciate the energy and soul which this admirable performer can so finely breathe into such a character, we need not say how great a treat he gave. With regard to what is technically called the "getting up" of the play as a "revival," in the shape of new dresses and decorations, certes the present are not fit to "march through Coventry with, that's flat!" The play of *Henry V.*, to be made fully attractive, ought to be a magnificent pageant, or, perhaps, acted when this country was at war with France; and, as we trust it will not soon have the latter recommendation, we counsel the managers to try the former.*

COVENT GARDEN.

LAST Saturday a dull and common-place melodrama, in three acts, was produced here, under the title of the *Carnival at Naples*. From the confusion of the plot, the number of redundant characters, and the incoherence of the incidents, it had more the air of the work of a youthful aspirant than of an experienced veteran, such as Mr. Dimond. The principal incidents are, the decoying away of a young Englishman from the midst of the gaieties of a Neapolitan carnival into a den of banditti, the terrors of his situation there, and his deliverance by means of a young woman who had been employed to tempt him into the snare by the blandishments of a wanton, but really possesses the trite purity and virtues of a heroine of romance. Will it be believed, that all these incidents and situations are crowded into the beginning of the piece, leaving a long residue of consequent insipidity? The plot is worthy of little further notice. The young person in question had been spirited away from her parents, a certain duke and duchess, by a good-for-nothing relation, who had an eye to her estate, and had fallen into the hands of the banditti, by whom she had been brought up, with a mind—*mirabile dictu!*—perfectly uncontaminated. Her unprincipled betrayer is represented all along as a very sentimental person, full of fine feelings and equally fine speeches, which form an unac-

* In our last week's dramatic notice, a wrong division of the text, in making up the Paper, placed a few words respecting Miss Crawford's *debut* and the new pieces in preparation at Drury Lane at the commencement of the Covent Garden article. Mr. Kenney's adaptation of *Hernani*, and Mr. Poole's ditto of *Le Nouveau Bourgeois*, are both in rehearsal at Drury.

countable contrast to the steady villany of his purpose. Of course he loses both his object and his life: the damsel is restored to her parents and united to her lover. The Englishman has an Irish servant, represented by Power, whose rich brogue and whimsical action provoked much laughter, and kept the audience in good humour. We had a few more personages introduced, for no other purpose than to sing songs and duets. Of these unhappy individuals, the foremost was Mr. Wilson, who had nothing to do but to walk on and off, speak a very few words, and sing a good deal of music, without any body knowing why or wherefore: in short, it was Carlos out-Carlosed. Miss Hughes had a part of a very similar kind; and both of them might be left out with much advantage to the play. The music, composed by Barnett, has considerable merit, though it is liable to much censure. It deserves praise, in the first place, for the ingenuity and spirit of some concerted pieces, especially a carnival chorus and ballet, which is very effective, and would have been still more so had it not been for the recollection of the market-chorus in *Massaniello*. It cannot be said that any of the musical passages are positively borrowed from that chorus, yet the general structure is similar, and the vocal phrases, as well as the accompaniments, are strongly marked with the peculiar style of Aufer's music. A similar remark may be made on the overture. At the same time, both these compositions display much knowledge of orchestral effect; and, on the whole, do the author credit. There is also a trio for two sopranas and a tenor, which is a charming production. We hope to see this *morceau* in print, as it would form a delightful acquisition to concerts and private parties. It is in his songs that Mr. Barnett has been least successful. With the exception of a very clever one, in the Polish style, sung by Miss H. Cawse, they are destitute of "the one thing needful" in musical composition—originality. They eternally put us in mind of one modern composer or another, particularly of Rossini, from whom whole passages are borrowed. Mr. Barnett's accompaniments to his vocal pieces are in general skilful and effective, but they are frequently too full and complicated; and, like most other composers of the present day, his use of the noisy military instruments is incessant and indiscriminating. Thus, inferior as a dramatic composition, and with small claims to applause for its music, the *Carnival at Naples*, acted to a wretchedly thin house, would have been deservedly condemned but for the sensation excited by a young lady of the name of Taylor, who made her first courtesy to a London audience in the principal character. If we may be allowed to judge from a *debut*, and that of an extravagant as well as indifferent part, Miss Taylor is one of the most valuable acquisitions to the metropolitan stage. An actress of great ability, a pleasing singer, young, well-looking, graceful, and enthusiastic, a long career of fame and fortune, we trust, is opening for her, and a new source of interest and delight for the public. Her reception was as genuine, as well as flattering, as we have ever witnessed. The audience, like ourselves, were evidently taken by surprise; and the appeal placed in her mouth by the author, at the end of the piece, helped to save his production, by the general application of it to the charming and intelligent speaker. We long to see this young lady in some character more worthy of her powers, and we think we shall soon be gratified; as, unless her attraction keeps it on the stage, the *Carnival at Naples* cannot live a fortnight.

And the sooner she is out of it the better; for it forces her into an exaggerated and somewhat melo-dramatic style, which will, we are sure, be abandoned when she has business to do less at war with nature and true dramatic art. The other parts were respectably supported: it was impossible to render them effective. Mr. Wilson could not have made any thing of his part. It was, as we have said, a nullity; and Mr. Barnett, with great dramatic propriety, we think, has written for it the most insipid songs in the piece. In general, the performance was received with much applause; of the quality of a great portion of which, however (except the *finale*, already alluded to), some suspicion may be entertained, when it is considered that there must have been several different sets of *claqueurs* in the house—namely, those attached to author, composer, and performers.

On Monday evening their majesties honoured this theatre with their presence. The performances were the *Provoked Husband*, and *Teddy the Tiler*. The national anthem and "Rule Britannia" were exceedingly well sung, and rapturously encored; but we missed the complimentary verse to the queen, which was so particularly distinguished at Drury Lane. Miss Fanny Kemble played *Lady Townley* for the second time in London, and in the serious portions of the character sustained her reputation; but, though perfectly lady-like and graceful in the lighter scenes, there was a want of that indescribable air which distinguishes the woman of high fashion. Miss Kemble is a *Lady Grace*, not a *Lady Townley*. Whatever she does, is done sensibly, pleasingly, "but still soberly." Mr. Kemble appears to us the most perfect representative possible of the aristocratic moralist. We are inclined to rank his *Lord Townley* amongst the best of his performances; and, enthusiastic as we are respecting him, that is high commendation. He looks born to a peerage; and his condescension to *Moody*, his sense of the ridiculous struggling with his natural dignity and delicacy during the simple coachman's whimsical but vulgar account of his adventures, is, in our opinion, one of the most highly finished and faithful portraits extant. Power, in the after-piece, convulsed the house with laughter, the royal party included.

On Wednesday, Miss Kemble appeared, for the first time, in the character of *Mrs. Haller*, her father performing the *Stranger*. So much was volunteered, last season, by the friends of the parties, respecting the delicacy with which they abstained from enacting, in concert, the virtuous loves of *Romeo and Juliet*, or the still more hallowed affections of *Jaffier and Belvidera*, that we were rather surprised by the peculiar inconsistency of the announcement of the *Stranger*. Excepting moral and other considerations, the performance has added another effective part to the list of the gentle lady, and the play is altogether one of the best acted at this theatre. On the fall of the curtain, Mr. Kemble was called for, and gave it out for repetition on Friday.

VARIETIES.

Royal Academy of Music.—We are glad to find that Lord Burghersh's musical drama of *Catharine, or, the Austrian Captive*, is not only to be represented this evening by the pupils of that institution (the Royal Academy of Music), which has been so much indebted to his spirit and care; but that her Majesty purposes to patronise the performances. An opera by an English nobleman, and executed by an

entirely English school, is a great novelty and attraction.

Africa.—M. Bozet, an engineer employed in the expedition to Algiers, has communicated to the French Academy some curious geognostic remarks on that part of the African coast occupied by the French army; namely, from the bay of Sidi-Feroukh to three leagues eastward of Algiers, and from the sea to the first chain of the Atlas Mountains.

Parisian Theatricals.—It may be considered as one of the signs of the times, that at the Ambigu-Comique, the Variétés, and other theatres in Paris, several little dramatic pieces have lately been brought out, which have Buonaparte for their hero.

Russia.—The mines of gold and platina in Russia produced in the first six months of the present year a hundred and eighty pounds of gold, and sixty-one pounds of platina.

New Club.—The English and Foreign Union Club, of which we spoke a week or two ago as the tenants of Lord Hertford's splendid mansion, is advancing rapidly towards completion. The house is to be opened almost immediately. Most of the distinguished resident foreigners have, we hear, joined it.

Tifis.—This city, the population of which last year amounted to 17,000, had at that time three journals; one in the Russian, another in the Georgian, and the third in the Persian language. The publication of the Georgian journal has been discontinued.

The Gentleman's Magazine.—Only think of our worthy Centenarian contemporary having been prosecuted for a libel, for the first time! The old gentleman, it seems, had reviewed a work on heraldry, in a manner unpleasant to the author; and the author had recourse to the wretched law of libel, in the hope of catching a farthing or a shilling damages, and thus punishing his critic with the usual ruinous expense by which justice is defeated, and the reverse done. He was non-suited: and if he had not been so, there must have been an end of all fair and honest criticism.

Medical.—We observe a letter in the *London Medical Gazette*, written by Dr. Granville, and reclaiming against an assertion in the biography of the late Dr. Gooch, that he, Dr. Gooch, had, by his essay, settled the question of the contagious nature of the plague. On the contrary, Dr. Granville demonstrates, by dates and authentic evidence, that the question was settled by Dr. Granville himself, and other medical men examined by a committee of the house of commons, and acted upon by government, before Dr. Gooch wrote a line upon the subject.

Painting and Engraving.—Mr. Gill, the artist, writes to us, that the engraving in the *Remembrance*, from his very clever picture of the "Orphans," though it has the name of Mr. C. Rolls affixed to it as the engraver, is, in fact, the work of a Mr. Duncan. Mr. Gill, with an honest warmth of feeling, asserts the claim of the young and unknown artist; and declares that Mr. Rolls only "took the liberty to darken the plate, which had not at all improved it."—It is our public duty to insert such authenticated appeals.

The Prince de Condé.—The judicial and medico-legal documents respecting the suicide of the late Prince de Condé, are about to be printed at Paris.

Dr. Valpy.—In returning thanks the other day to his pupils for the present of a handsome piece of plate, the learned and venerable master of Reading School spoke of "the flowers

that had occasionally illuminated his path." "Flowers illuminate?" exclaimed a young Aristarchus. "To be sure," observed a more amiable critic; "sun-flowers."

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XLV. Nov. 6.*]
A work on the Temple of Jerusalem, according to the description of the Prophet Ezekiel, by John Sanders, architect.—The Annals of My Village; being a Calendar of Nature for every Month in the Year, by the Author of "Select Female Biography."—The Cadeau, or Cottage Lyrics, another new Musical Annual, is announced.—Travels and Researches of eminent English Missionaries; including an Historical Sketch of the Progress and Present State of some of the principal Protestant Missions of late Years.—Mr. Walsh, of Cork, is preparing for publication a new edition of his work on the Geometrical Base, considerably enlarged, and intended for public instruction.

Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

Northcote's Life of Titian—Kotzebue's New Voyage—Trant's Travels in Greece—Constable's Miscellany, the Greek War of Independence—Dawson's Present State of Australia—Pratt's History of Savings' Banks—Priestley's Historical Account of Inland Navigation and Railroads, with its admirable accompanying Map—and many other new works of interest, are under consideration, though too late, or perhaps requiring too much time and attention for this No.

In answer to Mrs. Watts, we have only to say, that we are not guilty of the mistakes she charges us with having committed. The print and poem of the Soldier's Widow, published in this year's *New Year's Gift*, did both appear in the *Token* (Goodrich, Boston, U. S., for 1828), where, though unknown to her, our fair and good friend will find them by referring to page 76. In the English work the plate is far better engraved after Scheffer, by Baker, than in the American volume by Cheney. There is no other difference. With regard to the God-mamma's Letter, except a slight alteration in epithets, which seem to imply revision, it is identically the same in page 28 of the *Juvenile Forget Me Not*, and page 142 of the *New Year's Gift*. It is not easy to bear in mind precisely the multitude of small pieces which appear in such publications.—We have no object but to preserve the public from repetitions as novelties; and may have been mistaken, as Mrs. Howitt assures us we are, in supposing we had previously read her *Olden Time*. Sure we are, that with her abundant talent and integrity, she is among the last whom we would suspect of aught disingenuous.

We are much obliged to our friendly correspondent B. W. On turning to Miss Bowles's *Solitary Hours*, we find he is right in stating the little poem alluded to in our last is hers. Still, we must, for the sake of our own accuracy, refer him to the Annual we then mentioned, where he will find the verses under the other signature.

We have no means of informing M. B. why the Spanish Professorship in the London University has been abolished.

M. A. J. declined, for want of originality. We do not remember the prospectus to the new edition of the *Waverley Novels* sufficiently to say, that "a copious glossary" was promised; but having no doubt of the fact, from H. F.'s letter, we can only express our perfect reliance on the fulfilment of the pledge.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE LONDON UNIVERSITY SCHOOL, 16, Lower Gower Street, Bedford Square, (Head Master, the Rev. HENRY BROWN, M.A. of Corpus Christi College, Cambridge), will open on the 1st November.

Visitors for the present year:—The Right Hon. Lord Auckland & Leonard Horner, Esq. F.R.S. Wm. Bingham, Esq. M.P. Henry Haywood, Esq. F.R.S. &c. Henry Weymouth, Esq.

A more detailed Prospectus than has hitherto appeared may be had at the School, at the Office of the University, and at the following Booksellers:—Taylor, 30, Upper Gower Street; Longman and Co. 39, Paternoster Row; Baldwin and Co. 47, Paternoster Row; Parbury and Co. 7, Leadonhall Street; Jennings and Chaplin, Cheapside; Richardson, 23, Cornhill; Fiddlers, 39, Ludgate Street; Hunter, 72, St. Paul's Churchyard; Underwood, 32, Fleet Street; Black, Young, and Young, 2, Tavistock Street; Smith, 172, Strand; Wyld, 7, Charing Cross; Knight, 13, Pall Mall East; Trentell and Co. 30, Soho Square; Murray, 50, Albemarle Street; Ridgway, 109, Piccadilly; Gardner, 109, Regent Street; Balliere, Regent Street; Tompkinson, 13, Percy Street; Alexander, 37, Great Russell Street; Callow, 16, Princes Street, Soho. The Head Master will be spoken with at the School daily, (except Sundays), between the hours of 11 and 3. HENRY BROWN, Head Master.

UNIVERSITY OF LONDON.—The Council hereby give notice, that the following Classes for the Session 1830-31, have just opened. The Latin, Greek, French, German, Italian, Persian, Arabic, Sanscrit, Hindustani, and Hebrew Languages; Mathematics, Natural Philosophy, Philosophy of the Mind, and Logic; English Law, and General Jurisprudence. A Prospectus of these several Classes may be had at the Office of the University, and at several of the principal Booksellers in different parts of the Town. The Classes of the English Language and Literature will be opened in the course of the present month. LEONARD HORNER, Warden.

TO STUDENTS IN ARCHITECTURE.—A Gentleman is desirous of taking a limited Number of Pupils early in the ensuing Spring, who will be instructed in the Principles and Practice of Architecture, and in every Description of Architectural Drawing. As he is not a professional Teacher, they will be required to assist occasionally in the execution of actual Working Plans, which will afford them an opportunity of acquiring a Knowledge of Construction, as well as Facility of Delineation, seldom to be met with. Terms moderate. Every particular may be known on application, by Letter, to the Architect, at No. 10, Strand, containing real Name and Address.

5th November, 1830.

SIX VIEWS OF BRUSSELS, exhibiting some of the principal Points where the recent Contest took place, with a Plan of the City, drawn and etched by Lieutenant Colonel Baily. London: Jennings and Chaplin, 62, Cheapside.

PUBLIC LIBRARY, Conduit Street. At this extensive and valuable Library, from which the Nobility and Gentry, in Town and Country, are supplied, arrangements are made for affording the utmost possible accommodation to Subscribers in the perusal of New Works, as well as those of a standard character in the English, French, Italian, and German Languages, of which this Library contains an immense Collection. The Addenda for 1830 just published. Catalogues and Cards of Terms to be had on application.

THE OBSERVER of Sunday, November 7th, price only Seven-pence.—Clivic Banquet to the King and Queen.—The Order of Procession, and all other Particulars connected with the Preparations for the Reception of their Majesties, will be given in the Observer of Sunday, November 7th. Illustrated by an accurate Engraving of the splendid Interior of Guildhall, according to the form it will assume at the Festival to be given to the King and Queen on Lord Mayor's Day. This will be followed by another Engraving, in the Observer of the ensuing week, (Sunday, Nov. 11), illustrative of the Ceremonies to be observed on the same important occasion. A Monday edition of the Observer is regularly published at No. 109, Strand, every Monday Afternoon, at four o'clock.

MUSIC. The Vocal Annual for 1831. In 1 pocket vol. price 4s. boards, or 5s. 6d. in Turkey Morocco. THE VOCAL ANNUAL; or, Singer's own Book for 1831, embellished with Two Engravings. London: Printed by C. Whittingham, for Thomas Tegg, Cheapside; R. Griffin and Co. Glasgow; and sold by all Booksellers.

BOOKS PUBLISHED THIS DAY.

MEMOIR OF THE LIFE OF HENRY FRANÇOIS D'AGUNSEAU, Chancellor of France; and of his Ordonnances for Consolidating and Amending certain Portions of the French Law. And an Historical and Literary Account of the Roman and Canon Law. By CHARLES BUTLER, Esq. John Murray, Albemarle Street.

THE CAMP OF WALLENSTEIN, from the German; and original Poem. By LORD FRANCIS LEVESON GOWER. John Murray, Albemarle Street.

The following New Works are just published by Messrs. Colburn and Bentley, New Burlington Street.

THE LIFE OF TITIAN, with Anecdotes of the distinguished Persons of his Time. By JAMES NORTHOTE, Esq. R.A. In 2 vols. 8vo. with a fine Portrait of Titian.

The Water Witch; or, the Skimmer of the Seas. By the Author of the "Red Rover," the "Borderers," the "Prairie," &c. In 3 vols. post 8vo.

Narrative of a Journey through Greece in 1820, with Remarks on the Actual State of the Naval and Military Power of the Ottoman Empire. By Captain T. Abercromby Trant. In 1 vol. 8vo. with Plates.

The Heiress of Bruges, a Tale, by T. Colley Grattan, Esq. Author of "Highways and Byways," "Tales of Travel," &c. "A story of the most absorbing interest."—Globe.

A New Voyage round the World, in the Years 1828, 1829, 1830, and 1831, by Otto Von Kotzebue, Post-Captain in the Imperial Russian Navy. In 2 vols. post 8vo. with Plates.

The Life of Sir Humphry Davy, Bart. late President of the Royal Society, &c. &c. By A. J. Paris, M.D. Cantab. F.R.S. Fellow of the Royal College of Physicians, &c. &c. In 1 vol. with a beautiful Portrait.

Maxwell, a Story of the Middle Ranks, by the Author of "Sayings and Doings." In 3 vols.

The Literary Correspondence of John Pinkerton, Esq. F.R.S. Edited by Dawson Turner, Esq. 2 vols. 8vo.

Narrative of the French Revolution of 1830, the Events which produced it, and the Scenes by which it was accompanied. By D. Turnbull, Esq. Embellished with Portraits of Louis Philippe and General Lafayette, and a Plan of the Scene of Action. In 1 vol. 8vo. Quæque ipse miseranti vidi.—Virgil.

Scenes of Life and Shades of Character. In 2 vols. post 8vo.

Lady Morgan's New Work. In 2 vols. 8vo. with Portrait. By LADY MORGAN. "This is a book that will be universally read; the lightness of the style, the notoriety of the authoress, and the merit of the work will render it popular."

"As throwing light upon the state of private society and private opinion in Paris during the last twelve months, it will have a redoubled interest."—Globe. "It is a delightful work, gay, sparkling, piquant, and metaphysical."—Sun.

"This work on France is very clever."—Spectator. "Lady Morgan's light and graceful pen touches every thing, exhausts nothing. She gives us peeps into life which none but an acute and observant woman could furnish."—Scotsman. "The work is written in Lady Morgan's own style; her sketches of French manners are excellent."—Fremantle's Journal. "A work upon the state of France, in so glorious a time as that on which Lady Morgan has treated, was much to be desired; but when we have the masterly hand combined with the scrutinising eye of Lady Morgan, undertaking the wished-for task, the public must be more than gratified."—Brighton Guardian. Printed for Saunders and Ouley, Public Library, Conduit Street.

THE MILITARY EVENTS OF THE LATE REVOLUTION IN PARIS. By an OFFICER OF THE GUARDS. From the French. John Murray, Albemarle Street.

THE NEW MONTHLY MAGAZINE for November contains, among a variety of interesting Articles,—Retrospective Remarks on the Affairs of Holland and Belgium, by T. Campbell, Esq.—Questions anticipated in the present Session—Reflections on the Policy of Spain, considered with reference to the present state of Public Opinion in Europe—the Distant Grave, by L. E. L.—Zoology in Dublin—Recollections of the late William Hazlitt, by Barry Cornwall—Letter from Mr. Holthouse, relative to Galt's Life of Byron—the Banner of the Covenanters, by the Hon. Mrs. Norton—Sketches and Recollections No. 7; Gaming, by Mr. Poole—Fashionable Eclogues, No. 3; by T. Haynes Bayly, Esq.—The Histories of the Jews, by Milman and Gleig—the Last Guy Fawkes—La Reine Blanche, by Barry Cornwall—the early Life of the late Mr. Huskisson—Shakespeare's Character of Hamlet—the New Police—and the usual Varieties in Politics, Critical Notices of New Publications, the Drama, Music, Fine Arts, Biographical Memoirs of Persons lately deceased, and Original Occurrences, &c. &c. Henry Colburn and Richard Bentley, New Burlington Street.

Kennedy's Arrow and Rose. In demy 8vo. price 6s. boards. THE ARROW and the ROSE; with other Poems. By WILLIAM KENNEDY, Author of "The Fifful Fancies," &c.

"Critics, and critics only, can do full justice to the spirit, the deep feeling, the energy of this work. We consider Mr. Kennedy's love-poetry some of the finest that ever was written. He is a poet, if thought, feeling, and originality, can make one."—Literary Gazette.

"He is full of strong feelings and good conceptions. Manliness and sincerity are the great characteristics of his style. He writes like a man of good muscle; he strikes his ideas on the head at once, and then proceeds to characterize. He is no admirer of ornament. He uses the good old language of England—thrilling as it is, and full of home power—and his thoughts stand in it strong and sturdily, like the bristles on the back of the fretted porcupine."—Edinburgh Literary Journal.

"North.—There, James, is an exceedingly graceful, elegant, and pathetic little poem, the 'Arrow and the Rose.'"—Blackwood's Magazine. Smith, Elder, and Co. Cornhill.

EASTERN SKETCHES, in Verse. By HENRY GALLY KNIGHT, Esq. John Murray, Albemarle Street.

LEVI and SARAH; or, the Jewish Lovers. A Tale of the Polish Jews. John Murray, Albemarle Street.

D. A. Talboys, Oxford; and Whittaker, Treacher, and Co. London.

SOPHOCLES. The Tragedies of Sophocles, literally translated into English Prose, from the Greek Text of Brunch, with Notes, the 2d edition, very much improved, 8vo. 10s. boards.

2. Euripides. The Hecuba, Orestes, Phœnician Virgins, and Medea of Euripides, literally translated into English Prose, from the Text of Porson, with Notes, the 4th edition, revised and corrected, 8vo. 8s. boards. In the press.

3. The Hippolytus and Alcestis of Euripides, literally translated into English Prose, with Notes, 8vo. 4s. 6d. boards.

4. Aristophanes. The Comedies of Plutus and the Frogs, literally translated into English Prose, with copious Notes, 8vo. 8s.

5. The Rhetoric of Aristotle, literally translated from the Greek, with Notes; to which is added, an Analysis of Aristotle's Rhetoric, by Thomas Hobbes, of Malmesbury, with Notes, 8vo. 12s. boards.

6. Questions on the Rhetoric of Aristotle, 8vo. 2s. 6d. sewed.

7. Æschylus. The Tragedies of Æschylus, literally translated into English Prose, from the Text of Biornfield and Schütz, with copious Notes, Critical and Explanatory, 8vo. 10s. 6d. boards.

This is the only literal Translation of the whole of Æschylus. It is not a revision of the former edition, but a new translation, by a different hand. Order Talboys edition.

8. Livy. A new and literal Translation of Livy's Roman History, Books XXI.—XXX. inclusive, with Notes, 2 vols. 8vo. 14. 4s. boards.

4th edition, in 3 pocket vols. to correspond with the Family Library, price only 12s. DEATH-BED SCENES and PASTORAL CONVERSATIONS. John Murray, Albemarle Street.

IRELAND and its ECONOMY; being the Result of Observations made in a Tour through the Country in the Autumn of 1829. By J. E. BICHENO, Esq. F.R.S. Sec. Linn. Soc. &c. &c. John Murray, Albemarle Street.

THE DIURNAL REMEMBRANCE; or, Pocket Diary for 1831, containing a Selection of the most useful Lists and Tables, including the New Table of Terms and Returns, forming a Diary of the most convenient size for Memoranda, Appointments, &c. price 2s. 6d. half-bound, enlarged edition, containing half a page, 4s. extra enlarged edition, containing a page, for each Day, 6s. London: Published by Edward Dunn and Son, 9, Fleet Street; and sold by all Booksellers.

THE LAW and COMMERCIAL DAILY REMEMBRANCE for 1831. This Publication combines the advantages of a Diary for Daily Memoranda, with that of a most useful and valuable book of reference to subjects of importance and utility to all Classes, but particularly so to Merchants, Bankers, Solicitors, and Men of Business generally. In the selection of information contained in this Work, will be found a Table of the Terms and Returns altered pursuant to the Directions of the Act relating thereto; an Abridgement of the Laws relative to Stamps, with practical Instructions,—This Abridgement, from the information it contains, will be eminently useful to Country Solicitors,—Review of the proposed Alterations in the Stamp Laws; a List of the Members of the House of Commons, with their Town and Country Residences; Analysis of the whole of the Public Acts of the last Session of Parliament, &c. &c. &c. Price 2s. strongly covered, 3s. 6d.; half-bound, enlarged edition, half a page for each Day's Memoranda, 4s. 6d.; extra enlarged edition, a page for each Day, half-bound, 7s.; 4to. edition, a page for each Day, 12s. An edition in folio has this year been published, containing a page for each Day, adapted for the Use of Offices, &c. of extensive Business, price 15s. half-bound. Any of the above may be obtained ruled for Cash Accounts. London: Published by Edward Dunn and Son, 9, Fleet Street; and sold by all Booksellers.

PARTIES AND FACTIONS IN ENGLAND

at the ACCESSION OF WILLIAM IV.
Contents: Ultra-Tories in relation to the Catholic Relief Bill, and to the Revolutionary Changes for the Benefit of the Union; Ultra-Whigs, in relation to the Ballot, and to dangerous Innovations—Liberals in relation to the Progress of Knowledge, and of Social Improvement—The King and the Ministers—Union necessary to counteract the incendiary and Revolutionary Factions. London: Printed for Longman, Rees, Orme, Brown, and Green.

SIR WALTER SCOTT'S LIFE OF BONAAPARTE, AND HISTORY OF THE FRENCH REVOLUTION.

9 vols. 8vo. boards, new edition, published at 4s. 14s. 6d. reduced to 3s.
The eminent publishers of this distinguished work having been induced to accept an offer made them for the purchase of its unsold stock, it is, in consequence, become the sole property of J. Dowling, Bookseller, Strand Street, who, desirous of rendering it more easily accessible to all classes, particularly those to whom the original price may hitherto have proved an objection, as well as to a numerous class of new readers, excited to inquiry by the late extraordinary events in France, and by the threatening aspect of the times, has resolved on offering it for a limited period at the above extraordinary reduction.

PLATONIS OPERA OMNIA; recensuit

Commentariis Reholique Illustravit IMMANUEL BEKKERUS. Accedunt Vitaeque Heindorf, Wyttenbach, Ast, Buttmann, Gottleber, Finsleben, Serrani, Routh, Stallbaum, Nitzsch, Heusde, Fischer, Boeckh, Lange, Nurnberger, Stutzmann, F. A. Wolf, aliorumque Annotationes textuali subjectae. Verio Latinae, et Italicae Lexicon Vocum Platoniarum.
This beautiful edition has received the highest encomiums from the late Professor Cree, and many other eminent British and Continental Scholars, and is the only Variorum one hitherto published: it contains the whole of the Greek Text, revised and amended from Manuscripts now first collated or used in any edition of Plato; the Latin Translation of Ficinus; the Greek Scholia; the Annotations either entire or select, of the different Commentators on the Text of Plato, or the works attributed to him; a Reprint of the Lexicon Platonium of Firmus, as edited by Hubnken; the whole preceded by Fischer's Literary Notice of the Life and Writings of Plato. Bekker's Text and Scholia are used, and such typographical errors are corrected, as had escaped that editor's vigilance.
London: Printed for James Duncan, Paternoster Row; Parker, Oxford; and Deighton, Cambridge.

THE HISTORY OF CHEMISTRY.

The National Library, No. III.
Beautifully printed in small 8vo. with Portrait of Dr. Black.

Secrets in every Mansion, 2d edition, 5 vols. 11. 10s.

Weird Woman. By Mr. Coates. 4 vols. 11. 4s.

Sailor Boy. By Rosalia St. Clair. 4 vols. 11. 4s.

A POPULAR TREATISE ON GLANDERS AND FARCY.

By RICHARD VINES, Veterinary Surgeon, Teacher of Anatomy and Physiology, at the Royal Veterinary College.
Containing a new and ample account of Glanders and Farcy, hitherto but imperfectly understood. Descriptive of its various forms and appearances; whether following other diseases or occurring independent of them—the causes by which they are produced, and the current opinions, prevailing errors, &c. existing among Practitioners, Authors, and Lecturers. Including also an account of those Diseases which are liable to run into Glanders, and Farcy—as Strangles, Cold, Inflammation of the Lungs, Grease, Dropsy, Injuries, &c. with the best and most rational methods of prevention and cure.
The plan of treatment and cure recommended for Glanders and Farcy is both economical and effectual; and the medicine such as can be easily administered; with respect to the result, its astonishing success has been the chief inducement of the author's offering it to the profession and the public.
Published by Longman and Co. with elegantly coloured Copper-plates, price 12s. 8vo.

FOUR YEARS IN THE WEST INDIES,

in 1826, 1827, 1828, and 1829.

THE FAMILY CLASSICAL LIBRARY,

No. 11, containing Tacitus, translated by ARTHUR MURPHY, Esq.
Cicero remarks, that not to know what has been transacted in former times, is to continue always a child; and the learned Dr. Parr says, "If you desire your son, though no great scholar, to read and recite, it is your duty to place in his hands the best translations of the best classical authors."
To those, therefore, who are desirous of obtaining a knowledge of the most esteemed authors of Greece and Rome, but possess not the means or leisure for pursuing a regular course of study, the present undertaking must prove a valuable acquisition.
The preceding Numbers comprise Demosthenes, Aeschylus, Xenophon, Herodotus, Virgil, Pindar, Anacreon, &c. &c.
Henry Colburn and Richard Bentley, New Burlington Street.

RANULPH DE ROHAIS; a Romance of the Twelfth Century.

The characters in these volumes are individualised and brought out with no ordinary degree of skill. We heartily commend them, as possessing considerable interest and varied talent, very beautifully written, and full of pictures of the good old days of love and heroism."—Edinburgh Literary Gazette.
London: William Kidd, 6, Old Bond Street.

THE LITERARY SOUVENIR.

Edited by ALARIC A. WATTS.

The unrivalled beauty of this Series of Volumes has been universally acknowledged. It comprises many of the most exquisite Specimens of fine Engraving which modern times have produced.

Large Paper Sets.

A very few complete Sets of the "Literary Souvenir," in crown 8vo. (from its commencement in 1825 to 1830, inclusive), with Proofs of the Plates on India paper (originally selected by the Editor), may still be purchased, price 11s. 6d. If separately, 1s. 4d. each, with the exception of the Volume for 1829, the price of which is 8s.

Small Paper Sets.

A few copies of the small paper impressions may be had in seven volumes, price 4s. 3d. The price of the Volume for 1829, if purchased separately, is 1s. 2d. of the rest, 12s. each. As two of these volumes are already out of print, and are not likely ever to be reprinted, those persons who wish to complete their sets of the Work, are recommended to do so without delay.

Sets of Proofs.

Table listing sets of proofs for various years (1825-1830) and their prices. Includes items like 'A complete Set of Proofs (imperial 4to.) on India Paper, of Illustrations of the "Literary Souvenir." 10 10 0'.

In 8vo. with a Map, 12s.

No. 721.—AMERICAN EDITION.

SATURDAY, NOVEMBER 13, 1830.

REVIEW OF NEW BOOKS.

The Literary Correspondence of John Pinkerton, Esq. Now first printed from the originals, in the possession of Dawson Turner, Esq., M.A. F.R.S. 2 vols. 8vo. London, 1830. Colburn and Bentley.

THIS work must be highly pleasing to the lovers of literary and antiquarian gossip; for it is full of chit-chat upon a number of interesting topics; and, besides being most agreeable, from the desultory nature of its inquiries, is in many respects valuable, not only from the character of its information, but also of those whose opinions it unfolds. Among these, Horace Walpole, Lord Buchan, Lord Hailes, Dr. Percy (the bishop of Dromore), Gibbon, Dr. Thorkelin, Malcom Laing, Sir John Sinclair, Dr. Gillies, Mr. Douce, Sir Joseph Banks, Dr. Beattie, and other distinguished persons, are very prominent; and though some of the topics lead to no decisive result, there is still a great quantity of curious intelligence sprinkled over almost every page in these volumes. Such being the general tone of the Correspondence, we might make extracts from it to a considerable extent, with the certainty of gratifying every literary mind; but, at any rate, in the first instance, we must be content with a limited selection.

Pinkerton was a man of extraordinary powers, and of extensive attainments. Had he added good conduct, temper, and sound principles, to his natural and acquired talents, he might have been almost the Scott of his age and country. But he wanted these; and, unfortunately, with all his abilities, became an object of commiseration instead of admiration.

"The life of Mr. Pinkerton (says the editor) was so entirely and exclusively that of a literary man, so utterly unmarked by any other occurrences than those arising from his publications, that little is to be added on this subject to the information contained in the following letters. Pinkerton was born on the 17th of February, 1758, at Edinburgh, where his father was a merchant. The only school education he received was for six years at Lanark, under the care of a Mr. Thomson, who married the sister of the poet of that name. At an early age he was articled to Mr. Aytoun, a writer at Edinburgh; but, his father dying just at the expiration of his clerkship, he determined, in an evil hour, to abandon the law, and to enter into life as an 'author by profession.' With this view he fixed his residence in London, and steadily pursued his purpose, first as a diligent inquirer into the ancient poetry of his country, and then successively as a numismatist, an historian, a geographer, and a geologist; occasionally indulging himself with excursions into various departments of antiquity. His writings, arising out of these diversified branches of inquiry, and his eccentric, but very clever *Letters on Literature*, under the fictitious name of Robert Heron, are mentioned in his correspondence. He married a lady of great respectability; but the irregularities of his conduct

diminished the comfort of his union, and tended greatly to cause him to lose his rank in society. In the latter part of his life he removed for a short period to Edinburgh, and on two several occasions resided for some years at Paris, where he died on the 10th of May, 1826."

The *Letters on Literature* were not published "till the year 1783: it had been well for Mr. Pinkerton's reputation had they never been published at all. In a copy now before me," continues Mr. Turner, "lately the property of one of our most eminent critics, Mr. Park, I read the following very just quotation, in his handwriting, 'multa venustè, multa tenuiter, multa cum bile.' Mr. Pinkerton himself, in his *Walpoliana*, p. 78, admits that Heron's Letters was 'a book written in early youth, and contained many juvenile crude ideas, long since abandoned by its author.' Would that the crudeness of many of the ideas were the worst that was to be said of it! but we shall find, in the course of this correspondence, far heavier and not less just complaints. The name of Heron here assumed by Mr. Pinkerton, was that of his mother."

Of the letters, one of the most remarkable, to which we consequently give the first place, is the annexed, with some striking traits of the character of Oliver Cromwell—

"The following anecdotes concerning Oliver Cromwell, I learned in conversation, many years ago, from Mr. James Anderson, who was long the manager of Stockwell Street sugar-house in Glasgow, who was a man of veracity, and who died about thirty years ago, at a very advanced age. He said that he had them from Mr. Danziel, sen., a merchant in the High Street of Glasgow, who died in the beginning of this century; and that his friend Danziel's account was confirmed to him by many concurring testimonies. A short time before the battle of Dunbar, as Cromwell was reviewing the ground, accompanied by a few cavalry, a soldier of the Scottish army, prompted by his own zeal, concealed himself behind a wall which enclosed a field, and fired his musket at Cromwell. The ball did not take effect, but went near him. The cavalry seemed to be alarmed; but Cromwell, who was going at a round trot, never altered his pace nor tightened his rein; and only, looking over his shoulder to the place from whence the shot came, called out—

'You lubberly rascal, were one of my men to miss such a mark, he should certainly be tied up to the halberts!' When Cromwell entered Glasgow, said Danziel, at the head of his victorious army, I was standing in the street called Bell's Wynd, at the end of it which joins the High Street, with a good many young lads and a shoemaker, who was well known to us all by his drollery and by the name of London Willie. As we were silently admiring the order of the troops, Cromwell happened to cast his eye upon us, and cried out—'Hah, Willie! come hither, Willie!' If we were surprised at this, we were more surprised to see Willie retire into Bell's Wynd, and one of Cromwell's attendants go after him, who brought him to

the general, at whose stirrup he not only walked, but went in with him to his lodging for some minutes. My companions and I waited till Willie came out, anxious to know why one of his station was taken notice of by the famous Cromwell. Willie soon satisfied our curiosity, by informing us, that his father had been a footman to James VI., and accompanied him to London at the union of the crowns: that he himself was bred a shoemaker, and wrought in a lane through which Cromwell often passed to a school, as he supposed: that Cromwell used to stop at the workshop to get his ball and playthings mended, and to be amused with his jokes and Scotch pronunciation: that they had not met from that time till now: that he had retired into Bell's Wynd, lest it should be remembered that his father had belonged to the royal family: that he had no reason, however, to be afraid—for the general had only put him in mind of his boyish tricks, had spoken to him in the kindest manner, and had given him some money to drink his health, which he was going to do with all expedition. Next Sunday, said Danziel, Cromwell went to the Inner Church in Glasgow, St. Mungo's, and placed himself with his attendants in the king's seat, which was always unoccupied, except by strangers. The minister of the church was Mr. Durham, the author of some religious books, which are still very popular. He was a great Presbyterian, and as great an enemy to Cromwell; because he thought, and early said, that Cromwell and his friends would be forced, by the convulsion of parties, to erect an absolute government, the very evil they meant to remedy. The text was taken from Jeremiah; and the commentary upon it, by allusions, was an invective against Cromwell and his friends, under Scriptural language and history: During this satire they saw a young man, one of Cromwell's attendants, step to the back of his chair, and, with an angry face, whisper something to him, which, after some words, was answered by a frown; and the young man retired behind the chair, seemingly much disconcerted. The cause of this was unknown to the congregation. It was supposed to be owing to some intelligence of importance which had been just then received; but it was afterwards known, and generally known, that the following words had passed between them:—'Shall I shoot the fellow?' 'What fellow?' 'The parson.' 'What parson?' 'That parson.' 'Begone, sir: he is one fool, and you are another!' Danziel added, that Cromwell sent for Mr. Durham on the very next morning, and asked him, why he was such an enemy to him and his friends—declared that they were not enemies to Mr. Durham—drank his health in a glass of wine, and afterwards, it was said, prayed with him for the guidance of the Lord in all their doings. When Charles I. was in Scotland in 1633, a subscription was set on foot for building a new hall and library to the University of Glasgow; and the king's name appears at the head of the subscribers, for two hundred

pounds sterling. The king, however, was not able, I suppose, to pay that sum; and he contracted some debts at Perth, which are unpaid at this moment. When Cromwell arrived at the fulness of his power, he sent two hundred pounds to the University, and there is below the king's subscription, '*Solvit Dominus Protector.*' One of the magistrates of Perth, hearing of this, thought it entitled him to ask payment of the sum which the king had borrowed when in that town. But Cromwell did not listen to his petition; and, when it was urged again and again, said with vehemence, 'Have done, sir, I am not the heir of Charles Stuart!' To which the other replied with equal warmth, 'I wot well, then, you are his intromitter—shall I say a vicious intromitter?' In the law of Scotland, *intromitter* signifies one who takes upon himself to manage the estate of a deceased person, and who, by that act, renders himself liable for all his debts; and *vicious* is, when it is done without any right, and therefore is a vice or iniquity. Cromwell, though absolute, did not even chide him for this freedom, but declared, that he would never pay that money; 'because,' said he, 'I will do things for a learned society, which I will not do for other societies, and I would have you know this! Such facts mark the temper and genius of celebrated men more distinctly, perhaps, than the laboured character of many elegant historians; and the above I have heard, with some variations, from many persons as well as from Mr. James Anderson, of Stockwell Street sugar-house in Glasgow, who was not in the least degree connected with any of my kindred.'

... audience is delighted... number of his letters... separated, and... *dicta* and... chief ground of my... proceeded from having taken notice that an English audience is apt to be struck with some familiar sound, though there is nothing ridiculous in the passage, and fall into a foolish laugh, that often proves fatal to the author. Such was my objection to *hot-cockles*. You have indeed convinced me that I did not enough attend to your piece, as a *farce*; and, you must excuse me, my regard for you and your wit made me consider it rather as a short comedy. Very probably, too, I have retained the pedantic impressions of the French, and demanded more observance of their rules than is necessary or just: yet I myself have often condemned their too delicate rigour. Nay, I have wished that *farce* and speaking harlequins were more encouraged; in order to leave open a wider field of invention to writers for the stage. Of late I have amply had my wish: Mr. O'Keefe has brought our audiences to bear with every extravagance; and, were there not such irresistible humour in his utmost daring, it would be impossible to deny that he has passed even beyond the limits of nonsense. But I confine this approbation to his *Agreeable Surprise*. In his other pieces there is much more untempered nonsense than humour. Even that favourite performance, I wondered that Mr. Colman dared to produce. Your remark, that a piece full of marked characters would be void of nature, is most just. This is so strongly my opinion, that I thought it a great fault in Miss Burney's *Cecilia*, though it has a thousand other beauties, that she has laboured far too much to make all her personages talk always in character; whereas, in the present

refined or depraved state of human nature, most people endeavour to conceal their real character, not to display it. A professional man, as a pedantic fellow of a college, or a seaman, has a characteristic dialect; but that is very different from continually *letting out* his ruling passion."

Lyrical Writing.—"You are so obliging as to offer to accept a song of mine, if I have one by me. Dear sir, I have no more talent for writing a song than for writing an ode like Dryden's or Gray's. It is a talent *per se*, and given, like every other branch of genius, by nature alone. Poor Shenstone was labouring through his whole life to write a perfect song, and, in my opinion at least, never succeeded; not better than Pope did in a St. Cecilia ode. I doubt whether we have not gone a long, long way beyond the possibility of writing a good song. All the words in the language have been so often employed on simple images (without which a song cannot be good), and such reams of bad verses have been produced in that kind, that I question whether true simplicity itself could please now. At least we are not likely to have any such thing. Our present choir of poetic virgins write in the other extreme. They colour their compositions so highly with choice and dainty phrases, that their own dresses are not more fantastic and romantic. Their nightingales make as many divisions as Italian singers. But this is wandering from the subject; and, while I only meant to tell you what I could not do myself, I am telling you what others do ill. I will yet hazard one other opinion, though relative to composition in general. There are two periods favourable to poets: a rude age, when a genius may hazard anything, and when nothing has been forestalled; the other is, when, after ages of barbarism and in correction, a master or two produces models formed by purity and taste: Virgil, Horace, Boileau, Corneille, Racine, Pope, exploded the licentiousness that reigned before them. What happened? Nobody dared to write in contradiction to the severity established; and very few had abilities to rival their masters. Insuperbity ensues, novelty is dangerous, and bombast usurps the throne which had been debased by a race of *fainéans*."

Literary Mcn.—"With regard to the bookseller who has taken the pains of collecting my writings for an edition (amongst which I do not doubt he will generously bestow on me many that I did not *write*, according to the liberal practice of such compilers), and who also intends to write my life, to which (as I never did any thing worthy of the notice of the public, he must likewise be a volunteer contributor), it would be vain for me to endeavour to prevent such a design. Whoever has been so unadvised as to throw himself on the public, must pay such a tax in a pamphlet or magazine when he dies; but, happily, the insects that prey on carrion are still more short-lived than the carcasses were, from which they draw their nutriment. Those momentary abortions live but a day, and are thrust aside by like embryos. Literary characters, when not illustrious, are known only to a few literary men; and, amidst the world of books, few readers can come to my share. Printing, that secures existence (in libraries) to indifferent authors of any bulk, is like those cases of Egyptian mummies which in catacombs preserve bodies of one knows not whom, and which are scribbled over with characters that nobody attempts to read, till nobody understands the language in which they were written. As for the

shades that distinguish the degrees of mediocrity, they are not worth discrimination; and he must be very modest, or easily satisfied, who can be content to glimmer for an instant a little more than his brethren glow-worms."

The Olio. Vol. V., from January to July, 1830. J. Shackell.

The same, monthly parts for August, September, October, and November.

This periodical, to which we have in former *Literary Gazettes* referred with great praise, continues to support, or rather, we should say, to elevate, its character, as a truly acceptable "museum of entertainment." Tales, legends, anecdotes, poetry, all kinds of fugitive literature, gathered with judgment from works of interest—original papers, spirited embellishments in wood, a new and neat type, and other recommendations, contribute to render the last Vol. (V.) and following No. still more deserving of success. Of its class, we know no publication which can be taken up with greater certainty of affording amusement to the desultory reader.

The Landscape Annual. Edited by T. Roscoe. London, 1831. Jennings and Co.

There are few of the *Annuals* which are greater favourites than the one to which we now advise the public to direct its regards. To each exquisite view is affixed a few pages, which contain some historical records of the place in question, or a poetical quotation which has associated its beauty with song;—and both in romantic legend, and descriptive poetry, the Italian cities are very rich. The editor had little more to do than to select material, and this he has done with much industry and taste. We have made no quotation, as the matter contained rather pleasantly refreshes the memory, than offers original composition.

The Comic Offering; or, Ladies' Mixture of Literary Mirth for 1831. Edited by Louisa Henrietta Sheridan. 12mo. pp. 351. London. Smith, Elder, and Co.

YOUNG, fair, susceptible (of merriment), &c. &c. &c. &c., as the *Editress* insinuates she is, in her gentle preface; are we worse than stony-hearted critics, are we Turks (*aside*—who manage women tolerably well for both sexes after all), or Infidels, or Fellatahs, or Cherokees, or Foulahs, to say a word against her? Yet a regular comic woman, off the stage, in literature, is a novelty which (query who?) might provoke an inquisitive mind to all the splendours of metaphysical investigation. Forbid it, gallantry! and the very stoical fashion which we have of saying little or nothing where little or nothing need be said.

Mrs. or Miss (we know not) L. H. Sheridan has written, and pretty nearly designed, all this volume herself, in a shorter time than she anticipated; and as she says peculiar circumstances have attended her labours, which have precluded the variety she looks for in another year, it is but candid to admit the apology, and allow the *Offering's* claims "of a LIVELY NATURE, exclusively intended for the boudoir, drawing-room, and ladies' library." (pref. p. v.) Beyond this we cannot go. There are nearly seventy embellishments, and not far from as many pieces in prose and verse. To say that either had surprised us by their talent or convulsed us by their wit, would be—not to deceive ourselves; and we will truly give the best specimens we can select of both, in honour of the female *artista-literate* who has been funny enough to enter upon the path after Com-Ann-Hood.

"OH, NANNY, WILT THOU GANG WI' ME?"

MR. NOBODY AMUSING HIMSELF.

LARGE DEVELOPMENT OF THE MUSICAL ORGANS,
A Gall-ic Air.

UPSET BY A SQUALL.

"Cease, rude Boreas.
A lady being asked to sing,
At first declined;
But 'tis a customary thing
To change one's mind:
So fresh entreaties, winning wiles,
Again being tried,
The lady, with her sweetest smiles,
At once complied.
After a 'hem!' and little cough
In proper form,
At length she in full cry set off,
And sung 'The Storm.'
But 'twas a most unhappy choice
For her to make;
She had a shrill and piercing voice,
'Tween scream and shake!
One whispers—'Where is all the thunder
That she should bawl?
Does she call this 'The Storm,' I wonder?
'Tis but a Squall!"

"Taking Aim badly.
A lady, when asked 'why from India so often
Girls single return, though they've beauty and wit'
Replied, 'Pray remember (your satire to soften)
'Tis not at all times that a Miss makes a Hit!"

"An odd County.
To Hampshire a young doctor went,
To realise a store of wealth;
But Hampshire no assistance lent,
Its climate is so good for health!
He left the place in half a year—
'Twas useless there his time to waste;
His father asked in tone severe,
What brought him home in such great haste?
The son replied, with lengthened face,
'Dear Sir, I've been obliged to fly
From such a healthy horrid place,
Where I could neither live—nor die!"

A French Gentleman's Letter to an English Friend in London.

"Ah my dear friend, — I can not feel the plaisir I express to come to your country charming, for you see. I shall have the happiness to you embrace in some days from here; but it is necessary that I myself may rest before to set out. We are arrive at Southampton before yesterday at one hour of the afternoon, and we are debarked very nice. I am myself amused yesterday to look by the window which gives in the street. I see a crowd enormous of persons. I ask at the servant, 'What for all that?' 'It's a man that is beside himself, sir.' 'Oh yes!' I say, but I not understand; and I take my dictionary: I find '*beside, à côté de,*' and '*himself*' I know is '*lui-même.*' That make together '*à côté de lui-même!*' Oh not understand at all. I ask pretty girl of the house, 'What for crowd?' She say, 'Only man who is in his cups, sir!' 'Oh yes!' I say, but I not understand better. Search in the dictionary again: '*A man in his cups, un homme dans ses tasses!*' Well, I can not understand. Call pretty girl again — 'My dear miss, is it porcelain merchant fall among his cups?' She go away in clatters of laugh; very unpolite; and I hear her to say at the boy, 'John, that Frenchman seem a great spoon.' Boy replies, 'He is next to a madman!' Is it possible that the pretty person call me a *ouillères*? I not understand; so I look at the dictionary, and find *spoon, ouillères,* very right. How it is foolish

for call one person spoon! I send for the master of the hotel, and desire I may be put far from the madman who is next to me. The man say there was no madman at all. Then I ring the bell, and the boy come (who is very old and stupid; he tell me he has fifty-nine years). I ask to him if he tell pretty person there was madman in the next room to me? He say, 'Oh no, sir; I never said nothing of the kind.' I say, 'You speak bad English with two negatives; but I hear you say it when pretty person call me spoon.' Then he have shame, and his face redded all over, and he beg my pardon, and not mean that what he say. I never believe you when at Paris, you tell me that the Englishwomen get on much before our women: but now I agree quite with you; I know you laughing at your countrywomen for take such long steps! My faith! I never saw such a mode to walk; they take steps long like the man! Very pretty women! but not equal to ours! White skins, and the tint fresh, but they have no mouths nor no eyes. Our women have lips like rose-buttons, and eyes of lightning: the English have mouth wide like the toads, and their eyes are like *dreaming sheeps*, as one of our very talented writers say '*mouton qui rêve*.' It is excellent, that. I am not perceived so many English ladies *tipsy* as I expect: our General Pilon say they all drink brandy: this I have not seen very much. I was very surprise to see the people's hair of any colour but red, because all our travellers say there is no other hair seen, except red or white! But I come here, filled with candour, and I say I have seen some people whose hair was not red. You tell me often at Paris that we have no music in France. My dear friend, how you are deceived yourself! Our music is the finest in the world, and the German come after: you other English have no music; and if you had some, you have no language to sing with. It is necessary that you may avow your language is not useful for the purpose ordinary of the world. Your window of shop are all filled at French names—'*des gros de Naples*,' '*des gros des Indes*,' '*des gros d'été*,' &c. If English lady go for demand, Shew me, if you please, sir, some '*fats of Naples*,' some '*fats of India*,' and some '*fats of summer*,' the linendraper not understand at all. Then the colours different at the silks. People say, '*puce évanouie*,' '*œil de l'empereur*,' '*flammes d'enfer*,' '*feu de l'opéra*;' but you never hear lady say, I go for have gown made of '*fainting fleas*,' '*emperors' eyes*,' or '*opera fires*,' or of the '*flames*' of a place which you tell me once for say never to ears polite! You also like very much our musique in England: the street-organs tell you best the taste of the people, and I hear them play always, '*Le petit tambour*,' '*Oh, gardez-vous, bergerette*,' '*Dormez, mes chères amours*,' and twenty little French airs, of which we are fatigued there is a long time. I go this morning for make visit to the house of a very nice family. When I am there some time, I demand of the young ladies, what for they not go out? One reply, 'Thank you, sir, we are always oblige for stay at home, because papa enjoy such very bad health.' I say, 'Oh yes! How do you do your papa this morning, misses?' 'He is much worse, I am oblige to you, sir.' I bid them good bye, and think in myself how the English are odd to enjoy bad health, and the young ladies much obliged to me because their papa was much worse! *Chacun à son goût*, as we say. In my road to come home, I see a board on a gate, and I stopped myself for read him. He was for say, any persons beating carpets, playing cricket and such like diver-

sions there, should be persecuted. My faith! you other English are so droll to find any diversion in beating carpets! Yet it is quite as amusing as to play the cricket, to beat one little ball with big stick, then run about like madmen, then throw away big stick, and get great knock upon your face or legs. And then at cards again! What stupid game whist. Play for amuse people, but may not laugh any! Ah! how the English are droll! I have nothing of more for say to you at present; but I am soon seeing you, when I do assure you of the eternal regard and everlasting affection of your much attached friend."

Maxwell: a Story of the Middle Ranks. By the Author of "Sayings and Doings." 3 vols. 12mo. London, 1830. Colburn and Bentley.

THERE is nothing so strange as not to happen. The ordinary course of life is daily broken in upon by extraordinary events; and that memory must have little to record, which cannot remember something that would have passed all belief, unless that belief were our own. What a common phrase is it in conversation, "Well, if I had read this in a book, I should not have believed it!" And yet a novelist might rack his invention to go beyond the singular occurrences of actual existence. It is on a chain of improbabilities that continually take place—on coincidences which, however wonderful, we know to have happened—in short, on the extraordinary of ordinary life, that Mr. Hook has founded his story. The desire of aggrandisement is at once its interest and its moral. It is a true and useful picture which he draws of a man whose profession secures him competence, and his conduct respectability; but who sacrifices his daughter's happiness to ambition, and whose honourable exertions for independence, gradually deteriorated by a passion for wealth, the honest and valuable member of society is led on to join in the most destructive schemes,—those gambling and ruinous plans laid by avarice, and excited by speculation. The story is told in the author's own lively and pleasant manner,—touches of keen sarcasm, vivid insights into human nature, and—if we may apply such a phrase—a chemical analysis of motives. The great difficulty in pronouncing an opinion on a novel, is, to allow for the endless variety of tastes in the many different readers it has to please. Now, in the volumes before us, one will like the excitement of the story; another will enjoy the sketches of character; a third will appreciate its keen vein of satire; and, it may be, that some may prefer the very parts which others disapprove. We like Mr. Hook's wit; it is as true in its application as it is keen in its perception. But we sometimes dislike his humour, when it degenerates into caricature. Ridicule is the test of persons, not of things. A man, in giving a dinner, may be absurd, from his arrogance or his affectation; but there is nothing so very absurd in his living in a particular street, giving hashed calf's head, or having small cut glasses, in some of which are pickles, and in others preserves. These local ridicules were only relished in the first instance, from the oddness of their being brought at all before the public. The quarry was originally small, and it is now exhausted. The boundaries of civilised life and Oxford Street, is an old joke. "Something too much of this." Mr. Hook's talents are infinitely above this employment. It is a clever artist wasting his skill on a common coloured print. Major Overall is a caricature; so is Moss: his peculiarities of speech scarcely

tell on paper. The odd manner which, in speaking, would be aided by voice and gesture, and give effect to his droll terminations of words—his ginnums, for gin; Neddums, for Ned, &c., must necessarily be lost on the reader. He makes some speeches at first, but falls off at last; so difficult is it to embody a mere oddity in writing. On the contrary, Apperton strikes us as a masterly sketch, because it is true to nature. The calm, commonplace temper; the routine of business habits; the narrow-mindedness attendant upon want of feeling and want of information; the small economy, together with the spirit of speculation; the saving sixpence, and risking thousands, is caught to the very life. Maxwell himself is admirable; so is his daughter—an exquisitely finished and womanly portrait. There is an occasional carelessness of language, and one or two rather coarse jokes; but these are the exceptions, not the rule. We shall endeavour to form a mosaic of our quotations, collecting specimens of what strikes us as characteristic and original. A misanthrope makes the following excuse for his satire:—

"And you abusing every body I happened to mention," said Maxwell. "That's not my fault, Maxwell," said Moss; "the blame lies upon those who deserve the censure; however, I believe I am much quieter than I used to be. I find the world is past improvement, and it is little use trying to mend it."

The heroine's projected marriage is next introduced.

"Yes," said Maxwell, "I have hopes of happiness from that marriage, if we can bring it about. Apperton is rich and indefatigable in business, with excellent city connexions, and a good property." "Kate doesn't care a button for him," said Moss, pushing away snuff-box, wine-glass, plate, and all. "How d'ye mean?" said Maxwell; "she receives his addresses, is civil and kind to him, and has gone so far as to tell me that she has no objection to him." "Pleasant state of affection upon which two people are to marry."

Our misanthrope concludes with the pleasant conviction that—

"I know enough of the world to know that the more pains a man takes to please, the more he gets abused."

These slight touches of satire seem to us peculiarly happy. Speaking of professional people, our author makes an excellent remark.

"It seems pretty clear that none of our fellow-creatures enjoy life more than the successful member of one of the learned professions. There is, it is true, constant toil: but there are constant excitement, activity, and enthusiasm; at least, where there is not enthusiasm in a profession, success will never come; and, as to the affairs of the world in general, the divine, the lawyer, and the medical man, are more conversant and mixed up with them than any other human beings—cabinet ministers themselves not excepted."

The next passage, though in a graver tone, is too true to be omitted.

"Enjoyment, indeed, is altogether comparative; and, without some variation of the scene, it is impossible properly to appreciate the value of comfort and splendour. To enjoy life with all its acuteness,—to be deeply moved by the sorrows of others, or highly elevated by our own happiness, it is necessary to mingle with all classes, to see such scenes as naturally fall under the observation of professional men, to hear such tales as meet their ears, and, in short, to participate more or less in the various

pains and pleasures, which Providence, in its wisdom, has assigned as the lot of those who are forced, as it is colloquially called, 'to fight their way through the world.' There is more healthful exercise for the mind in the uneven paths of middling life, than there is on the macadamised road of fortune. Were the year all summer, how tiresome would be the green leaves, and the bright sunshine!—as, indeed, those will admit, who have lived in climates where vegetation is always at work."

We must give the conversation between Miss Maxwell and her intended, respecting the place where the honey-moon is to be spent.

"Where shall it be then?" said Katherine; "you have only to fix, and I shall be happy to accede to your proposition." "No, by no means," replied the lover; "you must decide, and I shall obey." This was with reference to the watering-place to which they were to retire to pass the honey-moon—since watering-place, by the influence of Moss, Maxwell had announced it to be. "What say you to Hastings?" said Miss Maxwell. "Hastings?" said Apperton, snarlingly. "The country about it," said Kate, "is pretty, the situation sheltered to suit my father; there are many agreeable objects in the neighbourhood, and the spot itself is historically interesting." "So it is," said Apperton, "and I dare say it is a nice place enough; but they gave some friends of mine, last year, an infernal bad dinner at an inn there—thirteen shillings a bottle for claret—and the fish not over good." "Well then," said Kate, "the Isle of Wight—a perfect paradise?" "Yes, the pictures I have seen of that are very pretty," said Apperton; "but then there's all the trouble of the sea, and additional expense and uncertainty." "Well then, Brighton?" said the nymph. "Why, yes, Brighton, I think is best," replied the swain. "It's nearest to town." "Not so secluded as it might be," sighed the bride elect. "Not quite secluded," said Apperton, "but sufficiently so. If you like retirement, any of the small streets away from the sea would answer; and the rents, I suppose, are much lower in those parts of the town, than on the cliffs." "Ah!" sighed Kate again. "They tell me the beef isn't good at Brighton," continued the stockbroker; "but I dare say we shall be very happy: the mutton, my friend Hopkins says, is famous, and fish I know is uncommon cheap; and besides there are stages to town almost every hour, so that one can run up to business when it gets dull."

A delay takes place: we quote the dialogue as a specimen of an ardent lover.

"When Apperton returned from the city, it was held to be a matter of delicacy, and even difficulty, to announce to him the change which had been made in the arrangements for the nuptials; but the elder Maxwell undertook to negotiate the matter, and having, by a circuitous route, mentioned the subject of Edward's much wished-for marriage with his cousin, came at last to the point, and hoped that Apperton would not feel annoyed at their having altered and postponed the day without waiting to consult him, explaining, at the same time, the absolute necessity that existed for the presence of the reverend vicar of Fudley cum Pipes at his living in the intermediate time. Kate entered the room during the discussion, and candid, or perhaps careless as she was upon the points of etiquette connected with the approaching ceremony, even she thought it necessary to put on an air of something like pique and dissatisfaction at the alteration. "Then, when is it to be?" said Apperton. "We now propose to-morrow three weeks," said Maxwell. "Let me see—Tuesday—Thursday—Friday,—

that will be the 14th," said Apperton. "Exactly," said Maxwell. "Twenty-two days," said Katherine, with a semi-sigh. A pause ensued. The father and daughter were alarmed; they thought they had wounded the delicacy, and hurt the feelings of the ardent lover. "The 14th?" repeated Apperton,—"couldn't we put it off till the 21st?—it would be more convenient to me, because of the 15th, you see, being the day for the account." They were entirely relieved from all their embarrassments, and the 21st was fixed."

We have not room for a most amusing dissertation on dinners, but we must quote the winding-up pun.

"Life in London would be a dull work unless illustrated with plates."

The ensuing matrimonial sketch is true "to the life."

"To prove the badness of the weather, it is only necessary to say, that, as the shining bridegroom handed his amiable Kitty into the carriage at her father's door, he observed, at that crisis of affairs, 'that he thought they should have a wretched journey of it to Brighton.' Wretched!—Any journey with one's bride wretched! What has rain or cold to do with the warmth and sunshine of the heart? Siberia, with the one loved being, would be as blooming, as cheering, and as fertile, as Italy; a dungeon so accompanied, more delightful than the brightest palace of the east without her; but not to Mr. Apperton, who, like hackney-coach horses, had his work and recreation limited by the bills of mortality; who had not been twenty miles from the metropolis in as many years; who believed Richmond Hill one of the highest mountains in Europe, and considered Severndroog Castle, on Shooter's Hill, a perfectly inaccessible fortress. It is true, he had been to Margate, on the salt sea, in a steam-boat; but, the moment he embarked at the Tower stairs, he sat himself down in a sort of coffee-house box in the cabin, with the daily newspaper in his pocket, and never left his corner till he was bumped ashore on Jarvis's jetty. A journey of fifty miles to Apperton formed such a large amount on the debit side of his day's happiness, that to have undertaken it, with all the accompaniments of wind and rain, was to him a matter of sufficient importance to make him forget, in the contemplation of it, that he had to enjoy the society of an amiable, accomplished young woman, during its progress; and that too with all the rights, privileges, immunities, and pre-eminences of a husband; forgetting, in short, that all her accomplishments, all her amiability, with herself into the bargain, were decidedly his own. But so it was—the weather had put him out of sorts, and the marriage procession, consisting of two carriages, had nearly reached St. James's church, where the indissoluble knot was to be tied, before he recovered his serenity, or rubbed quite dry and clean four or five of his new gilt buttons, which had been moistened by that indescribable humidity for which the atmosphere of London, at certain periods of the year, is celebrated."

We shall conclude with a *droll* summary of the merits of divers watering-places of fashionable resort.

"Tunbridge Wells is like Cranbourn Alley carried to Clapham Common; Bognor, with its pebble-stone rocks, dulness below misery; Hastings, a row of houses in a five's-court; Worthing, a bad imitation of its neighbour; Bath, a tea-kettle, always boiling and steaming; and Cheltenham a cockney edition of Hammersmith."

Is there not either a misprint or mistake in the name of one of the characters, for the Lord Bryanstone of one volume is called Lord Lessingham in the next?

If we except the very admirable tale of *Cousin William*, we think *Maxwell* is by far the best work Mr. Hook has produced; and we have not enjoyed it the less for recognising the originals of some of the characters.

Historical Account of the Navigable Rivers, Canals, and Railways, throughout Great Britain, as a Reference to Nichols, Priestly, and Walker's new Map of Inland Navigation. Derived from original and parliamentary Documents, in the possession of Joseph Priestly, Esq. 4to. pp. 776, with a six-sheet map in case. London, 1830. Longman and Co.

IN speaking of the origin of inland navigation, do we allude to the first period when the bark of trees was moulded into boats, and made the vehicles of transport, of fishing, or of travelling; or, do we restrict ourselves to the period when, by the aid of art, rivers were rendered navigable, and courses of water, under the name of canals, were carried over portions of the main-land? It is evident, that in the elaborate work before us, the text of an equally elaborate map, that the latter is the point from which the author takes his departure; though, like the descent of the earliest nations along the navigable rivers, and their colonisation of their fertile shores, the period at which these important adjuncts to the convenience and profit of commercial nations, were introduced either into China, or India, or Egypt, is involved in much obscurity.

Our enthusiasm, however, in the cause of canals, like their pecuniary value, abates very much when we turn to the consideration of the value and utility and advantages of railways, of the period of their first adoption for the conveyance of goods, "by whom they were originally brought into use, and in what part they obtained their celebrity, are facts alike unknown;" though it appears very probable, that the first workers of mines, not only in Great Britain, but in other countries also, were acquainted with the method of laying a kind of tram for the sledge to run upon, afterwards fitted with wheels, and converted into small waggons, to which we may trace the origin of our present improved mode of constructing them.

A new era was commenced with respect to rail-ways and tram-roads, by the extension of the other branches of mechanical science, and particularly the application of that at once powerful and flexible agent, steam, which gives to engines a motive power of the most fearful energy, which raises up water from the deepest abysses, gives a form to the most refractory and hardest metals, and at the same time will execute the most minute and delicate operations.

Mr. Priestly assigns the credit of being the first to apply the steam-engine to the propelling of loaded waggons on rail-ways to Mr. Treventhich, of Cornwall. A writer in the *Quarterly Review* appears to claim the credit for the unfortunate Symington, who, in 1787, exhibited in Edinburgh the model of a carriage propelled by steam. His scheme was improved upon by Mr. John Blenkinsop, of Middleton, near Leeds; and most of the eminent engineers since that period have turned their attention to the subject.

"The late experiment made with the carriages (says the author) of Messrs. Gurney, Stephenson, Errickson, Braithwaite, and others

celebrated engineers, on the Liverpool and Manchester rail-way, have proved with what speed the distance between different places may be traversed; and the numerous applications to parliament, for acts to legalise the construction of rail-ways in many parts of the country, sufficiently prove the interest with which the subject is taken up; whilst, from the very circumstance of the rapidity with which carriages have been propelled on this railway, it is now probable that, ere long, his majesty's mails will be conveyed on the plan introduced by Mr. Dick."

A carriage, bearing along with it other vehicles, and a considerable number of passengers, traversing in the space of an hour a distance of from twenty-one to thirty miles, was a sight which naturally excited much curiosity and interest. It was immediately inquired how it took place? Whether it would be possible to make these vehicles move on ordinary roads, or only on railways? Whether the same means of transport were susceptible of adaptation in all parts of the country? Or, were there obstacles which opposed themselves to their utility becoming general? These questions have now been pretty satisfactorily answered.

The great obstacle was the weight of the carriage, and the resistance offered by the inequalities of the road: now, the resistance created, and which resulted from this force of inertia and of friction, is in exact proportion to the weight. If we reduce our coaches to the size of ordinary vehicles, we do not leave sufficient power to overcome these obstacles; while, if we give them all the necessary power, their dimensions render them inconvenient, and they are inferior to the ordinary modes of transport, both in point of celerity and economy. To overcome these obstacles, rail-ways were invented; hard and polished surfaces, made of wood or metal, were introduced, on which the wheels of the carriages rolled with an ease and facility as much superior to what is obtained on the turnpike roads, as the facilities presented by these exceeded the bad roads of our forefathers.

In writing the historical account of the navigable rivers, canals, and rail-ways, throughout Great Britain, Mr. Priestly has furnished a very excellent and necessary accompaniment to the splendid map of inland navigation by Messrs. Nichols, Priestly, and Walker. It is difficult to say any thing of a work which contains mere statistical data of the greatest simplicity. The rivers, canals, and rail-ways, are arranged alphabetically, and the details given comprise the period at which they originated, or received the royal assent; the sums expended in their construction, or improvement, and the number and amount of shares; their length, width, and depth; the nature of the country through which they pass; the general articles of conveyance, and the price of tonnage; besides much additional information on many other points of interest to commerce, or connected with the local advantages of the different undertakings.

Indeed, one of the most important objects in a commercial country is the facilitating communication between the most distant points of that country. Dupin considers perfection in the modes of communication as the most essential source of prosperity; and it has been remarked by another author, that by uniting in a more intimate manner the different parts, it tends to give unity, power, and consistency, to the whole. Much as has been said of the labours of oriental nations, or of the toiling in-

habitants of the long banks of the Nile, to improve the inland navigation of their respective countries, in future days Great Britain will be pointed out as containing, previous to the introduction of rail-ways, the most stupendous examples of the efforts of human industry, seconded by commercial capital; and a glance at the map will shew us an island bevelled all over, and united at every point by the most extensive system of inland navigation that ever characterised any country.

We have examined this map with care and attention; and in point of accuracy of details, correctness of execution, and perfection of the whole, it fully answers our expectations of what the able engineers would accomplish. It is with the greatest diffidence, then, that we venture to make a few remarks on such a laboured production; and, in the first place, accurate as it is in its hydrographical features, why should it not have been so in the mountain chains, with whose directions and connexions the former are intimately allied? We do not mean to say that there are any inaccuracies in this map that did not occur in those that preceded it; but this was a fair opportunity to introduce a perfection which has been for some time in general use on the continent. The Cheviot range, for example, is made a single hill; the Pentland range is hardly marked; while Wilson-Town iron-works, which are on a moor, appear to be on a mountain range. There is such a science as geology—a science which in modern times has received too great an impulse from men of intellect, and has contributed too much to assist in the construction of roads, the operations of mining, and all other undertakings connected with the earth, to be entirely neglected. The plan adopted by the authors, of using chemical signs to denote the presence of iron, copper, cobalt, &c. is certainly a very excellent one; but there is much inconsistency in the manner in which their names, or their expressions, are used. If they are meant for references to mineralogical localities, they are altogether insufficient; and if they are used in an economical point of view, they are in very many cases unauthorised. The geological details are meagre in the extreme. The Malvern hills are marked as limestone, when there are only a few hills of limestone to the north-east, and those not connected with the range, which is granitic. Sandstones go by the name of stone, as the stone (new red sandstone) of Ross, and the stone (granite) of Edinburgh. We have also strong evidence of the value of geology as a mere science of nomenclature; in the map before us, rocks which have hardly a character in common, excepting their chemical constitution, are all included under the domination of limestone; while the authors are, we are sure, well aware that the hard limestone of the Avon or the Wye will burn well, or make roads, but is not fit for architectural purposes; and that of Derbyshire will receive an excellent polish; while the limestone of Bath, or Cheltenham, which at Scarborough the authors mark as freestone, is excellently adapted for building, or for lithographic stones. The magnesian limestone of Sunderland evinces equally peculiar properties, unfit for building; it also renders argillaceous or siliceous soils more arid, to which other limestones are as a manure, and, except in some parts of Marsden-rock, incorrectly spelt Marston in the map, it is not generally burnt. Need we remark to those acquainted with the intimate relation of the geological structure of the earth, with its physical aspect and its general appearance, and with the facilities or obstacles presented by that

structure, of what additional value it would have been had the map been geologically coloured after the excellent maps of Smith or of Greenough? With these few exceptions, upon which we do not like to dwell, it is a most splendid chart, and certainly the best hydrographical map which we possess.

Inquiries concerning the Intellectual Powers and the Investigation of Truth. By John Abercrombie, M.D. 8vo. pp. 435. Edinburgh, 1830, Waugh and Innes; Glasgow, M. Ogle; Dublin, Currie and Co.; London, Whittaker and Co.

MYRIADS of materialists deny the existence of the soul, and will not let us believe we have any mind at all. On the other side, one man (Berkeley) is ready to swear to the non-existence of matter—consequently, we can have no body. Reduced, then, to a state without either body or mind, how shall we becomingly applaud and adequately appreciate the philanthropy and philosophy of that man who, in this deplorable hour of need, hastens to our aid, rescues us from non-entity, fairly convinces us we have both, and elates us with the assurance that we are *somebodies*? In these days, when the bulwarks of society are openly assaulted by the avowed atheist, and its foundations are at the same time being sapped by the more insidious approaches of the sceptic—surely he merits the gratitude of his fellow-citizens who repels the advances of the one by demolishing his dogmata, and countermines the other by exposing his subtleties. It is well, once in a way, to have such a writer as Dr. Abercrombie come forward and disperse, by the light of philosophy, the thick darkness of materialism, which, since it cannot be seen through, blinds and bewilders the mental vision, and in which, as none can find their way, all must alike go astray, and wander in error. We quote the following passage, wherein the independent existence of mind is vindicated, and its immortality ably defended and argumentatively asserted:—

"We have, in truth, the same kind of evidence for the existence of mind, that we have for the existence of matter; namely, from its properties—and of the two, the former appears to be the least liable to deception. 'Of all the truths we know,' says Mr. Stewart, 'the existence of mind is the most certain. Even the system of Berkeley concerning the non-existence of matter, is far more conceivable than that nothing but matter exists in the universe.' A similar mode of reasoning may be applied to the modification of materialism more prevalent in modern times, by which mind is considered as a result of organisation, or, in other words, a function of the brain; and upon which has been founded the conclusion, that, like our bodily senses, it will cease to be, when the bodily frame is dissolved. The brain, it is true, is the centre of that influence on which depend sensation and motion. There is a remarkable connexion between this organ and the manifestations of mind; and by various diseases of the brain these manifestations are often modified, impaired, or suspended. We shall afterwards see that these results are very far from being uniform; but even if they were uniform, the facts would warrant no other conclusion than that the brain is the organ of communication between the mind and the external world. When the materialist advances a single step beyond this, he plunges at once

* This may, however, be done by hand, as an addition.—Ed.

into conclusions which are entirely gratuitous and unwarranted. We rest nothing more upon this argument, than that these conclusions are unwarranted; but we might go farther than this, and contend, that the presumption is clearly on the other side, when we consider the broad and obvious distinction which exists between the peculiar phenomena of mind, and those functions which are exercised through the means of bodily organisation. They do not admit of being brought into comparison, and have nothing in common. The most exquisite of our bodily senses are entirely dependent for their exercise upon impressions from external things. We see not without the presence both of light and a body reflecting it; and if we could suppose light to be annihilated, though the eye were to retain its perfect condition, sight would be extinguished. But mind owns no such dependence on external things, except in the origin of its knowledge in regard to them. When this knowledge has once been acquired, it is retained and recalled at pleasure; and mind exercises its various functions without any dependence upon impressions from the external world. That which has long ceased to exist is still distinctly before it; or is recalled, after having been long forgotten, in a manner even still more wonderful; and scenes, deeds, or beings, which never existed, are called up in long and harmonious succession, invested with all the characters of truth, and all the vividness of present existence. The mind remembers, conceives, combines, and reasons; it loves, and fears, and hopes, in the total absence of any impression from without that can influence, in the smallest degree, these emotions; and we have the fullest conviction that it would continue to exercise the same functions in undiminished activity, though all material things were at once annihilated. This argument, indeed, may be considered as only negative; but this is all that the subject admits of. For when we endeavour to speculate directly on the essence of mind, we are immediately lost in perplexity, in consequence of our total ignorance of the subject, and the use of terms borrowed from analogies with material things. Hence the unsatisfactory nature of every physiological or metaphysical argument respecting the essence of mind, arising entirely from the attempt to reason the subject in a manner of which it is not susceptible. It admits not of any ordinary process of logic; for the facts on which it rests are the objects of consciousness only; and the argument must consist in an appeal to the consciousness of every man, that he feels a power within totally distinct from any function of the body. What other conception than this can he form of that power by which he recalls the past, and provides for the future—by which he ranges uncontrolled from world to world, and from system to system—surveys the works of all-creating power, and rises to the contemplation of the Eternal Cause? To what function of matter shall he liken that principle by which he loves and fears, and joys and sorrows—by which he is elevated with hope, excited by enthusiasm, or sunk in the horrors of despair? These changes also he feels, in many instances, to be equally independent of impressions from without, and of the condition of his bodily frame. In the most peaceful state of every corporeal function, passion, remorse, or anguish, may rage within; and, while the body is racked by the most frightful diseases, the mind may repose in tranquillity and hope. He is taught by physiology, that every part of his body is in a constant state of change, and that, within a certain

period, every particle of it is renewed. But, amid these changes, he feels that the being whom he calls himself remains essentially the same. In particular, his remembrance of the occurrences of his early days, he feels to be totally inconsistent with the idea of an impression made upon a material organ, except he has recourse to the absurdity of supposing that one series of particles, as they departed, transferred the picture to those which came to occupy their room. If the being, then, which we call mind or soul, be, to the utmost extent of our knowledge, thus dissimilar to, and distinct from, any thing that we know to be a result of bodily organisation, what reason have we to believe that it should be affected by any change in the arrangement of material organs, except in so far as relates to its intercourse with this external world. The effects of that change which we call the death of an animal body, are nothing more than a change in the arrangement of its constituent elements; for it can be demonstrated, on the strictest principles of chemistry, that not one particle of these elements ceases to exist. We have, in fact, no conception of annihilation; and our whole experience is opposed to the belief of one atom that ever existed having ceased to exist. There is, therefore, as Dr. Brown has well remarked, in the very decay of the body, an analogy which would seem to indicate the continued existence of the thinking principle, since that which we term decay is itself only another name for continued existence. To conceive, then, that any thing mental ceases to exist after death, when we know that every thing corporeal continues to exist, is a gratuitous assumption, contrary to every rule of philosophical inquiry, and in direct opposition, not only to all the facts relating to mind itself, but even to the analogy which is furnished by the dissolution of the bodily frame."

The well-constituted mind cannot but derive satisfaction whenever the faith of religion receives additional confirmation from the convictions of science, or is relieved from its perversions—while the believer, with renewed confidence, may enter into the assurance of the inspired writer, and say with him, "Though, after my skin, worms destroy this body, yet in my flesh shall I see God."

We quote another passage, on the effects of fictitious narrative.

"There has been considerable difference of opinion in regard to the effects produced upon the mind by fictitious narrative. Without entering minutely upon the merits of this controversy, I think it may be contended, that two evils are likely to arise from much indulgence in works of fiction. The one is a tendency to give way to the wild play of the imagination—a practice most deleterious both to the intellectual and moral habits. The other is a disruption of the harmony which ought to exist between the moral emotions and the conduct—a principle of extensive and important influence. In the healthy state of the moral feelings, for example, the emotion of sympathy, excited by a tale of sorrow, ought to be followed by some efforts for the relief of the sufferer. When such relations in real life are listened to from time to time, without any such efforts, the emotion gradually becomes weakened, and that moral condition is produced which we call selfishness, or hardness of heart. Fictitious tales of sorrow appear to have a similar tendency—the emotion is produced without the corresponding conduct; and when this habit has been much indulged, the result seems to be, that a cold and barren sentiment-

alism is produced, instead of the habit of active benevolence."

The inference from these objections, though the offspring of a benevolent mind, goes a great deal too far. We confess ourselves not prepared to admit the veracity of any one who should come and avow his immorality to have been superinduced by the perusal of the *Waverley* novels—that his heart had been hardened, through the consciousness of inability to break off the espousals of Lucy Ashton—and his charities had been congealed, from powerlessness to rescue the tortured covenanter. The only reasonable objection to such fictitious narratives we conceive to arise from their being too entertaining, whereby the taste of the mind, from revelling in sweets, may, from too great indulgence, become enervated, and disgusted with more substantial and alimentary food; and even this objection is not so much directed against the productions as against their abuse.

Dr. Abercrombie's work is written in a plain and intelligible style; which, considering the abstruseness of metaphysical communications, is no trivial praise. This will court the favour of the many, by whom the book would have been thrown aside, had it been unaccompanied by such recommendation. It contains, moreover, the deep science of a strong mind; and this will ensure it the approval of the philosopher.

The Oxford English Prize Essays. Vol. II.

[Second Notice.]

THE beautiful essay on the "Sense of Honour," emanated in his early days from the mind of Reginald Heber, late Bishop of Calcutta. We cannot do full justice to its merits, but console ourselves with the following quotations:—

Shame.—"Nor is it only by an appeal to our hopes and wishes, that a sense of honour maintains its influence. Shame, which may be defined the sorrow of pride, is a feeling so strange and so terrible, that while every other suffering may be endured with firmness, or thought of with indifference, this is the only punishment which no strength can sustain, no power avert; to which the greatest are not superior, and of which the boldest will confess their fears."

Instances of the influence of a sense of honour:—

"But honour is not satisfied with a pre-eminence over every other feeling: it is not enough that when human laws oppose its rules, that very prohibition is considered as an additional motive. It goes still further; it is always endeavouring to excel and transcend itself. When Bayard, 'the fearless and unblamed,' was bleeding to death amidst the ruins of France—what restrained him, since he had done his utmost duty, from accepting the assistance and compassion of the rebel Bourbon? And when our own brave Sidney, in circumstances almost parallel, displayed a still more noble self-denial, no duty, or even charity, forbade his quenching his own intolerable thirst, before he sent the water to the dying sentinel. There is, there must be, in such acts of glory a pleasure superior to all external dangers; a high and almost spiritual exultation, elevated above the region of external pain."

We cannot but admire the following mild rebuke passed upon the isolated views of those whose spiritual pride would have us believe that a benevolent religion demands the unsparing sacrifice of every feeling of humanity.

"Self-respect, in short, is the most powerful, and one of the most useful, of our mental

habits; it is the principle to which the noblest actions of our nature may be most frequently traced—the nurse of every splendid and every useful quality. How far it may be occasionally abused, or how far it may be itself consistent with the principles of our holy religion, are questions which have long been disputed with violent and fanatical acrimony. The first objection I am neither prepared nor inclined to deny. To imperfection every human invention is liable; nor can it be considered as a subject of blame, that even our best institutions are only a chance of evils. But that a sense of honour is contrary to the spirit of religion, though Mandeville (perhaps insidiously) admits the charge, appears, to say no more of it, a hard and hazardous assertion. It will, indeed, be readily allowed, that there is only one motive which can deserve the name of virtue; but to condemn as illegal or impious every other desire or principle, would be in opposition to all the wants and feelings of mankind; and would, by an inevitable inference, lay the axe to the root of civil government itself. Like every other law, the laws of honour are occasioned by the wants and vices of the world;—like them, too, they must derive their influence from the weakness of our nature. The perfectly virtuous man, if any such there be, needs no such stimulus or restriction; but for our sake, for his own, let him not withdraw from us, who are not so fortunate, those salutary restraints and penalties which fence our virtues by our passions, and unite in the cause of human happiness the powers of this world and the next. For a politician neither must nor can destroy the propensities he attempts to guide. He must take mankind as he finds them—a compound of violence and frailty; he must oppose vice to vice, and interest to interest; and, like the fabled Argonaut, accomplish his glorious purpose by the labour of those very monsters who were armed for his destruction.”

We value this as the opinion of one whose piety and benevolence grew with his growth and strengthened with his strength. It is known to all, that it was not long permitted Bishop Heber to continue under the hot sun of India those labours of humanity and duty to which his days had been dedicated at home; and that his life-springs were dried up in the warrant, that with him self-denial was no idle or unmeaning theory. Thus was his death the sanction of his sincerity. It is from the energies of such men, while living, that systems become effective in the agency of good; and as they still borrow support from their memories when dead, so should they emulate their example.

The Mechanic's Saturday Night; a Poem in the vulgar Tongue: humbly addressed to the Hon. Sir R. Peel. By a Mechanic. 12mo. pp. 19. Teulon and Fox.

IN the march of intellect, the spread of knowledge, the “talented” exhibition of powers in the lower orders, and in the impartiality of our own criticism, we are not at all averse to allow the author to introduce his own performance. The following is his epistle to us, with the publication:—

“Sir—I trust you will excuse the liberty I have taken in troubling you with the enclosed poem. It is the work of a mechanic, a regular book-worm, and a nibbler of poetry. In the course of his book-grubbing, he stumbled over the Farmer's Ingle by Fergusson, and the ‘Cottar's Saturday Night’ by Burns. He was pleased with their fine descriptions of

the virtues of the Scotch peasantry, and he trembled with the wish to describe the virtues of the class to which he himself belonged—the London mechanics. How he has succeeded—the enclosed will shew. He submits to it you, sir, with some timidity, soliciting the honour of your notice and criticism. With the praise of a competent judge he will be pleased; with the fair and manly censure of a candid one, he will be profited.—Yours respectfully, B. H.”

B. H. draws a very coarse, but we fear a very just, picture of the orgies of the ale-house, almost the only pleasure now left for the mechanic to enjoy; for rustic sports, and fairs, and other ancient pastimes, have all been found to be too profane for him to be permitted to taste, and he has been driven into the more secret receptacles of drunkenness and vice. We cannot stain our page with the description of the blackguard and abominable revels; but if Hogarth's Beer Lane, and Gin Alley, had a moral in them, we think a like lesson may be drawn from this low and vulgar* saturnalia. At the close of his weekly labours,

“The blunt mechanic at pay-table stands,
While cautious scribes examine his rough score;
The cash he then receives with ready hands,
And eyes the slender total o'er and o'er;
Perhaps he has a thought aside to lay
A trifle, while affection softly leads,
His little lisp'ing one a frock to buy,
Or other little matters that it needs,
But ah! the thought soon dies, the little one still needs.
For see, he joins the ale-house party grim,
Then home and little ones soon disappear,
For what are home and little ones to him,
Whose soul's so often drench'd with gin and beer?
Soon, soon he gains the long'd, the lov'd retreat,
The ranks of lusty drunkards fast increase,
Half bashful and half bold he takes his seat,
And the first modest words are *pinto a-pièce*,
But O! what floods shall pour e'er call for *pinto* shall
cease!”

The progress of inebriation is fully, and, for decency's sake, too minutely painted, till we come to some of the effects of this shocking picture.

“But see! a shoeless urchin opes the door,
Staring with eyes inquisitive and sad,
He stalks dejectedly across the floor,
He seeks, and soon he finds his drunken dad:
He tells him how his little brother tattles
Over his little sister that lies dead,
He tells how Henry of his father prattles,
And cries and asks his mam in vain for bread;
Then mark how the sot yawns, and how he lolls his
head.”

And then came in a gentle-looking creature,
Seeking her husband, modestly she stept,
Grief and dismay seem'd busy in each feature,
And in her arms a half-clad baby slept:
Handsome she had been, but a train of sorrows
Had chas'd the roses from her cheeks away,
And in their stead pale Want had laid her furrows,
And dimm'd the lustre of her dark eyes' ray,
And in their half-raisd lids a tear did ling'ring stay.
She spoke not harshly, but assay'd to lure him
Unto his home with accents kindly mild,
Then angel-like she bent her knee before him,
And shew'd him his sweet sleeping lovely child;
Pleading for home and child in vain she stood,
Her kind looks he return'd with angry frown,
And rais'd himself in shameful attitude,
Prepar'd to strike her and her infant down,
Poor thing! she then retir'd, for she'd submissive
grown.”

The horrid revelry continues; but, as we have said, the strain is unfit for us; and we conclude with the only two applicable stanzas we can select.

O London town! whose every alley throbs
With some dark doing or delightful spree,
Thy gin and beer, and thy uproarious mobs,
Eclat and praise immortal bring to thee;
O glorious land of snirking mobs, how blest,
Ye useful classes, happy must ye be!
For when by want, and woe, and ruin prest,
A glorious mob will fly to stare at ye,
Hail! land of smiling mobs girt by a frowning sea.

* The title-page itself tells us it is “in the vulgar tongue;” and it is a pity it is so; for, humble as it is, there are vigorous graphic powers in this piece of *mechanism*.

To scenes like these some poor men owe a home
Of scantiness, of wretchedness, and woe;
Such scenes compel the ill-us'd child to roam,
And on some mother's cheeks the tear to flow:
From scenes like these with deadly freshness spring
Some of each fault which human kind disgraces,
Amid such darken'd scenes with fervour cling,
Want and her patron Vice in close embraces,
While crime, with paly smile, points at the useful
classes.”

No wonder we have a metropolis teeming with profligacy and discontent! no wonder we have mobs crying (naturally enough) “no police!” no wonder we have tumults and apprehensions:—let those at the head take heed!

Utility of Latin Discussed: for the Consideration of Parents, or those who have Influence in the Choice or Direction of Juvenile Education. By Justin Brenan. 18mo. pp. 82. London, 1830. Wilson.

IN discussing the utility of Latin, our author has set forth many confined, not to say remarkably ignorant, notions: we regret this, because, upon matters he understands, his style is plain, and calculated to convey his meaning in a manner well suited to the capacity of those for whose information he professes to write, and to whom, if master of his subject, he would be of considerable service. The question which he has at present thought proper to discuss, is beyond his comprehension, and a deplorably partial view is taken accordingly. The claims of the languages of Rome and Greece are too well known and appreciated to need our advocacy, or to be summarily knocked on the head by the shilaleh of Mr. Brenan. Let it be sufficient for us to point out some of this straightforward gentleman's plausibilities, and supply him with an exposure of a few of his fallacies. In apparent unconsciousness of these, he has successfully deceived himself, and may misinform many of his readers. To dissipate his own delusion, and prevent the diffusion of prejudice among those to whose especial consideration his work is submitted, will be a humane act in us, both towards himself and his readers. Mr. Brenan commences his assault upon the understanding of parents, by drawing a terrible portrait of a “learned blockhead.”

“Of all the wretched beings that degrade the character of man, the learned blockhead is the most contemptible. This creature will affect a superiority over men of intelligence and discernment, merely because they are not ‘classical,’ although his own insignificance is manifest in the commonest argument, except it turn upon some unimportant grammatical quibble. Ask him what advantage he has derived from Latin, and, if forced to give some other answer besides the unmeaning pedantic smile of ignorance, he will probably say that no one can know grammar without it, nor can ever be an orator. Yet he is the worst speaker and writer himself that can be imagined. Is a public meeting to be attended, he is found to be of no use, though great things were expected from him. He cannot express intelligibly what he means, and plain men are obliged to explain the business. Nay, they even find it necessary to draw up the resolutions; and the only duty that may be assigned for him is, to correct any grammatical inaccuracies therein! Thus, the uneducated or illiterate men, as he would call them, do what requires intelligence, discrimination, and sound sense, while he is only fit for a mechanical part of the work; just as the professed scrivener is employed to make a fair copy in an elegant hand. If this be not inferiority in the mental scale of society, I know not what is; yet he is not sensible of his humilia-

tion. He still thinks Latin is every thing; and will the next day again talk of logic, of Cicero and Quintilian, after such signal proofs of their uselessness to him."

Now, if a classical education produces such bug-bears, or if the attainment of classical knowledge precludes the possibility of information on general subjects, Mr. Brenan is right, and the sooner it ceases the better: but the fact is, he assumes an imaginary pedant—takes for granted, that he who is versed in Latinity cannot know any thing else, and proceeds to the equitable conclusion, that proficiency in the same renders its possessor alike odious and useless. Having fallaciously created this prejudice, our author passes on to make a plausible appeal to the pocket. The heavy per centage upon a limited income levied by the expense of a university education, is lamentably undeniable, but is altogether extraneous to the subject of discussion: the utility of knowledge, when acquired, is distinct from the difficulty of its attainment. Mr. Brenan, however, was too well aware of the weight of the pocket in controversy, as elsewhere, to omit endeavouring to strengthen his cause by such an efficient mercenary; while upon the same subject he wanders to a point where he asks the parent a few sound and sensible questions.

"Now, for what do you intend your son? Is not this a serious consideration, when you resolve to give up to Greek and Latin, ten or a dozen years of the studying time of his life? Do you mean that he should get his bread by it—that he should read for a professorship, or set up for a schoolmaster or teacher?—see, at an early period, the probability of success."

If these questions were fairly asked, and faithfully answered, classical education would be relieved from much unmerited odium. The results of instruction at our public schools and universities frequently bring home disappointment to the mind of the parent, not only from accidental obtuseness in their children, but from cherishing expectations far more than are warrantable. People in business, more particularly, look forward to some immediate and tangible return for outlay in education, and Greek and Latin are accordingly beheld with very suspicious eyes.

"Go to Homer, if you will,
And see if he'll discount your bill;"

is the test to which the utility of the classics is very generally submitted; and the discredit Homer has brought upon his firm by postponing to honour such acceptances, is almost incalculable. After proving the inutility of proficiency in Latin, Mr. Brenan whirls round, and would wheedle us into the belief that a "little Latin" is necessary, in order to understand the parts of speech of our own language! Though no very warm advocates ourselves for "half a year's Latin," we are glad that, after every obvious advantage has been omitted, or rejected, one is still acknowledged by our author; and from the *discovery* of this, the Latin grammar may still hope to be dog-eared a little longer. Mr. B., however, gets on, and, at page 51, recommends a little Greek also: the ingenious principle upon which this is advised, never could have been developed by any one not recently dipped in the Shannon.

"No man should be wholly and entirely ignorant of Greek. Every boy ought, therefore, to learn the alphabet, and something of the spelling and accentuation. The characters are used in astronomy, and for other purposes, and he should, at least, know how to call them and ordinary Grecian names in reading. With this view, a lesson might be introduced, at the

end of the Latin grammar, sufficient for such instruction. A slight knowledge of this kind would be very gratifying hereafter. It would enable a man to copy, with the more facility, any Greek word or short inscription, that he might meet in travelling or otherwise, and it would make him pass off always tolerably well in general society. If, while reading in company, he met a Greek sentence, he might say the first two or three words, and then lightly observe, 'I never was a good proficient in this language, but perhaps our friend Mr. Pericles can give a version.' Mr. P. would then perceive, by his having read a few words in the characters, that he was not entirely ignorant of Greek, and as no further trial would be required in polite company, he probably passes for knowing a great deal more than the alphabet and accents."

After ridiculing proficiency in Latin throughout his book, our author consistently concludes by seriously proposing that the works of every celebrated English writer should be preserved in a prose translation in that language, as the only unchangeable medium in which they can be securely transmitted to posterity! We should not have amused ourselves with the absurdities of Mr. Brenan, and endeavoured to set him right, had not he also published a small work upon "Composition and Punctuation," which, as a plain, useful, sensible little treatise, does its author credit, will well repay attention, and has our strong recommendation.

ARTS AND SCIENCES.

ROYAL GEOGRAPHICAL SOCIETY.

As we announced last week, the first ordinary general meeting of this Society was held on Monday, when its able and enlightened President, Lord Goderich, delivered a short but peculiarly appropriate extempore address. He observed, "that the pursuits which the Society was instituted to promote, were at once useful, interesting, and ennobling. They were useful—for all classes of society would necessarily benefit by that enlarged acquaintance with the resources of our own and other countries, which the improvement and diffusion of geographical knowledge, in fact, constituted. They were interesting—for scarcely any but had friends or relations, who, as seamen, merchants, or travellers, would still more directly profit from the information thus acquired. And they were ennobling—because they roused and exercised the noblest faculties of the human mind; the love of enterprise, the promptitude which meets and overcomes its attendant difficulties, the powers of observation which make the opportunities thus afforded valuable; and though last, not least, the attachment to strict veracity in narration; without which, all other advantages are worse than useless; but for which, he was proud and happy to think and say, that English travellers were, for the most part, pre-eminently distinguished. The Society met, then, with a conscious feeling of the worthiness of its objects; but these objects had, moreover, already received, and were still receiving, the sanction of all that was most eminent for rank and talent in the country. And this, too, would add to its satisfaction:—his most gracious Majesty, King William, had taken it under his most special protection, had conferred on it the title of Royal, and had added a regal gift, or donation, of fifty guineas annually, as a royal premium for the encouragement of geographical science and discovery. And the names in the list of subscribers sufficiently testified the quality and extent of the

approbation elsewhere bestowed on it. As to himself," his lordship continued, "he really hardly knew to what he owed the honour of being selected to be the first President of such an association. He had always loved geographical studies, and had been naturally led to attach much value to one branch of them—he meant statistical inquiries;—still, he felt unworthy of the distinction, now that it was conferred on him, and he could only promise to make up in zeal, and with the assistance of the council, for whatever he might want in ability and talent."

The minutes of previous meetings of council were then read, by which the Society was put in possession, historically, of every thing that had yet passed in the management of its affairs; and among other subjects thus brought under its notice, was a correspondence relative to a very old map of the world, preserved in Hereford cathedral, which the canons had most liberally offered, through Mr. Biddulph, treasurer to the Society, to send to London for its inspection,—an offer which, we need scarcely add, has been accepted. In the meantime, a fac-simile, on a small scale, was exhibited, and a short memoir read respecting it; furnished by Mr. Britton, the historian of our cathedral antiquities, who treated this as the earliest specimen of British map-making. Jerusalem is in the centre, with the rest of the old world not very much out of place; and England, Scotland, and Ireland, in particular, sufficiently correct and detailed to allow of a great many places being distinguished, and their names deciphered. But we shall not enlarge on this at present, as we may perhaps return to it when the map itself is brought to town.

The evening concluded by reading a list of the presents of books and maps already made to the Society's library. Among which we distinguished in particular, an offer made by Mr. Murray, Albemarle Street, to present the Society with whatever it might choose to select from his catalogue of publications. This liberal donation was received with great applause.

At the next meeting, Monday the 22d inst., an account of Swan River Settlement, drawn up by Mr. Barrow, from original and authentic materials, furnished by Governor Stirling, is, we heard in the room, to be laid before the Society: and this beginning of its proper business is exactly as it should be. This is an age of improvement and of emigration; but knowledge should precede all attempts at either.

Prius, ignotum ferro quam scindimus æquor,
Ventos et varium cœli prædicere morem
Cura sit, ac patrios cultusque habitusque locorum;
Et quid quæque ferat regio, et quid quæque recuset.
Quare agite, o proprios generatim discite cultus,
Agricolæ!
Virg. Georg. lib. i. 50. lib. II. 35.

ERUPTION OF MOUNT ETNA.

THE last number which we have received of the *Bulletin* of the Geographical Society of Paris contains an account of the afflicting catastrophe which occurred in the environs of Mount Etna, the 16th of last May. Seven craters opened on the acclivity of the mountain, and several villages (eight are mentioned), which hitherto had always escaped the ravages of the lava, have been completely destroyed, all the habitations having been buried under heaps of calcined stones and red cinders, thrown far into the country. The coasts of Calabria, and all those parts of Italy which were situated in the direction of the wind which blew on that disastrous night, were covered by a red dust somewhat similar to that under which the lands neighbouring the mountain were buried. The occurrence of this dust had at first been con-

dered as a very natural consequence of the eruption; but the editors of the *Bulletin*, influenced by letters from Palermo, think that it was brought from the plains of Africa by an impetuous wind from the south-east, which bore it over the Mediterranean. In support of this, it is stated, that chemical analysis does not allow of this dust being assimilated with volcanic cinders. We should like to see the results of this analysis; for we are very doubtful if, in the great variety of volcanic products, analysis could decide upon the igneous origin of a mineral.

Dr. Gillies lately read an account of volcanic dust, borne to a very great distance during an eruption of the mountain of Penquesen, in the Andes of Chili, in the Wernerian Natural History Society of Edinburgh, which also could not, by analysis, be referred to ordinary volcanic products. We might observe, too, that the researches of Professor Cordier, of Paris, have established the same difference between red and white volcanic cinders as between red and white lava, which are distinguished by a basis of augite or felspar. It is possible that the dust of African deserts may have been propelled as far as the shores of Sicily or Italy; though we do not see that the fact of a caravan having perished under the sands in the middle of May is any thing more than an accidental connexion.

RUSSIA.

AT various sittings of the Academy of Sciences in Petersburg, during the latter months of last, and the earlier months of the present year, a number of interesting papers were presented. M. Ostrogradsky announced that he had resolved the problem of the propagation of waves on the surface of a liquid contained in a vase having the shape of a cylindrical sector; and that he believed he had discovered the equation of partial differences respecting the propagation of heat in the interior of liquids. M. Kuffer communicated the geographical position of several parts of the Oural mountains, and of Siberia, transmitted to him by M. Hansteen, and accompanied by important magnetic observations; as also a letter from M. Berzelius, containing an account of several minerals of the Oural mountains, compared with those of Norway. M. Hess described the result of experiments made on the salt-springs of Starai-Roussa, in Novogorod. M. Hary sent notice from Odessa of the earthquakes which took place there on the 26th of November, 1829; and M. Hansteen, an account of the magnetic declension to the east of Siberia; &c. &c.

LITERARY AND LEARNED.

EXTRACTS FROM MR. SOTHEY'S VERSION OF THE ILIAD: BOOK II.

(Read at the Royal Society of Literature. See our last Literary Gazette.)

The Grecian army, by the advice of Nestor, thronging to council.

As when the bee's dense nations rise and rise
From the cleft rock, and cloud with life the
skies—
In clusters hang o'er spring's unfolding flower,
Sweep to and fro, and wind from bower to
bower: [host,
Thus from their ships and tents, host urging
To council swarm'd, and darken'd all the coast.
Fame, wing'd by Jove, before the arm'd array,
Waved her bright pennons, and illumed the way.

* It has given us great pleasure to hear that this translation is destined for the press; Mr. Murray having, with his usual judgment and taste, undertaken its publication.—Ed. L. G.

They throng'd—the tumult thicken'd—dire
the roar—

Deep groan'd beneath their weight th' encumber'd shore; [way,

The while nine loud-voiced heralds forced their
Warn'd them to silence—and their kings obey.
Scarce was the clamour hush'd, the tumult
quell'd,

And each in order due his station held,
When Agamemnon, rising up, display'd
The sceptre Vulcan's art divinely made.
Jove first that sceptre sway'd, by Vulcan
given—

Hermes received it from the king of heaven—
From Hermes, Pelops—and from Pelops' hand,
Imperial Atreus, heir of his command;
And when imperial Atreus left the light,
Thyestes held it in his father's right;
His death its power to Agamemnon gave,
Alike to lord it o'er the land and wave;
And Argos and her isles confess'd its yoke,
When, leaning on its strength, Atrides spoke.

The Grecians, at the deceitful advice of Agamemnon, rush to their ships.

He spake—and all who ne'er his counsel heard
All flew impatient at Atrides' word—
The hosts rush'd rolling on, as wave on wave,
When o'er th' Tearian sea swoln billows rave—
When east and south in adverse fury sweep,
Burst the dark clouds at once, and lash the
deep;

Or, as when Zephyrus o'er the harvest blows,
Waves the wide field, and rustles all its rows:
Thus the whole host was moved; and loud the
roar,

As burst the living tempest on the shore.
On as they rush'd, the dust, where'er they
pass'd, [cast;

Poised o'er their brow th' o'ershadowing column
And as their shouts immix'd, each urging each
To drag the gallees, sea-ward, down the beach,
To clear each trench, and strike the props
away— [bray,

Wide heaven's rent vault rebellow'd back the

Description of Thersites.

They met—all kept their stations—silent all,
Save loud invectives from Thersites' brawl,
Still jibing, still loquacious, right or wrong,
Still vibrating 'gainst kings, his serpent tongue,
Still prompt, if aught unseemly fed the jest,
To give the vulgar laugh a keener zest.

Foulest of form, the wretch to Ilium came—
One eye was squinting, and one leg was lame—
The gibbous load that either shoulder prest
To close contraction pinch'd his pointed breast;
And on his sharp convexity of head
Stray hairs, like wool, were here and there
outspread—

His bitter joy Ulysses to defame,
Or dim the lustre of Pelides' name.

Part of Agamemnon's speech preparing his host for the ensuing battle.

Now, each away, where festive joys invite,
There gather up his strength to stand the
fight— [shield,
New-edge the pointed lance, new-belt the
Pamper the steed to turn to flight the field;
New-brace from side to side the battle-car,
To bear from morn till eve the weight of war;
Cessation none, no pause, no rest from fight,
Till spread o'er either host one veil of night;
Sweat from each breast down shield and baldric
flow,

Fail the o'erwearied arm the lance to throw—
Sweat from each courser's widely-floating mane,
Foam on the chariot sweeping o'er the slain.
Be timely warned: who lone amid the fleet
Here willing lurks, and fears the foe to meet,

Fierce birds shall plunge their talons in his
gore,

And dogs contend his mangled carcass o'er.

Minerva arming for battle.

There, rushing o'er the war-resounding field,
In all the terror of her might revealed,
Mail'd in her panoply, Jove's martial maid
The shield of immortality display'd!
Bright blazed her ægis, as its orb around,
In braid all gold a hundred tassels wound,
All finely wreath'd in heaven's refulgent loom,
And, singly, each o'ermatch'd a hecatomb.
Thus arm'd, amid the host the goddess flew,
The eye of battle kindled at the view;
Each heart beat high, each arm felt tenfold
might, [fight;
Each nerve, new-strung, thrill'd vibrating for
And sweeter to their ear the battle-roar,
Than winds soft wooing to their native shore.

ROYAL SOCIETY.

A REQUISITION having been signed by thirty-three of the fellows, amongst whom were Mr. Herschel, Capt. Beaufort, Drs. Wallich, Horsfield, and Fitton, calling for a special meeting of the council, a meeting was held accordingly on Thursday evening; but as it was strictly private, and as another council is to be convened on the same subject next Monday, we do not feel at liberty to publish what transpired, further than that a debate of three hours took place. The anniversary, on the 30th, is looked to with increased interest.

FINE ARTS.

NEW PUBLICATIONS.

Chronological Epitome of the History of England; from the Norman Conquest to the present time: exhibiting the Succession in the Monarchy; the Ages of the several Sovereigns when they began to reign, and the duration of their Reign; the principal Statesmen, Military Characters, Men of Genius, and most Remarkable Events in each Reign. Howlett and Brimmer.

THE title so fully explains the nature of this publication, that we have only to add that it is beautifully printed, in gold and silver characters, on a purple or white ground; and that it contains as much useful information as it is possible to comprise in so limited a space.

Views in the East; comprising India, Canton, and the Shores of the Red Sea. From original Sketches by Captain Robert Elliot, R.N. Part III. Fisher, Son, and Co.

"ASSAR Mahal, Beejapore," drawn by T. Boys, engraved by G. Hamilton; "The Jumma Musjid, Agra," drawn by W. Purser, engraved by T. Boys; and "Cawnpore," drawn by S. Proust, engraved by C. Mottram; are the three embellishments of the third part of Captain Elliot's publication. Of these, the Jumma Musjid, at Agra, is unquestionably the most rich and beautiful. It is one of the finest specimens of Eastern architecture. "Agra," Captain Elliot observes, "like most other cities of India, consists of two portions; the one part presenting a scene of ruin and desolation, the other exhibiting a habitable and apparently prosperous condition. In some places the ancient and modern parts of a town are mingled together; in others they are separate; and of this last state both Agra and Delhi afford examples. A single century, or even a shorter space of time, is sufficient to reduce the streets and bazars of an Indian city to a level with the earth from whence they rose, and to become almost as though they had never been;

while the larger mosques and tombs remain with little deterioration, and stand as melancholy monuments of the earlier splendour and prosperity of Eastern capitals. The Jumma Musjid, or principal mosque, at Agra, stands nearly fronting the Delhi gate of the fort, leaving an open space, about the size of a London square, between them. This building, though it wears the appearance of antiquity, is still quite perfect, and seems, together with the fort, to form a connecting link between the ancient and modern parts of the city; so that, viewing them in their present state, a question might almost arise, as to which portion they most properly belong."

Ireland Illustrated: from original Drawings by G. Petrie, R.H.A., and W. H. Bartlett, Esqrs. With Descriptions by G. N. Wright, M.A. Nos. 11, 12, 13, and 14. Fisher, Son, and Co.

AMONG others, views of "The Custom House at Dublin," "Bantry House," "Glengariffe," "Waterford," "The Lake of Killarney," "The Giant's Causeway," and "Coltsman's Castle," at once attest the rich mine of the picturesque which exists in Ireland, and maintain the character of this cheap and pleasing publication.

The English Counties Delineated; or, Descriptive View of the present state of England and Wales. By Thomas Moule. No. I. Virtue; Simpkin and Marshall; and Jennings and Chaplin.

THIS is the first number of a publication, which is intended to consist of forty-eight monthly numbers; and to "form a complete English Atlas, containing a vast body of topographical information in a digested order: exhibiting the situation, extent, climate, and productions of the country, natural and artificial, with its government, &c., as well as the improvement in the arts, manufactures, and commerce of the kingdom." As far as a glance will enable us to judge, this work will, in a very unpretending form, and at a very reasonable rate, communicate much detailed and accurate knowledge.

Six Views of Brussels, exhibiting some of the Principal Points where the recent Contests took place; with a Plan of the City. Drawn and etched by Lieutenant-Colonel Batty, Jennings and Chaplin.

AT a period when the disturbances in the Netherlands have created so painful an interest in this country, a publication like the present is very appositely timed; and is calculated materially to assist persons who have never visited the magnificent city of Brussels, in understanding the accounts of those recent contests by which some of its finest edifices have been either destroyed or greatly injured. The etchings are executed in a slight, but masterly manner. We regret that they are not accompanied by a typographical notice, however brief, of the events which they are intended to illustrate.

The British Celestial Atlas. By G. Rubie.

Part IV. Baldwin and Cradock.

THIS ingenious publication is now complete, and comprehends "a Familiar Treatise on Astronomy; two Movable Plates of the Celestial Globe, with Problems thereon; a Manual Planetarium, on which a variety of instructive and amusing experiments may be performed; and a complete Atlas of the Starry Heavens." From the cursory view which we have taken

of its contents, and of the manner of its execution, it appears to us that the hope expressed by Mr. Rubie, that the work "will be found equally useful to families, the conductors of schools, private students, and mariners," is justified by its merits. A game for young persons, described in the present Part under the name of "the Military Orrery," seems to us to be admirably calculated to facilitate the acquisition of astronomical knowledge.

ARTISTS' AND AMATEURS' CONVERSAZIONE.

ON the 3d, the first annual meeting of this useful and interesting Society was held at the Freemasons' Tavern. Several of the new members, including the President of the Royal Academy, Lieutenant-Col. Batty, Messrs. W. D. Roberts and Prout, were present; and, altogether, about one hundred gentlemen attended. An extensive collection of works of art was laid upon the tables. The following appeared to be the most attractive. A large volume of drawings of forest and other trees, and landscapes, by F. C. Lewis—a store-house of the richest materials for the painter—once the property of Sir Thomas Lawrence, and now in the possession of Lord Northwick;—a painting of extraordinary power by Etty, of one of the children of Clarkson Stanfield;—an etching by Wilmore, of Harding's drawing, Lord Byron's dream, which promises to form one of the most excellent and effective of modern engravings;—two or three studies from the life, by Mr. J. Wood, (a member of the Society), and, in particular, a design from the Musidora of Thompson;—a collection of drawings, made during a recent tour in England, by Mr. George Sheppard, (also a member,) containing many of a highly picturesque character, and exquisitely finished;—a number of sketches by the lamented Bonington;—a miniature copy of the late President's picture of Master Lambton, by Mr. G. R. Ward—an artist whose excellence in this branch of the profession is quite unrivalled, and who has, we believe, copied the greater proportion of the works of Sir Thomas Lawrence, at his own especial recommendation. Mr. Henry Behnes Burlowe, the sculptor, exhibited a bust of Mr. Clint, A.R.A.; and as the original happened to be in the room, we had an opportunity of judging it to be as extraordinary a likeness as ever came under our notice; as a work of art, it is also excellent. Mr. George Morant submitted a portfolio of drawings, which contained several from the admirable pencil of Prout, ("a brave painter," according to Barry Cornwall,) D. Roberts, Copley Fielding, Stothard, Cox, and Thomas Boys, a young artist of rich promise.

It is one of the primary regulations of the Society, that such members as are artists be expected to submit their own works to the inspection of the meeting. We regret that the rule is not sufficiently attended to. The only individuals who claim our thanks upon this head are, Mr. Behnes Burlowe, Mr. G. R. Ward, Mr. J. Wood, and Mr. Sheppard. In our future notices of the *Conversazione*, we shall conceive it our duty to point out for especial attention such gentlemen, as afford proofs of their industry, talent, and liberality, by exhibiting the efforts of their pencils to their brother artists, and to the amateurs who desire to derive instruction and enjoyment from their society.

To the Editor, &c.

SIR,—Relying on the candour with which your Journal is conducted, I beg leave to forward

the enclosed statement, which, however strong, I pledge my honour to prove beyond the possibility of doubt.—I have the honour to be, &c. ANDREW DUNCAN.*

4, Felix Terrace, Liverpool Road, Islington, Nov. 6th, 1840.

