THE LONDON LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 689.—AMERICAN EDITION.

SATURDAY, APRIL 3, 1830.

THE LITERARY GAZETTE, containing the earliest information in regard to Literature, Science, and the Fine Arts, is well worthy of the attention of all those persons in the United States who wish to become acquainted with the progress of knowledge in Europe, which they may, through this medium, as efficaciously and as promptly as if they kept up an active correspondence with the principal literati and philosophers of the Old World. From the regularity in the sailing of the New York packets, each Number can be sent off within a day or two of its publication, and will frequently reach the most distant part of the United States within a month of its date; and in consequence of the low rate of postage on newspapers, the cost will not be greater to the subscriber in Missouri than to the subscriber in London. From these considerations, Mr. RICH has been induced to make arrangements for supplying his fellow-citizens with this important work, which he will do on the following terms:

The LITERARY GAZETTE, published in London every Saturday morning, will be sent to persons in every part of the United States by the packets to New York, whence it will be forwarded through the post-office at Eight Dollars per Annum, payable in advance, or £1. 10s. if paid in London.

The subscription will be considered to commence, unless otherwise directed, on the Saturday following the day on which the order and amount is received in London, from which time the LITERARY GAZETTE will be sent regularly for one year; and it is expected that those who wish to have the work continued, will take care to renew their subscription in due season, in order to avoid any interruption.

Subscribers are requested to be particular in giving their address, so that no mistake may occur in sending their papers.

The Numbers will be addressed to the subscribers, and transmitted by the first packet which sails after the day of publication, and delivered at the post-office of the port of her arrival in the United States, free of expense, the subscriber paying the inland postage to the place of his address.

Booksellers throughout the United States are authorised to receive subscriptions, and will be allowed a commission of ten per cent, and, on transmitting the amount of ten sub-

scriptions, will be entitled to an eleventh copy gratis.

Subscriptions may be transmitted by persons through their correspondents in England, or direct to Mr. RICH, 12, Red Lion Square, London; or those to whom it may be more convenient, may send the amount of their subscriptions to Mr. WILLIAM RICH, Washington, District of Columbia, or to GRAY and BOWEN, Boston.

*. Publishers of Newspapers and Periodicals, who may feel inclined to co-operate with one of their fellow-citizens in facilitating the literary intercourse between the Old World and the New, are requested to notice this Prospectus.

The Editor of the London Literary Gazette having excluded an extract from his second review, to make room for Mr. Rich's preceding announcement, takes the opportunity of saying a few words upon this plan for supplying an American edition of his publication with rapidity and certainty. It has met with his most cordial concurrence; and he trusts that, unpretending in form as the means are, they will conduce in spirit to draw closer the links of amity and friendly feelings between the two countries. It will be his object, throughout the whole of their intercourse, to promote this good understanding; while he endeavours to make his work as acceptable in the United States as it has fortunately become in the Old World, as an impartial compendium of what is valuable in literature, science, and the fine arts.

It is in itself a circumstance worthy of notice, and a new and curious feature in the history of the periodical press, that any journal of this kind should have acquired so high a general character and influence at home as to entitle it to the flattering distinction of being thus widely circulated among other nations. But as the arrangements made by Mr. Rich will enable him to produce the Literary Gazette at the same charge on the banks of the Susquehannah and the Mississippi, as it costs on the Thames and the Tweed; so have we also in progress other arrangements which will extend this advantage to the Indus and the Ganges. So universal a dissemination was never enjoyed by a periodical journal of any class; and we hope to prove ourselves deserving of the honour by diligent exertions, copious information, and unalterable independence.

It is pleasant to us in this No. to announce to our new friends across the Atlantic, that this day (Saturday, April 3d) the Council of the Royal Society of Literature awarded one of the two gold medals, placed annually at their disposal by his Majesty, to Washington Irving, Esq. Secretary to the American Embassy, in testimony of their admiration of his literary works. These medals are beautiful specimens of art, and of the value of fifty guineas each: they are voted yearly to individuals who have distinguished themselves by the production of works of standard reputation; and Mr. Irving shares the distinction with Scott, Southey, Milford the

Greek historian, Angelo Mai of classic fame, Baron Sylvestre de Sacy, Hallam (his colleague this year), and other eminent men in various walks of learning and genius. But this election is perhaps still more to be prized as an evidence of the kindly and liberal sentiments entertained by the Royal Society of Literature towards the citizens of the United States. Nor will the compliment be less esteemed when we mention, that upon the Council (to which also we are proud to belong) are to be found the Bishops of Salisbury and Bath and Wells, the Marquess of Lansdowne, the Earl of Carlisle, Lord Clive, the Hon. G. Agar Ellis, Mr. L. H. Petit, M.P., Colonel Leake, Mr. Caley, Dr. Richards, and other individuals of literary celebrity, as well as of exalted rank in church and state.

REVIEW OF NEW BOOKS.

Travels in Kamchatka and Siberia, with a Narrative of a Residence in China. By Peter Dobell, Counsellor of the Court of H. I. Majesty the Emperor of Russia. 2 vols. 12mo. London, 1830. Colburn and Bentley.

THESE Travels are full of interesting adventures, and relate many curious particulars both of Siberia and China (in the latter of which countries the author remained between seven and eight years); which will be both new and entertaining to readers. He landed in Kamchatka in 1812, and journeyed through Siberia, giving a much more favourable account of that frozen region than we have been accustomed to hear: but his previous visit to China in 1798, though it forms the end of the second volume, possesses more attraction for us in the way of extracts, and we shall illustrate the work by a few selections bearing on the customs, &c. of the Chinese, as observed by a European, who had better opportunities than common for acquiring correct information:—

“I have been told that the whole military force of the empire is upwards of a million of men. This may be true; but I will answer for it there never existed an army of the same numerical force, so feeble, so little adequate to the defence of the country, or so perfectly ignorant of the art of war. In the province of Fokien, civil wars have occurred between two powerful clans, which the military were unable to quell. Indeed, they never attempt it, when eight to ten thousand men of a side meet to decide some family quarrel. They look calmly on until the affair has had its bloody issue, when they intrigue with the stronger party, to deliver over for trial some of those whom they have conquered. The governor then despatches a flaming account to Pekin, relating the victory obtained over the rebels; and asks permission to cut off the heads of the prisoners. On receiving an answer (always in favour of cutting off heads), those poor wretches suffer punishment, and there ends the affair. There is a sect in China, very formidable, called ‘the Celestial Fraternity,’ who, certainly, if what the Chinese say of them be true, have some influential characters among them, by whose

intrigues many of the revolts we have read of have been produced. Although the fraternity at Canton is said to be composed of gamblers, robbers, pirates, and the very dregs of society, these men, being very daring, do oftentimes defy the police. Their object, I have been told, is the subversion of the Tartar dynasty. * * *

"The perfection of the mechanic arts in China cannot be denied in certain instances; but this is evidently not the result of a regular combination of scientific improvements. It appears to be the effect of the laboured experience of ages, brought slowly and difficultly to a certain point, where it is stationary, and cannot advance further, until science shall dispel the prejudices of habit and the clouds of ignorance. There is certainly a superiority in several of their silk manufactures, as it regards the gloss and the fixing of the colours, and the rendering them so bright and permanent; but this is not produced by any secret mordant or process unknown to Europeans. I was once present at the dyeing of silks; and, on examination, found the process conducted in the simplest manner, with the commonest mordants used in England. They know very little of the chemical agents, the use of which has become so common in Europe; and the brightness and permanency of their colours must be derived from a very nice experience of the application of the mordants, the climate, and other favourable and concurring circumstances. Owing to the cheapness of labour, a very large number of hands are employed; therefore the work goes on with a rapidity almost beyond conception, and the silks are immediately hung out to dry, during the prevalence of the north wind, called by them *Pak Fung*. Certainly, in any other

amputation, are there cured without the loss of limb. It may serve to account for this in some degree, if I state that the food of the poorer classes is principally rice and vegetables, accompanied by a couple of little ragouts of fish or flesh, and also a glass or two of their favourite *santchoo*, which is very rarely drunk to excess. Several workmen were placing tiles on the roof of a house not far from where I lived, when the beam that supported it, being old and rotten, broke, and the roof and the whole party fell into the house. There were no limbs broken, but fifteen of the men received cuts on their heads and bodies; some of them very deep. As the master-workman was an old acquaintance, he brought them all to my house, and requested me to dress them. I washed their wounds with laudanum, and closing the lips with strips of court-plaster, gave orders not to remove the bandages until the wounds should suppurate. Although some had several deep cuts, only two wounds suppurated, and these were on the back part of the head,—a place which the Chinese refused to have shaved, and, consequently, the hair interfered with the adhesive quality of the court plaster. All the rest were healed by what is called the first intention. The master-builder (who was also a joiner), thanked me much; for he said, had the men been left without dressing their wounds, it would have taken a long time to cure them, and he should have been obliged to nurse and feed them. He never forgot this friendly act, and gave me many proofs of his gratitude afterwards. * * *

Many persons have supposed (who only know the Chinese superficially) that a nation so grave, sedate, and monotonous, cannot include either fops or boys

without giving offence to delicacy; and these before the women, who appeared quite pleased at the entertainment. This must be owing, on their part, to a want of education and refinement, and to the habit of witnessing spectacles which European women, of even the worst class, would turn from with disgust. At a Chinese theatre there is always a place set apart for the females (I will not call them ladies), separating them from the rest of the audience by a curtain or screen; but, as they sit in front, near the stage, one has a good view of them, and near enough to discover how much they seem pleased with the play. Women in China are not even taught to read and write: needle-work and music (if it deserves the name) are their only accomplishments. To kill time, they play at cards and dominoes, and smoke incessantly. Men and women of the better classes never mix in society; it is considered disgraceful to eat with their wives; they do not even inhabit the same side of the house. I have, however, known some who broke through this custom, and who have assured me they found much pleasure in dining with their wives. Polygamy has certainly done a great deal of mischief in the way of morals. Some men, even at an advanced age, continued to increase their stock of wives, when they have already sons grown to manhood. I have been confidently informed, that intrigues between those sons and the younger wives, or concubines, of the father, are not uncommon. Dining once with a rich merchant, some comedies were represented to us, where the wit turned upon the refined tyranny of a husband, who beat his wives most unmercifully. We asked him if the wives did

beginning of October. This wind is so remarkable in its effects, and so immediately felt, that should it begin at night, even when all the doors and windows are shut, the extreme dryness of the air penetrates into the house immediately, and the furniture and floors begin to crack, with a noise almost as loud as the report of a pistol. If the floors have been laid down in summer, when the air is damp, or if the planks be not exceedingly well seasoned, and secured with iron cramps, they will open an inch at least when the north-east monsoon commences. The Chinese will not even pack teas or silks for exportation in damp weather; that is to say, unless they are hurried to do it by the strangers who have business with them, and wish to get their ships away sooner than ordinary. I have known a ship detained three weeks longer than the captain wished at Canton, because the security-merchant would not pack the silks which formed part of her cargo, until the weather became favourable. This will account, in some measure, not only for the permanency and beauty of the dye, but likewise for the care that is taken to preserve it. The Chinese say that if newly-dyed silks be packed before they are perfectly dry, or in damp weather, they will not only lose the brightness of the colour, but will also become spotted. They may have some secret in the spinning and tissue of silks, which we know nothing of; but certainly not in dyeing them.

"When they are wounded, there are no people so easily healed as the Chinese; fractures, which in other countries would require

of a particular simplicity. The richest black satin of Nankin, the soles of a certain height; his knee-caps elegantly embroidered; his cap and button of the neatest cut; his pipes elegant and high priced; his tobacco of the best manufacture of Fokien; an English gold watch; a tooth-pick, hung at his button, with a string of valuable pearls; a fan from Nankin, scented with *chulan* flowers. Such are his personal appointments. His servants are also clothed in silks, and his sedan chair, &c. &c. all correspondingly elegant. When he meets an acquaintance, he puts on a studied politeness in his manners, and gives himself as many airs as the most perfect dandies in Europe, besides giving emphasis to all those fulsome ceremonies for which the Chinese nation is so remarkable. The rich Chinese, who are cleanly, are all fond of dress; though some, from avarice, attend only to outward show, whilst the shirt and undergarments remain unchanged for several days, and expose, at the collar and sleeves, the dirty habits of the master through his splendid disguise. Those who are in the habit of mixing with Europeans are more attentive to cleanliness; but, generally speaking, the Chinese are certainly not so clean in their persons as one would expect from the inhabitants of a warm climate. The Chinese indulge in every species of sensuality, are fond of indecent shows and books, which debauch the minds of youth, and, indeed, are too apt to carry all pleasures to a criminal excess. At their theatres I have seen exhibitions such as it would be impossible to describe

imaginable. The strangers present all laughed heartily; and we could perceive the women enjoyed it beyond measure; but, the moment the master of the house discovered this, and that we passed some jests upon him, he became serious and embarrassed, and would not permit a continuance of those representations. We may therefore fairly conclude, that in spite of the strict and despotic manner in which wives are treated in China, they sometimes get the upper hand of their lordly masters. On stricter inquiry I found, that when a Chinese became enamoured of one of his wives in preference, she generally contrived to wheedle him, and govern him as she liked. The rich men, however, are not over-blessed with domestic habits. They dissipate a great deal of their time at the theatres, or in parties on the water, at the flower-boats, or receptacles for public women, at the exhibitions of fighting quails, gaming, &c. This latter vice is very prevalent amongst all classes and descriptions of people, and is carried to a great excess. *Pack-thai-Yen*, whom I mentioned before as having been civil governor and also viceroy of Canton, attacked it very severely; but, although he caused the public gaming-houses to be shut, and punished the proprietors, yet, in a short time afterwards, a number of new ones sprang up on the ruins of the old, and were as much frequented as if nothing had happened. No doubt the magical qualities of gold produced this effect. It seems to be the talisman of the Chinese soul, the deity to whom he pays his most fervent adoration; nor ought we to feel surprised at his de-

tion, when he sees it bind the rod of justice, and arrest the arm of the executioner. Besides cards and dice, they have other sports and games of chance peculiar to the country. The most remarkable are quail-fighting, cricket-fighting, shuttle-cock played with the feet, and ruffling, at which they are very expert. To make two male crickets fight, they are placed in an earthen bowl, about six or eight inches in diameter; the owner of each tickles his cricket with a feather, which makes them both run round the bowl different ways, frequently meeting and jostling one another as they pass. After several meetings in this way, they at length become exasperated, and fight with great fury, until they literally tear each other limb from limb. This is an amusement for the common classes; but quail-fighting belongs to the higher orders. Quails that are to be prepared for fighting require the strictest care and attention. Every quail has a separate keeper: he confines it in a small bag, with a running string at the top, constantly attached to his person; so that he carries the bird with him wherever he goes. The poor prisoner is rarely permitted to see the light, except at the time of feeding, or when the keeper deems it necessary he should take the air for his health. When he airs his quail, he will hold it in his hand (taking great precautions not to spoil his plumage) for two or three hours at a time. The patient care and attention of the Chinese to their fighting-quails and singing-birds, are equal to those of the fondest mother for a favourite child. When two quails are brought to fight, they are placed in a thing like a large sieve, in the centre of a table, round which the spectators stand to witness the battle and make their bets. Some grains of millet-seed are then put into the middle of the sieve, and the quails, being taken out of the bags, are put opposite to each other near the seed. If they are birds of courage, the moment one begins to eat the other attacks him, and they fight hard for a short time, say one or two minutes. The quail that is beaten flies up, and the conqueror remains, and is suffered to eat all the seed. I should suppose the best quail-fight never lasted more than five minutes. Rich men have always a number of birds ready trained, in order to have as many battles as will amply a considerable portion of the day. Immense sums of money are won and lost on them. A good deal of time also is spent in making the bets. Sometimes one quail has been known to win several hundred battles, and all of a sudden, gets beaten by a new and unknown bird; a circumstance which occasions high betting and fresh encounters, until the new comer is again beaten in turn. If we consider what a trifling gratification this sport affords, when compared with the time, trouble, and expense of preparing the quails, it is astonishing it should be so much esteemed. An extreme fondness for gaming can be the only inducement; but it exhibits at the same time a strong proof of their effeminate character. It is, however, pursued with great ardour in China, many persons losing and winning large fortunes at it, and some of the most voracious men I was acquainted with were great quail-fighters. I have been told also by the adepts, that there is a great deal of art in choosing and dressing quails, as well as feeding them and handling them. Next to quail-fighting, the flower-boats occupy most of a Chinese gentleman's leisure hours.

Among their dinner customs, the following would do well for Mr. Planché's Easter piece. Besides the stated periods for drinking, the guests drink with one another occasionally, as

in England. But when it is done ceremoniously, the parties rise from their chairs, with their wine-cups held in both hands, and proceed to the middle of the room. They then raise their cups as high as their mouths, and lower them again until they almost touch the ground—the lower the more polite. This process is repeated three, six, or nine times, each watching the other's motions with the greatest exactness; nor will one of them drink before the other, until, after repeated attempts, their cups meet their mouths at one and the same instant, when they empty them, and turn them up so as to expose the inside, and shew that every drop has been drunk. After this, they hold the empty cups and salute one another in the same manner, retreating by degrees towards their chairs, when they sit down to resume their functions at the repast. Here, sometimes, a polite contention takes place who shall be seated the first, and is not decided until after a number of ceremonious bows, nods, curvings of the bodies, and motions of the hands, when they contrive to lower themselves into their chairs at one and the same moment. At the commencement of this ceremony, when the parties approach one another so as almost to touch their wine-cups, they very often exchange them before they begin their salutations. They have also a game for making each other drink, which I shall endeavour to describe. The wine-cups being filled, the two persons engaged stretch forth their right hands towards the centre of the table, with their fingers closed. When the hands come almost in contact, they open as many fingers as they please, and each person cries out the number he opens, as one, three, five, &c. Whoever hits on the exact number of fingers presented by both persons, obliges his adversary to drink. I have seen this game continued for an hour, until one of the parties, finding himself the loser, and his head a little affected, is obliged to recede. It is an extremely noisy amusement when any number of guests engage in it. In passing up and down Canton river, on a holyday, one's ears are assailed on all sides with this boisterous merriment, which savours strongly of the barbaric customs that prevailed at the feasts of our uncivilised ancestors."

But we must conclude, which we do with the Chinese account of the origin of letters in Europe. "A Chinese, who was accustomed when he walked to take a book for his amusement, went once some distance into the woods, where he stopped to read and rest himself. Finding himself fatigued, he put the book down on the ground and placed a stone on it, whilst he lay down to repose himself. After a while he got up and went home—but forgot the book. It remained there for several years, until every part was decayed, except twenty-four characters covered by the stone. These a monkey afterwards found, and not being able to read them, he presented them to the Europeans, who formed their language with them. This story, ridiculous as it is, shews the vanity and pride of the Chinese, and the contempt they have for Europeans."

The Game of Life. By Leitch Ritchie. 2 vols. 12mo. London, 1830. Bull.

THIS tale is the history of a young man who, with no friends, and only ten pounds in his pocket, but with the birth, education, and feelings of a gentleman, is forced, by the pressure of necessitous circumstances, to visit London, and seek his fortune on the slender foundation we have indicated, having passed all the early portion of his life in the ignorance and seclu-

sion of the country. The scenes are uniformly dark—vice and want go hand in hand; and the exertions to escape from this double bondage are made in the lowest channels by which a livelihood can be gained. Copying law papers, collecting or manufacturing news for the daily press, and writing for magazines, finally leave him in a state of absolute destitution. However, the book ends very happily, owing to the intervention of an old gentleman, such as is seldom to be met with in life, though very often in novels, a Mr. Vesper, who, because the mother jilted him, sentimentally protects the son, helps him out of his difficulties, and finally marries him to his newly-discovered niece, the heroine of these pages. The plot is nothing; the argumentative portions somewhat lengthy; and we do not find much originality in the more creative efforts. But the great merit of the author is in the true and graphic pencil with which he draws pictures from actual life. Evidently an eye-witness, and perhaps an actor, in the scenes he describes, they are exhibited with startling fidelity. The lodging-house, and various street occurrences, are copied from the daily panorama of life, with the tact and accuracy of a very acute observer. We have room only for the following night piece, sketched in a very vivid manner.

"It was nearly twelve o'clock, the public-houses had already emptied their lawful contents into the vast thoroughfares of population; the shops were shut, with the exception, here and there, of an avaricious pastry-cook's, which still gaped upon the street for the purpose of tempting stragglers on their way home from the playhouses; the customary noises of evening had died away, all but now and then a drunken shout, or the rattle of a hackney-coach, or the hoarse voice of a watchman bawling the hour. By and by, the theatres flung their gushing volumes into the stream, which gave token of the addition to the furthest corners of the metropolis. Men and women, boys, girls, and children, flowed rapidly along; some absorbed as they passed into the ducts and creeks which opened by their side, and others disappearing in the gloom before. The eager remark, the abrupt question, the recollected laugh, echoed on all sides; and when the crowd gradually melted away, and their voices died in the distance, the loneliness of the desert street seemed strange and startling. The silence was now only broken at long intervals by the scream of the female night-wanderer, driven by intoxication and despair to remonstrate with the sullen guardian of the hour; but elsewhere the drowsy voices of the watchmen themselves seemed to add to the calmness of the scene,

'Imposing silence with a stilly sound.'

As William turned into Bridge Street by the Obelisk at Fleet Market, he heard a singular cry, which even his practised ear was unable to syllable into any of the customary sounds of a metropolitan night. A figure in white came rushing along the pavement, uttering a short, shrill, definite scream, repeated in rapid yet regular succession. As she approached, he could see that she was dressed in the extreme of fantastic tinery, and that her wild and bacchanal air denoted a profession of shame. 'Lost! lost! lost!' was her cry as she ran; 'Lost! lost! lost!' she shrieked most wildly in William's ears, as she swept past him like a spirit. Shocked and heart-stricken, he stood still and gazed after the phantom; and when her form had melted into the darkness, and the voice of the lost one fallen for the last time upon his heart, it was with a gasp of unat-

terable relief he pursued his aimless journey. On the neighbouring bridge he stood for a while, contemplating instinctively the imposing scene before him. No sensible perception, however, of beauty or sublimity at first entered his mind. He seemed to be awakened gradually from a dream, of which he remembered not the form or meaning, by the moon breaking from the clouds which had till now enveloped her, and calling out from the chaos of darkness the elements of a magnificent city. The proud dome of St. Paul's raised its head supreme amidst the mass of buildings, while meaner spires, countless in number, and various in form and character, were scattered around. To the west, the more definite part of the view was bounded by Waterloo Bridge, which threw its superb length, as straight as an arrow, over the wide and glittering river; and beside it, Somerset House, rising, with its palace-walls, from the water's edge, seemed a building created and existing only in the fancy of a painter. On the north, a forest of dark houses burdened the earth as far as the eye could reach, oppressing the imagination by their multitude, and their close and compact array; on the south, the line of Blackfriars' Road extended its rows of bright lamps with mathematical nicety to such a distance that it seemed to terminate in a point; and to the east, the cast-iron bridge bestriding the broad stream, like a giant, seemed to guard the tract beyond from view, into which, nevertheless, the eye could penetrate, although dimly, as in a dream, through darker clouds and shadows, which it learnt by its past experience to lead into homes.

...the mighty volume of waters which rolled in silence through the silent city; and in thick darkness its course was lost and swallowed up. William gazed with a feeling of littleness, which at last diverged into absolute terror. He forgot that he was himself an individual of that species of insects which had created the wonders around him!"

NOOKTA SOUND.

Journal of Travels in the United States, and on the North-western Coast of America. By Ignatius Hülschwitt, ci-devant Lieutenant of Artillery. 8vo. Coppenrath, 1829. Münster.

Dire scenes of horror on a savage shore,
In which, a witness sad, a part I bore.
The Author's motto.

THERE is little that can be said on the subject of the United States, with which the gleanings of our own industrious explorers have not made us familiar. In this point of view, indeed, the modest and straightforward narrative before us presents nothing that is strikingly novel; but it is far otherwise when we come to deal with the account of the writer's captivity and residence among the inhabitants of one of those remote corners of the New World, the name of which will remain co-existent with the recollection of the splendid enterprises led by a Cook and a Vancouver. Here, indeed, is a picture of men, and manners, and incidents, full of life, originality, and interest; and, what is rare enough in these days, pencilled with a simplicity and absence of art, which serve, in no slender degree, to attest its title to our confidence.

Hülschwitt quitted his home at Luxemburg in

1819, in company with his father-in-law, his wife, and a servant; embarked for America at Rotterdam; and reached Kennibank towards the end of the following December.

The first striking incident that arrests our attention, arises out of adult immersion; it is a practice rather honoured in the breach than the observance, as the reader will speedily acknowledge: and although we would pick no quarrel with Greek or Roman for baptising his full-grown Tom of bell-metal; nor with the schismatic Montanist of Africa for submerging his departed relatives; Heaven deliver the Christian, who has just turned the corner of his teens, from dipping when Fahrenheit is under 32°!

The party had reached widow Mason's at Kennibank. "Her civility," says the pilgrim, "was so much to our liking, that we boarded and lodged with her all the time we remained there. The cold was excessive; the snow had drifted together in hills, to such a degree, that in many places the inhabitants could not get at one another without delving themselves a passage. In doors, our breath froze on the counterpane, although a blazing fire was kept up during the whole night in an enormous chimney. The second day after Christmas, a new-married couple belonging to the baptist confession were baptised. After a few staves, the young people, dressed in white, stepped into the appointed hole; and the priest, who had bound his kerchief round their waists, dipped them completely under water, reciting the usual benediction. The young man, however, was so much affected by the cold, that he fell into the water, and was obliged to be rescued. In fact, the young man, who had been translated to the mansions of happiness."

Hülschwitt, having established a brewery at Catskill, on the Hudson, was doomed to witness the blasting of a very promising future in the destruction of his establishment by fire. We soon after find him at New York, where he accepted the situation of a supercargo in a vessel bound on a trading voyage to the north-western coast of America; and leaving his wife behind him, auspicious breezes and trade-winds brought him, in due time, to an anchor at Nootka. "The following morning several of the natives came on board, and amongst them, their king, Makina, who," says the traveller, "appeared much pleased to see us. He was a man of dignified deportment, prepossessing manners, erect in stature, and above six feet in height. His features were regular and agreeable, and a large Roman nose and lofty arched brow distinguished him above all his countrymen. His face, arms, and legs, were so completely covered with red paint, that it was scarcely possible to detect his dark, copper-coloured skin. His long, black hair, which shone with oil, was powdered with white down, bound together round his head, and gave him a most ferocious appearance. A mantle of sea-otter skins descended from his shoulders nearly to his knees, and was made fast by a girdle, which was bedizened with all sorts of figures in all sorts of colours. The dress at least became him, and befitted the dignity of his barbarian majesty. His people also wore mantles, but they were of woven bark of trees, like Indian mats, and were fastened with a girdle of one single colour: their hair was universally

tied round their heads, intertwined with a sprig of the fig-tree by way of ornament."

These savages, with Makina at their head, paid frequent visits on board the vessel, and an amicable intercourse subsisted between them, until on one occasion the captain, a man of very irascible temper, fired at a remark made by the royal savage, branded him with the epithets of a liar and a scoundrel—words to the import of which he was no stranger. "He did not open his lips, but his features bespoke a fierceness of anger which he would willingly have kept concealed from us. He drew his hand repeatedly across his throat and down to his breast; this he did, as he afterwards explained to me, for the purpose of keeping down his heart, which threatened to rise into his throat and choke him. He speedily took his departure, in a state of considerable excitement."

Cunning is the child of no exclusive soil, and the handmaid of revenge as well under uncivilised skies as in polished life. The next day Makina came on board, with more than common hilarity in his eye and manner; and having dined with the strangers, tempted the captain to despatch the helmsman and ten of his crew in search of salmon at Friendly Cove. Our traveller suspected that mischief was intended, but dared not expose himself, by hinting his misgivings, to the ridicule of his American messmates, as "they consider themselves (says he) the bravest nation in the world, and are therefore very much disposed to cry down every other as deserters." He, however, (he adds) in no manner was alarmed; and he had not been long on board, when I heard the shrill cry of alarm, which was instantly repeated from the deck. My ears were then struck by the howl, which was repeated from several places. I hurried up the ladder to Charles's workshop, where I found him lying on the floor in a state of total insensibility, with his head bleeding. Struck with horror, I attempted to make my way on deck, but the door was bolted on the outside. I looked through a chink, and what a horrible scene lay before me! To this day my hair stands on end, and my blood runs cold, whenever I recur to it. My companions lay stretched upon the deck, each of them chained down under the grasp of three or four Indians. In the absence of arms, the latter wrested their knives from the sailors, and deliberately severed their heads from their bodies! The convulsive struggles of my unfortunate messmates availed but to aggravate the sufferings of their dying moments. It is utterly impossible for me to describe the state of my feelings: I stood for a while stupified and speechless with trepidation. After the bloody deed had been consummated, a song of victory was set up, which thrilled through my ears like howlings from the infernal regions. Every sense within me was palsied and harrowed up. How willingly, had it been possible, would I have laid down my own life, to avenge myself on these incarnate demons! The slaughter was at an end. The heads of the murdered were placed in a row, and I had the misery to discern that of our brave and respected commander amongst them."

Hülschwitt and the smith were the only parties who contrived to save their lives; they became Makina's slaves, after they had, by his orders, brought the vessel ashore in the bite of Nootka, "where the inhabitants, men, women, and children, received it with loud shouts of joy; and setting up a terrific din against the roofs of their dwellings with huge sticks, kindled a quantity of torches made from the

resinous sprays of the pine, by way of celebrating the successful result of their expedition with an illumination."

Shortly afterwards, some neighbouring tribes pay their respects to Nootka, for the purpose of beholding the white lions captured by his majesty of the copper skin; and we cannot forego the opportunity of enlivening this dismal page with the humours of a public reception, where

"Half transform'd and half the same,
He bade them take their place;
Though still they kept their native grin,
And all their old grimace."

"Makina, proud of his conquest, was desirous of welcoming his guests after the European fashion. As soon as the canoes approached, he ordered his people to assemble on the strand with loaded muskets. The smith's duty and mine was to load and serve the cannon, whilst his majesty esconced himself on the roof of his mansion, with the speaking-trumpet. It would be difficult to conceive any thing so sublimely ridiculous as the motley array of savages, decked out in the most fantastic garbs, with our captured wardrobes on their backs. Some shone in women's attire of red and yellow; others strutted in the Highland plaid; here was one with a stocking dangling from his head; and there another had thrust his tawny arm through a pair of breeches. Powder-horns, shot-bags, cartridge-boxes, mock pearls and corals, dangled promiscuously about their necks. More than one contrived to carry as many as four muskets across his shoulders, half a dozen cutlasses hung by his side, and a like number of dirks were thrust into his girdle. Striking the but-ends of their firelocks upon the ground, they awaited, with evident apprehension, the king's order to fire, which they set about in as bungling a style as can be imagined. After discharging a few rounds, we let off our cannon, upon which the whole party fell down, and cut their antics in the sand. This done, they sprung upon their legs again, started a triumphant chorus, and capered like so many madmen about the shore, raising their spoils aloft as trophies of their victory. In fact, there was such a mad and laughable intoxication about their freaks, and it formed so ridiculous a contrast with the weapons of war and other paraphernalia they had heaped upon their persons, that the gravest fellow under the sun could not have suppressed a laugh."

Things are not more regularly ordered at Almack's, or Devonshire House, than at Nootka. The landing of the chiefs was followed by a banquet and ball, at which Terpsichore herself might have taken a lesson in the *pirouette*. "The king's son began his exhibition, which consisted of interminable jumpings, and every variety of attitude, besides twisting himself round upon his heels with amazing velocity. The dance was led off to the *obligato* of songs from his majesty; at every jump extraordinary the ladies cried out, '*Wocash! wocash, tye!*' (bravo! bravo, prince!) It lasted, with little or no interruption, for a space of nearly two hours; during which the chiefs rendered the music still more unbearable, by beating their sticks against hollow boards."

We must now listen to the captive's report of the place and its occupiers. "The village of Nootka is bounded on the east by a monotonous plain, but where European plants would thrive, if properly tended. The coast is low, and bordered with alternate hills and valleys; and the whole country is studded with woods of beautiful firs, pines, oaks, and beech trees, and rivulets of translucent water. The village lies upon the same eminence formerly occupied by a

Spanish garrison; the foundations of the church and governor's house are still visible. Some of the European vegetables, such as turnips, peas, and onions, are to this day occasionally springing up in the soil. Makina told me that the inhabitants, when driven out by the Spaniards, quitted their favourite abode with much regret; and when the English came and turned out the Dons, they again took possession of it. The houses are built in a row, and of different sizes, according to the rank of the *teyc*, or prince; that of the king, which stands next the sea, is one hundred and fifty feet long, forty in width, and about fourteen in height; but the others are not above ten feet high."

Of the people themselves his account is by no means unfavourable. "They lead a very simple life. Their food consists wholly of fish, marine animals, and berries of various kinds. All their victuals are eaten with a superabundance of train-oil, by way of gravy. They sit at their meals with their legs crossed under them, and place themselves round their troughs, which are generally three feet long, a foot broad, and eight inches deep. Their teeth and fingers serve them in lieu of knives and forks, and shells are the substitute for spoons. The king and his chiefs have their particular troughs, into which none but themselves—not even their wives and children—are allowed to dip. When the sovereign gives a feast, he is always attended by his master of the ceremonies, whose duty it is to receive strangers, and shew them where they are to sit; their places being punctually regulated in accordance with their rank. The king occupies the seat of honour, next comes his son, and then follow his eldest brother and the several chiefs according to their rank. As regards their stature, the inhabitants of Nootka are taller than their fellow-countrymen in its vicinity. The greater number of the men are six feet high, well-made, slim, and erect. There are no such beings as cripples or deformed persons among them. Their face is oval, their features regular, and their teeth handsomely set, and as white as ivory. They have large black eyes, nose somewhat arched, and uncommonly fine, long, black hair. The hair of the beard, &c. is plucked out by the roots; and Makina alone wore a mustachio, in token of his dignity. The women are much fairer than the men, and many of their girls would be deemed handsome even among Europeans: they are much cleaner in their dress than the males, and extremely modest both in their manners and attire. So vain are the natives in the painting of their faces and bodies, that I have seen Makina employed upon it for hours together; and if the performance did not turn out to his liking, he washed the whole off again and set to work anew. The ornaments they wear are armlets, ear-rings, and neck-bands of copper; but there is nothing they prize so much as the noselet, which they are, therefore, chary of using on common occasions. It is a piece of polished wood, about eight inches long, which is thrust through a hole bored in the cartilage of the nose, and at times of sufficient size to admit one's whole finger. That worn by the chiefs is made of brass, by way of distinction.*

* It is deserving of remark, that this sort of decoration obtains among many other islanders of the Pacific; nay, Duperrey, when coasting New Guinea, found it equally prevalent in that quarter. "The Arackis paid us a visit," says he, "on board of our corvette. They wear a stick through the cartilage of their noses. They are like the Papous, black, but more robust and resolute." That they are not of a copper complexion, like the Nootkaers, renders the existence of a similar custom amongst both races still more remarkable. We should

"The people of Nootka, as well as their neighbours, are not destitute of a taste for music: the melody of their songs is soft, plaintive, and very simple, though not devoid of harmony. The accompaniment is performed on three different instruments, namely, a drum, made from a thin board scooped out; a clapper, consisting of a sea-dog's hide, distended by blowing; and a clear-toned pipe, constructed of the bone of the deer. They dance to the music of an instrument made of muscle shells bound together, which is shaken and accompanied with men's voices."

From a subsequent page of the captive's narrative we steal the following war-song:

"Ei gi maai tsill, atla Klaha, haje bab
Que nok ar parts sarwas, gegi hab
Waubu naks mar hashi, jarba, El hie jar
Wahu naks get quits sisch ni ihese hieje hie jarba.
Ye little know, ye men of Klaha,
What valiant souls we are;
When with our poniards we approach,
Flies every foe like wind."

Visual deformity is as unpalatable under a savage as a civilised latitude. "There was a frightful storm; the whole expanse of heaven appeared on fire; trepidation and dismay were depicted in every countenance; they rushed together into Makina's house; mounted the roof, drummed against it with their sticks, sang aloud, and prayed to Quahuze, their god, not to destroy them. About this time, the king's sister came on a visit to Nootka: she was tall, slender, of extremely agreeable features, and fairer than any of the rest: indeed, she would have been a very handsome woman, if she had not accidentally lost one of her eyes. This was the reason she was not married; for, amongst the Indians, such a defect is unardonable."

As it was the determination of Hulswitt's hosts that he should become one of themselves, he was compelled to doff his European habiliments, and assume the dress of the country, and a spouse to boot; despite his qualms and remonstrances. To their credit be it recorded, that he was forced to put up with Yustoca, a king's daughter; the most beautiful maiden throughout the land, and, by his own report, every way fitted to console him in his captivity. "Fortunately," says he, "I found my Indian princess to be not merely amiable, but extremely intelligent, considering the confined sphere of her situation, and very anxious to lend herself to every arrangement which I proposed for the improvement of our household comforts. At the same time, she was indisputably the finest woman at Nootka, not excepting the queen herself. Her feminine and regular features wore the reflection of her modesty and amiability. She was not more than sixteen, and full of innocence and friendliness. Yet so far was this event from bringing me content or happiness, that I considered it a fetter, which linked me irrevocably to these barbarians, and raised an insuperable obstacle to the chance of my ever setting foot again on a civilised soil."

From this moment, the European was admitted to the full and free enjoyment of the rights of Indian citizenship, was treated with great kindness and confidence, accompanied them on a warlike expedition, and had occasion to witness their religious celebrations, during which he had formerly been compelled to remove to a distant wood. A few words as to their belief and penances must close our

like to know whether they adopt it as a charm, or from any superstitious feeling? A habit which, in its early use, must be painful, and, at all times, neither convenient nor agreeable *per se*, must surely be derived from something more than mere accident.—Ed.

extracts. "Their religion consists in a belief of a Supreme Being, whom they call Quahuze. He is, to use Makina's own words, king of all the kings in heaven, who vouchsafes them fish, sea-otters, &c. Water is apparently the usual spot for their devotional exercises; and they never bathe without reciting a long prayer. Many go out whole miles to bathe, probably that they may not be overheard when praying for the termination of some domestic schism. This was particularly the case with females, though they might have been impelled to it by a sense of decorum; for they are modest to an eminent degree. They frequently shed tears whilst praying, and on their return from their devotions have invariably a downcast look. This year their penance began in October and lasted a fortnight. Makina ordered us to join in their supplications to Quahuze, that he would again send them abundance of fish and sea-otters: and the men and women assembled under his roof in their worst clothes; their looks were extremely melancholy; they sang songs, to which the king beat time with a drum, took food only once in the day, slept little, and often rose at midnight to sing. The last scene was a drama, of a still more cruel description than that of the preceding year. Six bayonets were thrust through the flesh of a boy of fourteen; four through the arms and legs, and two above the hips. Six men laying hold of these bayonets, carried him about the house, without his uttering one single note of pain. I asked Makina the reason of this barbarous practice, and he told me, that in former times a human being had been offered up during these penitential rites, but that his father Alapilla had instituted this ceremony as a substitute for human sacrifices. These sacrifices were bound up by a rope to the sides of a large and heavily-lashed canoe, and the savage crew, in compliance with this custom, for their previous sins, carried him down the river. As to his wife's subsequent fortune, we have not seen to relate more than that he ultimately escaped on board an American ship which anchored at Nootka; found his way once more to New York, proceeded with his German wife, by the great canal of Erie and down the Ohio and Mississippi, took a plantation at Pointe-coupée, one hundred miles below Natchez, lost his wife by the yellow fever, and was compelled by ill health to embark for Europe, after vainly struggling against the scourge of the southern states of North America for more than twelve months.

THE EMPEROR OF BRAZIL.

Dr. Walsh's Notices of Brazil in 1828-9. Vol. II.

[Third Paper: Conclusion.]

THE influx of novelties will only permit us to give one sample from Dr. Walsh's second vol.: it is a picture of the Emperor Pedro, and will, we think, be read with much interest; both on account of the light which it throws upon his character generally, and from containing some pleasing traits of him not hitherto known in this country.

"The church of Da Gloria, close by our house, was that to which Don Pedro was particularly attached, from a sincere and deep feeling, I was told, for the memory of his wife. Every Saturday, at nine in the morning, as regular as the movement of a clock, he passed our door, driving four mules in a phaeton, and attended by a troop of horse with a trumpeter. I frequently followed in my morning walk over the hill. The emperor always stopped his phaeton at the bottom, and walked up, leaning on his

chamberlain, and dressed generally in plain clothes. A few respectable people of the neighbourhood formed the congregation on this occasion; and when he walked in, they followed him; he knelt on a carpet laid on the steps of the altar, and they knelt behind him. I have observed him during the continuance of the service, and he seemed serious and sincere, frequently crossing himself with much devotion. When it was over, they all rose, and he walked out among the crowd, as a simple individual of the congregation. He was generally accosted in the portico by some person, with whom he entered into familiar conversation; and on one occasion a droll, forward fellow, of the lower ranks, told him some story with the ease and familiarity he would to a common acquaintance, at which the emperor laughed heartily, and every one about him joined, as if they were not in the smallest degree restrained by his presence. On his way down he generally had a group about him joking in the same way, and his whole progress was totally divested of any seeming dislike to the *profanum vulgus*, or a wish to repel them, but was on the extreme of familiarity. When he again entered his carriage he drove off with velocity, followed by his guards at a gallop, and was soon lost in clouds of dust and sand. I had, however, an opportunity of a more intimate knowledge of him by a personal interview. * * * *

"I found the emperor standing in the middle of a room inside. When I had seen him before, on the steps of the throne, with his little boy beside him, he looked to me a tall and portly man; but when I now approached, and we stood close together, I perceived his person was more slender than I had supposed, and remarkably thick and fleshy. His face was full, and appeared more than middle-aged. His hair was black and thick on his forehead, with large whiskers, which, in contrast rather coarse and abundant. His manner, however, though dry, was affable and courteous. When I approached him, he said to me in French, 'I am much obliged to you for the books you sent me by the Marquês d'Aracaty.' 'Your majesty does me too much honour: I trust you found in them something to approve of.' 'Oh, as to that, I have not had time yet to read them; besides, I do not understand English well.' 'I have been informed your majesty speaks it fluently.' 'No: I was learning it from Father Tilbury, but he is ill, poor man. How did you find the interior of the country through which you travelled?' 'Oh, the country is very superb—it only wants inhabitants.' 'What do you think of our botanic garden?—we hope to make something of it.' 'It will be highly useful, when the indigenous plants are scientifically arranged.' After a few more similar observations I made my bow, and was conducted out by the Marquês; and I have transcribed for you, verbatim, what passed, as perhaps you would wish to know in what manner the emperor converses. As there were some interesting things in the palace, I wished to see the interior. Besides the cabinet of the late empress, there are also specimens of the handiworkmanship of the emperor. He, like his great namesake of Russia, is a good mechanic; and these memorials will hereafter be preserved and exhibited in a national museum to posterity, as the remains of this second Peter, and founder of a great empire in the new, as the other was in the old world. While yet a child, an ivory ship was presented to him by Colonel Cunningham, a gift from Sir Sidney Smith. It had been broken in the carriage, and required some ingenuity to put it again together. He

called for his box of tools, and soon repaired it in all its parts, with the skill of a shipwright, and the dexterity of a carpenter. His apartment is a workshop, in which is a lathe and a bench, and here he has constructed sundry articles. Over the lathe is a tablet on the ceiling, I believe of his own device and execution. It represents a telescope, an ear trumpet, and a padlock, implying by these emblems that all who enter the palace, should see, hear, and say nothing. Had I been shewn this device, I should perhaps have held myself bound not to transgress it, even by the foregoing communication. The emperor's habits are very active and very temperate. He rises every morning before day, and, not sleeping himself, is not disposed to let others sleep. He usually begins, therefore, with discharging his fowling-piece about the palace, till all the family are up. He breakfasts at seven o'clock, and continues engaged in business, or amusement, till twelve, when he again goes to bed, and remains till half-past one; he then rises and dresses for dinner. The Brazilians, as far as I have observed, are neat and cleanly in their persons; and the emperor is eminently so. He is never seen in soiled linen or dirty clothes. He dines with his family at two, makes a temperate meal, and seldom exceeds a glass of wine, and then amuses himself with his children, of whose society he is very fond. He is a strict and severe, but an affectionate father, and they at once love and fear him. I heard Baron Marchal, the Austrian minister, say he one day paid him a visit: he met no person at the door to introduce him; so availing himself of his intimacy, he entered without being announced. He found the emperor in an inner room, playing with his children with his coat off, entering with great interest into all their amusements, and like another Henry IV. was not ashamed to be found by a foreign ambassador so employed. At nine he retires to bed. His education was early neglected, and he has never redeemed the lost time. He still, however, retains some classical recollections, and occasionally takes up a Latin book, particularly the breviary, which he reads generally in that language. He wished to acquire a knowledge of English, and to that end he commenced, along with his children, a course of reading with the Rev. Mr. Tilbury, an Englishman who has taken orders in the Catholic church. After having made some progress, he laid it aside, and began to learn French, in which he sometimes converses. He has an English groom, from whom also he unfortunately learned some English. This fellow, I am informed, is greatly addicted to swearing and indecent language, and the emperor and even the late empress adopted some of his phraseology, without being aware of its import. In his domestic expenses he is exceedingly frugal. The careless profusion of his father, and the total derangement of the finances, had involved the country in such difficulties, that he found it necessary to set an example of frugality in his own person, by limiting himself to a certain expenditure. In his speech to the constituent assembly he announced this determination. 'The king's disbursement,' said he, 'amounted to four millions; mine does not exceed one. I am resolved to live as a private gentleman, receiving only 110,000 milreis for my private expenses, except the allowance to which my wife is entitled by her marriage contract.' This, at the rate of exchange before we left Rio, would not have amounted to more than 10,000*l.* per annum. His present allowance, as fixed by the chambers, is 200,000 milreis for himself, and 12,000 for his

children. To make this answer, he engages in various profitable pursuits, and adopts, in every thing, the most rigid system of economy. He lets out his fazenda at Santa Cruz for grazing cattle passing to Rio from the Minas Gerais, and receives so much a-head from the drovers. His slaves cut capim, and sell it, on his account, in the streets, where they were pointed out to me, distinguished by plates on their caps. He derives, also, a revenue, I am told, from several caxas shops, of which he is the proprietor, and thinks, like Vespasian, that the money is not at all affected by the medium through which it passes. In his domestic expenses, he is rigid even to parsimony. He allows a very small sum to his cook, of the expenditure of which he exacts a minute account, and is very angry if this trifling sum is exceeded on any occasion; and it is said that this was one cause of his disagreement with the late empress, whose free and careless bounty he never could restrain. His natural abilities, however, seem to be very considerable. Left, at a very early and inexperienced age, entirely to himself, in a region where every state around him was revolutionised into republics, and the same spirit rapidly advancing through his own, he, with great sagacity, saw the line of conduct left him to adopt, and, with equal dexterity, pursued it. He could not hope to resist the public sentiment, but by appearing to lead, he has hitherto contrived effectually to guide it; and by these means he has established a free constitution in Brazil, without any violent transition, and preserved it from the anarchy and confusion that still convulse every other state in South America. It is said, however, that he has conjured up a spirit of democracy, which it is his anxious wish entirely to lay, and that he is essentially despotic in his principles; that his apparent design to establish constitutional freedom was merely a bait to catch popularity; and having, as he supposes, guided the enthusiasm of the people till it has harmlessly exploded, and established himself firmly on the throne, he is now determined to reign by himself, and dispense altogether with troublesome popular assemblies, which he has already twice forcibly suppressed."

And here we close our extracts from these instructive and entertaining volumes; again heartily recommending them to the public.

Private Memoirs of Napoleon Bonaparte, during the Periods of the Directory, the Consulate, and the Empire. By M. de Bourrienne, Private Secretary to the Emperor. Vols. I. and II. 8vo. London, 1830. Colburn and Bentley.

THE publishers of this work deserve the thanks of the public—we mean, of every English reader who is not sufficiently master of the French language to understand the original. As a part of the history of the most extraordinary man, and the most extraordinary times, that ever invited elucidation, these *Memoirs* must continue to the latest ages to be records of invaluable interest. We speak advisedly when we say that their general authenticity is unquestionable; for we know, from the best political authority now living in England, (from one who had a near share in all the matters where England was concerned with France, during the transactions related by De Bourrienne), that the writer's accounts are perfectly corroborated by facts. To add a syllable to this, would be to injure the highest commendation which could be bestowed on this production; and as in its French form it has

been abundantly quoted in a hundred periodicals, we shall only add, that it is as piquant and amusing as it is veritable and trustworthy. Slips, or slight mistakes, may be attacked; but the spirit of true history must always look back on this book for genuine information, when the eventful era in which we have lived is delineated.

Fishes of Ceylon, &c. By J. Whitchurch Bennett, Esq. F.L.S. &c. Royal 4to. Nos. I. II. III. IV. V. London, 1830. Longman and Co.

THIS work has the honour to be dedicated, by special permission, to the King. It consists of a selection of the most remarkable and interesting fishes found on the coasts of Ceylon; with every appearance of being accurately drawn, as they are cleverly engraved and finely coloured. The extraordinary forms here delineated are treasures of ichthyology; so grotesque as to seem mere imaginations, and so strangely marked in colours as to look more like artificial than real creatures. The scientific descriptions, however, are as perfect as the execution of the plates is beautiful; and the naturalist will rejoice in the definitions, while the connoisseur will delight in the prints. The author has received the highest tributes of praise from the best-informed individuals and public bodies; and wherever his work is known he must meet with similar eulogies. There are fine specimens (and curious they are) in every No.

The British Celestial Atlas, being a complete Guide to the attainment of a Practical Knowledge of the Heavenly Bodies. By G. Rubie, Part II. London, Baldwin and Cradock; Hastings, G. Wood.

THE second part of this useful publication contains a number of astronomical definitions; a description of the form, measurement, and magnitude of the earth; and an account of the phenomena of the heavens, arising from the diurnal motion of the earth, illustrated by various problems. It is accompanied by a plate of the zodiac, and three plates of the constellations, as they appear in the months of April, May, and June. We see no reason to retract the favourable opinion which we pronounced upon this work on the appearance of the first portion of it.

Views of Country Seats of the Royal Family, Nobility, and Gentry of England, &c. &c. 2 vols. 8vo. London, Ackermann and Co.

A HUNDRED and forty-six coloured engravings, after original designs by W. Westall, J. Gendall, and other artists, accompanied by concise letter-press descriptions, form the numerous attractions of these volumes; and display the rural beauties and riches of England. We do not know a work more fit to add an interest to the country seat than such a production as this is; so full of variety, so pleasing to turn over, and so amusing to read, by such snatches as the delightful idling of time suggests. Many of these seats also possess a charm, from being associated with the names of occupants about whom the public are anxious to have every kind of information; and the little anecdotes interspersed throughout the accounts of libraries, pictures, grounds, all contribute to render the work agreeable and entertaining. The views have appeared in *Ackermann's Repository*; but produce a better effect by being collected together.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

THE following is a report of Mr. Faraday's lecture on Mr. Wheatstone's discoveries relative to linear conductors of sound; it will be found exceedingly interesting, which circumstance we trust will excuse its length.

The fact of the transmission of sound through solid bodies, as in the case of a metal rod placed at one extremity to the ear, and struck or scratched at the other end, has been long since observed; but as an aerial medium was formerly thought to be alone capable of propagating sonorous undulations, even Lord Bacon, when describing this experiment, falls into the error of attributing its transmission to spirits contained within the pores of the body. The first correct observations on this subject appear to have been made by Dr. Hooke, in his *Micrographia*, (1667); and he made an experiment through a distended wire of sufficient length to observe that the same sound was propagated far swifter through the wire than through the air. Professor Wunsch of Berlin (1783) made a similar experiment, substituting 1728 feet of connected wooden laths for the wire, and confirmed Dr. Hooke's results. Other experiments of a similar nature were subsequently made by Herhold and Rafn, Hassenfratz and Gay Lussac, Lamarck, &c.; but the first direct observations of the actual velocity of sound through solid conductors were made by Biot, assisted at different times by Bouvvard and Martin: his experiments were made on the sides of the iron conduit pipes of Paris, through the length of 951^m 25; and the mean result of two observations made in different ways gave 3,459 metres, or 11,080 feet per second, for the velocity of sound in cast iron. Previous to these direct experiments, Chladni had in an ingenious manner ascertained the velocity of sound in different solid substances; and his result has been fully confirmed by calculations from other grounds. His method was founded on Newton's demonstration, that sound passes through a space filled with air, of a given length, in the same time that a column of air of the same length, contained in a tube open at both ends, makes a single vibration. Chladni's discovery of the longitudinal vibrations of solid bodies, which are exactly analogous to the ordinary vibrations of columns of air, enabled him to apply this proposition to solid bodies, and to establish the general law, that sound passes through every body in the same time in which that body, when it vibrates, freely makes one longitudinal vibration. In this manner he ascertained the velocities of the following substances, among others: tin 7,800, silver 9,300, copper 12,500, glass and iron 17,500, and various woods from 11,000 to 18,000 feet per second. The intensity with which sound is transmitted has been found to be nearly in proportion to its velocity. Some known practical applications of this principle were then noticed, such as the stethoscope, microphone, &c. In all the preceding experiments the sounds transmitted were mere noises, such as the blow of a hammer, or, as in Herhold and Rafn's experiment, a single musical sound, produced by striking a vibrating plate attached to the conducting wire; and in no case were any means employed for the subsequent augmentation of the transmitted sound. Mr. C. Wheatstone was the first who tried experiments on the transmission of the modulated sounds of musical instruments; and who shewed that the undulations propagated

through linear conductors of considerable length, were capable of exciting in surfaces with which they are in connexion, a quantity of vibratory motion, sufficient to be powerfully audible when transmitted through the air. The following observations will illustrate the nature of this resonance or reciprocation. A sonorous body is audible in proportion to the quantity of its vibratory surface. Thus, a plate of metal or wood is capable of producing powerful sounds without accessory means; but insulated strings, or tuning-forks, being vibrating bodies of much smaller dimensions, are scarcely audible at any great distance; but they are capable of considerable augmentation when communicated to surfaces, as when the insulated string, or the tuning-fork, is placed on a table, or on the sounding-board of a musical instrument. There are several circumstances which influence the intensity of the tones of a sounding-board: the principal of these is the plane in which the vibrations are made, with respect to the reciprocating surface. Thus, the vibrations may be so communicated as to be perpendicular or normal to the surface: in which case the sound is the most greatly augmented; or they may be tangential to, or in the same plane with, the surface, when the sound is the most faint. These two cases may be illustrated by placing, for the first, a vibrating tuning-fork perpendicular to the surface of a flat board; for the second, placing it perpendicular to one of the edges of the board. In intermediate positions, viz. when the vibrations are communicated obliquely to the surface, the sounds have intermediate degrees of intensity. These facts being ascertained, the possibility of communicating the vibrations of musical instruments to surfaces, by means of a tube, and to a distance, may be better understood. It is found that the intensity of the vibrations of a tuning-fork, when placed on a sounding-board, is increased by the addition of a second board. The difference of intensity is more marked when the vibrations of the tuning-fork vibrate in the way in which it vibrates parallel to the surface, than when it vibrates perpendicular to the surface, and may be easily tried. In the sounding-boards of the harp, the guitar, the violin, &c., the circumstances are less simple; but it would encroach too much on our space to enter into details. Sufficient having been said to illustrate the subsequent applications, we will only add, that the volumes of air contained between the sounding-boards of a musical instrument greatly augment the intensity of the sound. The office of the bridge is obviously to communicate the vibrations of the strings to the sounding-board. Aware of this fact, Mr. Wheatstone substituted a glass rod five feet in length for the bridge, and found that the sound of a tuning-fork, or of an insulated string, placed at its end, was as distinctly audible as when it was immediately in contact with the board. This experiment, which was the first Mr. W. made on this subject, and which suggested all the subsequent ones, was repeated in the lecture-room, by substituting a deal rod forty feet in length, extending from the roof of the cupola to the floor of the room. The experiment was neat and decisive. When no sounding-board was placed at the lower extremity of the conductor, no sound was heard; but it became powerfully audible the instant the communication was made: this experiment was repeated with different acute and grave-toned tuning-forks, both in succession and in combination. As the sounds employed in these experiments are only audible when they become augmented by resonant surfaces after transmission, it is easy to repeat them, and to appreciate their results, under any circumstances;

but when it is required to transmit the sounds of a musical instrument, it is necessary to prevent the sounds being heard through the air, otherwise the communicated sounds will not be distinguishable from the original sounds: this may be effected by having the originally vibrating and the reciprocating instruments in different rooms, and allowing the conductors to pass through the floor or wall separating the two rooms. This experiment was tried, by communicating, by means of a slender deal rod, the sounding-board of a harp in the lecture-room with a piano-forte in a room below; and the performance of the latter was transmitted in the most perfect manner to the former instrument; and when the communication was interrupted, the transmitted sounds ceased. The construction of the lecture-room did not admit of the experiment being tried in the way first employed by the experimenter; viz. the sounds transmitted from a piano-forte in a chamber above, by a wire of very small diameter, to a lyre suspended from the ceiling. The transmission of the sounds of other stringed instruments, such as the harp, violin, violoncello, &c., were found to be equally effective. But Mr. W. did not confine his experiments to the transmission of the sounds of vibrating sounding-boards: he discovered also the means of transmitting the sounds when produced from wind instruments. He observed that the peculiar sounds of a clarinet, or other reed instrument, were not to be attributed either to the column of air or to the vibrating tongue alone, but that they mutually influenced each other, in such a manner, that whether the sounds are communicated to the atmosphere from the column of air, or from the tongue, or from the vibrating tongue, the quantity of the sound undergoes a change. The communication of the sounds of wind instruments, therefore found as subject as the communication of the sounds of vibrating sounding-boards. In other classes of instruments, the difficulties of transmission are greater; for it is not possible to transmit the vibrations of the air immediately through solid conductors with any degree of intensity; but if the intermediation of other bodies which enter readily into vibration, from the agitations of the air, be employed, the transmission may be effected. Thus, if the end of the conducting wire be placed in the most strongly vibrating part of the column of air in a flute, there is but little perceptible transmission of sound; but if it touch the sides of the instrument, it will more readily transmit the sounds in proportion as the sides are more susceptible of entering into vibration. In a similar manner, the sounds of an entire orchestra, or of the human voice, may be transmitted, viz. by connecting the end of the conductor with a sounding-board so placed as to resound to the various instruments; but in such cases the sounds are by no means so intense as when they are communicated directly from the instruments. The effect of such intermediate transmission was exemplified by some performances on Mr. W.'s new instrument, the symphonion. A few observations were then made on various proposed applications of this principle, and on the possibility of telephonic communication. It was stated, that as sound has been proved to travel through several conducting substances at the extraordinary velocity of 18,000 feet in a second, were it possible to transmit audible sound so far, a phonic communication might be made between London and Edinburgh—a distance of nearly 400 miles—in less than two minutes. Theoretical considerations have shewn, that when sound is commu-

nicated without any divergence through a perfectly elastic body of equal density throughout, its energy suffers no diminution; it follows, therefore, that the more perfectly we can approximate to these conditions of a conducting body, the less limitation there will be to the transmission of the sonorous undulations. But these points can be determined only by extended experiments. Some further investigations by Mr. Wheatstone, on certain remarkable properties of the sonorous undulations in their passage through linear conductors, were announced for a future evening.

ZOOLOGICAL SOCIETY.

LORD AUCKLAND in the chair.—Some conversation bearing on the management of Mr. Sabine took place. The noble chairman, Earl Caernarvon, and Mr. Vigors, severally spoke in support of that gentleman: notices of two motions, evidently aiming at him, and to be discussed at the next meeting, were given; they were to the effect, that no honorary servant of the Society do cause the Institution any expense (alluding to Mr. Sabine's residence at the inn at Kingston, on his visits to the farm); and the other, that it is expedient to relinquish the farm. The Marquess of Douro, and several others, were elected Fellows; after which, Mr. Vigors read a very satisfactory report for the last month, which shewed a considerable balance in favour of the Society. Lord Lansdowne, Lord Stanley, the Earl of Jersey, &c. made donations to the Society: amongst these were rare specimens of the *simia* tribe.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE President in the chair.—A letter from the Rev. James Farquharson, containing the sequel of his observations on the Aurora Borealis, was read. Another communication was also read; it was a statement of the principal circumstances respecting the united Siamese Twins, now exhibiting in London; by George Berkley Bolton, Esq.: the youths were brought to the meeting by their guardian, the better to illustrate Mr. Bolton's paper. On the table were placed a variety of important donations. Mr. Coddington exhibited his improved microscope, and explained its peculiarities; Mr. Ritchie his new and exceedingly delicate torsion balance and galvanometer, in both of which glass threads are employed: the balance is an invention of great interest, and is intended to shew extremely minute weights; as small as even to indicate the millionth part of a grain! Captain Fleming brought his very ingenious mechanical invention, meant to be employed on board ship for several useful purposes.

At a late sitting a paper was read, entitled, "on the Twelfth Axiom of the First Book of Euclid;" by Philip Henry Viscount Mahon, F.R.S., of which we give the following extract:—

The axiom states, that "if a straight line meets two straight lines, so as to make the two interior angles on the same side of it, taken together, less than two right angles, these two straight lines, being continually produced, shall, at length, meet upon that side on which are the angles that are less than two right angles." This proposition, the author remarks, is improperly placed among the axioms, as it is far from self-evident. Dr. Jenison has accordingly undertaken to prove it by an elaborate process of reasoning, employing for that

purpose no fewer than two definitions, one axiom, and five propositions. The object of the author in this communication is to furnish the same proof in a single proposition. For this end he proceeds on the self-evident position, that if the lines do not meet on the side stated in the enunciation of the axiom, they must either be parallel, or they must meet on the other side. He then proves, by a *reductio ad absurdum*, that they are not parallel; and next, by a more direct demonstration, that they cannot possibly meet on the other side. It follows, therefore, that they meet on that side on which are the angles that are less than two right angles.

SOCIETY OF ANTIQUARIES.

APRIL 1. — Hamilton, Esq., V.P., in the chair.—Mr. Kempe exhibited to the Society some highly curious ancient paintings on panel, discovered at Hayes, near Bromley in Kent, which had been described by him in a former communication to the Society. A paper was read, being the substance of a pamphlet preserved in the British Museum, shewing the dread entertained in the reigns of Elizabeth and James at the increase of buildings in London, which, as it was supposed, became a harbour for an influx of lewd and disorderly people; and recommending the appointment of a committee to watch and direct all new buildings, and to prevent the erection of cottages or small houses.

KING'S COLLEGE, LONDON.

WE had heard in some quarters that the further prosecution of this undertaking was likely to be abandoned. Our regret at the prospect of so unlooked-for a termination to what we have throughout considered a highly useful project, both in a domestic and a national point of view, has induced us to make further inquiry; and it affords us sincere gratification to be enabled to assure the public, that no thought of relinquishing the measure has ever been contemplated. On the contrary, the parties more immediately concerned in carrying it into effect, have been, and are, using every exertion to hasten the erection of the College, and are diligently engaged in maturing the internal arrangements, so that they may take advantage of the very first moment of its completion, to open both the higher and lower departments for the reception of pupils. We understand, indeed, that confident expectations are entertained of opening the latter in the course of the ensuing spring, and the former in the succeeding autumn.

LONDON PHRENOLOGICAL SOCIETY.

THE anniversary general meeting of this Society was held on Wednesday last, when the following gentlemen were elected as officers and members of the council for the ensuing year:—President, Edward Wright, M.D.; Vice-Presidents, Joseph Moore, M.D., David Pollock, Esq. F.R.S., Robert Maugham, Esq., H. B. Churchill, Esq.; Treasurer, John Elliotson, M.D. F.R.S.; Secretary, John Bell Sedgwick, Esq.; Librarian, Tarver Richard Fearnside, Esq.; Curator, Henry P. L. Drew, Esq.; Members of the Council, John Epps, M.D., Edward Lance, Esq., George Taylor, junior, Esq., Henry Belmes, Esq., Thomas Alcock, Esq., Chas. Aug. Tulk, Esq., F.R.S. F.S.A., James Sedgwick, Esq., Sir James Gardiner, Bart., John Morris Bennett, Esq., John Gray, Esq., Frederick Debell Bennett, Esq., George Rudall, Esq.

ETRUSCAN VASES.

SIR,—In a late Number of your Journal I saw a short notice of the discovery of numerous Etruscan vases on the estate of the Prince of Canino: it has struck me, that you would be glad to give your readers a more detailed and correct account, which I am happy in being able to lay before you. It is very true, that some dishonest agents had discovered many very beautiful and valuable specimens, and disposed of them to a learned Prussian, M. Dörow, who repaired in person to Canino to secure such matchless treasures. In justice to this eminent archaeologist, it must be supposed, that, in bargaining for these discoveries, and removing them from the premises, he doubted not but that the prince, who was then at a distance, was privy to the transaction. However, as such exquisite specimens of art could not long remain unknown in a country where so many persons devote their studies to its productions, whether ancient or modern, information of this important discovery soon got abroad, and was not long in reaching the ears of the proprietor of the soil. In October 1828, the Princess of Canino repaired to this estate, and fixed upon the ground which was to be the scene of further excavations. So great was the success of the operations which she superintended, that the prince himself was soon induced to leave his observatory at Sinigaglia (for he was at that time deeply engaged in certain astronomical studies), and cause excavations to be made on a much larger scale. A hundred workmen were now employed, and in the space of four months, more than two thousand articles were discovered, all of them exquisitely fashioned, and, for the most part, adorned with paintings, which have drawn forth the warmest expressions of admiration from the first artists of the day. Thorwaldsen, the celebrated sculptor, was quite lost in wonder at the sight of these treasures of art: Cammuccini, and his brethren of the easel, pronounced the paintings, with which they are all more or less embellished, *capri d'opera*: Dr. Nett, our countryman, formerly sub-preceptor to the lamented Princess Charlotte, who, from a residence of many years in Italy, is become a *cognoscente* of the first order, considered one vase in particular, called the "Cup of Hercules," as a matchless production, and beyond all price. The most eminent antiquaries were deputed by the Archaeological Society to inspect these treasures on the part of the government, who regards their removal to other shores with a jealous eye. They have, of course, the refusal of all antiquities found in the Roman states, and there offered for sale; but it is whispered, that the price set on these would more than drain the Papal treasury. It is reported, that one hundred vases, to be selected by the purchaser, may be had at the rate of one thousand crowns each! The prince has resolved, it seems, that no price shall tempt him to part with fifty of the finest specimens, which are to form his small but unrivalled collection. The King of Naples was one of the distinguished individuals who visited the Palazzo Gabrielli, where the vases are deposited: as his large collection has been thrown into the shade by the superior beauty of these specimens, it is said, that his majesty has signified a wish to treat for some of them, in order still further to ennoble his collection. It is agreed on all sides, that no discovery, since Pompeii and Herculaneum were disclosed to the view of us moderns, has caused such a sensation. Superior in every respect to those at

Naples, they have the additional interest of being enriched with inscriptions, which are to be seen on a great number of them, chiefly in the Greek character. The great Hellenists of Europe will have enough to do to illustrate them; for there are words amongst them quite unknown to the learned, which, if they turn out to be Greek, will serve to enrich our lexicons with some precious novelties. As for myself, who am no great scholar, but still have a great love for the language of Homer, and quite doat upon its characters as exhibited in the Porsonian type, I looked upon these venerable letters with more awe and reverence than the good people of Rome feel on beholding their most sacred relics. A vast number of the proper names inscribed on them are familiar to me and to every one. Scenes from the Theban war, and the Iliad and Odyssey, are very common, and the names of the gods and goddesses, heroes and heroines, are generally inscribed; a circumstance which saves much ingenious speculation. The potter and the painter are often indicated by name. We have,

ΤΕΛΕΣΟΙΚΟΝΕΑΡΧΟΒΟΙΕΣΗ

Let the name of this artist, Tlesonkonearcho, be added forthwith to the list of the ancient Wedgewoods, for he seems to be the very prince of potters. Sometimes the modest *imperfect* is used; Andocides writes *ΕΠΙΕ*; Kosthenes *ΕΠΟΙ*, which last I give from its singular orthography. Phittias, a painter, subjoins to his name, *ΕΠΑΦΣΕΙ*. Pheidipos, the *imperfect*, *ΕΠΙ*, &c. Sometimes the final N is omitted, as in No. 572, representing the death of Busiris. Epiktetos writes *ΓΑΡΑΦΣΕ*, Puthon the potter, *ΕΠΟΙΕΣΗ*, adding N. But the most remarkable thing is a genuine accent, perhaps the most ancient on record; it is placed over the

penult epsilon of *epoiesen*—thus, *Ε*: it is not accidental, but plainly traced with the same colour and varnish as the entire inscription. A great number of the vases are marked with *kalos*, sometimes repeated three or four times; sometimes *kaloi*; sometimes *kale*: this has not been explained to my satisfaction. In vase, No. 1547, on which there is a representation of a marriage-procession, in which a young couple, seated in a chariot, cut a conspicuous figure, their meaning is significant enough; for the inscription runs Lusipides *ΚΑΥΟΣ* Rodon *ΚΑΒΕ*. The vase, No. 1900, inscribed at the bottom *ΕΧΣΕΚΙΑΣΕΝΟΕΣΗ* (for so the last word is written), has a very remarkable inscription that runs round the interior of its rim, consisting of thirty-three words in a very bold character, similar to that Egyptian character which M. Champollion styles *demotic*. I will give you the first word as nearly as I can imitate it.

It would be endless, were I to state the interesting speculations to which these curious discoveries have given birth. There seems a pretty general idea, that the opinion, long since entertained by many learned men, that their beloved Italy cultivated the fine arts in great perfection at a time when Greece was semi-barbarous, is now fully confirmed. These vases are ascribed to an age anterior to the foundation of Rome, not long after the Trojan war, the actions of which are here represented,

varying in many particulars from Homer's account of them. They are all supposed to have been found on the site of Vitulonia, a city, according to Pliny, destroyed before the foundation of Rome: many striking circumstances go to confirm this idea. Although the site was unknown, still it was certain that this capital of ancient Etruria was situated a short way inland from that part of the coast where the minerals of Elba were landed, and that it was celebrated for its warm baths. Now, the iron of Elba continues to be landed on this coast, and foundries are still at work on the very spot: the baths are also in use, having been restored by the Prince of Canino about twenty years ago: but in further confirmation of this idea, a vase was discovered, on the 22d of April, 1829, in a vault twenty palms deep, which bears this remarkable inscription, of which I give you an accurate copy:

VIOLONOTEI

This discovery, in the minds of most men, has fixed the position of this ancient city, and established the fact of the great antiquity of the vases, and the claim which Italy puts forth to priority in the fine arts, as compared with Greece.

Besides these vases, a vast number of gold ornaments were found, consisting of necklaces, ear-rings, brooches, clasps for girdles, bracelets, rings; fifty of which number have engraved stones: they are of the purest gold, and some of them of the finest workmanship. These articles, from their beauty, novelty of form,

valuable antiquities in gold, and the most striking—it is a wreath of bay, in thin gold leaf, which is supposed to have encircled some royal head, as the vaults in which these gold ornaments were found are imagined to have contained the ashes of the kings of the country; all the vases here discovered being of finer workmanship. The articles in bronze are also numerous—spear-heads, greaves, a shield, and a variety of utensils for domestic purposes; a number of small statues, sphinxes, fawns; one of the latter Thorwaldsen considered the most perfect work he had ever seen. I must not omit mentioning two fluted rods of bronze, about five feet high, on a pedestal of the same metal, which are surmounted with an exact representation of the famous group on Monte Cavallo; which interesting fact proves that this subject was a favourite one in the remotest ages. Should further discoveries of any interest be made, (for the excavations are still going on,) I shall take the earliest opportunity of transmitting an account of them. Yours, &c.

C. S. T.

FINE ARTS.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS, SUFFOLK STREET.

No. 75. *From the Grounds of Lord Yarborough, Isle of Wight.* W. R. Earl.—Whether considered as a local view, or as a composition, Mr. Earl has, in the execution of this fine picture, exhibited some of the highest qualities of landscape art.

No. 143. *Interior of a Polish Synagogue, at the moment when the Manuscript of the Law is elevated, after the portion for the day has been read to the congregation.* S. A. Hart.—A very fine picture, by a young painter of the Jewish persuasion. It is a fortunate circumstance, when an artist contemplates any remarkable combination of colour, or any powerful effect of chiaroscuro, that he does not waste his genius on gross or unworthy matters—an error of frequent occurrence in the works of some of the best masters of the Flemish school,—but that, as in the present instance, he selects a subject of exalted character and interest. We congratulate Mr. Hart on his success; and we have no doubt that we shall have frequent cause to speak of his future labours with praise.

No. 142. *Girl looking from a Window.* F. Y. Hurlstone.—Little promise as there is in the title, Mr. Hurlstone's performance, whether as regards the expression, which is pleasing, or the effect, which is singular and spirited, does him high credit.

No. 215. *The Rat-catcher.* C. Hancock.—We can see no reason why this species of amusement should not rank among field sports; since few pleasures of that kind appear to excite more interest in the pursuit, or to give a more vivid expression both to man and to beast. In addition to the animation which Mr. Hancock has imparted to his subject, he has treated it with admirable technical skill.

No. 160. *A Field-day.* R. Farrier.—“Another, and another, and another; and,” we are bound to add, “the last work's as welcome as the former.” This, we believe, is the fourth of a series of entertaining pictures of boy-soldiers, by the same artist. We are glad to see the artist who has so long been the forerunner of the forked bill, and the black of a cock's tail, on the side of the picture, has now, in his watch-dog, introduced a new element into the mind of the beholder. The picture, which evidently excites a train of interesting recollections, is a very happy introduction.