SIR,—Having read in your paper a critique (dated Oct. 23d) on a plate called "the Orphans," published in the *Remembrance*,—I take the liberty to inform you, that the plate in question is not Mr. C. Rolls's engraving; it was engraved by me for Mr. Sharpe; but having been (very unaccountably) in Mr. C. Rolls's possession at the time of Mr. Sharpe's bankruptcy, it was detained, "to indemnify him for the very heavy losses sustained by him on that occasion;" not only was the plate detained, but without any reference to Mr. Gill, the painter, that extreme blackness was given to it, of which you so justly complain; and, to crown the whole of this honourable proceeding, Mr. C. Rolls "sold the plate to the assignees of the estate." It now goes forth to the world as his own; and I, who did the plate at a comparatively small price, in consideration of reaping the benefit of any merit, however small, attached to it, am unjustly deprived of that advantage, and obliged to suffer another man's name to be attached to my work, merely because Mr. Rolls happened to have money to accommodate Mr. Sharpe when he wanted it. Probably I should never have taken the liberty to address you on this subject, but that there seems a disposition to expose this sort of quackery, which has now arrived at such an infamous pitch, that any man possessing money is enabled to buy the reputation of talent he does not possess; and trading on the brains of others, with or without their consent, make his way to eminence in a profession, in which, if his course had been honestly pursued, his own talent would never have raised him to mediocrity. As you have thought the plate worth noticing, I trust you will be kind enough to publish this statement of the affair, which is the fact, Mr. Rolls being furnished with extracts from his own letters, which wait your perusal, if necessary. ANDREW DUNCAN.

SKETCHES OF SOCIETY.

POLITICS IN THE LITERARY GAZETTE!

City Alarm: the Wellington Era.

EVERY body is excited—and how can we be nobody? Spite of prudence, we must dabble a little in politics, like the rest of the world. It is an awful crisis in the City of London: we were there on Tuesday, which, by the by, being no day in the calendar, has given rise to the new name of the present epoch; *vide licet*, THE WELLINGTON PERIOD!—as we say the Julian, &c.; for a very wealthy citizen assured us, there was no *ninth* of November, this year; and, in consequence, as a native of the Sister Isle remarked of this "intercalation," we might commence another new style, as we did of old.

But what puzzled us most, both in the city and at the parliamentary end of the town, was the origin assigned for the alarm so suddenly and unexpectedly spread. A riot was, it seems, intended; and no sooner had ministers got a *Key* to the whole business, than they were overwhelmed with consternation. The late Lord Mayor's procession implied no danger—he was only a *Crowd-er*; but with the Lord Mayor elect affairs had assumed a more threatening aspect—

They were determined to mob it, With Blacking Hunt and Porcupine Cobbett;

and if the Premier ventured into the city, instead of the usual present of the Freedom in a gold box, the anonymous and other blackguards swore they would use the freedom of boxing his ears, or at least battering his coach-box. Here was a pretty plot!—all the wards, with their aldermen, turned out, besides Thomas Ward, the late Sheriff; and they all, upon the premises, refused to admit the opening of their master-Key. Indeed, they spoke scornfully. Cut off our lights! exclaimed the Chief of *Candlewick*; the thing is not to be done; I'll engage to find *Birch* enough to whip the demagogues out of the city. P-Shaw!

* Our sense of justice demands the insertion of this letter: and we shall be equally open to any counter statement from Mr. Rolls.

cried he of Portsoken. The maimed and lamed (if any—much doubt) may be sent to *Cripple-gate*, quoth the witty *Wood*. Very *Fair-brother*, re-echoed *Lime Street*; while *Vintry* thought of his own name of *Winchester*, and wished, in the event of a real riot, he were *there*. *William Thompson, Esq., M.P.*, delivered his sentiments more seriously: As all the necessaries of life, said he, are like my ward, *Cheap*, I am really surprised at all this clamour and hubbub. The *Common-sergeant* offered to put himself at the head of any recruits, and to die for, if he could not live by; the city; and the *Clerk of the Peace* vowed he was not afraid of war. The *Sword-bearer* volunteered his single services; but the *Common Crier* evidently felt for the difficulties of the times, as his desponding looks too plainly testified. The *City Marshals* pledged themselves to protect their brother *Marshal Wellington*; and the *Coroner* expressed his extreme readiness to perform his duty, whatever might be the result; for, as he observed, there might be visitations of Providence, and *finis coronat opus*.

The city being in this bold and masculine position, and not terrified by the fulminations of the thieves and pick-pockets, now known by the appellation of "the people," it was a grievous disappointment on that day, which, as we have noticed, turned out to be *no day*, that there was no royal visit—no *Lord Mayor's Show*—no dinner in *Guildhall*.^{*} Then, indeed, the condition of the citizens became frightful. O dear! resounded along *Cheapside*—prayers for safety were breathed in *Paternoster Row*, and clerkly answered by *Amen Corner*. From *St. Paul's* westward, as the *Cockneys* truly said, it was *Ludgate III*; and *Fleet Street* reminded the melancholious of the fleeting nature of human hopes and anticipations. To see the jostling and hustling of the passers-by and groups, one would have fancied

* Apropos of these dinners: we do not think our readers and musical friends are sufficiently acquainted with the humorous and amusing duet lately sung, so feelingly, by *Gog* and *Magog* on a festive occasion; and which appeared in the *Second No.* of *Hood's Comic Melodies*.

"*Magog*. Why, *Gog*, I say, it's after one,
And yet no dinner carved;
Shall we endure this sort of fun,
And stand here to be starved.
Gog. I really think our city lords
Must be a shabby set;
I've stood here since *King Charles's* time,
And had no dinner yet.
Magog. I vow I can no longer stay;
I say are we to dine to day?
Gog. My hunger would provoke a saint—
I've waited till I'm sick and faint.
I'll tell you what, they'll starve us both—
Magog. I'll tell you what, they'll stop our growth!
Magog. I wish I had a round of beef,
My hungry tooth to charm—
I've wind enough in my inside
To play the *Hundredth Psalm*.
Gog. And yet they feast beneath our eyes,
Without the least remorse—
This very week I saw the *Mayor*
A-feeding like a horse.
Magog. Such loads of fish and flesh and fowl,
To think upon it makes me growl—
Are we to dine to day, &c.
Gog. I wonder where the fools were taught,
That they should keep a giant short,
They'll stop our growth—
Magog. They'll starve us both, &c.
Magog. They said, a hundred years ago,
That we should dine at one;
Why, *Gog*, I say, our meat by this
Is rather over-done.
Gog. I do not want it done at all,
So hungry is my maw—
Give me, an alderman in chains,
And I will eat him raw.
Magog. Of starving weavers they discuss,
And yet they never think of us—
I say are we to dine to day, &c.
Gog. O dear, the pang it is to feel
So mealy-mouth'd without a meal!
I tell you what they'll starve us both—
Magog. I tell you what, they'll stop our growth, &c."

that *Pall Mall* had moved to the east of *Temple Bar*: but it was not so—*Pall Mall* was almost Stranded by griefs of its own, and had little more than a *Cross* to choose between.

But there is seldom any case so bad as not to have a spice of good to season it; and though there were bones of contention out of doors, there were crumbs of comfort and something more substantial within. Along the whole line of street from the *Palace* to the *Guild*, in every house, the master or mistress, or both, or both in one (where there was no divided sway), had shewn themselves worthy of the enviable station they enjoyed. Aware of the possibility of their being besieged by the revolutionary rogues who had menaced the tranquillity and tranquil eating of *London*, they, every housekeeper of them, had provisioned their *Englishman's castles*, and many of them called in their friends from remote parts, such as *Brompton*, *Hampstead*, *Highgate*, *Paddington*, &c. &c., to assist in their gallant defence; while others, more mercenary, had, by a capital ruse, persuaded bold and adventurous strangers to pay them for (the post of honour! i. e.) the privilege of fronting the enemy.

"Large was their bounty, and their souls sincere."

The preparations for holding out were on a very magnificent scale; and the whole was rendered nugatory by the non-interference of the foe. Of course the entire line of defence was abandoned, and the ordinary population left to consume the extraordinary supplies. Gluttons as they were, and with every stomach for the fight, they could not do it. It was pitiable to witness the efforts that were made, and made in vain. There was a perfect glut of turtle soup (in some cases, to be sure, a mere mockery), which went down, and down, and down, till it was below par. Pies were poison; rounds of beef met no longer with rounds of applause; chickens were at a discount, and turned out neck and crop; hams, tongues, and other salt meats, were no longer looked upon as refreshments; turkeys were pointed at, and pigeons in every way absolutely viewed with loathing detestation—for their proprietors could not help remembering they had already been pigeoned enough; the stews were disrelished—for every family was in a stew itself; unable to stuff any more, hares, with their own stuffing, were absolutely sold ready dressed; and, in fine, increase of appetite could no longer grow with what it fed on. On the contrary, *Amen* stuck in the throats of the gorged inhabitants, who had done all they could to remove the loads with which they were oppressed; but, like most reformers, discovered long before they got their dessert, that they only lightened one place to surcharge another. How it will terminate, no one can pretend to predicate; but it is whispered in private circles, that *Apothecaries' Hall* is to be illuminated. So much for prophets.*

Another of the vexations which arose out of this metropolitan calamity, fell upon the progress of intellect. Preparations had been made to enlighten and illuminate the city, when the gloom gathered, and the march of lamp-light was so suddenly suspended. It was woful to think of the hundreds of thousands of human beings left, as the saints say, in darkness and ignorance; and it was most afflicting, in a political sense, to see the apathy and disloyalty generated on the occasion. The royal crown, which should have shone with so much

brilliance, and been the gazing delight of all beholders, was every where lowered to the dust. *W.'s* and *A.'s* were treated like the most common letters of the alphabet; nay, the very anchor of *England* (as if it were a pique) was thrown overboard and all, like a worthless thing, and

Hope for a season bade the world farewell!

Union jacks and British banners lay on the flags profane—laurels from their palmy elevation were planted in the mud (oh, improper manure!), and hundreds of rows of lamps were sacrificed to the dread of one row.

Having witnessed these signs of the times with our own eyes, is it strange that, filled as others are with wonderment and amazement, we should endeavour on one small spot of our quiet, soft, and green literary field, (a field of relaxation and enjoyment, where all else is turbulence and noise), to expatiate on the engrossing topic of politics in our own way? *England* will right herself. She ought to be well and honestly governed—and there is nothing to create alarm. Alarm! Why it resembles a common full of asses. One silly ass brays, and another brays; and, anon, most of the herd, separately or in concerto, exalt their melodious voices; till, astounded by their own vociferations, they fancy the common about to be invaded, over-run, eaten up, and consumed. Poor beasts! the uproar and the danger are all their own: there will always be browsing for them, in spite of the radicals attacking the roots. In truth, it is the idle, the timid, the prating, the repeaters of every silly rumour, that swell the loud and empty blast of *Britain's* peril.

With regard to the burnings in *Kent*, they are rather more distressing than the fears of *London*. Better marry than burn, said *Paul*—better not marry, says *Malthus*; but, in the teeth of apostle and economist, the unhappy people do marry, and thus beget (according to the new lights) a surplus population, which, not being adequately supported, add their burnings to their parents' marriages—so that, in reality, they both marry and burn! Then, there is that phantom, "*Swing!*" a very *Rock* for the alarmists to split on. In a few weeks, we will predict, this bugbear of a *Guy Fawkes*, this *Swing* of *Kent*, will very likely come to the other swing at *Newgate*; and there will be two swings to terrify those who are afraid of ghosts.

In the meantime, with a good and popular *King*, with a people of whom the great mass enjoy many blessings, and among the rest the blessing of common sense—and, above all, with a firm purpose to apply every means to alleviate the sufferings and improve the condition of the poorer classes—"England 'gainst all the world!"

DRAMA.

KING'S THEATRE.

ON Saturday the performance of *Lord Burgersh's* opera, before the royal family and a splendid auditory, went off with much applause. There is a great deal of sweet music in the composition; but we cannot, now, afford room for a detailed criticism.

Perhaps the *Italian Opera* will be anglicised next season, if, as is rumoured, *Miss Paton* and *Madame Vestris* are engaged. The *Haymarket Theatre, on dit*, (see *Furet de Londres*) is to be opened by the *French company* in *January*.

* Quere, profits?—*Dial-lus typicus*.

DRURY LANE.

A NEW divertimento was brought out here on Monday last, after the performance of *Henry V.* *Les Trois Sultanes* introduced a Mademoiselle Rosalia Guet to a Drury Lane audience. She is a respectable second-rate dancer, who has evidently chosen Taglioni for her model; and a better she could not have. We beg to decline otherwise noticing the divertimento. This is Mons. Simon's second essay, and unless he is labouring under great restrictions, the less we see of his productions, the better for all parties.—The glorious music of *Guillaume Tell* (Anglicè, or rather Hibernicè, Hofer,) drew a suffocating house on Thursday, backed as it was by the announcement of a new farce for Liston, from the popular pen of Poole. In the opera, Miss Pearson and Miss Russel made their first appearances as *Bertha* and *Josephine*, characters sustained last season by Stephens and Vestris. Without trying them by so dangerous a standard, we are compelled to say that both the ladies are utterly incapable of executing the music of Rossini. Philips and Sinclair drew down repeatedly the enthusiastic applause of the audience. The grouping, scenery, dresses, and the lancer-dance, kept them also in good humour; and, notwithstanding the desperate drawbacks before mentioned, the curtain fell amidst rounds of approbation.—The new farce succeeded, in both senses of the word. *Turning the Tables* is founded (it were unfair to say translated) upon Scrlie's *Nouveau Pourçaugnac*. Its title explains its plot. Three would-be-wits of Uxbridge—the exciseman, a lawyer's clerk, and his cousin—lay their heads together to hoax an obnoxious visitor from Coventry, and have the tables turned upon them by the said visitor. Liston, as the *Exciseman*, was drollery itself; and Cooper played the *hoaxer* with great tact. The two Vinings performed the very inferior parts allotted to them with spirit and vivacity; but perhaps the most difficult, as well as one of the best supported characters in the piece, was *Patty Larkins*, a Dunstable girl, by Mrs. Orger, who is decidedly one of the cleverest women on the stage. The little farce is very pleasantly written, and will no doubt be a lasting favourite.

COVENT GARDEN.

The Carnival at Naples, supported solely by the talent of Miss Taylor, and somewhat of Power, still "drags its slow length along." This clever young actress is, however, we are happy to perceive, announced for *Rosalind*, a character in which, we trust, she will speedily assert her rights as a legitimate performer. We look forward with pleasure to Thursday next. *As You like It* is of itself a treat; and so is Charles Kemble's *Orlando*: we have great hopes that Miss Taylor will prove herself worthy both of the one and the other. Shakespeare is the touchstone.

A new-old farce, or interlude, the hundred-and-first adaptation of *Le Prisonnier, ou la Ressemblance*, which, under the title of *The Secret*, the *Prisoner*, &c. &c., has been acted at every minor theatre in London, was produced here last Thursday, with the appellation of *Hide and Seek*.

VARIETIES.

Silk Worms.—Silk worms fed at Turin on the leaf of the scorzonera, furnished a silk of a very inferior quality to that obtained from the same caterpillar when fed on the mulberry tree.

Hardening of Wood.—A piece of plane tree

(*Platanus occidentalis*), after a long immersion in water, diminished in size by one-tenth of its diameter, and became so hard as scarcely to be affected by the axe.

Tubercles of Potatoes.—M. Vilmorin presented to the Royal and Central Society of Agriculture of France, a specimen of the *eyes* or tubercles of potatoes, which had been completely frozen, and which he succeeded in preserving by simple drying in the air, so that they would serve for the nourishment of animals.

New Nutritious Plant.—M. Henri presented to the same society a specimen of *fecula* obtained from the root of a plant called *arracacha*, of the family of Umbelliferæ, indigenous in the provinces of Santa Fè of Bogota, and of Caracas in Southern America, where this root is employed as food. This substance has all the physical and chemical characters of the true *fecula*, and possesses all their alimentary properties.

New Café.—We observe the preparations in St. James's Street, and hear of the engagerment of Vestris, Mr. Anderson, Mr. Goldsmid the clever imitator, &c. for morning lounges and refreshments: but as the plan seems new to the metropolis, we must stop and see before we praise.

New Bazars.—Bazars are still the rage: the Egyptian Hall in Piccadilly is rapidly undergoing conversion for this object; though if it be to the total exclusion of all those exhibitions of art and curiosity which we have been so long accustomed to enjoy at this place, we, for ourselves, shall regret the change.

The French Academy.—The French Academy having required from the French government the power of immediately restoring to its body the academicians who were expelled by an arbitrary measure in 1815, the government has replied, that the Academy possessed the means of effecting the desired object by successive elections of the members of which it had been deprived.

Diamonds.—Several diamonds have lately been discovered at the foot of the Oural Mountains; and there is every reason to believe that more will soon be found.

Imperial Society of Naturalists at Moscow.—The Imperial Society of Naturalists of Moscow receives annually 10,000 roubles from the emperor. Out of this sum, 3,000 are devoted to journeys of natural history in Russia; 3,000 for the publication of the discoveries which result from these journeys; 1850 for the drawer and engraver; 800 for the office; and 650 for incidental expenses. The Society was founded in 1805 by its present director, Mr. Fischer. It has published seven volumes of memoirs; and from the beginning of 1829 it has printed a bulletin of its labours.

Method of obtaining the Skeletons of Fish.—Mr. Bluell's plan is to suspend a fish in a vessel full of water, into which he introduces a number of tadpoles, which devour the flesh, without injuring the bones. The tadpoles should be taken as small as possible: at the end of four and twenty hours the skeleton will be cleaned, but the water must be renewed several times.

Discovery of Bromine in the Baltic.—M. Kastner, in the *Archiv für die Ges. Naturlehre*, announces the discovery of bromine and iodine in the waters of the Baltic, near Swinemunde.

Monazite, a new Mineral.—Breithaupt has given the name of monazite* to a mineral

* From *μοναζω*, to be alone, from its not being capable of being compared with any other mineral.

which has been found in a ziran granite in the environs of Miarsk in Siberia. Its lustre is vitreous, colour brick-red, or reddish brown, translucent on the borders. Its crystals are rhombooidal prisms. Its hardness is equal to 6. Sp. gr. 4.93. It has not yet been analysed.

Movable Houses.—A French engineer, of the name of Blown, lately presented a memoir to the Academy, on the construction of movable houses. Movable houses have long been used in Sweden; but the mason as well as the carpenter has been employed in their construction. Those invented by M. Blown, on the contrary, are entirely of wood, can be erected in a very short time, so as to be perfectly habitable, and can be transported with facility. One of these houses has been eight times taken down in the course of eight years; and has travelled over a space of a hundred and fifty miles. M. Blown thinks that this kind of building may be usefully employed in African expeditions. The committee of the Academy to whom his memoir was referred are of a different opinion: they say that the extreme heat of the climate would soon warp the wood, and render the adjustment of the parts impossible.

French Coinage.—The gold and silver coinage of Philip the First was announced for issue on the 5th of November: by the by, our Guy Fawkes Day. The king's profile is to the right; the reverse has a crown of laurels, with the device, *Dieu protège la France*.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLVI. Nov. 13.]
 Roxobel, by Mrs. Sherwood.—Remarks on a New and Important Remedy in Consumptive Diseases, by John Humphreys Doddridge, Surgeon.—The Life of Thomas Fanshawe Middleton, D.D. Lord Bishop of Calcutta, by the Rev. C. W. Le Bas, M.A.

TO CORRESPONDENTS.

A. J.'s thought is affecting; but there are imperfections in the execution which forbid insertion.
 Our worthy friend M. T. S., of Long Stratton, must take an excuse from us, for reasons too long to explain.
 S., of Kew, declined. He must write to Miss H.: we cannot print it.

The adapter of the *Wreck Ashore*, at the Adelphi Theatre, ought to have acknowledged his obligation for that delightful drama, to the author of *Tales of a Voyager in the Arctic Ocean*, on whose story of *Letitia* it is so closely founded.

Sir James South's Charges against the President and Councils of the Royal Society was delayed too long in reaching us for consideration this week; we can only say, that they are confoundingly peppery.

In our review of the *Annulet* last week, we accidentally omitted the intended quotation from Mr. Carne's Eastern Story Tellers: it shall appear in our next.

Puffing.—Having spared a few columns to the farce in the City, as a temporary subject, we have postponed our remarks on the *Puff-System*.

ADVERTISEMENTS,

Connected with Literature and the Arts.

MEDICAL JURISPRUDENCE.

Mr. CRUMP will give his Second Lecture, at Half-past Eight o'clock, on Monday Evening. This Lecture will commence the Course, and will exhibit a General View of the Structure of the Human Body. The Course itself will treat of the investigation of Cases of Murder by violence or by poison, Infanticide, &c. &c. Terms—Two Guineas. Free Admission to Law Students, on application for Tickets to Mr. Crump, 5, Judd Street, Brunswick Square.

A CLASSICAL ASSISTANT WANTED.

A Graduate of Oxford wanted immediately, in a respectable endowed Grammar School. A Single Gentleman in Holy Orders would be preferred; but no objection would be made to giving a Title, either for Deacon's or Priest's Orders, to well-recommended Young Men. A. J. Valpy, R-d Lion Court, Fleet Street, London. All Letters to be post-paid.

TO EDITORS.—The Proprietor of a Provincial Paper,

heretofore conducted with considerable talent, on liberal and independent Principles, is in want of a Gentleman to edit his Paper, and to have the entire superintendence of the Literary Department. As a liberal Salary will be given, it is requested that none apply who cannot produce unexceptionable Testimonials as to Ability, &c. Address, post-paid, to D. H., care of Mr. Morgan, Stationer, 2, Farringdon Street, London. The Paper is published at the first Towns in England, and the Editor's Services would be required about Christmas next.

PUBLIC LIBRARY, Conduit Street.

At this extensive and valuable Library, from which the Nobility and Gentry, in Town and Country, are supplied, arrangements are made for affording the utmost possible accommodation to Subscribers in the perusal of New Works, as well as those of a standard character in the English, French, Italian, and German Languages, of which this Library contains an immense Collection. The Addenda for 1880 just published. Catalogues and Cards of Terms to be had on application.

THE ALBION; a New London Daily Evening Newspaper,

will appear on Monday next, the 15th of November. Orders received by all Newsmen and Postmasters in Town and Country, and at the Office, 69, Strand.

CELEBRATED PICTURE GALLERIES

at reduced Prices. The interesting and attractive Works here offered to public notice, form a Series of very beautifully finished Engravings, faithfully delineating every peculiarity of character and expression, and accompanied with Historical and Biographical Notices by Mr. Young, officers Picture in the following celebrated Galleries. These admired Works formed part of the Bankrupt Stock of a late eminent House, and have been purchased by the present Proprietor upon Terms enabling him to offer them at very reduced prices, viz.

J. Dowding, Bookseller, 82, Newgate Street.

MUSIC.

In oblong 4to. price 10s. 6d.
NEW SYSTEM FOR LEARNING AND ACQUIRING EXTRAORDINARY FACILITY ON ALL MUSICAL INSTRUMENTS, particularly the Piano-Forte, Harp, and Violin, (as well as in Singing), in a very short Space of Time; with a new and easy Mode of Marking the Fingering of all Wind Instruments. Illustrated by 25 Explanatory Plates, that will enable the Pupil to make great Progress, even in the absence of a Master, and without an Instrument; and dedicated to his Pupils in Amsterdam, Brussels, Paris, Naples, and London. By AUGUSTE BERTINI. Published by Longman, Rees, Orme, Brown, and Green.

BOOKS PUBLISHED THIS DAY.

Mrs. Dalglairns' Cookery, New Edition. Price 7s. 6d.
THE PRACTICE OF COOKERY, adapted to the Business of Everyday Life. By Mrs. DALGLAIRNS. The 3d edition. Every receipt in this work has been carefully revised for this edition, in order that advantage might be taken of the numerous valuable criticisms by which it has been honoured in every part of the empire. "A considerable number of new receipts have also been added; but only such as the author has had adequate means of ascertaining to be valuable, the principle which has been scrupulously adhered to throughout the volume."—*Author's Preface to the Third Edition.* Printed for Robert Cadell, Edinburgh; Whittaker and Co. London; and all Booksellers.

WAVERLEY NOVELS. New Edition.

This edition has now been Eighteen Months in the course of publication, and the following complete Works have appeared:—
Waverley, in 2 vols.—Guy Mannering, in 2 vols.—The Antiquary, in 2 vols.—Rob Roy, in 2 vols.—The Bride of Lammermoor.—The Heart of Mid-Lothian.—The Bride of Lammermoor, and the Legend of Montrose, in a Series of 7 vols.; and Ivanhoe, in 2 vols.
The above Novels and Romances are illustrated with thirty-four Designs, by the first Artists, engraved on duplicate Steel Plates, and sell for 6s. each volume, in crimson cloth.

Volume Eighteenth of the Edition, which commences the Monastery, with an Introduction by the Author, and illustrated by G. S. Newton and A. Chisholm, is published this day.

Volume Nineteenth, which completes the Monastery, illustrated by David Wilkie, principal Painter in Ordinary to His Majesty, and A. Fraser, will appear on the 1st of December.

In order to meet the wishes of many who desire to possess the Waverley Novels, if they can procure the same in monthly vols. the Proprietors have resolved to commence a New Issue on the 1st January next, beginning with Volume First, to be continued regularly on the 1st day of each month, till the whole is completed.

The New Edition will be distinguished from the present by a coloured label, but without differing from it in any other respect.

Subscribers will be so good as to give in their Names as early as possible to their respective Booksellers. Printed for Robert Cadell, Edinburgh; and Whittaker, Teacher, and Co. London. Specimens of the Work and Engravings are to be seen in the Shop of every Bookseller in Great Britain and Ireland.

As above will shortly be published, Tales of a Grandfather, by Sir Walter Scott, Bart.; being Stories from the History of France. 3 small vols. Price 2s. 6d.

AN EXAMINATION OF THE "ENGLISH SYSTEM OF BALANCING BOOKS,"

by Edward T. Jones, styling himself Professor of the Science of Perfect Book-keeping; exemplified in a Ledger, wherein every Entry is *Writæ* Posted, and which is proved by his System to be perfectly Correct.

By a PRACTICAL BOOK-KEEPER. Published by W. Simpkin and R. Marshall, Stationers' Hall Court; and E. Wilson, Royal Exchange, London; Oliver and Boyd, Edinburgh; and W. F. Wakeman, Dublin, for the benefit of the Society of Guardians for the Protection of Trade, &c.

ALMANACH DE GOTHÄ, 1831, price 6s.

Published by B. Ackermann, 66, Strand, a new Annual, entitled, **THE HUMOURIST.**

By W. H. HARRISON, Esq. Author of "Tales of a Physician," &c. Illustrated by Fifty Wood Engravings, exclusive of numerous Vignettes, from Drawings by the late Thomas Rowlandson. This Volume is handsomely printed in post 8vo. price 12s. bound in morocco.

Also, Forget Me Not for 1831, containing nearly 400 pages of Letterpress, consisting of between Sixty and Seventy Articles in Prose and Verse, by the most eminent popular Writers of both Sexes, embellished by Fourteen exquisitely finished Engravings on Steel, executed after Designs by eminent Painters. Price 12s.

Also, Ackermann's Juvenile Forget Me Not for 1831, embellished by Ten Engravings on Steel by eminent Artists. The universal commendations of the public press, and the sale of a large impression of the first Volume, attest the strong claims of this Work to the notice of Parents, Guardians, Teachers, and the Friends of Youth of both Sexes, who wish to put into their hands an elegant Miscellany, expressly adapted to their age and capacity, and conducive alike to moral improvement and pleasing instruction. Price 8s.

BURNETT'S PRACTICAL HINTS ON PAINTING.

Illustrated by nearly 100 Etchings from celebrated Pictures of the Italian, Flemish, and Dutch Schools. The Parts may be had separately, viz.
1. On Composition, price 15s.
2. On Light and Shade, price 18s.
3. On Colour, price 1l. 11s. 6d.

"The Library of no lover of the fine arts can henceforward be considered complete without Mr. Burnett's work."—*Literary Gazette.*

London. Printed for James Carpenter and Son, Old Bond Street. A few Copies remain unsold of the royal paper, with Proof Impressions of the Plates on India paper, and a Portrait of the Author, price 6l. 6s.

THE HOUSEKEEPING ACCOUNT-BOOK

School and College Classics.—Thucydides with English Notes.

3 vols. small 8vo. 27s. boards.
HISTORY OF THE PELOPONNESIAN WAR, by THUCYDIDES, formed on the Texts of Bekker, Goeller, and Poppo, with original English Notes, Examination Questions, Indexes, &c.

By the Rev. S. T. BLOOMFIELD, D.D. F.R.S. "The best praise that we can bestow on the notes is, that they form a valuable commentary, by which a careful student may acquire a clear and lasting acquaintance with the style and meaning of Thucydides. We have collated several passages of the text with the editions quoted in the title. The best reading appears to be adopted in all cases, and that after careful deliberation and extensive research."—*Atlas.*

••• Vols. II. and III. may be had separately by the purchasers of Vol. I. 17s. 6d. boards. Printed by A. J. Valpy; and sold by all Booksellers in London, Oxford, and Cambridge.

Of whom may be had, uniform in size, and on the same plan, 5s. each Play.
The Orestes of Euripides. By the Rev. J. R. Major. Also, *Medea, Phœnixus, and Hecuba.*

The Analysis of Xenophon. By F. C. Belfour, M.A. 8s. 6d.
Select Oration of Demosthenes. By E. H. Barker, Esq. 8s. 6d.

Herodotus, the Prometheus of Æschylus, and Cypripedia of Xenophon, will be shortly ready on the same plan.

In 8vo. price 14s. boards, a new edition, with Corrections and Additions, of

A KEY TO THE OLD TESTAMENT

AND APOCRYPHA; or, an Account of their several Books, of the Contents and Authors, and of the Times in which they were respectively written. By ROBERT GRAY, D.D. Lord Bishop of Bristol. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, London, and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author,

The Connexion between the Sacred Writings and the Literature of Jewish and Heathen Authors, particularly that of the Classical Ages. Illustrated, principally with a View to Evidence in Confirmation of the Truth of Revealed Religion. Second edition, 2 vols. 8vo. price 1l. 1s.

For the Use of Schools. In 18mo. price 7s. 6d. bound, the 3d edition, revised and corrected, of

EXCERPTA ex VARIIS ROMANIS POETIS, quæ in SCHOLIS RABULI LEGUNTUR.

Lucretio	Seneca	Martiale
Catullo	Lucano	Juvenale
Propertio	V. Flacco	Ausonio
Tibullo	S. Juvenco	Claudiano
Persio	Statio	

Notulis illustrata, quas selegit JOHANNES ROGERS PITMAN, A.M. Veneunt apud C., J., G., et F. Rivington, in Cometerio Pauliæ, et Vicodictio Waterloo Place.

New Work on Chemistry. 3d edition, in 1 large vol. 8vo. price 16s. with Engravings,

A CHEMICAL CATECHISM, in which

the Elements of Chemistry, with the recent Discoveries, are very clearly and fully explained, and its Applications to the Phenomena of Nature, to Agriculture, Manufacture, and Medicine, described. Illustrated by Notes, numerous Engravings, select Chemical Experiments, and a Vocabulary of Terms. By T. J. GRAHAM, M.D. &c.

"We esteem and recommend it. Every subject of interest connected with the delightful science is treated of in the clearest manner."—*London Weekly Review*, Feb. 1829.

"Every thing is here written up to the latest date, and the work cannot fall of being found eminently useful. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parkes's book."—*Monthly Magazine*, March 1829.

"The necessity of a clear progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has well supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements, to the compound and illustrative branches of the study. It is eminently calculated to afford a ready and accurate information, and to improve the knowledge of the learner."—*Atlas*, March 1829.

"It contains an immense quantity of valuable information, and is much superior to Parkes's."—*Monthly Olio*, April 1829. Published by Simpkin and Marshall. Sold by all Booksellers.

Of whom may be had, by the same Author, 3d edition, price 14s.
2. Modern Domestic Medicine. A Popular Treatise, exhibiting the Symptoms, Causes, and Treatment of all Diseases, with a Copious Collection of approved Prescriptions, &c. &c.; and forming a clear and comprehensive Medical Guide for the Clergy, Families, and Invalids.

"We conscientiously recommend it. It is very far above Buchan's."—*Literary Chronicle.*

"In the opinion of a respectable physician, well known in our connexion, it is incomparably superior to every similar work in our language."—*Edinburgh Magazine*, &c. &c.

"One of the very best and most useful books published in modern times."—*Monthly Olio.*
"It is altogether deserving of permanent popularity."—*London Weekly Review.*

Mrs. Rundall's Cookery Book.
Handsome printed in small 8vo. with Ten Plates, price 7s. 6d.
a new edition of

A NEW SYSTEM OF DOMESTIC COOKERY; formed upon principles of Economy, and adapted for the Use of Private Families. Comprising also the Art of Carving, Observations on the Management of the Dairy and Poultry Yard; Instructions for Home-Brewery, Wines, &c.; Cookery for the Sick, and for the Poor; many very useful Miscellaneous Receipts and Directions proper to be given to Servants, both in Town and Country. To which is prefixed, an Essay on Domestic Economy and Household Management; comprising many Observations which will be found particularly useful to the Mistress of a Family.

By a LADY.
"This is really one of the most practically useful books of any which we have seen on the subject. The lady who has written it has not studied how to form expensive articles for luxurious tables, but to combine elegance with economy: she has given her directions in a plain, sensible manner, that every body can understand; and these are not confined merely to cookery, but are extended to a variety of objects in use in families; by which means the utility of the book is very much increased."
British Critic.

John Murray, Albemarle Street.
Sold also by every Bookseller and Newsmen in England, Scotland, and Ireland.
Also, new edition,
Family Receipt Book, small 8vo. 7s. 6d.

In 8vo.
THE MILITARY EVENTS of the LATE REVOLUTION in PARIS.

By Mrs. MARKHAM.

Also,
A New edition of Mrs. Markham's History of France.
A History of Spain, on the Plan of Mrs. Markham's Histories of France and England. 2 vols. 16s.
John Murray, Albemarle Street.

THE UNITED SERVICE JOURNAL and NAVAL and MILITARY MAGAZINE for Nov. price 2s. 6d.
Contents.—Notes on Greece in 1829, from the Journal of an Officer.—On the National Importance of Yachts and Aquatic Sports.—Mob Victories; Military Delusions, No. 4.—A Health to the Red and the Blue.—Journal of the Surveying Expedition, composed of His Majesty's Ships Adventure and Beagle.—Original Anecdotes of the Emperor Napoleon, from the Journal of an Officer.—The late Military Operations at Paris and Brussels.—Lamentation of an Indian.—Flogging round the Fleet, with Prefatory Remarks on Punishments in the Fleet and Army.—On Hannibal's March through certain Marshes into Etruria.—The Soldier's Cemetery at Gibraltar.—Captain Lillo's improved Rudder.—The Fountain Pump substituted for the Chain Pump.—Revolution in Belgium.—Foreign Miscellany.—General Correspondence.—The Twenty-ninth Regiment at Soliga.—Progress of the Foreign Navies.—Editor's Portfolio.—African Travellers.—The Metropolitan Police.—Court Martial at Portsmouth.—Mutineers of the English.—Change of the Military Year.—New Periods of Payment.—Changes in the Stations of Corps.—General Orders.—Circulars, &c. &c.
Henry Colburn and Richard Bentley, New Burlington Street.

Neatly bound, price only 4s. 6d.
THE FAMILY CLASSICAL LIBRARY,
No. II, containing Tacitus, translated by ARTHUR MURPHY, Esq.
Ancients and moderns have concurred in placing this work among the most important historical productions of Greece and Rome. A lover of truth, and of the general good and welfare of mankind, Tacitus would neither flatter the follies, nor malignantly represent the extravagance of the general characters he delineated. The history of the reign of the Emperor Tiberius is his masterpiece. The deep policy, the dissimulation, and various intrigues of this celebrated prince, are painted with all the fidelity of the historian. This eminent writer possesses the distinctness of Xenophon, without his uniformity; he is more eloquent than Livy, and is free from his superfluity; and he has more knowledge than Polybius, without his affectation of reasoning on every occasion.
The preceding Numbers comprise Demosthenes, Sallust, Xenophon, Herodotus, Virgil, Pindar, Anacreon, &c. &c.
Henry Colburn and Richard Bentley, New Burlington Street.

The Iris.
On the 1st of November was published, price 12s.: or, on a fine demy paper, with India proof impressions of the Plates, on price 24s. the Second Volume of

THE IRIS; a Religious and Literary Offering.
By the Rev. THOMAS DALE, M.A.
The same pure morality and religious tendency which obtained for the Numbers of the Iris so large a share of popularity, will again be found in the present volume; and in order to give more variety to the embellishments, religious subjects have been selected and engraved in the first style of the art, from modern as well as ancient Masters, among whom are Rembrandt, Titian, Carlo Danièl, Reynolds, West, Lawrence, &c.
London: Published by N. Low, Lamb's Conduit Street; and Hurst, Chance, and Co. St. Paul's Churchyard.

Complete edition of
BOURNIENNE'S MEMOIRS of NAPOLEON.—This day is published, in "Constable's Miscellany," a new edition of Memoirs of Napoleon on Buonaparte. From the French of M. FAUVELET BOURNIENNE, Private Secretary to the Emperor.
By JOHN GALT, Esq. M.P., L.L.D.
In 3 vols. price 10s. 6d.; on fine paper, 12s. or in 3 vols. foolscap, as a distinct work, price 15s.
"We know, from the best political authority now living in England, that the writer's accounts are perfectly corroborated by facts."
Literary Gazette.
London: Hurst, Chance, and Co.; and Constable and Co. Edinburgh.

The National Library, No. III.
Beautifully printed in small 8vo. with a Portrait of Dr. Black, Price 5s.

THE HISTORY of CHEMISTRY.
By THOMAS THOMSON, Esq. M.D. F.R.S.E.
Professor of Chemistry in the University of Glasgow.
No. I. comprises the Life of Byron, by John Galt, Esq. with Plates, complete in a single volume, price 5s.
No. II. contains the History of the Bible, by the Rev. G. R. Giesl, M.A. M.R.S.L. &c.
No. IV. containing the History of Chivalry, by G. P. R. James, Esq. Author of "De L'Orme," "Darnley," "Richelieu," &c. With Plates, will appear on the 1st of Dec.
Henry Colburn and Richard Bentley, New Burlington Street.

3d edition, 2 vols. 8vo. 35s.
THE CONSTITUTIONAL HISTORY of ENGLAND, from the Accession of Henry VII. to the Death of George II.
By HENRY HALIAM.
John Murray, Albemarle Street.
Middle Ages, 4th edition, 3 vols. 36s.

Price 2s. 6d.
THE DUBLIN LITERARY GAZETTE and NATIONAL MAGAZINE, No. V. November 1830. (Under the Management of a new Editor.)
Contents.—Our Politics and Peculiar Opinions.—Political Dishonesty of the present Day; our Sentiments thereon.—Repeal of the Union considered.—Messrs. O'Connell, Lawless, and Shiel.—The County Members.—Messrs. Moore, Shaw, and Lefroy.—The Administration; the Duke of Wellington and Mr. Peel.—Priestly Power in Ireland.—Lady Moran's France.—Female Convicts.—Evening Song.—Periodical Literature.—Edinburgh Review, No. CII.—Theory of Population; Sadler versus Malthus.—Malthus.—Monk's Life of Bentley.—Niebuhr's Roman History.—Life of Sir Stamford Raffles.—Law Reform.—Jefferson's Memoirs.—Origin and Affinities of Language.—State of Parties.—Negro Slavery.—Woman.—Temperance Societies.—The Day Dream.—Alley Sheridan.—An Irish Story.—Sonnet.—Empiricism.—Medical Practice in Ireland.—Professional Sketches, No. I.; Mr. Lawrence.—Schools of Surgery, in Ireland.—The Barr, keeping Terms in London.—Demology and Witchcraft.—Irish Legends; Sir Turlough, or the Churchyard Bride.—the Annuals; Friendship's Offering and the Winter's Wreath.—Inaccuracies in Dr. Lardner's Cyclopaedia. REVIEW OF NEW BOOKS.

A New Voyage round the World, in the Years 1823, 4, 5, and 6. By Otto von Kotzebue, Post-Captain in the Russian Imperial Navy. 2 vols. 12mo. London, 1830. Colburn and Bentley.

DURING the progress of this interesting voyage we frequently received partial accounts of its "whereabouts" and proceedings, which we communicated to our readers; for whom therefore, as for ourselves, the connected narrative cannot have so much of novelty as it would otherwise have possessed; still it is a relation of events both attractive and important: attractive, from the nature of the seas, countries, and people, it describes,—and important, as marking the advance of scientific discovery, and the growth of the commercial, colonial, and political power of the vast empire of Russia.

We shall very briefly state the outline of the expedition, and confine our illustrative extracts to what appears to us to be most worthy of observation. Captain Kotzebue sailed in the ship *Predpriatie* (i. e. *Enterprise*), the first ever built in Russia under a roof, from Kronstadt, on the 28th July, 1823. She was of the size of a frigate of the middling class, though provided with only twenty-four six pounders, and manned by a crew (including naturalists, astronomers, &c.) of one hundred and forty-five souls. The vessel was richly stored with proper instruments for the purposes of science, and destined, in the first instance, for the north-west coast of America, where, among other duties, she was to protect the Russian American Company from the smuggling carried on there by foreign traders;—she accordingly made her way to Brazil, remained a while at Rio Janeiro, doubled Cape Horn, and made a stay at Chili; thence to O Tahaiti, Pitcairn Island, Navigators' Islands, Padack Islands, Kamtschatka, New Archangel, California, and the new Russian settlement Ross; the Sandwich Islands, the Pescadores, and some supposed new coral ranges, (called Rimski-korsakoff, Eschscholtz, and Bronus Islands,) the Ladrões and Philippines, St. Helena,—home. There is appended to the whole a zoological paper by Professor Eschscholtz, of considerable interest.

In the language of the estimable commander there is a spice of enthusiasm, occasionally bordering on the romantic; and in the translation, though faithful, on the whole, in conveying the meaning, we have to regret numerous inelegancies, not to say faults of style, and especially in rendering naval terms, which detract from its general merit. It is, however, so difficult, as almost to be impossible, to transmute any foreign tongue into pure English; and the German, from which we presume the present work is translated, is by no means the most ductile in this respect. Having premised so much, we now go to our selections.

At Teneriffe (says the writer, as he gazed upon the receding peak) we called to mind "the mysterious accounts of its aborigines, of whom it was said, from the resemblance of

their teeth to those of grazing animals, that they could only live on vegetables. They embalmed corpses in the manner of the ancient Egyptians, and preserved them in grottos in the rocks, where they are still to be found. The Spaniards, the first discoverers and appropriators of the island, have described in high terms the state of civilisation, methods of agriculture, and remarkably pure morality, of these ancient inhabitants, who nevertheless were entirely exterminated by the tyranny and cruelty of their conquerors."

After quitting Brazil the voyagers approached Staten-land, where the author again bursts into one of his enthusiastic apostrophes.

"A fresh breeze carried us so near to this inhospitable and desolate island, that we could plainly distinguish the objects on it, even without a telescope. What a contrast to the beauty of Brazil! There nature seems inexhaustible in her splendour and variety; here she has sparingly allowed a thin clothing of moss to the lofty masses of black rock. Seldom do the sun's rays lighten this or the neighbouring island of Terra del Fuego. Vegetation is so blasted by the perpetual cold and fogs, that a few miserable stunted trees can scarcely find subsistence at the foot of the mountains. The sea-birds avoid these barren shores; the very insects disdain them; the dog, the faithful companion of man, and man himself, the inhabitant of every climate under heaven, can alone exist in this; but the warmth of the sun is essential to the development of his faculties. Here he is a mere animal, and of disgusting appearance; small, ill-shaped, with dirty, copper-coloured skin, black bristly hair, and devoid of beard. He inhabits a miserable hut made of boughs covered with dried rushes, and appeases his hunger on the raw and often half-decayed flesh of the sea animals, whose skins furnish him with a scanty covering: this is the utmost extent to which his invention has yet led him, in providing defences against the roughness of the climate; and the dreariness of his existence is still unenlivened by any notion of amusement. Yet is this benumbing country situated in the same degree of southern latitude in which in the northern lies my beloved Esthonia, where every comfort of civilisation may be enjoyed—the land of my birth, where, in the charming form of woman, is 'garnered up' the happiness of my life, and where I hope to rest at last, in the haven of friendship and love, till I set out on that final voyage from which I shall never return."

We pass by the residence at Chili, the account of which more recent events have rendered of less consequence, and of that at O Tahaiti (somewhat under similar circumstances): all we shall say is, that Kotzebue draws a most unfavourable picture of the missionaries and their doings—representing them as grasping at power, fanatical, and rather injuring than improving the condition of the natives, whose numbers have been miserably decreased. Of the Radackers, or people of Radack, the description is infinitely preferable: their lan-

guage is quite different from all the Polynesian dialects, and appears of more recent formation. The author conjectures that they owe their origin to the Carolinas.

From Radack the Russians went to Kamtschatka, from which we shall only bring away two little anecdotes.

"The following anecdote evinces the hardness of the bears. Fish, which forms their chief nourishment, and which they procure for themselves from the rivers, was last year excessively scarce. A great famine consequently existed among them, and instead of retiring to their dens, they wandered about the whole winter through, even in the streets of St. Peter and St. Paul. One of them finding the outer gate of a house open, entered, and the gate accidentally closed after him. The woman of the house had just placed a large tea-machine, full of boiling water, in the court: the bear smelt to it and burned his nose; provoked at the pain, he vented all his fury upon the kettle, folded his fore-paws round it, pressed it with his whole strength against his breast to crush it, and burnt himself, of course, still more and more. The horrible growl which rage and pain forced from him, brought all the inhabitants of the house and neighbourhood to the spot, and poor bruin was soon despatched by shots from the windows. He has, however, immortalised his memory, and become a proverb amongst the town's people; for when any one injures himself by his own violence, they call him 'the bear with the tea-kettle.'"

"In the harbour of St. Peter and St. Paul there is sufficient depth of water close to the shore to admit of landing by means of a plank only. This proximity led a pair of swallows to mistake our frigate for a building upon terra-firma, and, to the infinite delight of the sailors, who regarded it as a lucky omen, they deliberately built themselves a nest close to my cabin. Undisturbed by the noise in the ship, the loving pair hatched their brood in safety, fed their young ones with the tenderest care, and cheered them with joyous songs. But when on a sudden they saw their peaceful dwelling removing from the land, they seemed astonished, and hovered anxiously about the ship, yet still fetched food for their young from the shore, till the distance became too great. The struggle between the instincts of self-preservation and parental love then became perceptible. They flew round the vessel, then vanished for awhile, then suddenly returned to their hungry family, and stretching their open beaks towards them, seemed to lament that no food was to be found. This alternate disappearing and returning continued some time, and terminated in the parents returning no more: the sailors then took on themselves the care of the deserted orphans. They removed them from the nest where the parent's warmth was necessary, to another lined with cotton, and fixed in a warm place, and fed them with flies, which seemed to please their palates very well. The system at first appeared to have perfectly succeeded, and we

were in hopes of carrying them safely to America; when, in spite of the most careful attention, they fell sick, and on the eighth day, to the general sorrow, not one of our nurslings remained alive. They, however, afforded an additional proof how kindly the common people of Russia are interested in all that is helpless."

From this point the ship steered for our Norfolk Sound, the Sitka Bay of the Russians, where, on the island of Sitka, is the New Archangel, the principal settlement of the Russian-American Company. The natives are called Kalushes, and they appear to be a fierce and daring race; disputing with the invaders of their country every inch of it which they have occupied or now possess. On land the black bear, and at sea the sea-otter (now rendered scarce by interminable hunting), produce furs of the highest price, not only in Russia, but in China. Kotzebue's picture of the natives is very disgusting.

"The Sitka Islanders, as well as their neighbours on the continent, are large and strongly built, but have their limbs so ill-proportioned, that they all appear deformed. Their black straight hair hangs dishevelled over their broad faces, their cheek-bones stand out, their noses are wide and flat, their mouths large, their lips thick, their eyes small, black, and fiery, and their teeth strikingly white. Their natural colour is not very dark; but they appear much more so than is natural to them, from the custom of smearing themselves daily over the face and body with ochre and a sort of black earth. Immediately after the birth, the head of the child is compressed, to give it what they consider a fine form, in which the eyebrows are drawn up, and the nostrils stretched asunder. In common with many other nations, they tear the beard out by the roots as soon as it appears. This is the business of the women. Their usual clothing consists of a little apron; but the rich wear blankets, purchased from the Russians, or from the American ships, and tied by two corners round the neck, so that they hang down and cover the back. Some of them wear bear-skins in a similar manner. The most opulent possess some European garments, which they wear on great occasions, and which would have an absurd effect, were they not so disgusting as to extinguish all inclination to laugh. They never cover the head but in heavy rain, and then protect it by round caps of grass, so ingeniously and closely plaited as to exclude every drop of water. Whatever the degree of heat or cold, they never vary their costume; and I believe there is not a people in the world so hardened against the weather. In the winter, during a cold of 10° of Reaumur, the Kalushes walk about naked, and jump into the water as the best method of warming themselves. At night they lie without any covering under the open sky, near a great fire,—so near, indeed, as to be sometimes covered by the hot ashes. The women whom I have seen were either dressed in linen shifts reaching to their feet, or in plaited mats. The custom, common to both sexes, of painting their faces in broad, black, white, and red stripes, crossed in all directions, gives them a peculiarly wild and savage appearance. Although this painting is quite arbitrary, and subject to no exact rules, the different races distinguish each other by it. To give the face a yet more insane cast, their long, hanging, tangled hair is mixed with the feathers of the white eagle. When powdered and painted in this way, the repulsiveness of the Kalush women, by nature excessively ugly, may be

imagined; but they have a method of still farther disfiguring themselves. As soon as they are nearly marriageable, an incision is made in the under-lip, and a bone passed through it, which is exchanged from time to time for a thicker one, that the opening may be continually widened. At length a sort of double button, of an oval form, called a kaluga, which, among the people of rank, is often four inches long, and three broad, is forced in so as to make the under lip stand forward thus much in a horizontal direction, and leave the lower teeth quite bare. The outer rim of the lip surrounding the wooden button becomes, by the violent stretching, as thin as a packthread, and of a dark blue colour. In running, the lip flaps up and down, so as to knock sometimes against the chin and sometimes against the nose. Upon the continent, the kaluga is worn still larger; and the female who can cover her whole face with her under lip passes for the most perfect beauty. Men and women pierce the gristle of the nose, and stick quills, iron rings, and all kinds of ornaments, through it. In their ears, which are also pierced in many places, they wear strings of bones, muscle-shells, and beads. It would be difficult to convey an adequate idea of the hideousness of these people when their costume is thus complete; but the lips of the women, held out like a trough, and always filled with saliva stained with tobacco-juice, of which they are immoderately fond, is the most abominably revolting part of the spectacle. The Kalushes have no fixed residence, but hover round the coast in their large canoes, which they call the women's, carrying all their property with them. When they fix upon any spot for their temporary establishment, they build a hut with great celerity, having all the materials at hand. They drive a number of stakes into the ground in a quadrangular form, fill the interstices with thin planks, and roof in the whole with the bark of trees. With such a dwelling they are satisfied: in the severest winter the family sit in a circle, carrying on their several employments round a fire in the centre. The interior displays as much filthiness as if the inhabitants belonged to the dirtiest class of the brute creation. The smoke—the stench of bad fish and blubber—the repulsive figures of the women, disgustingly occupied in seeking for vermin on the heads or skins of the men, and actually eating them when found; the great utensil for the service of the whole family, which is also the only vessel capable of containing water to wash with; all this soon drives the most inquisitive European out of so detestable a den. Their food, sufficiently disgusting in itself, is rendered still more so by their manner of eating. It consists almost exclusively of fish, of which the whale is the chief favourite, and its blubber an especial dainty. This is sometimes cooked upon red-hot stones, but more commonly eaten raw. The skins of the sea-otters form their principal wealth, and are a substitute for money; these they barter with the ships which trade with them, to the prejudice of the Russian Company, for muskets, powder, and lead. No Kalush is without one musket at least, of which he perfectly understands the use. The richer a Kalush is, the more powerful he becomes; he has a multitude of wives, who bring him a numerous family; and he purchases male and female slaves, who must labour and fish for him, and strengthen his force when engaged in warfare. These slaves are prisoners of war, and their descendants; the master's power over them is unlimited, and he even puts them to death without scruple. When the

master dies, two of his slaves are murdered on his grave, that he may not want attendance in the other world: these are chosen long before the event occurs, but meet the destiny that awaits them very philosophically. The continual wars which the different races carry on against each other, with a ferocious cruelty uncommon even among savages, may account for the scanty population of this district; the fire-arms with which, to their own misfortune, they have been furnished by the American ships, have contributed to render their combats more bloody, and consequently to cause renewed and increased irritation. Bows and arrows were formerly their only weapons; now, besides their muskets, they have daggers, and knives half a yard long. They never attack their enemies openly, but fall suddenly upon them in moments of the utmost fancied security. The hope of booty, or of taking a prisoner, is a sufficient motive for one of these treacherous attacks, in which they practise the greatest barbarities; hence the Kalushes, even in time of peace, are always on their guard. They establish their temporary abodes on spots in some measure fortified by nature, and commanding an extensive view on all sides. During the night the watch is confided to women, who, assembled round a fire outside the hut, amuse themselves by recounting the warlike deeds of their husbands and sons. Domestic occupations, even the most laborious, are also left to females; the men employing themselves only in hunting, and building their canoes. The slaves are required to assist the women, who often treat them in a most merciless manner. The females take an active part in the wars; they not only stimulate the valour of the men, but even support them in the battle. Besides the desire of booty, the most frequent occasion of warfare is revenge. One murder can only be atoned by another; but it is indifferent whether the murderer or one of his relations fall,—the custom merely requires a man for a man; should the murdered person be a female, a female is required in return. A case which would appear inconceivable has actually occurred,—that one of these most disgusting creatures has occasioned a struggle similar to that of Troy for the fair Helen, and an advantageous peace has been obtained by the cession of one of these monsters. The Kalush, who would probably look coldly on our most lovely females, finds his filthy countrywomen, with their lip-troughs, so charming, that they often awaken in him the most vehement passion. In proof of this, I remember an occurrence which took place during our residence in Sitka, among a horde of Kalushes who had encamped in the vicinity of the fortress. A girl had four lovers, whose jealousy produced the most violent quarrels; after fighting a long time without any result, they determined to end the strife by murdering the object of their love, and the resolution was immediately executed with their lances. The whole horde assembled round the funeral pile, and chanted a song, a part of which was interpreted by one of our countrymen, who had been long resident here. 'Thou wast too beautiful—thou couldst not live—men looked on thee, and madness fired their hearts!' Savage as this action was, another exceeded it in ferocity. A father, irritated by the cries of his child, an infant in the cradle, snatched it up, and threw it into a vessel full of boiling whale-oil. These examples are sufficient to characterise this hateful people, who appear to be in every respect the very refuse of human nature. Their weddings

are celebrated merely by a feast given to the relatives of the bride. The dead are burned, and their ashes preserved in small wooden boxes, in buildings appropriated to that purpose. They have a confused notion of immortality, and this is the only trace of religion which appears among them. They have neither priests, idols, nor any description of worship, but they place great faith in witchcraft; and the sorcerers, who are also their physicians, are held in high estimation, though more feared than loved. These sorcerers profess to heal the sick by conjurations of the wicked spirit; they are, however, acquainted with the medicinal properties of many herbs, but carefully conceal their knowledge as a profitable mystery."

We have not space to pause either at New California or the Sandwich Islands; but the details from Manilla are so curious, that to them, and the zoological and scientific intelligence contained in these volumes, we shall return: in the meanwhile they will be found eminently interesting in all other respects in which such works can be considered valuable by the public.

The Keepsake for 1831. Edited by F. M. Reynolds. 8vo. pp. 320. London, Hurst, Chance, and Co.; Jennings and Chaplin.

WE look upon this volume as quite a triumph of taste. Of its exquisite embellishments we have elsewhere spoken; and can now add, that its literary contents are, generally, varied and pleasant, with some specimens of superior merit. Mr. Agar Ellis has contributed a delightful paper, opening a mine of literature hitherto untouched, and yet we think peculiarly calculated for an Annual. It is a memoir of Lady Fanny Shirley, Chesterfield's "Fanny, blooming fair!" A series of these biographical sketches, embodying that lighter and more personal information, which, though scarcely matter of history, yet throws much light on the historic page, would be a new and most popular feature in a volume like the present. The memoir is written with Mr. Ellis's usual elegance, and enriched with one or two curious and original letters. We think Lord Nugent and Mr. Hook tell short stories better than any writers we know. Lord Nugent's "Pic-Nic Party" is delightful; and Mr. Hook's "Brighton Coach" as amusing an adventure on the road as any gentleman could wish to meet. "Transformation," and the "Swiss Peasant," are two clever tales, by the author of "Frankenstein," whose powers of creation are equally original and inventive, and who also possesses a peculiar and often deep insight into the feelings she investigates. Had her style more of condensation, it would double its attraction. Lord Morpeth's "Story of Modern Honour" owes much to its style of narration; it begins well, but the *dénouement* is overstrained. Duelling is bad in theory; but unless we can contrive to entirely remake human nature, and remodel society, it seems to us rather necessary to deprecate its abuse than its use. Severn's remorse is the imaginative exaggeration of a weak mind; not the manly regret that weighs both the good and the evil over which it laments. "Twice lost, but saved," by Mr. Banim, is an affecting incident, powerfully told: none excel this author in delineating the manners of ordinary life. We like, too, the story of "Arthur Chamberlayne," by the Hon. Charles Phipps. From the poetry we extract the following, by Lord Morpeth:—

"The Use of Tears.

Be not thy tears too harshly chid,
Repine not at the rising sigh:—
Who, if they might, would always bid
The breast be still, the cheek be dry?
How little of ourselves we know
Before a grief the heart has felt;
The lessons that we learn of woe
May brace the mind as well as melt.
The energies too stern for mirth,
The reach of thought, the strength of will,
Mid cloud and tempest have their birth,
Through blight and blast their course fulfil.
Love's perfect triumph never crown'd
The hope unchequer'd by a pang;
The gaudiest wreaths with thorns are bound,
And Sappho wept before she sang.
Tears at each pure emotion flow:
They wait on Pity's gentle claim,
On Admiration's fervid glow,
On Pity's seraphic flame.
'Tis only when it mourns and fears
The loaded spirit feels forgiven,
And through the mist of falling tears
We catch the clearest glimpse of heaven."

There is a very pretty poem called the "Gondola," by Mr. Bernal; another, by the author of "Granby." But, for the sake of variety, our next extract shall be prose. We mentioned the original letters in Mr. Ellis's contribution; we cannot do better than extract them.

"Lovell, as we shall see from his own confession, was a rival of Chesterfield; which circumstance renders his communications the more curious. The letters are addressed to his friend, Lord Essex, at that time ambassador at the court of Turin.

"Holkham, Dec. 31, 1735.

"My dearest Lord,—La Roche's present, by being the occasion of my hearing from you, afforded me as great pleasure as the present itself (though very agreeable and fit for my new house) will do. You have opened my wounds by speaking of Lady Fanny. She is quite lost to me: that foul fiend Chesterfield has bewitched her; and, under pretence of serving me, has entirely defeated me, and is in full possession of the lady's soul. In the enclosed, which I beg you'll deliver, I have eased my heart a little to La Roche, and told him of my misery. For since my secret is like never to be any secret at all, I find great ease in discoursing of it, and tiring all my acquaintance with my grief. My rival triumphs so publicly, that I hear of nothing from London but his success. All summer, parties by water, rides in Bushy Park, &c.; and the old ladies begin to be censorious; which the nice lady, however, stands, and, since she herself knows there is no harm, does not mind what others say. This plaguy peace, that is like to unhinge the measures of the seditious, and make them have nothing to do, will give Chesterfield still more time to love. I cannot bear London while things continue thus, though I must be there in about three weeks. I hear, from true judges, Veracini's opera is the finest that ever was, though I don't hear how it fills. Being obliged to write to his Grace of Grafton, per post, I acquainted him about Lord Euston, and shall remember you to all old friends, even Chesterfield, when I come to town. Our club at Dels would be overjoyed to have your company. Your most faithful and entirely humble servant,
LOVELL."

"London, Jan. 25, 1736.

"My dear Essex,—I have this moment received your obliging letter, by which I perceive you have not received mine, which I wrote in answer to your last, which brought me the first bill of lading, and enclosed in it one for La Roche, thanking him for his obliging present. I shall inquire at our office" by what

* "The post-office, Lord Lovell was at this time postmaster-general.

neglect that letter miscarried. That beauty you think so cold shevs herself warmer than any lady in England, but not with me. All I can flatter myself with at most is, the having made myself convenient to her. I attacked (though not boldly) in front; dazzled by her beauty, I could scarce approach, while that sly Chesterfield, like the toad in Milton, came privily behind, and fastened on her ear. In short, they live together, ride together, walk, go by water, &c. &c., in the face of the whole world; and this cold, shy beauty, as you called her, bears up, I do assure you, more than ever I yet saw married or unmarried lady. The great trouble they have is, that, when they ride out, his lordship is forced to stand on his stirrups, while she makes her back ache with stooping to hear him; but I am now in treaty for a monstrous tall horse that is shewed as a show here, which I will present to his lordship; for we are generous rivals and good friends yet. Your friend, his Grace of Newcastle, has a cook *qui fait trembler tout l'Angleterre*, and the whole discourse of the town is on him. He gave us a most fine dinner the other day, where were assembled Chavigny, the D. of Richmond, Pembroke, and all the nice critics in eating. We there drank Champagne—some sent by Waldegrave, some by you; and, though both were excellent, yours was preferred, and reckoned the best in England. To-morrow I dine with Scarborough, where I shall see many of your friends, who I will acquaint of your kind remembrance of them. The club goes on well, and we always remember you, and wish for you amongst us. Operas don't do so well. I missed hearing that of Veracini, which the best judges say is Squitone. Lest this letter should miscarry, I shall send it to the gentleman at the Treasury that brought it, who promised to carry it to your lordship.—I am, with the most unfeigned sincerity, regard, and respect, my dearest lord, your most faithful and obedient humble servant,
LOVELL."

L. E. L. has been peculiarly happy in her contributions to the *Keepsake*, though the ensuing is our favourite:—

"The Forgotten One.

I have no early flowers to fling
O'er thy yet earlier grave:
O'er it the morning lark may sing,
By it the bright rose wave;
The very night-dew disappears
Too soon, as if it spared its tears.
Thou art forgotten!—thou, whose feet
Were listen'd for like song!
They used to call thy voice so sweet—
It did not haunt them long.
Thou, with thy fond and fairy mirth—
How could they bear their lonely hearth!
There is no picture to recall
Thy glad and open brow;
No profiled outline on the wall
Seems like thy shadow now;
They have not even kept to wear
One ringlet of thy golden hair.
When here we shelter'd last appears
But just like yesterday;
It startles me to think that years
Since then are past away.
The old oak-tree that was our tent,
No leaf seems changed, no bough seems rent.
A shower in June—a summer shower,
Drove us beneath the shade,
A beautiful and greenwood bowyer
The spreading branches made.
The rain-drops shine upon the bough,
The passing rain—but where art thou?
But I forget how many showers
Have washed this old oak-tree,
The winter and the summer hours,
Since I stood here with thee.
And I forget how chance a thought
Thy memory to my heart has brought.
I talk of friends who once have wept,
As if they still should weep;
I speak of grief that long has slept,
As if it could not sleep:
I mourn o'er cold forgetfulness—
Have I, myself, forgotten less?

I've mingled with the young and fair,
Nor thought how there was laid
One fair and young as any there,
In silence and in shade.
How could I see a sweet mouth shine
With smiles, and not remember thine?
Ah! it is well we can forget,
Or who would linger on
Beneath a sky whose stars are set,
On earth whose flowers are gone?
For who could welcome loved ones near,
Thinking of those once far more dear,
Our early friends, those of our youth?
We cannot feel again
The earnest love, the simple truth,
Which made us such friends then.
We grow suspicious, careless, cold;
We love not as we loved of old.
No more a sweet necessity,
Love must and will expand,
Loved and beloved we must be,
With open heart and hand,
Which only ask to trust and share
The deep affections which they bear.
Our love was of that early time,
And now that it is past,
It breathes as of a purer clime
Than where my lot is cast.
My eyes fill with their sweetest tears
In thinking of those early years.
It shocked me first to see the sun
Shine gladly o'er thy tomb—
To see the wild flowers o'er it run
In such luxuriant bloom.
Now I feel glad that they should keep
A bright sweet watch above thy sleep.
The heaven whence thy nature came
Only recall'd its own;
It is Hope that now breathes thy name,
Though borrowing Memory's tone,
I feel this earth could never be
The native home of one like thee.
Farewell! the early dew that fall
Upon thy grass-grown bed
Are like the thoughts that now recall
Thine image from the dead.
A blessing hallow's thy dark cell—
I will not stay to weep. Farewell!"

There is something so odd, and yet so true, in the following remarks of Mr. Banim, that we must find room for them.

"Perhaps there is no country so little susceptible, generally speaking, of public sensations as England: events which agitate the peasant, nay, the peasant's wife, at the other side of the straits of Dover, would scarce reach John Bull in his village chimney-nook,—certainly would not disturb the serenity of his countenance if they did. And yet there is one species of occurrence which excites us, and pervades us, and absorbs us, through every grade of society, more than it could, or at least more than it does, any other civilised people. A murder—a downright, in earnest murder—broad-featured, well-marked, deliberate, unequivocal, refined—arouses into unusual vivacity all England, from the banks of the Tweed to the Land's End. Its fame spreads from cities and towns into the recesses of the small mountain hamlet. Men, women, girls, and children, talk and think of nothing else. The newspapers teem with nothing else, excepting only and always the unheeded advertisements of new books. Literary talent of really a high order is vented in descriptions, speculations, deductions, and sentimental discussions, on the subject. Artists hurry down to the rural scene of the atrocity, to make money by making drawings of it, as well as of all the innocent scenery and accompaniments within view. Thousands of people, who cannot wait for their second-hand information, hurry after them, or anticipate them, to see with their own eyes; or to hear with their own ears, the whispered anecdotes of the half-petrified carter, who, in the gray dawn of the drizzling morning, found the stained bread-knife, or the discharged pocket-pistol (the first dreadful intimations of the deed), in the lonesome bride-road, or by the side of the stagnant pool; or they pay round sums to have to say that they

sat down in the little back parlour, or scramble through the brake where the murderer so lately sat or passed."

We now leave the *Keepsake* to the judgment of the many to whom it will be offered—and to the Graces themselves a more elegant offering could not be made.

Life and Correspondence of the late Admiral Lord Rodney. By Major-General Mundy. 2 vols. 8vo. London, 1830. Murray.

THE *Life and Correspondence* of the brave and improvident Lord Rodney touch a time of brilliant interest in the annals of the navy, and can hardly fail to excite the attention of the British public. Though, in many respects, not to be compared with the *Memoirs of Collingwood*—and, we would say, perhaps hardly worthy of extension to two octavo volumes, containing between nine hundred and a thousand pages—there is, nevertheless, a mass of *matériel*, and a number of miscellaneous pieces of mosaic, in this publication, which will amply repay the trouble of perusal, and convey both information and amusement to the reader.

Major-General Mundy having married Sarah Brydges, the youngest daughter of Rodney, had every facility of access to his papers; and from his family connexion, it may readily be supposed, possessed all that kindly partiality for his subject which is no bad trait in the writing of biography. He sets out, accordingly, with the ancestry of Lord Rodney, and derives him from Sir Richard Rodney, knight, who fell at Acre, fighting under the banners of Richard I., though the male line terminated about the era of Charles II., and passed by a female into the house of Sir Thomas Brydges, of Kainsham, Somerset. The father of Lord Rodney commanded a royal yacht, in which George I. was wont to sail in his journeys to the continent; and his majesty stood godfather to his son, who was born February 19, 1718, and educated at Harrow. At twelve years of age he left school, and went to sea on a letter of service from the king, the last ever granted; and spent seven years on the Newfoundland station, under Admiral Medley. We need not trace his upward progress, which was accelerated by his great talents and devotedness to the duties of his profession. In Admiral Hawke's victory over the French fleet of M. de l'Etendière, off Finisterre, on the 14th of October, 1747, Rodney commanded the *Eagle* of 60 guns; and the following anecdote is related:—

"Captain Rodney, having compelled the French ship with which he had been chiefly engaged, to surrender, instantly boarded her, and made his way to the French captain, who, having given up his sword, remarked, with the characteristic *badinage* of a Frenchman even under the severest misfortunes, 'that he should rather have met the *Eagle* in the shape of a dove, with the olive-branch of peace.' To which Rodney instantly replied, in the words of his motto, 'Eagles do not beget doves' and in 1780, when he was advanced to the dignity of a Knight of the Bath, the above circumstances were made the insignia of his arms; viz. or, three eagles displayed purpure, answering to the three victories he had then gained over the French and Spaniards."

In 1753 he married Lady Jane Compton (who died in 1757), sister to Spencer, eighth Earl of Northampton; but this caused no interruption in his active services, and in May 1759 he was promoted to the rank of Rear-Admiral. It is from this period, when his more important enterprises commenced, that

the *Correspondence* is dated. At Havre, and in the West Indies, he continued to perform essential services till 1762, for which he received the thanks of parliament, and was, in 1764, raised to the dignity of a Baronet of Great Britain. In November 1765 he married Henrietta, daughter of John Clies, Esq., by whom he had several children—his successor to the peerage, and three daughters. From 1765 to 1770 he was Governor of Greenwich; and the following characteristic story is told of his administration:—

"At that period, few, if any, of the pensioners were allowed great-coats, and then only in consequence of a petition approved by the weekly board, or an order from the governor, who had authority to grant that indulgence. Sir George, the first winter of his government there, had applications made as usual, but required no better pretensions, or greater eloquence, than an old sailor and a cold day, to grant an order. The consequence of this was, that great-coats became so general, and the demand increased so much, that the Lieutenant-governor, Mr. Boys, at the next board, took upon him to represent the governor's conduct as extremely reprehensible. Sir George, who was present, got up, and after expressing his surprise at the lieutenant-governor's conduct, very calmly said to him, 'I have the greatest respect for you as a man, who, by the greatest merit, has raised himself from the station of a foremast man to the rank of an admiral—a circumstance which not only does you the highest honour, but would have led me to have expected you as an advocate instead of an opposer to such a necessary indulgence. Many of the poor men at the door have been your shipmates, and once your companions. Never hurt a brother sailor; and let me warn you against two things more: the first is, in future not to interfere between me and my duty as governor; and the second is, not to object to these brave men having great-coats, while you are so fond of one as to wear it by the side of as good a fire as you are sitting by at present. There are very few young sailors that come to London without paying Greenwich Hospital a visit; and it shall be the rule of my conduct, as far as my authority extends, to render the old men's lives so comfortable, that the younger shall say, when he goes away, 'Who would not be a sailor, to live as happy as a prince in his old age?'" and Sir George kept his word—for from that time every man was allowed a great-coat.* It was Sir George who first appointed the shoremen, as they are called, whose duty it is to watch and wash the retreating tide; thereby contributing to the salubrity of the hospital, and to the comfort and convenience of its numerous visitors."

The improvements now in progress under the royal William, will, however, still further contribute to the honour of this glorious establishment. In 1771-2-3-4, Rodney was again employed in the West Indies, during three years of peace; and being disappointed in obtaining the government of Jamaica, he returned, deeply chagrined, to Portsmouth, in September 1774.

"From this period (says his biographer), the sunshine which had hitherto cheered his existence became obscured; and for the space

* "By the humane exertions of that most able and excellent officer, Rear-Admiral Sir Richard Keates, the present governor of Greenwich Hospital, and by the judicious regulations of the directors of the establishment, the comforts of the pensioners may now be said to be consummated, both with regard to the clothing, discipline, and messing, as well as to the indulgences allowed to those who have families."

of four years the oppressive gloom of want, disappointments, and inaction, hung over him like a mist, when again the cheering light of prosperity beamed upon him, and gilded his evening with its brightest rays. It is to be lamented, that natures the most generous and ingenuous, from an honest zeal which flows through all their conduct, can seldom bring themselves to bear the dry methodical labour of arithmetical calculation, nor to bestow that attention to their financial concerns, which is, to a certain degree, indispensable in every condition of life. Sir George, it is to be apprehended, was one of this class. Possessing a pleasing and handsome exterior, with the courteous manners and address of the accomplished gentleman (qualities not particularly valued by the navy in those days), he had, at all times, when on shore, been received into the highest circles of fashion, where he took in the draught of pleasure, as others did; and his heart being warm and generous, he not unfrequently found himself involved in pecuniary difficulties. The words of the Scottish bard of nature might well be applied to him—

‘ He ne’er was giv’n to much misguiding,
Yet coin his pouches wad na bide in,
He dealt it free—
Wi’ him it ne’er was underhiding,
That’s owre the sea.’

In those days, that course of society and bane of happiness, the passion for play, prevailed to a degree one can now have no idea of, in the assemblies of the great. The votaries of fashion, of all ages and of either sex, were carried down its stream and engulfed in its vortex; and it has been asserted, that this gallant officer, so wise and circumspect whilst afloat on his country’s service, was unable, although a skillful mariner, to steer altogether clear of its seductions. This report, however, seems to be unfounded in truth, and probably owed its origin to the circumstance of his mixing much in the best society. His fortune was never a large one, and other causes are fully sufficient to account for its diminution, without accusing him of an attachment to play. He lived in a handsome style, although perhaps not beyond his income; but his difficulties were increased by the expenses consequent upon the different elections he had been engaged in for his seats in parliament, more especially the last one, for Northampton, in 1768, which nearly effected the ruin of three noble families concerned in it. Sir George did not remain in England very long after his return home. His embarrassments increasing, he repaired to France, and settled at Paris; thus going into a voluntary exile amongst a people whose government had trembled at his name. He here lived in very straitened circumstances until better days came; and to the credit of that gallant nation it must be mentioned, that they treated the English Belisarius with the respect, and sympathy due to his fame and to his misfortunes.*

Our readers may remember the story of the singular ruse by which it is related Sir George Rodney evaded his creditors and the bailiffs, and escaped to France. It is stated that he got off in the shape of a dead body; a hearse bearing his carriage, and a coffin his surcoat.

During the American war, Rodney’s exile in Paris became almost insufferable to him; and he used every effort to obtain employment, but in vain. His debts hung over him like a mortal burden; and he was only relieved, at length, by the generous intervention of Maréchal Biron, a loan from whom enabled him, in 1778, to quit the French capital with credit.

“ A short time prior to his departure from Paris, the Duke de Chartres, afterwards the

infamous Orleans, took occasion to acquaint Sir George that he was to have a command in the fleet which was to be opposed to that under the command of his friend and countryman Mr. Keppel; and, with an insulting air, asked him what he thought would be the consequence of their meeting? ‘ That my countryman will carry your royal highness home with him to learn English,’ was the spirited reply. On Sir George’s arrival in England, he was immediately enabled to remit the amount of the loan to his illustrious friend, as well as to adjust matters satisfactorily with his creditors. Having arranged these affairs, he lost no time in renewing his application for employment; but, unfortunately, this object under existing circumstances, was unattainable; and it was expedient that he should wait for a more favourable occasion.”

A year of inactivity elapsed ere he obtained that command which led to his splendid victory, April 12, 1782: but here, for the present, we must leave him.

The Present State of Australia: its Advantages and Prospects with reference to Emigration; and a particular Account of the Manners, Customs, and Condition, of the Aboriginal Inhabitants. By Robt. Dawson, Esq., late Chief Agent of the Australian Agricultural Company. 8vo. London, 1830. Smith, Elder, and Co.

The Friend of Australia; or, a Plan for exploring the Interior, and for carrying on a Survey of the whole Continent of Australia. By a Retired Officer of the East India Company’s Service. 8vo. pp. 428. London, 1830. Hurst, Chance, and Co.

We have thrown the two volumes lying before us into one head, from their both relating to a territory, which, from its extent and political importance, may, without cavil, be justly termed a *fifth quarter* of the world. It is impossible to look at the colony hitherto called “New South Wales,” without regarding it as the nucleus of a mighty empire, at no remote period. Whatever blunders may have been originally committed in selecting such an objectionable spot as that surrounding Port Jackson, yet, the settlement of a colony being once made, it becomes a far more difficult problem how to remove such colony, without greater sacrifices than those contingent on its disadvantageous site. There can be no doubt that, if the government surveyors had understood or done their duty in the first instance, they would have explored the country, at least to the extent of thirty or forty miles inland, in making a survey of the east coast of New Holland; when they must have discovered (if they had been blest with common capacity) that the line of coast was nothing more than the base of a considerable range of mountains; and, as a natural consequence, that the mountain torrents must of necessity occasion serious inundations, accompanied by the most disastrous consequences to an embryo colony.

It is only fair to acknowledge, that the rapid growth of this infant colony has exceeded the most sanguine hopes or calculations of its founders; while it proves, in a striking manner, the results of British enterprise, even under the most unfavourable auspices,—for the superior fertility of the soil in our *ci-derant* North American provinces, together with its proximity to the parent state, offered infinitely greater inducements to free settlers from every part of Europe than the remote island (or continent) of New Holland. The rapid progress in political and commercial (if not moral) im-

portance, which Australia has made within the last thirty years, may therefore be justly considered a political phenomenon, and is a pleasing proof of what good might be effected in the way of emigration, under a judicious administration.

That some measure must be speedily devised to provide for our half-famishing population, is admitted in all quarters. But whether our Canadian, South African, or Australian colonies, be the more eligible district, we must leave Mr. Wilmot Horton, and other benevolent political economists, to determine; while we lay before our general readers a few extracts from the work of a gentleman, who appears, from his official situation and habits of life, to have had greater opportunities of forming correct estimates of the agricultural and commercial capabilities of the new southern continent, and the character of the aboriginal population, than any other author whose labours have fallen under our notice.

Mr. Dawson* tells us in his introduction, that “ the following pages are not put forth to gratify the vanity of authorship; but with a view of communicating facts where much misrepresentation has existed, and (he continues) to rescue, as far as I am able, the character of a race of beings (of whom I believe I have seen more than any other European has done) from the gross misrepresentations and unmerited obloquy that have been cast upon them.” The author proceeds in several portions of his work to justify the above remarks by anecdotes exhibiting the docility and superior fidelity of the “cannibals” to many of the “civilised” whites who have voluntarily or involuntarily become settlers in the interior of the country.

Speaking of them, he says:

“ After a march, during one day, of between forty and fifty miles, in which I was accompanied by a few servants and two black natives, the whites manifested much impatience. The conduct and fortitude of the blacks was admirable: they were cheerful all the way, with heavy burdens on their backs. On ordering them a loaf of bread each, the wife of the innkeeper remarked, that ‘ she did not keep bread for such people.’ I repeated my request, observing, that if she was paid for the bread, it could signify little to her who consumed it. It was then supplied; and in the morning an officer under government, Mr. Busby, and myself, were furnished by this *civilised* white woman with such bread for breakfast as we could not eat. On my complaining, I was cavalierly informed, ‘ that I had ordered all her best bread for the blacks last night.’ This I afterwards discovered to be untrue. I wonder how many meals of fish this white lady had been supplied with by the good-natured blacks whom she thus affected to despise? Another settler once observed to my nephew, Mr. J. G. Dawson, that he was greatly annoyed by the blacks, and he had once entertained an idea of laying poison for them, the same as for rats! This feeling with regard to the natives was not, I believe, confined to him, as the acts of some of the settlers will testify.”

We trust the “settler” above mentioned was not a *free* settler, for the honour of our country. Some allowance, perhaps, ought to

* This gentleman has published a pamphlet, containing a “ statement of his services as agent of the Australian Agricultural Company,” which is now lying on our table; but as he, in vindication of his own character, finds it necessary to speak in no measured terms of some of the managers of that association, we do not think proper to enter into any thing like controversial matters by any comment on his pamphlet. It shows that, as an aggrieved person, his statements are likely to partake of prejudices.

be made for those desperate outcasts of society, who, having been banished from their native land for a given period, cannot be expected to return to a proper sense of the value of social obligations, when that sentence shall have expired. But Mr. Dawson's volume shews that this barbarity towards the natives is far from being an unusual occurrence.

"The natives (he tells us) complained to me frequently that white fellow (white fellows) shot their relations and friends, and shewed me many orphans whose parents had fallen by the hands of white men near this spot (Port Stephens). They pointed out one white man to me, on his coming to beg some provisions for his party up the river Karnah, who, they said, had *killed ten natives*—and the wretch did not deny it, but said he would kill them whenever he could."

Can it for a moment excite any surprise that the untutored savage should take vengeance when he has it in his power, in retaliation for such outrages from his civilised invaders? Can any doubt exist that the barbarities with which the Peruvian and other South American savage nations have been charged, originated in the atrocities committed on these harmless people by their (Christian) Spanish invaders? Is it not matter of history, that the brutal Dutch policy which formerly reigned in South Africa, also produced the barbarous re-action so often exercised by the Caffre tribes in the vicinity of the Cape of Good Hope? Is it not equally notorious, that the hostility so frequently manifested by the North American Indians, from Virginia in the south, to Canada in the north, was in almost every instance occasioned by feelings of revenge for the butcheries committed by the earlier European settlers? We therefore think Mr. Dawson is entitled to the thanks of the community, and especially the colonial department, for having called attention to the subject by the facts which he mentions.

For the information of such of our lady-readers as are destitute (either from choice or necessity) to feel an interest in the matrimonial transactions of "the fifth quarter" of the world, we give the following from the veritable authority of Mr. Dawson; entering our protest, however, against the colonial barbarism of calling a married lady by the vulgar cognomen, *gin*. "The blacks generally take their wives from other tribes, and, if they can find opportunities, they steal them, the consent of the females never being made a question in the business. When the neighbouring tribes happen to be in a state of peace with each other, friendly visits are exchanged, at which time the unmarried females are carried off by either party. The friends of the girl never interfere [wise men!]; and in the event of her making any resistance, which is frequently the case, her paramour silences her by a severe blow on the head with his waddy while he is carrying her off. He keeps her at a distance till her friends are gone, and then returns with her to his tribe. But if the girl has no objection to her suitor, or has no one that she likes better, she consents to become his gin,—thus rendering abduction unnecessary and unusual."

But, according to Mr. Dawson, a single modicum of "gin" is not sufficient to satisfy some of the uxorious natives of Australia, who in this resemble the more refined tastes

of some civilised nations we could name; for we are told, that "one of his *native* acquaintances had three wives, who lived in perfect harmony with each other, sitting at the same fire-side like sisters."

As the concurrent testimony of several authors has imputed the horrid practice of cannibalism to the natives of New South Wales, as well as to those of New Zealand, it is only justice to these poor people to give the following evidence of Mr. Dawson, who must be deemed an impartial witness:—

"The natives of Australia have, by some people, been accused of cannibalism; and the constant assertion amongst them, that the strange tribes, or others with whom they are at variance, will eat them in case they fall into their hands, gives currency to this notion, and has probably been the origin of it; but as far as my experience and inquiries went, in the district in which I resided, I had no reason to believe that this practice existed among any of the tribes there. The natives, who domesticate themselves among the white inhabitants, are aware that we hold cannibalism in abhorrence; therefore, in speaking of their enemies, they always accuse them of this revolting practice, in order, no doubt, to degrade them as much as possible in our eyes; while the other side, in return, throw back the accusation upon them. I have questioned the natives, who were so much with me, in the closest manner upon this subject, and, although they persist in its being the practice of their enemies, still they never could name any particular instances within their own knowledge; but always ended such inquiry by saying, 'All black fellow ben say so, massa.'"

Mr. Dawson considers the native Australian to be a branch of the Malay race; but free from most of the vices which characterise the parent stock. It is also remarkable, that all the natives, who have been examined in various parts of this vast continent, appear to have had one common origin, while they have not congregated into those chieftainships which distinguish most other savage people. "It has generally been supposed (says Mr. Dawson) that chieftainship exists among the natives of Australia. I can, however, confidently assert, that it was not mentioned amongst any of the people with whom I was acquainted. Each tribe is divided into independent families, which acknowledge no chief, and which inhabit, in common, a district within certain limits, generally not exceeding ten or twelve miles each way. The numbers of each tribe vary very much, being greater on the coast, where they sometimes amount to two or three hundred; and I have known them in other quarters not to exceed one hundred. The families belonging to a tribe meet together upon occasions of festivals at certain seasons, and also to consult upon all important occasions. But, although they have a community of interests at such meeting, still each family has its own fire, and provides its own subsistence, except in a general kangaroo hunt, where the game is impounded and taken in large quantities, when it is fairly divided." This state of society seems a nearer approach to the nomadic life of the Tartar hordes than any community hitherto described, either in the western or southern hemisphere.

We regret that our limits prevent us from extracting any of the numerous anecdotes given by the author in proof of the amiable qualities of these savage tribes, when they have been treated with kindness by the European settlers. But we must proceed to offer an ex-

tract or two, which, although discouraging to agricultural speculators, must be read with satisfaction by every philanthropist, who looks forward to the prosperity of this region, as an asylum for our starving population, and, at the same time, as affording an inexhaustible supply of the raw material of the woollen manufactures, leather manufactures, &c., from our own colonies.

"The increase of cattle and horses within the last seven years in the settled districts of Australia has been enormous, and beyond all former products in any country; and what is there, I ask, to prevent its proceeding in an increasing ratio, in situations where no one natural check is opposed to it in the unlocated districts of the interior, to which the settlers are daily sending back their increasing and unsaleable herds, as a relief to their farms? Before emigrants venture to embark for Australia, let them reflect upon all this, and let them also remember, that in no instance were similar efforts ever made in any colony to rear sheep; which, if they succeed in the production of the raw material of the staple manufactures of Great Britain to any great amount, will add also to the mass of human food beyond demand for it, to an extent which never had a parallel in any country on the face of the habitable globe."

This view of the case is pregnant with reflections of vast interest both as it regards the colonists themselves and the parent state: for the ultimate advantages must be reciprocal in a national point of view, whatever influence it may have on the property of persons who have been decoyed by the alluring statements of speculators to invest large sums in the purchase of allotments of land, when the produce of such land is comparatively of little value.

It appears evident that the decoy system for entrapping free settlers of property to emigrate, has been carried on, if not to an equal extent, at least to as culpable a degree, in our remote settlement of Australia, as by the "backwood" gentry of the United States and Canada. And although Mr. Dawson does not (for obvious reasons) point out by name those who have been most instrumental in such nefarious transactions as that of involving their fellow-countrymen in irretrievable ruin, for their own advantage; yet it seems pretty plain, in various parts of the volume, that such practices have been carried on to the ruin of hundreds of respectable individuals. It would appear, if we credit the author, that the "Swan River" has also been a favourite decoy for the emigrant *geese*, who understand as much of agriculture as architecture.

We must close our notice of Mr. Dawson's valuable work by one more extract, which is perhaps the most important in the whole volume to persons who meditate emigration:—"Those who are desirous of emigrating to New South Wales, and into whose hands this work may fall, will probably be anxious to know on which quarter of the east of the barrier mountains, good land, or such as it would be prudent to select, is to be found. To this I answer, that I can give them no satisfactory information upon that point, because I am not aware, and, indeed, I do not believe that any good soil remains unlocated. Unless, therefore, they can command sufficient capital to enable them to purchase good land on the Hunter's river, or are prepared to go behind the mountains, and to encounter the difficulties I have before pointed out, they had better stay at home. It is little likely that I shall ever revisit the shores of Australia, although I retain a very strong

* This may, for aught we know, be derived from some waggish "export," as an abbreviation of the Greek to *generate*; or, more probably, a nick-name given to some lady-export greatly addicted to the indulgence of "blue ruin."

partiality for the country as a place of residence, and have left behind me many kind friends, whose interests it would gratify me to advance by every means in my power. My object, in these pages, has been to shew the face and quality of the country generally, for the better information of those who have not seen it; and to give such hints to individuals proceeding there, as will put them on their guard against the misrepresentations of interested and designing persons; and to save those who may be wavering between two opinions from the pains of disappointment, and the probable ruin that might, under certain circumstances, attend their removal to that country."

The great interests which are involved in the future prosperity of this remote colony, have induced us to extend our extracts from Mr. Dawson's volume to a greater length than we first intended. We can, therefore, only devote a few remarks to the *Friend of Australia*, who, from his own shewing, has not had the practical advantages of a residence in the country which he undertakes to describe. The work, nevertheless, contains a multitude of judicious observations connected with what may be termed the *political colonization* of the vast territory now called Australia, but which the "Friend" would reconumend to be subdivided into four different districts, with separate names. The author also gives some very excellent advice to parties contemplating a long march across the country; and among other arguments which he advances in favour of more extended surveys of the coasts of New Holland, and planting small settlements on the most eligible spots, as a resource under the calamities of shipwreck, he justly remarks:—"British intercourse with the Australian seas multiplies every year; we must therefore expect that some accidents will occur, and although seldom, it ought not to slacken proper measures for rendering them less dreaded in their consequences. Under the above view of the subject, our ignorance of the interior is much to be regretted; and in proportion to the miseries and cruelties it may occasion to wrecked Europeans, and the advantages and resources we lose, so is a map of the country, and an increased number of settlements, the greater desideratum."

Considering the rapid progress which Russia is making in colonising the North Pacific islands, we fully agree with the author in the following remark:—"Let Britain secure to itself the honour of being the first to explore this mysterious interior, before her indefatigable continental friends set her the example."

The *Friend of Australia* forms a very good auxiliary to the work of Mr. Dawson, by supplying a lithographic map of this vast continent, so far as it has been hitherto explored. Both volumes, taken together, contain so large a mass of practical information, as to be well worthy of perusal by every person interested in the future Australian empire.

Pinkerton's Correspondence.

[Second Notice.]

CONTINUING our review of these volumes, we cannot do better than resume our quotations from the interesting letters of Horace Walpole; in which we find so much to admire—so much we should like to remember. For instance, there is great force as well as neatness in the following epigrammatic description of vanity.

"It is difficult to divest one's self of vanity, because impossible to divest one's self of self-

love. If one runs from one glaring vanity, one is caught by its opposite. Modesty can be as vain-glorious on the ground, as pride on a triumphal car. Modesty, however, is preferable; for, should she contradict her professions, still she keeps her own secret, and does not hurt the pride of others."

The ensuing remarks are so just in their application to criticism and to the attempts of detractors or envious rivals to depreciate what they cannot imitate, that we quote nearly the entire letter.

"You are too modest, sir, in asking my advice on a point on which you could have no better guide than your own judgment. If I presume to give you my opinion, it is from zeal for your honour. I think it would be below you to make a regular answer to anonymous scribblers in a magazine; you had better wait to see whether any formal reply is made to your book; and whether by any avowed writer; to whom, if he writes sensibly and decently, you may condescend to make an answer. Still, as you say you have been misquoted, I should not wish you to be quite silent, though I should like better to have you turn such enemies into ridicule. A foe who misquotes you, ought to be a welcome antagonist. He is so humble as to confess, when he censures what you have not said, that he cannot confute what you have said; and he is so kind as to furnish you with an opportunity of proving him a liar, as you may refer to your book to detect him. This is what I would do:—I would specify in the same magazine, in which he has attacked you, your real words, and those he has imputed to you; and then appeal to the equity of the reader: you may guess that the shaft comes from somebody whom you have censured; and thence you may draw a fair conclusion, that you had been in the right to laugh at one who was reduced to put his own words into your mouth before he could find fault with them. And, having so done, whatever indignation he has excited in the reader must recoil on himself; as the offensive passages will come out to have been his own, not yours. You might even begin with loudly condemning the words or thoughts imputed to you, as if you retracted them; and then, as if you turned to your book, and found that you had said no such thing there, as what you was ready to retract, the ridicule would be doubled on your adversary. Something of this kind is the most I would stoop to; but I would take the utmost care not to betray a grain of more anger than is implied in contempt and ridicule. Fools can only revenge themselves by provoking; for then they bring you to a level with themselves. The good sense of your work will support it; and there is scarce a reason for defending it, but by keeping up a controversy, to make it more noticed; for the age is so idle and indifferent, that few objects strike, unless parties are formed for or against them. I remember many years ago advising some acquaintance of mine, who were engaged in the direction of the opera, to raise a competition between two of their singers, and have papers written pro and con; for then numbers would go to clap and hiss the rivals respectively, who would not go to be pleased with the music."

The picture of his own old age is also finely fresh.

"I shall like," he says, "I dare to say, any thing you do write; but I am not overjoyed at your wading into the history of dark ages, unless you use it as a canvass to be embroidered with your own opinions, and episodes,

and comparisons with more recent times. That is a most entertaining kind of writing. In general, I have seldom wasted time on the origin of nations; unless for an opportunity of smiling at the gravity of the author, or at the absurdity of the manners of those ages; for absurdity and bravery compose almost all the anecdotes we have of them, except the accounts of what they never did, nor thought of doing. I have a real affection for Bishop Hoadley; he stands with me in lieu of what are called the fathers; and I am much obliged to you for offering to lend me a book of his; but, as my faith in him and his doctrines has long been settled, I shall not return to such grave studies, when I have so little time left, and desire only to pass it tranquilly, and without thinking of what I can neither propagate nor correct. When youth made me sanguine, I hoped mankind might be set right. Now that I am very old, I sit down with this lazy maxim—that, unless one could cure men of being fools, it is to no purpose to cure them of any folly; as it is only making room for some other. Self-interest is thought to govern every man; yet is it possible to be less governed by self-interest than men are in the aggregate? Do not thousands sacrifice even their lives for single men? Is not it an established rule in France, that every person in that kingdom should love every king they have, in his turn? What government is formed for general happiness? Where is not it thought heresy by the majority, to insinuate that the felicity of one man ought not to be preferred to that of millions? Had not I better, at sixty-eight, leave men to these preposterous notions, than return to Bishop Hoadley, and sigh?"

"One cannot expect health and strength, if one will live to seventy-six. I do not complain of a natural lot; and I only mention these circumstances as the causes of my little connexion with the world. If decrepitude exposes itself, it must be laughed at or pitied; and neither is pleasant."

That we may not occupy our whole notice with the agreeable proofs of Walpole's discrimination and intelligence, we shall now turn to Bishop Percy, the celebrated author of the *Reliques*. Alluding to additional volumes which he projected to this interesting collection, he writes thus, under the date of July 20th, 1778.

"The contents of these have long since been collected and arranged; and I flatter myself, in point of merit, are no whit inferior to what the public accepted with so much indulgence in the three former volumes. But the truth is, I have not so much leisure, and perhaps not quite so keen an appetite for amusements of this kind as when I was younger. It is near twenty years since I first began to form the preceding collection. I only considered these things as pardonable, at best, among the levities (I had almost said follies) of my youth. However, as I must confess that I have always had a relish for the poetic effusions (even the most sportive and uelaborate) of our ancestors, I have commonly taken up these trifles, as other grave men have done cards, to unbend and amuse the mind when fatigued with graver studies, till they have insensibly grown into a regular series ready for the press. And now I keep them by me, in order to make a present of them to my son, a tall youth of fifteen, who is at present a king's scholar at Westminster. And, as he has a strong relish and considerable taste for these compositions, I think to give him the merit of being editor of them, as soon as he removes to the university; by way of introducing him into the literary world, and of

filling up the vacancies of his academical studies. In the mean time I neglect no opportunity of amending and enlarging the series, and shall certainly much improve them for him by this delay."

And again, in January 1783, (having in the interim been raised to the episcopal bench,) the bishop says—

"If you think it necessary to mention in print that you received this old piece from me, I will beg you only to quote me by the name of Dr. Percy, or rather the Editor of the *Reliques of Ancient Poetry*, in 3 vols.—omitting rev., much more all mention of my present title, &c. And, if necessary, you may speak of my slight poetical pursuits, as what had been the amusement of my younger years and hours of relaxation from severer studies, which, in truth, they were, as it is more than twenty years since the three volumes of *Reliques*, &c. were collected for the press,—and even nineteen years since they were printed. And I have been so entirely drawn off from this subject by other unavoidable and necessary avocations, that Dodsley is, I believe, reprinting the book, without my being able to peruse or look at a single sheet or page in it."

This is a very characteristic trait between the young lover of poetry and the mature bishop. It is much to be regretted that advancement in the world or preferment in the church should have occurred to prevent our reaping the fruits of the estimable continuation of Percy's labours. We annex his opinion of Vallancey, the famous Irish antiquary, in a letter of February 1786: it is also curious with reference to the language and antiquities of Ireland forty years ago.

"You would (he says) be surprised, if you observed, as I do, how little the original language of this country is cultivated or understood by the aboriginal natives of it. We last winter began to form a society, in imitation of those in London and Edinburgh, for studying and preserving a knowledge of the antiquities of Ireland: then I had an opportunity of making the above remark. I believe there is not a Fellow of Dublin College that can read a line in their old Irish manuscripts. Vallancey, as you justly observe, is so *hot-headed*, that he is a very bad medium through whom to come at any sound, solid information; and yet I can only refer you to him. If I were in Dublin, I would apply to none but him,—and unfortunately I am not upon that footing with him to apply to him by letter; for he is as hot-tempered as he is *hot-headed*, and downright quarrelled with me one evening at the Society, for presuming to question some of his wild reveries. Yet I must do him the justice to say, that he, like other warm people, is very good-natured; and, if you would apply to him by letter, cautiously concealing your incredulity as to his historical tenets, you would find him obligingly active to serve you (I am persuaded); and he could do it; for he keeps an old Irish amanuensis, as I said above, who is continually making transcripts and extracts from the old Irish manuscripts for his use. This man I saw copying an old Irish manuscript for Colonel Vallancey, in Abp. Marsh's Library in Dublin—a public library founded by Archbishop Marsh, who bought Bishop Stillingfleet's library as the foundation, &c., replete with valuable books, both printed and manuscripts."

A letter from Dr. Johnstone, chaplain to the English minister at Copenhagen (1786), is worthy of extract, as relative to Scottish and northern literature; but this, and a very brief

requel, we find that want of room compels us to reserve till next week.

The Amulet for 1831.

THE following is the extract omitted in our review of this volume, and promised last week:—

"In Damascus some of the best reciters are to be found, and the peculiar luxury and situation of its coffee-houses aid very much the effect of their narrations. In Cairo, the want of water, the burning heat, and the dry, gloomy, and dusty streets, are great foes to the imagination, as well as the desert that spreads on every side. In Constantinople the beauty of the external scenery cannot be surpassed—the river and its enchanting shores; but the scantiness of water in the interior of the city decreases very much the luxuries of its people, who love, beyond every thing, the sight and sound of falling water in their apartments. In the capital of Syria, almost all the coffee-houses have splendid fountains, that are thrown up, some of them, to the height of six or seven feet; and it is delightful to recline on one of the soft seats near them, and listen to the ceaseless rush and fall; while the very sight of them, in so hot a clime, is like the face of a friend. The abundance of water, from the five streams that flow around the city, is incredible. The Assyrians might well complain, in their inroads into the promised land, of the scarcity of its rivers, and boast that there was nothing like their own Abana and Pharpar. In some of these houses of recreation, whose latticed windows, thrown open, admit the air, the wealthier people form dinner parties, of men only. Seated in a circle on the carpet, with the various dishes on low tables before them, they eat slowly and carelessly, conversing at intervals, without any of the *goût* or joviality that wine inspires. Every good private dwelling in Damascus has its fountain, and this is invariably in the best apartment; it being a luxury, or rather a necessity, that few inhabitants care to do without: an Englishman would as soon live in an uncarpeted house. And round the marble basin, or in the divan just beyond it, the host at evening receives his friends; and they sit, and smoke, and calmly converse the hours away. This is the time when the wealthier families sometimes send for a celebrated story-teller to amuse the party; and when the latter knows he is to be handsomely paid, it is a more *recherché* opportunity than the public companies afford. It is the sultry hour of noon, perhaps, when the burning rays are on the water, the trees, and green banks that surround the scene of indolence and indulgence; the light roof supported by the slender pillars casts a shade on the peopled floor, on which the well and variously dressed Turks recline, some in small wickered chairs, others on long and softer benches, covered and backed with carpets and cushions. These seats are placed close to the river's edge; and earth has nothing more luxurious than to sit here, in the cool of the day, or in the still hour of night, and listen to the rush of the waters, and gaze on the gleaming of the cataract; then put the amber-tipped and scented pipe to the lips, or turn to the throng of many nations around, all silently enjoying the hour."

The Gentleman in Black. With Illustrations by George Cruikshank. Engraved by J. Thompson and C. Landells. 12mo. pp. 309. London, 1830. W. Kidd.

WE are, it seems, partly responsible for the appearance of this work, and we are by no

means sorry for it. The MS. had been submitted to us some years ago, and in our notice to its anonymous writer (*L. G.* 480, April 1, 1826) we advised him "to publish his clever tale in a volume." Some fragments were subsequently printed in a periodical called the *Literary Magnet*, which, however, did not sufficiently attract public favour to afford them a fair circulation; and now, at length, aided by some admirable designs by George Cruikshank, the tale re-written, improved, and finished, is offered to this upper world in a neat tangible shape. It is very clever and very entertaining—replete with pleasantry and humour; quite as imaginative as any German diablerie, and far more amusing than most of the productions of its class. We would give an extract, but we think it would injure the story; and therefore content ourselves with cordially recommending it as a very whimsical and well-devised *jeu d'esprit*.

A RYGHTE Sorrowful Traggyke Lamentacyonne for ye Losse of my Lorde Mayor hys Duce, &c. &c. 12mo. pp. 11. London, 1830. C. Tilt.

A FIFTH of November sort of sixpenny squib at the ninth, at which every body with pen or pencil has thrown a cracker. There is one very offensive vulgar rhyme: of the rest, twenty-six verses, the five following are the best we can pick out:

"Our ministry of Cæsar thought,
But not as him so starch,
Wisely decided that they ought
Beware the threatened March.
I mean the march of city trade,
And told his Majesty
He mustn't go—the mayor then said,
'By Gog! no more will I.'

The man in armour 'gan to scoff
At fear, like any don;
And yet his armour was put off,
Before he put it on.

The city cooks all stood aghast,
The lively turtle *moan'd*,
The *feast* was turned into a *fast*,
And all the Poultry groan'd!

Then the dessert was lost to boot,
A loss which many feel,
Who, could they but have got the *fruit*,
Cared little for the *Peel*."

The writer is said to be Thomas Dibdin.

The World: a Poem. Pp. 43. Printed for the Author.

WE know not what in the world could seduce any one to print *The World*, a rhapsody of nonsense, where the author tells us—

"Verses I'd write, if but a single canto
In Byron's style, which I defy any man to."

The French Revolution of 1830; the Events which produced it, and the Scenes by which it was accompanied. By D. Turnbull, Esq. 8vo. pp. 443. London, 1830. Colburn and Bentley.

Military Events of the late French Revolution; or, an Account of the Conduct of the Royal Guard on that occasion. By a Staff Officer of the Guards. From the French. 8vo. pp. 119. London, 1830. Murray.

THE former of these publications is more made up from common sources than could be wished. It is of the left, if not the extreme left, in its politics, and adopts many of the exaggerations and romantic episodes of the *Three Days*. The latter is quite on the other side—evinces in full measure the *esprit du corps* of the Guards—and states some interesting particulars, of which we had not heard before. The author and translator contradict several of Mr. Turnbull's facts.

The Progress of Society. By the late Robert Hamilton, LL.D., F.R.S., &c. 8vo. pp. 409. London, 1830. Murray.

THERE is a vast fund of knowledge in this volume, and often put in an almost epigrammatic way. But we would chiefly recommend it for its extraordinary value in supplying food for the mind. There is hardly a question on which the author treats—and they are all important to society—on which he does not throw a strong light, and challenge the powers of every reflecting man.

Charges against the President and Councils of the Royal Society. By Sir James South, Fellow of the Society, and late a Member of the Council. 8vo. pp. 17.

WE alluded to this as a "peppery" work, in our *Gazette* of last week; and upon dwelling farther on it, we think we may add, that it savours also of vinegar and mustard, and other sour and hot ingredients. The author, indeed, cannot be spoken of in the words of the poet, as "the sweet South;" on the contrary, he is as biting as the East and North spiced together. Reform, re-model, is the order of the day; and the decline of science in England is attributed to their want. Sir James brings forward six-and-thirty paragraphs, each paragraph being a charge. They chiefly consist of keeping back minutes of council, omissions of entries, altering and garbling them, for mismanaging the Observatory at Greenwich, for favouritism to some and injustice to other scientific men, for squandering public money, for having allowed the Nautical Almanac to be a disgrace to the country, for neglecting the science of astronomy, for having misconducted experiments on the manufacture of glass for optical purposes, and many other misdemeanours.

Now, Sir James South is the President of the Astronomical Society,* the superior merits of which are referred to repeatedly in these charges; and being, as we have the pleasure to be, on as good terms as we desire with the leading members of both Societies, and with the opposition as well as the governing parties, we are free to say that, in our opinion, there is not only far too much of warmth and personal feeling, but much calculated deeply to injure science in these proceedings. Not being partisans of either side, but independent friends to the scientific interests and honour of our native land, we must confess that it is lamentable to us to have witnessed such squabbles in its most venerable and highest institutions, and to see the march of intellect sadly impeded by the march of ill-temper and passionate controversy. We trust we may have occasion in this very No. of our paper to announce, that a more truly philosophical spirit has prevailed; and that differences which would disgrace a parish vestry are composed in the Royal Society.

The Rick-Burners, a Tale for the Present Times. Canterbury, sold by all booksellers. AND ought to be liberally distributed among the poorer classes in every shed and cottage in the kingdom, by those who are able, and wish well to them and to the country. It is one of those touching and admirable traces which may produce much good; and renders the machinations of the incendiaries, now so deplor-

* See also our report of the proceedings of this Society, and its competition against the Royal Society with respect to the Nautical Almanac and the Royal Observatory. It is a young and, consequently, vigorous and active Society *versus* one which feels perhaps some of the lethargy of age.

ably arrayed against the laws of God and man, and their fatal effects both upon the idle and the industrious. The tale is plainly but most affectingly told. We gather from it, that some sort of fire-ball, which ignites amid the thatch or straw, is the engine used by the destroyers of agricultural property. We trust clergymen, magistrates, landlords, and the wealthy generally, will look at this little work, and spread it where it may bring forth salutary fruits.

Scenes of Life, or Shades of Character. 2 vols. 12mo. London, 1830. Colburn and Bentley.

A VERY promising title, whose fault is, that it promises more than it performs. What reader but would suppose he was to enjoy the perusal of a new work, instead of a collection of tales and sketches which have already gone the round of magazines, newspapers, &c. Such a title is a complete *ruse*. It is true the preface alludes to "some of the pieces having been already published;" but this knowledge comes too late when the volumes are purchased. The honest title would have been, "Selections from the Literary Magnet;" avowing, in the outset, their previous publication in that now discontinued magazine. Many of these papers, very pleasantly written, and quoted at the time in divers periodicals, will no doubt be familiar to a number of our readers; yet all who wish an hour to be passed agreeably in light amusement, may find in these and some half-a-dozen of novelties which are added, the sort of gratification they seek. The publication in a dearer form than the original, and with a deceptive title, is, however, another specimen of a very disingenuous system.

The Persian Adventurer; being the sequel to the "Kuzzibash." By James Fraser, author of a "Tour to the Himalaya Mountains," &c. 3 vols. 12mo. London, 1830. Colburn and Bentley.

MR. FRASER gives an amusing reason for his change of title. He says some one inquired of his publisher, "if the *Kuzzibash* was not a cookery book?" To avoid similar mistakes, he has adopted one more accessible to general understanding. We have not space for analysis this week; and can only say, that a very lively and pleasant preface ushers in a stirring period in the romantic annals of Shah Nadir's reign. We shall return to these volumes next week.

Reign of Fashion. By T. Surr, author of a "Winter in London." 3 vols. 12mo. Colburn and Bentley.

A WRETCHED specimen of a wretched school. An ill-conducted and improbable story is made the vehicle of personalities which would be offensive but for their want of information. Why it should be called the *Reign of Fashion* we do not understand, unless it be for the sake of a title, which is a complete misnomer. One would think it very easy to copy a paragraph from a newspaper; but it is curious to observe, that in so many novels which quote extracts from the journals, they quote invariably passages as utterly unlike any thing that ever appeared as can be well invented. The volumes before us have some glaring absurdities of this kind. We must also notice another most grave fault, viz. taking any individual, loading him with all the vices that can degrade humanity, and then holding him up as the specimen of a sect. Mr. Gregory, the saint, is at once a libel and a caricature.

ARTS AND SCIENCES.

LINNÆAN SOCIETY.

A. B. LAMBERT, Esq., in the chair. Part of Mr. Hogg's paper on the classical plants of Sicily was read. There was also read a paper by Lieutenant Bowler, communicated by the Asiatic Society, on a particular species of palm found in the government of Madras. The communication was accompanied by beautiful illustrative drawings, a hundred years old. This palm was considered by the fellows and botanists present to be the same as the *doum* palm of Thibet (*Hyphene coriacea* of Gærtner), and is remarkable as being almost the only species of palm with a branched stem: it was probably introduced by the Arabs into Madras. The stems are slender, and the fruit is a hard solid substance, which, after being steeped in water for a few days, is well beaten, and used by the natives as brushes to white-wash their houses. The leaves are very small and narrow, and the stalk is denticulated with many sharp curved thorns; from which circumstance the natives say it resembles the back-bone of a shark, and on this account the people of the adjacent villages carry it in their hands when travelling through the jungles, as a weapon of defence, and also during some of their festivals. The inhabitants look upon this tree as the guardian of their jungle, and hold it in some degree of veneration, conceiving it has, as its Sanscrit name (*kulpa vroochum*) implies, the power of fulfilling the desires and wishes of mankind; at least, such as from pureness of heart and morals have faith in its supposed virtues!

ASTRONOMICAL SOCIETY.

SIR JAMES SOUTH, president, in the chair. This was the first meeting of the Society for the session 1830-31. Amongst the certificates of those applying to be elected into the Society as associates, were two in favour of Fred. Argelandu, director of the observatory at Abo, and Major-General Shubert, chief of the topographical department of Russia, and director of the great trigonometrical survey of the Russian empire. Mr. E. Rüppell and several others were elected fellows. A long and interesting list of donations from foreign and domestic scientific bodies, as well as from various men of eminence, was also read. Sundry communications followed; namely,—on the predicted occultations of Aldebaran for ten principal European observatories, by Mr. Maclean; on a method of computing occultations approximately, by Mr. Henderson; a note to Mr. Kriel's paper upon the rectification of the equatorial, by Mr. Gompertz; observed occultations of Aldebaran, by Mr. Pain; on the period of the variable star β Lyrae, by Mr. Birt; on the refraction at low altitudes, and the dip of the horizon, by the late Mr. Atkinson.

The president announced, with regret, the resignation of Dr. Pearson as treasurer, the duties of which office would be performed by Dr. Lee *pro temp*. He congratulated the Society on the probable extension and improvement of the *Nautical Almanac*, upon which much time and attention had been bestowed by the council, aided by several distinguished individuals; he also intimated, that the Admiralty had invited the Society to co-operate in the visitation and inspection of the Royal Observatory. The Society's charter was likewise stated to be in a favourable train of settlement. We should far exceed our limits were we to give an epitome of the papers enumerated above. We have pleasure, however, in referring our astronomical readers to the judicious

abstracts, made under the auspices of the Society, and published from time to time, monthly we believe, by Messrs. Priestley and Weale, its publishers.

LONDON PHRENOLOGICAL SOCIETY.

MONDAY, Dr. Edward Wright, president, in the chair. Mr. J. B. Sedgwick read a paper on the character of the celebrated Duke Humphrey, protector of England during the minority of Henry VI., in illustration of a cast of his skull, taken from the original, in the tomb at the abbey church of St. Alban's. The author first dilated on the importance of the science of phrenology, and the advantages to be derived from its application to the study of history. He then gave a brief sketch of the life of the Duke of Gloucester, introducing such facts and anecdotes as would tend to elucidate his character, and afterwards compared them with his cerebral organisation, with which he affirmed them to be in strict accordance. The organs of destructiveness, firmness, and secretiveness, were as much, if not more fully developed, than in any of the casts preserved in the Society's collection. The head, corresponding with his mental energy, was stated to be much above the average size. The intellectual organs were exceedingly well developed; the greatest proportional development, however, was at the posterior superior, the posterior lateral, and the posterior parts. The organs of amativeness, love of approbation, self-esteem, and combativeness, were also pronounced to be all exceedingly large.

MAJOR LAING'S PAPERS.

THE suspicions we expressed in our review of Caillie's *Travels in Africa*, respecting the probable destination of Major Laing's papers, receive additional force from every new light that is thrown upon this mysterious transaction. We copy the following from the *Hampshire Telegraph* of last Saturday—a journal, by the way, which generally contains excellent intelligence of every thing connected with naval affairs:—"The Windsor Castle was gone (this is the news by the Rifleman, in nineteen days from Malta) to Tunis and Tripoli, to settle some differences between the British consul, who had struck his flag, and the dey, arising from the fact of the dey having retracted a decision he had previously given between the British and French consuls, relative to Major Laing's papers, of which there is no doubt that the French consul had improperly obtained possession. The poor dey had been compelled to withdraw his decision by the threats of Admiral Rosamel, backed by a French squadron. It is, however, unquestionable that these papers are lost to his friends and to his country: they have for a long time been safe in Paris." Were we not right in conjecturing that this was a dark business?