No. 201. *The Sportsman.* J. Inskipp.—Varying only in his subjects, Mr. Inskipp exhibits the same broad and harmonious treatment which so greatly distinguished his former works in this Gallery. Much, however, as we admire his “Sportsman,” we are still more struck with No. 435, *The empty Wallet.* Besides the fine intensity of the expression, it awakens remembrances of a tone and a colour to be found only in the best works of the best masters in the Spanish school of art.

No. 186. *All Hands to the Rescue.* J. Tennant.—There are few actions which surpass in daring, and none which equal in generosity, those, one of which the skill of Mr. Tennant has here so ably displayed. They ought to find a place in the pictured records of our naval achievements, by the side of the deeds of valour of another description, which have rendered the annals of England for ever glorious. As a work of art, this performance does great credit to the artist. The demons of the storm seem to ride the clouds, and the destructive billows to roll at their bidding; while the spirit and energy of the gallant human beings who, with noble self-devotion, are preparing to encounter them, are no less vigorously designed and executed.

No. 175. *Stage-struck Hero.* W. Kidd.—As the farce often follows the tragedy, and the sublime is succeeded by the ridiculous, so we pass from the wreck and the rescue to the would-be wearer of the buskin. In the latter

work Mr. Kidd has been no less successful in provoking a smile, than in the former Mr. Tennant was in raising a sigh. The ludicrous energy of his principal figure, the delight of one of the audience, the awe of another, and the irate expression of the critic with the cane, who is slyly stealing in, for the purpose, no doubt, of taking an active part in the performance, combine in producing a very humorous effect.

No. 48. *The first Offence.* E. Prentis.—“What dire events from trivial causes spring!” We quote the line appended to the performance; but we are sure, that if the artist had consulted any country squire, interested in the preservation of game, he would have declared that he did not consider poaching “a trifle.” Mr. Prentis's picture is, however, a very just and a very feeling appeal both to humanity and to policy; and involves a question of a very serious nature, on which it is probable the legislature will one day pronounce an opinion different from that which it has hitherto maintained. In this affecting representation, the quiet and submissive character of the offender is well contrasted by the brutal triumph and villanous countenances of those who are dragging him from his home, and his weeping and imploring family. The invalid boy is an incident full of pathos.

No. 246. *Infant Visions.* Miss Dagley.—Pleasingly executed, and very interesting; as indeed what work is not, in which infancy forms a conspicuous feature.

Among other distinguished portraits which this room contains, No. 92, *The late Mr. Park*, and No. 101, *The late Sir F. Bourgeois*, both by Sir W. Beechey, are among the most attractive, both from the skill of their execution, and their striking resemblance to the well-known originals. Nor must we omit to state, that besides those which we have already mentioned, there are several very admirable portraits by Messrs. Lonsdale, Howell, Bradley, Barber, Faulkner, Meyer, Middleton, Mrs. Pearson, &c.

No. 107. *Gipsies removing their Tents.* Sir W. Beechey, R.A.—We have frequently had occasion to remark the ability and taste with which Sir William introduces rich and varied landscape into the backgrounds of his portraits; and we are much gratified by this exclusive specimen of his powers in the representation of rustic scenery. The picturesque in composition unites in it with the harmonious in colouring, in a manner highly fascinating.

NORTH ROOM.

No. 265. *Nero's Tomb.* J. Giles.—We are not aware of having met with the name of this artist in any previous catalogue, or his works in any former exhibition; and we are equally surprised and gratified by the display of the original and brilliant talents which he evidently possesses. The effect which he has here thrown over his composition,—the solemn gloom, the partial light, the shower, the rainbow,—are appropriate and poetic. Judging from this, and other of Mr. Giles's pictures in the Gallery, we should say that his style combines the qualities of Salvator Rosa and Francesco Mola; at once elevated and picturesque.

No. 319. *Delights of Summer.* J. W. Wright.—A gay group of youthful persons, male and female, in the picturesque costume of other climes or times, reposing under umbrageous foliage of luxuriant growth, and recreating themselves with the concord of sweet sounds, forms the basis of this pleasing performance. The composition partakes of much of what has before appeared; but the judg-

ment and skill evinced in the execution of the work, and the taste which pervades the whole, render it as delightful to the sight as the season which it represents is to the feelings.

(To be continued.)

NEW PUBLICATIONS.

Admiral Sir Edmund Nagle, K.C.B. Painted by W. Corden; engraved by W. Ward. Sams.

This portrait in mezzotint is a very characteristic likeness of an individual, whose long attachment to his Majesty (to whom it is dedicated, by permission,) was rewarded by the constant favour, and we may say friendship, of his royal master. As a work of art it is well composed and beautifully engraved; but the higher merit in the eyes of those who knew the original, will be the traits of that humour and frolic which often set the table in a roar. Sir Edmund's recent death adds an interest to the publication.

Views illustrative of Pugin's Examples of Gothic Architecture. Part I.

THE merits of Mr. Pugin's *Examples of Gothic Architecture*, with respect both to scientific details and to tasteful execution, are well known. The present publication is an exceedingly pleasing illustration of that work. This first part consists (besides the cover and title) of ten views, drawn from nature, and on stone, by Mr. Joseph Nash, pupil to Mr. Pugin. The subjects selected are from Oxburgh Hall, Norfolk; Wolterton Manor House, East Barham, Norfolk; Eltham Palace, Kent; and the Episcopal Palace, at Croydon, Surrey. They possess enough of accuracy to satisfy the architect, and; at the same time, enough of freedom and of picturesque effect to please the general amateur. The introduction of figures in the costume of former times is very appropriate; and produces a harmony of sentiment, the absence of which we have frequently felt in looking at delineations of ancient and half-dilapidated buildings, embellished with ladies and gentlemen, who appear to have dressed from the plates in the last number of *La Belle Assemblée*.

Panorama of the Maine, and of the adjacent Country from Mayence to Frankfort; designed from nature by F. W. Delkeskamp; engraved by John Clark. S. Leigh.

UNLIKE in that respect the *Panorama of the Thames from London to Richmond*, recently published by Mr. Leigh, the *Panorama of the Maine* is a bird's-eye view, representing the meanderings of the river, and the roads, woods, houses, towns, &c. within a certain distance of its banks. To the traveller in Germany who stems the current of the Maine, for the purpose of visiting the celebrated city of Frankfort, it will be very useful; as will also the descriptive notices which accompany it, and which are concluded by a detailed account of Frankfort. Views of Hochst, Hochheim, and Frankfort, add to the interest of the publication.

Fisher's Views in Devonshire and Cornwall, from original Drawings by T. Allom and W. H. Bartlett; with Descriptive Accounts, forming brief County Histories, by J. Britton and E. W. Brayley, Esqs. Part II. Fisher and Son.

THIS second part is exclusively devoted to Devonshire, and contains a number of beautiful views. We were especially struck with the "Interior of St. Andrew's Church, Plymouth," "Shaugh Bridge, Bickleigh Vale," "Tiver-

ton Church, from the Bridge," and "Oreston and the Catwater." The descriptions are full of interesting information. The following curious fact is stated with reference to the quarries at Oreston, whence the stone for constructing the Breakwater at Plymouth was procured. "In working the quarries an extraordinary discovery was made in the midst of the substrata. At the depth of sixty-five feet from the surface, and twenty-five feet from the margin of the sea, a mass or module of clay, twenty-five feet in length, by about twelve feet thick, was embedded in the limestone. Enveloped in this clay were found the bones of a rhinoceros, in a more perfect state than they have yet been met with in any other place."

SKETCHES OF SOCIETY.

LADY BYRON'S REMARKS, &c.

THIS subject continues to be discussed in almost every society, and a new fillip has been given to it by a determined attack upon Mr. Moore and his biography, by Mr. T. Campbell, as a friend to Lady Byron, in the *New Monthly Magazine*. In this article Mr. Campbell distinctly accuses Lord Byron of some dark crime, and charges Mr. Moore with screening his hero, by disparaging his exemplary lady and her relatives. Having perused this demi-official paper too late for adequate remarks in this No. of the *Literary Gazette*, we shall abstain from offering any—for indeed the matter is too serious and indelicate, not to say disgusting, to be treated of hastily.

With regard to our share in bringing on the discussion by publishing the "Remarks," we are happy to find ourselves fully justified by all the parties concerned, and thanked by the public. What we did might be compared to a gentleman in a crowd pressing, perhaps, too closely upon another individual, but being instantly excused by the circumstances of the case: the conduct of those who pirated our account, resembled that of a gang of thieves taking advantage of such circumstances to pick a pocket.

MUSIC.

NEW PUBLICATIONS.

Legendary Ballads by T. Moore, Esq. Arranged &c. by H. R. Bishop. J. Power.

THIS publication has several claims to favourable notice—the poetry is by Moore; the music select, with one addition by Bishop and another by Mrs. Robert Arkwright; and the drawings, which illustrate the legends, by a fair and young amateur. Of the twelve ballads in the volume, we may say that they are all extremely graceful and pleasing; some, indeed, possessing higher powers of attraction than others, but each, in turn, charming the fancy or rivetting the feelings. The "Leaf and the Fountain," (previously published in the *Apollo's Gift*), is a very light and pretty air: "Youth and Age," (Mrs. R. Arkwright's contribution) does infinite credit to that lady's taste, and is well worthy of the composer of the beautiful legend, "The Brave Roland": "The Magic Mirror" is also prominent in our good opinion, as is the sweet "Pilgrim," and the perfect romaunt of "The high-born Ladye." Having thus characterised the music, we have but to give a sample of the poetry; and we cannot do better than take the playful lines, "Youth and Age," to which we have alluded.

"Tell me, what's Love?" said Youth, one day,
To drooping Age, who crost his way,

'It is a sunny hour of play,
For which repentance dear doth pay;
Repentance! Repentance!
And this is Love, as wise men say.'

'Tell me, what's Love?' said Youth once more,
Fearful, yet fond, of Age's lore.
'Soft as a passing summer's wind,
Wouldst thou know the blight it leaves behind?
Repentance! Repentance!
And this is Love,—when love is o'er.'

'Tell me, what's Love?' said Youth again,
Trusting the bliss, but not the pain.
'Sweet as a May tree's scented air,—
Mark ye what bitter fruit 'will bear,
Repentance! Repentance!
This, this is Love—Sweet Youth, beware.'

Just then, young Love himself came by,
And cast on Youth a smiling eye;
Who could resist that glance's ray?
In vain did Age his warning say,
Repentance! Repentance!
Youth laughing went with Love away.

Tam o' Shanter and Souler Johnny. Words by C. Butler; Music arranged by Mr. Smith, and accompanied by Burns' Poem of Tam o' Shanter. Willis and Co.

SUNG by Braham in one of his best styles, for he has many; and from the noblest music of Handel to the convivial song like this, he can throw his magic power into them all. No wonder, therefore, that this Tam o' Shanter should have become popular, like its glorious archetype by Burns, and, like its remarkable illustrator, the statues which have done so much honour to untutored art. The song itself is playful, and remonstrates against gentlemen remaining too long in the dining-room after the ladies have retired—of course it will, and ought to be patronised wherever high fashion has not banished enjoyment. We wish Braham would teach the Cockney population to relish this *bonne bouche*.

Quand on est deux. Birchall.

A LIGHT French air, with more of sweetness and simplicity than is usual even in the best of its kind. It is a pretty romance, and just what a romance should be.

O deem not that I love her less! Words by T. H. Bayly, Esq. Mori and Lavenu.

So pretty an air, that it would be a musical and moral offence to find fault with it. If not one of Mr. Bayly's best, it is certainly one of his most pleasing songs.

DRAMA.

KING'S THEATRE.

THE *Matilde di Shabran e Corradino*, as amended by Rossini at Paris, was produced at this theatre on Saturday night, to a very crowded and fashionable audience. The opera was originally brought out at Rome; and there is an anecdote connected with its first representation in that capital highly characteristic of the great *maestro*. Rossini had repeatedly promised the Roman manager that he would compose an opera purposely for the theatre of the "eternal city;" but his promises were so often broken, that it was pretty generally suspected he never intended to keep them. At length the master appeared with his promised production. The representation of his opera was duly announced. The house was crowded; the Romans having predetermined, in revenge for being so often disappointed, to punish the composer by hooting his composition throughout. The overture (which, by the by, is very spirited) was barely concluded, ere Rossini was assailed by hisses in every direction. He rose from his seat in the orchestra, and, gravely placing his hand on his heart, bowed several times to the audience. The vocal performance proceeded; but, though the singers were occasionally,

applauded, disapprobation fell thick and threefold on the head of the perfectly composed composer, who, in return for every round of hisses, expressed his grateful acknowledgments to his auditory by the most graceful bows and staid gesticulations of heartfelt satisfaction: but, in the end, the waggery and good humour of Rosini triumphed; for, on the close of the second representation, he was carried through the streets on the shoulders of those to whom, on the first night's performance, he had been most obnoxious.

Now of the opera itself, which is really a very attractive composition. It is true that it may be considered, as the Italians term it, a species of *centoni*, or rather a mosaic, of some of the author's most favourite phrases re-manufactured: but it is equally true, that some of those beautiful *motivos*, supposed to be traceable to other operas of the same composer, were originally written for this: to wit (as some of our contemporaries have observed), several palpable plagiarisms from *Semiramide* are detected; but the critics, perhaps, were not aware that *Matilde di Shabran* was written some four years prior to *Semiramide*; so that, if there be any borrowing (and there is some), it is in *Matilde* taken from *Il Barbiere* and *Otello*, its predecessors; and in *Semiramide* the reverse, i. e. from *Matilde*. This opera, speaking of its representation, we pronounce to be the most successful performance of the season; and we think no little merit is due to the company, but more especially to our present *prima donna*, when it is taken into consideration, that it is the ninth representation which has been given in the short period of six weeks,—

the first time, perhaps, that so many representations of the same opera have been given in so short a period. It is true, that the company were not perfectly successful in their performance; but the merit of the composition is not to be denied. The fashion affects the fashion opportunity of the language is not to be denied, though it is only justice to say, that in this opera she acquits herself in a manner which bespeaks something of promise. Her duet, "*No, Matilde, non morrai,*" with Mdlle. Blais, was given in a style which would have done credit to an *artiste* of greater pretensions. Of Blais's performance of the truly trying and difficult part of *Matilde*, we can only say that, in Italy, her singing in the quintettes commencing "*Questa è la dea,*" &c. (in the first act), and "*E palese il tradimento*" (in the second), together with her unrivalled execution of her last song, "*Ami alfin e chi non ama,*" would have brought down the house. But, as we remarked on a former occasion, merit will find its level. Last year, when the Sontag and Malibran mania was raging in a violent degree, we had the temerity, in opposition to the whole metropolitan press, to pronounce Mdlle. Blais an actress of extraordinary versatility of talent; and now we have the satisfaction to perceive that, with hardly an exception, the London journals are no longer blind to her merits, but, on the contrary, are loud in her praise. The same opera was repeated on Tuesday, yet, in spite of our opinion of it, with little effect; and, as we cannot suppose ourselves wrong, we must fancy the audience were touched by the change of the weather into apathy.

ORATORIOS.

ON Wednesday Mr. Hawes delighted a house so well and so respectably filled as to be almost worthy of the occasion, by the performance of the *Messiah*, not only excellently in its leading features, but with that masterly attention

to details which always renders an oratorio complete. Miss Paton in full voice—for, great as she was before, she is really improved this season both in force and sweetness—was most admirable in the recitatives and airs; but, what is still more commendable in a singer of her eminence, she entered with spirit into the choruses, and conducted to the magnificent style in which they were executed. "But who may abide?" by Phillips, was beautifully given; and Millar (after Brahm) was heard with credit to himself. Mr. Bennett (the other new vocalist) also sang in a pleasing manner; and Miss Bruce (Miss Wyatt, we believe, and daughter to one of the distinguished architects of that name, whom a devotion to music has carried before the public) displayed taste and talents of very considerable promise. Between the acts, a M. de Flor played on a keyed instrument resembling several which have of late years been produced as inventions. It owes its tones to metal bars, and is, generally, like the soft stops in the swell of an organ. The upper notes, however, are extremely fine, and remind us of the reed stops in the same instrument. The "Floradino," as it is called, was played rather too long; for there is a monotony about it which requires relief. A Master Cooper performed a concerto on the violin with great precision and skill; and a trumpet obligato, by Harper, was one of the most striking treats of the whole of this grand entertainment.

ADELPHI: ASTRONOMICAL LECTURES.

LAST evening Mr. Adams delivered his concluding lecture on astronomy (a very interesting and instructive one) at the Adelphi Theatre, on Monday evening, the 10th inst. The lecture was attended by a large number of persons, and was well received. The lecturer's address is to be published in the next issue of the *Literary Gazette*.

MRS. H. SIDDON'S ADDRESS.

WE observe, in the Edinburgh journals, that this accomplished actress and admirable private character has taken her farewell of the stage, delivering on the occasion a fine address, written by Sir Walter Scott. We remember her well, in all the charms of youth, beauty, intelligence, and natural simplicity, when she first adorned the London boards: since then she has nobly upheld the honours of the Drama in the Scottish capital by performances in the foremost walks of the comic Muse, and in parts of tenderness and pathos, as well as of spirit and gaiety. She retires in the meridian of her powers and life—before her brilliant fame is dimmed by the slightest shadow. Need we say that the theatre was crowded, and the applause enthusiastic?—it would have been a disgrace to Scotland had it been otherwise. Mrs. H. Siddons was much agitated throughout the play (*the Provoked Husband*); and her Lady Townley towards its close shewed the feeling to be increased so much, that on being led forward by Mr. Murray to speak the address, she nearly fainted on the stage. Having rallied, the lines which we subjoin were most effectively delivered; and the exit was triumphant, the audience simultaneously rising and testifying their sentiments by shouts and the waving of handkerchiefs.

"The curtain drops—the mimic scene is past—
One word remains—the saddest and the last:
A word which oft in careless mood we say;
When parting friends have pass'd a social day;
As oft pronounced in agony of heart,
When friends must sever, or when lovers part;
Or, o'er the dying couch, in whispers spoken,
When the frail thread of life is all but broken—
When all that ear can list, or tongue can tell,
Are the last, mournful accents, Fare ye well!

Such is the spell the actress must divide
From duties long her pleasure and her pride;
So brief the syllables that must bid adieu
To public life, to Scotland, and to you;
To hopes, to doubts, to efforts, and to fears,
And all the business of my scenic years.
Yet, ere we part—and even now a tear
Bedims my eye to think our parting near—
Fain would I speak how deeply in my breast
Will the remembrance of your kindness rest:
Fain would I tell, but words are cold and weak—
It is the heart, the heart alone can speak.
The wanderer may rejoice to view once more
The smiling aspect of her native shore;
Yet oft in mingled dreams of joy and pain
She'll think she sees this beautiful land again;
And then, as now, will fond affection trace
The kindness that endears her dwelling-place.
Now then it must be said—though from my heart
The mournful accents scarcely will depart—
Lingering, as if they feared to break some spell—
It must be uttered—friends, kind friends, farewell!
One suit remains—you will not scorn to hear
The last my lips shall falter on your ear—
When I am far, my patrons, oh! be kind
To the dear relative I leave behind;
He is your own—and, like yourselves, may claim
A Scottish origin—a Scottish name:
His ripened talents—let the truth be told—
A sister in a brother's cause is bold—
Shall cater for your eve of leisure still
With equal ardour and improving skill;
And though too oft the poor performer's lot
Is but to bloom, to fade, and be forgot,
Whene'er the mimic sceptre they resign,
A gentler destiny I feel as mine;
For as the brother moves before your eyes
Some memory of the sister must arise;
And in your hearts a kind remembrance dwell
Of her, who once again sighs forth—Farewell!"

VARIETIES.

Banks; United States.—By an official statement, it appears that at the beginning of the year 1829 there were in the state of Pennsylvania, possessing a population of 1,200,000 souls, no fewer than twenty-nine banks, with a nominal capital of 2,300,000*l.*, and a circulation in paper of 1,392,000*l.*, and in specie of 390,000*l.* In the same state there was, during the four years 1825—1828, an average of 6,593 children annually educated at the public charge, and at a yearly expense of 4,830*l.* The total sum expended by Pennsylvania on public education for the year 1828 was 6000*l.*

Dr. Waugh.—We insert the following characteristic letter, as a pleasing illustration of the review in our last Number, and of its amiable, sensible, and pious writer:—

Copy of a Letter from the Rev. Alexander Waugh to Alexander B—, on his going to Newfoundland.

My dear Alex.—Set the Lord always before you. Read a portion of God's blessed word every morning and evening alone in your cabin. Watch over the movements of your own heart, and check the first risings of evil desires. In the company of the ungodly, let prudence and firmness, modesty and resolution, mark your demeanour. Live near to God in prayer, in holy meditation. By an accommodating disposition in all things lawful, turn every acquaintance into a friend. Approve yourself in all things to your superiors, by readiness to obey, and fidelity to your trust. I commend you to the care of Heaven, in hopes of seeing you in health on your return. I remain, my dear Alex., most affectionately yours,
A. WAUGH.

Paris Academy of Sciences.—M. Jaume St. Hilaire presented a paper read by him in February last to the Society of Agriculture, on the soils more or less adapted to the spontaneous production of vegetables. After a careful analysis of specimens taken from the Bois de Meudon, the Plain des Sablons, the Bois de Boulogne, &c., he had come to the conclusion, that all the soils were composed of silex, magnesia, chalk, &c., in various proportions, in addition to a vegeto-animal matter, more or less abundant as the soils are more

or less adapted to the production of plants; 2dly, that plants growing on soils, the constituent parts and relative proportions of which are most favourable to their own particular nature, do not exhaust the ground; and lastly, that a course of observations on the various species of plants which grow spontaneously, and perpetuate themselves on certain soils, with a chemical analysis of those soils, would be attended with great practical utility to the science of agriculture.

Election.—General Count Philip de Segur was elected to the place in the Academy vacant by the death of the Duke de Levis, by thirty-one votes out of thirty-two; and M. Bussy to that of Professor to the School of Medicine.

Medals.—At the sitting of the Geographical Society of Paris on the 5th ult., a letter was read from M. Caillié, presenting a copy of his Travels in Central Africa, and expressing a hope that they would be viewed with favour by the Society. A gold medal of 500fr. value was subsequently voted to this gentleman; and another to the widow of the enterprising and unfortunate Major Laing, his precursor in that arduous field of discovery. Honourable mention was also made of the exertions of Captain d'Urville.

Percussion Cannon.—It seems unknown in England that percussion locks were introduced into the artillery of the Austrian marine two years ago, on board of the Guerriera frigate and USSaro brig; and the success which has attended the experiment has determined the government of Austria to employ these locks generally throughout their marine artillery.

American Protestant Missionary Society.—This Society in 1829 printed 172,000 copies of the Bible in the Chacta language, an equal number in that of the Senecas, and 175,000 in Cherokee. The Phoenix, a Cherokee journal, edited by a native (and fully described in our last year's Literary Gazette) who has invented written characters for his language, announces that a Temperance Society has been formed at New Echota, the Cherokee capital.

French Universal Statistic Society.—At the sitting, on the 25th ult., 156 new members were enrolled, and a great number of works, charts, &c., were presented to the Society. A committee of twenty members was nominated to decide on the subjects of the prize essays, and the value of the prizes to be given by the Society, &c. &c. The Dukes of Orleans and Chartres sent letters of excuse, regretting their being unable to attend.

Horses in France.—Great attention is still paid to the breed of horses in France, and well-bred animals fetch twenty to thirty per cent more than in London. Horses for ordinary use, however, are cheaper than in this country. On the last market-day in Paris, small draft horses for coaches, diligences, &c. averaged from 14l. to 18l. each; riding-horses 25l. to 30l. each; and ponies (being fashionable) 14l. to 16l.

Mathematics.—The Journal of Odessa, in a letter from Mr. Mayouroff, claims the discovery in mathematics, after the research of twenty-one years, of a very easy method of solving equations of all degrees, and of proving the method in every case. He has solved equations of the eleventh degree, and entertains no doubt that his method is applicable to all possible degrees. In equations of the fifth and sixth degree, which could not be solved by any method, he has not only obtained the roots of whole quantities,—but even when these equations are composed of fractional roots, he has found the real value in a few minutes.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XIV. April 3.]

PUBLISHING.

Messrs. Colburn and Bentley are about to publish, dedicated, by permission, to the Archbishop of Canterbury. Illustrations of the Exodus: consisting of Six Views from Drawings taken on the Spot, during a Journey through Arabia Petrea, in the Year 1828. By W. H. Newham, Esq., and engraved on stone by J. D. Harding. The scenes portrayed are those in which the principal events recorded in Exodus occurred. The Scriptural passages thus illustrated are to be given on a page of letter-press, facing each plate, together with remarks, notes, &c. explanatory of the present state of the country and its inhabitants.—Proposals for publishing the Wycliffite Versions of the Old Testament are circulated, under the sanction of the Royal Society of Literature. The editors are the Rev. J. Forshall and Mr. Madden, both eminent scholars, and connected with the British Museum: so that we may expect a work of great interest both to English philology and the Protestant religion from their hands.—The Author of Rome in the Nineteenth Century, and of Continental Adventures, is said to be preparing a new work.—By Mr. Ferrari, one of the oldest musical professors in London, we are promised Memoirs of his Life, and Anecdotes of his Musical Contemporaries. Mr. Ferrari was the intimate friend of Paisiello and Haydn, the precursor of the unfortunate Marie Antoinette, and of Madame Catalani.

LIST OF NEW BOOKS.

Lardner's Cabinet Cyclopaedia, Vol. V. Kater and Lardner's Mechanics, fcp. 6s. bds.—Travers's Venereal Affections, 8vo. 3s. bds.—Cooper on the Testis, royal 4to. India plain, 1l. 1s. 6d.; coloured, 3s. 3s. bds.—Boll on the Nervous System, 4to. 1l. 16s. bds.—Hooke's Mission to India, Part II. 8vo. 3s. 6d. bds.—The Game of Life, 2 vols. post 8vo. 18s. bds.—Beale on Deformities, 8vo. 12s. bds.—Inglis's Vindication of Christian Faith, 8vo. 10s. 6d. bds.—Kodes on the Battle of the Monastery, 8vo. 3s. 6d. bds.—Croly's Poetical Works, 2 vols. post 8vo. 1l. 1s. bds.—Family Classical Library, Vol. IV. 18mo. 4s. 6d. bds.—Grammar of the German Language, 12mo. 2s. 6d. sewed.—Sidney Anecdotes, Part II. 18mo. 2s. 6d. sewed.—Spalding's Scotland, 8vo. 12s. bds.—The Quarterly Part of the Foreign Literary Gazette, in wrapper, 10s. 10d.

TO CORRESPONDENTS.

Population: Relief.—We have received the Prospectus of a Plan for affording Relief to the Pauper Labouring Classes, by means of Systematic Colonisation, under a "National Emigration Society," respecting which a public meeting was held on the 13th ulto. We have also received an able letter recommending the allotting small portions of land to the poor, and the use of spade husbandry, as a remedy for the same evil. The former states the annual increase in Britain to be two per cent, or 400,000 persons per annum; and proposes the annual export of 100,000, being young couples, and consequently most productive, to Canada, South Africa, and Australasia; and so to continue, till all the waste land at the disposal of government shall have been appropriated and cultivated. The estimated expense of removal is 10l. per head; and the first operation projected is that of sending out the several thousand destitute children who starve in and infest the metropolis, as apprentices to emigrants already established. The latter plan has been tried on a limited scale in various parts of the country, and always attended by local benefits. Even as near London as Richmond, where land is so valuable, it is now acted upon with advantage.—We have only to mention the suggestion of another, and apparently a hard-hearted correspondent, who, either in jest or in earnest (we know not which from his style), earnestly recommends the abolition of cow-pox practice, and the re-introduction of small-pox, as a means of keeping the surplus population within due bounds!

* * * * * The accumulation of new works upon our table, and the continual influx of others, put it out of our power to insert so rapidly as we wish the reviews we have prepared of several poetical volumes, and other productions of genius. We intend, however, to take these up in our following Nos.; and also, by classing the publications on law, medicine, the drama, &c. &c. to give our readers a sufficient acquaintance with these arrears.

We request notice to the very interesting account of Etruscan Vases in a preceding page: it is by far the most complete yet published in Europe.

ERRATUM.—In the Celestial Phenomena for April, No. 688, page 209, column 2, last line, dele "of a mile."

ADVERTISEMENTS

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery for the Exhibition and Sale of the Works of British Artists is open Daily, from Ten in the Morning till Five in the Evening. Admission 1s.—Catalogue 1s. WILLIAM BARNARD, Keeper.

SOCIETY OF BRITISH ARTISTS. The

Exhibition for the Sale of the Works of living British Artists, in Suffolk Street, Pall Mall East, is now open to the Public, from Nine till Six. Admission, 1s.—Catalogue, 1s. R. B. DAVIS, Secretary.

PAINTED WINDOW. A Magnificent

Painted Window, painted in Enamel, of the Tournament of the Field of the Cloth of Gold, painted by T. Wilmshurst, from an original Sketch by Mrs. R. T. Bone, will be opened for Exhibition on Monday, April 5th, at No. 15, Oxford Street. Size of the Window, 24 Feet by 18 Feet. Contains more than 100 Figures, including upwards of 40 Portraits, with the strictest Attention to Costume. Admittance, 1s.—Description, 6d. Open from Ten till Five.

EDINBURGH REVIEW. Advertisements, Notices, &c. to be inserted in the General Advertising Sheet of No. 101 of the Edinburgh Review, which will be published in April, are requested to be sent to Longman and Co. Paternoster Row, by Saturday the 10th; and Prospectuses, Catalogues, Bills, &c. to be stitched in the Number, not later than the 15th. Advertisers will perceive the great advantage of sending their Advertisements and Bills early, as they are placed in the exact order they are received by the Publishers.

LITERARY PARTNERSHIP. A Gentleman fond of Literature, and having from 200l. to 500l. at his command, may obtain a Share of a respectable Periodical, realising at present a good profit, and capable of great improvement. Apply, by letter only, (post-paid) addressed to M. R., Peeli's Coffee House, Fleet Street.

MICHAEL THOMAS SADLER, Esq.

M.P. Just published, by L. Houghton, Printseller, 30, Poultry, Cheap-side, a Portrait of this distinguished Gentleman, who so ably advocated the Protestant Cause in the late Debate on Catholic Emancipation. Engraved by Thomas Lupton, from the original Picture by William Robinson. Price, Prints, 15s.; Proof, 35s.

Also, nearly ready, The Law Student's Common-place Book.

Eden Hall, Chesham. Published by G. Clarke, Mount Street, Grosvenor Square, price 6s. 6s. in boards, 2s. 6d.

TWENTY LARGE VIEWS OF EATON HALL;

with descriptive Letter-press, dedicated, by permission, to the Right Hon. Earl Grosvenor, from Drawings by J. Buckler, F.S.A., and J. C. Buckler.

MUSIC.

New Vocal Music.

A SET OF LEGENDARY BALLADS.

The Poetry by THOMAS MOORE, Esq. Arranged, with Symphonies and Accompaniments, by HENRY R. BISHOP; and embellished with Illustrations. Price 12s. Published by J. Power, 34, Strand.

BOOKS PUBLISHED THIS DAY.

Monthly Magazine for Families. On the 1st of April was published, price 1s. 6d. No. IV. of

THE BRITISH MAGAZINE. The

object of the publication is effectually to supply a desideratum in periodical literature.—It is a want of a Journal intended expressly for Families, that shall be more general in its character than Magazines that are exclusively religious, and more solid and beneficial than those that are merely literary.

Contents of the Number for April:—

Meteorological Phenomenon considered Miraculous—A Tale of the Woodlands, by J. F. Hollings—Studies at Calvary (Study III.), by the Rev. John Styles, D.D.—Sonnet to the Rev. Dr. Philip, by Thomas Pringle—"Rose-coloured Curtains," by Mrs. S. C. Hall—A Conundrum—The Substitute for Happiness—The Star—The Cygni; or, Gypsies in Hungary, by the Author of "Stories of a Bride"—Carriage, by Miss Jewsbury—The Voice of the Trumpet, by F. Muller—South African Sketches (No. II.), by Thomas Pringle—Modern Improvements in the Useful Arts—Notices of Useful Institutions—Public Abuses—Biographical Notices—Events of the Month—Reviews—New Music—Fine Arts—Exhibitions—Editor's Note Book, &c. &c. London.—Wesley and Davis Stationers' Hall Court; and to be had of any Bookseller in the Kingdom.

The Asiatic Journal, New Series, No. IV. Price 3s. 6d.

THE ASIATIC JOURNAL for April

contains some very interesting particulars respecting the Abolition of the Suttee Practice in India. Amongst the Original Communications, are an Analysis of Count Potocki's Travels in Astrakhan and Caucasus—an Examination of Sir J. P. Grant's Argument in the Case of Moro Ragoonah—On the Hieroglyphics of Horapollo—On Caste, &c. &c. The Asiatic department comprehends an unusually large portion of very interesting Intelligence, including the latest Accounts of the Occurrences at Canton, from a Correspondent on the spot. Published by Farbury, Allen, and Co. Ludenhall Street.

On the 31st of March was published,
THE WESTMINSTER REVIEW.
No. XXIV. price 6s.

Contents: I. Moore's Letters and Journals of Byron—II. Ancient Bohemian Ballads—III. Carlisle's Gentlemen of his Majesty's Most Honourable Privy Chamber—IV. Crawford's Embassy to the Court of Ava—V. Robert Montgomery's Satan—VI. Law of Arrest—VII. Colman's London Records—VIII. Financial Reform—IX. Galt's Lawrie Todd—X. Taxes on Literature—XI. Bentham's Petitions for Justice—XII. Public Charities in France—XIII. Life of Paul Jones—XIV. Works of Dr. Channing—XV. Cloudesley—XVI. Smith and Stoker on Fever—XVII. The Representative of the People. Particular to the Article on the Instrument of Exchange, in No. 1. Ditto ditto on the Newspaper Press.

No. XXV. will be published on the 30th of June next, and will contain Articles on the Distress of the Country—On Canada and the Colonial System—On the Ballot—On Planting and Vegetable Physiology—On the Life and Character of Thomas Jefferson—The Newspaper Press, &c. &c.

New Works on Botany and Natural History,
Published by Treuttel and Wirtz, Treuttel, Jun. and Richter,
80, Soho Square.

Dedicated, by permission, to the Honourable Court of Directors of the East India Company.

PLANTÆ ASIATICÆ RHAIORIS; or,
Descriptions and Figures of a Select Number of Unpublished East Indian Plants.

By N. WALLICH, M. and Ph.D.

Numbers I. and II. in large folio, with Twenty-five beautifully coloured Plates, and Twenty-two and Twenty-one pages of descriptive Text each, handsomely printed, 2l. 10s. each.

The Work will be published in Twelve Numbers, to appear every Three Months. Only a limited number of Copies being printed, the Subscription will be closed with the Fourth Number, which will complete the First Volume; and the greater part being already subscribed for, the price of the few remaining Copies will then be raised.

Published under the authority of the Right Hon. the Secretary of the Board of Directors of the East India Company.

2. Flora Boreali-Americana; or, the Botany of the Northern Parts of British America, compiled principally from the Plants collected on the late Northern Land Expedition under command of Captain Sir John Franklin, R.N.; to which are added (by permission of the Horticultural Society of London), those of Mr. Douglas from North-west America, and of other Naturalists.

By W. J. Hooker, F.R.S., and J. S. Sowerby, Esq., F.R.S., Professors of Botany in the University of Glasgow. Part I. in folio, with Eighteen Plates and a Map of the Country, comprising the most recent Discoveries, prepared by the Admiralty expressly for this Publication, and illustrative of the Routes of Captain Franklin, Barry, Beecher, and others. Price 11s.

The Work will be completed in Twelve Fasciculi, and the subsequent Parts will appear every Three Months until completed. Subscribers are requested to send in their Names for the Work.

Published by Treuttel and Wirtz, Treuttel, Jun. and Richter, 80, Soho Square.

A List of Subscribers will be printed in the last Number.

Dedicated, by permission, to the Honourable Court of Directors of the East India Company.

The Literary Department is sustained by Writers who have obtained celebrity in the World of Letters. Published by Whittaker and Co. London; Waugh and Innes, Edinburgh; and J. M. Leckie, Dublin.

NATIONAL PORTRAIT GALLERY OF ILLUSTRIOUS AND EMINENT PERSONAGES OF THE NINETEENTH CENTURY. With Memoirs, By W. JERDAN, Esq. F.S.A. &c.

In calling the attention of the British Public to this undertaking, the Proprietors would chiefly point out its acknowledged value as a work of art; its peculiar interest as a gallery of British portraits, comprising all that is illustrious for rank, or eminent for talent, in our own day; its importance to history, as handing down to posterity authentic likenesses of the distinguished characters of a period the most brilliant and eventful in the annals of the world. To be engaged on such a work, is to the Publishers a source of the highest pride and gratification, inasmuch as it affords to every admirer of national greatness, at a very trifling expense, the enviable means of becoming acquainted with the personal appearance of those illustrious individuals, by whom his native land has been so signally adorned during the nineteenth century. "We have now to introduce to the reader a work of no less permanent value than of immediate interest. We may add, that the National Portrait Gallery will be found a very fit and useful appendage to Lodge's splendid work of a similar nature."—See Monthly Magazine, Nov. 1829.

A Part is published on the 1st of each month, containing Three Portraits, mostly selected from the finest original Paintings, in the possession of the nobility, gentry, and public bodies, engraved in the highest style, and accompanied by their corresponding Memoirs. Twelve Parts will form a Volume.

Price, in imperial 8vo. Part; or with Proof Impressions on the Plates on India paper, 5s. per Part. London: Fisher, Son, and Co. Newgate Street; Colnaghi and Co. Pall Mall East; Ackermann and Co. Strand; and Simpkin and Marshall, Stationers' Hall Court.

Waverley Novels—New Edition. VOL. XI. of this Edition, containing the Conclusion of Old Mortality, and the Commencement of the Heart of Mid Lothian, with an Introduction by the Author, and illustrated by J. Burnet and A. Fraser, published this day.

All the early volumes of this work are again reprinted, and may be had from the Commencement, or any Volume or Novel separately. Printed for Cadell and Co. Edinburgh; and Simpkin and Marshall, London. Of whom, and of Moon, Boys, and Co. 6, Pall Mall, may be had, separately.

The Illustrations to the first Eight Volumes of the present edition of the Novels. These are from the pencils of Stephanoff, E. Landseer, Newton, Leslie, Kidd, A. Cooper, Chalton, &c. &c.

THE QUARTERLY REVIEW, No. LXXXIV. was published on Tuesday.

Valpy's Classical Library. THE FAMILY CLASSICAL LIBRARY; Translations of the most valuable Greek and Latin Biographical Sketches of the most eminent Authors, and Embellishments on Steel by the first class. 6d. per volume, neatly bound in cloth, average 350 pages of Letter-press. Edited by A. J. VALPY, M.A., and Richard Bentley, 8, New Burlington Street.

Prospectus. It not to know what has been transacted in infancy or knowledge; and the learned Dr. Parr says, "If you desire your son, though no great scholar, to read and reflect, it is your duty to place in his hands the best Translations of the best Classical Authors."

To those, therefore, who are desirous of obtaining a knowledge of the most esteemed Authors of Greece and Rome, but possess not the means or leisure for pursuing a regular course of study, the present undertaking must prove a valuable acquisition; for, sent directed, that sufficient time cannot generally be allowed for laying the foundation of an adequate acquaintance with the most popular Authors in the Greek and Latin Languages; and even in those instances in which the object has been attained—where the Classics has been preserved—the facility of reference to a series of correct and elegant translations must afford pleasure and occasional assistance even to the scholar.

The Selection is intended to contain those Authors whose works may with propriety be read by youth of both sexes; and the whole will be presented in a cheap, elegant, and uniform size. The excellence, as orators and historians, of Demosthenes, Cicero, Herodotus, and Xenophon, will place them foremost in the collection of Prose Authors; these will be followed by Thucydides, Livy, Sallust, Tacitus, &c.—Homer, Virgil, and Horace, will justly take precedence among the Poets.

Three Numbers are already published, comprising the orations of Demosthenes, Sallust, and the Analysis of Xenophon; and the publication will be regularly continued on the first day of every Month, so as to be delivered by the end of the Month. The testimonials in favour of this important undertaking, and its execution being far too numerous to quote in an advertisement, the publishers beg leave to refer the public for them to the leading Journals and Periodicals of the day.

Orders (which, to prevent mistakes should be particularly specified as being for Valpy's Family Classical Library) are received by every Bookseller throughout the Kingdom. Agents for Scotland, Messrs. Bell and Bradfute; for Ireland, Mr. John Cumming.

NOTICES of BRAZIL in 1828-9; with Original Maps and Views never before published, and many Illustrations. In 2 vols. 8vo. bound in cloth and lettered, 11. 14s.

By the Rev. R. WALSH, LL.D. M.R.I.A. &c. &c. Author of a "Narrative of a Journey from Constantinople to England." Dr. Walsh accompanied the late Extraordinary Embassy to Rio di Janeiro, as Chaplain, and visited several parts of the interior of the country during his residence in Brazil, particularly the mining districts. London: Printed for Frederick Westley and A. H. Davis, Stationers' Court.

THE LIFE OF LORD BYRON, including his Correspondence with his Friends, and Journals of his own Life and Opinions.

By THOMAS MOORE, Esq. The Second Volume of Mr. Moore's Life of Lord Byron will be published early in April.

Lately published, Another new and cheap edition, with a Portrait and Illustrations, re-engraved by Finden, 4 pocket vols. 18mo. only 18s.

2. The Poetical Works of the Right Hon. Lord Byron.

In the press, printed for the first time to match with the above, 18mo. 9s.

3. A Fifth and Sixth Volume of Lord Byron's Works, containing English Bards, Heaven and Earth, Deformed Transformed, the Island, &c. &c.; forming that Portion of the Works recently purchased by Mr. Murray, and rendering this the first and only complete Edition, without Don Juan. John Murray, Albemarle Street.

THE UNITED SERVICE JOURNAL, and NAVAL and MILITARY MAGAZINE, for April, price 2s. 6d.

Contents: Personal Narrative of Captain Glasgow, of the Hon. Company's ship Margrave of Ely, relating the Captivity of that Officer amongst the Ladrones of the Chinese Sea, and describing the haunts and habits of those Pirates—Song, by John Bowring, Esq.—The Kogniat Controversy concluded—Lines by Mrs. Hemans—Two Months' Recollections of the late War in Spain and Portugal, by a private Soldier, concluded—Letters from Gibraltar, No. 1.; by the Author of the "Military Sketch-Book"—Biographical Sketch of the late Major Taylor, of the Royal Artillery—The Story of Ja Far, Son of the Sultan of Wadal—Extracts from a Cruiser's Log—A Commander's Petition on the present Naval Uniform—Colloques with Folard, No. II.—Navarino in 1825, from the unpublished Journal of a late Naval Officer amongst the Ladrones of the Chinese Sea, by Sir Gilbert Blane—The Marquis of Londonderry's Narrative of the late War in Germany and France. Correspondence: Editor's Portfolio—Monthly Naval Register—Courts Martial, &c.

The attention of the Public, and particularly that of the United Service, is respectfully invited to this popular Journal, which embraces subjects of such extensive variety, and of such powerful interest, as must render it scarcely less acceptable to readers in general, than to the Members of those Professions for whose use it is more peculiarly intended. Conducted by Officers in His Majesty's Service, who have ensured the effective co-operation of gentlemen of high professional and literary character, it will be uniformly animated by the same ardent spirit of patriotism and loyalty which achieved the triumphs of Trafalgar and Waterloo. Henry Colburn and Richard Bentley, 8, New Burlington Street.

THE COURT JOURNAL.

The Numbers that were out of print having been again Reprinted, complete Sets of the First Quarterly Part for 1830 may be obtained on early application. The last Number of the Quarter, for Saturday last, contains the Articles on English Equipages and Noble Cèlibataires, which have excited so much attention. This new Weekly Journal of Fashion, the companion not only of the Drawing-room and Boudoir, but of the Break-up on a Stamped Sheet; and Subscribers may therefore receive and transmit it to their friends, postage free, throughout all parts of the Kingdom.

Printed for the Proprietor, Mr. Colburn of New Burlington Street, and sold by W. Thomas at the Office, No. 19, Catherine Street, Strand; and by every Publisher and News-vender throughout the Kingdom.

THE EXCITEMENT; or, a Book to induce Young People to Read; containing remarkable Appearances in Nature, signal Providences, and such Incidents as are peculiarly fitted to arrest the youthful Mind.

This is an admirable selection.—Literary Gazette, Jan. 1830. Published by Whittaker, Treacher, and Co. Ave Maria Lane, London; and Waugh and Innes, Edinburgh.

BOOKS IN THE PRESS.

Shortly will be published, in 8vo. dedicated, by permission, to Thomas Storer, Esq.

THE TRAVELLER'S LAY; a Poem. Written during a Tour on the Continent. By THOMAS MAUDE, Esq. A.M. Oxon. Printing for Longman, Rees, Orme, Brown, and Green.

Family Library. On Saturday, April 10th, will be published, illustrated with numerous Woodcuts, from Designs by George Cruikshanks, engraved by Thompson and Williams, complete in 1 vol. 6s. a new edition, with Corrections and Additions, &c.

THE LIFE OF NELSON. By ROBERT SOUTHBY, Esq. LL.D. Poet Laureate. Fosting No. XII. of the Family Library. John Murray, Albemarle Street.

Early in May will be published, with a Portrait, 3 vols. 4to. THE LIFE OF BISHOP HEBER, with Selections from his Correspondence and from his Unpublished Works. By HIS WIDOW. John Murray, Albemarle Street.

Just published, A Fourth Edition of Bishop Heber's Indian Journal, 3 vols. 8vo. 11. 16s.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; sold also by J. Chappell, 88, Regent Exchange; E. Edinburg; Smith and Son, and Robertson and Atkinson, Glasgow; and J. Cumming, Dublin.—Agent for America, O. Rich, 18, Red Lion Square, London. J. MOYES, Toak's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 690.—AMERICAN EDITION.

SATURDAY, APRIL 10, 1830.

REVIEW OF NEW BOOKS.

The King's Own: a Novel. By the Author of the "Naval Officer." 3 vols. 12mo. London, 1830. Colburn and Bentley.

THIS is, for the most part, a tale of the sea, written, we believe, by an English post-captain, whose life has been more than usually active, and who, having seen much, not only in "the service," but out of it, seems determined to turn to account materials so acquired. The result of this determination is a very remarkable book, full of vigour, and characterised in many places by incidents of perfect originality, both as to conception and treatment. While we speak thus of the work as a whole, we cannot avoid expressing our opinion, that had it not been for the romances of Cooper, the novel before us would probably never have been written: not that it is, in the slightest degree, a copy of any of the sea-stories of the American; but that the great success of the latter as a naval novelist has excited the literary rivalry of English seamen, (for our navy can boast of men as distinguished for intellect as for physical hardihood); and hence the nautical tales which have recently been added to our literature.

The King's Own is the second novel of Captain Marryat. Of his first production, the *Naval Officer*, we spoke in terms of dispraise; because we saw in it evidences of haste, carelessness, rashness even, and, above all, want of due regard to that propriety which is now demanded and commanded in every branch of literary production. It was said of Sir John Vanbrugh, in an epigram of the day, that he often wanted *grace*, (meaning, in that instance, chastity of thought,) though he never wanted wit; and had it not been for the signs, and more than the signs, of intellectual force which we recognised in the *Naval Officer*, we should assuredly not have taken the pains to point out and reprehend what appeared to us to be defective in the taste of the writer. Nothing is more provoking than the slightest sign of mental perversion in a man of real talent. In the present work, however, we have no errors of that kind to condemn. The author has evidently written with greater care than before; he has, if we may so speak, respected his task,—he has learned, that to construct a fiction which shall represent truly human character, passions, and manners, as modified and contrasted by difference of occupation and variety of country, and rendered subservient to the purposes of a consistent tale, is not an undertaking to be lightly approached.

The story opens with a picture on board of one of the ships at the general mutiny of the *Nore*. In this particular ship the commotion was excited, as it too often has been, not by an unruly spirit among the men, but by oppression on the part of the commanding officer. The tyrant on this occasion is designated as a Captain A—; and we cannot help fearing, so strong and peculiar are the markings of his character, that he is not merely a phantom of the novelist's imagination. The accumulated

injustice heaped by this person on the head of one of his crew in particular, a man of the name of Peters, is a main cause of the mutiny, or rather, as in the case of Massaniello, it converts Peters, from an obedient sailor, to a formidable avenger, strong in his wrongs, and suddenly eloquent from a keen sense of them. The following scene, connected with this event, is very striking.

"The irritated mind of Peters was stimulated to join the disaffected parties. His pride, his superior education, and the acknowledgment among his shipmates that he was an injured man, all conspired to place him in the dangerous situation of ringleader on board of his own ship, the crew of which, although it had not actually joined in the mutiny, now shewed open signs of discontent. But the mine was soon exploded by the behaviour of the captain. Alarmed at the mutinous condition of the other ships which were anchored near to him, and the symptoms of dissatisfaction in his own, he proceeded to an act of unjustifiable severity, evidently impelled by fear, and not by resolution. He ordered several of the petty officers and leading men of the ship to be thrown into irons, because they were seen to be earnestly talking together on the fore-castle,—and, recollecting that his conduct towards Peters had been such as to warrant disaffection, he added him to the number. The effect of this injudicious step was immediate. The men came aft in a body on the quarter-deck, and requested to know the grounds upon which Peters and the other men had been placed in confinement; and, perceiving alarm in the countenance of the captain, notwithstanding the resolute bearing of the officers, they insisted upon the immediate release of their shipmates. Thus the first overt act of mutiny was brought on by the misconduct of the captain. The officers expostulated and threatened in vain. Three cheers were called for by a voice in the crowd, and three cheers were immediately given. The marines, who still remained true to their allegiance, had been ordered under arms; the first lieutenant of the ship—for the captain, trampling and confused, stood a mere cipher—gave the order for the ship's company to go down below, threatening to fire upon them if the order were not instantaneously obeyed. The captain of marines brought his men to the 'make ready,' and they were about to present, when the first lieutenant waved his hand to stop the decided measure, until he had first ascertained how far the mutiny was general. He stepped a few paces forward, and requested that every 'blue jacket' who was inclined to remain faithful to his king and country, would walk over from that side of the quarter-deck upon which the ship's company were assembled, to the one which was occupied by the officers and marines. A pause and silence ensued; when, after some pushing and elbowing through the crowd, William Adams, an elderly quartermaster, made his appearance in the front, and passed over to the side where the officers stood, while the hisses of the rest of the ship's com-

pany expressed their disapprobation of his conduct. The old man had just reached the other side of the deck, when, turning round like a lion at bay, with one foot on the *comings* of the hatchway, and his arm raised in the air to command attention, he addressed them in these few words: 'My lads, I have fought for my king five-and-thirty years, and have been too long in his service to turn a rebel in my old age.' Would it be credited that, after the mutiny had been quelled, no representation of this conduct was made to government by his captain? Yet such was the case, and such was the gratitude of Captain A—. The example shewn by Adams was not followed:—the ship's crew again cheered, and ran down the hatchways, leaving the officers and marines on deck. They first disarmed the sentry under the half deck, and released the prisoners, and then went forward to consult upon further operations. They were not long in deciding. A boat-swain's mate, who was one of the ringleaders, piped, 'Stand by hammocks!' The men ran on deck, each seizing a hammock, and jumping with it down below on the main deck. The object of this manœuvre not being comprehended, they were suffered to execute it without interruption. In a few minutes they sent up the marine, whom they had disarmed when sentry over the prisoners, to state that they wished to speak with the captain and officers, who, after some discussion, agreed that they would descend and hear the proposals which the ship's company should make. Indeed, even with the aid of the marines, many of whom were wavering, resistance would now have been useless, and could only have cost them their lives; for they were surrounded by other ships who had hoisted the flag of insubordination, and whose guns were trained ready to pour in a destructive fire on the least sign of an attempt to purchase their anchor. To the main deck they consequently repaired. The scene which here presented itself was as striking as it was novel. The after part of the main-deck was occupied by the captain and officers, who had come down with the few marines who still continued steadfast to their duty, and one sailor only, Adams, who had so nobly stated his determination on the quarter-deck. The foremost part of the deck was tenanted by a noisy and tumultuous throng of seamen, whose heads only appeared above a barricade of hammocks, which they had formed across the deck, and out of which at two embrasures, admirably constructed, two long twenty-four pounders, loaded up to the muzzle with grape and canister shot, were pointed aft in the direction where the officers and marines were standing—a man at the breech of each gun, with a match in his hand, (which he occasionally blew, that the priming powder might be more rapidly ignited,) stood ready for the signal to fire. The captain, agnast at the sight, would have retreated; but the officers, formed of sterner materials, persuaded him to stay, although he shewed such evident signs of fear and perturbation as seriously to injure a cause,

in which resolution and presence of mind alone could avail. The mutineers, at the suggestion of Peters, had already sent aft their preliminary proposals, which were, that the officers and marines should surrender up their arms, and consider themselves under an arrest,—intimating, at the same time, that the first step in advance made by any one of their party would be the signal for applying the match to the touchholes of the guns. There was a pause and dead silence, as if it were a calm, although every passion was roused and on the alert, every bosom heaved tumultuously, and every pulse was trebled in its action. The same feeling which so powerfully affects the truant schoolboy,—who, aware of his offence, and dreading the punishment in perspective, can scarce enjoy the rapture of momentary emancipation,—acted upon the mutineers, in an increased ratio, proportioned to the magnitude of their stake. Some hearts beat with remembrance of injuries, and hopes of vengeance and retaliation; others with ambition, long dormant, bursting from its concealed recess; and many were actuated by that restlessness which induced them to consider any change to be preferable to the monotony of existence in compulsory servitude. Among the officers, some were oppressed with anxious forebodings of evil,—those peculiar sensations which, when death approaches nearly to the outward senses, alarm the heart; others experienced no feeling but that of manly fortitude and determination to die, if necessary, like men; in others, alas!—in which party, small as it was, the captain was pre-eminent—fear and trepidation were almost to the loss of reason. Such was the state of the deck of the ship at the moment when we are now describing. In the very centre of the deck stood one who, although surrounded by a crowd of anxious—astonished and divided parties stood a little boy, about six years old. He was the perfection of childish beauty; chestnut hair waved in curls on his forehead, health glowed in his rosy cheeks, dimples sported over his face as he altered the expression of his countenance, and his large dark eyes flashed with intelligence and animation. He was dressed in mimic imitation of a man-of-war's-man,—loose trousers, tightened at the hips, to preclude the necessity of suspenders, and a white duck frock, with long sleeves and blue collar,—while a knife, attached to a lanyard, was suspended round his neck; a light and narrow-brimmed straw hat on his head, completed his attire. At times he looked aft at the officers and marines; at others he turned his eyes forward to the hammocks, behind which the ship's company were assembled. The sight was new to him; but he was already accustomed to reflect much, and to ask few questions. Go to the officers he did not, for the presence of the captain restrained him. Go to the ship's company he could not, for the barricade of hammocks prevented him. There he stood, in wonderment, but not in fear. There was something beautiful and affecting in the situation of the boy; calm, when all around him was anxious tumult; thoughtless, when the brains of others were oppressed with the accumulation of ideas; contented, where all was discontent; peaceful, where each party that he stood between was thirsting for each other's blood:—there he stood, the only happy, the only innocent one, amongst hundreds swayed by jarring interests and contending passions. And yet he was in

keeping, although in such strong contrast, with the rest of the picture; for where is the instance of the human mind being so thoroughly depraved, as not to have one good feeling left? Nothing exists so base and vile, as not to have one redeeming quality. There is no poison without some antidote—no precipice, however barren, without some trace of verdure—no desert, however vast, without some spring to refresh the parched traveller, some Oasis, some green spot, which, from its situation, in comparison with surrounding objects, appears almost heavenly;—and thus did the boy look almost angelic, standing as he did between the angry, exasperated parties on the main-deck of the disorganised ship. After some little time, he walked forward, and leant against one of the twenty-four pounders that was pointed out of the embrasure, the muzzle of which was on a level with, and intercepted by, his little head. Adams, the quarter-master, observing the dangerous situation of the child, stepped forward. (He saves him; and the author adds), Reader, this little boy will be the hero of our tale."

The mutiny, however, is quelled, and Peters, as the ringleader, is hanged. His child is committed to the protection of an old sailor, who marks him with the broad arrow, and devotes him to the service of his king:—and in this affecting manner, and under this rough nurture, is the hero of the tale introduced to the reader. Nothing can be better conceived than this. The words which terminate the above extract—"Reader, this child will be the hero of our tale"—touch the ear with an ominous sound, and raise expectations which, as far as the hero himself is concerned, are, we are sorry to say, not fulfilled. The story itself, in many parts, particularly in the *finale*, is worthy of the noble commencement: but, alas! for the hero who, as a little child standing in the unconsciousness of infancy between the two desperate parties of men on board the mutinous ship, affects the reader almost to tears! One or two of the early events in his career are, indeed, very striking; but he soon degenerates into a well-disciplined midshipman, and hence loses all the individuality of character which might have been anticipated from the striking nature of his origin. The author himself is aware of this, and endeavours to reconcile himself to the hero's "decline and fall," by alluding to some illustrious masters of fiction whose heroes are the most insipid characters of their tales.

In the course of the adventures of this story, which are many and various, we meet with sketches which would seem to be portraits of living naval officers; but we cannot afford room for any more extracts, and must very briefly state the characters which have pleased us most, and which demonstrate, we think, unequivocally, the author's strong dramatic talent. Foremost among these is M'Elvina, the smuggler, a perfectly original sketch; Admiral de Courcy, a tragic portraiture; Mr. Rainscourt, the *roué*, who repudiates his wife, and then makes love to her; Jerry, the midshipman, with his eternal jokes at all times and seasons; and Captain M. Though the author's chief scenes are at sea, his knowledge does not seem to be confined to maritime affairs; his general observations deserve attention; he is a shrewd observer, too, of human nature, and throws about his gibes with no little effect. With regard to the more reflective portions of his work, we prefer those which have reference to politics, wherein Captain Marryat seems to be rather a dexterous tactician. Altogether, we

are of opinion that few persons will take up the book without going fairly through it to the catastrophe, which startles the reader by its unexpected nature.

Satan; a Poem. By R. Montgomery. Second edition. London, 1830. Maunders.

WE are induced to take up this second edition of R. Montgomery's volume not more for his sake than for our own. To the first we did not pay that sufficient regard which we purposed, and which it merited; and the gauntlet run which the young poet has experienced from our brethren seems to require that we should do him justice.

Of his design and of its execution we spoke in our former Review; objecting, in some measure, to the former, and pointing out the overwhelming burden which both imposed upon the most skilful and ambitious author. But because we felt these obstacles, and because we noticed blemishes and faults in Mr. Montgomery's page, were we, therefore, to shut our eyes to the original beauties and true poetical powers which he also displayed? Far be it from the *Literary Gazette* to dispense such criticism, or subject youthful genius to ordeals of ridicule and tests of composition which no genius that ever existed could withstand. Be it ours, while we adhere to justice, to be the encouragers of literature: to any others we will leave the distinction of earning notoriety by the easy paths of censure and abuse.

In the third book of *Satan* are many splendid passages, which ought to shield any writer from the severity of criticism—at all events, from criticism fraught with the personal hostility which has been so evident respecting this publication: we will quote an example or two in proof.

"There is a stormy greatness, by the sense
Of vulgar apprehension hail'd, yet vain
When match'd against an all-prevailing mind:
A warrior's glory in his banner waves:
The ocean-hero, where the tempest howl'd,
Outdared the winds; and echoes of renown
Roll mighty round the living head of each;
Yet ebb away to indistinct applause,—
A dying sound when Death has call'd them home.

But he who makes the mind a fame, each thought
Eternized, will become a voiceless charm,
A thinking power, a still omnipotence,
Whence half the heaven on pining earth will bloom.
For what a tale would time have told, had none
Burst through the thralldom of degrading sense,
And bade the spirit eloquently tell
Of truth, and beauty, and pervading love!"

In running over pictures of vain desires, we find the following:

"Another scene where happiness is sought!
A festive chamber, with its golden hues,
Its dream-like sounds, and languishing delights.
Since the far hour when England lay begirt
With savage darkness, how divinely raised
Art thou, Society! The polish'd mode,
The princely mien, the acquiescing smile
Of tutor'd lips, with all that beauty, love,
Accomplishment, and sumptuous art, bestow—
Are thine; but, oh, the hollowess within!
One mingled heart society should be,
Of glowing words and generous feelings made,
And hallow'd by sincerity; but hark!
The whisper'd malice of the envious vain:—
The shrug of falsehood, and the sly deceit
Of changing looks; the hypocritical glance,
The supple base, and stiff-neck'd proud,—behold!
From sim'ring youth to unregarded age
'Tis vapour, vanity, and meanness all!
Where honest natures sicken with disgust;
While school'd Hypocrisy, with glistening tongue,
Performs the social serpent of the night:—
A lying atmosphere, a soulless haunt,
Where fools are pamper'd, and the vile prevail.

From Fashion moved I to the loftier scenes,
Where hoets by learning titled, for renown
And rank more elevate than kings bestow,
Their inward toil pursue,—and yet how vain!
There is a craving for some higher gift,
A thirst which fame and wisdom fail to quench
Alone; the fountain hath a deeper well
And what is fame? When Hope, the morning-star

Of life, arose, enthusiast! thou wouldst climb
Her steep height, to hear th' acclaiming roar
Of thousands echoing round thee, like a choir
Of ocean wafted o'er a mountain-head.
In the dark womb of some weird solitude
Where destiny delights to colour years;
Or by some gush of beauty, or the glow
Of emulation, quicken'd by a mighty name,—
Didst first her music whisper, be thou great?
No matter: midnight watchings, gloom and tears,
Thy heart a fever, and thy brain on fire,—
The martyrdom of thought hath won the prize;
And midstmost thou, among the laurel'd tribe
A paramount art throned! And dear to thee,
Young hero of the mind, is first renown;
Fresh, warm, and pure, an early love, ere Time
Bath nipt it with his frosty wing. Awhile,
In Paradise thou dream'st, and seem'st to hear
The hallowing worship of posterity.
But now, come down from thy celestial height!
Descend, and struggle with the heartless crew
Who out of others' tears extract their joy.
The rocky nature of ignoble minds,
Ambitious spits, and unremitting hate,
And all who nibble at each young renown,—
'Tis thine to wrestle with: thy spell is o'er,
And glory is a feast for shame:—reproach
Is not, true happiness it never breathed!"

Again:—

"Glorious, and pleasure, learning, power, and fame,
All idols of deceptive sway,—mankind
Have crown'd them for the master-spell of life;
And yet, a mocking destiny they win.
How often dwelleth gladness in the smile
They raise, or rapture in the heaven they dream?—
Unknown, unhonour'd, in the noiseless sphere
Of humbleness, the happy man I found.
It was not that the tears or toils of fate
Were never his; or that no stormy change
The sober current of his days annoy'd:
But in him dwelt that true philosophy
That flings a sunshine o'er the winniest hour,
The proud he envied not; no splendours craved,
Nor sigh'd to wear the laurels of renown;
But look'd on greatness with contented eye,
Then smilingly to his meek path retired!
Thus, o'er the billows of a troublous world,
As o'er the snarthy of waters moves
The seaman's bark, in safety did he ride,
Forgot his woes, and left his wants to Heaven.
I envied, tempted; but could not decoy
His spirit to the perilous ascent
Of cumulative thought. He look'd around,
When glory wooed him with her trait'rous glare,
On the calm luxuries of humble life.
There sat the echo of his own pure mind,
The peaceful sharer of his love and lot:—
What beaming fulness in that tender eye,
What a bright overflow of spirit shone!
When by her sinless babe she mused, who lay
In beauty, still and warm as summer air,
And what could camp, or court, or palace yield,
Of nobler, deeper, more exalted bliss,
Than when, as weary daylight sunk to rest,
He shut his door upon the noisy world;
And with no harrowing dream of guilty hue
To meet the witching hours of love and home,
Set by his hearth, adoring and adored!"

The next is, to us, extremely poetical and touching.

"But now for country, and her chaster scenes!—
The melody of summer winds, the wave
Of heritage, in a bloomy radiance clad,
And chant of trees, that languishingly bend
As gazing on their shadows, meet around
This charmed haunt of Nature's sanctitude.
How rickety piled, how venerably graced
This hamlet fane! by mellowing age imbrown'd,
And freckled like a rock of sea-worn hue.
No marble tombs of agonising pomp
Are here; but turf-graves of unfolding green,
Where loved, yet lowly, generations sleep:
And o'er them many a Sabbath sigh is heaved
From hearts that live on sadness from the tomb.—

And such is thine, lone muses! by yon grave
Now ling'ring, with a soul-expressive eye
Of sorrow. Corn-fields glowing brown, and bright
With promise, sumptuous in the noon-glare seen;
The meadows, speckled with a homeward tribe
Of village matrons, sons, and holy sires,—
The hyming birds, all music as they soar,
And those twin brooks, so beautifully glad,
That whisper happy secrets to the wind,—
Such life and beauty by the landscape breathed,
And yet,—a tomb-shade overclouds it all!

A churchyard! 'tis a homely word, yet full
Of feeling; and a sound that o'er the heart
Might shed religion. In the gloom of graves
I read the curse primeval, and the voice
That wreak'd it seems to whisper by these tombs
Of village quiet, that around me lie
In green humility:—can Life, the dead
Among, be nursing, nor to me advance
The spirit of her thought! True, Nature wears
No rustic morning here: in golden play
Her sprightly grass-flowers wave; the random breeze

Hums in the noon, or with yon froward boughs
A murr'ring quarrel wakes; and yet how oft
In such a haunt, the insuppressive sigh
Is heard, while feelings that may pilot years
To glory, spring from out a minute's gloom!

Mind overcomes me here. Amid the hush
Of stately tombs, of dim, sepulchral pomp,
And monumental falsehood, piled o'er men
Whose only worth is in their epitaphs,
I fear thee not, thou meditating one!
Infinity may blacken round thy dream
Perchance, and words inaudible thy mind
With shadowy bodements fill;—but worldly gauds
Entice thee; whisper'd vanities of thought
Arise, and though Life lose her glare awhile,
Ambition tints the moral of the tomb.—
'Tis not so here: th' uncheated eye can dwell
On few distinctions, save of differing age;
The heart is free to ponder, and the soul
To be acquainted with herself alone.
And more development of man is found
In such calm scene, than in the warring rush
Of life."

And here, brief as our specimens are, we conclude; claiming for the young bard that public favour, of which, in some instances, notoriously jealous criticism has endeavoured to rob him. Be it remembered, that we, the objects of his early assault and his castigations, therefore, can entertain no sentiments upon this subject, but such as the fair, liberal, and honest exercise of our functions demand, not simply with respect to the author, but to the public and to literature. We hold it to be the bounden duty of the press to expose empiricism and put down immorality; but we are as certain that it ought to avoid the paltry and easy triumph of exhibiting smartness and rancour (though such means do attract notice) to the injury of real talents, and the depression of that cause common to all who write and publish, be it for fame or be it for profit. If we cannot be generous, we ought at least to be just.

Partings and Meetings: a Tale, founded on Facts. 12mo. pp. 255. London, 1830. J. B. Bell.

THIS is a very interesting tale, and written with that sweetness and grace which mark a feminine pen. Some traces there are of inexperience; for example, the treachery of Isabel is too unmitigated, and for the villany of Lawson there is scarcely sufficient cause: but, as a whole, these slight defects do not prevent the little volume before us from deserving much praise, while it gives earnest of more future promise. It is very difficult to quote from a story without destroying its interest; we shall, therefore, extract the following poem—a very original idea, well turned.

"There stood a young and blushing Hour
Beside the Morning's gate;
Sleep came to render up his power,
And all his deeds relate.

'A lover I soothed on his anxious pillow;
A sailor I rock'd on the foaming billow;
An infant wept on its mother's breast,
I breathed around, and it sunk to rest;
I've been to the prison, I've been to the cot,
And labour and sorrow awhile were forgot!"

'But where were you at dawn of day?'
Replied the blushing Hour,
'Oh! I was summon'd far away,
To a baron's lofty tower.

In peril and fear he had past the night,
His chamber he sought at dawn of light,
'And now,' said the baron, 'I'll call on sleep,
Round my aching temples his watch to keep!"

Your sister came, the youngest Hour,
To guide me on my way;
We softly enter'd that dark tower,
Where on his couch he lay.

Ask me no further: the bright rising sun
Would shrink from the course, ere his race began!
The birds would fall lifeless, while thunders peal'd
Through the dusky air, were the truth reveal'd;
But never shall you, or your sister, bright Hour,
Conduct me again to that desolate tower!"

A very lively introduction opens the book; and we cannot but think the fair writer would

succeed in a longer work, in which were mixed both pathos and gaiety. Of her animation, deprived as we are of the power of selection from the fiction itself (so interwoven every thread of it is with the whole weft), we shall venture a slight example from this preface.

"A young lawyer in our town, who wished to try his fortune in London, borrowed 500*l.* of my father: at his death, I thought I might as well see about it. Mr. Vellum was married, and lived in Montague Place. I soon found the house, and, though he was not at home, I was shewn into the drawing-room: it did my heart good to look at the blue silk curtains, and chandeliers, and all Mrs. Vellum's bracelets; for I felt that 500*l.* could be nothing. Mrs. Vellum seemed a very discreet woman, so I made no scruple of telling her the whole business; then she asked me to return at six o'clock to dinner, and go with her to a ball in Bedford Square: she would take no denial—luckily I had packed up my diamond shirt-pin: the waiter at the White Horse Cellar recommended a very fashionable hair-dresser; I chose out a nice-looking chariot from the stand in St. James's Street, and arrived at Mr. V.'s door just at the moment his hand was on the knocker. After dinner he was so kind as to offer to pay the 500*l.* immediately; but he felt it a duty to say, that if I chose to make it up a thousand, and leave it in his hands, there was an opportunity of increasing my fortune, which might never occur again. The 1000*l.* would purchase twenty shares in the 'United Brass Company'; they started with one million capital: this would enable them to supply the whole coast of Africa, and several islands in the Mediterranean with coal-skuttles and warming-pans. Now reckoning the sale at the rate of one skuttle to four souls, (a very moderate computation,) the profit would be immense. Mr. V. took the pains to explain it so clearly that I should have been a fool to hesitate; he arranged it all, and wrote the advertisement for the sale of my farm at East Grattanby; indeed he was so kind as to send his own servant to the office of the Times newspaper: then I went to the ball. I resolved to remark every circumstance, because I never might be in such fashionable society again! One thing I could not understand; the company went down two and two into a small back parlour: there was a long table with tea-things and glasses; there might have been other things. I was afraid to look; for seven maid servants, dressed all in white, stood behind the table, and whichever way I turned, I found one of them staring at me. And before the fire were wet dusters drying, and a pair of boots. When I asked Mrs. V. the reason, she only said it was tongueish; (alluding, no doubt, to the clatter of the tea-tongs.) One young gentleman (a Lancer they called him, which is the London name for an apothecary, I suppose, and certainly much genteeler,) led his partner close up to the table, and they began to converse: now, thought I, let me take advantage of this to learn the opinions of society. The Lancer said he was just up by the mail. 'Oh!' said the lady, and she lived in the square, 'how I wish to be once in a stage-coach, I do so long! but pa-wont hear of it, now we have our own barouche.' 'Quite—right!' replied the Lancer; and here I beg to inform all country practitioners, that *London Lancers* never speak more than two words, and those, divided,—thus. 'Oh, but I must,' the lady continued, 'for do you know, I am told the people sit with the straw up to their shoulders.' Now when I remembered this, a question naturally arose;

did not this lady speak the sentiments of her sex and rank? and may I not gratify hundreds and hundreds by opening the door, and shewing the interior of a stage-coach, while they sit genteel and proper in 'their own barouche?'"

Altogether, between plainness and observation, gentleness and acuteness, this is a most un-book-making and truly natural production.

Three Lectures on the Cost of obtaining Money, and on some Effects of Private and Government Paper Money, &c. By N. W. Senior, Professor of Political Economy in the University of Oxford. 8vo. pp. 103. London, 1830. J. Murray.

It will be remembered by those of our readers who take an interest in economical speculations, that we have from time to time endeavoured to draw their attention to the lectures of Mr. Senior, as they were (in compliance with the statute by which the professorship was founded) successively published. And though we have not always agreed with Mr. Senior's opinions, even upon important points, we are not disposed to attribute these differences to any partiality in his views, or haste and want of caution in arriving at his conclusions; nor do we feel inclined to abate one jot of censure in consideration of "the imperfect" manner in which the lectures, by the very statute of foundation, are required to be submitted to the press. Neither, for the same reason, can we allow that their merits are enhanced by the precipitancy exacted in their publication. These lectures are in fact well considered. The author must have sat in his chair already an easy and accomplished economist; and the lectures are composed of a considerable number of only important contributions to science, but, what is of peculiar value, they are peculiarly adapted for the use of beginners. We have made these general remarks on Mr. Senior's lectures, because, on reference to the statute, we apprehend that the present number (if we may so speak) will be the last; and that the volume of published lectures is now complete.

Our immediate business, however, is to offer a few observations on the three lectures recently published. The subjects discussed—always important—possess at the present moment a peculiar interest, and will continue to engross the public attention from time to time, so long as the general ignorance concerning them shall enable foolish or designing persons to put forward "the currency" as a bug-bear to frighten and to mislead. We cannot pretend to discuss the question, or even to examine the doctrines propounded in the first of these lectures, relating to the means of obtaining gold and silver,—to the comparative expediency of employing the precious metals or paper as money,—or to the effects which alternations from the use of one sort of money to that of the other have really produced, or are capable of producing, upon prices. We shall only remark, that Mr. Senior appears to us,—although he may not appear to himself,—to concur in substance with the opinions of Mr. Ricardo, and the modern school of political economists. It seems to us, that what he treats as "the effects produced on the value of money in any country by the skill and diligence with which the labour of that country is applied," amounts in other words to this: that the cheaper any given country can afford to sell its produce, either to the mining countries, or to others which can pay in gold or silver, the more gold

and silver it will import, whether for the purposes of currency or for private use. We think that these propositions, when duly examined, will prove to be identical; and we are at all events convinced, that all the consequences which Mr. Senior has drawn from the former are equally deducible from the latter. To some of these consequences we would call a moment's attention,—particularly on the part of those who have lately petitioned the legislature to resort to a prohibitory system of trade, as a remedy for low prices.