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE Royal Society resumed its meetings on Thursday last, when there was an unusually large attendance of members. Much time was occupied in the reading of the minutes of the preceding meeting; which being the last of the session, contained, of course, abstracts of all the papers which were then presented, and which were very numerous. The communication to the members of the contents of papers in this form is very advantageous, and often more satisfactory and instructive than when the papers are read at full length, especially

as many of them are better fitted for being studied in the closet, than comprehended when heard at a crowded meeting. The following gentlemen were admitted as fellows: namely, —J. Brunel, Esq., Rich. Greswell, Esq., Philip Pusey, Esq., and John H. Hawkins, Esq. The annexed were proposed as candidates for election: viz.—John Lee, LL.D., of Hartwell House, Buckinghamshire; Isaac Wilson, M.D., physician to the royal hospital at Haslar; and Wm. Hughes Hughes, Esq., M.P., barrister, of Ryde, in the Isle of Wight. A number of donations of books and engravings were announced, among which latter was one of the late Dr. Wollaston, engraved by Mr. Skelton. A paper was then read, on the nature of negative and of imaginary quantities, by the president. At the close of the meeting, Mr. Davies Gilbert announced his intention of retiring from the chair of the Society on St. Andrew's day.

SOCIETY OF ANTIQUARIES.

ON Thursday last, this Society resumed its meetings; Mr. Hudson Gurney, V. P., in the chair. A letter from Mr. E. Cartwright was read, respecting a stone coffin which had been discovered within an enclosure of Chichester Cathedral; and which, although buried outside of the church, appeared to have been that of a bishop of Chichester, from a leaden plate attached to it. A letter from Mr. Crofton Croker was read, illustrative of a brazen hand and arm which had been submitted to the Society. This curious relic, it would seem from Mr. Croker's communication, is unquestionably of Irish origin, and was probably a pagan idol of the fifth or sixth century. From rather an ingenious, although somewhat fanciful, chain of evidence, he presumes the bronze submitted to the Society to have been the identical hand which Smith, in his *History of Cork*, states was taken as a superstitious relic from a parish in that county (the name of which we could not catch) by the titular Bishop of Cloyne: from whom, Mr. Croker says, it was begged by Dean Swift for the museum of his friend Sir Andrew Fontaine. Mr. Ellis communicated a document respecting the prices of various articles in Westminster in 1580. The meeting was hastily adjourned, from the anxiety which prevailed respecting the anticipated proceedings at the Royal Society.

ROYAL SOCIETY OF LITERATURE.

WEDNESDAY, the president, the Lord Bishop of Salisbury, in the chair. After disposing of the routine business, a paper, by Sir Thomas Phillips, was read, giving an interesting account of the fate and present condition of several ancient monastic libraries in France, which the writer had traced and examined during a tour in that country. Many valuable historical and other curious documents relative not merely to France, but to England and Ireland, were described as existing among these literary treasures.

FINE ARTS.

NEW PUBLICATIONS.*

Illustrations of Le Keepsake Français, and The Talisman.

A NOVELTY of character is imparted to these embellishments, by the commixture of foreign and native art. We hail this friendly union with great satisfaction, and we wish the principle upon which it is founded were more ex-

* The beautiful etching by Willmore of Byron's Dream, noticed in our report of the Artists' Conversazione, is, we are informed, from Eastlake's fine picture, and not, as we supposed, from Harding's drawing.

tensively acted upon. General taste would be thereby improved, and the artists of all countries would be benefited by that comparison which the juxtaposition of their mutual excellences and defects must naturally excite. To render such a plan substantially effective, however, it must comprehend works upon a larger scale—affording a fair scope for the exhibition of the higher qualities of art, and therefore affording a fit opportunity for the application of the just canons of criticism. Of the pleasing trifles before us, our notice must be brief.

Portrait of the Queen of the French. Painted by Hersent; engraved by Thomson. As the resemblance of one so suddenly and unexpectedly raised to regal rank (if regal it can indeed be called), and moreover of one of whose amiable qualities report speaks highly, this is an interesting portrait; although we presume the most accomplished courtier could not pretend to find in it any personal charms.—*Frontispiece.* Painted by Colin; engraved by Sangster. We have on several occasions been called upon to notice M. Colin's talents with praise. This is an exceedingly agreeable composition.—*Curiosity.* Painted by Roqueplan; engraved by Humphrys. Three sly young gypsies having furtively possessed themselves of the cabinet of one of their companions, are eagerly devouring the contents of the various *billets-doux* with which it seems to be filled. The expression is admirable, and the effect broad and good.—*Cromwell and his Daughter.* Painted by Decaisne; engraved by E. Smith. A fine dramatic scene. The fit of abstraction into which Oliver is thrown by the contemplation of the portrait of the unfortunate Charles, and the vain attempt of his daughter to rouse him from it, are well depicted.—*The Young Widow.* Painted by Rochard; engraved by R. Graves. What can the fair mourner be thinking about? Not another husband, we are sure. The execution of this head is full of the characteristic qualities of M. Rochard's forcible style.—*Dieppe.* Painted by Harding; engraved by W. R. Smith. One of those admirable coast scenes for which our artists have of late years become so celebrated.—*The Benediction.* Painted by A. Johannot; engraved by E. Smith. The perusal of the story will probably give to this plate an interest which in itself it does not possess.—*Lake of Como.* Painted by C. Stanfield; engraved by R. Wallis. A charming representation of charming scenery. We wish the size of the figures in the foreground had been somewhat less.—*Portrait of Miss Croker.* Painted by Sir T. Lawrence; engraved by Thompson. This beautiful portrait is so well known, that all which it can be necessary for us to say is, that Mr. Thompson has been very successful in retaining, although on so small a scale, the animation of the original.—*Don Quijote in his Library.* Painted by Bonington; engraved by Sangster. There are few better subjects for graphic representation than the renowned knight of La Mancha. The enthusiasm with which he is inspired by reading the marvellous adventures of Amadis de Gaul, or some other valorous rescuer of distressed damsels, is here amusingly portrayed.—*The Chevalier de Lauzun and Madame de Montpensier.* Painted by E. Deveria; engraved by Bacon. An exquisite exhibition of the artificial elegance and mincing affectation of *la vieille cour* of France.—*The Tuilleries and the Pont Royal.* Painted by T. Boys; engraved by J. W. Cooke. From whatever point of view these fine objects are seen, they are picturesque.—*The Young Shepherd.* Painted by A. Johannot; engraved by Chevalier. We

certainly prefer the dog to his master.—*The Young Savoyard*. Painted by Decamps; engraved by Radclyffe. A rich and well-concentrated effect, reminding us of some of the best works of the Flemish school.—*The Ass and the Reliques*. Painted by Xavier le Prince; engraved by G. Corbould. Admirable! Neddy seems to be eyeing with just contempt the blockheads who are reverentially bending to the rubbish on his back.—*Barnard Castle*. Painted by J. M. W. Turner, R.A.; engraved by Wilmore. A noble view of this ancient edifice, seen under the glowing influence of a setting sun.—*The Swiss Girl*. Painted by Colin; engraved by H. Rolls. From the arch and coquettish glance of this charming mountain nymph's sparkling eye, we are as certain as if we saw him, that her lover is close at hand. Happiness to them!

To the Editor, &c.
38, West Square, Nov. 17th, 1830.

SIR,—You have admitted into the *Literary Gazette* a letter signed "Andrew Duncan," and have liberally stated that you will give insertion to one from me. Mr. Duncan's communication has been dictated by a bad spirit, and contains assertions directly the reverse of truth. The engraving of "the Orphans" certainly was not done by me—nor was it the work of Mr. Duncan; he engraved the figures, and a young artist of high promise (Mr. Godden) put in the background and some minor details: *the whole plate was finished by me*, and I am sure your acquaintance with the art has led you to know that this is a practice very general in the profession, of an engraver of experience and reputation "going over" the work of one who is without these advantages. I hope I may be permitted to state, that, however little ability I may possess in an art in which I have laboured so many years, I am under no apprehension of being placed upon a par with Mr. Andrew Duncan. I beg to add, that I know of scarcely one fine plate completed from beginning to end by one individual. I became possessed of the plate in consequence of Mr. Sharpe bringing it to me, stating that he was dissatisfied with it, and requesting me to improve it: I did so, and feel satisfied that no individual, whether a judge of art or otherwise, can look at the print as I received it, and that after it had passed out of my hands, without at once perceiving that, from being crude and defective to a very shameful degree (considering that Mr. Duncan received the liberal sum of fifty guineas for it), it became a plate by no means creditable to any engraver. The "extreme blackness" to which you have alluded, is, I apprehend, the fault of the printer, and may have been confined to your impression alone. I beg to submit, in support of my assertion, two proofs: one as Mr. Duncan left it, the other as finished by me. To Mr. Duncan's, very pertinent observation about "buying the reputation one does not possess," I make no reply—except to state, that if my reputation and ability were no greater than his, I must be very unworthy of the frequent praise with which you have honoured me during a period of years, and which has stimulated me to those exertions which have led to success.—I am, sir, &c.

CHARLES ROLLS.

To the foregoing letter we most willingly give insertion; and we are bound in justice to Mr. Rolls to state, that, on a comparison of the two proofs which he has sent us—the one taken immediately after the plate had left the hands of Mr. Duncan, the other after Mr. Rolls had "gone over" it—the mellowness and finish resulting from the latter process, with reference both to individual parts and to the general effect, are very striking.

"Extreme blackness" was not the expression which we used in the critique published in our 718th No. The words were, "very interesting, but sadly too dark and heavy;" and, making allowance for the probability that the impression which came originally under our notice might be accidentally overcharged with ink—too dark and heavy, notwithstanding its excellence in other respects, we still consider this little engraving to be. It is a frequent error in the prints of the present day; and we have repeatedly said so in the *Literary Gazette*. We well know, however, that in many instances engravers are induced to give to their works greater depth than their own taste and judgment would dictate, by the wish of pub-

lishers to have plates which shall produce a vast number of impressions. Much also depends upon the printing: we have artists' proofs so superior to the publications as to look like different productions.

SKETCHES OF SOCIETY.

NEW POLICE.

To the Editor of the *Literary Gazette*.

DEAR SIR,—I cannot suffer my fear of intrusiveness or female delicacy to suppress my patriotic feelings—I venture, therefore, without preface or apology, to implore your attention, in the hope that your judgment will lead you to participate in my present despondency, and excite you to employ your acknowledged influence in averting a most melancholy national calamity—I allude, sir, to no less a one than the abolition of the New Police. If, in submitting a few remarks on this subject, I touch upon an argument you have heard ten times before, I trust you will not permit the repetition to annoy you, but consider that in so doing, like the managers of many a barely-tolerated drama, I am actuated by the hopes (as my Tommy explained to me during the Midsummer holidays) that *decies repetita placebit*. My husband, Mr. Goggins, whose authority on the present subject is unquestionable, since his opinion in all parochial debates derives great weight from his vigorous and efficient services in the vestry; and pardon me, sir, if, in passing, I express my regret that his exertions in the *boudoir* are of a negative character; but, suffice it to say, though I do possess a little influence over Mr. G. in his own house, he is a very great man in his parish, and informs me that people grumble at paying twice as much for the new system as they did for the old, and that the majority seem inclined to have their pockets picked as formerly, rather than let it be done quietly, in the present civil way. But this, sir, does not take into consideration the advantages of being protected by day as well as by night—on this point, I have silenced Mr. G.'s opposition, by recalling to his recollection a little circumstance relative to a butcher-boy, who, as Mr. Goggins was going to a parish dinner, greased his best black silk smalls, by brushing them with a leg of mutton; and upon the dear man's mildly remonstrating against such rudeness, flung a handful of fat in his face, and offered to fight him—the remembrance of this fact has reconciled Mr. G. to balance the expense, *per diem*, with the protection afforded by the New Police against the recurrence of such alarms to himself, and similar assaults upon his best black inexpressibles; indeed, the non-popularity of Mr. Peel's young gentlemen with the rabble is a strong proof of their activity in the prevention of such annoyances and outrage. I ask you, sir, whether, then, it is not cruel, first to smother poor dear Mr. Peel with complaints against the old, and demands for a new police; and when the prayers of the petitioners are granted, to suddenly and violently change their minds, and bury him alive with petitions to undo what was done at their own request;—as all petitioners conclude by promising, with humility, to *ever pray*, so do they generally *keep to their word* with unremitting fidelity. But I would observe, that pantaloons and petticoats are subject to sudden and violent changes, as well as principles; I have myself had four of the latter submitted to sudden, violent, and total conversion, from the contact of a chimney-sweeper—I will not mention my husband's coat; but the same black silk smallclothes

whose purity was sullied by the insults of a butcher, were irredeemably bellowered by the designing attachment of a baker. The prevention of such calamities, in a great measure asserts the independence of our sex: ladies can now walk out with impunity, and are consequently relieved from the necessity of choosing between staying at home, or submitting to the caprice of their walking-sticks. In the same manner, sir, that ladies like myself are enabled to go out by day without such encumbrances, ladies not like myself are prevented by night from the disreputable display of their trade; for I learn that the New Policemen have effectively diverted their lively attentions from others, by having kindly themselves undertaken to monopolise the exertions of this profession. You will not, sir, be astonished at my knowing any thing of the nuisances to which our streets are subjected from beings of this *caste*, since you are well aware that we women in respectable life gain every possible information on such and similar subjects, from the circumstantial details of depraved life so accurately dwelt upon in the police reports of our newspapers. While on the subject, it is my painful duty to state that Mr. Goggins is in the habit of returning home late from his club, and sometimes does increase the natural warmth of his heart by the additional stimulus of a very little brandy and water. Now, sir, I do not mean to attribute to the Police the preservation of Mr. G.'s morals—no; such a thought is beneath me; but I really do think, once or twice, upon such occasions, they have prevented his charity from being duped (a virtue, in his sober moments, never open to imposition), and have been the means of securing his gold chain, watch, and four large seals, from becoming, in like manner, victims to the fingers of female innocence. Watchmen, sir, are not—and I never could bring myself to speak ill of those who are no more; but I must say, such a set of useless, muffled, old vagabonds was never suffered to waddle on the face of the pavements. I leave the activity of the present system to contrast itself with the proverbial torpidity of that which is past. I perceive, however, that the common council of the city of London still persist in opposing all attempts to introduce the new system; this, sir, calls for explanation. Now, it was notoriously admitted, that upon their first introduction, the Police swept the west end of the town of a great proportion of rogues and rascals, and that a similar increase was thence made to those already in the city. This accession of congenial spirits to their numbers may satisfactorily illustrate whence emanates the marked hostility to an efficient police, so strongly evinced by the members of that august assembly. I shall here, sir, deprecate the design of making the New Police parish officers: I shall hate the sight of one as long as I live. I had once a poodle—it makes my heart ache to think of it—to be brief, will you believe, sir, that as it walked out with me one day, before I could interfere, a beadle, with no more remorse than I would a rushlight, blew out poor Dowager's brains? I could get no redress: he insulted me by saying—"he discharged his duty together with his pistol; and that it was my own fault for not keeping the little son of a dog muzzled on the dog-days." A New-policeman might have taken Dowager into custody; but I never will believe—till they become parish officers—that one among them would have shewn the cruel want of feeling of that relentless beadle. I must also take the freedom of asserting, that the New-

* Published in the *Remembrances*.

policemen have stronger claims upon the affections of their country than are due from affording civil protection alone.—I allude to the claims, the irresistible claims, of the medals of Waterloo, which I perceive have been won and are worn by some of the new system: this subject ever kindles a glow in my bosom. I had a cousin at that battle, who, I lament to say, lost both his ears, in a charge of cavalry, and subsequently married a Dutch-woman; but such was the lasting impression he made upon me in his regimentals, that I have raised an urn to the memory of his mutilation—I could do no less in honour of my cousin, and that cousin a cavalry officer: people may sneer, and say I had three brothers killed there; but they, sir, were vulgar fellows in marching regiments. My feelings towards our military and civil defenders are such, that I cannot bring myself to think, even if the Duke were to command Mr. Peel's Police to rob and harry the whole population, and quadruple their numbers, as in that case would be necessary, that my country-women could, satisfactorily to themselves, entertain the inclination to offer resistance or complaint; for I put it to your conscience, sir, whether we do not owe our safety and honours to the bravery of the troops, and the military talents of the Duke of Wellington; and if such a consummation must be submitted to, surely the Duke, and those who fought under him, have nearer claims upon us than ever had the *gens-d'armes* of France, or the republican armies of Buonaparte—those who would perversely maintain an opposite opinion carry their taste for foreigners to far greater lengths than I do.

In addition to other domestic advantages derived from the New Police, my two maid-servants assure me, that they now sleep so free from the fear of crowbars and house-breakers, that they would not mind even leaving the doors open, and are perfectly content in placing themselves under the protection of two such polite gentlemen as the new system supplies them with, and positively affirm that the old watchman was of no use whatever to either of them; and that the change has proved, at least to them, of very great accommodation: and both Sarah and Susan inform me that the policemen often caution them against talking to men they do not know, who, under pretence of stealing a kiss from them, are by no means unlikely to pocket my table-spoons, by way of a keepsake. So great is the regard of these girls for the new system, that I cannot persuade either of them that the threatened dissolution of the police does not arise solely from the intrigues and jealousy of his Majesty's Lifeguards, whom the former gentlemen have supplanted in every area in the western regions of the metropolis. Indeed, I cannot myself but attribute to the police the improved condition of my maid-servants, who do not now wish to go gadding after sweethearts from home; nor, indeed, stand talking to any men in the street, except the police; and Susan's manners, instead of being those of a giddy, flaunty lady's-maid, are becoming more and more sedate, and her appearance decidedly that of a matron. I have made allusion to a few such circumstances, in order that these extra-official services of the policemen may not pass unnoticed or unrewarded by their more influential advocates than, dear sir, yours everlastingly,

EVELINA GOGGINS.

DRAMA.

DRURY LANE.

A MELO-DRAMA, called *the Conscript, or the Veteran and his Dog*, was produced here on Wednesday evening. His majesty's servants seem inclined to turn the drama topsy-turvy in every possible way; for melo-dramas are acted nightly as first pieces, and full three-act operas commence just before midnight. *The Conscript* is, we have heard, the production of Mr. Barrymore, who is, seriously, too valuable a man in a theatre, to be permitted to tarnish his reputation by the production annually of a *hash* of this description. Last season, we had the *Greek Family*, from the same source. *The Dumb Savoyard* is another crying offence; and still they "ripe and ripe, and rot and rot." This piece is well named "the *Veteran and his Dog*;" for the incidents are those of every melo-drama that has *gone to the dogs* since we can remember; and the whole concludes with the novel and diverting "ceremony of shooting a deserter." "Going to shoot," by the by, we recommend as a variation in the bill, the next time managers need such an announcement, as, deuce take 'em! they never do shoot him. The only new incident in the *Conscript* may here be honourably noticed in its proper place. The reprieve is in this instance forwarded—by what means do our readers suppose?—they will never guess; so we will be magnanimous and tell them: the *Veteran*, his daughter-in-law, and an intimate friend, come post upon "a piece of flying artillery!" We acquit Mr. Barrymore of all blame. If he chooses to make his poor melo-dramas foils to his excellent pantomimes, that is solely his affair. But that the managers should suffer such a piece as the *Conscript* to be played at Drury Lane, and have the assurance to announce the next day in their bills, that, "having been entirely successful, it will be acted," &c. when it was most vehemently and deservedly hissed by every one who paid his money to see it, is rather too much for us to pass over in silence. The *orderleys* in the boxes greatly outnumbered the sergeants on the stage; but it cannot be to the interest of the theatre to paper up so worthless an article. The bipeds did their best; J. Vining, Cooper, Webster, and Younge, especially. Cooper and Webster were admirably drest. The dog was imperfect, and his double a sad dog indeed. The incidental dance was pretty, but too long; in compliment to the principal character, it ought to have been curtailed. Madlle. Guet improves upon us. Why does she not dance Taglioni's *pas seul in Hofer*? that which a Miss Angelica inflicted on us last season. Mr. Gilbert is active enough, but he wants that untranslatable quality *à plomb*. He seems hung upon wires too, which gives a flapping, Pierot, air to his dancing. Mrs. Barrymore has more taste and fancy than any of her male competitors. A Miss Bruce made her first appearance about half-past eleven o'clock (!), as *Linda*, in *Der Freyschütz*. But we had fallen asleep a few minutes before, and on waking, at a quarter to one, found them singing the finale. We will take an earlier opportunity of noticing the lady; in the mean while, we are enabled to say, from the glimpse we had of her figure, that she looks like a great singer.

Poole's most laughable farce, *Turning the Tables*, increases, if possible, in popularity: it will be long enough before the tables are turned on him.

COVENT GARDEN.

WE have to apologise to the translator of *Hide and Seek*. By a singular accident, only the commencement of our notice of that piece was printed last Saturday, and, deprived of its context, had an appearance of severity far from our intention. We repeat our assertion, that the subject has been produced at all the minor theatres in London, merely to add our acknowledgment, that it has never been handled so felicitously; nor has it ever had the advantage of such excellent acting. Miss Ellen Tree's performance of *Mrs. Mordaunt* is nature itself; and she is ably supported by Keeley, as the inquisitive servant *Moses*. *Hide and Seek* is a light and pleasant trifle, likely to keep possession of the stage; and, as it is the first dramatic attempt of a young artist, we trust its success will encourage him to further exertions.

On Thursday Miss Taylor made her first appearance in *Rosalind*, and equalled our most sanguine expectations. Triumphant has she passed through that formidable ordeal, and we regret deeply our inability, at this period of the week, to follow her, step by step, through the character. We can only mention, as the most prominent points of her every-way delightful performance, her first interview and sudden admiration of *Orlando*, unparalleled of late years for depth of feeling and delicacy of execution; her description of Time's paces to *Orlando* in the forest; her "counterfeiting" at the sight of the bloody handkerchief; her cuckoo song, the perfection of dramatic singing, and which was enthusiastically encored; and the delivery of the well-known epilogue. Since the days of Mrs. Jordan we have had no such *Rosalind*. The whole play was most admirably acted, from the inimitable *Orlando* of C. Kemble, to the trifling part of *Hymen*, allotted to our little favourite H. Cawse. Keeley played *Touchstone* for the first time, and we have seen none superior. We will return to this subject at the earliest opportunity: in the mean while, gentle reader, go and see the play—we conjure you—for we are egregiously mistaken if it be not indeed *As You like It*.

ADELPHI.

ON Monday the *Water Witch* was dramatised here by Mr. Bernard, the editor of *Retrospections of the Stage*, and met with perfect success; though it never struck us that Mr. Cooper's thrice-told tale and redomontading was peculiarly adapted for the stage. The piece, however, was as well contrived as circumstances admitted; and what the author has done is well done, considering that he had to yield so much to make way for the clever and really surprising machinery with which his drama is accompanied. The sea-scenes and shipping are wonderfully managed—the acting excellent—and the whole has gone off with *célat* during the week. The *Wreck Ashore* is as great a favourite as ever; and, indeed, one of the most interesting performances on the stage.

TOTTENHAM STREET THEATRE.

MADAME VESTRIS made her *début* at this little theatre on Monday last, in *Lord of the Manor* and *John of Paris*, and on Tuesday as the gay *Don*; and has continued playing to overflowing houses up to the present period. On Monday she is announced in a new opera, written expressly for her, under the title of *Fra Diavolo*, and founded upon the French piece of that name, for the purpose of introducing Auber's delicious music. The story of this piece, we remember, is very curious: the point

is derived from a remarkable trial in the *Causes Célèbres*, in which an infatuated murderer, impelled by

"that power
Which unsubdued and lurking lies,
To take the felon by surprise,"

makes a strange and unexpected exclamation, which leads to the immediate discovery of his guilt.

THE TYROLEAN FAMILY, MELGO.

WE attended an exhibition of the Melgg family at Willis's Rooms, and were much pleased with their performances. The party consists of two young lads and two rather pretty girls, who, in their peasant costume, make an interesting appearance. They sing admirably in time, and their curiously wild and characteristic national airs have a striking effect. They were much applauded, and will no doubt enjoy a full share of public favour.

VARIETIES.

Persian Poetry.—The poetical works of the Shah of Persia, published under the title of "Poems by him before whom all the earth is prostrated in adoration," has not, as far as we are aware, been reviewed by any critic of Persia! If we can procure a copy of the royal volume, we will, however, venture to state our candid opinions upon its contents!

Salicine.—A simple process has been invented in France, by which this substance may be extracted in large quantities, and sold at half the price of quinine.

Captain King.—His Majesty has graciously shewn his sense of the services of this intelligent officer, by conferring on him the rank of a post-captain, immediately on his return from the survey of the South American coasts.

Odessa.—On Oct. 4th, several soldiers, at work in the fields, discovered, at the distance of six leagues from Kertsch, under a well, an ancient edifice, built of large stones. On examination, it proved to be a tomb, in which they found a great number of vases of bronze, silver, and gold; and many other articles of admirable workmanship and great value, as well for their archaeological worth as for the metal. Among the most remarkable are three large dishes, four cups, and fragments of armour, of bronze; fragments of spears, arrows, swords, knives, &c. two silver horns, with representations of a ram; four silver vases, (three of them gilt); three silver dishes; a gold goblet, with representations of several Scythians; three crowns, adorned with figures; two massive chains for the neck; several bracelets, some gilt, some gold; a quiver, with the Greek inscription ΠΟΡ-ΝΑΧΟ; two large medallions, with a figure of Minerva; several medallions; a large ring; a metallic mirror; a whetstone, and a number of small articles. The weight of the gold is about eight pounds.

Comparative Population.—M. Moreau de Jonnés lately communicated to the French Academy the result of some statistic inquiries, having reference to the division of the population of various European countries into different series, each formed of individuals simultaneously of the same age. It appears that in France the number of children is less, compared with the population, than in any country respecting which there exists accurate information. The same is the case with adults, to twenty years of age. From that age to thirty, the young people of both sexes form, as every where else, the sixth part of the population. But in the following periods, France has a singular superiority over the other parts

of Europe; and the number of its inhabitants who attain together the maximum of the powers of life is much higher than in the British islands, or in Sweden. Taking in a mass the whole active population, from fifteen to sixty, that class constitutes in France nearly two-thirds of the total number of inhabitants; while elsewhere it constitutes only the half, or less. This disparity causes an essential difference between two populations apparently equal; since in the one there is only one child or old person, to two human beings in the full vigour of life, while the half of the other consists of old age and infancy.

Magnetic Equator.—M. Hermann, in the years 1829 and 1830, has made no fewer than seven hundred magnetic observations between the meridians of Berlin and Rio-Janeiro. He has crossed the magnetic equator during that period several times. The magnetic intensity which he has observed in various points corresponds exactly with that observed by M. Humboldt in the same places.

Diorama Montesquieu.—The French papers speak in high terms of praise of a view of Rouen, by M. Huet, which is at present exhibiting at the Diorama Montesquieu, in Paris.

Prince Talleyrand.—The Prince is well known to be one of the wittiest men of his day, —and wit upon one's self is the best defence against the satire of others. A newspaper correspondent, giving an account of the prince's landing at Dover, expressed his surprise at seeing in Talleyrand, whom he had expected to look nothing but the cunning diplomatist, "the countenance of an open, candid, and honest character." This was shewn to Talleyrand, who coolly remarked, "It must have been, I suppose, in consequence of the dreadful seasickness I experienced in coming over!"

Asiatic Mountains and Volcanoes.—At a recent sitting of the French Academy, M. de Humboldt presented it with a treatise on the direction of the chains of mountains in the interior of Asia, and on the volcanoes which are found there. Various Chinese and Japanese manuscripts had affirmed the existence of these volcanoes, at a distance of four or five hundred leagues from the sea. M. Humboldt has collected new information on the subject, and has sufficiently established the existence of volcanoes situated much more to the northward than those hitherto known. M. Humboldt also remarks, that the Caspian Sea having evidently occupied in former times a more extensive space than at present, the volcanic mountains of Asia must have formerly been placed under circumstances different from those of their present state.

Human Fossil Bones.—M. Renaud (*Bull. Juillet*) visited the grotto of Dürfort, in the department of Gard, in 1820: it is two hundred to two hundred and fifty metres above the plain, and is entered by a passage, in which it is necessary to drag one's self along. The human fossil bones are deposited in the bottom, and are piled up from the soil to the roof. They belong to a later period than that attributed to them by Maral de Serres.—*Le Temps.*

M. d'Ornalius d'Halloy at Namur, and the Prof. Kuhn at Freyberg, are both at work on a treatise on geology.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. 3177, Nov. 20.*]

Mr. Baines is engaged in writing the History of the County Palatine of Lancaster.—A translation from the German, of Part I. of Anatomical Demonstrations, or a Collection of Colossal Representations of Human Anatomy, by Professor Surig, of Breslau.—A translation of the History of the Reformation in Switzerland, by A.

Ruchal, comprising a period of Forty Years, viz. from 1516 to 1556, by Joseph Brackenbury, A.M.

LIST OF NEW BOOKS.

Emerson's Modern Greece, 2 vols. 8v. 12s. bds.—Maxwell, by the Author of "Sayings and Doings," 3 vols. post 8vo. 1l. 11s. 6d. bds.—Wanderings of Tom Staboard, 12mo. 7s. hf.-bd.—More Stories for Idle Hours, 18mo. 2s. hf.-bd.—The Gentleman in Black, with Cruikshank's illustrations, fcp. 8vo. 7s. bds.—Bankes's Life, &c. of Giovanni Finati, 2 vols. 6d. bds.—Memoirs of Mrs. Newnham, 12mo. 5s. 6d. bds.—Russell's Sermons on the Festivals, 12mo. 4s. bds.—The Sacred Offering, 1831, 32mo. 4s. 6d.—Biden's Naval Discipline, &c. 8vo. 10s. bds.—Strawberry Hill, 18mo. 2s. 6d. hf.-bd.—The Bereaved, and other Poems, by Whitfield, fcp. 8vo. 6s. bds.—The Fenwick System, 8vo. 5s. 6d. bds.—Hamilton's Progress of Society, 8vo. 10s. 6d. bds.—Rubie's British Celestial Atlas, royal 4to. 1l. 5s. hf.-bd.—Leache's Selection from Gregory's Conspectus and Cetus, 18mo. 7s. bds.—Surtee's Horseman's Manual, &c. 12mo. 5s. bds.—Concise and Comprehensive Form of a Lease for Farms, by a Norfolk Land-owner, 12mo. 5s. stitched.—Collection of Spanish Proverbs, 18mo. 1s. 6d.; Italian do. 1s. 6d.

METEOROLOGICAL JOURNAL, 1830.

	November.	Thermometer.	Barometer.
Thursday	11	From 42. to 41.	29.50 to 29.56
Friday	12	— 35. — 47.	29.89 — 29.86
Saturday	13	— 30. — 50.	29.81 — 29.64
Sunday	14	— 40. — 56.	29.64 — 29.53
Monday	15	— 36. — 52.	29.50 — 29.60
Tuesday	16	— 44. — 55.	29.33 — 29.48
Wednesday	17	— 32. — 48.	29.40 — 29.55

Wind, S.W. and S.E., the former prevailing. Frequent and heavy rain, except on the 12th and 14th. Rain fallen, 1 inch and $\frac{5}{8}$ of an inch.
Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude.... 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. September 1830.

Thermometer—Highest.....	69.00°
Lowest.....	32.50
Mean.....	50.11041
Barometer—Highest.....	30.10
Lowest.....	29.96
Mean.....	29.51877

Number of days of rain, 18.
Quantity of rain in inches and decimals, 3.525.
Winds.—0 East—8 West—0 North—2 South—0 North-east—3 South-east—11 South-west—6 North-west.
General Observations.—Although rain fell on nearly as many days as in September last year, the quantity was almost an inch less, and very little for the month; the mean of the barometer below the usual average, yet higher than last year, as were also both the extremes: the temperature generally low, and on the night of the 21st only half a degree above the freezing point, which was lower than the thermometer has been in September since 1824. Thunder was heard on the 14th, about 3 P.M. The evaporation 0.13125 of an inch.

October.	
Thermometer—Highest.....	68.50°
Lowest.....	28
Mean.....	47.52217
Barometer—Highest.....	30.26
Lowest.....	29.42
Mean.....	29.95580

Number of days of rain, 10.
Quantity of rain in inches and decimals, 1.1375.
Winds.—4 East—7 West—2 North—2 South—4 North-east—3 South-east—5 South-west—4 North-west.
General Observations.—The month was uncommonly fine; the quantity of rain considerably less than during the last eight years; the mean temperature higher than since 1827, and the maximum above any observed at Wycombe in October during the journalist's residence: the barometer was also remarkably high, the mean being 29.9558 inches, and the maximum exceeding that in the corresponding month in 1825, which was considered extraordinary for the season: a rainbow seen on the 26th, about 5 P.M.; on the 28th and 29th the wind blew strong from the S.W. and westward, but could not be considered as violent gales. The evaporation 0.21250 of an inch.

TO CORRESPONDENTS.

P. W. declined. We cannot consider that *verse* to be fit for the *Literary Gazette* where the rhymes are constructed on so vicious a principle of divorcing nominatives from verbs, adjectives from substantives, and all sorts of governing or connecting from all sorts of governed or connected parts of speech.
We look for Scott's new Tales of a Grandfather next month, and for Count Robert of Paris early in the spring. *Glossary to the Waverley Novels.*—As we expected, we have had a letter from the publishers of the new edition, who state, that Mr. Robert Jamieson has been long employed on this glossary, which will appear (where alone it could appear with propriety) at the conclusion of the work.
We seem to have no great inclination for our job on the Puff System, since we are again induced to postpone it, by the pressure of, we trust, better matter.
ERRATUM.—In our last Number, p. 734, col. 2, line 55, for "granite," read "psamite."

ADVERTISEMENTS,

Connected with Literature and the Arts.

Patron, the King's Most Excellent Majesty.

THE EXHIBITION of New Inventions and Improvements in Arts and Manufactures, in the National Repository, Royal Mews, Charing Cross, is now open daily.

T. S. TULL, Secretary.

SCHOOL for DRAWING and PAINTING;

for the education of Artists, and the instruction of Amateurs, Ladies as well as Gentlemen, in the principles of the Fine Arts. Possessing every requisite for the study of the Human Figure and the various branches of art—forming, also, a Provisionary School for the Royal Academy. The following are included in the course of study: the Art of Design, in its most simple and specific meaning—the Delineation of Objects—Geometry—Optics—Perspective—Osteology—Mythology—Proportion—Beauty—Light and Shadow—Character—Expression—Composition—and Colour.

The hours for practical study are from Eight in the Morning till Five in the Afternoon. Terms may be known at No. 6, Charlotte Street, Bloomsbury, corner of Streatham Street.

GRAMMAR SCHOOL of EDWARD VI.

Bromsgrove, Worcestershire. The Business of this Foundation will be resumed after the Christmas Vacation, on Monday, Jan. 24, 1831. Pupils of two years' standing are eligible for Scholarships in the University of Oxford. The Scholars succeed to valuable Fellowships, two of which are tenable by Laymen. Each Scholarship, of which there are six, gives a Title for Holy Orders. Annually, in June either an ounce or at the Commencement of the neighbouring Clergy, when a Foundation Gold Medal, of the value of Seven Guineas, and a Silver one of the value of Three Guineas, are given to the most distinguished. Applications to be made (post-paid) to the Rev. the Head Master, Grammar School, Bromsgrove.

A YOUNG MAN of studious and literary habits, of most liberal Education, and who understands the German, French, and Italian Languages, is desirous of obtaining some Employment, in which the Knowledge he possesses may be required. Address, W. P., 42, Leicester Square.

PRIVATE TUTOR.—A Young Clergyman, who took a very high University Degree both in Classes and Mathematics, would be happy to engage as Private Tutor in a Gentleman's Family, or as Curate and Resident Tutor in the Family of a Beneficed Clergyman. The highest possible Testimonials will be given as to his Character and Manners, as well as to his Abilities and Experience in communicating Instruction. In forming an Engagement now, he would be willing to attend upon his Duties either at once or at the Commencement of the ensuing Year, as might be deemed most desirable. Letters, appointing an interview, may be addressed to C. M. R. A., care of Mr. Joy, Bookseller, 66, St. Paul's Churchyard.

TO PARENTS, &c. A Medical Gentleman, many years in extensive practice in a healthy country, thirty miles from London, will have a Vacancy for an Apprentice at Christmas, who will have superior opportunities for improvement; his domestic comfort and moral conduct will be strictly attended to. Good temper and education, and respectable connections, indispensable, as he will be the associate, and considered as one of the family. Terms moderate. Apply to Mr. Lane, 25, George Street, Adelphi, between Twelve and Four; or by letter, post-paid.

TO BOOKSELLERS, &c.—To be Sold by Private Contract, an entire and select Stock of a Publisher, consisting of Copyrights and the illustrated Works, all of the most popular and valuable character. For Particulars inquire of Mr. Leaping Smith, No. 25, Paternoster Row. Principals only will be treated with.

MR. BOSTON has returned from Dublin to his Residence, Brook Lodge, near Chester, where he receives Two Pupils to instruct in his "System for the Removal of Impediments in Speech," imperfect Enunciation, &c. as well as affording a Facility of Delivery, by removing the Fatigue and Difficulty often attendant on Public Reading and Speaking.

BOOKS PUBLISHED THIS DAY.

THE HOUSEKEEPING ACCOUNT-BOOK for 1831, containing, on an improved Principle, Ruled Columns for a Weekly Account of Domestic Expenditure, together with a Weekly Washing Account for the Year, and Checks to be given with each Week's Delivery, forming, in an 8vo. vol. of convenient size, a complete Housekeeping Account-Book, embracing every Item of Family Expenditure. Price, strongly covered, 2s. 6d. Published by Edward Dunn and Son, 9, Fleet Street.

IRELAND and its ECONOMY; being the Result of Observations made on a Tour through the County in the Autumn of 1829. By J. B. HICKEY, Esq. F.R.S. Sec. Linn. Soc. &c. We take leave of Mr. Hickeys with feelings of respect for his talents and learning, and above all for the dispassionate manner in which he delivers his views on the great questions on which he touches.—Athensian, May 29, 1830. Mr. Hickeys' little volume is one of the most intelligent books on Ireland that has been published for years. The whole volume is full of excellent feeling, and is remarkable for an absence of all attachment to particular theories, quite refreshing in our days.—New Monthly Magazine, July 1830, p. 279. John Murray, Albemarle Street.

THE LAW and COMMERCIAL DAILY REMEMBRANCER for 1831.

This Publication combines the advantages of a Diary for Daily Memoranda, with that of a most useful and valuable book of reference to subjects of importance and utility to all Classes, but particularly so to Merchants, Bankers, Solicitors, and Men of Business generally. In the selection of information contained in this Work, will be found a Table of the Terms and Returns altered pursuant to the Directions of the Act relating thereto; an Abridgment of the Laws relative to Stamps, with practical Instructions,—this Abridgment, from the Information it contains, will be eminently useful to Country Solicitors.—Review of the proposed Alterations in the Stamp Laws; a List of the Memoranda of the House of Commons, with their Town and Country Residences; Analysis of the whole of the Public Acts of the last Session of Parliament, &c. &c. &c.

Price 3s.; strongly covered, 6s. 6d.; half-bound, enlarged edition, half a page for each Day, Memoranda, 4s. 6d.; extra enlarged edition, a page for each Day, half-bound, 7s.; 4to. edition, a page for each Day, 12s. An edition in folio has this year been published, containing a page for each Day, adapted for the Use of Offices, &c. of extensive Business, price 15s. half-bound.

Any of the above may be obtained ready for Cash Accounts. London: Published by Edward Dunn and Son, 9, Fleet Street; and sold by all Booksellers.

ON FINANCIAL REFORM.

By SIR HENRY PARNELL, Bart. "Sir Henry Parnell's admirable work, to which we have more than once directed the attention of our readers."—Times. John Murray, Albemarle Street.

Just published by Henry Colburn and Richard Bentley, New Burlington Street.

XI. Captain Kotzebue's New Voyage round the World, in the Years 1823, 1824, 1825, and 1826. In 2 vols. post 8vo. with Plates.

ZELINDA, a Persian Tale. In Three Cantos. By RICHARD BADNALL. Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

A REFUTATION of an ARTICLE in the EDINBURGH REVIEW, No. CII. entitled "Sadler's Law of Population." In which are inserted additional Proofs of the Principle at issue, derived from the Censuses of several Countries, recently published.

By MICHAEL THOMAS SADLER, M.P. "Before any thing came out against my Essay, I was told I must prepare myself for a storm coming against it, it being resolved by some men, that it was necessary that book of mine should, as it is phrased, be run down."—John Locke. John Murray, Albemarle Street.

Complete edition of BOURIENNE'S MEMOIRS of NAPOLEON.—This day is published, a new edition of Memoirs of Napoleon Buonaparte. From the French of M. FAUVELET BOURIENNE, Private Secretary to the Emperor. By JOHN S. MEMES, LL.D. Price 18s. (strongly covered, price 18s.) "We know, from the best political authority now living in England, that the writer's accounts are perfectly corroborated by facts."—Literary Gazette. London: Hurst, Chance, and Co.; and Constable and Co. Edinburgh.

In a pocket volume, 8th edition, 6s. boards. THE PUPIL'S PHARMACOPEIA;

being a literal Translation of the London Pharmacopœia, with a Table of the Names of Medicines, and their Properties, Doses, &c. in Cases of Poisoning, &c. By W. MAUGHAM, Lecturer on Chemistry and Materia Medica. * This edition contains every information relative to the College of Surgeons, Apothecaries' Hall, East India Company's Service, &c. Printed for Longman, Rees, Orme, Brown, and Green.

THE MILITARY EVENTS of the LATE REVOLUTION in PARIS.

By an OFFICER of the GUARDS. From the French. John Murray, Albemarle Street.

Published by R. Ackermann, 96, Strand, a new Annual, THE HUMORIST.

By W. H. HARRISON. Author of "Tales of a Physician," &c. Illustrated by Fifty Wood Engravings, exclusive of numerous Vignettes, from Drawings by the late Thomas Rowlandson. This Volume is handsomely printed in post 8vo. price 12s. bound in morocco. "The 'Humorist,' an entertaining and pleasant book for a family circle; curtains closed, a bright fire, candles lighted, chairs drawn to the table, and people predisposed to be merry, because they are first comfortable."—Literary Gazette.

In 12 vols. foolscap 8vo. 14s. LIFE and ADVENTURES of GIOVANNI

FINATI, Native of Ferrara; who, under the name of Momet, met the Campaign against the Wahabees, for the recovery of Mecca and Medina, and since acted as Interpreter to European Travellers in some of the parts least visited in Asia and Africa. Translated from the Italian as dictated by himself, and edited by WILLIAM JOHN BANKES, Esq. "It is long since we have met with so eventful and interesting a narrative."—Literary Gazette. "The unpretending record of the observations of a man of plain sense, whose singular fortune it has been to have seen more of many countries than perhaps any other living person. There must be strange adventures in such a life, and the present narrative is proportionately full of interest."—Athenæum. John Murray, Albemarle Street.

For the benefit of Loungers, Walkers, Great Talkers, and Truaders. JOE MILLER MODERNISED; New

Characters attached to most of the Old stage Jobs. By a celebrated MILITARY CHARMER, and a BRIGHTER HARLEQUIN. Cuts by Croikbank. Plain, 6s. 8d.; coloured, Half-a-Crown.

FRASER'S MAGAZINE for TOWN and COUNTRY.

In putting forth the Tenth Number of Fraser's Magazine, it is the gratifying duty of the Publisher to express his deep sense of the daily increasing patronage with which his publication is honoured. His hopes of success were originally founded on his determination to deserve it. This he has endeavoured to do by securing the support of many among the most eminent literary characters of the age, the fact of which the pages of his publication afford abundant proof. Thus supported, he is emboldened to invite a comparison with any other periodical work, satisfied that, if ability, learning, and uncompromising principle, deserve a favourable decision, Fraser's Magazine may be said to merit it; and that, though not so heavy as many of his competitors, it will be found of good weight with an impartial and discriminating public. The "Literary Portraits," which form so striking a feature of this Magazine, have been most flatteringly noticed by that portion of the public, and weekly press, to whose preference it is invariably paid in such matters; it will, therefore, be the object of the Publisher to continue this department of the work with undiminished spirit and care. Repeating his acknowledgments for the liberal patronage he has met with, he has only to direct attention to the unnumbered testimonies of the press, in favour of a Magazine which rest its claims to public favour on unremitting exertion, unflinching principle, and strictly impartial criticism. Published monthly, by James Fraser, 215, Regent Street, London; John Boyd, Edinburgh; and Grant and Co. Dublin. Price 2s. 6d. each Number.

The Number for November contains—Goldwin's Novels—Stanzas for Music—Wounded Spirit, by D. M. Moir—Literary Sketch of Sir Walter Scott, with a Full-length Portrait—Thoughts on History—Machinery and the Manufacturing system—Bartholomew Fair, by the "Man-of-War's Man"—The Slave—Letter on West Indian Slavery, by John Galt, Esq.—Dozen Numbers of London, by Sir Morgan O'Doherty—Guelph, founded for the Canada Company, with a Lithographic Sketch—Calm and Storm—The Suck and the Huskin—Edinburgh Review terms—The Life of Byron—France and England—Question, and Quarterly Review—Symposic the First, &c. &c.

* Full-length Portraits of the following Literary Characters have already appeared in the preceding Numbers of Fraser's Magazine—W. Jerdan, Esq. Editor of the "Literary Gazette"—T. Campbell, Editor of the "New Monthly"—J. G. Lochart, Esq. Editor of the "Quarterly Review"—S. Rogers, Esq. Author of the "Pleasures of Memory"—T. Moore, Esq. Author of "Lalla Rookh."

The National Library, No. 111. Beautifully printed in small 8vo. with a Portrait of Dr. Black. Price 5s.

THE HISTORY of CHEMISTRY.

By THOMAS THOMSON, Esq. M.D. F.R.S.E. Professor of Chemistry in the University of Glasgow. No. I. comprises the Life of BYRON, by John Galt, Esq. with Plates, complete in a single volume, price 5s. No. II. contains the History of the Bible, by the Rev. G. R. Gleig, M.A. M.R.S.L. &c. No. IV. containing the History of Chymistry, by G. P. R. James, Esq. Author of "De L'Orme," "Dartley," "Richelieu," &c. with Plates, will appear on the 1st of Dec. Henry Colburn and Richard Bentley, New Burlington Street.

Knowledge for the People.—Elegantly printed, price 1s. KNOWLEDGE for the PEOPLE; or, the Plain Why and Because, familiarising Subjects of Useful Curiosity and Amusing Research. Part I.—Domestic Science. By JOHN TIMBS, Editor of "Lancet; or, the Best Words of the Best Authors." London: Sampson Low, 42, Lamb's Conduit Street; and Hurst, Chance, and Co. St. Paul's Churchyard.

A GREEK-ENGLISH SCHOOL LEXICON, containing all the Words that occur in the Books used at School, and in the Under Graduate Course of a Collegiate Education. To which is added, a Dictionary of Proper Names. By the Rev. THOMAS DIX HINKS, M.R.S.A., Master of the Classical School in the Belfast Institution. Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Captain Hall's North America, New Edition. In 3 vols. price 12 1/2s. 6d. with a coloured Map, TRAVELS in NORTH AMERICA, in 1827 and 1828. By Captain BASIL HALL, R.N. F.R.S. The 3d edition, with Additions. To which is added, an Appendix, on the use of the Camera Lucida.

Also, Forty Etchings, illustrative of the Travels, taken with the Camera Lucida. By Captain Hall. Royal sto. price 10s. 6d. "Captain Hall's book may probably do good in America; we hope it will—but we are quite sure it must do so here. The common-sense views he has taken, the penetration he has exhibited in sifting facts, and the powerful scrutiny he has exercised, give to his communications a very uncommon character, both of interest and information."—Quarterly Review, Nov. 1829. Printed for Robert Cadell, Edinburgh; and Whittaker and Co. London.

D. A. Talboys, Oxford; and Whittaker, Treacher, and Co. London. Handsomely printed in 4 vols. crown 8vo. upon a superfine paper, 11s. 6d. cloth boards.

OXFORD ENGLISH PRIZE ESSAYS, containing a Collection of the Prose Essays which have obtained Prizes in the University of Oxford, from the Year 1771 to the present time. The following are some of the Authors and Subjects.

- Earl Eldon.—Advantages and Disadvantages of Foreign Trade.

Lord Sidmouth.—Affinity between Poetry and Painting.
T. Burgess, Bishop of Salisbury.—Study of Antiquities.
A. Robertson, Savilian Professor of Astronomy.—On original Composition.
Lord Tenterden, Chief Justice of the Court of King's Bench.—Use and Abuse of Satire.
W. E. Taunton.—Popularity.
E. Copstone, Bishop of Landaff.—Agriculture.
R. Munt, Bishop of Down and Connor.—Commerce.
Reginald Heber, late Bishop of Calcutta.—The Sense of Honour.
C. P. Bury.—The Love of our Country.
R. Whately, Principal of Alban Hall.—What are the Arts in the Cultivation of which the Moderns have been less successful than the Ancients.
The Rev. J. Kelle.—On Translation from Dead Languages.
J. T. Coleridge.—Etymology.
The Rev. T. Arnold.—The Effects of distant Colonisation on the Parent State.
The Rev. H. H. Milman, Professor of Poetry.—A Comparative Estimate of Sculpture and Painting.
D. K. Sandford, Greek Professor in the University of Glasgow.—The Study of Modern History.
The Rev. W. A. Shirley.—On the Study of Moral Evidence.
R. B. Clarendon, Esq.—Events in the Time of Pericles, and Rome in the Time of Augustus.
G. Moberly.—Is a ruder, or a refined age, more favourable to the Production of Works of Fiction?
F. Oakley.—The Influence of the Crusades upon the Arts and Literature of Europe.
The Rev. Daniel Wilson.—Common Sense.
The Rev. William Sewell.—The Domestic Virtues and Manners of the Ancient Greeks and Romans, compared with those of the more refined Nations of Modern Europe.
G. A. Denison.—The Power and Stability of Federative Governments.

The Oxford Prize Poems; being a Collection of all the English Poems that have obtained Prizes in the University of Oxford. A new edition, revised and corrected, complete to the present time. Beautifully printed on the finest worst paper, foolscap 8vo. 3s. boards.

18mo. price 4s. SERMONS on the PRINCIPAL FESTIVALS and HOLYDAYS of the CHURCH. By the Rev. ARTHUR F. RUSSELL, B.C.L. OF St. John's College, Cambridge. Cambridge: Published by Thomas Stevenson. Sold also by Hatchard and Son; and Cochran and Key, London.

New Latin Grammar for the Use of Schools. In 18mo. price 3s. bound, with full allowance to Schoolmasters and Private Teachers.

AN ABRIDGMENT of ZUMPT'S LATIN GRAMMAR, For the Use of Schools. Printed for B. Fellowes, Ludgate Street.

- Of whom may be had, the following recent Publications, by the Rev. John Kenrick, M.A.
1. A Grammar of the Latin Language, by C. G. Zumpt, Professor in the University of Berlin. Translated from the German, with Additions. 2d edition, corrected and enlarged. 8vo. 11s. 6d.
"Far superior to any existing grammar that we know. To indeterminate Biology we are always adverse; but this is a production which cannot be too strongly recommended."—Monthly Review, Dec. 1824.
2. Exercises on Latin Syntax, adapted to Zumpt's Grammar, 8vo. 5s.
3. A Key to Exercises, adapted to Zumpt's Grammar. 2d edition, 8vo. 5s.

Lady Morgan's New Work.—In 2 vols. 8vo. with Portrait, FRANCE in 1829-30. By LADY MORGAN. "This is a book that will be universally read; the lightness of the style, the notoriety of the authoress, and the merit of the work, will render it popular. As throwing light upon the state of private society and private opinion in Paris during the last twelve months, it will have a redoubled interest."—Athenaeum. "It is a delightful work; gay, sparkling, piquant, and metaphysical."—Sun. "The work on France is very clever."—Spectator. "Lady Morgan's light and graceful pen touches every thing, exhausts nothing. She gives us peeps into life which none but an acute and observant woman could furnish."—Spectator. "The work is written in Lady Morgan's own style; her sketches of French manners are excellent."—Frasco's Journal. "A work upon the state of France, in so glorious a time as that on which Lady Morgan has treated, was much to be desired; but when we have the masterly hand combined with the scrutinising eye of Lady Morgan, undertaking the wished-for task, the public must be more than gratified."—Brighton Guardian. Printed for Saunders and Otley, Public Library, Conduit Street.

Just published by Henry Colburn and Richard Bentley, New Burlington Street.

2d edition, in 2 vols. post 8vo. with Portrait and other Plates, MEMOIRS of DON JUAN VAN HALEN, comprising the Narrative of his Imprisonment in the Dungeons of the Inquisition at Madrid, and of his Escape; his Journey to Russia, his Campaign with the Army of the Caucasus, and a brief Notice of his subsequent Career, up to the Period of his being placed at the Head of the popular Forces in Belgium during the recent Revolution.

The Second Volume of the Life of Lord Burghley, Lord High Treasurer of England during the Reign of Queen Elizabeth, with Extracts from his Private Correspondence and Journals. By the Rev. Dr. Nares.

The Life and Correspondence of John Locke, by Lord King. 2d edition, in 2 vols. 8vo. with considerable Additions, among which is a Diary of Lord Chancellor King. "A work which must ever remain a standard book in English libraries."—Literary Gazette.

Musical Memoirs, comprising an Account of the general State of Music in England, from the first Commencement of Handel, in 1724, to the Year 1827. Interpersed with numerous Anecdotes, Musical, Historical, &c. By W. T. Parry, Forty Years Principal Organist to the Theatre Royal Covent Garden. In 2 vols. post 8vo. 18s.

Dr. Doddridge's Private Correspondence, the Third and Fourth Volumes. "We know not when, if ever, we have perused volumes of the description of these now before us, with more intense curiosity, amusement, and instruction."—Literary Gazette.

Mr. Crawford's Narrative of a Residence in Siam and Cochinchina. 8vo. edition, in 2 vols. with Map and 45 Plates, 31s. 6d.

Personal Sketches of his own Times. By Sir Jonah Barrington. Being his own individual Recollections of distinguished Persons, remarkable Events, High Life, and Irish Manners, for the last Fifty Years. New edition, with considerable Additions. In 2 vols. 8vo. 21s.

Mr. Buckingham's Travels in Assyria, Media, and Persia. 8vo. edition, uniform with his Travels in Palestine and Mesopotamia. In 2 vols. with numerous Engravings, 21s. 6d.

Letters from the East, written during a recent Tour through the Holy Land. By John Carne, Esq. 8d edition, in 2 vols. post 8vo. 18s.

Petersdorf's Common Law Cases, complete. Volume XV., being the concluding Part of PETERSDORFF'S PRACTICAL and ELEMENTARY ABRIDGMENT of the CASES argued and determined in the Court of King's Bench, Common Pleas, Exchequer, and at Nisi Prius, &c. &c. London: Baldwin and Cradock. "The Publishers have sets of this important Work always ready done up in the following manner, viz.—In boards, at 11. 11s. 6d. per Volume in strong casing, to resemble law-binding, price 11. 12s.; and in law-calf and lettered, 11. 14s. 6d."

Savings' Banks.—Price 7s. 6d. in boards, THE HISTORY of SAVINGS' BANKS in ENGLAND, WALES, and IRELAND, with the Period of the Establishment of each Institution, the place where it is held, the Days and Hours when open, the Rate of Interest payable, and the Number of Depositors, &c. &c. according to the latest official Returns. Dedicated, by permission, to the Right Honourable the Chancellor of the Exchequer.

By JOHN TIDD PRATT, Esq. London: Printed for C. J. G. and F. Rivington, St. Paul's Churchyard; and Waterloo Place, Pall Mall. In 1 vol. 8vo. 5th edition, revised and corrected, with several new Plates and Woodcuts, 18s. boards.

THE FIRST LINES of the PRACTICE of SURGERY, designed as an Introduction for Students, and a concise Book of Reference for Practitioners. By SAMUEL COOPER, Surgeon to the Forces, Member of the Royal College of Surgeons, &c. &c.

Printed for Longman, Rees, Orme, Brown, and Green; Baldwin and Cradock; E. Cox and Son; G. B. Whittaker and Co.; Simpkin and Marshall; H. Nisbet; Burgess and Hill; T. and G. Underwood, London, and Adam Black, Stirling and Kenney, Macfarlane and Stewart, and P. Brown, Edinburgh.

Of whom may be had, by the same Author, A Dictionary of Practical Surgery, the 6th edition, corrected and enlarged. In 1 vol. 8vo. 12s. boards.

Price 2s. 6d. THE FRENCH and ENGLISH PICTORIAL VOCABULARY, containing upwards of Twelve Hundred Words in each Language, with their appropriate Illustrations. By N. WHITTOCK. Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

New Comic Annual. Price 12s. elegantly bound in Morocco, and illustrated with Ninety-seven beautiful Engravings on Wood, THE NEW COMIC ANNUAL for 1831.

"It is, from first to last, a budget of drolleries—full of puns, curious conceits, wittyisms, satires, &c. in prose and verse."—Bell's Dispatch. "The dedication, preface, contents, plates—all are good."—Edinburgh Literary Journal. "The head and tail pieces are extremely humorous, as well as abundant; and the whole volume is replete with fun."—Bell's Life in London. London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Where may be had, a new edition of Whims and Oddities; Second Series. By Thomas Hood. Price 10s. 6d.

In 1 vol. 8vo. with Plates, from original Drawings, price 12s. boards, THE BOSCOBEL TRACTS; relating to the Escape of Charles the Second, after the Battle of Worcester, and his subsequent Adventures, &c. &c. Edited by J. HUGHES, Esq. A.M. Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

Price 7s. 6d. THE COOK'S ORACLE. By WILLIAM KITCHENER, M.D. A new edition, being the 8th.

The whole of this work has, a seventh time, been carefully revised. One Hundred and Thirty new Receipts are especially which will greatly improve the comfort and economy of all, especially of Catholic Families. Printed for Robert Cadell, Edinburgh; Whittaker and Co. London; and Messrs. Sellers, Worcester, and London. "We venture to prophesy that the 'Cook's Oracle' will be considered as the English institute of cookery."—Edinburgh Review, March 1821.

ON THE LAST JUDGMENT, and the Destruction of Babylon, shewing that all the Predictions contained in the Apocalypse are at this day fulfilled. 8vo. 3s. boards. Sold by J. S. Hodson, No. 15, Cross Street, Hatton Garden, and W. Simpkin and R. Marshall, Stationers' Hall Court, Ludgate Street.

Price 12s. 6d. in cloth boards, Vol. II. of THE EDINBURGH JOURNAL of NATURAL and GEOGRAPHICAL SCIENCE.

And on the 1st December will be published, price 2s. 6d. with a beautiful Engraving by Lizars, of the Vendace or Vendis of the Lochmaben Lochs, Dumfriesshire, the First Number (to be continued monthly) of

A New Series of the same Work, conducted by Henry H. Cheek, F.L.S., F.R.S.E., Member of the Geographical Society of London, of the Geologists' and Horticulturists' Society, and Annual President of the Royal Medical Society of Edinburgh; with the assistance of the following Gentlemen, who have undertaken the entire direction of their several Departments:—Sir Wm. Jardine, Bart. F.R.S.E. F.L.S. M.W.S. F.Z.S. &c. G. A. Walker Arnott, F.R.S.E. F.L.S. M.W.S. &c. John Scouler, M.D. F.L.S. Professor of Natural History in the Andersonian University of Glasgow. Robert Knox, M.D. F.R.S.E. M.W.S. &c. Lecturer on Anatomy and Comparative Anatomy. And J. P. W. Johnston, A.M. &c. &c. With the promise of occasional aid from several other Gentlemen eminent in Science. John Anderson, Jun. 55, North Bridge Street, Edinburgh; Whittaker, Treacher, and Co. Ave Maria Lane, London; and J. B. Balliere, Paris.

Printed on the best large post, in 4to. price, half-bound, extra-enlarged, 9s.; enlarged, 6s.; small edition, 4s. 6d.; sewed, 3s. RICHARDS'S UNIVERSAL DAILY REMEMBRANCER for 1831, comprising a Diary for Memoranda, Appointments, Bill-Dues, &c. and a Variety of Information, adapted to the Use of Attorneys, Bankers, Merchants, and all Persons of Business.

Printed by G. C. Richards, St. Martin's Lane, Charles Cross; and sold by Simpkin and Marshall, and Suttaby and Co. Stationers' Court; Hurst, Chance, and Co. St. Paul's Churchyard; S. Low, Lamb's Conduit Street; and all Booksellers and Stationers in Town and Country.

BROWN'S PHILOSOPHY of the MIND, 4 vols. 8vo. 21s. 6d. or 1 large vol. 11. 1s.

This work contains the complete course of Lectures of the late Professor of Moral Philosophy in the University of Edinburgh. It was published ten years ago. The great popularity which the work immediately obtained, it has retained ever since. It is now in the 5th edition. There are translations of it in most of the languages, and several editions in America. And this hold of the public mind the work has taken solely by its merit. To the great Reviews it owes no part of its fame. A ten years' neglect on their part has been terminated by a laborious attack in the recent Number of the Edinburgh Review. Printed for William Tait, Edinburgh; and Longman and Co. London.

In small 8vo. THE DIURNAL REMEMBRANCER; or, Pocket Diary for 1831, containing a Selection of the most useful Lists and Tables, including the New Table of Terms and Returns, forming a Diary of the most convenient size for Memoranda, Appointments, &c. price 2s. 6d. half-bound, enlarged edition, containing half a page, 4s. extra enlarged edition, containing a page for each Day, 6s. London: Published by Edward Dunn and Son, 9, Fleet Street; and sold by all Booksellers.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 723.—AMERICAN EDITION.

SATURDAY, NOVEMBER 27, 1830.

REVIEW OF NEW BOOKS.

Narrative of a Journey through Greece in 1830; with Remarks upon the actual State of the Naval and Military Power of the Ottoman Empire. By Captain T. Abercrombie Trant, author of "Two Years in Ava." 8vo. pp. 435. London, 1830. Colburn and Bentley.

Not only the latest, but the most intelligent and best authenticated work we have seen relative to the existing situation of Greece. After the classical labours of Colonel Leake, and the diligent researches of Mr. Dodwell, we had little to expect either from descriptions of scenery, antiquarian discoveries, or illustrations of ancient literature;—and therefore we are not disappointed in finding all the portions of Captain Trant's volume which are devoted to such topics, of inferior value. But in his views of society, of the political state of the country, of its parties, of the effects of the late struggle, and of the future prospects of Greece, he has given us much to interest and inform us; and we have, from its pleasant and gentlemanlike style, perused his performance altogether with very great pleasure.

In October 1829 he reached the Grecian coast, where he says—"One of the most prominent objects was Castel Tornese, an old Venetian fort, now a ruin, but in former days affording protection to the town of Chiarenza, or Clarentza, which, by a strange decree of fortune, has given the title of Clarence to our royal family. It would appear that at the time when the Latin conquerors of Constantinople divided the Western Empire amongst their leading chieftains; Clarentza, with the district around it, and which comprised almost all of ancient Elis, was formed into a duchy, and fell to the lot of one of the victorious nobles, who transmitted the title and dukedom to his descendants, until the male line failed, and the heiress of Clarence married into the Hainault family. By this union, Philippa, the consort of Edward the Third, became the representative of the Dukes of Clarence; and on this account was Prince Lionel invested with the title, which has since remained in our royal family. It is certainly singular that a wretched village in Greece should have bestowed its name upon the British monarch."

It was not long before his travel brought Captain T. into contact with the celebrated Capo d'Istrias, who is now playing so prominent a part in Greece, that we need offer no excuse for selecting the leading notices concerning him.

"Previous to the year 1828, the whole country was ravaged by bands of armed men, who, although unable to cope with their national enemies, had power enough to oppress their country people: the roads were infested with robbers; the peasant, when following his plough, never for a moment laid aside his arms; and those persons who were obliged to travel across the country, were hourly exposed to the attacks of banditti. But these evils had been

so long and deeply felt, that the very actors in them sighed for the return of peace; and when the president, as a preliminary measure towards quieting the Morea, directed that no person should appear armed except those employed by the government, he was instantly obeyed. The exhaustion which necessarily followed an exterminating war of seven years' duration, placed great moral power in the hands of Capo d'Istrias; and, without the employment of a single soldier, he, by a simple mandate, at once allayed the intense fermentation of the country; a chief was appointed from among the elders of each village, to collect the rents for the government, and these were fixed at ten per cent of the produce of private property, and thirty per cent for the lands held upon lease from the government. Since then, two successive years of peace have enabled them to collect their harvests, and at least place themselves beyond the chance of starvation; and they now look forward to an undisturbed possession of the lands for which they so long contended, and in many instances have dearly bought."

This seems to have been an excellent measure; but our author thinks it counterbalanced by other pieces of conduct neither so beneficial nor disinterested. As the Spectator says, however, we always like to know something of the personal character of our heroes; we shall therefore introduce the president in Capt. T.'s words.

"Almost the first person whom I chanced to see when I arrived at Argos, was Count John Capo d'Istrias, the president of Greece. He was calling upon a gentleman at whose house I stopped; and from his dress I at first mistook him for a Russian officer, and was much pleased with his exceedingly gentlemanlike manner and winning address. His features are handsome and dignified, his figure erect and well proportioned, and his prepossessing appearance is not unsupported by his conversational powers, which are those of a well-informed, well-bred man of the world. Such is the appearance of the man who now presides over the interests of Greece."

"Count J. Capo d'Istrias is a Corsic by birth; and his family, which is of ancient descent, is possessed of considerable property in that island. Count John, who is the second brother, brought himself to the notice of the Russians at the time when they held possession of the Ionian islands; and having since entered their service, he became well known to the world as a diplomatist, and received credit for a considerable share of talent. At the congress of Vienna, he is reported to have called forth from Prince Meternich the remark, '*Ce jeune homme là nous a fait la barbe à tous*;' whilst another eminent statesman, Sir Thomas Maitland, in expressing his opinion of Capo d'Istrias's abilities, said, that he was a mere 'political puppet.' Which of the two sentiments was correct, his conduct, since his elevation to the presidency of Greece, will best determine. In the year 1819, a visit which he

made to Corfu was supposed to have been in connexion with the views of the Hetairsts, whose cause he was known to advocate; but when the revolution burst forth in Wallachia, and that Greece was called upon to arm by Prince Alexander Ipsilanti, Capo d'Istrias was urgent in his endeavours to check the progress of an insurrection, which, being premature, he foresaw threatened destruction to those concerned in it. He is said to have strongly assured the Greeks, that they had no assistance to hope from Russia; and, however he may secretly have been connected with their party, he overtly disavowed their proceedings; and, until he was summoned by the nation, did not offer to join the patriot cause: but there can be no doubt that he had, from the commencement, looked forward to the supreme command. In the month of January 1828, Capo d'Istrias arrived at Napoli di Romania, in a British line-of-battle ship; and Griva, who was at that time at war with Colocotroni, opened the gates of the fortress to him, and thus placed the key of the Morea in his hands: the other refractory chieftains hastened to shew their patriotism, by acknowledging the president, who, without any exercise of force, found himself at the head of the nation. At this period, the fears of the Greeks, as to their political existence, were hushed; the decided part taken by the allied powers, the battle of Navarino, and the results to which it led, had paralysed the movements of their most formidable opponent, Ibrahim Pasha; and although it is true that the fatal battle of Athens had been followed by the surrender of the Acropolis, the last stronghold possessed by the Greeks in eastern Hellas, the Turkish army had not been able to penetrate through the defiles of the Geranium mountains, or force the position taken up by Church for the defence of the Isthmus of Corinth. From the enemies of Greece the president had, therefore, comparatively little to fear; and his whole attention ought to have been occupied in allaying the irritation caused by the factions I have before alluded to, and in restoring quiet to the unhappy peasantry. To further his views, all parties were willing to concur. Those men who had hitherto been foremost in opposing the established government, when the member of a native cabal was at its head, hesitated not to support a person who, it was hoped, would prove a stranger to the intrigues of party and to the spirit of faction. The reputation for talent he had acquired when forming one of the Russian cabinet, fostered the opinion that he was so well initiated in the secret of legislation, as to become a rigid protector of the interests of the infant nation. His arriving in a British man-of-war, at a time when the allies had announced their intention of interfering in favour of Greece, seemed to imply that he came as the dictator chosen by the allied powers; and all classes, anxious to manifest their gratitude for the protection of the allies, hastened to promise submission to the president. Greece lay pros-

trate at his feet. How he availed himself of this disposition towards him, will hereafter appear. The first step taken by Capo d'Istria was to issue a proclamation, dated from on board of the Revenge, calling upon the Greeks to acknowledge his authority, and directing them to lay aside their arms. The alacrity with which this edict was submitted to, is highly creditable to the Greek peasantry; and the result of the measure was the internal pacification of the country: those people who had hitherto derived the means of existing from rapine and extortion, were obliged to seek a more peaceable mode of subsistence; the industrious classes were enabled to till their land and reap its fruits; the highways were no longer infested by a lawless banditti; and peace and security were restored to the interior of families. This great point being gained, it was now hoped that the president, when selecting his subordinate ministers, would have made the choice without any reference to their party feelings, and have merely allowed talent and integrity to be claims upon his notice; but the result did not justify his impression. Having abolished the preceding form of government, he proceeded to nominate a council, the Panhellenium; but though nominally possessing some power, this assembly was virtually merely used by him as a convenient mask to the really despotic authority that he reserved in his own hands. The contributions of France and Russia replenished his treasury, and gave him a force more irresistible in Greece than the employment of a powerful army; and, armed with these weapons, he no sooner saw himself in possession of the supreme power, than he began to prosecute his insidious designs, tending to the agrandisement of himself and his family; to effect which, he hastened to form a party, upon whose subserviency he could with certainty depend. To maintain himself in his post, as chief of the Greeks, was no doubt the object of his ambition; and whilst he tried to cajole England and France by an appearance of liberality and candour, he really rested his hopes upon Russia, who, having at all times looked upon Greece as a country she coveted, would no doubt prefer to see her governed by a man Russian in heart and education, and in whose hands she would be nothing more or less than a Russian province, than to find her influenced by the liberal policy of France and England. Having fixed upon his plan of operations, the president's first care was to disgust or otherwise get rid of all those men whose integrity of principle and patriotism were bars to his personal views, and to replace them by members of his family and Ionians, upon whom he could place implicit reliance. Prince Mavrocordato, Tricoupi, and many other persons of merit, were forced to retire from office; and the president's two brothers, Counts Viario and Augustin, were summoned from Corfu, where they had hitherto passed their days in obscurity, and called upon to assist in presiding over the destinies of Greece. Viario, the eldest, was forthwith placed at the head of the war and marine departments, and no sooner did he assume the office, than his incapacity and ignorance became manifest. From that day the president's popularity began to decline; and so well has Viario followed up the system he commenced, that he is now utterly detested, and not only receives credit for his own misdeeds, but is also supposed to instigate his brother, Count John, to perform those acts which have called down upon him the hatred of men who once were his firmest friends and supporters. Count Augustin is a very young man: he had

been educated for the law, but made no progress in his profession, and was idling at Corfu when his brother was nominated to the presidency of Greece. In him Capo d'Istria discovered some latent sparks of military talent (acquired, no doubt, by watching the drill of our regiments on the esplanade), and the experience thus learnt sufficed to point him out as the leader of the Greek army in Acarnania. Measures were therefore taken to thwart and disgust Sir Richard Church, who, as generalissimo of the Greeks, had been successfully employing himself with his nominal army in clearing Western Greece from the Turks; and, by refusing him supplies of money and provisions, this object was soon attained; Church resigned, and Augustin was appointed general, and nominated to the vacant post. His conduct in his new situation was exactly what might have been expected from such a puppet; he remained at Lepanto, providing for future contingencies, by availing himself of whatever opportunities occurred for improving his fortune, instead of taking effectual steps to pacify that part of the country, which, though now two years in the possession of the Greeks, is in as unsettled a state at present as it was during the war. The subordinate offices, in like manner, were distributed to persons whose only merits and claims were a blind subserviency to the will of the dictator; the Ionian islands poured forth the refuse of their population upon devoted Greece, and every lucrative office or situation of trust was confided to the islanders: they viewed Greece as vultures would a carcass on which they hoped to gorge themselves, even unto satiety; and so well have they employed their time, that there is little now left but the skeleton. To those persons whose accession he deemed advantageous to his party, the president dispensed the French and Russian subsidies with a liberal hand, on the plea of indemnity for losses sustained during the war; and the celebrated Colocotroni, who possesses great influence amongst the peasantry of the Morea, by this means was firmly bound to the president's party; the ignorant Moreots were led to believe that Ibrahim had been expelled from the country by Capo d'Istria, and that they owed their present security entirely to him; and as he abstained from taxation, they were easily induced to acquiesce in any measure proposed by the president's satellites. Thus the country was ruled with a tyranny not the less severely felt, though masked under the garb of liberty; the bright dreams of the well-wishers to Greece were dispelled by the conduct of him to whom they had looked as a preserver; factions, which they supposed were quelled, like the heads of the hydra, sprung up more formidable than ever; the demoralisation of Greece advanced with rapid strides, and as a final blow to the happiness of the country, a system of espionage was established, unequalled perhaps in the most despotic country in the world. The child was set as a spy upon the actions of the parent, the brother upon the brother; the privacy of families was invaded, letters were opened, and on one occasion the government mail was actually robbed by the orders of the president, who was anxious to examine its contents."

We are sorry that our limits compel us to stop here; but the story is long enough for next Saturday.

The Achillead, in Twelve Books. Vol. I. 8vo. pp. 196. By William John Thomas, M.R.C.S. London, 1830. Sherwood, Gilbert, and Piper.

WE hail great attempts! We all hail great

performances!!—The Achillead surpasses. In all its parts it is unique; in dedication, in preface, and in poetry. We despair of being able to satisfy our readers with any account we can give of it; we are certain that we never can satisfy its author. William John Thomas is, or are, no doubt three Christian names; but are we thereby prepared to discover under their cover a Greek, a Roman, and an English epic bard—are we, we say, prepared by a William, a John, and a Thomas,—or a Bill, Jack, and Tommy,—for a Homer, a Virgil, and a Milton in ONE? *Ex pede Herculem*, might do in the classics, or we might dream from the name of Achillead of that bow of Ulysses which so few could draw; but we never could have imagined that any modern chords would come upon us with the whole force of the tendon Achilles, like the heroics of Mr. Thomas, M.R.C.S. (Muse Royal to the Company of Surgeons!) But oh, the powers of true native Genius! "What rhubarb, senena, or what purgative drug," can stay it in? It defies the clangour of the pestle, it surmounts the clammy depths of the mortar; and it mounts like a volatile salt to its own attic regions. It converts Apothecaries' Hall into a temple of Apollo; and when business is slack, it lispes in numbers. To it we are indebted for a William John Thomas.

Let not our enthusiastic admiration, however, keep the panting public from a knowledge of this splendid work. This is its dedication—

TO THE
BRITISH NATION,
THE
NATIONAL POEM
OF THE
ACHILLEAD
IS DEDICATED BY
THE AUTHOR.

Happy nation to possess such an author; happy age to witness such a poem; and happy we to have it to review.—Yet we must pause on the preface. It expounds the grand idea. The undertaking is "a continuation of the tale of Troy divine"—for the Iliad terminates unsatisfactorily, as all the exalted characters of that sublime poem are "upon the field of battle, ready to renew the contest, like lions of the forest;" (certes, the first time we ever heard of these animals in this fashion upon the field of battle). Our friend Thomas takes up the strain, and he says, with most becoming modesty:

"The Achillead having carried down the narrative of the Trojan war to the death of the hero of the Iliad, the Æneid of Virgil will then supply the sequel of the narrative. The Achillead may be thus compared to a poetical viaduct connecting two everlasting hills together. That this communication may possibly be swept away in the great stream of time, the author of the Achillead will readily admit; but the memory of such a conjunction, in after-ages, may stimulate the fire of genius to dart its refulgent rays from the same foundations."

Glorious—magnificent—charming—interesting—nice,—as Major Overall would exclaim in Hook's very clever novel of Maxwell; but we must not indulge in superlatives, for we are not Overalls. To our history; though it be disgraceful to the king we love, the court we venerate, the ministry (we care not which) we worship, the officials and men in power we adore. Mark the difference between the Roman Augustus and an English monarch, between the fate of Maro and of Thomas.

"Virgil" (he tells us, with perfect historical truth) "flourished under the reign of Augustus—"

tus, at a time when the Roman people were assuming the array of elegant refinement: the arts and sciences were advancing under the protection of the imperial Cæsars, and the emperor Augustus, amidst all his martial exploits, was not regardless of the votaries of literature. Beneath his protection flourished the immortal Maro; but, the patronage of princes, however desirable it may be, is by no means essentially necessary to poetical prosperity: yet the author of the Achillead does not regret the time he has so unwisely spent in endeavouring to secure the patronage of princes of the British nation, and more especially that of an illustrious individual: he did not desire their support for the honour alone which might accrue to him from such imperial patronage: no! He was desirous of affording such princes an opportunity of displaying to the present and to succeeding generations, the paternal affection with which the British people cherish the votaries of literature. He presumed to consider the sovereign authority as the visible representative of the invisible commonwealth; and labouring under this supposition, he offered to lay before the representative of a great nation the national poem of the Achillead. The ungracious reception, however, which his proposals experienced, disinclined the author from prosecuting any further proceedings in that quarter: in delicacy, he forbears to expatiate upon this most painful topic."

How forbearing! But the author has higher consolations within his own mighty breast—and his recompense is at hand.

"For some years he has been amending, correcting, improving, or revising, the young ideas of the Achillead; he has taught them how to shoot, and now they are about to march forward into the world to exercise accordingly. Amidst every discouragement, the author has steadily proceeded forwards, adding verse after verse, and page after page, to the poem; and perseverance has accomplished this most arduous undertaking, notwithstanding the apathetic coolness of the patricians, and the frowns of princes."

"He is not aware that any other individual has attempted to bend this bow of Ulysses, and he has no doubt that the literati will appreciate those exertions, which the frowns of the most exalted individuals have been unable to suppress. In calling this a national poem, the author of the Achillead may be censured by hypercritical persons. Is not the Iliad the national poem of Greece? was not the Æneid that of the Roman empire? The emperor Augustus knew this well; he saw that, in patronising Virgil, he illuminated his imperial diadem with an immortal radiance which rendered it conspicuous amid the crowns of the Cæsars. That he has done well, must be acknowledged by all parties: the great empire which gave laws to the world has been swept away in the stream of time; but the Æneid has survived the destruction of the thrones of those august commanders. The author of the Achillead has pursued an undeviating course in the composition of this performance, through evil report and through good report, which, by his unassisted efforts, he introduces into the world; and having proceeded thus far, he solemnly confides the poem to the care of a great and learned nation."

He could not take a wiser or a better step; and we have much pride in being his couriers, or rather in Gazetting his triumphs. Nor are they unfit for an English Gazette; for though Achilles is the nominal hero, events now pass-

ing in our own political world are brought in, in the most natural and consistent manner, so as not to interrupt the unity of the poem. Such matters, we are gravely informed, will, "before thirty centuries have elapsed, have become historical fragments of the general narrative;" we suppose, of course, that in three thousand years it will be all the same to our higgledy-piggledy world.

Four books of this immortal design are contained in the thin volume before us—Heaven forbid that any accident should prevent the author from completing his publication in twelve books! Unlike the silylline tomes, the more he adds, the greater will be our enjoyment; and we pray that no envious or furtive hand may ever deprive us of a syllable, a tone, of the Thomasian lyre.

Book *One* opens with the novelty of an invocation to the "Celestial Nine;" who, among other curious secrets, are invited to tell

"What feats amid the world's anarchical storm,
The tyrant kings, despotic rogues! perform.
How, all allied, their fiery trains supply,
To explode the spark of heaven-born liberty
By every plot!"

which we take to be an entirely new illustration of the action of gunpowder, unknown to mortal chemists, and only known to the immortal Nine. The author then bewails the ignorance of the vulgar, whose

"darkened soul
[is doomed] Through error's maze ingloriously to stroll;"

and declares his intention,

"by satires turn'd aright,
To place that subject in its proper light;"—

a most commendable resolve, and one which is no sooner said than done. In a most poetical allegory of sunset, we think we discover (p. 9) an allusion typical of the fall of the Wellington administration: Mr. Thomas says—

"Now tipt with purple (Scarlet long had fled),
And Crimson* hasted from his western bed."†

After this fling, he gets back to the Greeks, and splendidly describes the ghost of Patroclus appearing to Achilles: it is the best ghost description we ever read—Scott's *Demonology* has nothing like it.

"Indefinite, the *serpentine* lines were spread,
Yet curled upwards to *defuse* a head."

The purple east in massy clouds was seen,
In sadness pondering o'er the stormy scene."

The stars, the very clouds, were visible through this incorporeal ghost; and its actions were as frightful as its appearance was uncommon.

"The shade approach'd: as if to give command,
Three times it shook on high its cloudy haud;
Three times convuls'd it wav'd, as when the breeze
Rocks the tall glaciers of the frozen seas:
Thrice it wept, three times to speak essay'd—
When voices issued from the internal shade"!!!

No wonder that poor Achilles is bothered, and in his bewilderment exclaims—

"What art thou? the sovereign deeply sighs;
Confused confusion to these aching eyes:
What are these motions which thy shape deform?
And what—ah, what! that melancholy form?"

The ghost satisfies him upon these particulars, in a style well befitting "confused confusion;" and certainly completes the amazement of his late friend and present auditor by the transformations he exhibits in the course of his speech. They are indeed sublime.

"Behold! he wav'd his hand: in grand reflection soon
He unrob'd the cloudy regions of the moon;
He unveil'd in haste the starry climes, and all
The shining mountains of the lunar ball!
The effulgent stars that moment through him sent
The radiant glories of the firmament!
Develop'd then, this form appear'd to view,
Compos'd of ether and ethereal blue;

* Evidently Brougham † J. E. Westmoreland.

By yellow rays the midnight moon was seen
To fill the shadow with a vernal green:
The distant floods a plaintive murmuring gave,
And all the flow'rets of the forests wave!"

Let Sir Walter hide his diminished head before this, in any edition of spectral sights he may attempt to improve: an ethereal blue ghost filled by the yellow rays of the moon with vernal green, must beat him from his colours with disgrace. There follows, p. 13, some bombast, which, if it conveyed any meaning, would be profane; but Achilles and his late companion go on with their chat. The former says—

"Ah! art thou then my friend's resistless shade,
In gloomy night and nightly gloom array'd?
How alter'd art thou! scarcely can I bend
These eyes upon the features of my friend;
Alas! why came you here? I should as soon
Have thought thee native of yon mournful moon!"

In the end, the hero refuses to depart at the ghost's suggestion; and

"The phantom frown'd—strong blew the gusty wind—
The hail careering, thunder'd from behind;
Full in their front the kindling lightnings flew,
And pierced the *shadows of the spirit* through."

The shade rejoind'—Ah! why, Achilles, why,
Permit that wrath to exist eternally?
Shall passion still be under no control—
Not subject to the *actions of the soul*?
Revoke thy words—what madness is *there here*?"

But even this unparalleled adjuration is neither here nor there; the sorrowful shade "ebbed in threefold sighs," and Thetis is appropriately introduced "weeping." Other sea gods, such as Nereus, Neptune, whales, hippopotami, Aquario, "cunning crocodiles," and the rest, flounder through several ensuing pages and the deep; and Aquario is despatched on a mission to Iris, whom he finds delightfully asleep in a temple somewhere about the Atlantic. His followers interrupt her repose, in our opinion very rudely; for

"The watery band delightful carols play'd,
And gave the nymph an evening serenade.
This roused her quickly from oblivion's care,
Whose powers the passions of the soul repair:
The nymph, astonish'd, rais'd her head on high,
And broke upon them with a gentle sigh.
Alas! said she, I little thought to see,
At such an hour, such gallant company!
How came you here—by what enchanted power
At such a season as the midnight hour?
'Tis most abrupt to break upon my rest,
When peaceful Bavius all my woes deprest:
When sleep, so sweet, his silent shadows shed,
And softest slumbers soothed my aching head:
To alarm me thus: how greatly do I fear!
Oh, fair Apollo! when wilt thou appear?
They frighten me! a virgin such as I
To awake at night! 'Tis quite a mystery."

By this time, however, the lovely creature has talked herself wide awake: the account proceeds with unrivalled powers of nature.

"The fair one wept; and as her tears *did flow*,
Thus the bright herald, gay Aquario!—
Alas! alas! why doth the virgin weep?
Lull thy wild terrors and thy tears asleep—
To open with candour it was not meet—
To awake the goddess at this hour of night;
But Thetis, regent of the hoary sea,
And Nereus also, have despatched me."

Notwithstanding which, the despatched divinity delivers his message, and summons Iris to the palace of Thetis.

"Aquario thus: to whom the nymph rejoins,
That virgin who Apollo's light purloins—
The showery maid (as maids are wont) first sighs,
Then the bright beauty of the bow replies:—
Ah! how can I comply with their demand,
And do what Nereus and the queen command?
For well you know, Aquario, that I pay
The exactest deference to the star of day:
When he did down the steep ecliptic sail,
I lost my plumage and my showery tail!"

The bargain is struck—she mounts his cab, and away they drive. They are interrupted by Boreas,—just as an Exquisite with his fair might be assailed by a hackney-coachman without a fare, whose stand they were passing in an elegant cantier,

"What people here presume their cars to lower
Above the ocean at the midnight hour?
Before the Pleiads have as usual driven
Their seven-starr'd chariot through the vaults of
heaven:
Before Orion draws his flaming sword,
Before Arctu—but on a monarch's word,
I think ye really are extremely rude,
To shake the seas with such a multitude;
To cross the main without one spark of light,
Like thieves carcering in the midst of night:—
Bring forth my thunders, bring my waving staves,
I will o'erthrow these rebels in the foam."

Iris is confoundedly frightened, and screams out—

"We shall be o'erthrown:
Oh! that I ne'er had left the frigid zone!
Where, wrapt in night, secure from harm I lay,
Awaiting only the approach of day:
What shall we do, if that rebellious swain
O'erturn your convoy in the boiling main?
Cruel Aquario! could you not—but, oh!
The chariot's sinking in the gulf below!
Ease, Iris, (thus Aquario said) the alarm—
I will protect you from all future harm.
I will myself converse with him apart,
And soothe the fury of his callous heart.
He stroked her cheek."

He then confides to Boreas, that his companion is "Iris travelling *incognito*;" and the matter is hushed, without the interference either of constables or the New Police. The travellers then proceed on their journey, by way of the Emerald Isle, Snowdon, Mount Etna, the cratered peaks of Stromboli, the Dardanelles, and other contiguous places: but there is an episode, comparing the whole earth itself to a gigantic animal, which we prefer to the itinerary.

"The earth's materials, we are all apprised,
Are form'd of matter, and are organised;
Her organs, on a somewhat larger scale,
Are like an animal's—suppose a whale;
Like the aorta, see the oceans boil,
From side to side the tumbling torrents toil;
Dispensing food upon the rapid seas,
To feed her forests, mountains, flowers, and trees."

Take it in toto: see the mighty soul,
Which, waving round, re-animates the whole."

What passes between Thetis and Iris would be too long for us. Suffice it to say, that the interview is not unworthy of our preceding extracts and panegyrics. But where every thing is so superb, so matchless, even our most earnest endeavours must fail to afford an adequate idea of an author like Mr. Thomas. We must therefore leave "the watery queen" and "the showery goddess;"* we must say nothing of Apollo, with his new epithets of "sun-lit and carminated curls;" and prefer the picture of a mortal lover to all the finer celestial portraits. Who would endure the pangs of love, or be a lover?

"In thought he views the nymph, whose placid gaze
Sets his whole system in a fervent blaze:
Swiftly the scarlet-tinted torrents find
Their devious ways, and irritate the mind;
No more in silence on the couch he lies,
But vents his anguish in redundant sighs:
The vestments then are from his body torn—
He rolls abandon'd, desolate, forlorn;
O'er his dim eyes careering fires are spread—
He pants, he tumbles, on his tortur'd bed."

The bare description is enough to make us take to our bed, hoping to find it less intolerable than a lover's couch.

But will it be believed, we have only passed through the first book of this immortal epic; and our dazzled mind, wandering in its effulgence, refuses to grasp at further glories? It may be, that we may regain composure to renew the task, not of criticism, but of applause; it may be, that our scattered senses, now under the influence of the Circe of transcendent poesy, may rally and bear us to the end: if so, readers, you shall hear again of the amazing production by William John Thomas, M.R.C.S.

* "At length, aroud's, the watery queen descried
The showery goddess and her noble guide."

The Persian Adventurer; being the Sequel to the "Kuzzilbash." By J. B. Frazer, Esq., Author of a "Tour to the Himāla Mountains." 3 vols. 12mo. London, 1830. Colburn and Bentley.

The pleasures of memory give birth to those of hope; and remembering how much we were pleased with the first part of the Kuzzilbash's adventures, we began the second portion with an expectation of amusement, which has not been disappointed. The story of the first volume is very interesting; in the next, the brilliant pageant of Nadir's conquest of India is brought upon the stage: the events of the last are thrown among tribes little known, and it embraces the eventful period of the Shah's death. These pages are in reality a dramatic and picturesque chronicle; all of whose leading facts are true, and whose inventions illustrate the manners and living peculiarities of the scenes where they are laid. They are a mass of research and information, invested with a most popular form. We have not space for "the barbaric pomp," showering pearl and gold over the captured Dehlee; and shall only select one anecdote from the splendid feast given by the conquered emperor to Nadir.

"When the proper time came for handing coffee to the royal guests, it was brought by Ameer Khan, umdut-ul-moolk, to whom this duty had been appointed, and who was about to present it in the usual form, when a sudden scruple seized him,—to which of the two monarchs should he first present the cup? Custom and etiquette required that his own master, the emperor of Hindostan, should first receive it; but in that case the khan would run the risk of affronting and exasperating a conqueror whom he dreaded, and whose resentment might be fatal both to his master and himself. On the other hand, to neglect his duty so far as to present it to any other than his imperial master and liege lord, might be jealously interpreted into a lack of zeal and regard, which might, at an after-period, be turned to his disadvantage. In this dilemma, a thought struck the khan. Pouring forth the coffee, and advancing as if he would have presented the cup to Nadir, he stopped short, like one that checks himself in a mistake, then tendering it upon his knee to the padshah—'Let an emperor,' said he, 'perform the honours of his house to a king of kings. Your servant is too mean for so exalted an office.' The elegance of his address, and the neatness of his expedient, delighted both monarchs. 'Barekillah! friend khan!' exclaimed Nadir, 'thou art a choice genius; thou hast truly hit the mark in the centre, and done thy duty well.' And his master, the emperor, not less pleased, united with the shah in his encomiums on a conduct which gratified both Persians and Indians."

The ensuing sketch of frank hospitality is a good contrast to this scene of courtly etiquettes. The hero, by one of those turns of fortune so common in the East, is flying for his life, and sees before him an Eeliaut encampment.

"It proved to be an extensive one. A multitude of cattle and sheep, horses and camels, mules and asses, were gathered round in temporary enclosures of reeds; or were still straying about the tents, with dogs barking at them, and shepherds running about in all directions to secure them for the night. The men were lounging before the tents, and the women were engaged in their household duties, spinning, weaving, making butter and cheese, feeding the young animals, or carrying water for the use of their families. I saw at once, from the

number of tents, and the size of one or two in the centre, that some chief of importance must be in the aoul; and at first I had made up my mind to seek the supply of my wants from some inferior member of the tribe, and thus to avoid inquiries or delays, which might have proved embarrassing from a higher quarter. But just as I had made up my mind to this arrangement, an object which caught my eye changed the intention, and induced me to throw myself at once, and in the most impressive manner, upon the hospitality of the chief himself. The object which wrought this change of purpose was a troop of some dozen or so of armed horsemen, who were riding in great haste over the plain, in a direction not very different from that by which I had come; and from their appearance as they approached, I could have little doubt that they were, in fact, a party sent in pursuit of me. To retreat was impossible, for I was close in view of all the tents; and the precarious generosity of an Eeliaut chief was preferable to the tender mercies of such as I believed that party to consist of. Passing, therefore, hastily in front of the flanking tents, although their inmates called aloud upon me to stop, to turn in and tell them the news, to accept of their bread and roof, I halted not until I reached the dwelling of the chief, before whose tents were picketed several handsome horses under the hands of their keepers. 'Refuge!—refuge and protection!—the sacred asylum of the stable!' exclaimed I, seizing one of these horses by the headstall, while the groom, respecting the well-known privilege, fell back and gave me way. The khan himself, for such he proved to be, was walking about superintending the management of his stud; but, upon hearing my words, and seeing my action, he turned and inquired who I might be. 'I am a man,' said I, 'and an unfortunate one, although guilty of no crime; as such, khan, I claim from you present protection, and concealment from my pursuers. As you love and practise hospitality, and value a high and honourable name among the tribes, pledge it to me, and let there be no delay.' 'It is granted, friend,' said the khan, coming forward and taking me with his own hand from the place of my asylum. 'I swear it to you by my own head and the tomb of my father!—and now what is to be done?' 'Behold!' said I, pointing to the party which now rose above the brow of a swelling ground, only a short space distant—'behold my pursuers! conceal me instantly from their eyes—the rest you shall quickly know; and if you deem me criminal, you have but to yield me to them at last.' 'Yield you! after my oath! No; by the holy Kaaba! I have said it, and you are safe, if the blood of my son were on your hands!' And the words of the khan were echoed by his kindred who had gathered about us; and who now, closing around, shut me out from view of all approaching eyes. The khan then made me a signal to follow, which I did, into a smaller tent connected with the public one in front. 'This is my khelwut; here you are safe—but stay, you are thirsty and fatigued. Ho, there! my sherbet and bread—let us eat;' and in a few moments, buttermilk and water, with some morsels of bread and cheese, were brought us, and the khan gave me to eat; and drinking a few mouthfuls himself, handed me the bowl. • • •

"Refreshments of every kind were now provided for me; a bath was administered, after the rude fashion of the tribes, by pouring many skinsful of tepid water over me, while a rough sort of dullauk kneaded and scrubbed me most lustily. A change of raiment was provided;

and after all was over, I sat down with the chief and his family to a substantial meal, the chief dish of which was a lamb stuffed with plumbs and raisins, stewed in a whole mountain of rice."

The next morning, Ismael is forced to proceed.

"So, after a comfortable meal to keep up our strength, I found a party of six stout fellows, headed by one of the khan's sons, all ready mounted before the door of the tent, and a horse of his own for myself, in the trappings of which the meerachor had consulted his master's credit more than the appearance of its intended rider. The khan himself seemed sensible of this incongruity, for he could not help smiling as he looked, first at the turquoise and silver-mounted irak (furniture), and then on my homely and tattered figure; and taking his handsome cloak, which I had worn the evening before, he threw it over my shoulders, remarking that there should be some degree of uniformity between the saddle and its burden; nor would he hear of any refusal. Thus accoutred, then, I pressed and kissed the old man's hands with an assurance that, if I lived and prospered, he should hear of me. But the chief, seizing me in his arms, saluted me with a frank and hearty bughulgeeree,* saying, such was the fashion of the tribes with their friends; that he was sure I was an honest fellow, a gallant man, who was well worth all the little kindness I had put it in his power to shew me. 'But I know,' added he, 'you must be impatient; so, Bero, be off; and may God protect thee!' 'May your house always flourish!—may your favour never diminish!' said I; and mounting, I rode away, accompanied by my gallant escort, who, with their long spears, caroled and curvetted around."

We cannot imagine a more agreeable rencontre in any precarious situation. We now leave these animated chronicles of Persian history to the favour they justly merit; and shall only say that we think Shah Nadir very fortunate in having Mr. Frazer for his Philip de Comines.

Pinkerton's Correspondence.

[Third notice: Conclusion.]

At the close of our remarks on these volumes in last week's *Gazette*, we alluded to a letter from Dr. Johnstone, on topics connected with Scottish and northern literature—the following is the portion which we consider to be of interest:—

"With respect to your queries, I have met with no complete chronicle of Scotland in this country: nothing but *disjecta membra*. To suppose that the Caledonian records were preserved at Iona, is a common error: for a long period it had no dependence upon the crown of Albany; and, besides, it underwent so many catastrophes, (being twice burnt, and the monks and patriarch massacred three other different times,) that it is impossible to conceive how any thing of value should be suffered to remain there. It is much more likely that Kenneth II., after obtaining the Pictish crown, intrusted his archives to Tuathal M'Fergus, primate of the united kingdoms; but who resided in a part of the nation very remote from Icolmkill, and much less explored. Neither the Danes nor Norwegians have preserved any written monuments of their history, previous to the tenth century: any thing we know of prior times is from the Icelanders. I am persuaded, if those gentlemen-rovers could only lay their hands upon a few fat cows, they

* Embracing and kissing each cheek three times.

gave themselves little trouble about other matters. Pictavia was incorporated with Albany before Iceland was discovered; consequently, it is not surprising if the Picts are never mentioned by the Scandinavian writers. I find nothing concerning Galloway in them previous to the time of Earl Allan, who made a distinguished figure in those ages."

In these pages we have too abundant proofs of the irreligious principles of Pinkerton, which provoked the most severe, yet friendly, remonstrances from Lord Hailes,* the Bishop of Dromore,† and others of his best and most powerful well-wishers; who tried to separate the able writer from the offensive man: but he was above advice, and the outbursts of his temper, and his bitter resentments, are painful subjects for reflection. We will not be accessory to spreading them farther than these pages; but rather try to furnish their apology in the unhappy person's own words.

Hamstead, July 8th, 1800.

"A serious illness of some days has prevented my answering sooner your favour of the 1st of July; for which I thank you, as an obliging testimony of your candour and liberality. I scarcely remember what I said of Ramsay, but have not forgotten my vexation at seeing him so extravagantly praised, to the total exclusion and eclipse of all our ancient classics. Nor could I easily pardon the introduction of his Phœbus, instead of the genuine ancient words of our old times. Let him only occupy his proper place in our poetical firmament, and I am satisfied; but he must not usurp the whole zodiac, and represent all the twelve signs. As, from a constitutional irritability of nerve, I have in my earlier productions shewn much controversial asperity, it would be ridiculous in me to complain when I am paid in my own coin. Were I revising my books, I should dash out all such passages, which I never see without disgust. I can only say they are the products of infirmity, and not of malice."

From Mr. James Sibbald, bookseller of Edinburgh, we find some entertaining information respecting a small quarto, printed by Forbes of Aberdeen; which, says Mr. S., "contains fifty-five cantos, songs, and fancies, and thirteen Italian and new English ayres." The fifty-five seem almost entirely English, at least I never saw any of them in a Scottish song-book of this century, save three or four. 'The gowans are gay,' 'You minor beauties of the night,' 'She is the fairest of her days,' 'Over the mountains and under the caves,' and 'Now is the month of Maying;' and none of these can properly be said to belong to the Scottish muse. The last is the same air as the chorus—'Come now for mirth and playing.' 'Remember, O! thou man,' is unquestionably the root of 'God save the king.' The finest air in the collection is,

When father Adam first did flee,
From presence of the Lord his face,

* "I have only (says his lordship, in concluding one of his letters) to beg, that, in your future publications, my name may not be mentioned as a correspondent of yours; at least, while you can perceive no difference between Jehovah and the demons of barbarous nations; or between the religion of the Jews, and that of the Hottentots."

† "I shall never (the bishop writes) scruple postage for any packet you may wish to transmit through me to others. &c., though I cannot but lament our difference in opinion in what I think some very essential points; and, as many others as well as myself think them of great importance to the welfare of society, the least to be wished is, that this departure from the received opinions should not officiously or unnecessarily be extracted on the world. Excuse this general reflection, which till I have seen your book, I cannot judge whether it be well applied or not."

The cloaths was short, scarce coverit his knee,
The great God cry'd, and held him in chace.
'Stay, Adam, stay, Adam,' saith the Lord,
Where art thou, Adam? turn thee and stay,' &c.
(Consists of five stanzas. It is a rich melody: no bass.)

I should be glad to hear that this is not in the old English music-books—it would do honour to Scotland. You can easily learn. Good airs are also—'Like as the lark within the Marleone's foot,' 'Joy to the person of my love,' 'When May is in her prime,' 'White as lilies was her face,' 'There is a thing that much is used.' The Italian are all by Castoldi; the new English by Henry Lewis, Simon Ives, William Webb, John Savile, and Dr. Wilson. Not a word of *Scottish* music in his long, fulsome dedication to the Magistrates of *Bon Accord*, as he styles Aberdeen, from its motto."

Between Sir John Sinclair and Mr. Pinkerton there is some curious correspondence about the Highland garb: we copy a few passages:—

"Sir John thinks that the word *haut-de-chausses* means trousers, and not the philibeg; indeed, it is well known (he says, but we are not converts to the opinion) that the philibeg was invented by an Englishman in Lochaber, about sixty years ago, who naturally thought his workmen could be more active in that light petticoat than in the belted plaid: and that it was more decent to wear it than to have no clothing at all, which was the case with some of those employed by him in cutting down the woods in Lochaber."

Mr. P. says: (1795) "When I first saw in the papers that you had appeared at court in a new Highland dress, substituting trousers, or pantaloons, for the philibeg, I was highly pleased with the improvement. The Highland dress is, in fact, quite modern; and any improvement may be made without violating antiquity. Nay, the trousers are far more ancient than the philibeg. The philibeg cannot be traced among any of the Celtic nations, Ireland, Wales, or Bretagne, either as an article of dress, or as a word in their languages. Giraldus Cambrensis, A.D. 1180, informs us that the Irish wore *braccæ*, or *brecchi* (that is, the long, ancient breeches, now called pantaloons, or trousers). On old monuments, the Irish kings are dressed in a close tunic, or vest, long trousers down to the ankle, and a long loose robe, fastened at the waist by a large brooch. Perhaps the brooch might be substituted in your regiment for the breast-plate with much *costume*. In the book of dress, printed at Paris, 1562 (from which I have published fac-similes), the Highland chief is in the Irish dress; and I can discover no philibeg. No part of the dress is tartan: nor is there a plaid, but a mantle. The woman is dressed in sheep-skins; and, as that sex is always more ornamented than the other, there is reason to believe that the common Highland dress was then composed of sheep or deer skins."

Lesley and Buchanan, 1570-1580, are therefore the first who mention the modern Highland dress. The former represents tartan as then confined to the use of people of rank. The latter says the plaids of his time were *brown*. Advocates for the antiquity of the philibeg say it is borrowed from the Roman military dress; but it is quite different; for the Roman skirts were mostly those of the tunic, which was worn under their armour; whereas the philibeg is a detached article of dress."

There is also much correspondence touching

* Mr. James Logan has just produced a work of great research, called the *Scottish Gaird, or Celtic Manners of the Highlanders*, which treat of the questions in a very able manner. In the course of our review of it we shall have occasion to go more deeply into the subject, and shew that these are very unsupported doctrines.—Ed. L. G.

the authenticity of Ossian; but as Mr. Malcolm Laing's and Mr. Pinkerton's views on that question have been embodied more at large in their works, we are not called upon to trace their progress. Indeed we may say of nearly all the second volume, that the numerous letters on the subject of portraits for Pinkerton's work on Scottish Portraits, and on other inquiries, both literary and antiquarian, (not to mention disputes with publishers,) are too indigested to convey much real information, and too desultory to admit of compression into a general design. We cannot attempt the latter, and shall therefore conclude with two extracts; the first a notice of Mr. Campbell's *début* in the poetical world; and the other a very characteristic letter from old Coult's the banker.

Of Campbell, Mr. J. C. Walker writes, May 1800: "Have you seen the *Pleasures of Hope*? When the age of the author is considered, it must be allowed to be a most extraordinary production."

And thus writes the wary man of money:—
 "I have received the favour of your letter, asking me to withdraw the claim for interest on the sum I lent on the security of a house; but the footing upon which you have put the request is one I have uniformly at all times thought to be such as I ought to reject, and have rejected accordingly. The bankers in Scotland, and the country banks in England, are on a different plan from those of London. They circulate their own notes, and make payments in them: we give out no notes of our own, and if we were to give interest at even one per cent per annum, we should be losers by our business. We do not consider ourselves as being obliged to any one person who places money in our hands, however considerable: it is to the aggregate and general mass of society that we owe our situation, and to the credit our prudence and attention has obtained for us: and people deposit their money in our hands for their own advantage and conveniency, not from favour to us; nor do we desire to have it on any other terms. Probably you may not understand the explanation I have spent time in making, which I can very ill spare, and it may therefore answer no purpose; but it satisfies myself; and I wish to shew equal attention to all my employers, whether they have large or small sums in my hands, which indeed hardly ever occupies my attention. My attention is fully engrossed in doing business with honour and regularity, leaving the rest to the common chance and course of things. It surprises me that, though it every day appears that there is very little truth published in the newspapers, yet people will still believe what they read, especially abuse, or what they think is against the character or prudence of the person treated of. I saw some paragraphs, and heard of more, of what I had done for Mr. Kean, in all which there was not a word of truth; though I see no reason why I might not, without offence to any one, have given Mr. Kean any thing I pleased. In doing any little matter in my power for any individual, I must add, I never had any view to celebrity with the present age or with posterity. If I should know of any gentleman wanting a travelling companion abroad, I shall mention you to him; but it seldom happens that I am applied to in such matters."

Kotzebue's Voyage round the World.

[Second Notice.]

WE have only to preface our continuation of this review, by recalling the memory of the

reader to what we stated respecting Manilla in our last.

"The whole world," says Capt. Kotzebue, "does not offer a more advantageous station for commerce than the town of Manilla, situated as it is in the neighbourhood of the richest countries of Asia, and almost midway between Europe and America. Spanish jealousy had formerly closed her port; but since the revolt of the American colonies, it has been opened to all nations, and the Philippines are consequently rising rapidly to importance. As yet, their export trade has been chiefly confined to sugar and indigo for Europe, and the costly Indian bird's-nest and *trepangs* for China. The latter is a kind of sea-snail without a shell, which, not only here, but on the Ladrões, Carolinas, and Pelew Islands, even as far as New Holland, is as eagerly sought after as the sea-otter on the north-west coast of America. The luxurious Chinese consider them a powerful restorative of strength, and purchase them as such at an exorbitant price. But what an inexhaustible store of commercial articles might not these islands export! Coffee of the best quality, cocoa, and two sorts of cotton, the one remarkably fine, the produce of a shrub, the other of a tree, all grow wild here, and with very little cultivation might be made to yield a prodigious increase of wealth. These productions of nature are, however, so much neglected, that at present no regular trade is carried on in them. A great abundance of the finest sago trees, and whole woods of cinnamon, grow wild and unnoticed in Luçon. Nutmegs, cloves, and all the produce of the Moluccas, are also indigenous on these islands, and industry only (a commodity which, unfortunately, does not flourish here) is wanting to make them a copious source of revenue. Pearls, amber, and cochineal, abound in the Philippines; and the bosom of the earth contains gold, silver, and other metals. For centuries past, have the Spaniards suffered all these treasures to lie neglected, and are even now sending out gold to maintain their establishments. The regular troops here, as well as the militia, are natives. The officers are Spaniards, though many of them are born here, and all, at least with few exceptions, are extremely ignorant. It is said that the soldiers are brave, especially when blessed and encouraged by the priests. As far, however, as I have had an opportunity of observing the military force, I cannot think it would ever make a stand against a European army. Not only are the troops badly armed, but even the officers, who are in fact distinguished from the privates only by their uniforms, have no idea of discipline; any sort of precision in their manœuvres is out of the question; and to find a sentinel comfortably asleep with his musket on his shoulder, is by no means an uncommon occurrence. I was told that Luçon contained eight thousand regular troops, and that by summoning the militia, twenty thousand could be assembled. The field of honour, where the heroes of Luçon distinguish themselves, is on the southern Philippine Islands, which are not yet subdued; they are inhabited by Mahomedan Indians, who are constantly at war with the Spaniards, and who, ranging as pirates over all the coasts inhabited by Christians, spread terror and desolation wherever they appear. From time to time some well-manned gun-boats are sent in pursuit of these robbers, which expend plenty of ammunition with very little effect. It is said that six thousand Chinese inhabit the suburbs of Manilla, to which they are restricted. The greater part of them are clever and indus-

trious mechanics; the rest are merchants, and some of them very rich: they are the Jews of Luçon, but even more given to cheating and all kinds of meanness than are the Israelites, and with fewer, or rather with no exceptions. They enjoy no privileges above the lowest of the people, but are despised, oppressed, and often unjustly treated. Their covetousness induces them to submit to all this; and as they are entirely divested of any feeling of honour, a small profit will console them for a great insult. The yearly tax paid by every Chinese for liberty to breathe the air in Manilla, is six piastres; and if he wishes to carry on any sort of trade, five more; while the native Indian pays no more than five reals. The Philippines also did not follow the example of the American colonies; for some disturbances among the Indians here were not directed against the government, and an insurrection soon after attempted proved unsuccessful. The former were occasioned by a few innocent botanists wandering through the island in search of plants; and an epidemic disease breaking out among the Indians about the same time, of which many died, a report suddenly spread among them that the foreign collectors of plants had poisoned the springs in order to exterminate them. Enraged at this idea, they assembled in great numbers, murdered several strangers, and even plundered and destroyed the houses of some of the old settlers in the town of Manilla. It has been supposed that the Spaniards themselves really excited these riots, that they might fish in the troubled waters. The late governor, Fulgeros, is accused of not having adopted measures sufficiently active for repressing the insurrection. This judicious and amiable man, who was perhaps too mild a governor for so rude a people, was murdered in his bed a year after by a native, of Spanish blood, an officer in one of the regiments here, who followed up this crime by heading a mutiny of the troops. The insurgents assembled in the market-place, but were soon dispersed by a regiment which remained faithful, and in a few hours peace was re-established, and has not since been disturbed. The present governor, Ricofort, was sent out to succeed the unfortunate Fulgeros. The king, affected by the loyalty displayed by the town of Manilla, at a time when the other colonies had thrown off their allegiance, presented it with a portrait of himself, in token of his especial favour. The picture was brought out by the new governor, and received with a degree of veneration which satisfactorily evinced the high value set by the faithful colony on the royal present. It was first deposited in a house in the suburb belonging to the crown, and then made its entry into the town in grand procession, and was carried to the station of honour appointed for it in the castle. This important ceremony took place during our residence here, on the 6th of December; and three days previously the king in effigy had held a court in the suburb. The house was splendidly illuminated: in front of it stood a picket of well-dressed soldiers; sentinels were placed at all the doors; the apartments were filled with attendants, pages, and officers of every rank, in gala uniforms; and the etiquette of the Spanish court was as much as possible adhered to throughout the proceedings. Persons whose rank entitled them to the honour of a presentation to the king, were conducted into the audience-chamber, which was splendidly adorned with hangings of Chinese silk: here the picture, concealed by a silk curtain, was placed on a platform raised a few steps from the floor, under a canopy of silk overhanging two gilded

pillars. The colonel on duty, acting as lord chamberlain, conducted the person to be presented before the picture, and raised the curtain. The king then appeared in a mantle lined with ermine, and with a crown upon his head; the honoured individual made a low bow; the king looked in gracious silence upon him; the curtain was again lowered, and the audience closed. On the 6th of December, the immense multitudes that had assembled from the different provinces, to celebrate the solemn entry of the portrait into the capital of the islands, were in motion at daybreak. The lower classes were seen in all kinds of singular costumes, some of them most laughable caricatures, and some even wearing masks. Rockets and Chinese fireworks saluted the rising sun, producing of course, by daylight, no other effects than noise, smoke, and confusion; while elegant equipages rolled along the streets, scarcely able to make their way through the crowd. At nine o'clock, a royal salute thundered from the cannon of the fortress, and at twelve the procession began to move, displaying a rather ludicrous mixture of Spanish and Asiatic taste. I saw it from the windows of a house on its route, which commanded a very extensive view of the line of march. The cortège was led by the Chinese. First came a body of twenty-four musicians, some striking with sticks upon large round plates of copper, producing an effect not unlike the jingling of bells, and others performing most execrably upon instruments resembling clarionets. The sound of the copper plates was too confused to allow us to distinguish either time or tune—points of no great consequence, perhaps; the choir, at least, did not trouble themselves much about them. The musicians were followed by a troop of Chinese bearing silken banners, upon which were represented their idols, and dragons of all sorts and sizes, surrounded by hieroglyphical devices. Next followed, in a kind of litter richly ornamented, a young Chinese girl with a pair of scales in her hand, and intended, as I was told, to represent Justice; a virtue for which her country-people, in these parts, have not much cause to applaud themselves. Another set of musicians surrounded the goddess, making din enough with their copper plates to drown every complaint that might endeavour to reach her ear. Then came the rest of the Chinese, in different bands, with the symbols of their respective trades represented upon banners. Four bacchantes, somewhat advanced in age, and in an attire more loose than was consistent with modesty, followed next: from their long, black, dishevelled hair, they might have been taken for furies; and it was only their crowns of vine-leaves, and the goblets in their hands, that enabled us to guess what they were intended to represent. Bacchus, very much resembling a harlequin, followed with his tambourine, and after him a body of very immodest dancers: these, as the procession moved but slowly, halting frequently, had abundant opportunities of displaying their shameless talent, for the benefit of the shouting rabble. Why the procession should be disgraced by such an exhibition, it was not easy to conceive; but there were many other inconceivable matters connected with it. A troop of Indians followed, in motley and grotesque attire, intended to represent savages: they were armed with spears and shields, and kept up a continual skirmish as they marched. Next in procession was a battalion of infantry, composed of boys armed with wooden muskets and pasteboard cartridge-boxes, and followed by a squadron of hussars, also boys, with drawn sabres of wood, not

riding, but carrying pasteboard horses: each of these had a hole cut in its saddle, through which the hussar thrust his feet, relieving the charger from any actual necessity of making use of his own; though, to shew its high blood and mettlesome quality, each emulated his fellow in prancing, rearing, and kicking with front and hind legs, to the no small danger of discomfiting the parade order of the squadron. To this redoubtable army succeeded a party of giants two fathoms high, dressed in the very extremity of fashion, the upper part of their bodies being represented in pasteboard, accompanied by ladies elegantly attired, and of nearly equal dimensions, and by some very small dwarfs: the business of this whole group was to entertain the populace with pantomimic gestures and comic dances. Next came all sorts of animals, lions, bears, oxen, &c. of a size sufficiently gigantic to conceal a man in each leg. Then, with grave and dignified deportment, marched Don Quixote and his faithful Sancho. To the question, what the honourable knight of the rueful countenance was doing there, somebody replied that he represented the inhabitants of Manilla, who were just then mistaking a windmill for a giant. The hero of Cervantes was followed by a body of military, seemingly marching under his command; and after them came two hundred young girls from the different provinces of the Philippine Islands, richly and tastefully attired in their various local costumes. Fifty of these young graces drew the triumphal car, richly gilt, and hung with scarlet velvet, which contained the picture of Ferdinand. Not content with the mantle the painter had given him, they had hung round him a real mantle of purple velvet embroidered with gold. By his side, and seated on a globe, was a tall female form dressed in white, with an open book in one hand, and in the other a wand, pointing towards the portrait. This figure was to represent the Muse of History;—may she one day cast a glance of friendly retrospection on the prototype of her pictured companion! A body of cavalry followed the car, and the carriages of the most distinguished inhabitants of the place closed the procession. Several Chinese triumphal arches crossed the streets through which the retinue passed; they were temporary erections of wood, occupying the whole breadth of the street, and were decorated in the gayest and most showy manner by the Chinese, who, on this occasion, seemed to have spared no expense in order to flatter the vanity of the Spaniards. When the royal edify entered the town, it was received by the governor and the whole clergy of Manilla, and the young girls were superseded by the towns-people, who had now the honour to draw the car, amidst the incessant cry of 'Viva el Rey Fernando!' The cannon thundered from the ramparts; the military bands played airs of triumph; and the troops, which were ranged in two files from the gate of the town to the church, presented arms, and joined their 'Vivas' to those of the populace. The procession halted at the church; and the picture being carried in, the bishop performed the service; after which, the king was replaced on his car, and conducted to the residence of the governor, where, at length, he was installed in peace. Three days longer the rejoicings continued; bells were rung, guns were fired, and each evening the town and suburbs were magnificently illuminated: many houses exhibiting allegorical transparencies which occupied their whole front. But the illumination of the Chinese triumphal arches in the suburbs surpassed all the show: the dra-

gons which ornamented them spat fire; flames of various colours played around them; and large fire-balls discharged from them emulated the moon in the heavens, till, from their increasing height, they seemed to disappear among the stars. Each of these edifices was of three stories, surrounded by galleries, on which, during the day, the Chinese performed various feats for the amusement of the people: there were conjurors, rope-dancers, magic lanterns, and even dramatic representations, the multitude eagerly flocking to the sight, and expressing their satisfaction in loud huzzas! I saw a tragedy performed on one of these galleries, in which a fat mandarin, exhibiting a comic variety of grimaces and strange capers, which would have done credit to Punchinello, submitted to strangulation at the command of his sovereign. At night, the people went about the streets masked, and letting off sky-rockets and Chinese fireworks. In several parts of the town, various kinds of spectacles were exhibited for the popular amusement: the air resounded with music, and public balls were gratuitously given. This unexampled rejoicing for the reception of a testimonial of royal approbation, seems sufficiently to prove the loyalty of the Philipines, and the little probability of their revolting, especially if the mother country does not shew herself wholly a stepmother to her dutiful children."

To this interesting extract we shall add nothing: it is our intention to devote a few remarks hereafter to the scientific portion of this Russian expedition.

The Scottish Gaël; or, Celtic Manners, as preserved among the Highlanders; being an Historical and Descriptive Account of the Inhabitants, Antiquities, and National Peculiarities, of Scotland. By James Logan, F.S.A. of Scotland. 2 vols. 8vo. London, 1830. Smith, Elder, and Co.

WE have alluded to this work in a note upon Pinkerton; and can only now mention it more specifically as a production of much research and ability, and replete with interesting investigations into our northern antiquities. Embracing the whole range of subjects which have so long engaged literary and antiquarian attention, it is out of our power to bestow that pains upon it, within a few days, which its importance demands; but even a desultory examination enables us to say that it deserves the warmest patronage of the public, as a most meritorious, curious, and sterling performance.

The History of Modern Greece, from its Conquest by the Romans, B.C. 146, to the present Time. By James Emerson, Esq. 2 vols. 8vo. London, 1830. Colburn and Bentley.

THIS week has been rather too prolific of works on Greece; and unless we filled our sheet with one subject, we must defer the detailed review of these volumes. Of this production we have therefore only to say, at present, that it runs cursorily, but clearly, over the early history; and that the author employs his talent more diligently upon later events, and the character of the Greek people.

Stories of American Life, by American Writers. Edited by Mary Russell Mitford. 3 vols. 12mo. London, 1830. Colburn and Bentley.

WE must own we expected more from a work edited by Miss Mitford;—we expected something both of taste and research—remarks on American literature, and an acquaintance with American writers;—we expected judicious cri-

ticism and original information. Moreover, we expected novelty; not a collection of stories that must be familiar to every reader of periodical literature. Miss Mitford has just lent her name to one of those cases of literary piracy which we shall always mark with the reprobation we hold they deserve. The *Legendary*, the *Token*, the *Atlantic Souvenir*, are the sources from which the materials of these volumes are taken, without one word of mention or acknowledgment, except a general allusion to Transatlantic literature;—no credit given to the various Annuals in which they appeared—no attempt made to point out the different authors, or assign the just praise they deserve. This is truly “the paste-and-scissors school of authorship.” The original idea was good. The lighter and more imaginative branch of American literature has been especially rich of late years in graphic sketches—short, but picturesque tales. A selection of these—a view of the present state of American literature— notices of the authors—critical remarks—and some historical illustrations, would have made a standard work, equally interesting to both countries. But we see no advantage in a collection (from which, by the by, many of the most beautiful and characteristic stories have been omitted), which, excepting in expense, differs not from the Annuals themselves. The price which is given for these volumes would purchase all the best of the American Annuals; and very pretty and clever little books they have hitherto been. In making her choice, Miss Mitford has not even adhered to her own rule: she says, rather inelegantly, “that she has clutched” any sketch, so that it was essentially American, and omitted any that might have been written on this side the Atlantic. Now, “Unwritten Philosophy” and “Unwritten Poetry” are beautiful tales—but might be the productions of any country; so might “the Drunkard.” Besides, we think an English editor should scarce have selected such a passage as the following. Speaking of the French and the Indians, she gives the former credit for “the absence among them of that insatiable avarice, that boundless ambition, that reckless prodigality of human life, that unprincipled disregard of public and solemn leagues, which, in the conquests of the British and the Spaniards, have marked their footsteps with misery, and blood, and desolation:”—an assertion about as untrue as it is disgraceful. We find little in these volumes to induce quotation: the best tales have already either been cited by us, or noticed, if their length forbade extract, in our various reviews of the *Legendary*, the *Token*, and the *Atlantic Souvenir*. We are free to confess we preferred them in their American forms. But the whole system of the literary interchange between both countries is founded on a wretched plan of mutual robbery. We hope to see the time come for a more liberal and kindly intercourse.

Le Keepsake Français; ou, Souvenir de Littérature Contemporaine. Deuxième année. London, Whittaker and Co.; Paris, Giraldon, Bovinet, and Co.

WE exceedingly approve of the plan of this Annual. Literary intercourse is ever desirable, as being well calculated to destroy prejudices, and to draw more closely together those mental links which are the best bonds of humanity. These pages contain a great variety of pleasant matter; and have this peculiar advantage, that in placing before us light specimens of many French writers, we are enabled to acquire a knowledge of their style, and form

an idea of their merits: thus obtaining much information, from its being brought before us in so popular a form. A poetical dedication to the Queen of the French opens the volume; and the first prose article is an extract from the inedited memoirs of the Prince de Ligne, from which we select the following:—

“Louis XVI. was exceedingly careless in sporting. I once heard a bullet whiz close to my ear, at the death of a stag. He often took me with him for the sake of conversation, as only himself and his two brothers shot. It was a favour granted to but a few courtiers; still it put my heart in my mouth, when one day he killed a partridge between the queen and myself. . . . The Empress Maria Theresa had a passion for faro: she played with singular good luck; and when she had a little mountain of ducats before her, she would suddenly recollect an audience to be given, or some papers to sign. The next day she would reckon up her gains, laugh, and equally distribute them to better uses than those of the gaming-table.”

The prince's summary of the causes of the revolution is original at least. “Every one has written about, and settled after their own fashion, the causes of the French revolution: the devotees, because the *Encyclopédie* had been read; the Chevaliers de St. Louis, because the Comte de St. Germain had maliciously discharged the household of the king; the clergy, because his majesty had not a distinguished confessor, who might have governed him; the libertines, because the king had no mistress; the ministers, because he did not give himself up entirely to them; the young men about court, because they were not sent on embassies; the pretty ladies of the palace, because their lovers were not marshals of France; the parliaments, because they had been made to feel they were not English parliaments, where, also, there is but one; literary men, because they were not in the ministry; jewellers, because of the history of Collier; authors, because the court were not fond of poetry; merchants, because there were not fêtes enough; peasants, because the working on the roads and the salt duties were not abolished; soldiers, because nobility was required for an officer; and young pedants, because the queen neither liked memorials, projects, nor *ennui*; and I, who am none of these, but as a man, and an observer, who have looked closely into them all,—I now write, what has at least not been said: Fools, rascals, and people of talent, error, horror, stupor,—such is the title, epigram, epigraph—call it what you will—for the history of revolutions, whether of France, Brussels, Poland, or America.”

There is a good deal of verse, more political than poetical; we shall pass to the more purely literary, as we doubt whether the glory, regeneration, and patriotism of “*la grande nation*” possess the magic influence on this side the Channel, which is their right on the other. We doubt whether it be possible for an English critic to be a good judge of French poetry, if we are to measure the justice of our opinions by the truth of theirs on our own. M. Ch. Nodier draws a parallel between Byron and Moore, and pronounces their genius to be essentially similar; and gives us the somewhat new and startling intelligence, that they were indebted for it to the East India Company! The public ought to pass a vote of thanks to the directors. There is something, we suspect, utterly irreconcilable in French and English poetical taste. Who among us would ever have thought of choosing such a subject as M. Alfred

de Musset has done? The disgusting circumstances of Francis I.'s death, and his beautiful mistress, la belle Ferronière, may be matter of historical detail, but execrable must be the taste that selected them for poetical illustration. One poet, Méry, in what seems to our ears most melodious verse, imagines a lover entreating his mistress to retire from the hurry and glare of fêtes to simpler scenes. He describes this idea of simplicity, of which we give the outline for the benefit of our young lady readers. She is to wear no togue of velvet, nor a comb, nor a turban, but a Leghorn hat, with a rose placed in it which she has herself gathered; she is to wear white muslin, and buskins invented for her feet; while in her fingers is to be a handkerchief perfumed with thyme. This is wound up by two pretty lines, when the lover is to address this fair Simplicity by those

Mysterious words, which tremble on the lip,
When said for a first time amid the pines;
Invented words which we may speak, not write.

There is also a little madrigal by Robespierre, which prettily enough recommends a young and fair Ophelia to preserve her timidity: it finishes thus:—

Thou wilt be only better loved,
For fears that thou art not.

There is a very picturesque fantasy, a “*Magical Feast in Thessaly*,” by M. Ch. Nodier; the “*Château of Montesquieu*,” an interesting paper by G. Geraud; a fragment from an unpublished novel by De Stendhall, with a great air of real life about it. We also like much some fragments of Chateaubriand's. The “*Yellow Domino*” has been published before; and the next time A. Pichot translates from an English author, it would be but common honesty to acknowledge it. The tale of the “*Magical Mirror*,” to which he puts his name, is an exact version of one written by the late Henry Neale, about four years ago, for Ackermann's *Forget Me Not*, and afterwards published in the *Romance of History*. There are some original letters of Madame de Stael's; and a very lively paper containing some records of chess. Of the poetry, we shall endeavour to give a short specimen, or so, next week; and now conclude by saying, that this is a very varied and pleasant miscellany, and one we warmly recommend to the lovers of French literature.

The Talisman; or, Bouquet of Literature and the Fine Arts. London, 1831. Whittaker, and Co.; Paris, Giraldon, Bovinet, and Co. INSTEAD of a review, we will give a receipt. Take one or two popular magazines, some half dozen *Literary Gazettes*, a volume or so of favourite authors; shake them together, taking as little trouble as possible; publish the collection in an expensive form; and you will send into the world a volume, which may benefit yourself, instead of giving time and thought to original composition. Nothing can be easier. This is just another instance of that reprehensible system of literary piracy, which subsists on the labours of others: as unjust to the author as it is to the public. The one is deprived of the benefit of his own productions—the other of that novelty which is the great charm in works of amusement. Take, for example, the clever tale of “*Mynheer Von Wodenbock*,” by H. Glassford Bell, which, besides its original appearance, was quoted about a year ago, to our own knowledge, in half-a-dozen different English provincial papers. We have previously spoken highly of the plates which adorn these two works.

A Chronological Chart; or, Synoptic-Historical View of the Origin and Introduction of Inventions and Discoveries, from the earliest date to the present period. By the Author of a Practical System of Mnemonics, entitled "Reminiscencia Numeralis." Darton and Harvey.

WE are great friends to all those comprehensive forms of communication, which, addressing themselves to the eye, through that medium assist the memory in retaining facts. We are not sure that this chart can be exactly classed among the forms to which we allude; but it contains a great deal of well-arranged information, "deduced from the most eminent historians and approved authorities," which may be referred to at a single glance. When we are drinking a glass of wine with our friends, we can thus remind ourselves that we owe that pleasure to Noah; when our fire has nearly expired, that the bellows by which it is revived was the invention of Anarchus; and when the clock strikes the agreeable hour of dinner, that the ingenuity of Pacificus devised that mode of marking the divisions of time. Nor are such matters the trifles that some persons think them. Whatever tends to render knowledge precise and accurate, materially enhances its value.

The Dominie's Legacy; consisting of a Series of Tales illustrative of the Manners of Scotland. Second edition. 3 vols. 12mo. London, 1830. W. Kidd.

IT is with great satisfaction we hail the reward of genuine merit in a second edition of these very characteristic and interesting Tales. Mr. Picken, their author, observes truly, and describes feelingly, the manners of the people of Scotland; and his incidents, whether founded on facts or more indebted to his fancy, are of a kind to awaken the best attention of the reader. Having expressed a high opinion of his work on its original appearance, we need only repeat our entire approbation of it in its new form—very prettily printed, and every way worthy of popular favour.

Travels and Researches of eminent English Missionaries; including an Historical Sketch of the Progress and Present State of the principal Protestant Missions of late Years. By Andrew Picken, Author of "the Dominie's Legacy." 12mo. pp. 598. London, 1830. Kidd.

THE interest attached to missionary voyages, and their worth, whether looked at as conveying curious information respecting regions and people very little known, or as detailing the far more important news of the extension of cultivation and religious improvement,—must make this a very popular volume. It follows the strange narrative of the ship *Duff*, Captain Wilson, in the South Pacific; Vanderkemp and Campbell's Travels in Southern Africa; Jefferson's in the Georgian Islands, &c.; and the more recent and ample proceedings of Mr. Ellis. A general summary and conclusion stamps these contents with a lasting value for the Christian world.

ARTS AND SCIENCES.

ROYAL GEOGRAPHICAL SOCIETY.

MR. GREENOUGH in the chair. — A letter to Capt. Beaufort, on some details connected with the hydrography of Denmark, was read. A paper on the present state of the Swan River, by Mr. Barrow, followed. It mentioned the

discovery of bones in the caverns of Australia, in situations and in deposits similar to those in which they occur in Europe, and probably antediluvian. It had not been ascertained to what animals these bones belonged: there were some which slightly resembled those of an ox, but were four times the size of the bones of that animal: they were not, however, the remains of animals which have as yet been met with in Australia. The learned author pointed out the close relation which is established by these facts between the old world and the last-mentioned new continent, inasmuch as races of animals have there been destroyed by catastrophes similar to those whose action has been traced in Europe; and that it is probable that the kangaroo and other marsupial animals, as well as the paradoxical class of monotremes, are not new creations, but, to all appearance, as ancient as the living creatures of the old world. This relation is further supported by the new hydrographical discoveries which have been made in the interior of this unknown land, and which satisfactorily prove that rivers, in opposition to a too prevalent opinion to the contrary, follow the same course that they do in other countries. A chart of Australia was handed round, in which the courses of the Murrumbidgee and another more extensive salt river were traced from the western acclivity of the Blue Mountains to their mouth or exit into the Gulf of St. Vincent. It was natural that the mind should have been led into error by the new and striking features presented by the animal and vegetable kingdoms, and the hydrographical and geographical phenomena, of this unexplored land, and that their novelty should have surrounded the continent with a cloud of mystery, as unfavourable to accuracy of detail, as its own coral reefs and shoals were to actual survey; and it is pleasurable, in so short a time, to find that bold and enlightened researches are effectually removing that veil, and tending to ally its phenomena with those presented by better-known regions.

CELESTIAL PHENOMENA FOR DECEMBER.

21^d 19^h 3^m—the Sun enters Capricornus. 31^d —shortly after midnight the Earth attains its perihelion.

Lunar Phases and Conjunctions.

☾ Last Quarter in Leo.....	P. H. M.
☾ New Moon in Sagittarius.....	15 16
☽ First Quarter in Pisces.....	14 20 19
☾ Full Moon in Gemini.....	22 10 42
	29 2 2

The Moon will be in conjunction with

	D. H. M.
Saturn in Leo.....	5 14 45
Venus in Ophiuchus.....	14 17 0
Mercury in Sagittarius.....	15 10 24
Jupiter in Sagittarius.....	17 4 40
Mars in Cetus.....	23 5 45

3^d 16^h—Mercury in his superior conjunction. 4^d—in aphelion. 17^d 22^h—in conjunction with α Sagittarii: difference of latitude 4'.

20^d 16^h—Venus in her superior conjunction.

Mars will be in conjunction with the following stars in Cetus: 3^d—with the star 5 in Mayer's catalogue; difference of latitude 13': 9^d—with 10; difference of latitude 2': 21^d—with 20; difference of latitude 1': 27^d—with 30; difference of latitude 18'.

The Asteroids.—3^d—Vesta a degree and a half west of 16 Ceti: R.A. 45^m, S.D. 5° 3'. Juno forms the vertex of a triangle with 58 and 65 Aquarii, the asteroid south of the stars: R.A. 22^h 28^m, S.D. 12° 19'. Pallas a degree south of ϵ Ophiuchi: R.A. 17^h 19^m, S.D. 5° 32'. Ceres a degree and a half east of δ Ophiuchi, and close to a nebula in which are two small stars: R.A. 17^h 25^m, S.D. 23° 51'.

Jupiter will soon be lost in the evening twilight. None of the eclipses of the satellites will be visible this month.

12^d—Saturn stationary.
9^d—Uranus in conjunction with 854 Mayer; difference of latitude 21'.

Deptford.

J. T. B.

LITERARY AND LEARNED.

ROYAL SOCIETY.

AT the last meeting the following paper was read: "On a simple electro-chemical method of ascertaining the presence of different metals, applied to detect minute quantities of metallic poisons." By Edmund Davy, Esq., F.R.S. M.R.I.A., Professor of Chemistry to the Royal Dublin Society. The Rev. Robert Walker, M.A., tutor of Wadham College, proposed as candidate for election, presented to the Society his work entitled, "The Elements of the Theory of Mechanics." The following gentlemen were by ballot elected auditors of the treasurer's account for the past year; viz.—Wm. Cavendish, Esq. M.P., Francis Chantrey, Esq., Dr. Fitton, J. T. W. Herschel, Esq., J. W. Lubbock, Esq. Among the books presented, were Parts 13 and 14 of Professor Bessel's *Astronomical Observations*; *Mémoires de l'Académie Royale des Sciences de l'Institut de France*, Tom. II.; *Annals of the Vienna University*, presented by his Majesty the Emperor of Austria.

An advertisement has appeared in the newspapers, signed by sixty-three Fellows of the Society, recommending Mr. Herschel to election as President at the ensuing anniversary. We do not remember an instance of any branch of the royal family being opposed in a similar manner as this setting up another candidate against his majesty's brother.

The Row.

The Row is an ugly phrase for dissensions among such a body as the Royal (or Row-all) Society; but as we know no shorter or more applicable word, it must stand at the head of this brief history of what has occurred since our last.

The meeting called for last Wednesday by *Socius*, to be held in the library, for devising some means to save "the Society from disgrace," was attended by 18 fellows. *Socius*, however, preserved a strict *incog.*; and the fellows, after chatting to each other for some time, separated, under the impression that a hoax had been practised on them.

On Thursday night, after the acknowledgments for books, &c. presented had been read, Sir James South rose, and addressed the meeting. He complained that the authorities of the Society had taken upon themselves to withhold from presentation a copy of his "Charges against the President and Councils," (see notice of this pamphlet in the last *Literary Gazette*), which he conceived they had no right to do. He entirely disclaimed all personal motives in any thing he had done: it was all for the good of the Society and of science; and the president, as an individual, was entitled to his sincere respect. Sir James was proceeding, when

Mr. Hawkins rose to order. The introduction of such discussions was contrary to the rules and constitution of the Society.

[As the French say, there was now a vivid sensation. The law was referred to, and read by the president. Several fellows rose at the same time, amid cries of "Order," and "Go on."]

Dr. Granville contended that Sir James

South had a right to be heard. Cries of "No, no!"

Sir James South again stood forward, expressed his deference to the chair, but insisted on his argument.

The chairman said, the business of the Society had better proceed. He could not account for the course the honourable member was pursuing, except as one of those aberrations of mind, which [a noise prevented us hearing the end of this sentence, so quietly applying the term of aberrations to so eminent an astronomer!] The president continued, and explained that he had taken upon himself to direct that the pamphlet alluded to should not be presented, because it was the usual custom to thank the donors for every work presented; and he could not think it consistent with the character of the Royal Society to return its acknowledgments for a production, which, besides other harsh and indefensible expressions, contained the following:—That it was indifferent to the writer whether he remained a fellow or was expelled; "for where admission is no honour, expulsion can be no disgrace."* The president justified himself by analogy in the proceedings of the House of Commons; and appealed to the Society for approbation. (Cries of "Hear.")

Mr. Babbage intimated, that as he was nominated for the Council for next year, he wished it to be understood (if his friends resolved on electing him), that with his views of the great alterations which he considered to be necessary for the benefit of the Society, he was of opinion he might not contribute to the more easy conducting of its affairs.

Sir James South immediately retired, and the ordinary proceedings were resumed by Dr. Roget. *Sic transit.*

SOCIETY OF ANTIQUARIES.

A COMMUNICATION from Mr. Kempe was read, respecting an ancient coffin-lid in Keston church, Kent, supposed to be that of Sir Robert Belknap, chief justice of the Common Pleas, banished to Ireland, 7th Richard II., returned 20th of the same reign. The words *revenu de Irlande*, extant on the stone, formed the principal ground of Mr. Kempe's conjecture, coupled with the fact that Belknap was lord of the manor of Keston, in the time of Richard II. J. A. Repton, Esq. exhibited a copy of an ancient tapestry, which, from the dresses represented, appeared to be of the time of Henry VIII. Mr. Repton observed, that the artist seemed to have sacrificed the faces of his figures for the purpose of better shewing the gaudy colours of their dresses, as the faces were all excessively dark (indeed, nearly black) and very rudely delineated. The Secretary commenced the reading of a series of six letters from the Rev. J. Skinner to Sir R. C. Hoare, on the site of Camelodunum, described by Tacitus, and which the reverend writer fixes at Camerton, near Bath.

FINE ARTS.

NEW PUBLICATIONS.

Portrait of a Young Lady. Drawn from life, and on the stone, by W. C. Ross. Dickinson. ALTHOUGH only a single figure, this drawing is in a style similar to that of "the Bud and the Blossom," of which, on its appearance, we spoke with the praise which it deserved. A melancholy interest is imparted to Mr. Ross's

* *Apropos.* A second edition of this pamphlet, with additions, improvements, and farther corrections, i. e. more pepper, has just appeared.

present work by the sad word (deceased) subjoined to the title. If we may judge from the resemblance, the original must have been one of those lovely beings who are "formed in the prodigality of nature." The features are individually beautiful; and the general expression is full of refinement and sensibility; and, unless our physiognomical discernment has quite forsaken us, we have no doubt

"That ne'er was to the bowers of bliss convey'd
A purer spirit, or more welcome shade!"

Sketches of Animals in the Zoological Gardens. Drawn from life and on stone, by E. Lear. Part I. Ackermann.

Illustrations of the Family of Psittacidae, or Parrots. Drawn from life and on stone, by E. Lear. No. I. Ackermann.

THESE are the productions of a young artist of great promise. The first publication contains—"Head of a sleeping Lion," "Harpy Eagle," and "Polar Bear;" all strikingly characteristic. The second publication consists of "Platyercus Stanleyii, or Stanley Parakeet;" "Palaeornis Torquatus, or Rose-ringed Parakeet—yellow variety;" and "Palaeornis Columboides, or Pigeon Parakeet." They are splendidly coloured; and must immediately elicit from every one who looks at them, the exclamation of "Pretty Poll!" We have no doubt that both these works will, in their progress, become valuable additions to our existing illustrations of that most delightful branch of human knowledge—natural history.

W. Hyde Wollaston, M.D., F.R.S., &c. &c. Painted by John Jackson, R.A.; engraved by W. Skelton.

A VERY striking likeness of a great ornament to science, and very sweetly engraved in line by Mr. Skelton. The attitude of the figure is peculiarly fine; and there is a simplicity in the whole design well befitting the character of the subject.

The Young Catechist. Painted and engraved by Henry Meyer. Fisher, Son, and Co. AN interesting representation (intended, we are told, though also published separately, for the *Imperial Magazine*) representing a lovely girl instructing a negro in prayer. At a period when the great question of negro slavery is so much agitated, this affecting representation of what must be gracious in the eyes of all parties, is extremely *apropos.*

The English School; a Series of the most approved Productions in Painting and Sculpture, executed by British Artists, from the days of Hogarth to the Present Time. Selected, arranged, and accompanied with descriptive and explanatory Notices, in English and French. By G. Hamilton. Engraved in outline upon steel. Nos. I. to VI. Tilt. AFTER protesting against even the momentary supposition, that such a publication as the present is calculated to give any thing like an approximation to an accurate idea of the qualities of the English school, we have no hesitation in saying, that, considering its size and price, it possesses much more merit than could justly be expected. The plates, of course, convey only the composition of form; and that, in several cases, very imperfectly. Some of them, however, are executed with much taste and ability. When we state that these six Nos. contain specimens from the pencils and chisels of Wilkie, Morland, Farrier, West, Peters, Northcote, Fuseli, Lawrence, Reynolds, Banks, Harlow, Leslie, Newton, Flaxman, Stothard, Barry, Mulready, Nollekens, Cooper,

Gainsborough, Smirke, Burnet, Westall, and Chantrey, it will be evident that the work presents a great variety of styles. The descriptions are brief, but comprehensive.

Mrs. H. M. Bowdler. Drawn on stone by J. W. Slater, from a Drawing (in 1814) by J. Slater. Cadell.

THIS amiable woman was the author of a volume of sermons, which has already passed through nearly fifty editions;—certainly no small proof of their excellence. In her life she had frequently expressed a great interest in the Moravian missions; and the lady in whose possession this portrait was, thought she could not do any thing that would have been more agreeable to her old friend, than (while she gratified those who loved her, by the publication of a very excellent likeness) to raise a small sum in aid of those missions, by devoting the profit of the print to that purpose.

Twelve Sketches, illustrative of Sir Walter Scott's Demonology and Witchcraft. By George Cruikshank. Robins and Co.

A MOST laughable and fanciful series, worthy alike of the Scottish editor and his most ingenious illustrator. It is hardly fair to particularise, where all the subjects are so truly humorous and characteristic; but the *Elfin Arrow* Manufactory, the *Witches' Frolic*, the *Ghost of Mrs. Leckie*, *Elfin Tricks*, *Puck in Mischief*, and *Fairy Revenge*,—are so extremely droll, that we cannot help mentioning them as among the cleverest examples even of the whim and imagination of George Cruikshank. Every owner of the *Demonology* must possess these, its happy concomitants.

DUNCAN versus ROLLS.

WE have received a letter from Mr. Duncan, addressed to Mr. Rolls, which we must decline inserting; both on account of its length, and because we fancy our readers have had nearly enough of the controversy between these gentlemen. We will, however, briefly state, that Mr. Duncan quotes the following passages in letters to him from Mr. Rolls, respecting the little plate which has occasioned so much disturbance:

"Mr. Sharpe brought the plate to me for some trifling alteration to save time, but from no doubt of your capability. I was naturally led to detain the plate, to indemnify myself for my very heavy losses on that occasion."

"The publisher has affixed my name without my wish or consent."

Mr. Duncan allows that Mr. Godden etched the back ground to "The Orphans;" but adds that Mr. Rolls invariably applies to the same artist for similar assistance; and that he has recourse to Mr. Wilmore to finish what Mr. Godden has begun; to Mr. Godden again, to put in the dry-point: to Mr. Goodyear, for the faces; to Mr. Edwards, to finish generally; if there be a horse or other animal in the picture, to Mr. Webb for that;—and that, in more than one instance, Mr. Rolls has employed even Mr. Duncan himself to engrave the faces for him.—Mr. Duncan also asks why, if Mr. Rolls were not conscious that he was doing wrong, he did not apply, as is the invariable custom, to the painter (Mr. Gill), for his opinion of the plate?

FRENCH ACADEMY AT ROME.

M. HORACE VERNET has addressed to the French government a memorial, in which he recommends, for the benefit of the arts, the suppression of the school of Rome, of which he

is the head. That school costs France a hundred thousand francs a year; and there have never been in it more than twenty students in the three branches of the fine arts which are taught. According to the proposition of M. Vernet, the expense of twenty boarders would amount only to sixty thousand francs. He advises, therefore, that each student should receive three thousand francs a year; four hundred and fifty to be paid to him quarterly, by the French ambassador, and twelve hundred on the remittance to France of his studies every year—those studies to be sent to the Academy of the Fine Arts at Paris, in order that they may decide whether the student should remain at Rome, or be recalled. To the forty thousand francs annually which would thus be saved by the suppression of the school, might be added thirty thousand francs, the rent of the hotel of the French ambassador at Rome, who might reside in the beautiful hotel of the academy.

ORIGINAL POETRY.

THE SONG OF BEAUTY.

I TURN on every side,
And gaze along the land,
And yet, both far and wide,
The lowly and the grand,
The noble and the clown,
The fallen and the free,
The court, the camp, the crown,
Alike are slaves to me!

The soldier wields his sword,
And glories in the fight;
The miser views his hoard,
And revels in delight;
The statesman's dearest aim
Is rank and high degree;
But power, gold, and fame,
They'd give them all for me!

Let fraud or force obtain
A mastery on earth—
I hold my right to reign
From nature at my birth:
I care not for the strife,
Who conquer or who fee;
So long as there is life,
There will be slaves for me!

The monarch is my tool,
The soldier is my lamb,
The scholar is my fool,
Yet mistress as I am
Of all beneath the sun,
Of man, and earth, and sea,
I'd give them all for one—
I'd give them all for thee!

F. M. R.

MUSIC.

NEW PUBLICATIONS.

The Musical Bijou; an Album of Music, Poetry, and Prose, for 1831. Edited by F. H. Burney. Goulding and D'Almaine. *The Bijou* was the first Musical Annual published in England; and if Mr. Burney be able, each succeeding year, to send forth such a combination of talents as the present volume contains, it must continue to be also among, if not, the first in merit. This truly elegant work commences with a short poetical introduction; then follows one of these charming ballads which none better than Thomas Haynes Bayly knows how to write, entitled, "Why comes he not?" meant, as we should think, to illustrate Mr. Parris's beautiful picture, exhibited last year. It is set to music by

Charles Horn; the melody is simple, but not very striking. "Poor last leaf of summer," very pretty stanzas, by that evergreen, Lord Ashdown. "We return no more," is worthy of its gifted authoress, Mrs. Hemans: the music which is attached to these lines is composed by Mr. Lodge, and has much merit. "Waltz," composed by F. Burrowes: the first part is sweet and elegant; but the *animato* movement by no means suits our taste. "Mozart," by the author of the "Roué," is both elegant and entertaining, and quite surprised us how so much interest could have been conferred on so oft-told a tale. The "Sonnet," by Miss M. A. Browne, is exceedingly sweet. "La Tenerizza," composed by C. Czerny, is pleasing and shewy: we do not like the last G in the sixth bar of the second page; nor do we exactly understand the 25th, 26th, and 27th bars of the same page. "The Young Matron" is a charming sketch, by Mrs. Cornwall Baron Wilson. "The Widow," by T. H. Bayly, another beauty, but not more beautiful than is the lithographic drawing by T. Childs, from an original drawing by G. Cattermole: Bishop, the pride of English composers, has added some charming notes to this song. "The Royalist Souvenir," for the harp, by N. C. Bochsa: all that Bochsa writes for the harp must be good. "Aria alla Francese," by T. Valentine, is very light, and, we doubt not, will be played by young boarding-school misses with great satisfaction. "An Air," by Bishop, arranged by V. Novello. Can Novello arrange any thing badly? No! "The Poet's Bride," by Miss Pardoe: as it is written by a fair hand we will not censure. "I love thee," by J. R. Planché, is, like all his poetry, exceedingly sweet: Miss Dance is the composer, and the music is very pretty. "I'll meet thee, love,"—we would rather not have met thee. "Melancholy Musings" is quite equal to, if not better than, any thing we have seen by Richard Ryan; we like his lines very much. "Night and Dawn," by R. J. Raymond, composed by J. Barnett. Popularity will never dawn upon this night. "The Stranger's Goodnight" is a long farewell, but pretty. "The Motherless;" the author appears to have no name; but, if he continues to write, we prophesy he will very soon gain one. There is a beautiful drawing by G. Childs, from a design by John Wright, as an embellishment to this little poem. The two pieces for the piano-forte, by F. Kalkbrenner and Henri Herz, are clever and brilliant. "Impromptu," by T. A. Rawlings. The young ladies will thank him for making it very easy. "The Birth and Progress of Music," by T. C. N. To read an account of the birth, parentage, and education, of so old a dame as Music, startled us at first, we confess; but having commenced, we were led on by degrees, until at last we felt sorry the account was so short. "The Witch," by Lord Nugent, we shall at once dismiss, by saying it is excellent. "My home, dear love, and thee," by F. H. Burney, is highly creditable to his talents; the music, by Addison, although not very striking, is pretty. "Lord Ronald," by George Linley. Mr. Linley will oblige every one by writing much more. "Song of the Highland piper," old words, new music by G. H. Rodwell, is one of the most spirited compositions of modern music; with it we close the book, and could not do so under more favourable impressions than it has produced.

The Tartar Drum. Ballad sung by Miss M. Glover, in the "Black Vulture." Poetry by Mr. Fitz Ball: the Music by G. H. Rodwell. London. Goulding and D'Almaine. Of the sweet effect of this ballad we spoke in noticing the piece in which it was produced, and we have now only to repeat that the air is truly beautiful. Plaintive and perfectly suited to the words, it is just one of those things which are calculated for universal popularity.

*This Rose I plucked at Morn.
My Laced Home.*

THESE two, of the sweetest of Mr. John Barnett's compositions, are published by him from the Carnival at Naples, in which they are sung by Miss Taylor. To praise one of them is to praise both, for they bear a strong resemblance to each other, and are in the same key, though different in time. Simple and pretty, we think they must become great favourites off, as well as on, the stage.

DRAMA.

SONTAG.—Miss Sontag arrived at Hamburg on the 9th instant, in the steam-boat from St. Petersburg. She has been received with every mark of distinction by the principal members of that city, and by the hereditary Prince of Mecklenburg, who chanced to be on a visit there with his princess. Miss Sontag has given two private concerts, and has sung twice in the theatre; of course to half-suffocated and quite enraptured audiences. She has received an invitation from the citizens of Bremen, who offer a *carte blanche* as to terms, and assure her that she cannot fix any price upon her attractions which will exceed the value they set on them. She has, however, declined the offer, and stated her resolution to retire altogether from public life. At a supper given in compliment to her, by a spirited and distinguished English merchant at Hamburg, she announced that her last farewell to the stage would take place on the 20th inst. She added, that she should testify her sense of the gratifying reception which she had met with on that her last professional visit, by a valedictory address, in which she should subscribe herself, for the first time, *Grafine Rossi*. All mystery is now cleared away, and with it will vanish, we hope, the pale cast of melancholy which her former equivocal position with society cast over her delicate cheek.

DRURY LANE.

OTWAY'S *Venice Preserved* was performed on Monday evening, for the purpose of introducing the long-promised Miss Huddart as *Belvidera*. We always question the *taste* of a lady who chooses this character for her *début*; and if Miss Huddart was a free agent in the business, her *judgment* is equally to be doubted;—as, in the whole range of the drama, there is scarcely a part which she is less qualified to sustain. The masterly construction of the play will always keep it before the public; but it is one of the least affecting to us, from the total want of interest in the *dramatis personæ*. Who could possibly care if the whole of them were swallowed by an earthquake? The author has not forgotten to prejudice us against the Doge, Priuli, and all the rest of the "reverend rogues in robes," who compose the senate. We certainly feel that, as far as they are concerned, we could ourselves carry "a torch to the arsenal and set its gates on fire;" yet we should be loath to do it in the company of such conspirators as the execrable Renault, the contemptible Jaffier, or the quarrelsome

but cowardly herd around them. Pierre and Belvidera are the most respectable persons in the play; and the first is, after all, but a "fine, gay, bold-faced villain"—a discontented soldier, who, to gratify his private animosities, would consign the whole city to flame and massacre—nay, exults in the anticipated catastrophe. "How lovely the Adriatic, &c. drest in her flames, will shine! Devouring flames! such as shall burn her to her watery bottom, and hiss in her foundations!" Like Jaffier, therefore, we must turn to Belvidera for consolation;—and what can reconcile us even to her? Beauty alone of the most voluptuous description—"a smiling mischief" should she be, whose blandishments might shake the fortitude, and warp the patriotism, of "the noblest Roman of them all." All Italian as she is, we cannot fancy a dark Belvidera: the ardent and heroic Juliet may wear her eyes and hair as black as she pleases; but Belvidera is a weak, fond, languishing woman; and soft blue eyes and sunny hair seem indispensable to the character. We never saw but one Belvidera—we almost doubt the possibility of our seeing another; and we should have made due allowance for Miss Huddart, on account of that prejudice, had she not offended our ears by tearing her passion to tatters—to very rags. Nearly every line of the part was delivered "in Ercole's vein;" and long before madness was her apology, she raved with a vehemence which we fear must have been as distressing to herself as it was to the audience. We perceive she is announced for Lady Constance in *King John*; we shall therefore suspend our final judgment as to her capabilities. Her figure, though spare, is commanding; and her black flashing eyes and lofty brow may serve her well in the sterner walks of tragedy; but (from her entire misconception of Belvidera) we fear she has not "that within which passeth shew," and without which the finest physical qualifications can little avail an actor. Mr. Wallack's *Jaffier* is a very clever performance: if any body could interest us in that despicable character, it would certainly be he. Mr. Macready in *Pierre* makes some fine points in the character: his holding up his chains to his betrayer *Jaffier* is admirable. Mr. Younge played *Renault* exceedingly well: he is a very sensible actor, and one of the most level speakers on the stage. Why does not Mr. Thomson wear the proper and peculiar robe and cap of the Doge of Venice?—we have scarcely seen them at Drury Lane in *Othello* and the *Merchant of Venice*: if we are mistaken, it is high time they should be added to the wardrobe. The scenery is also much behind that at Covent Garden; and the remark applies to more plays than *Venice Preserved*.

COVENT GARDEN.

THE success of Miss Taylor in *Rosalind* has induced the management to repeat *As You Like It* twice since our last *Gazette*. For this they deserve honourable mention, as it is a well-known fact in the theatrical world, that, for some unassignable reason, the play, exquisite as it is, was never a money-bringing one;—even when Mrs. Jordan was the *Rosalind*, and in the very height of her popularity. We have witnessed Miss Taylor's repetition of the part with increased pleasure, and a full conviction, that she has no faults but such as a season's practice in the regular drama, and by the side of such an actor as Mr. C. Kemble, will entirely remove. An exuberance of action, and a proneness to attitude upon slight occasions (the latter, by the way, the fault of her

instruction), are her principal defects; but they are common to all young actors of any soul and spirit,—and certainly on the right side. Judgment may quiet down the mercurial, but it cannot give animation to a clod.

The melo-drama of the *Pilot* was transplanted hither from the Adelphi on Monday last, and favourably received. We question the policy, however, of the majors appropriating to themselves the goods of the minors, at the very moment they are prosecuting those establishments. We caught a glimpse of a Mr. Parry in this piece, who promises to become an agreeable acquaintance. He made his appearance here as *Durimel* some time back: but who is likely to succeed in *Durimel*? or who would care for him if he did? Mr. Parry bears himself unaffectedly, and has a very pleasant voice, of which we shall be happy to hear more.

TOTTENHAM STREET THEATRE.

Fra Diavolo was produced, for the first time in this country, at this little theatre on Wednesday last, and was completely successful as a drama: as an opera, it could only boast of the overture (which was remarkably well executed), and four or five airs. Two of the most beautiful were sung by Vestris; and we think the song descriptive of a brigand, and concluding with the burthen of "Diavolo, diavolo, diavolo,"—was one of the most effective things we ever heard. It seemed, however, to be "caviare to the million." Vestris played delightfully;—she was, in fact, the support of the piece, which was put in jeopardy by the negligence of Mr. Melrose, who could scarcely repeat a line of his part in the last act. But the fair lady triumphed over all difficulties, and brought the piece well through. Her dress as the contadina *Zerlina* was exquisite, yet in strict adherence to the costume of an Italian peasant. Indeed, well supported, we do not hesitate to say that this would be one of her most effective and attractive characters; and we hope hereafter she will bring it out under better auspices, and before better audiences. Even here, it is worth going to see; for the writing of the drama is of a superior order to those things in general. Mr. Fredericks made the *Brigand* a dashing part, even with Wallack full in our remembrance.

VARIETIES.

Detention of Mr. Taylor.—The India Board have received intelligence, that Mr. Taylor, so conspicuous lately in forwarding the steam navigation intercourse in the Indian seas, has been captured in the desert by the Arabs, on his return to Europe.

Geology.—Adolphe Brogniart states (*Journal de Geol.* No. 3), that the Alpine limestone of Germany contains galena and calamine, as well in the masses superior to the salt as those inferior to it.

Party Rancour.—One of the liberal journals of Paris, after describing the abusive attack lately made at Glasgow, by a Mr. Douglas (or Dunglas, as the translator has it), on Sir Walter Scott, adds, that that eminent man "is in every respect still lower in the estimation of his countrymen even than in that of foreigners"!!! As a pendant to this splenetic effusion, we may mention a placard that has for several days been exhibited in London, announcing the publication of a penny pamphlet, entitled "the Waterloo Dung and his Bantams"!!!

Odessa.—One of the ancient tomb-stones found at Kertsch has an inscription in Greek

characters, of the following tenour: "Socrates, son of Socrates of Tium, together with his wife Melicine, (erected this monument) to the memory of his foster-father Memnon, son of Aminias, in (the year) 426, in the month of Xandikus." This is the first time that a date has been found upon a tomb-stone on the shores of the (Cimmerian) Bosphorus.

Literature, or Politics?—The Duchess of Berri, who is on the eve of leaving London for Holywood House, has been engaged in raising a considerable amount of money. Her Royal Highness's jewels, and other valuable property, have been sold; but what brings the transaction within our sphere, is the disposal of her very splendid library. Among the books, with the prices affixed, we have seen—

Antiquités de France,	marked at 600 francs.
Biblioth. Français, 235 vols.	250
Classique do.	640
Daniel's Voyage round Great Britain,	2000
in 1814, vel. fig. col.	
La Henriade, 1 vol. on vellum, with original designs of the first masters (unique). Presented by the city of Paris to the Duc. c Bourdeaux.	20,000
Herbier Général de Amateur,	2500
Boydell's Shakespa e,	2500
Musée Royal Français, 1803 to 1813, 6 vols.	10,000
Les Roses, Rédoute, 6 cahiers,	35,000

There are many other curious and valuable works, but these are the most remarkable; and we thought the list would interest our readers. If it be that necessity compels such sacrifices, that interest must be augmented: at any rate, all our bibliographical friends will value the intelligence.

Cambridge, Nov. 15th.—The first meeting of the Philosophical Society for the present term, was held on Monday evening; the Rev. Dr. Turton, president, in the chair. A variety of presents were notified, including the following additions to the Society's collection of birds:—specimens of the roseate tern, the sooty petrel, and a new species of swift from Madeira, presented by the Rev. R. T. Lowe; a red-necked grebe, killed in Cambridgeshire, from the Rev. L. Jenyns; a variety of the blackbird, from Dr. F. Thackeray; and a British-killed spoon-bill, from W. Yarrell, Esq. The following communications were made to the Society:—a memoir on the equation to curves of the second degree, by A. De Morgan, Esq.; observations on the wourali poison used by the Macoushi Indians of Demerara, by the Rev. W. Oke, who exhibited a quiver of the arrows, and a blow-pipe, nine feet long, used in shooting them; a notice, communicated by Professor Cumming, from Mr. Edwards, of a substance resembling cannel coal, discovered in digging a canal near Norwich. There was also read the beginning of a series of observations by Mr. Lowe, on the natural history of the island of Madeira; the result of an attentive examination of the organic productions of that island, of which Mr. Lowe has drawn up a systematic description. After the meeting, Prof. Whewell gave an account, illustrated by models, of a mode of constructing stone vaults with no centering, except from the diagonal ribs. This process has been revived by M. De Lassaux, of Coblenz, architect to the king of Prussia, and is shewn to have been practised in the vaulting of churches, &c. by the architects of the fifteenth century. M. De Lassaux calls it *free-handed vaulting* (*aus freier hand*), and shews it to be much cheaper, lighter, and stronger, than vaulting on a boarded centering. He finds it described by a French architect, Philibert de l'Orme, who wrote about 1588: and it is by him called "voutes modernes, et la mode Française, que les maistres maçons ont

accoutumés de faire aux églises et logis des grandes seigneurs."

Captain King.—We have heard from good authority, that this meritorious officer, whose promotion as a post-captain we mentioned in last week's *Gazette*, refused an acting appointment to this rank more than two years since, as it would have interfered with the important survey in which he was engaged; and we, in common with every lover of science, must regret to find, that the late Board of Admiralty have retired from office without doing justice to the zeal, intelligence, and perseverance of Captain King, by giving his commission the date when it was in his power to have assumed the rank.

Causes of the Earthquakes in Chili and Peru.—It is well known that the western side of the Andes is very subject to earthquakes, more especially between the 20° and the 30° south, from November to April. Mr. Lambert, in the *Annales de Chimie et de Physique*, attempts to connect these with meteorological phenomena. The theory of the trade winds is well known; but the author remarks, that this current is reacted upon by the earth's rotation, which is greater at the equator than the poles. The wind coming from the east, discharges its vapours on the Andes; hence the deserts of Huasco, Copiapo, Atacama, Calama, and Yunque, and generally between Coquimbo and Puyter. The winds, striking against the summits of the Andes, occasion a continual disengagement of electricity in a state of tension. It accumulates from the dryness of the air, and breaks out by the air or the earth; if by the latter, it will pass by metallic veins, by humid crevices, or by courses of water. The phenomena produced by these changes, as the vibrations of the soil, the volatilisation of certain bodies, the combustion of sulphur and of anthracite, the oxidation of metals, all would only take place when the westerly wind blows, or from the month of November to April. The author proposes to erect conductors on the crest of the Andes, and to connect them with rivers or the sea.

Human Fossil Bones.—M. Bernardi has visited a grotto at the foot of Mount Griffon, and precisely at the extremity of that little post which commands the sources of Mare Dolce, near Palermo. The following is the order of succession of deposits:—1. bones mingled with calcareous stones and clay; 2. bones cemented to the rock and to calcareous tuffa; 3. bones cemented to the rock and to indurated clay; 4. bones cemented to pieces of rock and to quartz, by means of a calcareous cement. The walls of the grotto above the deposits are rough, and pierced by a species of modiola, while those beneath are smooth, and as it were polished. The bones have evidently been deposited at different periods: and besides those of the human species, belong to hippopotami of different sizes, to the mammoth, and to other mammifère.—*Giornale ufficiale di Palermo*, April, 1830.

Teeth of Fossil Elephant.—Four teeth of the elephant, and a portion of the tusk, have been found at Cherette, a village near Liege.

Biblical Lore.—At a recent discussion on some points in biblical history, it happened to be remarked, that there was no account of the death of Eve. "Nor of Adam either," said one of the company. "I beg your pardon," replied a religious lady, who began to think there was too much of scepticism in these remarks. "if you read your Bible carefully, you will find it stated that Adam was gathered to his forefathers!"

Botany in Denmark.—Botany shares, with chemistry, the little attention paid to science in Copenhagen. It is indeed the favourite study in Denmark. It is taught in some of the learned schools; and besides those whose course of study requires them to attend lectures on botany, there are also a few who study it as amateurs. I have seen (says a traveller) in North Jutland, a party of half-a-dozen proceeding along the road with their vasculums slung over their shoulders. But the value set upon it in general does not appear to be very great. "At the lectures which are given gratis," said Horneman, "I have perhaps a hundred pupils; mais quand il faut payer, ma foi! je n'ai qu'un vingtaine." "And what is the fee?" "Five dollars!" about 18s. English.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLVIII. Calcutta. Nov. 27.]
A new edition, by Mr. H. H. Wilson, at Calcutta, of his Sanscrit and English Dictionary, much enlarged.—A Practical Book-keeper's Examination of E. T. Jones's English System of Balancing Books.—Affection's Gift, a Selection of Sacred Poetry, from the most approved Authors.—A second edition of Professor Jacobs' Latin Reader, Part II.: with Notes, by T. W. C. Edwards.—Divarication of the New Testament into Doctrine and History, by T. Wignam, Esq.—Joachim Fortius Ringelbergius' Treatise de Ratione Stibii, translated from the edition of Van Erpe, by G. B. Earr.—The fifteenth volume of the forthcoming Annual Biography and Obituary, is stated to contain memoirs of Sir Charles Penrose, Mr. Tierney, Sir George Montagu, George IV., Lord Reddale, Sir Charles Brisbane, Dr. Gooch, Sir Thomas Lawrence, Bishop James, Sir Thomas Staines, Dr. Somerville, Sir Charles Morice Pole, William Bulmer (printer), Sir Eliab Harvey, Mr. Huskinson, David Stewart (Garth), a Poetical Sketch; with Lays, Historical and Romantic, by Charles Swain.—A History of the Revolutions in France, by J. Bell, Esq., Vol. I.; being the detail of the first Revolution, 1787 to 1802.—A new edition of an Original Essay on the Immortality and Immortality of the Human Soul, founded solely on Physical and Rational Principles, by S. Drew.

LIST OF NEW BOOKS.

Scudamore on Consumption, 8vo. 4s. bds.—Harte's System of the World, from the French of La Place, 2 vols. 8vo. 14. 4s. bds.—Mackintosh's Practice of Physic, Vol. II. 8vo. 14s. bds.—Bertini's New System of Learning Music, 4to. 10s. 6d. stitched.—Nichols' Map of Oriental Navigation, &c. &c., on six sheets, 3s. 3s.; coloured, 3s. 13s. 6d.; on rollers, in a case or as an atlas, 4s. 14s. 6d.; Book of Reference to ditto, by Priestley, 4to. 2s. 2s. bds.—Way of the World, 3 vols. post 8vo. 12. 11s. 6d. bds.—Smith's Manual of the Rudiments of Theology, 12mo. 9s. bds.—Statutes, 11 George IV. and 1 William IV., 8vo. 18s. bds.—Greek Dramatists, royal 8vo. 12. 11s. 6d. bds.—Persian Adventurer, 3 vols. post 8vo. 12. 11s. 6d. bds.—Shaw's Domestic Lawyer, 12mo. 9s. bds.—Bowles's Fortune's Reverses, 2 vols. 18mo. 7s. 6d. hf.-bd.—Scenes in our Parish, 12mo. 5s. bds.—Whately on Romish Errors, 8vo. 10s. bds.—First Preaching of the Gospel, 18mo. 2s. 6d. hf.-bd.—Stories from Italian Writers, on Locke's Plan, 2d. ed. bds.—Art of Correspondence, English and French, 2 vols. 18mo. 5s. 6d. stitched.—Johnson's Prayers, 32mo. 1s. bds.; 1s. 6d. black sheep; 2s. 6d. in silk.—Du Bordieu on Fortifying, &c. Military Positions, fcp. 10s. bds.

METEOROLOGICAL JOURNAL, 1830.

November.	Thermometer.	Barometer.
Thursday . . . 18	From 21. to 44.	29.66 to 29.84
Friday . . . 19	— 27. — 40.	30.09 — 30.12

Wind variable, S.W. prevailing.
Raining generally, except on the 19th, 23d, and 24th.
Rain fallen, "3 of an inch."
Edmonton. CHARLES H. ADAMS.
Latitude 51° 37' 35" N.
Longitude 0° 3' 51" W. of Greenwich.

TO CORRESPONDENTS.

Y. M. does not suit us on the present occasion.
We regret that we cannot hold out the prospect of emolument to Ro.
ERRATA.—In the notice of the Linnean Society, in our last, for "Lieut. Bowler" read "Lieut.-Col. Bowler;" the drawings mentioned in the same paper as being nearly one hundred years old, were made only about five years ago.—In an advertisement under the head of "School for Drawing and Painting," for "Mythology" read "Myology."

ADVERTISEMENTS,

Connected with Literature and the Arts.

MR. CRUMP continues his Lectures to Barristers on Medical Jurisprudence, in the Hall of Wood's Hotel, Furnival's Inn, every Monday Evening, at half-past Eight o'Clock.
The next Lecture will consist of general Observations on Chemistry, and the Investigation of Poisoning by Oxalic Acid.
Terms for the Course, Two Guinea.
Cards of Admission may be had of Mr. Crump, 5, Judd Street, Brunswick Square.
Free Admission to Law Students.

Connected with the Fine Arts.
TO BOOKSELLERS, &c.—To be Sold by Private Contract, an entire and select Stock of a Publisher, consisting of Copyrights and the Illustrated Works, all of the most popular and valuable character.
For Particulars inquire of Mr. Leaping Smith, No. 22, Paternoster Row.
Principals only will be treated with.

IMPORTANT to BOOKSELLERS and LIBRARIANS.—To be Sold, by private Contract, the Lease, Goodwill, Stock, and appropriate Shop Fixtures, of a Book-stor and Librarian, in a fashionable and improving Watering Place. The object in view is to sell the Stock, at a great sacrifice will be made. The Stock has lately been purchased, and of the very best description, and the Library is most complete. The peculiar circumstances under which the Sale will be effected, offers an opportunity to a Purchaser which may never again occur.
Further particulars may be had, during the ensuing fortnight, (if by letter post-paid), of Mr. Duffield, Bookseller, Bath; or Mr. Betteson, Bookseller, Cheltenham.
This Advertisement will not be repeated.

Situation Wanted.
EMANUEL N. SHEVIER, Clerk of the Publication Department of the London Society for promoting Christianity amongst the Jews, respectfully announces that he will shortly be disengaged, and is therefore anxious to obtain another Situation, in Town or Country. He is thirty years of age, single, and of the Established Church of England; was brought up to the Book-selling Business, is conversant in Accounts, and writes a good Hand. He can produce satisfactory testimonials of character, &c. in the situations filled by him in England and Ireland during a period of seventeen years, five of which have been spent in the service of the London Society.
Address 10, Wardrobe Place, Great Carter Lane, Doctors' Commons.

Just published by R. Ackermann, Strand.
JULIET. Engraved in Mezzotint, by Mr. Say, after a Painting by Miss Floribus, dedicated, by special permission, to Her Most Gracious Majesty Queen Adelaide. Size, 18 inches by 14. Price 15s.; Proofs, 31s. 6d.

Published by R. Ackermann, 96, Strand; and to be had of all Printers.
A PORTRAIT OF HER ROYAL HIGHNESS THE DUCHESS OF KENT, dedicated, by special permission, to Her Highness the Princess Victoria. Engraved by T. Woolnough, from the original Picture by H. Colten, Size, 4 1/2 by 3 1/2. Price, Proofs, India paper, 7s. 6d.; Prints, 5s.
Her Royal Highness the Princess Victoria, dedicated, by special permission, to Her Royal Highness the Duchess of Kent. Engraved by T. Woolnough, from a Painting by A. Stewart. A Circle. Price, India Proofs, 7s. 6d.; Prints, 5s.

BOOKS PUBLISHED THIS DAY.

Just published,
THE HOUSEKEEPING ACCOUNT.
A BOOK for 1831, containing, on an improved Principle, ruled together with a Weekly Account of Domestic Expenditure, together with a Weekly Washing Account for the Year, and Checks to be given with each Week's Delivery, forming, in an 8vo. vol. of convenient size, a complete Housekeeping Account-Book, embracing every Item of Family Expenditure. Price, strongly covered, 2s. 6d.
Published by Edward Dunn and Son, 9, Fleet Street.

Post 8vo. 8s. 6d.
IRELAND and its ECONOMY; being the Result of Observations made on a Tour through the Country in the Autumn of 1829.
By J. E. BICHENO, Esq. F.R.S. Sec. Linn. Soc. &c. &c.
"We take leave of Mr. Bicheno with feelings of respect for his talents and learning, and above all for the dispassionate manner in which he delivers his views on the great questions on which he touches."—*Athenaeum*, May 20, 1830.
"Mr. Bicheno's little volume is one of the most intelligent books on Ireland that has been published for years. The whole volume is full of excellent feeling, and is remarkable for an absence of all attachment to particular theories, quite refreshing in our days."—*New Monthly Magazine*, July 1830, p. 279.
John Murray, Albemarle Street.

The National Library, No. III.
Beautifully printed in small 8vo. with a Portrait of Dr. Black, Price 5s.
THE HISTORY OF CHEMISTRY.

No. II. contains the History of the Bible, by the Rev. G. R. Gieg, M.A. M.R.S.L. &c.
No. IV. containing the History of Chivalry, by G. P. R. James, Esq. Author of "De L'Orme," "Darnley," "Richelieu," &c. with Plates, will appear on the 1st of Dec.
Henry Colburn and Richard Bentley, New Burlington Street.

Causes of the Failure of the Military at Paris.

THE MILITARY EVENTS OF THE LATE REVOLUTION, BY AN OFFICER OF THE GUARDS. From the French. John Murray, Albemarle Street.

Handsome printed in 4to. with a Portrait, price 3s. 6d. boards. THE LIFE OF RICHARD BENTLEY, D.D. Master of Trinity College, and Regius Professor, Divinity in the University of Cambridge; with an Account of his Writings, and Anecdotes of many distinguished Characters during the Period in which he flourished. By the Very Rev. JAMES HENRY MONK, D.D.

London: Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, and J. and J. Deighton, Cambridge.

In 4 large vols. 8vo. price 3s. 3d. boards, the 2d edition, revised and corrected, of

A NEW ANALYSIS OF CHRONOLOGY and GEOGRAPHY, HISTORY and PROPHECY, in which their Elements are attempted to be Explained, Harmonised, and Vindicated, upon Scriptural and Scientific Principles, tending to remove the Impediments and Discordance of preceding Systems, and to obviate the Cavils of Sceptics, Jews, and Infidels. By the Rev. WILLIAM HALES, D.D.

Rector of Killesandra, in Ireland, and formerly Fellow of Trinity College, and Professor of Oriental Languages in the University of Dublin. London: Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Price 12s. the 10th edition of

THE FRENCH COOK; or a System of Fashionable and Economical Cookery. By LOUIS EUSTACHE UDE, Chevalier Cook to Louis XVI. and the Earl of Sefton; late Steward to His Royal Highness the late Duke of York, and now Maître d'Hôtel at Crookford's Club.

With an Appendix of Observations on the Meals of the Day, comprising Mr. Ude's celebrated Method of giving Suppers at Routs and Soirées, as practised by him when with Lord Sefton; a History of Cookery; Rules for Carving, and for the Choice of Meats; with other Additions. Also, price 9s.

The Italian Confectioner; or, Complete Economy of Desserts, containing the Elements of the Art, according to the most approved Practice. By G. A. JARRIN, Confectioner. 4th edition, corrected and enlarged. Messrs. Ebers and Co. British and Foreign Library, 27, Old Bond Street.

Price 12s.

ACKERMANN'S FORGET ME NOT, for 1831.

"This very pretty volume is the first to take the field, and, as usual, does equal credit to the taste and industry of the publishers, who allude with most justifiable vanity to its success, not only on its own soil, but in more remote countries; and truly it may well beguile even a sultry morning by the Ganges."—Literary Gazette.

Also, Ackermann's Juvenile Forget Me Not for 1831, price 6s.

"We cannot but think our young friends ought to be very happy in the prospect before them: here is a pretty picture, pretty tales, and pretty poems."—Literary Gazette.

ENCYCLOPÆDIA LONDINENSIS; or, Dictionary of Arts, Sciences, and Literature.

This Work is complete in Twenty-four closely printed quarto Volumes, and is illustrated with 1,520 beautiful Engravings, price 2l. per volume. London: Published by Jones and Son, 17, Ave Maria Lane.

2d edition, crown 8vo. 9s. 6d.

ON FINANCIAL REFORM. BY SIR HENRY PARNELL, Bart.

"Sir Henry Parnell's admirable work, to which we have more than once directed the attention of our readers."—Times. John Murray, Albemarle Street.

Containing 5000 Receipts. In 1 vol. neatly and closely printed in double columns, comprising upwards of 500 pages, price only 9s. 6d. bound.

THE COOK'S DICTIONARY and HOUSEKEEPER'S DIRECTORY. A New Family Manual of Cookery and Confectionary, on a Plan of ready Reference never hitherto attempted. BY RICHARD DOLBY, Of the Thatched House Tavern, St. James's Street.

"The dictionary plan is novel; you pounce at once, ladies, on the article you want, and settle in half a glance how to have it cooked. Poor Dr. Kitchiner would have run wild, and summoned a new committee of taste, had he thought it possible to present such an improvement in the culinary art. It appears to contain all that the verted gourmand in Christendom would sigh for, in a life like Methusalem's, with 'a throat a yard long, and palate all the way.'"—Ladies's Magazine. Henry Colburn and Richard Bentley, New Burlington Street.

Mr. Faber's New Work on the Prophecies. In 3 vols. 8vo. price 1l. 10s. in boards.

THE SACRED CALENDAR of PROPHECY. By GEORGE STANLEY FABER, B.D. Rector of Long Newton.

"The object of this Work is to combine together the various Prophecies both of the Old and of the New Testament which treat of the grand double Period of Seven Times—a period coinciding with the times of the Gentiles, which, according to a strict chronological success, are there justly styled by Mede, the Sacred Calendar of Prophecy. In the present, both much more extensive and much more complete Work, the author has been enabled, at once to rectify various errors in his preceding publications, and to give a better arrangement (extending down to the present day) of the great part of the prophetic volume which he believes to have been already unfolded. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Whom may be had,

All Mr. Faber's other Works,

Major Rennell's Geography of Herodotus. In 2 vols. 8vo. price 1l. boards, new edition, printed from the Author's revised Copy, and containing the original Maps and Portrait, of

THE GEOGRAPHICAL SYSTEM of HERODOTUS EXAMINED and EXPLAINED, by a Comparison with those of other Authors, and with Modern Geography. By JAMES RENNELL, Esq. F.R.S. Lond. and Edin. Late Major of Engineers and Surveyor-General in Bengal. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Dr. Johnson on Indigestion.

AN ESSAY ON INDIGESTION, or MORBID SENSIBILITY of the STOMACH and BOWELS, as the proximate Cause, or characteristic Condition of Dyspepsia, Nervous Irritability, and other Disorders, Hypochondriacal, and many other Affections, with an improved Method of Treatment, Medicinal and Dietetic. To which are added, Observations on the Diseases and Regimen of Invalids, &c. By JAMES JOHNSON, M.D.

Physician Extraordinary to the King. 6th edition, enlarged, price 9s. 6d. boards. Published by T. and G. Underwood, 32, Fleet Street; and S. Highley, 174, Fleet Street.

Church Architecture.

NEALE and LE KEUX'S VIEWS of the COLLEGIATE and PAROCHIAL CHURCHES of GREAT BRITAIN, with Historical and Architectural Descriptions. Nine and six Editions, and the following reduced Prices. 2 vols. royal 8vo. in cloth, price 2l. 10s. published at 5s.; 2 vols. royal 4to. Proofs on India paper, (arranging with Britton's Cathedrals), in cloth, price 5s. published at 10s.

The Organic Remains of a Former World. In 3 vols. 4to. with 54 coloured Plates, exhibiting above 700 Fossil Remains, price 6l. 6s. in cloth.

2. An Examination of the Mineralised Remains of the Vegetables and Animals of the Antediluvian World, generally termed Extraneous Fossils. By James Parkinson. Vol. II. may be had separately, price 2l. 12s. 6d. cloth.

Outlines of Oryctology. In crown 8vo. with Ten Plates, price 12s. cloth, a new edition, corrected by the Author.

3. An Introduction to the Study of Fossil Organic Remains, especially those found in the British Strata. Intended to aid the Student in his Inquiries respecting the Nature of Fossils, and their Connexion with the Formation of the Earth. By James Parkinson.

4. Dr. Turton's Bivalve Shells of the British Islands, systematically arranged, with 30 Plates, coloured by Sowerby. 4to. cloth, price published at 4l. A Practical Conchologist observes, "that Dr. Turton's Account of British Shells is not only interesting to the collector, but also particularly desirable, as it includes the shells that have been discovered since the publication of Montague. The author's residence being on that part of the coast where the greatest number of shells are found, he had the most favourable opportunities of investigating the subject, the objects of his study being continually before him."

5. Watt's Bibliotheca Britannica; or, General Index to British and Foreign Literature. In 4 vols. 4to. in cloth, price 6l. 6s. published at 11l. 11s. Odd Parts, to complete Sets, at 10s. 6d. each.

This Work is of the greatest utility. Vols. I. and II. contain a complete Catalogue of Authors and their Works, their various editions, sizes, and prices. Vols. III. and IV. constitute an Index or Key to all that has been written on every subject.

6. Dr. Dibdin's Library Companion. In 1 large vol. 8vo. price 14s. boards, published at 1l. 9s.

A Catalogue of Books, gratis. M. A. Nattall, 24, Tavistock Street, Covent Garden.

Small 8vo. 5s. 6d.

THE VERACITY OF THE FIVE BOOKS

of MOSES, argued from undesigned Coincidences to be found in them, when compared in their several Parts. By the Rev. J. J. BLUNT, Fellow of St. John's College, Camb. "Mr. Blunt has already signified himself by his work on the Acts of the Apostles, as an individual intimately conversant with the most minute particulars of holy writings, and a very successful disciple of Dr. Paley, in the management of that species of Christian evidence which arises from the discovery of undesigned coincidence of revealed truth. This volume cannot fail to increase his reputation. It is both a pleasing and instructive work, and is creditable to the talents, learning, and piety of the respected author."—Evangelical Mag. June 1830.

"We think Mr. Blunt's clever and very ingenious web of argument will be read with pleasure, as it certainly must with profit."—Monthly Review.

Also, by the same Author,

The Veracity of the Gospel and Acts, a new edition, post 8vo. 5s. 6d.

John Murray, Albemarle Street.

A new edition, post 8vo. 10s. 6d. with numerous Wood Engravings of original Portraits and Subjects of Interest,

THE GOLD-HEADED CANE.

"The Gold-Headed Cane is a modest little volume, containing sketches of the lives and manners of four most eminent physicians, from Radcliffe to Baillie, and composed in a style lively, graceful, often humorous, well calculated to attract the unprofessional reader. We wish it were generally circulated."—Quarterly Review.

John Murray, Albemarle Street.

Price 6d.

GENERA NOMINUM; or, a New and Brief Mode of Learning the Genenders of Latin Nouns; being a Substitute for the Propria quæ maribus, &c.

By GEORGE FRETWELL, Master of the Classical Establishment, Welbeck Street, Cavendish Square.

Lately published, by the same, A New Collection of Arithmetical and Scriptural Tables, for the Use of Schools. London: Whittaker and Co. Ave Maria Lane; W. March, 145, Oxford Street.

Complete in 2 vols. 8vo. with a Portrait of the Author, and numerous other Plates,

TRAVELS to TIMBUCTOO, and other Parts of Central Africa, during the Years 1824, 1825, 1826, 1827, and 1828.

By M. CAILLIE. "M. Caillie has unquestionably achieved one of the grandest discoveries of modern times. Caillie is the only European who has succeeded in the attempt to penetrate to Timbuctoo, and returned, in spite of the perils interposed by the climate, to communicate all the information he has collected."—Evening Paper. Henry Colburn and Richard Bentley, New Burlington Street.

D. A. Talboys, Oxford; and Whittaker, Treacher, and Co. London.

ADDISON. The Miscellaneous Works, in Prose and Verse, of JOSEPH ADDISON, a new edition, with Notes, and a Sketch of the Author's Life, 4 vols. fcap. 8vo. beautifully printed, to match in size the various editions of the British Essayists, in royal 18mo. 1l. Oxford, 1820.

For those who have the British Essayists, these vols. will complete the Works of Addison. "We can warmly recommend these volumes."—Lit. Gaz.

Just published by Henry Colburn and Richard Bentley, New Burlington Street.

IX. The Persian Adventurer, forming a Sequel to the Kuzilbash. By J. B. Frazer, Esq. In 3 vols. post 8vo.

X. Capt. Beechey's Voyage to the Pacific and Behring's Strait, for the Purpose of Discovery, and of co-operating with the Expeditions under Captains Parry and Franklin. In 1 vol. with numerous Plates.

XI. Stories of American Life. Edited by Mary Russell Mitford. In 3 vols. post 8vo.

XII. The English Army in France; being the Personal Narrative of John Gordon Smith, M.D. 2d edition, in 2 vols. small 8vo.

Anatomy and Diseases of the Ear.—Price 9s. 6d.

A NEW and IMPROVED MAP of the EAR, exhibiting its internal, intermediate, and external Structure, with the Bones in situ, together with the principal Nerves and Blood Vessels in its immediate vicinity. Price as coloured, or 10s. 6d. on roller.

By J. HARRISON CURTIS, Esq. Surgeon-Aurist to the King.

"This map is certainly well calculated to facilitate the student's early acquisition in aurial anatomy, and to him we can recommend it."—Medical Observer and Review. Published by S. Highley, 174, Fleet Street.

Of whom may be had,

A Synoptical Chart of the various Diseases of the Ear, shewing at one View their Order, Classification, Seat, Symptoms, Causes, and Treatment, price 2s. 6d.

"This chart expresses the whole subject in so lucid and matterly a style, as to render it a highly valuable sheet of reference. The popular mode of explanation adopted by the author, will make it as acceptable to non-medical readers as to the profession."—Atlas.

In 8vo. 3s. 6d.

THREE LECTURES on WAGES, and on some Effects of Absenteeism, Machinery, and War, delivered before the University of Oxford, in Easter Term, 1820.

By NASSAU W. SENIOR, Magd. Coll. A.M. Late Professor of Political Economy.

Lately published, by the same Author,

John Murray, Albemarle Street.

In 2 vols. foolscap 8vo. 14s.
LIFE AND ADVENTURES OF GIOVANNI FENATI, Native of Ferrara; who, under the name of Mahomet, made the Campaign against the Wahabites for the recovery of Mecca and Medina; and since acted as Interpreter to European Travellers in some of the parts least visited of Asia and Africa. Translated from the Italian as dictated by himself, and edited by WILLIAM JOHN BANKS, Esq.
 "It is long since we have met with so eventful and interesting a narrative."—*Literary Gazette*.
 "The unprejudiced record of the observations of a man of plain sense, whose singular fortune it has been to have seen more of many countries than perhaps any other living person. There must be strange adventures in such a life, and the present narrative is proportionally full of interest."—*Athenaeum*.
 John Murray, Albemarle Street.

In 8vo. price 4s.
CASES illustrative of the Efficacy of various Medicines administered by Inhalation in Pulmonary Consumption, in certain Morbid States of the Trachea and Bronchial Tubes, attended with distressing Cough; and in Asthma.

In 8 large vols. 8vo. price 6l. 2s. in boards,
RECENSIO SYNOPTICA ANNOTATIONIS SACRÆ; being a Critical Digest and Synoptical Arrangement of the most important Annotations on the New Testament, Exegetical, Philological, and Doctrinal.
 By the Rev. S. T. BLOMFIELD, D.D. F.A.S.
 Of Sidney College, Cambridge, Vicar of Bishopscote in Rutland, and Author of a New Translation of Thucydides, illustrated with very copious Notes. 3 vols. 8vo.
 In the foregoing Work it has been the especial aim of the author to ascertain the true interpretation, not only by a diligent use of all the best Modern Commentators, but by exploring the fountain heads of Interpretation, as found in the Ancient Fathers, and the Greek Commentators, Schollasts, and Glossographers. Every apposite illustration of phraseology or sentiment to be found in the multifarious and immense Collectanea, both of the Classical and Rabbinical Illustrators (especially Wetstein and Kypke, Lightfoot and Schegien) has been selected, and many thousands of original ones have been added. The very valuable matter derived from the above sources has been digested into one Corpus, in which each portion is, as far as possible, ascribed to its respective author, and the foreign matter translated into English. With the whole is interwoven a Series of Critical Remarks, intended to guide the judgment of the student amidst the diversities of jarring interpretations; and a very copious body of Original Annotations, in which the true reading is, in important cases, discussed, the connexion traced, the course of reasoning indicated, and in general whatever seemed necessary to complete the Corpus Exegetico, is supplied by the editor, who has further consulted the benefit of students by forming a Series of Glossarial Notes on every word or phrase of the least difficulty, and occasionally by giving a new literal translation, or close paraphrase of the sentences annotated on.
 Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 724.—AMERICAN EDITION.

SATURDAY, DECEMBER 4, 1830.

REVIEW OF NEW BOOKS.

The Life of Mrs. Jordan; including Original Private Correspondence, and numerous Anecdotes of her Contemporaries. By James Boaden, Esq., author of "the Life of Kemble," &c. 2 vols. 8vo. London, 1830. Bull.

At one period of Mrs. Jordan's life, Mr. Boaden remarks, (Vol. II., page 236,) she "became the subject of a great variety of attacks in the infamous prints of the time—probably levelled at her *purse*—and conceiving the union of her daughters with two gentlemen in public life a happy opportunity to work upon her fears or their delicacy. Among other matters, 'they understood—(by which the reader always understands, if he knows them, they invented)—a violent quarrel between the Duke and herself.'" Now, we are not Quixotic enough to stand forth for the universal probity, honour, and good feeling, of the press—but we must say, that this attack comes with an exceedingly ill grace from the author of these volumes.

"Oh, would some power the giftie gie us,
To see oursels as others see us!"

Mr. Boaden would not have ventured to condemn others, while himself committing a far more heinous offence. They slandered the living—he assails the dead; they intruded on the privacy of the domestic circle—he violates the sanctity of the grave. Spite, and malice, and envy, and the thirst of base lucre, might be their incentives to do the work of shame; but has he a right to reprehend them, who, to gratify the worst appetites of the multitude, exhumes the corpse after it has lain for years unmolested in the last sleep of mortality, and, heedless of the feelings which must be lacerated in his course, sacrifices them all for the gain to be derived from such a production?

From the moment we saw this work announced, to that in which we have finished its perusal, we could entertain only one sentiment respecting the design—a design which we think every honest breast must reprobate. What led to it?—the accession to the throne of a justly popular and beloved king, who had a claim upon every good and loyal subject to spare him this cruel annoyance. But, putting apart his Majesty and his justly honoured family—(men and women of the most exemplary and virtuous characters, in very word the ornaments of society—unassuming, amiable, and benevolent)—putting these aside, which it is indeed a hard task to do, we would ask, what good end could be proposed by the publication of these Memoirs? Could it be to improve the general morals, by presenting a picture of all that was lovely, fascinating, and estimable, accompanied by one circumstance of unhappiness, for which, Heaven knows, the largest allowance was due, not merely in charity, but in the sternness of principle?—or could it be to tempt the hypocritical to display their odious sanctity by casting the first stone at erring humanity? Whichsoever it was, it was alike to be deprecated and deplored. We

will neither cant, nor be the apologists of what is wrong; but we are free to say, that, all things considered, from youth to age, from the cradle to the tomb,—if ever departure from the established rules of our condition could be deemed venial, it was in this case;—if ever the final close of the scene, instead of the heartless re-raising of the curtain, should have been hallowed by the silent tears of sympathy, of pity, and of mercy,—it was when the sepulchre closed on the remains of a being who was all but an angel.

We shall now come to speak of the work before us somewhat more in detail: it is a duty we owe our readers, and we shall perform it with as much fidelity and delicacy as we can.

As a book, the present is as complete a specimen as we ever saw of what may be done by the art of amplification. All that relates to Mrs. Jordan in it, might be comprised in far less than half of one of the volumes. In point of fact, the Memoirs begin at the twenty-third Chapter (*i. e.* Vol. II., page 232.) and there are but twenty-eight in all (pages 364): the preceding personal notices are of the slightest texture—consist of theatrical engagements, a list of new parts, &c. of little or no interest; and are swelled into bulk by stories about every body who wrote or performed, or were connected with the theatres where Mrs. Jordan appeared. An infinite deal of nothing, is the most applicable quotation which could be made to the whole;—if it be not worse than nothing, to have chapter lumbering after chapter, without a single syllable respecting the individual whose name gives the title to the work. Chapter X., for instance, is a history of Drury Lane Theatre for about two centuries; and Chapter XX. contains an account of the Young Roscins, and other matters—but not a word of Mrs. Jordan, except that she played for Macklin's widow! From the first twenty-two chapters we gather that Mrs. Jordan's mother was one of three sisters of a respectable Welsh family of the name of Phillips, who embraced the stage as a profession. Grace Phillips married a Mr. Bland; but the union, of which Dorothy, or Dora, was the issue, was dissolved on the ground of minority. Mr. Boaden fixes her birth in 1762, in Ireland; and at the age of sixteen we find her a favourite upon the stage, to which it may be readily supposed the example of her relatives bent her mind. Of this sort of early influence the author entertains singular opinions—for he says:—

"The studies of the stage, it may here be observed, constitute a better education than is commonly derived from the schools. What other ladies have under their command, constantly encamped, such 'an army of good words' as our actresses? Who, besides them, are so stored with every variety of neat and polished thought? Who else can have equal self-possession, equal address; and, above all, who ever approach them in distinct articulation, in voluble or impressive delivery? So great are these advantages, that they have kept very powerful actresses in high reputation for their

wit, who could scarcely read their parts, and never acquired the orthography in which they were all of them printed. We shall not therefore be surprised, that without the possibility of her receiving an expensive education, which her embarrassed parents could not afford, Mrs. Jordan acquired, almost domestically, a very correct diction in her native language, and the power of composing agreeably, in either prose or verse, with little premeditation."

Her first character was Phœbe in *As You Like It*, at Dublin; and she played there and at Cork, rejecting the addresses of a Lieutenant Doyme, who offered her marriage. In 1782 she visited England, and performed with Tate Wilkinson's company in Yorkshire (of which we hear a great deal) for about three years, with increasing fame. It was during this period that she dropped the name of Miss Francis, and assumed that of Mrs. Jordan, by which she afterwards became so celebrated as the Thalia of England. Her "swindling laugh," as it has been happily called, seems to have conquered all hearts; and the charming young actress was besieged by admirers. Mr. (afterwards Sir Richard) Ford was the most fortunate; and for nearly ten years he was the envied possessor of this prodigal gift of nature. In 1785 Mrs. Jordan made her *début* in the metropolis; and 1791-2, Mr. Ford* failing to accede to those legal ties which were required from him, she gave herself and all her warm affections to H. R. H. the Duke of Clarence. With him she enjoyed twenty years of uninterrupted felicity; and was (save in what the law denies to our princes and subjects) a pattern of every conjugal and maternal worth.

At the expiration of this period some heavy pecuniary embarrassments in which she became involved, on account of her daughter Frances (Mrs. Alsop) and Mr. Alsop, led to the dissolution of the royal connexion; but we can (and we rejoice at it) afford no insight into these transactions and their unfortunate result; for of all the perplexed and unintelligible statements we ever read, that of the author concerning them is the most mystifying and inexplicable. There is some correspondence, it is true; but, from not knowing to whom it is addressed, there is no possibility of discovering the meaning: it might as well have been in cipher. It is, nevertheless, from these letters, &c. that we must select our extracts: Mr. B. says of them—

"A momentous point in her life is about to open upon us, which we are happily enabled to illustrate by her own letters. They will shew her, though deeply suffering, generous, candid, and affectionate; meriting a very dif-

* Of Ford, Mr. Boaden draws a ludicrous picture. "He married a Miss Booth, with whom he got some property. Of all the men whom it has been my chance to know, I never knew a man of whom there is so little to tell as Sir Richard Ford. I asked men of his own standing at the bar, and on the bench, their recollections of Ford. They knew him as I did, personally; but he had impressed their minds as a fly would their hands—they had just shaken it, and it was gone."

ferent fate, but drawn on from circumstances over which she could have no control, to encounter alienation and unsuspected difficulty; the failure of her maternal hopes, and the embarrassment of her finances. A noble fortune, acquired by unexampled toil, mouldering away unaccountably from her disposal, and her independence, at last, consisting in an annuity, which sprung solely from the bounty of him whose happiness she had promoted for nearly twenty years of even exemplary attachment and confidence."

The Misses Ford, Dora and Lucy, married a Mr. March of the Ordnance Office, and Colonel Hawker; and soon after, the troubles of their mother reached a climax. But we must quote her own words upon the first rumour of a domestic rupture.

"With regard to the report of my quarrel with the duke, every day of our past and present lives must give the lie to it. He is an example for half the husbands and fathers in the world—the best of masters—and the most firm and generous of friends. I will, in a day or two, avail myself of your kind offer to contradict those odious and truly wicked reports. I am so ill that I can do nothing myself—but must wait for the assistance of a good and clever friend, who is at present out of the way, and who (if truth is not quite scared out of the world) will endeavour to do away the ill impressions those reports were meant to make."

Mr. B. insinuates that he was the adviser alluded to; but, like the rest, it is impossible to attach a clear or certain meaning to his words. In April, 1809, the separation took place; and the author says:

"Her letters are always careless, unstudied effusions, written as fast as the pen will cover the paper. The following, however, is singularly valuable, as it unfolds much of her personal history; and proves how affectionately she had answered the numerous calls of family upon her professional emoluments. She herself, it will be remarked, considered her success through life as most extraordinary; and, notwithstanding her almost boundless liberality to her relations, in her modest estimate of her claims, she thought that she had certainly obtained enough;—however, her duty, as she conceived to others, still urged her to go on. Her sincerity, a great feature in her character, openly confesses, that, as to the talents around her, she is not excited by emulation, and that her vanity has long been gratified to the height. But she never acted better in her life, than at the library, the Bath 'School for Scandal.' Dr. Johnson would have said, had he received such a letter from her, 'Say no more, dearest; rest your epistolary, aye, and social fame too, upon your description of the conduct which followed that impertinence.' 'In pity to them, I left the place immediately; and flatter myself I did not shew any disgust, or ill nature, on the occasion.' It reads to my ear and heart, like one of those hopes of his own moderation, that the sage was wont to murmur into the ear of the diligent and reverential Boswell.

"Bath, Sunday, April 22, 1809.

"Dear Sir,—I should be more insensible than my heart tells me I am, if I did not experience much gratification from your very kind and friendly letters: friendly they must be; for, though I am ever asking favours of you, I feel it impossible that I can ever return them. My professional success through life has, indeed, been most extraordinary; and, consequently, attended with great emoluments. But from my first starting in life, at the early age of fourteen, I have always had a large

family to support. My mother was a duty. But on brothers and sisters I have lavished more money than can be supposed; and more, I am sorry to say, than I can well justify to those who have a stronger and prior claim on my exertions. With regard to myself (as much depends on our ideas of riches), I have certainly enough; but this is too selfish a consideration to weigh one moment against what I consider to be a duty. I am quite tired of the profession. I have lost those great excitements, vanity and emulation. The first has been amply gratified; and the last I see no occasion for; but still, without these, it is a mere money-getting drudgery. The enthusiasm of the good people here is really ridiculous; but it brings 'grist to the mill,' and I shall, notwithstanding the great drawback of unsettled weather, clear, between this place and Bristol, from 800*l.* to 900*l.* Though I very seldom go out, when from home, I was tempted by my dear girl, to go to a fashionable library to read the papers; and, not being known, was entertained by some ladies with a most pathetic description of the parting between me and the duke! My very dress was described, and the whole conversation accurately repeated! Unfortunately for the party, a lady came in, who immediately addressed me by name, which threw them into the most ridiculous and (I conceive) the most unpleasant embarrassment imaginable. In pity to them, I left the place immediately, and flatter myself I did not shew any disgust or ill-nature on the occasion. The last favour I asked of you was not to gratify my own vanity, but my best friends, who, in spite of the world, are, I can with truth assure you, as much interested about me as they were seventeen years ago. Believe me ever, your truly obliged,

"DORA JORDAN."

Mrs. Jordan returned to the stage, and performed both in this country and in Ireland; but (passing by a strange episode about Mary Ann Clarke*) we proceed with the narrative.

"While she was acting at Cheltenham, a storm burst upon her totally unexpected, which is thus recorded by an actor, who was at the time in the theatre. She received a letter from his royal highness, desiring her to meet him at Maidenhead, where they were to bid each other farewell. Mrs. Jordan had concluded her engagement, but remained one night over to perform Nell, for the manager, Mr. Watson's benefit. It was in the afternoon of this very day she received the fatal letter. With that steady kindness that always distinguished her, she arrived at the theatre dreadfully weakened by a succession of fainting fits. She, however, struggled on with Nell, until Jobson arrived at the passage where he has to accuse the conjuror of making her laughing drunk. When the actress here attempted to laugh, the afflicted woman burst into tears. Here Jobson with great presence of mind altered the text, and exclaimed to her—'Why, Nell, the conjuror has not only made thee drunk; he has made thee crying drunk;' thus covering her personal distress, and carrying her through the scene in character. After the performance, she was

* There is an anecdote of her we do not remember to have heard before:—

"On the 3d of July, 1809, a cause was tried in the Court of King's Bench, in which an upholsterer named Wright was plaintiff, and Wardle, the member, defendant. Mrs. Clarke, in support of the plaintiff, gave evidence with her accustomed precision and force. During the cross-examination, one of the counsel pertly accosted her thus: 'Pray, madam, under whose protection are you now?' She replied instantly, looking archly at the bench—'Lord Ellenborough's.'—His lordship smiled—and the *esquive* of the trisum convulsed the court with laughter."

put into a travelling chariot in her stage dress, to keep her appointment with the royal duke, in a state of anguish easily to be conceived. What passed at the meeting I would not wish to detail." (If he could, it would have been worth all his book to the curious; and, if he could not, he had no business to undertake it.) "After allowing her due time to recover her spirits, and endeavour to do herself justice by making her statement to the regent—submitting herself entirely to his judgment, and finally to the generous nature of the duke himself—she thus writes upon the subject of the separation, to her confidential friend. She may now be pardoned for omitting to date the communication. But her mind is still amiable in its disappointments; and she turns herself unaffectedly to apologise for the rashness by which she has suffered.

Letter I.

"Bushy, Saturday.

"My dear sir,—I received yours and its enclosure safe this morning. My mind is beginning to feel somewhat reconciled to the shock and surprise it has lately received; for could you or the world believe that we never had, for twenty years, the semblance of a quarrel? But this is so well known in our domestic circle, that the astonishment is the greater. Money, money, my good friend, or the want of it, has, I am convinced, made him, at this moment, the most wretched of men; but having done wrong, he does not like to retract. But with all his excellent qualities, his domestic virtues, his love for his lovely children, what must he not at this moment suffer! His distresses should have been relieved before—but this is *entre nous*. All his letters are full of the most unqualified praise of my conduct; and it is the most heartfelt blessing to know that, to the best of my power, I have endeavoured to deserve it. I have received the greatest kindness and attention from the R****, and every branch of the royal family, who, in the most unreserved terms, deplore this melancholy business. The whole correspondence is before the R****; and I am proud to add, that my past and present conduct has secured me a friend, who declares he never will forsake me. 'My forbearance,' he says, 'is beyond what he could have imagined!' But what will not a woman do, who is firmly and sincerely attached? Had he left me to starve, I never would have uttered a word to his disadvantage. I enclose you two other letters; and in a day or two you shall see more, the rest being in the hands of the R****. And now, my dear friend, do not bear the D. of C. unfairly abused: he has done wrong, and he is suffering for it; but, as far as he has left it in his own power, he is doing every thing kind and noble, even to the distressing himself. I thank you sincerely for the friendly caution at the end of your letter, though I trust there will be no occasion for it; but it was kind and friendly, and as such I shall ever esteem it. I remain, dear sir, yours sincerely, DORA JORDAN.

"These letters are for your eye alone."

Letter II.

"Bushy, Monday.

"My dear Sir,—I should be sorry the letters I have enclosed to you were the only vouchers I could produce to the world, if necessary. But, good God! what will not the world say? I received two letters this day, telling me that I was accused of intriguing with the Duke of Cumberland! I am heart-sick, and almost worn out with this cruel business: but I am, very gratefully, yours,

DORA JORDAN."

Letter III.

"Bushy, Thursday.

"Dear Sir,—Allow me to thank you for your kind attention to my request. We really live so much in the country, and so entirely within ourselves, that we might be dead and buried without our friends knowing even that we had been ill. I have the heartfelt happiness of informing you, that the duke is considerably better, though far from being as we could wish: however, his physicians have given his royal highness permission to go to town to-morrow. I have been confined ever since my return, owing to the fatigue and anxiety I have gone through. I fear it will be some time before I recover the very great shock I received. I hear there are to be two Drury Lanes—I believe just as likely as one. Yours ever,
DORA JORDAN."

Letter IV.

"Calogon Place, Thursday.

"My dear Sir,—I fear I must have appeared unmindful of your many kindnesses, in having been such a length of time without writing to you; but really, till very lately, my spirits have been so depressed, that I am sure you will understand my feelings when I say, it cost me more pain to write to those interested about me, than to a common acquaintance; but the constant kindness and attention I meet with from the duke, in every respect but personal interviews (and which depends as much on my feelings as his), has, in a great measure, restored me to my former health and spirits. Among many noble traits of goodness, he has lately added one more—that of exonerating me from my promise of not returning to my profession. This he has done under the idea of its benefiting my health, and adding to my pleasures and comforts; and, though it is very uncertain whether I shall ever avail myself of this kindness, yet you, if you choose, are at liberty to make it known, whether publicly or privately. Yours ever, &c. &c.

DORA JORDAN.

"P.S. I wish I could see you; but it is such a long way for you to come."

Letter V.

"St. James's, Tuesday, 7th December.

"My dear Sir,—I lose not a moment in letting you know, that the Duke of Clarence has concluded and settled on me and his children the most liberal and generous provision; and I trust every thing will sink into oblivion. Yours ever,
DORA JORDAN."

If our readers can solve the enigma, we shall not repine: we have laid all the materials before them, the entire pith and marrow of Mr. Boaden's revelations—contained in these letters, and what he calls "*Authentic Statement*."—In the autumn of 1815 Mrs. Jordan was called upon, very unexpectedly, to redeem some securities given by her, for money raised to assist a near relative. The cause of this aid was the pressure of matters purely of a domestic nature. The call upon her was sudden, and certainly unexpected; and, not finding herself in a situation to advance the 2,000*l.* claimed, she withdrew herself to France, deputing a friend in England to make every necessary arrangement for paying all the creditors as soon as possible. At the time of Mrs. Jordan's quitting England, she was in the receipt of an annual income of upwards of £2,000*l.* paid, with the greatest punctuality, quarterly, without demur, drawback, or impediment; and so continued to the hour of her death. Up to April 1816, Mrs. Jordan's drafts on Messrs. Courts and Co. were duly paid—

never, for a moment, could she have felt the gripping hand of poverty. I can positively assert, that never during her lifetime was one shilling paid towards liquidating the securities in question; nor was it urgent that it should be done; because the creditors, for the most part personal friends, well knew the upright principles they had to depend upon; nor were they ignorant, that the transcendent talents of this gifted being were always sure to receive a munificent reward from the hands of the public whenever she should again seek their assistance; and in the fruits of this they were sure of participating. Her protracted stay abroad was occasioned by untoward circumstances, over which the principals had no control. Up to the hour of Mrs. Jordan's leaving England, she had been living under the same roof with the relative with whom she was concerned in the securities alluded to. Reciprocal acts of kindness, mutual confidence in all domestic matters, and many points of private affairs, tended to create in Mrs. Jordan's mind a reliance upon this person. Never, for a moment, during the six years that her daughter had been married, had Mrs. Jordan reason to doubt his sincere affection, or his veracity; nor did she doubt them when she left England. Immediately upon the derangement of Mrs. Jordan's affairs, and before she left England, a statement of all the claims to which she was liable was made out, together with a list of the persons holding her bonds and bills of acceptance; the result of which convinced Mrs. Jordan that her liabilities did not much exceed 2,000*l.*; and that the claimants were, one and all, the personal friends of the parties. In August 1815 Mrs. Jordan left England for France, with the intention of remaining away some ten days, the time computed necessary to place matters in that state as to render her person legally secure from arrest. Her affairs were placed in the hands of persons well informed in every particular thereof, as of all other matters connected with her life. Mrs. Jordan was well aware that the creditors were only anxious to have their claims placed in a secure state, and that they were willing to give every accommodation required. She was also aware that her fellow-sufferer had given up a considerable portion of his annual income; and she felt that her representative in England could, in one hour's time, settle any doubtful point that might arise during the arrangement. In short, she knew that no impediment existed. Consequently, when she found that month after month elapsed without any thing being finally settled, her mind became troubled. When Mrs. Jordan left England, she took with her, as a companion, a lady who had for some years previous been employed in superintending the education of Mrs. Jordan's younger children, and who had for the last twelve months been Mrs. Jordan's constant attendant. This person came to England in January 1816, to receive and take to Mrs. Jordan her quarter's income, then in Messrs. Coutts' house. From the moment of her arrival in England, until she quitted it, she pursued a line of conduct towards the daughters of Mrs. Jordan (then residing in Mrs. Jordan's house) that was offensive beyond measure: she peremptorily, and in a most insulting manner, called upon the person concerned with Mrs. Jordan in the affair of the bills and bonds, to make oath that Mrs. Jordan was not liable to any claims beyond those of which she already knew; the demand was accompanied with base insinuations. Justly doubting this to be really the wish of Mrs. Jordan, and irritated at the cir-

cumstances attending the demand, it was refused; and on the same day, this lady returned to France—and there is little doubt but then, for the first time, Mrs. Jordan did become 'apprehensive.' During her stay in England, the lady alluded to informed two of Mrs. Jordan's daughters, that Mrs. Jordan's future place of residence in France was to be kept a profound secret from them, and that all letters from them to their mother must be sent through a third person, and directed to Mrs. James, instead of Mrs. Jordan; thus, from that time, all such communications first passed through the hands of a person, who might withdraw Mrs. Jordan's confidence and affection from those most interested in getting her back to England. It is necessary to revert to the verbal refusal given to take the oath demanded, because it has been made a point of much importance as connected with Mrs. Jordan's state of feeling, in consequence of the publication made in the *Morning Chronicle* of 26 January, 1824, of a letter of Mrs. Jordan's bearing date 16th January, 1816. Mrs. Jordan's letter must have been written immediately after the return of the above-mentioned lady to France; and there is great reason to think, that then only, for the first time, did a feeling of apprehension of further demands awake in Mrs. Jordan's mind, and the fatal step of cutting off the source of communication, prevented altogether, or perhaps only delayed, the receipt of a letter, written by the person refusing to take the oath, on the very same day, to say that he was truly willing to do whatever Mrs. Jordan should herself require, and that the oath should be taken whenever she wrote to say it was her wish. There can be no question that the mind of this great woman had been long and grievously oppressed—nor will this be any matter of wonder when a retrospect is taken of her eventful life. Who can deny that, in the greatest flow of her prosperity, she had many bitter memorials that good and ill will mingle in every human condition? The greatest pleasure that acquiring wealth could bestow upon Mrs. Jordan was its affording her the power of shedding greater happiness around her. Can there be a severer censure on her memory, than to think that pecuniary difficulties, even weighty, (which hers never were) could for any length of time have depressed a mind such as hers in its perfect state? I have thrown this statement together in the hope that you will deem it satisfactory."

Professing once more that we cannot comprehend the elucidations, and are, with regard to facts, just about as wise as when we sat down to these volumes, we shall not follow Mrs. Jordan into her seclusion in France, where she resided for a while in very melancholy spirits, and finally died almost broken-hearted, on the 9th of July, 1816.

A sweet portrait, after Romney, and a holograph letter (fac-simile) adorn the Memoirs, of which we may sum up the character by repeating, that they are miserably deficient in information, confused in arrangement, and made up with all sorts of matters and a catching title to attract notice. With regard to the principle involved in their publication at all, we have freely expressed our opinion— we hold it to be utterly indefensible; and the only poor palliation that can be afforded lies in the Apothecary's line—

"My poverty, but not my will, consents."

Regimen Sanitatis Salernitanum; a Poem on the Preservation of Health, in Rhyming Latin Verse. Addressed by the School of Salerno to Robert of Normandy, Son of William the Conqueror: with an ancient Translation, and an Introduction and Notes. By Sir Alexander Croke, D.C.L. and F.A.S. 8vo. pp. 199. Oxford, 1830. D. A. Talboys.

To the medical professor this volume will not fail to be highly interesting from its matter; and, from the quaintness of its style, to be infinitely amusing. He will sometimes indeed have to restrain the smile of superiority, at the grave simplicity and dogmatic absurdity with which, in the eleventh century, the College of Physicians were wont to afflict their patients; while he will more frequently have to trace the modern discovery and the specific nostrum to some antique common-place. Nor will he seldom find reason to exult, how soon the twilight of his science began to dispel the profound darkness of the middle ages, and feel proud of the stout infancy of his profession, which while in the cradle strangled the Typhon, and commenced its vigorous labours of anticipating or alleviating human suffering,—in aiding to rid the world of the ravages and havoc of disease. To the antiquary,—if there be one whose researches this little book may have eluded,—a rich fund of delight will be opened. Even if he should have met with the original, his veneration for antiquity will not be violated by meeting an old friend with a new face: we have the authority of Sir Alexander Croke's introduction for our declaration, that the poem is "in the precise state in which it was sent to the King of England;" that is, Duke Robert of Normandy, who was to have been king, provided he had lived long enough, had not flung his crown at the Saracens, and his brother William Rufus, the pawnbroker, had thought proper to let him.—We quote Duke Robert's history; since to him the poem was dedicated.

"Such was the situation of the country, and the state of medical science at Salerno, when Robert Duke of Normandy, the eldest son of William the Conqueror, having mortgaged his dukedom for ten thousand marks to his brother William Rufus, set out upon his expedition to Palestine. This army of the crusaders, which consisted of Britons, Normans, and French, was conducted principally by Hugh the great Count of Vermandois, the Duke of Normandy, Robert Count of Flanders, Stephen Count of Chartres and Blois, Eustace Count of Bologne, and Odo Bishop of Bayeux. Whilst Godfrey of Bouillon with his companions marched through Hungary, this division left France, in September 1096, and crossed the Alps into Italy. At Lucca they received the benediction of the pope, visited the tombs of the apostles at Rome, and repaired to Salerno, the metropolis of the Norman duchy of Apulia. Robert of Normandy was nearly related to the reigning family. Ruggiero, the duke, had married Adela, Robert's first cousin, the daughter of Robert le Frison, who was brother to Matilda, the wife of William the Conqueror. The season was too far advanced to proceed safely by sea to the coast of Epirus. The impetuosity, however, of the Counts of Vermandois and Flanders impelled them to brave the dangers of the sea, and to pass over with their troops. The Duke of Normandy, and the Counts of Chartres and Bologne, passed the winter at Salerno. In the April following they proceeded on their expedition from the ports of Apulia. In their way to Bari they

visited the monastery of Mount Casino, to recommend themselves to the prayers of the monks, and the protection of Saint Benedict. From hence they sailed over to Durazzo, arrived at Constantinople, and joined the armies of the crusaders at the siege of Nice. It is unnecessary to relate here the prodigies of valour performed by Duke Robert in Palestine. After the conquest of the holy city, the victory at Ascalon, the election of Godfrey, and the establishment of the kingdom of Jerusalem, the greater part of the crusaders returned home, crowned with glory, and exhausted by their labours. The Duke of Normandy and the Count of Flanders, by the way of Constantinople, returned into Apulia in September, 1099. Robert was received by his countrymen and relations, Ruggiero Count of Sicily, and his nephew Ruggiero Duke of Apulia, with the cordiality and honours due to the successful champions of the cross, and in a round of festivities they forgot the sufferings of their Christian warfare. Robert was vanquished by the charms of Sybilla, the daughter of Geoffrey Count of Conversano, the nephew of Robert Guiscard. She was a lady of great beauty, elegant manners, and superior understanding. At a subsequent period, after their return to Normandy, she was said to have conducted the affairs of the duchy, during his temporary absences, with more judgment than her imprudent husband. He had a son by her named William, who became Count of Flanders. Yet she appears to have fallen early a sacrifice to the envy and factiousness of some Norman ladies of nobility. Upon this marriage, from his father-in-law and other friends, Robert received a large treasure to enable him to redeem his dominions. Besides visiting his Norman friends, a principal object in Robert's return to Italy was to consult the physicians of Salerno, for a wound which he had received in his right arm from an arrow supposed to have been poisoned, and which had degenerated into a deep ulcer, called a fistula. The story that the poison was sucked out by his affectionate wife during his sleep, is probably one of the romantic tales of that romantic period, and has been told of other heroes. That his cure was owing to the skill of the doctors of Salerno is more probable. Amidst the hospitality of his countrymen, the luxuries of Italy, and the endearments of his bride, Robert wasted near a year, and by this delay he lost the crown of England, and ended a brave but imprudent life in a captivity of eight and twenty years."

Before entering upon the merits of the Salernian poem, we should state, that the extraordinary popularity with which it was welcomed, called forth many imitations. Among other emulatory productions, was one by Otho of Cremona. We shall take the freedom of making the annexed extract from Mr. Otho's poem, for the sole and especial gratification of our medical friends. Sir Alexander remarks: "The following prudential advice enters too deeply into the mysteries of the profession to have been designed for the use of the profane:

De prudentia Medici amentis pro talore.
 Non didici gratis, nec sagax Musa Hippocratis
 Agris in stratis serviet absque datis.
 Sumpta solet carè multum medicina juvare,
 Si que datur gratis nil habet utilitatis.
 Res darè pro rebus, pro verbis verba solemus.
 Pro vanis verbis montanis utimur herbis,
 Pro caris rebus, pigmentis et speciebus.
 Est medicinalis medis data regula talis:
 Ut dicatur, da, dum profert languidus, ha, ha.
 Da medicis primo medium, medio, nihil imo.
 Dum dolet infirmus medicus sit pignore firmus.
 Instanter quare nummos, ut pignus, habere.
 Fœdus et antiquum conservat pignus amicum,
 Nam si post queris quærens semper eris."

The subject-matter of the third book of another imitator, Ægidius, is far too valuable for us to pass over unnoticed. Its contents supply us with "advice that young and inexperienced physicians are to be avoided;" also "the description of a good physician:" this, we confess, we should very much like to see—but presume it can only be meant as ideal. The same book moreover asserts, that "the circumstances of cases should be inquired into" in the propriety of this, Mr. Abernethy will of course consistently acquiesce. It may not be amiss to give the acknowledgments of the same writer, for the extra services of him who does rather more for your money than would be generally required at his hands:

*Qui requiem monachis in acutis febribus offert,
 Et requiem facit æternam.*

These lines may be considered as peculiarly applicable to one Sanctus Johannes Longinus, whose memory lives in the minds of every one—but his patients. Our fair readers will suppose the censure to be passed upon the empiric, who, in fulfilling his promise of repose, relieves his patients by what may be translated the long sleep.

We trust our readers will not think we mean to insult them by proceeding to quote the old English version, in preference to the original Latin. The exposition of the line,

Unica nux prodest, nocet altera, tertia mors est.
 is neat, quaint, and pretty:

"This speche perhapes is somewhat darke,

As riddles use to be—
 The stile thereof with common sense
 Doth not so well agree.

But for to tell by passinge nutt
 Our author what he meane,
 The nutmegge first he profereth,
 And that to good intente.

In second place, what hurtfull is
 He seemeth for to tuche,
 Wherein he meaneth the walnutte
 Doth hurte us over muche.

But in the last what perils moughte
 Be hidde therein I muse,
 Because to eate or cracke that nutte
 No man did ever use.

As well inoughe he knew that wratte
 This pessante pretye verse,
 So doeth he bringe in pretilye
 What nutte doth use to perse.

And in his talke of nuttes in deede
 In sadnes first he spake:
 But at the last the name of nutte
 As loughte for to forsake.

He sayeth that full manye a man
 The crosse-bowe hath ysiane,
 The nutte whereof he blames therefore—
 His meaning now is playne;
 And I do tell you, not in vaine,
 "Tis good from such nuttes to refrain."

The Salernian poem opens thus:—

"The Salerne Schoole doth by these lines impart
 All health to England's king, and doth advise
 From care his head to keepe, from wrath his harte.
 Drink not much wine, sun light, and soone arise;
 When meat is gone, long sitting breedeth smart;
 And after noone still waking keepe your eyes;
 When moud' you find your selfe to nature's need,
 Forbeare them not, for that much danger breeds:
 Use three physitions—first, doctor Quiet,
 Next doctor Mery-man, and doctor Dyet."

The physicians of former days, like those of the present, were very much of St. Paul's way of thinking in regard to wine. It must have been a "bee's-wag" gentleman who gave the following hints:—

"Chuse wine you meane shall serve you all the year,
 Well-savour'd, tasting well, and color'd cleere;
 Flue qualities there are, wine's praise advancing,
 Strong, beautyfull, and fragrant, coole, and dauncing.
 White Muskadell and Candy wine, and Greeke,
 Do make men's wits and bodies grosse and fat;
 Red wyne doth make the voyce oft time to seek,
 And hath a binding quality to that;
 Canary and Madera, both are like
 To make one leane indeed (but not you what):
 Who say they make one leane, wold make one laffe—
 They meane, they make one leane vpon a staffe.
 Wine, women, baths, by art or nature warme,
 Y'd or abus'd, do men much good or harme."

With the exception of Ude, cooks are not in general sufficiently aware of their importance in the political atmosphere; we trust, like Ude, they will henceforth become more consequential, as their influence in society justly entitles them;—in a word, upon them the safety of the state depends.

“ Good dyet is a perfect way of curing,
And worthy much regard and health assuring;
A king that cannot rule him in his dyet,
Will hardly rule his realme in peacc and quyet.”

Convinced as we are of the truth contained in the above quatrain, we earnestly and humbly deprecate our good king's eating too freely of the great plum-cake that was lately sent him.

We cannot refrain from divulging for whom the following prophetic extracts were intended; at the same time we must in justice acknowledge, that the outlines of the predictions are pretty accurately portrayed. The first stanza is evidently intended for John Bull, when, like ourselves, he does not run his head against politics, and is consequently in the humour to revive the days of merry England.

“ Complexions cannot vertue breed, or vice;
Yet may they vnto both gie inclination;
The Sanguin gamesome is, and nothing nice—
Loues wine, and women, and all recreation;
Likes pleasant tales and newes, plaics cards and dice,
Fit for all company and euery fashion;
Though bold, not apt to take offence, nor brefall,
But beautiful, not kind, and looking chearcfull:
Inclining to be fat, and prone to laffer;
Loues myrth and musicke, cares not what comes after.”

We cannot for a moment hesitate where to apply the second; nor do we doubt but that the honourable Member for Clare will conscientiously admit who is the representative designated therein.

“ Sharpe Choller is an humour most pernicious,
All violent and fierce, and full of fire—
Of quicke conceit, and therewith ambitious;
Their thoughts to greater fortune still aspyre;
Proud, beautifull enough, yet oft malicious—
A rich, bolle speaker, and no bold a liar;
On little cause to anger great inclin'd;
Much eating still, yet euer looking pin'd;
In younger yeares they vse to grow apace,
In elder, hairy on their breast and face.”

We have been induced to hint at the above application, solely from understanding that the honourable member won't fight. This anti-Hibernian quiescence has, we are credibly informed, already debilitated, if not totally abolished, the popularity of the member with the majority of his constituents, and undeniably renders him a very improper representative of the proverbial feelings of his countrymen. Since it may be done with impunity, we are determined, like other honourable gentlemen, to have a fling at him whenever we please. But why continue to bother with the lie, a man who, at least, is alike ready to give and take? The third stanza we have already conveyed, in the last despatches, to the Hague.

“ The Flegmaticque are most of no great growth,
Inclining rather to be fat and squice;
Giuen much vnto their ease, to rest and sloth,
Content in knowledge to take little share,
To put themselves to any paine most loth,
So dead their spirits, so dull their senses are:
Still either sitting, like to folke that dreame;
Or else still spitting, to avoid the flegme,
One quality doth yet these harmes repaire,
That for most part the Flegmaticque are fayre.”

The fourth sufficiently recommends itself to those who would see through the inward workings of our Puritans.

“ The Melancholy from the rest do vary,
Both sport, and ease, and company refusing;
Exceeding studious, euer solitary;
Inclining pensive still to be, and musing;
A secret hate to others apt to curry;
Most constant in his choice, tho long a choosing;
Extreame in loue sometime, yet seldom lustfull;
Suspicious in his nature, and mistrustfull;
A wary wit, a hand much giuen to spurring,
A heavy looke, a spirit little daring.”

The volume is illustrated by some rather

equivocal etchings. These, however, bear witness, since they are fac-similes from old editions, that there were Cruikshanks in those days, as well as the present. Heartily joining in the good wishes of the poem, both to our readers and ourselves, we close our notice of this entertaining modern antique in its concluding words:—

“ And heere I cease to write, but will not cease
To wish you live in health and die in peacc;
And ye our Physicke rules that friendly read,
God graunt that Physicke you may neuer neede.”

The Sea-Kings in England; an Historical Romance of the time of Alfred. By Edwin Atherstone, author of “the Fall of Nineveh.” 3 vols. 12mo. Edinburgh, 1830, Cadell; London, Whittaker and Co.

We have a great respect for our Saxon ancestors: they were a bold, free race, and contributed their full share to that superiority which we believe is now considered to be the birthright of every true Briton. Mr. Atherstone has given an epic character to his romance, which is laid at a most stirring period—the time when Alfred urged his fiercest warfare with the Danes. The interest of the story is centered in a boy, rescued, by the sea-king Sidroc, from the general destruction attendant on the slaughter and burning of the monastery where he was being educated. The chances of the eventful life of his young hero are well blended with the known history of the times. Alfred is contrasted with the ferocious Hubbo; Aslauga, the widow of the celebrated Regnar Lodbrod, is also introduced; and a single combat is described with great spirit. In the comic parts Mr. Atherstone is not so successful: Elf, the pantaloon of the drama, is absurd—not entertaining. But let our readers see how they like a specimen or two.

Description of the Queen Aslauga:—“ Upon a sort of couch, or throne, of width sufficient to accommodate three persons, and ornamented at the extremities by two carved and gilded figures, probably designed to represent lions, there sat a lady, richly attired, of a commanding presence, and exceeding beauty. The covering of the couch was a rich cloth of purple; but, where it had been thrown back at the sides or arms, it shewed underneath a soft cushion, formed from the hide of a bear, one claw of which hung down in front, and appeared to have been gilded. A table, adorned with plates of silver, and studded with gems of various colours, stood near her; and upon it lay a small silver bell, and a piece of embroidered silk, upon which she had just been busied. A footstool of crimson cloth, interwoven with flowers of yellow silk, supported her right foot. Her shoes were of tawny leather, broad at the toe, and laced close to the foot. She was clad in a loose upper robe of purple silk, having a broad band of gold embroidery at the hem, and a little below the knee, where, having partially fallen aside, it discovered an under garment of light blue, wrought of silk and fine woollen intermingled. She had no covering upon the head but that which nature had given her—a profusion of the most beautiful golden hair, hanging in locks, delicately twisted on either side, and of such a length behind that, had they not been turned up, and loosely bound with slender bands of golden chainwork, they might probably have reached to the knee.”