"It would be a painful task to trace the steps by which the increasing embarrassments of commerce, occasioned partly by our own adherence to the barbarous policy called protection, and partly by the retaliatory follies of other countries, by diminishing the market for English labour, are now gradually lowering its price, increasing the cost of obtaining the precious metals, and reducing the income of every producer, while the public burdens, nominally the same, are, for that very reason, really in a state of constant increase. It is a lamentable proof of the public ignorance on these subjects, that the general fall of prices, or, in other words, the increasing difficulty of obtaining the precious metals, of which every one is sensible, should, by almost every one, be attributed to some cause of almost ridiculous inadequacy. It has been attributed to our return to a metallic currency, as if the subtraction of twenty millions of sovereigns, or less than four hundred thousand pounds troy of gold, from the ten millions of pounds troy of gold bullion, coin, and plate, supposed to be in use throughout the world; that is to say, the removal of one-twenty-fifth part, could sensibly affect the value of gold. It has been attributed even to the substitution of gold and silver for the three or four millions of one pound notes lately called in; as if the value of the two thousand millions sterling of gold and silver bullion, coin, and plate, supposed to be in use throughout the world, could be materially affected by the subtraction of less than one-five-hundredth part of it. It has been attributed to over-production. We have been told that our agriculturists and manufacturers all produce too much; as if it were possible that every body could have too much of every thing; as if there were a single family that would not like to spend 1000*l.* a year. It has been attributed, which is nearly the same explanation, to the increased use of machinery; as if it were possible that general embarrassment could be the result of the improved efficiency of labour; as if all men would be impoverished if their force and their skill were doubled. It has been attributed even to free trade; as if any thing approaching to free trade had ever been conceded; as if free trade were not specifically the cure of the evil of which it is represented as the cause; as if the allowing every man to exert his industry in the mode which he finds, from experience, to be most productive, would diminish its value; as if we could increase the incomes of the inhabitants of Manchester, by forcing them to turn their bleaching grounds into corn fields; or those of the neighbouring farmers, by forcing them to weave their own shirts."

Can any thing, in fact, be more obvious than the proposition, whether applied to the precious metals or any other foreign commodity—that those who have most to give will get most in return?—that if (as some persons appear to wish) our foreign commerce were destroyed, we should not only be deprived of tea and sugar, but of gold and silver; and all this for the sake

of eating our own corn, and pleasing those who produce it?

The last two essays in this volume treat of certain effects of paper money: first, when issued by individuals; and secondly, by governments. These essays contain a brief but highly instructive account of the Bank Restriction Acts in England; the issue of inconvertible paper in France, during the regency (commonly called the Mississippi scheme); and finally, an account of the revolutionary currency, well known by the name of *assignats*. Our space will not allow us to allude to the latter two subjects; but we heartily recommend them to the best attention of our legislators and the public.

Traits and Stories of the Irish Peasantry. With Etchings by W. H. Brooke, Esq. 2 vols. 12mo. Dublin, 1830. W. Curry.

GENUINE and capital Irish Stories and Traits these are; equally entertaining as descriptive of manners, and diverting as humorous illustrations of the grotesque-romantic, if we may duplicate and coin a word of such a fashion. We opened the book, indeed, with some fear that the grain had been pretty nearly thrashed out of this crop by the amusing and characteristic labours of Mr. Crofton Croker, of Mrs. Hall, and by the clever novels of Crowe, Griffin, Banim, and other writers who have recently done so much for Irish literature: but our fears were groundless; and what between Brooke's felicitous designs and the author's naive and native talent, we have here a publication which may well be placed on the shelf beside its most popular contemporaries.

A preface brings the story-tellers together, like Boccaccio in his Decameron, but by the fireside of an Irish cabin public-house; where each in turn tells his tale, consisting of "The Three Tasks," "Shane Fadh's Wedding," "Larry M'Farland's Wake," "The Battle of the Factions," "The Funeral and Party Fight," "The Hedge School and the Abduction of Mat Kavanagh," and "The Station." All of these possess peculiar merit; and never were the festivals or feuds of Ireland painted with a more accurate pencil. Besides, though we have already admirable delineations of the Milesians of the southern and western provinces, we do not remember to have met before with any accounts which afford so lively a picture of the peculiarities which mark the northern Irish—the Ulster Creachts, as they are called, and who, the author observes, are as different from the others as the people of Yorkshire are from those of Somersetshire. We are, therefore, well pleased to accompany him to the poor mountain haunts of Tyrone, Donegal, and Derry; and we can promise our readers much amusement from following the same course for themselves, after we have given them such a taste as we can of the treat—*not* having the dread of the author's shillaly* before our eyes at all, at all.

The sketch of Ned M'Keown, which forms the introductory part, is excellent; nor is that of his wife Nancy inferior to it. The party assembled about them—priest, rustic, traveller—are also replete with individual character; and the scenery is worthy of the inhabitants.

* "In presenting (says he) the following 'Traits and Stories' to the public, the author can with confidence assure them, that what he offers is, both in manufacture and material, genuine Irish; yes, genuine Irish as to character—drawn by one born amid the scenes he describes—reared as one of the people whose characters and situations he sketches—and who can cut and dress a shillaly as well as any man in His Majesty's dominions; ay, and use it, too; so let the critics take care of themselves!"

The following, for example, is very new to us:—

“It may be right here to inform the reader, that about two hundred yards from Ned’s house stood a piece of Roman Catholic worship, called ‘The Forth,’ from the resemblance it bore to the forts or raths so common in Ireland. It was a small green, perfectly circular, and about twenty yards in diameter. Around it grew a row of old, overspreading hawthorns, whose branches formed a canopy that almost shaded it from sun and storm. Its area was encompassed by tiers of seats, one raised above another, and covered with the flowery grass. On these the congregation used to sit—the young men probably swearing-in a ribbonman, or ogling their sweethearts on the opposite side; the old ones in little groups discussing the politics of the day, as retailed by Mich M’Caffry, the politician; while, up near the altar, hemmed in by a ring of old men and women, you might perceive a *voicen* repeating some new prayer or choice piece of devotion—or some other, in a similar circle, gallouring with sanctimonious avidity ‘Doctor Gallaher’s Irish Sermons,’ ‘Pastorini’s History of the Christian Church,’ or ‘Columbkil’s Prophecy’—and perhaps a strolling pilgrim, the centre of a third collection, singing the *Dies iræ* in Latin, or the ‘Hermit of Killarney’ in English. At the extremity of this little circle, was a plain altar of wood, covered with a little thatched shed, under which the priest celebrated mass; but before the performance of this ceremony, a large crowd used to assemble opposite Ned’s shop-door, at the cross-roads. This consisted of such as wanted to buy tobacco, candles, soap, potash, and such other groceries as the peasantry require. After mass, the public-house was filled to the door-posts with those who wished to get a sample of Nancy’s *iska-belagh*, and many a time has little Father Neddy himself, of a frosty day, after having performed mass with a celerity that was the admiration of his auditory, come in to Nancy, nearly frost-bitten, to get a toothful of mountain-dew to drive the cold out of his stomach. The fact is, that Father Neddy Deleery made himself quite at home at Ned’s, without any reference to Nancy’s saving habits; the consequence was, that her welcome to him was extremely sincere—‘from the teeth out.’ Father Ned saw perfectly through her assumed heartiness of manner, but acted as if the contrary was the case; Nancy understood him also, and, with an intention of making up by complaisance for her nearness in other respects, was a perfect honeycomb. This state of cross purposes, however, could not last long—neither did it. Father Ned never paid, and Nancy never gave credit; so, at length, they came to an open rupture: she threatened to process him for what he owed her, and he, in return, threatened to remove the congregation from ‘The Forth’ to Ballymagowan-bridge, where he intended to set up his nephew, Bill Buckley, in the ‘public line,’ to the ruin of Nancy’s flourishing establishment. ‘Father Ned,’ said Nancy, ‘I’m a hard-workin’, honest woman, an’ I don’t see why my substance is to be wasted by yer reverence, when ye won’t pay for id.’ ‘And do you forget,’ Father Ned would reply, ‘that it’s me that brings you your custom? Don’t you know that if I bring my flock to Ballymagowan, ye’ll soon sing to another tune?—so lay that to yer heart.’ ‘Troth, I know that whatever I get I’m obliged to pay for id: an’ I think every man should do the same, Father Ned. You must get a hank iv yarn from me, an’ a bushel or

two iv oats from Ned, an’ yer riglar dues along wid all; bud, avourneen, id’s yerself that wudn’t raise yer hand over iz, if we war in the last gasp, for all that, widout gettin’ the silver.’ ‘Salvation to me, but ye’d akin a flint.’ ‘Well, if I wud, I pay my debts.’ ‘You do?’ ‘Yes, troth, do I.’ ‘Why, then, that’s more than you’ll be able to do long, plase the fates.’ ‘If all my customers war like yer reverence, it is.’ ‘I’ll tell ye what it is, Nancy, I often threatened to take the congregation from ‘The Forth,’ an’ I’ll do id—if I don’t, may I never sup sorrow.’ Big with such a threat, Father Neddy retired. The apprehensions of Nancy on this point, however, were more serious than she was willing to acknowledge. This dispute took place a few days before the night in question. Father Neddy was a little man, with a red face, slender legs, and flat feet; he was usually cased in a pair of ribbed minister’s gray small-clothes, with leggings of the same material. His coat, which was much too short, rather resembled a jerkin, and gave him altogether an appearance very much at variance with an idea of personal gravity or reverence. Over this dress he wore, in winter, a dark great coat, with high collar, that buttoned across his face, shewing only the point of his red nose; so that, when riding or walking, his hat rested more upon the collar of his coat than upon his head. The curate was a tall, raw-boned young man, with high jutting cheek-bones, low forehead, and close knees. To his shoulders, which were very high, hung a pair of long bony arms, whose motions seemed rather the effect of machinery than volition. His hair, which was a bad black, was cropped close, and trimmed across his eyebrows; the small-clothes he wore were of the same web which had produced Father Neddy’s, and his body-coat was a dark blue, with black buttons. Each wore a pair of gray woollen mittens. ‘There, Pether,’ said Father Ned, as he entered, ‘hook my bridle along with your own, as your hand’s in.—God save all here! Paddy Smith, ma bouchal, put these horses in the stable, till we dry ourselves a bit—Father Pether an’ I.’ ‘Musha, bud yer both welcome,’ said Nancy, wishing to wipe out the effects of the last tiff with Father Neddy, by the assistance of the stranger’s punch, ‘will ye bounce, ye spalpeens, an’ let them to the fire. Father Neddy, yer dhreepin’ wid the rain; an’ Father Pether, avourneen, yer vet to the skin, too.’ ‘Troth, an’ he is, Nancy, an’ a little bit farther, if you knew but all—four tumbler, Ned—deuce a *spudh* less. Mr. Morrow, how do you, do sir?—’

We are obliged to break off in the middle of this colloquy, which leads to the tale-telling, and is so connected with the whole substance of the work, that it is out of our power to separate it for extract; and, indeed, as we have almost weekly to acknowledge, we find nothing so difficult to review and illustrate fairly as narratives of fiction. We shall endeavour, however, to do our best with the “Three Tasks,” adding our own task, as a fourth, to the number.

Jack Magennis is the son of a decent widow, Nancy Magennis;—a well-behaved lad, and attached with strong filial affection to his mother. “Jack, indeed, grew up a fine slip; and, for hurling, foot-ball playing, and lepping, hadn’t his likes in the five quarters of the parish. Is’t he that knew how to handle a spade and a raping-hook, and what was betther nor all that, he was kind and tindher to his poor ould mother, and would let her want for nothing. Before he’d go to his day’s work in

the morning, he’d be sure to bring home from the clear spring-well that ran out of the other side of the rock, a pitcher of water to serve her for the day; nor would he forget to bring in a good creel of turf from the snug little peat-stack, that stood, thatched with rushes, before the door, and leave it in the corner beside the fire; so that she had nothing to do but put over her hand, without rising off of her sate, and put down a sod when she wanted it. Nancy, on her part, kept Jack very clane and comfortable; his linen, though coarse, was always a good colour; his working clothes tidily mended at all times; and when he’d have occasion to put on his good coat to work in, for the first time, Nancy would sew on the fore part of each sleeve a stout patch of ould cloth, to keep them from being worn by the spade; so that when she’d rip these off them every Saturday night, they would look as new and fresh, as if he hadn’t been working in them at all, at all. Then, when Jack came home in the winter nights, it would do your heart good to see Nancy sitting at her wheel, singing ‘*Stachlan Maragah*,’ or ‘*Peggy Na Larccen*,’ beside a purty clear fire, with a small pot of *murphys* boiling on it for their supper, or in a wooden dish, comfortably covered with a clane prakeen, on the well-swept hearthstone; whilst the quiet, dancing blaze might be seen blinking in the nice earthen plates and dishes that stood over against the side-wall of the house. Just before the fire, you might see Jack’s stool waiting for him to come home; and, on the opposite side, the brown cat washing her face with her paws, or sitting beside the dog that lay asleep, quite happy and contented, purring her song, and now and then looking over at Nancy, with her eyes half shut, as much as to say, ‘Catch a happier pair nor we are, Nancy, if ye can.’ Sitting quietly on the *rost* above the door, were Dicky the cock, and half-a-dozen of hens, that kept this honest pair in eggs and *egg-milk* for the best part of the year—besides enabling Nancy to sell two or three clutches of March-birds every sason, to help to buy wool for Jack’s big-coat, and her own gray-beard gown and striped red and blue petticoat. To make a long story short—no two could be more comfortable, considering every thing. But, indeed, Jack was always observed to have a dacent, ginteel turn with him; for he’d scorn to see a bad gown on his mother, or a broken Sunday-coat on himself: and instead of dhinking his little earning in a sheeben-house, and then eating his praties dry, he’d take care to have something to *kitchen* them; so that he was not only snug and dacent of a Sunday, regarding wearables, but so well fed and rosy, that the point of a rush would take a drop of blood out of his cheek. Then he was the comeliest and best-looking young man in the parish, could tell lots of droll stories, and sing scores of merry songs, that would make ye split your sides with downright laughing; and when a wake or a dance would happen to be in the neighbourhood, maybe there wouldn’t be many a sly lookout from the purty girls for pleasant Jack Magennis. In this way lived Jack and his mother, as happy and contented as two lords; except now and then, that Jack would feel a little consarn for not being able to lay past any thing for the sore foot, or that might enable him to think of marrying—for he was beginning to look about him for a wife; and why not, to be sure? But he was prudent for all that, and didn’t wish to bring a wife and small family into poverty and hardship. It was one fine, frosty, moonlight night—the sky was without a cloud, and the stars all blinking

that it would delight any body's heart to look at them, when Jack was crassing a bog that lay a few fields beyant his own cabin. He was just crooning the *Humours of Gylinn* into himself, and thinking that id was a very hard case that he couldn't save any thing at all, at all, to help him to the wife—when, on coming down a bank in the middle of the bog, he saw a dark-looking man, leaning against a clamp of turf, and a black dog sitting at his ase beside him, with a pipe of tobacky in his mouth, and he smoking as sober as a judge. Jack, however, had a stout heart, becase his conscience was clear, and, barring being a little daunted, he wasn't very much afeard. 'Who is this coming down toardst us?' said the black-favoured man, as he saw Jack approaching them. 'It's Jack Magennis,' says the dog, making answer, and taking the pipe out of his mouth with his right paw, and after puffing away the smoke, and rubbing the end of it against his left leg, exactly as a Christian (this day's Friday, the Lord stand betune us and harm), would do against his sleeve, giving it at the same time to his comrade—'it's Jack Magennis,' says the dog, 'honest Widow Magennis's dacent son.' 'The very man,' says the other back to him, 'that I'd wish to sarve, out of a thousand.—Arrah! Jack Magennis, how is every tether-length of you?' says the ould fellow, putting the *furraun* on him—'and how is every bone in your body, Jack, my darling? I'll hould a thousand guineas,' says he, pointing to a great big bag that lay beside him, 'and that's only the tenth part of what's in this bag, Jack, that you're just going to be in luck, this very night.' 'And may worse never happen you, Jack, ma' says the dog, putting in his tongue, and holding out his tail and *houding* out his paw to Jack. 'Gintlemen,' says Jack, 'to give the dog his paw, it wasn't safe to touch me, says he, 'ye're in luck, this frosty night.' 'Why, then,' says the ould fellow, 'but if we're sitting far from the fire, we're sitting very near the makings of it.' So, with this, he pulls the bag of goold over to him, that Jack might know, by the jingle of the shiners, what was in it. 'Jack,' says dark-face, 'there's some born with a silver ladle in their mouth, and others with a wooden spoon; and if you'll just sit down on the one end of this clamp with me, and take a hand at the *five and ten*,' pulling out as he spoke, a *peck* of cards, 'you may be a made man for the remainder of your life.' 'Sir,' says Jack, 'with submission, both yourself and this cur—I mane,' says he, not wishing to give the dog offence—'both yourself and this dacent gentleman with the tail and claws upon him, have the advantage of me, in respect of knowing my name; for, if I don't mistake,' says he, putting his hand to his hat, 'I never had the pleasure of seeing either of ye before.' 'Never mind that,' says the dog, taking back the pipe from the other, and clapping it in his mouth; 'we're both your well-wishers, any how, and it's now your own fault if your not a rich man.' Jack, by this time, was beginning to think that they might be after wishing to throw look in his way; for he had often heard of men being made up entirely by the fairies, till there was no end to their wealth. 'Jack,' says the black man, 'you had better be sed by us for this bout—upon the honour of a gentleman, we wish you well; howsoever, if you don't choose to take the ball at the right hop, another may, and you're welcome to toil all your life, and die a beggar after.' 'Upon my

reputation, what he says is true, Jack,' says the dog, in his turn, 'the lucky minnit of your life is come; let it pass without doing what them that wishes your mother's son well desire you, and you'll die in a ditch.' 'And what am I to do,' says Jack, 'that's to make me so rich all of a sudden?' 'Why, only to sit down and take a game of cards with myself,' says black-brow; 'that's all, and I'm sure it's not much.' 'And what is it to be for?' Jack inquires, 'for I have no money—tare-nation to the rap itself's in my company.' 'Well, you have yourself,' says the dog, putting up his fore claw along his nose, and winking at Jack, 'you have yourself, man—don't be faint-hearted:—he'll bet the contents of this bag; and with that the ould thief gave it another great big shake, to make the ginneys jingle again—it's ten thousand ginneys in hard goold; if he wins, you're to sarve him for a year and a day; and if he loses, you're to have the bag.' 'And the money that's in it?' says Jack, wishing, you see, to make a sure bargain, any how. 'Every penny,' answered the ould chap, 'if you win it; and there's fifty to one in your favour.' By this time the dog had got into a great fit of laughing at Jack's sharpness about the money. 'The money that's in it, Jack,' says he; and he took the pipe out of his mouth, and laughed till he brought on a hard fit of coughing: 'O, by this and by that,' says he, 'but that bates Bannagher! and you're to get it ev'ry penny, you thief of the world, if you win it; but for all that, he seemed to be laughing at something that Jack wasn't up to. At any rate, surely, they palavered Jack betune them, until he sot down and consinted. 'Well,' says he, scratching his head, 'why, worse nor lose I can't, so here goes for one trial at the shiners, any how!' 'Now,' says the obscure jintleman, just whin the first card was in his hand, ready to be laid down, 'you're to sarve me for a year and a day, if I win; and if I lose, you shall have all the money in the bag.' 'Exactly,' says Jack; and just as he said the word, he saw the dog putting the pipe in his pocket, and turning his head away for fraid Jack would see him breaking his sides laughing. At last, when he got his face sobered, he looks at Jack, and says, 'Surely, Jack, if you win, you must get all the money in the bag; and upon my reputation you may build castles in the air with it, you'll be so rich.' This pluck'd up Jack's courage a little, and to work they went; but how could it end otherwise, than Jack to loose betune two such knowing schemers as they soon turned out to be?"

His future adventures are so laughable and marvellous, that we must bestow a second paper upon them next week.

Herodotus, translated from the Greek, for the use of general Readers; with short explanatory Notes and Maps. By Isaac Taylor. 8vo. pp. 766. London, 1820. Holdsworth and Ball.

We are happy in giving a cordial welcome to this very seasonable publication: the father of history has never yet made his appearance among us in an unexceptionable form till now. Littlebury is coarse, and not trustworthy; Beloe loose and uncertain; while both are objectionable on the score of delicacy. Though Herodotus is not fairly chargeable with pruriency, he has occasionally permitted himself to communicate specific details which, in their naked form, render it impossible to recommend an indiscriminate perusal; and we must confess that we had, hitherto, taken for granted the impracticability of so discarding or dis-

guising them, as to make him fit for the parlour table. Mr. Taylor has, however, undertaken to accomplish this; and, we can venture to affirm, from a rather extensive comparison, with decided success. We have felt some surprise at the ease with which he has contrived to communicate the fair amount of the information, while extirpating every remnant of grossness; and there is now nothing to prevent us from putting into the hands of youth, one of the most entertaining, as well as most important, among historical compositions.

Our readers would hardly thank us, at this time of day, for a regular analysis of the nine books of Herodotus; nor could we, were such an abstract desirable, give up so much space as it would demand; since, although their proper subject is a mere episode of Grecian history—the illustrative and ornamental matter ranges over a large surface. In connexion, immediate or remote, with the feuds and hostilities of Persia and Greece, the ancient historian brings in the annals of Lydia, Assyria, Media, Persia, and Egypt, mixed up with traditions and legends, always amusing, and frequently valuable. It is quite obvious, that to give all these their full effect, extensive commentary and annotation are required; and we cannot imagine a finer textbook for the scholar. In the present instance, such an apparatus would have been superfluous, since a different object was contemplated.

No one will question the advantages to be derived from studying history in its sources, rather than in secondary authorities; and it is highly expedient that every facility should be afforded, even to the general reader, for the attainment of primary information. There are in this country thousands of intelligent individuals to whom the languages of antiquity are unknown; but who are both capable and desirous of searching out for themselves the original materials of history. To all such persons, the volume before us will be found a valuable acquisition. The translation is clear, fluent, and expressive; while the preface and notes, though brief, are comprehensive and satisfactory.

If Herodotus should ever become—and why should it not?—a school-book, even in a course of English education, no translation that we have seen can be better suited to such a purpose. A single volume, excellent typography, neat and available maps, are circumstances which every way favour the pretensions of Mr. Taylor's work.

Encyclopædia Britannica; or, a Dictionary of Arts, Sciences, and Miscellaneous Literature. Vol. I. Part I. Seventh Edition, with the Supplement to the former Edition incorporated. Illustrated by an entirely new set of Engravings on Steel; and edited by Professor Napier. 4to. Dissertation, pp. 64—Encyclopædia, 72. Edinburgh, Adam Black: London, Simpkin and Marshall; Whittaker and Co.; Hamilton and Adams; Jennings and Chaplin: Dublin, J. Cumming.

THE very respectable character attained by the *Encyclopædia Britannica* on its first appearance, has been continually heightened by the improvements made upon subsequent editions; and now that the seventh edition is commenced on a popular plan, and so many able parties have followed the example set, we need only refer to these facts, and to the extent of publication, in proof of the great value of the work, and of the estimation in which it is deservedly held. The Supplement, published a few years ago, and which attracted much notice, from the talents displayed in it, is here incor-

pared with the original text; and still more modern improvements and discoveries are also promised to be carefully added,—so that the Dictionary will be complete to the present time, *i. e.* to the current ten years,—for the letter *A* will be ten years old before the letters *Y Z* are produced. The parts are to follow in monthly succession, so as to form two volumes, each of about 800 pages, in a year; and the whole, it is calculated, will reach to 20 or 21 vols. The prefatory dissertation is to appear by portions in the first twelve parts, so as to be the first of the two volumes in the first year; the second beginning the alphabetical order. Upon the specimen on our table we shall simply remark, that we like the arrangement and general appearance of the typography; and that the plates (acoustics, aërostatic, and agriculture, four in all,) are well engraved; but the two maps of Africa do not please us so well, wanting clearness in execution, and the correctness they might have possessed in nomenclature. Besides the lights thrown on geography by the latest travels, no one now prints the Straits of Bab el Mandeb by the old erroneous title of Babelmandel. We would also recommend to the spirited and intelligent publisher of this work to consider it, as it is, a great national undertaking, and to strive to render it amply worthy of national favour by employing competent persons to polish the style. We do not require, in so mixed a production, that every subject should be treated in refined language; but all ought to be plain and lucid, and, especially, correct. By referring to the article Abyssinia, it will be seen that there is on the contrary some very slovenly writing, such as a well-educated corrector of the press (a class of infinite value to authors) would not have suffered to pass. *Wishing* Mr. Black the popularity he so justly deserves, we do not mention these points in any unfriendly tone, but as hints for his consideration. It is easy to mend at Part I., and it would be fatal to great success at Part XXX. or XL. to have public opinion fixed that the *Encyclopædia Britannica* was an inferior performance; and Professor Napier is bound to be very attentive to this subject, both for the sake of the large capital embarked, and for his own literary reputation.

The Perth Miscellany. Nos. I. and II. Morrison, Perth.

WE always rejoice to hail new contemporaries in the common field of literature; and the present, from the specimens before us, appears to be well worth a hearty welcome. It is very difficult for any provincial journal, even though produced in the most populous place, and conducted with great talent, to keep alive that spirit of novelty, and furnish that general intelligence, which is demanded by the pampered appetite of the public, with such success as to reward the toil and expense of publication. Merely local encouragement makes a long starvation, but does not support even the best efforts of this kind; and we see them successively “rise like the rocket, and fall like the stick.” And this is a vexation to us, the parent, as it were, of the whole progeny. We could wish to see our children, legitimate and illegitimate, prosper; for there is not one of the breed that would not do some good; and when we read the contents of such able claustrums as we have in Edinburgh, Dublin, Oxford, Liverpool, Manchester, &c. &c., we feel a degree of pride in having led to a system, which, by the diffusing of useful knowledge, unencumbered by pedantry, and treading in the ways of

pleasantness, may produce much good, and can do no evil. *The Perth Miscellany*, (and Perth ought to be named with praise, as a town of marked intellectual cultivation, and literary and scientific activity), is more original than almost any periodical we have seen out of London; and from the abilities displayed in it, deserves to be not only a favourite (where, they say, no man is ever esteemed a prophet) in its own country, but in a wider circle.

A Letter to the Bishop of Norwich from the Bishop of Salisbury. Rivingtons; Hatchard and Son.

THE firm friend of the Church of England, and the uncompromising defender of the Protestant faith, the excellent Bishop of Salisbury has here addressed a letter to his brother of Norwich, in which he repels the charge of bigotry and prejudice applied by his lordship to those who opposed the Roman Catholic claims. It is an able pamphlet, and, what is better, written in a spirit of Christian moderation and charity, the great object being to re-assert the religious principles of the Reformation, and the consequent opposition to the admission of “Papists” into Parliament. As we abstain from all polemical discussions, we shall only repeat that the learned and pious author’s arguments are put with admirable simplicity and logical as well as historical strength: his motto speaks the rest.

ΑΘΑΝΑΤΟΣ ΜΗ ΠΙΠΤΑ ΘΕΟΥ, ΝΟΜΟΣ ΔΙΑΚΥΡΙΑΣ, ΤΡΟΣ, ΚΑΙ ΣΕΒΟΤ ΟΡΚΟΝ.

RELIGION HONOUR, AS BY LAW ESTABLISHED, YOUR FIRST GREAT CARE; AND VENERATE AN OATH.

Good Thoughts in Bad Times, &c. By Thomas Fuller, D.D. 12mo. pp. 365. London, 1830. Pickering.

A VALUABLE reprint of a too much neglected work, by the author of our *Church History* and *Worthies*. These pages (exactly the number of the days of the year) abound in fine and original thoughts, applicable to all periods, though written during the stormy times of the struggles between the Cavaliers and Roundheads. To the serious part of the community, the volume may be recommended for its matter—to the merely literary, for the beauty of its similes and other merits of manner.

The Poetical Works of the Rev. George Croly. A.M. H.R.S.L. 2 vols. 12mo. Colburn and Bentley.

WE have, perhaps, the only good excuse which any literary or critical periodical could offer for confining our remarks upon these volumes within a narrow compass, having paid our tribute of just applause to nearly the whole collection, (now made for the first time,) as the principal poems appeared in separate publications.* Yet we rejoice to see the fruits of Mr. Croly’s poetical genius thus brought together and presented to the public in one point of view, as it must not only tend to exalt his fame, but afford much gratification to the lovers of fine composition. We have, indeed, felt more than surprise that such works as *Paris in 1815*—*The Angel of the World*—*Gems from the Antique* (in conjunction with Mr. Dagley’s designs)—the drama of *Catiline*—and *Sebastian*—did not obtain a wider popularity than the most successful of them reached on their first appearance; but we are sure that the union of these not less various than beautiful productions will now obtain for them the need they so amply deserve. Full of lofty

* Some of the minor poems, too, were first published in the *Literary Gazette*.

imaginings and poetic thought; occasionally playful and often strikingly pathetic, though the general tone of Mr. Croly’s muse rather belongs to grandeur than to passionate feeling,—we will venture to say, that there is hardly a theme which he has not awoken with a masterly hand, and hardly a sympathy which he has not beautifully touched in the great and multifarious range of subject embraced in these volumes. Thus enriched, we most cordially recommend them to that universal attention which they will repay tenfold by the pleasure they are so well calculated to yield.

Carwell; or, Crime and Sorrow. London, 1830. Colburn and Bentley.

NEVER did volume more truly keep the promise of its title—a record of crime indeed do these pages unfold; but the melancholy interest that is excited is well sustained, and relieved by a most exquisite tone of feminine tenderness. Few readers would, we think, begin *Carwell*, and not have their attention kept alive to the last. Charlotte, the heroine, is a most touchingly drawn character; and the pages do credit to the talents of their fair authoress.

A Vade-Mecum of Morbid Anatomy, Medical and Surgical; with Pathological Observations and Symptoms. Illustrated by upwards of two Hundred and Fifty Drawings. Royal 8vo. London, 1830. Burgess and Hill.

THIS is an anonymous production; but it is, nevertheless, one of more than common pretensions and execution. The drawings are lithographic, and well done: the morbid changes and their attendant symptoms are succinctly, but accurately, described; and the work is altogether a very cheap and useful manual of morbid anatomy.

Hospital Facts and Observations, illustrative of the Efficacy of the New Remedies, Strychnia, Brucia, Acetate of Morphia, Veratria, Iodine, &c., in several Morbid Conditions of the System, &c. A Report on the Efficacy of Sulphureous Fumigations in Diseases of the Skin, Chronic Rheumatism, &c. By J. L. Bardsley, M.D., Physician to the Manchester Infirmary, &c. 8vo. pp. 235. London, 1830. Burgess and Hill.

THIS work contains a candid report of the virtues of the remedies enumerated in its title-page, and of the benefits which the author has obtained from a very extensive and discriminating use of them, in the public charities to which he is physician. We can add, with great truth, that it is a production of considerable merit, and deserving of a place in the libraries of medical men.

ORIGINAL CORRESPONDENCE.

Paris, April 3.

THE Italian theatre has closed for the season. On Tuesday evening Madame Malibran surpassed herself in the opera of *La Gazza Ladra*. The public have still another opportunity of proving their admiration of this accomplished singer, her benefit being fixed for this evening (Saturday), at the Académie Royale de Musique. This concluding representation will be composed of the opera of *Tancredi*, and a scene from Azoli’s *Pygmalion*, which has never been performed before a Parisian audience. On the whole, the Italian season has this year been splendid. The double gratification afforded to the public by the union of two such singers as

Mademoiselle Sontag and Madame Malibran in *Tancredi*—the powers displayed by the latter in *La Gassa Lutra*, in *Otello*, and in *Romeo*, have left a lasting impression on the recollections of the *dilettauti*. It will be no easy task again to unite a similar assemblage of talent on the boards of the same theatre. Mademoiselle Sontag is engaged for a number of years at the theatre at Berlin; Madame Malibran is about to visit England; Madame Pisaroni retires from the stage; and Mademoiselle Heinefetter quits us for Italy. Madame Mérie Lalande and Lablache are engaged, it is said, for October next. Meanwhile, definitive arrangements have been made for the representation of a series of German operas at this theatre. These performances, which are limited to twenty-four, will commence on the 13th of April, and close on the 5th of June. An opera will be performed every Tuesday, Thursday, and Saturday, during the above period. The orchestra will be chiefly composed of the musicians belonging to the Italian theatre, assisted by a certain number of German artists. Particular attention will be paid to the choruses, which form a prominent feature of the German opera. The public will, therefore, shortly have an opportunity of judging of the *chefs-d'œuvre* of the best German masters. Among the compositions selected for representation are Spohr's *Faust*, the *Oberon* of Weber, the *Bibiana* by Pixis, the *Vampire*, and a new opera of Marchner, which has obtained considerable success in Germany.

In point of *bizarrierie*, an author of the romantic school could scarcely have chosen a more appropriate subject for dramatic representation than the career of Mademoiselle of Sweden, who has been the subject of her author's imagination, and liberty, and unbridled imagination. The drama, which has been represented on the theatre of the *dramma per musica*, the *tragedie*, the *tragedie* are translated into the secret of the *tragedie* with Donaldelchi, and the Italian's tragical end. In short, M. Dumas seems to have undertaken the task of exhibiting, through a sort of magic lantern, all the events of Christina's life. At Paris we see her in the midst of wits and favourites, and keeping up a secret intelligence with Sweden, in the hope of recovering the crown which she formerly abandoned for the sake of freedom. At Rome she finishes her career surrounded by cardinals, monks, grand seigneurs, and gallants. The fourth and fifth acts of this drama were loudly applauded; but a species of epilogue, with which it concludes, was ungraciously received by the sovereign public, who seemed, on the whole, rather fatigued with a composition prolonged to the romantic duration of six hours.

Private accounts from Italy, as well as various paragraphs inserted in the Italian journals, state that the lovers of *harmony* at Venice have formed themselves into two opposite parties; the one violently in favour of Madselle. Grisi, and the other as outrageous in support of Madame Caradori Allan. It appears that the representations at the Opera seldom terminate without a few broken heads given and received. The *habitués* of the pit are the partisans of Madselle. Grisi, while the more aristocratic lessees of the boxes vouchsafe Madame Caradori their gracious protection. A prodigious uproar took place on the first representation of *Maria di Brabante*. Madselle. Grisi not appearing in this opera, the pitites declared open war against the composer, and, it is said, even bribed the leader of the orchestra to introduce confusion

among his musicians, in order to spoil the effect. The trick, however, was discovered, and as a recompense for the signor leader's ingenuity, the commissary-general of police invited him to take up his abode for a few days in prison.

Pacini has composed a new opera (*Giovanna d'Arco*) for the theatre of La Scala; but the representation has hitherto been postponed, in consequence of the illness of some of the principal performers.

The inhabitants of Verona have requested Madame Pasta's acceptance of a medal representing the bust of the *prima donna* crowned by Melpomene and Euterpe.

At Dresden, a new opera of Wolfram is much talked of: the title is said to be the *Bergmanch*, or Monk of the Mountain.

Mademoiselle Sontag arrived at Berlin on the 9th of March, and was expected to make her first public appearance in the course of the week, either in the opera of *Otello*, or of *Don Juan*. On her way through Göttingen she gave a concert, which was attended by upwards of 1200 auditors. At the conclusion of the entertainment the university students unharnessed the horses from her carriage, which they drew in triumph to her hotel.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

ON the different methods of constructing tables of lives from which the values of annuities and reversions might be computed. The lecturer began by explaining the method of forming such tables from parochial registers: from which it appeared, that the lives embraced by tables so formed are not selected, but are taken promiscuously at their births; and that the number living at every age, according to these tables, must consist of both sick and healthy persons. The lecturer argued, that such tables were therefore unfit to be used in computing the values of annuities on healthy lives. Hence it becomes an important object to construct other and more correct tables for this purpose; and as the lives of the annuitants themselves appeared to afford the most certain data for estimating the average duration of such lives, on the supposition that the average state of health of this class of persons, at the time of their becoming annuitants, would not differ much in different individuals, it was stated that several tables of such lives had been constructed within the last few years.

It was then shewn, that an increase had taken place in the population of the country, between 1801 and 1821, amounting to more than 1-3d of the number of inhabitants contained in the census of 1801; and that it was probable the number at this time would be to that in 1801 as 3 to 2, or $\frac{1}{2}$ more; an increase which might alone (observed the lecturer) be expected to produce much of the distress now complained of. The increase in the population of London had not, it appeared, kept pace with that of the kingdom at large. In 1700 it was about 1-8th of the whole population; in 1801 it was 1-10th; in 1811 and 1821 it was 1-12th; the number of persons coming annually from the country and settling in London had been estimated at 1-4th of the yearly deaths in the metropolis. The proportion of deaths in the kingdom at large was stated to have considerably diminished within the last century. In 1780 the proportion was supposed to be about 1 in 40; in 1801, it was 1 in 47; in 1811, it was 1 in 52; and in 1821, it was 1 in 58. The extreme duration of life does not, however,

appear to have increased. The proportion of deaths in Pembrokeshire had been estimated as low as 1 in 83; and in another county, the name of which we could not catch, it had been found as high as 1 in 22 $\frac{1}{2}$; in Russia, it was stated as 1 in 41, but attended with many remarkable instances of great longevity, there having died in 1828, 895 persons between the ages of 100 and 120, and 53 between 120 and 160. The relative mortality in summer and winter was stated to be about as 57 to 72; and the difference in the number of deaths in large towns and the country nearly as 2 to 1. The well-ascertained difference in the duration of life among males and females was also pointed out, that of the females being the greatest at all ages; and it was shewn that as a compensation for the greater mortality of males, the number born to the number of females was very nearly as 20 to 19.

COLLEGE OF PHYSICIANS.

SIR HENRY HALFORD, Bart., in the chair.—The meeting of this evening was well and numerously attended. Dr. Francis Hawkins read a letter from Sir Robert Ker Porter, addressed to the President of the College, on the subject of a medicinal plant growing wild in South America, and called the *guaco*; respecting the virtues attributed to which plant, Sir Robert had been at great pains to collect some facts and interesting information. It appears that there are native Indians and negroes in some parts of South America, who possess a wonderful power of handling the most venomous serpents with impunity. It has been ascertained that they owe their protection to the internal use and external application of the leaves and expressed juice of the *guaco*. The same means are also found effectual for the cure of the bites of serpents and other poisonous reptiles. It is further stated, that the use of this plant is the best preservative from, and the only cure for, that most dreadful of diseases, *hydrophobia*. The plant has received its name from the manner in which its properties were discovered. A bird of the kite kind, a great destroyer of serpents, had been observed to attack them always with impunity, after feeding on this plant;—the bird is called the serpent-falcon, or *guaco*, from the monotonous cry which it utters; and the plant has been named after the bird. It is a creeper plant, corymbiferous, growing in the hotter regions of the New World, along the sides of rivulets, and in well-shaded spots. Many other virtues are attributed to it; as, that it is a cure for rheumatism and consumption, and various other disorders. After making due allowance for some degree of exaggeration, and for the influence of superstition, it appears certain that it possesses some virtues as an antidote to animal poisons. On the table there were placed a bottle of the juice of the *guaco*, expressed in South America, as well as a dried flower, and a leaf from a plant raised in this country in a hot-house, where it grows readily.

HORTICULTURAL SOCIETY.

AN election of five new members of council, in lieu of Mr. Sabine and others, was proposed. Mr. Stapleton objected to the election, and moved a postponement, as well as a repeal of the by-laws, which he characterised as "infamous;" these resolutions were put and negatived;—the election then commenced. At its close, Lord Caernarvon and others were declared duly elected. Mr. Anderson, an old

botanist, one of the earliest members of the Society, and among the first associates of the Linnæan Society, complained loudly;—his pocket, he said, had been picked of 67L by the Society for its *Transactions*, which, excepting the engravings, (pictures, we think, he called them), were not worth taking off the street, so trashy were they. Some members objected to the ballot; and we were informed, after we left the room, that the chairman acknowledged it was illegal, inasmuch as it had not taken place within the hours prescribed by the by-laws.

LITERARY AND LEARNED.
ROYAL SOCIETY OF LITERATURE.

AT a special meeting of the Council on Saturday last, to determine upon the appropriation of the two gold medals placed annually by his Majesty at their disposal, to be awarded to authors distinguished by works honourable to themselves and to literature, the medals of the present year were voted to Washington Irving and Henry Hallam, Esqrs. The historical productions of the last-mentioned gentleman have entitled him to this honour; and we cannot notice the high claims of the first, without also expressing a sense of additional pleasure upon the occasion, from his being the son of another country, which, though British by descent, has not before been gratified by such a mark of parental attention. We think this decision, however, justly due to Mr. Irving's talents, will be equally agreeable to the United States and to England, as an example of that right and kind feeling which ought never to be interrupted between two such nations. Nor can the compliment to Mr. Irving be considered with less than a general interest, when we observe that the body which conferred it consists of high and dignified churchmen, noblemen of great rank and estimation, and gentlemen eminent alike for station in society and for literary attainments. We hail it as an auspicious omen of future good in the intercourse between the countries—not limited to science or letters, but extended to every possible relation of commerce and politics. The medals will, of course, be presented at the general anniversary on the 29th.

ASIATIC SOCIETY.

SIR G. STAUNTON, Bart., in the chair.—A variety of donations in natural history, literature, and art, were laid out the table; amongst which were a collection of fragments of human bones, military weapons, vases, &c., taken out of a tumulus near Hydrabad, with a plan and section of the tumulus, presented by Col. Hopkinson. This cemetery formed one of a number noticed by Colonel H. near Hydrabad, having the appearance of a long low hill, composed of many circles, each about eighteen feet in diameter; at the bottom of one of which were found the remains now presented: they appear to have been a sword, a spear, two large vases, and several smaller relics, besides the bones: the metal fabrications, it is stated, seemed to be quite perfect when uncovered, but crumbled to pieces on being touched. The bones have evidently been burnt; and it is therefore imagined that the tumulus must have been the burial-place of a Hindu. The sword and spear are very similar to those still in use in India; but the other articles are of a shape now unknown. The Pasha of Egypt was elected an honorary member of the Society. Among the papers read were a few original

letters of the late Sir William Jones; in one of the earliest of which is a remark upon the advantage of writing Sanscrit words in Roman characters, instead of according to the sound: the word *pacsha* he instances as being pronounced in different provinces *pokyo*, *puch'h*, and *puck*.

ETRUSCAN VASES.*

IN the account of the important discovery of Etruscan vases published in our last *Literary Gazette*, the writer observes, "There seems a pretty general idea that the opinion long since entertained by many learned men, that their beloved Italy cultivated the fine arts in great perfection, at a time when Greece was semi-barbarous, is now fully confirmed."

This impression (upon which it was not in our power to offer any observations at the moment), so far as regards the early civilisation of Italy, appears amply borne out by the subjects of the paintings on the vases, their Greek inscriptions, and by the Vitulonian inscription; all which tend to refer them to an age between the taking of Troy and the foundation of Rome. Not so, however, as regards the claim of Italy to a priority in the fine arts over Greece. For the inscriptions being chiefly in the Greek character and language, and the paintings commonly taken from Grecian subjects, as the Theban and Trojan wars, &c., conclusions diametrically opposed to such a claim appear inevitable; viz. that Greece was the source of the arts as well as of the language of Italy in the ages in question. The art of pottery may indeed have been carried on more extensively, and consequently in greater perfection, in Italy than elsewhere; but it seems quite gratuitous to seek any other derivation for those of painting and sculpture than the parent country indicated by the language of the inscriptions—the country through whose medium the arts of Egypt were refined and communicated to the rest of the civilised world.

Were history altogether silent on the subject of the colonisation of Italy, it is evident that we need go no further than these vases for the origin of the inhabitants (at least of the western coast), their language, arts, and customs, which, after this singular discovery, would be no longer a secret. But as on this subject history speaks plainly, it may be well briefly to notice the outline of the peopling of Italy preserved by Dionysius of Halicarnassus. We learn from this writer, that the Siculi, the indigenous inhabitants of the land, were expelled and succeeded by a colony of Arcadians from Peloponnesus under Cenotrus, seventeen generations before the Trojan war; that these were afterwards joined by the Pelasgi, from Thessaly, under their leader Tyrrhenus. Next came Evander, with a second colony of "Arcadians, who brought with them the Greek literature, laws, and musical instruments,"† and settled in the neighbourhood where Rome was afterwards built. The next were the Heraclidæ from Peloponnesus, who fixed themselves in Latium; and, lastly, the Æneadæ, from Troas. About the same time arrived other Greek colonies, under Nestor and Diomedes, as Strabo informs us (lib. 6). The same writer acquaints us, that the Cumani, settled in Campania, left many vestiges of Grecian institutions at their colony of Naples (Neapolis)

* It is very apropos to this subject, that an Exhibition of fine Etruscan Vases, and other antiquities, is about to be opened in London. (See Advertisement.)

† Vide Dion. Hal. cited in Euseb. Chron. Armen. ed. Venet. lib. 1.

(lib. 5). There were several other Greek settlements on the western and southern coasts. Seneca extends Magna Græcia along the whole coast of the Tyrrhene sea: "Totum Italiæ latus, quod Infero mari alluitur, Major Græcia fuit."

Enough has, it is hoped, been said to prove that the important antiquities in question, far from establishing "the claim which Italy puts forth to priority in the fine arts, compared with Greece," do but confirm the account of the introduction of the Greeks, their literature and arts, supplied by Dionysius of Halicarnassus, and other ancient writers; and thus far, like the monuments of Egypt, contribute to the verification of ancient history. It seems probable, that when the general contents of the inscriptions on the vases are made known, considerable light may be thrown on this subject; but so little remains of primitive Italian history, that any light thus derived must be very limited in its historical utility.

Thus much seems, however, already proved—that European civilisation was far more widely extended in the very early ages than has been generally admitted; that as the age of the Æneadæ appears to have been an age of civilisation and refinement in Italy, the vague histories of that period which have reached us through Diodorus Siculus and Dionysius of Halicarnassus, &c. are not to be despised; and that, granting the arts to have been in a high state of cultivation in Italy long before the foundation of Rome, it follows that the arts of Greece were of a much older date.

This is perfectly conformable to the accounts we have of the arrival of Egyptian colonies in Attica and Argos, under Cecrops and Danaus, about 1500 years before the Christian era; in the days of Moses, as Diodorus affirms (lib. 40, apud Phocium). Thus, as history accounts for the introduction of the arts into Italy by the means of Grecian colonies, it accounts for their prior introduction into Greece by means of Egyptian colonies. This is all perfectly consistent;—and consistency is one of the chief tests of historical truth.

It is remarkable, that, besides the Greek names of potters and painters given in the account of these vases, we find the oriental names Tlesonchonearcho and Echsiekias, both which appear to be Phœnician.* This seems to argue a commercial intercourse with other countries. Italy may have been the grand emporium for pottery to the traders of those ages, when the Phœnicians were the great carriers of the world.

This may perhaps account for the demotic inscription (if it be really such) found on one of the vases; the potters of Vitulonia might have had orders to execute for the traders of Egypt. Such communication may moreover account for the bronze sphynxes which have been discovered with the vases; and perhaps also for the celebrated pyramidal tomb of King Porsenna.

An ancient tradition is preserved by John Malala, Cedrenus, the author of the *Paschal Chronicle*, Suidas, &c., which, if well founded (and all such obscure histories are proved by the discoveries of the present resuscitating age to be entitled to some consideration), shews how the progress of the Italian arts might have become known in Egypt. It is, that Faunus, called also Hermes, or Mercurius, king of Latium, on the arrival of Hercules, father of Latinus (Lavinia's father), migrated

* These names are not unlike those of Sanchoniatho and Echnibal, the Phœnician historian and judge. The former flourished in the age to which these vases appear to belong, according to Porphyry.

to Egypt, where he taught philosophy and became a king, and was deified as the bestower of riches and the god of gold. He might have been the same whom Manetho denominates the second Hermes, and who first transcribed the sculptured annals of the Pharaohs into the sacred Hermaic books (the source of Manetho's chronicle). It is certain that the time of this Faunus, or Hermes, in the 12th century B.C., quadrates with Egyptian history—for in that century we find two princes of the name, according to the Theban chronicle of Eratosthenes, viz.

No. 35. Siphos-Hermes, B.C. 1200 to 1195.

C.

FINE ARTS.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS, SUFFOLK STREET.

(Third Notice.)

No. 294. *A Hindoo; a Sketch*. H. C. Slous.—We should not have considered it just to have called this performance a sketch, as, in the way of effect at least, we do not imagine that any thing more could have been accomplished. The sunbeam-light which crosses the lower part of the figure is admirable; and the strength and mellowness of the colour are equalled only by

No. 295. *Study of Fruit*. J. Holland; in which a similar power and richness of tone prevails.

No. 296. *October*. S. A. Hart.—If double-dealing be at all allowable, it is in the present instance, where the autumnal title is equally applicable to the toper and to his beverage. The drawing is bold and beautiful execution and the colouring is a fine production.

No. 297. *Open Door*. P. F. Poole.—The drawing is similar to the last-mentioned work, as showing the abuse of a good thing produces not enjoyment, but misery. The drawing of the window is remarkable for its drawing-like transparency. It may be in parts rather too slight and sketchy; but the finished portion conveys all that can be wished for of character and expression.

No. 291. *Dancing Dolls*. W. Gill.—The delights of childhood are the favourite subjects of Mr. Gill's cabinet pencil, with which he fascinates equally those who are and those who are not familiar with the principles of the fine arts.

No. 288. *Moor Game*. J. Oliver, A.R.A.—Pictures of this class, like those of fruit and still-life, are essential to the agreeable variety of every well-arranged collection. We have seldom seen one more skilfully painted; and we strongly recommend Mr. Oliver in future to "keep the game in view." We echo his title,—"More Game."

No. 286. *Portrait of a Horse*. R. B. Davis.—It is well for an artist when his reputation in his profession allows him occasionally to depart from what may be considered the common routine. In this point of view we regard Mr. Davis's animal portraits. The character of that noble creature the horse, in his free, unconstrained movements, is given by him in a manner that renders his pictures as interesting to the general amateur as to the critic of the stable.

No. 328. *The Giaour*. E. F. Green.—The principal figure in this highly-imaginative subject is very ably treated. The wild expression of the eye is well suited to the vision which the fancy has conjured up. The colouring, effect, and execution, are also entitled to great

praise. The spectre, however, strikes us as being too substantial, and too well dressed, for a ghost.

No. 315. *Travelling Tinker*. G. Vincent.—Under this title (the tinker being a very subordinate feature in the performance) will be found one of those picturesque and spiritedly-pencilled landscapes, for which Mr. Vincent is so justly celebrated. No. 833, *Landscape and Cattle*, by the same artist, is similar in character.

No. 354. *The Frosty Reception*. R. W. Buss.—A good lesson for those who are unacquainted with the world. To break in upon the solitude of a gourmand, at the moment when he fancies that he has secured to himself the exclusive enjoyment of some delicious dish, and is lifting the first savoury morsel to his mouth, is indeed a fearful experiment. Mr. Buss has well depicted the fixed and ferocious glare of the annoyed host, the obsequious deportment of the unwelcome guest, and the sly delight of the servant who witnesses the scene. Perhaps the first is a little overcharged.

No. 348. *Moonlight*. J. B. Crome.—Mr. Crome, in this pleasing work, as well as Mr. Hofland in No. 269, *Composition—Moonlight*, have "visited the glimpses of the moon," not for the purpose of "making night hideous," but in order to display its beauty and loveliness.

No. 347. *Lane Scene, near Tissington, Derbyshire*. T. Creswick.—Although in the spirited execution of this picturesque subject we recognise much of the pencil and feeling of Gainsborough, yet we also see in it, as in the other works of this able artist, an originality and a variety of style and composition which place him very high in the ranks of our landscape painters.

Leaving, for the present, the North, we shall take a peep into the South Room.

No. 419. *Pro and Con*. H. Pidding.—As in Wilkie's celebrated picture of a similar subject, a batch of village politicians have assembled, no doubt to set every thing right; but, if a judgment may be formed from the apparent ardour of the principal antagonists, the debate will end in setting every thing wrong. This well-filled interior exhibits great variety of character and expression. The apathy of some of the listeners, and the different degrees of excitement in others, are admirably discriminated. Several amusing episodes add to the interest of the main story; and the whole does Mr. Pidding infinite credit.—No. 453. *The Fair Penitent*, by the same artist, is an entertaining piece of graphic wit,—a painted pun. It represents a negro in the stocks!

No. 431. *Half-way House*. E. Child.—All that belongs to the truly picturesque, and all that can render rustic scenery pleasing, are associated in this clever composition. Such scenes as these, whether in nature or in art, are, or ought to be, productive of tranquillising thoughts and gratifying feelings.

NEW PUBLICATIONS.

Illustrations of the Waverley Novels.

FOUR landscape gems are now before us; viz., Doune Castle, (see *Waverley*), drawn by J. D. Harding, engraved by E. F. Finden; Penrith, by P. Dewint and E. Finden; Arran, (see *Heart of Mid Lothian*), by W. Daniell and W. Finden; and Windermere, by W. Westall and E. Finden. These are exquisite views of beautiful and varied scenes, executed in the sweetest and most skilful manner—a few inches of paper affording to the eye all the details of

earth and sky, of sea and land, of mountain and champaign, of wood and rock, and church and tower, and, in short, of every charm of British scenery and artist-like composition. They are such prints as have adorned the most finished of the Annuals; and we rejoice to see them addressed to the works of our great novelist.

The Hon. Mrs. Hope. Engraved by Scriven, from Lawrence.

THIS very sweet portrait is the sixty-fifth embellishment of *La Belle Assemblée*; which, really, with such a mass of female grace and beauty, has well sustained its rights to the name, by the assemblage. Mrs. Hope possesses greater simplicity, combined with elegance of costume, than is common to the pencil of the late admired President; and the composition is altogether very pleasing.

National Portrait Gallery of Illustrious and Eminent Personages of the Nineteenth Century. With Memoirs by William Jerdan, Esq., F.S.A. No. XII. Fisher, Son, and Co.

THE memoirs which form the twelfth number of the *National Portrait Gallery* are those of the Right Hon. Richard Brinsley Sheridan, the Right Rev. William Carey, D.D., and the Most Noble the Marquess of Ormonde, &c.;—the first distinguished for his genius and misfortunes, the second for his learning and virtue, the third for his illustrious descent. It is not surprising that the notice of Mr. Sheridan should be more copious than that of either of the eminent persons with whom he is here associated. Of course there cannot be any striking novelty in the incidents; but the narrative occasionally gives rise to reflections, the perusal of which may be beneficial to the hasty and harsh-judging, who forget how frequently

"—the light that led astray
Was light from heaven!"

This Number, completing the first volume, also comprehends a title-page, a dedication (by permission) to his Majesty, and an address to the public. In the last, the proprietors state the difficulties with which they had to contend in the commencement of their undertaking, the gratification which they feel at the present state of the work, and the confidence which the promises they have received of original portraits and materials, from many of the most eminent individuals in the kingdom, justify them in indulging with respect to the future.

NATIONAL CEMETERY.

WE this week present our friends with a representation of the inmost region of the proposed National Cemetery, which is now exciting so much interest. This View looks towards the Parthenon;—for the design embraces the erection of temples after the models of the noblest architectural remains which have been preserved to us from classic antiquity; and would thus afford to the architect and the sculptor an almost exhaustless field for the exercise of their genius.

Our readers are aware that Mr. Goodwin's drawings are objects of public exhibition; and we are informed that great admiration of these splendid designs is so prevalent, that a society of shareholders is already on the eve of being embodied for the purpose of carrying the plan into effect. Its novelty, beauty, and magnitude, certainly recommend it to general notice; and we shall have much pleasure in making it better known to the world.

BRITISH DIORAMA.

THE Royal Bazar, in Oxford Street, having risen from its ruins with increased splendour, the British Diorama has been re-opened in it with four pictures, viz. "A View in Venice," by Allen; "The Interior of Durham Cathedral," by Arrowsmith; "The Thames Tunnel," also by Arrowsmith; and "The Pass of Briançon," by Stanfield. The two last mentioned are in our opinion the most striking, and are finely contrasted in character and effect. The one represents a stupendous work of nature, the other a stupendous work of art; the one is invested with all the glowing hues of the most brilliant sunshine, the other makes the spectator fancy that he feels the damp and chilliness of a subterranean, or rather of a subaqueous position. They are both highly creditable to the able artists by whom they have been executed.

BIOGRAPHY.

M. CHENEVIX.

It is with much regret that we announce the death of Richard Chenevix, Esq. which took place at Paris on the 5th inst. after an illness of a few days. Mr. Chenevix was a fellow of the Royal Society, and a member of most of the scientific and literary institutions of Europe, to the promotion of which his time and fortune were devoted. In chemistry, his name ranks as one of the highest among those who have cultivated the analytical branches of that science; and a volume of plays, written in the style of the writers of the age of Elizabeth, full of poetical beauties, together with many contributions of great interest, on various topics, to the most eminent periodicals of the day, attest the versatility and extent of his talents and acquirements. In private life, Mr. Chenevix was universally beloved and esteemed, and his death will be long and deeply deplored by his numerous friends and admirers.

SKETCHES OF SOCIETY.

LADY BYRON'S REMARKS, &c.

THIS strange matter has, as we noticed in our last, assumed another and a darker shade, from the interference of Mr. Campbell, who, assuming to be the personal champion of Lady Byron, has stepped forward to throw the most odious imputations upon the character of Lord Byron which can possibly be left to the worst imaginations to conceive. Against this course we protest, in the name of all that is honourable in human nature. We were the undeviating censurers of the poet's injurious productions during his life-time; but we cannot do otherwise than condemn, in far stronger terms, any attempt, after he is laid in his grave, to blast him for ever by mysterious and voiceless whisperings. Of what monstrous crime was he guilty?—for unless he was guilty of some monstrous crime, a foul wrong is done to his memory. His accusers are bound, by every moral and sacred tie, to be definite in their charge; against such there is a possibility of defence; but there can be no shield against the horribly vague denunciation which has been so intemperately hurled at the unprotected and unanswering dead. And what called this forth? A very slight surmise by Mr. Moore against the parents of Lady Byron—to repel which she comes rashly out with a statement that damns the husband of her bosom; and, as if this were not enough, the zeal of Mr. Campbell advances to pour additional suspicion and ignominy upon his mouldering ashes. The fame of a Byron is public property; and, after what has passed, it

is imperative on his adversaries either to fix some eternal brand upon it, such as can justify their language,—or confess that they have used expressions which no conduct of his could authorise. And we are persuaded that they must do the latter; for it is incredible that any woman of the spirit and honour of Lady Byron could have lived an hour with a man whom she knew to be a detested criminal; and far less that she should have corresponded with him in playful and soothing letters. The plea of insanity itself cannot reconcile this with anything like the atrocious guilt now by circumstance imputed; and we do earnestly trust that an explanation will yet be vouchsafed, which shall set this painful discussion to rest in a manner more satisfactory to the world.

Having, in these few remarks, grappled with the main point at issue, we abstain saying a syllable on minor affairs: and we do not deem ourselves in a condition to blame any one of the parties we have been obliged to name.

ROYAL DESCENT: AN ANECDOTE.

WE extract the following from the third and fourth volumes (unpublished) of the "Chroniques de l'Œil de Bœuf."

"Dufresney, a descendant of Henry IV. by the left side, has just taken it into his head to marry; but only see to what excess a poet may carry his originality. A young and comely washerwoman, whose account with the wit might be compared to a theatrical piece without a *dénouement*, made her way one morning into the author's apartment, and in a positive tone demanded, once for all, as she termed it, the settlement of her account. "Your account!" exclaimed the poet, slipping on his coat, and taking up the bill for the night. "I am not a poet," said the girl, "but I am a washerwoman; and I have come to you to demand the settlement of my account. You have had my money for thirty pistoles, and I have given you my labour for nothing. You are going to begin just as I left off last night." "But in eight days I am to be married; and it's no use talking; you must in the meantime find wherewithal to pay your debt." "Ah! you are going to be married! then it seems you have money; for alas! if you count upon my thirty pistoles—" "I lean upon a rotten staff,—is that your meaning?" "Not exactly, child: I will assuredly pay you one of these days; some morning when you chance to find me in possession of the vein that I was forced to abandon last night. But, a moment: thirty pistoles are not your entire portion?" "Certainly not: by dint of washing, and scouring, and plaiting, and starching, I have amassed about a couple of hundred ducats." "The devil you have! Jeannette; you have indeed starched and plaited to some purpose. And who is the bridegroom?" "An honest Norman coachee, who has promised to manage our little household matters as carefully as he drives his master's carriage." "A coachman! Fie! fie! a girl like you might do better." "Whom then would you have me marry? a duke, I suppose?" "In truth, Jeannette, there are dukes who do not deserve you, and who are incapable of amassing in a century the two hundred ducats which your little hands have put together in so short a time. What say you to me, girl, for a husband,—his majesty's *valet-de-chambre*, and comptroller of the royal gardens?" "You, M. Dufresney! you marry a washerwoman?" "Why not? my

great-grandmother worked in a garden.' A slight whispering of ambition tingled in Jeannette's ear:—"I don't exactly refuse," said she, with a downcast look;—"you are his majesty's *valet-de-chambre*, and comptroller of the royal gardens?" "Even so, child." "And in case of accidents, mayhap you could become *valet-de-chambre* in some other great house,—or gardener?" "I don't promise that,—but—I am a poet." "Oh, for the matter of that, your trade is not worth much. I wash for twenty poets, not one of whom pays me—but—" "Well! have you made up your mind? Here I am—quite dressed; give me your arm,—we'll have the banns published immediately." "With all my heart," said the washerwoman, taking the poet lovingly by the arm; and in a fortnight the fair starcher, whom we must now call the grand-daughter of Henry IV., was obliged to scrub and plait harder than ever to gain another couple of hundred pistoles, her husband having spent the first in a fruitless search after his vein of luck. But in a week afterwards, Dufresney made his appearance with a thousand pistoles, which Louis XIV. had given him; his majesty good-naturedly observing, that his *relation*, Jeannette, must not be suffered to starve for the crime of having married a great monarch's illegitimate grandson."

MUSIC.

NEW PUBLICATIONS.

A Collection of Peninsular Melodies. With Words by Mrs. Hemans, Mrs. Norton, Dr. Bowring, &c. The Airs selected by G. L. H. Goulding, D'Almaine, and Co.

WHEN we first saw the announcement of this work, we entertained great expectation as to the result, knowing, as every one must do who has ever heard a Spanish national tune, that in originality of melody and strength of expression, no music can surpass the traditional airs of the Peninsula. The *guarachas* and *boleros*, with which we have been familiarised here, have begotten, in all lovers of sweet sounds, a longing for more tunes from the same source; not scholastic compositions from modern Spanish musicians; not mere elegancies, common to all countries where music is cultivated, and which have become wearisome common-places; but vigorous and peculiar strains, born in old times of strong feeling, and finding a vent, without what Ben Jonson calls "the adulteries of art;"—we mean, in one word, "national airs." Of these, one of the finest, as regards Spain, is to be found in Corelli's violin solos: it is there called, we believe, *La Follia*, and a volume of such tunes would be inestimable.

The work before us has done much towards satisfying the hitherto ungratified wishes of the lover of music; but it does not wholly fill the void. Many of the airs are not original, not *national* in the emphatic sense of the word. They consist too much of smooth prettinesses, without distinctive character. They abound in *apoggiaturas*, and other effeminate luxuries of art; and they seem to have been compiled with too cautious a view to the sensibilities of the boarding-school and drawing-room. Some songs there are, however, which are genuine things, new to this country, and in themselves worth the whole price of the volume. Of these, three have fixed themselves on our memory, namely, a trio called "Expostulation;" a *zorzico*, "The Biscayan to his Mistress," and an *epigramma*, entitled "Mary's Glance." The last is exquisite.

Altogether, we cordially recommend the work to the notice of the cultivator of melody, and

of the inquirer into the early and unpolluted sources of musical expression.

J. N. HUMMEL.—This celebrated composer was to leave Paris on Tuesday last on his way to England, where his arrival will make quite an epoch in the musical world. His concerts are, we hear, to be given at the King's Theatre music-room.

DRAMA.

WE have no theatrical criticisms in Passion week, though our Paris letter contains some curious dramatic reports from that capital. At home, the note of preparation is struck for the Easter spectacles, and Stanfield has been reviving all his travelled recollections of China for the scenery of Planché's Chinese piece at Drury Lane. Nor is Covent Garden behind in efforts: we anticipate that both will be gorgeous.

From the Edinburgh journals we gather, that after Mrs. H. Siddons' farewell, the *gude* folks of the Northern Athens had derived some consolation from the *début* of their countryman, and Crevelli's celebrated pupil, Mr. Wilson. He has appeared in *Massaniello* and *Harry Bertram*, with immense success; and his admirable tenor seems to have captivated all the connoisseurs of that musical capital.

VARIETIES.

Sheep in Hungary.—There are in Hungary 7,000,000 sheep, of which three millions belong to Prince Esterhazy.

Cincinnati.—The inhabitants of this city in the year 1802 did not exceed 800, and at this moment they amount to more than 25,000; the population during the last three years alone having increased eight thousand souls.

American.—Mr. Halleck, one of the most popular and sweetest bards of America, is about to give the world a new poem. The subject is supposed to be the "Minute Men," from which, it is hinted, his lines on Connecticut are extracted. A translation of the French novel, "*La Chronique du Charles IX.*," is also forthcoming from an able pen.

New York.—We learn from New York, that a plan is in agitation for establishing in that city a university, on the plan of the London College. May we notice, as another sign of the march of mind, that masquerades were begun there last year, and are to be continued this season! !

Astronomy.—Mr. South has mounted the extraordinary glass which he so *dashingly* secured at Paris (see *Literary Gazette*); and it now forms a striking feature in his superb Observatory at Kensington. The cloudy state of the weather has hitherto prevented us from enjoying the study of the heavenly bodies through this powerful tube; but we rejoice to find it employed in hands so well calculated to deduce important scientific results from its use.

French Dramatic Readings.—Monsieur Dupont finished his course of French readings last Wednesday at Willis's Rooms. Previously to entering upon the exquisite comedy of *Le Joueur*, he eloquently traced the principles of dramatic composition, and with great skill brought them to bear on the productions of his own country. Monsieur Dupont's exhibition has been, indeed, one of considerable interest; and such as must place him in the foremost rank of professional teachers.

New Invention.—The *Journal de Cadix*, of March 14, states, that a French watch-maker, named Auguste Morieau, residing in that city,

has just invented a machine, to which he has given the name of *calador*, (guardian,) as it affords complete security against robbers. The *calador* is very portable; and being placed behind a door or window, or against the wall, or on the floor, if any one should attempt to break into the apartment, it makes three successive reports, similar to those of a pistol.

Vaccination.—A statement has been published in Bohemia of the number of men who have died of the small-pox within the last twenty years, which affords a new proof of the advantages of vaccination. From 1809 to 1828 the number of deaths from this disorder has greatly diminished, notwithstanding a large increase of population. In 1809 the number of births was 134,651, and of deaths from the small-pox 13,291: in 1828 the number of births was 144,095, and that of the deaths was only 520. At the end of the last century, in 1799 and in 1800, 1,7000 children died of the small-pox. The number of births was then 125,750 upon the average; and that of the deaths was not less than 135 out of 1000:—it is now hardly four. These satisfactory results afford reasonable ground for the hope that the small-pox will in a few years be completely harmless in its effects.

Parisian Statistics.—There were sold, in 1829, 412,000 sacks of corn, 290,710 of flour, 1,050,000 hectolitres of oats, 3,875,000 of salt, 72,590 oxen, 14,500 cows, 66,580 calves, 340,730 sheep, 85,180 hogs. In the markets, exclusive of what was purchased at the residences of the consumers, were sold 7,940,000 francs' worth of game and poultry, 5,950,000 f. of butter, 4,180,000 f. of eggs, 4,470,000 f. of sea-fish, 815,000 f. of oysters, 580,000 f. of fresh-water fish. There have also been brought to market 901,700 hectolitres of wine, 50,630 of brandy, 7,120 of cider and perry, 97,800 of beer, 17,160 of vinegar, 5,300 of olive oil, 70,000 of common oil, 864,350 cords of firewood, 167,500 cords of white firewood, 4,160,000 faggots, 2,166,900 hectolitres of coal, 9,500,000 pottles of hay, 13,920,000 of straw, 40,185 cords of building wood, 5,459 of white wood, 2,350,000 lineary metres of sawn timber, 4,250,000 of white wood, 2,100,000 hectolitres of plaster, 72,000 hectolitres of lime, 138,600 measures of rough stone, 55,600 of marble and granite, 5,800,000 tiles, 7,450,000 bricks.

Canova.—The beautiful group of *Piety* by Canova, the only work in plaster left by that illustrious sculptor, has just been executed in marble by M. Cincinnato Baruzzi, one of his most distinguished pupils. The Italian journals speak very highly of this work.

Walking Skeleton.—There is at this moment at Douai a man thirty years of age, known by the appellation of the Walking Skeleton. He has the faculty, although sufficiently *embonpoint*, of contracting his muscles and reducing his flesh, leaving his bones protruding, so as to give himself the appearance of a skeleton. With this he combines other surprising feats. He swallows with impunity all sorts of poisons, arsenic, sulphuric acid, corrosive sublimate, and devours live coals. He can also free himself from chains and manacles of every description. The most expert of the gendarmerie have in vain applied thumb-screws, hand-cuffs, irons of all sorts, to secure him; he rids himself of them in an instant. A triple chain, by way of experiment, was fastened round his body and secured with screws; by one or two movements, of which he alone possesses the secret, they fell at his feet. The name of this juggler is Jean Pierre Decure, a native (as he says himself) of Africa.

LITERARY NOVELTIES.

[Literary Gazette's Weekly Advertisement, No. XV. April 10.]

LIST OF NEW BOOKS.

McKenzie's Notes on Haiti, 2 vols. post 8vo. 12. 1s. —Howison's Tales of the Colonies, 2 vols. post 8vo. 12. 1s. —Coventry's Coke upon Lyttelton, royal 8vo. 12. 1s. —Sturgeon's Bankrupt Act, 12mo. 6s. —Riland on Church Reform, 12mo. 6s. —Letters of a Recluse, 12mo. 3s. —Caldington on the Eye and Optical Instruments, 8vo. 5s. —Seale's Principles of Dissect, 12mo. 2s. —Sims' Memorials of Oberlin and De Staël, 12mo. 4s. —Irvine's Sermons, 8vo. 8s. —Bailey's Algebra, 8vo. 8s. —Bucke's Julio Romano, a Drama, 8vo. 8s. —Muir's Sermons on the Seven Churches, 12mo. 4s. —Mather's Elements of Drawing, 12mo. 3s. —The Young Cook's Assistant, 18mo. 1s. —Turner's Hertford, 8vo. 13s. —royal 8vo. India proof, 12. 10s. —Appleyard's Sermons, 12mo. 4s. —Grant on Liberty, 12mo. 5s. —Webster's Dramatic Works, 4 vols. crown 8vo. 2l. 2s. —Holt's Bible Cuts, 8vo. 12. 1s. —India, 2l. 2s. —Lewentwater, a Tale of 1715, 2 vols. post 8vo. 12. 1s. —Seager's Bos Elliptica, 8vo. 9s. —Caunter's Island Bride, a Poem, 8vo. 10s. —

METEOROLOGICAL JOURNAL, 1830.

April.	Thermometer.	Barometer.
Thursday ... 1	From 29. to 43.	29.68 to 29.69
Friday ... 2	— 30. — 41.	29.56 — 29.40
Saturday ... 3	— 31. — 39.	29.16 — 29.76
Sunday ... 4	— 24. — 42.	29.99 — 30.12
Monday ... 5	— 19. — 46.	30.12 — 30.02
Tuesday ... 6	— 19. — 58.	29.95 — 29.74
Wednesday 7	— 37. — 55.	29.81 — 29.74

Prevailing winds, N.W. and S.W. Generally clear; raining on the 2d and 3d, accompanied with a little hail and snow. Rain fallen, 1.275 of an inch.

Edmonton. CHARLES H. ADAMS.
Latitude 51° 37' 32" N.
Longitude 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. February 1830.

Thermometer—Highest	53°
Lowest	2-25
Mean	32-96535
Barometer—Highest	30-98
Lowest	29-12
Mean	29-62036

Number of days of rain and snow, 13.
Quantity of rain and melted snow in inches and decimals, 2-36375.
Winds.—2 East—3 West—0 North—2 South—1 North-east—5 South-east—9 South-west—6 North-west.

General Observations.—The early part of the month was very cold, attended by snow: on the 5th, at night, the thermometer stood at 2° 25', which was much colder than for many years in the same month: a thaw commenced on the 7th, and rain fell on eight different days—the greater part on the 7th and 8th, and 21st and 22d: the whole quantity of rain and melted snow 2-36375 inches, which was more than since February 1826, a remarkably wet month: there were five snowy days, and the whole depth was about 4½ inches: the mean of the barometer lower than last year, and the range less than usual. The evaporation 0-68125 of an inch.

Thermometer—Highest	62°
Lowest	27-35
Mean	43-38508
Barometer—Highest	30-34
Lowest	29-25
Mean	29-82376

Number of days of rain and snow, 5.
Quantity of rain and melted snow in inches and decimals, 0-725.
Winds.—5 East—9 West—1 North—1 South—3 North-east—1 South-east—10 South-west—1 North-west.

General Observations.—The month was particularly fine, and the thermometer rose to a height not experienced at Wycombe during the last seven years; the mean temperature was also much above those of the same period: the six last days had more the appearance of summer than of spring; but in the night of the 31st an extraordinary change took place, and rain, sleet, and snow fell: the whole quantity of rain and melted snow was small for the month, though much more than last year: the barometer was considerably higher than usual, and the mean 24-100ths of an inch above that of March 1829. The evaporation 0-55625 of an inch.

TO CORRESPONDENTS.

The constant recurrence of publications at stated intervals, such as the Library of Useful Knowledge, the Family Library, Dr. Lardner's Cabinet Cyclopædia, Constable's Miscellany, &c. &c. falls very heavily upon our columns, and forces us into an arrear not only with regard to these, but to other publications. In our present No. also will be found some of the fruits of those communications which were opened for the *Foreign Literary Gazette*, and which will henceforward give variety to these pages. But if we find that, with all our exertion, we cannot keep pretty equal pace with the influx of new and interesting matter, we shall again and again have recourse to additional sheets, to be presented gratuitously to our readers.

ADVERTISEMENTS

Connected with Literature and the Arts.

ARTISTS' GENERAL BENEVOLENT INSTITUTION, for the Relief of Decayed Artists, their Widows, and Orphans.

The Nobility, Friends, and Subscribers, are respectfully informed, that the Fifteenth Anniversary Festival will be celebrated in Freemasons' Hall, on Saturday, the 24th instant.

- The Right Honourable the EARL of ABERDEEN, K.T. in the Chair.
- Stewards.
Sir Thomas Dyke Acland, Bart. William Freeman, Esq.
M. P. G. B. Joseph, Esq.
Sir Harry Verney, Bart. G. B. Lonsdale, Esq.
Martin Archer Shee, Esq. E. Lydgate, Esq.
P. R. A. W. H. Mann, Esq.
John Jackson, Esq. R. A. H. Munro, Esq.
Henry Dehnes, Esq. Charles Russell, Esq.
John Hraithwaite, Esq. George Seddon, Esq.
H. P. Bruce, Esq. A. R. A. John Smart, Esq.
C. R. Goodell, Esq. George Booth Tynaldie, Esq.
G. C. Denham, Esq. George R. Ward, Esq.
William John Donthorne, Esq. George G. Wyattville, Esq.
- Dinner on Table at Half-past Five o'Clock.
The Vocal Department under the Direction of Mr. Broadhurst. Tickets (including wine), 12. 1s. each, may be had of the Stewards; the Assistant Secretary, 14, Duke Street, Portland Place; and at the Freemasons' Tavern.
- W. J. ROPER, Assistant Secretary.

BRITISH INSTITUTION, PALL MALL.

The Gallery for the Exhibition and Sale of the Works of British Artists is open Daily, from Ten in the Morning till Five in the Evening, and will be closed on Saturday, the 24th instant. Admission 1s.—Catalogue 1s.

WILLIAM BARNARD, Keeper.

ETRUSCAN ANTIQUITIES. On

Monday, the 12th instant, will be exhibited, at the Western Exchange, Old Bond Street, a splendid Museum of Etruscan Antiquities, more ancient than the Pompeii and Herculaneum. The Collection consists of more than Three Hundred Urns, Vases, Ewers, Idols, Jewellery, Lachrymatories, and numerous other Varieties, used by the Ancients in the offering of their Sacrifices, and the Burial of their Dead. The contents of this magnificent Museum were all lately excavated from old Vaults in the very ancient City of Volterra, in Tuscany, formerly Etruria; and the Proprietors are confident that their Exhibition will afford the highest gratification to Antiquaries, and attract the attention of all the curious and enlightened of the British Public.

Entrance, 2s.

SPLENDID EXHIBITION. Mr.

WILMSHURST'S Magnificent Painted Window of the Tournament of the Field of the Cloth of Gold, between Henry VIII. and Francis I. (from a Sketch by R. T. Jones). To be now Exhibiting, at No. 15, Oxford Street, Five Doors from Hanway Yard. Size of the Picture, 21 Feet by 18, containing 100 Figures, with upwards of 40 Portraits, with the strictest Attention to Costume.

Admission, 1s.—Description, 6d.
Open from Ten till Dusk.

TO GENTLEMEN connected with the

PUBLIC PRESS. The Proprietor of a highly respectable Provincial Newspaper, conducted upon moderate Tory principles, is desirous of forming an Engagement with some Gentlemen of Political Knowledge and Literary Attainments, to contribute Weekly an Original Article for the Political Department of his Newspaper.

References as to capability, or specimens, will be required. Address (post-paid) to J. H., at Mr. Taylor's Newspaper and General Advertising Office, 52, Fleet Street.

MR. BROSTER purposes residing in Town

Two Months this Season. In the mean time, Applications may be addressed to him, at his Residence, at Brook Lodge, Chester, where he will take Two Pupils. The Progress of the System for removing all Impediments of Speech, discovered (80 years ago) by John Broster, F.A.S. Edin. M.R.S.L. &c. with References, may be had from Messrs. Longman and Co. Paternoster Row, London.

HORTICULTURAL SOCIETY of

LONDON.
A few remaining Copies of any Volumes or Parts of Volumes of the Transactions, may be purchased upon application here before the 1st of July, at a Reduction of 50 per cent from the Prices hitherto charged, and also a few uncoloured Copies at 10s. per Set.

21, Regent Street, April 1830.

BOOSEY'S FOREIGN CIRCULATING

LIBRARY, 4, Broad Street, City.
The Subscribers are respectfully informed, that their Supplement for 1830 is now ready, and will be delivered gratis to Subscribers. It contains some valuable Additions of New Books, more particularly in the French and German Languages.

 America with the Camera Lucida.** By Captain Hall.

4th edition, in 3 pocket vols. to correspond with the
 Family Library, price only 12s.
**DEATH-BED SCENES, and PASTORAL
 CONVERSATIONS.**

"It has often occurred to me as something wonderful, that
 amongst the vast variety of books which are to be met with on
 the important subject of religion, there should still be wanted a
 manual for the information and direction of the minister in his
 daily intercourse with sick persons and other members of his
 flock."

"Having been in the habit, then, for several years, of remark-
 ing this defect of instruction with regard to practical divinity
 and the whole business of a parish priest, and having myself,
 meanwhile, been thrown perpetually into the most interesting and
 awful scenes with my own parishioners, I determined at length
 to take up my pen and to commit to paper whatever I having passed
 under my personal observation might be most likely to be useful
 to others of the same profession."

"I had no thought originally of doing more than assist my
 younger brethren in the clerical order who might be appointed
 to the management of large parishes, without time or oppor-
 tunities to prepare themselves in an adequate manner for so dif-
 ficult and momentous an undertaking. But in proceeding with
 my work I began to flatter myself with the notion that it may
 possibly both amuse and instruct every description of readers.
 Many persons may be tempted, upon the recommendation of their
 clergy, to peruse the book; and may find unexpectedly their
 fears allayed, their knowledge increased, and their hearts touched
 and improved."—*Preface.*

"The above Work has recently been included in the list of
 publications recommended by the Society for Promoting Christian
 Knowledge."

John Murray, Albemarle Street.

In 8vo. price 12s. boards. The Third and concluding Volume of
**THE HISTORY OF THE UNIVERSITY OF
 EDINBURGH,** for the Period from 1756 to 1829, chiefly
 compiled from original Papers and Records never before pub-
 lished; with an Appendix, containing an Account of different
 Institutions connected with the University.

By ALEXANDER BOWER,

Author of the *Life of Luther*, &c.

Besides the History, this volume contains Biographical Accounts
 of Principal Robertson, and Twenty-eight Professors now de-
 ceased—comprising a List of many of the most celebrated Men of
 Science and Literature of the period to which it refers.

Printed by W. Green and Sons, Edinburgh, and
 Simpkin, Marshall, and Co., London.

POEMS,
 in 8vo. price 5s. 6d. boards.
 By the late
 King.

"I have set my life upon a cast,
 And I will stand the hazard of the die."—*Shakespeare.*

3. **The Lost Hair; a Novel.** In 3 vols.

4. **Tales of the Five Senses.** 1 vol.

"The design is excellent; it is to instruct the reader in the
 natural history of his own frame."—*Dublin Literary Gazette.*

5. **The Romance of History, New Series,**
 8 vols.

6. **Bacon's Life of Francis,** 2d edition, in
 8 vols.

7. **Creation; a Poem, in Six Books.** By

 Published by Edward Bull, New Public Subscription Library,
 26, Holles Street, Cavendish Square.

Now ready, in 3 vols. post 8vo. price 24s.
THE DOMINIE'S LEGACY.

Consisting of a Series of Tales, illustrative of the Scenery
 and Manners of Scotland.

Literary Commendations.

"The *'Dominie's Legacy'* consists of a series of stories, chiefly
 Scottish, and well deserves a place in every library. The story of
 "Mary Gillivie" is very affecting."—*Blackwood's Magazine.*

"The writer of the work before us is entirely Scotch; and his
 pages are pictures from scenes which impress of truth tell he has
 taken them as an eye-witness; and many are rich in quiet, simple
 pathos, which is evidently his forte. We should compare the
 feelings excited in these pages to gazing on a series of rustic
 landscapes and simple houses in one of those we recommend them
 further to our readers."—*Literary Gazette.*

"These tales teem with delicate touches of truth and simpli-
 city, and contain a happy variety of sketches after life. The ma-
 chinery by which they are strung together is inartificial, and
 does no violence to attention. Were we to select a writer to furnish
 a true statement of the modes, moral and physical, of the Scotch
 peasantry, we should unhesitatingly name the author of the '*Do-
 minie's Legacy*.'"—*Atlas.*

"In the author of these three interesting tomes we have disco-
 vered an old friend, and rejoice to find that experience is at once
 richly and rapidly maturing his powers. Amid the stir and
 strife of the great habel, he has not forgotten Scotland; and as a
 portrayer of her manners, he has shewn himself, in the volumes
 before us, little, if at all, inferior to some countrymen of proud
 name."—*Edinburgh Literary Gazette.*

"There is much fascination in this author's style. He at once
 fixes attention, and we go on with real anxiety to know how his
 characters are to fare."—*Sunday Times.*
 London: William Kidd, 6, Old Bond Street; Constable and Co.
 Edinburgh; and Robertson and Atkinson, Glasgow.

Now ready, in 2 vols. post 8vo. price 31s.
DERWENTWATER. A Tale
 of 1718.

 and favourite foster child. Through an infant, it shews the Her-
 cules in the cradle."—*Sun*, 1st February.
 London: Hurst, Chance, and Co. 65, St. Paul's Churchyard;
 Constable and Co. Edinburgh; and Curry, Jun. and Co. Dublin;
 and to be had of all Book-sellers throughout the Kingdom.

New Edition of *Precedents of Livy*.—Price 5s. 6d. bound,
**LIVY. Books I. to III. with English
 Notes.**

By JAMES PRENDIVILLE,
 Scholar of Trinity College, Dublin.
 "In this new edition the text has been thoroughly revised
 and corrected, many additions and improvements have also been
 introduced into the notes; and while the book is beautifully
 and correctly printed, it has been reduced in price, so that the Pub-
 lishers trust it will be found superior to any school edition of Livy
 now in use.
 Dublin: Printed for W. Curry, Jun. and Co., 1, Hurst, Chance,
 and Co. London; and sold by all Booksellers.

In 1 vol. 8vo. price 8s. 6d.

 agement of the best Stage, Bed, and Border Flowers, usually
 cultivated in Britain. To which is added, a Directory for the
 Management of the Hothouse, Green-house, and Conservatory,
 with the different Modes of raising and propagating Exotic
 Plants. Interspersed with many new Physiological Observations.
 By James Main, A.L.S.

Early Dramatic Writers.
THE WORKS OF JOHN WEBSTER,
 now first collected, with some Account of the Author,
 and Notes.

By the Rev. ALEXANDER DYCE, B.A.
 4 vols. crown 8vo. price 12s. boards.

The Works of Webster have long been a desideratum in our
 literature. By those who are acquainted with his Writings, he is
 allowed to be the first of the first of the Elizabethan dramatists,
 and scarcely inferior to Shakespeare.

Uniform with the above,
 2. **Feele's Dramatic Works, edited by the
 Rev. A. Dyce.** 2 vols. 12s. boards.

3. **Christopher Marlowe's Works, 3 vols.**
 11. 7s. boards.
 "Feele and Marlowe were the contemporaries of Shakespeare;
 both had exquisite feelings for poetry, and excelled in descrip-
 tions, to which the former lent beauty, the latter sublimity."—*Gifford.*

4. **Tyrwhitt's Chaucer. New edition, 5 vols.**
 crown 8vo. 21. 12s. 6d. boards.
 The Canterbury Tales of Chaucer, with an Essay on his Lan-
 guage and Versification, an Introductory Discourse, Notes, and a
 Glossary. By T. Tyrwhitt, Esq. Embellished with a Portrait
 of Chaucer, and a reduced Engraving of the celebrated Canter-
 bury Pilgrimage, by Stothard.

5. **Holbein's Bible Cuts. Illustrations of
 the Old Testament,** by Hans Holbein; being Fac-similes of the
 celebrated Icones Historiarum Veteris Testamenti, comprising
 Ninety Woodcuts, beautifully engraved. Crown 8vo. price 11. 12s.
 boards.
 The pencil of Holbein threw a charm and an interest about
 this volume, which I have rarely met in any similar production."
 —*Dibdin's Bibliographical Decameron.*

In the press,
**Holbein's Dance of Death, with 52 Wood-
 cuts.**

6. **The Poetical and Dramatic Works of
 S. T. Coleridge,** with numerous additional Poems, collected and
 revised by the Author. 3 vols. crown 8vo. price 11. 16s. boards.
 "Our standard of excellence in poetry is very high one. It
 must be by a rare felicity that the requisite qualities for its pro-
 duction are found in a man, and when they are, we should mar-
 vel much of him; he is a treasure to the world. High as our stand-
 ard is, Mr. Coleridge comes up to it; and we rejoice in the fact-
 lies afforded, for substantiating his claims; by the collection now
 before us."—*Westminster Review.*
 William Pickering, 57, Chancery Lane, London.

Price 7s. to Subscribers for the whole Work, and 9s. to
 Non-Subscribers, Part II. of

**DR. WEBSTER'S DICTIONARY of the
 ENGLISH LANGUAGE.**
 London: Black, Young, and Young, Foreign Booksellers,
 2, Tavistock Street.

Price 2s. 6d. No. XI. of
**MEDICAL BOTANY and VEGETABLE
 TOXICOLOGY;** illustrated with Plates, beautifully
 Coloured, of Pimpinella Anisum, Amyris Gileadensis, Copastora
 Officinalis, and Papaver Somniferum. By JOHN STEPHEN-
 SON, M.D. F.L.S. and JAMES MORRIS CHURCHILL, F.L.S.

Vols. I. II. III. may be had, in boards,
 price 2s. 2s. each.

The Fourth and last Vol. will be completed this year.
 A favourable opportunity presents for commenting this Work,
 as the early numbers are again passing through the press.
 "This work merits high commendation. It bears internal
 evidence of much care, extensive research, and unwearied in-
 dustry."—*Med. Chir. Review.*
 "By far the most valuable and elegant work on the subject in
 this country."—*Medical Repository.*
 "The figures are equal, if not superior, to those of any other
 botanical periodical."—*London's Gardener's Magazine.*
 London: Published by John Churchill, Carlton Street,
 Waterloo Place.

Gray's Supplement to the Pharmacopœia, including the New French Remedies. 4th edition, much improved and enlarged, in 8vo. price 1s.

NATURAL HISTORY OF ENTHUSIASM, in Ten Sections. We believe that in this small volume might be collected sufficient materials to stock any ordinary mind with subjects of reflection for a year.—Literary Gazette.

In 3 vols. post 8vo. Actual State of St. Domingo. 2. Notes on Haiti, made during a Residence in that Republic. By Charles Mackenzie, Esq. F.R.S. F.L.S. late His Majesty's Consul-General in Haiti, and now His Majesty's Commissioner of Arbitration in the Havana, &c. In 2 vols. post 8vo. 3. Tales of the Colonies, by John Howison, Esq. Author of "Sketches in Canada," &c. In 2 vols. post 8vo. 4. The Rev. George Croly's Poetical Works, in 2 vols. with Illustrations. In a few days, 5. The King's Own. A Tale of the Sea. By the Author of the "Naval Officer." In 3 vols. post 8vo. 6. Personal Narrative of an Officer in the English Army of Occupation in France. In 9 vols. small 8vo. 7. The Denounced. By the Author of "Tales by the O'Hara Family." 3 vols. post 8vo. 8. Correspondence and Diary of Philip Doddridge, D.D.: the Third and concluding Volumes. Edited from the Originals, by his Great-Grandson, John Doddridge Humphreys, Esq.

Albemarle Street, April 1830. Family Library. Complete in 1 vol. 8s. embellished with numerous Woodcuts, from Designs by George Cruikshank, engraved by Thompson and Williams, No. XII. of the Family Library, being THE LIFE OF NELSON. By ROBERT SOUTHEY, Esq. LL.D. Poet Laureate, &c. Third edition, with Corrections and numerous Additions. List of the Volumes of the Family Library published since its Establishment, in April 1829. I. and II.

Containing the Life of Napoleon Buonaparte, with Fifteen Engravings on Steel and Wood, by Finden and Thompson; the Woodcuts from Designs of George Cruikshank. Third edition, very neatly bound in canvass, 2 vols. 10s. III. The Life of Alexander the Great. (Classical Series, No. 1.) A new edition, 1 vol. 5s. IV. The Lives of the most eminent British Painters, Sculptors, and Architects. Vol. I. with Ten Engravings on Steel and Wood, 5s. A new edition. V. VI. and IX. The History of the Jews. Complete in 3 vols. with original Maps and Woodcuts, 6s. each. A new edition. VH. The Natural History of Insects, with very numerous Woodcuts. Vol. I. (to be completed in 2 vols.) 5s. A New edition. The Second is nearly ready. VIII. The Court and Camp of Buonaparte, with Portraits. 1 vol. 5s. A new edition. X. The Lives of the most eminent British Painters, Sculptors, and Architects. Vol. II. With Seven Engravings, 5s. A new edition. XI. The Life and Voyages of Christopher Columbus. By Washington Irving. Abridged by him from his larger Work. Complete in 1 vol. Illustrated with Plates and Maps, 5s. Early in April will be published, The Family Library, Dramatic Series, No. I. containing the Works of Philip Massinger, illustrated with Explanatory Notes, and adapted to the Use of Families and Young Persons, by the omission of all exceptional Passages. John Murray, Albemarle Street.

Post 8vo. 7s. 6d. MARY, QUEEN OF SCOTS; and other Poems. By JOHN HENEGE JESSE. "This is a beautiful poem."—Sketches of London Magazine. "A work of some labour and of historical recollections, as well as poetic nerve."—Times. "Our author has produced a very graceful poem."—Literary Gazette. "A poem which Byron need not have blushed to have owned."—Edinburgh Evening Post. "The whole of it is very far superior to that of any new candidate for poetic fame that we can remember."—Edinburgh Literary Gazette. John Murray, Albemarle Street. In 1 large vol. 8vo. 16s. a new edition, corrected and greatly enlarged, of the PRINCIPLES OF POLITICAL ECONOMY. By J. R. McCULLOCH, Esq. Professor of Political Economy in the University of London. Besides other important Additions, this edition contains new Chapters on Credit—Insurance—Cases in, and Objects for, which Government should interfere in Industrial Undertakings—Influence of Speculation on Prices—the Poor Laws—the Improvement and Letting of Land, &c. Also a comprehensive Index. Printed for William Tait, Edinburgh; Longman and Co. London; and Curry and Co. Dublin. Of whom may be had, Smith's Wealth of Nations, with large Additions by Professor McCulloch, 4 vols. 8vo. 2s. 12s. 6d.

Books in the Press. Early in May will be published, with a Portrait, 2 vols. 4to. THE LIFE OF BISHOP HEBER, with Selections from his Correspondence and from his Unpublished Works. John Murray, Albemarle Street. Just published, A Fourth Edition of Bishop Heber's Indian Journal, 3 vols. 8vo. 11s. 10s. In a few days will be published, in 8vo. price 12s. in boards, SERMONS on some of the most interesting SUBJECTS in THEOLOGY. By the Rev. GEORGE TOWNSEND, M.A. Prebendary of Durham, and Vicar of Northallerton. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall. Of whom may be had, by the same Author, The Old and New Testament, Chronologically arranged, with Notes and Indexes. 3d edition, in 4 large vols. 8vo. price 4s. in boards.

On Tuesday, 20th of April, will be published, in 1 vol. 8vo. THE DOOM OF DEVORGOIL; a Melodrama. 2. Auchindrane; or, the Ayrshire Tragedy. By SIR WALTER SCOTT, Bart. Printed for Cadell and Co. Edinburgh; and Simpkin and Marshall, London.

Nearly ready, in 3 vols. post 8vo. THE ARMENIANS. A Tale of Constantinople. By CHARLES MACFARLANE, Esq. Printed for Saunders and Otley, Public Library, Conduit Street. Of whom may be had, by the same Author, Constantinople in 1828-29. 2d edition. "Of all the tourists whom the late demand has tempted to the press, Mr. Macfarlane will, beyond comparison, most reward the reader. The main purport of his book is specifically adapted to the very points on which the curiosity of the moment is most alive. For the condition of this part of the Eastern World, of its politics, temper, and prominent interests just at present, an authority so recent and so satisfactory as Mr. Macfarlane is a greater piece of good fortune than it would have been reasonable to expect."—Edinburgh Review.

In a few days, 3 vols. post 8vo. FIRST LOVE. "Ma dimmi! al tempo de' dolci sospiri, A che, e come concederai amore. Che cos'è questo iudizio del ciel?"—Dante. Printed for Saunders and Otley, Public Library, Conduit Street.

In the press, and shortly will be published, A NEW EDITION OF WOOD ON RAILROADS. With Plates. London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Moule's English Counties. On the 1st of May, 1830, will be published, in 4to. price 1s. or the Map coloured, 1s. 6d. No. 1. of CHOROGRAPHIA BRITANNIÆ—the ENGLISH COUNTIES DELINEATED; or, Descriptive View of the present State of England and Wales, accompanied by a Map of London, and a Series of Forty County Maps, embellished with Vignette Views of remarkable Places, and Armorial Decorations, chiefly from the Seals of County Towns. Forming Two Volumes, handsomely printed in 4to. By THOMAS MOULE, Author of "Bibliotheca Heraldica," and Editor of several popular Topographical Works. Each Number will contain not less than Two Sheets of Letter-press, closely printed in Double Columns, on demy 20. paper, accompanied by a beautiful Map, from the very best Authorities, and embellished with Four interesting County Views. London: Printed for G. Virtue, 26, 1st Lane; Simpkin and Marshall, Stationers' Court; and may be had of all Booksellers.

In the course of this month, THREE COURSES and a DESSERT. With Fifty-two Illustrations by George Cruikshank. In 1 vol. crown 8vo. "Sit down and feed, and welcome to our table."—As You Like It. Vizetelly, Branson, and Co. Fleet Street.

Preparing for the Press, and shortly will be published, by Longman and Co. Paternoster Row, CASES illustrative of the remarkable Efficacy and perfect Safety of certain Medicinal Agents in the form of Vapour by Inhalation, especially Iodine, Chlorine, and Hydrocyanic Acid, in Pulmonary Consumption and other Morbid States of the Lungs. By Sir CHARLES SCUDAMORE, M.D. F.R.S. Physician in Ordinary to H. R. H. the Prince Leopold of Saxe-Coburg; Physician Extraordinary to His Excellency the Lord Lieutenant of Ireland, &c. &c. Already published, by the same Author, Treatises on Gout, Gravel, &c.; or Rheumatism; and on other Medical Subjects.

In a few days will be published, in 4 large vols. 8vo. price 2s. 3s. boards, the 3d edition, revised and corrected, of A NEW ANALYSIS OF CHRONOLOGY, in which an Attempt is made to explain the History and Antiquities of the Primitive Nations of the World, and the Prophecies relative to them, on Principles tending to remove the Imperfection and Discordance of preceding Systems. By the Rev. W. H. LUGG, D.D. Rector of Killesandra, in Ireland, and formerly Fellow of Trinity College, and Professor of Oriental Languages in the University of Dublin. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, London.

Of whom may be had, by the same Author, 1. An Essay on the Origin and Purity of the Primitive Church of the British Isles, and its Independence upon the Church of Rome. 8vo. 16s. 2. Faith in the Holy Trinity, the Doctrine of the Gospel, and Babellian Unitarianism shewn to be the God-denying Apostasy. 2 vols. 8vo. 11s. 3. Dissertations on the Prophecies, expressing the Divine and Human Character of our Lord Jesus Christ. 8vo. 8s. In a few days will be published, handsomely printed in 4to. with a Portrait, price 2s. 3s. in boards, THE LIFE OF RICHARD BENTLEY, D.D. Master of Trinity College, and Regius Professor of Divinity in the University of Cambridge. By the Very Rev. JAMES HENRY MONK, D.D. Dean of Peterborough. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and J. and J. Deighton, Cambridge.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Moulton Street, Oxford Street; sold also by J. Chappell, 98, Royal Exchange, E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Son, and Roberts and Alderman, Glasgow; and J. Cuswning, Dublin.—Agent for America, O. Rich, 12, Red Lion Square, London. J. MOVES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 691.—AMERICAN EDITION.

SATURDAY, APRIL 17, 1830.

REVIEW OF NEW BOOKS.

THE CUT-AND-DRY SYSTEM OF CRITICISM!

The Literary Gazette, No. 691.

It is a melancholy task to us, though far from an unusual thing in the general practice of contemporary book-makers, to review our own work! At any rate, we have the consolation of performing it openly, and also of following the common example of the larger Reviews,—i. e. saying little or nothing about the publication at the head of our article. But in these days, when the schoolmaster is so much abroad, (our friend Captain Windlass says he thinks him "all abroad;" by which sea phrase the amphibious animal seems to mean aught but a compliment), there are many new modes of teaching; and it is to the latest of these we wish to call the public attention.

THE CUT-AND-DRY SYSTEM OF CRITICISM, which has recently sprung up, and is rapidly growing into great force and magnitude, is individually and patriotically odious in our eyes. It affects us, and it injures literature: it is founded on selfish motives, and abuses the public mind. And what is the *cut-and-dry system*? we hear our readers ask. It is altogether a novel custom, we reply, and performed as herein after described.

Almost every book that is now published being an excellent book, in the opinion of its author, compiler, or publisher, one or other of them kindly takes the trouble to pick out some score or two of its best and most striking passages, which are forthwith printed on a loose, separate sheet of paper, duly labelled as being extracted from such or such an able, or admirable, or extremely popular, or widely circulated, or piquant, or exquisite, or highly poetical, or (which is rather the favourite phrase) *talented* work. With every volume sent to review, magazine, or newspaper for notice, one of these *cut-and-dry* Helps (as the Americans call their servants*) is forwarded; so that the critic or editor, relieved from the need of labour, or the fatigue of reading the book, has only to re-echo that such or such a work has appeared, and that to show the public how good it is, he has to quote the following able, or admirable, or piquant, or exquisite, or highly poetical, or *talented* paragraphs, anecdotes, &c. from a production which is already extremely popular and widely circulated!! And all this passes current for the genuine opinion of the reviewer or

* *Master and servant* are names unknown in the United States. There, servants will not acknowledge they have a master. I am *helper* to such a one, is their term. In the French revolution, too, it may be curious to mention, the word *master* was abolished, and *bourgeois* was substituted. A servant talks of his *bourgeois*, or the *bourgeoisie*, meaning the master, and if his *bourgeoisie*, the mistress. The hatred of the word *master* may be traced back to, not republican, but imperial Rome. Augustus never could bear it. Suetonius tells us, that at the theatre an actor, in his part, said: "O the just, O the good master!" The public, with one accord, and with transports of joy, applied it to Augustus, who testified by his countenance and action how much it displeased him; and the next day he issued an edict severely reproaching the people on the subject; and he forbade the term to be applied to him, by high or low, in jest or earnest.

newspaper writer; whereas, he has had no occasion to open the book, or to look into it; but, finding a parcel of favourable tit-bits sought out for him, just has the politeness to retail them as the fruits of his own taste, judgment, and sagacity.

It is very ungrateful in us to expose this *cut-and-dry* course, which is calculated in an especial manner to contribute to our great ease and comfort; *firstly*, by sparing us the toil and pains of wading through lots of dulness and trash; and *secondly*, by placing us on such excellent terms with authors, compilers, and publishers, that we might live unmolested and be praised by them all the days of our lives, instead of being, as now, abused for cruelty sometimes, and reproached for not bestowing sufficient panegyric always. It is a singular fact, and we record it as a wonder to future generations, that we do not remember ever having quite satisfied an author in the whole "march" of our literary career, though, Heaven knows, we have eulogised some of them till the force of language could no farther go! But this by the by.

We dare say the *reflecting* public is often astonished at the rapidity with which the merits of new works are spread abroad; and the marvellous unanimity which prevails respecting them throughout the press. Why, even the most remote provincial journal is within the reach of a *cut-and-dry sheet*; and it is delightful to the over-busied and intelligent editor, who generally presides over such an organ of opinion, to fill up his columns with the clippings of amusing or striking paragraphs, so civilly provided for him as samples of the able, admirable, piquant, exquisite, *talented*, &c. &c. &c. which, he can assure his readers, has as yet hardly been seen in London.

Now, what are the consequences of this? The efficient expressions to answer the question are "humbug and imposition;" the palming of partial, egotistical, and interested views upon the world, instead of the honest sentiments of the party who is apparently responsible for the statements. And thus are the public every day, and day after day, gulled into the belief, that the most contemptible performances are possessed of extraordinary claims to attention and patronage: they buy, the bubble bursts, they feel they have been cheated, and the next hour they or others fall into the same trap again; and "the million" keep up the game, like reproduction, by furnishing a never-ending succession of dupes. Perhaps it may be thought, at first sight, that these are too strong terms in reprehension of a practice so innocuous as merely sending a few of the best extracts from a publication to the newspapers;—and so they would be, were the evil confined to the delusion of procuring a market for what is undeserving of encouragement. But the great wrong lies deeper—it is by the protrusion of what is worthless that real merit and talent are stifled. The voice of modest Genius cannot be heard amid the din of clamorous puffing; and the expense of making a sterling production known

amounts to a prohibition against the efforts of learning and intellect, unsupported by the long purse and ingenious devices, to create a demand, of the existing mode of publishing. It is, therefore, for the sake and on behalf of humble Genius that we think it time to enter our protest against the oppression of this monopoly: it is our painful province to be made acquainted with hundreds of estimable persons, emulous of literary fame, and competent to acquire it too, whose hopes are crushed and destroyed by the system of which we speak. It is the roaring of the ocean that condemns full many a gem of purest ray to lie waste and unnoticed amid the wreck below: it is the upas that blights every fair floweret under its baleful shade.

The effect upon our national literature is another of the considerations which attaches much importance to this mode of proceeding. Let us look at the class of publications which inundate the Circulating Libraries, and compare it with an annual catalogue of the works of a superior character for information, learning, or lasting utility. Where are they? It is not worth while to publish a learned volume, or a volume of beautiful poetry, or any unpretending book of original research and valuable application. It would require a hundred pounds, perhaps, to advertise the limited number of the buyers of such sterling production that it existed, and the return would not cover this expense or remunerate the bookseller. He must therefore, and does, reject nearly all labours and efforts of this kind, however deserving; and turns to the ephemerides of the hour, which, by being puffed into notoriety, attract the multitude, are disposed of, repay the outlay, disgrace our literature, deprave the public taste, and are forgotten.

The connexion formed between the periodical journals and publishers in this way, is another curious part of the business. Newspapers devoted to political news, do not generally hold themselves to be authorities on literary subjects, though almost every newspaper now dabbles a little in the trade of criticism. They, therefore, care no great deal for what their columns contain in the mere ordinary routine of inserting what is paid for: the booksellers' paragraphs and advertisements come together, and the latter insures the companionship of the former. And this has grown to so vast an extent, that the entire press of the country, with hardly an exception, is subservient to it. We cannot take up a paper without recognising page after page of the materials already familiar to us from the circular *cut-and-dry* sheets which we, like others, have received, to guide us, as it were, in the path we are wished to go, but which we are determined never to follow. Indeed, the more we see it pervade the system, so as to lead and mislead the public, the more resolutely shall the *Literary Gazette* adhere to the opposite course, and, at all events, deliver its own opinions. These may be erroneous, and liable to be questioned, as well as others; but as we

think the cut-and-dry fashion to be more insidiously detrimental to real literature than the outrageous puffing which it has in some measure supplanted, and with which it has in some degree combined, we shall fearlessly oppose ourselves to its continuance.

What we have said must contribute to throw a light upon it, and will, we trust, conduce to an honest and better order of things. Should it be otherwise, should it be agreed that every man being his own reviewer is a convenient and proper plan, we must also submit to be silenced; but until we are made to feel that our Othello's occupation's gone, we will not consent to have it performed by the little black slaves of the cut-and-dry manner.

In submitting this exposition we have made no personal allusions; for we regret to say that the cause of complaint is but too widely spread, and in that lies its power of mischief. A few insulated examples would only offend, but the mass almost utterly smothered justice, and debilitates our national literature into trifling and superficial trumpery of the day, destitute of vigour and standard excellence. The old saying, of "every one a mouthful, and no one a bellyful," is being fulfilled to the utmost letter; and if the English reader wants a book calculated for future times, he must go to Germany, or France, or Russia! for in England there are nothing but reprints, compilations, annuals, periodicals, and the old species of machinery of the druggists' bottles mingling the contents of several, and shewing off the mixtures of every colour of the rainbow.

We will now take our leave of the *cut-and-dry* fashion, which has been detected, and its influence, and its influence:—
The *cut-and-dry* fashion is a very unequal mixture of the various elements of literature, and is a very unequal mixture of the various elements of literature.

Walter Colyton: a Tale of Love. By the Author of "Brambletye House." 3 vols. 12mo. Colburn and Bentley. London, 1830.

MR. SMITH'S most successful efforts are certainly his historical ones: he evidently commences no work till he has thoroughly examined his ground, and made himself master of all its details; in all his allusions to, or descriptions of, the manners, customs, and events of the time, he is strikingly correct; and we have now to notice one great improvement,—he has been much more sparing of his antiquarian lore; and peculiarities of style and dress are chiefly introduced as they illustrate necessarily the period and characters. Though Mr. Smith is not the founder of his school, he is, at least, one of its best followers; originality he does not possess; he would never of himself have raised the historical novel to its present distinction: but he writes very pleasantly, and communicates much information in too popular a manner not to secure many readers. We prefer *Walter Colyton* to many of its predecessors; the story is interesting, and the *dénouement* very unexpected; and that, at least, we will take care not to spoil. Among the personages introduced is the celebrated Catherine Sedley, countess of Dorchester, favourite of James II., in whose reign the scene is laid: we shall extract a portion in which she figures.

Walter, the hero, has been condemned to death by a court-martial for striking his superior officer, though under circumstances of great provocation. Seagrave has been prin-

cipal accessory to an attempt to marry him, even by force, to a mistress, of whom Lord Sunderland, then minister, is weary. Hetty, his own attachment (an animated copy from Jeannie Deans), learns from her lover, that chance has thrown him into contact, and also into favour, with the Countess of Dorchester; and she forthwith proceeds to London in man's attire, trusting, through Catherine's interest, to present the petition for his life to the king.

Influenced by the same considerations that had weighed with her before her departure, Hetty determined to preserve her male attire in London; but as her travelling garb was of rather a rude, rustic description, and she feared that there might be some difficulty in making her way quickly to the countess's presence, unless she presented a handsome exterior, she purchased a genteel dress suit, hung a sword to her side, exchanged her close wig for one of the small, fashionable perukes, and, without waiting to recruit herself after her long journey, hastened in her new habiliments to St. James's Square. On the afternoon of Hetty's visit, the countess, seeing the rapid approach of that crisis, which by her counsels she had not less strenuously than vainly endeavoured to avert, and anticipating, in the probable loss of her royal lover, a deprivation of all her splendour and distinction, was endeavouring, in a half melancholy and half bantering mood, to drive away the dismal forebodings that haunted her.

'Morlay, *mia cara!*' she exclaimed to her parasite, with a forced smile, 'I was advised not long since to imitate Madame de la Valière, to retire into a Carmelite convent, and practise all sorts of austerities; but, methinks, if I am to turn *religieuse*, I had rather, like Fenelon, attach myself to Madame de Guyon, and become a Quietist.' 'A Quietist! Sprightly, vivacious, and witty, as you are by nature, how can you ever expect to become a Quietist? Not that I know any thing of Madame de Guyon's doctrines, though we have heard so much about her.' 'She preaches the entire renunciation of self, the silence of the soul, the annihilation of all its powers, interior worship, and that pure and disinterested love of God which is neither degraded by the fear of punishment, nor animated by the hope of reward. Now, methinks if I had a very romantic hermitage, and a smart young hermit to chat with after my fits of quietism were over, I should not object now and then to indulge in a holy abstraction from the world, to turn my thoughts inwards, and to sit, as it were, in the solemn, solitary temple of my own heart, musing ineffable reveries *à la Guyon*. But positively I must have the smart young hermit.' 'Nay, now you are rattling and talking like a giddy madcap as you are, for nobody was ever half so free from flirting or gallantry: you are a very turtle-dove towards the king. At times, indeed, you have been too careless of appearances, too indifferent, in the consciousness of your innocence, as to what people might say. There you must confess that blunt Morlay has proved herself your friend, for I have always warned you to be scrupulously observant of decorum, always told you that Caesar's wife ought to be not only virtuous, but even free from suspicion.' 'I am not Caesar's wife, however, but his mistress.' 'Tush! is it not exactly the same thing? A king's wife is his state mistress, and his mistress is his private wife.' '*Eh va via, non mi romper la testa!* Prithree no more of this.'

"A servant entering, announced that a stranger was below, who declined giving his name; but had desired him to state that he

was a friend of Captain Colyton. 'Not give his name! What is he like? is he a gentleman? is he young? is he handsome?' inquired the countess. 'Quite a gentleman,' my lady, 'very young, and remarkably handsome.' 'Had I three ears, I'd hear thee! Shew him up, by all means.' In another minute Hetty Chevill entered the apartment, endeavouring to make a man's bow, in which she did but indifferently succeed; and catching her foot in her sword as she advanced, — a circumstance that added to her confusion as she blushingly said, 'If I have the honour of addressing the Countess of Dorchester, may I entreat you, madam, to favour me with a private interview?' 'A private interview! truly this is a modest request for a stranger to make! Morlay, *duenna mine*, how is Caesar's wife to act?' 'How can you ask such a question, when I know your thorough discretion?' said the scrupulous observer of decorum, taking the hint, and immediately quitting the apartment. 'Oh madam!' cried Hetty, throwing herself upon her knees before the countess, 'forgive me for thus intruding into your presence, and, above all, for appearing in this disguise; but when I tell you that I am an unhappy and almost heart-broken maiden —, 'Maiden! Egad, wench! I could have better forgiven you had you really been what your dress betokens; though I had discovered you before you spoke, for I am not easily deceived in these matters. As one of my own sex, however, you can have no business at my feet; so prithree seat yourself, resume your composure, and tell me the purport of your visit, particularly as it has reference to my friend Captain Colyton.'

Hetty gives all the necessary information, and at the conclusion of her narrative.

"'Betrothed to Captain Colyton! Are you aware, my love-lorn donzella,' continued the countess, who even upon so grave an occasion could not altogether refrain from bantering — 'that I have a sneaking kindness for him myself, and that, if I save his life, it will be only to tie him to my own apron-string as my *ciois-beau*, my fashionable dangler, my private lover?' 'Save him! save him! only save his life, and I care not what becomes of myself; I can bear any thing, provided Walter be spared. I could even resign him for ever — yes, cheerfully, madam, will —' A rising sob, which she vainly endeavoured to suppress, prevented the completion of the sentence, while the tear that started to her eye refuted the assertion she was about to make. 'Tut, wench! I did but joke,' said the countess, taking her companion's hand, and affectionately pressing it. 'A pest, however, upon the mistimed pleasantry that could thus trifle with your feelings! Kate Sedley may be accused of levity, of folly, of misconduct, but heartless I am not; and may I perish if I would not thrust this right hand into the fire, and burn it to a coal, like Cranmer's, rather than interfere between you and the object of your affection.'

"'I promise that I will set in motion all the influence and interest I possess; that I will exert every faculty of my soul; that I will importune the king without ceasing, until I obtain a remission of Captain Colyton's sentence.' Hetty's vehement emotions could now no longer be repressed. Throwing herself at the countess's feet, and pressing to her heart the hand which she still held, she passionately exclaimed, 'A thousand, thousand thanks, best and most generous of women! you have saved me from despair; you have attached me to you for ever; and if the most fervent gratitude, if my readiness to lay down my life in your service, could

be deemed a fitting return for your condescension and goodness —' She broke off abruptly; for the door of the apartment suddenly opened, and a person entered, whom, from the portraits she had seen, she immediately recognised to be the king. 'Hah!' exclaimed the monarch, starting back, and snatching at the pommel of his sword, while his whole face whitened with rage, even to the lips, — 'treachery here, too! Nothing but treachery on all sides! It is well, madam, it is well; but I could have been better pleased had your audacious paramour been a king, and worthy of my sword. Traitor as the villain is, I cannot draw against a subject.' Releasing the hilt of his weapon, he paused for a moment, in apparent irresolution whether to retire from the apartment or await an explanation; while Hetty arose from her kneeling posture, and stood with averted face and eyes fixed upon the floor, overcome with awe, surprise, and confusion. 'It were well for your majesty if you had no worse treasons to fear than this,' said the countess, whose peulance was instantly piqued by any thing like a taunt, especially when she knew it to be unmerited: 'Oh! what a precious discovery have you made, and how eager do you seem to become your own Actæon! Send for Sir Godfrey, that he may paint us as we stand — your majesty pale with anger — yonder detected gallant twiddling his sword-knot after a most sheepish and lackadaisical fashion — and Kate Sedley looking as saucy as if she had committed no offence. Pardon my impertinence, but were it not well that you should rub your eyes, and exclaim with the jealous-pated man in the play, 'Hum! ha! is this a vision? is this a dream? do I sleep? Awake, awake! Master Ford; I will now take the gallant; he is at my house; he cannot escape me — 'tis impossible he should; he cannot creep into a halfpenny purse, nor into a pepper-box; but lest the devil that guides him should aid him, I will search impossible places.' *Basta!* enough of this; I will myself search for your majesty's rival beneath this disguising periwig!' Turning Hetty suddenly round towards the king, she twitched off her wig, and resumed, as her luxuriant locks fell about her shoulders, — 'There, sir, you may see by these modest blushes, and by the palpitation of her bosom, threatening to break the buttons of her vest, that the Imogene who was kneeling at my feet, is, in spite of her alarming garb, a poor, timid, harmless maiden!' 'I understand not this mummery; who is she? what is she?' inquired James, still speaking sternly, though his ordinary complexion had returned, and his countenance was now not more saturnine than usual. 'Speak for yourself,' said the countess to Hetty; 'you implored me to present you to the king; there is his majesty; tell your own story.' Believing that the fate of her beloved Walter might depend upon her conduct and self-possession at the present moment, Hetty summoned all her energies to her aid, threw herself at the feet of the sovereign, stated in a hurried manner the cause and the nature of Walter's offence, with the sentence it had drawn down upon him, and in a passionate appeal, such only as a loving woman could pronounce, implored a remission of the fatal decree. 'Your majesty now perceives,' said the countess, 'that there is nothing more criminal in the whole affair, no more important discovery to be made, than that a very small fraction of my Lord Sunderland's private-life treacheries has come to light; his public treasons remain yet to be developed!' This speech

was luckily thrown in, and the moment was altogether propitious to Hetty's suit; for recent events, in spite of James's infatuation, had begun to force open his eyes to the perfidious proceedings of his minister. By the arrival of Skelton, the ambassador in Holland, it was found that the various letters he had officially written, positively announcing the destination of the prince's armament, had been all suppressed, and carefully kept from the king's knowledge. Other revelations had filled the royal mind with grave misgivings as to the honesty of the man upon whom he had lavished his favour and confidence; and as instances of ingratitude and perfidy multiplied around him, he was the better pleased to find that his suspicions of the countess's fidelity were unfounded. 'Who is this Captain Colyton?' he inquired, speaking in a still more gracious mood than he had hitherto used. 'The same,' replied the countess, 'whom Sunderland, that he might the better inveigle and insnare him, presented at a late drawing-room, when your majesty condescended to converse with him, and led him to expect that you would serve him, should occasion offer. Your majesty's promises have ever been held sacred and inviolable, — an honourable fact which not even your bitterest enemies can deny.' 'I made no promise: even if I had, it would have been abrogated by misconduct in the party. This is a grave, almost an irremissible offence; at the present moment it is peculiarly necessary to enforce a strict observance of discipline in the army.' 'It is still more necessary not to alienate that army and extend disaffection by sacrificing a gentleman of whom they may well be proud, to such a low and worthless character as Lord Sunderland's creature, whom they cannot but view as a disgrace to their profession. Clemency,' continued the countess, who knew that the king, like other men, loved to be most highly lauded for those virtues in which he was most deficient, 'clemency is not only your majesty's noblest prerogative, but the one which you have ever shewn to be the dearest to your heart. In Monmouth's infamous affair, did you not pardon thousands who had forfeited both life and estate? My Lord Brandon, Lord Stamford, Mr. Hampden, and many others, after being convicted of high treason, have received their lives at your hand; and will your majesty, who can thus generously forgive traitors, rebels, and enemies, suffer a brave and loyal soldier to be shot, because in a hasty moment he struck a bully of Lord Sunderland's?' 'I do not remember to have seen the report of this court-martial. Has that too been suppressed, like Skelton's letters?' 'This active and undaunted girl, who travels faster than most of the royal couriers, has outstripped its arrival. She left Somersetshire as soon as it was agreed upon, travelled incessantly both day and night, and has hardly been an hour in London.' 'It will probably, then, be laid before me to-morrow.' After pausing for a few seconds, as if considering how he should word his promise, the king, addressing himself to Hetty, continued — 'And if there be no more aggravating circumstances in the case than those you have mentioned, the capital part of the punishment shall be remitted.' 'There! do you hear?' cried the countess to Hetty — 'you may retire. Say no more — do no more — the word has gone forth from the mouth of one who never yet violated a promise.'

The following passage has so much historical truth, that we must give it place. Forrester is speaking of the time-serving character of too

many of the then English courtiers, and addresses William III.

"I can easily believe that this covetousness and inconsistency on the one side, coupled with the insight which your majesty must have obtained into the clamorous protestations of universal loyalty that preceded the general defection from the late king, may have lowered our nation in your eyes; nor can I deny, that the revolution, however glorious to your majesty, however blessed in its results, may be hereafter deemed dishonourable to the people of England in the mode of its achievement. But the Stuarts are only the victims of the general corruption they themselves effected. At the time of the restoration, high-minded Puritans of the Hutchinson and Ludlow stamp were still living, men who might have strengthened the public mind by imparting to it their own morality and strict religious tone; even as the Goths, when they intermingled with the degenerate people of Italy, corroborated their bodily strength. But in the reign of Charles the Second, drunkenness, irreligion, immorality, and corruption, became tests of loyalty; and the people at large soon learned to imitate, though they could not surpass, the gross depravity of the court. Charles and his successor were both pensioners of France; both secretly leagued with a foreign despot against their subjects; and they can have no right therefore to complain when the people turned the stream of corruption, and entered into conspiracies against themselves. It will be for your majesty to commence a moral revolution, still more glorious than the political one you have achieved, by making the court a school of religion, morality, and decorum; and thus gradually reforming the people by the same high example that has so thoroughly corrupted them."

We must apply to some part of this work a censure we have used towards another in a different place of this *Gazette*; viz. the introduction of so much of the Somersetshire dialect: it seems to us strangely bad taste in a writer, whose object we suppose is to interest a refined class, to devote pages to recording the vulgar corruptions of their native tongue in use among boors. If these provincial imitations continue, novels and dictionaries must go together; and, moreover, we doubt the policy of an author throwing a stumbling-block in the way of that large body of readers who seek but amusement.

The Doom of Devorgoil, a Melo-drama: and Auchindrane; or, the Ayrshire Tragedy. By Sir Walter Scott. Bart. 8vo. pp. 337. Edinburgh, Cadell and Co.: London, Simpkin and Marshall.

HAVING, we believe, with the exception of the publishers' duplicate, the only copy of this volume which has found its way to London, we seize a hurried hour (for it reached us late) to bring the performance before our readers. And we regret this haste the less, because it would have been an idle waste of time to attempt elaborate criticism on a new work from the pen of Sir Walter Scott; though its dramatic form, and the nature of the two traditions which it embodies, might entitle it to some observations beyond those of a mere cursory report. But be that as it may hereafter, we are, for the present, limited to the pleasant duty of making a *cento* of the beauties that have struck us most; and adorning this No. with the earliest blossoms we have been able to collect into a nosegay, from the dark wreaths of *Devorgoil* and *Auchindrane*.

The first, though entitled a melo-drama, Sir

And the strap, from the hide of a lame racer, sold
By Lord Match, to his friend, for some hundreds in gold.
Both. For all of the humbug, the bite, and the buzz,
Of the make-believe world, becomes forfeit to us.
Cockatelemog (placing the napkin).
And this cambric napkin, so white and so fair.
At a usurer's funeral I stole from the heir.
[*Throws something from a vial, as going to make vuds.*]
This dewdrop I caught from one eye of his nother,
Which wept while she ogled the parson with 'other.
Both. For all of the humbug, the bite, and the buzz,
Of the make-believe world, becomes forfeit to us.
Octopiegle (arranging the father and the basin).
My soap-ball is of the mild alkali made,
Which the soft dedicator employs in his trade;
And it froths with the pith of a promise, that's sworn
By a lover at night, and forgot on the morn.
Both. For all of the humbug, the bite, and the buzz,
Of the make-believe world, becomes forfeit to us.
Halloo, halloo,
The blackcock crows,
Thrice shrieked hath the owl, thrice croaked hath the
raven,
Here, ho! Master Gullcrammer, rise and be shaven!"

And he is trimmed accordingly.
We have only to remark, that the names
"fool," "ass," &c. are rather liberally dis-
pensed throughout this drama;—and turn to
the more fatal and bloody tragedy of *Auchin-
drane*, founded on the real crimes of Mure,
the feudal laird of that domain, in the county
of Ayr, whose trial and fate forms a remark-
able record in Pitcairn's Criminal Trials of
Scotland.* Mure was a Richard III. in a
lower sphere, and destroyed all that stood in
the way between him and his ambition. One
of his victims, Quentin, returns home after an
absence of six years, and thus apostrophises the
scene:—

"Each rock, each stream I look on,
Each bosky wood, and every frowning tower,
Awakens some young dream of infancy:
Yet such is my hard hap, I might more safely
Have look'd on Indian cliffs, or Afric's desert,
Than on my native shores. I'm like a babe,
Doom'd to draw poison from my nurse's bosom."
"A lord,
The master of the soil for many a mile,
Dreaded and powerful, took a kindly charge
For my advance in letters, and the qualities
Of the poor orphan lad drew some applause.
The knight was proud of me, and, in his halls,
I had such kind of welcome as the great
Gee to the humble, whom they love to point to
As objects not unworthy their production,
Whose progress is some honour to their patron."

His friend, Sergeant, an old campaigner,
who has returned with him, endeavours to get
him from this fated region; and the following
ensues:—

"Sergeant. Mark, me, Quentin.
I took my license from the noble regiment,
Partly that I was worn with age and warfare,
Partly that an estate, such as a kinsman's death,
Of no great purchase, but enough to live on,
Has call'd me owner since a kinsman's death.
It lies in merry Yorkshire, where the wealth
Of fold and furrow, proper to Old England,
Stretches by streams which walk no sluggish pace,
But dance as light as yours. Now, good friend Quentin,
This copyhold can keep two quiet inmates,
And I am childless. Wilt thou be my son?
Quentin. Nay, you can only jest, my worthy friend!
What claim have I to be a burden to you?
Sergeant. The claim of him that wants, and is in danger,
On him that has, and can afford protection:
Thou wouldst not fear a foeman in my cottage,
Where a stout mastiff slumber'd on the hearth,
And this good halbert hung above the chimney?
But come—I have it—thou shalt earn thy bread
Duly, and honourably, and usefully.
Our village schoolmaster hath left the parish,
Forsook the ancient schoolhouse with its yew-trees,
That turk'd beside a church two centuries older,—
So long devotion took the lead of knowledge;
And since his little flock are shepherdless,
Thou shalt be promoted in his room;
And rather than thou wantest scholars, man,
Myself will enter pupil. Better late,
Our proverb says, than never to do well.
And look you, on the holidays I'd tell

* This very curious and deeply interesting work, so illustrative of the history of Scotland and the manners of every age, is publishing in 4to Parts, of which we have four on our table, containing the memorable transactions of the criminal courts from 1569 to 1802. The violence and atrocities of ruthless barons, the superstitions regarding witchcraft, and the cruel murders of the deluded or accused practitioners of the black art, and many other strange matters, fill these extraordinary pages.—*Ed. L. G.*

To all the wondering boors and gaping children,
Strange tales of what the regiment did in Flanders,
And thou shouldst say Amen, and be my warrant,
That I speak truth to them.
Quentin. Would I might take thy offer! But, alas!
Thou art the hermit who compell'd a pilgrim,
In name of Heaven and heavenly charity,
To share his roof and meal, but found too late
That he had drawn a curse on him and his,
By sheltering a wretch foredoom'd of heaven!"
"Sergeant. Faith, thou hast borne it bravely out.
Had I been ask'd to name the merriest fellow
Of all our muster-roll—that man wert thou.
Quentin. Seest thou, my friend, yon brook dance
down the valley,
And sing blithe carols over broken rock
And tiny water-fall, kissing each shrub
And each gay flower it nurses in its passage,—
Where thinkest thou is its source, the bonny brook?—
It flows from forth a cavern, black and gloomy,
Sullen and sunless, like this heart of mine,
Which others see in a false glare of gaiety,
Which I have laid before you in its sadness."
The following simile is good:—
"What should appal a man inured to perils,
Like the bold climber on the crags of Ailsa?
Winds whistle past him, billows rage below,
The sea-fowl sweep around, with shriek and clang,
One single slip, one unadvised pace,
One qualm of giddiness—and peace be with him!
But he whose grasp is sure, whose step is firm,
Whose brain is constant—he makes one proud rock
The means to scale another, till he stand
Triumphant on the peak."

The next is also worth quoting as a speci-
men:—
"Father, what we call great, is often ruin'd
By means so ludicrously disproportion'd,
They make me think upon the gunner's instock,
Which, yielding forth a light about the size
And semblance of the glow-worm, yet applied
To powder, blew a palace into atoms,
Sent a young king—a young queen's mate at least—
Into the air, as high as e'er flew night-hawk,
And made such wild work in the realm of Scotland,
As they can tell who heard."

And as this play ends, so must we, somewhat
abruptly. In the way of observation, we might
say that several of the characters are perhaps
rather refined or metaphysical for their rude
age; and, for the sake of shewing that we are
critical, point out the use of the same image
three times in the same composition:—

"Thine officer,
Whom yon ungrateful slaves have pitch'd ashore,
As wilt waves heap the sea-weed on the beach,
And left him here, as if he had the pest."
"Yonder mutineers that left their officer,
As reckless of his quarters as these billows,
That leave the wither'd sea-weed on the beach,
And care not where they pile it!"
"O, my soldiers!
My merry crew of vagabonds, for ever!
Scum of the Netherlands, and wash'd ashore
Upon this coast like unregarded sea-weed!"

But enough: we are sure our readers will
be glad to possess so much of this celebrated
author, till they can procure the work itself;
and great as he is, we are not without a hope
that he will be obliged to us for our prompt
tribute. For, altering only one word, and put-
ting *author* for *soldier*, we flatter ourselves that,
even among the highest,

"Your author
Begs for a leaf of laurel, and a line
In the GAZETTE!"

Traits and Stories of the Irish Peasantry.

WE regretted to leave our readers in suspense,
though only for a week, respecting the fate of
Jack Magennis; and we now take him up
where we left him, playing a losing game with
the dark gentleman.

"For what do you think, but as Jack
was beginning the game, the dog tips him a
wink, laying his fore claw along his nose, as
before, as much as to say, 'Watch me, and
you'll win,'—turning round, at the same time,
and shewing Jack a nate little looking-glass,

* We wonder what sort of *Gazettes* there were in those
days of spectres and goblins?—neither Government nor
Literary, we suspect: perhaps the phrase is an anachron-
ism.—*Ed. L. G.*

that was set in his oxther, in which Jack saw,
dark as it was, the spots of all the other
fellow's cards, as he thought, so that he was
cock sure of bating him. But they were a pair
of downright knaves, any how; for Jack, by
playing to the cards that he saw in the looking-
glass, instead of to them the other held in his
hand, lost the game and the money. In short,
he saw that he was blarried and chated by them
both; and when the game was up he plainly
tould them as much. 'What, you scoundrel!'
says the black fellow, starting up and catching
him by the collar, 'dare you go for to im-
pache my honour?' 'Leather him if he says
a word,' says the dog, running over on his hind
legs, and laying his shut paw upon Jack's
nose, 'say another word, you rascal,' says he,
'and I'll down you;' with this the ould fellow
gives him another shake. 'I don't blame you
so much,' says Jack to him; 'it was the look-
ing-glass that desaved me.' 'What looking-
glass, you knave you?' says dark-face, giving
him a fresh haul. 'Why the one I saw under
the dog's oxther,' replied Jack. 'Under my
oxther! you swindling rascal,' replies the dog,
giving him a pull by the other side of the
collar; 'did ever any honest pair of jintlemen
hear the like?—but he only wants to break
through the agreement; so let us turn him at
once into an ass, and then he'll brake no more
bargains, nor strive to take in honest men and
win their money.' So saying, the dark fellow
drew his two hands over Jack's jaws, an' in a
twinklin' there was a pair of ass's ears growing
up out of his head. When Jack found this, he
knew that he was'n't in good hands; so he
thought it best to get himself as well out of the
scrape as possible. 'Jintlemen, be aisy,' says
he, 'an let us understand one another: I'm
very willing to sarve you for a year and a day,
but I've one request to ax, and it's this: I've a
helpless ould mother at home, and if I go with
you now, she'll brake her heart with grief first,
and starve afterwards. Now, if your honour
will give me a year to work hard, and lay in
provision to support her while I'm away, I'll
sarve you with all the veins of my heart—for a
bargain's a bargain.' With this the dog gave
his companion a pluck by the skirt, and, after
some chat together, that Jack didn't hear,
they came back and said they would com-
ply with his wishes that far; 'so, on to-morrow
twelve-month, Jack,' says the dark fellow, 'the
dog here will come to your mother's, and if you
follow him, he'll bring you safe to my castle.'
'Very well, your honour,' says Jack; 'but as
dogs resemble one another so much, how will I
know him whin he comes?' 'Why,' answers
the other, 'he'll have a green riband about his
neck, and a pair of Wellington boots on his
hind legs.' 'That's enough, sir,' says Jack,
'I can't mistake him in that dress, so I'll be
ready.' During that year Jack wrought night
and day, that he might be able to lave as much
provision with his poor mother as would support
her in his absence; and when the morning
came that he was to bid her farewell, he went
down on his two knees and got her blessing.
He then left her with tears in his eyes, and
promised to come back the very minnit his
time would be up. 'Mother,' says he, 'be kind
to your little family here, and feed them well,
as they're all you'll have to keep you company
till you see me again.' His mother then stuffed
his pockets with bread, till they stuck out be-
hind him, and gave him a crooked sumpence for
luck; after which, he got his staff, and was
just ready to tramp, when, sure enough, he
spies his ould friend the dog, with the green
riband about his neck, and the Wellington

drollery or curious traits of national manners and feelings. In justice to the writer, and to shew that his reflective mind is as competent to take original and enlarged views as to describe localities, we shall conclude with a brief extract from the opening of the second volume, which strikes us as being particularly happy.

"It has been long laid down as a universal principle, that self-preservation is the first law of nature. An Irishman, however, has nothing to do with such a law; he disposes of that as he does of the rest, and washes his hands of it altogether. But commend him to a fair, dance, funeral, or wedding, or to any other sport where there is a likelihood of getting his head or his bones broken, and if he survives, he will remember you with a kindness peculiar to himself, to the last day of his life—will drub you from head to heel, if he finds that any misfortune has kept you out of a row beyond the usual period of three months—will render the same service to any of your friends that stand in need of it; or, in short, go to the world's end, or fifty miles further, as he himself would say, to serve you."

The context and illustration of this position are admirable.

The Cabinet Cyclopædia, No. V. Natural Philosophy: Mechanics. By Captain H. Kater, V.P. R.S., and the Rev. D. Lardner, LL.D., F.R.S. London, Longman and Co.

THE *Cabinet Cyclopædia* has here struck into a new path, and with the utmost success; as might well have been anticipated from the talent employed in exploring it. Captain Kater has supplied those portions which treat of balances and pendulum, the instruments on which the measurement of weight and time depends; and Dr. Lardner himself the remainder of this valuable volume, which, though replete with philosophical information of the highest order in mechanics, is adapted to ordinary capacities in a way to render it at once intelligible and popular. This is a great advantage derived from procuring scientific essays from those who are not only masters of the particular subject in hand, but equally qualified to instruct the world in the general circle which connects all sciences the one with another. Thus we find a pouring out of knowledge, and a mass of illustration, which is far different from the too common class of publications, that are got up, manufactured we may say, for the occasion, the writer or compiler merely making himself acquainted with as much of the matter assigned for his work as may enable him to recast the old materials into a new shape, without adding one scintilla to the original stock. It is not so, when superior abilities are brought to bear upon the given point; they not only illustrate and exhaust it, but throw light upon all its collateral associations: and such is the volume before us.—a production of the greatest merit, and containing the latest and most valuable information on mechanical properties and powers. Although such a production does not afford much room for quotation, we shall give one short paragraph, to shew that when teaching philosophy, a lesson of what is useful in every-day life is also imparted.

— "It frequently happens that the stopper of a glass bottle or decanter becomes fixed in its place so firmly, that the exertion of force sufficient to withdraw it would endanger the vessel. In this case, if a cloth, wetted with hot water, be applied to the neck of the bottle, the glass will expand, and the neck will be

enlarged, so as to allow the stopper to be easily withdrawn."

There are many similar remarks; but one is sufficient to shew the character of the work.

The Last Days of Bishop Heber. By Thomas Robinson, A.M. 8vo. pp. 355. Printed at Madras. Reprinted, London, 1830. Jennings and Chaplin.

THE great popularity of the memoirs, &c. of Bishop Heber has led to this publication—an addendum to the tide. Mr. Robinson was his chaplain, is now archdeacon of Madras, and has here preserved some more threads of the mantle which has been so much admired. From his account of the death of the Bishop, it seems difficult to determine whether it proceeded from apoplexy, or drowning in the bath. There is much of missionary zeal in this volume.

Sermons on the Dangers and Duties of a Christian, &c. By the Rev. Erskine Neale, B.A. 8vo. pp. 283. Hurst, Chance, and Co.

THERE is much curious matter in this book; for the sermons are the least remarkable part of it. In introductory remarks, and other miscellanea, the author shews himself a zealous churchman; but makes admissions, and argues cases, which we think the dissenting interests might impugn with considerable effect.

Sermons. By the Rev. S. Pope, M.A. 12mo. pp. 177. London, 1830. Rivington and Hatchard.

THE curate of St. Mary's, Lambeth, in this little volume inculcates stricter principles than the living world around him acknowledge. Whether he is over-righteous or not, we must leave to others: he seems sincere, which is a great point.

Bower's History of the University of Edinburgh. 8vo. Vols. I. and II. Edinburgh, Oliphant; Waugh and Innes: London, J. Murray.

WHEN the third volume of this work was recently presented to us, we mentioned in our favourable notice of that portion of the production that we could not form a competent judgment of the whole, as we had not seen the former volumes. This desideratum the publishers have since politely supplied; and upon the general consideration we will repeat our praise of the history as a diligent record. The London University appears to be modelled on the same plan as the Edinburgh—a school of science, without reference to religious opinions; and this circumstance gives an additional interest to the work before us. Still, the biographies are the most valuable portions of the work.

Microscopic Illustrations of a few new popular and diverting Living Objects, with their Natural History, &c. By C. R. Goring, M.D., and A. Pritchard. 8vo. London, 1830. Whittaker, Treacher, and Co.

THIS curious volume contains enlarged coloured engravings of the extraordinary creatures which the improved principle of microscopes exhibit to the wondering gaze. As we have before noticed these monsters, in glancing at the Quarterly Journal of Science, and on other occasions, we shall now only repeat, that they are marvellous in the extreme, and their natural history, as far as ascertained, not less remarkable.

Anecdotal Reminiscences of distinguished Literary and Political Characters. By Leigh Cliffe, Esq. Author of "Margaret Coryton," "Parga," &c. 12mo. pp. 288. London, 1830. R. and S. A. Bielefeld; Simpkin and Marshall.

A PRODUCTION of this kind (anecdotes and traits of individuals now living or only recently removed from amongst us) must be liable to objections, if every tale be not favourable to those concerned. Accordingly, we think, some of these pages might have been omitted with advantage: of the rest, some are so-so, some poor, some tolerable, and some good. We quote two paragraphs which are most new to us:—

"*The Margrave of Anspach.*—At one of the gay parties at Brandenburg House, a gentleman by some accident had the misfortune to break one of the magnificent pier-glasses with which the apartment was ornamented. He felt exceedingly confused, and knew not what to say in apology for his awkwardness, till he was relieved by the amiable consideration of the margrave, who, pushing the decanter towards the gentleman, observed kindly, that "where the glass stands there is no mirth."

"*An honest Bookseller.*—Mr. Robson, of Bond Street, was at one time persuaded to take a partner in his business, who advanced a handsome sum of money on the articles being signed. The profits were increased to a degree which had not been anticipated, and it was supposed that Mr. Robson, when the first quarter's accounts were made up, would be highly gratified at the impulse which had been given to his trade. But the contrary was the case—he declared that he did not conceive such great profits could be obtained fairly, and dissolved the partnership, to the surprise of every person, who thought he, for once in his life, had lost his senses."

The Family Library, No. XII.: Southey's Life of Nelson. J. Murray.

SOUTHEY'S *Life of Nelson* needs no comment: it is one of the most popular biographies in our language; and this new edition of it is an ornament even to the *Family Library*.

The Works of John Webster, now first collected; with some Account of the Author, and Notes. By the Rev. Alexander Dyce, B.A. 4 vols. London, 1830. Pickering.

THE perseverance and the zeal of Mr. Pickering in reproducing the sterling works of the earlier and vigorous times of English literature, is most deserving of praise; nor can we do less than extend the eulogy to the neatness, it may be called beauty or elegance, with which he revives these works. This edition of the celebrated dramatist Webster is worthy of his press; and the interest of the author will not be diminished by the renewal of his claim upon public attention. Webster, forming himself upon Marston, is unquestionably one of our best painters of manners; and if he had only written Westward and Co., (in which, however, he had Dekker's aid,) he would have deserved to be a favourite with every curious and inquiring reader: and when we consider that, independently of his vivid local traits, he abounds in poetical beauties, (not debased by any of the very gross coarsenesses so familiar to his age,) we shall find more reason to commend Mr. Dyce's labours to the favour of all literary persons. The publication is an indispensable addition to every good collection of our national literature.

Derwentwater: a Tale of 1715. 2 vols. 12mo. London, 1830. W. Kidd.

EVIDENTLY the production of a young writer, it is also evidently the production of a clever one: there are several characters of considerable originality, and many scenes written with a vivacity which promises much for the author's future efforts. The study of good models is recommended to all youthful writers; but, like all other good things, it may be carried to an excess: our present candidate for public favour shews excellent taste in his evident admiration of Sir Walter Scott; but this admiration has led to too direct imitation. We also think him quite mistaken, in supposing that filling page after page with the barbarous dialect of Northumberland could be entertaining to the mass of readers. Nothing but the extreme popularity of Scott would, we think, ever have reconciled his English admirers to the introduction of his native tongue so much; though, for the use of the Scotch, there were reasons, of no avail in the present instance: the Scotch is the language of a nation spoken equally by the lower and higher classes, and has a standard literature of its own; whereas the Northumbrian speech is but the barbarous corruption of the lower classes, whose only characteristic is its vulgarity.

The Jewish Maiden; a Novel. By the Author of "Ambition." 4 vols. 12mo. London, 1830. Newman and Co.

REALLY a prettily told story, and the heroine Miriam a very sweet creature.

Chronicles of a School Room. By Mrs. S. C. 2 vols. 12mo. London, 1830. T. Agnew and Sons.

THESE two volumes, the first and second, ripen- ing in the mind of the author, and the feeling of the heart, the sense of the danger shade cast by approaching the end. It is a difficult period for the writer, one at which the error of the imagination has most powerful effect; when stronger interest is required than the simple narrative, and when the knowledge of good and evil is most dangerous and most necessary. This is truly the task of a woman; and Mrs. Hall has executed it delightfully. Touching and natural, the tales are riveting as stories; while the narration derives every possible advantage from graceful language, snatches of picturesque description—those little home truths, put so simply but so forcibly—and observations, as just in their sentiment as they are elegant in expression. For example, how true are the following!—"We are too apt to think that we confer obligations when we only perform our duty; and this occasions us sometimes to overrate our exertions." "I am certain that there is no habit or propensity which cannot be overcome, if the person be conscious of the error, and anxious to amend; and the eagerness, the longing after perfection, and, at all sacrifices, endeavouring to attain it, is the unerring proof of a mind of a superior cast. The proud (in common parlance), the selfish, the mean, the giddy, are incapable of such an exertion." "Children, if unsophisticated, have a wonderful knack of manufacturing pleasures for themselves: give them a few simple materials, and not too much leisure, and they will make themselves happy in their own simple way."

Most cordially do we agree in the disap-

probation expressed of children's balls—not the dance of mirthfulness and animated exercise, but that of display and dress: parents too much neglect the happiness of their offspring, in not keeping children as long as possible. Again we give these *Chronicles* our unqualified praise; we congratulate the author, but still more her young readers, to whom they will be at once a great treat and a great benefit.

ORIGINAL CORRESPONDENCE.

THE DRAMA IN PARIS.

AMONG the dramatic novelties described by one of our Paris correspondents, at greater length than we have room to detail, are a three-act comedy, in prose, entitled *Le Dueliste*, in rehearsal at the Théâtre Français; and it is said that an ex-ministerial personage, and an unfortunate individual long known in Paris by the appellation of *l'homme à la longue barbe*, figure among the *dramatis personæ*. Most of our countrymen who have visited Paris have probably seen the last-mentioned singular character, whose real name is Chodruc Duclos; and to those who have not seen him, it would be impossible to convey an adequate idea of his outward and visible man. His costume is the *recherche* (if I may so call it) of raggedness and filth, and his whole appearance the *beau idéal* of vagabondage. From sunrise to sunset he may be seen parading the long galleries of the Palais Royal, with the slow, monotonous march of old Father Time, to whom his venerable gray beard, and the not undignified sternness of his aspect, may be supposed to give him additional resemblance.

An agreeable tale of Zchokke, who is designated by the flattering title of the Swiss Walter Scott, has furnished the incidents of *Le Mariage du Défunt*, a little one-act comedy, performed at the theatre of the Ambigu Comique.

Another, entitled *Le Mari à neuf Femmes*, and which can boast but slender claims to originality, has been represented at the Théâtre des Nouveautés. The hero of the piece, an honest sailor established in Mexico, and, like his *caste*, rather given to polygamy, has, in the course of his different voyages, contrived to pick up a wife at every port. The Mexican tribunals, instead of mercifully hanging him for his uxorious propensities, condemn him to live with his nine muses. The *ménage* is, however, by no means visited with the harmony of the sacred nine, and the poor husband, glutted with his dose of conjugal tribulations, sails for England with a tenth wife, his cook-maid, who rules the roast which she formerly basted, "and dines from off the plate she lately washed." The juxtaposition of so many Ariadnes on the stage produced some lively scenes.

Les Accidens, a farce founded on the petty miseries of human life, has been brought out at the Théâtre de la Gaîté; and the authors of *Newgate* have furnished the Porte St. Martin theatre with a new melodrama, entitled *Arnand et Stéphanie*.

Arwed, ou les Représailles, a very successful drama, in two acts, has been represented at the Théâtre du Vaudeville. The leading incident reposes on a slight historical foundation; but much of the plot has been borrowed from a drama performed some fifteen years ago at the Odéon theatre, and from Cooper's novel of *Lionel Lincoln*.

In this happy theatrical review the performances of M. Comte's juvenile actors are not the least deserving of honourable mention. Many a veteran stager might take a valuable hint

from the *naïveté* of certain of these embryo Talmas and Fleury's, who have not yet attained the dignity of their teens.

Armand, of the Théâtre Français, who has long been unrivalled in the higher walks of genteel comedy, has retired from the stage.

ARTS AND SCIENCES.

LINNEÆAN SOCIETY.

LORD STANLEY, President, in the chair.—A paper by John Morgan, Esq., entitled, "a further description of the mammillary organs of the kangaroo," was read. This paper may be considered a continuation of one by the same author, which appeared in the first part of vol. 16th of the Society's *Transactions*: its object is to illustrate the various changes which take place during the period of gestation; for which purpose the author obtained a living female kangaroo on the 28th of October last; the pouch of which contained a young one adhering to the marsupial teat: the offspring was about the size of a small rat, entirely destitute of hair, and of a light flesh colour; it was constantly lubricated by a viscid, moist secretion, which was also spread over the interior of the pouch. It appears that in the earlier periods of life the young immediately die on being separated from the marsupial teat, and that they do not derive support from this organ in the usual way, viz. by suction; but that, on the contrary, the nourishment is ejected by the mother into the adhering mouth.

ECCLECTIC SOCIETY.

MARCH 30.—Mr. Birt read a paper, accompanied by a diagram, in which he attempted to shew the motion of the solar system through space, and the phenomena consequent thereon, assuming as his postulata, that the motion is curvilinear, and that the diameter of the sun's orbit is sensible at the distance of the nearest fixed star. Dr. Walker read a paper (*vulgo*) the lightning before death; and instanced a remarkable case of a woman who, for a long period, had been perfectly unconscious of passing events, and even of the presence of her nearest relatives, being suddenly aroused to consciousness by the funeral preparations of her son: she died shortly after.