A Saxon dinner.—“ The dining table was oblong, and rounded at the ends. The cloth was a rich crimson, with a broad gilt margin; and hung low beneath the table. The com-

pany sat upon chairs with concave backs, and were arranged, much as at the present day, with the view that to each of the ladies should be assigned a neighbour of the other sex. . . . The dishes consisted of fowls and fish, of the flesh of oxen, sheep, deer, and swine, both wild and domestic, not excepting certain portions of the sea-swine, or porpoise—a food not at present much in repute, but at that period no unfrequent article of diet. There were two *sanda*, or dishes, of *sodden sylfian*, or soup bouilli, and one of *scathen*, or boiled, goose. The bread was of the finest wheaten flour, and lay in two silver baskets upon the table. Almost the only vegetable in use among the Saxons was kale wort; and the only condiments were salt and pepper. These various articles were boiled, baked, or broiled; and were handed by the attendants upon small spits to the company. . . . Instead of forks, which were not used in England till James the First's time, when Tom Coriarte introduced them from Italy, our ancestors made use of their fingers; but, for the sake of cleanliness, each person was provided with a small silver ever containing water, and two flowered napkins of the finest linen. Their dessert consisted of grapes, figs, nuts, apples, pears, and almonds.”

Scene in a Danish tent.—“ The first object that he beheld was the celebrated raven banner of the Northmen, which, elevated upon its gilded pole, appeared to move its wings as if in the act of flying. Upon this were turned the looks of some forty or fifty mail-clad men, who, standing up and clashing their sword-hilts upon their breast-plates, shouted in exultation at the mystic sign that promised victory. Edmund gazed for a moment at the magical banner, of which the history was well known to him, and then glanced round at the warriors. Their faces were flushed with wine, and their eyes shot fire. They were unhelmeted, and their hair, mostly red, flowed in curls upon their shoulders. All appeared to be men of great strength and unbounded fierceness. One gigantic form as yet stood at the farther end of the tent, with his back toward Edmund, looking up to the banner; his left hand was on his sword-hilt, and his right extended as if in exultation at the favouring sign. But the wings of the raven were again folded; and the warrior turned round to his companions. The huge fierce countenance came upon Edmund, like the burst of a red fire. It was Hubbo that stood before him. The ferocious features had never been erased from his memory; but he did not expect that the actual appearance would equal the hideous picture of his fancy. Such, however, as his boyish fears had depicted, such was the dreadful Northman that now stood before his bodily vision. Years had nought impaired his strength, or softened his fierceness, while they had made his features yet more gross, and stamped upon them yet more strongly the characters of cruelty and savage daring. ‘Tis fixed then for the morrow,’ he cried; ‘at sunrise shall the sacrifice be offered up, and afterwards let the Saxon look for his doom. Fill up the cups to the god of battle! The blood shall flow for him like a mountain stream! the choosers of the slain shall be wearied among the heaps of dead! Trondath, fill up the skull to the brim: we drink to the terrible god. Are ye all prepared?’ ‘All, all,’ exclaimed every voice. Hubbo lifted the skull filled with mead; his guests stood up, each holding in his extended right hand the full-charged vessel, and every eye bent upon their leader: ‘To Odin,’ he cried, with a voice that shook the tent; ‘to the terrible and severa

god! the father of slaughter! the god that carrieth desolation and fire!"

We must give due praise to the industry that has collected every possible light thrown by the scattered notices of historians on the manners and customs of the times. Mr. Atherstone is a man of unquestionable powers; but we do not think they are judiciously applied. It is folly for an author to talk of posterity, and of despising those among whom his lot is cast. The taste of the present time has little relish for scenes of single combat between armed chiefs—battles, with their repetitions of bloodshed, flight, and triumph. We have no sympathy where we have nothing in common. The epic glory of kings and warriors has had its day. An author, in choosing such subjects, first incurs a most disadvantageous comparison with his predecessors, and then has to contend with utter indifference on the part of his readers. An interesting story, and skillfully depicted characters, would now outweigh a whole army of heroes, with a single combat in every chapter. The worst we say of Mr. Atherstone is, that he deserves to have been born some hundred years ago, when he might have been bard to some heroic king, tuned his harp with a key of silver, and drank mead out of a cup of gold.

Constable's Miscellany, Vol. LXII.—History of Peru. By Don Telesforo de Truena y Cosío, author of the *Life of "Hernan Cortes."* 12mo. pp. 341. Edinburgh, 1830, Constable and Co.; London, Hurst, Chance, and Co.

THIS volume completes the history of Spanish conquest in America, and, sooth to say, it is a most ruthless one. The doctrine of some dark and terrible fatality, or rather judgment, seems alone able to account for the extraordinary success of the Spanish conquerors, and the blindness of the unfortunate Peruvians. The advantages and disadvantages attendant on the conquest of America, are a common subject with debating societies. The benefits Europe has derived were purchased at the expense of life to an entire race. There is a good contrast drawn in the preface between the fierce and cruel habits of the Mexicans, and the mild and greatly civilised ones of the Peruvians. We recommend this preface to our readers' attention. The information it contains is given in a most animated manner, and its remarks are as just as its views are clear. The history of Pizarro would be a romance, but for its truth;—fact always goes farther than fiction. Our author observes:—"There is something almost incredible, not to say absurd, in the circumstance of three private persons settled in an infant colony, quietly deliberating, and coolly resolving, to embark into schemes which had for their object the overturning and subjugation of vast and powerful regions." Pizarro, his friend Almagro, and an ecclesiastic, Hernando Luque, were the triumvirate, whose extraordinary perseverance in almost hopeless efforts, discovered and conquered Peru. A hundred and eighty soldiers not only invaded but subdued a vast and populous empire. The difficulties that the enterprise had to contend with at first, were, exposure to the climate, want of food, and extreme fatigue: most of the early adventurers perished. The following extract will shew Pizarro's difficulties:—

"Both he and Almagro perceived the necessity of preventing their followers from keeping up any correspondence with their friends at Panama. They were aware that a representa-

tion of the sufferings they had endured, and of the precariousness of their present situation, would tend to deter other adventurers from joining their fortunes. Almagro, therefore, refused to be attended by any of his followers upon his return to Panama, under pretence that his companions ought to be left in possession of every resource, in order to be prepared for any contingency. He also objected to bearing any letters from his companions, thinking, by this means, to thwart the intentions of the discontented. But, despite of the vigilance of the two chiefs, the desponding portion of their followers succeeded in conveying to their friends a lamentable account of their misfortunes. The manner in which this was contrived appears not destitute of ingenuity. One Saravia sent a representation of their troubles, and of their anxiety to be freed from their present state of thralldom, hidden in a ball of cotton thread, which he sent to a friend, under pretext of having a pair of stockings made. This document concluded with four doggerel lines expressive of their sentiments with regard to their leaders. They were as follows:—

‘Oh governor, incline your ear,
And ponder well our state;
While the butcher lingers here,
The gatherer is gone to bait:’*

alluding to Almagro and Pizarro, who were characterised by those two epithets."

In one of his difficulties, Pizarro had recourse to an action which reminds one somewhat of the classical expedients of antiquity.

"In this emergency, the baffled commander resolved to adopt one of those magnanimous measures, which, by striking the imagination of men, often end in persuading their hearts. Open revolt—perhaps his own death—would be the consequence of the attempt. Pizarro assembled his soldiers, and, drawing his sword, described with it a line on the ground. He then, with a firm demeanour and resolute voice, exclaimed, 'Spaniards! this line is the emblem of hardships, dangers, and constant toil—of innumerable sufferings which are to be sustained in the prosecution of a most glorious enterprise. Let those who consider themselves endowed with sufficient strength and magnanimity—those to whom the renown of a glorious conqueror is dear, boldly pass the line; and as for those who feel themselves unequal to the sacrifice of present ease, for the attainment of future fame and fortune, let them return to Panama with all suitable speed; I myself will remain here, and, with the help of the bravest of my followers, however few they may be, I will prosecute our enterprise; trusting that, with the assistance of God, and by our undaunted perseverance, our efforts will be ultimately crowned with success.' No sooner were these words pronounced, than the soldiers hastened to profit by the invitation they afforded. With unbecoming alacrity, they bent their steps towards the shore, to embark with the utmost expedition, lest the determination of their commander should undergo a change. Only thirteen men had the courage and the noble resolution to pass the line, and declare themselves resolved to adhere faithfully to their chief until death. To this heroic band is owing the discovery and conquest of Peru."

Retribution seems to have visited all the conquerors of Peru. Pizarro himself was murdered; his brother Gonzalo executed; and never was the Scripture threat more completely

* "Pue señor gobernador
Mirelo bien por entero,
Que alla' va el recogedor,
Y aqui queda el carnicero."

fulfilled—"he that lives by the sword shall die by the sword." We will quote their deaths.

"The deportment of Carvajal, during his confinement and trial, was extraordinary. There was a degree not only of indifference, but even of levity and buffoonery, displayed in his conduct, wholly unbecoming a man of such advanced age, and on the point of being thus ignominiously sent into eternity. He was visited in the prison by several individuals; some led by curiosity, others bringing strange requisitions. A tradesman, among others, came to demand the restitution of a great sum of money, and pathetically remonstrated with Carvajal on the danger his soul would incur in a future state, if he neglected to settle his debts before he departed from this world. This strange application, made to a man who had not a coin to call his own, was answered by Carvajal in his usual style of jocularity. 'Friend,' he said, smiling, 'what are you saying about a great debt? the only one with which my conscience reproaches me, is that of a rial, which I owe to an old public-house keeper at Seville: so go your ways, and don't trouble me with such stories.' Carvajal was dragged to the place of execution with ignominy, and underwent his fate with extraordinary coolness, and even indifference. He was hanged the day after his capture, in the eighty-fourth year of his age. His long career of life had been devoted entirely to the profession of arms; so that he possessed consummate knowledge in the art of war. He had served in Italy under Gonzalo de Cordova, and had particularly distinguished himself in the battle of Ravenna, where he fought as an ensign. He may justly be considered as the most experienced and skilful officer that ever appeared on the scene of American conquest; and his superiority in military tactics was universally acknowledged. But he continually stained the lustre which would have attended his valour and abilities, by the ferocity of his conduct. He was of so sanguinary a character, that he inflicted death for the most trifling offences—even for no offence at all, when he considered that the sacrifice of human blood was favourable to his schemes. His rigour with regard to military discipline was carried to such an extreme, as to create a sensation of dread and horror among the independent and lawless adventurers, who had hitherto been accustomed to conduct themselves as best suited their purpose, and without much reference to martial regulations. His name became, therefore, a by-word of terror; and though his severity was attended with beneficial results to the army, by the establishment of military discipline, it is not less true that it induced many to desert. Neither his capture nor death created any sensation of pity or regret; for, though his merits could not but be generally appreciated, he was universally an object of dread or abhorrence."

Gonzalo Pizarro died in a better spirit:—

"He ascended the platform where he was to suffer death, with the greatest firmness and composure, but shewed not the least token of that bravado and indifference which is so often assumed to display a contempt of death, but which, instead of impressing the beholders with sentiments of admiration, naturally creates feelings of horror and disgust. Pizarro advanced to the border of the platform, and cast a look upon the surrounding multitude, when he appeared desirous of addressing. Indeed, in this motley crowd were many of his brave veterans, companions in his perilous expeditions, and partakers of his glory and disasters.

Pizarro then, in a loud, clear, and collected voice, said, 'It is well known to you, that this empire, in which I am about to suffer death, was conquered by my brothers and myself. Many of you here present are indebted for the wealth you possess, either in Indians or lands, to the gift of my brother the marquis, or myself. Many there are, also, who have experienced repeated tokens of personal kindness; and others who, on account of a long companionship in trouble and peril, glory and adventure, ought to hear the name of Pizarro with some degree of regard. To all these I now make known my poverty. I die in extreme indigence; so poor, indeed, that the very dress in which I am attired, is to become, according to law, the property of the executioner who is to sever my head from my body. I die, therefore, without the smallest means of defraying the expenses of my burial, or obtaining the aid of those prayers and masses necessary for the repose of my soul. I beseech you, then, as friends and Christians, to help me with your charity, and to do that after my death which my utter destitution prevents me from securing in life. I die a Christian; and through the merits of our Saviour, and your prayers and charity, I hope for the remission of my offences.' This address, delivered in an impressive tone and manner, created a deep sensation among the assembled multitude. Groans and sighs were heard on every side, and tokens of sincere sorrow displayed in the looks of the greater number of the spectators of the tragic scene. The head of Gonzalo Pizarro was then cut off with a single stroke. It was afterwards carried, together with that of Carvajal, to Lima, where they were placed in iron cages in the public square. His houses at Cuzco were rased to the ground, and a pillar erected on the spot, on which was the following inscription:—'This was the property of the traitor Gonzalo Pizarro.' His mortal remains were interred in the convent of the Lady of Mercies at Cuzco, where lay the bodies of the two Amagros. They displayed thus a striking similarity in their lot, all three having been warriors and conquerors of Peru—all beheaded at Cuzco—and being now all united in one grave."

We look upon both this volume and its predecessor as very delightful specimens of biography. The material has been collected with much industry, and arranged with great spirit. One fault of style, and that a grave one, the author has fallen into: why does he, in his introduction, use French words? Surely inspection is as good a word as *surveillance*, and *retinue* expresses his meaning as well as *corlège*.

The Way of the World. By the Author of "De Lisle," and "The Trials of Life." 3 vols. 12mo. London, 1830. E. Bull.

WE prefer this to the author's former works. It has not the lengthened period of time, and the multiplicity of actors, which weakened the interest of *Herbert de Lisle*; neither has it the mistaken but decidedly immoral tendency of *The Trials of Life*. An amusing story displays some good and original drawing of character. Lady Maddalena is a true and well-wrought sketch; so is Sir Henry Daverout; and few (and those very fortunate) will deny the reality of Lady de Verney. As we think this writer excels in her personal sketches, we will give a specimen of her talents for mental analysis. The contrast between Lady Maddalena and her niece is very well drawn.

"Not for herself did Lady Maddalena hope or fear. Her lot in life was cast; and though

still young and strikingly handsome, her mind had, from nature, education, and circumstances, become so schooled, that her sensibilities were seldom awakened by any thought of herself. Every affectionate impulse of her heart, all the powers of her well-regulated and cultivated understanding, were devoted to her child—as she fondly called Emmeline. As a child she considered and treated her, partly upon system, and partly from a conviction that her sentiments were more unformed and infantine than is commonly the case with girls at sixteen. The lovely orphan looked up to her aunt with reverence for her virtues, admiration of her talents, and heart-felt gratitude for the uniform kindness and protection she had received at her hands from the earliest dawn of her recollection. She loved her tenderly, and would have loved her more, but that a feeling of awe, amounting almost to fear, mingled with the regard she bore towards her. Under the dark eye of Lady Maddalena her timid glance sank; ever fearing to offend, she often lacked the energy necessary to attempt pleasing. From the slightest imputation of blame her gentle and sensitive nature recoiled. The coldness of her aunt's manner chilled and repressed those warmer feelings that would spring from the heart of Emmeline whenever she met with some proof of Lady Maddalena's affection; and frequent were those proofs, and deeply did they sink on the mind of the orphan, claiming from her the most implicit deference, the most unqualified submission. Yet she was still a child, and likely to be long considered as one by Lady Maddalena, who was so completely her opposite in character, that it was scarcely to be expected that they should ever comprehend one another. Whilst the one looked on every passing object in sober sadness, sighing o'er the past, fearing to sigh o'er the future, and reasoning on the present; the other, just bursting into life and happiness, painted each scene with the warm colouring of hope and joy, gilding her horizon with the bright visions, the vivid fancy, the enthusiastic feelings, of early youth. To the delighted mind all things are delightful. As the body by its own warmth creates its peculiar atmosphere, so does the mind by its own power form a surrounding cloud, through the medium of which we discern things, not indeed as they really are, but as it suits us to imagine them. To few people did this mental atmosphere give so little trouble as to Lady Maddalena. Calm and steady, she was devoid of enthusiasm, and destitute of sensibility. Incredulous and reserved, it was difficult to deceive, and scarcely possible to irritate her. Her attachments were few, but strong, and hardly to be shaken. Her mind was noble, comprehensive, and liberal; neither to be warped by affection, nor seduced by flattery. To the world she appeared a beautiful statue, on whose cold, unchanging countenance neither displeasure nor tenderness could be traced. Her very smile expressed neither joy nor love, but simple approbation, and sometimes mingled compassion and contempt: the former, however, was a principle, as well as an almost habitual feeling; while the latter was merely an evanescent idea, excited by the sudden appearance of vice or folly. Unaccustomed to meet with sympathy, she had learnt early neither to require nor to value it. Solely occupied with her young charge, she never betrayed her solicitude by word or manner, but her actions were all marked by the fondest and tenderest discharge of the duties she had imposed on herself. She used no endearing epithets, no fond caresses, no tender admo-

nitions; her language was simple, concise, and characteristic, alike free from false sentiment or exaggeration; her voice clear and impressive, but equally destitute of flexibility or pathos; her features—bold, regular, and in perfect drawing—were striking, but not attractive: brilliant, but not captivating."

There is much nice discrimination in the following distinction: "Lady Maddalena had much judgment, but little penetration."

There are three other tales, one of which is founded on the romantic and melancholy story of Lady Grange, whose husband confined her for years, secretly, in one of the Hebrides.

Lord Byron's Cain, a Mystery; with Notes, wherein the Religion of the Bible is considered in reference to acknowledged Philosophy and Reason. By Harding Grant, author of "Chancery Practice." London, 1830. Crofts.

WHEN Lord Byron's fancy was sketching the drama of *Cain*, little did he dream that he was composing a metaphysical treatise, and, least of all, a system of theology. Had he anticipated that, after the lapse of some eight or ten years, it was fated to become the subject of an examination so formidable, doubtless he would have modified his plan, and restrained the exuberance of his fancy. In that case, what his work would have lost in poetry it would have gained in argument, and thus his readers have obtained an abundant recompense. But genius and talent are not always under the control of wisdom, nor necessarily made subservient to the interests of virtue. Sometimes the most splendid endowments have been employed, not to promote the best interests of mankind, but to seduce and enslave the human passions and sensualise the mind. We certainly are not apologists for those writers, however distinguished their powers, whose ambition for popularity, or rage for eccentricity, induces them to minister to the mere gratification of their readers, regardless of the moral influence of their principles: nor do we deem it either right or fair to employ works of imagination as the means of unsettling the faith, or weakening the best hopes, of mankind. If Lord Byron really entertained those sentiments, which he has chosen to invest with the splendours of his exalted genius, he would have acted a juster and a nobler part, had he, instead of exhibiting them in a poetical form, and in a mode which necessarily precluded reply, condescended to grapple in manly pose with those master-minds who have investigated with acknowledged ability the various subjects of his "mystery." No doubt his lordship anticipated considerable notice, and even reprehension; but certainly not exactly of the nature of these elaborate and copious annotations. It is difficult to characterise Mr. Grant's work, nor shall we attempt to follow him in his various theories. Giving him entire credit for the rectitude of his intentions, we must yet be permitted to doubt, whether advocates of his peculiar views are likely to be the most successful opponents of the philosophical scepticism of such men as Lord Byron. Calvinism is undoubtedly not the ground on which we should choose to contend, either for the religion of the Bible, or "acknowledged philosophy and reason."

The writer of the Notes seems to have proceeded much after the fashion of certain German commentators, through whose leaves the text of the author flows like a scanty stream, amid abounding margin and more abounding notes, while pages of annotation illustrate or

darken a few fated lines of the original, and in many a passage the relentless pursuer assails the same phantoms, or slays once and again the slain. Hence, the matter being so miscellaneous distributed, the same positions so frequently repeated, the meaning becomes difficult of discovery, and it is of course still more difficult to make out a consistent hypothesis. This *copia verborum*, these intricacies of thought, and this multiplicity of words, will forcibly remind the reader of the witty illustration which occurs in Tucker's "Light of Nature." A formal old gentleman, finding his horse uneasy under the saddle, alighted, and called to his servant in the following manner: "Tom, take off the saddle on my bay horse, and lay it upon the ground; then take the saddle from thy grey horse, and put it upon my bay horse; lastly, put the other saddle upon thy grey horse." The fellow gaped all the while at this long preachment, and at last cried out, "Lack-a-day, sir, could you not have said at once, change the saddles?"

Many points which are discussed at large in the Notes seem not to have called for the direct consideration which they there receive, especially the grosser blasphemies of Lucifer, which, as they instantly disgust all well-regulated minds, are utterly poisonless and innocuous. The half-hinted objections and scarce-whispered doubts,—these are, in our opinion, the true dangers of the "mystery." Reduce the semblance to reality, embody the shadow, and the foe is palpable—the victory secure.

According to Mr. Grant's mode of reasoning, we are not likely to arrive at a satisfactory conclusion upon any subject. Sometimes he assumes the language of a philosopher, and sometimes of a divine; and he not unfrequently so mixes up his discussions, that the reader finds the utmost difficulty in ascertaining whether he has arrived at his conclusions by the legitimate deductions of reason, or by the authority of revelation. These ought certainly not to be confounded with one another. As a specimen of his metaphysical creed, we subjoin the close of the note on the origin of evil.

"Upon the whole of this subject," he says, "I would reduce it to three or four principles. First, that God is a sovereign in the highest sense; a moral governor also; the sole creator and ordainer of all existences, with all their moral capacities and qualities: that he is all wise, all powerful, and all good, and therefore cannot err, nor can do nor permit pure essential evil. Second,—that under such government no pure essential evil, moral or physical, can be in creation; all is, and cannot but be, essentially and absolutely good. Third,—that man is, as in Scripture declared, and in all right reason, and therefore justly, responsible and punishable for sin, because he sins voluntarily. Fourth,—that the term 'the author of sin' is unfounded in Scripture, and illogical. There can be no 'author of sin' in the abstract. Is it not ever desirable to hold important truths without unscriptural hesitation, and to escape from wrong or incorrect impressions or persuasions? It appears also to me, that to deny God's sovereignty and indisputable and absolute right over his creatures, accompanied too as that right is by unerring wisdom and infinite goodness, is to deny his essential nature and attributes; and to do that, is to deny God. The consistency of considering the Almighty as the author of all intelligent creatures, with all their moral liabilities, on the

one hand, and yet man as responsible for his, on the other, is precisely that consistency which Dr. Copplestone advocates for the doctrines of predestination and free-will; which, however apparently inconsistent, he declares to be the doctrine of God's word, as well as of the establishment of which he is now a dignitary."

This, it will be acknowledged, is a curious, though by no means a novel, method of removing those mountains, which have perplexed, if not confounded, the most powerful minds. If Mr. Grant had confined himself to the absolute denial of the existence of what he calls "pure essential evil," and demonstrated that he has so unequivocally asserted, that "all is, and cannot but be, essentially and absolutely good," he would have saved himself and his readers an immensity of trouble. As to what he and others of his school have said about the sovereignty of God, he is merely fighting with a shadow. That sovereignty is not questioned. It is only the nature of it which constitutes the subject of inquiry. It is by no means fair to ascribe certain acts to the Supreme Ruler, and when an objection is urged, to say, God is a sovereign, and has a right to do whatever he pleases. The grand question is, What will a Being of infinite perfection please to do? and, whether the sovereignty of such a Being is not an infinitely wise, and just, and gracious sovereignty? Some of our best philosophers and ablest divines have, and some think successfully, contested the very principles which this writer has so confidently laid down.

But, again, we would protest against the repeated and needless introduction of a class of phrases, which, however intelligible to a certain school, yet, in a work intended for a wider circulation, will be, with many, a sufficient bar to an impartial investigation of the subjects of his disquisitions. The frequent use of such language has, if we mistake not, very much injured the cause of religion, and even ministered aid to the shafts of infidel ridicule. Such expressions, however *φωσφάντα συντασιον*, as Pindar has it; yet, to very many persons, it may be truly added, *εμπρησιν χαπιζου*,—and in a work professing to consider the religion of the Bible "in reference to acknowledged philosophy and reason," they are peculiarly inappropriate. One is too apt, at times, to imagine, when they flow from the lips of a reasoner, that they only come to aid a deficient argument. At all events, it is highly objectionable to introduce, in the guise either of acknowledged philosophy or reason, notions (whether correct or incorrect, it is not our province to determine,) which are merely the views of individuals, or the dogmas of a party.

The Geographical System of Herodotus examined and explained, &c. &c. &c. By Major James Rennell. Second edition, revised. 2 vols. 8vo. pp. circ. 1000. London, 1830. Rivingtons.

RENNELL'S Geography of Herodotus must ever continue to be an important standard work in English literature; and we are much gratified with this revised edition of it, for which we are indebted to the filial piety of his daughter Mrs. Rodd. It is handsomely produced, with the maps well engraved, and a characteristic portrait; and yet at a very moderate price. To speak now of the extraordinary value of Herodotus as an ancient geographer, or of the lights thrown upon his labours by the able labours of Major Rennell, would be an absurdity. Both are acknowledged to their full extent by every scholar and critic. We have therefore simply to notice the appearance

of this excellent publication in its improved state; and to mention, that a memoir on the general currents in the Atlantic Ocean, accompanied by a series of charts shewing their force and direction; and also a work on the ancient and modern geography of certain parts of Asia, with twelve maps, found among Major Rennell's papers—are preparing for the press, the former under the patronage of the King.

History of the War of Independence in Greece. By Thomas Keightley, Esq., author of "Fairy Mythology," &c. Vols. I. and II. *Constable's Miscellany, Vols. LX. and LXI.* Edinburgh, 1830, Constable and Co.; London, Hurst, Chance, and Co.

MUCH of novelty could not be expected from a work whose material was to be gleaned from recent publications, still fresh upon the public mind. Mr. Keightley has some high-flown liberty notions, and has gone so far into the romance of modern Grecian history, that we can scarcely consider his performance in any other light than an interesting and spirited oriental tale, though certainly founded on very considerable research.

Classic Cullings and Fugitive Gatherings. By an Experienced Editor. pp. 304. London, 1831, Arnold, Longman, Whittaker, Simpkin; Edinburgh, Oliver and Boyd.

OUR "experienced Editor" has learnt the advantages of variety in his experience. The volume before us contains a little of every thing. Sense and nonsense, sentiment and wit, pathos and merriment, short passages from different authors, a stock of anecdote, and a number of *bons-mots*. It is an agreeable miscellany, best characterised in the words of Shakespeare: "He has been at a great feast of languages, and stolen all the scraps."

The Life of Bruce, the African Traveller. By Major B. Head. *Murray's Family Library, Vol. XVII.* 12mo. pp. 535. London, 1830. Murray.

WE do not know whether this volume has not delighted us fully as much as any publication of the class to which it is so great an ornament. To have the spirit of Bruce's five ill-treated and not very generally read volumes compressed within one small tome, with a portrait and map, for five shillings, is a grateful offering. The interest of the narrative, the manly defence of the calumniated author, and the corroboration of his statements from later travellers and writers, impart an uncommon value to this really most charming work; and we cordially recommend it to every reader, whether young or old, whether for amusement or instruction.

The East India Magazine, or Monthly Register for British India, China, &c. London, 1830. Alexander; Simpkin and Marshall; Gilbert and Piper.

A NEW contemporary; and one addressed to a subject which we have long wondered should have been suffered to remain in obscurity. When we look at the vast importance of India, and consider the influence of the press, we must indeed be surprised at the supineness which has left all the great questions now about to be agitated respecting the administration of that empire, to be *impressed* upon the public mind in the shapes and forms which chance or competition dictated. The immense stake, if worth playing for, was surely worth the trouble of being fairly argued.

Lardner's Cabinet Cyclopaedia, Vol. XIII. The Western World; Vol. I. The United States. 12mo. pp. 344. London, 1830. Longman and Co.

THE present volume of Dr. Lardner's *Cabinet Cyclopaedia* commences the history of the Western World: this, in a concise and connected form, was much wanted. The necessary matter for such a work has been, in the present instance, diligently collected, and perspicuously arranged. The volume is written in a plain and pleasing style, and is altogether well calculated to win and retain the attention of the mind, and repay it with solid information. We must defer our illustrations till next week.

ARTS AND SCIENCES.

ZOOLOGICAL SOCIETY.

ON Thursday afternoon a very interesting meeting of this Society took place in one of the museum rooms, Bruton Street; J. E. Bichenor, Esq. in the chair. Mr. Vigors read a brief but satisfactory report; which shewed that, during the gloomy month of November, 8676 persons had visited the gardens;—that the Society's receipts during the same period (including a balance brought forward) was 2023*l.* 10*s.* 6*d.*; and the expenditure 953*l.* From another report, also read by Mr. Vigors, we learned that the whole of his Majesty's collection had been removed from the menagerie at Sand-pit Gate, Windsor, and was now in the Society's possession;—that a committee of science and correspondence, comprising eleven individuals, had been formed, by which means a friendly intercourse with the learned bodies of the continent and foreign parts might be cultivated, thereby facilitating the spread of the knowledge of comparative anatomy and animal physiology. A warm tribute of thanks was paid to Captain King and Major Franklin; to the latter, for his collection of birds from the Himalaya Mountains, the Society and science in general would feel much indebted:—of these birds, Mr. Vigors pleasantly observed, that they were alive on the Himalaya Mountains eight months ago, they arrived in England five weeks since, and were now placed on the Society's table, accompanied by accurately coloured figures, life-size. These birds have heretofore, we believe, been strangers in England; their form and plumage are exceedingly beautiful. The report further noticed a collection of American quails (*genus ortyx*)—a group analogous to the partridge of the old world: of this bird only four species were lately known; now there are eleven, four of which were introduced to science by the Zoological Society.

Lord Kinnoul, Lord De Tabley, Colonel Fitzclarence, and a number of other individuals distinguished for rank and science, were balloted for, and elected.

MEDICO-BOTANICAL SOCIETY.

EARL STANHOPE in the chair. A list of valuable donations connected with medical botany, made to the Society by sundry distinguished individuals, was read. Letters were also read from Mr. Lockhart, of St. Ann's, West Indies, containing observations on the bark of the *Cantaria speciosa*, which is found to be of great use in disordered stomachs, acting both as emetic and cathartic; it is much esteemed by those of the old French families resident on the island, who are acquainted with its worth:—from Dr. W. Hamilton, of Plymouth, stating, upon the authority of Mr. Macfadyn, a botanist and medical

practitioner of some consideration at Jamaica, that it was probable the milky juice of the *Calotropis gigantea*, diluted with mucilage, would prove a useful application in cases of chronic ophthalmia: it appears that Mr. Macfadyn had applied it successfully in cases of ulcers of the palate; he recommends its trial in cases of aphthae in children:—from P. J. Brown, Esq., of Thun, canton of Bern, communicating some interesting particulars relative to the use of the leaves of the walnut tree, for the more rapidly dispersing of milk in females. Dr. Sigmond read a paper descriptive of certain valuable seeds, presented by Sir J. Macgrigor.

LITERARY AND LEARNED.

ROYAL SOCIETY: ANNIVERSARY MEETING.

ON Tuesday we were present at the anniversary meeting of this learned body, which has lately acquired a kind of "untoward" popularity. The attendance of the fellows was unprecedentedly numerous; and we noticed amongst them many of the chief scientific Englishmen of the day; and also several fellows of high rank and distinction. The Archbishop of Canterbury was an attentive auditor. At 11 o'clock, Davies Gilbert, Esq. took the chair; before him was placed the splendid mace* of the Society. The president then rose, and delivered his annual speech. He began by adverting, in feeling and appropriate language, to the loss of eminent persons sustained by the Society since the last anniversary: the list of these embraced the names of the Duke of Atholl; Sir Frederick F. Baker; Sir Richard Brooke; Nicholas Browne, Esq.; Henry Browne, Esq.; Richard Chenevix, Esq.; Lieut.-Col. Cocks; Sir R. T. Farquhar; Jeremiah Ives, Esq.; Sir T. Lawrence; Lieut.-Col. Mackenzie; Sir C. M. Pole; Sir Lucas Pepys; Lord Redesdale; Major Rennell; Dr. Shackelford; James Smithson, Esq.; Edmund Turner, Esq.; the Rev. Stephen Weston; Sir Robert Wigram; and Sir F. Barmard. The worthy president characterised these as individuals of great distinction, of extensive acquirements, and of splendid talents, whose loss would long be remembered, not only in the walks of science, but in the more familiar society of the fellows. He then detailed, in glowing terms, several particulars of the life of Major Rennell, an officer frequently introduced to the notice of the readers of the *Literary Gazette* in his lifetime: of his works, that on the Geography of Africa, his Atlas of Bengal, his Map of the Mogul empire, and several others, have gained him a name honourable in science. With a vigour of intellect that reminded classical readers of the greatest of the Roman censors, Major Rennell, after he had passed a mature age, gained a knowledge of Greek, sufficient to enable him to consult with advantage the early writers in that language. His Geographical System of Herodotus, including the expedition of Darius Hystaspes to Scythia, the site of Babylon, the Temple of Jupiter Ammon—a dissertation on the locality of Troy, &c., were the fruits of this acquirement in his later years. Next in

* As the gilding of this ensign of royalty forms one of Sir James South's charges against the Society, we may here observe, that the mace itself is of silver, about 4 feet in length, and very massive: it was some time ago gilded, the expense of which was 20*l.* It is the same which was in use, time out of mind, in the House of Commons, and to which Cromwell, when he dissolved the Long Parliament, alluded in the words, "Take away that bauble!" Shortly after, it was presented to the Royal Society by Charles II.; being superseded at the House of Commons by the one now borne by Col. Seymour, the sergeant-at-arms.

order, the president alluded to Chenevix, a name long known to all our scientific readers, as being identified with chemistry. On Mr. Smithson, the president was very eloquent; it appeared they had studied together at Oxford; and the friendship of youth grew with their growth. Chemistry was also Smithson's favourite pursuit; a list of his papers on this most interesting subject, was read: many of these, we believe, have been given, under the head of the Royal Society, in the *Literary Gazette*. An anecdote related of him by the president in his speech, we shall attempt to narrate as closely as possible. Smithson happened once to observe a tear gliding down a lady's cheek; he endeavoured to catch it on a crystal—one half of the drop escaped; he preserved the other however, submitted it to re-agents, and detected what was then called *microcosmic*—salt, with muriate of soda, and three or four more saline substances, held in solution. Mr. Browne, Lieut.-Col. Mackenzie, Sir Lucas Pepys, and his Grace the Duke of Atholl, were severally alluded to by the president; the latter was a warm patron of science, especially that most important, interesting, and improving branch, geology, which, though its birth-place was the Continent, had been fostered by Dr. Hutton in this country. The patronage of his grace, and the facilities for prosecuting the study of geology which his extensive domain presented, both of which were bestowed by him on the well-known geologist, McCulloch, were very happily characterised. After paying a warm, but merited, panegyric to the memory of Sir Thomas Lawrence, the president concluded, by stating that he was not aware of the death of any of the foreign members having taken place during the past year. He then announced, that the royal medal had been awarded to Dr. Brewster, for various communications on light; many of which we have published in the *Literary Gazette*, from time to time, during the past session. The other royal medal had been awarded to M. Balard, of Montpellier, for his recent discovery in springs of *brôme*, so called from the motion of the sea, and its peculiar odour. The Copley and Rumford medals were not awarded.

At the close of the address, a new council was balloted for. The election fell upon the Duke of Sussex,* Sir Robert Peel,† Lord Melville, Sir George Murray, Sir Astley Cooper,† Col. Fitzclarence,* Messrs. Barrow,* Cavenish,* Children,* Lubbock,* Peacock,* Vigors,* Barlow, Ellis, Faraday, Gilbert, Capts. Kater, Philip, Pond, Rennie, and Dr. Roget. Those marked thus * are new members—the others were of the last council.

A ballot for president, treasurer, and secretaries, then took place: for the former office there were only two candidates—H. R. H. the Duke of Sussex and Mr. Herschel the astronomer: the result of the ballot was—

For H. R. H. the Duke of Sussex	119
For Mr. Herschel	111

8†

Mr. Lubbock was elected treasurer, and Dr. Roget and Mr. Children were chosen secretaries. It was then resolved that a deputation of the fellows should wait upon his royal highness, and communicate the result of the election; after which Mr. Gilbert briefly thanked the Society for the attention shewn to him during the three years of his presidency: he then vacated the chair, shaking hands in the most cordial manner with those around him.

† There is some confusion afloat touching the mode of the ballot; but, in effect, it appears to have been to decide this question.

In the evening forty or fifty of the fellows dined together, as is customary on these occasions.

SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen, president, in the chair.—The reading of the Rev. J. Skinner's letters to Sir. R. C. Hoare, "on the site of the Roman station of Camelodunum," was resumed: this portion of the letters comprised a critical collation of the account of Tacitus with those of other ancient authors.

ROYAL SOCIETY OF LITERATURE.

AT the meeting of Wednesday, Nov. 17, an important antiquarian restoration was presented by Isaac Cullimore, Esq.; being a delineation of the lost fragment of the celebrated chronological tablet of Abydos,—the great regulator of (and, with the Rosetta inscription, the key to) the hieroglyphic history and discoveries. The drawing was accommodated to the copy of the tablet published in the Society's fasciculi of Hieroglyphics.

By this restoration, which Mr. Cullimore has drawn exclusively from British discoveries, the authentic monumental records of Egypt are raised considerably higher than the point of time to which they have hitherto been supposed to ascend; in consequence of which, several of the ancient Pharaohs, and various inscriptions, which have been heretofore without a place in history, may now be referred to their proper ages; and the connexion between the hieroglyphic records and the annals of inspiration may be drawn still closer. To this interesting subject we shall take another opportunity of advertizing.

A portion was likewise read of Professor Lee's learned "Observations on the origin of Heathenism." In this part of his able dissertation, the professor shews that the religious system of the ancient Persians was substantially the same as that held by the Egyptians, Chaldeans, and Greeks, and to a great extent identical with that now taught by the followers of Buddh and Brahma:—the foundation of them all being the system of emanations, derived from the principles of revelation, corrupted by tradition and by the inventions of a fanciful philosophy.

KING'S COLLEGE, LONDON.

THE completion of the buildings of this Institution is proceeding with great rapidity; and the builder, so far as we can judge from a transient inspection, appears to us to be acquitting himself most efficiently of the task entrusted to him. Very little now remains to complete the roofing of the College; and we are told, that in another week it will be entirely covered in: so that no delay whatever will occur in proceeding with the internal fittings during the ensuing winter. When the great object of preparing this establishment for the final reception of students has been accomplished, we understand that no time will be lost in completing the eastern wing of the river front of Somerset House, in harmony with Sir W. Chambers' original design; and within this wing will be the residence of the principal, and other officers connected with the higher and lower departments. We believe our readers are not generally aware, that his present Majesty, within a very short period after his accession, was pleased to take the College under his special patronage; and under such auspices as these, we are not surprised to learn that some valuable donations have been presented to it. Among the benefactors who

have thus evinced their sense of the deep importance of keeping education inseparably connected with religious instruction, we have heard that respected individual Sir Henry Halford mentioned, as having lately placed a valuable cabinet of materia medica at the disposal of the council. In the list of appointments recently made we were pleased to observe the name of James Rennie, Esq., (the admired author of "Insect Architecture,") as professor of natural history.

LITERARY MANŒUVERING.

A GLASGOW newspaper, called the *Scots Times*, has been sent to us, we presume from its containing an article under the above title; which, after referring in no very fair spirit to our honest and independent exposure respecting the palming of the old novel of *Self Indulgence* upon the public as the new novel of *Separation*, offers to pioneer us to similar acts of literary fraud. "But we stipulate beforehand," (says the writer, *improperly* naming an individual as editor of the *Literary Gazette*) "that he is to grant no quarter; for we shall not bring him in contact with females, nor indeed with any writer who deserves mercy." To the editor of the *Scots Times* (whoever he may be) we will simply say, that no syllable ever seen in the *Literary Gazette* can have given him the right to insinuate a suspicion that it ever shrank from its public duty, or was ever induced, either by partiality or dislike, to swerve one iota from the straight-forward line of just, but, we trust, at the same time, of gentlemanlike criticism. Its object was at its outset, and always has been, to foster the literature, fine arts, and science, of the country; with which its editor never could conceive that the persons, personal affairs, or supposed motives of publishers, authors, artists, or men employed in scientific researches, could have any thing to do. It has therefore contented itself with the most earnest pursuit of information; and what it has acquired, it has freely, candidly, and with the most fearless adherence to truth, laid before its readers. By this means it has taken a very important station, and that station it is not inclined to lose by deviating from the honourable course which has led to it. We now quote the case as alleged by the Glasgow editor.

"The first delinquent, then, that we introduce is no other than the author of *Sayings and Doings*! Mr. Colburn six years ago published this novel in three goodly volumes, for which he charged the good-natured public three half-guineas. Of these three volumes, containing about 1050 pages, 600 pages, or nearly two-thirds, are occupied by the story of "Merton"—a good story, perhaps,—at least a story well praised by the critics. But another story, which, like Lady Charlotte Bury's, was published twenty years ago, *i. e.* in 1808, is to be found in three thin volumes under the title of *The Man of Sorrow*, and said to be from the pen of Alfred Alledale, Esq. Now, if the editor of the *Literary Gazette* will compare this story with "Merton" he will find a few verbal alterations, and, of course, new names to the heroes in the latter; but in every other respect a complete similarity—in other words, the *Man of Sorrow* of 1808 is nearly the "Merton" of 1824! He may begin the comparison at the top of page 106, Vol. II. of *Sayings and Doings*, and at the middle of page 41, Vol. I. of the *Man of Sorrow*; and, to lessen his labour as much as possible, we may furnish him with the following key:—Mr. Savage of the latter is Mr. Felton of the former—Merton is Mr. Musgrave—the heroine Fanny Meadows is Miss Vincent—and of course, the active plotting mother in "Merton," Mrs. Meadows, is Mrs. Vincent of the *Man of Sorrow*."

Having given place to this, it would be gross injustice in us were we either to allow its accuracy, or that it resembled Lady C. Bury's case, or that the writer's inferences were well founded. On the contrary, the indifferent novel of the *Man of Sorrow*, published by Mr. Hook when in his teens, and probably very little circulated, served the author of "Merton" for nothing more than the thread of a good

story, which he entirely re-wrote, and compressed into a much smaller compass, as one of the series of tales in *Sayings and Doings*. For our parts, jealous as we are of imposition, we can see nothing to censure in this natural transaction.

FINE ARTS.

ARTISTS' AND AMATEURS' CONVERSAZIONE.

ON Wednesday, we had the pleasure of attending the second meeting of this very pleasant society. A variety of works of art were, as usual, laid upon the tables, or scattered around the room,—a considerable proportion of them being the productions of the members. Among them the following attracted much attention: an exquisite drawing in water-colours, by J. W. Wright, describing the scene in which the old nurse details to Lucy Ashton the evil portents that attend the heir of Ravenswood; it is a picture which would form a capital illustration to the Waverley Novels, and combines the finish of the old Dutch masters with the grace of Watteau. Mr. Frederick Nash exhibited a large series of drawings made during a recent tour in France, including some delightful subjects of ancient buildings at Tours, Angiers, and Nantes. Mr. H. Behnes Burlowe sent his two busts of Sir William Ouseley and the Rev. Dr. Styles; and they afforded satisfactory proof that this sculptor is destined, at no very distant period, to hold a foremost rank in his profession. A bust in *terra cotta*, by Robbilliac, of old Jonathan Tyers, his earliest patron, and also the patron of Handel and Hogarth, was lent to the society by the Rev. Dr. Barrett, the grandson of Mr. Tyers, who inherited from him the gardens of Vauxhall, of which he was the original proprietor. Buckingham's noble picture of Henry III. of France, surrounded by his favourite birds and monkeys, receiving Don John of Austria, was also in the room; as well as a delicious sketch of Venice by this lamented artist. Two extraordinary models in ivory of the Lords Lyndhurst and Brougham, said to be the productions of journeyman workers in ivory, were remarkable for skill of execution and fidelity of likeness.—Mr. Knight's painting of two old men pledging each other in the "brimming glass" was admired universally; it possesses high excellence, and must greatly raise the reputation of this promising young artist. Three studies by Wood, finely drawn and coloured—a small painting by Leslie—two drawings by Barrett—one by Stanfield—a picture by Etty of "Guardian Angels"—a drawing of "Florence" by Turner—a miniature by Holmes—a drawing of peculiar power and beauty by Cattermole—a portrait, and an exquisite sketch of two children, by Boxall—with several works from the pencils of the old masters, completed the more prominent parts of the collection. There were also several fine prints, not yet published, submitted by Messrs. Moon, Boys, and Graves.

The artists to whom we were indebted for exhibiting their own works are, Mr. Stanfield, Mr. Wright, Mr. Boxall, Mr. H. Behnes Burlowe, Mr. Wood, Mr. A. Clint, Mr. S. Clint (who produced an exquisitely executed medal of the late President of the Royal Academy), and Mr. Shaw, whose Illuminated Ornaments from Missals and Manuscripts of the Middle Ages excited great attention, and were much admired.

We hope our notice of the next meeting will contain a greater number of the names of members who personally exert themselves to contribute to the enjoyment of the evening.

It is only by exertions of this description they can hope to increase the interest, and add to the value, of the Artists' and Amateurs' Conversazione.

NEW PUBLICATIONS.

Sketches in Italy. No. I. Drawn on stone by W. Linton, as Fac-similes of his Sketches made during his Tour in the years 1823 and 1829. London: published by the Author; Moon, Boys, and Graves; Colnaghi and Son; and Rodwell.

THIS superb and interesting work is dedicated, by permission, to his most gracious Majesty William the Fourth; and, from its style and character, is in every respect worthy of the patronage it has obtained. Our eye has, of late, been so accustomed to look on the gem-like and laboured productions of the burin, that a variety like the work before us, comes with a refreshing influence. In the facile and efficient sketches of the artist we wander "fancy free," and may be said to enjoy with him the pleasures of his tour. To the artist, and the lovers of art, sketches have a charm, in many instances, beyond that of more finished productions. In the latter, it often happens that, instead of embracing the spirit and character of the view, the attention is called off to admire the technical skill of the lines, and the beauty of the execution; whereas fac-similes, like those of Mr. Linton, leave the imagination at liberty to embody the scene, and colour it at pleasure. No. I. of this splendid work contains views of Otricoli, Veji, Lugano, San Martino, Il Lago Maggiore, Vale of Terni, Tivoli, and Subiaco. Views of Italian scenery are to the painter of landscape what the antique statues are to the student of historical art; they imbue his mind with exalted perceptions, and give to the most ordinary forms, or the most familiar scenes of his pencil, without departing from truth, a character of excellence, which, without such aid, they would seldom, if ever, possess. The world of art is, therefore, highly indebted to the industry and talent which have brought forward a selection like the present, in which fresh ground has been entered upon, and novelty has been added to variety,—two of the most essential qualities that art can boast. The work is accompanied with descriptive references, and is to be completed in twelve numbers; and no expense appears to have been spared in paper, typography, or other matters connected with getting up a publication justly deserving general encouragement and patronage.

Gems of Beauty; or, Studies from Nature; comprising Fruit, Flowers, &c. Part II. Wright.

AN unassuming but pleasing little publication. The plate in the present Number, of "the King of the Pippins," makes our mouth water. For the introduction of this beautiful apple, which ripens in November, and remains in a high state of preservation until January, the public are indebted to Mr. Kirke, of Brompton.

ORIGINAL POETRY.

EARLY DEATH.

Quem Deus amat, moritur adolescens.

If it be sad to mark the bow'd with age
Sink in the halls of the remorseless tomb,
Closing the changes of life's pilgrimage
In the still darkness of its mouldering gloom;
—Oh what a shadow o'er the heart is flung,
When peals the requiem of the loved and
young!

They to whose bosoms, like the dawn of spring
To the unfolding bud and scented rose,
Comes the pure freshness age can never bring—
The spirit, joyous in its rich repose:
How shall we lay them in their final rest—
How pile the clouds upon their wasting breast?

Life openeth brightly to their ardent gaze—
A glorious pomp sits on the gorgeous sky,
O'er the broad world Hope's smile incessant
plays,

And scenes of beauty win the enchanted eye:
—How sad to break the vision, and to fold
Each lifeless form in earth's embracing mould!

Yet this is Life! To mark, from day to day,
Youth, in the freshness of its morning prime,
Pass, like the anthem of a breeze, away—
Sinking in waves of Death, ere chill'd by
Time!

Ere yet dark years on the warm cheek had shed
Autumnal mildew o'er its rose-like red!

And yet what mourner, though the pensive eye
Be dimly thoughtful in its lava tears,
But should with rapture gaze upon the sky
Through whose far depths the spirit's wing
careers?

There gleams eternal o'er their ways are flung,
Who fade from earth while yet their years are
young!

WILLIS GAYLORD CLARK.

Philadelphia, Oct. 1830.

DRAMA.

DRURY LANE.

MISS HUDDART has played *Constance*, as we anticipated, better than she played *Belvidera*; but not well enough to support herself in the rank to which those characters pertain. She must subside to the *Meg Merrilies* and the *Helen Macgregors*; and even then she will suffer by comparison with Mrs. Faucit, who, if she have less power, has more judgment, more taste, and is every way a more agreeable performer. Macready, in *John*, was somewhat unequal; occasionally too colloquial, sometimes grand and impressive.* The play was very badly got up; as, indeed, all Shakspeare's are at this theatre. Mr. Cooper, both in *Henry IV.* and in *King John*, has managed to be correctly and picturesquely attired; but the "lords and gentlemen," generally, are sadly in want of decent clothing. The old and hateful system of introducing songs into established operas is again raging, in spite of every sensible critic's repeated reprobation. In *Masaniello*, the other evening, Miss Pearson was advertised to introduce "Even as the sun," composed by Mr. Horn. In *John of Paris*, Mrs. Wavlett sings "The soldier's tear," and "Come where the aspens quiver;" and Miss Pearson "La rose d'amour." In the *National Guard*, we have Bishop's "Tell me, my heart," from the opera of *Henri Quatre*, in lieu of Auber's original lovely ballad; and in *Hofers*, the characteristic ballad of "Beautiful war" is rejected for a Swiss air, from the portfolio of Mad. Stockhausen. Is it to be wondered that the house does not fill? Where is the use of leaving one's fire-side, to hear an opera of Rossini, Auber, or Boileudieu, when almost every body's music is sung except the original composer's? The whole of the songs we have mentioned are excellent in their places, but ridiculously out of keeping with the pieces they are here lugged into; and, moreover, with the exception of "Come where the

* As critics seem to differ much on this accomplished gentleman's style of acting (though all allow him the highest powers), we may shortly devote a column to the subject.

aspens quiver," which is also sung in *Midas* (!), not one has even the solitary merit of novelty to excuse its introduction. They are the stock songs of all the concert rooms, libraries, and theatres, in and out of London. We do entreat the managers, for their own sakes, to stop this pernicious system. We never wish to write one line that may annoy or offend; but our duty to the public will oblige us, if our friendly expostulations have no effect, to speak more plainly upon this subject.

We must now drop a hint on the *play-bills*, or rather house-bills: had these, in this instance, adhered to their wonted diction, and, as usual, announced that the new comer had been welcomed with "enthusiastic applause"—we should simply have considered the expression as the acknowledgment of the managers for the vigorous fulfilment of private contract on the part of those ordered to different parts of the house, for the specified and specific purpose of displaying their enthusiasm. But since we perceive in the diurnal bills of Drury Lane, that the new tragedian is branded, with characters half an inch in diameter, as having met with "decided success," it is with extreme submission, and with the consciousness of the shilaleh (as she is from Dublin) hanging over our heads, that we venture to offer a contradictory opinion. By way of primary propitiation, we agree with the "decided success" of managerial criticism,—so far, at least, as that the success of Miss Huddart as any thing like a first-rate actress, was decided beyond all doubt or question. There is a deficiency of dignity in her bearing, while her features may be considered as having considerable expression: her voice is frequently harsh; and in her mad scenes she positively roars, very much after the fashion of those animals in which her country is especially productive. Miss Huddart possesses but little pathetic influence; and though she cannot be said to excel in exciting pity, yet to those parts of tragedy which demand energetic delineation, she has the power of giving an alarming effect: this talent for awakening terror requires at present no little restraint; for though we should be unwilling to deny the possession of force, we must observe that there is enough, and a little more.

COVENT GARDEN.

BRAVO! Mr. Peake! your *Chancery Suit* has terminated most happily for all parties concerned. Our hypercritical brethren may snarl, and call it a five-act farce, if they please; but the town, we hope, will be grateful for so pleasant a gift; and, farce or not, we can only say, that five acts have seldom tripped off so merrily since poor O'Keefe sowed his *Wild Oats*, and moved the spirit of his "young quaker." Our readers have read the plot in all the daily papers. It is interesting enough, without being intricate, and new in construction, if not in detail. The language, without aspiring to wit, is lively throughout, and frequently humorous in the extreme. The characters have been called caricatures by some persons, who have forgotten *Arces* and *Mrs. Malaprop*. To us they did not seem such: we have known individuals as harmlessly eccentric as the warm-hearted *Guy Thistlebloom*; and his own explanation is, in our opinion, exceedingly natural and affecting. As to the lampooning Irishman, from "Trin. Col. Dub." who has narrowly escaped conviction "in a heavy libel case," and worms himself into every body's confidence, for the purpose of placarding their follies in doggerel verses,—we are astonished that

verisimilitude is not unanimously accorded to him. His siding with the worst party, and consequently escaping a horse-pond, may perhaps be rather out of keeping; but the author had no doubt the fear of "a heavy libel case" before his eyes, and threw in the redeeming point as "a sop to Cerberus." These two characters were admirably supported by Bartley and Power. Mr. Warde, as the brother of *Thistle-bloom*, is entitled to equal praise; but the most naturally conceived, and perfectly executed, part in the whole play, was that of *Winterfield*, the ancient servant of *Sir Bernard Blazon-court*, personated by Blanchard. It is truly refreshing, in these degenerate days, to see such an artist as Blanchard cheerfully and honestly exerting himself to give to the most trifling gem committed to his charge the highest polish it is capable of receiving. How many of the profession, who, without half his talents, are receiving double his salary, should blush at the lesson read them by this our old and deserving favourite. Miss Ellen Tree had little to do but to look lovely—and how lovely she did look! Mrs. Gibbs, we always think, has too little to do: she is one of the actresses we can never see too much of. An accident had occurred to Mr. Abbot, and Mr. G. Bennett was obliged to read the part. We cannot praise him more than by saying, it did not appear to injure the comedy in the slightest degree. Meadows, Egerton, and Mr. J. Hughes, did well; but there was a lady.—We will not throw any bitterness, however, into this sweet notice: we are in too good humour with the author, and the actors generally, to say any thing disagreeable to any body; and such was evidently the feeling of the audience on Tuesday evening. Again we say, bravo! Mr. Peake; you are a step higher in our good opinion; and if, in writing this comedy, you sometimes fancied you were writing a farce, the next time you write a farce, be sure you think you are writing a comedy, and you will escape the only rock that ever threatens your dramatic craft, and on which they have sometimes struck at the very mouth of the heaven.

Miss Taylor has played *Clari*, in the opera of that name, and with the greatest effect. She is already an established favourite with the public, and her great and versatile talents render her a most valuable acquisition to the theatre.

ADELPHI.

ON Tuesday a caricature of the *Pilot* was produced at this little theatre. Absurdity can alone please from its novelty; and burlesque is essentially absurd. The deficiency of interest which necessarily occurs in the plot and incidents, requires to be supplied by the dialogue. Unless this be unusually replete with wit and humour, burlesque soon grows flaccid and tedious. The pro-*Pilot* of the Adelphi, with the exception of Fat Tom Coffin's song as a water-man—

"Oh, row with me down the ri-ver,
Ven I've von the cup and the ki-ver"—

has little to recommend it, except being most laughably absurd. An opportunity is, however, afforded Mr. Yates, in the prelude, of having a fair rap or two at the patent theatres, for their irregular appropriation of dramatic property. On this subject we shall take the freedom of expressing our disapprobation of theatrical monopoly in its present bearings, and trust that public opinion will not suffer a system to obtain longer; alike partial, subversive of competition, and consequently diminutive of public amusement. A patent we conceive to be granted

for the purpose of protecting what belongs to ourselves alone; nor can it be unjust that dramatic, like all other composition, should belong to the author, or those to whom, for a consideration, he has thought proper to concede his claim; but this converting letters patent into letters of marque—this carrying on a plan of self-protection by privateering and piracy, far exceeds our notion of equity. Some, indeed, are even prepared to question the propriety of any of the purveyors of public amusement being permitted to monopolise the *matériel* for supplying the same. We, however, say, let the larger theatres be protected from petty larceny—but put an end to the present system of licensed robbery. Is it fair or expedient to prosecute a thief, and, if he happens to have any thing worth taking, at the same time to pick his pocket yourself? If, like the Arabs, "their hand was against every man's, and every man's hand against theirs"—it would be but fair play; but now the little theatres have their hands tied behind them. The only defence that the patentees offer is—

"For why? because the good old way
Sufficeth us; the simple plan,
That they should take who have the power,
And they should keep who can."

Reeves's Beadle is equally deserving, and far more popular than the New Police; his metropolitan favour rises with his parochial dignity; his farce is rich and broad—but he must not let applause lead him into the mistake of making it broader. Mrs. Yates would greatly conduce to the effect of her inimitable cottage scene if she would provide herself with a "copper-cap," or, at any rate, with a gun that would never miss fire.

VARIETIES.

The Jews.—By a recent decree of the Emperor of Russia, it is stated that the Jews who cannot pay their taxes are obliged to become soldiers.

A Beryl.—There is at St. Petersburg (says the Mining Journal published there) a beryl found three years ago near Murzinskaja, in the district of Catherineburg, which is above eleven pounds in weight, and valued at more than 7,000*l.*

Colloquials of a Kentucky Man.—"He believed that the best qualities of all countries were centered in Kentucky, but had a whimsical manner of expressing his national attachments. He was firmly convinced that the battle of the Thames was the most sanguinary conflict of the age, and extolled Colonel J—n as 'a severe colt.' He would admit that Napoleon was a great genius; but insisted that he was no 'part of a priming' to Henry Clay. When entirely 'at himself,'—to use his own language,—that is to say, when duly sober, Pete was friendly and rational, and a better-tempered soul never shouldered a rifle. But let him get a dram too much, and there was no end to his extravagance. It was then that he would slap his hands together, spring perpendicularly into the air with the activity of a rope-dancer, and, after uttering a yell which the most accomplished Winnebago might be proud to own, swear that he was the 'best man' in the country, and could 'whip his weight in wild cats!' and after many other extravagances, conclude, that he could 'ride through a crab-apple orchard on a streak of lightning.'"—*Stories of American Life.*

Dissection of a Mummy.—An extremely fine Egyptian mummy from Thebes, which was presented to the Royal Asiatic Society by Sir John Malcolm, late governor of Bombay, is about to

be dissected and lectured upon by Dr. Granville, at the theatre of the Royal Institution, which has been lent to the Royal Asiatic Society for the occasion.

Natural Rocking-Stone in Auvergne.—Dr. Hibbert has at length found a rocking-stone, so much the object of religious worship with our Celtic and Teutonic ancestors, in Auvergne, a country where the natives, from their peculiar dark complexion, shew decisive marks of a Celtic origin; and where the monuments of antiquity resemble those of Wales and Cornwall. It is of granite, its site is near to the village of Tonbeyrat, and it is surmounted by a Christian cross. Auvergne is equally remarkable for memorials of rock worship in cromlechs; and what is interesting, as illustrating the ancient attire of the Gael, is, that the costume of the figures represented on the surmounting pedestal of the cross is that of the Scottish Highlands, even to the kilt.

Ancient Money of Scotland.—About four or five years ago, in ploughing a field at Tegs, near Inverness, the ploughman found a rod of pure gold, about fifteen inches long, with three sides, each about half an inch in depth. In the middle it is twisted, and terminated by a bend similar to a shepherd's crook, in very rude workmanship. This relic was presented to the Society of Scottish Antiquaries, and several opinions were given regarding its probable use. The question, however, lay over till very lately, when Dr. Hibbert has advanced a theory founded on the Welch laws of Howel Dha, which tend to prove, beyond doubt, that the said rod of gold indicated nothing more than the form of current money of many northern countries.

Electrical Accumulations.—The *Transactions of the Plymouth Institution* contains a lengthened memoir on the laws of electrical accumulations, which are recapitulated in the following facts:—1. An electrical accumulation may be supposed to proceed by equal increments. 2. The quantity of matter accumulated may be estimated by the revolutions of the plate of the electrical machine, supposing it in a state of uniform excitation; or it may be measured by the explosions of a jar connected with the outer coatings. 3. The interval which the accumulation can pass is directly proportional to the quantity of matter, and inversely proportional to the surface. 4. The force of electrical attraction varies in the inverse ratio of the square of the distance between the points of contact of the opposed conductors, supposing the surfaces to be plane and parallel; or, otherwise, between two points which fall within the respective hemispheres, at a distance equal to one-fifth of the radius, supposing the opposed surfaces to be spherical. 5. The free action is in a direct proportion to the square of the quantity of matter, and in an inverse proportion to the square of the surface. 6. The effect of an electrical explosion on a metallic wire, depends exclusively on the quantity of matter, and is not influenced by the intensity or free action.

New Fire Escape.—Darby's fire and burglary alarm, for which a patent has been taken out, has the appearance of a wardrobe: wires connected with it are attached to the various doors and windows, and in the event of thieves breaking in, or fire taking place, a bell alarms the inmates of the house, and at the same instant it lights a candle, and presents a tablet shewing the name of the apartment where either of those disagreeable agents are carrying on their work of destruction!

Chlorures of Iodine.—The examination of

these composites has led to some remarkable results, of which the following are the principal. 1. Perchlorure of iodine, brought into contact with water, is suddenly decomposed, and occasions the formation of iodic acid and hydrochloric acid. 2. The property possessed by alcohol of not dissolving iodic acid, furnishes the means of separating the two acids. The simple contact of perchlorure with alcohol produces the hydrochloric acid, which remains in the liquid, and the iodic acid is precipitated in the form of a white crystallised powder. 3. Iodic acid is one of the most active agents in detecting the presence of vegetable alkalies, with which it unites, forming scarcely soluble acid composites. The presence of the hundredth part of a grain of alkali may by this means be detected.

The Æolophon.—This new instrument, which is played like a pianoforte, is becoming a great favourite with the lovers of the sweet and tasteful in music. In its tones it resembles the Æolina, but it has much greater compass. Among its highest honours has been the approbation of the queen, before whom it was performed upon, last Saturday, at St. James's Palace, when her majesty's partiality for the simple style in music was made apparent, by the applause bestowed upon the two ballads, "Meet me by moonlight," and "Love's ritornella," the latter of which was repeated by command. We have not yet been able to attend a rehearsal of the Æolophon, at Mr. Chapell's, where there are, we believe, daily performances.

Lost Greenland.—The *Indicateur* of Calais has the following:—We learn from Copenhagen, that an expedition which sailed from that port in May last, succeeded in reaching the eastern coast of Greenland, where some Norwegian colonists settled eight centuries ago, and to which all access had since been prevented by the ice. The expedition found there the descendants of the primitive colonists, who still profess Christianity. Their language is that of the Norwegians of the tenth century.

Puns.—Every body condemns punning; but every body likes it now and then, except the dull dogs who never make a pun, and who repeat the hereditary objection to that sort of humour. Now we have been amused this week—

1. By hearing the Court of Chancery, with Lord Brougham and Vaux presiding, designated as *Vaux-hall*.
2. A gentleman in Piccadilly attempting to raise another gentleman who had fallen, overcome with wine, said, "I don't know what to do with him; I cannot get him to give any account of himself!" "How can you (observed a looker-on) expect an account from a man who has lost his balance?"
3. "The deuce is in these incendiaries (said a pseudo-punster); here they are destroying pease-stacks; why don't they get rid of all taxes?" This deplorable attempt, however, brought out a fair hit from a professor. "Rather (rejoined he, seeing their hostility to the church and tithes,) I marvel that instead of burning hay-ricks, they don't burn bishop-ricks."

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XLIX. Dec. 4.*]
The Life of Sir Humphry Davy, by Dr. Paris.—Vegetable Cookery; with an Introduction, recommending Abstinence from Animal Food and Intoxicating Liquors.—A second edition, with great additions, of Lloyd's Field Sports of the North of Europe.—A new edition of the Extraordinary Black Book; comprising a complete Exposition of the Abuses in the Church, the State, and

Colonies, &c.—Captain Beechey's Voyage to the Pacific, and Behring's Straits.—Travels in Chili, Buenos Ayres, and Peru, by Samuel Haigh, Esq.—Essays concerning the Faculties and Economy of the Mind, by William Godwin.—The Miscellaneous Chemical and Philosophical Researches of Sir Humphry Davy; with Notes, by William Maugham.

Longitude..... 0 3 51 W. of Greenwich.

To the Editor, &c.
Sir, — Although halos round the moon are by no means uncommon, I offer for insertion in your next *Gazette* the following description of an unusually large one, of an oval form, which I observed here last night for four hours. I saw it first at half-past five o'clock: the sky at that time was for the most part covered with light clouds — the cirro-stratus, through which the stars were here and there discernible. The cold wind blew violently from the S.E., and the moon shone dimly. The halo then seemed composed of precisely the same species of light clouds as partially covered the rest of the heavens; and but for its oval form, could not have been distinguished therefrom. Between eight and nine o'clock, however, during the intervals occurring in the passage of dark clouds across the halo, the moon and the white meteor shone beautifully bright, in a clear sky, without an intervening cloud of particle of mist. At the moon's southing, the two foci of the halo were directly N. and S.—I am, sir, &c.
Redruth, Nov. 26th, 1830. R. E.

TO CORRESPONDENTS.

* * * The temporary interest and the length of our first Review obliges us to defer Lingard's History, Vol. VIII., completing the first portion of that able work; the conclusion of Rodney's Memoirs; Picken's Travels, &c. of Missionaries; Trant's Travels in Greece; Illustrations of Bruce's Travels (Family Library); and of Dr. Lardner's History of the Western World; which, with other novelties, shall have our earliest attention. The same cause compels us to postpone the consideration of the Royal Society contest.
In our own good time—"O tempora!"
Mr. Evans, the book auctioneer in Pall Mall, has inserted a letter in the *Times*, converting our statement respecting the Duchess of Berr's library:—Mr. Evans knows nothing about the matter, and we do know a good deal. He had better *dig below the surface* before he impeaches those who have authentic intelligence from *divers places*.
Our card reached us too late for the performance of Russian Horn Music on Wednesday. The same happened with the ticket for the rehearsal at the Athenæum Saloon. Those who desire to have their exhibitions or performances noticed, ought not to defer their invitations to the last moment.
ERRATA.—No. 723, p. 768, col. 3, line 12, for "toque," read "toque."—P. 772, col. 1, last line but six of critique on Drury Lane, for "scarcely," read "surely."—In the Advertisement of Genera Nominum, for "George Fretooge," read "George Futvoege;" and for "W. March," read "W. Marsh."

* * * It is very desirable, both in advertisements and legibly written. The contrary leads to errors, besides giving us infinite trouble.

ADVERTISEMENTS,
Connected with Literature and the Arts.

December 1st, 1830.
RUSSELL INSTITUTION.
Gentlemen who are qualified to deliver Lectures on any branch of Literature, Art, or Science, calculated to gratify a large and mixed Audience, are informed that the Committee of the above Institution will be ready to receive Communications on either of the above Subjects, at any time prior to Wednesday the 15th inst. Every requisite information may be obtained of the Secretary, E. W. Brayley, Great Cornam Street.

This day is published,
SCRIPTURE ILLUSTRATIONS to the

MUSIC.

Popular Journal of Music.
On the 1st of January will be published, price 3s. the first Number for 1831, of
THE HARMONICON, a Monthly Journal, devoted to the Publication of Vocal and Instrumental Music, and offering a Medium for the Union of Music and Literature, by means of Essays, Memoirs, and Criticisms on Musical Subjects; together with Periodical Reports of the State of the Art in all parts of the World.
Each Number will contain:—I. An Original Biography of some distinguished Composer or Performer. II. Interesting Correspondence, or original Dissertations on Subjects connected with the Science—III. Detailed Accounts of the Opera, Concerts, and other Musical Performances of the past Month—IV. Copious Extracts from the Foreign Musical Journals, giving the Reader the latest Information of the Progress of the Art and its Professors throughout Europe—V. Liberal and unbiased Accounts of all Musical Works as they appear—and VI. Six or Seven Pieces of Music, Vocal and Instrumental, English and Foreign, selected with care, and printed with a beauty and accuracy that may safely challenge competition.
London: Published by Longman, Rees, Orme, Brown, and Green, (to whom Communications for the Editors may be addressed), and regularly forwarded with the Magazines to all Booksellers and Dealers in Music in Town and Country, with whom Specimen Numbers of the Harmonicon may be seen.

BOOKS PUBLISHED THIS DAY.

In 1 thick vol. 8vo. price 1l. 4s. boards,
A NEW AND COMPLETE GREEK GRADUATE; or, Poetical Lexicon of the Greek Language. With a Latin and English Translation, an English Greek Vocabulary, and a Treatise on some of the principal Rules for ascertaining the Quantity of Syllables, and on the most popular Greek Metres. For the Use of Schools and Junior Students in the Universities.
By EDWARD MALTYB, D.D. F.R.S. F.S.A.
Preacher to the Learned and Honourable Society of Lincoln's Inn. Printed for T. Cadell, C., J. G., and F. Rivington, Payne and Foss, Longman and Co., J. Nunn, Jeffery and Son, J. Richardson, R. H. Evans, Baldwin and Cradock, J. Booker, J. Bohn, E. Williams, R. Priestley, Hamilton and Co., J. Duncan, Whittaker and Co., Simpkin and Marshall, E. Hodson, T. and W. Boone, J. Bigg, Black and Co., Houlston and Son, W. S. and J. Maynard; J. Parker, Oxford; and Deighton, Cambridge.

In small 8vo. price 8s. boards, the 3d edition of PRINCIPAL REFLECTIONS on the ORDINATION SERVICES for Deacons and Priests in the United Church of England and Ireland.

By JOHN BREWSTER, M.A. Rector of Eggleston, in the County of Durham. Printed for C. J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Also, by the same Author, Lectures on the Acts of the Apostles. New edition, in 1 vol. 8vo. 14s.

In 23 vols. 8vo. with finely engraved Portrait, from the original in the Red Cross Street Library, price 12s. 12s. in boards, THE PRACTICAL WORKS of the Rev. RICHARD BAXTER, with a Life of the Author, and a Critical Examination of his Writings.

By the Rev. WILLIAM ORME. Printed for James Duncan, 37, Paternoster Row. * Subscribers are requested to complete their Sets as early as possible, to prevent disappointment.

Mr. Orme's Life of Baxter is published separately, in 2 vols. 8vo. price 31s. boards.

Burke's Works complete, with General Index. In 10 vols. 8vo. price 6l. 17s. boards. THE WORKS of the Right Honourable EDMUND BURKE, complete, with General Index.

Printed for C. J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall. * A few Copies may be had on royal paper, price 9l. 12s. in boards. Also, Vols. IV. to VIII. in 4to. with General Index to complete that edition, price 2l. 12s. each, boards.

Bell on the Teeth. PHYSIOLOGY, and DISEASES of the TEETH. By THOMAS BELL, F.R.S. F.R.S. F.G.S. Lecturer on the Anatomy and Diseases of the Teeth at Guy's Hospital, and Surgeon-Dentist to that Institution.

1 vol. 11s. 6d. Also, in 1 vol. 8vo. price 5s. Do. Addition on Females. Observations on the Disorders of Females, connected with Uterine Irritation. By Thomas Addison, M.D. Assistant Physician and Lecturer on the Theory and Practice of Physic at Guy's Hospital.

Printed for S. Highley, 174, Fleet Street. Austral and Emigration. In 1 vol. 8vo. price 14s. THE PRESENT STATE of AUSTRALIA; a Description of the Country, its Advantages and Prospects, with Reference to Emigration; and a particular Account of the Manners, Customs, and Condition of its Aboriginal Inhabitants.

By ROBERT DAWSON, Esq. Late Chief Agent of the Australian Agricultural Company. "The comprehensive nature of Mr. Dawson's duties, and the monuments he left of his exertions, demonstrate that no man could stand in more favourable circumstances than he did, for appreciating the exact amount of benefit to be derived from location in New South Wales. The narrative portion of his book is distinguished by delightful simplicity, affording the general reader a fund of agreeable information; while those whose thoughts are fixed upon emigration to Australia, will find the question discussed, both specifically and incidentally, to a highly satisfactory extent."

Price 1s. A VOICE from the CHURCH; being Extracts from a Work entitled "Exposition, or the Complaints of the Church of England against encroaching Pluralities," by the Right Rev. Father in God, Thomas Ken, D.D. formerly Bishop of Bath and Wells. A new edition, respectfully addressed to the Archbishops and Bishops.

By a CLERGYMAN of the CHURCH of ENGLAND. Printed for Longman, Rees, Orme, Brown, and Green. Price 1s. 6d. THE RESULT of the CHANGE of ADMINISTRATION; or, what the New Ministry has to look to.

Published by Longman, Rees, Orme, Brown, and Green, Paternoster Row; and J. Ridgway, Piccadilly. In 8vo. price 14s. cloth boards, A TREATISE on FEVER. By SOUTHWOOD SMITH, M.D. Physician to the London Fever Hospital.

Printed for Longman, Rees, Orme, Brown, and Green. * This Treatise on Fever stands, without competition, at the head of all that has been written on this abstruse disease."—Westminster Review, Jan. "There is no man in actual practice who should not possess himself of Dr. Smith's work."—Lond. Med. and Surg. Journal, February. "The general reader will find it perfectly intelligible, and of great practical utility."—Monthly Repository, March. "With a mind so trained to accurate observation and logical deduction, Dr. Smith's delineations are peculiarly valuable."—Medical Critique, March. "Of the medical phenomena he has given a most masterly description."—London Medical and Physical Journal, March. "The author merits the reward of a double service, by arriving at important truth amid much popular error, and by laying this truth before the world in a dictation, and with a demonstration, which most powerfully recommend it to the judgment."—Westminster Review, April. "The work just analysed is the best which we have ever perused on the subject of fever, and in our conscience we believe it the best that ever flowed from the pen of physician in any age or country."—Medical-Chirurgical Review, April.

Works on Natural History. PRINCIPLES of GEOLOGY; being an Attempt to explain the former Changes in the Earth's Surface, by reference to Causes now in operation. 8vo. Illustrated with numerous Woodcuts, Plans, &c. Vol. I. 15s.

By CHARLES LYELL, F.R.S. Foreign Secretary of the Geological Society. "It is very interesting and amusing, and should be read by every one who takes an interest in this rising branch of natural history."—Jameson's Philosophical Journal. "This is a work of no ordinary mind. It bears deeply stamped upon it the impress of talent, knowledge, and research; and independent of the interesting and important nature of the subject, the depth and general interest of the author's views are recommended to us by the perspicuous and elegant language in which they are clothed. We cannot conclude this notice of the volume without strongly recommending it."—Athenaeum.

2. The Journal of a Naturalist. 3d edition, foolscap 8vo. with numerous Additions and Improvements, Plates and Woodcuts, 15s.

Plants, trees, and stones, we note, Birds, insects, beasts, and many rural things. "The author of the charming volume before us has produced one of the most interesting books we remember to have seen for a long time."—New Monthly Magazine, June 1829. "The success of this interesting book, which has now reached a third edition, is a tolerable pledge of its merits. No one can have looked through its simple unassuming pages without pleasurable feelings."—Asiatic Journal, Sept. 1828.

3. Consolations in Travel; or, the last Days of a Philosopher. By Sir Humphry Davy, late President of the Royal Society. In 1 vol. Printed uniformly with "Salmonia." 6s. a new edition. "We have been greatly delighted with this work."—Monthly Review. "The work is of a very superior character, elaborately written, full of most ingenious thoughts, with some passages of great beauty."—Asiatic Journal.

Also, by the same Author, 4. Days of Fly-Fishing, a new edition, with Plates and Woodcuts, 12s.

5. The Zoology of North America, Part I. containing the Quadrupeds. By John Richardson, M.D. Surgeon of the late Expedition under Captain Franklin. Illustrated by Twenty-eight spirited Engravings, by Thomas Landseer, 4to. price 11. 11s. 6d.

* Published under the Authority and Patronage of His Majesty's Government. 6. The Zoology of North America, Part II. containing the Birds. By John Richardson, M.D. With Fifty coloured Engravings, drawn on Stone, by W. Swainson, Esq. and numerous Woodcuts. 4to. In the press.

7. The Natural History of Insects, embellished with numerous Woodcuts. Vol. I. (to be completed in two vols. 2d edition, small 8vo. 5s.

8. Outlines of Geology; being the Substance of a Course of Lectures delivered at the Royal Institution, a new edition. By W. T. Brande, F.R.S. Post 8vo. 7s. 6d.

9. Hooker's Botanical Miscellany, Numbers I. II. III. forming Vol. I. Royal 8vo. with 75 Plates, 10s. 6d. each Number. A few Copies of Nos. I. and II. with Plates coloured, price 15s.

10. Journal of the Royal Institution, No. I. with Plates and Woodcuts, 6s. 6d. John Murray, Albemarle Street.

In 18mo. price 3s. 6d. half-bound, A SHORT ACCOUNT of the FIRST PREACHING of the GOSPEL by the APOSTLES; being a Continuation of Conversations on the Life of Jesus Christ. By a M. THER. Printed for B. Fellowes, Ludgate Street.

Small 8vo. 5s. 6d. THE VERACITY of the FIVE BOOKS of MOSES, argued from undesigned Coincidences to be found in them, which are impossible in several Parts. By the Rev. J. B. BLUNT, Fellow of St. John's College, Camb.

"Mr. Blunt has already signalled himself by his work on the Acts of the Apostles, as an individual intimately conversant with the most minute particulars of holy writers, and a very successful disciple of Dr. Paley, in the management of that species of Christian evidence which arises from the discovery of undesigned coincidence of revealed truth. This volume cannot fail to increase his reputation. It is both a pleasing and instructive work, and is creditable to the talents, learning, and piety of the respected author."—Eccegitical Mag. June 1830. "We think Mr. Blunt's clever and very ingenious web of argument will be read with pleasure, and it certainly must with profit."—Monthly Review.

Also, by the same Author, The Veracity of the Gospel and Acts, a new edition, post 8vo. 5s. 6d. John Murray, Albemarle Street.

A new edition, post 8vo. 10s. 6d. with numerous Wood Engravings of original Portraits and Subjects of Interest. THE GOLD-HEADED CANE.

"The Gold-Headed Cane is a modest little volume, containing sketches of the lives and manners of our most eminent physicians, from Raeliff to Baillie, and composed in a style lively, graceful, often humorous; well calculated to attract the unprofessional reader. We wish it were generally circulated."—Quarterly Review. John Murray, Albemarle Street.

In 8vo. 2s. 6d. THREE LECTURES on WAGES, and on some Effects of Absenteeism, Machinery, and War, delivered before the University of Oxford, in Easter Term, 1830. By NANSAU V. SENIOR, Magd. Coll. A.M.

Late Professor of Political Economy. Recently published, by the same Author, 2. Three Lectures on the Transmission of the Precious Metals. 3d edition, 2s. 6d.

3. Three Lectures on the Cost of obtaining Money, &c. 6d. John Murray, Albemarle Street.

Burke's Peerage and Baronage for 1830. Third edition, inscribed, by permission, to His Most Gracious Majesty, in 1 large vol. with numerous Illustrations, BURKE'S DICTIONARY of the PEERAGE and BARONETAGE of the BRITISH EMPIRE.

"This popular work justly deserves to be considered as a history of the British Nobility. It is enriched by a variety of personal anecdotes, never before published, relative to many illustrious houses, in addition to numerous authentic details connected with their lineage, and communicated to the author by the noble inheritors of the titles. The volume, containing 300 pages of letterpress, is moreover illustrated with upwards of 150 original and beautiful a type, as to comprise a quantity of matter equal to no less than 12 octavo volumes."—John Bull. Henry Colburn and Richard Bentley, New Burlington Street.

Just published by Henry Colburn and Richard Bentley, New Burlington Street. Octavo edition, in 2 vols. with Map and 25 Plates, 31s. 6d.

SIAM and COCHIN CHINA, exhibiting a View of the Actual State of those Kingdoms. By JOHN CRAWFURD, Esq. F.R.S. &c.

II. Memoirs of Don Juan Van Halen, comprising the Narrative of his Career, up to the Period of his being placed at the Head of the popular Forces in Belgium during the recent Revolution. 2d edition, in 2 vols. post 8vo. with Portrait and other Plates.

III. The Second Volume of the Life of Lord Burghley. By the Rev. Dr. Nares.

IV. The Life and Correspondence of John Locke, by Lord King. 3d edition, in 2 vols. 8vo. with considerable Additions.

V. Parke's Musical Memoirs, in 2 vols. post 8vo. 18s.

VI. Dr. Doddridge's Private Correspondence, the Third and Fourth Volumes.

VII. Memoirs of Lady Fanshawe, 2d edition, in small 8vo. with beautiful Portrait, price 9s.

VIII. Conversations of James Northcote, Esq. R.A. with W. Hazlitt, Esq. In 1 vol. post 8vo. with a fine Portrait of Mr. Northcote, 10s. 6d.

IX. Sir Jonah Barrington's Personal Sketches of his own Times. New edition, with considerable Additions. In 2 vols. 8vo. 21s.

X. Travels in Persia, by J. S. Buckingham, Esq. 8vo. edition, uniform with his Travels in Palestine and Mesopotamia. In 3 vols. with numerous Engravings, 31s. 6d.

XI. Letters from the East. By John Carne, Esq. 3d edition, in 2 vols. post 8vo. 18s.

XII. Captain Frankland's Travels to Constantinople. 2 vols. 8vo. 3d edition, with Thirty-Eight Engravings, price 24s.

THE NEW MONTHLY MAGAZINE for December.

Contents.—Political Events; the New Ministry—the King's Speech—the late Administration—Lord Brougham—Thoughts and Facts respecting the Civilization of Africa, by Thomas Gaskell, Esq.—Conversations with an Ambitious Seducer—Speakers and Speeches in Parliament—a thought of Paradise, by Felicia Hemans—Tales of a Stamboul—Caliph Zolem—the Princess of the Bright Shadow, by John Galt, Esq.—My First Tragedy, by Mr. Pool—the Mounter, by the Hon. Mr. Norton—Repeal of the Union—Ireland in 1830—Sketches from the Ganges, No. 3; Legislature in India—Selborne—the Enthusiast, by the Author of "De l'Orme," "Darnley," &c.—The Confessional, by Mrs. Hewitt—the English Poor, &c. &c. Henry Colburn and Richard Bentley, New Burlington Street.

THE GENTLEMAN'S MAGAZINE, which is now on the eve of completing its Hundredth Year, is constantly embellished with Two Plates, and continues at the long-established price of 6s. The Number published on Dec. 1 contains, among others, the following Articles: Correspondence of Volney and the Baron Grimm—On Modern Authors of Latin Poetry—On the Nobility of Venice—Oldland Chapel, county Gloucester, with a View—Reflections at the Grave of the Pretender—On the Architecture of St. Mary's Church, Beverley, with a Plate—On the Screen of Van Dyck—On Ancient Law Treatises—The Editors at the Suit of William Berry, Compiler of County Genealogies—Classical Literature: Dr. Bloomfield's Thucydides—On the Origin of Greek Cases, &c. Reviews of History of Worcester, Vindication of John Ashburnham, Lives of British Physicians, Grant's History of the Netherlands, Cray's George the Fourth, the Annuals, &c. Obituary, with Memoirs of the Duke of Atholl, Earl of Beverley, Lord Biantyre, Adm. Sir C. M. Pole, Rev. D. Roderick, and Seven other distinguished characters—A variety of Intelligence in Literature, Antiquities, and the Fine Arts—Foreign and Domestic News, &c. &c. Printed for John Harris, St. Paul's Churchyard.

Price 2s. THE SHOW FOLKS; embellished with Nine characteristic Designs, by the late Theodore Lane, Esq.; engraved in the first style of the art, by Mr. J. Thompson, united with a Biographical Sketch of the Talents of the above much-lamented Artist. By his sincere Friend and Admirer, PIERCE EGAN. Author of "Life in London," "Fry to Ascot Races," &c. Dedicated to the President of the Royal Academy. Sir Martin Archer Shee, Knt. M. Arnold, 21, Tavistock Street, Covent Garden; and Simpkin and Co. London.

Publishing monthly, under the Patronage of the King.

THE NATIONAL PORTRAIT GAL- LERY, No. 20, contains the Portraits and Memoirs of Duke of Kent, Earl of Harewood, and Archdeacon Nares. "The Nineteenth Number of this valuable and interesting publication contains portraits of Viscount Godolphin, Professor Porson, and the Hon. Earl Elliot. The work is, we believe, completely established in public favour, and we know of none that better deserves it."—New Monthly, Dec. 1830.

No. 21 will contain the Marquess of Anglesea, Sir Edward Coldington, (both after Sir Thomas Lawrence), and Lord Carlisle, after Jackson. London: Fisher, Son, and Co.; Colnaghi and Co.; Moon, Boys, and Graves; Whittaker, Treacher, and Co.; and Simpkin and Marshall.

Just published, Part IV. of

CAPTAIN ELLIOT'S VIEWS in the EAST, including India, Canton, and the Shores of the Red Sea.

"The gorgeous palaces, the solemn temples, and the glorious scenes, in which nature is at once sublime and beautiful, must always be pleasant to look upon; but more especially when these are linked with some association of time or circumstance that more particularly interests us. The grave of many a fellow-countryman, the ground on which many a friend has gathered glory in the rich East; and there are few who do not number among the dwellers in the far-off land some kindred or acquaintance. India is, as it were, another home of Englishmen, of which he desires to know, and of which he ought to know, much. We therefore welcome with pleasure any publication calculated to forward this important object. The one to which we direct the attention of our readers, has another recommendation,—it is excellent as a work of art."

London: H. Fisher, Son, and Co.; Moon, Boys, and Graves; Colnaghi, and Co.; and all Booksellers.

On the 1st of November was published, price 12s.; or, on a fine demy paper, with India proof impressions of the Plates, price 21s. the Second Volume of

THE IRIS; a Religious and Literary Offering.

By the Rev. THOMAS DALE, M.A.

"The Iris opens with a very striking and highly interesting narrative, a 'Scene of the Pestilence,' by the Author of the 'Last of the Plantagenets': this is followed by some striking stanzas by Miss Jewsbury. We have next the 'Martyr,' a dramatic sketch, by William Howitt, very well conceived, and excellently adapted to the professed design and character of the volume. The Iris is, after all, the most unexceptionable of all the Annuals, and we must give our cordial recommendation of the volume."—Eclectic Review, No. 23.

"The Iris is intended for serious readers—the object is secured; the tales are long and excellent of their kind; the touching pathos of the author of that sad story of 'Richard Plantagenet' is beautifully drawn out in the opening article."—Atlas, Oct. 24.

London: Published by S. Low, Lamb's Conduit Street; and Hurst, Chance, and Co. St. Paul's Churchyard.

4th edition, in 3 pocket vols. to correspond with the Family Library, price only 12s.

DEATH-BED SCENES and PASTORAL CONVERSATIONS. John Murray, Albemarle Street.

Just published by Henry Colburn and Richard Bentley, New Burlington Street.

THE PERSIAN ADVENTURER, forming a Sequel to the Kuzilbash.

By J. B. FRAZER, Esq.

In 3 vols. post 8vo.

II.

The Literary Correspondence of John Pinkerton, Esq. F.R.S. Edited by Dawson Turner, Esq. 2 vols. 8vo. with Portrait.

III.

The Heiress of Bruges, a Tale, by T. Colley Grattan, Esq. Author of "Highways and Byways," "Traits of Travel," &c. 2d edition, in 3 vols. post 8vo. "A story of the most absorbing interest."—Globe.

IV.

Stories of American Life. Edited by Mary Russell Mitford. In 3 vols. post 8vo.

V.

The History of Modern Greece, from its Conquest by the Romans, B.C. 146, to the present time. By James Emerson, Esq. of Trinity College, Dublin. In 2 vols. 8vo.

VI.

Maxwell. By the Author of "Sayings and Doings." In 3 vols.

VII.

The Life of Titian, with Anecdotes of the Distinguished Persons of his Time. By James Northcote, Esq. F.R.A. In 2 vols. 8vo. with a fine Portrait of Titian.

The National Library, No. IV.

Beautifully printed in small 8vo. with Plates, price 5s.

THE HISTORY OF CHIVALRY.

By G. P. R. JAMES, Esq.

Author of "De L'Orme," "Darnley," "Richelieu," &c.

Forming the Fourth Number of the National Library.

No. I. comprises the Life of Byron, by John Galt, Esq. with Plates, complete in a single volume, price 5s. 4th edition now ready.

No. II. the History of the Bible, by the Rev. G. R. Gleig, M.A. M.R.S.L. &c. Price 5s.

No. III. the History of Chemistry, by Thos. Thomson, Esq. M.D. F.R.S.E. Professor of Chemistry in the University of Glasgow. Price 5s.

No. V. containing Festivals, Games, and Amusements, Ancient and Modern, by Horace Smith, Esq. Author of "Brantford House," &c. with Plates, will appear on the 1st of January, price 5s. Henry Colburn and Richard Bentley, New Burlington Street.

Entertaining Voyages and Travels.

ROUGH NOTES, taken during some rapid Journeys across the Pampas and among the Andes. By Capt. F. BOND HEAD. Third edition, in post 8vo. 6d.

2. Forest Scenes and Incidents in the Wilds of North America. By George Head, Esq. Post 8vo. 8s. 6d. "We have been led to talk of Robinson Crusoe by the narrative of Mr. Head, who is a sort of Robinson Crusoe in his way. We have perused his work with considerable pleasure."—Westminster Review.

"The 'Rough Notes' of Captain Head on his gallop across South America, are not more unlike ordinary travels than this diary of the Italian, as dictated by himself, and a summer residence in the woods there. The whole book is written in a lively and agreeable spirit."—Quarterly Review.

3. Life and Adventures of Giovanni Finati, Native of Ferrara, who, under the Name of Mahomet, made the Campaign against the Wahabees, for the Recovery of Mecca and Medina; and since acted as Interpreter to European Travellers in some of the Parts least visited of Asia and Africa. Translated from the Italian, as dictated by himself; and edited by Wm. John Bankes, Esq. 2 vols. 8vo. 6s. 6d.

"It is long since we have met with so eventful and interesting a narrative."—Literary Gazette.

"The unpretending record of the observations of a man of plain sense, whose singular fortune it has been to have seen more of many countries than perhaps any other living person. There must be strange adventures in such a life, and the present narrative is proportionally full of interest."—Athenaeum.

4. Captain Parry's First, Second, Third, and Fourth Voyages. A new edition, beautifully printed in six Pocket Volumes. With Plates by Finden. 2s.

The object of this Work is to present the public with a cheap but elegant edition of the accounts of the great discoveries made in consequence of the Voyages and Travels which have of late years been undertaken, chiefly under the direction of the British Government.

5. The interesting Narrative of Capt. Franklin's Privations and Sufferings during his Voyages to the Polar Sea. Beautifully printed in Four Pocket Volumes, similar to those of Captain Parry's Voyages, and illustrated with Portraits of Captain Franklin, Captain Back, Dr. Richardson, Lieutenant Hood, and others. 2 vols. 8vo., engraved on Steel by Finden (in all Twenty Plates). Only 2s.

6. The Travels and Discoveries in Northern and Central Africa. By the late Lieut.-Col. Denham, Captain Clapperton, and Doctor Oudney. A 4th edition, with numerous Plates on Steel, in 3 pocket vols. 19s.

Printed, for the first time, uniformly with the small edition of Parry's and Franklin's Voyages and Discoveries.

7. Travels of Bruce. Edited by Major F. B. Head. 18mo. 5s.

8. Six Months in the West Indies. 2d edit. with Additions. Post 8vo. 9s. 6d.

9. A Narrative of a Journey through the Upper Provinces of Calcutta. By the Right Rev. Reginald Heber, late Lord Bishop of Calcutta. A 4th edition, 3 vols. 8vo. 11. 16s.

10. Narrative of a Journey from Calcutta to Europe, by way of Egypt, in the Years 1827 and 28. By Mrs. Charles Lushington. 2d edition, post 8vo. 8s. 6d.

"We have no hesitation in recommending Mrs. Lushington's Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of approbation."—Oriental Herald.

John Murray, Albemarle Street.

In 1 vol. 8vo. price 10s. 6d. boards,

THE LITERARY POLICY of the CHURCH of ROMÉ, exhibited in an Account of her Damnable Catechism on Indulgences, both in Prose and Explanatory, with various Illustrative Extracts, Anecdotes, and Remarks.

By the Rev. JOSEPH MENDHAM, M.A.

Printed for James Duncan, 37, Paternoster Row.

In 1 vol. crown 8vo. price 12s.

MEMOIRS of the TOWER of LONDON, embellished by a Series of Engravings on Wood, by Brantston and Wright. Deceased by permission to the Duke of Wellington. The Literary part, by J. Britton and E. W. Brayley, Fellows of the Society of Antiquaries, &c. comprises a great variety of Historical and Biographical Anecdotes, as well as some curious and interesting information respecting this Metropolitan and National Fortress, and Palace.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

BOOKS IN THE PRESS.

In a few days, in 3 vols.

LIVES of the ITALIAN POETS. By the Rev. HENRY STEBBING, A.M. Author of the "History of Chivalry," &c. With 80 Medallion Portraits.

Just published,

2. The Way of the World, by the Author of "De Lisle," &c. "The author of 'De Lisle' possesses profound powers of thought, with a closeness and accuracy of observation of a very extraordinary kind."—Times.

3. Charley the Fatalist. By a Contributor to Blackwood's Magazine. 3 vols. "This is an interesting story, told with skill and effect, and will meet with success."—Athenaeum.

4. The Life of Mrs. Jordan, including original Private Correspondence, and numerous Anecdotes of her Contemporaries. By James Bonden, Esq. Author of the "Life of Kemble." With a fine Portrait, in 2 vols. 8vo.

5. The Romance of History, Third Series: France. By Leitch Ritchie, 3 vols.

6. The Family Cabinet Atlas, No. VIII.

7. The Anatomy of Society, by J. A. St. John. 2 vols. Nearly ready.

Printed for Edward Bull, New Public Subscription Library, 86, Holles Street, Cavendish Square.

On Monday next, December 6th, will be published, THE ROMANCE of the SEA KINGS in ENGLAND. In 3 vols.

By the Author of the "Fall of Nineveh."

Whittaker, Treacher, and Co. the London Publishers.

Nearly ready for publication by Messrs. Colburn and Bentley, New Burlington Street, In 1 vol. with a beautiful Portrait.

THE LIFE of SIR HUMPHRY DAVY.

By J. A. PARRIS, M.D. Cantab. F.R.S.

Fellow of the Royal College of Physicians, &c. &c.

II.

The Premier!!! In 3 vols. post 8vo.

III.

Life of Henry Fuseli, Esq. M.A. R.A. By John Knowles, Esq. F.R.S. one of his Executors. To which is added, his Lectures on Art, his History of the Italian School of Painting, &c. In 3 vols. 8vo. with a fine Portrait.

IV.

Scenes of Life and Shades of Character. I. 2 vols. post 8vo.

V.

Capt. Beechey's Voyage to the Pacific and Behring's Strait, for the Purpose of Discovery, and of cooperating with the Expeditions under Captains Parry and Franklin. In 1 vol. with numerous Plates, engraved by Finden.

VI.

The Siamese Twins, a Satirical Poem. By the Author of "Pelham," "Paul Clifford," &c. 1 vol. 8vo.

VII.

Narrative of a Journey across the Two Passes of the Balkan, and of a Visit to Alagni, and other newly discovered Ruins in Asia Minor, in 1829, 30. By Major the Hon. George Keppel, F.S.A. In 2 vols. 8vo. with Maps and Plates.

VIII.

Mothers and Daughters; a Tale of the Year 1830. In 3 vols. post 8vo.

IX.

Sketches in Spain and Morocco. By Sir Arthur De Capell Brooke, Bart. F.R.S. containing an Account of a Residence in Barbary, and of an Overland Journey from Gibraltar to England. In 2 vols. 8vo. with Plates.

X.

The Turf, a Satirical Novel. 2 vols. Second edition.

XI.

The English Army in France; or, Personal Narrative of John Gordon Smith, M.D. In 2 vols. small 8vo.

XII.

Field Sports of the North. By L. Lloyd, Esq. 2d edition, in 2 vols. 8vo. with great Additions, and several new Plates.

XIII.

On Tuesday will be published, price 12s.

A HISTORY of the FIRST REVOLUTION in FRANCE.

By J. BELL, Esq.

This Work presents a Comprehensive Survey of the Causes, immediate and remote, which gave rise to those convulsions, in which the social system of France was agitated at the close of the 18th Century.

Printed for F. C. Westley, Strand. Sold by Sutherland, Edinburgh; Smith, Liverpool; Lewis, Manchester.

The following New Works will be published in a few days. Albemarle Street, December 5th.

MOORE'S LIFE of BYRON. Vol. II. with an original Whole-length Portrait, engraved by William Finden, from a Painting by Sanders.

2. On the Origin and Prospects of Man, by the Author of "Anastasis." 3 vols. 8vo.

3. A Selection from the Papers of the Earls of Marchmont, in the Possession of the Right Honourable G. H. Rose, illustrative of Events from 1685 to 1730. 3 vols. 8vo.

4. Attempts in Verse, by John Jones, an old Servant. With an Introductory Essay on the Lives and Works of uneducated Poets. By Robert Southey, LL.D. In crown 8vo.

5. Proverbs of the Modern Egyptians, illustrating their Manners and Customs. By the late John Lewis Burckhardt. 4to.

6. A Grammar of the German Language, by C. F. Becker, M.D. 8vo.

7. The Eighth and last Volume of the Orlando Furioso. With a Copious Index of Names and Things contained in the Poem. Translated by William Stewart Rose. F. 8vo. 9s.

8. The Life and Correspondence of Admiral Rodney. By his Son-in-law, Major-General Mundy. Deceased by permission, to His Majesty. With a Portrait, 2 vols. 8vo.

9. Müller's Dorians. 2 vols. 8vo. with two very superior Maps.

John Murray, Albemarle Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 13, South Moulton Street, Old Bailey; sold also by J. Chappell, 98, Royal Exchange; Marlborough, Ave Maria Lane, Ludgate Hill; A. Paul, Edinburgh; Smith and Son, D. Robertson, and A. Agnew and Co. Glasgow; and J. Cameron, Dublin.—Agents in America, O. Rich, 19, Red Lion Square, London. J. MOYRS, Took's Court, Chancery Lane.

No. 725.—AMERICAN EDITION.

SATURDAY, DECEMBER 11, 1830.

REVIEW OF NEW BOOKS.

The Scottish Gaël; or, Celtic Manners, as preserved among the Highlanders: being an Historical and Descriptive Account of the Inhabitants, Antiquities, and National Peculiarities of Scotland, &c. By James Logan, F. S. A. S. 2 vols. 8vo. London, 1830. Smith, Elder, and Co.

IN our short notice of this work, a fortnight ago, we recommended it to the patronage of the public, as a most meritorious and curious performance. Our favourable opinion, thus expressed on a first hasty glance at the volumes, we are happy to say has not been shaken by an attentive perusal. Mr. Logan's reading is extensive, his research deep, and his enthusiasm extraordinary: his path was almost untrodden—a circumstance which must have aided greatly to the difficulty of the task, but which is likely to reward him for his labours by the value and novelty it attaches to them. His volumes have, however, in common with many other archaeological publications, two serious faults, which are considerable drawbacks, unfortunately, on their general utility. The first is a lack of that chronological arrangement which can alone leave a clear impression on the mind of the reader; and the second, the absence of contemporary authority for numberless statements, which require to be so established before the cautious inquirer chooses to accept them as the bases of ingenious speculations. Mr. Logan, besides, being himself perfectly acquainted with, and enthusiastically attached to, his subject, canters on his hobby in the most excursive manner, from the Grampians to the Alps, from the siege of Troy to the battle of Culloden, from Tentabochus, king of the Teutoni, to Big Sam, the Prince of Wales's porter,—till his bewildered reader feels, on laying down the book, as if he had awoke from one of those puzzling dreams in which every thing in nature is served up to his mental vision, jumbled together like the dish of *salmagundi* that has occasioned his indigestion. It is not to instances where parallels are drawn between the customs of the Highlanders and those of some remnant of the great Celtic race in other parts of the globe, that we are here alluding—it is to the jumping backwards and forwards—the abrupt transitions—the sudden stride to remote objects when least expected, and which, at the first glance, induces us to imagine we have turned over two leaves at once. For instance, at p. 213, vol. i., we read—“A tenant in Caithness spun a certain quantity of woollen yarn, and so much of lint; paid a quantity of oats to feed the laird's horses; trout, if near a river or lake; and if in the vicinity of a wood, a certain number of *nasks*, i. e. binders of birch, to secure the laird's cows.” “In Man, the swine of felons belonged to the king, the goats to the queen.”

Now, this is like the rough jotting down of notes in an antiquary's pocket-book; and either startles or confuses, according to the character of the reader. With the explanation of the

word *nask* terminates the notice of Gaelic law terms; and the next paragraph—“In Man, the swine of felons belonged to the king,” &c., though it sounds as if it either had some relation to what has gone before, or was, as the French say, *apropos des bottles*, is, in fact, the commencement of an entirely different subject (the legal punishments of the Celts), and requires, at least, a word or two by way of introduction. There is also something obscure in the paragraph immediately succeeding:—“According to Diodorus, the Celts impaled on stakes, and burned on lofty piles, those who were guilty of any great crime, after a close imprisonment of five years; and *in like manner* he says they used their captives—some cutting the throats, burning, or otherwise destroying both men and beasts. Among the ancient Caledonians, malefactors who were sentenced to death were burnt between two fires; from whence is derived the saying—*Edir da teine Bheil!*—he is between the two flames of Bel.”

Now, we do not perceive the likeness in manner between cutting the throat of a prisoner of war and burning or impaling a notorious criminal after five years' imprisonment; nor can we exactly understand what the other men and beasts have to do with the business. The peculiar custom of burning a malefactor between two fires, as practised by the ancient Caledonians, is not traced to the Celts described by Diodorus; consequently, it is expressly stated that their criminals were burned on lofty piles—and on what authority does Mr. Logan record the former singular punishment? We presume he can furnish us with one, but he has not done so; and before he asserts that the Gaelic proverb is derived from that custom, the critical reader will require that the custom itself should be proved to have existed. In that very interesting portion of the work which relates to the national dress of Scotland, round assertions are made by scores, without any authorities being quoted in their support, while the want of chronological arrangement is perplexing in the extreme. Mr. Logan discovers the *feile-beag*, or kilt, on the seal of Alexander I. of Scotland, considering it apparently (as we understand him) neither more nor less than a tunic reaching to the knees. Now it needs no ghost from the grave to tell us, that the tunic is nearly as ancient as the Grampians themselves; but the garment so called was of the shape of a shirt, with or without sleeves, and covered the body from the neck to the knees. The *feile-beag* is now put on like a petticoat, and is a separate article of dress from the vest or jacket that covers the chest to the waist. When did this alteration take place? Did the fashion of making it separate originate with the Scots, or was it borrowed from some other nation? The kilt is certainly not a tunic at present. And the sporan, or purse, “anciently,” Mr. Logan says, “was small, and less decorated;” and he instances that of Lord Lovat, who suffered in 1746. Anciently! Where is the authority for its existence anciently? We know

that the gypsire, or pouch, was worn hanging at the girdle on one side during the middle ages, throughout Europe; and there is, or was, an effigy of a Scotch warrior, of the fourteenth century, to be seen at Ilcolmkil, attired in a gambeson, and wearing a square leathern pouch (the *dorlach*) on the right side;* but the hairy and tasselled sporan of the modern Highlander is worn in front, and differs totally in form, as well as situation, from any other description of pouch with which we have met. Could not Mr. Logan have furnished us with the date of the alteration? Respecting the *trius* again, which has been considered by many of our best antiquaries to be more ancient than the *feile-beag*, Mr. Logan remarks, that the Gaelic *triubhals*, or *triughas*, the Irish *trius* and Welsh *trws*, signify the vestment which covers the loins, derived from the root *trus*, gather, truss, or tuck up, &c.,” and contends that the Irish trowse and *mantle*, so often alluded to by old writers, were formed like the breacan or belted plaid of the Scots Highlanders, and left the legs bare. Yet immediately afterwards (p. 257) he says, without any comment, “the *triughas*, pronounced *trius*, are pantaloons and stockings joined; and are either knit like the latter, or, according to the ancient manner, are formed of tartan cloth, nicely fitted to the shape, and fringed down the legs; they were sometimes merely striped, and were fastened by a belt round the loins, with a square piece of cloth hanging down before.” And “respecting this dress,” he tells us, “there is preserved a Gaelic saying,” after contending through the two previous pages that the *trius* was not originally a covering for the legs, and that the term, which was applicable to the tucked-up breacan, was given to the trousers adopted on the prohibition of the ancient dress. How are we to reconcile such contradictory statements? Notwithstanding these faults, however, we repeat with pleasure, that there is much curious and valuable matter in these volumes; and that Mr. Logan has acted as a zealous pioneer for the student of Celtic antiquity. He has not the erudition of Chalmers, nor the perspicuity of Davies; but he has gotten together a mass of very interesting materials, and deserves the thanks and patronage of the British public, particularly of that portion of it to which he immediately belongs, and whose claims to our respect and admiration he has so ardently and learnedly supported. The following miscellaneous extracts may be taken as a favourable specimen of the style in which the work is written; though the need of cuts and engravings puts it out of our power to refer to several portions of the highest antiquarian interest.

“Every one knows that the Scots are fond of snuff, and the figure of a Highlander is the almost invariable symbol of a snuff-shop. How they became so noted for their partiality to ‘*sneeshin*’ is not easy to determine; it is a

* Mr. Logan is perhaps aware of the existence of this effigy, but he has not alluded to it.

subject that has hitherto received little attention. There is a tradition, that when the Black Watch, now the 42nd regiment, first came to London, the men were so constantly calling to supply themselves with their favourite powder, that the dealers whose snuff had met with their patronage, adopted the figure of a Highlander to indicate their business. This may be very correct; but how came the inhabitants of the remote Highlands and Isles so speedily to bring into universal use an article that had been but recently introduced in England? Sir Walter Raleigh first brought tobacco here, about 1586; and we know that, like all innovations, it must have been some time before its use became common, even in the south; yet, in a poem by Mary Mac Leod, of the house of Dunvegan, addressed to John Mac Leod, brother to Sir Norman, and written about 1600, she thanks him for presenting her with a bra thombac, or tobacco mill-stone. Now it is not at all probable that the Highlanders could have received their knowledge of this plant from the English, or that, in so short a time, they would have been, not only reconciled, but proverbially addicted to its use. The strong prejudice which the Gaël have to innovation of all kinds, even emanating from a less objectionable quarter than the Sassanach, forbids us to believe that their snuff was connected with Raleigh's discovery. The root cornaille, or braonan, was chewed like tobacco by the old Highlanders, and may have been smoked or ground to snuff; but whatever the article was, it is certain that the Celts were accustomed to smoke, and their pipes have been frequently dug up both in Britain and Ireland. They were discovered, in considerable numbers, under ground, at Brannockstown, in the county of Kildare, in 1784; and a skeleton, found under an ancient barrow, had a pipe actually sticking between its teeth. Its form is much similar to those now in use, only of an oval or egg-shape. Herodotus says, the Scythians had certain herbs, which were thrown into the fire, and the smoke being inhaled by those sitting around, it affected them as wine did the Greeks. Strabo tells us, a certain religious sect among them smoked for recreation; and Mela and Solinus plainly describe the smoke as being inhaled through tubes. The Highlanders appear to have adopted the tobacco introduced by Raleigh from a previous addiction to a native herb of similar pungency; and they are said to have formerly grown and prepared their own tobacco in a very judicious manner, drying it by the fire, and grinding both stem and leaf, making a snuff not unlike what is now termed Irish blackguard. They are so partial to snuff, that a supply of it is often a sufficient inducement for one to accompany a traveller across extensive tracts of mountain or muir."

"The love of intoxicating liquors is a vice which people in a low scale of civilisation are prone to. The Gauls, who drank sparingly of their own beverages, indulged to excess in the produce of the Italian vintage. The Highlanders can enjoy a social glass as much as any persons; but although whiskey is plentiful with them, habitual tipping is extremely rare, and there is a proverb which speaks their contempt of those who meet for the sake of drinking only. The renowned Fingal, who, by the by, delivered his maxims in triads, said, that one of the worst things which could happen to a man was to drink curmi in the morning. Measg, mixture, now pronounced meisg, signifies drunkenness, apparently from the stupefying effects of drinking mixed liquors. A gentleman assured me, that, in the parish of Lairg,

in Ross-shire, where he was formerly resident, there was but one person addicted to drink; and a native of Laggan, Inverness-shire, knew but one individual in that part who was accustomed to intoxication: these characters indulged their depraved tastes in solitude, for they could find no associates. The Highlanders seldom met for a carousal, and when they did assemble, they enjoyed themselves very heartily, the 'lawing,' or bill, being paid by a general contribution, for which a bonnet was passed around the company. If, however, the Highlanders seldom met to drink together, it must be confessed that when they did 'forgather,' they were inclined to prolong their stay, and would occasionally spend days and nights over the bottle. Donald Ross, an old man, full of amusing anecdotes of the gentlemen of Sutherland and the neighbouring counties, used to dwell with particular pleasure on those social treats. The laird of Assynt, on one occasion, having come down to Dunrobin, was accosted by the smith of the village, when just ready to mount his garron and set off. The smith being an old acquaintance, and the laird, like the late Mac Nab and others of true Highland blood, thinking it no derogation from his dignity to accept the gobh's invitation to take *deoch an doras*, a draught at the door, or stirrup-cup, (for every glass had its significant appellation,) and went into the house, where the smith called for the largest jar or graybeard of whiskey, a pitcher that holds perhaps two gallons, meaning, without doubt, to shew the laird that when they parted, it should not be for want of liquor. 'Well,' says Donald, 'they continued to sit and drink, and converse on various matters; and the more they talked, the more subjects for conversation arose, and it was the fourth day before the smith thought of his shop, or the laird of Assynt.' It is customary at meetings of Highland Societies to accompany certain toasts with 'Celtic honours,' that are thus bestowed. The chief or chairman, standing up, gives the toast, and with a slight wave of the hand, repeats three times, *suas e, suas e, suas e*, 'up with it, up with it, up with it,' the whole company also standing, and joining him in three short huzzas. This is repeated, when he then pronounces the word *nish*, now, also three times, with peculiar emphasis, in which he is joined by the company, who dwell a considerable time on the last cheer. As the company sit down, the piper strikes up an appropriate tune.

"The word *aos* in Irish, which at first signified a tree, was applied to a learned person; and *feadha*, woods or trees, became the term applied to prophets or wise men, undoubtedly from their knowledge of the alphabet, or sylvan characters, which were used. The 'Researches' of Mr. Davies have thrown much light on Celtic Antiquities, and in his pages will be found several passages from bardic compositions, which elucidate the tree system of learning. It is well known that various trees and shrubs have been symbolical, or used as tokens; but the learning of the sprigs consisted in arranging, tying, and intertwining them in various ways, thereby altering their expression or import. There is a work which Mr. Davies quotes, in which the author says, 'he loves the sprigs with their woven tops, tied with a hundred knots, after the manner of the Celts, with the artists employed about their mystery.' Small branches of different trees were fastened together, and being 'placed in the tablet of devices, they were read by sages who were versed in science.' The art of tying the sprigs in numerous and intricate

knots was an important part of the mystical studies of the druidical order, and appears to have been known by few. Talliesin, who gloried in belonging to the profession, boasts of this part of his knowledge; his acquaintance with every sprig, and the meaning of the trees, he calls 'understanding his institute.' We thus see that the Celts had a method of conveying their knowledge to the initiated by a sort of hieroglyphic, or symbolical characters, produced by twigs, or branches of various trees; and the characters, which afterwards formed an alphabet, represented those branches and retained the names of different trees."

[To be concluded in our next.]

The Exiles of Palestine: a Tale of the Holy Land. By the Author of "Letters from the East." 3 vols. 12mo. London, 1831. Saunders and Otley.

THE time in which a romance is laid is a point that at once tries the taste and the research of the writer. Novelty and association are both required; the ground, though haunted by the past, should be unbroken by the present; and, in these writing days, it is no easy task to find an historical subject worthy of choice, and yet unchosen. The crusades are full of adventure; and, with recollections that come home to every memory, their only drawback is, that the lion-hearted Richard and the noble Saladin are familiar to every reader.

The author before us has been peculiarly happy in a choice of period which, while it has all the advantage of historic interest, yet involves no comparison, and whose ground is new and untouched. Nor has he been less judicious in his choice of place: perhaps not a man in England is so well calculated as the writer of the "Letters from the East" to do justice to the natural beauty and exciting memories of the Holy Land. The scene is at a period when valour took its highest tone from misfortune, and devotion was deepened by despair into fervid enthusiasm. But we will use his own words:

"Almost at the foot of Mount Carmel, there stands a solitary castle, on a rock that juts out into the sea: the walls and towers are in a ruinous state, but still massive enough to afford a strong hold to the Bedouin, as well as a home to the traveller. And this home, 'of a night,' is a romantic and impressive one; the beautiful declivities of the mountain are behind; dark with trees, or covered with the flocks of the shepherd. The waves bathe the walls of the castle on every side, save one, a narrow path that joins it to the main. Many of the apartments are still entire, and very spacious; for here formerly lodged the kings and princes of the crusades. The sun was setting on the gloomy battlements as we rested on our journey beside them; for their shelter is the only one for a long way on the coast. After the expulsion of the Christians, by the capture of Ptolemais or Acre, this noble castle of Pellegrino was left desolate, till a singular instance of daring occurred. Only a few years afterwards, a small and solitary band of knights took possession of it, and defended it with success, for some time, against all the power of the enemy.