A paper was read from the Chevalier Aldini on his method of resisting fire; also on the application of galvanism in cases of suspended animation.

TUSCAN EXPEDITION INTO EGYPT.

Florence, Feb. 6, 1830.

THE scientific expedition to Egypt, set on foot by our government, closed its quarantine on the 7th ultimo, and a few days afterwards its members paid their respects to the grand duke. It is gratifying to be enabled to communicate a general notice of the collections they have made. They have brought with them no fewer than thirteen hundred drawings of the most interesting basso-relievos, which they met with on the exterior and in the interior of Egyptian monuments; many of them being coloured after the originals. Such a harvest as this is a very sufficient proof of the industry of Messieurs Ricci, G. Rosellini, and G. Angeli, the gentlemen to whom the investigations were intrusted. Some of these drawings refer to the history, some to the religion, and others to the public and private life, of the ancient Egyptians. The former contain not only very valuable and unexpected illustrations of the earliest periods of Egyptian history, but of the annals of the most celebrated nations of Asia and Africa, in times which precede the

records of written history. The expedition has also brought a rich store of remains, the results of excavations, made under its directions, in various parts, but particularly in the plains of Thebes. They consist of a series of basso-relievos of a historical and funereal nature; of a monolite of granite, which was used as a tabernacle in the great temple on the island of Philæ; of a large sarcophagus of beautiful limestone, covered with sculptures; of eight valuable mummies; a superb collection of vases, made of burnt clay, alabaster, or other stone; a quantity of smaller articles, molten, or of gold or stone, which either ornamented or represented the symbols of worship; several small columns of wood and stone; and, lastly, a variety of fragments of walls, covered with ancient Egyptian paintings in fresco.

It is a sensible drawback upon the gratification which the success of this undertaking has afforded, that it has been attended with the loss of Professor Raddi, who was associated with it in the capacity of a naturalist. This eminent and indefatigable individual died of a dysentery, after he had completed his excursions though Egypt, Nubia, and the shores of the Red Sea. An abundant collection of subjects in natural history was the fruit of his undaunted researches. His loss is greatly enhanced by the amiability of his moral character.

ANTARCTIC EXPEDITION.

THE brig Annawan has sailed from New York on a three years' voyage. This vessel belongs to a company, and has been fitted out for scientific and commercial purposes. She is destined for the frozen regions of the antarctic pole, and her construction is admirably calculated to encounter the perils of those seas. The Annawan is commanded by Captain Palmer, a skilful navigator, known by the discovery of a continent, or group of considerable islands, near the antarctic pole. He has for a partner in his enterprise Captain Pendleton, commanding the Seraph, a vessel of equal size. The latter is the same who was to serve as chief pilot in the great national voyage which was so much talked of, but which has never been executed. The crew of the two vessels, amounting to fifty men, is composed of stout young fellows, sons of Connecticut farmers: of several of them it is the first voyage. Among the remarkable particulars of the equipment, are the means, as simple as ingenious, by which the ships' boats can be in a moment transformed into sledges for crossing the ice. The Lyceum of Natural History at New York eagerly contributed to the preparation of this fine enterprise. Dr. James Light, of Albany, a distinguished member of that body, is attached to the expedition in the quality of naturalist. Mr. Reynolds, known by his active perseverance in calling the attention of Congress to an expedition of the same kind, directs the commercial part of it. A library of several hundred volumes, and a collection of valuable instruments, were the generous presents of some of the citizens of New York. All the arrangements for the expedition were confided to the care of Captain Edmund Fanning, the agent of the South Sea company: and it is hoped that the voyage will be productive of very important results.

INGENIOUS ARTS: BERRY'S PATENTS.

It has frequently been remarked, how much our comfort, and even our happiness, depends on slight and trivial things—a hair will turn the scale, and life or death often hang upon

the accident of an instant. We always, therefore, look with complacency upon the efforts of ingenious men to apply the principles daily developing, by our progress in chemical and mechanical knowledge, to useful or elegant purposes; and to do our duty by advancing them with the public. Thus we brought into general notice Mr. Pratt's admirable inventions for beds, chairs, &c., as well as travelling apparatus, on various extremely convenient plans, and stuffed with iron-wire, the most elastic of materials; and on former occasions we spoke of the less bulky, but not less clever, application of caoutchouc, by Mr. Berry, to many beneficial purposes. From samples of his skill now before us, we observe that he has made such improvements upon these articles as well to merit a further mark of our approbation. We take up a scent-bottle, with the paradoxical description of being "stopped without a stopper;" but it is nevertheless not only true, but remarkably neat and perfect. The little silver top contains a ground glass revolving plate, embedded in the yielding caoutchouc, and the mere act of screwing it on, so effectually stops the bottle, that salts of the subtlest kind are hermetically sealed. The same principle to medicine bottles is of great value, for even sulphuric acid can be preserved by it in the hottest climates; not to mention the merit of enabling us to get instantaneous access to the contents,—no stoppers fixed in irremovably, no trouble or agitation in hurrying for a remedy. A second application of Mr. Berry's means is to portable ink-stands or bottles, in small and handsome wooden cases: these are of all forms, and so contrived as to keep the fluid in a state of lasting safety, neither to be spilled, wasted, nor dried up. For the travelling writing-case, or the pocket, we have seen nothing so complete. But the chief of these curious and skilful productions are sundry sorts of lamps, which may be ignited in a few seconds, some by simply dipping matches into receptacles preserved by the caoutchouc, others by opening tiny boxes, where the mere act of opening supplies the source of light, the means of lighting, and the candle to be lighted; and a third, the most interesting of the whole, a self-illuminating apparatus, where, by pulling a silken string, you instantaneously inflame a wick, which is struck by a loosened reel. Though not complex, yet the detail of this piece of ingenuity would require more of our space than we can afford to spare; and we must therefore request our readers to see the thing itself, and be convinced of its extraordinary value to the man of business, the student, and the invalid.

LITERARY AND LEARNED.

ROYAL SOCIETY OF LITERATURE.*

AT the meeting of the 7th inst., a memoir was read on the "Grecian Rose," as illustrating the imagery of the odes ascribed to Anacreon, with a view to determine the authenticity of those compositions.

The flower described with such extravagant encomiums by the author of these odes, under the name of *ῥόδον*, is unquestionably the same fragrant and beautiful production of the garden, which is known at the present time as the rose. It was the object of Dr. Nolan, the learned writer of this memoir, to state the grounds upon which he coincides in opinion with those critics who, from this circumstance, refuse to acknowledge those elegant effusions

* Though the report of a learned Society, we might almost call this "The Romance of the Rose."—Ed.

as the genuine works of the Teian bard. The following is a sketch of the arguments adduced by Dr. Nolan, with this view.

1. The rose, as described in the Anacreontic odes, and as familiarly known in modern times, is acknowledged to be the product of cultivation; the original plant, from which all our varieties have proceeded, being the common wild-briar. Such is the rose which Theophrastus describes in his History of Plants, as alone commonly known in Greece: and although the process by which the simple blossom of the wild-briar is converted into the fine double rose, does not appear to have been altogether unknown to that naturalist, yet the language he uses in speaking of the artificial production implies that he had never had an opportunity of seeing it. This testimony is confirmed by the accounts which have come down to us of the state of horticulture among the Greeks; that people having been wholly unacquainted with gardens, in the modern sense of the term, before the time of Epicurus. Further evidence to the same purpose is derived from the fact, that the garlands used by the Greeks upon festive occasions were composed of such ordinary plants and herbs as myrtle, coriander, feverfew, parsley, &c.: the custom of interweaving them with flowers was not introduced before the 100th olympiad. Such likewise was the composition of the crowns celebrated by the early Lyrists, including the genuine remains of Anacreon, preserved by Athenæus. The period when Theophrastus published his work, in which he gives the above account of the rose, as known to the Greeks, at which period the horticultural art was in a state quite incapable of producing flowers corresponding in beauty and fragrance with those celebrated in the odes, was the 116th olympiad; while the period when Anacreon flourished cannot be brought lower than the 65th, being a difference of more than two centuries.

2. While, however, the cultivated rose appears not to have existed in Greece in the age of Anacreon, the term (*ῥόδον*) afterwards applied to this flower, was in use not only at that period, but even in the times of Homer. The second part of Dr. Nolan's memoir was therefore devoted to ascertaining the particular flower to which the term was originally applied.

The word *ῥόδον* is of oriental derivation: its elements are employed by the Hebrew writers, and by Homer, to express not specifically the rose, but generally any flower used in dyeing; in this sense it was applied to the lily, the plant madder, the privet, &c. On assuming that the rose was the first flower to which it was applied, and the type from which all others so termed derived their appellation, it is inconceivable that these plants should have been at all termed roses, and inexplicable that they should have been called, as was the case, the dog rose, the red rose, and the white rose; but on the supposition that the term signified a dye-flower, no name so appropriate could be applied to them as the dog dye-flower, the red dye-flower, and the white dye-flower; they having all been employed in the art of dyeing. The flower which assumed to itself, *κατ' ἑξοχὴν*, the name of the dye-flower *ῥόδον*, was the blossom of the pomegranate, or balaustium. The dye extracted from this flower was red; and hence the word appears to have been applied to all flowers of a red colour. We learn from the scholiast on Pindar, that it was from its being celebrated for its dyes, which were obtained from the pomegranate, that the island

of "Miny," engraved by C. Penny, from a miniature painted by L. Ferriere, from the original picture by Sir T. Lawrence, in the possession of Countess Cowper; of which (with the exception of a decorated border), Mr. Wright's *Rose Bud* is so perfect a facsimile, not only in size, but in expression, execution, effect, and every other quality, that we are astonished at the resemblance.

Michael Thomas Sadler, Esq. M.P. Painted by W. Robinson; engraved by T. Lupton. Houghton.

A FIRM, well-marked, expressive portrait; and, we have no doubt, a good resemblance of the honourable member for Newark.

The Bud and the Blossom. W. C. Ross del. Brooker.

A BEWITCHING lithographic print, full of sweetness and grace, and which strongly reminds us of an admirable stanza by Mr. Gaspey, in Dagley's "Takings."

"Not yet matured the charms which were her own,
Yet ne'er to be surpassed in life's full flood.
Magnificent, I grant, the flower when blown,
But exquisitely beautiful the bud!
I love the blossom! and, with sorrow mute,
Behold it fade, though fading into fruit."

Sir Thomas Lawrence. C. Turner, A.R.A. Colnaghi, Son, and Co.

THIS is a fine likeness of the late President R.A., and admirably executed in mezzotint by Mr. C. Turner. We have hitherto met with nothing which has done so much justice to the graceful features of Lawrence, and been at the same time so creditable to the arts. A bust by Sievier is highly spoken of; but we have not yet seen it.

MADDOX STREET GALLERY.

IN a recent No. of the *Literary Gazette* we noticed the portion of Mr. Buchanan's valuable collection of pictures exhibiting in Regent Street, under the title of "Le Petit Louvre." The remaining portion of the collection is now exhibiting in Maddox Street, and is equally worthy of the attention of the amateur. The most striking works in the room are the magnificent paintings in fresco by Paul Veronese, taken from the walls of the Soranzo Palace, which we described a few years ago, when they were introduced to this country by Mr. Vendramini. We entirely concur in the justice of Mr. Buchanan's remarks respecting them:—"Their importation into this country may be said to form an epoch in the fine arts, as being the first objects of their class (of any importance) which have been brought to England. The grandeur and purity of their style render them worthy of every consideration; and it is to be hoped that some of them will be secured for the nation, its public schools of art, or its splendid edifices, during the short period that they may still be offered to the British public." Besides these admirable productions, there are in the Maddox Street Gallery above thirty easel pictures, of great merit, by Cornelius du Sart, Gabriel Metz, Vanderwerff (Chevalier), Schidone, Cornelius Bega, Adrian Ostade, David Teniers, Both, Van Tyssens, David Teniers jun., Paul Veronese, Vandyck, Rembrandt, Giorgione, Bassano (Giacomo), Richard Wilson, Gainsborough, Rubens, Gaspar and Nicholas Poussin, Honthorst, Willeboorts, Velasquez, De Hooze, Both and Berghem, Fyt, Steenwyck, and Lunini.

THE FIELD OF THE CLOTH OF GOLD.

A LARGE window, composed of three hundred and fifty pieces of glass, of irregular forms and

sizes, fitted into metal frames, which are so contrived as to fall into the shadows, and give the appearance of an uninterrupted picture, is now to be seen in Oxford Street. It is painted by Mr. T. Wilmshurst, from an original sketch by Mr. R. T. Bone. The subject,—The Tournament of the Field of the Cloth of Gold,—the last, and one of the most gorgeous exhibitions of chivalry in Europe, is too well known to our readers to render it necessary for us to describe it. Our first impression when we entered the room in which this splendid work is shewn, was, we own, rather unfavourable; in consequence of the great glare, and the want of keeping occasioned by the distant figures being diminished in size alone, and not at all, or, if at all, very little, in strength of light and shade, and vividness of colour. When, however, this first impression was abated, and we began to contemplate the picture with attention, we found in it much that was highly interesting, and admirably executed. The composition is exceedingly well contrived, and displays to advantage the illustrious persons assembled on this celebrated occasion. The furious onset of Henry, and the discomfiture of his opponent the Marquess de Fleurenges, as well as the contest between Francis and the Earl of Devonshire, are represented with great spirit and energy. The spectators in the foreground are gracefully disposed; and the pavilion, with the two queens and their respective suites, is a fine feature of the scene. It was the pleasing occupation of an hour to trace the different details, and, with the aid of the key prefixed to a description of the picture, which may be had at the room, to examine the portraits of the distinguished individuals of both sexes, whom policy, gallantry, vanity, and ostentation, concentrated in The Field of the Cloth of Gold. With the single exception to which we have already alluded, we were much gratified with this magnificent performance, which would be an appropriate ornament for the hall of some royal or national edifice.

ARTISTS' AND AMATEURS' CONVERSAZIONE.

ON Wednesday evening was held what we understood to be the last meeting of this Society for the season; but we have since been informed that it is their intention to hold another, in place of that of which they were deprived in so melancholy a manner by the death of Sir T. Lawrence. On the present occasion we observed among the works, a superb collection of etchings from the gallery of M. Denon, of Paris; a bas-relief by Bailey, of the head of Sir T. Lawrence, intended for the set of medals of "Great Men" now working by S. Clint; a beautiful Vandervelde; a choice picture by Terburg; a head by Vandyk; Eddy's celebrated "Guardian Angels;" drawings by Catermole and Bonington; a bust of Mr. Nash, by Behnes; some beautiful characteristic drawings by Daniel, delineating most strange and romantic scenes, chiefly in the Isle of Skye; two cattle-pieces by Ward; a small model, after Canova, of Venus rising from the sea—a most delicious *morceau*; and a perfect production of the newest etchings and engravings.

ORIGINAL POETRY.

FIRST AND LAST.—NO. I.

The First and Last Flower.

FLOWER, earliest flower of spring!
Born before thy sisters fling
From their heads the leafy veil,
Hiding blossoms fair and pale—

Born before the changeful sky
Looks out with its proud blue eye
('Tis so full of trembling glee)
For a moment steadily,—
Daisy floweret! how I love
To watch thee peeping first above
The emerald blades of springing grass
That brighten as the breezes pass.

First fair flower! yet soon arise
Round thee buds of brighter dyes.
Who observes thy pensive eye
Meekly turning to the sky?
Who would pluck thee, whilst around
Blossoms gaudier far are found?
Heed it not: an hour shall come
When they shall not slight thy bloom;
Like the meek, retiring mind,
Wait until the winter wind
Shall have withered leaf and flower;
Then shall they too feel thy power.

Flower, the latest of the year!
Wherefore dost thou still appear?
There thou art, a living gem
In winter's frozen diadem!
On the trampled turf thou art,
Speaking deeply to the heart;
Looking sweet, as when was burst
Thy tiny crimson bud at first.
Daisy flower! I look on thee
As something half akin to me;
Both have seen the rose's birth,
And both have watched them drop to earth.

Last dear flower! yet dearer far
For the thoughts, thou earth-born star,
That thou awak'at, than for thy bloom,
Scattered thus o'er Nature's tomb:
Thou art like the faith that first
In the young warm heart is nursed,
Keeping still its hallowed ground,
Whilst life's joys are young around,
And blooming out in age, to bring
The promise of another spring.

Worton Lodge, Isleworth. M. A. BROWNE.

MUSIC.

NEW PUBLICATIONS.

What Tongue can chide the Archer Boy? Poetry by Mrs. C. B. Wilson; Music by J. Barnett. Barnett and Co.

THIS is an answer to the Archer Boy, and strongly resembles it—but wants the peculiarity which recommended its predecessor. Second thoughts, they say, are best; but it seldom happens in music or in literature that second *any things* are half so good as *firsts*.

My own sweet Flower. J. B. Holland, Esq.; Music by J. A. Barnett.

A VERY pretty song, doing great credit to the composer—a brother, we believe, of John Barnett.

The Banks of the Arno. Words by H. J. Bradfield; composed by Augustus Meves. J. Willis.

A SIMPLE and beautiful song, to which Miss Cawse has done ample justice, by singing it most chastely and sweetly. In public or in private it must give pleasure, and more in the latter than in the former.

The Mariner's Child to his Mother. Words by L. E. L.; composed by J. Macdonald Harris. H. Falkner.

A COMPOSITION of great variety and originality. The pathetic lines appeared in the *Juvenile Keepsake*; and the music echoes their pathos and spirit with striking fidelity.

DRAMA.

KING'S THEATRE.

ON Thursday, after the opera, (a repetition of *Matilde di Shabran e Corradino*, in consequence of Lalande's being too much fatigued by her journey to rehearse *Il Pirata*), the ballet of *La Somnambule* was produced, with Varrennes as the heroine, in which she entirely failed. A nimble and graceful dancer she certainly is; but this part requires head and heart as well as heels; and we cannot forget the enchanting and pathetic Pauline. Coulon returned to his post, and acquitted himself most satisfactorily; and Malibran, in a box, appeared to enjoy the scene.

ALL the theatres, major and minor, royal and, we were about to say, rural,—but, alas! the march of bricks and mortar has left nothing of Coldbath Fields, or St. George's Fields, but the name,—all, however, have presented their Easter offerings in due season, and with appropriate exertion. The most successful, according to report, (for criticism has also a holiday on these occasions, and is contented to be pleased with the many) are those of Drury Lane and Astley's,—*The Dragon's Gift* at the former house, and *The Phantom Steed* at the latter: they are both Chinese in subject, and produced with exceeding splendour and taste. *The Wigwag*, at Covent Garden, is an adaptation from Cooper's novel of the *Pioneers*, and will probably do better when the holidays are over, as it is well got up and well acted, though not of the character looked for on Easter Monday. The real Easter piece of this theatre is its

under the *Glass Slipper*, words and the executed his earlier scenes changes, deous and fanciful, as she always does, vivaciously;—and was admirably supported by Penson and Morley, both of whom have gained laurels upon this occasion. Their trio, in the second act, was the best thing of the sort, perhaps, ever heard on the English stage. Wood, though not perfectly at home in Rossini's music, manifested much improvement in his style; and Miss Hughes and Miss Cawse supported the parts of the two sisters with ability. The latter, by the by, has had several opportunities of late, owing to Mrs. Keeley's temporary retirement, and has availed herself of them to rise much in public favour. Keeley was exceedingly ludicrous as a domestic, but some lines were of a quality which might as well have been omitted. The opera was eminently successful, and deserved to be so.

VARIETIES.

Congress: United States.—We learn from an authentic source, that the present House of Representatives consists of 210 members, who are thus elected:—By Maine 6, New Hampshire 6, Massachusetts 13, Rhode Island 2, Connecticut 6, Vermont 4, New York 34, New Jersey 6, Pennsylvania 25, Delaware 1, Maryland 9, Virginia 22, North Carolina 12, South Carolina 9, Georgia 7, Kentucky 12, Ohio 13, Tennessee 9, Indiana 3, Louisiana 3, Alabama 2, Illinois 1, Missouri 1, and Mississippi 1. The territories of Michigan, Arkansas, and Florida, send each of them a delegate to Congress.

Academy of Sciences, St. Petersburg.—The Emperor of Russia has just ratified several

supplementary articles of this Society. In future it will consist of twenty-one regular or full members and ten associates: the former are to have 5000 roubles each per annum, and the latter 2,500. There are to be two academicians for mathematical theories, and one for the applications, two for astronomy, one for geography and nautical science, two for natural philosophy, one for chemistry, two for zoology, one for botany, one for mineralogy, one for comparative anatomy and physiology, one for political economy and statistics, one for history and Russian antiquities, two for Greek and Roman antiquities, and two for the history and literature of the people of Asia. The total sum allowed by the government for the use of the Academy is 206,100 roubles per annum.

Gastronomy.—The *Gastronome*, a French paper, gives the following as a proper and fashionable bill of fare for twelve persons:—

4 Hors-d'œuvre.
Artichaux potvrade, Cornichons, Olives, Salade d'anchois.
Premier Service: Potage.
Un vermicelle.
Relié de potage.
Turbot, sauce aux câpres.
4 Entrées.
Poulet au blanc.
Veau à la bourgeoise.
Matelote de carpe et Anglaise.
Filets de chevreuil, sauce piquante.
Deuxième Service: Milieu.
Un biscuit de Savole.
2 Rôts.
Un quartier d'agneau.
Un poulet gras au cresson.
(Une salade).
4 Entremets.
Petit pot de crème.
Croquettes de riz.
Choux de Bruxelles, sautés au beurre.
Chicorée à la crème.
Troisième Service: Dessert.
2 Assiettes montées.
Garnis de meringues, biscuits à la cuillère, macarons, petits gâteaux décorés, et mûseaux.
4 Compotiers.
De pommes.
De fromage à la crème.
De poires.
De pruneaux.
4 Assiettes de Fruits crus.
Pommes. Raisins.
Poires. Oranges.
(Fromage.)

Expense of Governments.—The following calculation has been made by a French paper of the cost of the principal monarchies of Europe to every inhabitant. The maintenance of nine European sovereigns (not including the Grand Turk) costs 189,470,000 francs, divided as follows:—Russia 45,000,000 francs; France 42,500,000; Austria 37,500,000; Spain 13,750,000; Prussia 10,937,500; Netherlands 6,500,000; England 25,000,000; Naples 5,250,000; Portugal 3,322,500. According to this calculation, the amount per head is, in Russia 88 centimes; in France 1 franc 36 cents; Austria 1 franc 34 cents; in Spain 1 franc 20 cents; in Prussia 1 franc; in the Netherlands 1 franc 20 cents; in England 1 franc 20 cents; in Naples 80 cents, and in Portugal 78 cents. The sums paid by each state, and particularly by France, out of the crown revenue, for the support of a great number of royal and public establishments, are included in this calculation.

Russian Manufactures.—A commercial paper of St. Petersburg has lately published various documents relative to the state of manufactures in Russia. From these it appears, that in 1828 there were in the empire 5244 manufactories of different kinds, which employed 225,414 workmen. The number of these establishments had increased 122 within the year. The rearing of fine-wooled sheep had made great progress in the direction of the Baltic, and even greater in the southern districts. M. Merenas, who acquired much knowledge in the management of silk-worms, during twenty years' residence in India, has been appointed to superintend plantations of the various trees, and other productions, necessary for their support. Measures have also been taken for improving the growth of the vine.

Crocodile's Age!—M. Beltrami, the author of some lately published travels in Mexico,

prides himself on being the first to make known the means of ascertaining the age of crocodiles: he says, "That a negro acquainted him with the fact, that a sort of bag is placed in the intestines of the crocodile, which always contains a number of stones corresponding with the years of its life; it being the custom of these animals to swallow a stone on their birthdays!"

Tea of Siberia.—M. Erman, son of the celebrated naturalist of that name at Berlin, who is now travelling in Asia, gives the following account of the tea used by the Russians in Siberia. "The leaves of different shrubs and plants (the true tea-plant being entirely omitted) are heated and curled in the same way as those of China, and are then made into hard cakes with the serum of sheep's blood. When required for use, one of these cakes is boiled with milk, butter, or mutton suet, and a very wholesome and nourishing food is obtained. This, and horse-flesh, are the principal articles of diet used in Siberia."

Academy of Sciences.—A considerable portion of the time devoted to the two last sittings of the Paris Academy of Sciences was taken up with the reading of papers on the organisation of fishes. One of the members read a long paper, to shew that all fishes had a marine origin; and that in the great irruption of the waters, the fishes of the sea were left in rivers, lakes, and ponds, where such could bear the transition, and survived, propagated, and left the fresh-water species which are now known. Some of the arguments advanced in support of this position are curious, but they did not seem to be convincing.

French Marble.—The Paris papers inform us that some splendid specimens of native marble, found in the quarries near Aix, have lately arrived at the Louvre, where, by their beauty and hardness, they have excited great admiration.

Parisian Statistics.—The number of births in Paris in 1829 was 28,521, viz. 14,560 males, and 13,961 females; the number of deaths was 25,324, viz. 12,021 males, and 13,303 females. These numbers, compared with the population, give 1 birth to 28.60 inhabitants, 1 marriage to 114.62, 1 death to 30.24. In 1817 the number of births was as one to 30.05, and the deaths as 1 to 33.79.

Egypt.—The *Astrolabe*, which has just finished a voyage round the world, has arrived at Havre, laden with the antiquities collected by M. Champollion in Egypt. Among them is a magnificent sarcophagus, weighing 12,000 lbs., and a capital weighing 4000 lbs.

How to smuggle en Militaire.—The good folks of Madrid have recently enjoyed a hearty laugh over as ridiculous a farce as the annals of smuggling ever recorded. Fifteen hundred gray trousers lay in dépôt for the first regiment of the guards in the village of Carabanchel; but the worthy custodians of the city gates would not allow the articles to pass through them without paying the duty to which all merchandise brought into Madrid is liable. The colonel of the regiment, however, had no inclination to brook the ignominy, but rode restive, and, on the 14th of February, marched his men out of town and halted them at Carabanchel. Here they stripped themselves of their under-garments, and, lodging them in their knapsacks, attired themselves in the new inexpressibles; this done, they marched back to their barracks, drums beating and colours flying, under the noses of the baffled fiscalists.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XVI. April 17.]
 The Aphorisms of Hippocrates; with a Free Version and Notes.—Gregory's Conspectus Medicinæ Theoreticæ, to be published in Numbers.—second volume of the British Naturalist.—A new edition of the Stories of regular Travels in South America.—Oxford English Prize Essays, now first collected.—A Disquisition on the Geography of Herodotus, with a Map; and Researches on the History of the Scythians, Getæ, and Sarmatians, from the German of Niebuhr.—A Manual of the History of Philosophy, translated from the German of Tennemann.—Reflections on the Politics, Intercourse, and Commerce, of the Principal Nations of Antiquity, translated from the German of A. H. L. Heeren; and also Professor Heeren's Manual of the History of the European States-System and their Colonies.—The Arrow and the Rose, and other Poems, by William Kennedy, whose preceding productions displayed so much poetical genius.—The Author of "Pelham" has in the press a new novel, to be called Paul Clifford.—Colonel Bory de St. Vincent has been appointed by the French Minister of the Interior to edit a work on Greece; and having directed the first expedition in the Morea, he will probably be able to furnish many particulars relative to that country. The book is expected shortly.

LIST OF NEW BOOKS.

Warner's Literary Recollections, 2 vols. 8vo. 11. 6s. bds.—Britton's Bristol Cathedral, 4to. 11. 4s.; Imperial 4to. 2s. 2s. bds.—Brady's Instructions to Executors, 3d edition, 8vo. 3s. bds.—Auldjo's Mont Blanc, 2d edition, 8vo. 11s. 6d. bds.—Monk's Life of Bentley, with Portrait, 4to. 3s. bds.—Cuvier's Animal Kingdom, Fossil Remains, 8vo. 11. 16s.; royal 8vo. 2s. 14s.; demy 4to. 3s. 12s. bds.—Burrows' Hours of Devotion, translated from the German, 8vo. 14s. bds.—Dean Graves' Sermons, 8vo. 11s. 6d. bds.—De Morgan's Arithmetic, 12mo. 3s. 6d. cloth.—Fenwick's Parisian Grammar, 12mo. 3s. 6d. hf.-bd.—Ezra, a Tale of the Druids; and other Poems, 18mo. 5s. bds.—Darwall's Plain Instructions in Management of Infants, 12mo. 6s. 6d. bds.—French and English Dialogues on the Literal System, 12mo. 4s. bds.

TO CORRESPONDENTS.

As the late arrival of Sir Walter Scott's volume has obliged us to displace for a week several of our Reviews and Notices: we have only room to mention, among our last receipts, the Creation, the Athenaid, Part II. of the Fall of Nineveh, and other poetical works of merit; an edition of the Pilgrim's Progress in a style worthy of Major, the publisher of Isaac Walton; the Life of Dr. Bentley, by Dr. Monk, Dean of Peterborough, and a production of great interest; Three Courses and a Dessert, with a multitude of wood-cuts which reflect honour even on the grotesque humour of Cruikshank, and on the art of Visselty and Branton; Picture of India, &c. &c. We cannot oblige "Mine Enemy" with insertion; nor can we find room for the fragment of W. G. H.: Y. Z. is too long; and Beppo not short enough. The Sword of Bruce, though spirited, wants some polish.

ADVERTISEMENTS

 His Grace the ARCHBISHOP of CANTERBURY, the Visitor of the College, in the Chair.
 By Order of the Council,
 H. SMITH, Secretary.
 3, Parliament Street, 14th April, 1830.

PHILOMATHIC INSTITUTION,

Burton Street, Burton Crescent. Mr. Thompson will, during the next Month, deliver Twelve Lectures on the Study and Practice of Elocution, illustrated by Readings, principally from the English Poets—the First on Friday, April 23d, at a Quarter-past Eight; the Second on Friday, April 29th, at the same hour. Visitors can be admitted only by the personal introduction or written order of a Member.
 Mr. Thompson continues to give advice and instruction for the Removal of every species of Vocal and Enunciative Impediment.

ORIENTAL LANGUAGES and GENERAL EDUCATION for INDIA.

LONDON ORIENTAL INSTITUTION, 2, South Crescent, Bedford Square. The Hindustani, Bengali, Persian, and Arabic Languages (some of which are now indispensably necessary for those holding high offices in the Company's Service), are taught here, with their true Pronunciation, by Professors who have studied them among the learned Natives of the East, and who have already prepared some hundreds of Gentlemen for the East India Service. A select number of youths receive Board and Education, with the Oriental, Classical, and Mathematical Instruction required for the Civil Service. The highest Reference can be given.
 Apply personally (or by letter, post-paid).

MINERALOGY. To be Sold, a fine

Collection of Russian Minerals, including Specimens of Native Gold, Platina, &c. each numbered according to a Descriptive Catalogue. The whole Collection consists of above 500 Specimens, many of which are extremely rare, and have been obtained from the more distant parts of the Russian Empire. The price is 250 Guineas.
 They may be seen at Mr. Baker's, Upholsterer, 72, Margaret Street, Cavendish Square.

TO FAMILIES going ABROAD.

Families going Abroad are respectfully informed, that an Individual who has had much experience in Tuition in different parts of the Kingdom, and for some years in London, and who can give the most satisfactory References, is desirous of accompanying, as a Classical and Mathematical Tutor, the junior branches of a Family intending to reside or travel in a foreign Country. He is competent to give instruction in the higher departments of Mathematical Literature, including Astronomy, &c. as well as in the usual branches of an English Education; also, in French, the principles of Chemistry, Natural Philosophy, History, &c. They will find in the departments of Education connected with their Scientific or Commercial Pursuits, the mode of teaching employed more easy and effective than the usual routine of scholastic Instruction.
 For further information apply to J. Hatchard and Son, No. 117, Piccadilly, or to J. and A. Arch, No. 41, Cornhill, London.

TO PARENTS and GUARDIANS.

A Young Lady of talent and genteel Connections, may be received as Articled Pupil in a First-rate School, established forty Years, and attended by the most eminent Masters. She will be treated with maternal kindness, and her moral and religious principles will be as carefully attended to as her intellectual improvements. Her course of instruction will comprise the English, French, and Italian Languages; the Piano-forte and Singing; the Harp; if wished for, the Needle, and the evolutions taught for it. A Professional Gentleman, or Widow Lady, moving in the higher ranks of Society, with a limited Income, will find this a desirable opportunity of giving a Daughter a liberal Education, at a fixed and moderate expense. Premiums, for Three Years, One Hundred Guineas; for Five Years, One Hundred and Fifty. The most satisfactory References will be afforded.
 Address, post-paid, with real Name and Address, to N. C., Post Office, Kensington.

CHOICE ENGRAVINGS. To be Sold by

In 1 vol. atlas folio, price 4l. 4s.; India Proofs, 6l. 4s. THE HISTORY AND ANTIQUITIES OF THE CHAPEL at LUTON PARK, a Seat of the Most Hon. the Marquess of Bute.

Published by Messrs. Carpenter and Son, Old Bond Street. The most splendid and elaborate specimen of private ecclesiastical architecture extant. The beauty of execution, and fidelity of detail, reflect great praise on the talents and perseverance of Mr. Shaw.

A TREATISE ON POISONS, in relation to Medical Jurisprudence, Physiology, and the Practice of Physic. By R. CHRISTISON, M.D. Professor of Medical Jurisprudence and Police in the University of Edinburgh.

To the medical jurist, from the novelty, accuracy, and practical bearing of the facts so copiously collected, it is indispensable. In short, it is, beyond comparison, the most valuable practical treatise on toxicology extant.

From this analysis our readers will be able to form an imperfect idea of the excellence, both as to matter and manner, of this classical work.

Elements of General and Pathological Anatomy; adapted to the present state of knowledge in that science. By David Craigie, M.D. In 1 thick vol. 8vo. 16s.

MILDA DE' LAMBERTAZZI; and other Poems. By SOPHIA MARY BIGSBY. London: Hurst, Chance, and Co. 68, St. Paul's Churchyard.

A SERIES OF SUBJECTS from the WORKS OF R. P. BONINGTON. Lithographed by J. D. HARDING.

Part III. will appear early in May. In 1 vol. 4to. price 3s. 3s. In boards.

Practical Hints on Painting.—I. On Composition. 3d edition, price 15s. 9s. On Light and Shade. 3d edition, price 18s. 3s. On Colour. 2d edition, price 11s. 6d.

Painters and their alleged Disciples. By Bryan. In two volumes, royal paper, with proof portraits of the painters.

A New Vitruvian Britannicus; containing the History and Antiquities of Wolurn Abbey, Bedfordshire, a Seat of His Grace the Duke of Bedford. By P. F. Robinson, Architect, F.S.A.

Part II. containing Hatfield, a Seat of the Marquess of Salisbury, will appear in the course of the present Year.

On the Landscape Architecture of the Great Painters of Italy, in 4to. Illustrated by 56 Plates, from the Pictures of Michael Angelo, Raphael, Dominichino, Claude, &c.

Rural Architecture, consisting of a Series of Designs for Ornamental Cottages, Lodges, Dairies, &c. By P. F. Robinson, Architect, F.S.A.

Designs for Ornamental Villas. By P. F. Robinson, Architect, F.S.A.

Designs for Villas on a moderate Scale of Expense. By J. G. Jackson. 4to. price 11s. 6d.

Designs for Villas in the Italian Style of Architecture. By Robert Wotton, Architect. Parts I. to IV. To be completed in Six Parts, 6s. each.

A Series of Views of Pompeii, by Colonel Light, with Plan and illustrative Letter-press, folio, 3l. 10s.; Proofs, 4l. 16s. 6d.

Price 6d. Part I. of a new, greatly improved, and cheap edition of THE ENCYCLOPEDIA BRITANNICA.

Part II will be published on the 30th of April.

In 12mo. 8s. boards. DIALOGUES ON NATURAL and REVEALED RELIGION, with a Preliminary Inquiry, an Appendix containing Supplemental Discourses, and Notes and Illustrations.

By the Rev. ROBERT MOREHEAD, D.D. F.R.S.E. &c. This is a fervent, yet sensible effort to implant religious feelings in the mind, by employing views of nature, and other simple but elevating means, instead of the usual forms of sermons and treatises.

This is in many respects one of the most interesting books that has fallen under our notice since the commencement of our literary career. We frequently meet with the eloquence of Hume combined with his ingenuity; while we enjoy throughout the purer satisfaction which arises from the exposure of sophistry, and from the development of the most important truths.

Besides the Preliminary Inquiry and the Dialogues on Natural and Revealed Religion, there is an Appendix of two hundred pages, containing ten excellent sermons, illustrative of the subjects handled in the former part of the volume.

We hold the present volume to be a valuable contribution to the stores of theological literature. It is eminently calculated to do good service to the cause of our common Christianity; and it, moreover, written in a clear, energetic, and elegant style.

Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

In 12mo. 7s. boards, the 2d edition, enlarged, of HISTORICAL SKETCHES OF the NATIVE IRISH and their DESCENDANTS, illustrative of their past and present State, with regard to Literature, Education, and Oral Tradition.

By GEORGE THOMAS ANDERSON. Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

Of whom may be had, by the same Author, The Genius and Design of the Domestic Constitution, with its untransferable Obligations and peculiar Advantages. Post 8vo. 10s. 6d. boards.

In 8vo. price 14s. boards. HOURS OF DEVOTION, for the Promotion of True Christianity and Family Worship. Translated from the original German.

By the Rev. E. J. BURROW, D.D. F.R.S. and F.L.S. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author, A Summary of Christian Faith and Practice, confirmed by References to the Text of Holy Scripture, compared with the Liturgy, Articles, and Homilies, of the Church of England; and illustrated by Extracts from the chief of those Works which received the Sanction of Public Authority, from the time of the Reformation to the final Revision of the Established Formularies. In 2 large vols. 12mo. 11. 1s.

In 12mo. price 5s. boards. A TREATISE ON CONFIRMATION, with Pastoral Discourses, applicable to confirmed Persons.

By THOMAS WILLIAM LANCASTER, M.A. Vicar of Banbury, and formerly Fellow of Queen's College, Oxford. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author, 1. The Harmony of the Law and the Gospel with regard to the Doctrine of a Future State. 8vo. 12s.

2. The Alliance of Education and Civil Government, with Strictures on the University of London, in Two Sermons, preached in St. Paul's Cathedral, before the Lord Mayor, &c. in 1828. 4to. 6s.

Elegantly printed in post 8vo. price 10s. 6d. with an Illustration by Martin, Proof Impressions of which may be had separate, price 2s.

THE ISLAND BRIDE; a Poem, in Six Cantos. By the Rev. HORATI CAUNTER, B.D. Published by Edward Bull, New Public Subscription Library, 96, Holles Street, Cavendish Square.

In 1 vol. 8vo. price 10s. 6d. HISTORY OF the PROGRESS and SUPPRESSION OF the REFORMATION in SPAIN in the SIXTEENTH CENTURY.

By THOMAS MACRIE, D.D. Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

Of whom may be had, by the same Author, 1. History of the Progress and Suppression of the Reformation in Italy during the Sixteenth Century, including a Sketch of the History of the Reformation in the Grisons. 8vo. 10s. 6d.

2. The Life of John Knox, 2 vols. 8vo. (A new edition preparing.)

3. The Life of Andrew Melville, 2d edition, 2 vols. 8vo. 11. 4s.

In 8vo. price 12s. in boards. SERMONS on some of the most interesting SUBJECTS in THEOLOGY.

By the Rev. GEORGE TOWNSEND, M.A. Prebendary of Durham, and Vicar of Northallerton. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author, The Old and New Testament, Chronologically arranged, with Notes and Indexes. 3d edition, in 4 large vols. 8vo. price 4l. in boards.

In 8 large vols. 8vo. price 6l. 2s. in boards. RECENSIO SYNOPTICA ANNOTATIONIS SACRÆ: being a Critical Digest and Synoptical Arrangement of the most important Annotations on the New Testament, Exegetical, Philological, and Doctrinal.

By the Rev. S. T. HOUMFIELD, D.D. F.A.S. Of Sidney College, Cambridge, Vicar of Bisbrooke in Rutland, and Author of a New Translation of Thucydides, illustrated with very copious Notes. 3 vols. 8vo.

In the foregoing Work it has been the especial aim of the author to ascertain the true Interpretation, not only by a diligent use of all the best Modern Commentators, but by exploring the fountain heads of interpretation, as found in the Ancient Fathers, and the Greek Commentators, Scholiasts, and Glossographers.

Every apposite illustration of phraseology or sentiment to be found in the multifarious and immense Collectanea, both of the Classical and Rabbinical Illustrators (especially Wetstein and Kypke, Lightfoot and Schreagen) has been selected, and many thousands of original ones have been added.

With the whole interwoven a Series of Critical Remarks, intended to guide the judgment of the student amid the diversity of jarring interpretations; and a very copious body of Original Annotations, in which the true reading is, in important cases, discussed, the connexion traced, the course of reasoning indicated, and in general whatever seemed necessary to complete the Corpus Exegeticos, is supplied by the editor, who has further consulted the benefit of students by forming a Series of Glossarial Notes on every word or phrase of the least difficulty, and occasionally by giving a new literal translation, or close paraphrase of the sentences annotated on.

Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Price 5s. 6d. boards. THE CAMBRIDGE UNIVERSITY CALENDAR for the Year 1830. Containing a List of all the Members of the University—the Tripos—List of Mathematical Honours for the last Eighty Years—Lists of Classical Honours, Prizes, Exhibition, Scholarships, Patronages, Degrees conferred during the Year 1829—a List of Representatives in Parliament of the University for the last Century—the Examination Papers for the Degree of Art, in Arts, in January, 1830, and for the Mathematical Prizes—Regulations for the previous Examination of Undergraduates—also a List of the Members of the Cambridge Philosophical Society, &c. &c.

Printed at the University Press, for J. and J. Dighton, sold in London by Longman and Co. C., J., G., and F. Rivington; Whittaker, Treacher, and Co.; J. Hatchard and Son; B. Fellows; Simpkin and Marshall; J. Richardson; and by Parker, Oxford.

Debrett's Peerage, corrected to Jan. 1st, 1830. In 2 vols. 12mo. price 11. 8s. boards, with the Arms elegantly engraved, the 18th edition of

DEBRETT'S PEERAGE of the United Kingdom of Great Britain and Ireland.

Printed for Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, London. Of whom may be had, uniformly printed, Debrett's Baronetage, new edition, (Sept. 1828). In 2 vols. price 11. 2s.

In 8vo. price 10s. 6d. boards. THE GERMAN PULPIT; being a Selection of Sermons by the most eminent modern Divines of Germany.

Translated by the Rev. RICHARD BAKER, A.M. Of Merton College, Oxford, and Chaplain to the British Residents in Edinburgh.

Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, London.

To those who are at all interested in the inquiry respecting the state of religion on the Continent, this volume will prove of remarkable interest; but it is also equally valuable, if not more so, as a collection of excellent discourses, full of striking and impressive views of religious truth, and furnishing the readers of sermons with an addition to their collection which will be of real use to them, as being wholly free from tame imitations of the style and ideas of those which they have formerly pursued.

In 2 vols. 8vo. THE LAW OF POPULATION; a Treatise, in Six Books, in disproof of the Superfecundity of Human Beings, and developing the real Principle of the Increase.

By MICHAEL THOMAS SADLER, M.P. John Murray, Albemarle Street.

In 1 large vol. 8vo. 16s. a new edition, corrected and greatly enlarged, of the PRINCIPLES OF POLITICAL ECONOMY.

By J. R. MCCULLOCH, Esq. Professor of Political Economy in the University of London. Best of other important American and British editions, which Government should interfere in Industrious Undertakings—Influence of Speculation on Prices—the Poor Laws—the Improvement and Letting of Land, &c. Also a comprehensive Index.

Printed for William Murray, Albemarle Street, London; and Curry and Co. Dublin.

Of whom may be had, Smith's Wealth of Nations, with large Additions by Professor McCulloch, 4 vols. 8vo. 37. 12s. 6d.

A LETTER to the COMMITTEE of MANAGEMENT of the SOCIETY for the SUPPRESSION OF MENDEICITY, in Red Lion Square.

By EDWARD PELLHAM BENTON, Esq. Captain in the Royal Navy, and Author of the Naval History of Great Britain.

London: C. Rice, 123, Mount Street, Berkeley Square.

In 3 small 8vo. vols. with many appropriate Illustrations from original Designs, 10s. In handsome cloth boards, THE PICTURE OF INDIA; exhibiting, in a brief, yet clear and graphic manner, the Geography, Topography, History, Natural History, Native Population, and Produce, of that most interesting Portion of the Earth; with a Particular Account of the European Settlements, with the present State of the British Territories, and an impartial View of the India Question, with reference to the impending Discussion on the Renewal of the Charter.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane. Also, The Picture of Australia, 10s. 6d.

In 2 vols. 8vo. 11. 4s. boards, FIRST LINES OF THE PRACTICE OF PHYSIC. BY WILLIAM CULLEN, M.D. Formerly Professor of the Practice of Physic in the University of Edinburgh, &c. &c. A new edition; with an Appendix, containing a View of the most important Facts which have been ascertained, and principles which have been adopted, since the Death of the Author, with the late William Cullen, M.D. &c. Continued and completed. By JAMES CRAUFURD GREGORY, M.D. F.R.S.E. &c. &c. Printed for Longman, Rees, Orme, Brown, and Green; and J. Duncan, London; Bell and Bradfute; and Adam Black, Edinburgh.

In 8vo. price 38s. boards, HISTORICAL RESEARCHES ON THE CONQUEST OF PERU, MEXICO, &c. in the THIRTEENTH CENTURY, by the MONGOLS. With Two Maps, and Portraits of all the Incas and Montezumas. BY JOHN RANKING,

Author of "Wars and Sports of the Mongols and Romans." "Indigeni del Messico e del Perù furono, senz'alcun dubbio, di origine Asiatica." "Tutto il mondo, come ha fatto di provarlo ultimamente il Signor Giovanni Ranking, in un'opera di somma erudizione, da lui pubblicata due anni sono in Inglese, col titolo di "Investigazioni storiche intorno la Conquista del Perù, del Messico, di Bugota, Natchez, e Talonoco, nel Decimotercio Secolo da Mongoli; accompagnata da elefanti, e concordanza della storia e della tradizione coll'esistenza d'avanti di elefanti e di mastodonti in America." La quale opinione, che abbiamo già Adattata in cotale guisa, ed a diversi tempi, abbandonato l'antico mondo per arrivare fortissimamente al nuovo, fu già presentita tre secoli sono dal padre Giusefello di Acosta, ed è ora stata dal Signor Ranking resa quasi indubitata per una serie di argomenti, prove, tradizioni, e conghietture, al complesso delle quali ci è pare difficilissimo, per non dire impossibile, il non arrendersi compiutamente. Robertson, de Humboldt, Pennant, Carver, Barton, ed altri, vanno in ciò d'accordo con noi. La sola parte del libro del Signor Ranking dove non ci possiamo coniarare, on lui, è quella che tratta delle cose dette antichità di Talonoco." "Retrato dell' Antologia, No. 104, Agosto 1829. "Montezuma said, in the presence of Cortez, We have heard by our ancestors, that we are strangers. A certain great prince, reported in our history, before the men of all men living, brought our ancestors into these countries; whether voluntarily, or driven by tempests, it is not manifest."—Peter Martyr, Decade V. chap. 3.

Price 2s. TRIBUTE TO THE MEMORY OF LORD BYRON, supposed to be written in the Sculpture Room of the Society of Arts, Birmingham. BY E. BAGGALL, M. A. Magdalen Hall, Oxon. London: Hurst, Chance, and Co. St. Paul's Churchyard; and W. Hodgkiss, Journal Office, Birmingham.

Post 8vo. 7s. 6d. MARY, QUEEN OF SCOTS; and other Poems. BY JOHN HENEGAE JESSE. "This is a beautiful poem."—Sharp's London Magazine. "A work of some labour and of historical recollections, as well as poetic verse."—Times. "Our author has produced a very graceful poem."—Literary Gazette. "A poem which Byron need not have blushed to have owned."—Edinburgh Evening Post. "The whole of it is far superior to that of any new candidate for poetic fame that we can remember."—Edinburgh Literary Gazette. John Murray, Albemarle Street.

Gray's Supplement to the Pharmacopœia, including the New French Remedies. 4th edition, much improved and enlarged, in 8vo. price 14s. A SUPPLEMENT TO THE PHARMACOPŒIA; being a Treatise on Pharmacology in general; including the Drugs and Compounds which are used by Practitioners of Medicine; with a Collection of the most useful Medical Formulae; and a large Collection of the most approved Horse and Cattle Medicines, and Perfumery. BY JAMUEL FREDERICK GRAY. Printed for T. and G. Underwood, 22, Fleet Street.

Of whom may be had, Thomson's Conspectus of the Pharmacopœia, &c. 6d. sewed.

2d edition, 8vo. price 1s. NATURAL HISTORY OF ENTHUSIASM, in Ten Sections, in which might be collected sufficient materials to stock any ordinary mind with subjects of reflection for a year."—Literary Gazette. "We shall be glad to meet again with the unknown but talented author of the Natural History of Enthusiasm."—Monthly Review. Haldworth and Ball, 18, St. Paul's Churchyard, London.

In 1 vol. 8vo. price 8s. THE TRUTHS OF RELIGION. BY JAMES DOUGLAS, Esq. of Cavers. Likewise, by the same Author, price 6d. Thoughts on Prayer at the present Time. Printed for Adam Black, 37, North Bridge, Edinburgh; and Longman and Co. London.

Withering's Botany—a new edition. In 4 vols. 8vo. price 2l. 16s. boards, AN ARRANGEMENT OF BRITISH PLANTS, according to the latest Improvements of the Linnæan System; with an Easy Introduction to the Study of Botany. BY WILLIAM WITHERING, M.D. F.R.S. F.L.S. Member of the Royal Academy of Sciences at Lisbon, &c. The 7th edition, with considerable Additions, including the most recent Discoveries, and numerous Annotations, illustrative of Vegetable Economy.

Cadell; J. Richardson; J. M. Richardson; Hatchard and Son; R. Scholey; S. Bagster; Baldwin and Cradock; Hurst, Chance, and Co.; Hamilton, Adams, and Co.; Whittaker and Penn; Whittaker, Treacher, and Co.; J. Duncan; J. Colburn; Simpkin and Marshall; W. Mason; G. Cowie and Co.; T. Bumpus; G. Wilson; T. and W. Boone; J. Dowding; W. J. and J. Maynard; Smith, Elder, and Co.; J. Bain; E. Hodgson; Houston and Son; and Strirling and Kenny, Edinburgh; and G. and J. Robinson, Liverpool.

H. K. White's Remains—the only complete editions. 12th edition, complete in 1 vol. 8vo. with Portrait, engraved Title, and Vignette, 5s. boards, THE REMAINS OF HENRY KIRKE WHITE; selected, with Prefatory Remarks, and an Account of his Life.

By ROBERT SOUTHEY, Esq. Printed for Longman, Rees, Orme, Brown, and Green. N.B. The property of the Family having been invaded, it is necessary to state that this and the edition in 2 vols. 8vo. (price 1l. 4s. boards), published by Longman and Co. are the only editions which contain the Life by Mr. Southey, and the contents of the third volume.

With 49 Engravings, price, in demy 8vo. 36s.; royal 8vo. 64s.; and in demy 4to. 3l. 12s. in cloth,

THE FOSSIL REMAINS OF THE ANIMAL KINGDOM. BY EDWARD PIDGON. This Work forms a Supplementary Volume to the Animal Kingdom, described and arranged in conformity with its Organization, by the Baron Cuvier; translated, with large additional Descriptions of the Species hitherto named, and of many not before noticed, and with other Original Matter. BY E. GRIFFITH, F.L.S., C. HAMILTON SMITH, F.L.S., and E. PIDGON.

The Class Mammalia, complete in Twelve Parts, with upwards of Two Hundred Engravings, forming Five Volumes, price, in extra cloth boards: Demy Octavo 27 4 0 Royal Octavo 10 16 0 ditto, coloured 14 8 0 Demy Quarto, India paper 14 8 0 The Class of Birds, complete in Nine Parts, forming three volumes, price, in extra cloth boards: Demy Octavo 15 8 0 Quarto, India paper 10 16 0 Royal Octavo 8 2 0 ditto, coloured 10 16 0

The Reptiles, Fishes, and Insects, will form about Sixteen Parts; the whole comprising about Forty Parts. It is so arranged, for the convenience of those who may confine their zoological studies to either of the classes, that each class will make a distinct work, as well as one of the series of the "Animal Kingdom." The conclusion will contain a tabular view of the system, a copious Index, and a general terminology of the science. The engraved illustrations of this work are in a superior style of execution, by different artists of distinguished eminence; and, among the rest, many are by Mr. Landseer. Most of them are from original drawings, made from nature; and several represent species altogether new, or never figured before.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane. Of whom may be had, price 10s. 6d. Popular Lectures on the Study of Natural History and the Sciences, Vegetable Physiology, Zoology, the Animal and Vegetable Kingdom, and on the Human Faculties, Mental and Corporeal. By WILLIAM LEMMON, M.D. 2d edition, to which has been added, Two Lectures on the Mammiferous Animals.

On Health and Long Life. AN ACCOUNT OF PERSONS remarkable for HEALTH and LONGEVITY; exhibiting their Habits, Practices, and Opinions, in reference to the best means of preserving Health, improving a bad or impaired Constitution, and prolonging Life. To which are added, Authentic Cases of Recovery from many severe and protracted Diseases, with the means successfully employed—a definite Plan for the Removal of that peculiar affection of the Throat to which Clergymen and other Public Speakers are liable—and Maxims for the Gouty, Paralytic, and Asthmatic. BY A PHYSICIAN. "A work replete with admirable precepts."—Number Mercury, July 1829. "It is drawn up with great knowledge of the subject; and we have seldom met with a production calculated to entail greater benefits on the community."—Sun, July 1829. "The motto of this book is Knowledge is Power; but its tendency is to show, that knowledge is even something better than power—in its health, and long life, and happiness."—Court Journal, July 1829. London: Published by Simpkin and Marshall; sold by all Booksellers.

Of whom may be had, by the same Author, 2d edition, price 8s. boards, 2. Sure Methods of Improving Health and Prolonging Life, by regulating the Diet and Regimen. Embracing all the most approved principles of health and long life, &c. Illustrated by Cases. "It is altogether an admirable code of health."—Atlas, September 1827. "The tendency of this volume to advance the important objects which it proposes is unquestionable, and we warmly recommend it. It is intelligent, practical, and highly interesting."—New Literary Gazette, Sept. 1827. "Men of all habits will derive information from it, calculated to increase their comfort and extend their days."—Edinburgh Observer.

Of whom may be had, by the same Author, 2d edition, price 8s. boards, 2. Sure Methods of Improving Health and Prolonging Life, by regulating the Diet and Regimen. Embracing all the most approved principles of health and long life, &c. Illustrated by Cases.

6th edition, with numerous additions and improvements, A CLASSICAL DICTIONARY; containing, under its different heads, every thing illustrative and explanatory of the Mythology, History, Geography, Manners, Customs, &c. occurring in the Greek and Roman Authors. BY THOMAS BROWNE, LL.D. Printed for Longman and Co.; Baldwin and Co.; J. Richardson; G. Bell; Whittaker and Co.; E. Hilliers; J. Duncan; J. Harris; J. Collingwood; Hamilton and Co.; Baileys; Simpkin and Co.; Harvey and Co.; T. Tegg; and J. Sonner.

Published by Effingham Wilson, Royal Exchange. In 12mo. price 9s. THE FUGITIVES; or, a Trip to Canada. An interesting Tale, chiefly founded on Facts; interspersed with Observations on the Manners, Customs, &c. of the Colonists and Indians. BY EDWARD LANE. Formerly a Resident in Lower Canada.

School and College Books. Just published by A. J. Valpy, M.A. Rev. Lion Court, Fleet Street, London; and may be had of all Booksellers. SCHOOL and COLLEGE GREEK CLASSICS; with English Notes, Questions, &c. At the express desire of many eminent Schoolmasters, Mr. Valpy has commenced the publication of a Series of such portions of the Greek Authors as are chiefly read in the upper classes of Schools and in Colleges. The best Texts are adopted, and the Critical and Explanatory Notes are presented, in a more inviting and accessible form than those of Latin Commentators, by avoiding that profuseness of annotation which frequently anticipates the ingenuity, supersedes the industry, and retards rather than promotes the improvement of the pupil. Examination Questions, adapted to the points discussed in the Notes, and Indexes, are also added; and the Series, it is hoped, will constitute a convenient introduction to the niceties and elegancies of Greek Literature, and to the perusal of that portion of the relics of antiquity which is best calculated to interest a youthful mind. Each volume will be sold separately; and it is intended that all shall be published in a cheap duodecimo form.

The following are already published:—Enripides—Hecuba. By the Rev. J. R. Major, Master of Wisbeach School, and of Trin. Col. Cam., 5s. Medea. By the Same, 5s. Phænissæ, 5s.

Sophocles—Œdipus Tyrannus. By the Rev. J. Brasse, D.D. late Fellow of Trin. Col. Cam., 5s. Œdipus Coloneus 5s. Antigone, &c. Trachinæ, &c. Analysis of Xenophon: the Text improved, chiefly according to Huxham; with English explanatory Notes and Illustrations of Idioms from Viger, &c.; examination Questions, and copious Indexes. By F. C. Belfour, M.A. Oxon. F.R.A.S. LL.D. In 1 vol. post 8vo. price 1s. 6d. boards. Demosthenes. Oratio Philippica I.; Olynthiaca I. II. et III.; de Pace; Œchines contra Demosthenem; et Demosth. de Corona. With English Notes, Questions, &c. By E. H. Barker. 8s. 6d. boards.

Thucydides, Herodotus, &c. will speedily be published on the same plan. 2. Greek Gradus; or, Greek, Latin, and English Prosodial Lexicon; containing the Interpretation, in Latin and English, of all Words which occur in the Greek Poets, from the earliest period to the time of Ptolemy Philadelphus, and also the Quantities of each Syllable; thus combining the advantages of a Lexicon of the Greek Poet and a Greek Gradus for the Use of Schools and Colleges. By the Rev. J. Brasse, B.D. late Fellow of Trin. Col. Cam. 8vo. 24s. boards.

"The indefatigable application required in the compilation of the 'Greek Gradus' is manifest; and we heartily recommend the work as a most judicious and useful school-book, and likely to be advantageously used to a very wide extent."—Literary Chronicle.

3. Second Greek Delectus; or, New Analeceta Minora; intended to be read in Schools between Dr. Valpy's Greek Delectus and Dalzell's Analeceta Majora. With English Notes, and a copious Greek and English Lexicon. By the Rev. F. Valpy, M.A. Trin. Coll. Cam., and one of the Masters of Reading School, 8vo. 6s. 6d.

4. Viger on the Idioms of the Greek Language translated into English, and abridged. By the Rev. J. Viger, 8vo. 6s. 6d. boards. "When you have a spare half-hour read Vigerus. Consult him again and again, and read him a third time while you are in statu pupillari. Have the book almost by heart."—Dr. Parr's Letter to Dr. C. P. Burney.

Hoogveen on the Greek Particles. By the Same. 7s. 6d. Also, Bos Ellipsea, 9s. 6d. By the Same.

5. Homer's Iliad, with English Notes to the First Six Books. 2d edition, 10s. 6d. 8vo. "This is perhaps the most useful edition of the Œneonian bard that has yet made its appearance. The author has judiciously enlightened the critical matter of his work by quotations from Pope's translation, and adorned it with a few parallel passages from the Roman poet, and from Milton."—New Monthly Magazine, Oct. 1816.

* * * Ask for Valpy's editions.

In a pocket volume, with 74 excellent Engravings, and a Map of London, from a new Survey, comprising all the late Improvements; together with a Map of Reference to the Squares, Public Buildings, and all Objects of Interest, 12s. bound.

THE PANORAMA OF LONDON, and VISITOR'S POCKET COMPANION; in a Tour through the Metropolis and its Environs, with a Description of the Buildings, and all Objects of Interest, 12s. bound. Author of the Histories of London, Lambeth, &c. "This work is a very gratifying treat to those who are acquainted with the edifices engraved and described, and to residents in the country, who are desirous of knowing places of which they are in the habit of hearing or reading." The pocket size and cheapness of the book is another no inconsiderable recommendation. —Gentleman's Magazine. Published by Whittaker, Treacher, and Co. Ave Maria Lane

6th edition, with numerous additions and improvements, 8s. bound.

A CLASSICAL DICTIONARY; containing, under its different heads, every thing illustrative and explanatory of the Mythology, History, Geography, Manners, Customs, &c. occurring in the Greek and Roman Authors. Under the especial Patronage of the King.
NATIONAL PORTRAIT GALLERY OF ILLUSTRIOUS and EMINENT PERSONAGES OF THE NINETEENTH CENTURY. With Memoirs.
By W. JERDAN, Esq. F.S.A. &c.

New edition, to be entitled the King's Edition, in royal 4to. with the earliest proof Impressions, price 7s. 6d. per Part. Encouraged by His Majesty having graciously consented to patronise the Work, and induced by the request of numerous Subscribers to the royal 4to. edition of Lodge's beautiful and splendid publication, the Publishers have determined to bring out a new and very superior edition of the "National Portrait Gallery," in royal 4to. to contain the choicest proof impressions, on India paper. For this purpose, the whole of the plates already published will be carefully reworked, (in future, the earliest impressions being reserved for those of whose destiny it is to visit the scenes in a larger type; and every other improvement studied that can possibly enhance its value.)

Parts I. to XII. of the King's Edition will be ready early in May.
Part XIII. the commencement of Vol. II. will be published on the 1st of May, and regularly afterwards on the 1st of each month.
Price 7s. 6d. per Part, containing Three Portraits, and their corresponding Memoirs.

OBSERVATIONS ON THE NATURE and TREATMENT OF CHOLERA, and on the PATHOLOGY of MUCOUS MEMBRANES.
By ALEXANDER TURNBULL CHRISTIE, M.D. Madras Medical Establishment, and lately in Medical Charge of the Civil Department in the Southern Mahratta Country. Printed for MacLachlan and Stewart, Edinburgh; and Simpkin and Marshall, London.
"We conclude our review of this book with a very favourable opinion of its author: the opportunities he had of investigating the disease were extensive, and he does not appear to have neglected them. The book contains much to praise, and but little to blame, and may be safely recommended to the profession, more particularly to those of whose destiny it is to visit the scenes where cholera commits its ravages."—*London Medical and Surgical Journal*, Dec. 1828.
"We consider Dr. Christie's work indicative of patience and research, experimental ingenuity, and general sobriety of induction, and we recommend its attentive perusal to our professional brethren, especially to those who may have occasion to visit the warmer latitudes."—*Medico-Chirurgical Review*, Dec. 1828.

In 8vo. 1s. sewed,
SPLENDID SINS. A Letter, addressed to His Grace the Duke of Wellington.

THE ARMENIANS. A Tale of Constantinople.
By CHARLES MACFARLANE, Esq. Printed for Saunders and Otley, Public Library, Conduit Street.
Of whom may be had, by the same Author,
Constantinople in 1828-29. 2d edition.
"Of all the tourists whom the late demand has tempted to the press, Mr. Macfarlane will, beyond comparison, most reward the reader. The main purport of his book is specifically adapted to the very point on which the curiosity of the moment is most alive. For the condition of this part of the Eastern World, of its politics, temper, and prominent interests just at present, an authority so recent and so satisfactory as Mr. Macfarlane is a greater piece of good fortune than it would have been reasonable to expect."—*Edinburgh Review*.

In a few days, 3 vols. post 8vo.
FIRST LOVE.
"Ma dirmi: al tempo de' dolci sospiri, A che s'come concedette amore Che concessete di dabboli desiri?"
"But tell me, in the time of your sweet sighs, By what, and how Love granted, that ye knew Your yet uncertain wishes?"—*Dante*.

REVIEW OF NEW BOOKS.

Three Courses and a Dessert. The Decorations by George Cruikshank. 12mo. pp. 432. London, 1830. Vizetelly, Branston, and Co. Of the most striking recommendation of this volume to very great popularity we can afford but a crude idea,—for it consists of a number of humorous designs, partly (as we gather) suggested by the author, and partly produced by the inimitable George Cruikshank, whose peculiar talent ranks him so high as an artist in this style of caricature. Nor have Vizetelly and Branston failed to distinguish themselves by the skill with which they have executed these decorations, which are not only remarkable for preserving expression, but for their Rembrandt-like effects, and the beautiful manner of their workmanship, emulating the finest branches of the graver's art. A crocodile preaching, a pudding inviting to dinner, a dog pointing a prisoner committed to his charge, a boor reading a road-post "to Reading and Devises,"* Cupids harpooning a whale, a baby oyster, steel-traps and spring-guns, tooth-drawing with a pitchfork, a lawyer and his clients (a fox biting off the heads of two geese at one mouthful), a duck swimming under an umbrella on St. Swithin's day, a black porter carrying a trunk (an elephant's), driving to Gretna, the dessert (human-faced ends of lemons), *dos-à-dos tête-à-tête*, are all admirable specimens of the ludicrous or grotesque, and all carved with infinite dexterity; so that, were the work possessed of no other merits, we should give it our hearty praise, as a passport to public notice for these alone.

But the literary portion of it has also claims to attention, as being both clever and entertaining. The *Three Courses* are three sets of tales or scenes, of considerable originality—the first, "West-country Chronicles," the second Irish, the third Legal, and the Dessert miscellaneous—the whole amounting to about forty dishes; so that the repast is various and ample enough, independently of the plates.

As we have recently transferred some amusing Irish stories to our pages, and as we do not think the present author most happy either in his levies upon Patland or his attempts at the broadly humorous, we shall select, as an evidence of his ability, a piece of a Devonshire description, which strikes us as likely to be considered more new and characteristic by the majority of our readers. Archibald Hackle, a London citizen, has gone down to visit his brother, Sir Waldron, the representative of the ancient squire-family of Hackle Hall, and meets there his other brother, Reginald, a clergyman with a good living not far from the place of his birth. The following is the conversation of these three "after they had made a tolerable lunch on a cold pigeon-pie and two quarts of very respectable ale. 'Well, brother Archibald,' said the reverend gentleman, as soon as the tray was removed—'and pray what aspect

does your native place wear to your eye since your long absence from it? But you were so young when you quitted it for a dismal, smoky, London-merchant's 'counting-house, that I suppose all recollection of it must have escaped your memory.' 'That's the positive truth,' replied Archibald; 'if I had remembered the place and its people—if the least remnant of a sample had cleaved to me—not even the pleasure of seeing you and Waldron would have induced me to have quitted the metropolis to pay it a visit.' 'You amaze me!' exclaimed Reginald; 'the hospitality—' 'Oh! I've had enough of hospitality, believe me; and so had Gulliver in the arms of the Brobdignag monkey, who ran away with him and poked pounds of nauseous chewed food out of his own jaws into his; people are sometimes offensively, cruelly hospitable. Here, now, for instance, was I taken yesterday by my brother for a treat—mark me—to dine with one Jehoshaphat Higgs—' 'Almost the sole remaining specimen,' interrupted Sir Waldron, 'of the fine, old English West-country yeomen;—a race, alas! now nearly extinct. I honour the man: he farms his own land; sends his sons to the plough, his daughters to the spinning-wheel, and his wife to the churn. He keeps up all the good old customs of the country; raises the mistletoe on his beam at Christmas, and dances round the May-pole with his buxom dame at seventy, as gay at heart, though not as light of limb, as he did at twenty: I repeat, that I honour such men.' 'Honour them as much as you please, Waldron,' replied Archibald; 'honour them, and welcome; but, I beseech you, do not entrap me to honour another of them—if, indeed, there be such another blade as old Jehoshaphat hereabouts—with any more visits. First, brother Reginald, conceive the misery, if you can, of dining in a room, falsely designated a parlour, with a sanded floor! My teeth were set on edge every time I moved a foot.' 'Ay, but, brother, provided the table be well covered,' observed Reginald, 'one might, methinks, even put up with a clean, dry, sanded floor.' 'Ay, ay, keep him to that, Reginald,' said Sir Waldron; 'the table was, indeed, well covered. I have not dined so well these three weeks. We had a full course of downright thoroughbred old English dishes;—Devonshire dainties of the first water; such as that transcendent lyrist, Robert Herrick himself, when he dwelt in this country, doubtless occasionally feasted on; compared with which, your modern kickshaws, your town messes, and hashes, and fricassees, and starved turtle, brother Archibald, are as shaff compared with its own grain. You shall judge, Reginald: among other things, there was a remarkably fine-flavoured muggot-pie;—a dish of which I find, by an old manuscript in our library, that the talented and virtuous Raleigh was remarkably fond, and moreover partook three days previously to his execution.' 'In my opinion,' said Archibald, 'a man who would be fool enough to prefer muggot-pie to—'

'It's fine eating, Archibald,' quoth Sir Waldron; 'would that you had tasted it!—and Sir Walter was a great man—fine eating, on the honour of a gentleman.' 'What! calves' tripe baked in a pie, fine eating!' said Archibald; 'if this be the result of your dwelling in Devonshire—' 'I never was out of it but thrice in my life,' said Sir Waldron; 'and each time I had cause to repent of my folly. But, to waive the muggot, had we not also parsley-pie?' 'Made, as it's name implies, of the herb that's used for garnish!' 'Squab-pie—' 'A horrible mixture of mutton-chops, apples, onions, and fat bacon! Most abominable!—the stench was enough to have defeated an army of civilised beings. In fact, the dinner given by Peregrine Pickle's friend the physician, in imitation of the ancients—' 'The ancients fed well,' observed Reginald; 'Heliogabalus—' 'Was a nincompoop to Queen Elizabeth's cook,' added Sir Waldron, rather warmly—'whose mistress was served with fine natural meat and drink—' 'Such as muggot, squab, and parsley-pies, I suppose,' quoth Archibald. 'The appetites of the Romans,' continued Sir Waldron, 'were in latter times depraved; and so is my brother Archibald's. Smollett very justly ridicules the feasts of the ancients in that passage of Peregrine Pickle where—' 'Really, brother Waldron,' interrupted Reginald, while a slight blush tinged his cheek, 'I must entreat of you to pass on to some other subject; you know we never agree on this: if I have a failing—if, said I?—I meant that among my numerous failings, that of being slightly irritable when the glorious masters of the world are attacked by one who cannot appreciate them, is, I am sorry to say, very conspicuous.' 'Exceedingly so, Reginald,' replied Sir Waldron; 'and if I have a virtue in the world—I beg pardon—among my numerous virtues, that of standing forth manfully for the customs of old England, and defending its literature against any man who presumes to set up the cold, classical, marbly stuff of the Greeks or Romans in preference, is certainly, I am proud to say, most paramount.' 'Pindarus quisquis studet emulari, brother Waldron,' exclaimed Reginald; but he was cut short in his intended quotation by Archibald, who said—'And if I plume myself on any merit of mine—except from my boyhood always having balanced to a fraction—it is on that of preferring a good carpet to a sanded floor; a Hoby's boot to a hob-shoe; a tooth by Ruspini, to fill up a gap made by time, to no tooth at all; a calf by Sheldrake, to make my left match with my right, to an odd pair of legs; a good dinner of fish, flesh, and fowl, at Cuff's, or the Albion, or in my own dining-room, to muggot, parsley, or squab pie, in Devonshire; a glass of claret to poor pinch-throat cider; punch to such filthy messes as buttered ale (hot ale with sugar, butter, and rum!), or meaty-drinky (ale made thick with flour!); and the company of two or three intelligent men over a bottle or a bowl, to all the famous authors, from Homer downwards,

* The fifth letter in this word is like a c over which a c is made.

Greek, Roman, and English; not one of whose works I ever found half so useful as the Tables of Interest, Patterson's Roads, or the London Directory.' This speech by no means raised Archibald in the estimation of either of his brothers. Sir Waldron thrust his hands deep into his pockets, and began whistling 'Lillibulero.'

The colloquy now turns on reading; the squire holding out for Chaucer, Sidney, Spencer, and the old English writers; the clergyman for the classics; and Archibald for the ledger and day-book.

"But, perhaps, (says Reginald) my brother Archy prefereth the authors of modern days, and they delight him to the exclusion of the fine old spirits of past ages." "Not so—not so, indeed," replied Archibald; "they are all the same to Archibald Hackle. I would rather have a good dinner than the finest feast of reason that ever enthusiast described. I prefer a roasting pig to Bacon; a Colchester oyster to Milton; a cut of the pope's eye to Pope's Homer; an apple-tart to Crabbe; Birch's real turtle to Ovid's Art of Love; and a roasted potato to Murphy. While others embark in man-of-war, frigate, merchantman, heavy Dutch lugger, hoy, yacht, bum-boat, gondola, canoe, funny, or other craft, for the wide ocean of literature—let me enjoy myself in port. I would, any day, barter a volume of *Sheridan* for a bottle of Dan sherry;—a second quarto for the first pottle of strawberries, or a book by—" "Brother Archibald, prithee do not run on at this rate," interrupted Sir Waldron; "you, surely, are not so lost to all intellectual delights as you pretend; you cannot be always employed at your business or your bottle;—to say the least, you must have some time to kill." "Kill! kill time!—Oh, dear! no," replied Archibald; "you know nothing about the matter. Time travels too fast by half to please me;—I should like to dip the old scoundrel's pinions. The complaints which I have heard occasionally, of time passing away so slowly, *emui*, and what not, are to me miraculous. Time seems to travel at such a deuce of a rate, that there's no keeping pace with him. The days are too short by half, so are the nights; so are the weeks, the months, and the years. I can scarcely get to bed before it's time to get up; and I haven't been up but a little time, apparently, before it's time to go to bed. I can but barely peep at the Gazette, or any matter of similar interest in the papers, and swallow an anchovy-sandwich, and a couple of cups of coffee, when it's time to be at the 'counting-house. By the time I have read the letters and given a few directions, it's time to be in a hundred places:—before I can reach the last of them, it's time to be on 'Change;—I don't speak to half the people there, to whom I have something to say, before it's time to reply to correspondents; and my letters are scarcely written before its post and dinner time. Farewell business!—but then there's no time for enjoyment: dinner, wine, coffee, supper, and punch, follow in such rapid succession,—actually treading on each other's heels,—that there's no time to be comfortable at either of them. It's the same in bed;—a man must sleep fast, or time will get the start of him, and business be behind-hand an hour or two, and every thing in disorder next morning.—If I accept a bill for a couple of months, it's due before I can well whistle: my warehouse rents are enormous; and, upon my conscience, Lady-day and her three sisters introduce themselves to my notice, at intervals so barely perceptible, that the skirt of one of

the old harridan's garments has scarcely disappeared, before in flounces another. It's just as bad with the fire-insurances, and a thousand other things, little matters as well as great: a man can scarcely pick his teeth before he's hungry again. The seasons are drawn by race-horses; my family has barely settled at home after a trip to Buxton, Brussels, or elsewhere, before summer comes round, and Mrs. H. pines for fresh air and an excursion check again. I can scarcely recover the drain made on my current capital by portioning one daughter, before another shoots up from a child to a woman; and Jack This or Tom T'other's father wants to know if I mean to give her the same as her sister. It's wonderful how a man gets through so much in the short space of life; he must be prepared for every thing, when, egad! there's no time for any thing.' "Can this really be the fact?" inquired Reginald, incredulously. "I give you my word and honour it is." "But," said Sir Waldron, "you have actually complained to me, this morning, how the past week has 'dragged its slow length' along with you." "To be sure it has," replied Archibald; "because I'm here—where I've nothing to do—and nothing to eat." "Nothing to eat, Archibald Hackle!" exclaimed Sir Waldron, drawing himself up with an expression of offended dignity; "Hackle Hall, sir, is almost an open house, even to the way-farer;—you are one of its sons. I trust I have supported the honour of our ancestors while it has been in my keeping;—if you think otherwise, brother Archibald, and can shew that I have not deported myself as becometh the head of the family, although you are my younger brother, I lie open to your most severe censure." "My dear fellow," said Archibald, in a familiar manner, that Sir Waldron deemed altogether unsuitable to the circumstances of the moment, "my dear fellow, I don't care a pepper-pod about the honour of our ancestors." "Not for the honour of our ancestors, brother Archibald!" exclaimed Reginald, raising his eyebrows, and laying considerable emphasis on every word, so as to make himself clearly understood. "Ay, sir!" said Sir Waldron sternly; "not for the honour of our house, eh?" "Not a pepper-pod!" replied Archibald, coolly. "I have other things to trouble me:—I care more about the house of Van Bummel and Croots of Amsterdam honouring its bills; except, indeed, that this house is your property, Waldron;—but I suppose, of course, it's insured;—you couldn't be such a fool as not to insure it;—and therefore, perhaps, the sooner it's burned down the better, if it wasn't for the loss to the company; for, to speak the truth, it's one of the ugliest edifices I ever had the honour of beholding. I dare say it was well enough a few centuries back; but it has been so patched, and with so little attention to order, that it looks as bad as a beggar's coat. It's a compound of the tastes of every half century for these four hundred years past, and harmonises remarkably well, brothers, with the range of our ancestors' portraits in the gallery;—there they are, bow-legs and bandy-legs, fat old fellows in flowing wigs, who remind one of porters at a masquerade, and brawny ruffians in armour, whose looks would half hang them, without other evidence, in any court in the kingdom:—Roundheads, cavaliers, churchmen, and knights of the shire;—mitres and helmets, cocked hats and cones, with women to match for each generation;—tag-rag and bob-tail, pell-mell, higgledy-piggledy,—in all styles, costumes, forms, and fashions!" "Those portraits, sir," exclaimed

Sir Waldron, 'are invaluable—invaluable, sir!' "They wouldn't fetch a pound a-piece, one with another, by auction," replied Archibald; "the collection is just like the house itself; to which each generation seems to have added its quota, more in accordance with the fashion of the day than the character of the building. What remains of the original masonry reminds me of an old iron chest; and the affair altogether, with its turrets and chimneys sticking up, of various sizes and forms, resembles nothing in the world (except its gallery of portraits) but an old cruet-stand, furnished with odd bottles. The squat, round, flat-headed west turret, with the flag-staff without a flag, overhanging one side of it, resembles a tenpenny mustard-pot; the little trumpety dome that stands up at the east, a pepper-castor; the tall chimney, almost in the centre, the neck of a slender vinegar-cruet; the—" "Sdeath! brother Reginald," interrupted Sir Waldron, "are we to bear this?" "No—really, I think Archibald is going to lengths which are not decidedly to his credit," said Reginald. "I would take leave to tell him," continued Sir Waldron, "if he were not under my roof, and in the honourable house of his ancestors, that the expressions he has used are derogatory to his elder brother's dignity. I have always endeavoured to support the name of Hackle, in the county, in its proper rank: I am proud to say there is not a blot in my escutcheon."

Archibald, however, still urges his complaints against every thing and every body—among others, the old housekeeper, as an intolerable nuisance. "Last night (he says) she spent full half an hour imploring me to suffer her to close the shutters and pin up the curtains of the east window of my bedroom, to prevent the rays from my candle shooting across the park-path outside; which rays, as she protests, impede our grandfather's ghost very much in his nightly rambles: it seems that he frequently walks down that path; but as a Devonshire ghost cannot cross a ray of light from a candle, the good old gentleman is compelled to go round, or kick his heels in the cold until I get into bed. One of your tenants, brother Waldron, told me, with a very grave face, that he has often met our grandfather, in the middle of night, with old Geoffry his huntsman, and a whole pack of hounds, hunting a stag at full speed; that he has actually opened the gates for the old man and his ghostly pack to pass through; and that although 'squire, huntsman, dogs, and stag, are without heads, he recognises and honours them! Why, the man must be either a natural idiot, or travelling fast towards lunacy; and yet he's accounted a positive Sir Oracle in these parts. It is said, our ancestor is seen in all forms, by various persons, at different parts of the village: one scoundrel has had the impudence to tell me that he met him one night in Blackpool Lane in the form of a woolpack! and that he gave him a cut with his whip as he rolled at full speed along the road! Now, admitting that ghosts walk or run, how he could know Sir Jonathan in the shape of a woolpack is to me a miracle:—but so it was—he knew him; he'll swear to it; and may I be posted at Lloyd's, if the villagers don't believe him. But I'd forgive them almost every thing if they'd let the church bells alone, and wouldn't roar choruses: every evening, between six and eight, some of the brawny vagabonds go to practise triple-bob-majors, or grandsire-trebles, in the belfry;—thus agonising my ears with the most atro-

dious music that ever was inflicted on suffering man : to mend the matter, I've a natural antipathy to all bells except the waiter's and the postman's. It occurs very unluckily for me that I should arrive among you in a week of merry-making ending with a revel ; and go where I will, my ears are assailed by execrating songs, all of which, without exception, have some terrific chorus tacked to the tail of each verse, which the rogues bellow in such a way, that I'm often obliged to take to my heels in mere self-defence. The song which just now seems to be most fashionable in the village I have heard so often, that, much against my inclination, I know every word of it ; I feel it humming in my brain when I awake in the morning, and my watch ticks it when I go to bed at night. I will be judged by any reasonable man, if the eternal affliction of such words and sounds as those which I am about to utter, vociferated by Stentorian lungs, is not enough to drive a decent being, with a nice ear and moderate taste, mad :—you shall hear.' ' Pray don't trouble yourself, brother,' said Reginald. ' Nay, but, with your leave, I insist upon giving you a specimen : match it for sense in all Europe if you can :

' My father a' died, but a' didn't know how,
A' left I rix hosses to vollar the plough ;
W'f my wim, wom, woddle, oh !
Jack, strim, strodle, oh !
Bubble, boys ! bubble, boys !
Down by tha brook !'

' Enough, enough, brother,' said Reginald : ' I lament that you should be so dissatisfied with your visit.' ' Not at all, sir ; I'm not at all dissatisfied. I'm perfectly satisfied with it : it has cured me of a mania I've had all my life of enjoying rural felicity, and Devonshire, my birth-place, in my old age : I've seen quite enough of it to make me put up with London or Clapham Common, and rest contented. Besides, I've seen you and Waldron ;—God bless you both, my boys !—I shall be glad if you will run up to town now and then :—I leave my boy to your care, Reginald ;—and to-morrow I start.' "

Narrative of a Tour through some Parts of the Turkish Empire. By John Fuller, Esq. 8vo. pp. 560. London, 1830. Murray.

THE author of the volume before us is, we doubt not, a very amiable man, and this record of his personal sojourn and travel in classic land will, of course, be received by his immediate friends with interest and delight, (and it was, indeed, originally meant only for private circulation) ; but to the world at large, it will still be a matter of indifference how John Fuller, Esq., while travelling through the Turkish empire, ate, drank, or slept ; what he endured from thunder, lightning, hail, or rain ; how he sickened, how he got well, or how, at last, he got home again. Fifteen years ago, the appearance of a work of this standard would have caused a sensation among general readers : Turkey, Egypt, Syria, were almost *terra ignota* ; but the locust herd of literary adventurers have long since swept the light honey from the flower. So great, of late years, has been the confluence of strangers in European Turkey, that the religious prejudices of this warlike people have sensibly softened, from the frequency of the intercourse : in Egypt, the restless sand of the desert has been almost tracked by their feet ; the sound of foreign tongues mingles with the rushing cataracts of the Nile ; the loud laugh of the boyish wanderer is heard sportively reechoing with its echoes the deserted temples of the Coptic race ; while the spot where the holy drama of our blessed re-

demption was enacted, formerly the resort only of the way-worn pilgrim, or the less frequent enterprising traveller, is now thronged with droves of visitors for the mere gratification of curiosity. The eyes of the inquiring world are now fixed upon these parts, and look for information from men of greater intellectual calibre than Mr. Fuller, and to higher sources than the ephemeral journals of hurrying travellers ; the qualifications necessary for a writer to get a-head of the knowledge already transmitted to us, are by no means every-day ones. He who would devote himself to tracing the history and analogy of the various tribes, the investigation of the manners and customs of the dwellers in Egypt, must learn to assimilate his own bearing and deportment to theirs, and to look into the minds of men with the close observance, yet seeming simplicity, of Sheikh Ibrahim ; he who would successfully explore her various-featured antiquities, should possess the iron frame, the perseverance, of Belzoni, and the genius and learning of a Dr. Young, for their elucidation. Let it not be supposed that we mention these difficulties to deter others from this field of honourable enterprise ; our desire is to enlist ardent spirits, capable of further prosecuting the daring work of raising a language from the dead, and of revivifying arts and sciences, so long condemned to the same tomb. But our enthusiasm is leading us away from all connexion with our task, and we must descend to Mr. Fuller's book : it is an octavo volume, of no fewer than five hundred and sixty pages, containing a diary of occurrences and observations during a journey, undertaken so far back as 1818, through parts of the Turkish empire, including Egypt and Syria. The style is light and agreeable, and we must add that it is ushered forth in the most unpretending tone. We never recollect to have read a volume of travels, particularly in the East, more fitting for female perusal, or affording such direct evidence of the author's being a delicate-minded man, and a gentleman. We must endeavour to gather from our traveller's notes by the road-side, an extract by way of specimen ; and upon again turning over the volume, almost in despair of a novelty, we select a curious account of the ceremony of a Christian wedding, and a very well-told tale which forms the sequel to it.

" The population of Aleppo is considerable, and almost exclusively Mahometan ; for the Ensyrian idolaters reside chiefly in the villages, and not more than a hundred Christian families are now to be found at this primitive seat of their religion,—all of them Greek schismatics. To one of the principal of these, —a young man named Yussuff Saba,—I had letters of introduction from Moosy Elias. He received me very kindly, but excused himself from lodging me in his house, which he said was in a state of great confusion. An old steward who had lived for many years in his family was going to be married ; and, according to the customs of these countries, where the distinction between master and servant is not so strongly marked as among nations which have made a greater progress in refinement, the marriage was to take place at his master's house ; and Yussuff, in order to shew his respect for his old domestic, had determined that it should be celebrated with due magnificence. The ceremony was not to take place till two days afterwards, but the visitings and feasting had already commenced, and the bustle of preparation was at its height. Yussuff therefore provided me with an apartment at the

house of his brother-in-law, another wealthy Christian, where he thought I should be more quiet than in his own. During the greater part of the next day the rain kept me in-doors ; and when evening came, I was glad to seek for amusement in a visit to the wedding party. I found a large assembly, chiefly composed of the Christian inhabitants of the town, but intermixed with a few of the neighbouring Ensyrian peasants. In the middle of the room was an emaciated old man with gray hair and beard, whom I soon discovered to be the family buffoon. The company seemed much amused by his odd sayings and grotesque attitudes ; but the most effective part of his wit appeared to consist in the enormous quantity of aqua vite which he drank, and at every draught there was a general peal of laughter. Nor did the other guests appear less disposed to imitate than to applaud old Simone, as a small glass was handed round at least every quarter of an hour, and I observed very few who ever allowed it to pass. The Christians in the north of Syria are extremely addicted to aqua vite, partly from taste, and partly because their Mahometan neighbours are confined to water only. Drinking they therefore esteem a distinctive mark of their religion, and their zeal and orthodoxy are gauged by the quantity of strong liquors which they are able to swallow. The other amusements of the evening were singing and dancing, in which several of the company took a part. The most favourite vocal performer was a young Jew from Aleppo, whose appearance was greeted with general acclamation. He had a very fine voice, and was an adept in the art of singing after the Eastern fashion. The applause which his shrill and nasal tones excited was quite enthusiastic, and I never saw so great an effect produced by the performances of Braham or Catalani. The delight of the audience was expressed by every look and gesture ; till one by one almost all rose from their seats, stamping their feet and clapping their hands in time ; while the youth placing the hollow of his hand behind his ear, poured forth his harsh notes with all the strength of his lungs. In the intervals of the singing, dancing was introduced,—an exercise of which the inhabitants of Upper Syria are very fond, and in which they excel. Their dances are generally executed by one or two persons only ; and some of them (the sabre dance especially, a sort of mock single combat, derived probably from the ancient Pyrrhic) are spirited and picturesque. The performances on this occasion, however, were chiefly in that peculiar style which is prevalent throughout the East ; and as the evening advanced and the aqua vite circulated, it was highly diverting to see even 'grave and reverend seniors' imitating the attitudes of Egyptian Almebs. The Christians of Antioch, it appears, do not think that so natural an exercise as dancing can be unbecoming at any age. During the time that these festivities were going on among the men, the ladies, if we might judge from the frequent cry of joy which proceeded from their apartment, were amusing themselves equally well. About an hour after midnight the party broke up, having passed the evening with the greatest harmony, and without riot or excess. They seemed much pleased by the presence of the stranger-guest, and as a mark of their attention I was escorted to my own lodgings by several of the young men, preceded by a drum, a pipe, and a mandolin. Sunday the 16th was fixed upon for the wedding, the preliminary rejoicings having already lasted three days. The

length of time during which these festivities continue is regulated by the wealth and rank of the parties. In some families they are protracted for ten or fourteen days, to the extreme disorder of the household. The ceremonies, as far as I had an opportunity of observing them, were as follows. About three o'clock the young friends of the bride having collected together in the house of Yussuff Saba (which on this occasion was supposed to belong to the bridegroom), the latter was obliged to relinquish it to them, and seek refuge at that where I was lodged. He made but a forlorn appearance, as custom required that for several days preceding the wedding he should let his beard grow and wear his oldest and shabbiest clothes. As soon as the bridegroom's house was thus clear for her reception, the women sallied forth to fetch the bride from the abode of her parents. There were about fifty of them, all dressed in white veils, which covered their faces and almost their whole figures; they carried garlands of flowers in their hands, and walked in procession with a hurried and irregular pace. There was not any crowd collected in the streets to see them pass, as the Mahometans, either from disdain or from courtesy, make it a rule to keep aloof from all Christian festivals. About an hour after sunset a party of friends came to fetch the bridegroom, whose chin had been polished in the meantime, but who was still dressed in his old clothes; and he was conducted by torch-light to Yussuff's house. I accompanied the procession, and on our arrival we found the court crowded with friends and spectators. A mat was spread out in one corner, on which the bridegroom's new clothes were placed; and by the assistance of four priests, who acted the parts of valets on this occasion, he was speedily disencumbered of his old ones, and re-equipped from top to toe. Like the *Bourgeois Gentilhomme*, he was dressed to the sound of music; for the priests during the whole of the operation kept droning out a most melancholy and nasal psalm tune, in which the spectators who stood round, each with a lighted taper in his hand, occasionally joined. As soon as the dressing was completed, we adjourned into a large room which opened on the court, and in the middle of which stood the bride and the bridemaid: the bride was covered with a long white veil, which flowed down to the ground and concealed her whole figure; in addition to which, a rose-coloured gauze handkerchief was thrown over her head and face, and fell down to her waist. Her companion wore the same dress with the exception of the handkerchief; and as they stood alone and motionless in the middle of a large room, no one would have taken them for animated beings. At their feet were crouched two of the most miserable squalid-looking objects that I ever beheld, whose dirty rags seemed ill-suited to the place and the occasion. On my asking, 'How they came there without a wedding-garment?' I was told that they were poor sick women, who were admitted because to hear the marriage benediction was considered a certain remedy for their disorders. As soon as the immediate friends had been introduced, the doors were closed; so that the room was not at all crowded, the party consisting perhaps of about thirty persons. The bride and bridegroom were placed side by side; the chief priest stood facing them and repeated certain prayers or lessons, to which the others responded; he then crossed the ring three times on the forehead of the bridegroom, and as often on that of the bride, and gently drawing her delicate little

hand from under the rose-coloured veil, placed it on her finger. A coronet ornamented with flowers and gilding was set on each of their heads, and each took a sip of wine from a silver cup, the priest drinking the remainder. They then joined hands, and with their attendants walked at a measured pace, keeping time to a chant sung by the priests three times round the altar, which on this occasion was typified by a small joint-stool placed in the middle of the room. After this the benediction was pronounced, and the ceremony concluded. The bridemaid now led back the bride to join her companions in the women's apartment, from whence during the ceremony the joyful cry of, 'Lillah, lillah, lillah,' had frequently reached our ears, and the house was again left to their sole possession. All the men immediately retired to my lodgings, and the evening and great part of the night was spent in the same revelry as the preceding one had been; singing, dancing, and drinking, being kept up till near day-break. The bridegroom, accompanied by a young friend who acted as his brideman, remained in one corner of the room aloof from the rest of the company, with a large candle burning before him, and exhibiting him as a clearer mark for the jests, neither few nor delicate, with which he was assailed on all sides. I was told that, according to strict etiquette, he ought to have been kept standing on one leg; but this inconvenient formality was dispensed with; he was allowed to use both, and even to sit down, except when any person of consequence was singing or dancing. With all this, however, to quote the words of another traveller on a similar occasion, 'for a man in so enviable a situation as that of a bridegroom, he made but a sorry figure;' and being, moreover, a very grave and staid-looking person of about fifty years of age, the effect was the more ludicrous.—17th. The weather still continued so rainy that I could not go out, and about twelve o'clock I was fated to see my apartment again filled with guests, who came to amuse the afternoon in the usual way. About sunset we repaired to Yussuff Saba's, where the festivities were concluded by a grand supper, at which about sixty persons sat down. As soon as it was over, the bridegroom took his leave of the company and was admitted to the women's apartment, where he would for the first time behold the features of his bride, the business of courtship in these countries being carried on by the intervention of a third person, and the lady being carefully kept from the lover's sight till after marriage. The rest of the company adjourned to my room, and the amusements of the former evening were revived. I perceived, however, that the spirit of the party had very much evaporated. Several of the most popular performers had retired to their own homes, and those who remained appeared jaded and exhausted by the long-continued revels. I was in hopes that they would have departed early and have left me to repose; but old Simone the buffoon came out in the new character of a story-teller, and kept his audience together till long after midnight. The intervals in his narration, occasioned by his frequent draughts of aqua vitæ, afforded the interpreter an opportunity of giving me the outline of several of his tales; but I did not think any of them so good as that of

"The Jew of Hamah."—Once upon a time there lived in Hamah a certain Turk called Mustapha, who, having accumulated some wealth by carrying on a trade in goats' hair, determined to make a pilgrimage to Mecca.

His family consisted of his wife and two slaves; and as the lady insisted on not being left behind, the good man resolved to sell off his stock of goats' hair, to take all his household with him, and to shut up his house till his return. The only difficulty that presented itself was what to do with his money. He did not like to run the risk of being robbed of it in his journey through the desert, he did not like to leave it in an empty house, and there were not any of his friends to whom he wished to trust the secret of his wealth. After much deliberation he placed it in separate parcels at the bottom of five large earthen jars, which he then filled up with butter, and on his departure sent them to the house of one of his neighbours, a Jew named Mousa, to keep till his return, telling him that it was a stock which he had laid in for winter consumption. The Jew, however, from the weight of the jars and other circumstances, suspected that they contained something more valuable; and as soon as Mustapha was fairly on his way to Damascus to join the caravan, he ventured to open them; when finding his expectations realised, he took out the gold and filled them up again with butter so carefully, that nobody could tell that they had been disturbed. The poor Turk, on his return from the pilgrimage, soon found out the trick that his neighbour had practised upon him; but as the jars were exactly in the same apparent state as when he left them, and as there was no evidence as to their contents, it was plain that no legal process could give him any redress. He therefore set about to devise some other way of punishing the Jew, and of recovering if possible his property; and in the mean time he did not communicate his loss to any person but his wife, and enjoined on her the strictest secrecy. After long consideration, a plan suggested itself. In one of his visits to the neighbouring town of Homs, where he was in the habit of going to sell his goats' hair to the manufacturers of the mashlaks, for which that place is famous, he fell in with a troop of gypsies, who had with them an ape of extraordinary sagacity. He prevailed on them to sell him this animal; and conveying it privately to his house at Hamah, shut it up in a room to which no one but himself had access. He then went to the bazar and bought one of the dark scanty robes and the small caps or *kalpaks*, with a speckled handkerchief tied closely round it, which is the prescribed costume of the Jews throughout the Turkish empire. This dress he took care invariably to put on whenever he went to visit his ape; and as he always carried him his meals, and indeed never allowed any other person to see him, the animal in the course of a few weeks became extremely attached to him, jumping on his neck and hugging and caressing him as soon as he entered the room. About this time, as he was walking along the streets one day he met a lad, the son of the Jew Mousa, and having enticed him into his house by the promise of some figs, he shut him up a close prisoner in a detached apartment in his garden, at such a distance from the street and from the other houses in the town, that the boy could not discover to any one the place of his confinement. The Jew, after several days' search, not being able to obtain any tidings of him, concluded that he had either been drowned, or had strayed out of the town and fallen into the hands of some wandering Bedouins; and as he was his only child, fell into a state of the greatest despair: till at length he heard by accident, that just about the time that the boy was missing, he had been seen walking in company with

Hadgi Mustapha. The truth instantly flashed on his mind, and he recognised in the loss of his son some stratagem which the Turk had planned in revenge for the affair of the butter-jars. He immediately summoned him before the cadi, accused him of having the boy in his possession, and insisted on his immediately restoring him. Mustapha at first strenuously denied the fact; but when one of the witnesses positively declared that he saw the boy go into his house, and when the cadi was about to pronounce his decree, that he should bring him into court dead or alive,—‘*Yah illah, el Allah!*’ he exclaimed, ‘there is no God but Allah, and his power is infinite; he can work miracles when it seemeth good in his sight. It is true, *effendi*,’ continued he, addressing himself to the cadi, ‘that I saw the Jew Mousa’s son passing by my house; and for the sake of the old friendship subsisting between his father and myself, I invited him to come in and to eat some figs which I had just been gathering. The boy, however, repaid my hospitality with rudeness and abuse: nay, he even blasphemed the name of our holy prophet; but scarcely had the words passed his lips, when, to my surprise and horror, he was suddenly changed into a monkey. In that form I will produce him: and as a proof that what I tell you is true, you will see that he will immediately recognise his father.’ At this instant a servant who was waiting on the outside let loose the ape into the divan, who seeing that the Jew was the only person present in the dress to which he was accustomed, mistook him for his master, jumped upon him, and clung round his neck with all the expressions of fondness which the child might have been supposed to exhibit on being restored to his parent. Nothing more was wanting to convince the audience of the truth of Mustapha’s story; ‘A miracle, a real miracle!’ they cried out, ‘great is Allah, and Mahomet is his prophet:’ and the Jew was ordered to take the monkey and retire from the court. A compromise was now his only resource; and accordingly, as soon as it was dark, and he could go unobserved, he repaired to Mustapha’s house, and offered, if he would liberate his son, to restore all the money which he had taken from the butter-jars. The Turk having attained his object, consented to release his prisoner; but in order to keep up his own credit, he stipulated that the child should be removed privately, and that the father, with his whole family, should immediately quit the place. The popular belief in the miracle thus remained unshaken; and so great was the disrepute into which the Jews fell in consequence of this adventure, that they all departed one after the other, and none have ever since been known to reside in Hamah.”

New Reise um die Welt, &c.—A second Voyage round the World. By Sir O. von Kotzebue, Commodore in the Russian Navy. 2 vols. 8vo., with 2 engravings and three charts. St. Petersburg and Weimar, 1830.

THE original object of the voyage was purely scientific; but it was subsequently changed to that of supplying Kamtschatka with materials, and protecting the Russo-American Company from the contraband traffic carried on by foreign traders on the north-west coast of America. What may have been in some respects a loss to science, has probably proved a gain to the general reader; because the absence of those dull, though important details, from which the latter would have recoiled, has been supplied by a most intelligent and amusing

delineation of the state of nature and mankind in the motley regions which the author had occasion to visit during a two year’s circumnavigation.* The result, indeed, of his inquiries fully bears him out in a personal allusion which he casually makes in the second volume; where, he says, an old English captain boasted that there was no happiness so great as that of commanding a stout and swift-sailing vessel, sitting down to a good table, and incessantly navigating between the tropics, without once setting foot on shore! “I confess,” the author remarks, “that this right seamanlike declaration is not in unison with my own feelings. Though it is by no means an uninteresting task to bring a vessel in safety through distant oceans, and triumph over the inconstancy of the elements, yet I ever found it a source of far higher delight to acquire a knowledge of unknown countries and unknown fellow-creatures, and always looked upon the perils of the seas as an ordeal leading to such a recompense.”

His good ship, the frigate “Predpriatie,” (or Enterprise), was constructed within the space of fourteen months, and was the first vessel built by the Russian government under a roof. On the 14th of July (O.S.) 1823, she lay, fully and abundantly equipped, in the harbour of Cronstadt, having a crew of thirteen superior officers, and one hundred and eighteen petty officers and seamen; independently of a chaplain, a physician (Dr. Siegwald), a naturalist (Professor Eschscholtz, who had accompanied Capt. Kotzebue in his former voyage), an astronomer (M. Preus), a botanist (M. Lentz), and a mineralogist (M. Hoffmann). On the 28th of the same month, after the late Emperor Alexander had inspected the vessel and bade its navigators a cordial farewell, the anchor was weighed. Rio de Janeiro was made on the first of November following, and a short sojourn in this city was enlivened by the celebration of Don Pedro’s birth-day, which is described with much animation. Doubling Cape Horn and running along the Patagonian coast, the next port of refreshment was Concepcion, where the reader is introduced to the Chilian president and authorities, as well as the Araucan Indians, from the treachery of both of which the voyagers appear to have made a fortunate escape. They next touched at Juan Fernandez; on the 2d of March, 1824, discovered an unknown island (in lat. 15° 58’ 18”, and long. 140° 11’ 30”, the declination of the needle being 4° E.) to which they gave the name of “Predpriatie;” thence they sailed past the Palliser and Greigh groups, and on the 14th of March made the beautiful land of Otaheite, from the long and attractive sketch of which we select a curious picture of the effects of Christian civilisation.

“There are six missionaries, inclusive of Nott and Wilson, on the island of Otaheite, and four in the remaining Society Islands. Natives themselves are trained to become missionaries, and sent among the isles of the archipelago to preach Christianity. Among ourselves a careful education and a course of diligent study in schools and universities are necessary preparations to be undergone by those who would qualify themselves for the ministry. The Missionary Society in London is not so exorbitant in its demands. A semi-savage, with a mind bewildered by the dogmas of a mere sailor (Wilson), possesses, in the eyes of that society, abundant qualifications for the

* As accounts of his proceedings reached us, we have occasionally enriched the columns of the *Literary Gazette* with notices of the author’s discoveries, &c.—Ed.

office. Church-time was at hand, and Wilson invited me to attend divine worship,—an invitation I willingly accepted. It took us about ten minutes to walk to the church, a pretty building, about one hundred and twenty feet long and sixty broad, made of wicker, well suited to the climate; airy from a number of large windows, which, as it is not necessary to keep out the weather, are unglazed, plastered with lime, and whitened with chalk; so that it forms a lively contrast with the verdure of the surrounding foliage. It has neither tower nor bell; but the churchyard, with its black crosses of wood, produces a solemn impression upon the mind. The interior of the building forms a spacious hall, the walls being neatly ornamented and a number of benches being placed in long rows; so that the auditory have a distinct view of the pulpit, which is placed in the centre. When we entered, we found the church crowded to suffocation: the men were seated on one side, and the women on the other; most of them had psalm-books before them, and deep silence prevailed. We have already alluded to the value they set upon our European apparel; and they are prouder to possess portions of it than the female part of our fashionables are to sparkle in brilliants and diamonds, or the male in stars and orders: however old or worn out, they are not held in the less estimation; a hole or rent seam abstracts nought from their elegance. All these remnants of apparel are purchased from the navigators who touch at Otaheite, and, as there is no such thing as a tailor, are resold with enormous profit. A complete suit would prove too costly, and they are content, therefore, to put up with a portion. Necessity has been the arbiter of fashion in Otaheite. The owner of a coat, or English military uniform, parades with no other article of covering, except the tapagirdle, and the fortunate acquirer of a waistcoat or pair of trousers considers his wardrobe complete. Some wear nothing but a shirt, whilst others, though perspiring under a dense woollen cloak, as if in a vapour bath, are too proud to doff it. Stockings, boots, or shoes, are quite out of the question; but nothing can be so ridiculous as to see the men imprisoned in coats, which are neither long nor roomy enough to fit their persons; many are scarcely able to move their arms, and are compelled to distend them like the flyers of a windmill, with here and there an elbow playing the part of peeping Tom. Picture to yourself a congregation thus attired, and, according to their own apprehensions, with all due decorum and decency; add, to complete the ludicrous effect of the scene, a set of faces shrouded with as solemn and serious an expression as can be conceived; and then,—the impossibility of being devoutly disposed, in such a presence, will not be charged upon me as unnatural. The dress of the women, though not quite so ludicrous, was scarcely less remarkable. They had on white, and even striped, men’s shirts, which were insufficient to conceal a stout pair of knees; some had broad frills upon their bosoms, and many were enveloped in counterpanes. Their bare shaved heads (a fashion for which they stand indebted to the missionaries) were crowned with little European straw hats of the most uncouth and out-of-the-way shapes, furnished with ribbons and flowers, which were the produce of Otaheitean copyists. But a cotton piece, staring with colours, was the *ne plus ultra* of their toilettes, as well as the indication of superior affluence.” After describing the puritanical exhibition, to which the missionary had drilled

his flock, Capt. Kotzebue adds:—"All inclination to be merry had forsaken me. I had beheld a congregation of these new and extra-devout converts to Christianity: I compared them with their ancestors, such as earlier visitants have described them; and was thus led into a train of reflections which grew but the more melancholy in proportion as I became more familiar with the recent history of Otaheite."

The picture he then draws of the bloodshed, murders, and persecutions, which accompanied the introduction of Christianity among these islanders, is worthy of the worst ages of Islamism. The state of this region under the virtual government of the missionaries,—the morose and melancholy temper they have created,—the coronation of the boy Pomarch as king,—the regal banquet,—the visit of the queen-dowager,—the state of the country itself, and its people,—are but a few of the prominent features which impart value and interest to the traveller's notes on Otaheite. From those of an American captain on the Pittcairn islands, which he has interwoven in his narrative, we obtain tidings of our old friend Adams. I found, says Kotzebue, "one of Adams's wives in Otaheite. She spoke English with some fluency, though with a foreign accent. The longing after home, with which the breast of every mortal glows, had occasioned her return. She told me that mankind was far more wicked here than in her little paradise, where she wished herself back again. She launched out warmly in praise of Adams, and maintained that there was not another human being fit to be compared with him. He had commissioned her to solicit the missionaries to send him a successor, as he was become old and infirm. And the Otaheitean mission will not fail to bring the Pittcairn islands under their yoke."

On the 24th of March, the navigators quitted Otaheite for the Navigation Islands, in one of which, Maouna, they found a race of cannibals, "probably the most abandoned of any mortals whom the South Seas contain." The Radack islands, which Kotzebue had discovered in 1816, appeared in sight on the 28th of April; and we regret that more important matter forbids us to dwell upon the kind and amiable character, the sham-fights, the dramatic amusements, &c., of the people of Otdia (one of that group), where the expedition landed. Thence, sailing past the Ligieje isles, their course was bent to the port of St. Peter and St. Paul, in Kamschatka, where they rested from the 8th of June till the 20th of the following month. The second volume opens with the approach to this land of snow and solitude.

"On the 1st of June," says Capt. Kotzebue, "being in latitude 42° and longitude 201°, and, therefore, opposite to the coast of Japan, we observed a red stripe on the surface of the water, which was about a fathom in width, and full five miles in length. As we crossed it, we fished up a tubful, and found that the colour proceeded from an infinite number of dwarf crabs, which could scarcely be detected by the naked eye."

Croak as we may over the petrifying horrors of our southern winters, there is comfort in them when weighed against the living inhumation of a Kamschatka snow-storm, "which drives down so heavily from the mountains as to bury the houses entirely, and compel the indwellers to dig out an exit, whilst their cattle are treading above the roofs. The winter expeditions, which are undertaken in light sledges,

drawn by six or more dogs, are conveniently and quickly performed; only it is requisite to be upon your guard against storms, accompanied by drifts of snow. These are here called *purga*; and if one of them overtake the traveller, he has no other means of escape but the allowing himself to be quietly *inpurgated*: that is to say, he suffers himself and his dogs to be interred beneath the snow, (an operation effected in the twinkling of an eye,) and, when the tempest has subsided, puts forth his best energies to release himself from his grave. In this he does not always succeed; for if he be beset in a defile, the snow collects so thick and imperviously about him, that the spot becomes his last resting-place."

Though the author's account of this country is extremely full and satisfactory, we have found nothing that is strikingly novel, excepting a description of its ancient superstitions, which we do not recollect to have met with elsewhere. "Besides their supreme deity, Kutka, they had a variety of inferior divinities, whom their imagination located amongst mountains and woods, in the waters and the atmosphere. They worshipped them, so long as their wishes were accomplished, and abused them without mercy when their expectations were crossed; much like the lower orders in Italy, who, when they are in tribulation, doff their bonnets to the saint, call him by as many holy names as start up to their lips, and presto!—trample him in the mire. The Kamschadales believed in the immortality of their own souls, as well as those of every animal; but they conceived that they would be equally called upon to obtain their livelihood by labour in a future life, though it was their hope that their toils would be lightened, and the produce always sufficient to relieve them from any apprehension of famine." It appears also that they had a tradition of a universal *Deluge*, and to this day they point out the spot, on the summit of a lofty mountain, where Kutka is said to have stepped out of a boat, and peopled the world with human beings!

At the close of July 1823, the Predpriate made sail for New Archangel, on the island of Sitka, a station of the Russo-American Company, "which is blessed with more rain than, perhaps, any other spot in the wide world." Many a page is filled with a report of the former and present condition of this settlement, and the character and habits of the Kalushes, its native owners: we can only afford space for a stirring instance of savage love. "The Kalush, whose soul would probably remain unmoved at the sight of the fairest of European beauties, discovers such irresistible charms in the pouting lips of his disgusting countrywomen, that his passions are often worked up to a state of frenzy. An instance of this was afforded by an occurrence which took place among a tribe of Kalushes, who had encamped in the vicinity of the fort during our sojourn at Sitka. A girl had four lovers, amongst whom the fiend of jealousy stirred up a deadly strife. After hard blows on all sides, which resulted in cooling down the passion of none of them, they resolved upon murdering the object of their adoration, who drew her last sigh under the deadly thrusts of their spears. The whole tribe assembled round the funeral pile, on which her body was burnt, and sang a hymn, of which some of our fellow-countrymen, who had been long resident at the settlement, made out the following expressions:—"Thou wast too fair. It was not meet thou shouldst abide with us. To look upon was but to steep our senses in

delirium.' And yet, barbarous as was this deed, it was surpassed by a fouler act. A parent's wrath was excited by his child's cries in a cradle, and he took it out and threw it into a cauldron of boiling train-oil! Such instances as these are sufficiently characteristic of this execrable race, who are, in every respect, the veriest refuse of human kind."

We could, indeed, swell our extracts into as many columns as there are pages in these volumes: but we look back, and are warned that we have already transgressed those natural limits, on which the attractive narrative of a Kotzebue has impelled us to make no trifling inroad. It must suffice the reader, therefore, to be told that the Enterprise left New Archangel on the 11th of August, and arrived at S. Diego, on the Californian coast, in the end of September; that a mass of very valuable information, on the subject of the Spanish and Russian missions and colonies in that quarter, was one of the results of a fourteen months' stay; that Captain Kotzebue quitted his cruising ground in November 1824, doubled the Sandwich islands and dropped past Owyhee in December, anchored at St. Helena at the end of March, and after touching at Portsmouth, brought his vessel safely alongside the ramparts of Cronstadt on the 10th of July, 1825.

We earnestly hope that a translation of this voyage, which comes recommended by as much good taste and modesty as sterling intelligence, will be speedily undertaken; and looking forward to this occurrence, we must also express a hope that the beauty and precision of the charts* may be transferred to the English edition. An appendix of "zoological gleanings," by Dr. Eschscholtz, a Dorpat professor, who was attached to the expedition as naturalist, merits the attention of the scientific reader.

The Descent into Hell: a Poem. pp. 223.

Murray.

Creation: a Poem. By William Ball. pp. 295.

Bull.

Mount Sinai: a Poem. By William Phillips. pp. 220. Maunder.

Scenes from the Flood, the Tenth Plague, &c. By Dugald Moore, author of the "African." pp. 213. Glasgow, Robertson and Atkinson: Edinburgh, Constable and Co.: London, Hurst and Co.

The Fall of Ninveh: a Poem. The Last Days of Herculaneum, &c. By Edwin Atherstone, author of a "Midsummer Day's Dream." Vol. II. pp. 308. Baldwin and Cradock.

The Island Bride. By the Rev. Hobart Caunter. pp. 243. Bull.

The Athenaid; or, Modern Grecians: a Poem. By Henry J. Bradfield, author of "Waterloo," &c. Second edition. pp. 231. Marsh and Millar. 1830.

WERE we to be asked, what branch of our literary profession most reverses the general rule, and, while it gives most trouble, is repaid by least pleasure, we should unhesitatingly say poetry. To both poets and public it is impossible to give satisfaction; the public require that our columns should contain as much variety and novelty as possible, and that, in the present excess of new things, our best judgment should be used in the selection of what has most information or most interest. Poets, on the contrary, expect that column after column should be devoted to critical ana-

* The bay and village of Mattavai, Otaheite;—the northern portion of the group of Coral Islands, Radak and Balik;—and the Navigator's Islands.

lysis and specimen-extracts of works, which, being too often the poorest parts of literature, would seem to be, as is usual in the physical world, the most prolific. Now, we cannot but think that these said columns would be parts very likely to be skipped, a destiny we greatly deprecate for any portion of our *Gazette*. We are remote from believing that either the age or the taste for poetry is past; the human heart will always ask for some higher expression for its feelings and imagination than the common language of life; and wherever there is a demand, there will be a supply. Poetry, and the love of poetry, always have existed and always will exist. The noble band of poets that have lately enriched our literature have far from satiated the appetite they did so much towards creating; but they have refined taste to a degree of luxury, and the spirit of the lyre now walks abroad in company with the strictest criticism. The remark has been made before of other tomes, and may with equal justice be applied to those before us: there are many among them whose appearance fifty years ago would have been hailed as an era in our literature; that time is past, and we cannot say there is one of these works possessing that striking originality which can now alone arrest public attention. They show taste, talent, cultivation by study of the best models, but, unfortunately, these models are often too apparent; and it is obvious, that had they not previously existed, neither would these their copies. Most of the authors are clever, intelligent men, but fall short of our idea of men of great genius. We will just characterise the style of each successively, as they are marked at the head of these observations. We recommend the *Descent into Hell* to those readers of Miltonic taste, who may like to follow through the mysteries of time and space; the *Creation* to those who like a little mingling of metaphysics and fancy; the *Tenth Plague* has some graceful description, and the minor pieces are very pleasing. The *Fall of Nineveh* possesses all the pretension of an epic; the versification is fine, with many striking passages; but we doubt whether the taste for battles, single combats, heroes, &c. be not gone past recall. The *Island Bride* is a pretty story, and has many very gracefully turned stanzas; but its frontispiece is not among Mr. Martin's successful efforts. That, on the contrary, before *Mount Sinai* is a superb conception; and truly the poem needs something to recommend it. Of the *Athenaid* we can only say, it is a composition so truly Greek, that it ought to introduce its young author to the pleasure of revisiting those shores under the auspices of their new prince.

We cannot but remark on the great number of religious poems which now overwhelm us. One great reason is, we think, the tempting facilities of this branch of composition; the sacred character seems such a shelter against criticism, while the Bible is an inexhaustible mine of magnificent epithet and noble imagery; nevertheless, their adoption is generally any thing but an improvement; and we cannot applaud this business-like and technical appropriation of words the most sacred. Poetry can never be better employed than in the cause of Religion; but let her beware of too familiar a use of its holy language.

The Influence of Climate in the Prevention and Cure of Chronic Diseases, &c. By James Clark, M.D. Second edition, enlarged.

It is little more than six months since we gave an account of Dr. Clark's book, on its first

appearance, in a somewhat extended article; and we are already called on to notice a second and considerably improved edition of it. We are gratified to find that the opinion of the public has confirmed, in the most unequivocal manner, the judgment we then pronounced of the uncommon merit of this work; and if our favourable testimony has had any influence in directing attention to its pages, we rejoice less on our own account or on that of the author, than on account of the public generally,—as we are persuaded few works have issued from the press of late years fraught with more important information to the medical profession, and to the whole class of sufferers from slow ailments, than Dr. Clark's volume, which we observe has just been translated into German. In this new edition we discover considerable additions made to the first part of the work, that, namely, which treats more particularly of climate. The article on the milder climates of England is entirely rewritten, and also greatly enlarged. In this edition we have too, for the first time, an account of numerous islands scattered over the Northern Atlantic, which are occasionally resorted to by invalids under very incorrect notions of their respective merits;—viz. the Canaries, the Azores, Bermudas, Bahamas, and the West Indies. The description of the last-named islands is full and extremely interesting; though they are considered by Dr. Clark as, in general, much too hot for consumptive patients; but recommended in some diseases. The other islands named are said to be all inferior to Madeira for persons predisposed to consumption. It will be recollected, that Dr. Clark puts only moderate faith in the effect of climate after this disease is once fully formed. The doctor appears to be very partial to the Isle of Wight.

The Three Histories: the History of an Enthusiast, the History of a Nonchalant, the History of a Realist. By Maria Jane Jewsbury. Pp. 322. London, 1830. Westley and Davis.

THIS is one of those books which give the impression of their author possessing higher powers than the actual work develops. The first tale (for the two others find, as in many cases, place principally for their titles) is beautifully told—a fine poetic spirit, caught from familiar acquaintance with the most exquisite literature of our language runs throughout—*si je ne suis pas la rose, j'ai vécu près d'elle*—and it also possesses occasional keen and lively observation, though shewing rather a naturally acute spirit than much knowledge of the world. Mrs. Carhampton is an excellent sketch; while many of the expressions are those little happy "pearls" of thought, set "in a silver sea" of graceful words. Julia, the heroine, is young, beautiful, rich, but, alas! a genius—a successful one—and consequently, it seems, doomed to a life of mental misery, and an early death. Our great objection to this picture is its false groundwork. We neither can nor do believe that the possession of one of Heaven's noblest gifts is like that of the false fairy—to be fatal: it is easy to place the woman of genius in such circumstances as must make her miserable; but before poor Genius is blamed, let us examine if it has produced those circumstances. Certainly not in the tale before us: Julia's real cause of unhappiness is an unreturned attachment; and beauty, wealth, or even chance, would have led quite as much, or more, to

the life of dissipation which eventually separates her lover and herself, than any success attending genius. Moreover, as a portrait of passion, this is, we think, wanting in truth; an enthusiastic creature like Julia, loving with such earnestness and devotion, would scarcely have resigned her lover without, at least, an effort to win and wear him; her woman's penetration would have divined his tastes, and her woman's affection taught her to adopt them. It would lead us too far into metaphysical inquiry, were we to examine how much the mind of a woman is formed by that of the man she loves; but we will venture to say, it is from that it receives its character. Loving as Julia is represented to have loved, she would never have so voluntarily and so entirely separated herself from Cecil. All the worldly scenes are exceedingly exaggerated: we cannot but reprobate that cant, we can use no other term, about the "heartlessness" of the upper ranks, the faithlessness of friendships, &c.: we believe human nature to be much the same in every station; and as to friendship, its falsehood often is only a false estimate of our own claims, and a forgetting that the mere pleasant intercourse of society bears flowers rather than fruits. The only rational question for disappointment to ask is, Did it not expect too much? We have entered thus fully into the analysis of this work, on the ground of the author's intending it as a moral medicine, while to us it appears that she has much mistaken both the causes and the symptoms of the disease. We have now only to add, that the narrative is most sweetly told, and the interest well kept up; the style also possesses great poetical beauty. Among the images is one too prettily turned to be omitted, while we would correct the misnomer: the fair author calls society "the Moloch with the diamond eyes." Did not these diamond eyes belong to the idol of Juggernaut? We all remember the story of the jeweller who fell in love with its brilliant orbs.

Rouge et Noir, in six cantos; and Versailles, a Poem. By W. Read, Esq. 3d edition. 12mo. pp. 133. Longman and Co.

THE words "third edition" are more magical than any critical commendations; but Mr. Read is well known to our Readers as a very charming poet. Some parts of this volume have been re-written, and, from the taste of the author, considerably improved. We rejoice to see that he announces a miscellaneous volume.

Conversations on the Natural Geography of Europe and Africa, &c. &c.; being a Continuation of Domestic Instruction on useful and interesting Subjects. By Mrs. Mathias. 2 vols. 18mo. London, 1830. Seeley and Burnside.

SOME time ago we noticed, with the commendation they deserved, the volumes, of which these now before us constitute the sequel. This new series is entitled to all the praise we bestowed on the former; it is characterised by the same unaffected cordiality which belonged to its precursor; and in this respect contrasts advantageously with clever but more frigid works of the same class. In reading the dialogues of Mrs. Mathias, we derive our own gratification from the continual indications of the existence, in the mind of the writer, of an anxiety to promote the moral and religious improvement of those who are supposed to be addressed by her. This is a kind of merit which will enhance her volumes in the esteem

of those who would have valued them highly, even if they had had no claim to praise except for the information they impart.

Travels on the Continent, Sicily, and the Lipari Islands. By R. Duppa, I.L.B. Large 8vo. pp. 494. Longman and Co.

WE rejoice to see a new edition of this interesting volume, where the antiquary, the lover of the fine arts, and the man of letters, find so much to inform and delight them. The work is beautifully embellished, the style most agreeable, and the whole an ornament to every library where books of taste and talent are preserved.

Marley on the Diseases of Children. 8vo. pp. 312. London, Burgess and Hill.

THIS is a straightforward, sensible medical work, intelligible to mothers, and therefore very valuable for family practice. The complaints of children are indeed now becoming so well understood, that it is not too much to say that the great increase of population is owing to the skill with which they are treated. Mr. Marley's able production will add to this farther perplexity of Malthus and his system.

ORIGINAL CORRESPONDENCE.

Paris, April 14, 1830.

IF I may hazard a profane expression, we have just got over the *semaine sainte*, which is always terribly unproductive of novelty in the metropolis of his most Christian Majesty. A stranger who should arrive in Paris for the first time during the procession of *Longchamps*, might imagine the inhabitants on the eve of revolt—bivouacs of gendarmes on every point of the boulevards—cavaliers, armed cap-à-pie and sabre in hand, gallantly wheeling round carriages filled with well-dressed females! Incontestably the French are a gay people. At last, however, the theatres have re-opened, to the great delight of worldly-minded sinners.

The Théâtre Français began with *Hernani*, and the Odéon with M. Dumas' unconscionably long *trilogie*, as he has thought proper to term it, of *Stockholm et Fontainebleau*. It is said that Victor Hugo has composed two new dramas, which have been laid before the committee of the Théâtre Français. Mademoiselle Duchesnois, whose final retirement from the stage will shortly take place, has arrived in Paris from a provincial tour.

The representation for the benefit of Madame Malibran terminated the season at the Théâtre Italien. It would be no easy matter to say for what reason the scene from *Pygmalion* was substituted in place of the opera of *Maitte di Shabran*, which had been originally announced for performance on this occasion, and which had even been rehearsed several times. The scene from *Pygmalion* unquestionably possesses some striking beauties, which, however, are better adapted for the drawing-room than the stage, where, comparatively speaking, they produce but little effect. In the opera of *Tancredi* Madame Malibran gave occasional proofs of exquisitely pathetic and dramatic inspiration. Her voice, however, is evidently fatigued, and her warmest admirers admit that some repose is absolutely necessary for the recovery of her former powers.

Hummel's second and last musical *soirée* was numerously attended. The first artists of Paris united their talents to those of the celebrated composer, who may be called the leader of the German school, and who, throughout the whole of the concert, was most deservedly and enthu-

siastically applauded. He left Paris on the 8th inst. for London, and, after a visit to Scotland, is expected to return in the month of September.

The grand theatre at Milan closed on the 20th ult. with an opera in which Madame Lande was much applauded. This *cantatrice* will make her appearance here in the month of October, at the Théâtre Italien.

Accounts from Italy state that a grand musical *soirée* was lately given by Rossini, in his palace at Bologna. To gratify his numerous admirers, the *maestro* terminated the concert with the celebrated air from *Figaro il Barbiere*, which, it is added, he sung in a style never equalled on any theatre in Europe.

The inexhaustible Madame de Genlis, who for some fifty years has given but slight repose to her pen, has lately carved out occupation for the legal gentry. The lady having composed or compiled a work which she entitled a *New Manual for Youth*, one of the publishing tribe, trusting to the *clat* of her literary name, purchased the manuscript at a high price, and without previous examination. The book having proved a mere farrago of the trite compositions inflicted of late years on the public, the bookseller objects to his purchase, on the ground that the production of novelty was among the stipulations of his contract with the authoress. The result of this trial will place in a new and interesting light several questions connected with the sale of literary property in France.

"As happy as a king," is an old saying; and as proverbs are the wisdom of nations, it is not surprising that the sceptre, like other glittering baubles, should have its amateurs. Commend me to the new Mathurin Bruno, *alias* Louis XVII., who is at present making the tour of his kingdom, and exhibiting himself to his trusty and well-beloved subjects in divers *estaminets* and wine-shops, where his majesty is pleased to hold his court. This exalted personage is distinguished from the crowd by his six feet two inches, his jolly rubicund visage, and a tremendous pair of whiskers. His majesty usually wears a great-coat, hermetically sealed on his Herculean chest, probably from commiseration for the jaundiced condition of his linen. He cannot be said to rule his subjects with a rod of iron, his sceptre being a riding-whip, or, on occasions of ceremony, an honest Hibernian-looking shillelah. But, above all, the modesty of this monarch *in partibus* deserves the most honourable mention, his principal decoration being a long *écume de mer* pipe, the mouth-piece of which he occasionally deigns to insinuate between his royal lips. The constant companion of his majesty's journeys is an ample portmanteau, over which he watches with as much anxiety as a pasha over his harem, and which might therefore be supposed to contain the royal diadem, the crown jewels, &c. No such thing. His majesty travels in the hosiery line for a cotton-spinning manufactory, in consequence of which subaltern occupation, he is forced, during the day, to abdicate his sovereignty, and to exhibit to the customers of the house sundry specimens of hose, and cotton nightcaps of superior quality. Alas, for the changes and chances of this mortal life! In the evening, however, he folds up his patterns in the aforesaid portmanteau, and repairs to the neighbouring *table d'hôte*, where he devotes an hour or so to the concerns of his vast empire. His majesty being exceedingly courteous, he occasionally condescends to favour his improvise subjects with the narrative of his royal adventures. He himself long remained ignorant of his illustrious birth, but while philoso-

phising one day in the tap-room of the village public-house, he happened to cast his eyes on a bust of his august sire Louis XVI., rather damaged by time, and disfigured by stains of smoke, spots of grease, and other subliminary indications of wear and tear. The astonishing resemblance of the royal visage to his own, suddenly enlightened him on the subject of his high descent, and inflamed him with the heroic resolution of reconquering the throne of his ancestors. His majesty has stated to his followers that he has already gained over to his legitimate cause the drummers and fifers of an entire regiment, and, with the aid of this imposing force, has little doubt that his claims will be recognised by his uncle Charles X., or, in case of the worst, that all matters relative to the succession may be settled *à l'amiable*. His majesty's moderation is equal to his personal modesty. He would not for the world change the established order of things in his hereditary dominions, and has therefore magnanimously announced his willingness to postpone the settlement of his claims till the present occupant of his throne shall be gathered to his fathers. *En attendant* till the course of events summon him to that exalted seat which Napoleon denominated a high chair studded with gilt nails, his majesty contents himself with a seat at the *table d'hôte*, where he reigns over some half-dozen *badauds* instead of thirty-two millions. His last travelling bulletin is dated from the hôtel des trois Magots Couronnés, at his good city of Chatillon, where his arrival seems to have produced a considerable sensation. The police, with their usual interference, took the liberty of examining his passport, and expressed much unbecoming surprise at the interlineal addition of six little words—"Roi de France et de Navarre,"—which the local authorities had omitted in their *signalement* of the industrious traveller, but which his majesty had inserted, in pencil, with his own royal hand. Unbounded were the confusion and bustle occasioned thereby; and loud and enthusiastic were the acclamations with which ostlers, chambermaids, cooks, and turnspits, hailed the unexpected presence of royalty. His majesty, with the condescension and urbanity which form part of his character, vouchsafed to admit to the same table with himself a score of travellers who had just arrived by the diligence, and even deigned to help the soup without distinction of age, sex, or rank. It was stipulated, however, as an indispensable condition of access to the royal presence, that each of the favoured guests should pay his share of the reckoning; for, by some unpardonable neglect, his majesty's House of Commons has not as yet voted the expenses of his majesty's *personnel* for the current year. As a proof that the French are essentially a monarchical people, I have only to state the fact, that King Bruno was helped to a double quantity of *vin ordinaire*, the liver-wing of the turkey, and the bottom of the salad-bowl. Innumerable were the *bon-mots* which his majesty uttered during the dessert, after which he, in the most affable manner, consented to win a little loose cash from his loyal subjects at billiards. The evening concluded with a private audience with which his majesty was pleased to favour one of his ladies of honour, who solicited a decoration for her husband—a mark of distinction which the august monarch immediately granted. And all this without either chancellor of the exchequer, prime minister, or privy councillor!

THE TYROLESE MINSTRELS.

[These genuine natives of the Tyrol, and captivating performers in a style of music peculiar to their native land, were such favourites in London, that we are sure the following truly characteristic letter from the elder brother will be read with very general interest. We have preserved the orthography faithfully; and have only to add respecting it, that two years ago the writer did not understand one word of English. It says, therefore, as much for his talent as the sentiments do for his head and heart.]

Dublin in Ireland, April 6th 1830.

MY dear friend W*****! — After a long, and very successful journey through England and Ireland, are we at length arrived here, in Dublin, we are all in good health, but not in such a good spirits because our Brother Antons wife is no more! she died on august the 25th last year, and we received this melancholy news a few weeks ago, which makes us all so very sorry, as she was a real good, and what you call in No 10, in our songs, a faithfull wife! but so was it the will of our almighty Lord, and we weak creatures shall make our bow to his providents which is always good and wise! dear friend we are very anxious to see our home again, to see our happy old father, our wives, and all our family, to sit amongst them in the warm summer evenings, and to tell them tales of our travelling through the world which is so great, and still so poor, I hope that in two month I may see the poor happy Valeys of my own Country, which I would not exchange for all Englands gold and splendour! Our intention is now to stay her one or two weeks after the easter Hollydays and then we will go to England again for a time of about 6 or 7 weeks then we go to home, we are very much obliged to Mr. Lackington for the kind offering of His room next season, but it is not our intention to sing any more in London we do much better in the country, will you be so kind and give our best compliment to Mr. Lackington, will you be so good to write us a few lines here we would feel great pleasure, and then be so kind to write us what is becoming of the gews which calls themselves, Bohimian Brothers, are they in London now! Dear W***** j hope to see you soon again if should be any thing, for us, by you be so kind to send to us here or to Liverpool; good by to you, we send to Mrs. W***** and all your little ones our best respects and are very sincerely your friends.

FELIX RAINER.

ARTS AND SCIENCES.

Florence, April 6.

A MONUMENT to the memory of Dante has lately been erected by subscription in Sta Croce. His bones, as you know, are at Ravenna. It has been severely criticised; but it pleases me greatly, and Thorwaldsen praised it highly. It consists of three figures—Dante seated; on his right hand Italia, and on the left Poetry. This last statue has been found fault with, as wanting in dignity.*

We have an exhibition of Egyptian antiquities, collected by the Tuscan commissioners who accompanied the French, and also a very numerous collection (nearly 1500) of drawings, which they made from the bas-reliefs. These are very interesting, as among them is a series of portraits of the Pharaohs, and representations of all the trades. The antiquities are not very remarkable, excepting a Scythian car, which was found in the tomb of a warrior who lived 1560 years before Christ; and a mummy,

* The Grand Duke of Tuscany has granted a pension to Stephen Ricci, a Florentine, the artist of this splendid mausoleum. It is pleasant to find that the arts and sciences are encouraged in the most petty and insignificant states.

in the case of which is an inscription in Greek, which is repeated in Egyptian characters. It is believed that the grand duke will undertake some excavations at Chiusi, which would very probably occasion the discovery of many Etruscan antiquities.

During Lent, Lord Burghersh has amused us with one of his operas, the *Fedra*, and also an Italian tragedy and comedy; in the latter of which Lady B. performed. He is now writing an English opera. We have also had races, which went off very languidly.

COLLEGE OF PHYSICIANS.

DR. MATON in the chair.—Dr. Francis Hawkins, the registrar, read a letter from Dr. Heberden, addressed to the president of the College, on the subject of a case of small-pox which had lately occurred in the Penitentiary at Milbank, under very peculiar circumstances. A prisoner had been seized with that disorder, who, according to the rules of the prison, had been closely secluded from intercourse with all other persons, except the officers of the institution. None of these persons had been ill, nor, so far as they themselves knew, had they been exposed to infection. It was impossible, in short, to discover in what manner the disorder could have been communicated to the prisoner. Dr. Heberden did not advocate the idea of spontaneous small-pox, but only observed how cautious we (the faculty) should be in pronouncing any situation perfectly secure. A paper was also read, communicated by Dr. Macmichael, on Sydenham's theory of the small-pox, and illustrative of the important and much-contested subject of contagion. It was a favourite argument with the anti-contagionists, that the plague could not be contagious; for if it were, the fact of its being so would be known and readily allowed, as is the case with the small-pox and the other well-known contagious diseases. Who ever doubted, said they, that the small-pox was contagious? The fallacy of this argument Dr. Macmichael had exposed in a pamphlet which he published a few years ago, in which he shewed that the notion of contagion is by no means an obvious one, naturally suggesting itself to the mind, and easily ascertained to be true or false; since in the description which Sydenham has given of the small-pox, there is no hint whatever of his being at all aware that it is communicated from one person to another. It appears, however, from an examination of the earlier writings of Sydenham, that the idea of this disease being contagious did at one time occur to his mind (although he supposed contagion only one, and that the slightest, of the causes of its origin); but he afterwards abandoned this notion altogether, because he found it irreconcilable in some respects with his preconceived views of the nature of infection. Yet this by no means weakens Dr. Macmichael's refutation of the argument of the anti-contagionists, but rather adds to its strength, by shewing that the nature of contagion is so far from being natural and obvious, and easy of proof, that even when it had presented itself to such a mind as Sydenham's, with respect to the small-pox itself, it was not admitted, because the evidence in its favour did not appear to him sufficiently conclusive. There was also read a description of some plates which lay on the table, presented by Mr. Sewell, of the Veterinary College, representing diseased states of the lungs of horses, produced by inoculation from others that had died of glanders.

LITERARY AND LEARNED.

ROYAL SOCIETY.

ON Thursday evening the meetings were resumed after the Easter recess. Davies Gilbert, Esq. the president, in the chair. A paper was read, entitled "on the quantities of water afforded by springs at different periods of the year;" by J. Henwood, Esq. Another paper was also read, "on the action and laws of elliptic polarisation, as exhibited in the action of metals on light," by Dr. Brewster. On the table were placed a variety of donations in literature; amongst them were a series of documents styled "The Criminal Code," presented by the Right Hon. the Secretary of State for the Home Department, in seven volumes.

SOCIETY OF ANTIQUARIES.

YESTERDAY, being St. George's Day, the annual election of officers, &c. for this Society took place; Hudson Gurney, Esq. in the chair. At three o'clock the balloting boxes were examined, when it appeared that the Earl of Aberdeen had been re-elected *President*; T. Amyot, Esq. *Treasurer*; J. Gage, Esq. *Director*; N. Carlisle and H. Ellis, Esqrs. *Secretaries*.

Of the old Council, — the Earl of Aberdeen, Mr. T. Amyot, Mr. J. Britton, Mr. N. Carlisle, Mr. H. Ellis, Mr. J. Gage, Mr. H. Gurney, Mr. H. Hallam, Mr. W. R. Hamilton, Mr. J. H. Markland, and the Right Hon. C. W. Williams-Wynn, were re-elected. In the room of Mr. M. Bland, Dr. T. F. Dibdin, Mr. F. Douce, the Hon. G. A. Ellis, Lord Farnborough, the Bishop of Llandaff, Mr. E. Lodge, Sir G. Ouseley, Mr. T. Phillips, and Mr. E. V. Utterson, who went out by rotation, the following ten members were chosen: Mr. C. F. Barnwell, Mr. T. C. Croker, Dr. A. Henderson, Mr. F. Madden, Mr. J. H. Merivale, Mr. W. Y. Ottley, the Bishop of Salisbury, Sir G. Staunton, Colonel B. C. Stephenson, and Viscount Strangford.

We rejoice to find that the Society is rapidly increasing in numbers: its present force is almost mystical, viz. 777!

ROYAL ASIATIC SOCIETY.

SIR GORE OUSELEY, Bart., in the chair.—Several gentlemen were elected into the Society, and Washington Irving, Esq., was proposed as a foreign member. The papers read at this meeting were, continuations of Captain Low's account of the Siamese Buddha; of Colonel Kennedy's Analysis of Mohammedan Law; and of Sir W. Jones's Letters to S. Davis, Esq. The portion of Captain Low's paper which was read at this sitting comprised some curious particulars respecting the *Shra-baat*, or sacred footprint of Buddha, worshipped by the Siamese: a drawing of this relic, copied from the original, accompanied the paper; it contains not fewer than 100 compartments, each having a distinct emblem represented on it; besides the spaces for the toes, each of which bears a double figure of the lotus. The original impression is cut upon a rock, and enclosed in a chapel; it is about five or six times as long as a human foot, and proportionally broad; it is generally covered with water, which the devotee sprinkles over his body, to wash away the stain of sin. This impression, it should be remarked, is considered to be that of the right foot of Buddha; that of the left is said to be the one still remaining on the top of Adam's Peak in Ceylon. It appears that there was a *Shra-baat* at Mecca before Islamism prevailed; in the time of Herodotus a similar

impression, about two cubits long, was to be seen on the banks of the Syros (Dniester); and the authority of a Hindoo traveller is cited to prove the existence of another near the north-west corner of the great wall of China. Besides these, memorials of the same kind are found on the banks of the Ohio, and in many places on the continent of Europe. Several curious donations were made to the Society; and Colonel Harriot exhibited some rare oriental treasures in literature, art, coins, &c.

THE VIOLA.

As a pendant, or rather as a meet companion, for our abridgment of Dr. Nolan's paper on the Rose of Anacreon, read at the Royal Society of Literature, and inserted in our No. 691, we can hardly afford our classical readers a greater treat than by giving place to the following *Remarks on the Viola of the Ancients, by the Lord Viscount Mahon.*

I shall attempt in this paper to prove that the plant called *viola* by the Romans, is not, according to the received opinion, our common violet, but the flower called *iris*, and well known in our English gardens. This idea first occurred to me, when, in the winter of 1825-26, I travelled on horseback over the greater part of Sicily, and observed, that amongst the numerous wild flowers which that genial climate was already bringing forth at that season, there was no violet to be seen, but, on the other hand, a great abundance of *iris*; and I have since been informed that such is likewise the case in southern Italy. This seemed to me to render it improbable, that a plant so common should have been unnoticed by the ancient pastoral poets, and that their strains should be devoted to one apparently of foreign origin, of later introduction, and of less general growth.

This presumption will, I think, be confirmed by a consideration of the following passages:

In the description of the *viola* by Pliny, several circumstances are quite inapplicable to the violet, but agree exactly with the *iris*.

1. He mentions *viola lutea*, amongst other sorts. Now, there are no violets of this colour; but although the common *iris* is dark blue, several of its species are yellow, such as the *iris lutescens*, and the *iris lurida*, which grows naturally in the south of Europe.

2. *Sponte, apricis et macris locis proveniunt.* This is true of the *iris*, which I observed in Sicily, commonly growing wild on the rocky hills, exposed to the sun; but this is not true of the violet, which is proverbial for loving the shade.

3. *Statim ab radice carnosio exeunt.* The *iris* has a bulbous root, appearing out of the ground, so that the adverb *statim* is peculiarly true of this plant, as distinguished from the tulip, crocus, &c. The root of the violet is fibrous.

A passage in Ovid seems to me still more decisive:

Ut si quæ violas, rigoque papaver in horto,
Liliæque infringat, fulvis hærentia virgis,
Marcida demittant subito caput illa gravatum:
Nec se sustineant, spectentque cacumine terram.

Any one must observe how completely inapplicable this description is to the violet, whose flower all but touches the ground, and cannot therefore, if broken, exhibit the "demittant caput . . . spectentque cacumine terram." The *iris*, on the contrary, is of nearly the same height as lilies and poppies, and having, like these, a tall and naked stem, displays, when broken, the same appearance

that they do, and justifies the poet in classing them together.

I should add, that amongst the country people of Sicily the *iris* still bears the name of *viola*.—*Archæologia*, vol. xxiii.

EXCAVATIONS.

Rome, April 1.

THE excavations of the Campo Scalo, which are conducted this season by Messrs. Campanari and Fossati, have been going on with great activity for this month past. We mention a few particulars, which will doubtless excite in many persons a desire for more ample information.

A unique Sepulchre.—The vestibule would furnish an architect with materials for a fine work and solid reasoning. The *lacunaria* are rich and novel. In one chamber are some pilasters of an uncommon form, and in another remains of paintings.

On the 4th of March there was discovered, happily not spoiled, but wholly filled up with earth, the tomb of a wrestler or pancratiast, who had gained a prize in some games. He is characterised by the disk of iron; the arms, of bronze, were placed near him; these consist of a vast clypeus, the greaves, and the hilt of the sword. The most beautiful tripod, the *prefericoli*, and the crater of bronze, are the prizes which he gained. Near the tripod was one of those large painted vases, which bear the well-known inscription, and Minerva, who has here for ensign a siren playing on the double flute. Two little images of Iole and Hercules stood on the other side. This tomb had three chambers: most of the things found were in that on the left hand; there were some articles in the two others, but of less value, if we except a gold ring, with a lion engraved on it,—a symbol very suitable to the deceased,—and part of a gold necklace. The Marquess of Northampton was present on the evening of the 6th and the morning of the 7th, when this most interesting chamber was cleared. The clypeus, however, remains untouched in its place.

A third tomb strikes the eye at first sight by a certain novelty in the design, and the ornaments shew that an Egyptian chose to be buried in Etruria in the Egyptian fashion; in fact, no vase records a Greek or Roman rite. Two little marble statues of Isis and Osiris, many vases with animals, twelve gold clasps, a very singular gold ring, and a broken spherical paste vase with hieroglyphics, were also discovered.

The two gentlemen above named, the proprietors of the spot, are themselves present at the work, which they conduct with considerable expense and great diligence. Among other things, they have found a beautiful vase painted by Pausæus; and a large vase adorned with the apotheosis of Hercules, and Hebe crowned, whom the gods lead to meet him. There is a vase without handles, of an extremely novel form, on which a very animated dance is painted. The first consignment of the articles found is expected to arrive at Rome in a few days.

PINE ARTS.

WATER-COLOURS' EXHIBITION.

A HASTY glance at this peculiarly English and peculiarly beautiful exhibition of art enables us to say that it has this year lost none of its attractions. We have gone on from time to time fancying, "Well, there cannot be a better, or hardly so good a collection again;" and happily

we have been, from time to time, agreeably disappointed by the appearance of one, at least as good, if not better. Such is the present case. There are 366 paintings on the walls and on three screens, very tastefully arranged; and we think rather greater interest is produced by an increase in the number of figure subjects. The landscapes maintain their usual delightful character; and the various styles of the leading artists are displayed in a manner that adds much to the gratification of the spectator. It is dangerous to particularise (lest we do injustice to names omitted); but we may safely say that Barret never surpassed his productions in this gallery, of which 159 is a fine example; Cristall has one work worthy of his best efforts, though executed, we were sorry to hear, under the pressure of a dangerous illness; Cox, De Wint, Fielding, Gastineau, Harding, Hills, Hunt, Lewis, Prout, Robson, Miss Sharpe, Stephanoff, Turner, J. Varley, Wild, and Wright, fully keep the high reputations they have so justly acquired. Among Hunt's pictures are some striking novelties of fruit and flowers, remarkable for truth and colour. Miss Sharpe is admirable in a domestic scene, and in one from the Vicar of Wakefield;—J. S. Cotman hardly less so for sea pieces, with very peculiar effects in the water. But perhaps one of the most novel and striking features in these rooms will be found in the extraordinary performances of Mr. Cattermole: *Comrades Carousing, The Captain's Story, and The Merchant of Venice*, are surprising compositions. As we are now mentioning the associates, we must add the names of Austin, Chisholm, and Pyne, as having caught our notice by their works in the very cursory glance we were enabled to bestow on the exhibition.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS, SUFFOLK STREET.

[Concluding Notice.]

Water-colour and Miniature Room.

In this room are many productions of high merit. Without disparagement, however, to contemporary talent, we have no hesitation in placing as first of its class,

No. 721. *Girl Sketching.* Miss M. A. Sharpe. Breadth and simplicity in the design, vigour and taste in the execution, are the characteristics of this masterly drawing. It is one of the most fascinating works in the Gallery.

No. 728. *The Holy Family.* F. Corboux.—An admirable copy of Sir Joshua. In No. 715, *Sappho*, and No. 756, *the Panther*, Miss Corboux also evinces powers which a little more study of the principles of composition would fully develop.

No. 699. *Fruit and Flowers, from Nature.* No. 746. *Fruit, from Nature.* Mrs. Dighton.—Like all the productions that we have seen from Mrs. Dighton's pencil, skilful in their arrangement, and beautiful in their execution.

Among the miniatures, we were greatly struck with No. 605, *Portrait of a Young Lady*, Mrs. Green, as a beautiful example of taste in character, and style in painting. No. 620, *Portraits of G. Malcolm, Esq., Mrs. Coleridge, — Champion, Esq., and Mrs. Graham;* and No. 641, *Portraits of Lady Campbell, Sir A. Campbell, Captain Johnstone, Mrs. J. S. Alexander, and J. Alexander, Esq. M.P., Mrs. J. Robertson,*—are, as usual, admirable miniatures. No. 600, *Medora watching for the Corsair's Sail*, Miss E. E. Kendrick, and other imaginative performances by the same fair

hand, strongly remind us of poor Shelley. No. 642, *The Little Gleaner*, R. T. Bone; No. 651, *Titian in his Study*, enamel, W. Bone; and No. 667, *A Group of Children*, after *Rubens*, C. R. Bone,—are very clever works; as are also No. 556, *Student of the Royal Academy*, F. T. Rochard; No. 606, *Heart's ease*, Mrs. G. R. Ward; No. 666, *Portrait of — Cherer*, Esq., F. J. Meyer; No. 675, *Portrait of Lieut. Newcome*, 88th Regiment, J. Green; No. 625, *Portrait of the Queen of Portugal*, No. 604, *Portrait of Miss F. H. Kelly*, J. Holmes; and 565, 575, 582, and other clever likenesses by W. Hudson. In the landscape department will be found much to admire under Nos. 772, 525, 530, 534, 496, 508, 513, 539, 612, 697, 698, 705, 729, and 518; by Messrs. Glover, Stanley, Crome, Shepherd, Ince, Campion, Everett, Tomkins, Hull, Byrne, Barrett, and Bach.

PRINTS.

Of the engravings there are few which have not already come under our notice. Among the novelties, we must place No. 779, *Boccaccio*, after J. M. W. Turner, R.A. T. P. Quilley. We understand the riddle of the original painting far better in black and white, than we did in the glare and scratch-work which involved it at Somerset House. No. 780, *Portrait of a Lady*, after Sir Thomas Lawrence, W. Ward; No. 803, *Chatham*, after Stanfield, J. C. Allen; No. 813, *Engraving*, after *Stephanoff*, H. C. Shenton; No. 788, *Egglestone Abbey*, after J. M. W. Turner, R.A., T. Higham; and No. 789, *Southwark Bridge*, after *Robson*, J. Redaway—*are some of the most prominent works of this class. Mr. Walker also shews the commencement of a promising engraving of Sir Joshua's Holy Family.*

SCULPTURE.