"The castle of Pellegrino is a monument of what the enthusiasm of a few men could achieve. As we stood before its ruinous walls we could not help admiring the courage that, in this sea-girt hold, had set at defiance the whole power of the invaders. With great labour they repaired the shattered defences: while the desolate chambers, with their walls

and floors of massive stone, afforded ample lodging for their little band. From the towers they might look forth on many a faded and sacred scene, of mountain, valley, and shore, in defence of which they came to give their life—at least, so they professed—and their deeds did not belie their words. A well of water within the walls supplied their thirst, and incursions to the rich sides of the mountain, or the plain beyond, where hamlets and pastures are still scattered, supplied, no doubt, the demands of hunger."

The characters of the three knights, its defenders, are exceedingly well imagined, and brought into admirable contrast with each other. The serene enthusiasm, the calm resolution, the high religious tone, only softened by his tender love for his sister, in Sir Philip, find their opposite in the equally brave, but more worldly and selfish, De Clifford. The two female characters are similarly well opposed: the strong affection, subdued but not destroyed by earnest devotion, of the meek yet high-minded Isabel, is of another order to the beautiful and passionate Saracen, whose only rule of action is impulse. Lucius is, however, the most original conception; "the quicksand paths that lead from fault to crime" are developed with great truth. The want of dramatic power in the dialogues is our author's chief failing—yet the story requires them but little; and both the narrative and descriptive style are especially flowing and graceful. The scene where the love of gold first awakens in the heart of Lucius the Armenian, will give some idea of a picture afterwards skillfully filled up.

"Unclasping his girdle, he eagerly took from his vest the vessels of gold that he had saved in his flight, and placed them, one by one, on the table. 'Glittering baubles,' he said; 'the hands that have so often clasped you, are now sealed in death, and the forms that have been bowed before your fancied virtue, are food for the vulture.' He stood, regarding them silently for a long time, a thousand thoughts revolving in his mind; those which his own situation excited were bitter and painful in the extreme. A tranquil and luxurious home was suddenly taken from him: the numerous brethren, by whom he was held in high regard and esteem, for his talents and influence, if not for his virtues, were buried in the ruins of their monastery, or else helpless outcasts. Deep distress, like deep poverty, often hardens and corrupts the heart; and so it proved here. The youthful priest had been, during the many years of his profession, careless, gay, and fond of indulgence; loved by his companions of a similar vein, and seldom more than gently reproved by his elders. Prosperity, perhaps, had shrouded the vices of his nature—the few days of famine, of scorn, of friendlessness, produced a rapid and fearful change; and he now stood, a selfish, a heartless, and a lonely man—resolved to seek his own ends through every change of fortune. He saw that the desperate bravery of the knights would probably throw some chances in his way, that might be turned to great advantage; and their commission gratified at once his love of wandering through a land where so many happy hours had been passed, and the desire of fanning the expiring flames of resistance to the Saracens. He preferred, also, to trust to the promises and protection of these men, two of whom, he was aware, were of great wealth, as well as rank, than to seek refuge in Europe, as a houseless and friendless guest. Struggling with the exhaustion that weighed down his frame, he strove to look forward into futurity; but it

was dark and cheerless—and, for the first time, the thirst of gold entered into his soul. 'It can do all,' was the last thought he cherished, as, laying himself on the couch, a deep and long slumber stole over him; 'it can give me friends—power—pleasure—even in the desert.'"

The following scene is too picturesque to be omitted:—

"It was the day of a Christian festival; and it was resolved by the people and their pastor that it should be more than usually splendid, on account of the strangers' arrival. The situation of Aden was peculiarly adapted to give effect to the simple and solemn ceremony: the ground that sloped gently towards it, on each side, was covered thick with trees: in the middle ran a rapid stream, and the dwellings on both of its banks were connected by a bridge of fine stone, of simple and light proportions. The people, the greater part of whom were females, all dressed in white for the festival, were passing in eager groups over the bridge, and along the edge of the water, that rolled on silent and glittering in the sunbeams. The gray mountain steep rose above the body of foliage; and this contrast was heightened by the pure and exquisite piles of snow, that, far above, hung in the cloudless air. There was a rich cultivation on every side; the villagers evidently lived in great comfort, and even competency; for few soils reward the hand of industry so profusely as that of the interior of Lebanon. To be the pastor of such a place was an enviable thing. The church stood on a green bank at the extremity of the dwellings: the cemetery was below in the shadow of the wood. Slowly and sweetly the hymn rose on the air, sung by so many and willing voices, and the procession came forth and passed on in the avenues of the trees, whose broken shadows, trembling in the breeze, were thrown on the forms and faces of the suppliants. The pastor led the way, followed by the chief inhabitants; then came the females—all young women, with garlands of flowers on their brow, and bearing branches of the palm-tree in their hands. They were remarkable for the luxuriant hair, and the fresh and ruddy complexion peculiar to the women of this mountain region. When issuing from the wood, they moved along the brink of the water, the effect was beautiful, the rich and clear tones of their voices rising and falling. It was only during their pause, at times, that the soft rush of the river was heard. The many fugitives, as well as ecclesiastics from Acre, helped to swell the procession. Mingling in the latter, were two figures that did not seem of the people of the village: they were females: the low stature, as well as calm aspect of the first, marked her to be Isabel Audeley. There was another, whose veil had never for a moment been drawn aside. Her looks bent on the ground, and her hands crossed on her breast, she joined not in the ceremony, save by a slow and almost unconscious step. At last the long procession ascended the bank, and entered the church. Two of the soldiers of St. John followed, with an altered demeanour, in which the pride and cruelty of their career seemed to vanish before a holier influence; for the spectacle of this assembly, thus worshipping in the wilderness, was strangely impressive. The pallid and anguished features of so many suppliants, on whom misery fell so suddenly—and on whom poverty, like an armed man, had come; the youthful and elegant forms of women, wasted by the fearfulness of war, and the hands clasped in trembling yet fervent hope, would

have touched the hardest observer. Old men thrust forth from their homes in hamlet and city, childless and companionless, even on the brink of the grave, with none to soothe their passage to it; their dim gaze bent forward, as if even now the king of terrors bade them come. And by their side knelt children, but not their own, cast on the kindness of the stranger."

Many of the descriptions are perfect pictures. We regret we have not room for the scene where the young Saracen enters the tent of the prisoner knight for the purpose of avenging her father's death: it is conceived in the very spirit of poetry. While on the subject of poetry, we must remark on the great beauty of the occasional poetry scattered through these volumes. We extract two or three verses of a piece which must have been written under one of the cedars of Lebanon.

"Look forth—the land is beautiful,
The rose fills Carmel's sacred air;
The cedar trees of Lebanon
Seem natural temples made for prayer.
But each rose wears a deeper dye,
Caught from the battle's crimson rain;
And every lofty cedar's bough
Is drooped above the unburi'd slain.
I see the lances flash below,
I see the banners float above;
I ask the dying and the dead,
Is this the faith of hope and love?
The willows on Moriah's side
Are heavy with the harp no more;
The sword is ploughshare of the land
Which angel footsteps loved of yore."

We must find a place for the prose sketch which doubtless suggested the above lines.

"Felled with an unsparing hand, neglected by a desolate and oppressed people, these famous cedar groves had shrunk gradually away, leaving a naked and melancholy waste, where once was unfading coolness, and the gloom at noon-day, so welcome to the weary. The inhabitant, who once 'made his nest beneath the pleasant branches,' was now compelled to lay his head on the rock: one group was still left, on which the tempest and the lightning had spent their fury for ages; but the trunks were unscathed, the foliage unwithered. Thousands of years ago, the kings of the earth built their palaces and temples from these noble trees, and thought that their glory and beauty were to be for ever; but time had smote them like the thistle on the hill. The people looked on the trees with reverence; and every one cut pieces from the branches, to be treasured as relics, and borne to their various homes; they were about twenty in number, of immense size, being thirty or forty feet in circumference, with divers rows of branches, stretching straight out, as though they were kept by art; some young cedar trees had been planted around by the hands of others, but it was only to grow up and die. The part of the mountain where they stood was a small plain, around which rose the high and snow-covered peaks, whose white mantle no summer took way: it looked like a solitary world; the only thing that triumphed over the wide decay that had come down on city, temple, and forest, was this single and eternal group of cedars: each year saw them put forth their rich and proud foliage, and the same shadows that had sheltered the princes of Tyre and Judah, now waved over the lonely group of Christians. One tree alone of the group had fallen, long since, it was said by some; according to others, but a few years ago; but whether blown down by the storms, or levelled at last by age, it was not easy to decide. Slowly the hand of decay came over it: for, while some of the branches were withering, and put forth no leaves, the rest were yet green and feebly

flourishing; for the struggle for life was still strong in the noble tree."

There is an exquisite episode of a wife abandoned by her husband, whose heart pours its woman's love on a child of the village where she dwells. We regret our limits forbid further extract, particularly of some very sweet lines on the child's death, though the author has been more careless of their polish than his wont. The sultan Melec Seraph's tent is sketched, "profuse in eastern luxury;" and we would point attention to the monastery "of the Martyrs;" to several of the desert scenes; to the interview in the convent between Isabel and Itahie; and though we have carefully avoided any hint of the story, we must inform our younger readers that the *dénouement* is equally new and unexpected.

In conclusion we must say, Mr. Carne has been very successful in the Oriental character given to his story, without losing human interest in the picturesque. We doubt not but the author's pain will be repaid by the author's pleasure—popularity.

The Romance of History—France. By Leitch Ritchie. 3 vols. 12mo. London, 1830. E. Bull.

WE must divide our review into two parts, as we have two opposite opinions to deliver, and to consider Mr. Ritchie in his romantic, and then in his historical, character. We have no hesitation in saying, that, as tales, this collection is the best of the series. The stories are interesting, told with much dramatic effect in, often, very beautiful language, and with an animation which keeps the attention awake. The first three tales are our especial favourites. The manners of the age give a rich and picturesque effect to the scene, while the spirit is just idealised enough to meet our modern conception of romance. The attempts at humour are failures—Mr. Ritchie is either coarse (too common a fault with him, by the by,) or extravagant; but we readily excuse the "King of the Beggars," and the "Magic Wand," in favour of "the Bondsman's Feast" and "the Pilgrim of St. James," which are equally spirited and characteristic. "The Rock of the Fort" must not be omitted, as it is a favourable specimen of the author's lighter powers: the historical incident is told in a very amusing manner. But is not the romance of the history of France a misnomer, as regards great part of these volumes? "The Phantom Fight," and "the Serf," are founded on Flemish history; and the "Dream Girl," a very affected term for a somnambulist, has no sort of historical connexion with the plan; and this is the more to be blamed, as Mr. Ritchie has, after all, left untouched the great mass of the romantic annals of France. The poetical records of Provence, the chivalrous court of Francis I., the eventful contests between the Huguenots and the Catholics, the romantic adventures of Henry IV., the rich field of the wars of the Frondeurs, so full of incident—are all left wholly unnoticed. Our author does not appear to us to have entered *con amore* into his subject; he looks on the past as if he were pointing out its defects in a debating society; and when he talks of Froissart as "a cold, dry writer," he shews how little he is imbued with the spirit of the romance he undertakes to illustrate. He judges of the acts of past ages by that unfair criterion, the opinions of the present; and as his premises are unfair, his conclusions are unjust. His "historical summary" is a flippant collection of prejudice—commonplace

and inelegant in language. Kings of all sorts are an offence in his sight—

"The very name of Nazarene
Is wormwood to his Paimin spleen."

His style is, occasionally, particularly objectionable—*ex. gr.* "Louis XIV. next took it into his head to fall out with the Dutch." The same monarch also sits on the arch of his triumphs, "to snuff up the adulation of the world." A monk gives a sigh "from the very bottom of his bowels:" this seems rather a favourite expression, for it occurs once or twice besides;—a knight, in combat, gives a stroke from "the very bottom of his bowels" also. But we must in fairness observe, that these are only occasional blemishes; for Mr. Ritchie's language is often beautiful, even to poetry. Before we return to do full justice to his great talents for narrative, we must again allude to the false flippancy of his historical summary. The war against the Saxons was carried on by Charlemagne to extermination; Mr. Ritchie calls them "the martyrs of liberty"—license rather: a set of bold idolaters, they were to Europe what the Danes were a century later. Again we repeat, nothing can be more unjust than to judge of ancient times by our present more equitable views: warfare, in those days, was a great and terrible means of civilisation. Out of evil hath worked good; and a nice line of distinction ought to be drawn between our present conviction of the sin and error of bloodshed, and the former fierce spirit which made battle glorious, because, in reality, necessary. Mr. Ritchie has fallen too much into the common cant against conquerors: the dominion of the church is also a perpetually recurring subject of sarcasm. Now, no one can be more thoroughly convinced than ourselves of the evil of this enormous spiritual power; but let it be also remembered, that the priests were in those days the only depositaries of either religion or learning; the only advocates, and, in a great measure, the conservators, of peace—some power was absolutely requisite. The monasteries were places of refuge; and many of the large donations were bestowed with the view that the donors or their children would benefit by the very shelter they endowed. All human institutions are liable to error; and the system of the pontifical power was essentially a human institution. The tide of events always finds its own level; and as soon as this great authority became only a hindrance and an injury, it was destroyed, or weakened—and, alas! with much bloodshed: but who shall read history, and not own that blood has ever been the seal of great change? We have gone rather at length into this subject, because this work is destined for the young; and sweeping conclusions are always bad, more especially for the youthful, who cannot be too soon taught to hesitate in forming an opinion—to balance the good and the evil—and to learn, that the only secret for forming an accurate judgment is to make allowances.

We have now to let our author speak for himself—the time is during the siege of Paris by the Normans.

A spectator would not have been able to conjecture, from the appearance that evening of the little court of Adele, that a struggle was so nearly at hand which, in all probability, would decide the fate of the city. The laugh and the jest went lightly round; lays were sung, and legends recited of the olden time; warriors whispered soft tales in ladies' ears, and ladies blushed and smiled while they listened. Although the formal Vows of the Pheasant had not yet come into fashion, the chiefs

were not slow in promising wonders to their mistresses; and the latter amused themselves with imposing tasks upon their lovers, to be executed in the expected sally. One desired a pebble from the opposite bank of the river; another longed for a branch of a tree which grew near the enemy's camp; and a third charged her servant with an ironical message to one of the Norman leaders, desiring him, during its delivery, to strike three blows upon the Pagan's shield. Adele gave some trifling commission of this kind to almost every one present; and as the Count Odon remarked the air of absolute devotion with which his sister's commands were listened to, a flush of pride rose into his brow. Conscious that the admiring eyes of her brother, whom she herself admired more than any human being, were fixed upon her, she became more wildly gay, and gave more extravagant scope to her imagination. "Listen, sirs," said she; "there is one thing I had forgotten—a very trifle, it is true, and hardly worth the asking; but there may be some one here who will condescend to the task for the sake of Adele." "Name it!—name it!" cried the chiefs, and the circle narrowed round her as they spoke. "There is a tent," she continued, "at the eastern angle of the Norman camp, distinguished from the rest by the splendour of its appearance, and the wide open area that encircles it, guarded by a double wall of huts. Except on particular nights, when the idolatrous fires are blazing, and the heathens gather into this enclosure for the performance of their unholy rites, the sole inhabitants of the tent are an aged woman of lofty stature, and a young child. The former appears to be even as a priestess among this unbelieving people, and either the mother of the infant or a nurse appointed to tend and care for him." Adele paused, and glanced carelessly round among the crowd of admiring hearers. "Speak!" cried they with one voice; "command, we are ready!" "I would that some one," said the spoiled beauty, "would bring me that Pagan boy for a foot-page!" The chiefs were silent; some from surprise, and some in the belief that she had spoken in jest, so madly desperate did the enterprise appear; but the next moment Eriland stepped into the circle. "Madam," said he, with a low obeisance, "if I return from to-morrow's sally a living man, I will lay that infant at your feet!"

The young hero makes his way into the camp.

"Farther on, the tent described by Adele, and on which he had himself often gazed from the city walls, presented a striking and beautiful contrast. It was surrounded by a little grove of flowering shrubs, which filled the air with a delicious fragrance, and a stream, trickling from a fountain of carved stone, wandered murmuring through the green parterre at the entrance. The pace of the adventurer slackened as he approached; and it was at last with noiseless tread and suppressed breathing that he entered the tent, where the silence seemed strange and almost preternatural. No paraphernalia of religion, however—no awe-inspiring gloom, such as he had been accustomed to in the usages of his own church, met his view; the open lattices admitted a softened light through leaves and flowers, and discovered nothing more terrible than a lovely infant sleeping in a cradle of wicker upon the floor. The features of the warrior relaxed at the sight; he gazed upon the little creature with a feeling of joy and tenderness; and taking it up cautiously in his arms, as one robs the nest of a bird, he fled with his prize. At the instant, a

startling scream rang in his ears, and a woman, who had been concealed by the drapery of the tent, rushed after him. Her lofty figure was unbent by the load of years whose mark was on her brow; and she was arrayed in a costume of picturesque extravagance, and crowned with garlands of evergreen shrubs, whose leaves seemed to mock the tresses, as white as snow, with which they were twined. Eriland had hardly time to turn round to gaze upon this strange apparition, when he felt himself wounded by a lance she bore in her hand. Disdaining to combat with a woman, he merely parried, without returning, her furious blows; but finding at length the odds less unequal than he imagined, he was constrained to disarm her. He would then have resumed his flight; but the old woman, seizing on his mantle, with the most passionate entreaties and lamentations, partly in her own language and partly in his, besought his forbearance. 'A Christian and a soldier!' she exclaimed; 'oh, thou who warrest with babes and women, be-think thee of thy honour and thy faith! By the sword of thy father—by the pains of thy mother in travail—by the souls of thy young brothers and sisters—by thy home, thy altar, and thy God, have pity on the gray hairs of my age—have mercy on the child of a nation's hope! He never injured thee nor thine; see, he smiles—yea, even now, he smiles in thy face! Hard-hearted man! does not that holy beam fall like sunshine on thy soul to warm and to melt? Give him back to my arms, and receive the blessing of the aged and the stranger. Give me back the green leaf of promise—the sweet bud of hope and delight! Give back my child—my life of life—my own—my beautiful—my boy, my boy!' and she threw herself at the feet of the warrior, tearing her white hairs, and weeping and lamenting, as if her heart would break. Eriland hesitated. The smiles of the young infant—the tears of the aged woman—the breath of the flowers and shrubs—the coolness of the air—the murmur of the water—all nature, animate and inanimate, conspired to shake his resolution. His soul was touched with pity—his eyes filled with tears; and pressing his trembling lip to the cheek of the babe, he restored it to its nurse, and sprang over the wall of the enclosure. The panic had in the mean time subsided, and it was known that only a single stranger was in the camp. Guards were stationed at every possible avenue of escape, and spies posted on the roofs of the houses, to give notice of the appearance of the prey; while a tumultuous crowd rolled like a stormy flood through the camp, every individual quivering with rage, and hungering and thirsting after vengeance. Eriland had no sooner left the enclosure than he was desecrated; and in a few moments more he saw the gleam of weapons amidst the tents, and heard the near tread of his executioners, who rushed towards him, yelling like famished wolves. The city walls were visible from where he stood, and the tower was still crowded with ladies, the proud banner of St. Martin floating over their heads. A thousand thoughts swept across the heart of the warrior as if at one instant. His dreams of fame—his youth, unripe and unrenowned—his presumptuous love—his obscure and unpitied death! 'Adele!' he exclaimed aloud, looking with straining eyes towards the city—'lovely and beloved! Oh, would that thou couldst see me die! Yet thou wilt guess my fate, and my unstained name will live in thy memory. Farewell, noble banner of France!—long mayest thou wave over strong walls and brave

hearts! Farewell, my true comrades in arms! Farewell the light of day, the song of birds, and the sweet rush of waters! Farewell, my life! and grasping his sword with both hands, the stout cavalier shouted his battle cry, and rushed into the midst of his enemies. At this moment a voice was heard behind, which rose distinct and terrible above the yells of the multitude, and, springing over the wall of the enclosure where Eriland had descended, a gigantic Norman flung himself into the midst of the fray. The people fell back at his command with habitual obedience, conceiving, it is supposed, that he claimed to himself the prerogative of despatching the prisoner; but when they saw that his purpose was to save rather than destroy, they returned with renewed fury to the assault. With entreaties mingled with imprecations and menaces, the giant at first endeavoured to shield his protégé; but when these were unavailing, he had recourse to blows; and they cut their way through the half-yielding, half-resisting mob to the outer wall. Eriland grasped the hand of his unknown friend; and the two warriors looked for a moment in one another's faces with an expression of admiration and esteem. 'The young child,' said the Norman, 'sent thee this rescue.' 'To thee, notwithstanding,' replied Eriland, 'I owe a life;' and jumping over the fortifications, he regained the city."

We can only add, that the rest of the story is equal to these spirited scenes. Mr. Ritchie has a most original invention—a vivid power of creation; and we give him but his due when we say he is by far our best writer of romantic and imaginative tales.

The Life of Titian; with Anecdotes of the distinguished Persons of his Time. By James Northcote, Esq.; R.A. 2 vols. 8vo. London, 1830. Colburn and Bentley.

MR. NORTHCOTE has been too frequently before the public, both as a painter and a writer, to render it necessary for us to eulogise his various merits. Veteran as he is, his mind seems to retain at least the greatest portion of the freshness and energy of youth. The volumes which he has just produced have not been subjected to any very strict arrangement (a circumstance which is, perhaps, not at all to be regretted); but they contain a great mass of curious and amusing matter, and much food for serious reflection.

When the length of Titian's life, the celebrity he enjoyed, and his constant intercourse with all who were distinguished either by rank or by talent in his time, are considered, it will not appear surprising that Mr. Northcote, in the course of his narrative, has introduced sketches—some very slight, others approximating to a finish—of many persons, of whom every body must be desirous of knowing something. Among these are, Giorgione, the Bellini, Leo X., Bembo, Navagero, Francis I., Aretin (with numerous letters), Algarotti, Tribolo, Benvenuto Cellini, Paul Veronese, Tintoret, Charles V., Alfonso Lombardi, Vasari (with his history and correspondence), Hippolito, Alexander, Catharine, and Giovanni de Medicis, Clement VII., Pordenone, Paris Bordone, Paul III., the Duke of Urbino, Michael Angelo (with many letters), Ludovico Dolce, El Mudo, &c. &c. &c. They will all well repay the perusal. But the most valuable part of the work we take to be (and we wish it had borne a greater proportion to the biographical and historical part), the original remarks by Mr. Northcote himself (an artist of no mean powers, and a judicious and experienced

critic) on art generally, on the peculiar qualities of the Venetian school, and on the style of Titian, its illustrious chief. From these remarks our extracts shall be principally, although not entirely, made.

We trust that our young students in painting will attend to the following sound opinion:

"I will in this place venture to give my opinion, that there is no way so improving to a student, as to finish his pictures to the utmost minuteness in his power; by which means he will acquire a thorough knowledge of the exact forms and character of the parts. If he has a genius for the art, he will soon discover what he may treat slightly or leave out of his work; and if he has none, he will be enabled, by this method, to give such an air of truth to his productions as will pass for merit with a large part of the community, by which he will be secure of employment, and will also have a certain claim to respect. But a careless, and what is often supposed to be a bold manner, when practised by the ignorant, is detestable, and shews a kind of unfeeling assurance, as if the artist said, 'Any thing is good enough for the public!'

"The diligence with which he (Titian) pursued his studies is sufficiently evident from his success. Statesmen and warriors may grow great from unexpected accidents, and from a fortunate concurrence of circumstances, neither procured nor foreseen by themselves; but reputation in the fine arts or the learned world must be the effect of industry and capacity. Titian never lost an hour—always endeavouring to add excellence to excellence."

They may also derive some valuable hints from the subjoined observation:—

"I cannot but think that Titian had a considerable advantage in the improvement of his taste for colouring, from having been in his first studies taught fresco-painting, by which his eye was early inured to that fresh, clear, and unadulterated tone which is unavoidably preserved in all those works that are done without oil. It was by degrees he crept into the knowledge of the use of oil, without having had his eye familiarised by early habit to the heavy, dingy, slimy effect of various oils and megilps; which, as they more and more prevail, soak up and destroy the wholesome freshness and purity of the tints, and reduce them at last to the saturated appearance of an oil-skin umbrella. Artists who paint in water-colours justly wish to give their pictures the force and finish of oil; as those who paint in oil should endeavour to impart to their tints the clear and vivid purity of water-colours. And the clearness of the one, with the depth and solidity of the other, is what Titian possessed the power of uniting beyond any other painter that ever lived."

A third lesson, although of a different nature, may be found in an entertaining anecdote of Alfonso Lombardi, the sculptor, a friend of Titian's, and a youth of great promise:—

"As he grew up, he was considered very handsome, having a very fine-proportioned person, with a healthy and spirited countenance. This undoubtedly was the chief cause of his being idle; and accordingly he seemed to practise the art as if more for his amusement or for a certain vanity only, having no relish for the slow and laborious process of cutting and chiselling marble: and (what is not very uncommon in the youthful period of life) he became a very great fop, and attired himself most fantastically. He used to wear round his neck and on his arms, as well as on different parts of his dress, fine ornaments of gold, and

appeared more like a gallant or high-born courtier, than a studious artist desirous of fame in his profession; and, in truth, when he was thus decked out, he carried it very awkwardly; for his dress was more gaudy and extravagant than that of persons of quality; so that, while he put himself into competition with them, and wished to be taken for a man of wealth and consequence, instead of being admired and respected, he was laughed at and despised by all men of sense, and became the jest of his associates. Alfonso, being thus enamoured of himself, became abandoned to pleasure and to pursuits little befitting a prudent and ingenious artist; and at length, by these habits, lost all the fame he had acquired. He next took it into his head to fall in love, and this with a noble lady. One night, being at a wedding-ball in the palace of a Bolognese count, this young lady happened to be there also; and she by chance became his partner. In the midst of the dance he turned towards her; and, heaving a profound sigh, said, as he looked in her face with what he thought ineffable softness in his eyes—*‘S’ amor non è, che dunque è quel ch’io sento?—If it be not love that I feel, pray then what is it?’* The lady, to put a stop to his impertinence, smiled and answered—*‘E’ sarà qualche pidocchio!—Perhaps it is a louse.’* This answer being overheard by the company, was soon talked of through all the city of Bologna, and he became the jest of the whole town.”

The temporary rivalry of Pordenone with Titian elicits a caustic reflection, the justness of which, however, must be allowed by all.

“How exactly we find the same thing in our days, when scarcely a year passes but we are called upon to bestow our wonder and attention on some new and surprising genius, who makes a prodigious noise for a season, and then is heard no more! The earnest desire of mankind for novelty, and the pleasure it gives to those who fondly hope they have had the sagacity to bring the hidden treasure to light, tempts them to decry the most established reputation, and leads them to suppose that their new-discovered favourite may supply the vacant place; the frequent failures they experience being passed over without making them wiser.”

It is well known that Charles V. made Titian a knight and count of the holy Lateran palace, and of the imperial court and consistory; and that, subsequently, he created him a count palatine. “These honours,” observes Mr. Northcote, “it is the more necessary to recall to the reader’s attention, as they are at this time so totally absorbed and lost in the splendour of his single name—so universally known from his eminent talents—that it seems like a jest even to mention the inferior distinctions bestowed on him by earthly princes; for he was a man endowed by Heaven with such transcendent abilities, that, to use the words of Kneller in speaking of himself, ‘he was one of God Almighty’s noblemen.’”

The anecdote of Charles’s having twice picked up this great artist’s pencil, and presented it to him, saying, “To wait on Titian was service for an emperor,” is well known; but we do not remember to have met with the following:

“Titian had painted the portrait of Charles several times, as I have before observed; but now being called to the court of that prince, he for the last time painted his portrait, just as it then appeared in the latter part of his life; and this picture also much pleased the renowned emperor. Certain it is, that the very first portrait Titian drew of him so struck him with admiration, that he would never after sit on any

other artist; and for every portrait Titian took of him he gave him a thousand crowns in gold. Titian in all painted three portraits of the emperor; and when he last sat to him, at the conclusion of the picture, Charles said, with emphasis,—“This is the third time I have triumphed over death.”

In speaking of some pictures which Titian painted at a mature period of his life, Mr. Northcote observes—and the observation is pregnant with instruction:—

“These pictures are in the possession of his Catholic majesty, and held in high esteem for the vivacity Titian has given to the figures; and in colour they are equal to nature itself. But it is certain that about this time he made a very great alteration in his style of execution from that which he practised in his younger days. For his first pictures are finished with most incredible diligence, so as to bear examining near, and yet look well at a distance also: but the works he did about this time are full of strokes and spots, after a certain bold manner, so that they seem nothing when viewed close, though they look well at a distance, as if perfectly finished. This last manner of his, many painters have endeavoured to imitate, by which they have made very gross and random work. They have been tempted to imagine it done with ease; but in this they are much mistaken, as it is the result of very long practice and vast judgment, earned from experience; and so far from being easy, that it is impossible to do it well without a long life of preparation. And as it demonstrates the great master of the art, the ignorant are captivated, and conceive that it can be performed at will—not apprehending the infinite labour it has cost to acquire this seeming facility. If the painter should be asked how long he was about the picture done in so masterly and free a style, he might give the answer of one of the moderns on a similar occasion, to wit—‘All my life!’”

On the Venetian school generally, and on the style of Titian in particular, the following passage contains much valuable remark:—

“The Venetian painters who fixed the style of their countrymen, were most certainly Giorgione and Titian. Giorgione took the hint of that fine manner of colouring which, as we observed before, became the distinguished characteristic of the Venetian school, from Leonardo da Vinci, the Florentine; and Titian carried it to the greatest possible perfection; but Titian adopted this search into colouring at an early period of life, and (comparatively speaking) knew but little of anything else that might tempt him into other pursuits;—he gave up almost his whole time to improving colouring to the utmost perfection it was capable of receiving; therefore, if Titian is more remarkable as a colourist than as a draftsman, the climate had nothing to do with it. And Michael Angelo, like the great and judicious artist that he was, did not ascribe Titian’s excellence in colouring, or his defects in other parts, to any particular direction of genius which might enable him to succeed in any one part of the art more than in another: no, he well knew that the acquisition of the art, in the whole together, or in the several parts and divisions of it, will always, in the hands of a man properly qualified, bear a just proportion to the application made, and to the advantages of study enjoyed. After praising Titian’s colouring, his remark upon him is—‘It is a misfortune that the painters of Venice have not a better manner of study.’ At the same time, Giorgione, who was a little anterior to Titian, founded a school of painting at Venice, which

school made great progress, from the opportunities they had of painting large *façades* and saloons. As Titian, by living at Venice, had not the facility of examining ancient works, he could not fundamentally acquire a great style, like Michael Angelo; and for that reason he did not bestow on his delineation of forms all that attention which they merited, and applied himself more to the appearance of truth, which depended on the colours of the body, and arrived in that part, by continual exercise of painting and copying nature, to such excellence, that he never has been equalled; and what contributed much to this, was the vanity of the Venetian gentry, who wished to be painted by him, or to have from his hand those exquisite female figures. Contemporary with Titian, the Duke of Mantua employed Mantegna, who established at Modena the first academy that had been in Italy, from which came Bianchi, the master of Antonio Allegri, named Correggio. From the foundation of the Venetian school, a mode of proceeding was adopted, which, though well calculated to give the painter a greater promptness of execution, a more commanding dexterity of hand, and a more chaste and lively colouring, than is to be found in the artists of the Roman or Florentine schools, was also the means of introducing a want of correctness in their compositions, and a neglect of purity in their outlines. Their method was to paint every thing without the preparation of a drawing; whereas the Roman and Florentine painters never introduced a figure of which they had not studied and prepared a model or cartoon. Following the system of his countrymen, Titian painted immediately from nature; and possessed of a correct eye, attuned to the harmony of effect, he acquired a style of colouring perfectly conformable to truth. Satisfied with this identity of imitation, he was little sensible of the select beauty of form, or the adaptation of that characteristic expression, so essential to the higher order of historic painting. In his works of that description, if we look for the fidelity of the historian, he will be found, like other artists of his country, little scrupulous in point of accuracy. He neither presents us with the precise locality of the scene, the strict propriety of the costume, nor the accessories best suited to the subject; attributes so estimable in the works of those painters who consulted the best models of antiquity. * * * As Titian contented himself with a faithful representation of nature, his forms were fine when he found them in his model. If, like Raphael, he had been inspired with the genuine love of the beautiful, it might have led him to have courted it in selected nature, or in her more attractive charms to be found in the polished graces of the antique: the purity of his design thus united with the enchanting magic of his colouring would have stamped him the most accomplished painter that the art has produced. But although Titian cannot with propriety be placed among those artists who have distinguished themselves by the excellence of their choice, and the refinement of their expression, he is not altogether wanting in grandeur or dignity. Like Michael Angelo, he occasionally exaggerated or went beyond his model; but it was rather to render it more tender and fleshy, than, like Buonarrotti, to render it more vigorous and muscular. A general feeling for colour, rather than a correct principle of composition, induced him to make prominent the most beautiful parts of his figures, as affording the finest masses and the boldest relief. His female figures and children are preferable to those of his men; and he has given them an air of

naïveté and ease, which, though not absolutely grace, is nearly allied to it; and it is generally supposed that N. Poussin and the sculptor Flaminio, who excelled in the representation of infantine beauty, formed their idea of it by contemplating the works of Titian. As a colourist, Titian holds an unrivalled dominion over every competitor. No painter has viewed nature with so chaste an eye; and to none were the tender blandishments of her charms more confidentially communicated. In his pictures the tones are so subtly melted as to leave no intimation of the colours which were on his pallet; and it is perhaps in that respect that his system of colouring differs so materially from that of Rubens, who was accustomed to place his colours one near the other, with a slight blending of the tints. He observed, that in nature every object offered a particular surface or character, transparent, opaque, rude, or polished, and that these objects differed in the strength of their tints and the depth of their shadows. It was in this diversity, that he found the generality and perfection of his art. Hence, as Mengs remarks, in imitating nature he took the principal for the whole, and represented his fleshy tones, chiefly composed of demitints, totally by demitints, and divested of demitints those passages in which few were discernible in nature. By these means he arrived at an indescribable perfection of colouring, which approaches to illusion. In invention and composition he confined himself to a representation of what appeared to him to be naturally necessary to the subject; and this strict adherence to individuality prompted him to introduce into his historical pictures, instead of ideal characters analogous to the subject, heads designed from life, with a precision which gave to the most interesting subjects of history the formality of portraiture. That he was capable of occasionally venturing beyond this boundary, he has given proof in his fine picture of St. Pietro Martire, in which his friend and admirer Algarotti asserts, that the most fastidious critic cannot find the shadow of defect. The composition of this celebrated picture is admirable; and though composed of very few figures, they are spiritedly designed, full of action, and marked with a grandeur seldom found in the works of this artist. As a painter of portraits, Titian is indisputably entitled to the highest rank. To the nobleness and simplicity of character which he always gave them, he added what Sir Joshua Reynolds calls 'a senatorial dignity,' a natural and unaffected air, which distinguishes his personages from those of every other artist; and to his transcendent excellence in this branch, he is indebted for a great portion of his fame. To the celebrity of Titian as a painter of history and portraits, is to be added his excellence in landscape painting. Whether it is predominant, or introduced as an accessory, it is always treated by him in the grandest and most picturesque style. Such is the admirable background of his famous picture of St. Pietro Martire, than which it would be difficult to find in the whole range of art a more sublime and impressive accompaniment, so artfully conducive to the terrific effect of the subject."

In the course of his work Mr. Northcote introduces a chapter "on the encouragement of art in England and Italy," which we have marked for extract; but we must defer it until a future number.

Lardner's Cabinet Cyclopædia, Vol. XIII. The Western World; Vol. I. The United States. 12mo. pp. 344. London, 1830. Longman and Co.

In our last No. we briefly characterised this new volume of the *Cabinet Cyclopædia*, to which we now return, for the sake of illustration. The habits of the American Indian are described in a concise, and, at the same time, a very interesting, manner. We omit probably the most beautiful specimen of Indian eloquence, the speech of Logan, since we cannot but presume that it is already well known to our readers; and proceed to quote the accompanying extract from the (we trust genuine) speech of a Pawnee chief, addressed to the President of the United States, as late as 1822. We think we shall be borne out in considering the speech as beautifully pathetic; and the concluding allusion to the future consequences of destroying the buffalo for the sake of traffic with the whites, as a touching appeal, replete with pathos and simplicity.

"My great father, some of your good chiefs, as they are called (the missionaries), have proposed to send some of their good people among us, to change our habits, to make us work, and live like the white people. I will not tell a lie; I am going to speak the truth. You love your country; you love your people; you love the manner in which they live; and you think your people brave. I am like you, my great father: I love my country; I love my people; I love the manner in which we live; and I think myself and my warriors brave. Spare me, then, my father; let me enjoy my country, and pursue the buffalo and the beaver, and other wild animals; and with their skins I will trade with your people. I have grown up, and lived thus long, without working—I hope you will suffer me to die without it. We have plenty of buffalo, beaver, deer, and other wild animals; we have also abundance of horses—we have every thing we want—we have plenty of land, if you will keep your people off it. My father (Major O'Fallon) has a piece of land, on which he lives (Council Bluffs), and we wish him to enjoy it—we have enough without it. We wish him to live near us, to give us good counsel, to keep our ears and eyes open, that we may continue to pursue the right road, the road to happiness. He settles all differences between us and the whites, and between the red skins themselves. He makes the red skins do justice to the whites—he saves the effusion of human blood, and preserves peace and happiness in the land. You have already sent us a father. It is enough. He knows us, and we know him—we have confidence in him—we keep our eye constantly upon him; and since we have heard your words we will listen more attentively to his. It is too soon, my great father, to send these good men among us. We are not starving yet; we wish you to permit us to enjoy the chase until the game of our country be exhausted—until the wild animals become extinct. Let us exhaust our present resources, before you make us toil, and interrupt our happiness. Let me continue to live as I have done; and after I have passed to the Good or Evil Spirit from off the wilderness of my present life, the subsistence of my children may become so precarious as to need and embrace the assistance of those good people. There was a time when we did not know the whites. Our wants were then fewer than they are now; they were always within our control—we had seen nothing which we could not get. Before our intercourse with the whites, who

have caused such a destruction in our game, we could lie down to sleep, and when we awoke, we found the buffalo feeding round our camp; but now we kill them for their skins, and feed the wolves with their flesh, to make our children cry over their bones."

We give the following, wherein the early outbreaking of the American revolt is detailed. Throughout the work, the writer has wisely confined himself to the relation of facts, without obtruding his own political opinions. His readers, therefore, will account this an ostensible warrant, that there is no wish to infuse prejudice by a partial narrative—the sure consequence of an author's endeavouring to make his readers imbibe his own peculiar political notions.

"The assembly, to the number of ninety, met at the time and place appointed. They waited a day for the governor to open the session; but finding he did not appear, they, on the third day, resolved themselves into a provincial congress, and adjourned to Concord, a town about twenty miles distant from Boston. They chose Mr. Hancock president, and appointed a committee to wait on the governor with a remonstrance, in which they apologised for their meeting, by representing the distressed state of the colony, mentioned the grievous apprehensions of the people, asserted that the rigour of the Boston port bill was increased by the manner of its execution, complained of the late laws, and of the hostile preparations on Boston Neck, and adjured him to desist immediately from the construction of a fortress there. The governor was at a loss how to act. He could not recognise the meeting at Concord as a legal assembly, and was sensible of the imprudence of increasing the public irritation by declining to take notice of their remonstrance. He was constrained by the pressure of circumstances to return an answer; and, in that answer, he expressed his indignation at the suspicion that the lives, liberty, or property, of any but avowed enemies were in danger from English troops; and observed that, notwithstanding the hostile dispositions manifested towards them, by withholding almost every necessary accommodation, they had not discovered that resentment which such unfriendly treatment was calculated to provoke. He told them that, while they complained of alterations in their charter by act of parliament, they were themselves, by their present assembling, subverting that charter, and acting in direct violation of their own constitution; he therefore warned them of their danger, and called on them to desist from such unconstitutional proceedings. But the warnings of the governor made no impression on the provincial congress. On the 17th of October, that assembly adjourned to Cambridge, a town about four miles from Boston. They resolved to purchase military stores, and to enlist a number of *minute* men—so named from their engaging to take the field in arms on a minute's warning. But the greater part of the members, although sufficiently zealous in the cause, had no conception of the expense attending such proceedings, and were alarmed at the mention of the most paltry sums. They were in easy circumstances, but had little money; living on the produce of their farms, their expenditure was trifling, and they were utter strangers to large accounts. They were prevailed on, however, at first to vote 750*l.* sterling, and afterwards to add 1500*l.* more, for purchasing warlike stores. By cautious management, their leaders ultimately induced them to grant almost 16,000*l.* sterling, for the purpose of maintaining their liberties. Such was

the sum with which they were to resist the power of the British empire! They appointed a *committee of safety*, with authority to call out the militia when thought necessary for the defence of the inhabitants of the province, and a committee of *supplies*, to purchase ammunition, ordnance, and other military stores. They elected Jedidiah Pribble, Artemas Ward, and Colonel Pomeroy, who had seen some service in the late war, general officers, and appointed them to the chief command of the minute men and militia, if they should be called into actual service. On the 27th of October, the congress adjourned to the 23d of November. On the approach of winter, the governor ordered temporary barracks for the troops to be erected; but he found much difficulty in the execution of his purpose; as, through the influence of the select men and committees, the mechanics were unwilling or afraid to engage in the work, and the merchants declined to execute his orders. The mutual suspicions of the governor and people of Massachusetts Bay were now so strong, that every petty incident increased the irritation. Each party made loud professions of the best intentions; and each watched the other with a jealous eye. In a proclamation, the governor forbade the people to pay any regard to the requisitions, directions, or resolutions of the provincial congress, and denounced that body as an illegal assembly; but the proclamation was disregarded, and the recommendations of congress were revered and promptly obeyed."

In conclusion, we have only to repeat, that we consider this history to be a very judicious and well-executed addition to the Cabinet Library.

The Family Cabinet Atlas. Constructed upon an original plan, and engraved on steel, by Mr. Thomas Starling. To be published in Monthly Parts—not to exceed Twelve. Parts I. to VIII. Bull.

"THE *Family Cabinet Atlas*," says the prospectus, "is designed more particularly to accompany and illustrate the historical and geographical portions of the *Family Library*, the *Cabinet Cyclopaedia*, the *Family Classical Library*, and similar publications, by supplying, in the clearest and most accurate manner, all the information of large and expensive general atlases, in an elegant volume of the same size as those cheap and popular works."

From an inspection of the eight Parts of this publication, it appears to us that the promise held out in the foregoing paragraph has been performed as fully as was practicable in a work of so small a size. To prevent confusion, only the names of the principal places are inserted in the maps, and lists are given of the less important, with their respective latitude and longitude. The plates are throughout engraved with great neatness, and, besides the maps of various countries, present us with "a comparative View of the principal Mountains in the World, with their Altitudes," and "a comparative View of the chief Rivers in the World, with their respective lengths."

The History of Chivalry. By G. P. R. James, Esq., author of "De L'Orme," "Darnley," "Richelieu," &c. *National Library, Vol. IV.* 12mo. pp. 348. London, 1830. Colburn and Bentley.

Of all the works produced by Mr. James, we have had to speak in terms of the highest praise; and their great popularity has confirmed the justice of our eulogy. Nor will the

present publication detract from the author's well-earned fame. On the contrary, it will shew that his ability for historical research is fully equal to his talent for imaginative writing. The volume is, indeed, one of the most valuable and important which has yet been addressed to the interesting exposition of the crusades and chivalry; and, whether we advert to the multitude of curious authorities which have been consulted, to the quantum of new information brought forward, or the excellent arrangement of matter and style, we find it impossible to withhold the tribute of admiration from Mr. James's production.

Having given it this true character, it will readily be felt, that, though only a single volume, it will require more of our attention than could be bestowed upon a hurried perusal; and that, therefore, we have a fair apology for deferring any details till next week. In the meantime, we cordially recommend it.

Herbert Milton, oder Leben der höheren Stände in London, &c. By Von G. Richard. 3 vols. Leipsig.

We merely notice this as a good translation into German of Herbert Milton: it is pleasing to observe our continental neighbours diffusing the knowledge of English works.

Reminiscenze di Carlo Beolchi. 12mo. pp. 236. London, 1830. Rolandi and Co.

THE author of this little volume having taken an active part in the Piedmontese revolution of 1821, and which ended by a renewal of the former yoke, had no other resource except in flight or an ignominious death. Discreetly choosing the first alternative, he proceeded with many others of his disappointed countrymen to Catalonia, where they formed a corps, and greatly distinguished themselves in fighting the battles which ensued on the Bourbon invasion of the peninsula. Again discomfited, the Italian refugees sought an asylum in this country, where they have continued to partake of no small portion of the horrors of exile, and would have continued to do so much longer, were it not for the recent events which seem to shed a new ray of hope on their destiny, if it does not hold out an immediate prospect of returning to Italy. The object of the volume before us, is to describe the author's adventures, from the period of his quitting the shores of his native country, till the breaking up of the corps of which he formed a part; and the task has been performed in a very pleasing manner. The style, though tinged with the sentimentality of *Jacopo Ortis*, (*Ugo Foscolo*), and occasionally somewhat affected, is animated and agreeable. While describing the romantic scenery through which he passed, or the battles in which he took a part, Signor Beolchi loses no fair opportunity of referring to the sufferings of Italy. And, though something less of political matter would render these Reminiscences more amusing to the generality of readers, nevertheless this little volume is well worthy of perusal, were it only on account of the elegance of its language.

Novelle Romantiche, in Prosa e in Versi. Pp. 96. London, 1830. At the Italian Library.

THE *Novelle Romantiche* is a sweet little volume, containing three beautiful tales. The second is touchingly simple. The third, partaking of prose and verse, savours of the German style; that is, the wonderful. The book may be safely placed in the hands of young

people, as there is not an exceptionable sentence throughout.

The Talba; or, the Moor of Portugal: a Romance. By Mrs. Bray, Author of the "White Hoods," &c. 3 vols. London, 1831. Longman and Co.

WE received these volumes too late for detailed review. We can only say, that they open in a very picturesque manner, and are laid during a period full of romantic interest. We like the first chapter much.

The History of the First Revolution in France; comprising the Period from 1787 to 1802. By John Bell, Esq. 8vo. pp. 418. London, 1830. Westley.

WE have gone over this able and excellent history, with which we can truly say we are entirely satisfied, and in every respect. We regret that we cannot immediately render it the tribute of a longer notice; but bidding our time, we cannot allow a week to pass without stating that it is a most meritorious, interesting, and valuable production.

ORIGINAL CORRESPONDENCE.

Calculating Boy.—A Sicilian boy, Vincenzo Zuccaro, has lately given repeated proofs of a most extraordinary facility in performing arithmetical computations. He is seven years old, and of good general talents, but is still a mere child, and of no education. The city of Palermo, where he was born, assigned him a pension, which has been subsequently authorised by the government, that he may enjoy the advantage of careful instruction, from which his station in society (he is the son of an itinerant fiddler) would otherwise have perhaps excluded him. The answer to one question, which he solved perfectly correctly, contained no fewer than fourteen figures. He could not enumerate such an elevated quantity, but said the figures one after another as independent sums. He computes arithmetical and geometrical progressions, extracts the square and cube roots, and performs any of the common equations. Another precocious boy, Carlo Pace, who, at the age of eleven, appeared in the extraordinary character of a public improvisatore, and who was placed in one of the royal seminaries, that lack of fortune might not prejudice his improvement, has written a sonnet on Zuccaro. I subjoin it, though it is no great matter, and is generally considered inferior to his extemporaneous effusions: it is, however, a curiosity, as being written by a boy of thirteen on a child of seven.

This is the child! 'e'en this! oh, what surprise
Steals to my bosom and enchains my tongue!
Perhaps an angel 'tis, who left the skies
To live th' inhabitants of earth among.
Things that to know require 'e'en age's might,
Thou sudden seest, and piercest the thick veil.
O shining beam of the eternal light—
O child divine and dear! I bid thee hail!
Nought was the genius, at thy age, whose fame
Makes England proud; and nought that other name
Who but a fulcrum asked to move all earth.
Why did ill stars, alas! deny thee birth
In old heroic times? Incense and wreaths
Had given the bard who now thy praises breathes.

Letter from Naples.

ARTS AND SCIENCES.

LINNEAN SOCIETY.

A. B. LAMBERT, Esq. in the chair. A paper by Mr. Don, lib., F.L.S., on the plant which yields the gum ammoniacum, was read. The author observes, that the gum ammoniacum has held a place in the *materia medica* from a very early period, yet the plant from which it

is obtained has hitherto remained totally unknown. Dioscorides, whose opinion is adopted by all subsequent writers, derives the name ammoniacum from Ammon, or Hammon, the Jupiter of the Libyans, whose temple was situated in the desert of Cyrene, near to which the plant was said to grow: but it appears to the author, that Dioscorides was altogether mistaken as to its native country; and that the name ammoniacum, or armoniicum, as it is indifferently written, is really a corruption of Armeniacum; for it is now ascertained beyond all doubt, that it is a native of the north of Persia; and in ancient authors the name of the apricot is sometimes found written *malum armeniicum*. The author then proceeds to give the essential character and a detailed description of the plant, which he regards as a new genus, and has called it *dorema ammoniacum*; concluding with some observations on the plant which yields the analogous gum, *galbanum*, which he considers also to form a new genus, and proposes for it the name of *galbanum officinale*. The plant which has hitherto been considered as yielding the gum galbanum, namely, the *bubon galb.* of Linnaeus, and of the pharmacopœias, Mr. Don has shewn to be totally different, possessing neither the smell nor taste of galbanum.

HORTICULTURAL SOCIETY.

DR. HENDERSON in the chair. Two communications were read, viz. on the different kinds of pine-apples cultivated in the Society's garden at Chiswick. It appeared, that of five hundred pines previously supposed to be of different sorts, only fifty are entitled to that distinction. The meteorological journal kept at the garden was the other communication. The journal was accompanied by remarks, and, upon the whole, was interesting and curious; the table regularly published in the *Literary Gazette*, however, supersedes any analysis: it may be sufficient to observe, that the following is a notation of the quantity of rain which fell during the corresponding months of 1829 and 1830, from which it appears that the harvest season of 1830 has been reckoned a wet one: it was considerably exceeded by that of 1829.

	1829.	1830.
July	3.07	1.46
August	3.71	3.05
September	1.40	2.11
	9.38	7.62

The chairman announced that a course of spring lectures on botany, in connexion with horticulture, would be delivered at the Society's house in Regent Street, and that a fête was intended to be given next June. On the table were placed several varieties of the beet-root: a deep yellow colour seems to be the distinguishing characteristic of that species from which sugar is made.

LONDON PHRENOLOGICAL SOCIETY.

Ox Monday last, Mr. Churchill, V. P., in the chair. Mr. Levison gave an account of an interesting case, illustrated by a cast, of an enormous development of the organ of amativeness, accompanied by the corresponding feeling, in a girl only four years old, and now in the work-house at Hull. He also exhibited the skull of the murderer Kerpell, and some others, as proofs of the truth of the science of phrenology. A singular case of absence (congenital) of the anterior lobes of the brain, with a similar deficiency of the intellect, was also read.

MR. ST. JOHN LONG.

We have been amused with some personalities aimed at the (declared) Editor of the *Literary*

Gazette, by the *Medical Gazette*, the *Age* newspaper, and others of our gentle craft, in which, it must be confessed, a joke of our own, to a medical friend, has been converted into a solemn truth, and we have been most miraculously horsed and unhorsed. But we would not allude to this subject on our own account: we think something is, in common honesty, demanded from us respecting Mr. Long, lest our total silence should operate to his disadvantage.

We have been accused of being his partisans. We refer to the *Literary Gazette*; and we say that we might, with equal truth, have been called the partisans of a man who pretended to have discovered the longitude, the elixir vitæ, or the philosopher's stone. We did in his case what we do in all others: we mentioned the claims of the party to be able to cure consumption. We inquired of many intelligent patients what were the results of his treatment; and we stated, as stated to us, their answers. The investigation was one of great interest to humanity; and we should have been ashamed, as public journalists anxious to lay every kind of information before our readers,—of pursuing any other course. We gave no opinion whatever; but we should be guilty of falsehood were we not to acknowledge that the testimony of these individuals induced us to entertain a very favourable opinion of Mr. Long's system.

He is now run down, *secundum artem*; and the prejudice against him is so virulently kept alive, that we believe he can have no chance of a fair trial. To be called a quack and a murderer, for months, in almost every periodical journal, is quite enough, with the influence of the press, to procure the legal murder of any victim so designated for universal reprobation. We are not going into the merits or demerits of the question; but we would put it candidly to every just bosom, if this man has had fair play? No highwayman or burglar was ever pre-condemned, as he has been; and though we are well aware that the hostility against him is almost overwhelming, we do fancy we can perceive a re-action in the public sentiment, and people begin to doubt whether he is really a monster, invading the medical world to devour its practitioners, or something of a martyr to persecution. We have had many dangerous quacks; but no other quack was ever singled out as he has been. He offered the proof of his remedy upon a given number of patients, to be furnished by the faculty; but instead of this, he has had the trial of two strange coroner's inquests, and one verdict against him, which every lawyer declares to be against the law. This was the working of popular prejudice;—cry "Mad dog!" and the poor dog has a bad chance. Yet, in spite of his horrible system, a multitude of persons cured by it came forward to express their gratitude,—a matter of no avail, it seems, against evidence to a specific charge:—really these are queer laws, and queer doctrines! There is not a physician, a surgeon, an apothecary, or an accoucheur, in Great Britain, who is not liable to be hanged for murder, on the principles applied to this quack; who is reported to have made (oh, grievous offence!), we do not know whether ten or twenty thousand pounds a-year by killing patients!

Again, we repeat, that we are not deciding, *adhuc sub judice lis est*, whether Long be innocent or guilty; but we are free to say, it appears to us, that his enemies have pursued him with such notable and persevering acrimony,

that there is not a jury in England with whom he would have the fair chance which it is alleged every subject of Britain is entitled to enjoy, however heinous his crimes.

CHOLERA MORBUS.

THE rapid advance of the cholera morbus, which comes from the extremity of India, and the certain fact, that it always follows the migration of large bodies of men, such as the march of armies and caravans, should warn Western Europe of the near invasion of this dreadful scourge. Two Russian divisions, which have advanced to the frontiers of Poland, come from the governments of Koursk and Cherson, where this epidemic rages. M. Moreau de Jonnés, on the 22d November, read before the Academy of Sciences at Paris a report of considerable interest, respecting this new species of plague. "Will the cold," asks M. Moreau de Jonnés, "extinguish the cholera morbus this year? But has cold done so during the fifteen years it has ravaged Asia? Did it even at Orenbourg, under a latitude more northern than Paris? Besides, we forget too easily the memorable plague which desolated Wallachia and Russia from 1769 to 1771. It was imported into Moscow during the autumn, and continued its fearful career during three very severe winters. Will this scourge reach Poland, Germany, and, at last, France? We dare not dwell on these fearful thoughts: we shudder when we remember that the cholera morbus, engendered in India, has already stretched to the north, far beyond the latitude of Paris and the principal states of Europe—and nothing has stopped its progress." M. Moreau de Jonnés adds also some new facts. Already has this pestilence disease thrice advanced towards Europe by different routes. Imported in the year 1819 from Bengal into the Isles of France and Bourbon, it threatened to arrive on our shores by some of the many ships belonging to France or England. Precautions taken at the Cape of Good Hope prevented this misfortune. In 1821 the communication between Bombay and the ports in the Gulf of Arabia, brought the cholera morbus to Bassora: it ascended the Euphrates, crossed Mesopotamia, and following step by step the commercial communications, it arrived in Syria. There it yielded to the cold during the winter, but re-appeared in the spring with redoubled force, and during three years decimated the population. It spread into most of the cities situated on the Mediterranean. In the spring of 1825 it appeared at Bukara, and continued its ravages towards Moscow, where it penetrated on the 28th of September last. M. Moreau de Jonnés is of opinion that in the provinces of the Russian empire which lie between 45° and 57°, the cold of winter will stop the progress of the contagion; but from experience, it is probable that it will re-appear in spring, with all its activity and violence; and he fears its descent into the milder climates of Europe, where its ravages will be more terrible, as the population is more dense, and communications more rapid and more numerous.

LITERARY AND LEARNED.

UNIVERSITIES.

WE last year adopted the course of giving *monthly returns* of the proceedings of the Universities, instead of casual reports: we now recommence with the term; also bringing up our lee-way, so as to make the whole complete.—Ed.

OXFORD, June 23d.—Commemoration: The Commemoration of Founders and Benefactors was holden in the

theatre. The honorary degree of Doctor in Civil Law was conferred on General Viscount Combermere, Captain Sir T. Fellowes, B. N. C. B., J. S. Duncan, Esq. M.A. late Fellow of New College.

2d.—The degrees of Bachelor and Doctor in Divinity, by accumulation, were conferred on the Rev. W. Carwithen, of St. Mary Hall.

25th.—The following degrees were conferred:—

Masters of Arts.—E. Pops, Grand Compounder, J. C. Connellan, Oriol College; Rev. T. Morgan, S. Lilley, Jesus College; Rev. T. Hutton, Magdalen College; J. Malcolm, Christ Church; Rev. T. Woodruff, St. John's College; S. Hingeston, Lincoln College; Rev. T. Hand, R. Etwall, Rev. W. A. Trenchard, Trinity College.

Bachelors of Arts.—A. Fisher, St. Alban Hall; J. Cunningham, T. L. Williams, University College; the Right Hon. Viscount Grimston, R. Ellison, J. Edwards, Christ Church; H. A. Gilbert, Exeter College.

July 1st.—The following degrees were conferred:

Masters of Arts.—T. Tyers, Grand Compounder, New College; J. C. Dowdeswell, Student, W. M. Du Pre, Christ Church; W. Platt, Rev. W. Bannerman, Brasenose College; Rev. J. Mauney, Pembroke College; Rev. W. H. Landon, Worcester College; Rev. C. R. Roper, St. John's College; W. J. B. Angell, Queen's College; Rev. St. V. L. Hammick, E. F. Glanville, Fellow, Exeter College.

Bachelor of Arts.—G. Atkinson, Queen's College.

Oct. 21st.—The following degrees were conferred:—

Doctor in Divinity.—Rev. B. S. Claxson, Worcester College.

Bachelor and Doctor in Divinity (by accumulation).—Rev. W. D. Thring, Wadham College.

Bachelor and Doctor in Civil Law.—W. R. Williams, M.A. Michel Fellow of Queen's College.

Masters of Arts.—Rev. W. Marsh, Magdalen Hall; Rev. H. Sanders, C. Lushington, Rev. L. B. Brown, Students, Rev. J. J. Marsham, Rev. R. W. Frer, Christ Church; J. E. Jackson, Rev. G. Leigh, Rev. J. Birchall, Brasenose College; C. Neate, Fellow, H. Hoskyns, Oriol College.

Bachelors of Arts.—T. J. A. Robartes, Christ Church, Grand Compounder; E. Power, W. Worsley, Magdalen Hall; J. W. S. Powell, St. Edmund Hall; H. Randolph, Scholar of Balliol College; F. Belson, Scholar, J. T. Wells, University College; J. F. Crouch, Scholar of C. C. College; T. Garner, Worcester College; A. C. Streetfield, W. H. B. Stocker, St. John's College; E. Cockey, Scholar of Wadham College; R. J. Rolles, C. H. Bayly, N. B. Young, Fellows of New College; S. Lysons, H. Dudding, Exeter College.

Oct. 27th.—The following degrees were conferred:—

Honorary Master of Arts.—The Hon. F. J. Stapleton, Trinity College.

Masters of Arts.—W. Hutt, Trinity College; R. A. Riddell, Christ College.

Bachelor in Civil Law.—A. T. Russell, St. John's College.

Bachelors of Arts.—J. Lendrum, Trinity College; Rev. C. Longhurst, Queen's College; Rev. W. M. Dudley, S. Westbrook, Catharine Hall; G. Carew, Downing College; A. H. F. Luttrell, Pembroke College.

Nov. 3d.—The following degrees were conferred:

Masters of Arts.—G. C. Elwes, Fellow, All Souls' College; W. Mac Ivor, Brasenose College; Rev. S. Harris, N. Goldsmid, Exeter College; W. E. Wall, Trinity College.

Bachelors of Arts.—T. H. Whipham, Trinity College; E. Thrupp, Wadham College; H. K. Seymour, Christ Church College.

Nov. 4th.—The following degrees were conferred:—

Doctor in Divinity.—The Rev. J. Caine, Grand Compounder, Oriol College.

Masters of Arts.—Rev. T. Cornthwaite, T. Collett, Rev. J. Peck, Trinity College; Rev. H. R. Thomas, Jesus College; Rev. W. Annesley, University College; Rev. E. Barlee, St. John's College; Rev. J. Matthew, Balliol College; Rev. J. R. Wood, Christ Church.

Bachelors of Arts.—H. Hutton, Wadham College; J. H. Moran, Magdalen Hall.

Nov. 11th.—The following degrees were conferred:—

Masters of Arts.—Rev. J. Griffith, Jesus College; J. Horne, Exeter College.

Bachelors of Arts.—W. Atkinson, Grand Compounder, University College; Viscount Boringdon, Christ Church; G. Williams, Jesus College; R. Smith, Balliol College; R. A. C. Austen, J. T. Graves, Oriol College, incorporated from Trinity College, Dublin.

In a convocation holden the same day, the Rev. E. Bouchier, M.A. of St. John's College, Cambridge, and Rector of Bramfield, Herts, was admitted *in honorem*.

Nov. 11th.—The following degrees were conferred:—

Masters of Arts.—F. Forster, Rev. J. Foley, Fellows, of Wadham College; Rev. H. Brown, Balliol College.

Bachelors of Arts.—W. Bingham, Grand Compounder, St. Mary Hall; R. Morgan, Jesus College; H. Crofts, Scholar, University College; B. Harrison, Student, T. Taucrod, W. Cureton, Christ Church; S. Cotes, Wadham College; S. Grimshaw, Brasenose College; E. Owen, Worcester College; J. Carter, Fellow, St. John's College; J. W. Bruce, Exeter College; R. H. Blanshard, Lincoln College; P. Barlow, Queen's College; J. Campbell, Pembroke College; H. Brydges, Oriol College; Hon. F. Bernard, H. W. Wilberforce, Merion College.

Nov. 25th.—The following degrees were conferred:—

Masters of Arts.—Rev. E. Osborn, Grand Compounder, Oriol College; J. P. Simonet, St. Edmund Hall; J. Kaye, Brasenose College; R. Seymour, Student, Christ Church; Rev. C. Gilbee, Queen's College.

Bachelors of Arts.—G. Bird, St. Edmund Hall; E. Greene, Demy, Magdalen College; G. A. Haigh, Uni-

versity College; J. R. Mitford, Christ Church; H. P. Dawson, J. G. Headlam, R. C. Windham, Brasenose College; H. H. Healey, Lincoln College; E. W. Holland, Worcester College; G. E. Gepp, Scholar, Wadham College; T. Birmingham, Trinity College; J. Dobson, J. Hodgson, Scholar, R. Collinson, Queen's College; J. Taylor, R. Haynes, Pembroke College.

Dec. 1st.—The under-mentioned degrees were conferred:—*Bachelor in Divinity.*—Rev. C. Musgrave, Trinity College, Vicar of Halifax and Whitkirk, Yorkshire.

Honorary Master of Arts.—Hon. A. F. Phillips, Trinity College.

Masters of Arts.—Rev. J. Cooper, Rev. C. Bridges, Queen's College; Rev. F. Ellaby, Compounder, Catharine Hall; Rev. J. Lugar, Sidney Sussex College.

Bachelor in Medicine.—G. E. W. Wood, Trinity College.

Bachelor of Arts.—E. S. Bosanquet, Trinity College.

At the above congregation, Mr. J. Brogden, B.A. of Trinity College, was elected Travelling Bachelor, on Mr. Wort's foundation.

CAMBRIDGE, July 6th.—This being Commencement Day, the following Doctors and Masters of Arts were created:—*Doctors in Divinity.*—The Rev. R. N. Adams, Fellow of Sidney Sussex College; the Rev. J. W. Whittaker, late Fellow of St. John's College, Vicar of Blackburn, Lancashire.

Doctors in Physic.—W. J. Bayne, Trinity College; B. G. Babington, Pembroke College; T. Waterfield, Compounder, Christ College; R. Holson, Compounder, Queen's College; C. Phillips, Compounder, Clare Hall; A. Mower, Emmanuel College; T. Elliotson, Jesus College.

Masters of Arts.—W. H. Tucker, J. Chapman, G. Hamilton, King's College; G. Cartmel, Compounder, G. Cooper, W. J. Allen, C. Cotton, C. J. Greene, Pembroke College; J. S. Baker, J. Hale, T. H. Tucker, E. E. Rowsell, Sidney College; W. W. Follett, W. Carus, B. Charlesworth, T. Turner, V. F. Hovenden, O. Lloyd and H. R. Crewe, Compounders, H. E. Goodhart, J. Puleine, R. Ingram, S. Smith, H. J. Shackleton, C. W. Chalklen, W. Gibson, Compounder, C. Earle, F. Leighton, Compounder, J. Neeld, C. Morton, Compounder, P. Smith, A. Clea-by, F. W. Darwall, W. C. Dobbs, G. F. Prescott, E. J. Shepherd, R. Collyer, W. C. Fomereau, C. S. Whitmore, J. Falbot, H. K. Cankrein, R. Appleton, W. Greig, C. M. Long, T. France, W. C. Wallaston, F. Thornhill, C. Johnstone, Compounder, H. Elphinstone, G. Stanfield, F. V. Lockwood, E. C. Cumberkitch, Trinity College; J. Price, R. J. Bartlett, Compounder, B. H. Kennedy, C. Vate, E. Peacock, G. A. Butterton, J. Livesey, J. Hills, J. F. Denham, E. T. Yorke, W. L. Jarrett, H. Thompson, C. De la Cour, W. T. Antrobus, J. Antrobus, W. Bull, F. F. Haslewood, J. W. Lay, D. Mead and T. Spers, Compounders, F. J. Farre, H. Stohhouse, Compounder, W. Paul, E. S. Halsewell, Compounder, T. P. Outram, F. W. G. Barrs, A. H. Barrs, C. Livingston, Compounder, F. Cheere, W. Colville, G. Rideout, T. Everett, C. H. Gaye, J. B. Marsden, E. Dewdney, S. Rees, W. Burroughes, St. John's College; H. White, Downing College; J. S. Stock, H. P. Gordon, R. Twigg, W. Hopkins, W. F. Powell, R. Yaldwin, C. W. Woodley and C. Murray, Compounders, H. Penneck, St. Peter's College; F. D. Gilby, H. Reeks, E. Bley, W. B. Frost, T. Mills, W. Cooper, T. Grosz, W. North, G. W. Livesey, Clare Hall; E. Lindsell, Compounder, H. J. Stevenson, W. H. Henslow, J. Long, Jesus College; T. Newbery, T. Sikors, T. Fitzherbert, J. C. Moore, T. M. Barwick, Compounder, H. Kitchell, T. M. Brooks, T. T. Smith, T. B. Stuart, J. Venn, Compounder, Queen's College; J. Tinkler, F. T. Sogant, G. King, J. C. Homfray, W. Cape, S. Hey, A. Cumbly, G. W. Stewart and H. G. Newland, Compounders, Corpus Christi College; W. R. Colbeck, R. J. Bunch, T. Easton, J. C. Athorpe, Compounder, H. H. Woods, A. Brocas, Emmanuel College; E. Sneyd, S. Prentis, Compounder, J. Cartwright, W. G. Lyall, W. Richardson, J. P. Sill, J. E. Daniel, A. Packe, J. Deans, Compounder, Christ College; W. Smith, H. Owen, C. Hodgson, F. Wintour, T. Dayrell, Magdalen College; H. S. Pinder, S. Dawes, J. D. Eade, W. Howorth, F. G. Burnaby, E. S. Appleyard, W. Kelly, F. Colbold, H. J. Branson, Compounder, St. V. Beechey, Caius College; W. W. Smyth, Compounder, Trinity Hall; T. Jarrett, A. Power, Compounder, J. Wilson, J. Torriano, Compounder, T. P. Wright, J. Gilderdale, J. Mandell, Catharine Hall.

July 3d.—The following degrees were conferred:—

Bachelor in Physic.—J. Harris, Trinity College.

Bachelor of Arts.—W. J. A. Abington, Trinity College.

July 5th.—The under-mentioned degrees were conferred:—

Bachelors in Civil Law.—J. Vinal, Esq. Compounder, Trinity Hall; Rev. H. M. Grover, St. Peter's College; Rev. P. Osborne, Catharine Hall; Rev. C. Payne, Compounder, Trinity Hall.

Bachelors of Arts.—G. L. Fraser, St. Peter's College; W. J. Barker, Queen's College.

July 8th.—The following degrees were conferred:—

Masters of Arts.—T. Greenwood, St. John's College; Rev. J. P. Voules, Compounder, St. Peter's College; W. Hartley, R. T. Lowe, Christ College.

Bachelors of Arts.—H. Wright, St. John's College; W. H. King, Catharine Hall.

Nov. 3d.—The Rev. George Thackeray, D.D., Provost of King's College, was elected Vice-chancellor of this University for the year ensuing.

The Seatonian Prizes for the present year were on Friday last adjudged to the Rev. R. Parkinson, M.A., of St. John's College, and W. M. Praed, Esq. M.A. Fellow

of Trinity College. Subject of the poem, "the Ascent of Elijah."

Nov. 17th.—The following degrees were conferred:—*Doctor in Physic.*—H. J. H. Bond, Corpus Christi College.

Masters of Arts.—W. G. P. Smith, Trinity College; T. Bros, G. H. Woodhouse, St. John's College.

Licentiate in Physic.—E. A. Domeier, Trinity College.

Bachelor in Civil Law.—E. St. John, Downing College.

Bachelors of Arts.—R. Hinde, St. John's College; T. B. Wells, Trinity Hall; C. Orlebar, Christ's College.

The subject of the Norrisian prize essay for the ensuing year is, "The Proof of the Divine Origin of the Gospel derived from the Nature of the Rewards and Punishments it holds out."

ROYAL SOCIETY.

THURSDAY evening.—His Royal Highness the Duke of Sussex took the chair as president of the Society. His Royal Highness appeared in full court dress, a black velvet coat, and three brilliant stars. The reading of Mr. Barlow's paper on astronomical glasses was resumed; and after the ordinary business was terminated, his Royal Highness addressed the fellows. He thanked them for the great honour they had conferred upon him in electing him president, and assured them that he should use every endeavour in his power, not only to advance the interests of science and of the Society, but also of every individual member, who should be alike welcome to him. His house, he informed the meeting, was at present undergoing repairs; but, as soon as it was ready, it was his intention to throw it open, alternately on the forenoons and evenings of Wednesday, for the reception of the fellows and men of science. This, he trusted, would suit the convenience of all; and those who could not do him the pleasure of breakfasting with him, might be able to attend from half-past eight to eleven at night. If he failed in any thing, he hoped they would attribute it to his weakness, and not to a want of zeal in the cause. They would remember that he was yet but young in office; however, he trusted, with the advice and assistance of the council, to give them general satisfaction.

[This address, delivered in a most condescending and gentlemanlike tone, and with great urbanity of manner, was frequently interrupted by plaudits, which were renewed as its close. Both the room of the Antiquaries and that of the Royal Society were crowded as full as they could hold, and a majority of the distinguished scientific and literary characters of the metropolis were present.]

His Royal Highness then partook of coffee in the library up stairs, and mixed in conversation with the fellows in the most familiar manner.

SOCIETY OF ANTIQUARIES.

THURSDAY, Mr. Hamilton, V.P. in the chair. His Royal Highness the Duke of Sussex attended the meeting, and, having subscribed to the statutes, was admitted a member. Lord Jermyn, Sir Roger Gresley, Bart., and J. P. Collier, Esq., were elected members. The secretary commenced the reading of a paper by Mr. Amyott, the treasurer; being a reply to remarks by Mr. Tytler on the death of Richard II.; in which Mr. Amyott endeavoured to shew, from circumstances, that Winton's story of Richard's having escaped from imprisonment, and wandered about as a pauper in Scotland, where he was recognised by a woman who had seen him in Ireland, taken, and kept a prisoner by Albany, and his having been buried at Stirling, was altogether untrue; or that Albany was deceived by some poor maniac, who fancied, and admitted, that he was King Richard.

ROYAL SOCIETY OF LITERATURE.

DEC. 1.—The reading of Dr. Nolan's second memoir, on the use of the ancient Cycles, was begun at this meeting. The former memoir was devoted to the investigation of the chronology of the Chaldeans: the writer now proceeds to examine the system of the Egyptians, the rivals of that people in antiquity and science. Both these ancient and learned nations equally directed their chronological efforts to the purpose of determining the revolutions and computing the duration of the world, by means of cycles referring to a grand conjunction of the planets; and although their great planetary years differed, as well in numbers as in nature, from each other, both originated alike in the observance of a derangement in the celestial motions, and in the notion of a period when those irregularities would be adjusted. In proceeding to examine the elements of the Egyptian planetary year, as compared with the Chaldean, Dr. Nolan shews that the difference between them (the former consisting of 1461 years, the latter of 1440 years,) arose from the neglect of the system of intercalation by the chronologists of the former nation, and the constant use of it by those of the latter, with the view of securing an agreement between their natural and civil years. He then enters upon the elemental details of the system by which that ancient and ingenious nation, whose antiquities have of late so deeply engaged the attention of antiquaries and the learned in general, computed the great period of the restoration of nature; directing his researches to bear on the fact, that the chief use of the cycles, and the use to which the Egyptians themselves applied them, is that of a graduated scale, by which the principal epochs in their history are to be determined.

A further reading was extracted from Professor Lee's memoir "on the origin of Heathenism." The professor here enters upon the disputed question, whether, and to what extent, the notions of the heathen philosophers were derived from the Jews? Although it may be true that the Hebrew school did not directly supply the facts and notions of the Pagan philosophy, yet the latter cannot on that account prefer any claim to originality, inasmuch as both the Mosaic theology and the philosophic systems of heathenism are evidently alike founded on the principles of an anterior revelation. Were this not an undeniable fact, we could account for the remarkable agreement of heathenism with Judaism upon no other principle than the absurd supposition that the philosophers had the benefit of divine inspiration. The course of the learned writer's argument leads to the conclusion, that there will always be a tendency in revelation to become corrupted by the speculations of philosophy,—that is to say, by the disposition of the human intellect to explain what the Author of revelation has left unexplained. And such, he asserts, is the fact; and he adduces testimony to support his assertion, from the history of the opinions of the Jews, from the earliest to the latest periods of their national history, but particularly as evinced in the Cabbala.

Among the communications laid on the table of the council was a translation of the official report of the audience of the first Ottoman ambassador sent to England in the year 1794. This paper (which we shall have an opportunity of reverting to), though of no great historical interest, is very curious as a specimen of Turkish diplomacy; and it is further interesting from having been translated into

English by a learned foreigner, M. Joseph von Hammer, the author of the "History of the Ottoman Empire." It was accompanied by a letter from M. von Hammer, likewise read at this meeting, containing some account of the historiographer from whom the relation has been obtained, together with a general notice of the series of Turkish official historians.

ROYAL ASIATIC SOCIETY.

SIR A. JOHNSTONE, V. P., in the chair. This was the first meeting of the season. The table was covered with donations from nearly thirty individuals: amongst them was the gift of Lord Kingsborough, of a copy of his magnificent work on the Antiquities of Mexico, in seven large folio volumes, of which the first four comprise the plates, mostly coloured, and the remaining three contain the Spanish, Italian, and French texts, with English translations. This work, edited by M. Aglio, comprises all the collections of Mexican hieroglyphics to be met with in the public libraries of Europe. Nine years were occupied in the preparation of the work, and not less than 30,000*l.* has been expended upon its completion by Lord Kingsborough. An interesting paper, by Colonel Tod, entitled "a Comparison of the Hindu and Theban Hercules," was read. The drift of Colonel Tod's essay appeared to be, to prove the Hindu origin of the Grecian Hercules: in support of this opinion he quotes largely from authors of both nations, besides bringing to the inquiry great personal knowledge of the geography and of the present inhabitants of a great part of the country formerly ruled by the *Pandūs*,—five brothers, of whom one, named Baldeva, "the god of strength," is the Hercules of the Hindus, whose attributes and dress are represented to be in accordance with those of the Theban. Indeed this is shewn by a reference to an intaglio in the possession of T. Perry, Esq., which gave rise to Colonel Tod's disquisition. On this is represented Hercules in his lion's hide, resting on his club, and holding in his right hand a figure apparently presenting him with a wreath or crown. Behind the figure of Hercules is a monogram of two letters in a character now unknown, but which Colonel Tod states is the same as that found on all inscribed monuments of the *Pandūs* wherever they colonised.

The dissection of the Society's mummy, noticed in our last, promises much gratification.

THE SOCIETY OF SCHOOLMASTERS.

THE general meeting of this truly excellent Society took place last Saturday; and from the treasurer's report it appeared that no fewer than fifty-two cases of suffering had been relieved within the last twelve months, and at the small expense of 358*l.* "The schoolmaster is abroad;" the phrase has obtained political fame; and we can only express our hope that those who think the schoolmaster's being abroad is of advantage to the community, would, in the simple spirit of fact and truth, remember his despised services, and feel for his distress. The schoolmaster is an important character for good or evil:—Instruction with direction, the greatest of blessings; tuition without that which makes a little learning dangerous, the greatest of curses. There can be no question, therefore, of the advantages of a Society, to overlook, regulate, and assist, this important body of men; and we hope our slight notice of it may not be passed over without producing a beneficial effect. The Society was instituted in 1798, for the relief of distressed masters and

ushers of endowed and boarding-schools, and of their widows and orphans.

"Its income (says the circular of the year) has uniformly been husbanded with the most scrupulous economy; and every precaution has been taken, by a strict investigation into the character and circumstances of each individual petitioner, that no portion of its funds shall be wasted upon the undeserving. Yet still its revenues are extremely limited, and, even if they were increased by the subscription of every schoolmaster in the land, the Society could not confer adequate or permanent assistance, without a far more ample share of public favour than it has hitherto been its good fortune to enjoy. Death has deprived it of nearly all its early and warmest advocates, and the loss of annual subscribers has of late been severely felt. On the respectability or usefulness of their profession, the committee forbear to speak,—nor is it for them, perhaps, to dwell upon its toils, and difficulties, and privations,—nor upon the influence, moral, civil, and religious, which it beneficially exercises upon the community at large. They feel confident, that those especially who can appreciate the blessings which they derive from education, while they reflect upon it the highest honour, will not be unmindful of their obligations to men, who are now, in many instances, old and infirm, poor and friendless, after having faithfully devoted to their important charge the best vigour of their life, and most laborious exercise of their faculties."

We do not know that we can promote a better cause than by making the wide circulation of the *Literary Gazette* subservient to the recommendation of this most laudable Society.

FINE ARTS.

NEW PUBLICATIONS.

Views in the East; comprising India, Canton, and the Shores of the Red Sea. From original Sketches, by Captain Robert Elliot, R.N. Part IV. Fisher, Son, and Co.

MESSRS. Cotman, Cattermole, and Purser, are the three able draughtsmen to whom Captain Elliot is indebted for the elaboration of his original sketches in the present Number. The views are—"Perawa," a small town in the province of Malwa, the capital of which province, Oojein, "has perhaps more undoubted claim to remote antiquity than any inhabited city in India;" "The Caves of Ellora," described as "the principal, and far the finest range of excavations that are found in India;" and "Shuhur," which is "a strong hill fortress, in the principality of Jeypore, one of the provinces of Rajpootana." In the "historical and descriptive illustration" which accompanies the last-mentioned plate, it is very gratifying to meet with the following passage:—"Since the British conquests and interference in the countries adjoining to Rajpootana, a great change has been wrought in these hitherto distracted nations. Multitudes of people have emerged from the hills and fortresses where they had sought refuge, and have again occupied their ancient and long-deserted villages. In no part of Hindoostan has the alliance of independent states with the British government had a more favourable effect, or the peasantry been more universally sensible of the improvement in their condition, than in Rajpootana. Security and comfort are now established where terror and misery before existed; and the ploughshare is in peace turning up a soil which for many seasons had never been stirred, except by the hoofs of predatory cavalry."

The Spirit of the Plays of Shakespeare. By Frank Howard. Numbers XIX. and XX. Cadell.

THESE two Numbers illustrate "The Comedy of Errors," and "Henry the Sixth, Parts II. and III.," and shew Mr. Howard's usual talent, and his acquaintance with the costume of the times. The latter, however, he no doubt frequently himself feels to be an obstacle in the way of picturesque effect, rather than to facilitate it; and to be more gratifying to the antiquary than to the artist. Our favourite plates

are,—in the Comedy of Errors, “Antipholus taking leave of his father,” “The marriage of Antipholus of Ephesus with Adriana,” and “Antipholus of Syracuse accosted by Adriana and Luciana;” in the Second Part of Henry the Sixth, “Margaret brought by Suffolk to Henry, as his queen,” “Bolingbroke raising the Spirit before the Duchess of Gloster,” and “Gloster discovered dead in his bed;” and in the Third Part of Henry the Sixth, “Lady Elizabeth Grey suing to the King for her late husband’s lands,” and “The murder of King Henry by Gloster.”

Landscape Illustrations of the Waverley Novels.
Engraved by W. and E. Finden. Part VIII. Tilt.

AN exquisite Number. We are especially charmed with “Inverloch Castle,” from a drawing by Robson; and “Coningsburgh Castle,” from a drawing by De Wint.

The High-Mettled Racer. Illustrated by Ten Engravings on wood, by G. W. Bonner, from Designs by Robert Cruikshank. Kidd. Of the many admirably characteristic ballads by Dibdin, no one is more full of pathos than his “High-mettled Racer.” It is not impossible that a considerable portion of the interest and sympathy which this affecting little composition always excites, is occasioned by a secret comparison which passes in the mind of the hearer, between the fate of the noble steed, and the similar fate of many a noble but unfortunate human being; who, having started in early life, full of vigour, spirit, and glorious expectation, has been, by the successive oppressions of the world, and perhaps even by the too unrestrained exercise of his own generous virtues, broken down, and compelled, scarcely figuratively, when

“Blind, old, lean, and feeble, to tug round a mill,
Or draw sand—till the sand of his hour-glass stands still!”

Both Mr. R. Cruikshank and Mr. Bonner have shewn great talent in their illustrations of “the decline and fall” of the fine animal whose history they have undertaken.

Devonshire and Cornwall Illustrated.

Part IV. Fisher, Son, and Co.

WHEN we look at the fourteen exceedingly pleasing prints which adorn this *livraison*, we are astonished that the publication can be sold at so cheap a rate. They are all from the pencil of Mr. Thomas Allom, and do him great credit.

Tit-bits; selected by Heath, and published by Ackermann.

AT this epicurean season of the year, tit-bits of all kinds are very pleasant things. It is the appetite for laughter, however, which these tit-bits are intended to gratify; and some of them, such as “Pigs’ Petticoes,” “Collared Beef,” “a Spare-rib of Pork,” &c., are entertaining enough.

MUSIC.

NEW PUBLICATIONS.

The Musical Gem; a Souvenir for 1831.
Edited by N. Mori and W. Ball. London. Mori and Lavenu.

THE present volume is embellished by some clever lithographic portraits of the most eminent professors of music, by Gauci and William Sharpe; and the presentation plate, designed and executed by R. J. Hamerton, is extremely pretty. We have Pasta, a most becoming portrait; Paganini, the wildest-looking genius that ever exemplified the poet’s great wits

being near allied to madness; Hummel, and Taglioni. The frontispiece is his most gracious Majesty; and the book is dedicated to Queen Adelaide. The slight memoirs of eminent artists is a species of literature well adapted to such a work; and the songs are as good as the usual run of mediocre songs are,—we speak but of the words. The fac-simile of the last page of Handel’s MS. of the Messiah is very interesting. Neukomm informs us, “that this divine oratorio was written in the incredibly short space of twenty-one days.” It is a strange fact, that almost all truly great works have been written in a hurry.

We could almost quarrel with the musical department, in spite of its containing one or two exceptions to our censure; for, in our opinion, a work of this kind should be formed of none but original productions. “Spirit of Music,” by Miss Smith, is very good for a young lady; but the G sharp in the 9th bar of page 6 ought to have been an A flat. “La Caclucha” is a sweet duet, and may be executed without difficulty: it is called a Spanish melody, or we should certainly have thought it to be of English manufacture. “Rosalie,” composed by Bellini, is simple and pleasing; but the harmonies employed in the fifth and sixth bars might and ought to be greatly improved. “Sympathy,” composed by W. B.: such music as this will get no sympathy from us. “It is the hour,” composed by C. de Beriot, is pleasing; as is also “Accusa i tuoi bei rai,” by Gabusi. “Rouse thee up, Shepherd Boy,” composed by Mde. Malibran, is very well; but the accompaniment wants a little more variety in its harmonies. “The Swiss Maiden’s Song to the Eagle,” by F. Stockhausen, is pretty, and that’s all; for certainly there is nothing of the master about it: the C in the third bar of the bass, page 72, would have been much better A. To us, the greatest attraction in the volume is the spirited Spanish air, “Ay San Anton,” which the fascinating little Vigo has almost made her own.

“Souvenir de l’Opéra,” airs arranged by I. Moscheles, are well done; but the Queen Adelaide Quadrilles are miserably bad.

IN our notice of *The Musical Bijou* (Number 523), we omitted to particularise “the Stranger’s Good Night,” one of Miss Jewsbury’s very prettiest poems; and to quote, as we intended, the following *jeu d’esprit* by Lord Ashdown:—

“To a Lady who accused the Writer of Toryism.
Yes—I confess myself a Tory—
While beauty rules by right divine,
Submission is my pride and glory—
Command is your’s—obedience mine.
Royal prerogatives belong
To all your sex—I’ll tell you why,—
The young and fair can do no wrong,
The old and ugly never die.”

DRAMA.

DRURY LANE.

AFTER the *Belles Stratagem*, very poorly performed, we were *disennuyed* at this theatre on Thursday, by the production of a neat and clever farce, from the prolific and popular pen of Mr. Planché, called the *Jenkinses*. It is so true a picture of life, that, were it not also so laughable, we should be inclined to say it was too good for farce, and quite equal to pure comedy. The introduction of a spoilt boy (admirably enacted by a Mr. Fenton), takes it out of the higher line, and restores it to its farcical quality. The humour consists of an old retired grocer (Farren), seeking comfort as a boarder in the family of his neighbour, *John Jenkins*

(Cooper); where, as might be expected, his confirmed bachelor habits are tortured by every body and every incident. He is made the confidant of amours, a busy meddler, a seducer, &c. by turns; till human nature can endure no longer, and he bids a hearty farewell to the *Jenkinses*. Farren, Cooper, J. Vining as *Gingham*, (a whiskered traveller to a house in the Manchester trade), Mrs. Orger as *Mrs. John Jenkins*, and Miss Mordaunt as *Miss Georgiana*, were all excellent; and the piece was received throughout with the best testimonies of applause—shouts of laughter, which lasted till the curtain dropped. One scene, in which a table overturned by the boy, discovers *Gingham* lying *perdu*, is not inferior, as a picture, to the famous screen scene in the *School for Scandal*.

COVENT GARDEN.

A BROADLY farcical interlude, called *The Omnibus; or, a Convenient Distance*, was produced here on Monday. It is little more than a series of practical jokes, but they are well strung together; and Power, Keeley, Blanchard, and Bartley, keep the house in a roar from the beginning to the end of them. Part of the subject, especially the blundering servant, is not entirely new to the stage; but it has been mixed up with the incidents in a very humorous paper by Mr. Poole, that appeared some time ago in the “New Monthly Magazine.” The name of the present arranger is unknown to us.

Of the *Fair Penitent*, which has been revived here, we shall say nothing this week, (as we purpose offering some general criticisms upon it in our next), except that, while we must condemn the entire scope of the play, we think the performance of *Callista* one of the highest histrionic efforts of Miss F. Kemble.

To the regret of the lovers of genuine amusement, various untoward circumstances have caused the *Chancery Suit* to be postponed from time to time.

ADELPHI.

THIS house was crammed on Thursday, to greet the return of Mathews; and the treat he furnished to his surrounding friends justified the warmest welcome which he could receive. This little theatre has deservedly been overflowing through its season: how it will manage with this great additional attraction, we know not, unless it can contrive to overflow over an overflow. By the by, we have seen conjurers slip an immense number of coins into a glass which had been filled to a bumper, without causing it to run over: we would recommend to Mathews and Yates to study the process, and apply it to the Adelphi.

VARIETIES.

Parisian School of Law.—A tumultuous scene lately took place in l’Ecole de Droit, at Paris. M. Portes, the professor appointed by an ordinance of the ancient administration, with which he sympathised in opinion, had, nevertheless, taken the oath of allegiance to Louis-Philippe. When he presented himself in the school, to commence his course of lectures, he was received with murmurs and hisses. In vain did he attempt to speak—his voice was drowned in the noise, and he was obliged to withdraw.

Cambridge, Nov. 29th.—Philosophical Society; the very reverend the Dean of Peterborough in the chair. The continuation of Mr. Lowe’s paper “on the natural history of

Madeira and Porto Santo" was read. The total number of phanerogamous plants observed was about 700, of which between 50 and 60 are new; and of ferns 43, of which four or five are new. The general character of the vegetation is of a form intermediate between that in the Canaries and in the south of Europe: and it appears, that if Madeira have given many plants to the Canaries, she has received scarcely one from them in exchange. Several interesting facts were detailed connected with the botanical geography of these islands, and a few particulars alluded to respecting the economical and medicinal properties of certain species. Seventy-one species of land mollusca were observed, of which forty-four are new. A single species only of fresh-water mollusca was found, the *Ancylus fluvialis*, so commonly distributed over Europe. Although Madeira is so near to Porto Santo, Mr. L. noticed only four species of helix (out of sixty collected by him) that were common to the two islands.—The beginning of a paper by Professor Whewell was read, "on the rules proper to be observed in the selection and employment of mathematical symbols of quantity."—After the meeting, the Rev. L. Jenyns laid before the society some observations on the principles of classification in natural history, more particularly with the intent to illustrate the quinary system of Mr. M'Leay, and to point out the exact difference between relations of analogy and relations of affinity. These two relations were stated to have been constantly confounded before the publication of Mr. M'Leay's discoveries, and the defects consequent on such mistakes were pointed out in the various systems hitherto proposed for the arrangement of animals.

Playing Cards.—A new and very handsome appearance has just been given to playing-cards, by Messrs. Reynolds, which is not only beautiful in itself, but likely to be advantageous in use. It consists of enamelling the backs of the cards, with a pretty pattern in gold enamel, which certainly looks well, we had almost said splendid. But it is further stated, that, in consequence of this sort of ornament, the cards are rendered more firm, and less liable to warp: they deal readily, and lie flat, so that, altogether, we think the process an improvement well calculated to reward the ingenuity of its applicants.

Parisian Exhibition.—The gallery of the Luxembourg has been opened with a collection of pictures, exhibited for the benefit of the wounded in the late revolution. Among the principal works are compositions by Guérin, Girardet, Gérard, and others, illustrative of the most striking events in the history of the French empire under Napoleon, now brought forth from the obscurity to which they had been condemned since the restoration of the Bourbons.

Society.—A large establishment has been projected at Paris, for the purpose of enabling any individuals, by the annual payment each of 700 francs (less than £30), to enjoy all the pleasures of social, with all the independence of domestic life. For that sum they are to have lodging, board, clothes, and washing; the use of a library, the daily papers, billiard-rooms, play, conversation, &c. The whole to be under the management of a committee chosen by themselves. The prospectus even holds out the expectation of a country-house, and free admission to the theatres!

Affray at Swan River.—By accounts in the Indian papers, we learn that there has been a battle royal between the settlers and the natives at the new establishment of Swan River.

The quarrel commenced in an attempt at theft by the natives at Perth. The aborigines made a great shew of courage: they dared the settlers to fight; and one of them advanced and quietly knocked down a corporal with his waddie, a stick about two feet and a half long, and an inch in diameter. The chiefs ascended the trees like monkeys, and chattered to (the newspapers say harangued) their tribes from the tops of the branches. In such situations they were shot at with facility; but they feared not the thunder and lightning of the Europeans; and seven of their number were killed. The whole certainly must have been as unique as every thing that is connected with this wonderful settlement.

Snakes.—M. Duverney, one of the professors of the Strasburg Academy, lately read to the French Academy a very curious paper on the anatomical distinctions between venomous and non-venomous snakes; in which he shewed that salivary and lachrymal had been frequently mistaken for venomous glands; and that much of the mortal character of venomous snakes depended upon the position of the fangs.

The Nerves.—By the assistance of a newly invented galvanometer, of a very delicate construction, it has been ascertained that the hypothesis of the existence of electric currents in the nerves, is destitute of foundation.

Inscription.—At the opening of the Archaeological Academy at Rome, Nov. 18th, M. Carlo Fea read a memoir on the unique inscription of Trajan, lately discovered at the distance of about ten miles from Rome, which determines the year in which the aqueduct of the Sabatine or Trajan water was built, and which is partly the same as what is now called the *Acqua Paola*. This inscription, which we annex, bears the date of the year 110 of the vulgar era.

A Batch of Puns, from a Correspondent.—Among some amateur private theatricals, in a regiment whose head quarters was the Tower, they christened their Prince of Denmark "one of the Tower Hamlets;" and another tragedian, who *squinted* sadly, they cast, for no other qualification, into King Lear!

A baker advertising said,
"I wish none this to heed
Not bred to making bread, because
I need a man to knead,
Mould, set, and in a shop I have
At Leeds, to take the lead."

According to the criminal code of China, they often doom the offender to be tied for many hours, and exposed in a painful position, with his knees pressed up to his chin: "this (said a wag, looking at a print of it) cannot be a *Chin-ease* punishment."

"What say you of my last night's speech?
I was just in the mood;
For (though in a stew all the while)
I spoke through two hours good."
"Say? Sir George—why, then I dare say
You were not under-stew'd."

French Riddle.—As an addition to our *Vaux-hall*, a correspondent sends the following: "Une vraie tête de veau, quand n'est-elle pas une vraie tête de veau?" Solution: "Quand elle est une vraie tête de Vaux."

The French Academy.—The French Academy recently proceeded to fill up the vacancies occasioned by the deaths of Messrs. Fourier, and Segur sen. The number of members present was 27. The candidates were, Messrs. Victor Cousin, B. Constant, Viennet, Tissot, and Keratry. M. Victor Cousin was elected at once, and M. Viennet after a ballot against M. B. Constant.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. L. Dec. 11.]

An Inquiry into the Theory of Colours, with reference to the Newtonian Doctrine, by Mr. Walter Crum, of Glasgow.—Lectures, Practical and Expository, upon the Gospels of St. Matthew and St. Mark: especially intended for the purpose of Domestic Instruction and Devotion, by the Bishop of Chester.

Wind, N.E. and S.E., the latter prevailing. Overcast; mizzling rain at times on the 6th and 7th. Rain fallen, .05 of an inch. **Edinburgh.** CHARLES H. ADAMS.

TO CORRESPONDENTS.

It is out of our plan to give a "sketch of the history of General Monk, Duke of Albemarle, and family, and the reason why the dukedom and marquise became extinct in 1809;" but if our correspondent will apply to the Editor of the *Gentleman's Magazine*, he will be sure to have any information required.

We cannot insert notices of royal appointments, which we observe are advertisements in the newspapers.

We noticed the matter referred to by R. C. E. A. when the burletta was produced at the Adelphi; and it does not seem to be worth while to try back on such an occasion.

H. C. declined, with thanks. The medal of C. J. D. is well known, and common. It is a satire upon the pajal power.

G—e, who sends "Extract of an unpublished Poem," should have paid the postage. We cannot insert the lines. It is out of our power to comply with the hint of an "Ardent Admirer;" if we could have done so at all, no expense would have prevented; but there are insuperable obstacles in the way of publication.

Our correspondent at Clapham is right in his suspicions; but we do not wish to keep the shameful subject alive. If we did, we could a monstrous tale unfold; but the abortion is dead, and had better be left in its dirt. Among our unavoidable postponements are, Reviews of Shipp's Military Bijou, Nicolas on the State of Historical Literature, and Lingard's History; also a description of Lieut.-Col. Blom's invention of Transportable Houses.

ERRATUM.—P. 715, col. 1, line 20, of Zoological Society, for "spread of the knowledge," read "diffusion of the knowledge;" the vile phrase printed in our report escaped notice.—Ed.

ADVERTISEMENTS,

Connected with Literature and the Arts.

A GRADUATE OF CAMBRIDGE, residing at the West End of London, wishes to attend as Tutor for a Part of the day in a Nobleman or Gentleman's Family. He will also be willing to prepare a few Pupils at his own House, for the University, King's or the London University.

Portrait of Dr. Warton. This day is published, a fine Master of Winchester College, from the original Drawing by Sir Nathaniel Holland, Bart. The Print is engraved by P. C. Lewis, and will soon become very scarce and valuable, as only a limited number of Proofs will be published. Price One Pound.

LANDSCAPE ILLUSTRATIONS of the WAVERLEY NOVELS, Part VIII. containing beautifully engraved Views from Drawings by Stanfield, Barrett, Copley Fielding, and Fraser. This work, if completed as it has been begun, will be worth all the miscellane illustrations that have hitherto appeared.

CORNWALL and DEVON ILLUSTRATED, containing Sixteen Engravings, viz. In Cornwall—Trematon Castle—Fort Elliot—Launceston Castle—Launceston Church—St. Austle—and Launceston. In Devonshire—Cloveley—Bilford—Rolle Canal and Aqueduct—Castle Hill—Fritton Priory—Great Torrington Church—Foliottery—Dunington House.

COMPLETE SERIES OF VIEWS IN ITALY, to be drawn on Stone, in the Line or Chalk Manner, by W. Linton, as Fac-similes of his Original Pencil Sketches, drawn from Nature, during his Tour in the years 1829 and 1830. He will accompany each scene with descriptive but concise Observations, and add an Index of reference, en route. To be completed in Twelve Numbers; each to contain Eight Drawings, 10 inches by 14 inches. The whole will be printed on the best imperial drawing paper, folio.

THE SPIRIT OF THE PLAYS OF SHAKESPEARE, containing Nineteen Engravings, illustrative of Henry the Sixth, Parts II. and III. Accompanied by Quotations and Descriptions. Drawings engraved by Frank Howard. The whole work will not extend beyond Twenty-five Numbers. Printed for T. Cadell; C. J., G., and F. Rivington; Baldwin and Cradock; and J. Booker, London. To be had also of Mr. F. Howard, 18, Tavistock Street, Bedford Square, or 5, Newman Street.

BOOKS PUBLISHED THIS DAY. 3d edition, 1 vol. 8vo. with Plates, 14s. MILITARY MEMOIRS OF FOUR BROTHERS, (Natives of Staffordshire), engaged in the Service of their Country, as well in the New World and Africa, as on the Continent of Europe.

THE HISTORY OF THE DECLINE AND FALL OF THE ROMAN EMPIRE. A new edition, in 1 vol. with some Account of the Life and And a Portrait. By ALEXANDER CHALMERS, Esq. F.A.S.

THE HISTORY OF THE CHURCH OF ENGLAND, No. VII.; being the Second Volume of the Works of Dr. Barrow (in which will be introduced several unpublished Sermons), with a Summary of each Discourse, Notes, &c. By the Rev. F. H. D. Paternoster Row, London.

THE HISTORY OF THE CHURCH OF ENGLAND, No. I. to V. contain the only uniform and complete edition of the Works of Bishop Sherlock. Price 11. 17s. 6d.

4th edition, in 3 pocket vols. to correspond with the Family Library, price only 12s. DEATH-BED SCENES and PASTORAL CONVERSATIONS. John Murray, Albemarle Street.

ORIGINAL GENEALOGICAL ABSTRACTS OF THE WILLS OF INDIVIDUALS OF NOBLE AND ANCIENT FAMILIES, now or formerly resident in the County of York. By WILLIAM AYMER. The plan of this work is to show the name, and in most cases the residence of the testator, the date of the execution and probate of his will, the place of his interment as directed by that instrument, the names and relationship of all persons mentioned therein, together with a brief account of his family, and notes, explanatory of the information to be adduced from the abstract.

TRANSLATIONS OF THE GREEK and LATIN CLASSICS, with Biographical Sketches, illustrative Notes, Engravings of the Authors, Maps, &c. Small 8vo. neatly bound in cloth, and hot-pressed. The following Authors form a Part of Valpy's Family Classical Library, and are now arranged for separate sale, entirely unconnected with the Series.

1. The Oration of Demosthenes, translated by Leland. Complete in 1 vol. 7s. 6d. 2. Sallust's History of Catiline's Conspiracy, and of the Jugurthine War. By Rose. 2s. 6d. 3. Xenophon's Anabasis and Cyropædia, by Spelman and Cooper. 2 vols. 10s. 4. Herodotus, by Beloe, 3 vols. 15s. 5. Virgil. The Eclogues by Wrangham, the Georgics by Sotheby, and the Æneid by Dryden. 2 vols. 10s. 6. Pindar; a new Translation, by the Rev. C. A. Wheelwright, Prebendary of Lincoln. To which is added, a new Translation of a fragment.

The Family Classical Library, No. XII. containing Part of Murphy's Tacitus. On the completion of Tacitus will be given a new Translation of Juvenal, by Dr. Badham, with Notes, &c. and Sir W. Drummond's Terence. This Selection of Translations, which acquired so high a character at its commencement, continues to receive the most flattering recommendations from the Editors of the Public Journals.

AN EXPLANATION OF MORAL RIGHTS, in a Practical View of the Subject, and as opposed to the erroneous Ideas of Natural Rights. By GEORGE GILES VINCENT. Printed for T. Cadell, Strand. In this Work the claims of the poor are particularly considered relative to property, and the channel through which relief can be afforded to the distressed portion of any community in extraordinary occasions.

PINACOTECA REALE di BOLOGNA. Published by Signior F. Rosapina di Bologna. These Subscribers who have not yet received Fasciculi XI. and XII. which complete the Series, may procure them on application to Mr. C. F. Molini, No. 14, Paternoster Row, London, where any of the preceding Numbers may also be obtained.

DIVINES OF THE CHURCH OF ENGLAND, No. VII.; being the Second Volume of the Works of Dr. Barrow (in which will be introduced several unpublished Sermons), with a Summary of each Discourse, Notes, &c. By the Rev. F. H. D. Paternoster Row, London.

No. I. to V. contain the only uniform and complete edition of the Works of Bishop Sherlock. Price 11. 17s. 6d.

An amusing and valuable Work for Young Persons. In 3 vols. small 8vo. a 5d. edition of THE DOMINIE'S LEGACY, consisting of a Series of detached Tales. These volumes no longer need our praise; but we cannot mention them without remembering the deep pathos of 'Mary Ogilvie,' and the rich quiet humour of 'Minister Tam.' We begin now to have good hopes of winning fame for sound, wholesome literature, since the world is willing to patronise so unpretending and unpuifed a work as the 'Dominie's Legacy.'

THE CLERGYMAN'S OBLIGATIONS CONSIDERED, as to the Celebration of Divine Worship, Ministry of the Sacraments, Instruction of the Youth, Preaching, and other Official Duties; and as to his Personal Character and Conduct, his Occupations, Amusements, and Inter-course with others; with particular Reference to the Ordination Vow. By RICHARD MANT, D.D. M.R.I.A. Bishop of Down and Connor. Oxford: Printed for J. Parker, and C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, London.

INTRODUCTIONS to the STUDY of the GREEK CLASSIC POETS, for the Use of Young Persons at School or College. By HENRY NELSON COLERIDGE. Mr. Coleridge has done himself infinite credit by this little volume, which displays striking proofs of judgment, learning, and good taste. It is designed for the use of young persons at school or college, though, in truth, it may be used with advantage by persons of all ages. The present volume is only the first of a series intended to be put forth from time to time.

FOREST SCENES and INCIDENTS in the WILDS OF NORTH AMERICA. By GEORGE HEAD, Esq. We have been led to talk of Robinson Crusoe by the narrative of Mr. Head, who is a sort of Robinson Crusoe in his way. We have perused his work with considerable pleasure.

ROUGH NOTES, taken during some rapid Journeys across the Pampas and among the Andes. By Captain F. Bond Head. John Murray, Albemarle Street.

TRAVELS IN THE MOREA. By WILLIAM MARTIN LEAKE, F.R.S. John Murray, Albemarle Street. Of whom may be had, by the same Author, The Topography of Athens, with Plates, 8vo. 11. 10s. Journal of a Tour in Asia Minor, with Map, 8vo. 12s.

A SHORT HISTORY OF SPAIN, for Young Persons. By MARIA CALLOTT. With Wood Engravings. John Murray, Albemarle Street.

THE CONSTITUTIONAL HISTORY OF ENGLAND, from the Accession of Henry VII. to the Death of George II. By HENRY HALLAM. John Murray, Albemarle Street. Middle Ages, 4th edition, 3 vols. 8vo. 36s.

THE POETICAL PRIMER, consisting of Short Extracts from Ancient and Modern Authors, selected and arranged progressively, for the Use of Children. By Mrs. LAWRENCE. John Murray, Albemarle Street.

LECTURES ON SCULPTURE. By JOHN FLAXMAN, Esq. R.A. As delivered by him before the President and Members of the Royal Academy. With a brief Memoir of the Author. John Murray, Albemarle Street.

THREE LECTURES ON WAGES, and on some Effects of Absenteeism, Machinery, and War, delivered before the University of Oxford, in Easter Term, 1836. With a Preface on the Causes and Remedies of the present Disturbances. By NASSAU W. SENIOR, M.A. Coll. A.M. Late Professor of Political Economy.

THREE LECTURES on the Transmission of the Precious Metals. 2d edition, 2s. 6d. 3. Three Lectures on the Cost of obtaining Money, 2s. 6d. John Murray, Albemarle Street.

Mrs. Dalgairn's Cookery, New Edition, Price 7s. 6d. THE PRACTICE OF COOKERY, adapted to the Business of Every-day Life. By Mrs. DALGAIKINS. The 3d edition. Every receipt in this work has been carefully revised for this edition, in order that the advantages to be taken of the numerous valuable criticisms by which it has been honoured in every part of the empire. A considerable number of new receipts has also been added; but only such as the author has had adequate means of ascertaining to be valuable. The principle which has been scrupulously adhered to throughout the volume.—Author's Preface to the Third Edition. Printed for Robert Cadell, Edinburgh; Whittaker and Co. London; and all Booksellers.

French Literature.—Selected Writers of the present Age. Now publishing in single volumes, pocket size, price 3s. 6d. each, in extra canvass boards.

BIBLIOTHEQUE PORTATIVE des DAMES; or, a Collection of the best French Works of the Nineteenth Century. Edited by M. de ROUHLON.

This Work will be divided into Six Series:—I. Essayists, and Moralists, &c.—II. History, Biography, Memoirs, &c.—III. Dramatic Works.—IV. Novels, Tales, &c.—V. Poetry.—VI. Miscellaneous, Literary History, &c. Each volume will contain about 350 pages. Each work will be preceded by a Biographical and Literary Sketch of the Author.

This Work is also well adapted for the superior Classes in Schools. Volumes already published. First Series, Vol. I.; containing l'Hermite de la Chaussée d'Antin, par M. de Jouy (the Addition of France). Tome I. Second Series, Vol. I.; Histoire Ancienne, par M. Le Comte de Segur. Tome I. Third Series, Vol. I.; Choix de meilleures Pièces de M. Scève. Tome I. London: Longman, Rees, Orme, Brown, and Green; and John Stacy, Old Haymarket, Norwich.

Price 5s. boards. DOCTRINA COPULARUM LINGUÆ LATINÆ: sive de Vi etque Usu elegantiori Particularum Ac, Atque, et Que, dæque Formulis Commentarius. Conscripti HENRICUS E. ALLEN, A.B. Printed for T. Cadell, Strand, London; and W. Blackwood, Edinburgh.

THE DUBLIN LITERARY GAZETTE and NATIONAL MAGAZINE. Price 2s. 6d. No. VI. of the National Magazine. Contents.—Repeal of the Union considered—the Donogh, or the Horse Stealers. By the Author of "Traits and Stories of the Irish Peasantry"—Lines on an Infant—Mrs. Burns and her Husband's Biographers—to the Memory of Mary De V.—a Sketch from real Life—the Ship—"Fish out of Water"—Rev. Robert S. Crooke; Personal Sketch—the Opening of Parliament—the Last of the Bourbons—Monk's Life of Bentley—the Murdered Traveller—an Incident of the Southern Road—Medical Lectures—Dr. McCarty, Leahy, and Graves—Songs for the Sorrowful, No. 1.—Personal Sketch; Sir E. Sugden—Demology—Dreams and Apparitions—Christmas Times; the Annals—Present State of France—Notes of the Month, by Two Hermits in London—Critical Notices; the Gospel of St. John in Irish—the Evils and Remedy of Intemperance—(Connaught, a Tale of 1798)—Observations on the Legislation of St. John—Rational Arithmetic—Varieties, Literary and Scientific—List of New Works—Ecclesiastical Intelligence—University Intelligence—Monthly Record of Military Promotions, Appointments, &c.—Births, Marriages, and Deaths.

It has long and justly been considered a disgrace to the literary character of Ireland, that no publication of a similar kind has hitherto been successful. The true cause of failure may, perhaps, in a great degree be traced to a deficiency of interest or utility in the works themselves, and not to any want of patriotism or discrimination on the part of the public. That such has really been the case, the Proprietors of the National Magazine trusts will be proved, by his receiving such countenance and support as may enable him to carry on the work with the spirit and energy requisite to render it creditable to the country, and useful to its readers. He confidently submits the present Number, as a fair specimen of a work deserving national support. Dublin: Published at the National Magazine Office, 8, Cecilia Street, by P. D. Hardy, to whom all Communications are to be addressed; and by W. F. Wakeman, 9, D'Olier Street; Hurst, Chance, and Co. London; and Oliver and Boyd, Edinburgh.

Library of Useful Knowledge. Published by Baldwin and Cradock, under the Superintendance of the Society for the Diffusion of Useful Knowledge. HISTORY OF THE CHURCH. By the Rev. GEORGE WADDINGTON, M.A. Trinity College, Cambridge. Parts I. and II. price 6d. each. On the 15th December, Parts I. and II. of a History of Rome will be published.

In 1 vol. 12mo. price 5s. boards. LETTRES CHOISIES de MENDAMES de SEVIGNE et de MAINTENON, avec une Préface et des Notes. Par M. DE LEVIZAC. Chez Dulau et Co. Noho Square; Whittaker et Co. Ave Maria Lane; T. et T. Hoey, Old Broad Street; Longman et Co. Paternoster Row; Harding et Lepard; Pall Mall East; Simpkin et Co. Stationers' Hall Court.

In 1 vol. 18mo. price 3s. 6d. bound. LA HENRIADE; Poème. Par VOLTAIRE. Avec Notes. Chez Dulau et Co. 37, Noho Square; Whittaker et Co. Ave Maria Lane; Bousely et Fils, Old Broad Street; Poole et Edwards, Ave Maria Lane; Longman et Co. Paternoster Row; Simpkin et Co. Stationers' Hall Court; et Souter, St. Paul's Churchyard.

New Works on Chemistry. 3d edition, in 1 large vol. 8vo. price 16s. with Engravings. A CHEMICAL CATECHISM, in which the Elements of Chemistry, with the recent Discoveries, are very clearly and fully explained, and its Applications to the Phenomena of Nature, to Agriculture, Manufacture, and Medicine, described. Illustrated by Notes, numerous Engravings, select Chemical Experiments, and a Vocabulary of Terms. By T. J. GRAHAM, M.D. &c.

"We esteem and recommend it. Every subject of interest connected with this delightful science, is treated of in the clearest manner."—London Weekly Review, Feb. 1829.

"Every thing is here written up to the latest date, and the work cannot fail of being found constantly useful. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parkes's book."—Monthly Magazine, March 1829.

"The necessity of a clear progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has happily supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements, to the compound and illustrative branches of the study. It is eminently calculated to afford agreeable relaxation to the uninitiated, and to improve the knowledge of the learner."—Atlas, March 1829.

"It contains an immense quantity of valuable information, and is much superior to Parkes's."—Monthly Review, April 1829.

Published by Simpkin and Marshall. Sold by all Booksellers.

Of whom may be had, by the same Author, 3d edition, price 15s.

2. Modern Domestic Medicine. A Popular Treatise, exhibiting the Symptoms, Causes, and Treatment of all Diseases, with a Copious Collection of approved Prescriptions, &c. &c.; and forming a clear and comprehensive Medical Guide for the Clergy, Families, and Invalids. "We conscientiously recommend it. It is very far above Buchan's."—Literary Chronicle.

"In the opinion of a respectable physician, well known in our country, it is incomparably superior to every similar work in our language."—Weston Magazine.

"One of the very best and most useful books published in modern times."—Monthly Review.

"It is altogether deserving of permanent popularity."—London Weekly Review.

In 2 vols. foolscap 8vo. 14s. LIFE and ADVENTURES of GIOVANNI FINATI, Native of Ferrara; who, under the name of Mahomet, made the Campaign against the Wahabees, for the recovery of Mecca and Medina; and since acted as Interpreter to European Travellers in some of the parts best visited of Asia and Africa. Translated from the Italian as dictated by himself, and edited by WILLIAM JOHN BURNES, Esq. "It is long since we have met with so eventful and interesting a narrative."—Literary Gazette. "The unpretending record of the observations of a man of plain sense, whose singular fortune it has been to have seen more of many countries than perhaps any other living person. There must be strange adventures in such a life, and the present narrative is proportionally full of interest."—Athenæum. John Murray, Albemarle Street.

Family Library. With Portrait, Maps, and Woodcuts, 5s.

NO. XVII. of the FAMILY LIBRARY; being the Life of Bruce, the African Traveller.

By Major F. B. HEAD, Author of "Rough Notes made during some rapid Journeys across the Pamper and among the Andes."

Printed for M. Arnold, Tavistock Street, Covent Garden; sold by Simpkin and Marshall, Stationers' Court; J. Turner, No. 5, Holles Street, Cavendish Square; and all other Booksellers.

A 4th edition of

THE Rev. J. W. BELLAMY'S CONCORDANCE to the HOLY BIBLE, is just published in 4to. price 5s. sewed. To which are added, a Geographical Index, Calendar, and Table of Lessons, and an Alphabetical List of Proper Names, accented.

This work will be found very useful to bind up with any Quarto Edition of the Bible, and is particularly adapted to the Maps and Notes of the Family Bible edited by Dr. D'Oyley and Bishop Mant. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Edinburgh Cabinet Library, No. 11.—Africa.

In small 8vo. containing above 500 Pages, price 5s. cloth boards, illustrated by a Map, and Plans of the Routes of Parks, and of Denham and Clapperton, with numerous Engravings by Hranston.

NARRATIVE OF DISCOVERY AND ADVENTURE IN AFRICA, from the earliest Ages to the present Time, with Illustrations of the Geology, Mineralogy, and Zoology.

By PROFESSOR JAMESON, JAMES WILSON, Esq.

F.R.S.E. and HUGH MCKRAY, Esq. F.R.S.E.

Being No. 11. of the Edinburgh Cabinet Library.

On the 1st of October was published, No. 1.

Narrative of Discovery and Adventure in the Polar Seas and Regions, with Illustrations of their Climate, Geology, and Natural History; and an Account of the Whale Fishery. By Professor Leslie, Professor Jameson, and Hugh Murray, Esq. F.R.S.E. With a Chart, and Engravings by Hranston. Price 5s.

Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

In 2 vols. 8vo. embellished with a fine Portrait, from a Painting by Romney.

THE LIFE of Mrs. JORDAN, including original Private Correspondence, and numerous Anecdotes of her Contemporaries.

By JAMES BOADEN, Esq.

Author of the "Life of Keble." "Mr. Boaden has written, we are confident, a faithful record of the eventful life of this celebrated actress; but he has treated the subject with the delicacy of a gentleman, and the good taste of a practised author. He has told all that the most prurient inquisitiveness can desire to know; but he has told it in a manner which shews a proper respect for the feelings of her children, and which seeks not to conceal a painful truth, but to dress it in language the least injurious to virtue, and the least offensive to the modesty of his readers. He has done ample justice to the memory of Mrs. Jordan, and to the reputation of those who survive her."—Obit.

Printed for Edward Bull, New Public Subscription Library, 26, Holles Street, Cavendish Square.

Works published during the week by Longman, Rees, Orme, Brown, and Green.

HISTORY of the WESTERN WORLD, Vol. I.—United States of America. Price 6s. Being Vol. XIII. of "Dr. Lardner's Cabinet Cyclopaedia."

No. 726.—AMERICAN EDITION.

SATURDAY, DECEMBER 18, 1830.

REVIEW OF NEW BOOKS.

The History of the First Revolution in France; comprising the Period from 1787 to 1802.
By John Bell, Esq. 8vo. pp. 418. London, 1830. Westley.

NAPOLEON was wont to *aphorise*, that a revolution in France was a revolution throughout Europe. This gasconade, though unwarranted when uttered, and from which succeeding events withheld their sanction, was nevertheless well calculated to gratify Gallic vanity, and the indigenuous taste for grandiloquence. It will be considered to carry with it no deeper meaning, than, that the local success of any principles, whether of good or of evil, naturally kindles the hopes of all who cherish kindred feelings, and, it may be, engenders them sometimes in others, by whom, but for their alien ascendancy, such would never have been naturalised or fostered. That France has not unfrequently taken the lead in Europe, or that some unsettled districts have seized the chance of treading in her steps, none can deny; but that surrounding nations ever do implicit homage to her republican dogmata, was an assumption arising neither from foresight nor conviction, and worthy rather of *Bombastes* than of *Buonaparte*. If it were true, that France, by her example, revolutionised Europe, why, to confirm our view, did not England follow in her wake? there was neither wanting the physical force of a discontented rabble, nor the voice of sedition to halloo them on; nor can we forget, that it did not fail to cry aloud and spare not. The cause was simply, that in England the same despotism was not to be found, nor the same abuses, which in France had burst its bonds. It did not escape the conviction of reason, that from among the long catalogue of grievances which clogged the French people, the only faint parallel that could be traced then, as now, lay in our remnant of the game laws, and the plurality of our benefices. In retracing the events of the French revolution, the loyal subject has to lament the folly and perversity of the monarch, who, though conscious of debilitated power, still doted on the shadow of his tyranny; and the lover of liberty finds not the less reason to shrink back from the frenzy of its advocates, and shudder at the ruin of anarchy. It is the *Immoderates*, the causes and the *odia* of the causes they would advance, who, while right reason gives warning of the necessity, set aside the justice of relieving distress and absterging abuse, would deafen the ear of the rulers to the voice that will not pass by unheard or unheeded. It is the *Immoderates* of the other party who would drown the cry of distress, and the just demand for the removal of abuses, in the uproar of riot and the bloodshed of rebellion. Thus, the one by withholding what ought to be granted, the other by clamouring for too much, with menace and violence, foils his own cause, and strengthens that to which he is opposed. To the one, despotism owes its birth, and monarchy its downfall; while the agency of the other prevents the

door being unbarred for the banishment of evils, lest anarchy rush in; and sooner than yield to threats, misery is suffered to linger on unrelieved. Surely they are little fitted to stem the rush of revolutionary principles, whose monarchical enthusiasm blinds them to its abuses; who, because these are ingrained and inveterate, cling to them with the more obstinate tenacity as sacred and inviolate. They who shrink from the excision of the morbid parts, risk the corruption of the whole, and endanger and weaken the system they would cherish in vigour and security. It is unknown, or rather it is too well known, how the influence of a plain-writing or plain-speaking autocrat sways the discontented and ignorant multitude. By the retention of abuses, though they may be of but partial importance, a government renders its supporters less powerful, and places such levers in the hands of its opponents, as, in critical times, they will not fail to employ for its total subversion. The lower orders, for the most part confined in their comprehension, and obtuse in their perception, cannot be expected to discern or detect the fallacious inductions of their pot-house politicians. They can, however, understand a plain fact; their oracle, aware of this, lays hold of some particular abuse in the government, and, together with the fact, his hearers swallow his inference,—the tyrannical corruption of the whole. He may make the statement, "that no man should receive the public money for doing nothing;" and who shall gainsay him? His inference will go further: he will state indiscriminately that there ought to be no securities. As rewards for past and positive services, they are neither open to attack, nor do they need any defence; where they are *not*, to offer any, requires a hireling. Seldom is it that the operative reads, or hears read, a few lectures upon the rights of man, without going home fully impressed with his own wrongs. It is by no means a difficult task, and therefore common enough for a free speaker, urged by the motive of interest or discontent, to acquire a powerful ascendancy over the rabble, provided his impudence be never known to forsake him, or his effrontery to be abashed; since he cannot be charged with hypocrisy, he will gain the reputation of candour. By attributing the causes of their distress to the objects of their prejudice, he cannot fail of popularity with his hearers. Having once gained this hold, our patriotic mis-leaders of the mob stand forth in matchless notoriety as the advocates of anarchy, and the advertisers of their own blacking. Ignorance is ever the dupe of misrepresentation; yet we trust the further dissemination of knowledge among the lower orders, will, ere long, sweep these strong delusions from their minds, that they may no longer believe in lies. At present, the diffusion of knowledge among the operative classes is scarcely more than nominal; nor can we undertake to deny, that a little learning is dangerous, while it increases the means of imbibing fallacies, yet has not advanced sufficiently to create the power of detecting their subtlety, and distinguishing truth. It is thus

that good, from its weakness, is made to advance, not thwart, the designs of the factious.

We have been led to make these remarks from the perusal of Mr. Bell's book. It is written without having for its object the advocacy of any particular principles, but holds up the magic glass alike to the despot and the demagogue. The style is powerful and concise; and the clearness with which the workings of the political parties is developed, has probably never been surpassed. We quote the annexed passage, containing the closing career of *Mirabeau*!—

"These preparations of the assembly only stimulated the king's desire to escape; and *Mirabeau's* genius was taxed to devise the means. Fresh riots, too, alarmed the court. The prison of Vincennes was attacked by the populace (Feb. 28), as the Bastille had been. *La Fayette* succeeded, however, in quelling the tumult. The servants and retainers of the king, meanwhile, fearing an attack upon the Tuileries, armed themselves to defend the royal person. It was suspected, however, that they designed to carry off the king; and a party of the national guard was employed to disarm them. The belief that the king meditated flight quickened the deliberations of the assembly; and on the very day of the riots, the emigration law was brought forward for discussion. The subject was felt to be surrounded with difficulties. 'Has the assembly a right to fix any man to his native soil?' was asked in many quarters; and the answer was, 'Yes, if the safety of the country require it.' Still, however, it was admitted to be necessary to distinguish between the motives of travellers—between Frenchmen and strangers—between emigrants from political causes and commercial travellers; and how to do so, without establishing inquisitorial powers of the most hateful kind, was a problem which no one could profess to solve. *Chapelier*, however, the president of the committee which had been appointed to prepare a law suited to the emergency, intimated to the assembly that he was prepared to submit one to their notice, declaring, at the same time, that the law to which he alluded violated all their principles. 'Shall I read it?' 'Yes,' 'No,' were shouted from the different sides, till *Mirabeau* demanded to be heard. He defended the right of emigration, as one of the inalienable privileges of man. 'What though that right was abused at the moment; its abuse could never injure the assembly. Contempt was the only feeling which it became the assembly to indulge in towards those who might choose to leave their native country in its hour of danger.' These observations had some weight; but *Chapelier* was finally called on to read the law which the committee had devised. It was simple in the extreme. It merely proposed the creation of a committee of three dictators, to whom should be intrusted the power of pointing out by name, and at their pleasure, those who might be permitted to leave the kingdom. The assembly felt the irony of such an enactment,

and clamoured loudly against its adoption. 'Your murmurs console me,' exclaimed Mirabeau; 'your hearts sympathise with mine, and reject this absurd tyranny. As for myself, I should consider myself freed from every oath towards those who should be infamous enough to admit of a dictatorial commission.' Here he was interrupted by the republicans. 'Yes,' repeated he, 'I swear—' The interruption was renewed. 'This popularity,' he at last succeeded in saying, 'which has been the object of my ambition, and which I have enjoyed as others, is not a frail reed: I will plant it deep in the earth, and make it bud in the soil of justice and reason. I swear to you that, if the law of emigration is passed—I swear to you that I will disobey it!' Applauses followed this burst; but the discussion was continued. Some demanded an adjournment: Mirabeau again requested to be heard. 'By what title does Monsieur Mirabeau play the dictator?' asked one of the deputies; but the question was disregarded, and Mirabeau was listened to. 'I entreat those who interrupt me to remember, that I have all my life opposed tyranny, and that I shall oppose it wherever it appears.'—[He looked to the left side, from which fresh murmurs arose.]—'Silence, you thirty voices!' said he, still addressing himself to the Jacobins. 'If it be desired, I also will vote for the adjournment, providing it be decreed, that from this time to its conclusion no sedition shall take place.' Shouts of applause followed this declaration; the adjournment was unanimously agreed to; but it was Mirabeau's fate never to appear in the assembly again. 'His end was approaching, and these were his last triumphs. Presentiments of death had for some time mingled with his vast projects, and sometimes arrested their course. Yet he was satisfied with his career; he had gained and kept the public esteem; and if he had not done enough for the safety of the state, he had, at least, for his own glory. His last moments were divided between philosophy and gaiety. His pale countenance and deep-sunk eyes spoke plainly of the ravages of disease, and his appearance in the tribune, where he was frequently seized with sudden faintness, caused a general alarm. The excesses of pleasure and business, and the violent emotions he experienced in the assembly, broke down his strong constitution. The baths, also, he was accustomed to use contained a solution of sublimate, and had given a greenish hue to his complexion, which was attributed to poison. The court was terrified, and all parties astonished; and, long before his death, the cause of his dangerous illness was eagerly inquired into. The last time he spoke, he addressed the assembly in five different speeches, and he left it exhausted. He then took to his bed, and never left it but to go to the Pantheon. He begged Cabanis, his attendant, not to call in physicians; but in this he was disobeyed, and, on their arrival, they found death fast approaching. His head was the last part of his body attacked, as if nature permitted his genius to shine on to the last moment. An immense crowd, observing the most profound silence, thronged round his house. The court sent messenger after messenger to ascertain his condition; bulletins of his health were transmitted from mouth to mouth, and spread grief among the people, at every new turn of his disorder. He himself, surrounded by his friends, expressed regret at the interruption of his projects, but seemed proud of his past career. 'Support,' said he, 'the ablest head in France.' The anxiety of the people affected him; and the visit of Bar-

nave, his enemy, who came in the name of the Jacobins, caused him a pleasing emotion. He gave some thoughts to public affairs. The assembly was about to be engaged on the questions of testaments: he therefore called for Talleyrand, and gave him a discourse which he had written on the subject. 'It will be pleasant,' said he, 'to hear a man speak against testaments, who ought to be making his own, and who is no more.' The court, indeed, wished him to make one, and promised to take upon itself the payment of his legacies. In allusion to the supposed projects of England, he observed, 'Pitt will gain more than any other man by my death. That Pitt is the minister of preparatives; he governs by menaces: I would have given him some trouble if I had lived.'—'My friend,' said he to Cabanis, 'I shall die to-day: envelope me in perfumes, crown me with flowers, and surround me with music, so that I may deliver myself peaceably up to sleep.' When his sufferings became intense, he demanded opium. It was refused; he insisted on it with his usual violence. A cup, which his attendants persuaded him contained opium, was handed to him: he drank it, and died immediately (April 20, 1791). The proceedings of the assembly were immediately suspended, a general mourning ordered, and a magnificent funeral prepared. 'We will all attend,' exclaimed the whole assembly. In the church of Saint Genevieve a monument was erected to his memory, with the inscription,—'A grateful country to great men.' It was situated next to that of Descartes. His funeral took place the day after his death. All the authorities, the departments, the municipalities, the popular societies, the assembly, and the army, accompanied the procession; and this orator obtained more honours than ever had been conferred on the pompous funerals which proceeded to Saint Denis. Thus terminated the career of this extraordinary man, who has been greatly praised and greatly blamed, who effected much good and much evil, and whose genius was equally adapted to both. Having vanquished the aristocracy, he turned upon those who contributed to his victory, arrested their course by his eloquence, and commanded their admiration, even while he provoked their hostility."

Were we disposed to indulge in retrospective reverie, a fruitful subject would offer itself, from the speculation of what might have been the progress and event of the French Revolution had the life of Mirabeau been prolonged. He was the only man capable of stifling the fury of the Jacobins; and had such a faction never risen into ascendancy, France might have exulted in triumphant liberty, without shuddering at the excesses by which it was deformed.

We shall probably revert to Mr. Bell's work in a subsequent number.

The Comic Annual. By Thomas Hood, Esq. 12mo. pp. 176. London, 1831. C. Tilt.

We have the true Amphitryon of wit and pun at last—the genuine Momus for our Christmas laugh; and so appropriately near the time, that his volume really resembles an Annual. Most of the others, from their irregular period of appearance, were so out of season, that reading them was like eating mince-pies and plum-pudding at Midsummer. But the propriety of the delay seems to have encouraged strange poaching upon the manor of Hood-cunn-over-grin, in the county of Wi(l)ts; and our author, in his preface, shews how competent he is to be his own game-keeper on his own estate. He has peppered the intruders very prettily;

and as their cases have been legally brought before our high tribunal for judgment, we beg leave to recapitulate the evidence, and pronounce sentence.

Hood v. Hurst and Co.—"I do not intend (said the plaintiff—if such a name could fit so merry a wight, and one who, though his own counsel, had by no means a fool for his client)—I do not intend (said he), like some votaries of freedom, to cast mud on the muddy, or dirt on the dirty; but, while I am on the hustings, I will ask the committee of that uncanid candidate, 'the New Comic,' whether it was quite honest to canvass against me under my own colours, and to pass off the enemy's poll-book as mine? The Code of Honour should be a kind of Coade's cement between man and man—but, to speak technically, some seem bound by it, and some unbound. Mr. Hurst gave me his word, and shook hands thereon, that the delusive title should be altered—and yet that bad title to a good name, the 'New Comic,' is still retained. Surely he feels both the brand and the blush in what Byron calls 'that red right hand.' Were there no other and fitter labels extant than such close parodies of mine? For example, 'the Laughing Hyena,' or 'the Merry Unwise,' or 'the Main Chance?' The Old Brown Bear in Piccadilly is bearish, perhaps—but he is original. The coupling, in advertisement, 'the New Comic' with a volume really mine, is a trick that smacks of the neighbourhood. There is as little difference as distance between the plying of 65, St. Paul's Churchyard, and the plying of the Fulhams and Brentfords close at hand."

In this case our decision is for the plaintiff, on all the counts; and we trust he will find his account in it; for, in the long run,* honesty is the best policy. We have always denounced the paltry trick of imitating the titles or external appearance of popular works, which only affords appearance of the want alike of principle and talent. Marching under false colours, or uttering base and counterfeit coin, may impose on the unwary for a while, but they never succeed in the end. The mode of advertising the new and rival work we consider to be still more indefensible: its obvious object was to mislead purchasers; and we know that it did lead several into error, of which they repented when undeceived, too late to recover their money. Such things disgrace the literary world; and, however comic they may seem to their doers, will never be treated as jokes by the public.

Hood v. Sheridan.—In this case you have heard the same counsel—"Fain would I drop here the steel pen for a softer quill, to speak of an editress who—distinguishing fair from unfair—has acted the perfect brunette towards me, and has brought a heavy charge against me 'for work done.' In the announcement of 'the Comic Offering'—a little book chiefly remarkable for a coat of damson cheese, seeming equally fit, like Sheridan's poor Peruvians, for 'covering and devouring,'—it is insinuated that I am an author unfit for female perusal—I, who have never that respect infringed, which, with me, dwells 'like fringe upon a petticoat.' Miss Sheridan and modesty compel me to declare, that many ladies have deigned to request, for their albums, some little proof of 'the versatility' or prosatity of my pen:—yet, what says the announcement, or rather denounce-

* The only exception we ever saw to this golden rule is in Hood's whimsical frontispiece of "A Day at the Devil's Dyke;" in which old Cloven-foot, in the shape of a mawkin, is leading the hunt such a run, that it is easy to perceive honest perseverance must only make matters worse.

ment—' But shall we permit a clown or pantaloou to enter the drawing-room or boudoir—no, not even under a Hood.' Putting pantomimic people on a par, was clown Grimaldi so very unfit for the drawing-room of Mrs. Serle, or pantaloou Barnes for the boudoir of Miss Bar-net? Is it vulgar to go to Margate by the Harlequin, but genteel by the Columbine—to read 'the Comic' instead of the 'Offering to be Comic'? To put the screw of comparison into my cork model, have I made any drawing less worthy of the drawing-room, than 'Going it in High Style'?—any verse more perverse to gentility than

'Old Bet crying 'Mac-car-rel!' happened to meet,' &c.

Gad a mercy! did Miss Sheridan never read or see a comedy called the School for Scandal? If she has heard of my indelicacy or vulgarity, it must have been from Sir Benjamin Backbite. Mrs. Candour compels me to confess that I am not guilty of either. Joseph Surface would give me credit for morality; and even those Crabtrees, the reviewers, have awarded me the praise of propriety, confessing that though I am merry, my spirits are rectified. Like Sir Peter Teazle, I would willingly resign my character to their discussion; but little Moses has a post-obit on my reputation, and forbids my silence. I confess, besides, that on being so attacked by a perfect stranger, I did at first think it rather hard of her; but having now seen her book, I think it rather soft of her, and shall say no more."

And no more need be said. We find Miss Sheridan guilty of a trespass, with intent to commit defamation; but, in consequence of the punishment she has already received, dis-Miss the cause, in the hope that it will operate as a warning to her to conduct herself better in future. Of all the modes of attracting notice, that of endeavouring to depreciate others, in order to puff yourself, is the most disreputable. A chandler would be ashamed of it; and in literature it is below contempt.

Of Mr. Harrison's respectable production (the *Humourist*), Mr. Hood takes no notice; for it was brought forward and published by that gentleman and Ackermann in an honourable way; and was a fair competitor in the common field. But we are glad to pass from these points to the work before us itself. The dedication this year is almost as good as the last: it is—

"To his Grace the Duke of Devonshire, the great comptroller of all public performers, kindly countenancing plays upon words, as well as plays upon boards—the noble patron of the Italian, as well as of the present English opera—this volume of the Comic Annual, with the Lord Chamberlain's special license, is respectfully and gratefully dedicated," &c. &c.

The vignette—a young clown, with a lantern, riding on the merry-thought of a fowl—is very playful; and the cuts altogether most original and amusing. The first paper, giving accounts of a parish revolution—a parody on the late French revolution, and, in general, on the mode of communicating news according to the most universal and approved newspaper plan—is replete with humour. Stoke Pogis is the scene, and the fifth of November the day: it begins thus:—

"Alarming news from the country—awful insurrection at Stoke Pogis—the military called out—flight of the Mayor.

We are concerned to state, that accounts were received in town, at a late hour last night, of an alarming state of things at Stoke Pogis. Nothing private is yet made public; but report speaks of very serious occurrences. The num-

ber of killed is not known, as no despatches have been received.

"Further particulars.

"Nothing is known yet; papers have been received down to the 4th of November, but they are not up to any thing."

Then we have "Another account"—"From another quarter"—"A later account"—"Fresh intelligence," &c. &c. &c.; from which we take a few of the various particulars.

"From another quarter.

"We are all here in the greatest alarm! a general rising of the inhabitants took place this morning, and they have continued in a disturbed state ever since. Every body is in a bustle, and indicating some popular movement. Seditious cries are heard! the bellman is going his rounds, and on repeating 'God save the king!' is saluted with 'hang the crier!' Organised bands of boys are going about collecting sticks, &c.—whether for barricades or bonfires, is not known; many of them singing the famous Gunpowder hymn, 'Pray remember,' &c. These are features that remind us of the most inflammable times. Several strangers of suspicious gentility arrived here last night, and privately engaged a barn; they are now busily distributing hand-bills amongst the crowd;—surely some horrible tragedy is in preparation!"

"Eleven o'clock.

"The mob have proceeded to outrage—the poor poor-house has not a whole pane of glass in its whole frame! The magistrates, with Mr. Higginbottom at their head, have agreed to call out the military; and he has sent word that he will come as soon as he has put on his uniform. A terrific column of little boys has just run down the High Street—it is said, to see a fight at the Green Dragon. There is an immense crowd in the market-place. Some of the leading shop-keepers have had a conference with the mayor, and the people are now being informed, by a placard, of the result. Gracious heaven! how opposite is it to the hopes of all moderate men—"The mare is obstinate—he is at the Roes and Crown—but refuses to treat."

"Half-past Three.

"The check sustained by the mob proves to have been a reverse; the constables are the sufferers. The cage is chopped to faggots, we hav'n't a pound, and the stocks are rapidly falling. Mr. Wigsby has gone again to the mayor with overtures; the people demand the release of Dobs and Gubbins, and the demolition of the stocks, the pound, and the cage. As these are already destroyed, and Gubbins and Dobs are at large, it is confidently hoped by all moderate men that his worship will accede to the terms.

"Four o'clock.

"The mayor has rejected the terms. It is confidently affirmed that, after this decision, he secretly ordered a post-chaise, and has set off with a pair of post-horses as fast as they can't gallop. A meeting of the principal tradesmen has taken place, and the butcher, the baker, the grocer, the cheesemonger, and the publican, have agreed to compose a provisional government. In the mean time the mob are loud in their joy,—they are letting off squibs, and crackers, and rockets, and devils, in all directions, and quiet is completely restored."

Then comes, to crown the whole, "The Narrative."

"The Narratist of a High Whittness who seed every Think proceed out of a Buck-winder up Fore Pears to Mrs. Humphis.

"O Mrs. Humphis! Littel did I Dram, at my Tim of Life, to see Wat is before me. The hole Parrish is Throne into a pamikin! The

Revelations has reeched Stock Poggis—and the people is riz agin the Kings rain, and all the Pours that be. All this Blessed Mourning Mrs. Griggs and Me as bean siting abscondingly at the tiptop of the Hows crying for lowness. We have lockd our too selves in the back Attical Rome, and nothing can come up to our Hanksiety. Some say it is like the French Plot—sum say sum thing moor arter the Dutch Patten is on the car-pit, and if so we shall Be flored like Brussels. Well, I never did like them Brown holland brum gals! Our Winder overlocks all the High Street, except jest ware Mister Higgins juts out Behind. What a prospectus!—All riotism and hubbub—Their is a lowd spechifying round the Gabble end of the Hows. The Mare is arranging the Populous from one of his own long wuiders.—Poor Man!—for all his fine goold Cheer, who wood Sit in his shews! I hobserve Mr. Tuder's bauld Hed uncommon hactiv in the Mobb, and so is Mister Waggstaff the Constable, considering his rummatiz has onely left one Harm disaffected to shew his loyalness with. He and his men are staving the mobbs Heds to make them Suppurate. They are trying to Custardise the Ringieders But as yet hav Captivated Noboddy. There is no end to accidene. Three unsensible hoddis are Carrion over the way on Three Cheers, but weather Naybers or Gyes, is dubbious. Master Gollop too, is jest gon By on one of his Ant Shuters, with a Bunch of exploded Squibs gone off in his Trowsirs. It makes Mrs. G. and Me tremble like Axle trees, for our Hone nevvies. Wile we ware at the open Winder they slipe out. With sich Broils in the Street who nose what Scraps they may git into. Mister J. is gon off with his muskitry to militate agin the mobb; and I fear without anny Sand Witches in his Cartrich Box. Mrs. Griggs is in the Sam state of Singularity as meself. Onely think, Mrs. H. of too Loan Wiming looken Down on such a Heifervescence, and as Hignorant as the unbiggotted Babe of the state of our Husbandry! To had to our Convexity, the Botcher has not Bean. No moor as the Backer and We shold here Nothing if Mister Higgins hadn't hollowed up Fore Storys. What news he brakes! That wicked Wigsby as refused to Reed the Riot Ax, and the Town Clark is no Scollard! Isn't that a bad Herring! O Mrs. Humphis! It is unpossible to throee ones hies from one End of Stock Poggis to the other, without grate Pane. Nothing is seed but Wivs asking for Huzbinds—nothing is herd but childerin looking for Farthers. Mr. Hatband the Undertacker as jst bean squibed and obligated for aefness to inter his own Hows. Mister Higgins blames the unflexable Stubbleness of the Mare, and says a littel timely Concussion wood have bean of Preventive Servis. Haven nose! For my Part I dont believe all the Concussion on Hearth wood hav prevented the Regolater bein scarified by a Squib and runnin agin the Rockit—or that it could unshatter Pore Master Gollop, or squentch Wider Welshis rix of Haze witch is now Flamming and smocking in two volumes. The ingins as been, but cold not Play for want of Pips, witch is too often the Case with Parrish ingenuity. Wile affares are in these friteful Posturs, thank Haven I have one grate comfit. Mr. J. is cum back on his legs from Twelve to won tired in the extreams with Being a Standing Army, and his Uniformity spatteredashed all over. He says his hone saving was onely thro leaving His retrenchments. Pore Mr. Griggs has cum In after his Wif in a state of grate exaggeration. He says the Boys hav maid a Bone Fire of his garden fence and

Pales upon Pales cant put it out. Several Shells of a bombastic nater as been picked up in his Back Yard and the old Cro's nest as bean Perpetrated rite thro by a Rockit. We hav sent out the Def Shopmun to here wat he can and he says their is so Manny Crackers going he dont no witch report to Belive, but the Fishmongerers has Cotchd and with all his Stock compleatly Guttid. The Brazers next Dore is lickwise in Hashes,—but it is hopped he has assurance enuf to cover him All over.—They say nothink can save the Dwelling ad-journing. O Mrs. H. how greatful ought J and I to hee that our hone Premiss and propperty is next to nothing! The effex of the lit on Bildings is marvelous. The Turrut of St. Magnum Bonum is quit clear and you can tell wat Time it is by the Clock verry planely only it stands! The noise is enuf to Drive won deleterious! Too Specious Conestabbles is persewing littel Tidmash down the Hi Street and Sho grate fermness, but I trembel for the Pelisse. Peple drops in with New News every Momentum. Sum say All is Lost—and the town Criar is missin. Mrs. Griggs is quite retched at herein five littel Boys is throwd off a spirituous Cob among the Catherend Weals. But I hope it wants cobboboration. Another Yuth its sed has had his hies Blasted by sum blowd Gun Powder. You Mrs. H. are Patrimonial, and may suppose how these flying rummers Upsetts a Mothers Sperrits. O Mrs. Humphris how I envy you that is not tossing on the raging bellows of these Flatulent Times, but living under a Mild Dispotic Govinment in such Sequestrated spots as Lonnon and Paddington. May you never go thro such Transubstantiation as I have bean riting in! Things that stood for Sentries as bean removd in a Minut—and the verry effigis of wat is venerablest is now burning in Bone Fires. The Worshipfull chaer is empty. The Mare as gon off clandestiny with a pare of Hossis, and without his diner. They say he complanes that his Corperation did no stik to him as it shold have dun But went over to the other Side. Pore Sole—in sich a case I dont wunder he lost his Stommich. Yisterdy he was at the summit of Pour. Them that hours ago ware enjoying parrish officiousness as been turnd out of there Dignittis! Mr. Barber says in futer all the Perukial Authoritis will be Wigs. Pray let me no wat his Magisty and the Prim Minester think of Stock Poggis's constitution, and believe me conclusively my deer Mrs. Humphris most frendly and trully
BRIDGET JONES.

For variety's sake, we now turn to a clever poetical *jeu-d'esprit*.

"I'm not a Single Man.

"Double, single, and the rub."—Hoyle.
"This, this is solitude."—Byron.

"Well, I confess, I did not guess
A simple marriage-vow
Would make me find all women-kind
Such unkind women now!
They need not, sure, as distant be
As Java or Japan,—
Yet ev'ry Miss reminds me this—
I'm not a single man!

Once they made choice of my base voice
To share in each duet;
So well I danced, I somehow chanced
To stand in every set:
They now declare I cannot sing,
And dance on Bruin's plan;
Me draw!—me paint!—me any thing!—
I'm not a single man!

Once I was asked advice and task'd
What works to buy or not,
And 'would I rend that passage out
I so admired in Scott?
They then could bear to hear one read;
But if I now began,
How they would snub, 'my pretty page,'
I'm not a single man!"

One used to stitch a collar then,
Another hummed a frill;
I had more purses netted then
Than I could hope to fill.
I once could get a button on,
But now I never can,—
My buttons then were bachelor's—
I'm not a single man!

Oh how they hated politics
Thrust on me by papa:
But now my chat—they all leave that
To entertain mamma.
Mamma, who praises her own self,
Instead of Jane or Ann,
And lays 'her girls' upon the shelf—
I'm not a single man!

Ah me, how strange it is the change,
In parlour and in hall,
They treat me so, if I but go
To make a morning call.
If they had hair in papers once,
Bolt up the stairs they ran;
They now sit still in dishabille—
I'm not a single man!

Miss Mary Bond was once so fond
Of Romans and of Greeks;
She daily sought my cabinet,
To study my antiques.
Well, now she doesn't care a dump
For ancient pot or pan;
Her taste at once is modernized—
I'm not a single man!

My spouse is fond of homely life,
And all that sort of thing;
I go to balls without my wife,
And never wear a ring:
And yet each Miss to whom I come
As strange as Genghis Khan,
Knows by some sign, I can't divine,—
I'm not a single man!

Go where I will, I but intrude,
I'm left in crowded rooms,
Like Zimmerman on Solitude,
Or Hervey at his Tombs.
From head to heel, they make me feel,
Of quite another clan;
Compelled to own, though left alone,
I'm not a single man!

Miss Towne the toast, though she can boast
A nose of Roman line,
Will turn up even that in scorn
Of compliments of mine:
She should have seen that I have been
Her sex's partisan,
And really married all I could—
I'm not a single man!

'Tis hard to see how others fare,
Whilst I rejected stand,—
Will no one take my arm because
They cannot have my hand?
Miss Parry, that for some would go
A trip to Hindostan,
With me don't care to mount a stair—
I'm not a single man!

Some change, of course, should be in force,
But, surely, not so much—
There may be hands I may not squeeze,
But must I never touch?—
Must I forbear to hand a chair,
And not pick up a fan?
But I have been myself picked up—
I'm not a single man!

Others may hint a lady's tint
Is purest red and white—
May say her eyes are like the skies,
So very blue and bright,—
I must not say that she has eyes,
Or if I so began,
I have my fears about my ears,—
I'm not a single man!

I must confess I did not guess
A simple marriage-vow
Would make me find all women-kind
Such unkind women now!—
I might be hash'd to death, or smash'd
By Mr. Pickford's van,
Without, I fear, a single tear—
I'm not a single man!"

The poem which follows this is a "May-day Vision," by Miss Isabel Hill, an extremely fanciful and very pretty composition. We regret we have not room for it now, and that we can only say, it is worthy of the best of the company with which it is associated. The "Portrait of a Blind Man" is Hood all over, so that it is no wonder he cannot see.

An "ode to Mr. Vigors, on the publication of the *Gardens and Menagerie of the Zoological Society*," is another of the so-peculiarly-peculiar Hoodisms, and the subject itself is so generally popular, that we are tempted to extract it.

"Give you good den."—Shakespeare.

"So Mr. V.,—no, Vigors—I beg pardon,
You've published your Zoological Garden!
A book of which I've heard a deal of talk,
And your Menagerie—indeed, 'tis had o' me,
But I have never seen your Beast Academy!
Or set my feet
In Bruton Street,
Or ever wander'd in your 'Bird-cage Walk.'
Yet I believe that you were truly born
To be a kind of brutal overseer,
And, like the royal quarterings, appear
Between a lion and a unicorn;
There is a sort of reason about rhyme,
That I have ponder'd many, many a time;
Where words, like birds of feather,
Likely to come together,
Are quite prophetically made to chime;—
So your own office is forestall'd, O Vigors!
Your proper surname having but one single
Appropriate jingle,
—Tigers!

What is your gardening volume?—like old Mawe's!
Containing rules for cultivating brutes,
Like fruits,
Through April, May, or June;

As thus—now rake your lion's manes, and prune
Your tiger's claws;
About the middle of the month, if fair,
Give your chameleons air,
Choose shady walls for owls,
Water your fowls,

And plant your leopards in the sunniest spots;
Earth up your beavers; train your bears to climb;
Thin out your elephants about this time,
And set some early kangaroos in pots;
In some warm shelter'd place
Prepare a hot-bed for the bog race,
Leaving them room to swell;
Prick out your porcupines, and blanch your ermine;
Stick up opossums; trim your monkeys well;
And 'destroy all vermin.'

O tell me, Mr. Vigors! for the fleas
Of curiosity begin to tease—
If they bite rudely, I must crave your pardon—
But if a man may ask,
What is the task

You have to do in this exotic garden?
If from your title one may guess your ends,
You are a sort of Secretary Bird,

To write home words
From ignorant brute beasts to absent friends.
Does ever the poor little coatamondi
Beg you to write to ma'

To ask papa
To send him a new suit to wear on Sunday?
Does Mrs. L. request you'll be so good—
Acting a sort of Urban to Sylvanus—
As write to her 'Two Children in the Wood,'
Address'd, post-paid, to Leo Africanus?
Does ever the great sea-bear Landonensis
Make you amanuensis

To send out news to some old arctic stager—
'Pray write that Brother Bruin on the whole
Has got a head on this day's pole,
And say my Uraa has been made a Major?'
Do you not write dejected letters—very—
Describing England for poor 'Happy Jerry,'
Unlike those emigrants who take in flats,
Throwing out New South Wales for catching sprats?
Of course your penmanship you ne'er refuse,
For 'begging letters' from poor kangaroos;
Of course you manage bills and their acquaintance,
And sometimes pen for Pelican a double
Letter to Mrs. F. and brood in trouble,
Enclosing a small dab, as a remittance;
Or send from Mrs. B. to her old cadger,
Her full-length, done by Harvey, that rare
draughtsman

And skilful craftsman;
A game one too, for he can draw a badger.
Does Doctor Bennett never come and trouble you
To break the Death of Wolf to Mrs. W.?
To say poor Buffalo his last has puff'd,
And died quite suddenly without a will,
Soothing the widow with a tender quill,
And gently hinting, 'would she like him stuff'd?'
Does no old sentimental monkey weary
Your hand, at times, to vent his scribbling itch?
And then your pen must answer to the query
Of Dame Giraffe, who has been told her deary
Died on the spot, and wishes to know *which?*
New candidates, meanwhile, your help are waiting:
To fill up cards of thanks, with due refinement;
For Missis 'Possum, after her confinement;
To pen a note of pretty Poll's dictating,
Or write how Charles the Tenth's departed reign
Disquiets the crown'd crane

And all the royal tigers;
To send a bulletin to brother Asses,
Of Zebra's health, what sort of night he passes;—
Is this your duty, Secretary Vigors?

Or are your brutes but garden-brutes, indeed,
Of the old shrubby breed,
Dragons of holly, peacocks cut in yew?
But no—I've seen your book,
And all the creatures look
Like real creatures, natural and true;

Ready to prowl, to growl, to prey, to fight,
Thanks be to Harvey, who their portraits drew;
And to the cutters praise is justly due;
To Branston always, and to always Wright.
Go on, then, publishing your monthly parts,
And let the wealthy crowd,
The noble and the proud,
Learn of brute beasts to patronise the arts.
So may your household flourish in the Park,
And no long boa go to his long home;
No antelope give up the vital spark;
But all, with this your scientific tome,
Go on as swimmingly as old Noah's ark!"

Our author should surely be made laureate to the Society, and sing in a cage as a Hood-ed crow.

But we are getting out of bounds, and must prune our wings. "Domestic Asides" is a neat piece of point; "the Step-father," and his contrast at page 123, two excellent little essays; and "My Son and Heir," could be written by nobody but our author. "The Supper Superstition" follows:—

"'Twas twelve o'clock by Chelsea chimes,
When all in hungry trim,
Good Mister Jupp sat down to sup,
With wife, and Kate, and Jim.

Said he, 'upon this dainty cod
How bravely I shall sup'—
When, whiter than the table-cloth,
A ghost came rising up!

'O, father dear, O, mother dear,
Dear Kate, and brother Jim—
You know when some one went to sea—
Don't cry—but I am him!

You hope some day with fond embrace
To greet your absent Jack;
But, oh, I am come here to say
I'm never coming back!

From Alexandria we set sail,
With corn, and oil, and figs;
But steering too much Sow', we struck
Upon the Sow and Pigs!

The ship we pump'd till we could see
Old England from the tops;
When down she went with all our hands,
Right in the Channel's chops!

Just give a look in Norey's chart,
The very place it tells;
I think it says twelve fathom deep,
Clay bottom, mix'd with shells.

Well, there we are till 'hands aloft,'
We have at last a call;
The pug I had for brother Jim,
Kate's parrot too, and all.

But, oh! my spirit cannot rest
In Davy Jones's sod,
'Till I've appeared to you and said—
Don't sup on that 'ere cod!

You live on land, and little think
What passes in the sea;
Last Sunday week, at 2 p. m.,
That cod was picking me!

Those oysters, too, that look so plump,
And seem so nicely done,
They put my corpse in many shells,
Instead of only one.

O, do not eat those oysters then,
And do not touch the shrimps;
When I was in my briny grave,
They suck'd my blood like imps!

Don't eat what brutes would never eat,
The brutes I used to pat;
They'll know the smell they used to smell—
Just try the dog and cat!

The spirit fled—they wept his fate,
And cried, *alack, alack!*
At last, up started brother Jim—
'Let's try if Jack was Jack!'

They called the dog, they called the cat,
And little kitten too;
And down they put the cod and sauce,
To see what brutes would do.

Old Tray licked all the oysters up,
Puss never stood at crimps,
But munch'd the cod,—and little Kit
Quite feasted on the shrimps!

The thing was odd, and minus cod
And sauce, they stood like posts:
O, prudent folks, for fear of hoax,
Put no belief in ghosts!"

"The Scrape Book of an Unlucky Man" is very ludicrous; but the volume is, from beginning to end, so full of amusement, that there would be no end to our Review, were we to attempt to be particular. Particular therefore we are not: we only tell all our

readers who love mirth, to buy Hood's *Comic Annual*.

We have given three of the cuts as speci-

mens: the "Step-father" is admirable, and illustrates a capital story: the others will speak for themselves to our holiday readers.

A STEP-FATHER.

GETTING A HOLE HOLYDAY.

"WELL! I NEVER COULD KEEP MY LEGS!"

Memoirs of the Affairs of Greece; containing an Account of the Military and Political Events which occurred in 1823 and following Years: with various Anecdotes of Lord Byron, and an Account of his last Illness and Death. By Julius Millingen, Surgeon to the Byron Brigade at Mesolonghi, &c. 8vo. pp. 338. London, 1831. Rodwell.

THIS is a very amusing volume; anecdotes, personal sketches, and curious customs, form an entertaining *mélange*. The events of a campaign in Greece, and of a month or so with Lord Byron, are sufficiently out of the ordinary run to be continued sources of novelty and entertainment. In his account of the noble poet, Mr. Millingen is exceedingly minute. He informs us that he always wore gloves, drank green tea and gin profusely; and of his self-denial, where his appetite was inclined to risk his figure, gives the following example:

"On dinner being served up, although several dishes of meat were upon the table, Lord Byron did not partake of any; his custom being to eat meat only once a month. Soup, a few vegetables, a considerable portion of English cheese, with some fried crusts of bread and fruit, constituted his daily fare. He ate with great rapidity, and drank freely. There happened to be on the table a roasted capon, the good looks of which so powerfully tempted him, that after wistfully eyeing it, he was on the point of taking a leg; but suddenly recollecting the rule he had imposed on himself, he left it in the dish, desiring his servant to let the capon be kept till the next day, when his month would be out."

The anecdotes we subjoin are the newest we can find; the last days of Byron's life having been so repeatedly before the public.

"During the earlier part of his youth, his then very limited revenues were soon exhausted by his extravagant expenses in London, and especially by his frequenting the gaming-houses. He had borrowed so much from the usurers, that none were to be found humane enough to advance him any further sum, at whatever interest he offered. One morning, after a sleepless night, spent at one of those establishments, in which he had lost all his money, he heard a coach stop before his lodgings, and soon after saw a young lady of rank, who had given him proofs of the most ardent attachment, enter his room. She held a small casket in her hand, and on depositing it on the table, told him, that hearing of the pecuniary misfortunes he had met with, and fearing he might find himself in embarrassed circumstances, she had brought him all her jewels and money, and requested he would accept them as proofs of her affection. 'Go and take back with you,' said Lord B. sternly, 'your trinkets and money. I am not a man to be imposed upon by cant; and you know full well that you would never have brought such things to me, had you supposed me vile enough to accept them.' Mention being once made before him of the frequent errors of judgment into which a person may be led by the appearances of physiognomy, he observed: 'You are young men, and may therefore have occasion to derive benefit from this precept of mine: never give your entire faith to any one whose eyes are gray.' On its being remarked to him, that his own were of that very colour, he added, 'Do not think I consider myself an exception to this, I might say, universal rule: it would have been well for many, who have had to deal with me, had they been guided by it.'"

Narrow Escape from Shipwreck.—"Surrounded by rocks on every side, the sailors thinking their fate inevitable, had lost their courage. Lord Byron's tranquillity of mind was undisturbed. Aware that, should the miserable anchor they had give way, the ship would be dashed to atoms, he had recommended to Lucca, a young Greek of Patras, confided to his benevolence by the youth's mother, to keep himself ready in case of a similar accident, to mount on his back, for he would save him by swimming.

"When I passed to the Chané, where the apartments appropriated to the establishment of the dispensary were, the wife of Hussein Aga, one of the Turkish inhabitants of Mesolonghi, came to me, and imploring my pity, begged me to allow her to remain under my roof, in order to shelter her from the brutality and cruelty of the Greeks. They had murdered all her relations, and two of her boys; and the marks remained on the angle of the wall, against which, a few weeks previously, they had dashed the brains of the youngest, only five years of age. A little girl, nine years old, remained to be the only companion of her misery. Like a timid lamb, she stood by her mother, naked and shivering, drawing closer and closer to her side. Her little hands were folded like a suppliant's; and her large beautiful eyes, so accustomed to see acts of horror and cruelty, looked at me now and then, hardly daring to implore pity. 'Take us,' said she, 'we will serve you, and be your slaves; or you will be responsible before God for whatever may happen to us.' I could not see so eloquent a picture of distress unmoved; and from that day I treated them as relatives. Some weeks after, I happened to mention before Lord Byron some circumstances relative to these individuals, and spoke with so much admiration of the noble fortitude displayed by Husseinina in the midst of her calamities; of the courage maternal love inspired her with on several occasions; of the dignified manner in which she replied to the insults of her persecutors, that he expressed the wish of seeing her and her child. On doing so, he became so struck by Hatajé's beauty, the *naïveté* of her answers, and the spiritedness of her observations on the murderers of her brethren, that he decided on adopting her. 'Banish fear from your mind,' said he to the mother, 'your child shall henceforth be mine. I have a daughter in England: to her I will send you. They are both of the same age; and as she is alone, she will, no doubt, like a companion, who may, at times, talk to her of her father. Do not shudder at the idea of changing your religion; for I insist on your professing no other but the Mussulman.' She seized his hand, kissed it with energy, and raising to heaven her eyes, filled with tears of gratitude, she repeated expressively, 'Allah is great!' He immediately ordered more costly dresses to be made for them than those I had given them; and sent to Hatajé a necklace of sequins. Twice a week I was desired to send them to his house. He would then take the little girl on his knees, and caress her with all the fondness of a father. Nothing could surpass the jealousy of the Mesolonghiot women, when they beheld the manner in which these former objects of their insults were now treated. One day the little girl, with eyes drowned in tears, entered his room; and returning to him her necklace, asked for the clothes she formerly wore. 'They are not like these,' said she; 'but when I wore them, the Mesolonghiots did not tell me they would kill both

me and my mother.' Lord Byron burst into a violent rage, and in order to spite the Mesolonghiot population, ordered the most expensive clothes to be made for Hatajé; and had the intention of covering her, according to the oriental fashion, with golden pieces of money, to parade her on horseback through the principal streets of the town."

We must say that his kindness was more judicious than its display. Speaking of his own death: "'Do you suppose,' inquired his lordship with impatience, 'that I wish for life? I have grown heartily sick of it, and shall welcome the hour I depart from it. Why should I regret it? Can it afford me any pleasure? Have I not enjoyed it to a surfeit? Few men can live faster than I did. I am, literally speaking, a young old man. Hardly arrived at manhood, I had attained the zenith of fame. Pleasure I have known under every form it can present itself to mortals. I have travelled—satisfied my curiosity—lost every illusion: I have exhausted all the nectar contained in the cup of life: it is time to throw the dregs away. But the apprehension of two things now haunts my mind. I picture myself slowly expiring on a bed of torture, or terminating my days like Swift—a grinning idiot! Would to heaven the day were arrived, in which, rushing, sword in hand, on a body of Turks, and fighting like one weary of existence, I shall meet immediate, painless death,—the object of my wishes!'"

We scarcely know whether most to pity or blame such a state of mind. During his illness blisters were proposed.

"When on the point of applying them, Lord Byron asked me, whether it would answer the same purpose to apply both on the same leg. Guessing the motive that led him to ask this question, I told him I would place them above the knees, on the inside of the thighs. 'Do so,' said he; 'for as long as I live, I will not allow any one to see my lame foot.'"

It is but fair to Mr. Millingen to state, that he vindicates himself from the charge brought against him, of being one of the causes of the delay, to which such fatal effects have been ascribed, in bleeding Lord Byron. He concludes, by saying: "The more I consider this difficult question, however, the more I feel convinced, that whatsoever method of cure had been adopted, there is every reason to believe that a fatal termination was inevitable. And here I may be permitted to observe, that it must have been the lot of every medical man to observe, how frequently the fear of death produces it; and how seldom a patient, who persuades himself that he must die, is mistaken. The prediction of the Scotch fortune-teller was ever present to Lord Byron; and, like an insidious poison, destroyed that moral energy which is so useful to keep up the patient in dangerous complaints. 'Did I not tell you,' said he repeatedly to me, 'that I should die at thirty-seven?'"

Never yet was there a sceptic without superstition: witness the next anecdote.

"I was not a little surprised to hear him ask me on the 15th, whether I could not do him the favour of inquiring in the town for any very old and ugly witch? As I turned his question in derision, he repeated to me with a serious air, 'Never mind whether I am superstitious or not; but I again entreat of you to bring me the most celebrated one there is, in order that she may examine whether this sudden loss of my health does not depend on the evil eye. She may devise some means to dissolve the spell.' Knowing the necessity of indulging a patient

in his harmless caprices, I soon procured one, who answered exactly to his description. But the following day, seeing that he did not mention the subject, I avoided recalling it to his memory. It is in the Levant an almost universal practice, as soon as a person falls ill, to have recourse, in the first instance, to one of these professed exorcisers. If their art does not succeed in restoring the patient to health, by destroying the power of fascination, then the medical man is called in. But without this previous preparation, none of his medicines are supposed to be capable of curing the complaint."

We will not enter into the anatomical details of appearances after death, except in one instance.

"The appearance presented by the heart was singular. Its parietes were as collapsed, and of a consistence as flabby, as of those persons who have died of old age."

We certainly are all most ingenious in self-deception: Mr. Millingen winds up by stating, "I am incapable of enumerating the faults of one from whom I received so many marks of kindness, merely to gratify the curiosity of the idle, or the malice of his enemies."

Now our author repeatedly alludes to his noble friend's vanity, pride, affectation, inebriety, betrayal of confidence, his sarcastic spirit, his want of religion: if he does not consider these as faults, pray what does he think them?

We shall proceed to make a cento from the various anecdotes scattered through these pages; but it must be next Saturday.

The Military Bijou; or, the Contents of a Soldier's Knapsack: being the Gleanings of Thirty-three Years' Active Service. By John Shipp. 2 vols. 12mo. London, 1831. Whittaker and Co.

Our readers, we do not doubt, will remember the Autobiography of John Shipp. We trust that, in recalling to their recollection the narrative of his life, we shall not fail to create a prejudice in favour of the *Contents of a Soldier's Knapsack*. A series of desultory sketches, written in some parts with humour, in others with good feeling, will, we fear not, with all but the hypercritical, meet with a kind word and a welcome. The frankness and candour of our author's preface battles the designs of censure, and conveys the broadest hint that John Shipp does not write wholly and solely for literary fame, of any man we remember to have met with:—

"But this is a critical period for becoming an author; any attempt in the form of a book having so much to apprehend, so much to dread, in the present 'march of intellect,' where there are so many spies and critical sentinels standing upon the watch-tower of literature, to resist the approach of every new adventurer, as if he were an enemy. But I am like him who sits with a craving stomach by the side of a brook, watching, with eager eye, the nibbling of every little fish, on the hooking of which depends his dinner. If he did not cast in the bait, he could not expect to catch any fish; if I did not attempt to write, I, like him, should have no dinner."

Shipp, however, need not look upon his volumes as altogether a "forlorn hope," which he is advancing against the batteries of criticism; but take heart, that, like the many he has volunteered on, the present will come off with credit; and, what is of more substantial importance, ensure him a beefsteak, and, it

may be, a bottle to boot. We commence by quoting the Soldier's Wife:—

"'Who comes there?' said a sentinel to a person coming near his post. 'A friend,' softly said a timid voice. 'Advance, and give the parole.' The same soft, timid voice said, 'Love.' 'Love,' said the sentinel, 'is not the parole, and you cannot pass. It is more than my life is worth, to permit you to pass.' 'Indeed, this is cruel indeed, not to allow a sergeant's wife to pass, to take perhaps her last farewell. I beseech you to let me pass; ere the morning's battle takes place, let me spend this night in his company. I have travelled forty miles to see him.' 'Pass, friend: all's well!' It proved her last farewell."

There are one or two anecdotes, such as "the Regimental Dog," which will not suffer us to entertain the supposition that "spinning a long yarn" is by any means confined to the navy. We must also take the freedom of observing, that when an author's title-page proclaims the contents of his volumes to be the gleanings of active service, it is unwise to designate any particular anecdote as "a fact." We deprecate this, because some unreasonable people will take the hint that its less marked companions are *not* such. We give the annexed selections as characteristic of Shipp's feelings on some subjects, which cannot but gain him credit, and which, to do him justice, he never loses an opportunity of advocating.

"The Drummed-out Soldier."

"However necessary punishment may be in the army, and that it is necessary is beyond a doubt, still I have ever been of opinion that punishments whereby the delinquent is debased, and held up as a public object of derision and laughter, are injurious. The act of such disgrace is a positive detraction from the respectability of the military profession. No soldier, whatever his offence, ought to be degraded as a common vagabond. What can reflect more discredit on the British soldier than the lowering spectacle of tying a rope round his neck, a placard pinned upon his back, facings and buttons cut off, and the Rogue's March played after him? I say it is a degradation to the honourable profession of arms, and a constitution boasting of its freedom and humanity. If he, the culprit, merits this, he falls beneath the cognizance of the service, and ought to be transferred to the civil authorities, and there his crime be provided for; but never should he be the public gaze or jeer. It is a death-blow to many a young man entering into the service; for very often, and, I fear, too often, the crime so visited is petty theft, which the civil law would punish with a couple of months at the tread-mill."

"Hanging Soldiers."

"However expedient and necessary exemplary punishments may be deemed in the army, to check mutiny or curb the rebellious spirits of soldiers, and nip crime in the bud, every one, on deeply considering the circumstances combined with hanging, will recoil at it. It detracts from the respectability of the profession; it casts a black cloud over it, putting soldiers on a level with the lowest and veriest delinquents of the earth. If a soldier deserves death, let him die like a soldier, not like a pickpocket or housebreaker. Blow him from the mouth of a gun, or let him be shot like a man. Hanging is no example to soldiers; soldiers look upon it as a general disgrace or reflection on the profession. What, permit me to ask my military readers, can be more repugnant to a bold and intrepid soldier, than to see

his comrade in full uniform suspended from a tree? Such sights may, and do, affect soldiers at the time, but they never will view it as justice: it is degrading to them in the extreme. Shooting is more congenial to their modes of thinking, and to mine too. There is something noble in seeing a soldier meeting the offended laws of his country in the same haughty and manly spirit he met his country's foes; but dragging him to the gallows is, I repeat, a slur upon the profession of arms."

We quote one more extract, which we sincerely hope is nothing less than a libel.

"A military chaplain had become so shamefully drunk at the mess on the Saturday night, that three or four of those last remaining were obliged to carry him home. On the following morning, to the astonishment of his dear companions, he took the following text: 'A drunkard shall not enter the kingdom of heaven;' and handled the subject with all the eloquence and pathos of a saint. During the oration, some of the young ones had the greatest difficulty to restrain their risible muscles; and, meeting the reverend gentleman after the sermon, one of them said, 'My dear doctor, you have astonished the whole regiment this morning by the beautiful sermon on drunkenness,—the last subject in the world we should have supposed you would have touched upon.' 'My dear fellow,' calmly replied the divine, 'if you had such a d—d headach as I have, you would preach against it too.'

In conclusion, we give John Shipp a friendly word of caution, to leave off sentimentalising, more especially about rockets and cannon-balls, to relinquish his addiction to grandeur of language, and a too general redundancy of epithets. We have refrained from particularising, and shall regret if our advice does not obviate these defects, and lead him henceforth to study a style more becoming. His object should be to write as the plain, straightforward soldier; in which case, the adventures of his life will not fail to supply literary occupation and emolument to himself, while it affords to the public amusing illustrations of the soldier's habits and hardships.

The Talba; or, the Moor of Portugal: a Romance. By Mrs. Bray, author of "the White Hoods," &c. &c. 3 vols. 12mo. London, 1830. Longman and Co.

THE melancholy and romantic history of the unfortunate Ines de Castro is here well wrought into a chronicle of Moorish history. The Talba is a Mahometan expression, similar in meaning to that of philosopher: Mrs. Bray has made a very picturesque personage of hers; and she has also succeeded in giving considerable action and interest to her narrative. The following scene is an animated sketch of a combat to which a young Moor is condemned.

"All was in readiness. Alonso cast a look on Hamet, in which there was something less severe than his usual expression.—'Art thou prepared?' said the king. 'Ay, for life or death!' replied Hamet. 'Then God be thy judge, young man,' said Alonso, as he raised his arm and gave the signal. The trumpet gave one clear and hollow blast. It curdled the blood; for it sounded like the knell of death, to all but the obdurate of heart. Ere the echoes of the surrounding mountains had finished repeating the awful clarion, the barrier was thrown open; and with one bound the bull burst out. With nostrils smoking, as he uttered fearful howlings, he stood gazing around, shook his sides, paved the ground with his broad hoofs, but did not advance to

the combat. He was black in colour; and therefore had he been named Nero. Whilst thus he stood, wild cries arose from the circus. They were strange and mingled; some seemed uttered in joy that the animal shewed little symptoms of being willing for the attack. The more brutal Portuguese, however,—those true lovers of the game, who could forget even humanity in their sports,—greeted the creature with yells, hoots, and hissings; since it was always deemed an infallible mark of cowardice in the bull if he did not instantly attack his foe. Hamet was ready to receive him; his wood-knife in his hand—his eye fixed on his enemy. His fine person drawn to its utmost height, every muscle in his slender limbs seemed to swell and to shew its power, as he stood, 'like a greyhound on the slip,' eager for the hardy encounter."

Dogs are sent in, when "the bull, that had been thus irritated by having the dogs turned out upon him,—a usual practice, whenever the animal shewed any delay in the attack,—now sufficiently convinced all the spectators that such delay was not from want of spirit. With an aspect full of savage fury, he lashed his sides with his broad tail, bellowed, tore up the ground with hoof and horns, and darted forward towards Hamet. The youth, by leaping with an agility alone to be compared to the nimble-footed chamois as it springs from rock to rock, endeavoured, but in vain, to avoid the continued pursuit of the bull,—his eye ever watchful for the moment of attack. No such moment occurred; and it seemed evident that his life would terminate with the time in which he should become spent and breathless, from the violent exertions he made to preserve it. Hassan saw this. He clasped his hands together in agony—he looked up to heaven—he uttered fearful cries, that mingled even with his prayers. 'He will die! he will die!' exclaimed Hassan. 'O for an angel's wing to waft him hence in safety! Mortal aid is there none to save him. But see, prophet of Mecca! what a daring act! He has seized the terrible animal by the horns; he suffers himself to be dragged round the arena. Now he hangs by one hand; he stabs him in the throat; the blood spouts like a fount of waters—but the brute still lives. Look! Hamet falls from his hold—God save thee! He is up again! he is on his feet! O, Allah, how I thank thee! He flies! he flies!—but look! the brute is mad with fury—gored with wounds. See how he tears up the sand. He follows—he follows. How will Hamet escape? He has driven the youth close to the barrier; there is no escape, no hope—he must fall!' 'He falls not, he falls not!' exclaimed Cassim. 'O noble Hamet!' At this instant a loud, continued, and deafening shout of applause shook the arena; for Hamet, bold, active, quick of eye and vigorous of limb, with one bound, at the very instant the bull was about to toss him on his horns, sprang on the animal's back, and leapt over him. He ran forward. Nero had already received more than one stab from the knife. None of them, however, reached any mortal part; still he bled fast, and there was hope, could Hamet but keep him at bay till the creature was somewhat spent by loss of blood, he might even yet despatch him. So great was the interest excited in the breasts of the spectators, that many called out to him to make for the extremity of the arena, under the king's pavilion, as being farthest removed from his enemy.

"The bull had, indeed, turned again to the pursuit; and that with so much fierceness,

the last efforts of his rage, that the sight of it impressed horror. His blood streamed from his flanks; he bounded, rather than ran, forward with dreadful bellowings. He shook his neck and sides, tossed the sand in his career, whilst volumes of smoke arose from his mouth and nostrils. Hamet, as a final effort, determined to spring upon him; and, for that purpose, when within a few yards of the bull, turned to confront him. His foot slipped—he fell—and the knife dropped from his hand. All hope fled; for at this instant he stood close to the barrier, which cut off all retreat, and the wild bull was making towards him, with head bent, to gore him to death with his horns. A cry of horror arose from the arena. Hamet sprang up. There was no escape. Ines de Castro sat immediately above the very spot where the youthful Moor was in so much danger. Quick in feeling and in thought, she tore from her shoulders the crimson mantle in which she was wrapt, and threw it into the arena with so true a hand, that Hamet caught it—cast it over the bull's head as he prepared to gore him—and ere the beast could disentangle himself from the blind thus thrown over him, Hamet recovered his knife, that lay close at his feet, and struck it into the spine. His mighty enemy fell, a convulsed corpse."

There are some very beautiful descriptions of Portuguese scenery: Mrs. Bray sees with the eye of a painter; and one great merit, that of historical accuracy as regards manners, costume, &c., her pages invariably possess. These volumes must add, therefore, to her already high popularity.

The Life of Bruce, the Abyssinian Traveller.
By Major T. B. Head. (*Family Library*, XVII.) 12mo. pp. 535. London, 1830. J. Murray.

A FORTNIGHT ago, on the issue of this new volume of the *Family Library*, we briefly characterised it as most deserving of the attention of all classes of readers, whether for amusement or instruction; and return to it now, not to alter, but to repeat and enforce our verdict. To compress the marrow of Bruce's five volumes into one good thickest little book of 535 pages, with an excellent portrait, woodcuts, and maps, for five shillings, is very like getting the *Iliad* into the nutshell, and very deserving of public reward.

Major Head, too, has performed his task *con amore*. He has dashed on as if he were riding over the Pampas, full of spirit and intelligence; and he has shewn a zealous regard for his subject, worthy of a brother traveller, whose own rough journeys have taught him the difference between an experienced observer and a fire-side critic. Perhaps he displays more acerbity than is required upon Lord Valentia's and Mr. Salt's dissonances from Bruce; but it must also be confessed, that he frequently demonstrates them to be mere cavils or mistakes. Ours, however, is not the office to reconcile controversies; and we shall be content to quote a few passages as specimens of the style and feeling of the "Life."

"When Bruce's work was completed, just before it was printed, and while public attention was eagerly expecting it, Johnson translated and published the travels in Abyssinia of the Jesuit Jereme Lobo. In the *Gentleman's Magazine* for 1789, it is stated that Johnson had declared to Sir John Hawkins, 'that when he first conversed with Mr. Bruce the Abyssinian traveller, he was very much inclined to believe that he had been there; but that he had afterwards altered his opinion!' In Johnson's

preface, accordingly, he, evidently at the expense of Bruce's reputation, extols the Portuguese traveller, as one who 'has amused his reader with no romantic absurdities or incredible fictions. He appears by his modest and unaffected narrative to have described things as he saw them, to have copied nature from the life, and to have consulted his senses, not his imagination. He meets with no basilisks that destroy with their eyes, his crocodiles devour their prey without tears, and his cataracts fall from the rock without deafening the neighbouring inhabitants.' These round, rigmarole sentences were rolled against Bruce, a man who had patiently visited three-quarters of the globe, by Johnson, one of the most prejudiced men of his age, who, himself a traveller, had not temper enough to travel in a hack-chaise to Aberdeen! Peter Pindar amused all people (except Bruce) by his satirical flings, one of which was

'Nor have I been where men, (what loss, alas!)
Kill half a cow, and turn the rest to grass.'

Bruce met these and other similar assaults in a manly way; in the way that all writers, conscious of truth and integrity, ought to meet the misrepresentations or calumnies of the envious and malicious. "He concludes his preface with the following noble and remarkable words:—'I have only to add, that were it probable, as in my decayed state of health it is not, that I should live to see a second edition of this work, all well-founded, judicious remarks suggested, should be gratefully and carefully attended to: but I do solemnly declare to the public in general, that I never will refute or answer any cavils, captious or idle objections, such as every new publication seems unavoidably to give birth to, nor ever reply to those witticisms and criticisms that appear in newspapers and periodical writings. What I have written I have written. My readers have before them, in the present volumes, all that I shall ever say, directly or indirectly, upon the subject; and I do, without one moment's anxiety, trust my defence to an impartial, well-informed, and judicious public.'"

Upon these matters Major Head says well—
"There is surely nothing which, in the opinion of liberal men, can more degrade a country—nothing which, at the great table of the world, more deservedly places it 'below the salt'—than its unreasonably disbelieving an honourable man. A man's opinions may be canvassed, his theories may be opposed, his arguments may be resisted; but, without rhyme or reason, to disbelieve his statements, is at once to sever the band which holds society together; it destroys the allegiance which a well-disposed individual would willingly feel that he owes to public opinion; it tells him that his only defensive weapon is contempt. 'Sir, you are no gentleman!' exclaimed a passionate, irrational man.—'Sir, you are no judge!' was the calm, contemptuous reply."

The following anecdotes and remarks, towards the close of Bruce's life, interest us much.

"After the publication of his travels, Bruce occupied himself in the management of his estate, and of his extensive coaleries. He visited London occasionally, and kept up a correspondence with Daines Barrington and with Buffon. He also employed his time in Biblical literature, and even projected an edition of the Bible, with notes, pointing out numberless instances in which the Jewish history was singularly confirmed by his own observations. He took a deep interest in the French revolution. He had received much personal kindness from Louis XVI., and when intelligence

arrived that the king was stopped in his attempt to escape from Paris, before the 12th of August, 1792, Bruce was so much affected, that his daughter observed him to shed tears. His notions of his own consequence, and of the antiquity of his family, were high, and he had, consequently, the reputation of being a proud man; yet he was in the habit of entertaining, at Kinnaid, with great hospitality, strangers, and those people of distinction who visited him; and, in his own family, he was a delightful companion, entering into the amusements of his children with great delight. His young and amiable daughter used to walk, almost every morning, by his side, while Bruce, who had now grown exceedingly heavy and lusty, rode slowly over his estate to his coal-eries, mounted on a charger of great power and size. At Kinnaid he was often seen dressed in a turban, and reclining in an eastern costume; and in those moments it may easily be conceived that his thoughts flew with eager pleasure to the mountains of Abyssinia—that Ozoro Esther, Ras Michael, Gusho, Powussen, Fasil, Tecla Mariam, were before his eyes, and that, in their society, beloved, respected, and admired, he was once again—Yagoube, the white man! But, although his life at Kinnaid was apparently tranquil, his wounded feelings, respecting his travels, occasionally betrayed themselves. One day, while he was at the house of a relation in East Lothian, a gentleman present bluntly observed, that it was impossible that the natives of Abyssinia could eat raw meat! Bruce said not a word; but, leaving the room, he shortly returned from the kitchen with a piece of raw beef steak, peppered and salted in the Abyssinian fashion. ‘You will eat that, sir, or fight me!’ he said. When the gentleman had eaten up the raw flesh (most willingly would he have eaten his words instead), Bruce calmly observed, ‘Now, sir, you will never again say it is impossible!’ Single-speech Hamilton was Bruce’s first cousin and intimate friend. One evening, at Kinnaid, he said, ‘Bruce, to convince the world of your power of drawing, you need only draw us now something in as good a style as those drawings of yours, which they say have been done for you by Balugani, your Italian artist.’ ‘Gerard,’ replied Bruce, very gravely, ‘you made one fine speech, and the world doubted its being your own composition, but, if you will stand up now here, and make another speech as good, we shall believe it to have been your own.’ These trifling anecdotes sufficiently shew how justly sensitive Bruce was to the insult that had been offered to him. For twenty years, which had elapsed since his return to Europe, he had endured treatment which it was totally out of his power to repel. It is true, he had been complimented by Dr. Blair, and a few other people, on the valuable information which he had revealed; but the public voice still accused him of falsehood, or, what is equally culpable, of wilful exaggeration; and against the gross public an individual can do nothing. Bruce’s career of happiness was at an end—he had survived his reputation; and the only remedy left him was that which a noble Roman is supposed to have prescribed for his own son. ‘What could he do,’ he was asked, ‘against so many?’ he answered . . . ‘Die!’ and this catastrophe—this ‘consummation devoutly to be wished’—we have now the pleasure to relate. The last act of Bruce’s life was one of gentlemanlike, refined, and polite attention. A large party had dined at Kinnaid, and while they were about to depart, Bruce was gaily talking to a young

lady in the drawing-room, when, suddenly observing that her aged mother was proceeding to her carriage unattended, he hurried from the drawing-room to the great staircase. In this effort, the foot which had safely carried him through all his dangers happened to fail him; he fell down several of the steps—broke some of his fingers—pitched on his head—and never spoke again! For several hours every effort was made to restore him to the world; all that is usual, customary, and useless in such cases, was performed. There was the bustle, the hurry, the confusion, the grief unspeakable, the village leech, his lancet, his phial, and his little pill; but the lamp was out—the book was closed—the lease was up—the game was won—the daring, restless, injured spirit had burst from the covert, and was—‘away!’ Thus perished, in the sixty-fourth year of his age, in the healthy winter of his life, in vigour of mind and body, James Bruce, of Kinnaid, a Scotchman, who was religious, loyal, honourable, brave, prudent, and enterprising. He was too proud of his ancestors, yet his posterity have reason to be proud of him. His temper was eager, hasty, and impetuous; yet he himself selected for the employment of his life enterprises of danger, in which haste, eagerness, and impetuosity, were converted into the means of serving science and his country. The eagerness with which he toiled for the approbation of the world, and the pain he suffered from its cruelty and injustice, exclude him from ranking among those great men who, by religion, or even by philosophy, may have learnt to despise both; yet it must be observed, that, had he possessed this equanimity of mind, he would never have undertaken the race which he won. Bruce belonged to that sect—that labouring class, that useful race of men—who are ever ready

‘To set their life upon a cast,
And stand the hazard of the die.’

He was merely a traveller—a knight errant in search of new regions of the world; yet the steady courage with which he encountered danger—his patience and fortitude in adversity—his good sense in prosperity—the tact and judgment with which he steered his lonely course through some of the most barren and barbarous countries in the world, bending even the ignorance, passions, and prejudices of the people he visited to his own advantage—the graphic truth with which he described the strange scenes which he had witnessed, and the inflexible courage with which he maintained his assertions against the barbarous incredulity of his age, most deservedly place him at the top of his own class, where he at least stands—second to no man. His example is well worthy the attention and study of every individual, whose duty or inclination may lead him to attempt to penetrate the yet unknown, dangerous, and uncivilised regions of this world. Four days after his death, his corpse, attended by his tenantry, and by several of the principal men in the county, was deposited in the churchyard of Larbert, in a tomb which Bruce had built for his wife and his infant child. On the south side of the monument there is the following inscription:—

In this Tomb are deposited the Remains of
James Bruce, Esq., of Kinnaid,
Who died on the 27th of April, 1794,
In the 64th year of his age.
His life was spent in performing
Useful and splendid actions.
He explored many distant regions.
He discovered the Sources of the Nile.
He traversed the Deserts of Nubia.
He was an affectionate husband,
An indulgent parent,
An ardent lover of his country.

By the unanimous voice of mankind
His name is enrolled with those
Who were conspicuous
For genius, for valour, and for virtue.

‘The descendants of James Bruce, of Kinnaid, remain, to this day, in their country—unrewarded.’

Some of our friends, perhaps, may be of opinion that we should have presented them with some extracts from the ‘Travels;’ but, as the volume is calculated to find its way into most hands where it has not already done so, we have rather selected what our readers abroad will, we trust, prefer.

The History of Chivalry; being Vol. IV. of the National Library. By G. P. R. James, author of “De L’Orme,” &c. London, 1830. Colburn and Bentley.

HAD this volume been called a History of the Crusades, the title would have given a much juster idea of its contents. It commences, it is true, with a luminous and correct view of the rise of the spirit of chivalry, and does full and deserved justice to its most beneficial influence; but as its entire history, it is incomplete. There are only a few pages after the wars in the Holy Land are brought to a close. Now, the most distinguished knights flourished after that period; those, too, whose example was peculiarly influential on their age—Duguesclin, Sir John Chandos, Bayard, &c., are all dismissed in a few brief sentences. Its rise is traced—but not its empire, nor its decline; and therefore, we repeat, the title is erroneous. As a History of Chivalry, it cannot compete with that of Mills, which embodies the whole of personal adventure, the variety of observance, and the individual sketches which illustrate the subject. Mills’ History of Chivalry, with all its antiquarian errors, forms two of the most delightful volumes we know. But considering the present as a history of the Crusades, we must say, that we think it infinitely superior to Mr. Mills’ work on that subject; its views are much more just, its research more careful, its style much more animated—it has all the information, and none of the heaviness, of its predecessor. Mr. James’s first merit, and that a great one in an historian, is, that he has entered into his subject with the utmost enthusiasm; his second is, that this is united with the most patient investigation, and an excellent judgment in choice of *matériel*—while the whole narrative is set off by a style peculiarly happy in its simplicity and animation. We have not space to enter into the specific differences between his views and those of Mills; but content ourselves with saying, the present author’s are by far the most correct and just. The following is one specimen:—

“One of the historians of the crusades, attributing, perhaps somewhat too much, the spirit of modern politics to an age whose genius was of very different quality, supposes that the course determined on by the pope and his ally was, in fact, principally a shrewd plot to fix Urban firmly in the Vatican, and to forward Boemond’s ambitious views in Greece. It seems to me, however, that such a supposition is perfectly irreconcilable with the subsequent conduct of either. The pope shortly after threw himself into the midst of his enemies, to hold a council on the subject of the crusades; and Boemond abandoned every thing in Europe to carry on the holy war in Palestine. It is much more natural to imagine that the spirit of their age governed both the prelate and the warrior—the enthusiasm of religion the one, and the enthusiasm of chivalry the other.”

We can coincide in the truth of the next remark.

"He who does not grasp the spirit of the age on which he writes, but judges of other days by the feelings of his own, is like one who would adapt a polar dress to the climate of the tropics. Before closing this chapter, one observation, also, must be made respecting the justice of the crusade, which enterprise it has become somewhat customary to look upon as altogether cruel and unnecessary. Such an opinion, however, is in no degree founded on fact. The crusade was not only as just as any other warfare of the day, but as just as any that ever was waged. The object was, the protection and relief of a cruelly oppressed and injured people—the object was, to repel a strong, an active, and an encroaching enemy—the object was, to wrest from the hands of a blood-thirsty and savage people, territories which they themselves claimed by no right but the sword, and in which the population they had enslaved was loudly crying for deliverance from their yoke—the object was, to defend a weak and exposed frontier from the further aggression of a nation whose boast was conquest."

The ensuing observations are excellent.

"Enthusiasm will conquer difficulties, confront danger and death, and change the very nature of the circumstances in which it is placed, to encouragement and hope; but it will not bear to be mingled with less elevated feelings and considerations. The common ambitions and passions of life, cold reasonings, and thoughtful debates, deaden it, and put it out; and amidst the intrigues of interest, or the speculations of selfishness, it is extinguished like a flame in the foul air of a vault."

We select one characteristic anecdote. "One Turk, in particular, signalised himself by an immense slaughter of the crusaders, shewing himself exposed upon the battlements, and plying his terrible bow, which winged death in every direction. The Christians became so fearful of him, that that most imaginative passion, terror, began to invest him with some supernatural defence. The best-aimed arrows proved totally ineffectual, and reports spread rapidly that he might be seen still sending destruction around from his hand, while twenty shafts, each carrying the fate of a common mortal, were sticking unheeded in his flesh. Godfrey of Bouillon, to end the panic that this man occasioned, at length took a crossbow himself, though that machine was considered but a fit weapon for a yeoman, and directing the quarry with a steadier hand than those which had before aimed at the Turkish archer, he sent the missile directly to his heart."

Our author is very minute in his antiquarian details, and corrects a mistake of Mills, who states plate armour was not known until the thirteenth century—it can be traced back as far as the time of Louis le Débonnaire. One of his passing observations we think much to summarise—he thus mentions Henry II.: "After one of the violent fits of passion to which he so often yielded himself, he was taken ill, and concluded a long life of vice and crime, before the altar of the Lord, which he had once caused to be stained with blood."

This we hold to be an unfair mention of one of the greatest, the wisest, and certainly the very best, of our early kings. We must remind Mr. James of his observation touching the injustice of passing judgment on former times according to our modern criterion. Here the better administration of justice, the comparatively flourishing state to which he brought his

kingdom, the great talents he displayed for peace and war, are all merged in a passing censure on his private character, whose vices were those of his age—while his higher qualities were essentially his own. In two instances, also, Mr. James has shewn a leaning to romantic fables, at variance with his generally strict research. He alludes to the tragedy of the Fair Rosamond as if it were a fact, instead of a mere invention; and where Eleonora sucks the poison from the wound of Edward I., instead of treating it as, what it certainly was, a fable, he mentions, that though some historians omit it, yet Camden sanctions it. Now, he must know it was one of those floating stories, told first of one hero, and then of another: for example, it is narrated of Robert Duke of Normandy, and as occurring in the first crusade.

We shall conclude with the following anecdote, which Sir Walter Scott has turned to such admirable dramatic purpose in his tale of the "Talisman," which Mr. James thus mentions:—"The spirit of the whole of this crusade (which I could wish to dwell upon more than any thing else) has been already fully, perfectly, and feelingly displayed, in that most beautiful composition, the 'Talisman;' wherein Sir Walter Scott, however he may have altered some historical facts to suit the purposes of fiction, has given a more striking picture of the human mind in that age—of the character of nations as well as individuals—than any dull chronicle of cold events can furnish."

The incident really took place after a victory of Saladin's.

"The king—Renault de Chatillon, Count of Karac, who had so often broken faith with the Moslems—and the Grand Master of the Temple, whose whole order was in abhorrence amongst the Mussulmans—were taken alive and carried prisoners to the tent of Saladin. That monarch remained for some time on the field, giving orders that the knights of St. John and those of the Temple, who had been captured, should instantly embrace Islamism, or undergo the fate of the cimeter. A thousand acts of cruelty and aggression on their part, had given cause to such deadly hatred; but at the hour of death not one knight could be brought to renounce his creed; and they died with that calm resolution which is in itself a glory. After this bloody consummation of his victory, Saladin entered the tent where Lusignan and his companions expected a similar fate; but Saladin, thirsty himself, called for iced sherbet, and having drunk, handed the cup to the fallen monarch—a sure pledge that his life was secure. Lusignan, in turn, passed it to Renault of Chatillon; but the sultaun, starting up, exclaimed, 'No hospitality for the breaker of all engagements!' and before Chatillon could drink, with one blow of his cimeter Saladin severed his head from his body."

We have now cordially and universally to recommend this volume—to the young it will be invaluable. Just, accurate, and animated, Mr. James has given a picture of the crusades as faithful as it is lively.

Affection's Offering; a Book for all Seasons, but especially designed as a Christmas and New Year's Gift, or Birth-day Present. London, 1831. Tilt.

A PLEASANT little volume for children, containing some well-told tales, and some neat woodcuts. An inducement is held out to youthful essayists, by prizes offered for the best essays on given subjects. The writers must not be more than sixteen years of age. The subjects pro-

posed for next year are: "the Efficacy of Prayer"—"the Wickedness and Folly of indulging in Perverse Tempers"—"on the Advantages of Truth and Sincerity over Falsehood and Duplicity;" to be addressed to the publisher. The prizes are books of various value.

An Epitome of the History of England, from William the Norman to William the Fourth; with the Contemporary Sovereigns of Scotland, France, Russia, Germany, and the Roman Pontiffs. G. Tytler; and A. Miller.

AN exceedingly large sheet, divided into columns, which contain as many dates, and as much information, as it seems possible to compress in the space. The whole is well arranged, and exhibits, at a glance, what it would require a search through many hundreds of volumes to obtain.

The Emperor's Rout. Illustrated by coloured plates. Pp. 38. London, C. Tilt.

IN this pretty little book, that splendid division of entomology, the moths, is treated of after the manner of the butterflies in their celebrated ball. The amusing form of a rout introduces the various species to the knowledge of the young lover of this interesting science; and the plates are faithful representations of many of the individuals who figure in the text. The design has our best word; and the execution will convey more real pleasure than the most perfect account of a human emperor's rout that ever existed.

Massaniello. By James Kenney. Pp. 55. London, E. Moxon.

WE have only to notice the publication of this justly popular opera in a very neat form; Mr. Kenney having already forestalled his honours upon the stage.

Satan in Search of a Wife, &c. &c. By an Eye-witness. Pp. 36. E. Moxon.

ANOTHER piece of *diablerie*. It possesses some humour, and the wood-cuts are very good indeed, both in design and execution.

ARTS AND SCIENCES.

ROYAL GEOGRAPHICAL SOCIETY.

MR. BARROW in the chair.—Read minutes of the preceding meeting, viz. a brief account of a Danish voyage of discovery, undertaken last year, and again prosecuted this, in search of some remains of the (supposed) Icelandic colony on the east coast of Old Greenland; and of a detailed statement of the condition and prospects of the Swan River settlement, on the 1st of January, 1830, drawn up by Mr. Barrow, from Governor Stirling's official reports to government, with the botany of the district, contributed by Mr. Brown. Afterwards read.—1. A very long list of donations made to the Society's library, since last meeting. 2. A letter from Dr. Holland, suggesting the propriety of keeping a book for the insertion and classification of geographical desiderata, as they may occur to members, or others willing thus to record them; with a minute of an order of the council directing such a book to be immediately commenced at the Society's office, and requesting contributions to it, whether desultory notices of new matters of fact, or suggestions of subjects of inquiry. 3. A report made by Captain Vidal, R.N., to the Admiralty, and communicated by Mr. Barrow, of the earnest but unsuccessful efforts made by him in the months of June, July, and August last, to dis-

cover a *vigia*, or supposed sunken rock, called Aitkin's rock, off the north-west coast of Ireland, the belief in the existence of which has frequently excited much uneasiness among the ship-owners of Greenock and other northern ports; but which Captain Vidal has most satisfactorily ascertained not only not to lie near any of the points usually assigned to it, but not even to be found within the extreme limits of latitude and longitude indicated by the most remote of them, viz. between 54° 50' and 55° 40' north latitude, and 8° and 13° west longitude, the whole of which space he repeatedly traversed, and examined with a minuteness, as exhibited on his chart, truly admirable. 4. and lastly. A short but very interesting account of an ascent to the summit of the Peak of Teneriffe, made by the late Captain Pearce, R.N., the African traveller, on his voyage to Sierra Leone, in 1825, also communicated by Mr. Barrow, being an extract from a letter received from him at the time. The meeting, from the extreme variety of the subjects thus brought before it, was very interesting, and was concluded by holding a special general meeting, to receive the regulations proposed by the council to be observed in transacting the Society's business, which were confirmed and adopted without comment. Adjourned over the holidays.

LECTURE ON THE MUMMY AT THE ROYAL INSTITUTION.

AN assemblage of about four hundred persons took place on Saturday, to hear a lecture by Dr. Granville, on the opening of a Theban mummy. Sir Gore Ouseley took the chair, *vice* the Duke of Sussex, who was called upon to attend at the British Museum, of which his royal highness becomes a trustee *ex officio*, as President of the Royal Society. The mummy which was to be opened had been presented by Sir John Malcolm to the Royal Asiatic Society; and Dr. Granville had, as a member of that institution, been deputed to comment upon the appearances presented at the opening of the coffin. He set out by remarking how much interest was awakened by researches of this kind: we called into our presence the remains of a being who had been buried perhaps three thousand years; and how powerful were the associations connected with such a reflection: it appeared almost to connect us with fabulous times. Mummies were of the greatest utility to antiquaries in their studies; they had been the means of perpetuating history, and had remained to attest the art and magnificence of former times, while other monuments had passed away like a dream. The lecturer dwelt upon the enthusiasm of Denon, when he was "promenading" in the galleries crowded with the remains of the ancient inhabitants of the long banks of the Nile. The pleasure to be derived from such scenes might be said to be introduced into this great city; and there had been a project of establishing a necropolis, or city of the dead, by two able architects, which was to contain galleries of a similar nature, and which project the doctor recommended to his numerous audience. There was a gentleman, he said, well known to the literary world. (Jeremy Bentham,) who had often expressed his wish to be embalmed after his death.

The outer case, which consisted of two pieces, and was of sycamore, was taken off, and, being placed in an erect position, presented the curious figure of a Theban, in long drapery, with a longitudinal band of hieroglyphics, necklace, and other ornaments. The second coffin had a

more finished repetition of the same portrait, with similar ornaments. Lastly, the inner case, which has erroneously been stated to be made of papier mache, contained the representation of a figure in the inside, holding in its hand the sign of divine life. The external part was beautifully painted and varnished with a variety of emblematic designs. At the feet of the mummy was the figure of the god Apis, by which it was immediately prognosticated that it would be the coffin of a male person. A second partition, moulded over the body as exactly as the former, was divided into two portions, which were held together by a rough suture; and lime was found in the inner side of the covering, which Dr. G. gave as his opinion, had been introduced subsequently to the moulding on of the inner coffin. At this period of the process, Dr. G. entered upon a slight historical account of the discoveries which had been made in modern times with regard to mummies, noticing the researches of Blumenbach, Denon, and more particularly his own, pointing out the curious and entertaining facts which he had been successful in discovering. The preservation of the shape, size, and flexibility of the muscles, by the injection of wax, was particularly alluded to. The mummy was then deprived of its bandages; these were externally retained by a roll, with blue stripes, which was stated to resemble in every point the dress in use at the present day on the spot from which the mummy came. Contrary to their common relative situation, the general envelope came before the rollers. All the cavities and sinuosities of the body were found to be carefully filled up. Lastly, the mummy itself came to view, when it excited some disappointment to find, that, whether for economy or other motives, the body had not undergone the more complete process of embalming, but had merely been dipped in a compound bituminous mixture; in consequence of which all the flesh had been destroyed, the muscles corrugated and inflexible, and the membranous textures entirely obliterated: the intestines were also destroyed. On removing the scalp, the brain was found intact as of one that died yesterday. The *pia mater*, or external membrane of the brain, was perfect. The doctor here discussed the question, as to how the removal of the viscera and of the brain was effected: in the former case, the integuments were too much destroyed to ascertain whether or not the abdomen had been opened; but in the latter, there was only the opening by the nose through which the brain could have been removed; had they been destroyed by caustic substances, the delicate membranes would also have been destroyed. After Dr. Granville had terminated his interesting lecture, some questions were put by the chairman, and others made different suggestions. The hair was not woolly, and of a light colour.

Appendix.—In our account of Kotzebue's voyage, we remarked that the teeth of the mummies of Teneriffe had led to a supposition that the ancient grandees probably lived on vegetables. A peculiarity of structure in the teeth is, however, also characteristic of the Theban mummy, which serves well to distinguish them from those impositions which have in latter times been so frequently got up. Why did the learned doctor not examine the teeth, or allude to this fact? The development of the head, as connected with the moral and intellectual character of the ancient Egyptians, and as serving to establish a magnificent historical parallel between remote ages and present

appearances, would, we think, have deserved the attention of a philosophical mind.

ASTRONOMICAL SOCIETY.

SIR James South in the chair.—There were read, a communication on the method of determining the declination of two stars with one mural circle, by means of the sum and difference of their altitudes, by Mr. Pond,—observations of occultations, by Sir Thomas Brisbane and Mr. Dunlop,—an account of Capt. Smyth's observatory and instruments at Bedford,—also Capt. King's observations of a comet in the southern hemisphere. Capt. Beetham and the Rev. A. Mead were elected fellows. The president read a letter from Mr. Barrow, of the Admiralty. This communication was in answer to a report on the present state of the *Nautical Almanac*, which had been referred to the Astronomical Society by the Lords Commissioners of the Admiralty.—a circumstance noticed in the *Literary Gazette* some time ago. The letter went on to say, that the writer had been commanded by their Lordships to acquaint the Society that they had directed the Astronomer Royal to carry the several suggestions in the Report into effect, particularly as to the *Nautical Almanac* for 1834. Furthermore, twenty copies of the Society's Report had been commanded by the Lords of the Admiralty to be distributed to the several flag-officers and commodores commanding his Majesty's squadrons at home and abroad. The letter also expressed a desire, on the part of the Lords Commissioners, that the Astronomical Society would accept their thanks for the great pains and labour which had been evidently bestowed on the important subject referred to the consideration of the Society, and for the valuable suggestions offered towards the improvement of navigation, and the general interests of astronomical science.

We may here state, that the address to his Majesty, noticed in our last report, was presented to the King at the levee on Wednesday, by Mr. Davies Gilbert.

LITERARY AND LEARNED.
ROYAL SOCIETY.

HIS Royal Highness the Duke of Sussex in the chair. A mathematical paper, by Mr. Lubbock, was read. After a number of donations were announced, his royal highness intimated that it was his intention to invite the foreign ministers to the Society's meeting-room; and, in order that they, as well as any foreigners distinguished by rank or science, who might accompany them, should be properly accommodated, his royal highness suggested, that the bench next the foreign secretary be appropriated to their use on the occasion. By such a friendly intercourse, the great objects for which the Royal Society was instituted would be materially advanced. The intimation was very cordially received. The royal duke appeared to be in excellent health.

At a meeting of the council, held on Thursday, his royal highness was pleased to nominate Davies Gilbert, Esq., Sir Astley Cooper, Bart., J. W. Lubbock, Esq., Wm. Cavendish, Esq., John Pond, Esq., and George Rennie, Esq., as his vice-presidents. The appointments are severally engrossed on stamped paper, and signed by his royal highness in a fine bold rubric character.

SOCIETY OF ANTIQUARIES.

THURSDAY, Hudson Gurney, V.P., in the chair.—The Secretary concluded the reading

of Mr. Amyot's reply to Mr. Tytler's observations respecting the death of Richard II.; and mentioned several circumstances in confirmation of his position, that Richard died in the first year of the reign of Henry IV., and that the Scotch were deceived in the man who personated the deceased king of England, and who lived for years in Scotland, and was buried at Stirling. He noticed the exposure of King Richard's corpse in London, and that Froisart, among other ancient authors, states that his body was seen at St. Paul's by more than 20,000 people—that the Londoners well knew Richard's person—and many must have detected the imposture, if (as had been asserted) the body of any other person had been shewn as that of the king. Mr. Amyot also noticed the marriage of King Richard's widow previous to the death of his representative in Scotland, as an evidence that she must have been convinced of his death having occurred twelve years previous to the Scotch account.

Sydney Smirke, Esq., exhibited to the Society a drawing of the mausoleum of the Gothic king Theodoric, at Ravenna, with a drawing of part of the frieze, from the pattern of which, Mr. S. considered that the zig-zag moulding of the Saxon architecture might have been derived; and also a drawing of an ideal restoration of the building as it stood in the sixth century. A short descriptive paper was read, in which it was stated that the dome was thirty-six feet in diameter, and formed of a single stone; and Mr. Smirke considered, that the want of knowledge to construct a dome of several stones in a concentric form, must have induced the herculean task of hollowing out an immense mass of stone, and working on the other side a regular convex shape.

FINE ARTS.

NEW PUBLICATIONS.

Extraordinary Steeple-Chase for a Thousand Sovereigns; between Mr. Osbaldistone's "Clasher" and Captain Ross's "Clinker." Engraved by Messrs. Alken and Duncan, from a painting by E. Gill. Ackermann.

Of the various modes which have been invented for the torture of that noble animal, the horse, the steeple-chase is among the most barbarous. In a recent account of one of these scandalous exhibitions of cruelty, it was stated that one of the gallant creatures who are thus tasked beyond their strength, was killed in the field, and that another died on the next morning! Who that has common feeling can read such details without disgust and indignation? The only consoling consideration is, that the riders frequently break their own ribs, legs, and collar-bones. As a striking illustration of the inhumanity of this "sport," the print under our notice is highly meritorious.

The Costumes of the French Pyrenees. Drawn on stone by J. D. Harding, from Original Sketches by J. Johnson, Esq. Part II. Carpenter and Son.

Highly picturesque; those of the "Peasants of the Valley of Ossau" especially. The backgrounds are rendered peculiarly interesting by being local views.

Penmanship.—We have seen two specimens of ornamental penmanship, by Mr. J. P. Hemm, surrounding portraits, in stipple, of their Royal Highnesses the Dukes of Sussex and Gloucester. Of Mr. Hemm's "Original Penmanship," we spoke favourably in its appearance; and the works to which we now allude, confirm the

opinion we then expressed of his taste and talent. They are about to be published by Mr. Harding.

DRAMA.

COVENT GARDEN.

MISS KEMBLE is certainly the most unfortunate of fortunate persons. Her extraordinary success was not dreamed of even by her most sanguine friends and admirers. She restored the fortunes of the theatre, and laid the foundation of her own; and now, in the very blossom of her reputation, comes "a chilling blight," as unexpected as her success, but not, like that, deserved. During the whole of her career, we have written but two notices, of any length, upon her performances, because we felt that the observations made upon one would nearly apply to all. In all, the same genius was apparent,—in all, the same defects. The latter, both natural and acquired, have been confirmed, instead of removed, by practice; and the misfortune of the case is this,—that the few existing characters most adapted for the display of Miss Kemble's peculiar style and powers, are either unsuitable to her age and figure, or so worthless and disagreeable in themselves, as to make us lament the waste of such talent upon them. We remarked, some time ago, the exceeding poverty of our stage in tragedies possessing important female characters. Our prince of poets has furnished us with but two or three of any consequence, while of heroes he is profuse. *Cordelia* and *Desdemona*, beautiful as they are, are secondary personages by the side of *Lear* and *Othello*. Few actresses who can look and play *Juliet*, are also fitting representatives of *Lady Macbeth* and *Constance*; and when we bid adieu to Shakespeare, where are we to seek for tragedies which, in these days, will be popular? *Venice Preserved* is the first met with in our rapid descent to mediocrity. The *Gamster* ranks next, perchance, in public estimation; and, with less reason, the play of the *Stranger*; Southern's *Isabella* then "drags its slow length along;" and down we sink at once into the very dregs of Melpomene's chalice.—the *Grecian Daughter* of Murphy, and the *Jane Shore* and *Fair Penitent* of the ridiculously over-rated Rowe! Now, with the exception of *Romeo and Juliet* (and Mr. C. Kemble's exquisite *Mercutio* must also be taken into consideration, when accounting for the attraction, last season, of that tragedy), the plays in which Miss Kemble has, in our opinion, most distinguished herself, are, unfortunately, precisely those which we cannot honestly wish to see attractive on the London stage in the nineteenth century; and if any one will take the trouble to refer to the bills, they will also perceive that the plays in which Miss Kemble has succeeded, have been attractive, as nearly as possible, in proportion to their merits as plays, and not according to the success of her own individual exertions. We believe the account stands thus:—

Romeo and Juliet has been performed	39 nights.
Venice Preserved	24
Gamster	19
Isabella	13
Grecian Daughter	10
Stranger, produced this season and still in its run	8

The *Fair Penitent*, the revival of which has called for these remarks, has now been played three times; and considering, as we do, that *Calista* is decidedly the best of Miss Kemble's performances, we repeat that she is the most unfortunate of fortunate persons. The public will not pay to see dull and

disagreeable plays, because one character is finely performed; and who are to write new tragedies for this fastidious generation? *Two, Virginus* and *Rienzi*,* have succeeded greatly and deservedly, in about ten or a dozen years, and the former alone is likely to keep possession of the stage. What would become of the *Fair Penitent* or the *Grecian Daughter*, were they now to be written and produced? and yet our fathers not only tolerated, but admired them; the greatest of actresses deigned to perform in them; and "next to Shakespeare's" is placed "the honoured bust" of the perpetrator of the former! Yet we are daily told of the dullness and imbecility of modern dramatists. Pshaw! We are sick of the cant. There is more true poetry and dramatic spirit now stirring than has been ever known in England since the days of Shakespeare; and it is the refinement, not the degeneracy, of the times that makes success almost impossible, and, consequently, scares from the attempt not only those who have reputations to gain, but those who have already obtained them. Here, then, is the dilemma in which Miss Kemble is placed. The only new play that has been written for her has failed miserably; and the meagre list of "opening parts," as they are technically termed, she has nearly exhausted. We trust some competent hand will hasten to our aid, and save us from the infliction of *Jane Shore*, *Tancred and Sigismunda*, the *Mourning Bride*, the *Orphan*, and the rest of that whining, rhyming, ranting, ragged regiment.—To return to the *Fair Penitent*. Miss Kemble's *Calista* is a most powerful performance, and bears the stamp of genius upon it far more strongly than any of her previous personations. We have all along felt that her strength was in the storm and the volcano, and in the still more terrible calm and hush that precedes them. The finest and most original points of her *Juliet* are, as we have before pointed out to our readers, the icy coldness of her replies to *Paris* when she meets him in the *Friar's* cell; her scorn and indignation, when counselled by the *Nurse* to forsake *Romeo*; her anticipation of the horrors of the vault; and her management of the final catastrophe. In *Belvidera*, we shall long remember her rush from the stage after her last parting with *Jaffier*: and in *Euphrasia*, her taunts of *Dionysius*, though a little deficient in dignity, still ring in our ears. The part of *Calista* abounds in similar passages; and perhaps nothing was ever given with more truth and force than the lines in which she anticipates the strictures of the "rigidly righteous" on her conduct. The monotonous recitation which disfigures all her tenderness and sorrow is broken through in an instant, when the bitterness of a wounded spirit, or the despair of a rending heart, awakes the sleeping spark within her. Her eyes flash lightnings; her lips seem to shrink, and disclose the clenched and grinding teeth, and her bosom "swells with its freight, for 'tis of aspics' tongues." Her by-play, too, is excellent; she is always in the scene. But then her supporters! Mr. Parry has sadly disappointed us. His *Altamont* is poor indeed. Abbott cannot reconcile us to the heartless *Lothario*; and the talent of C. Kemble is wasted upon the prosing, drivelling *Horatio*. We know of no greater compliment to the genius of Miss Kem-

* The five-act melo dramas of *Bertram* and *Britus*, made by Kean, and expiring with him, are scarcely worth mentioning; but, as they brought money for the time, we may take them into account, as well as Coleridge's *Remorse*, Procter's *Mirandola*, Shiel's tragedies (for which Miss O'Neil accomplished what Kean did for those we have named), and the productions of Miss Mitford.

ble, than the sufferance of this tragedy. That it should be repeated twice vouches far more for her ability than the forty nights' run of *Romeo and Juliet*.

On Tuesday evening Miss Inverarity made her appearance in *Cinderella*, to a bumper house, and with most complete success. It is a triumph of which she may well be proud, for it places her at once at the head of her profession. We trust she will be able to maintain the giddy elevation—and we have great hopes that she will; for, through all the embarrassment of a first appearance on the stage—on such a stage, and in such a character—there were gleams of intelligence which gratified us more by the promise than the mere mechanical ability she exhibited, great and original as we are happy to acknowledge it. Her voice is of a most delicious quality, and her style unexceptionable: she is fair, tall, and her smile is particularly engaging. As an actress, she has, of course, every thing to learn that can be learned; but, fortunately, she possesses that first grand qualification, which no teaching can bestow, and without which all teaching is in vain. We understand, also, that she is yet in her eighteenth year! increasing power, therefore, may be confidently calculated upon—and opera “looks up,” as they say in the city. Mr. Wilson relieved us from some previous apprehensions into which we had lately fallen respecting him: we are most happy to say, that his performance on Tuesday fully justified our first favourable impressions respecting him. He was loudly applauded throughout; as, indeed, was the whole opera, most deservedly. We should mention that Miss Rarity, as we may justly abbreviate her inconvenient name, was rapturously *encored* in the great trial song, which forms the finale, and which, after singing through three long acts, is no trifling exertion, taking the lungs alone into consideration. The opera was announced for repetition on Friday, amidst thunders of applause. We cannot dismiss this subject without noticing the singular fact, that to Covent Garden we are indebted for nearly all the most popular performers of late years. Miss Stephens, Miss Tree, Miss Paton, Miss Love, Mr. Wood, Mr. Sinclair, amongst the vocals; Miss O’Neil, Miss Kemble, Mr. Young, Mr. Macready, Farren, Liston, Jones, amongst the comedians, have all emanated from, or acquired their reputation on, the boards of Covent Garden. Kean and Madame Vestris are the two principal stars that have arisen in the other hemisphere.

DRURY LANE.

By right of custom, and we believe of rank, Drury Lane stands in all columns before Covent Garden; but the *Fair Penitent* and *Cinderella* having the start by time, and demanding so much notice, we are compelled to restrict our account of *Werner*, this week, to the mere fact of its having greatly and justly succeeded, not more from its own intrinsic merits than the admirable acting of Macready, Wallack, and Cooper. We have seldom seen three characters so perfectly conceived and executed in one play. We hail the addition of *Werner* to our poor stock of tragedies, and feel ourselves doubly indebted to Macready, by whose judicious and unpresuming adaptation, we are enabled to place the name of Byron on the roll of modern dramatists, and in the rank, too, such a name should occupy, next to the only English poet who surpasses him in fame,—a station which has too long been claimed for Rowe, by those who ought to have known better.

VARIETIES.

Paper from Wood.—A Mr. Brad, in Upper Provence, has succeeded in producing a good sort of grayish paper, fit for writing upon, or for conversion into a light and serviceable pasteboard, from the fibrous parts of rotten pine wood.

Reform.—A rusty shield addressed the sun, and cried, “O, sun! enlighten me!” To which the sun returned—“O, shield! be- cleanse thyself!”

A new Sect.—A new religious society has been formed at Paris, under the title of “the Society of Saint Simon;” the professed object of which appears to be the extermination of bigotry and superstition, and the establishment of “peace on earth and good-will towards men.” The meetings of the society are held at the Hall Taitbout, and are attended by crowded and brilliant audiences. It having been stated that Madame Malibran was one of the preachers of the society, that lady has addressed a letter to several of the Parisian journals, denying the truth of the assertion.

La Bibliothèque du Roi.—The sub-librarians of the King’s Library at Paris have published, in the *Moniteur*, a complaint of the insufficiency of their salaries, especially as compared with the emoluments enjoyed by the keepers, and other superior officers of that establishment.

Mr. Pentland’s Researches in Bolivia.—M. Arago laid before the Academy of Sciences, on the 12th of July last, the geographical labours of Mr. Pentland in the republic of Bolivia. The author, who has carried on his observations at considerable heights, carefully noted the variations of the chronometer on the mountains, dependent upon the diminution of atmospheric pressure. This important fact had been previously neglected, and the observations of Mr. Pentland will consequently cause an alteration in the position given to all the places where he has been.

Benjamin Constant.—The Paris papers of last week announce the death of the celebrated Benjamin Constant. He was a fine German scholar, and contributed much to introduce the philosophy of Germany into France. We observe, by another paragraph, that the government has decreed the Pantheon to be re-opened for the reception of the ashes of great men, and that M. Constant is to be interred there;—forming, to begin with, an exception to the general rule, that ten years must elapse after the death of the individuals, to enable posterity to judge of the validity of their claim to this national honour.

Population of Poland.—At the beginning of 1829, the kingdom of Poland (i. e. the Russian province so called, of which Warsaw is the metropolis) contained 4,088,289 souls, exclusive of the army. The increase since the year 1825 had therefore been 383,983. The Jewish portion of the inhabitants had been almost universally located in distinct quarters; they amounted to 384,263 individuals. The extent of property insured in the Warsaw Assurance Office was 420,000,000 guildens (33,250,000) in value. Warsaw itself possesses a population of 136,564 souls, independently of a garrison of about 15,000 men; and of this population 30,146 are of the Israelitish faith.

Ancient Pike.—In the year 1497, a pike was caught in standing water, at Heilbronn on the Neckar, which had a copper ring round its head; the ring bore the following inscription in Greek:—“I am the first fish that was launched into this pond, and was thrown in by

Frederic the Second, emperor of the Romans, on the fifth of October, 1230.” It appeared, therefore, that the pike was two hundred and sixty-seven years old when thus caught; it weighed three hundred and fifty pounds; and an exact representation of it exists to this day against one of the gates of Heilbronn.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. 11. Dec. 18.]
The third volume of Colonel Napier’s History of the Peninsular War.—The History and Antiquities of Somersetshire, by the Rev. W. Phelps, A. B., vicar of Meare, and author of “*Calendarium Botanicum*.”—A series of Views in the Mauritius, on stone, by William Rider, from original Drawings by T. Bradshaw, Esq.; with a Memoir of the Island, and Letter-press Descriptions of each View.—A narrative entitled *An Only Son*, by the Author of “*My Early Days*.”

LIST OF NEW BOOKS.

Loudon’s Gardener’s Magazine, Vol. VI. 8vo. 11. 1s. 6d. bds.—Key to Butler’s Latin Praxis, 8vo. 6s. bds.—Hawthorn on Ventilation, 12mo. 2s. 6d. bds.—Trial of the Unitarians, post 8vo. 4s. bds.—Nicolaus’s Observations on Historical Literature, 8vo. 7s. 6d. bds.; Household Book of Elizabeth of York, 8vo. 11. 1s. bds.—Betham’s Dignities, Feudal and Parliamentary, &c., Vol. 1. 8vo. 15s. bds.—Romance of History, France, 3 vols. post 8vo. 11. 11s. 6d. bds.—Margate, a Poem, with Cruikshank’s designs, 12mo. 1s. 6d. sewed.—Becker’s German Grammar, 8vo. 1s. 6d. bds.—Mundy’s Life of Admiral Rodney, 2 vols. 8vo. 11. 4s. bds.—Green’s British Merchant’s Assistant, royal 8vo. 11. 11s. 6d. bds.—A Visit to the Zoological Gardens, 12mo. 3s. 6d. sewed.—Hansard’s Parliamentary Debates, Vol. XXV. royal 8vo. 11. 10s. bds.; 11. 13s. 6d. hf. bd.—Hood’s Comic Annual for 1831, 12s. hf. bd. morocco.—The Emperor’s Court, 12mo. 2s. 6d. sewed.—Anecdotes of Napoleon, 3 vols. 18mo. 9s. bds.—Tempest, Gallery of Shakspeare, 12mo. 2s. sewed.—Campbell’s Lays from the East, fcp. 6s. bds.—Logan’s Scottish Gaelic, 2 vols. demy 8vo. 11. 10s. bds.; royal 8vo. 2l. 2s. bds.

METEOROLOGICAL JOURNAL, 1830.

December.	Thermometer.		Barometer.	
Thursday . . . 9	From 40.	to 49.	28.94	to 29.90
Friday . . . 10	— 38.	— 42.	28.96	— 29.16
Saturday . . . 11	— 30.	— 40.	29.18	— 29.25
Sunday . . . 12	— 26.	— 39.	29.31	— 29.63
Monday . . . 13	— 26.	— 35.	30.06	— 30.14
Tuesday . . . 14	— 22.	— 41.	30.29	— 30.22
Wednesday 15	— 28.	— 39.	30.36	— 30.38

Wind variable, N.W. prevailing. Alternately clear and cloudy, rain at times; some snow about an hour before noon of the 12th. Rain fallen, 575 of an inch.

Aurora Borealis.—Except that of the 15th, every evening since Friday the northern parts of our horizon have been more or less illumined by the aurora borealis: from midnight of the 11th, till about three in the morning of the 12th, the continued flashing of the immense body of light, which extended over an arc of about 70°, was peculiarly interesting; the coruscations, however, were neither so strong nor so numerous as during the night of the 12th; at times, as many as fifteen were together visible, rolling from the E. by N. to about the same distance westward of the north, and darting in a direction nearly perpendicular to the horizon, to a height of about 40°; though perfectly calm at the time, none of that crackling noise which frequently attends this phenomenon, could be heard. From one till four in the morning of the 14th, the generalised light which covers every part of the visible hemisphere was not inferior to the light reflected from our moon when at her quadrature.

Edmonton. CHARLES H. ADAMS.

TO CORRESPONDENTS.

The point of the concluding line, that *Adam* and *Eve* were the first who “*Mac-Admised* the globe,” is very fair; but the rest of the poem will not bear printing.

Our effort to do ample justice this week to Hood’s comicities compels us to postpone many favours, as well as Reviews of new works, conclusions, &c. We regret also to defer our account of Colonel Blom’s Transportable Houses; but as it is illustrated by a wood-engraving, we found it too inconvenient to have it upon this sheet.

In answer to the queries put to us by a correspondent, we have to say, that the siphon is new to the public in its improved state and compass. The principles of the instrument are similar to the German æolium, but may be traced back to the Chinese organ, which has been long known in this country, and consists of a small circle of reeds, with tongues, which vibrate in an aperture when the reeds are blown into with the mouth. The novelty of the present instrument is the mode of application of these tongues or springs, in such a form as to admit of a great increase of power, and an extended compass of six octaves, from double F upwards. Several have been imported, and attempts made here on the organ principle, like the above, with from three to four octaves; but none have come near it in the qualities above described.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL-MALL. Notice to Exhibitors. All Pictures and Works of Art intended for Exhibition and Sale at this Place must be sent to the Gallery on Monday the 10th, and Tuesday the 11th of January next, between the hours of Ten in the morning and Five in the afternoon, after which time no Picture or other Work of Art can be received.

Portraits and Drawings in Water Colours are inadmissible. N.B. No Picture will be received for Sale that is not bona fide the property of the Artist.

WILLIAM BARNARD, Keeper.

Dr. Warton.—This day is published, a fine PORTRAIT OF DR. WARTON, Head Master of Winchester College, from the original Drawing by Sir Nathaniel Houlston, Bart. The Print is engraved by E. C. Lewis, and will soon become very scarce and valuable, as only a limited number of Proofs will be published. Price One Pound.

Published by R. Ackermann, Junr. 191, Regent Street; T. Butler, Oxford; and Messrs. Johnson and Wheeler, Winchester. This inimitable likeness of Dr. Warton has been universally admired, but none of the friends of Sir Nathaniel could prevail upon him to allow an engraving to be made from this or any of his portraits in his lifetime.

Just published, to be completed in Ten Monthly Parts, price 10s. each.

NUMBERS 1, 2, 3, 4, 5, 6, of a SERIES of PLATES, Illustrations of Travels in Arabia Petraea. By Messrs. DE LA BORDÈRE and LIGNANT.

(The latter travelling for the African Society of London). "Palmyra, the Hauran, and all the Antiquities of Egypt, have been visited and described in works of more or less celebrity. The antiquities of a country so celebrated in ancient history, remains unknown, and in vain have several intrepid travellers succeeded in detailing their importance. They have only been able to convey to us imperfect descriptions, unaccompanied by any representation of the parts explored. Messrs. Leon la Borde and Lignant, not less courageous, but more fortunate than their predecessors, having penetrated into that country, sojourned there in the midst of its ruins, and gathered for their materials sufficient to make us acquainted with them.

"The novelty and importance of the discoveries are not the sole merits of this work. The most careful attention has been paid to its execution, and with not an exception one of the most remarkable descriptions and representations of pictures, que scenery ever offered to the literary and scientific world."—Extract of a Report of the Institute of France.

Sold by Colnaghi, Son, and Co. Print-sellers to their Majesties, Pall Mall East; Molteni and Graves, Pall Mall; M. H. Colnaghi, Cockspur Street; and Hodgkin, Bond Street.

For the Drawing-Room Table, &c. This day is published, price 3s. half-morocco, or 2s. 6s. superbly bound in morocco.

WESTALL'S GREAT BRITAIN ILLUSTRATED, containing 119 beautiful Views in various Parts of the United Kingdom. This splendid quarto volume has just been completed at an enormous expense; but with the expectation of a very extensive sale, it is offered to the Public at a price little above what is usually charged for a blank Album of the same size and style of Binding. Charles Tilt, 20, Fleet Street.

WILLIAM SAMS, Bookseller to His Majesty, St. James's Street, respectfully informs the Nobility and Gentry, that he has for disposal Private Boxes, by the Night or Season, at Drury Lane, Covent Garden, and Adelphi Theatres, in the best and most commodious manner. The Terms of Subscription to the Library—the Year, 5s. 6s.; Half-year, 3s. 6s.; Quæ rier, 1s. 6s. All the New Publications as soon as printed.

MUSIC.

VENETIAN AIR; a brilliant Rondo for the Piano-forte. By J. B. CRAMER, 3s. German Bacchanalian Song; a brilliant Rondo for ditto, by J. Moscheles, 3s. Tyrolese Air, with Variations for ditto, by J. N. Hummel, 3s. Ditto, for T wo Performers, by ditto, 4s. Serenade for the Piano-forte, on the favourite Air "The Moorish Maid," by Henry Chalon, 2s.

My Fandert, my Fairest, sung by Madam Malibran. Composed by Hummel, the Words by G. Linley, Esq. 2s. O, I remem her well; Ballad. Words by T. H. Bayly, Esq. Composed by Horn, 2s. Yes, by the Waterfall. Words by W. H. Bellamy, Esq. Composed by T. Cooke, 2s. Then is the Hour. Ballad, by J. Blochley, Author of "Love not," 2s. The Gondolier's Song. Composed by Miss Cooke, 2s. Cramer, Addison, and Beale, 201, Regent Street.

BOOKS PUBLISHED THIS DAY.

3 vols. foolscap 8vo. 10s. PRACTICAL LECTURES ON THE HISTORICAL BOOKS OF THE OLD TESTAMENT. By the Rev. HENRY LINDSAY, M.A. Perpetual Curate of Wimbledon, Surrey. John Murray, Albemarle Street.

Price 3s. 6d. boards. A POPULAR AND IMPARTIAL ESTIMATE OF THE PRESENT VALUE OF VACCINATION, as a Security against Small Pox, and of the Danger of Encouraging or Tolerating the Inoculation of the latter. Addressed to Parents and the Public.