In this department of art the subjects are not numerous. The principal, and by far the most tasteful one, is

No. 859. *Resurrection: Model for a Monument executed in marble.* E. H. Baily, R.A.
No. 852. *Statue of his Grace the Duke of Wellington.* J. Francis.—The senatorial costume is well conceived, and is executed with skill and judgment.

No. 848. *Monumental Figure.* T. Denman.—Highly appropriate, and in very good taste.
No. 869. *Affection.* E. G. Physic.—A pleasing group.

No. 850. *Lear and Edgar—Shakespeare.* J. Henning, jun.—Very creditable to the young artist. The composition would, no doubt, be more satisfactory to us, were not our minds pre-occupied with the admirable manner in which the same subject was treated by the late Mr. West, in one of the finest pictures that ever came from his pencil.

These, with various characteristic and well-executed busts, make up the chief attractions of the Sculpture-room.

And so, with every good wish, farewell, for the present year, to the Society of British Artists!

DIORAMA.

A NEW and very beautiful pair of dioramas have been opened in the Regent's Park: Mount St. Gothard, and the Interior of the Cathedral at Rheims. The wild scenery of the one contrasts finely with the architectural grandeur of the other; and both do honour to the talents of the artists, Messrs. Daguerre and Bouton. To use the common saying, they are truly sights worth seeing.

BRITISH INSTITUTION.

It is so beneficial to our native arts to shew who are their patrons and encouragers, that, crowded as our space is, we are induced to insert a list of the pictures which have been sold during the Exhibition of the British Institution; and to express a hope that it may be greatly lengthened before the close on Saturday.

Subjects.	Painters.	Purchasers.
<i>The Duenna</i>	G. S. Newton, A.R.A.	Lord Farnborough
<i>Landscape, with a Wooden Bridge</i>	F. R. Lee	The Rev. William Long.
<i>The House-Chapel at Cothelie</i>	N. Condy	Earl Brownlow.
<i>The Hall at Cothelie, an ancient Seat of the Earl of Mount Edgcumbe</i>	Ditto	Ditto.
<i>A View from Steanscombe Wood, Kent</i>	P. Nasmyth	Earl of Essex.
<i>A Heath Scene</i>	John Linnell	Ditto.
<i>Mother and Child</i>	R. Edmonstone	Lord Northwick.
<i>Little Barb, on the Seaside</i>	C. Stanfield	Ditto.
<i>Interior of the British Gallery</i>	Scarlet Davis	R. Hart Davis, M.P.
<i>Morning</i>	H. Howard, R.A.	Sir Willoughby Gordon, Bart. William Wells, Esq.
<i>The Guardian</i>	G. S. Newton, A.R.A.	Ditto.
<i>Scene off the Flemish Coast</i>	C. Stanfield	Ditto.
<i>Fruit</i>	George Lance	Ditto.
<i>Interior of a Cottage in Devonshire</i>	A. Fraser	Ditto.
<i>Plumicorn and Roe-buck</i>	Edwin Landseer	Ditto.
<i>Children, the Seat of Sir G. Warren-der, Bart. M.P.</i>	F. R. Lee	Sir G. Warren-der, Bart. M.P.
<i>Landscape with Figures and Sheep Scene in the Play of Charles XII.</i>	Ditto	James Ord, Esq.
<i>Girl of Normandy</i>	G. Clint, A.R.A.	Earl of Essex.
<i>Seed Time</i>	G. S. Newton, A.R.A.	Colonel Hugh Baily, John Turner, Esq.
<i>Coast Scene: Fishermen</i>	T. S. Good	Ditto.
<i>The Bridemaid</i>	E. F. Paris	C. Heath, Esq.
<i>Choice—Comedy or Tragedy?</i>	H. P. Briggs, A.R.A.	— Dawkins, Esq.
<i>Venus and Cupid</i>	Wm. Etty, R.A.	R. A. Thorpe, Esq.
<i>The Sick Child</i>	Thomas Webster	R. Vernon, Esq.
<i>Plate and Fruit</i>	G. Lance	J. Bridge, Esq.
<i>Le Débris</i>	Ditto	J. Fawcett, Esq.
<i>Rocks near Luc-combe Chise, Isle of Wight</i>	C. Stanfield	— Stewart, Esq.
<i>A Fresh Breeze</i>	G. Chambers	Colonel Long.
<i>Portsmouth in the distance</i>	Ditto	Ditto.
<i>The Spanish Brig Almirante captured by H.M.S. Black Joke</i>	H. T. Huggins	Captain Downs.
<i>Highland Music</i>	E. Landseer	R. Vernon, Esq.
<i>The Stone-Breaker</i>	Ditto	W. Wells, Esq.
<i>Coax, from Nature</i>	Wm. Barraud	Ditto.
<i>Sir H. Lee blessing Charles II.</i>	Miss A. Beaumont	Mrs. Barnard.
<i>A Study</i>	Miss Kearsley	Ditto.
<i>Dressing for a Masquerade</i>	T. Clayter	C. Spencer Rick-ets, Esq.
<i>Rose Malcolm</i>	A. Cooper, R.A.	Ditto.
<i>Christ and Nicodemus</i>	P. C. Wonder	Ditto.
<i>Arguello Bay, Jersey: Evening</i>	P. F. Rogers	— Walker, Esq.
<i>Fruit</i>	S. Platt	H. G. Home, Esq.
<i>Study of a Painter</i>	Ditto	Ditto.
<i>Don Quixote and Sancho after their rencounter with the Yanguenian Carriers</i>	Colvin Smith	G. Agar Ellis, Esq. M.P.
<i>London Bridge as it appeared in October 1822</i>	W. F. Wither-ington	R. Vernon, Esq.
<i>St. Paul's, from the western side of Blackfriars Bridge</i>	Ditto	Rev. H. T. Knapp.
<i>Entrance of Boulogne Harbour</i>	Ditto	Ditto.
<i>In search of Bait</i>	T. Wilson	Lord Northwick.
<i>A Venetian Scene</i>	R. Edmonstone	Ditto.
<i>Study of a Sketch</i>	A. G. Vickers	Ditto.
	Ditto	Ditto.

Subjects.	Painters.	Purchasers.
<i>The Trumpeter</i>	F. Taylor	M. Ricardo, Esq.
<i>Life Guardsman</i>	Ditto	Ditto.
<i>Scene on the River Aar, Switzerland</i>	S. J. Stump	Sir G. Staunton, Bart.
<i>Belvidere</i>	J. Borden	Earl Cawdor.
<i>Going to Market</i>	Wm. Shayer	G. Cook, Esq.
<i>A Scene in North Wales</i>	J. Marshall	James Taverner, Esq.
<i>Misty Morning</i>	J. Tennant	— Mott, Esq.
<i>Scene in Switzerland</i>	Miss Beaumont	Mrs. Barnard.
<i>Cottage's Wife</i>	J. Smart	Major Ebbs.
<i>Birth of Venus</i>	H. Howard, R.A.	Wynne Ellis, Esq.
<i>Heath Scene</i>	A. G. Vickers	Jennings, Esq.
<i>Apples</i>	A. J. Oliver, R.A.	J. Shaw, Esq.
<i>Years</i>	Ditto	Ditto.
<i>The Artists' Paint- ing Room</i>	Miss Alabaster	Marquess of Staf- ford.
<i>The Toilet</i>	J. G. Middleton	Earl of Chester- field.
<i>Pilgrims approach- ing the Monastery</i>	G. R. Lewis	C. Russell, Esq.
<i>Dead Christ</i>	J. King	Corporation of Bristol.
<i>Chalk Church, Gravesend</i>	J. H. Pitt	— Frampton, Esq.
<i>View on the Banks of Thames</i>	S. W. Reynolds	— Broadhurst, Esq.
<i>Schelling Beach</i>	J. Wilson	Ditto.
<i>The Weekly Regis- ter</i>	H. Liverseege	Lord Ranelagh.
<i>The Glaiour</i>	G. Laporte	G. Burnand, Esq.
<i>Puppies</i>	S. Taylor	Hon. Mrs. Coch- rane.
<i>The Intruder</i>	J. Ward	G. Morant, Esq.
<i>Be gone, dull Care</i>	W. Kidd	Ditto.
<i>Reading the Gazette</i>	T. V. Rippingill	Ditto.
<i>The Clavinet Player</i>	P. F. Pool	Ditto.
<i>Scene in a Vineyard</i>	A. Aglio	P. B. Duncan, Esq.
<i>Landscape</i>	J. A. O'Connor	Ditto.
<i>Eastnor Castle</i>	J. Barnicle	Hon. Mrs. Harri- riott Cox.
<i>View from Shooter's Hill</i>	T. Tingcombe	R. Kales, Esq.
<i>Fruit</i>	S. B. Cudlip	S. Freeman, Esq.
<i>Interior of Durham Cathedral</i>	C. Arrowsmith	Giraldin, Esq.
<i>Interior of a Church</i>	Ditto	Ditto.
<i>Kitt's City House, near Aylesford</i>	T. H. Pitt	G. Watlington, Esq.
<i>Female Head, from Nature</i>	Mrs. Hakewell	Walter Burrell, Esq. M.P.
<i>Beach Scene, blow- ing Weather</i>	W. Shayer	— Martin Esq.
<i>Cottages near Ban- ston</i>	F. W. Watts	Rev. J. Roche.
<i>Cullercoats: Fisher- men</i>	H. P. Parker	Ditto.
<i>Preparing for Mar- ket</i>	W. Sheils	J. Attwood, Esq.
<i>Girl and Donkey</i>	Ditto	Ditto.
<i>Bala Lake</i>	F. H. Henshaw	Ditto.
<i>Portobello</i>	John Wilson	Sir G. Warren- der, Bart. M.P.

ORIGINAL POETRY.

FIRST AND LAST.—NO. II.

First and Last Hours.

LOV'ST thou the hour, the first of day,
When the dewy flowers are opening bright,
When through the curtains of morning gray
Are stealing streaks of crimson light?
Hath it not a power, a spell?
Doth it not to thy warm heart tell
Of life, fresh, sparkling, new-born life,
And scenes as yet too young for strife?

LOV'ST thou the hour in twilight time,
When every flower is closing round,
When fainter and fainter the far bell's chime
Comes with a soothing, dying sound?
Hath it not a spell, though it be
Differing from the first, for thee?
Doth it not tell of visions deep,
And a gradual dropping down to sleep?

These hours are types and signs of thine:
Thy first hour brought both smiles and tears,
And called forth feelings half divine,
In those who looked to future years,
And watched how grew each feature's mould,
And saw their little buds unfold,
And trusted strife should never come,
To cast on heart and brow a gloom.

And thy last hour—'tis thine to make
It calm, as twilight's lovely time,

A blessed sleep, from which to awake,

Will be to the better world to climb:
Remember, 'tis thine, ay thine, to choose,
If storms shall take place of stars and dews,
Or if thy spirit shall have a power
To make its parting like day's last hour.

Worton Lodge, Isleworth.

M. A. BROWNE.

MUSIC.

NEW PUBLICATIONS.

Songs of the Boudoir. The Melodies selected and the Poetry written by T. H. Bayly, Esq. Vernon.

IN discharging part of our arrear in the musical score, it would be an offence, for which our ears ought to pay, were we to forget these *Songs of the Boudoir*, from so popular a lyricist as Mr. Bayly. There are nine of them, the number of the Muses, and neither unworthy of these ladies nor of the author. On the contrary, the words are graceful, and the melodies appropriate. "We met—'twas in a crowd," the first, is an exquisitely simple ballad; and the second, "The board is full," is also a charming composition. "They weep when I have named her," is one of Mr. Bayly's most touching pieces; and must rank with its so well known predecessors, "Oh no, we never mention her," "She never told him, never," and the "Bridemaid." The last song, "Oh, sing me no new songs to-night," is more happy in the words than in the music; but the whole production is eminently deserving of a place on the stand by harp and piano. We quote our favourite songs.

"They weep when I have named her! I'm sure she was more dear
To me than all the world beside, and yet I shed no tear;
I culled the freshest roses, and twined them for her hair,
And then I sought her chamber—but oh! she is not there!
They tell me I have lost her; I smile to see them mourn:
She could not thus desert me—I know she will return;
And I have deck'd her bower with all my former care,
And now I come to seek her—but oh! she is not there!
I saw them kneel in silence beneath a yew-tree's gloom,
They pointed to the name I loved upon a marble tomb!
And then I wept—but something forbid me to despair,
I felt that we should meet again—for oh! she is not there!"

"Oh, sing me no new songs to-night;
Repeat the plaintive strain,
My favourite air in former years,—
Come sing it once again:
Sweet thoughts that slumber'd start to life,
And give my heart relief;
And though I weep to hear that song,
'Tis not the tear of grief.

Her precious record of the past
Fond Memory oft conceals,
But Music with her master key
The hidden volume steals:
The loves, the friends, the hopes of youth,
Are stored in every leaf:
Oh, if I weep to hear that song,
'Tis not the tear of grief."

Fire-side Lyrics. Composed by F. J. Klose. S. Chappell.

THIS is really a nice present for the new year, or for any period, being a collection of sweetly simple airs, just fit for the friendly circle. A pretty set of Quadrilles at the end will serve as a farther recommendation to the youthful groups.

DRAMA.

KING'S THEATRE.

"I play'd the part of Lady Fame."

Much Ado about Nothing.

A MELO-DRAMATIC opera, entitled *Il Pirata*, was produced at this theatre, for the first time,

* Appropos of this, Mr. Peel has become the possessor of Mr. Parris's natural and affecting picture, of which we spoke so highly in our critique upon the Exhibition of the British Institution. It had been secured by Mr. C. Heath for his next *Keepsake*; but the Engraver yielded his prize to the minister, obtaining permission, however, to make a plate from this delightful subject.

on Saturday, and repeated on the following Tuesday to a very crowded, fashionable, and, sorry are we to add, an awfully silent and solemn, auditory. As we regard the first representation of a new opera in no other light than that of a "dress rehearsal," we shall pass unnoticed the performance of Saturday, and confine our remarks solely to the representation of Tuesday.

The *Pirate* (and here we must be permitted to indulge in the parenthetical remark, that, as a musical production, a more appropriate title could not possibly have been given to the opera) never will, we fear, be favourably received by a London audience: how it could have met with any degree of success at Milan, is to us a matter of considerable surprise; we say surprise,—for, independently of the many palpable *piracies* which pervade this "truly original opera,"* and which we shall bring presently to light, we are convinced that the composer, or rather the compiler, of *Il Pirata* is not only egregiously ignorant of all knowledge of "stage business," but totally destitute of that dramatic tact so essential to the production of scenic effect. It is true that in numerical strength the *dramatis personæ* of *Il Pirata* is perhaps too feeble to admit of the introduction of concerted pieces; but it is equally true, that in two or three of the most popular compositions of Rossini, the *dramatis personæ* do not exceed the number employed in the opera before us. But the fact is (and it must be obvious to all who have the least knowledge of operatic composition), that Signor Bellini understands little of that which the Italians so comprehensively express by the term "*colpir la scena*." What other composer would have concluded a *prayer* with the common hackneyed comic *caballetta* which, at the termination of every vocal piece, concerted or otherwise, we have had rung in our ears for the last half century? Nor are these the only faults which characterise the compositions of Signor Bellini: his predilection for developing his plot through the tiresome and always monotonous medium of *recitative*, added to the unpardonable practice of *marring*, by the same means, some of the most striking incidents to be found in the *libretto*, are blunders that cannot be overlooked by the musical critic.

Having no room to detail the plot of the piece, we now proceed to prove our assertions, and to expose the many petty larcenies (for they merit no other designation) discoverable in the composition of the *Pirate*. Passing by the overture, as unworthy of analytical notice, we enumerate the vocal plagiarisms as they stand in the order of the opera. The first song sung in the first act, by *Gualtiero* (Donzelli), and commencing with the words "*Nel furor delle tempeste*," is nearly note for note of an air in Spontini's opera of *Fernand Cortes*; and almost immediately following the preceding piracy, it again falls to the lot of Donzelli to remind the musical auditor that the air beginning with the line "*Per le di vane lagrime*" has been pilfered from a duet in Rossini's *Il Italiano in Algieri*. The next "borrowing" assumes a less questionable shape, it being a legitimate loan from Pachini, and which, as it is the pet song of Madame Lalonde, may be presumed was lent on the score of that donna's promised security to repay the owner in "half notes" on her public appearance in London. A very old acquaintance next startles the ear: it is a martial air, sung by *Ernest* (Santini), shortly after his first *entr e* on the scene, and which doubtless will

* Vide Newspapers.

† It is merely a metrical version of Maturin's *Bertram*.

be readily recognised by some of our French friends as the national air of "*Voici le Roi*," &c. &c. The Parisian critic will detect this larceny the instant he lights upon the line, "*Si vincemmo e il pregio io sento*." So much for the originality of the first act. Now for the second. The opening chorus of this act (a "chorus," as the *libretto* informs us, of "maidens" uttering the most doleful lamentations to the gayest music) is no other than a merry movement taken from the *Carnaval de Venice*; and again has *Gualtiero*, in the appropriate delivery of the couplet,

"Ma non fia sempre odiata
La mia memoria, io spero."

to recall to the recollection of the critics in the pit, that the accompaniment of the air which he is then so admirably singing, and which, by the by, is the best composition in the opera, is taken from the "*Questo e gruppo*" of Rossini's *Cenerentola*. But the most barefaced plagiarism which assails the ear of the amateur is the slow movement of *Imagine's* concluding song, commencing with the words, "*Col sorriso d'innocenza*." Here we have note for note, and bar for bar, of the beautiful romance of "*Mai pi *," a song which many of our readers may remember was so beautifully sung by Velluti in Morlarchi's opera of *Teobalda ed Isoline*. So much for the piracies of the *Pirate*. Of the really original compositions of this opera, there are only two productions which are worthy of eulogium, and these, it is just to say, are extremely pleasing: the opening chorus in the first act, previous to the introduction of the prayer; and the chorus of "*Viva viva*," in the second scene, are the *morceaux* to which we allude.

We have now to speak of the far-famed fair *d butante*. The motto prefixed to this paper may, in some measure, have prepared our readers for our critical opinion as to the merits and demerits of Madame Meric-Lalande.

From the preliminary puffing, and romantic memoirs occasionally put forth in the columns of some of our fashionable journals, we and the public were led to suppose that Madame L. was not only the *nonpareil* of *prima donnas*, but the most perfect divinity that ever appeared in this gullible land. But was ever witnessed an audience so disappointed as that assembled at the King's Theatre on Tuesday night? Never! and this truth we attest in the teeth of the whole metropolitan press.

To us, who have for years been accustomed to witness the performance of the best continental artists, it seems quite inexplicable how Madame M. Lalonde could have acquired celebrity; for, certes, she never could have founded her fame on her present pretensions. There is a tremor in the voice of this *donna* which strongly reminds us of the same natural weakness which was so detrimental to the singing of Madame Bonini. Added to this organic defect, the tone of Madame L. is monotonous in the extreme, partaking of a constant lachrymose whine, which seems to correspond admirably with her cast of countenance. And the recitative of this *artiste* is hardly to be tolerated; it is tame and thin-toned, and veritably comes under the denomination of what we have on a former occasion characterised by the designation of *wretched recitative*. We could not discover a single ray of original genius either in her acting or singing.

We are sorry for this failure, as the exertions of Laporte merit far better. He has, we fear, thrown away his 2,600*l.* on this bargain; but still there is time to do much before the end of the opera season; and with the other strength he possesses, and his own deserts (for

never was manager more indefatigable), he ought to have, and we trust will have, the warmest public support.

DRURY LANE.

Our gentle Stephens has returned to this theatre, and her reception every night she has appeared must have proved to her that absence has not weakened, one jot, the positive affection with which she is regarded by the public. Popularity, mere vulgar noisy popularity, may be obtained by circumstances little redounding to the credit of the idol; but it is only unimpeachable private character, and general good conduct in the discharge of professional duties, that can so command the esteem as well as the admiration of an English audience. Amid the disgraceful uproar that shook the walls of Drury Lane on Tuesday evening last, her entrance invariably calmed the storm, and imposed respectful silence on the loudest brawler. Of the cause of that uproar we shall forbear to speak. Strong asseverations have been made on both sides, and a court of law is the fitting arena for such a dispute.* The magnificent music of Rossini's *Guillaume Tell* has been adapted to the spirit-stirring story of the Tyrolese patriot, Andrew Hofer, and the opera will be produced on Thursday next, with all the aids that characteristic scenery, painted by Stanfield from original drawings, picturesque costumes, and splendid uniforms, can give to its representation. The success of *Cinderella* at Covent Garden induces us to hope John Bull is "progressing," as his brother Jonathan would say, in his taste for music, and will no longer hiss a splendid scena because it would be impossible to dance an Irish jig to the air.

THE PRAGUE MINSTRELS.

UNDER this name we attended a private rehearsal at the Egyptian Hall of a party of Bohemian performers on wind instruments, eight in number. The effect was very new, and the execution in many parts admirable. A hunter's call, with an echo, was particularly beautiful. A keyed-trumpet discoursed most eloquent music, and the whole entertainment was received with great applause.

VARIETIES.

Meat.—It appears by a recent computation, that the consumption of butchers' meat in London averages 143lbs. for each of the inhabitants annually; and that in Paris the average is only 86lbs.

Poniatowski.—A monument to Marshal Prince Joseph Poniatowski has just been finished at Warsaw. It is to be cast in bronze, and erected, it is said, in the street of the faubourg of Cracow.

Talleyrand.—The following is Talleyrand's dictum on the present political aspect of affairs in France: "In the morning," says the prince, "I believe in the dissolution of the Chambers; in the afternoon I change my opinion; in the evening I have no opinion at all."

Asiatic Negroes.—The Geographical Society of Paris have offered a gold medal, of the value of 1,000fr., to the author of the best memoir upon the origin of the race of Asiatic negroes. According to Chinese historians, the negro races inhabited the mountain of Kuenlen,

* We may notice, however, that the relation in which the disputants are understood to stand towards each other, through the medium of the lady's sister, renders this sort of family quarrel, with which it is very unfit for the public to be troubled. If actors and actresses will lead these sorts of lives, they ought for decency's sake to keep quiet as possible.

to the north of Thibet; and there exist remains of the same races in the mountains which separate L'An-Nam from the Kambodjé. In the nation of the Sameng, or the mountains of Malacca, there are also the remains of a negro colony: they speak the same language as the negroes of Oceana. In general it is known that there is some connexion between these colonies and the Malay race, which extends from the isle of Formosa to Madagascar, as well as from New Holland to the Sandwich Islands. The memoir is to state the result of researches into the origin of these colonies, and to make known every race of negroes which has inhabited, or which now inhabits, the different parts of Eastern Asia. It is desired that the writer should found his researches upon the accounts of Chinese authors.—*Foreign Journal.*

Encouragement of Talent.—There is at Toulouse an annual exhibition of paintings by the students of the art in that city. The young artist who exhibits the best specimen is sent to Rome for three years, at the expense of the municipal council, and, on his leaving that capital, means are furnished to enable him to follow his profession. Several pictures, which were painted at Rome by some of these students, have recently arrived in Toulouse, where they have excited great admiration.

Public Instruction.—The French treasury allows the sum of 50,000 francs per annum for primary instruction, while in the Netherlands 667,524fr. are allotted by the government for that purpose. To place France on an equal footing with the Netherlands, in proportion to the population, she ought to expend 3,400,000fr.

Sir Thomas Lawrence.—When we observe the errors into which our Gallic neighbours are led with respect to occurrences in this country, — and we have no doubt that we are led into similar errors with respect to occurrences in France, — we are almost inclined to believe that there are some silly persons who make it the absurd and mischievous amusement of their lives to propagate falsehood. In a recent number of a French periodical work, it is gravely stated, that the body of Sir Thomas Lawrence has been deposited in one of the aisles of Westminster Abbey, until the erection of a monument to him!

Benvenuto Cellini.—A manuscript by this celebrated artist has just been published at Venice, under the title of "Racconti," or Tales. It was extracted by M. Gamba from a treatise on the Art of Working in Gold, now in the Marciana library at Venice, which belonged to Cellini, and in which he inserted a number of notes and observations.

Military Discipline.—An old Swiss captain was so much in the habit of seeing his men deviate from a right line on quitting the cantine, that he never could be induced to admit that a soldier was drunk. Whenever a report was made to him that a private of his company was unable to maintain his footing, or, in military phrase, was "rather the worse for liquor," he generally cut short the bearer of the incredible intelligence, with a—"was he able to walk?" "Why, yes; but he held by the wall as he went along, and yet tumbled at every step." "In short, he was able to walk; therefore he could not have been drunk." Sometimes, however, the case seemed more conclusive, the delinquent being reported incapable of stirring hand or foot. On such occasions the worthy captain would say,—"Did he speak?" "He muttered a few incoherent expressions, but—" "In short, he did speak: he could not have been drunk."—*Voyage Episodique, recently published in Paris.*

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XVII, April 24.]

The Denounced, by the author of the O'Hara Tales, and consisting of two stories, entitled the Last Baron of Cranagh, and the Conformists.—By Mr. J. H. Wiffen, a new edition of his Translation of Tasso, with the wood engravings of the former edition.—Wedded Life in the Upper Banks, a Novel, said to be founded on a recent event.—Travels through the Crimea, Turkey, and Egypt, by the late James Webster, Esq., of the Inner Temple.—The English at Home, by the author of the English in Italy.—The third and fourth volumes of Dr. Israel's Commentaries on the Life and Reign of Charles I.—The Anthology: an Annual Reward-Book for Midsummer and Christmas 1830; consisting of Selections, &c., by the Rev. I. D. Parry, M.A.—A new edition, nearly re-written, of Dr. Ure's Dictionary of Chemistry.

The King of Bavaria.—The following is a literal translation of an article in the *Gazette d'Augsbourg* on the 13th inst.—"The prose translation of the poems by the King of Bavaria, which has been published in Paris at Dreuilis by Mr. William Duckett, contains at page 192, Vol. II., an appendix of thirty-nine pieces which are not in the original German. The appendix concludes in these words: 'End of the Poems of the King of Bavaria.' We are authorised to declare that these additional poems are not the compositions of the King of Bavaria, and to announce that it is a manifest infringement of all the rights of authorship. The titles of these pieces are: 1. *Me voila*, 2. *les Mythes*, 3. *le Tibre*, 4. *le Ciel d'Italie*, 5. *les Cloches*, 6. *le Panay*, 7. *Venise*, 8. *la Poésie*, 9. *la Fable*, 10. *mes Rêves*, 11. *les Rois d'autrefois et ceux d'aujourd'hui*, 12. *la Chasse*, 13. *les Italiens*, 14. *la Course*, 15. *le Voyage*, 16. *l'Hiver*, 17. *la Prison*, 18. *à la Grèce*, 19. *à **, 20. *le Temps*, 21. *à mon Filz*, 22. *Sonnet*, 23. *Plaintes d'un Amant heureux*, 24. *à **, 25. *Sonnet*, 26. *Sonnet*, 27. *Reponse au Bilet d'une Inconnue*, 28. *les Passions*, 29. *l'Architecture Gothique*, 30. *les Tombeaux*, 31. *l'Immortalité de l'Âme*, 32. *les Hommes libres*, 33. *les Douleurs*, 34. *le Vice*, 35. *le Clergé Italien*, 36. *la Pudeur*, 37. *Dante*, 38. *l'Arioste*, 39. *Vanité de l'Être*."

Prevailing wind, S.W. The 17th and 18th generally clear; the remaining five days cloudy, with frequent rain. Rain fallen, 25 of an inch.

Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

☞ We beg to refer to our letter from Florence for some interesting accounts of the antiquities brought by the Tuscan travellers from Egypt.
The Outcast's Farewell, &c. passed over.
Infortunatus also passed over.

Mr. T. Wright seems to fear that our notice of his Rosebud in our Fine Arts last week may create a prejudice against him; and informs us that the plate was taken from the original picture without the slightest reference to Mr. Ferriera's "Miny," which was, however, from the same.

ERRATUM.—In our last, page 257, column 2, line 29, for "sulphuric acid," read "sulphuric ether."

**Court and Camp of Buonaparte, 1 vol. And,
 No. VII.—The Natural History of Insects.**
 John Murray, Albemarle Street.

**A GRAMMAR of the LATIN
 LANGUAGE.**

By C. G. ZUMPT.
 Professor in the University of Berlin.
 Translated from the German, with Additions,
 By the Rev. JOHN KENRICK, M.A.
 Second edition, corrected and enlarged, 8vo. 10s. 6d.
 "Much, indeed, is it to be lamented, that men of sound learning
 are so little inclined to devote their time to the amelioration
 of elementary books: for it is essential that the young scholar
 should meet with such facilities and elucidations, in its 10th
 edition, as may enable him to continue his classical career with a
 clear comprehension of his subject, or at least an intimate acquaint-
 ance with its principles. Yet how is this to be attained, unless
 those who are thoroughly versed in every branch of classical lore
 will contribute their valuable aid in digesting and arranging such
 a work as shall combine perspicuity in the development of general
 principles with copiousness of examples, and still keep in view
 the brevity which is essential to young readers? That such a
 plan is perfectly feasible, is demonstrated by the production of
 Professor Zumpt, which, without unnecessary periphrastic re-
 marks, is incomparably more diffuse and abundant in its explana-
 tions, than any similar book in general use at our public schools.
 The subject of declensions has been, in all our grammars, most
 imperfectly and superficially explained. The superiority of M.
 Zumpt's plan is almost self-evident. He lays down certain gen-
 eral principles, and thoroughly clears away the mass of rubbish
 which encumbers the usual system. Another advantage is de-
 rivable from M. Zumpt's Grammar, viz. the perspicuous manner
 in which he describes the genders of the declensions. It is not,
 however, in one, but in almost every instance, that M. Zumpt
 displays the superiority of his system. Mr. Kenrick, the inge-
 nious translator, states in his preface, that the work has received
 several additions. It also remarks, in a note, that the section on
 the Roman reckoning is also additions. From whatever source the
 information may have been derived, it is surely of the highest
 importance. In the remainder of this valuable work, the author
 considers the reckoning of money, and fractional parts; and the
 two concluding sections are appropriated to quantity and accen-
 tuation. They do not in the slightest degree derogate from the
 general merits of the book, which is far superior to any existing
 grammar that we know. To indiscriminate eulogy we are always
 averse; but this is a production which cannot be too strongly
 recommended."—*Monthly Review*, December 1824.

**Exercises on Latin Syntax, adapted to
 Zumpt's Grammar.** To which are added, Extracts from the
 Writings of Muretus. By the Rev. John Kenrick, M.A. In 8vo.
 price 5s.
 Printed for B. Fellowes, Ludgate Street.
 By whom also will shortly be published,
**A Key to Exercises adapted to Zumpt's
 Grammar.** By the Rev. John Kenrick, M.A. 3d edition, 8vo.

In a neatly printed vol. price 5s. the
**SERVANTS' GUIDE and FAMILY
 MANUAL, with New and Improved Receipts, arranged
 and adapted to the Duties of all Classes of Servants.**

Housekeeper	Laundrymaid	Groom
Cook	Dairymaid	Footman

Forming a complete System of Domestic Management, from
 the most recent and authentic Sources, aided by numerous private
 Communications; to which is added, an Appendix of Lists,
 Rates, and Tables, and other useful Information.
 Printed for John Lymbird, 143, Strand.

In 12mo. price 3s. 6d. cloth.
THE ELEMENTS OF ARITHMETIC.
 By AUGUSTUS DE MORGAN.
 Professor of Mathematics in the University of London.
 Printed for John Taylor, Bookseller and Publisher to the
 University, 30, Upper Gower Street.

The Universal Instruction of Jacotot.
 Price 2s.
**A COMPENDIOUS EXPOSITION of
 the PRINCIPLES and PRACTICE of PROFESSOR
 JACOTOT'S celebrated SYSTEM of EDUCATION, originally
 established at the University of Louvain.**
 By JOSEPH PAYNE.
 "Already are schools after the method of Jacotot spread over
 France and the Netherlands; already does almost every province
 and town in the north of these countries possess either an estab-
 lishment upon the principle, or one or more instructors."—*Eu-
 ropean Quarterly Review*, Feb. 1828.
 Published by R. Stephens, 18, Southampton Row, Russell Square;
 and Simpkin and Marshall, Stationers' Hall Court.

Price 6s. 6d.
**PLAIN INSTRUCTIONS for the
 MANAGEMENT of INFANTS, with Practical Observa-
 tions on the Disorders incident to Childhood. To which is added,
 an Essay on Spinal and Cerebral Irritation.**
 By JOHN BARWELL, M.D.
 Physician to the Birmingham Dispensary.
 Printed for Whittaker, Treacher, and Co. at Maria Lane.

FRASER'S MAGAZINE

For Town and Country.
The following are a few Extracts from the Critical Notices of the Third Number, published on the 1st of April, and which have appeared in the public journals during this month.

* A complete List of the Extracts in full, may be had of the Publisher, gratis.

Standard, April 9.—"This magazine is very fast fulfilling its early promise of excellence. The contents are numerous, and manifest ability of the first order."
Morning Advertiser, April 11.—"It is with great pleasure we notice another Number of this rapidly rising periodical, which has been denominated, and not inaptly, the 'Blackwood of the South,' since he must, indeed, have a cataract, and be on the lists of 'incurables' at the Ophthalmic Hospital, who cannot perceive with 'half an eye' that many of 'Blackwood's' best bloods are joked to Fraser's newly started 'Omnibus' and 'Country'."

Although the work is yet but in its infancy. It is the infancy of Hercules, crushing and strangling the serpents which vainly attempted to fathom their venom over it while in its cradle; or, rather, let us compare the work to the young Minerva, starting forth, armed at all points, able and willing to encounter the world of opposition naturally engendered by its appearance in the periodical lists. With the same talent, the same principles, the same independence, and the same genius which it has hitherto displayed, 'Fraser's Magazine' may confidently step forth on the 'Babylonian' arena, without the fear of meeting with an antagonist capable of coping with it."

Weekly Free Press, April 3.—"Of 'Fraser's,' this is decidedly the best Number that has yet appeared, and removes any doubt we may have previously entertained of its taking a high place in periodical literature."

Morning Advertiser, April 11.—"Fraser's Magazine," of which the third Number is before us. To say of it that it continues to improve, and that the present is a better Number than the last, would be faint praise, as the present is an excellent Number throughout, and exhibits a variety of information, and a degree of judgment in the selection of the articles, which may safely challenge a comparison with any of its contemporaries. In proof of this our opinion, it is only necessary to state, that among the contributors to the present Number are the Poet Laureate himself; Hogg, the Ettrick Shepherd—a greater than the laureate himself; Crofton, a roker, and others, whose names are not given, but who may be said to have written by their style and manner. We also recognise throughout the Magazine a freedom of sentiment and independence of opinion not always to be met with in periodicals, which cannot fail to procure for it on the one hand the confidence of the public, and on the other to entitle it to that extensive patronage which is ever ready to commend."

The Sun, April 11.—"We have infinite respect for this very clever, and, we are glad to learn, rising periodical, for the honest, manly, classical, and uncompromising stand that it has made against the prevailing cant and nullity of the day, its (mis-called) religious poesy, the misapportion of its labours, its energy and maquette. The editor is really doing a service to literature and true religion, by boldly entering his protest against the Methodist sentimentality with which the public have, for the last two or three years, been deluged, *usage ad nauseam*. This Number is an admirable one."

The News, April 11.—"The praise which we bestowed upon the second Number of this periodical may be safely reiterated on the third. It displays the same lively spirit, the same intimate knowledge of men and things, and that stimulant ability, which are the best requisites for a Magazine. Next to 'Blackwood's' 'Fraser's Magazine' is written with all the vigour of Blackwood's. Notes, and all the able style which graces the 'Standard.' It is from a well-known and justly appreciated pen. The other articles are able done."

The Age, April 4.—"Fraser's Magazine" is a brilliant of the first water. There is a stinging article under the title of 'the Dominick's Legacy,' written with all the vigour of Blackwood's. Notes, and all the able style which graces the 'Standard.' It is from a well-known and justly appreciated pen. The other articles are able done."

Weekly Times, April 4.—"We have now arrived at the third Number of this monthly, and we are happy to declare that we find no falling off in its merits; on the contrary, its claims to consideration as a miscellany continue to increase, and its sale is, we understand, increased proportionably. In the present Number, the articles are numerous and the subjects well chosen; and we can predict that it will excite the attention of the public. The *Dispatch*, April 11.—"This talented, though generally caustic Magazine is evidently destined to cause a great sensation in the literary world. The editors are evidently men of superior editorial powers, and they show no mercy to any of the unfortunate scribbling tribe, who come within the lash of their stinging censures. We are well to admire talent, wit, and satire, to peruse 'Fraser's Magazine.'"

The World, April 7.—"In this work we perceive a progressive improvement, the present Number very much surpassing the two preceding in energy, variety, and novelty."

The Intelligence, April 11.—"We turn with pleasure from such a subject (the Byron affair in the New Monthly), to 'Fraser's Magazine,' by far the liveliest of the set."

The Globe, April 8.—"Fraser's Magazine," in spite of its ultra-toryism, shows great talent, and seems likely to cut the feathers out of its Northern contemporary, from whom it appears to have been taking lessons in the use of the tomahawk."

No. IV. will appear next Saturday.

THE GENDERS OF THE FRENCH

NOUNS, according to their Terminations, rendered easy for Children, by familiar Rhymes. 16mo. price 9d. sewed. Hearne, 81, Strand.

Of whom may be had, very cheap, Hume and Smollett's History of England, 13 vols. 8vo. with Scott's Reign of George III. 4 vols. making 17 vols. 8vo. 2l. 6s. boards.

Paley's Works, 5 handsomely printed vols. 8vo. 17s. 6d. boards.

Gray's Works, containing Additions never before printed, 2 vols. 8vo. 7s. boards.

NATIONAL PORTRAIT GALLERY

OF ILLUSTRIOUS AND EMINENT PERSONAGES OF THE NINETEENTH CENTURY. With Memoirs, By W. JERDAN, Esq. F.S.A. &c.

New edition, to be entitled the King's Edition, in royal 4to. with the earliest proof impressions, price 7s. 6d. per Part. Encouraged by His Majesty having graciously consented to patronise the Work, and induced by the request of numerous Subscribers to the royal 4to. edition of Lodge's beautiful and splendid publication, the Publishers have determined to bring out a new and very superior edition of the 'National Portrait Gallery' in royal 4to. to contain the choicest proof impressions, on India paper. For this purpose, the whole of the plates already published will be carefully revised, (in future, the earliest impressions being reserved for this edition); the Memoirs recomposed in a larger type; and every other improvement studied that can possibly enhance its value.

Parts I. to XII. of the King's Edition will be ready early in May.

Part XIII. of the commencement of Vol. II. will be published on the 1st of May, and regularly afterwards on the 1st of each month.

Price 7s. 6d. per Part, containing Three Portraits, and their corresponding Memoirs.

London: Fisher, Son, and Co. 38, Newgate Street; Colnaght and Co. Pall Mall East; Ackermann, Strand; Tilt, Fleet Street; and Jennings, Cheapside.

NOTES ON THE BEDOUINS

AND WAHABYS, collected during his Travels in the East. By the late JOHN LEWIS BURCKHARDT. In 1 vol. uniformly printed with his other Works. Published by Authority of the African Association.

2. Women as they are; or, the Manners of the Day. 2d edition, in 3 vols. post 8vo.

3. Notes on Haiti (St. Domingo), made during a Residence in that Republic. By Charles Mackenzie, Esq. F.R.S. F.L.S. Late His Majesty's Consul-General in Haiti, and now His Majesty's Commissioner of Arbitration in the Havana, &c. 2 vols. post 8vo. 21s.

4. Walter Colyton. A Tale of the Reign of James II. By the Author of "Brambletye House," the "New Forest," &c. &c. In 3 vols. post 8vo.

5. The English Army in France; or, Personal Narrative of an Officer. In 2 vols. small 8vo.

6. The King's Own. A Tale of the Sea. By the Author of the "Naval Officer." In 3 vols. 8vo.

7. The Third Volume of the Correspondence and Diary of Philip Doddridge, D.D. Edited from the Originals, by his Great-Grandson, John Doddridge Humphreys, Esq.

In a few days,

8. The Denounced. By the Author of "Tales of the O'Hara Family," the "Nowlans," the "Croppy," &c. &c. In 3 vols. post 8vo.

9. Travels through the Crimea, Turkey, and Egypt. By the late James Webster, Esq. of the Inner Temple.

10. The Life of Sir Thomas Munro, Bart. and K.C.B. late Governor of Madras. With Extracts from his Correspondence and Private Papers. By the Rev. G. R. Gleig, M.A. M.H.S.L., &c. In 2 vols. 8vo. with a fine Portrait by Meyer, and sep.

"We hardly know how to express the satisfaction we have derived from the perusal of these volumes; the more than satisfaction, the instruction mingled with delight, pride, and pleasure, in the contemplation of such a character as that of Munro. This book is a guide to the Indian statesman, and ought to be made the *rade-mecum* of every young man looking to our oriental possessions for useful and honourable employment."—*Spectator*.

11. Random Records, by George Colman the Younger, dedicated, by gracious permission, to His Majesty. In 2 vols. small 8vo. with Portrait.

"The production of an able and excellent pen—unquestionably that of one of the most distinguished dramatic writers of the age. It abounds in amusing and interesting subjects."—*Morning Post*. "We consider the volume offers the most amusing, if not the best specimen of dramatic memoirs, hitherto offered to the public."—*Court Journal*.

12. The Country Curate. By the Author of the "Subaltern," the "Chelsea Pensioners," &c. In 3 vols. post 8vo.

"What Mr. Crabbe effected in poetry, the author of the 'Country Curate' has done in prose; his materials, like those of Mr. Crabbe, being collected from real life, in some of its remarkable forms. The story of the Poscher, for example, contains the history of a singular character who lived, not long ago, in a village near Ashford. The Miser, again, served a cure in Romney Marsh, upwards of a quarter of a century; and the Parish Apprentice ran his course within the memory of the last generation. The same may be said of each of the remaining sketches, which describe a great variety of character."—*Morning Chronicle*.

13. Paul Clifford. By the Author of "Pelham," "Devereux," and the "Disowned." In 3 vols. post 8vo.

Price 1s.
A SERMON, on the Subject of forming Provident District Societies in large Towns. Preached on Sunday, April 4th, 1839. By the Rev. JAMES ASPINALL, A.M. Chaplain of St. Michael's, Liverpool. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

CHRONICLES OF A SCHOOL-ROOM.

By Mrs. S. C. HALL. 1 vol. crown 8vo. price 6s. boards. "This is truly the task of a woman, and Mrs. Hall has executed it delightfully."—*Literary Gazette*.

By the same Author, Sketches of Irish Character, 2 vols. crown 8vo. price 12s. boards.

London: Printed for Frederick Westley and A. H. Davis, Stationers' Hall Court.

Novum Testamentum Græcè.
Most beautifully printed with pearly type, in 1 small pocket vol. price 5s. bound in cloth.

H KAINH ΔΙΑΘΗΚΗ. NOVUM TESTAMENTUM.

Glasgow: Excubant Hutchison et Brookman; impensis Thomæ Tegg, Londoni.

Where may be had, uniform with the above, price 4s. Pindari Carmina, ex editioe Chr. G. Heyne.

Trimmer's Natural History.
A new edition, in 2 vols. most beautifully printed, and embellished with 300 Cuts, price 8s.

A NATURAL HISTORY OF THE most

remarkable Quadrupeds, Birds, Fishes, Serpents, Reptiles, and Insects; interspersed with interesting Characteristic Anecdotes.

By Mrs. MARY TRIMMER, Author of the "Natural History of Man," &c. &c. Chiswick: Printed by Messrs. Whittingham, for Thomas Tegg, Cheapside; and sold by N. Hailes, Piccadilly; and R. Griffin and Co. Glasgow.

Montgomery's Satan.—Second Edition.
Price 10s. 6d. the 2d edition of

S A T A N. A Poem.

By ROBERT MONTGOMERY, of Lincoln College, Oxford.

"Whence comest thou? From evil and from good in the earth, and from waking up and down in it."—*Job*, chap. 1, v. 7. "Devils also believe, and tremble."—*St. James*, chap. 2, v. 19.

By the same Author, price 7s. 6d. the 11th edition of **The Omnipresence of the Deity, and other Poems.**

Also, price 7s. 6d. the 3d edition of **A Universal Prayer; Death, &c.**

London: Printed for Samuel Maunders, 10, Newgate Street. Of whom may be had,

The Treasury of Knowledge, and Library of Reference, price 7s. 6d. in 1 thick vol.; or in separate Parts, price 4s. each.

Splendidly illustrated with Engravings from Designs of Martin, and with numerous Woodcuts by the first Artists, demy 8vo. 1l. 1s.; or in royal 8vo. (proof printed) 2l. 2s.

THE PILGRIM'S PROGRESS, with a

Life of JOHN BUNYAN. By ROBERT NOUTHNEY, Esq. LL.D. &c. &c. &c. John Murray, Albemarle Street; and John Major, Fleet Street.

BOOKS IN THE PRESS.

Cheap Monthly Magazine for Families.
On the 1st of May will be published, price only 1s. 6d. No. I. containing nearly One Hundred 8vo. pages, of

THE FAMILY MAGAZINE.

"The attention of the Public, and of the Heads of Families in particular, is respectfully invited to this new Periodical, as one of the cheapest, and at the same time most original, most amusing, and most elegant of the day; to which the young of both sexes may recur for instruction, and entertainment of an elevated and refined nature; and which the reader of mature years may peruse with advantage. When the Proprietors state that it will be conducted by the Editor of the 'Forget Me Not,' and enriched by Contributions from the ablest Writers, they need offer no other guarantee, that whatever is offensive to good taste and to the strictest delicacy, shall be carefully excluded from its pages. Published by Hurst, Chance, and Co. 65, St. Paul's Churchyard; Constable and Co. Edinburgh; and W. Curry, Jun. and Co. Dublin."

Under the Superintendance of the Society for the Diffusion of Useful Knowledge.
Library of Entertaining Knowledge.
Price 3s.

THE NEW-ZEALANDERS, Part II.

The Volume completing this Subject will be ready on Thursday, April 20th.

Volumes published, price 4s. 6d. each, bound in cloth, Vol. I. Menageries.

III. Insect Architecture.

IV. Pursuit of Knowledge.

London: Charles Knight, Pall Mall East.

REFLECTIONS ON THE DECLINE OF

SCIENCE IN ENGLAND, and on some of its Causes. By CHARLES BABBAGE, Esq. Lucasian Professor of Mathematics in the University of Cambridge, &c. &c. Printing for B. Fellows, Ludgate Street.

SATURDAY, MAY 1, 1830.

REVIEW OF NEW BOOKS.

Paul Clifford. By the Author of "Pelham," "Devereux," &c. 3 vols. 12mo. London, 1830. Colburn and Bentley.

WE have now before us the fourth work of a writer, each of whose performances has differed as much from its predecessor as if, instead of being the production of successive months, they severally marked an epoch of years, past with all those changes of thought, feeling, and action, years inevitably must bring. One of our most original novelists, he is also one of our most various—though, by the by, variety is but an effect, of which originality is the cause. Mr. Bulwer (we can have no scruple in using a name so generally known) is, we believe, very young; but if ever the assertion, that it is by the use of time, not its lapse, that years should be reckoned, is true, it is in his case: he has evidently read much, seen much, felt much, thought much, and reflected on all still more. It appears to us, that, from the very first, he entered the arena of literature, not only from mere love of literary exertion, the excitement which forces great talents to find themselves employment, not only from the mere desire of fame, but with one great moral purpose ever before him. Whether using the diamond arrow of wit, the graver arms of argument,—whether in the pictures from real life, or the creations of imagination, he has kept the one aim in view, of human amelioration. He has satirised follies—to deter, if possible, from their pursuit; and drawn in noble colours the good and the great—to attract, if possible, by example. We cannot here but combat an absurd opinion we have heard maintained, or we should rather say asserted, that these works are forsooth "fashionable novels,"—that their author is an exquisite, who draws but from his own mirror and his own mind. Were it not that in the present day there is no assertion so false or ridiculous but what must be contradicted, unless we wish it to be believed, we should simply say, such speak of pages they have not read. But to bring our proof in juxtaposition with our denial, we shall briefly allude to a few of Mr. Bulwer's most opposite characteristics. In *Pelham*, besides the animated satire, the keen observation, how much was there of sound reflection,—nay, to trench on our own province, of admirable criticism: the few remarks on Shelley would be the best essay that could be prefixed to his poems. In the *Disowned*, the imagination of the poet was allowed to appear. What could be fuller of touching yet simple pathos than the history of the young painter? Where could the beauty of excellence be more loftily displayed than in Algernon Mordaunt? Where a more powerful and tragic development of misdirected energies than in the patriotic but erring Wolfe? Or, to take the common-place of life, could any thing be more real than the mean, clever, successful, yet miserable Crauford? and, in the low comic, Mr. Brown is an ambulating farce. *Devereux* broke up new and historical ground: the scenes

in Russia we would instance as admirable. As to the character of Bolingbroke, we must allow who pleases to differ from the author's view of it; but no one can deny the research, or the liberal and enlightened spirit it evinces. One general characteristic of all these volumes is the great charm of their style: whether in its neat epigrammatic turn, or its poetic grace, the language is always admirable—and language, like music, has an inexplicable fascination.

And now to *Paul Clifford*—which restores us to the age of Swift, since which we have had nothing so good—agreeing as usual with its brethren only in its entire difference: we should call it a political romance, or rather tragi-comedy; but that would give no idea of its excellent real-life scenes, and its most intensely interesting story. The epoch is some fifty years ago; and the hero is one of those picturesque cavaliers whose hand is equally ready for the pistol and purse; and who, like younger brothers, have the great fault or misfortune of being born too late; for, after all, a highwayman is but a knight divested of white plume and silver shield, delivered over to the ballad-monger instead of the minstrel, and with the Newgate Calendar instead of Froissart to chronicle his feats. Paul Clifford has divers comrades; and the principal members of his gang are embodied in most lively caricatures of many now conspicuous political characters—the late chancellor, the present premier, solicitors-general, tame and wild elephants—nay, royalty itself figures in these Cruikshank-like etchings. We cannot better illustrate this part than by giving the scene which first introduces Paul to the robbers' club, to which he is now going.

"Have you never heard of Gentleman George?" "What! the noted head of a flash public-house in the country? To be sure I have, often; my poor nurse, Dame Lobkins, used to say he was the best-spoken man in the trade!" "Ay, so he is still. In his youth, George was a very handsome fellow, but a little too fond of his lass and his bottle to please his father, a very staid old gentleman, who walked about on Sundays with a bob-wig and a gold-headed cane, and was a much better farmer on week days than he was head of a public-house. George used to be a remarkably smart-dressed fellow, and so he is to this day. He has a great deal of wit, is a very good whist-player, has a capital cellar, and is so fond of seeing his friends drunk, that he bought some time ago a large pewter measure in which six men can stand upright. The girls, or rather the old women, to whom he used to be much more civil of the two, always liked him; they say, nothing is so fine as his fine speeches, and they give him the title of '*Gentleman George*.' He is a nice kind-hearted man in many things. Pray Heaven we shall have no cause to miss him when he departs. But, to tell you the truth, he takes more than his share of our common purse." "What! is he avicious?" "Quite the reverse; but he's so

cursefully fond of building, he invests all his money (and wants us to invest all ours) in houses; and there's one confounded dog of a bricklayer, who runs him up terrible bills,—a fellow called 'Cunning Nat,' who is equally adroit in spoiling ground and improving ground rent."

"Threading a gallery or passage, Augustus preceded our hero, opened a door, and introduced him into a long, low apartment, where sat, round a table spread with pipes and liquor, some ten or a dozen men, while at the top of the table, in an arm-chair, presided Gentleman George. That dignity was a portly and comely gentleman, with a knowing look, and a Welsh wig, worn, as the Morning Chronicle says of his majesty's hat, 'in a *dégaré* manner, on one side.' Being afflicted with the gout, his left foot reclined on a stool; and the attitude developed, despite of a lamb's-wool stocking, the remains of an exceedingly good leg. As Gentleman George was a person of majestic dignity among the Knights of the Cross, we trust we shall not be thought irreverent in applying a few of the words by which the foresaid Morning Chronicle depicted his majesty, on the day he laid the first stone of his father's monument, to the description of Gentleman George. 'He had on a handsome blue coat and a white waistcoat;' moreover, 'he laughed most good-humouredly,' as, turning to Augustus Tomlinson, he saluted him with—'So, this is the youngest you present to us. Welcome to the 'Jolly Augler!' Give us thy hand, young sir; I shall be happy to blow a cloud with thee.' 'With all due submission,' said Mr. Tomlinson, 'I think it may first be as well to introduce my pupil and friend to his future companions.' 'You speak like a leary cove,' cried Gentleman George, still squeezing our hero's hand; and, turning round in his elbow-chair, he pointed to each member, as he severally introduced his guests to Paul—'Here,' said he, 'here's a fine chap at my right hand—(the person thus designated was a thin, military-looking figure, in a shabby riding frock, and with a commanding, bold, aquiline countenance, a little the worse for wear)—here's a fine chap for you; Fighting Attie we call him; he's a devil on the road.' 'Halt—deliver—must and shall—can't and shan't—do as I bid you, or go to the devil,'—that's all Fighting Attie's palaver; and, 'adeath, it has a wonderful way of coming to the point! A famous cull is my friend Attie—an old soldier—has seen the world, and knows what is what; has lots of gumtion, and devil a bit of blarney. Howsomever, the highflyers doesn't like him; and when he takes people's money, he need not be quite so cross about it. Attie, let me introduce a new pal to you.' Paul made his bow. 'Stand at ease, man!' quoth the veteran, without taking the pipe from his mouth. Gentleman George then continued; and, after pointing out four or five of the company (among whom our hero discovered, to his surprise, his old friends, Mr. Eustace Fitzherbert and Mr. William Howard Russell),

came, at length, to one with a very red face, and a lusty frame of body. 'That gentleman,' said he, 'is Scarlet Jem; a dangerous fellow for a press, though he says he likes robbing alone now, for a general press is not half such a good thing as it used to be formerly. You have no idea what a hand at disguising himself Scarlet Jem is. He has an old wig which he generally does business in; and you would not go for to know him again, when he conceals himself under the wig. Oh, he's a precious rogue, is Scarlet Jem! As for the cove on t'other side,' continued the host of the Jolly Angler, pointing to Long Ned, 'all I can say of him, good, bad, or indifferent, is, that he has an unkinnon fine head of hair: and now, youngster, as you knows him, spose you goes and sits by him, and he'll introduce you to the est; for, split my wig!—(Gentleman George was a bit of a swearer)—if I ben't tired; and so here's to your health; and if so be as your name's Paul, may you always rob Peter* in order to pay Paul.'"

A slight difference which arises is thus quelled:—

"The full voice of Gentleman George thundered forth—'Keep the peace there, you youngster. What! are you just admitted into our merry-makings, and must you be wrangling already? Harkye, gemmen, I have been plagued enough with your quarrels before now, and the first cove as breaks the present quiet of the 'Jolly Angler,' shall be turned out neck and crop—shan't he, Attie?' 'Right about, march,' said the hero. 'Ay, that's the word, Attie,' said Gentleman George: 'and now, Mr. Pepper, if there be any ill blood 'twixt you and the lad there, wash it away in a bumper of bing, and let's hear no more whosomewer about it.' 'I'm willing,' cried Long Ned, with the deferential air of a courtier, and holding out his hand to Paul. Our hero, being somewhat abashed by the novelty of his situation and the rebuke of Gentleman George, accepted, though with some reluctance, the proffered courtesy. Order being thus restored, the conversation of the convivialists began to assume a most fascinating bias. They talked with infinite *gout* of the sums they had levied on the public, and the peculations they had committed for what one called the 'good of the community,' and another, the 'established order,'—meaning themselves. It was easy to see in what school the discerning Augustus Tomlinson had learnt the value of words. There was something edifying in hearing the rascals!—So nice was their language, and so honest their enthusiasm for their own interests, you might have imagined you were listening to a coterie of cabinet ministers conferring on taxes, or debating on perquisites. 'Long may the Commons flourish!' cried punning Georgie, filling his glass; 'it is by the commons we're fed, and may they never know cultivation!' 'Three times three!' shouted Long Ned; and the toast was drunk as Mr. Pepper proposed. 'A little, moderate, cultivation of the commons, to speak frankly,' said Augustus Tomlinson modestly, 'might not be amiss; for it would decoy people into the belief that they might travel safely; and, after all, a hedge or a barley-field, is as good for us as a barren heath, where we have no shelter if once pursued.' 'You talks nonsense, you spooney!' cried a robber of note, called Bagshot; who, being aged, and having been a lawyer's footboy, was sometimes denominated 'Old Bags.' 'You talks nonsense; these innovating ploughs are the ruin of us. Every blade of corn in a

common is an encroachment on the constitution and rights of the gemmen highwaymen. I'm old and mayn't live to see these things; but, mark my words, a time will come when a man may go from Luunon to Johnny Groat's without losing a penny by one of us; when Hounslow will be safe, and Finchley secure. My eyes, what a sad thing for us that 'ill be!' The venerable old man became suddenly silent, and the tears started to his eyes. Gentleman George had a great horror of blue devils, and particularly disliked all disagreeable subjects. 'Thunder and oons, Old Bags!' quoth mine host of the Jolly Angler, 'this will never do: we're all met here to be merry, and not to listen to your mullancolly tara tarantarums. I says, Ned Pepper, spose you tips us a song, and I'll beat time with my knuckles.' Long Ned, taking the pipe from his mouth, attempted, like Iady Heron, one or two pretty excuses: these being drowned by a universal shout, the handsome purloiner gave the following song, to the tune of 'Time has not thinned my flowing hair.'"

Our extracts partake, or at least ought to partake, of the feminine character,—if, according to Pope, ladies, like tulips, owe half their charms to their variety,—and no contrast can be greater than the following portrait of the heroine:—

"Never did glass give back a more lovely image than that of Lucy Brandon at the age of nineteen. Her auburn hair fell in the richest luxuriance over a brow never ruffled, and a cheek where the blood never slept; with every instant the colour varied, and at every variation that smooth, pure, virgin cheek seemed still more lovely than before. She had the most beautiful laugh that one who loved music could imagine,—silvery, low, and yet so full of joy! all her movements, as the old parson said, seemed to keep time to that laugh; for mirth made a great part of her innocent and childish temper; and yet the mirth was feminine, never loud, nor like that of young ladies who have received the last finish at Highgate seminaries. Every thing joyous affected her, and at once,—air,—flowers,—sunshine,—butterflies. Unlike heroines in general, she very seldom cried, and she saw nothing charming in having the vapours. But she never looked so beautiful as in sleep! and as the light breath came from her parted lips, and the ivory lids closed over those eyes which only in sleep were silent,—and her attitude in her sleep took that ineffable grace belonging solely to childhood, or the fresh youth into which childhood merges,—she was just what you might imagine a sleeping Margaret, before that most simple and gentle of all a poet's visions of womanhood had met with Fanst, and ruffled her slumbers with a dream of love. We cannot say much for Lucy's intellectual acquirements; she could, thanks to the parson's wife, spell indifferently well, and write a tolerable hand; she made preserves and sometimes riddles—it was more difficult to question the excellence of the former than to answer the queries of the latter. She worked to the admiration of all who knew her, and we beg leave to say that we deem that 'an excellent thing in woman.' She made caps for herself and gowns for the poor, and now and then she accomplished the more literary labour of a stray novel that had wandered down to the Manor House, or an abridgement of ancient history, in which was omitted every thing but the proper names. To these attainments she added a certain modicum of skill

upon the spinet, and the power of singing old songs with the richest and sweetest voice that ever made one's eyes moisten, or one's heart beat. Her moral qualities were more fully developed than her mental. She was the kindest of human beings; the very dog that had never seen her before, knew that truth at the first glance, and lost no time in making her acquaintance. The goodness of her heart reposed upon her face like sunshine, and the old wife at the lodge said poetically and truly of the effect it produced, that 'one felt warm when one looked on her.' If we could abstract from the description a certain chilling transparency, the following exquisite verses of a forgotten poet* might express the purity and lustre of her countenance—

'Her face was like the milky way 't the sky,
A meeting of gentle lights without a name.'

She was surrounded by pets of all kinds, ugly and handsome, from Ralph the raven, to Beauty the pheasant, and from Bob the sheep-dog without a tail, to Beau the Blenheim with blue ribands round his neck; all things loved her, and she loved all things. It seemed doubtful at that time whether she would ever have sufficient steadiness and strength of character. Her beauty and her character appeared alike so essentially sexual, soft, yet lively, buoyant, yet caressing, that you could scarcely place in her that moral dependence, that you might in a character less amiable, but less yieldingly feminine. Time, however, and circumstance, which alters and hardens, were to decide whether the inward nature did not possess some latent, and yet undiscovered properties."

Mr. Bulwer has been reproached with making his heroines too poetical, too much "bright creatures of the element;" but nothing can be more exquisite, yet more true, more feminine, both in her romance and her reality, than the present heroine. Of the ensuing portrait of W. Brandon we can only say, it is wrought out with an intensity of power absolutely fearful—one of those extraordinary characters whose changes and extremes are only to be traced by genius: and to remark, that the filling up of the sketch, throughout the novel, is equal to its first tracing, is giving it the highest praise.

"Few persons, when he liked it, could be more agreeable than William Brandon; but, at times, there mixed with his conversation a bitter sarcasm, probably a habit acquired in his profession, or an occasional tinge of morose and haughty sadness, possibly the consequence of his ill-health. Yet his disorder, which was somewhat approaching to that painful affliction the *tic douloureux*, though of fits more rare in occurrence than those of that complaint ordinarily are, never seemed even for an instant to operate upon his mood, whatever that might be. That disease worked unseen; not a muscle of his face appeared to quiver; the smile never vanished from his mouth, the blandness of his voice never grew faint as with pain, and, in the midst of intense torture, his resolute and stern mind conquered every external indication, nor could the most observant stranger have noted the moment when the fit attacked or released him. There was something inscrutable about the man. You felt that you took his character upon trust, and not on your own knowledge. The acquaintance of years would have left you equally dark as to his vices or his virtues. He varied often, yet in each variation he was equally undiscoverable. Was he performing a series of parts, or was it the ordinary changes of a man's true temperament, that you beheld

* We have filled our poetical department this week with a specimen of these songs.

* Suckling.

in him? Commonly smooth, quiet, attentive, flattering in social intercourse, he was known in the senate and courts of law for a cold asperity and a caustic venom, scarcely rivalled even in those areas of contention. It seemed as if the bitterer feelings he checked in private life, he delighted to indulge in public. Yet, even there, he gave not way to momentary petulance or gushing passion: all seemed, with him, systematic sarcasm or habitual sternness; he outraged no form of ceremonial, or of society; he stung, without appearing conscious of the sting; and his antagonist writhed not more beneath the torture of his satire, than the crushing contempt of his self-command. Cool, ready, armed and defended on all points, sound in knowledge, unflinching in observation, equally consummate in sophistry when needed by himself, and instantaneous in detecting sophistry in another; scorning no art, however painful—being grudging no labour, however weighty—minute in detail, yet not the less comprehending the whole subject in a grasp:—such was the legal and public character William Brandon had established, and such was the fame he joined to the unsullied purity of his moral reputation. But to his friends he seemed only the agreeable, clever, lively, and, if we may use the phrase innocently, the *worldly* man,—never affecting a superior sanctity, or an over-anxiety to forms, except upon great occasions; and rendering his austerity of manners the more admired, because he made it seem so unaccompanied by hypocrisy."

We are sorry we cannot place Lord Maul-everer in our portrait gallery: it is a striking picture.

We shall now take a few extracts at random; some of those keen yet deep observations which are such transcripts from human nature: for example, the advice given Paul by his nurse.

"Mind thy Kitty-chism, child, and reverence old age. Never steal, 'specially when any one be in the way. Never go snacks with them as be older than you,—'cause why? the older a cove be, the more he cares for his self, and the less for his partner. At twenty, we diddles the public—at forty, we diddles our cronies! Be modest Paul, and stick to your situation in life. Go not with fine tobvynen, who burn out like a candle wot has a thief in it,—all flare, and gone in a whiffy! Leave lip-mor to the aged, who can't do without it. Tape often proves a halter; and there be no ruin like blue ruin! Read your Bible, and talk like a pious 'un. People goes more by your words than your actions. If you wants what is not your own, try and do without it; and if you cannot do without it, take it away by insinivation, not bluster. They as swindles, does more and risks less than they as robs; and if you cheat toppingly, you may laugh at the topping cheat;—and now go play.' Paul seized his hat, but lingered; and the dame, guessing at the signification of the pause, drew forth, and placed in the boy's hand, the sum of five halfpence and one farthing. 'There, boy,' quoth she, and she stroked his head fondly when she spoke. 'You does right not to play for nothing; it 's loss of time!—but play with those as be less than yourself', and then you can go to beat 'em, if they says you go for to cheat!'

"I will tell you what opinions seem to me like.' 'What?' said Brandon, abstractedly. 'Trees!' answered Maul-everer, quaintly; 'if they can be made serviceable by standing, don't part with a stick; but when they are of that

growth that sells well, or whenever they shut out a *fine prospect*, cut them down, and pack them off by all manner of means!'

"A certain vague joy predominated over all. A man feels but slight comparative happiness in being loved, if he know that it is in vain. But to a woman that simple knowledge is sufficient to destroy the memory of a thousand distresses; and it is not till she has told her heart again and again that she is loved, that she will even begin to ask if it be in vain."

It is but fair to let the hero appear on the stage; and we could scarcely select a more dramatic scene. We should premise, Lovett is one of his aliases.

"As the trees rapidly disappeared behind them, the riders entered, at a hand gallop, on a broad track of waste land interspersed with dykes and occasionally fences of hurdles, over which their horses bounded like quadrupeds well accustomed to such exploits. Certainly at that moment, what with the fresh air, the fitful moonlight now breaking broadly out, now lost in a rolling cloud, the exciting exercise, and that racy and dancing stir of the blood, which all action, whether evil or noble in its nature, raises in our veins; what with all this, we cannot but allow the fascination of that lawless life;—a fascination so great, that one of the most noted *gentlemen highwaymen* of the day, one, too, who had received an excellent education, and mixed in no inferior society, is reported to have said, when the rope was about his neck, and the good ordinary was exhorting him to repent of his ill-spent life, '*Ill-spent, you dog!—God! (smacking his lips,) it was delicious!*' 'Fie! fie! Mr. —, raise your thoughts to Heaven!' 'But a canter across a common—oh!' muttered the criminal; and his soul cantered off to eternity. So briskly leaped the heart of the leader of the three, that as they now came in view of the main road, and the distant wheel of a carriage *whirred* on the ear; he threw up his right hand with a joyous gesture, and burst into a boyish exclamation of hilarity and delight. 'Whist, captain!' said Ned, checking his own spirits with a mock air of gravity, 'let us conduct ourselves like gentlemen; it is only your low fellows who get into such confoundedly high spirits; men of the world like us should do every thing as if their hearts were broken.' 'Melancholy ever cronies with sublimity, and courage is sublime!' said Augustus with the pomp of a maxim-maker. 'Now for the hedge!' cried Lovett, unheeding his comrades, and his horse sprang into the road. The three men now were drawn up quite still and motionless by the side of the hedge. The broad road lay before them curving out of sight on either side; the ground was hardening under an early tendency to frost, and the clearing of approaching hoofs sounded on the ear of the robbers, ominous, haply, of the chinks of 'more attractive metal,' about, if Hope told no flattering tale, to be their own. Presently the long-expected vehicle made its appearance at the turn of the road, and it rolled rapidly on behind four fleet post-horses. 'You, Ned, with your large steed, stop the horses; you, Augustus, bully the post-boys; leave me to do the rest,' said the captain. 'As agreed,' returned Ned, laconically. 'Now, look at me!' and the horse of the vain highwayman sprang from its shelter. So instantaneous were the operations of these experienced tacticians, that Lovett's orders were almost executed in a briefer time than it had cost him to give them. The carriage being stopped, and the post-boys white and trembling, with two pistols (levelled

by Augustus and Pepper) cocked at their heads. Lovett dismounting, threw open the door of the carriage, and in a very civil tone, and with a very bland address, accosted the inmate. 'Do not be alarmed, my lord, you are perfectly safe; we only require your watch and purse.' 'Really,' answered a voice still softer than that of the robber, while a marked and somewhat *French* countenance, crowned with a fur cap, peered forth at the arrester.—'Really, sir, your request is so modest, that I were worse than cruel to refuse you. My purse is not very full, and you may as well have it as one of my rascally duns—but my watch, I have a love for—and—' 'I understand you, my lord,' interrupted the highwayman. 'What do you value your watch at?' 'Humph—to you it may be worth some twenty guineas.' 'Allow me to see it!' 'Your curiosity is extremely gratifying,' returned the nobleman, as with great reluctance he drew forth a gold repeater, set, as was sometimes the fashion of that day, in precious stones. The highwayman looked slightly at the bauble. 'Your lordship,' said he with great gravity, 'was too modest in your calculation—your taste reflects greater credit on you: allow me to assure you, that your watch is worth fifty guineas to us at the least—to shew you that I think so most sincerely, I will either keep it, and we will say no more on the matter; or I will return it to you upon your word of honour, that you will give me a cheque for fifty guineas, payable by your *real* bankers to 'bearer for self.' Take your choice; it is quite immaterial to me!' 'Upon my honour, sir,' said the traveller, with some surprise struggling to his features, 'your coolness and self-possession are quite admirable. I see you know the world.' 'Your lordship flatters me!' returned Lovett, bowing. 'How do you decide?' 'Why, is it possible to write drafts without ink, pen, or paper?' Lovett drew back, and while he was searching in his pockets for writing implements, which he always carried about him, the traveller seized the opportunity, and suddenly snatching a pistol from the pocket of the carriage, levelled it full at the head of the robber. The traveller was an excellent and practised shot—he was almost within arm's-length of his intended victim—his pistols were the envy of all his Irish friends. He pulled the trigger—the powder flashed in the pan, and the highwayman, not even changing countenance, drew forth a small ink-bottle, and placing a steel pen in it, handed it to the nobleman, saying, with incomparable *sang froid*, 'Would you like, my lord, to try the other pistol? If so, oblige me by a quick aim, as you must see the necessity of despatch. If not, here is the back of a letter, on which you can write the draft.' The traveller was not a man apt to become embarrassed in any thing—save his circumstances; but he certainly felt a little discomposed and confused as he took the paper, and uttering some broken words, wrote the cheque. The highwayman glanced over it, saw it was writ according to form, and then with a bow of cool respect, returned the watch, and shut the door of the carriage. Meanwhile the servant had been shivering in front—boxed up in that solitary convenience termed, not euphoniously, a dickey. Him the robber now briefly accosted. 'What have you got about you belonging to your master?' 'Only his pills, your honour! which I forgot to put in the —' 'Pills!—throw them down to me!' The valet tremblingly extracted from his side-pocket a little box, which he threw down and Lovett caught

* Gallows.

in his hand. He opened the box, counted the pills—'One,—two,—four,—twelve,—Aha!' He reopened the carriage-door. 'Are these your pills, my lord?' The wondering peer, who had begun to resettle himself in the corner of his carriage, answered, 'that they were!' 'My lord, I see you are in a high state of fever; I were a little delirious just now when you snapped a pistol in your friend's face. Permit me to recommend you a prescription—swallow off all these pills!' 'My God!' cried the traveller, startled into earnestness: 'what do you mean?—twelve of those pills would kill a man!' 'Hear him!' said the robber, appealing to his comrades, who roared with laughter: 'What, my lord, would you rebel against your doctor?—Fie, fie! be persuaded.' And with a soothing gesture he stretched the pill-box towards the recoiling nose of the traveller. But, though a man who could as well as any one make the best of a bad condition, the traveller was especially careful of his health, and so obstinate was he where that was concerned, that he would rather have submitted to the effectual operation of a bullet, than incurred the chance operation of an extra pill. He, therefore, with great indignation, as the box was still extended towards him, snatched it from the hand of the robber, and flinging it across the road, said, with dignity—'Do your worst, rascals! But if you leave me alive, you shall repent the outrage you have offered to one of his majesty's household!' Then, as if becoming sensible of the ridicule of affecting too much in his present situation, he added, in an altered tone: 'And now, for God's sake, shut the door! and if you must kill somebody, there's my servant on the box—he's paid for it.'"

In addition to points we have already mentioned with high praise, we should add, notes, preface, &c. contain many true and piquant hits at the existing state of things, lively, good-humoured, but not the less pointed. One merit to which we have not alluded, is the introduction of little touches, which display so much knowledge of human nature,—such as a dying beauty preserving by her bed-side the luxuriant hair which had been shorn from her fevered head. Perhaps the most original of all his works, *Paul Clifford* will at once vary and add to its writer's reputation: for the man of the world there is shrewdness and satire; for the moralist matter, indeed, of deep thought; for the young all the interest of narrative, and all the poetry of feeling; and we must say, it is no ordinary pleasure for a critic to be able to assign praise so cordially, and so sincerely, as we can to the author of *Paul Clifford*.

Notes on the Bedouins and Wahábys, collected during his Travels in the East. By the late John Lewis Burckhardt. 4to. pp. 439. London, 1830. Colburn and Bentley.