By SAMUEL PLUMBE, M.R.C.S. Senior Surgeon to the Royal Metropolitan Infirmary for Children, &c. &c. Printed for T. Cadell, Strand, London; and William Blackwood, Edinburgh.

- Of whom may be had, by the same Author, 1. A Practical Essay on Ringworm of the Scalp, Scalled Head, and the other Species of Porrigo. 8vo. price 3s. 6d. boards. 2. A Practical Treatise on the Diseases of the Skin. 8vo. with Two coloured Engravings, price 15s. boards. Mr. Plumbe has removed to No. 7, Bedford Place.

8vo. 12s. 3d edition of ELEMENTS OF RHETORIC; comprising the Substance of the Article in the Encyclopædia Metropolitana, with Additions. By RICHARD WHATELY, D.D. Principal of St. Alban's Hall, and late Fellow of Oriel College, Oxford. John Murray, Albemarle Street, London; and J. Parker, Oxford.

3d edition, foolscap 8vo. 5s. 6d. EASTERN SKETCHES, in Verse. By HENRY GALLY KNIGHT, Esq. John Murray, Albemarle Street.

8vo. 9s. 6d. TWO ESSAYS ON THE GEOGRAPHY OF ANCIENT ASIA, intended partly to illustrate the Campaigns of Alexander, and the Anabasis of Xenophon. By the Rev. JOHN WILLIAMS, Vicar of Lamparter, and Rector of the Edinburgh Academy. John Murray, Albemarle Street.

8vo. 6s. 6d. MEMOIR OF THE LIFE OF HENRY FRANCIS DAGUESSEAU, Chancellor of France; and of his Ordinances for Consuetudine and Amending certain Portions of the French Law. And an Historical and Literary Account of the Roman and Canon Law. By CHARLES BITTLER, Esq. John Murray, Albemarle Street.

In 3 vols. the 4th edition of LACONICS; or, the Best Words of the Best Authors, with the Authorities given. "There is a world of wit and wisdom in these three little volumes."—Literary Gazette. "An excellent companion for the breakfast and drawing rooms."—Gentleman's Magazine. B. W. Sustenance, 109, Piccadilly.

In 12mo. price 9s. in boards. A MANUAL OF THE RUDIMENTS OF THEOLOGY, containing an Abridgment of Bishop Tomline's Elements, an Analysis of Paley's Evidences, a Summary of Bishop Pearson on the Creed, and a Brief Exposition of the Thirty-nine Articles, chiefly from Bishop Burnet, together with other Miscellaneous Matters connected with Jewish Rites and Ceremonies, &c. &c. By the Rev. J. B. SMITH, Of Christ College, Cambridge; Rector of Sotby, Perpetual Curate of Bambrug, and Head Master of Horncastle Grammar School. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Slavery as it now exists in the West India Colonies. In two vols. with numerous Views. 8vo. 7s. 8s. 9s.

FOUR YEARS IN THE WEST INDIES, in 1836, 7, 8, 9. "Our best thanks are due to the author of this interesting volume for the very able and impartial manner in which he has performed his task."—Fraser's Magazine. "A very interesting and useful volume, containing a chronology of the Antilles, which is not to be met with elsewhere."—Sundel. "Our author is a man of sense; his anecdotes are fresh and amusing, and his 'business' details such as cannot fail to supply much valuable information to those interested in West India property, as well as to those who are pledged to advance the great cause of humanity, the abolition of negro slavery."—British Magazine. London: William Kidd, 6, Old Bond Street.

8vo. 6s. 6d. THE LIFE AND SERVICES OF CAPTAIN PHILIP BEAVER, R.N. late of H.M.S. Nisus. By Captain W. H. SMYTH, R.N. K.N.S.F. F.R.S. and F.S.A. "There is much in the volume which will be interesting to the general reader, and a professional student may derive from it a personal many valuable hints for his conduct."—Ho. Mag. Review. "The volume before us deserves the honour of ranking with the lately published Memoir of Lord Collingwood, between whose character and that of Captain Beaver there exist some points of similitude. We predict that it will become popular, and we trust that it is the harbinger to other works of the same kind from the same pen."—United Service Journal. See also the Quarterly Review, No. LXXXII. John Murray, Albemarle Street.

In 3 vols. post 8vo. price 11s. 6d. THE SEA KINGS IN ENGLAND; an Historical Romance of the Time of Alfred. By the Author of the "Fall of Nineveh." Printed for Robert Cadell, Edinburgh; and Whittaker and Co. London. Who have very nearly ready, Tales of a Grandfather; being Stories taken from the History of France. By Sir Walter Scott, Bart. 3 small vols. uniform with Tales from Scottish History.

Entertaining Voyages and Travels. ROUGH NOTES, taken during some rapid Journeys across the Pampas and among the Andes. By Capt. F. BOND HEAD. Third edition, in post 8vo. 9s. 6d.

2. Forest Scenes and Incidents in the Wilds of North America. By George Head, Esq. Post 8vo. 8s. 6d. "We have been led to talk of Robinson Crusoe by the narrative of Mr. Head, who is a sort of Robinson Crusoe in his way. We have perused his work with considerable pleasure."—Westminster Review. "The 'Rough Notes' of Captain Head on his gallop across North America, are not more unlike ordinary travels than this winter's journey in British America, and a summer residence in the woods there. The whole book is written in a lively and agreeable spirit."—Quarterly Review.

3. Life and Adventures of Giovanni Finati, Native of Ferrara, who, under the Name of Mahomet, made the Campaign against the Wahabees, for the Recovery of Mecca and Medina; and since acted as Interpreter to European Travellers in some of the Parts best visited of Asia and Africa. Translated from the Italian, as dictated by himself, and edited by Wm. John Bankes, Esq. 8 vols. foolscap 8vo. 15s. "It is long since we have met with so eventful and interesting a narrative."—Literary Gazette. "The unpretending record of the observations of a man of plain sense, whose singular fortune it has been to have seen more of many countries than perhaps any other living person. There must be strange adventures in such a life, and the present narrative is proportionally full of interest."—Athenæum.

4. Captain Parry's First, Second, Third, and Fourth Voyages. A new edition, beautifully printed in Six Pocket Volumes. With Plates by Finden. 24s. "The object of this Work is to present the public with a cheap but elegant edition of the accounts of the great discoveries made in consequence of the Voyages and Travels which have of late years been undertaken, chiefly under the direction of the British Government.

5. The interesting Narrative of Capt. Franklin's Privations and Sufferings during his Voyages to the Polar Sea. Beautifully printed in Four Pocket Volumes, similar to those of Captain Parry's Voyages, and illustrated with Portraits of Captain Franklin, Captain Back, Dr. Richardson, Lieutenant Hood, &c. 8 vols. foolscap 8vo. 15s. "Printed, for the first time, uniformly with the small edition of Parry's and Franklin's Voyages and Discoveries.

6. The Travels and Discoveries in Northern and Central Africa. By the late Lieut.-Col. Denham, Captain Clapperton, and Doctor Oudney. A 4th edition, with numerous Plates on Steel, in 3 pocket vols. 12s. "Printed, for the first time, uniformly with the small edition of Parry's and Franklin's Voyages and Discoveries.

7. Travels of Bruce. Edited by Major F. B. Head. 18mo. 5s.

8. Six Months in the West Indies. 2d edit. with Additions. Post 8vo. 9s. 6d.

9. A Narrative of a Journey through the Upper Provinces of Calcutta. By the Right Rev. Reginald Heber, late Lord Bishop of Calcutta. A 4th edition, 3 vols. 8vo. 11s. 6d.

10. Narrative of a Journey from Calcutta to Europe, by way of Egypt, in the Years 1827 and 28. By Mrs. Charles Lushington. 2d edition, post 8vo. 8s. 6d. "We have no hesitation in recommending Mrs. Lushington's Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of approbation."—Oriental Herald. John Murray, Albemarle Street.

Mr. Theodore Hook's New Work, &c. MAXWELL. By the Author of "Sayings and Doings." In 3 vols.

Field Sports of the North. By L. Lloyd, Esq. 2d edition, in 2 vols. 8vo. with great Additions, and several new Plates.

Stories of American Life. Edited by Mary Russell Mitford. In 2 vols. post 8vo.

The History of Modern Greece, from its Conquest by the Romans, B.C. 146, to the present time. By James Emerson, Esq. of Trinity College, Dublin. In 2 vols. 8vo.

The Persian Adventurer, forming a Sequel to the Kuzlibash. By J. B. Frazer, Esq. In 3 vols. post 8vo.

The Life of Titian, with Anecdotes of the Distinguished Persons of his Time. By James Northcote, Esq. R.A. In 2 vols. 8vo. with a fine Portrait of Titian.

The Heiress of Bruges, a Tale, by T. Colley Grattan, Esq. Author of "Highways and Byways," "Travels of Travel," &c. A new and cheap edition, in 3 vols. post 8vo.

"A story of the most absorbing interest."—Globe. Henry Colburn and Richard Bentley, New Burlington Street.

The National Library, No. 17. Beautifully printed in small 8vo. with Plates, price 5s.

THE HISTORY OF CHIVALRY. By G. P. R. JAMES, Esq. Author of "De L'Orme," "Darnley," "Richelieu," &c. Forming the Fourth Number of the National Library.

Works on Natural History.

PRINCIPLES of GEOLOGY;

being an Attempt to explain the former Changes in the Earth's Surface, by reference to Causes now in operation. 8vo. Illustrated with numerous Woodcuts. Plans, &c. Vol. I. 12s.

By CHARLES LYELL, F.R.S., Foreign Secretary of the Geological Society. "It is very interesting and amusing, and should be read by every one who takes an interest in this rising branch of natural history."—*Journal of Philosophical Journal*.

"It is a work of no ordinary mind. It bears deeply stamped upon it the impress of talent, knowledge, and research; and independent of the interesting and important nature of the subject, the depth and general justness of the author's views come recommended to us by the perspicuous and elegant language in which they are clothed. We cannot conclude this notice of the volume without strongly recommending it."—*Edinburgh*.

2. The Journal of a Naturalist. 3d edition, foot-strap 8vo., with numerous Additions and Improvements, Plates and Woodcuts. 12s.

Plants, trees, and stones, we note, Birds, insects, beast, & many rural things.

"The author of the charming volume before us has produced one of the most interesting books we remember to have seen for a long time."—*New Monthly Magazine*, June 1829.

"The success of this interesting book, which has now reached a third edition, is a tolerable pledge of its merits. No one can have looked through its simple and unassuming pages without pleasurable feelings."—*Antiq. Journal*, Sept. 1825.

3. Consolations in Travel; or, the last Days of a Philosopher. By Sir Humphry Davy, late President of the Royal Society. In 1 vol. Printed uniformly with "Zalmoxis." 6s., a new edition.

"We have been greatly delighted with this work."—*Monthly Review*.

"The work is of a very superior character, elaborately written, full of most ingenious thoughts, with some passages of great beauty."—*Antiq. Journal*.

Also, by the same Author,

4. Days of Fly-Fishing, a new edition, with Plates and Woodcuts, 12s.

5. The Zoology of North America, Part I. containing the Quadrupeds. By John Richardson, M.D. Surgeon of the late Expedition under Captain Franklin. Illustrated by Twenty-eight spirited Engravings, by Thomas Landseer, 4to. price 11. 11s. 6d.

Published under the Authority and Patronage of His Majesty's Government.

6. The Zoology of North America, Part II. containing the Birds. By John Richardson, M.D. With Fifty coloured Engravings, drawn on Stone, by W. Swainson, Esq. and numerous Woodcuts. 4to. In the press.

7. The Natural History of Insects, embellished with numerous Woodcuts. Vol. I. (to be completed in two vols. 2d edition, small 8vo. 5s.)

8. Outlines of Geology; being the Substance of a Course of Lectures delivered at the Royal Institution, a new edition. By W. T. Brande, F.R.S. Post-8vo. 7s. 6d.

9. Hooker's Botanical Miscellany, Numbers I. II. III. forming Vol. I. Royal 8vo. with 75 Plates, 10s. 6d. each Number. A few Copies of Nos. I. and II. with Plates coloured, price 13s.

10. Journal of the Royal Institution, No. I. with Plates and Woodcuts, 6s. 6d. John Murray, Albemarle Street.

Works now ready.—In 3 vols.

CHARTLEY the FATALIST.

By a CONTRIBUTOR to BLACKWOOD. "The Epitome." It is in this part of the novel that the author displays his best powers. He develops a deep knowledge of human nature."—*Atlas*.

"This is a valuable novel."—*Spectator*.

2. The Way of the World, by the Author of "Do Laide."

"The Author possesses profound powers of thought."—*Times*.

FOURTH QUARTERLY REVIEW.

Contents.—I. Norman Conquest of England.—II. On Codification, and its Application to the Laws of England.—III. On Chivalry and Romance, and Italian Romantic Poetry.—IV. French Prohibitive System.—V. On the Occult Sciences of the Ancients.—VI. Modern French Tragedy.—VII. French Revolution of 1789.—VIII. Commercial Histories: Financial Reform.—IX. The Belgian Revolution. Critical Sketches: N. Stuenkel, Trauerspiel von Michael Beer. XI. Ein treuer Diener seines Herrn, Trauerspiel von F. Grillparzer. XII. Geschichte des Grafen von Montmorency von J. J. Van Dr. V. A. Haters. XIII. Theorie du Judaïsme, appliquée à la Réforme des Israélites de tous les Pays de l'Europe. Par l'Abbé L.-A. Chiarini. XIV. Paris et Londres comparées. Par A. Tissot.—LV. Tableau de la Pologne, Annoncé et M. de R. Par M. de Brun et Ch. de S. L. Lettre Sentimentale à l'Amour. D'un jeune Italien.—XVII. Kounga-Sugar of Shoa. Stralinsky. Miscellaneous Literary Notices from Denmark, France, Germany, Italy, the Netherlands, Russia, Sweden, and of Oriental Literature.—List of the Principal New Works published on the Continent, from June to September, 1843, Index to the Sixth Volume.

Published by Truttel, Wurtz, and Co., by Solo Square, and Black, Young, and Young, 1, Tavistock Street.

"This Review promises to be the best of our quarterly periodicals. The twelfth Number, which we this day announce, contains a most able article on the subject of a Review of M. Thierry's History of the Conquest of England by the Normans; an historical paper of some value. On Codification, and its Application to the Laws of England, is an able paper, in which the folly of Mr. Bentham's theory is exposed, though the author is brought forward as a side object, and thus the present opportunity more favourable, the more as our power and the object most beneficial. On Chivalry and Romance, and Italian Romantic Poetry, is an article so much in accordance with our feelings and our opinions, that we should like to quote from it largely. The article on the French Prohibitive System contains a vast mass of statistical information. The review of M. Salette's Work on the Occult Sciences of the Ancients, forms an admirable appendage to Sir Walter Scott's Letters on Demonology. Perhaps the articles on the French Revolution of 1830, and the Belgian Revolution, particularly the last, will be read with the greatest interest at the present moment. We recommend the No. to our readers, as one that will amply repay the time employed in the perusal."—*York Gazette*.

"We like the Foreign Quarterly Review. We always open it with the expectation of finding instruction conveyed in an elegant form, and we always find our expectations answered. It is a talented and a gentlemanly publication."—*Edinburgh Literary Journal*.

"This, like almost all public journals of eminence in the present day, takes every opportunity of advocating the principles of moral reform, and we are glad to see that the Review of the Channel are beginning to find out that protected trades are the worst trades going; and an excellent article on the French Prohibitive System, and another on Commercial Histories, which appear in the present Number, may be read with advantage."—*Bentham*.

"The 12th Number of the Foreign Quarterly Review maintains the high rank occupied by its predecessors. For variety of subjects, vigour of reasoning, and elegant perspicuity of style, it has scarcely any competitor; and of this review generally it can be truly affirmed, that it really is a review of the works, the names of which are prefixed, and it has been universally the case in other periodicals, a collection of essays, the subject of each of which had been suggested by the title of the book supposed to be under consideration."—*Albion*.

"From one of those admirable articles on commerce, which make this work indispensable to every liberal merchant, and actually a companion to the counting-house—which treats of the effects of a Prohibitive System in France,—we now quote what to every one in Glasgow is of vital importance, &c."—*Glasgow Free Press*.

"The Foreign Quarterly Review, just published, bears incontestable marks of being conducted by men of superior ability in every department of science, literature, commercial inquiry, and political economy, to which its interesting and valuable pages are devoted. Proofs of diligent research and calm inquiry, of liberal feeling, and of correct taste, are to be met on every page, and every candid reader of the present Number will admit that it is entitled to take rank with any similar periodical of the present day."—*Bath Herald*.

In royal 8vo. bound in cloth, 15s. Plates, &c.

TRANSACTIONS OF THE PLYMOUTH

INSTITUTION, containing Introductory Discourse, Rev. R. Lampen—Geology of the Country near Plymouth, Mr. J. Pridoux—Laws of Electrical Accumulations, Mr. W. S. Dr. Paris's Life of Sir Humphry Davy, Bart. late President of the Royal Society, &c. In 1 vol. with a fine Portrait.

The English Army in France; being the Personal Narrative of an Officer. 2d edition, in 2 vols. small 8vo. Year 1830. In 3 vols. post 8vo.

Mothers and Daughters; a Tale of the Year 1830. In 3 vols. post 8vo.
The Turf, a Satirical Novel. 2 vols.

Scenes of Life and Shades of Character. Edited by A. A. Watts, Esq. In 2 vols. post 8vo.

On the 1st of January, 1831, will be published, in 8vo.
THE ANNUAL BIOGRAPHY and OBITUARY for the Year 1831, containing Memoirs of celebrated Persons who have died in 1830-31.
Contents.—Sir Charles Vignolles—Penelope—the Right Hon. George Tierney—Sir George Montagu—His Majesty George the Fourth—Lord Redesdale—Sir Charles Brisbane—Dr. Gooden—Sir Thomas Lawrence—Bishop James—Sir Thomas Staines—Mr. Somerville—Sir Charles Morice Pole, Bart.—William Palmer, Esq.—Sir Eliah Harvey—the Right Hon. William Huskisson—Major General David Stewart—William Hazlitt, Esq.—Major Bannel, &c.
Printed for Longman, Rees, Orme, Brown, and Green.
Of whom may be had,
The preceding 14 Volumes, 15s. each.

Non Year's Gift.
TIME'S TELESCOPE for 1831 will be published next week, price 9s.
In addition to its usual contents, it will contain Memoirs of all the eminent Persons who have died within the past year; including Sir T. Lawrence, Mr. Huskisson, Mr. Hazlitt, &c. The Astronomical department, from the able pen of the Contributor to that science to the "Literary Gazette," will be found greatly improved, and of extreme interest. Many Engravings will be given, illustrating various Phenomena of the Celestial Bodies. To render the whole more attractive and suitable for a present, at this season, upwards of Fifty Vignettes, on wood, will be given, in addition to Six Engravings, on steel, from Pictures by R. Westall, R.A., J. Russell, R.A., W. Hamilton, R.A., Rubens, &c.
Published by Sherwood and Co. Paternoster Row.

Very nearly ready, in 3 small vols. half-bound, Plates, uniform with Tales from Scottish History,
TALES of a GRANDFATHER; being Stories taken from the History of France.
By Sir WALTER SCOTT, Bart.
Printed for Robert Cadell, Edinburgh; and Whittaker and Co. London.
Of whom may be had, new editions of
Tales of a Grandfather, First, Second, and Third Series; being Stories taken from Scottish History. 3 vols. 1l. 11s. 6d. half-bound.

Just published,
The Sea Kings in England, a Romance, by the Author of the "Fall of Nineveh." 3 vols. post 8vo. price 1l. 11s. 6d.

On Monday, a 2d edition of
THE LIFE of Mrs. JORDAN will be issued to the Public.
"Mr. Boden has brought into clear view much that was hidden in obscurity and falsehood. He has had the justice and candour likewise, to let Mrs. Jordan speak for herself. Her letters, which he has inserted, carry the strongest claims to attention, not only as they exhibit touchingly and eloquently the generous goodness of her own estimable heart, but as they dispel the mist of prejudice which has existed with regard to the deportment towards her of that exalted individual to whom so many links of her destiny are attached."—*Courier*.

Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 727.—AMERICAN EDITION.

SATURDAY, DECEMBER 25, 1830.

REVIEW OF NEW BOOKS.

Tales of a Grandfather; being Stories taken from the History of France. 3 vols. 12mo. Edinburgh, 1831, Cadell; London, Whitaker and Co.; Dublin, Cumming.

WE cannot imagine history assuming a more delightful form than it does in these little volumes. An immense body of information is collected, manners and customs are detailed, characters drawn, and events depicted, with that animation and truth,—that vivid colouring, in which Sir Walter Scott has no equal. Historical information is valuable to the young, not only for its intrinsic advantages, but as the best foundation for all other knowledge. It develops the reasoning faculties, by shewing the consequences of conduct, and the gradual steps of improvement; its evils are strongly marked, and therefore warning; while its examples of good are many, and put forth in the most exciting form. Sir Walter Scott has bestowed equal industry and judgment on his work; and his facts are as luminously stated, as their inferences are strikingly suggested. We grudge ourselves even the brief space allotted to these short remarks,—such a work speaks best for itself. Our task of extract is uncommonly easy (there are very few authors of whom we can say it matters little what we select); we can scarcely fail to choose some interesting anecdote, or accurate remark. The commencement of the dedication is, we think, quite beautiful in its simple and touching tone of feeling.

“*To Master John Hugh Lockhart.*”

“My dear boy,—I must no longer treat you as a child; so I now lay aside the pet appellation of Hugh Littlejohn, Esq. and address you by your name. Heaven, at whose pleasure we receive good and evil—and we are bound to receive both with thanks and gratitude—has afflicted you from infancy with a delicacy of constitution. With this misfortune there are often connected tastes and habits the most valuable any man can acquire, but which are indispensable to those who are liable, from indifferent health, to be occasionally confined to the solitude of their own apartment. The hours you now employ in reading are passed happily, and render you independent of the society of others; but will yet prove far more valuable to you in future life, since, if your studies are well directed and earnestly pursued, there is nothing to prevent your rising to be at once an ornament and a benefit to society. It is with great pleasure, my dearest boy, that your parents remark in you early attention to your book, and a marked desire to profit by what you read; nor can I, as one of the number, make a better use of a part of my leisure time than to dedicate it to your advantage, and that of your contemporaries, who, I trust, will play their parts honourably in the world, long after the generation to which your grandfather belongs has mouldered into earth.”

Clovis's Vow.—“St. Martin, of Tours, who

had been active in the general conversion of Gaul, was the principal object of his vows. He endeavoured to propitiate that saint with many promises, and particularly that of dedicating to him a favourite charger, which was perhaps the thing in the world which he loved most dearly. The King of Franks joined battle with Alaric, near Poitiers, where the usual good fortune of Clovis prevailed. He shewed his personal gallantry in the pursuit; and, attaching himself to the person of Alaric, slew him with his own lance, while at the same time he made his escape with difficulty from two desperate Gothic champions, who united to avenge their monarch's death by that of his conqueror. The risk which Clovis had eluded by his own dexterity, and the excellent qualities of his approved charger, endeared the noble animal to him, and he endeavoured to repurchase him at the price of one hundred golden pieces, from the saint to whom the good horse had been pledged by the royal vow. But he was displeased to learn that St. Martin had vindicated his property, and that the steed would not stir from his stable, till redeemed at a higher rate by his secular master. ‘An excellent friend in time of need, this St. Martin,’ said the king, somewhat fretted at the saint's tenacity, ‘but rather difficult to transact business with.’”

It is so much the custom to bring forward instances of the evil of the church's dominion in the darker ages, that we are the more willing to allow room to a picture of the times which shews the need of such authority, and also of its beneficial exertion sometimes.

Philip Augustus married “the Princess Ingerberge of Denmark, with the purpose of obtaining, as part of her fortune, the cession of the pretensions of the descendants of Canute to the throne of England, which might give him a pretence to disturb the heirs of William the Conqueror, now in possession of that kingdom. His marriage took place; but, disappointed at not succeeding in this intended purpose, or displeased with his new bride's person, and determined to annul the marriage, Philip sent the Danish princess to a convent before she had resided two days in his palace. The king's aversion to the unfortunate Ingerberge was so great, that the simplicity of the times supposed that a sense of dislike so sudden and strong could only arise from the effect of magic,—as if any magic could operate more powerfully than the caprices of a self-willed despot. With the same unjust fickleness, Philip employed some of the more subservient prelates about his court to discover cause for a divorce, which was easily found in the usual pretext of too close alliance in blood between the wedded parties. A pedigree was drawn up to favour the plea, in consequence of which, a complainant council of French bishops passed a sentence of divorce between Philip and Ingerberge, within three years after their separation. The king then proceeded to marry Agnes de Merania, daughter to the Duke of Dalmatia. The King of Denmark remonstrated at Rome,

where his complaints found favourable hearing, against the injury and insult offered to his offending daughter. The legate of the pope having taken cognisance of this important case, declared formally that the marriage with Ingerberge remained binding, and admonished the king to put away her rival, Agnes, as one with whom he could have no legal tie. As Philip remained obstinate and impenitent, the pope proceeded to lay his kingdom under an interdict, which, while it lasted, prohibited the performance of divine service of every kind, the administration of the sacraments, the reading the services for the dead, or for marriage or baptism, occasioning thereby an inexpressible confusion in the country where these divine rites were suspended, and all civil affairs, of course, interrupted. Philip, enraged at the perseverance of the pope, revenged himself on the clergy. He seized on their temporal effects, imprisoned the canons of the cathedrals, and raised heavy taxes on all classes, by which he maintained such large bodies of mercenary soldiers, as made resistance impossible on the part of his vassals. At length, finding it difficult to remain in this state of violence, Philip made a compromise with the pope, agreeing that he would become amenable to the obedience of the church, providing his holiness would condescend once more to examine the question of the divorce and marriage. A council was accordingly held at Soissons, for the re-examination of an affair that was extremely simple. Fifteen days were spent by churchmen and canonists in these subtle questions, which rather perplex than enlighten justice,—when, suddenly, a young and unknown speaker took the side of the divorced queen with such persuasive force of truth, that the churchmen conceived they heard themselves addressed by the voice of an angel. The king himself perceived his cause was indefensible, and resolved to take back the Danish princess, as if of his own accord, ere yet he should be compelled to do so by the order of the council. He therefore told the legate abruptly, that he would settle the affair with his wives in his own way. He did so accordingly, with very little ceremony, instantly riding to the convent where the discarded Ingerberge resided, taking her up behind him on the same steed, and proceeding with her in that manner to Paris, where he publicly acknowledged her for his lawful wife. Ingerberge, with the same patient obedience which distinguished her while in the cloister, returned to the world, and lived and died blameless, if not beloved. The fate of Agnes de Merania was more melancholy; she died of a broken heart, at feeling herself reduced from the rank of a royal matron to that of a concubine.”

In those days of ignorance and barbarity, superstition and iron power were concomitant evils—one needed the sway of the other.

Chivalric Lover.—“Thibault, Count of Champagne, a prince of great possessions, was renowned alike as a good knight and as an excellent troubadour, or poet, in which capacity

he had, even during the life of her husband, Louis VIII., selected as the theme of his praise, and the sovereign mistress of his affections, no other than Blanche herself. The adoration of a poet, in those times, had in it nothing that was necessarily hurtful to a lady's reputation; nevertheless, it was said the queen had expressed resentment at the liberty which the Count of Champagne had taken in fixing his affections so high, and in making his admiration so public. It is even surmised, that the severity with which the queen treated the enamoured poet, was so highly resented by him, that his mortification was the cause of his joining the confederates. But a woman of address and beauty knows well how to recover the affections of an offended lover; and if her admirer should be of a romantic and poetical temperament, he is still more easily recalled to his allegiance. It cost the queen but artfully throwing out a hint that she would be pleased to see Thibault at court, and the faithful lover was at her feet, and at her command. On two important occasions the enamoured troubadour disconcerted the plans of his political confederates like a faithful knight, in obedience to the commands of the lady of his affections. Upon one of these occasions, Count Thibault gave private intimation of a project of the malecontents to seize the person of the queen, on a journey from Orleans to Paris. Their purpose, being once known, was easily defeated, by the queen-mother throwing herself and her son into a strong fortress, till a suitable escort was collected to ensure their passage in safety to the capital. On another occasion, the king having called an assembly of his nobles to oppose Peter of Bretagne, who had appeared in open arms, the conspiring nobles agreed to bring each to the rendezvous a party of followers, in apparent obedience to the royal command, which, though it should seem but moderate in regard to each individual prince's retinue, should, when united, form a preponderating force. But this stratagem was also disconcerted by the troubadour Earl of Champagne, who, to please his royal mistress, brought a stronger attendance than all the others put together; so that, as none of the other great vassals dared to take the part of Peter of Bretagne, he was obliged to submit to the royal authority. The Count of Champagne had like to have dearly bought his compliance with the pleasure of his lady-love, instead of pursuing the line of politics of the confederates. He was attacked by the whole confederacy, who, enraged at his tergiversation, agreed to expel him from his country, and confer Champagne upon the Queen of Cyprus, who had some claim to it, as heiress of Thibault's elder brother. Blanche was so far grateful to her devoted lover, that she caused her son to march to his succour, and repel the attack on his territories. Yet she sought to gain something for the crown by this act of kindness, and therefore intimated to the count, that, to defray the expenses of the war, and compensate the claims of his niece, it would be expedient that he should sell to the young king his territories of Blois, Chartres, Chateaudun, and Sanssevre. The count murmured forth some remonstrances, in being required to part with so valuable a portion of his estates. But so soon as Blanche, with a displeased look, reproached him with his disobedience and ingratitude, he fetched a deep sigh, as he replied, 'By my faith, madam, my heart, my body, my life, my land, are all at your absolute disposal!' The crown of France acquired the territory accordingly. It does not appear that the devotions of this infatuated

lover were offensive to Queen Blanche herself, who, as a woman, might be proud of her absolute influence over a man of talents, and, as a politician, might judge it desirable to preserve that influence over a powerful nobleman, when it was maintained at the cheap price of an obliging word or glance. But some of the French courtiers grew impatient of the absurd pretensions of Thibault to the queen's favour. They instigated Robert of Artois, one of the sons of Louis VIII., who was little beyond childhood, to put an affront upon the Count of Champagne, by throwing a soft cream-cheese in his face. Enthusiasm of every kind is peculiarly sensible to ridicule. Thibault became aware that he was laughed at; and as the rank and youth of the culprit prevented the prince being the subject of revenge, the Count of Champagne retired from the court for ever, and in his feudal dominions endeavoured to find consolation in the favour of the muses, for the rigour, and perhaps the duplicity, of his royal mistress. This troubadour monarch afterwards became king of Navarre; and his extravagant devotion to beauty and poetry did not prevent his being held, in those days, a sagacious as well as accomplished sovereign."

The scenes in Louis VIII.'s crusade are very characteristic of the times. The Christians are retreating to Cairo.

"The king himself might have made his retreat in safety by water; but it was no part of his plan to desert his army. He himself quitted his own battalion, and, with Sir Geoffrey de Sergines, joined the rear division—thus continuing his countermarch as far as the town of Casel. In the latter part of his retreat, the Turks came so close upon him, that Sir Geoffrey was obliged to drive them off with strokes of the blade and point of his sword; at length the unfortunate prince was reduced to such a state, that he was obliged to lie down with his head in the lap of a female who had come from Paris: he expected every moment to die in that posture. Walter de Chatillon, with the constancy of a gallant knight, planted himself alone at the door of the house in which the king lay, attacked every infidel who passed, and put them repeatedly to flight. The king, who saw him rush to the attack alone, brandishing his sword and rising in his stirrups, exclaimed, in his hour of distress, 'Ha, Chatillon! gallant knight, where are all our good companions?' The faithful knight was at length overpowered by numbers."

The king is finally captured.

"At first, indeed, the French in their captivity were threatened with a terrific death by torture, unless they would renounce the Christian faith to ensure their personal safety. Such a proposal, under such tremendous threats, was made to the king himself. But when Saint Louis shewed by his firmness that he held such menaces in scorn, the Saracen prince sent a message in a milder tone, demanding to know what ransom the captive monarch was willing to pay, in addition to the surrender of Damietta, which was stipulated as one indispensable condition of his freedom. The king of France replied, that if a reasonable ransom was demanded, he would write to the queen, who was still enclosed within the walls of Damietta, to pay it for him and for his army. The Saracens, whose manners permitted of no admission of women to their councils, asked with surprise to what purpose the queen should be consulted in such an affair. 'Have I not reason?' answered the simple-mannered and gallant-hearted Louis; 'is she not my wife and my companion?' A second message in-

formed the captive monarch that his ransom was fixed by the sultan at a million of golden bezants—equal, says Joinville, to five hundred thousand livres. At once, and without accepting farther to chaffer upon the bargain, 'I will cheerfully give,' said Louis, 'five hundred thousand livres for the ransom of my army; and for my own, I will surrender the town of Damietta to the sultan; for my rank is too high to be valued in money.' The sultan was seized with a generous emulation. 'He is a right generous Frank,' said Touran Shah, 'who does not cheapen our first offer like a merchant or pedlar; tell him I abate my demand in one-fifth, and that four hundred thousand livres shall be a most sufficient ransom.' He also sent garments for the king's use, and seemed disposed to part with him upon liberal terms. But while Touran Shah was disposing of the fate of another, he little knew how near he approached to his own. The discontent of his body-guard of slaves, then called Haleuca, and the same which are now distinguished by the well-known name of Mamelukes, had risen to the highest. They broke out into insurrection, attacked the unfortunate Touran Shah, set fire to his pavilion, and cut that unfortunate prince to pieces. Having committed this murder, they came before the king and the French captives, with their bloody battle-axes and sabres in their hands. 'What will you give me,' said the foremost assassin, who was yet streaming with the blood of Touran Shah, 'who have slain the enemy that sought thy life?' To this Saint Louis returned no answer. The French knights confessed themselves to each other, expecting to be immediately massacred. Yet in the very flushed moment of their king's murder, and while seeming still greedy of more blood, the conspirators felt restraint from the dignified demeanour of their disarmed prisoner. They also remembered that Damietta still held a Christian garrison, which might give them trouble. Under such impressions, they shewed indeed a disposition sufficiently mischievous, yet they entered into new conditions, somewhat similar to those that had been prescribed by the murdered Touran Shah; but stipulating that the king should take an oath, binding him to renounce his baptism and his faith, with the inestimable privileges purchased by them, in case he did not comply with all the articles of the treaty. Louis constantly and magnanimously answered, 'he would rather die a good Christian, than live by taking the impious and sinful oath which they would force upon him.' The patriarch of Jerusalem, who was present at the moment, was immediately seized by the soldiers, and tied to a post, so tightly, that the blood sprung from his hands, while the old man in agony called upon the king to swear boldly whatever the infidels chose, since he would take the sin upon his own soul, rather than endure this horrid torture. But whether the oath was taken or not, Joinville declares he cannot tell. In the meantime the scene suddenly changed, as was not unnatural among such fickle and barbarous men. A mirthful sound of trumpets and kettle-drums was heard before the tent, and King Louis was presented with an invitation from the chiefs of the late conspiracy to become their sultan and sovereign, in room of the murdered Touran Shah. That such a proposal should be started, among other wild plans, by men in the condition of the Mamelukes, slaves, strangers, and foreigners, indifferent to the Mahometan religion, and impressed by the undaunted bravery of their royal captive, was not perhaps so unnatural as if it had been made elsewhere, or by

others. But it does not seem to have been generally embraced, or seriously insisted on. On the contrary, some of the leading emirs were of opinion, that, to atone for the treasonable slaughter of Touran Shah, a good Mahometan, by their hands, it was their duty to put to death Saint Louis and his followers, the mortal enemies of Mahomet and his religion. At length, however, the proposition for mercy prevailed, and a treaty for ransom was carried into execution."

Vow of an English Knight.—"Lord Audley came forward, and besought a boon of the Prince of Wales. 'My lord,' he said, 'I have been the true servant of your father, and of your house; and out of respect for both, I have taken a vow, long since, that when I should be in any battle where the king, your father, or any of his sons, should command, I will myself begin the battle, or die upon the place. May it please you now to permit me to pass to the vanguard, and accomplish my vow!' The prince willingly granted his desire, saying, 'Sir James, God give you grace so to bear yourself, that you shall be acknowledged the best and foremost knight of all, this day!'"

"Lord Audley, who had commenced the battle of Poitiers, had continued, as long as the action lasted, still pressing forward, without stopping to make prisoners, until at length he was nearly slain upon the spot; and he was the first object of the prince's gratitude. Upon this noble knight the prince bestowed, with his highest commendations, a noble gift of five hundred merks of yearly revenue, which Sir James Audley received with suitable expressions of gratitude. When he returned to his own pavilion, the noble knight sent for his brother, and some other friends, and made them bear witness that he transferred to his four faithful squires the gift which the prince had given him; since it had been by their means and steady support, through the whole battle, that he had been able to render the services which the prince had valued so highly."

"The Black Prince learned the generous manner in which Lord Audley had disposed, among his four esquires, of the splendid gift which his bounty had conferred upon him. He sent for him therefore to his presence, and requested to know wherefore he had parted with the gift of his sovereign? and whether his conduct arose from the present not being acceptable to him? Sir James Audley confessed that he had presented to his esquires the gift which his highness's bounty had conferred; but he alleged, that the fidelity of those esquires had been the means of his being able to execute the vow which he had made; and that, by their constant attendance through the bloody day, they had repeatedly saved his life at the imminent risk of their own. 'Wherefore,' said the noble lord, 'it was well my part to transfer to them that bounty which your highness designed for me; especially since, renouncing in their behalf this royal gift, I have still, God be praised! revenues sufficient to maintain my place in your highness's service. But if this should offend your highness, I am right willing that it shall be ordered according to your pleasure.' The Black Prince joyfully accepted an apology so congenial to his feelings. He highly approved of Lord Audley's gift to his esquires, but made a point of pressing upon him an additional gift of four hundred pounds yearly more, which he required him to retain for his own use and behoof."

The ensuing accident, by finally unsettling

the mind of Charles VI., was a fit commencement to the most disastrous period in French history.

"There was, one night, displayed at court a mask of particular splendour, in which the king himself acted a part. Six personages of the highest rank, the king himself being one of them, appeared, for the amusement of the party, disguised in the character of silvans or satyrs. Their dress consisted of canvass coats, pitched over, to which wool or flax was attached in loose flakes, to represent the character which they had assumed. They were linked together with chains, and formed a pageant which excited general curiosity. The Duke of Orleans used the privilege of his rank, to approach the silvans with a torch, in order to discover who the maskers were. Unhappily, their dress being highly inflammable, the whole group was on fire in an instant. Linked together in the manner described, there was little chance of escape; yet the general cry of the perishing group was to save the king, even while they themselves were in the agonies of a death so painful. The Duchess of Berri, who was speaking with the king at the moment when the accident took place, had the presence of mind and resolution to wrap the unhappy monarch in her mantle, and save him from a death, which, in his condition, however painful and horrible, might have been a merciful dispensation. Another of the unhappy maskers plunged himself into a cistern of water, which chanced to be near. The remaining four were so dreadfully burnt, that they all died in great agony."

We have before expressed our opinion of the great value of historical knowledge to the young: it here appears in its most attractive form. We think few presents for the ensuing season will be more agreeable or more useful than the *Tales of a Grandfather*. We give them our most cordial approval.

An Only Son: a Narrative. By the Author of "My Early Days." 12mo. pp. 340. London, 1831. Westley and Davis.

THIS is a very beautifully written and interesting story. It is the history of a boy at once weak and wilful, whose good qualities are checked, and his bad ones developed, by a course of injudicious and harshly exerted authority. His father is one of those severe sectarians whose great principle of duty is to make no allowances; who, considering affection as weakness, crush its outward demonstration, at least; and who injure the cause of the religion they profess, and the virtue they advocate, by mistaking sternness for strength, and repulsive coldness for self-denial. There is an air of simple reality about the scenes which forcibly arrests the reader's attention: the hero's school days are as actual as any Miss Edgeworth ever drew; while the effects of imaginative influences are depicted with singular truth. Robert Earnshaw's character is a fine piece of mental analysis—the child to whose timid temper deception is taught by severity; while his vanity is secretly fostered by the undue value set on his literary acquirements—the worse for being nourished in secret, and left to his own estimate, instead of being made matter of affection, and measured by the open standard of comparison. This child grows into the equally vain and weak youth, yielding to every temptation, shrinking from discovery, and repining at consequences. The whole story is admirably supported throughout; but we think the *dénouement* might have been made more forcible. The hero is just one of those whose vanity

turges on their weakness into faults over which they rather repine than repent. It is individuals of this class, acting solely from impulse, who commit half the crimes, and endure two-thirds of the sufferings, which darken and embitter human life. The quiet non-entity of his latter years is not in keeping with his discontented, and therefore restless, mind. The moral of a weak, vain, and wilful spirit like Earnshaw's, would have been brought out more strongly by shewing that no crime was too great for such a one to be gradually led on to commit. The duel is too much an unlucky chance. We will now proceed to extract a few favourite passages. The following is a curious, but nevertheless true, sketch of deception, begun even in childhood.

"There was a fine garden of early fruits about three miles from our house, the owner of which had invited me to visit it, along with the two sons of a neighbouring farmer. After much persuasion I obtained leave to go, with many emphatic admonitions to return by sunset. My companions were older than I—simple, good-humoured lads. The day was beautiful, and we were as happy as it was long. We fished for minnows—explored the nests of birds and bees, and feasted on the most delicious berries of every variety of colour and flavour. Evening approached all too fast, and regretfully I warned my comrades that it was time to retrace our steps. They detained me, under different pretences, until twilight was setting in, when we departed, laden with fruit and the spoils procured in our rambles. Part of our way lay through a wooded valley, which had a lonesome effect in the declining light. The discourse turned upon ghosts, goblins, and fairies, with whom I boasted an intimate acquaintance. I was listened to with a deference that increased as the road became more solitary. While we proceeded I spoke of the twelve signs of the zodiac, and of the extraordinary power I held over them. Questioned as to what they were like, I described them as wonderful beings, living where the sun went down, in palaces of fire, called azimuth circles. Entering a glade, in the centre of which stood the trunk of a blighted oak, I rested beside it, and informed my friends, who seemed to doubt my description, that, if they had courage to behold them, I would there favour them with a sight of the twelve signs of the zodiac, snorting like mad horses, caparisoned in flame. I began to chant a medley of polysyllables, in imitation of a conjuror muttering a spell; when my terrified companions, imploring me to desist, seconded their entreaties by an offer of all they had gathered at the garden. This I declined, and suggested, instead, an exchange of toys with one of the brothers, who possessed a plaything I greatly coveted, though less expensive than my own. He innocently agreed to the proposed barter, and I put an end to the conjuration, secretly elated by my superior sagacity."

We like the next remark: "Over-severity of punishment always defeats its object, hardening, in place of mollifying, the disposition, on which equitable correction might have the most beneficial operation. It dishonours Penitence by attiring her in the weeds of Meanness, and invests Obduracy with the *toga virilis* of Resolution."

The ensuing scene is beautiful with the poetry of feeling:—

"No marvel that poets have chosen home and the native land, as grateful themes of song. In themselves, the words are full of melody; in their associations they form exquisite music. It is a blessed thing to have a haven of rest

where love lights its beacon and keeps its vigils to greet the returning wanderer, weary of a cheerless pilgrimage by flood or field. God help those for whom every country wears a foreign aspect—who avert their steps from the dwelling of their fathers, banished by the clouds of discord, or the rank weeds of desolation! Pleasant to me, as the face of an early friend, were the broken shores of Pembroke, and the bay of St. Bride's. The vessel touched at Ilfracombe, where my luggage was consigned to the care of Jonathan, who was to make a short stay there with a relation: as it was but two days' journey to Thorncroft, I proceeded direct, and on foot. Spring was in its prime. The morn I started was as rosy as the matin flush of midsummer; the virgin breath of the meadows and gardens, through which the road meandered, gave lightness to the bosom, elasticity to the footstep. The vine-branches were shooting forth their infant foliage, and orchard after orchard, ever and anon, enriched the breeze with a tide of fragrance, inspiring, in the fervour of noon-day, a voluptuous languour. Gladsome to the eye that expatiates on nature is the maternal beauty of the blossoming apple-tree; surpassingly gladsome was it to me, just landed from the waters, in the county of my birth, where I had, from childhood, been encircled by its peaceful glories. The hues of sunset were glowingly interstreaked, varying from the warmest crimson to the tenderest green, and in their wavy irradiations imparted to the western sky the fanciful resemblance of a superb ocean-shell. Tired of travel, I came in sight of the rustic chapel where I used to go up, with our house, to worship. My feet were blistered, my shoes arid with dust. I turned into the cool, grassy burying-ground, to calm the flutter of my spirits, to rest my limbs, and to refresh my soiled apparel, lest a chance encounter with an acquaintance should betray my pedestrian return. The chapel had been whitewashed and repainted, and, peering through its shade of larch and yew, presented a soothing emblem of Christian tranquillity. Time, place, and circumstance, were masters of my mood. I did not wish to dispel the religious awe that solemnised the soul; and from a resistless reverence for those who slept beneath, I refrained from profaning the luxuriant herbage by the taint of the highway. I passed to the lonely spot where, apart from the rest, beneath a weeping willow, was my mother's grave. The shrubs which surrounded it were flourishing—no unseemly weed had permission to vegetate there—the birds nestled in the branches of the overshadowing tree, as secure of protection near the remains of her who was meek and merciful to all the creatures of God. The moss-covered headstone had been displaced by one of recent construction. In addition to the simple consecration to the memory of the departed, it bore the inscription of, 'Blessed are they who die in the Lord.' I bared my brow, pressed my lip and cheek to the name of my parent cut in the cold slab, and prayed that her dove-like spirit might resume its ascendancy over him whom, like her, I loved, but whom, unlike her, I dreaded."

There is too much of theoretic digression in the latter part of the narrative. Like most young men, Mr. Kennedy (we believe the author's name is not meant to be a secret) is sanguine in his expectations, and sweeping in his censure. Such a passage as the following is grandiloquent absurdity: "After the soldier and the tax-gatherer have left the martyr of misrule on the salt shores of misery, the hope of absorption into a boundless ocean of beati-

tude shines the rainbow of the wave which is to obliterate for ever the memory of his woes."

The ensuing is worse, for it is unjust:—

"The capture of Ciudad Rodrigo was denominated 'a brilliant operation.' Of the contending parties at least two thousand perished ere the close of the siege. Many of the wounded died from exposure to the elements at an inclement season. Calamity was throned in funeral state upon the ramparts of the trembling city. It was for national gratitude to overbalance ills inseparable from warfare. Lord Wellington was created a Spanish grandee and an English earl. The British parliament added a yearly pension of £2,000 to keep the titles in countenance. Of the humble instruments of his will, the survivors were made supremely happy by 'a vote of thanks.'"

Mr. Kennedy forgets, that but for the commanding genius of the man who baffled Napoleon's best generals, and, finally, Napoleon himself—that man whose justly earned reward is thus meanly grudged, and whose services are thus depreciated—those very scenes of warfare, all that he holds in such just abhorrence, would, in all human probability, have found their theatre in our own country, and have been acted more bloodily in London than at Ciudad Rodrigo. The whole representation of the Spanish war is singularly unfair: for example, a scene of fearful suffering and aggression is introduced, and the aggressors are British soldiers. Now, in common honesty, it ought to have been stated how rare were such occurrences in our army, and how strictly the Duke of Wellington enforced that discipline which prevented them. These scenes were of daily recurrence among the French troops. The only just view to take is this:—the Peninsular war was one of great bloodshed and suffering; but it was endured in a rightful cause—a lesser evil to prevent a greater. We drove an invader from a foreign land, to prevent his carrying desolation into our own. We have now only to say, that we hold his talents in higher estimation than we do his opinions. The tale itself we think equally beautiful and interesting; the facts have all the simplicity of truth, while the style is invested with the rich colouring of the imagination.

Beauties of the Mind; a poetical Sketch: with Lays Historical and Romantic. By Charles Swain. 12mo. pp. 197. London, 1831. Simpkin and Marshall.

MR. SWAIN possesses one of those minds which, poetical in themselves, imbue all they touch with poetry. A poet's eye sheds its own colouring around; and the passing thought, the slight hint, are developed into beauty by the light of his words. Mr. Swain is especially happy in his historical illustrations; his descriptions are as rich as the moral he deduces is touching: he links human feeling and human pomp well together. The first poem had best be read as a whole "harmonious chain of thought." The two following stanzas are promising specimens.

"For, oh! the bliss to love, and to believe
Ourselves beloved!—to linger o'er each dream
Of happiness we cannot choose but weave;
To breathe but only in the beautiful beam
Of Love's fond, eloquent, delicious eyes!—to deem
One form the paragon of earth! Oh, fair
As moonlight upon lilies of the stream!
Those water-jewels, delicate and rare,
Those chaste and fitting wreaths for Beauty's raven hair.

Alas! there is no chord of human life
Whose natural tone breathes not of wo!—there seems
Even in boyhood, when the world is rife
With buds and birds—with flowers and sunny beams

Along our being's course, where'er it streams,
Some haunting fever of decay—some shade
From whose destructive taint, no aid redems!
Wo, that it reached thy generous heart, sweet maid;
Wo! that so white a breast should be so darkly laid!"

Out of the very beautiful minor poems we select two favourites.

"Truth, Youth, and Age.

Truth. What is Immortality?
Youth. It is the glory of the mind,
The deathless voice of ancient Time;
The light of genius, pure, refined!
The monument of deeds sublime!
O'er the cold ashes of the dead
It breathes a grandeur and a power,
Which shine when countless years have fled,
Magnificent as the first hour!

Truth. What is Immortality?
Age. Ask it of the gloomy waves,
Of the old forgotten graves,
Whereof not one stone remains;
Ask it of the ruined fane,
Temples that have passed away,
Leaving not a wreck to say,
Here an empire once hath stood!
Ask it in thy solitude,
Of thy solemn musing mind,
And, too truly, wilt thou find
Earthly immortality
Is a splendid mockery!"

"Reminiscences.

I know it is not beautiful!
That in the vale below,
Far gayer gifts of summer bloom,
And brighter waters flow;
I know it is not beautiful!
But, oh! unto my heart
It breathes a charm of vanished days,
No other scene impart.
The days once eloquent with tones
They never more may bring,
Sweet as e'er wooed a woman's lip
To Love's delicious spring;
Deep as the distant clarion's breath
Upon the moonlight air,
Inspiring high and glorious deeds,
It were a pride to share!
The form whose beauty imaged forth
The vision of a youthful heart,
Romantic, warm, and deep;
The voice, that music of my mind!—
Are with the spells of yore,
On which the morn may brightly rise,
But never waken more!
No gift of thine, love, meets my gaze,
No token fond and fair—
No, not, to soothe me in my tears,
A single lock of hair:
Thou' st passed, my love, like some pale star
We look in vain to find,
Nor left to cheer my blighted path
One lonely ray behind!
They tell me I am waning fast,
That leaf by leaf I fade—
They bear me forth with wreathed hair,
In jewelled robes arrayed;
They deem the festive dance may woo
My memory from this spot,
But, ah! amidst the courtly crowd,
Thou art the least forgot.
My eyes are wandering fast and far
To other shores away,
My soul is with thee in thy grave!—
How can I then be gay?
I perish in their festive light,
I die amidst their mirth—
Oh! take me to thine arms, dear love,
From this cold, cheerless earth!"

We have only to repeat, that we admire this little volume much: it has grace, truth, and tenderness, told in music; and we cannot dwell on its page without experiencing a feeling of liking and respect towards the author.

Trant's Travels in Greece.

[Second notice:—(see p. 762) Conclusion.]

WE broke off from this interesting volume with a reference to a strange story about the government mail being robbed by order of the president, Capo d'Istria: we now resume our extracts with some other curious incidents.

Upon the president and his party the following extract throws still greater light.

"Shortly after our return to Argos, the nomination of Prince Leopold to the sovereignty of Greece became publicly known; and

this intelligence caused as much dismay to the partisans of the president's family, as it did pleasure to the liberal-minded and intelligent portion of the inhabitants,—the Roumeliots, the Islanders, and the constitutional party, formed the latter; whilst the ignorant Moreots, who were entirely at the beck of Colocotroni, composed the former party, backed by the council miscalled senate, which, as I before observed, contained a body of illiterate men quite devoted to the will of Capo d'Istrias—his words were their words, his wishes their wishes; and in parodying the words of Napoleon, he might with justice exclaim, 'What is the senate?—the senate is me!' Weighty reasons had been urged to bind Colocotroni to the cause of Capo d'Istrias; and many of the Moreots, who were favoured beyond all the other Greeks, lent their wishes to the president. On the other hand, the Roumeliots and Islanders, who were the only Greeks that fought during the war, and merit any praise for their patriotism, having had their services disregarded, and even treated with derision by the president and his parasites, and for months been kept under arms without an ostensible motive, and without pay to save their families from starvation, until, in their despair, they threatened to remunerate themselves by the plunder of the more fortunate Moreots—who saw no hopes of improving their condition but in the arrival of a sovereign, whose first duty would be to act with justice towards his subjects—these hailed the nomination of Prince Leopold with unfeigned delight. The constitutional party also at last found their wishes gratified: all that they required was a prince, who, setting himself above the spirit of faction, would devote his talents solely to the amelioration of their unhappy country; and (without being too subservient to England and France, or, like the president, the mere slave of Russia) maintain Greece on a footing with the allied powers, which would evince her deep feelings of gratitude for their exertions in her favour, and not militate against her independence. Capo d'Istrias well knew, that if a British prince ascended the throne of Greece, his power would terminate; he had long since given up all hopes of imposing upon the clear-sightedness of the British government, who had pierced through the flimsy veil he cast over his designing policy; he knew that the false patriot appeared to them in his true colours; and by an underhand intrigue could he alone hope to counteract the fate which he foresaw awaited him. The senate was called—he pulled the strings of his puppets—and whilst he uttered the words, the obedient machines performed whatever the showman required."

"I had seen enough of Greece (says our intelligent author, towards the close of his stay in that country) to convince me, that although she possesses great capabilities, yet that the future ruler will have a most arduous task to perform in bringing her within the bounds of civilisation. Inveterate habits and prejudices must be weeded from the minds of the people, and their irascible passions calmed; a new impulse must be given to the enterprising spirit of her mariners; a lawless soldiery is to be disbanded and thrown loose upon the country; taxation must be enforced; roads made, and justice administered; and to effect these objects, the new sovereign must be supported by a foreign army, and resolve to govern his subjects with a

'Main de fer et gant de velours.'

The proceedings of Capo d'Istrias's assembly at Argos sufficiently demonstrate the incapacity

of the Greeks generally to understand the advantages of a representative government; and therefore, previous to throwing any power into the hands of the delegates from the people, it would be necessary to form municipalities, and thus initiate them in the secrets of election."

"The misrule of the president, during the last two years, has placed the sovereign in a more difficult position than that of Capo d'Istrias in 1827, inasmuch that, in addition to the vices of the Turkish administration, and to the abuses crept in during the war, he has also to unravel the web of Machiavellian texture with which Capo d'Istrias has entangled the country; and so difficult, or rather hopeless, is this task, that his only chance of succeeding will be in severing it at one blow."

Having devoted so much of this Review to develop the character and position of the most influential man in Greek affairs, we shall only farther make a cento of a few of the most striking passages, as they regard various places and subjects.

Of Constantinople, so altered must it be by recent events, Capt. Trant gives us a very new picture. "So many books (he says) have been published relative to that city, that I am not presumptuous enough to undertake a new version of an oft-told tale. I will only say, that I had the honour of playing at *carté* with the captain pasha; that I saw the members of the sultan's cabinet drinking the health of the king, and of Charles the Tenth, in bumpers of champagne, at the supper-table of Count Guilleminot, on which a large ham was placed; that I was present when Avney Bey, lieutenant-colonel of the cavalry of the guard, and first aide-de-camp to the sultan, requested a lady to waltz with him, and continued dancing during the whole evening; that the Turkish ladies have lowered so much of their veil, that the infidels are now permitted to see part of the forehead, and even the nose; and that Sultan Mahmoud wears boots, spurs, trousers, and gloves, just like a Christian! . . .

"I have often met *arobas* [covered carts] full of laughing young Turkish ladies, driving outside of Constantinople, unattended by a guardian—they were going to enjoy a party of pleasure on the banks of the Bosphorus, or perhaps were merely taking exercise; but during the whole time that I was at Constantinople, I do not recollect seeing any Greek ladies walking or riding about—they remained shut up in their houses, their sole occupation being that of looking through the *jalousies* of their windows to see what was going forward, and who was passing, in the dirtiest street of a place which has not improperly been called 'L'égout de l'Europe.' An English gentleman, who had taken a house in a retired part of Pera, was remonstrated with by a Greek lady—'Your wife will never be able to bear that stupid house,' said she; 'it does not look out on the street.' A few Greek ladies may be met at the houses of the different ambassadors at Constantinople; but they are mostly the wives or daughters of persons attached to the embassies, and cannot be considered as genuine samples of the Grecian fair, who live quite amongst themselves, within the precincts of the Fanar. One advice I would give the Greek ladies is, to take care that the Turks do not overtake them in the march of civilisation. This is an event which once would have been deemed impossible; but when I left Constantinople, the captain pasha was going to give a ball, where they were to be present in galleries; and Mr. Calosso assured me, that when he asked the sultan whether they were to join

in the dance, he only laughed, and said, 'It is not time yet.'"

Touching the *fine arts* we select two short statements.

"I lately heard that the Greek government, notwithstanding their pretended love of the fine arts, have been throwing down part of Tiryns, with the view of employing the stones in a wall round a government farm. If true, this act is most disgraceful; for every one who has been in Greece, well knows that there is no lack of stone in the country. To think that Greeks should wilfully destroy what even Turks had respected, does not say much in favour of their pretensions to civilisation."

"If proper care be taken to form a museum, there is every reason to hope that Greece, instead of having fewer beautiful sculptures than any other country, may possess more. Excavations, properly conducted, would bring a great many interesting marbles to light; and a law having lately been passed, that no works of art shall henceforth be exported, she secures to herself those pieces of sculpture which are daily appearing; but when the government is finally organised, persons should be allowed to excavate, on condition of resigning to the nation whatever it thinks worth retaining."

At a distance, too, the Turkish functionaries seem to have relaxed a little in their strictness. For instance, our countryman visited the Bey at Athens, where, after other ceremonies, &c., Captain T. relates:

"Rum and water was now offered to us by the page; and the bey took repeated draughts, gradually forgetting to mix it with water, until at last it was almost pure spirit. We were quite surprised that he should be so well supplied with this beverage; but the source of his wealth became accidentally disclosed to us.

Mr. Gropius proposed that we should visit a small *kiok* at the top of the house, whence there was an excellent view; and when the secretary conducted us thither, we discovered that it had been converted into a spirit store; shelves full of lemons were ranged round the room; several loaves of English sugar were piled up in one corner; and some dozens of bottles labelled with the word 'Rhum,' in large letters, were on the floor. It is fortunate for the Turks, that Mahomet was ignorant of the various uses of the sugar-cane; but as the prophet had never heard of rum, and that his guardian angel did not reveal its future appearance to him, that spirit was not excluded from the beverage of the true believers, who, availing themselves of the omission, drink rum to excess. Captain Gordon increased the bey's stock, by a present which we knew would be most acceptable to him. A supper, similar to that of the preceding evening, closed our evening's entertainment; and the bey, whose eyes were beginning to glisten, having stretched his mattress on the floor, and retired to rest, we followed his example. Before day-break next morning, the bey commenced smoking his pipe; and shortly afterwards, the officers under his command came to attend his levee,—each making a humble salâm, and then squatting in a circle on the floor, or at the extremity of the divan where we were sitting, coffee and pipes being the succedaneum for conversation."

The following are curious Greek characteristics:—

"Great wealth accrued to the chiefs by the plunder of Tripolizza. The peasants, who knew not the value of precious stones, offered diamonds for sale at one or two shillings each; and a pair of diamond-mounted pistols, worth

fifty thousand piasters, was sold for six thousand. Colocotroni amassed an immense booty here; and from being a penniless Klepht has become the richest man in Greece. The plunder the Greeks at various times acquired not having been drawn from the country, it is evident that there must be a great deal of capital now concealed in Greece: but the Greeks are so afraid of appearing rich, that when they do amass a little money, they immediately bury it, and hide even from their dearest friends where it is concealed. The Turks also buried their money; and the *policari* used never to enter a house without running their ramrods into the floor, in the hopes of finding treasure. A Turkish gentleman, at the commencement of the war, buried a large sum of money in a certain part of his house, which was destroyed during the contest. Being afraid of trusting himself in the power of the Greeks, he was unable to seek for his treasure; but when hostilities ceased, he wrote to some European officers who were stationed near his house, offering them half of his wealth, provided they would dig it up, and transmit the remainder to him. The bargain was made,—the officers easily found the spot indicated,—but the money had already been taken. ‘Fool that I was,’ said the Turk, when he heard of his misfortune; ‘I entrusted my dearest friend with my secret!’ The Greeks are more cautious in keeping a secret, for not even the fear of approaching death will induce them to disclose the site of their hoarded wealth; as an instance which occurred lately near Argos will testify. There was an old Greek, apparently in the greatest misery, who was taken very ill, and in a few days his life was despaired of: his friends assembled round him; and when they acquainted him that there was no hope, said that he ought to make what arrangements he wished relative to his property, and declare whether he had any money concealed. ‘Money!’ exclaimed the wretch; ‘I am so poor, that I have not enough to pay the expenses of my funeral,—I am not worth a single para: how should I get money?’ The relations still urged him to confess, but he resolutely refused compliance. Next day he became worse; and on the following morning, finding that death was at hand, he called one of his relations, told him ‘to search near the large olive-tree in the garden,’ and shortly afterwards expired. Not far from the olive-tree, a jar was found containing two hundred dollars.”

With one anecdote, to illustrate the state of education and of the priesthood, and another quotation on the important subject of the church, we must conclude.

“I was one day speaking to a Greek gentleman respecting the deficiency of their education. ‘To shew you,’ said he, ‘the estimation in which they are held, I will relate to you a story current among the people. ‘There was a merry fellow once who, wishing to expose the ignorance of the priests, led an ass up to the bishop, and respectfully begged that he would confer ordination upon him.’—‘Out upon you!’ said the bishop in a rage, ‘how dare you insult the mysteries of our holy religion by such a proposition?—away with you!’ The man turned round, and was leading the beast away, when the bishop perceived a purse full of gold hanging to his tail. ‘Stop, friend,’ he cried out, ‘I was wrong; bring your animal back; for, although only an ass in front, I see that he will make an excellent priest behind.’”

“It is already contemplated by the liberal Greeks to effect a reform in their churches, and emancipate themselves from the authority

of the patriarch; but much opposition is manifested by the bishops and principal dignitaries of the church, who affect to view any innovation on their religion as sacrilege. Although so perfectly ignorant themselves of what their religion is founded upon, that they only know it by the ceremonies that they perform, they profess to consider any attempt at reform as an heretical invasion. The president having judiciously taken possession of the church lands, disgusted many of the bishops, who view with jealousy any encroachment upon their prerogatives, and are anxious still to hold their investiture from the patriarch, as it only requires a well-furnished purse to ensure their nomination. It, however, is evident, that nothing can be so injudicious as to allow a patriarch nominated by and in the interest of the Porte, to have the spiritual control of the Greek nation; and enlightened men are all of opinion that the Greek church ought to have its chief in Greece, as it is undoubtedly contrary to the canons of the church that their patriarch should be nominated by an infidel. On the other hand, it is feared that this will create a schism, there being three million two hundred and fifty thousand Asiatic Greeks who would recognise the patriarch, whilst Greece could only number seven hundred and fifty thousand. * * *

“No measure could possibly be more conducive to the interests of Greece than encouraging foreigners to become purchasers of government property, on the condition of actual residence. The population of the Greek kingdom being only 750,000, is so inadequate to its extent of territory, that to do justice to the fertility of the soil, and natural advantages of the country, it is absolutely necessary that colonisation should be resorted to; but that this system may not tend to the prejudice of the actual proprietors of land, and to prevent the nation being burdened with the support of strangers, it must be carried on solely at the expense of individuals. * * *

“With the increased demand for articles of luxury would follow a proportionate employment of shipping; and the islanders, instead of seeking service with the Turks and Egyptians, might find employment under their own flag. It appears, however, that the present government is quite averse to the introduction of either French or English settlers; and the president wished to enact that none but Greeks should become purchasers of land; but this the national assembly had the good sense to negative.”

The volume is adorned by engravings, and deserves to be consulted by every one desirous of becoming acquainted with Greece as it is.

Millingen's Memoirs of the Affairs of Greece.

[Second Notice.]

WE proceed, without prefatory remark, to quote the most striking of the many incidental traits with which this volume abounds.

Turkish Generosity.—“The cutter in which Count Gamba had embarked, and which contained the greater part of the money Lord Byron had thought expedient to bring over to Greece, was not equally fortunate in avoiding the enemy; though at last it escaped from their hands in a manner yet more surprising. Towards day-break, having fallen in with the same Turkish frigate, its commander, Mahmood Captain, ordered the Zantico captain on board; and, brandishing his scimitar over his head, asked him whether he dared to say that he was not bound for Mesolonghi. Valsamachi was so terror-struck by his threatening

mien, that, losing all presence of mind, he confessed that he was proceeding to that town. He had scarcely terminated his imprudent confession, than the Turk raised his arm to cut the Ionian's head off, and ordered the cutter to be sunk. ‘Wilt thou destroy,’ cried the Greek, ‘the life of him who saved thine own?’ The Turk suspended his blow, and attentively considering him, soon recognised the person who, some years previous, had saved him after a shipwreck in the Black Sea. He fell on his neck, and embracing him, gave him the promise, that though, for appearance sake, he must lead him to the castles, he would exert all his influence to procure his immediate release. Nothing might have been easier than to prove the cutter to be a fair prize. Although the clearance was for Calamo, he was taken close to Mesolonghi; the captain and crew had owned that they were bound for that place; and, notwithstanding the tale made out by Gamba, its falsehood might have been soon demonstrated by inspecting the ship; where printing presses, cannons with Lord Byron's arms and name, and helmets, could not easily be passed as part of the travelling apparatus of an English gentleman.”

Sketch of Trelawney.—“Though somewhat below the full-grown stature, he was altogether a very handsome man, possessed of great strength and surprising agility. Nature had given him a highly romantic countenance: his wild, haughty, unquiet, scintillating dark eye, denoted his disposition to bold and extraordinary undertakings. In his manners and opinions he seemed to have taken Anastasius for his model: and, to judge from his lofty language, he had a mint of phrases as rich as Don Adriano de Armado; and he entertained for his heroes a veneration as deep as that of Don Quixote himself, for all the giant-killers and liberators of imprisoned virgins who had preceded him. Born of a respectable Cornish family, he embarked when young as a midshipman; but finding that the strictness of naval discipline did not allow much room for indulging romantic dispositions, he quitted the ship on its arrival in the East Indies, and soon after joined the buccaneers, who then infested those seas. Among them he passed his happiest days, meeting continually with the most extraordinary adventures and hair-breadth escapes. He might have yet continued to enjoy a life so congenial to his disposition, had not his companions sought to kill him during a dispute about prize-money. He satisfied his vengeance; but seeing himself closely pursued, the terror he felt was so great, that he did not stop in his flight till he found himself in the country of the Wachabees. The exploits which followed, though not new, were marvellous; the quality atoning for the quantity. At length, in a fit of nostalgia, he determined on returning home, the place of his birth appearing to him then dearer than the three Arabias. His native air soon cured him of this intermittent paroxysm, for he found Cornishmen a tame set of persons. Growing weary of home, he passed over to Italy, where more room was afforded to indulge his oriental habits. He formed there an acquaintance with Lord Byron, who derived no little pleasure from the company of so singular a character. He invited him to accompany him into Spain; but hearing of the disasters the constitutional party had sustained, he proposed going to Greece. Arrived at Cephalonia, Trelawney discovered that Lord Byron was not romantic enough to be his companion; and he started, in consequence, for Peloponnesus; where having

roamed in vain in quest of a hero, he passed over to Athens. There he met with Odysseus; and so powerful is the invisible force of sympathy, that although they could not understand each other's language, they became, in an instant, intimate friends. According to Trelawney, Odysseus was the personification of the *beau idéal* of every manly perfection, mental and bodily. He swore by him, and imitated him in the minutest actions. His dress, gait, air, and address, were not only perfectly similar, but he piqued himself even in being as dirty; having as much vermin, and letting them loose from his fingers in the same dignified manner, as if sparing a conquered enemy. This ridiculous spirit of imitation was, in other respects, very useful to him; for it enabled him to endure the privations and hardships inseparable from the Greek mode of warfare, with as much apparent indifference as his prototype; sleeping on the bare earth with a stone for a pillow, and, in one word, sustaining a total want of every bodily comfort. All this, however, was only when distant from Athens. On his return thither he found ample compensation for the toils of war, in the enjoyments of a numerous harem. The courage which distinguished him in Negropont acquired him the esteem of his friend, and of the palichari. He so rapidly and completely moulded himself to their manners, as to be generally taken for a Roumeliot. This, with his generosity, gained him their affection; and his severity ensured him their obedience. With similar qualities, Trelawney would, most certainly, have risen into notice, had not fortune turned against the friend to whose destinies he had linked his own. Whatever his faults, however, and the blame which his conduct in embracing the party of a rebel and traitor to his country, may draw upon him, every European who knew him in Greece cannot but praise the generous qualities of his heart, and acknowledge him to have been a most entertaining companion: and though, owing, no doubt, to his prolonged stay in oriental countries, his imagination got the better of his veracity, or, as Lord Byron observed of him, 'he could not, even to save his life, tell the truth;' his narrations were so interesting, that whether true or untrue, one could not but listen to them, with as much pleasure as to the wonders of an Arabian tale."

Greek Women.—"Their feet and ankles, which, by the by, rather correspond to Grecian than to modern ideas of beauty, are completely hid by the folds of these trousers, that are tied like a purse just below the knee. This gives a woman, when walking, completely the appearance of a feathered-paw pigeon. This is the more striking, as Grecian coquettes affect as much as possible to imitate the walk of a bird. 'You walk like a goose,' 'like a duck,' (*ὡς χήνα, ὡς πάπυ πικρατίς*) however impertinent in the ear of an English belle, are the most flattering compliments that can be whispered in those of a Greek one."

Voutier's Memoirs.—"The best judgment on this work is contained in the following anecdote, related to me by Mavrocordato. On Voutier's return to Greece, Mavrocordato requested him to favour him with a copy of his Memoirs. Anxious to see in what manner his conduct, during the siege of Mesolonghi, had been represented, he hastened to consult the chapter which relates that event; when, to his great surprise, he perceived that the whole of it had been torn out. The next day, on meeting the author, he asked him why he had given him so imperfect a copy. After stammering for a while, he replied: 'As there are,

in the chapter you allude to, some slight exaggerations, which I thought necessary to insert, in order to place the cause of Greece under a more favourable light, I took the liberty of retrenching those leaves; fearing you might blame me for having allowed my Philhellenism to get so much the better of my veracity.' 'If,' answered Mavrocordato, 'your conscience has, since your return, become so sensitive, I am surprised that you have not begun to revise your work altogether: for that chapter, I am sure could not contain more lies than the rest.'"

Sketch of Mavrocordato.—"The ensemble of his head was excessively fine, being very large in proportion to his body; and its bulk was not a little increased by his bushy jet black hair and prodigious whiskers. His thick eye-brows and huge mustachios gave a wild, romantic expression to his features, which could not but produce a striking effect on a stranger. The expression of his physiognomy was that of a clever, penetrating, ambitious man. His large Asiatic eyes, full of fire and wit, were tempered by an expression of goodness. His looks had not, perhaps, sufficient dignity; for they had a kind of indecision, and timid flutter, which prevented him from looking any one stedfastly in the face. His stature was much below the usual size; and his carriage altogether too un-martial to impart much confidence to a half-civilised people, who prize external appearance so much, and are more, perhaps, than others, influenced by an awe-commanding countenance. The prince also paid too little regard to dress: inasmuch that even the Franks could not refrain from remarking how much to his disadvantage the contrast was between his plain European attire and travelling cap, and the splendid, highly graceful Albanian costume worn by the other chiefs. If nature had neglected Mavrocordato's exterior, she amply compensated him for such omission, by the lavish manner in which she had endowed his mind. Educated at Constantinople, he had devoted his earlier years to the study of Oriental languages. Few persons were more intimately acquainted with Persian and Arabic, of which the court language of the Turks is, in great part, formed. He was an excellent Greek scholar, spoke and wrote French like a native of France, and was tolerably well acquainted with English and Italian. Setting aside his wit and other qualities, which, in private life, rendered him the charm of society, we have only to consider him as a public character, belonging to history. He was, perhaps, the only man in Greece, who united, in an eminent degree, unadulterated patriotism, and the talents which form a statesman. He alone was capable of organising and giving a proper direction to civil administration. This he shewed shortly after his arrival in Peloponnesus, when he drew up a form of government out of the chaos in which every thing then lay. He gave constant proofs of his genius for order, whenever he had the lead of affairs; and few, in any country, ever possessed more than he did, the talent of simplifying the most complicated questions, and rendering them intelligible to the most illiterate. The rapidity and precision with which he despatched business was surprising; and no doubt, the extensive practice he had had, when secretary to Caradja, Hospodar of Wallachia, was now of no small assistance to him. He had been repeatedly accused of retaining too much the principles of a Fanariot education. Incapable of a plain, bold, open conduct, it has been said that he could only advance by crooked ways, and obtain his ends by tricks and cunning.

The untractable, suspicious, and deceitful character of those he had daily to deal with, might render this necessary. It was the current money of the country. No other would pass."

Curious Erasion of the Custom-house Officers.—"The markets of Zante and Cephalonia received from this province their chief supply in cattle, poultry, butter, cheese, honey; the larger portion of these articles being sold on Sessini's account, who sent his wife to the former island to receive the money. He frequently sent her over large sums, but, partly fearing to excite the notice of the Ionian governments, and partly to avoid the custom-house duty, he often concealed his gold in the butter or cheese, which he sent in presents to Madame Sessini. Two of these cheeses were, by some unaccountable mistake, sold to a Zantiot, who felt as delighted on discovering in their interior little mines of gold, as Madame Sessini was vexed on detecting her error. She in vain applied to the police for restitution: it was replied to her representations, that since they were registered at the custom-house as cheeses, they were legally bought as such; and that the loss of the money was a just punishment for the deceit which she had practised so long on the government."

Romance in real Life.—"A few days after this, Jani Souka, a handsome Albanian Greek, who had deserted from Caravansera with his company of a hundred and fifty Lachiots, arrived at the camp. From the beginning of the revolution, he had, on every important occasion, fought against his co-religionaries, and behaved with so much activity and valour, as to gain the entire confidence of Omer Pasha and other Albanian chiefs. He was, in fact, so well treated by them, and enjoyed so much consideration, that the voice of patriotism alone would never have made any impression on his interested mind, had he not at last been caught by the lips of love. While in the Turkish camp, his mistress unexpectedly entered his tent: disguised as an Albanian page, she had fled from Arta, and accompanied one of the capitano's men, whom he had sent to that town on an errand. She entreated her lover, in consideration of the irresistible motive that actuated her, to overlook her imprudence in taking such a step without first consulting him. She could not, she said, exist far from the man she loved. For his sake she had sacrificed every interest and consideration; and representing to him the danger which would inevitably burst upon both their heads, were they to return to Albania, owing to the resentment of her relations, she urged him to join the Greeks. His qualities as a soldier would be as much prized, and as well remunerated, by them as they were by the pasha; and for the remainder of his days, he would enjoy, undisturbed, all the sweets of independence and love.—the only real blessings of this life. Jani Souka took her advice."

State of Medicine in Turkey.—"This gentleman was born at Zagori, a district not far from Ioannina, famous throughout the Levant for its breed of itinerant quacks. The male population consists solely of M.D.'s; Zagoriot and doctor being synonyms; and indeed, the medical profession becomes, in their hands, so lucrative, as entirely to supersede the necessity of any other. An idea of their wealth may be formed from their houses, which are well built, spacious, and the best furnished in Turkey. When at home, they live like gentlemen at large. It may not prove uninteresting to those who wish to ascertain the state of medicine in Turkey, to hear some particulars relative to

the education and qualifications requisite to obtain a degree at this singular university. The first thing taught to the young men is the professional language; a dissonant jargon composed purposely to carry on their business, hold consultations, &c. without being understood by any being in existence but themselves. They are then taught reading sufficiently to decipher the pages of their *ιστοροσφαι*, or manuscript, containing a selection of deceptive formulæ, for all possible diseases incident to human nature. When a candidate has given before the elders proofs of his proficiency in these attainments, they declare him to be *dignus entrare in docto nostro corpore*; and he then prepares to leave Zagori. The Zagorioti generally travel about Turkey in small bands, composed of six or eight different individuals, each of whom has a separate part to perform, like strolling players. One is the signor dottore. He never enters a town but mounted on a gaudy-caparisoned horse, dressed in long robes, with a round hat and neckcloth; never opening his mouth but *ex cathedra*, his movements are performed with due professional gravity, and he is at all times attended by his satellites. One is the apothecary; the second the dragoman; for it is the doctor's privilege not to comprehend a syllable of any other language but the Zagoriot; a third is the herald, who, endued with a surprising volubility of tongue, announces through the streets and in the public squares, the arrival of the incomparable doctor; enumerates the wonderful cures he has performed; and entertains the people to avail themselves of this providential opportunity: for, not only does he possess secrets for the cure of actual diseases, but of insuring against their future attacks. He possesses the happy talent too of ingravidating the barren, and leaves it to their choice to have male or female, &c. &c. He is skilled in the performance of operations for the stone, cataracts, hernia, dislocations, &c. Two others, who pass under the denomination of servants, employ their time in going from house to house in quest of patients; and as, from their menial employment, they are thought to be disinterested, credit is the more easily given to their word. Thus they journey from town to town, hardly ever remaining more than a fortnight in any place. After a tour of five or six years, they return for a while to their families, and divide in equal shares the gains of their charlatanism. On a second journey, they all change parts, in order to escape detection. The dottore yields his dignity to the servant, and does the same offices to him as he was wont to receive; the dragoman becomes herald, the herald apothecary, &c."

Superstition.—"In the evening we supped with Vattino. According to custom, a whole-roasted lamb was brought on the table, and after it had been carved with the yataghan (cutlass) of one of the guests, we helped ourselves with our hands in the best manner we could. The right shoulder-blade of the animal was diligently stripped of the surrounding meat; and then handed to Vattino, as the person then present best qualified to foretell, from its appearances, the foreboding events. Placing it before the candle, he attentively considered the outlines presented by the vascular system of the diaphanous portion of the bone; the whole company waiting in deep silence to his oracular observations. Every one of the *palichari* was horror-struck on seeing the sudden alteration that took place on his physiognomy, and on hearing the following word uttered with a solemn, impressive voice: 'Brethren, the enemy is preparing against us;

—yes—much Greek blood will be spilled—but two considerable tombs will be erected by the Turks.' All the old Cleftes examined it, and assured that Vattino's words were true,—the appearances of their habitual augury being too plain to be mistaken.

There are two faults in our author's style; the first, that it is sometimes too fine; and the second, that it is crowded with professional phrases—utterly unintelligible to two-thirds of his readers. As a whole, it is a very amusing volume.

The Political Life of the Right Hon. George Canning, from his Acceptance of the Seals of the Foreign Department, in September 1822, to the period of his death in August 1827: together with a short Review of Foreign Affairs subsequently to that Event. By Augustus Granville Stapleton, Esq. 3 vols. 8vo. London, 1831. Longman and Co.

SINCE the decease of Mr. Canning, which was affectionately, though briefly, recorded in this journal, no occasion so appropriate as the present has been afforded for offering a worthier tribute to his memory. It were to be wished that ampler space and longer time could have been available for the performance of a duty so mournful and so gratifying; since, whether it be considered in relation to its subject, or to the authentic character of its materials, this is one of the most important contributions to the political history of Europe that have appeared in the present age. The biography of a British minister of state, founded on documents to which his representative alone could give access, and written by a gentleman who filled the confidential and honourable post of his private secretary, would have strong claims to attention, whoever were the individual, and whatever were the period, to which it might relate. How irresistible, then, must claims of that kind be in regard to such a minister as Mr. Canning, and to a period so momentous as that which forms the last, the most laborious, and the most splendid of his political life.

But, important as this work is (and we can, from personal knowledge, vouch for its perfect accuracy in every part), we can this week only give one short extract, as an example of its style and character. That extract, however, is of much interest, not only to the British reader, but to the whole political world.

"It has been more than once asserted in parliament, by persons of consideration, that the government of the Duke of Wellington has been guided by Mr. Canning's principles, and has maintained his 'system' of foreign policy. On the merits or the demerits of the duke's administration various opinions may be entertained. All that we intend to affirm is, that his grace's principles of government were not the same as Mr. Canning's; and that the course of his foreign policy was directly at variance with Mr. Canning's 'system.' To establish this distinction is obviously but an act of justice to both parties, lest the one should carry off the praise, or be made responsible for the faults, which the adherents or enemies of the other may be respectively disposed to attribute to his political measures. In the preceding pages of this work, Mr. Canning's principles of action have been not only stated in his own words, but have been illustrated by examples of their practical application. There is no room, therefore, for any mistake or misrepresentation as to their nature; and, further, a pause in the narration has more than once been made, for the purpose of bringing his measures to the test, by inquiring whether they were

really in accordance with those fixed principles, which he professed to have laid down as the guide of his political conduct. It is now intended to try the measures of the Duke of Wellington's administration by the same test, in order to shew, that, however excellent were the fixed principles of his grace, they were, with respect to our foreign relations, in no way similar to those which were acted upon by Mr. Canning; and that, with respect to measures of internal policy, if there has been a much less marked deviation, and, indeed, in some striking instances, an unexpected conformity, yet in many cases there has occurred a very decided variation. In a brief review of this nature it is not necessary to touch upon every measure of the government, but simply to refer to those which, from their importance, afford the best means of judging of its principles. In the first session after the Duke of Wellington had become the premier, the two leading questions were, the corn bill and the test and corporation acts. On both these measures, Mr. Peel was the organ of the government in the House of Commons."

Mr. Stapleton proceeds to demonstrate, that on both these great measures Mr. Canning's system was abandoned. The Catholic question is next examined, and a powerful light thrown upon its history as a cabinet measure; but we have only time for one extract more.

"When the Duke of Wellington became first minister, he was known to this country and to Europe as belonging to the 'continental school.' His name was attached to the treaties of Vienna; and he was universally believed to have been an admirer of Lord Castlereagh, and an opposer of Mr. Canning's liberal measures. On this subject 'a contrast' had been 'held up' between them, not only in the daily press, but also within the walls of parliament. It was therefore naturally to be expected that the duke would not adhere to Mr. Canning's system of 'neutrality between conflicting principles,' but would return to that of Lord Castlereagh. At the formation of the duke's government, the public were mystified by the continuance of Lord Dudley in the post of foreign secretary, which he had held in Mr. Canning's time, and by the recall of the British ambassador from Lisbon when Don Miguel declared himself king; but the veil was to a certain degree withdrawn, when the duke gave it to be distinctly understood that he had in no way 'pledged himself to abandon his own principles and opinions,' and when the Portuguese charter was overthrown. The preservation of that charter during the continuance of Mr. Canning's and Lord Goderich's administrations, had been with justice ascribed to its supporters receiving the moral countenance of Great Britain, who, in common with the other governments of Europe, recognised Don Pedro as the legitimate sovereign of Portugal. Its subversion being coincident with the appointment of the Duke of Wellington as premier, suspicions arose that the one event contributed to bring about the other. All hope, however, (with those who understood the matter,) of the duke's perseverance in Mr. Canning's system was destroyed, when his grace betrayed such extreme eagerness to seize the opportunity of ridding himself of Mr. Huskisson and his friends, and when Lord Dudley was replaced by Lord Aberdeen, whose inclination towards the holy alliance was supposed to be not less strong than that of the premier himself. This inclination was displayed in the very first speech which his lordship delivered."

"Judging, therefore, of the foreign policy of

the Duke of Wellington's government by what was manifested of its tendency with respect to Portugal, and of the exposition made of it in parliament by the foreign secretary, it is impossible not to conclude that, upon principle, it sided with the ultra-monarchical extreme. That point once established, it follows that the partisans of that extreme must have acquired 'greater confidence than ever' in their own strength. The consequence of such confidence, Mr. Canning had always anticipated would be, to incite that one of the two parties which entertained overweening notions of its own vigour, to such extraordinary efforts for obtaining an increase of power, as would provoke violent resistance, and consequently collision. Collision certainly has taken place, and that in about 'two years' after the system of the Duke of Wellington and Lord Aberdeen had come into full operation. The question then must be, Is the one the consequence of the other? That Charles X., had he not given his people cause to mistrust his sincerity, by selecting a ministry of the character of M. de Polignac's, and had he not made an unjustifiable and outrageous attack upon the liberties of his people, would have been now seated on the throne of France, with a reasonable prospect of transmitting it to his descendants, is a proposition which few, if any, will deny. Would that appointment and subsequent attack then have been made, if the British government had not thrown the weight of its influence into the ultra-monarchical scale? To this it must be answered, that it is difficult for those individuals to believe that it ever would, who have remarked the following train of singular coincidences."

These are indeed most remarkable; but we can go no farther.

Memoir of an Employé, &c. &c. By E. Scheener, Esq. of the Foreign Office. 8vo. pp. 58. London, 1830.

A VOLUME which very distinctly proves that the writer must have been so intemperate and troublesome in any official situation, as fully to warrant the measures taken to provide for his retirement.

Naval Discipline. Subordination contrasted with Insubordination; or, a View of the Necessity of passing a Law establishing an efficient Naval Discipline on board Ships in the Merchant Service, &c. &c. By Christopher Biden. 8vo. pp. 392. London, 1830. J. M. Richardson.

THE author, late commander of an East India-man, has here treated a subject which, even amid the number of vital questions that agitate the public mind, merits, by its importance, both the earliest and the best attention of our legislators. The disgraceful and painful scenes so lately exhibited in the metropolis and its police and law courts, and which demonstrate so lax, uncertain, and dangerous a state of discipline in our commercial marine, call aloud for definite measures, whether to preserve merchant vessels from being converted into pirates, or generally to promote the interests of the navy. Capt. Biden's work contains much information relative to the past; and, from his facts and reasoning, we think much may be done for the better regulation of the future.

The Companion to the Almanac, or Year-book of General Information, for 1831. 12mo. pp. 240. London. C. Knight.

THE volume before us of this work, published annually under the superintendence of the

Society for the Diffusion of Useful Knowledge, is altogether worthy of the best expectations which could be formed of any production of the kind, under the most favourable auspices. By judicious arrangement, compression, and the employment of tables, it is really surprising how much of the latest, and consequently most useful, information is contained in these pages. All recent changes in legal and political matters are carefully noted; and abridgements convey almost every thing necessary to be known respecting commercial subjects, statistics, astronomical phenomena, &c. &c. &c. In short, the whole is a treasury of intelligence, so fit to be referred to in the course of the ensuing year, that we are sure no person in active life could have a better "Companion."

ARTS AND SCIENCES.

LINNEAN SOCIETY.

R. BROWN, Esq. in the chair. Another portion of Mr. Hogg's paper on the classical plants of Sicily was read, of which we at present give no analysis, for the reason stated in a former No. The Secretary announced that his Majesty had graciously signified his intention of becoming the patron of the Society. In pursuance, a deputation, consisting of Lord Stanley, Dr. Maton, Mr. Forster, and Mr. Bicheno, had waited on his Majesty at St. James's palace, for the purpose of obtaining the sign manual to the charter-book of the Society. The deputation was received in a very kind manner by the King. It may not be thought *infra dig.* even by our scientific readers, for whom more particularly these notices are intended, were we to give a brief description of the page of the charter-book in which the royal signature is written. At the top are the royal arms, at the bottom those of the Society, both richly coloured; in the centre an elegant and appropriate circle is formed of sprigs of the *quercus robur* (English oak), *tectona grandis* (teak of India), *eucalyptus robusta* (mahogany tree of New Holland,) and the *pinus strobus* (pine of Canada). These are coloured after nature, and entwined in a very beautiful manner; in the middle of the circle is the royal signature, written in a bold and free style.

The meetings stand adjourned till after the Christmas recess.

TRANSPORTABLE HOUSES.

IN the 721st No. of the *Literary Gazette*, we inserted a short notice from *Le Globe* of the invention by M. Blom (changed by the French printers into Blown) of movable wooden houses. M. Blom is not, as we had supposed, a French engineer, but a lieutenant-colonel of engineers in the service of his Swedish majesty. He is at present in this country, and has obligingly communicated to us a number of particulars respecting his invention, of which the following is an abstract.

It was in the year 1819 that Colonel Blom first carried into execution the ideas which he had conceived as to this mode of building houses. He then constructed a pavilion, consisting of a saloon and two smaller rooms, which answered admirably; and, at the request of the president of the Academy of Agriculture and Industry, at Stockholm, he wrote a paper on the subject, which appeared in the second No. of the seventh volume of the annals of that Society. Since that time, above eighty buildings of the same kind, of different sizes, some of one story, some of two stories, several with upwards of four-and-twenty rooms, have been constructed at Stockholm, under Col. Blom's super-

intendence; besides a great many in the Swedish provinces, from his designs and directions. Others have been transported to Denmark, to Russia, to the United States of America, and elsewhere. In one, which was erected at Stockholm, an English family, that of Admiral Baker, resided during the summer of 1829, and were extremely well satisfied with the accommodation which it afforded.

Although these houses have often been erected on great heights, they have, even in the worst season of the year, resisted the most severe and tempestuous weather much better than the ordinary buildings in their neighbourhood. As wood is not so good a conductor of caloric as stone or brick, they are, by means of stoves, more easily warmed and kept warm than common houses. The expense of constructing them is comparatively trifling. Above all, they can be taken to pieces in a few hours, and removed to any spot that may be desired. Principally intended for the country, they may, nevertheless, be advantageously employed in great cities; and in the formation of new colonies, or in enterprises of discovery, or in scientific expeditions, the benefits resulting from their use would be very extensive.

The general principles of the construction of these buildings, are as follow:—The outer walls (*parois*) are placed perpendicularly, which has the advantage of preventing the sinking of the building, and of allowing the easy descent of water, by its following the direction of the grain of the wood. The different pieces are inserted into one another in grooves. The interior part of these walls is afterwards lined with a wainscoting joined in the same manner. Between the outer wall and the wainscoting is placed a kind of pasteboard, the tenth of an inch thick, to prevent the air from penetrating. The angles are secured by means of screws sunk into the wood. In general, girders are not necessary in the construction of the walls. By means of locked and screwed joints, all currents of air are rendered impossible. There is no need of frames, either for the doors or for the windows. The floor is double, as well as the walls, but is a fourth thicker. The pieces of which it is composed, and which are five or six feet square, or, rather, twelve feet long by six feet wide, are inserted by grooves into the piece which serves for the base of the building. The angles of the base are united by screws. The walls are, in the same way, inserted in it by a groove, so contrived that no damp can penetrate. The solidity of the roof depends principally upon that of the gable. It is double, like the walls, and is lined with semicircular laths, fluted below, in order to be adapted to the planks of the roof, having reverse flutings. The roof is painted in oil, as well as the rest of the house, or well plastered with some other composition which repels damp. If it be not intended frequently to remove the house, it would be still better to line the roof with a kind of pasteboard, laid in lozenges, and which might be imbued with a matter that would render it incombustible.

Such is an abridgment of the description with which we have been favoured by Colonel Blom. How far the introduction, to any extent, of structures of this kind would be feasible or expedient in England, experience alone can shew. It would certainly be very convenient, as well as very amusing, to be enabled to go to a warehouse of ready-made houses, of all sizes, from the hunting-box to the spacious mansion, choose one's own residence, and have it brought home in an hour! Nor would the facility of a change of site be less agreeable.

A house might regularly travel with the family every summer,—one year to Brighton, another to Bath, a third to Scarborough,—and return to town in time for the meeting of the *two Houses*. In purchasing such a house, no charge could justly be incurred for fixtures, seeing that nothing would be fixed. At the expiration of his lease, a farmer might transport his house to another farm, as he now does his plough or his stock. By cunningly contriving to let your house be upon the road on quarter-day, the taxgatherer might be eluded. It would be well, however, to postpone any erection of this nature until the atrocities of the present time have been effectually checked; for a letter from Mr. Swing, notwithstanding the incombustibility of the roof, would be rather apt to disturb the sleep of the tenant of such a building!

Some of the French philosophers seemed to

entertain the opinion that the transition from a northern to a tropical climate would be fatal to these mansions; but it has been demonstrated by fact, that they are capable of enduring the change, as ships are; and that, if properly seasoned, they neither shrink nor crack, so as to become ineligible for residence. From the severe cold of a Swedish winter, to the summer heat, affords a perfectly satisfactory trial in this respect; and not only houses, but columns, churches, and royal palaces, have stood the test.

As this invention (which, by the by, has been known for years in America and the West Indies,) is likely to be practically illustrated in many parts of Europe, and, among other places, in London, by the Swedish Ambassador; we have caused an engraving to be made, as an example of Colonel Blom's talents and ability.

from its boldness, and the wildness of its situation. It has now, however, sunk into comparative insignificance, from the superior architecture of its modern rival, towering far above the ancient bridge. The modern erection is just completed, carriages having passed over it for the first time in August 1830." The site of this structure is certainly one of extraordinary sublimity; and, in contemplating it, the imagination reverts with awe to the mighty convulsions of nature, which originally threw such masses of matter into the grand and grotesque shapes they here assume. Nor are the ingenuity, intrepidity, and perseverance, which have contrived to connect those masses by the comparatively slight and fragile work of human hands, less a just subject of admiration.

Views of Interiors of Churches and other Buildings. Drawn on stone by Mr. Jaime, from Drawings by the Chevalier Bouton. Hull-mandel.

The fine works which he has from time to time exhibited at the Diorama, have rendered the talents of M. Bouton extensively known in this country. The present publication consists of a dozen little views, chiefly of interiors; in most of which we recognise that perfect knowledge of effect, by which M. Bouton's larger productions are so eminently distinguished.

Anatomical Demonstrations, or Colossal Illustrations of Human Anatomy. By Professor Seerig. Translated from the German. Part I. A. Schloss.

"FEARFULLY and wonderfully are we made!" When we look at plates such as these, we are astonished, not that there is an occasional derangement of the multifarious and complicated systems of the human body, but that they should exist for a moment without disorder. We have no doubt that this is a publication which will be highly useful, not merely to the young student, but to the matured surgeon. The list of subscribers—among whom are many of our most distinguished anatomists—is a sufficient warrant of its value. The preface states, with reference to the four plates of which the present Part consists: "The first is copied from the elder Meckel's plate of the Nerves of the Face. The second, with the exception of some alterations which Professor Seerig has thought proper to introduce, is taken from the second plate of Bock's Dissection of the Fifth Cerebral Nerve. The third and fourth plates are derived chiefly, though not exclusively, from Soemmering's works on the Ear and Eye." The publication will be composed of six Parts, to appear from time to time, at short intervals, until completed.

LITERARY AND LEARNED. ROYAL ASIATIC SOCIETY.

SIR G. STAUNTON, Bart., in the chair. The Church Missionary Society presented a small vocabulary of the *Evo* or *Aku* dialect of Western Africa, compiled by the Rev. John Raban, missionary at Sierra Leone. A few specimens of this dialect are given by Captain Clapperton in the Appendix to his Travels. The people are called *Aku* at Sierra Leone, from their using that word in their salutations. A communication was read from Mr. Mackenzie Beverley, on the zodiac of Dendera. The object of this essay is to analyse Mr. Bentley's treatise on the same subject. The writer is of opinion that Mr. Bentley's drawings of the zodiac are incorrect. He then goes on to describe the originals, critically examining Mr. B.'s mode of reasoning, which he demonstrates to be fallacious, and leading to erroneous conclusions. Mr. Beverley proves that the zodiac of Dendera is neither a Roman nor an Egyptian calendar, but an Egyptian planisphere. He does not consider its date older than 150 B. C., and thus assumes the French savans to be wrong, as well as Mr. Bentley.

FINE ARTS.

THE GLASGOW DILETTANTI SOCIETY.

The third annual festival of this Society was held a fortnight ago; James Smith, Esq. of Jor-

danhill, in the chair. The company consisted exclusively of the members of the Society; and liberal and enlightened sentiments characterised the various eloquent addresses which were delivered by the gentlemen present, in the course of a very agreeable evening. It appears, from a list published in the *Glasgow Courier*, that during the last exhibition, no fewer than sixty-three productions of Scottish artists were sold; upon which the Editor of that able journal remarks:—"The number of pictures contained in the above list, evinces that a taste for the fine arts has now become general in Glasgow; and we hope that the success with which the third West-of-Scotland exhibition has been crowned, will stimulate both its promoters and its exhibitors to continued exertion for an object so truly laudable and patriotic."

NEW PUBLICATIONS.

Clerical Collage, St. Bees, Cumberland. Drawn by W. Westall, A.R.A. Dickinson.
A VERY pleasing specimen of lithography.

The New Devil's Bridge, on the Pass of the St. Gothard. Drawn from Nature by C. Hullmandel; on stone by W. Walton. Dickinson.

"THE Old Devil's Bridge," says a note at the bottom of the print, "of which remains are perceived under the new one, was always considered one of the greatest curiosities in the Alps,

ORIGINAL POETRY.

TEMPUS FUGIT, ET NON FUGIT.

Tempus fugit.

THE school-boy counts each weary chime,
And chides the lagging wings of Time,
Nor thinks that hour will ever come,
He buds his willing footsteps home.

Tempus non fugit.

It comes at last—ah, happy day!
He hails the long-expected morn;
Satchel and books are flung away,
And rod and rule are laughed to scorn.
His brow, unfurrowed yet by care,
By sorrow yet unscathed his cheek,
His sports his young companions share—
No moody solitude they seek.

If Winter rears his hoary head,
 And trees abroad their branches spread
 Yclad in livery pale;
 If cutting winds, frost-laden, sweep,
 Around the blazing hearth they creep
 To hear the cheerful tale;
 Or gambol round the spacious hall,
 Or deftly ply the snowy ball.
 If genial Summer warms the plain,
 They ramble forth, a blithesome train:
 With them he panting climbs the hill,
 With them he wanders by the rill:
 They gather from the streamlet's bank
 The chaste blue-bell, the osier dank;
 They bask upon the sunny mead,
 Or revel in the cooler shade;
 O'er the brown heath their footsteps bound,
 They shout, and answering all around
 The merry echo rings.
 He deems such happiness before
 Was never felt, nor will be more.
 While day and night in pleasure pass,
 He heeds not Time, his sithie, nor glass;
 Yet when the withered old returns,
 His heart in bitter anguish burns,
 And joy within him dies;
 He weeps to think that Time has wings,
 So rapidly he flies.

KATTE.

SIGHTS OF LONDON.
 SINGERS OF THE ALPS.

UNDER this title, a new and rather extraordinary set of four male performers have commenced a musical entertainment at Willis's Rooms. They are from Styria; and, both in vocal and instrumental music, display some very singular qualities. One of them whistles after a fashion such as we never heard before; and the highest tenor voice is altogether marvellous, dwelling on notes with long-continued freedom, which few voices even of the most famous singers could reach. The conclusion of the concert, in which a mountain echo is introduced, is perfect illusion and also perfect beauty. The whole is a great treat, and well worthy of being visited.

PANORAMA OF QUEBEC.

AMONG the new sights opened for the gratification of the holiday visitors to London, we have to notice a very finely painted panorama of Quebec, by Mr. Burford, which was exhibited on Wednesday, for the first time, in Leicester Square. The wild scenery of North America, the noble river, the peculiar features of the nearer landscape, and the boundaries of distant mountains, are all represented with infinite truth; and the whole is one of the most pleasing efforts of the artist's successful pencil.

DRAMA.
 DRURY LANE.

WERNER is making its way as it deserves to do. The talent of Mr. Macready, both as adapter and performer, has been enthusiastically acknowledged by the public. Mr. Wallack and Mr. Cooper have seldom appeared to more advantage than as *Ulric* and *Gabor*; and Mrs. Faucit's *Josephine* is a most chaste and clever performance. Mr. H. Wallack also merits our commendation for his performance of *Stralenheim*. Mr. W. Bennett's steward is altogether a mistake; and Miss Mordaunt is as unlike *Ida* as can well be imagined; but the latter has little to do, and there is so much to interest and excite the spectator in the other characters,

that when *Idenstein* disappears in the third act, he is forgotten, if not forgiven. The costumes are splendid, particularly the last worn by Mr. Wallack; and the scenery exceedingly appropriate and effective. We anticipate that, after Christmas, *Werner* will draw crowded audiences. Its second representation was followed by a new interlude, *The King's Fire-side*. It is a translation, by Mr. Morton, of *Henri Quatre en Famille*, but not in his usual happy vein. It is however a mere trifle; and the clever acting of two little girls, Miss Poole and Miss Marsball, will most probably keep it alive during the holidays. Farren was admirably dressed as *Henri Quatre*, but did not seem to relish the part. Mrs. Waylett had no song; and Miss Mordaunt nothing to do but to whimper.

COVENT GARDEN.

WE called on Fate, and Fate has heard our prayer. If we are to believe report, Miss Mitford's tragedy of *Inez de Castro* is in rehearsal at this theatre; Mr. and Miss Kemble of course playing the principal parts. We trust it will equal, if not surpass, *Rienzi*. *Cinderella* is going on triumphantly, and Miss Inverarity may already be classed among the most popular of our native songstresses. Mr. Wilson, also, has displayed his fine talent to more and more advantage; so that the opera brings the first overflows of the season to Covent Garden. The pantomimes at all houses are in full preparation.

ADELPHI.

WE last week omitted to notice two novelties produced at this theatre, and since repeated nightly to bumper houses. The first, *Am I to blame?* is a gay and pleasant entertainment, from the pen of Mr. Rodwell; in which the felicity of a domestic circle is endangered by the *penchant* of the husband for a pretty French milliner, and the encouragement which a knowledge of his infidelity affords his friend to assail the affections of his wife. The story is well told, the acting—especially of Mr. and Mrs. Yates—excellent, and the *dénouement* most satisfactorily dramatic. The other piece is one of the diabolical class, called *The Devil's Ducal*, in which also Mrs. Yates's performance is most delightful. She is very ably seconded by Mr. Yates and O. Smith; so that, like *Lancelot Gobbo*, the fiend makes a strong attack upon the inclination of the audience. Mathews, in other scenes of older date, contrives, as usual, to convulse the theatre with laughter.

MADAME VESTRIS, who has taken the Olympic, opens it, newly decorated, on Monday week. Mrs. Glover and Miss Foote assist her at the commencement. Mrs. Glover eventually goes to Tottenham Street, which is to be opened, with material alterations, about the middle of February, by Mr. Macfaren, the author of several dramatic pieces, with Mr. Winston as manager. The question of the extension of the licenses of Mr. Morris and Mr. Arnold, proprietors of the Haymarket and English Opera House, is to be decided by the Lord Chancellor (to whom it has been specially referred by his Majesty) on the 11th of January. An entire revolution appears, therefore, to be on the point of taking place in theatricals. Some distinct legal act has been long required, by which dramatic rights may be defined, established, and protected, in this country, as they are upon the continent.

VARIETIES.

Curious Circumstance.—Under this title we have to mention the discovery of a body of gigantic dimensions on the unfrequented shores of Brora, in the north of Scotland. It is stated to be no less than seven feet in length, and the habiliments were quite foreign to those districts; they consisted of a blue jacket, silk vest, and cambric shirt; but there were no papers that could give origin to correct surmises on the country of the unknown dead!

Greek Calendar.—In *La Revue des Deux Mondes* for May and June, 1830, p. 440, it was announced, that "the Greek Calendar, which is, as is well known, twelve days in arrear of the Gregorian, was going to be abolished." In the *Revue Encyclopedique* for August, p. 491, there is a positive contradiction, in the following words:—"This abolition has not taken place, and it will be yet long deferred, as it is one of those great political and religious questions, which cannot be lightly resolved."

Cambridge Philosophical Society.—On the 13th, the very Rev. the Dean of Peterborough in the chair. Among the presents to the Society were a white rat, presented by the Rev. H. Fardell; a variegated blackbird, by Mr. John Headley; and a beautiful plate of *Napoleonite*, or orbicular Diorite of Corsica, by Captain Smyth, R.N. Some observations were made by Professor Whewell, in continuation of his paper "on the selection and employment of mathematical symbols of quantity." A paper was also read by Professor Henslow, on the "fructification of the *Chara vulgaris*," in which he stated that he had remarked a fact, apparently indicating some affinity between this plant and certain species of the "Arthrodiæ" of Bory.—After the meeting, a machine was exhibited, invented by Professor Airy, for the purpose of shewing the nature of the motion by which an undulation is communicated along a line of particles; and Professor Henslow also exhibited a portion of the stem of a tree-fern from Demerara, and pointed out the resemblance which it bore to the fossil species of these plants, so frequently met with in our coal strata.—*Cambridge Chronicle.*

A. von Kotzebue.—Among the dramatic writers of the last hundred years, hardly one, we fancy, could be named in Europe to compare with Kotzebue in fertility. The number of his dramatic pieces alone is 219, in 489 acts, viz. 15 tragedies, in 49 acts; 60 dramas (*schauspiele*), in 174 acts; 73 comedies, in 153 acts; 30 farces, in 53 acts; 41 parodies, preludes, afterpieces, operas, melodramas, &c., in 60 acts. They are specified in *Büchner's Manual of German Dramatic Literature*, since 1761. The number of Kotzebue's prose works, consisting of novels, histories, travels, periodicals, &c. is estimated at thirty volumes octavo, on the most moderate calculation.

Antediluvian Remains.—(*St. Petersburg, Nov. 16.*)—Last May there were discovered in the circle of Daniloff (government of Jaroslaff) the bones of a quadruped which appears to have been of the largest species of antediluvian elephants, and whose length, including the neck and head, may be estimated (judging by these bones) at about thirty-two feet. One of the great teeth (tusks) which was found, and differs from all before seen, is about six and a half feet long, eleven inches in diameter, and weighs about eighty pounds; it is very smooth, resembles externally an ox's horn, is not much bent, and forms a regular arc of a circle; inside was a substance resembling gypsum. One of the grinders is twelve inches long, four inches

thick, and weighs ten and three quarter pounds. The jaws were broken, so that the number of teeth could not be ascertained.

The *Essex Herald* states that the nest of a wagtail, with four perfect eggs, was lately sawn out of a solid elm-tree, at the distance of nine inches from the surface or bark, and that no aperture leading to this curious enclosure could be discovered.

Magnificent Vase of Aventurine.—A short time ago mention was made in the public papers of a costly vase which the Emperor of Russia had presented to Baron Alexander de Humboldt. This vase is now exhibiting in the Hall of Antiques in the Museum at Berlin. The peculiar stone out of which it has been wrought, renders it unique of its kind; as it is not found either in the central or southern countries of Europe, but seems to be an exclusive production of Siberia. The name which the attendant at the museum gives to it, is that of *Aventurine*. From the transparency and variegated colours of its veins, its crystalline fineness of texture, and its high susceptibility of polish, it bears a striking resemblance to the finest sort of agate, "the sardonyx, or onyx;" in substance it is like the former, and in its striata and parti-coloured spots it resembles the latter. For multiplicity and alteration of tints, it is in no respect inferior to the most brilliant opal or jasper of Sicily or the Indies. This rare production of nature, which stands inclusive of the pedestal, eight feet high, shows that Siberia possesses a description of quartz better adapted than any other yet known in a southern climate for works of magnitude; for the block from which it was wrought cannot have contained much short of seventy cubic feet of pure stone. The vase is finely moulded after the antique, and has two superb raised arms of massive gold, carved with much taste.—*Berlin, 30th September.*

Denmark.—The Royal Society of Northern Antiquaries at Copenhagen, whose object is to publish, first, works on ancient northern literature, and then whatever may throw light on the ancient history of the north of Europe, its language, its antiquities, &c.; and under whose auspices a number of the Icelandic Sagas (or ancient fables), with Latin and Danish translations, have appeared; having determined, that from the present year, in order to give its transactions the greatest possible publicity, it would communicate, in a regular journal, an account of its sittings, of its labours, and of the works addressed to it, has accordingly published a *procès-verbal* of the general assembly of the Society on the 15th of April last; by which it appears to have been very actively engaged in prosecuting the interesting purposes of its establishment.

Additions to the British Fauna.—It is not generally known that three distinct species of three-spined sticklebacks, have been constantly confounded under the name of *gasterosteus aculeatus* of Linnæus. Mr. Yarell has fished all three species up in the Thames, near Woolwich. They are distinguished by the distribution of the scales, which in the first extend throughout the whole length of the side. In the second, they reach no farther backwards than the line of the vent; and lastly, in the third species, the lateral scales extend no farther than the ends of the rays of pectoral fins.

Silk from Cobwebs.—At a late meeting of the Society of Arts, a gentleman exhibited some very fine silk which he had obtained from the web of the spider; it possessed considerable strength, and a beautiful metallic lustre. Many species of spider have been tried, and food of a

varied character given to them—the *larvæ* of flies successfully.

Specific Identity of Anagallis arvensis and cœrulea.—The Rev. J. S. Henslow, professor of botany in the University of Cambridge, received last year some specimens and seeds of *Anagallis cœrulea*, gathered in Yorkshire. From these seeds the professor raised a dozen plants, nine of which had blue flowers, and three red.

French Journals.—In a pamphlet lately published in Paris it is asserted, that the sum expended by the old government in the purchase of a portion of the daily press of the French capital, amounted to 4,075,439 francs; and the manner in which that sum was distributed is detailed.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. LII. Dec. 25.]

An Analysis of Archbishop Secker's Lectures on the Church Catechism, by the Rev. R. Lee.—Raphael's Witch, by the Author of "the Prophetic Messenger;" with coloured scenes.—A second edition of Professor Millington's Epitome of the Elementary Principles of Mechanical Philosophy.—A Key to a Complete Set of Arithmetical Ruds, by P. B. Templeton.—Mr. Jones Quain's Two Lectures on the Study of Anatomy and Physiology.—A Collection of Statutes relating to the Town of Kingston-upon-Hull, by William Woolley.—Professor McCulloch is preparing for publication a Theoretical and Practical Dictionary of Commerce and Commercial Navigation.—A Course of Lessons in French Literature, on the plan of his "German Lessons," by Mr. Rowbotham.—The Life and Death of Lord Edward Fitzgerald, by Thomas Moore, Esq., is nearly ready.

LIST OF NEW BOOKS.

Stapleton's Life of Canning, 3 vols. 8vo. 11. 16s. bds.—Rask's Anglo-Saxon Grammar, by Thorpe, 8vo. 15s. 6d. bds.—Tales of a Grandfather, Fourth Series, Stories from the life of France 3 vols. 18mo. 10s. 6d. hf.-bd.—Morrison's Counsels to Sunday-School Teachers, 32mo. 1s. bds.—Rowlatt's Sermons at the Temple, 8vo. 12s. bds.—James's Sermons on the Sacraments and Sabbath, 8vo. 8s. 6d. bds.—Cadeau, a Musical Annual for 1831, folio, 12s. bds.—White's Naval Researches, 8vo. 7s. 6d. bds.—Prometheus of Æschylus, English notes, &c., post 8vo. 5s. bds.—André's French Teacher, 12mo. 7s. sheep.—Billing's First Principles of Medicine, 8vo. 6s. bds.—Vizier's Son, 3 vols. 12mo. 11. 4s. bds.—Bruce's Cypress Wreath, 18mo. 3s. 6d. bds.—Taylor's German Poetry, Vol. III. 8vo. 15s. bds.—Bernays's German Prose Anthology, 12mo. 7s. bds.—Horton's Cases and Remedies of Pauperism, 8vo. 12s. bds.—Infant's Daily Sacrifice, 16mo. 5s. bds.—Annals of My Village, crown 8vo. 12s. bds.

METEOROLOGICAL JOURNAL, 1830.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. November 1830.

Thermometer—Highest	56.75
Lowest	24.25
Mean	41.01791
Barometer—Highest	30.15
Lowest	28.82
Mean	29.56655
Number of days of rain,	16.
Quantity of rain in inches and decimals,	3.01275.
Winds.—6 East—4 West—0 North—3 South—0 North-east—7 South-east—4 South-west—1 North-west.	

General Observations.—Thirteen days might be denominated fine; and the thermometer reached an elevation above any in the same month during the last seven years; while the mean temperature was nearly 4° higher than in November last year. The barometer was generally low, and the mean gave a depression greater than since 1826; the quantity of rain much greater than usually falls in the month—indeed, more than since 1825. Lunar haloes were seen on the nights of the 25th and 27th, and a faint aurora borealis was observed on the 17th, about half-past eleven p.m. The evaporation 0.13125 of an inch.

TO CORRESPONDENTS.

Christmas has robbed us of our publishing day this week, and index and title-page so cramped our limits, that we must endeavour to excuse a lame winding-up No. for the fourteenth volume of the *Literary Gazette*; and request our friends and readers to believe that our course will be resumed with unabated energy for 1831. We have nothing but thanks and continued zeal and exertion to offer for the unprejudiced success which attends our labours, and to pledge ourselves to the same impartiality and independence which has procured for our publication so envied an influence, and so extended a popularity.

To Amicus: we do not see the use of Amicus's question; but the answer is, an individual sent by and for us.
ERRATUM.—In the Lecture on the Mummy, at the Royal Institution, in our last, p. 819, col. 2, fourth line of the *Appendix*, for "grandes," read "Guanches."