To the three volumes of Burckhardt's interesting travels already published, the Association for promoting the Discovery of the Interior of Africa have now added a fourth, under the able editorship of Sir William Ouseley. One part of this volume is descriptive, and the other part historical; and whether we consider its views of Arab manners, customs, institutions, and other particulars, or its exhibition of the remarkable Mohammedan sectaries, the Wahábys*, from their earliest appearance as reformers, to almost the present time, we find abund-

* An event of considerable importance has just occurred to this sect. The greater part of Muscat has fallen a prey to the flames. For the information of the curious on this subject and the condition of the Wahábys on the shores

of the Persian Gulf, we would refer to the interesting history of Seyd Saïd, the Sultan of Muscat, published by Booth about six or eight years ago.

ance of matter to gratify curiosity and entertain and inform the reader. The work sets out with a classification of the Bedouin tribes that inhabit the Syrian desert, and then proceeds to detail their mode of encamping, costume, arms, sciences, literature, religious forms, &c. &c., in a sketchy and agreeable style: the materials for a history of the Wahábys, collected from various native sources, follow, and throw a clear light over the rise, progress, and existing state of these enthusiasts. At present we confine ourselves to the former subject. The Arab tribes, we are told, "may be classed under two different heads—some who in spring and summer approach the cultivated parts of Syria, and quit them towards winter; and others who remain the whole year in the vicinity of the cultivated tracts. The first are the tribe of Aeneze; the latter are numerous tribes comprehended under the appellations of Ahl el Shemal and Arab el Kebly. The Aenezes are the most powerful Arab nation in the vicinity of Syria, and, if we add to them their brethren in Nedjd, may be reckoned one of the most considerable bodies of Bedouins in the Arabian deserts."

The traveller calculates "the force of the Aeneze tribes (their brethren in Nedjd not included) at about ten thousand horsemen, and perhaps ninety or one hundred thousand camel-riders; a number rather over than underrated. The whole northern Aeneze nation may be estimated at from three hundred to three hundred and fifty thousand souls, spread over a country of at least forty thousand square miles."

The Ahl el Shemal, "or the 'northern nations,' are those tribes who encamp during the whole year among the villages of Eastern Syria, partly in the once cultivated desert from Hauran towards Palmyra northward as far as Sokhne, a village five days from Aleppo on the Baghdad road. They inhabit the Ardh el Shemal or northern tract, while the Kebly and Nedjd Arabs generally reside in the more southern plains of Arabia. They never venture to the great eastern desert. In proportion to their tents, they have more horses, but fewer camels, than the Aenezes."

The Ahl el Kebly are so called as being the southern nations, in opposition to the northern or Ahl el Shemal; but the Aenezes are the only genuine Bedouin tribe in Syria, maintaining their ancient laws and customs, from which all the others have more or less degenerated. These Aenezes "are distinguished at first sight from all the Syrian Bedouins, by the long tresses of their hair. They never shave their black hair, but cherish it from infancy, till they can twist it in tresses that hang over the cheeks down to the breast: these tresses are called *keroun*. Some few Aenezes wear girdles of leather, others tie a cord or a piece of rag over the shirt. Men and women wear from infancy a leather girdle around the naked waist; it consists of four or five thongs, twisted together into a cord as thick as one's finger. I heard that the women tie their thongs, separated from each other, round the waist. Both men and women adorn the girdle with pieces of ribands, or amulets. The Aenezes call it *hhakou*; the Ahl el Shemal call it *bireim*. In summer the boys, until the age of seven or eight years, go stark naked; but I never saw any young girl in that state, although it was mentioned, that in the interior of the desert the girls, at that early age, were not more en-

cumbered by clothing than their little brothers.

"An Arab's property consists almost wholly in his horses and camels. The profits arising from his butter enable him to procure the necessary provisions of wheat and barley, and occasionally a new suit of clothes for his wife and daughters. His mare every spring produces a valuable colt, and by her means he may expect to enrich himself with booty. No Arab family can exist without one camel at least; a man who has but ten, is reckoned poor: thirty or forty place a man in easy circumstances; and he who possesses sixty is rich."

"It may almost be said, that the Arabs are obliged to rob and pillage. Most families of the Aenezes are unable to defray the annual expenses from the profits on their cattle, and few Arabs would sell a camel to purchase provisions: he knows, from experience, that to continue long in a state of peace, diminishes the wealth of an individual; war and plunder therefore become necessary. The sheikh is obliged to lead his Arabs against the enemy, if there be one—if not, it can easily be contrived to make one."

"On the subject of Bedouin science we shall not be long detained. There are whole tribes, such as the Ibn Dhouahy, of which not one person can read or write. A Damascus pedlar, who resided with that tribe the greater part of the year, acting occasionally as secretary to the sheikh, assured me of the fact. It was mentioned as an extraordinary circumstance, that the children of Ibn Esmeyr had learned to write. On my journey towards Tedmor, I had taken with me a volume of the history of Antar, and sometimes read a striking passage from it to my companions; but I never met with one individual among them who professed to know even as much as myself of Arabic reading. But little science can be expected among those whose minds are constantly bent on war and depredation. I never saw in the possession of the Aenezes any book besides a few copies of the Korán. * * * Their astronomical science consists in a mere nomenclature of the constellations and planets, with which most of the Aenezes are acquainted."

"Poetry is still held in esteem among the Arabs: a poet is more frequently styled *sahéb koul*, or *kouïl*, than *shaarâ*. Their poetical talents are most commonly exerted in reciting verses which celebrate the merits of their chiefs, or of some distinguished warrior (*el medieh*), or the charms of their mistresses. Every kind of poetry is called *kazide*. Of ancient poetry, the *History of Antar* (an excellent work), and the *History of Selim el Zyr*, and three or four similar compositions in the true Bedouin style, are known to a few individuals, and occasionally recited. Whenever an Aeneze recites verses, he accompanies his voice with the *rebâbu* (a kind of guitar, described by Niebuhr), the only musical instrument used in the desert. The people of Djof are famous for their poetical and musical talents. Their poets visit the Aenezes from time to time, singing at the sheikh's tents for a trifling remuneration; but the Aenezes themselves never accept any reward for having entertained the company. That the reader may judge of Bedouin poetry, I subjoin a true specimen of Desert production, a recent composition, which, although it may want grammatical precision, will perhaps be found interesting as a picture of Arab manners, drawn from real life, in the style employed by most Bedouins when they celebrate the praises of their heroes; and in many parts exhibiting the

true Bedouin dialect. An Arab, against the advice of his sheikh, had sent his camels to pasture during the winter season with a foreign tribe; the camels died, and he addressed the following verses to his sheikh, who was thereby induced to repair the loss, by giving him some.

"A Bedouin Poem.—'Soleyman! lend me the pen, and the white-coloured leaf, that I may compose my verses, the language of truth. Let me implore God's assistance; and may he have mercy upon our sins! Let us praise him with praises innumerable as the hoarded grains, as the cultivators of the earth; the *bedous*, and the shepherds. And may the prophet before God intercede for us; our crimes may then be pardoned. O thou who departest from me, mounted upon the clear-coloured camel, bearing upon its back the four-sided saddle, and its bag and neck-leather, and well-ground flour, with the coffee-beans, and the sweet-smelling tom-bac. An honest youth he is, beloved by his companions, the young women's pride. The country paths he spies better than the night-swarming kattas do; and his eye sees farther than the eagle intent upon his prey. Thy way is towards the *bulje*; slowly thou proceedest (for thou knowest not fear), and rich booty thou wilt once obtain from the hadj. The wandering robber thou must fight on thy road, and pursue him; but, friend, guard well thy camel, else the thief will leave thee to perish in the dreary plain. Let thy journey be at night, long after the time of sun-set; nor let the (far-appearing) fire hasten thy pace until thou hearest the dogs barking, and the songs of our people; the proudest women never discontinuing their songs in praise of the brother of Waddha. Amidst the flocks of the watchful shepherd, thou mayst find Waddha's brother following the moving herd. Mounted upon his snow-white mare, with ease he overtakes each horseman; with her the booty that he takes is immeasurable. Who can count the heroes, the warriors whom he has slain! whose heart's blood has flowed upon the ground! They fly before his eye.—the warriors, like birds that have been slightly wounded. But he marks them, and at his war-cry none dares to turn back; even the coward will fight for his booty. Has not his own kinsman felt the weight of his arm? a more praiseworthy deed none ever related. And now when thou approachest the camp, songs of joy will be sung, and loud will be the shouting, and great will be the slaughter (of animals). Then come the girls with teeth bright as lightning, to learn the achievement of the brother of Waddha; rich are his Arabs. His beard shining with virtue; his walk not that of the wretched; and the darkness of night does not conceal any of his actions. His manly person stands clear of all base crimes, and proof against all reproaches. To him present my greetings and many blessings, and to his hand deliver my verses in his praise. And when thou enterest the tent, let every bad man retire: praise God and the prophet, and wealth will be thy lot. And thus saying, carpets will be placed for thee, and the boiling beans will diffuse their grateful odour, while dates and butter are dished up: be sober, think on the sheep just slaughtered. Then after thou hast eaten and washed thyself, he may ask thee where I live at present. Tell him, 'Jousef now lives in misery and distress: since the time when he slighted thy advice, he never has experienced good fortune. His property is gone! neither lances nor enemies have taken it; but he is punished for

inattention to thy advice. God will amend the matter, my brother: his aid be always with thee; for if thou alone art left to me, O brother! I am still rich. O fortune! accompany his steps; let verdure and roots, even in winter, sprout up before him, and bless his flock. Whenever thou prayest to God, praise him with praises innumerable, like the beads of the shrub and the hair of thy flock.' * * *

"With respect to education, a young Aeneze boy may be truly styled 'the child of nature.' His parents leave him to his own free will; they seldom chastise him, but train him from his cradle to the fatigues and dangers of a nomade life. I have seen parties of naked boys, playing at noon-day upon the burning sand in the midst of summer, running until they had fatigued themselves, and when they returned to their fathers' tents, they were scolded for not continuing the exercise. Instead of teaching the boy civil manners, the father desires him to beat and pelt the strangers who come to the tent; to steal or to secrete in joke some trifling article belonging to them; and the more saucy and impudent they are, the more troublesome to strangers, and all the men of the encampment, the more they are praised, as giving indication of a future enterprising and warlike disposition. An Arab child never discloses to a stranger more than his own by-name, being instructed to conceal the name of his family, lest he should fall a victim to some enemy who had a claim of blood for the death of a relation, against the tribe: even grown-up Arabs never mention their family name to a stranger, of whatever tribe he may be.

"The Bedouins, until within a few years, had not any priests among them, neither *mollás* nor *imáms*; but since their conversion to the Wahaby faith, mollas have been introduced by a few sheiks. * * *

"There are but three things which the Bedouins consider themselves as forbidden to touch. These *harám*, or forbidden things, are swine, dead bodies, and blood. They eat whatever kind of game they can take. On the day of *korbán*, the great sacrifice on Mount Arafat, each Arab family kills as many camels as there have been deaths of adult persons during the last year in that family, whether the deceased were males or females. Though a dead person should have bequeathed but one camel to his heir, that camel is sacrificed; and if he did not leave one, his relations kill one of their own camels. Seven sheep may be substituted for a camel; and if the whole number cannot be procured for the *korbán* of the death-year, the deficiency may be supplied by killing some on the next or subsequent year. The *korbán* is therefore always a day of great feasting among the tribes. On the death of an Arab, his body is immediately buried, without any ceremony. When Soleiman died, who was elder brother of the famous Aeneze chief, Ibn Esmeyr, his body was thrown upon a camel, and intrusted for burial to a Fellah: no one, not even his brother, attended the corpse. If the camp in which an Arab dies be near a ruined village, (and such abound in the Desert at four or five days east of Syria,) the dead man is buried among the ruins; but in the plain, if a ruined village be not near; and stones, piled over the grave, indicate it to the traveller, and at the same time serve to guard the body from wild beasts. On the death of a father, the children of both sexes cut off their *kerouns*, or tresses of hair, in testimony of grief. At the moment of a man's death, his wives, daughters, and female re-

lations, unite in cries of lamentation, (*welou-louá*), which they repeat several times. If the deceased has not left any male heir, and that his whole property is transferred to another family, or if the heir is a minor, and goes to live with his uncle or next relation, the tents are torn up immediately after the man has expired, and the tent demolished (*khurbbeit*). It is since their conversion to the Wahaby faith, (about fifteen years ago), that the Aenezes have begun an observance of the regular prayers; knowing that the Wahaby chief is very rigid in punishing those who omit the practice. There are different opinions about the Wahabys' tenets, and I never met in Syria any person who even pretended to have a true knowledge of their religion. I think myself authorised to state, from the result of my inquiries among the Arabs and the Wahabys themselves, that the religion of the Wahabys may be called the Protestantism or even Puritanism of the Mohammedans. The Wahaby acknowledges the Korán as a divine revelation; his principle is, 'The Korán, and nothing but the Korán;' he therefore rejects all the *Hedayth* or 'traditions,' with which the Muselman lawyers explain, and often interpolate, the Korán. He regards Mohammed as a prophet, but merely as a mortal to whom his disciples pay too much veneration. The Wahaby forbids the pilgrimage to Mohammed's tomb at Medinah, but exhorts the faithful to visit the Kaaba, and, principally, to sacrifice upon Mount Arafat, sanctioning so far the objects of the pilgrims at Mekka. He reproves the Muselmans of this age, for their impious vanity in dress, their luxury in eating and smoking. He asks them, whether Mohammed dressed in pelisses, whether he ever smoked the argyle or the pipe? All his followers dress in the most simple garments, having neither about their own persons, nor their horses, any gold or silver; they abstain from smoking, which, they say, stupefies and intoxicates. They reject music, singing, dancing, and games of every kind, and live with each other (at least in presence of their chief) on terms of most perfect equality; because no respect, says the chief, is due to any but God, before whom all are equal; nor will this great chief allow any person to rise on his entrance, or to make room for him. He exclaims against any intercourse between his faithful people and the heretics (*meshrekein*), as he calls the Muselmans. The Wahaby, (as Ibn Saoud, the chief, is emphatically styled) propagates his religion with the sword. Whenever he purposes to attack a district of heretics, he cautions them three times, and invites them to adopt his religion; after the third summons, he proclaims that the time for pardon has elapsed, and he then allows his troops to pillage and kill at their pleasure. When the town of Mesdjed Aly was taken, his Arabs slaughtered all the inhabitants. A country once conquered by the Wahaby enjoys under him the most perfect tranquillity. In Nedjd and Hedjáz the roads are secure, and the people free from any kind of oppression. The Muselmans are forced to adopt his system; but the Jews and Christians are not molested in exercising the respective religions of their ancestors, on condition of paying tribute. A Wahaby priest, or molla, being asked why, in the assault of a town, the lives of honest Turks, Christians, and Jews, were not spared, replied, 'If you wish to grind a heap of wheat in which you know that there are few peas intermixed, do you not rather grind the whole together, than take the trouble of picking out the few peas

one by one?" A principal tenet of the Wahaby faith, is the obligation of paying tribute, (*zekah-wah*, or *zeká*), due to the chief, by all his followers.

"If an Arab, on the consummation of his nuptials, should have reason to doubt whether he had found the bride in a state of virgin purity, he does not immediately expose her shame, being afraid of offending her family; but after a day or two he repudiates his wife, assigning, as a sufficient motive, that she did not please him. If an Arab has manifest evidence of his wife's infidelity, he accuses her before her father and brother; and if the adultery be unequivocally proved, the father himself, or the brother, cuts her throat. Most Arabs are contented with a single wife; but for this monogamy they make amends by indulging in variety. They frequently change their wives, according to a custom founded on the Turkish law of divorce, which, however, has been much abused among the Arabs; for when one of them becomes, on any slight occasion, dissatisfied with his wife, he separates himself from her by simply saying *ent tálek*—'thou art divorced.' He then gives her a she-camel, and sends her back to the tents of her family. He is not obliged to state any reasons, nor does this circumstance reflect any dishonour on the divorced woman, or her family: every one excuses him by saying, 'he did not like her.' Perhaps, on the very same day, he betrothes himself to another female; but his repudiated wife, on the contrary, is obliged to wait forty days before she can become the wife of another man, that it may be known whether or not she is pregnant by the former husband. Divorces are so common among the Aenezes, that they even take place during the wife's pregnancy; and a woman is sometimes repudiated who has borne several children to her husband. In the former case, the woman nurses her child till it is able to run about, when the father takes it to his tent. When a man discards an old mother of a family, he sometimes allows her to live in his tent among her children; but she may retire to her parents. A woman who has been three or four times divorced, may nevertheless be free from any stain or imputation on her character. I have seen Arabs about forty-five years of age, who were known to have had above fifty different wives. Whoever will be at the expense of a camel, may divorce and change his wives as often as he thinks fit. The law allows to the wife also a kind of divorce; if not happy in her husband's tent, she flies for refuge to her father or kindred. The husband may induce her, by promises of fine clothes, ear-rings, or carpets, to return; but if she refuse, he cannot take her by force, as her family would resent the violence: all he can do is to withhold the sentence of divorce, *ent tálek*, without which the lady is not authorised to marry again. The husband is sometimes bribed, by a present of many camels, to pronounce the words of divorce; but if he persevere in refusing, the wife is condemned to a single life. A wife thus parted from her husband, but not regularly divorced, is called *támehhe*: of this class there are great numbers; but, on the other hand, there are not any old maids to be found among the Arabs."

With these remarkable traits of this people we must, for the present at least, be satisfied. The volume is full of excellent matter, when from some fifty pages such extracts present themselves; and we need give no further recommendation to it, than that it is the best account of the Arab tribes we have ever seen.

Mémoires et Révélations d'un Page de la Cour Impériale, de 1802 à 1815. Charles Malot Editeur. 2 vols. 8vo. Paris, 1830.

WITHOUT in the slightest degree vouching for the authenticity of this work, we extract a few fragments selected from its pages, which embrace the reign of Napoleon, from his coronation, in 1802, to his final overthrow, in 1815. A French page is naturally an indiscreet animal, with a spice of the *mauvais sujet* in his composition; and though our author professes to have attained the age when "the hey-day of the blood" subsides into a sobered current, a remnant of vanity may probably have induced him to speculate on his secrets, as Charles Surface knocked down his family portraits to the highest bidder. Seriously, considering the present redundancy of scandal and anecdote to be obtained in the French market, and which our neighbours class under the general head of *piquant* revelations, it were an idle task to sift too narrowly the authenticity of every stray volume that claims our passing notice. For ourselves, we have arrived at that degree of philosophic indifference with regard to the veracity of these lighter productions,—these small "Tritons of the minnows," that we ever feel disposed to part on terms of good fellowship with the trifler who unburdens us of a heavy hour. The main incident of this work is the career of Napoleon; its secondary interest is derived from the scattered episodes relating to personages such as ever have figured, and ever will figure in the memoirs, past, present, and future, on the subject of the imperial régime; and respecting whom we now offer a few extracts, taken at random, from the work under consideration.

"On the elevation of Napoleon to the imperial dignity, the ancient etiquette was re-established at the court of the Tuileries, and those who were fortunate enough to revive some long-forgotten usage were certain of advancement. The Count de Narbonne, formerly Louis XVIth's minister, was one day intrusted with an unimportant despatch for the emperor. Kneeling down on one knee, the courtier presented his paper on the crown of his hat. 'What does this mean?' exclaimed Napoleon. 'Sire,' replied the count, 'it was thus that Louis XVI. always received his despatches.' 'Ah! the idea is excellent,' said the emperor, who from that moment bestowed his entire confidence on the Count de Narbonne, and subsequently promoted him to posts of the highest importance.

With regard to the king of Wurtemberg, who had the appearance rather of a comfortable citizen than a monarch, the Page states Talleyrand to have remarked, that "Providence had created him for no other purpose than to shew the degree of obesity which the skin of the human stomach was capable of attaining."

"Louis Buonaparte having at first pleaded ill health as an excuse for declining the throne of Holland, and having urged that the climate of that country would infallibly prove his death—'What matter?' replied Napoleon—'provided you but die upon the throne!'"

The following affords an encouraging sample of the moderation of military rule:—

"At the period when Buonaparte was about to be named consul for life, General Saint-Hilaire assembled the troops under his command, and delivered the following harangue: 'Comrades, the nation are deliberating on the question if General Buonaparte shall be appointed consul for life. Opinions are free as air: I would not for the world seek to in-

fluence yours. However, I think it right to apprise you, that the first man who refuses to vote in Buonaparte's favour, shall be shot at the head of his regiment: liberty for ever!"

Our readers are probably acquainted with Talleyrand's observation on the political situation of the French empire towards the commencement of 1614. His phrase, "the beginning of the end," was at once a precise and pithy summary of the state of affairs at that critical juncture. The Page states, that "about the same period a paper was found attached to the base of the pillar in the Place Vendôme, which at that time was surmounted by the emperor's statue. On the paper was written, in large letters, 'Pass quickly; the Colossus will soon have a fall.'"

We select an anecdote relative to the ex-king of Westphalia.

"Previously to his elevation to the sovereignty, Jerome Buonaparte led a life of dissipation at Paris, and was much in the habit of frequenting the theatres, and other public places of amusement. He had formed an intimacy with some young authors at that time in vogue for their wit and reckless gaiety. On the evening after his nomination to the crown of Westphalia, he met two of his jovial companions just as he was leaving the theatre. 'My dear fellows,' said he, 'I am delighted to see you: I suppose you know that I have been created king of Westphalia?' 'Yes, sire, and permit us to be among the first to—' 'Eh! what! you are ceremonious methinks: that might pass, were I surrounded by my court; but, at present, away with form, and let's have the same friendship, the same free and easy gaiety as before,—and now let's be off to supper.' Jerome, upon this, took his friends to one of the best *restaurateurs* in the Palais Royal. The trio chatted and laughed, and said and did a thousand of those foolish things which, when unpremeditated, are so delightful. Conversation, it may be supposed, was not kept up without drinking. When the wine began to take effect, 'My good friends,' said Jerome, 'why should we quit each other? If you approve of my proposal, you shall accompany me. You, C., shall be my secretary; as for you, P., who are fond of books, I appoint you my librarian.' The arrangement was accepted, and instantly ratified over a fresh bottle of Champagne. At last the party began to think of retiring, and called for the bill. Jerome produced his purse; but the king of Westphalia, whose royal treasury had not as yet been established on a regular footing, could find only two louis, which formed but a small portion of two hundred francs, the amount of the restaurateur's demand. The new dignitaries, by clubbing their worldly wealth, could muster about three francs. What was to be done? At one o'clock in the morning, where could resources be found? It was, at last, deemed expedient to send for the master of the house, and to acquaint him how matters stood. He seemed to take the frolic in good part, and merely requested to know the names of the gentlemen who had done him the honour to sup at his house. 'I am secretary to the king of Westphalia—' 'And I librarian to his majesty.' 'Excellent!' cried the restaurateur, who now set his customers down as sharpers,—'and that noodle yonder is no doubt the king of Westphalia himself?' 'Precisely,' said Jerome, 'I am the king of Westphalia.' 'Gentlemen, you are pleased to be facetious, but we shall see presently how the commissary of police will relish the joke.' 'For heaven's sake!' exclaimed Jerome, who began to dislike

the aspect of the affair,—make no noise: since you doubt us, I leave you my watch, which is worth ten times the amount of your bill;’ at the same time giving the host a magnificent watch, which had been a present from Napoleon, and on the back of which was the emperor’s cipher in brilliants. The friends were then allowed to leave the house. On examining the watch, the restaurateur concluded that it had been stolen, and took it to the commissary of police. The latter, recognising the imperial cipher, ran with it to the prefect, the prefect to the minister of the interior, and the minister to the emperor, who was at Saint Cloud. The result of the whole was that, on the following morning, the *Moniteur* contained an ordonnance, in which the king of Westphalia was enjoined to repair to his government forthwith; and prohibited from conferring any appointment till his arrival in his capital!”

With regard to the final overthrow of Napoleon’s hopes at the battle of Waterloo, and his return to Paris, the Page affords no new information. We conclude with a brief extract from the latter part of his work.

“After quitting the carriage, Napoleon ran hastily up the staircase, and gained his apartment, without addressing himself to a human being. We hastily followed him. Just then my friend seized me by the arm, and, in stifled accents,—‘You see,’ said he, ‘all is lost!’—the door of the first apartment at that moment opening—‘except honour,’ said the emperor, in firm accents, and with steadfast gaze. ‘That,’ said my comrade, ‘is the first word he has uttered for eight-and-forty hours.’”

These extracts may suffice. A work on the same subject (the *Memoirs of Napoleon’s Valet de Chambre*) has been announced as about to make its appearance in Paris. Its authenticity is said to be unquestionable. We may, therefore, shortly lay a few extracts before our readers, who will thus be enabled to judge whether, in this instance, the old adage has been belied,—“no man is a hero to his valet de chambre.”

Travels through the Crimea, Turkey, and Egypt. By the late James Webster, Esq. of the Inner Temple. 2 vols. 8vo. London, 1830. Colburn and Bentley.

To this various and able work is prefixed a Memoir of Mr. Webster, a young Scotsman, who, after receiving a good education at St. Andrew’s, travelled for improvement, not only in Europe, but through large portions of Asia and Africa. The editor was, we believe, a fellow-traveller with Mr. Webster, and has raised this literary monument to the memory of his friend: it contains not only a fund of intelligence respecting the countries and places which they visited, but a mass of philosophical and general observation, which offers enough for the critic to dilate upon, were he in the command of half a dozen volumes, instead of being limited, as we are, to only a few columns. We select a very interesting account of the death of the Emperor Alexander, as one among the many things which shew how much intelligence the writer has brought to this publication.

“At the period when the emperor appeared in the Crimea, a short time before his death, viz. in the month of November, he was in the highest state of health, and took the greatest delight in viewing the magnificent scenery along the southern shores of the Crimea, and in seeing the native Tartars, to whom he was extremely attached. One day he was seen

standing on the flat roof of a Tartar house, with upwards of one hundred of the natives in their Oriental costume around him, whom he was eagerly regarding through his eye-glass, with much regard and affection, when, gratified with the sight, he exclaimed, ‘What magnificent countenances, and what a fine race of men they are! they must not be expelled from the country;’ alluding to what most Russians ardently desired, in order to introduce people of their own race. On leaving the cottage, he distributed money to the crowd, and allowed them to kiss his hands and feet, which they did with enthusiasm; and he treated them as a father would his children. At Taganrog, the emperor went much out, was very active in examining the country, and giving directions relative to the construction of a great public garden, then forming under the superintendence of an Englishman, brought from St. Petersburg for the purpose: he usually dined at two o’clock, and slept in his camp-bed, which had a leathern pillow; the same on which he died. He took very little care of his health, and was frequently out walking in the mud, up to the ankles; whilst the common means of counteracting illness were neglected, and, as he refused all kind of medicine, every cause of disease had its full action on his system; for he had as much horror of physic as his ancestor, Peter the Great, entertained of water. The peaceful state hitherto apparent in the country was sadly interrupted by the arrival of a courier, in the middle of the night which the emperor spent at Alupka, informing him of the existence of a plot to take away his own life, and to subvert the government. During the night, General Diebitch, then sleeping in an adjoining Tartar house, was twice summoned to the emperor, who was very restless, and walked about his room; they spent several hours together in deep conversation, and before morning a courier was despatched to the headquarters of the conspirators, the information of whose plot was this night first communicated to the emperor, he being previously quite ignorant of it; on the contrary, he had thought himself universally beloved by all ranks of his subjects. The following morning there was little apparent change in the manner of the emperor; and no one yet knew of the distressing news he had then received, or what had taken place in the southern part of Russia. Nevertheless, it was observed during the journey to Sevastopoli, that the emperor was unusually irritable, and expressed himself dissatisfied with his horse, with the roads, and all around him: in fact the disease now developed itself. The report prevalent in Europe, that the emperor had been poisoned, is quite unfounded; the facts about to be related, on the authority of one who was in the country at the time, and who well knew all the circumstances, and indeed was an eye-witness of the scene, completely disprove such an idea. The emperor unquestionably died of the common fever of the country, brought on by his residence in the Crimea during an unhealthy season, and by his carelessness and exposure to the usual exciting causes. These, no doubt, were very much influenced by the mental anxiety of his majesty, in consequence of the recent discoveries he had made of the plot, at a time when he thought himself, like some foolish or less amiable sovereigns, esteemed—nay, even venerated, by those under his sway. His obstinate, and, it may justly be said, criminal rejection of all medical treatment, besides, allowed the violence of the disease gradually to augment, and thus to hasten his

dissolution. The symptoms were, at first, those of a slight catarrh, followed by intermittent fever, which took place at Orickoff early in November 1825. This, in a few days, became greatly aggravated, and it then assumed the form of severe remittent fever,—a disease which had been extremely prevalent in the Crimea in the preceding autumn, and to which several strangers had fallen victims. 5th of November (old style), Alexander arrived at Taganrog. The paroxysms of the fever occurred daily, till the 8th; and as the emperor, during this time, refused to take medicine, or to submit to any treatment whatever, whilst the symptoms became more alarming, Sir James Wylie, the personal physician of the emperor, called into consultation the empress’s physician, Dr. Stophregen. At this period the emperor had frequent attacks of syncope; but the affection of the head did not manifest itself till several days after. On the 13th Sir James Wylie proposed to bleed his patient, but he would not on any account submit to the operation; again on the morning of the 14th, both the physicians, and also the empress, earnestly entreated the emperor to have some leeches applied; but he still rejected the proposition with the greatest obstinacy and violence. When Dr. Stophregen, on his first visit, told the emperor that he was distressed to see him so ill, he replied hastily, ‘Say nothing of my indisposition; only tell me how the empress is,’ (she being then affected with a disease of the heart, of which she died some months afterwards.) The emperor at the same time said to Dr. Stophregen, ‘Sir James Wylie believes me to be ill, and therefore wishes some other physician to consult with him; and, as I am always very glad to see you, you may consult on my case together; but do not trouble me with physic.’ During the progress of the disease, the emperor obstinately refused all kind of medicine, with the exception of a single dose of calomel; and in the whole period of the case, notwithstanding all the entreaties of the two physicians, and the prayers of the empress, he would take nothing further: in consequence of which, and as he was in great danger, from all the symptoms rapidly getting worse, the priest was now proposed to him, and accordingly he was brought, late on the 14th. On this occasion Sir James Wylie was called into the sick room by the empress, for the purpose of informing his majesty that he was in a dangerous state; and since he would not on any account submit to medical treatment, the emperor was therefore urged to think seriously about employing spiritual aid, so long as he retained his senses. No objection was made to this proposition, and, at five o’clock in the morning of the 15th, he was confessed. At this melancholy ceremony his majesty requested the priest ‘to confess him as a simple individual, and not to consider him as an emperor.’ After this he took the sacrament; and the confessor, like a sensible man and a Christian, urged him strongly to employ medical aid, saying that, unless he did so, he had not entirely fulfilled his whole Christian duty. The illustrious patient through this reasoning now consented to the application of leeches to the head; but it was too late, and, the following morning, the emperor became completely insensible. At this hopeless point of the disease, it was accidentally mentioned to Sir James Wylie, by General Diebitch, who was then chief of the staff of the emperor, that an old man named Alexandrowich, a practitioner in surgery at Taganrog, had cured some one affected with the same complaint as his ma-

jesty; upon which Alexandrowich was immediately summoned in order to answer inquiry into the fact. On his arrival he seemed thunderstruck at the desperate state of the emperor, and said the case alluded to was quite different from his majesty's, for whom, he was compelled to confess, there was no remedy; and the fatal result soon followed. Sir James Wylie observed, if a case of *lèse majesté* was ever lawful, it would be on an occasion like the present, where a medical man would be perfectly justified in compelling his sovereign to act contrary to his own express commands, and submit to what was for his benefit, and restoration to health. After death, the body of the emperor was examined. The only appearances found were two ounces of fluid in the ventricles of the brain, save that the veins and arteries of the head were gorged with blood; and an adhesion existed between the membranes of the brain at the posterior part, which appearance had resulted from inflammation at some remote period. Nothing farther was observed, excepting in the abdomen, where the spleen was soft and enlarged, which is a very common occurrence in fevers of the country. It is therefore probable, had treatment been allowed, life might have been saved, as no decided morbid changes of structure had taken place. The emperor did every thing possible to augment the fever and aggravate the disease. Nor would he even submit to have the common offices required for all sick persons performed to him, but would get out of bed when so feeble that he could hardly make his way back again; he also talked much, and would not remain quiet. At one period of his disease, the emperor appeared about to communicate some important secret to those near him, by saying, 'Emperors suffer more than other men; my nervous system is shaken;' then, stopping, he threw himself back on the pillow, exclaiming, 'It was a detestable action which they committed.' For thirty hours before death the empress scarcely for a moment quitted the emperor's bed-side, and the scene was most affecting when he expired. She continued kneeling by her husband, with her eyes fixed upon him, as he was gradually becoming weaker and weaker, until all signs of life were gone, when she rose and closed his eyes, and then took a handkerchief to bind up his head, to prevent the jaw from falling. After this she folded his arms over the breast, kissed his lifeless, cold hand, and, kneeling down by the side of the bed, continued for half an hour in prayer. The empress was also present in an adjoining apartment when the funeral service, or masses, were performed. She was an excellent woman, and died soon after her husband, of disease of the heart, said to have been induced by the neglect of the emperor in the earlier part of life, occasioned by his attachment to another lady, Madame Nourakin. The body of the emperor lay in state in the house where he lived and died. The coffin was raised upon a small platform, and covered by a canopy. The room was hung with black; the coffin covered with a yellow cloth of gold; numbers of wax candles burning in the apartment, and each individual in the room held a long, slender taper, lighted. These were given to all present, by those who had been the personal attendants of his majesty, as is done at all funerals in Russia. A priest was placed at the head of the coffin, reading the gospels. This was continued night and day. On each side of the body a sentinel was placed, with a drawn sword; guards were stationed round the doors of the house, and also on the stairs.

In the ante-room a number of jovial priests were occupied in putting on their robes, for the nobler service, or mass, which was performed twice a-day. There was no sign of melancholy, either on their countenances, or with those who formed the crowd; and the military officers present seemed impressed with other feelings than those of sorrow for the deceased emperor, their attention being directed more to the ladies present, than to the mournful ceremony then performing. The funeral was afterwards performed with great pomp and splendour, according to the ritual of the Greek church."

Of the conspiracy here alluded to, a very striking account is given: it is altogether a most important and interesting document, and we regret that its length and details preclude our doing little more than to refer to it. Among other projects, besides the assassination of the emperor, the provisional government proposed to establish "a fourth state, and people it with all the Jews of Russia and Poland. Their number, says Pestel, amounts to just two millions, comprising women, children, and aged persons; and they might easily, even without the aid of auxiliary troops, traverse the whole of European Turkey, choose a fertile country on the borders of Asia Minor, and there form an independent state."

This secret society extended its ramifications very widely, not only in Russia, but in Poland and even Italy. Many persons of high rank were among the conspirators, and the army in particular was strongly tainted with disaffection. After the death of Alexander, they continued their machinations against his successor, of which we may in our next be tempted to give some particulars.

The Family Magazine. No. I.
Hurst and Co.

WE always rejoice to welcome new and deserving contemporaries into the literary field: the *Family Magazine* has just reached us, and affords us a very favourable opinion of its merits. It is cheap, and of unobjectionable purity in morals and language. The miscellany, both prose and verse, is pleasing, whether original or drawn (as some of it is) from foreign sources, especially from the rich mines of Germany. The perusal of this first No. has left a very agreeable impression on our minds.

Bourrienne's Private Memoirs of Buonaparte.
Vols. III. and IV. Colburn and Bentley.

THESE volumes conclude the Memoirs, which we need only (after so much discussion) repeat, are the most interesting that have yet appeared on the period, and the man who almost made it.

Description of the Bible written by Alcuin, and presented by him to Charlemagne on the day of his Coronation at Rome. By its proprietor, M. de Speyr-Passavant. Paris, October, 1829; Fontaine, Rue Hautefeuille. 8vo. No. XVI.

THE monk Alcuin, when he was preceptor to Charlemagne and his sons, undertook the correction of the numerous errors which, by the unskilfulness of copyists, had crept into various texts of the Bible. The work accomplished, he made a present of it to Charlemagne, on the day of his coronation, by the hands of his beloved disciple Nathaniel. Amidst the troubles which succeeded the death of the great emperor, this Bible became the property of the monastery of Prum, in Lorraine, and then that of the monastery of Montier-Grand-Val,

near Basle. In 1793, on the dispersion of the Benedictines of Grand-Val, it fell into the hands of a Sieur Bennot, President of the Tribunal of Delemont, from whom M. de Passavant obtained it in 1822. It was then in a very bad state; but by great care M. de Passavant has restored it to its original splendour. The writing of this valuable monument of paleography is excessively neat and exact; Greek letters are profusely mingled in it with Latin; and the character is, besides, perfectly similar to that of the Code of the Canons, written in 787, by order of Bishop Rachion of Strasburg. The initial letters are ornamented with seals, and emblems of all kinds, in gold, silver, and colours. These illustrations are very inferior with respect to brilliance and colouring to those of the manuscripts and books of the church of the fourteenth and fifteenth centuries; above all, they are not to be compared to the admirable missals of the court of Francis I., of which M. Renouard's library probably contains the most curious specimens. We will say as much of the four large miniatures which are in this Bible, and of which the drawing is without merit, the expression vacant, and the colouring remarkably *mediocre*. But these defects are a striking proof of the authenticity of Alcuin's Bible; they betray the infancy of the art, and give, as it were, the date of the book.

In the pamphlet which we are noticing will be found a crowd of attestations by the principal bibliographers of France, which establish the authenticity of the monument. We willingly unite with judges so competent in such matters to entreat the French government not to let this grand memorial of one of the most wonderful periods of our history go out of the country; and, in default of the government, it is at least desirable that the bibliographical societies of France or England should devote the produce of a subscription to the purchase of a book so valuable to art and erudition.—*Revue Encyclopédique.*

The Private Devotions of Lancelot Andrews,
Bishop of Winchester, &c. &c. Translated
from the Greek and Latin, by the Rev.
Peter Hall, B.A. London, W. Pickering.
To go back for three centuries, even in forms of devotion, is a treat to the reader of modern works. This reprint of the celebrated Bishop Andrews is further remarkable for the learning of its pious author.

Historical Sketches of the Native Irish, &c.
By C. Anderson. 12mo. pp. 356.
AN enlarged second edition of this work contains a great deal of matter that may deserve consideration. The author argues for the diffusion of instruction in Ireland through the medium of the native dialect.

ARTS AND SCIENCES.
ROYAL INSTITUTION.

MR. FARADAY occupied the lecture-table on the first evening after the Easter recess, when he delivered an exceedingly interesting account of some experimental investigations made by M. Huber, relative to the flowing of sand under pressure and other circumstances. Before entering into M. Huber's experiments, Mr. Faraday took a brief view of the ideas generally entertained regarding the two states of solidity and fluidity of sand, for the purpose of demonstrating to the audience that the phenomena to be shewn with sand, or other matter, divided into small particles,

presented singular analogies, as well as differences to these states. He then described generally the apparatus:—this consists of a reservoir for the sand, having apertures at the bottom and sides formed in metallic plates;—these apertures can be varied in size at pleasure:—the sand, it was observed, should be dry, well sifted; neither dusty nor containing too large particles. The flow of sand through a constant aperture will be in proportion to the time only; differences of height or of pressure causing no variation whatever; in fact, the velocity is constant. The same is the case also with lateral apertures; but here the thickness of the substance in which the aperture is cut has an influence, not on the constancy of flow, however, but on the quantity of matter which issues. The motion of the sand within the reservoir is beautifully proportionate in different parts to the position of those parts to the aperture. All these points were illustrated by numerous *timed* experiments. The force which is thus obtained by a fall of sand from an aperture, is unique in its kind, because of its independence of those causes of variation which affect other forces;—it is neither altered by the varying gravity of the mass above, by the variable resistance of the atmosphere, nor by friction. Illustrations of the peculiar advantages of its constancy under these circumstances were drawn from the hopper of the corn-mill, the hour-glass, &c. The flowing of sand upon a plane, or down the sides of heaps, was then considered; and the general result obtained by M. Huber, it appeared, was, that sand remains undisturbed at angles less than about 30 degrees with the horizontal plane, whereas at greater angles it tended to flow. Comparisons were then drawn between the pressure of sand and fluids in tubes and other vessels. In a siphon, fluid rises to an equal height in both limbs of the instrument; but sand poured into one limb rises to no height in the other;—it cannot pass the bend. Hence it appears, that the sides of the tube essentially support the weight of the column of sand, and not the bottom:—this was further proved by having a tube open at both ends, and using a card as a bottom to it: when the tube was balanced in a perpendicular position, the card then held to the open bottom, and sand poured in, it was found that the tube became very heavy, and required weights to raise it from the card below, equal to the weight of all the sand within, except the little cone that stood upon the circular space, equal to the diameter of the tube! On the other hand, on examining the card bottom, it was found, that when a tube, nearly three feet long, was filled with sand, still the card, which closed the bottom, required no more counterpoising weight to hold it against the bottom than that equal to the before-mentioned small cone, not a fiftieth part of the weight of the sand in the tube. This led to another curious fact, namely, the extreme difficulty of pushing sand out of a tube. Let a tube, one inch in diameter, be filled with sand for five or six inches, or even less, and then being placed horizontally, let an endeavour be made to push the sand through the tube by a rod of a diameter which would leave it quite free to move in the tube, had there been no obstruction—it will be found that the sand will not stir; and the fact shews, in addition to the former, that the force is transferred to the sides of the tube, and not continued directly through the axis. The application of this fact to the process of blasting rocks, and the use of sand in some countries superseding the dan-

gerous mode of plugging the gunpowder with stony materials, was then happily pointed out. Finally, reference was made to the theory of these effects, and the analogy of the grains of sand to so many spheres: although the grains differ much in size and shape, yet from their multitude it would appear that these differences compensate each other, and that the direction of the forces is nearly as if all the grains were spherical.

On the library-table were placed a variety of interesting productions in literature and the arts: amongst them were two profiles of Sir Thomas Lawrence: the larger in bronze, by Bailey, was an exceedingly faithful and well-executed likeness of the late President of the Royal Academy.

CELESTIAL PHENOMENA FOR MAY.

21^d 3^h 19^m—the Sun enters Gemini: its true place in the heavens is between the Hyades and Pleiades.

Lunar Phases and Conjunctions.

	E. H. M.

J. T. B.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE President in the chair. A paper by J. W. Lubbock, Esq., was read, "on the variations of the elliptic constants." Captain Bauza, hydrographer to the Spanish Government, presented a chart of the Gulf of Mexico; M. Jomard his remarks on Caillie's Voyage; M. Morin four Nos. of a new periodical, containing meteorological correspondence; M. Bruguière his Orography of Europe; and Mr. Bell his new work on the nervous system.

At a recent sitting, a paper was read, entitled a "statement of the principal circumstances respecting the united Siamese Twins, now exhibiting in London," by George Buckley Bolton, esq. member of the Royal College of Surgeons, communicated by Dr. Roget; of which we give the following comprehensive abstract.

The twin brothers, of whom an account is given in this paper, were born of Chinese parents, in 1811, at a small village in Siam, distant about sixty miles from Bangkok, the capital of the kingdom. When the intelligence of their birth reached the ears of the King of Siam, he gave orders that they should be destroyed, as portending evil to his government; but he changed his intention, and suffered them to live, on being assured that they were harmless, and would be capable of supporting themselves by their own labour. About six years ago, Mr. Robert Hunter, a British merchant resident at Siam, saw them for the first time in a fishing-boat on the river, in the dusk of the evening, and mistook them for some strange animal. It was only in the spring of last year that permission could be obtained from the Siamese government to bring them to England. They were taken to Boston in the United States, where they landed in August last, and six weeks afterwards embarked for England, and arrived in London in November.

They are both of the same height, namely, five feet two inches; and their united weight is 180lbs. They have not the broad and flat forehead so characteristic of the Chinese race; but they resemble the lower class of the people of Canton in the colour of their skins and the form of their features. Their bodies and limbs are well made. The band of union is formed by the prolongation and junction of the ensiform cartilages of each, which meet in the middle of the upper part of the band, and form movable joints with each other, connected by ligamentous structures. Underneath the cartilages there appear to be large hernial sacs opening into each abdomen; into which, on coughing, portions of the intestine are propelled as far as the middle of the band; though, in ordinary circumstances, these hernia are not apparent. The entire band is covered with common integument; and when the boys face each other, its length at the apex is one inch and three quarters, and at the lower edge not quite three inches. Its breadth from above downwards is four inches, and its greatest thickness nearly two inches. In the centre of the lower edge there is a cicatrix of a single navel. It possesses little sensibility, and is of great strength; for upon a rope being fastened to it, the twins may be pulled along without occasioning pain; and when one of them is lifted from the ground, the other will hang by the band alone, without sensible inconvenience. For the space of about half an inch from the medial line of the band, the sensibility of the skin appears to be common to both. The following experiment was tried upon them by Dr. Roget. A silver tea-spoon being placed on the tongue of one of the twins, and a disk of zinc on the tongue of the other, the moment the two metals were brought into contact, both the boys exclaimed "sour, sour;" thus proving that the galvanic influence passed from the one to the other through the connecting band. Another simple but clever experiment (which we need not detail, as all philosophical inquiries are not fit for publication) proved that the sanguineous inter-communication was not common to the two.

Their strength and activity are very remarkable. They can throw down with perfect ease a powerful man. They run with great

swiftness, bend their bodies in all directions, and in their sports often tumble head over heels without the least difficulty or inconvenience. In all the bodily actions in which the concurrence of both is required, such as running, jumping, playing at battledoor and shuttlecock, they exhibit a wonderful consent, or agreement, without the appearance of any previous communication of their intentions. The intellectual powers of each are nearly equal; and they have both attained the same degree of proficiency in the games of chess, draughts, and whist. They both possess great powers of imitation. In their respective physical constitutions, however, several differences are observable. Chang, as the boy on the left is named, has more vigorous health, and greater regularity of functions, than his brother, whose name is Eng. In general they take their meals, and obey the calls of nature, at the same time. The author details the circumstances of a catarrhal complaint which attacked both of them in December last, the symptoms and progress of which were similar in each; and from which they both recovered in the same manner and at the same time. In their healthy state their pulses are generally alike, and are easily excited; but that of the one may be accelerated, while that of his brother continues calm.

In their habits they are very cleanly and delicate: in their dispositions affectionate and grateful for every kindness shewn to them. There exists between them the most perfect harmony. They always fall asleep at the same moment; and it is impossible to wake the one without also waking the other. The author adverts in the course of the paper to the question, whether they were the produce of a single or double ovum, and also to the possibility at some future time of effecting their separation with safety to themselves; and he concludes, by bearing testimony to the uniformly kind treatment they have received from Captain Coffin, Mr. Hunter, and Mr. Hall, who have evinced on all occasions the greatest anxiety for their welfare and happiness; and to the liberal manner in which they have always afforded access to men of science, for promoting any object of philosophical inquiry.*

SOCIETY OF ANTIQUARIES.

HUDSON GURNEY, Esq. V.P. in the chair.—A paper, from the British Museum, was partly read, being a work on the history of Ireland, called the *Anatomy of Ireland*, addressed to King James, in 1615, by Barnaby Rich, in the form of a dialogue. It appears an *ex-parte* statement by a staunch Protestant, describing the Irish as savage and uncivilised, and too stubborn to take any example or copy from the English; that they were buried in Papism, and magistrates could not be got to administer justice towards the Protestants, nor juries to decide against the Papists; that the clergy had been assaulted and prevented from performing the service at funerals; and that the country was become a refuge for lawless and abandoned characters from England, Spain, and other countries.

ROYAL SOCIETY OF LITERATURE.

The general annual meeting on Thursday was numerously attended; the rooms being filled by eminent and literary men. The Lord Bishop of Salisbury, the president, read a

* Mr. Bolton's opinions on the possibility of separating these twins, and the means of doing so, display not only much professional skill, but a very philanthropic sense of humanity.

learned and extremely interesting address, of which we shall give an epitome in our next; and afterwards presented the two royal medals of the year to Mr. Washington Irving and Mr. Hallam. Both gentlemen returned thanks for the honour; and Mr. Irving expressed his satisfaction that a compliment of this kind should be paid to his native country, rather than to any claim which he could prefer to the distinction. Mr. Cattermole, the secretary, read the proceedings of the Society during the year, which were of a very gratifying description. The meeting then proceeded to the election of president, council, &c., for the ensuing year, when the following were elected:—

President.—The Lord Bishop of Salisbury.
Vice-Presidents.—The Duke of Rutland, the Marquis of Lansdowne, the Lord Bishop of Bath and Wells, Lord Bexley, the Earl of Carlisle, the Right Hon. Charles Yorke, the Hon. George Agar Ellis, Colonel Fitzclarence, The Rev. D. Richards, D.D., *Charles Baring Wall, Esq., M.P.
Council.—*The Earl of Clarendon, *Sir Thomas Phillips, Bart., The Rev. H. H. Baber, John Caley, Esq., The Rev. R. Cattermole, *The Rev. H. Clissold, *The Rev. G. D'Oyley, D.D., *W. R. Hamilton, Esq., A. E. Impey, Esq., W. Jacob, Esq., W. Jordan, Esq., W. M. Leake, Esq., L. H. Petit, Esq., M.P., D. Pollock, Esq., W. Tooke, Esq., *P. Vere, Esq.
Treasurer.—A. E. Impey, Esq.
Auditors.—*W. Sotheby, Esq., *R. Lemon, Esq.
Librarian.—The Rev. H. H. Baber.
Secretary.—The Rev. R. Cattermole.
Foreign Secretary.—The Rev. H. A. Delafite.
Accountant and Collector.—Mr. T. Paull.

Those marked with stars are newly elected, in the room of officers, &c., who go out by rotation, viz. :—

The Earl of Clare, V.P., the Bishop of Ely, Lord Farnborough, R. Blanshard, Esq., Prince Hoare, Esq., Sir Gore Ouseley, Bart., and W. Sotheby, Esq., *Council*: L. A. De la Chaumette and F. Madden, Esqs., *Auditors*.

All the others were re-elected.

The Bishop of Bristol paid an elegant and appropriate tribute to the learning and virtues of the chairman, to whom the thanks of the Society were voted, on his lordship's motion.

FINE ARTS.

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

IT is little more than half a century since the study and practice of water-colour painting were first cultivated in this country, and yet its improvement in that period has placed it in the highest ranks of art. In depth of tone, brilliancy of colour, and spirit of execution, the water-colour paintings of the present day are fully equal to the most splendid and powerful paintings in oil. Those who remember the early character of water-colour drawings well know that it was in few instances that they went beyond a slight wash over a pencil or penne'd outline. Many of the drawings of Cipriani, West, and Angelica Kauffman, were so little "made out," that the skill of a Bartolozzi alone could impart to the engravings from them the correctness, force, and beauty of finished works. In landscape, however, even in those more remote days, a more solid foundation began to be laid, as may be seen in the productions of Paul Sandby, M. A. Rooker, Byrne, Smith, and others. We have indulged in this slight retrospect, as shewing the growth of an art so entirely peculiar to England. If it did not spring forth at once, like Minerva from the head of Jove, it has attained perfection in a much shorter time than could possibly have been anticipated; and such have been the talents displayed and the exertions made by its present professors, that their annual exhibition possesses an interest with the public which perhaps renders it more secure of encouragement than any other of a less select nature. We proceed briefly to notice some of the most

striking performances in the collection of the present year.

No. 4. "Comrades free, Carousing after victory."

G. Cattermole.

This exceedingly clever performance, with others in which Mr. Cattermole has let a little more light into his subject, is a fair illustration of what we have alluded to in our remarks on what may be called "the old style." In the production under our notice there is much—perhaps too much—left to the imagination of the spectator. Some artists are ultra in the brilliancy of their tones, Mr. Cattermole is equally ultra in the obscurity of his. He possesses, however, an originality of conception and a power of execution, which, in the estimation of every real judge and lover of art, must give his daring sketches an incalculable preference to more laboured works which are destitute of those high qualities.

No. 22. *View of Lincoln, from the Brayford.*

P. De Wint.—Cities, like countenances, have their favourable and unfavourable aspects, and their favourable and unfavourable lights; and as much judgment and taste in selection are requisite with reference to representations of the one, as with reference to representations of the other. In the instance before us, Mr. De Wint has been eminently successful in his choice. It is one of the most charming drawings that we have ever beheld, even from his masterly pencil. The rich variety in all the forms, whether of buildings, vessels, or other accessories, the depth and beauty of all the tones, and more especially the liquid transparency and flatness of the water, are incapable of being surpassed.

No. 73. *A Domestic Scene.* Miss E. Sharpe.

—There has been such a demand for beauty in the graphic embellishments of the Annuals, and other recent publications of a similar nature, that we are not at all surprised at the supply brought by a lady of Miss E. Sharpe's powers into the market of art. We have here a lovely wife, a handsome husband, a well-looking grandmamma, pretty children, and the sweetest of all possible infants; and this redundancy we are perversely inclined to consider as the only fault in the picture, which, in point of composition, brilliancy of colour, and careful, yet spirited, execution, is a most splendid performance.

No. 88. *Durham.* G. F. Robson.—If Mr. Robson is not weary of painting these grand and interesting views of Durham, neither are we weary of admiring them. The present, in execution, as well as in every other quality of art, is one of the finest that we have seen.

No. 95. "PISCATOR. 'Look you now, you see him plain; I told you what he was; bring hither the landing-net; and now, sir, he is your own, and, believe me, a good one; sixteen inches long, I warrant him.'" J. F. Lewis.

—It would certainly have done Isaac Walton's heart good to have beheld so spirited an illustration of his favourite amusement. Mr. Lewis has well "suited the action to the word." Both the figures and the scenery are in the best style of art.

No. 103. *The Squire.* J. F. Lewis.—This, which is placed as a pendant to the last-mentioned work, is scarcely less attractive in character and execution. The former is action; the present is repose. The sports of the day over, the squire and his dogs are tasting the enjoyment which results from warmth, rest, and good cheer. Although every object is represented with great truth and vigour, we think that the relief is effected too much by

colour alone, and not sufficiently by light and shade.

No. 118. *The Rival Guests*. G. Cattermole. — We correct the catalogue, which has it "Rural Guests." Any thing less rural could scarcely be conceived. The subject is one of high romantic and chivalrous character. There is the same mysterious light, or rather obscurity, that pervades No. 4, although not in the same degree; and there is also abundant matter for the imagination to speculate upon.

No. 127. *Girl with a Guitar*. Miss L. Sharpe. — This is really what our friends of the Emerald Isle would call "a highly talented family." It is to such performances as the present, and as No. 73, that the Society owes its right to assume the title of "*Painters in Water-Colours*." Well, indeed, may such powerful and highly-finished works be called "paintings." Still, however, we are so fastidious as to think that Miss L. Sharpe, as well as Miss E. Sharpe, is too fond of prettiness to be quite natural.

No. 158. *Loch Lomond, from the point of Farkin, West Highlands: a Rainy Day*. Copley Fielding. — The admirable effect produced in this beautiful work, as well as in No. 64, *A Gale coming on at Sea*, by the same able hand, is accomplished by a mastery over means which long practice alone can give. In the deep-toned clouds of Mr. Fielding's productions of this description, there is a flat, solid, intensity of gloom which we have never seen equalled by any other artist, either in oil or in water-colours.

No. 159. *Evening*. G. Barret. — The poetry of art pervades this noble composition, and entitles it, in all its bearings, to rank in the highest class of landscape-painting. Such exhibitions of talent make us pause and ask, "Can art be carried further?"

No. 164. *Interior of Fielding's House, at West Storr, Dorset*. G. Cattermole. — We hold ourselves, as it were, personally obliged, when relics such as these are snatched from the fangs of Time. The sight of them calls up early and delightful associations. Whatever is connected with the author of Tom Jones cannot fail to be interesting and valuable in the eyes of all who are sensible of the merits of that most vigorous and characteristic, though occasionally licentious, work.

(To be continued.)

NEW PUBLICATIONS.

The Deserter. Painted by R. Farrier, and drawn on stone by T. Fairland.

Mr. FAIRLAND has been very successful in transferring to stone the humour of the original picture. His lithographic chalk is handled with great freedom and looseness; and the print which he has now produced is an excellent companion to his former one, of the same size, from Mr. Farrier's *Who'll serve the King?*

Illustrations of the Exodus, from Drawings taken on the spot, during a Journey in Arabia Petraea. Colburn and Bentley.

THESE Illustrations have been very ably transferred to stone by Mr. Harding, from drawings by Mr. Newnam, the companion of the lamented Webster, to whom the fatigues of the journey from Cairo to Mount Sinai, and the pestilential and furnace-like winds of the desert, proved fatal, and who expired at Cairo on the 1st of August 1828, two days after his return. "Few places," justly observes Mr. Newnam, in his prefatory remarks to the work, "possess greater interest, whether his-

torically or religiously considered, than the site occupied by the mountains of Sinai and Horeb. These names are inseparably associated with events which, above all others, have influenced the moral condition of man; and in no age or country can they be indifferent to the enlightened and liberal mind." It is impossible, indeed, to contemplate these highly characteristic views without deep and awful interest. They are six in number, viz., "Mount Horeb," "The Convent at Mount Sinai," "The Chapel over Elijah's Cave," "The Summit of Mount Sinai," "The Rock in Rephidim," and "Mount Sinai." Each view is accompanied by a brief typographical description, and by the passages from the Scriptures which it is intended to illustrate; and there is an appendix to the publication, containing, among other matters, a sketch of Arab history.

Scenery, Costumes, and Architecture, chiefly on the Western Side of India. By Captain Robert Melville Grindlay, member of the Royal Asiatic Society, &c. Part VI. Smith, Elder, and Co.

WE have already spoken of this interesting publication with the high praise that it deserves; and the present, which is the concluding Part, fully sustains the character of its earlier portions. The plates are singularly beautiful: they are engraved and tinted with a richness and a delicacy which are very rare, and which give them the appearance and value of drawings. The "View of Sassoor in the Deccan," and the "Porch of a Hindoo Temple, with other Hindoo and Mahometan Buildings," are pre-eminent in this respect. Both the Asiatic and the European world are greatly indebted to Captain Grindlay for the manner in which he has carried on and completed his splendid work.

Her Royal Highness Augusta Wilhelmina Louisa, Duchess of Cambridge. Engraved by Say, from a miniature by A. E. Chalon, R. A. Whittaker and Co., and Sams.

SOMEWHAT formal; but, as a print, very carefully and beautifully executed. It forms the embellishment of the sixty-seventh Number of *La Belle Assemblée*.

The National Portrait Gallery. No. XIII. Fisher and Son.

THIS No. contains portraits and memoirs of Mr. Canning, Davies Gilbert, Esq., and Lord Whitworth. The first supplies some interesting particulars and original anecdotes of the late lamented premier; and the publishers have liberally allotted more space to this single sketch than their design promised for the whole three given in each No. The portraits are among the best which have yet adorned this rapidly rising publication.

Picturesque Views on the River Clyde. Engraved by Joseph Swan, from drawings by J. Fleming; with historical and descriptive Illustrations by J. M. Leighton. Parts XIII. and XIV. Moon, Boys, and Graves.

THESE Parts complete Mr. Swan's clever and interesting publication, which comprehends upwards of forty-two plates; by far the greater number of them of high picturesque beauty, and all of them accompanied by descriptions written with great neatness, and containing much curious and valuable information. To those who have never visited the banks of the Clyde, this work will afford very pleasing and satisfactory evidence of the justice of the

epigraph which is prefixed to it from *Cyril Thornton*:

"I had never seen before, and I have never seen since, any river, which for natural beauty can stand in competition with the Clyde. Never did stream glide more gracefully to the ocean through a fairer region."

TRICKS OF PICTURE-DEALERS.*

To the Editor, &c.

SIR,—Knowing the respectability and independence of your Journal, I am induced to address to you the following remarks:—

There is a cunning amongst dealers in the fine arts, which requires to be closely watched, and occasionally exposed; or aspirants to fame will be plundered of their due reward, and men of established reputations defamed, to put money into the pockets of the artful instead of the artist.

It too generally happens that young artists, however promising their talents, are a little cramped in their finances. The temptation of ready cash is almost irresistible, and to obtain it, they will sacrifice much of the value of their productions. The dealer knows this, and profits by it. But the evil does not end here, as, I think, may be remarked now and then at the exhibition of water-coloured paintings. Let any one observe, at its first opening, how many clever pictures are already ticketed as sold. This attracts a more particular attention to their merits; and the dealers, who will be generally found to be the purchasers, well know the effect of such early sales in enhancing the future price of the pictures.

The difficulty of getting these productions especially noticed and praised in some papers, is not great; and, indeed, their rapid sale is not unfrequently the best clue to their merits, which many of the *arbitri elegantiarum* possess.

Did the matter rest here, the harm might not be great; since the artist, though badly paid, is somewhat remunerated by increase of notoriety. But the evil lies deeper; for, it will be often seen, that in the paper where these purchased pictures are lauded to the skies, the works of established artists are abused with the most unsparing acrimony; and this, I apprehend, does not always happen through chance or refined critical judgment, but because men of established reputation are not quite so convertible to speculative purposes as those who are striving to obtain it. Thus, the due reward of the one, and the fame of the other, are both sacrificed to the interest of the trader.

No sooner, however, does the ill-paid artist attempt to raise the price of his works in proportion to his acknowledged merits, than he also, in his turn, is subjected to the lash of criticism, and some other practitioner is forced into notice to supply his place.

I am desirous to call the attention of the public to this ingenious system, now that the exhibition is opened; for I think it but fair, both to the artists and patrons of the art, that this institution should not be converted into a show-shop for picture-dealers.

AN OLD AMATEUR.

Westmoreland Street, April 26.

ARTISTS' BENEVOLENT INSTITUTION.

THIS day week the annual dinner of this truly excellent Society was held at the Freemasons' Tavern, where a very numerous and respectable company partook of Mr. Cuff's good

* We print this as received, though from an anonymous correspondent: if such evils as are pointed at exist, it would be well to reform them altogether.—Ed. L. G.

cheer. The Earl of Aberdeen intended to have filled the chair; but being called from town unexpectedly, the duties of chairman devolved on Lord Grantham; and verily they could not have fallen into better hands than into those of a nobleman distinguished by his zeal for the interests of the arts in general, and who has ever shewn himself the devoted friend and liberal supporter of this Institution for the relief of aged, less fortunate, or less gifted artists. The evening was agreeably diversified by speeches from the Hon. Chairman, Sir T. Dyke Acland, Mr. Shee, Mr. Phillips, Mr. Robertson, &c. &c.—by the toasts usual on such occasions—and by the delightful singing of Broadhurst, assisted by his musical brethren.—It was remarked by one gentleman, in his speech, that the arts have already made such progress in Britain, that the artists of Rome now copy from us, instead of the artists of England copying from those of Rome, as was formerly the case. This is exceedingly flattering to the artists of this country, and very gratifying in a national point of view.—The list of new subscribers and donations amounted to between 6 and 700l.

POETRY.

SONGS FROM PAUL CLIFFORD.

Long Ned's Song.

OH, if my hands adhere to cash,
My gloves at least are clean,
And rarely have the gentry flash
In sprucer clothes been seen.

Sweet Public! since your coffers must
Afford our wants relief,
Oh! soothes it not to yield the dust
To such a charming thief?

I never robbed a single coach
But with a lover's air;
And though you might my *course* reproach,
You never could my *hair*.

John Bull, who loves a harmless joke,
Is apt at me to grin,
But why be cross with laughing folk,
Unless they laugh and win?

John Bull has money in his box;
And though his wit's divine,
Yet let me laugh at Johnny's locks—
And John may laugh at mine!

Old Bags's Song.

Are the days then gone, when on Houn-
slow Heath
We flash'd our nags?
When the stoutest bosoms quail'd beneath
The voice of Bags?
Ne'er was my work half undone, lest
I should be nabb'd:
Slow was old Bags, but he never ceas'd
'Till the whole was grabb'd.

Chorus.

'Till the whole was grabb'd.

When the slow coach paus'd—and the
gemmen storm'd,
I bore the brunt— [form'd
And the only sound which my grave lips
Was "blunt"—still "blunt!"
Oh! those jovial days are ne'er forgot!—
But the tape lags—
When I be's dead, you'll drink one pot
To poor old Bags!

Chorus.

To poor old Bags!

The Robber's Grand Toast.

A tumbler of blue ruin, fill, fill for me!
Red tape those as likes it may drain;
But whatever the lish, it a bumper must be,
If we ne'er drinks a bumper again!
Now—now in the crib, where a ruffler maylie,
Without fear that the *traps* should distress
him,
With a drop in the mouth, and a drop in the eye,
Here's to Gentleman George—God bless him!
God bless him—God bless him!
Here's to Gentleman George—God bless him!
'Mong the pals of the prince, I have heard it 's
Before they have tippled enough, [the go,
To smarten their punch with the best curaçoa,
More conish to render the stuff!
I boast not such lush!—but whoever his glass
Does not like—I'll be damn'd if I press him!
Upstanding, my kiddies—round, round let it pass!
Here's to Gentleman George—God bless him!
God bless him—God bless him!
Here's to Gentleman George—God bless him!
See—see—the fine fellow grows weak on the
Assist him, ye rascals, to stand! [stumps,
Why, ye stir not a peg!—Are you all in the
dumps?—
Fighting Attie, go, lend him a hand!

[The robbers croak around Gentleman George, each, under
pretence of supporting him, pulling him first one way
and then another.]

Come, lean upon me—at your service I am!
Get away from his elbow, you whelp!—him
You'll only upset!—them 'ere fellows but sham!
Here's to Gentleman George—God help him!
God help him—God help him!
Here's to Gentleman George—God help him!

Stanzas.

When I leave thee, oh! ask not the world
what that heart
Which adores thee, to others may be!
I know that I sin when from thee I depart,
But my guilt shall *not* light upon thee!
My life is a river which glasses a ray
That hath deign'd to descend from above;
Whatever the banks that o'ershadows its way,
It mirrors the light of thy love.
Though the waves may run high when the night-
wind awakes,
And hurries the stream to its fall;
Though broken and wild be the billows it makes,
Thine image still trembles on all!

DRAMA.

KING'S THEATRE.

ON Thursday night Madame Malibran made her first appearance this season, in Rossini's *Cenerentola*; but why selected, we cannot guess; for, independently of the opera being the stalest of the stale, there is nothing so peculiarly striking, either in her singing or acting in the part of the heroine, to justify her choice.

In some of our criticisms, last season, we took occasion to deprecate Madame M.'s predilection for meretricious ornament, and to point out to her the mischief likely to result to her voice by indulging in those flights of fancy. Sorry are we to say, the report of our Parisian correspondent is but too true;—the whole *timbre* of Madame M.'s voice is considerably deteriorated since her appearance last season. She was, however, most enthusiastically received.

We hear that La Blache is hourly expected, and will make his *début* in Cimarosa's opera of *Il Matrimonio Segreto*. La Porte has proceeded to Paris to recruit for dancers.

COVENT GARDEN.

AT this theatre the great novelty has been Miss F. Kemble as *Isabella*, in the *Fatal Marriage*, acted for the benefit of her much-respected and popular father. The house was full; and the applause so great, as to encourage the repetition of the part thrice a week.

ADELPHI.

THIS theatre of everlasting drollery, fun, and amusement, was re-opened on Monday by Mr. Mathews, with an entertainment called the *Comic Annual*, and equal to the best of his preceding *solitary* performances to *crowded* houses. Some of the jokes and puns are old—could they be all new in such a production?—but they are rendered better than new by the talents of the actor. And then the assumption of character: the making of fifty individuals out of the one individual Charles Mathews; why it is as wonderful as it is laughable,—or touching, for in some of his light strokes the pathos of Mathews is irresistible. But we have not room now for details; and can only say, that the humour, the transitions, the personations, and the talents, in this piece, are admirable matters on which to *waste* a most pleasant evening.

VARIETIES.

Marble.—Some splendid columns of indigenous marble have lately arrived at Paris, and have been deposited in the Louvre. They are intended as a present to the King of France. The quarries from which they have been brought are situated at Tholouet, near Aix.

Novelties.—At this season of the year we are oppressed with the multitude of novelties to be perused, seen, heard, considered, and reported. Signor Pistrucci's improvising at the King's Theatre on Wednesday was an admirable treat; and displayed prodigious readiness and facility. The performance of *Agamemnone* was also delightful to the Italian scholar. The Haytorian Museum, in the Strand, is a rich exhibition of minerals belonging to Devon; and also of some fine specimens of shells. The National Repository at Charing Cross invites attention from the many objects of curiosity and utility which it contains. Mr. Hessey, in Regent Street, amazes us with a strange Hindoo idol. Hummel's Concert was a great attraction. And to these we shall now have the Royal Academy constantly, and the exhibition of Sir T. Lawrence's pictures at the British Gallery.

Palladium, &c.—At a late sitting of the Paris Royal Academy of Sciences, M. Arago presented some grains of the palladium, collected in its native state by M. Humboldt in the mines of the Oural mountains. Several naturalists are stated to have previously found this metal in its pure state, but no specimen had been presented to the Academy. At this sitting M. Blumenbach was elected a member, in the room of Dr. Thomas Young, deceased. An interesting discussion ensued relative to the late work of M. Caillié on Africa. M. Coquebut, after commenting on the importance of the information communicated by M. Caillié relative to Timbuctoo, spoke with great vehemence in censure of an article in the *Quarterly Review*, throwing doubts on the assertions of M. Caillié as to his having visited Timbuctoo. There is also a long article in the *Moniteur*, vindicating Caillié from the imputations of the *Quarterly Review*; and almost

resenting the criticism as a piece of national illiberality.—*Ed. L. G.*

Agriculture.—The Paris Central Society of Agriculture, at its last sitting, awarded the following prizes:—2000 francs to Messrs. Flackat and Mulot, for their process of boring for Artesian wells. Another, for the same object, to Messrs. Fraisse and Poitevin; and also a gold medal to M. Favel. 1000 francs to M. Payen for a memoir on the use which may be made of the carcasses of domestic animals when dead; and other prizes, of small amounts, on different subjects, making altogether 7000 francs. Several gold and silver medals were also presented. The prizes of next year are to be, first, 1500 francs for the best treatise on the use which may be made of the dead bodies of domestic animals: 1500 francs for the best treatise on the blindness of horses: 3500 francs for the best model of a threshing and winnowing machine: 3000 francs for the best treatise on the mode of boring for water: 1000 francs for the best treatise on the culture of the pink poppy. Three prizes are also announced for 1834.

Insanity.—It appears from an official report relative to the inmates of Charenton, near Paris, that the months during which there is the greatest number of patients in that establishment, are June, July, and August, and the least, January, May, and November. The age at which this malady most frequently manifests itself, is from thirty to thirty-five. More than half of the inmates are unmarried, and the majority are females. There are usually few married men or widowers.

Fish.—In a memoir recently read to the French Academy by M. Boabe, the author maintains the opinion that all the fish at present existing in fresh water had a marine origin.

Artesian Wells.—The Paris *Globe* informs us, that an English company has received authority to introduce into France, by Havre, all the instruments necessary for the construction of Artesian wells in different parts of France.

China.—The learned orientalist Neumann, one of the professors at the University of Munich, and the author of the *Lives of the Armenian Philosophers*, is about to proceed to China, for the purpose of studying the language and literature of the country. It is remarkable that he is the first learned European who has visited China for a purely literary purpose. The Royal Academy of Berlin has placed at his disposal 1,500 thalers, for the purchase of Chinese books.

The French Consul at Florence has taken great offence at a piece which has been recently acted at the theatre of that city, and in which there occur some observations not very flattering to the French nation. No attention, however, was paid to his complaints, and the disappointed consul immediately sent a formal remonstrance to the government on the insult offered to the country of which he is the representative.

Congreve Rockets.—Some experiments were recently made at Toulon, for the purpose of ascertaining the power of the Congreve rocket. Out of seven which were fired, two exceeded, by about 250 toises, the range of a 36-pounder, and two others burst before they had reached half their distance. The experiments, on the whole, were considered satisfactory, as they demonstrated that about half the number of rockets discharged will be effective.

Elementary Instruction.—An interesting meeting of the Society for promoting Element-

ary Instruction took place in Paris a few days ago. It appeared from the report then read, that the Society supports three schools for mutual instruction in Paris, and that it expects to open a fourth within the year. It has also sent pecuniary assistance to schools in several of the departments. There are about 2000 subscribers to this Society. The Bank of France has given 30,000 francs towards it, and the Minister of Public Instruction has also given to the same amount. A prize is offered by the Society for the best work on the liberty of instruction.

Statistics.—The sixth monthly meeting of the Société de Statistique Universelle was held last week at Paris. Prince Leopold was to have been there, but having been prevented by indisposition, sent a letter of excuse. Several statistical works were presented, and the names of new candidates for admission were given. An interesting report was read, from which it appears that the Society now consists of 517 members, among whom are several princes, ministers of state, peers of France, and other distinguished personages. At this meeting it was proposed, and unanimously agreed to, that, at the end of 1832, three prizes of 3000, 2000, and 1000 francs should be awarded to the authors of memoirs on statistics, the best calculated to further the views of the Society.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XVIII. May 1.]

The success of our Popular Libraries, Cyclopedias, &c. &c., seems to have stimulated Messrs. Colburn and Bentley to enter that field with great force and spirit. They announce, we perceive (in addition to the Classics, already in the course of publication), the Library of General Knowledge, conducted by Mr. Clegg; an edition of the Standard Novels, uniform with the *Waverley Novels*; the Library of Modern Travels, Voyages, and Discoveries; and, though last, not likely to be the least useful, a Juvenile Library, addressed to the youth of both sexes.—Mr. Madden, the traveller in Turkey, is preparing an eastern tale, in the manner of *Anastius*.—Messrs. Black, Young, and Young, the publishers of Dr. Webster's Dictionary of the English Language, announce their intention to publish the Introduction to the work in a separate form.

LIST OF NEW BOOKS.

Lardner's Cabinet Cyclopædia, Vol. VI. Roscoe's British Lawyers, foolscap, 6s. bds.—Hall's General Atlas, 12. 18s. 6d. canvass, 9s. 6d. hf.-bd. russia, full size, 10s.; India proofs, 14s. 5s. hf.-bd. russia.—Gambou's Mining Ordinances of Spain, by Heathfield, 2 vols. royal 8vo. 2l. bds.—Hampson on Trustees, 2d edition, 8vo. 16s. bds.—McCulloch on Political Economy, 2d edition, 8vo. 16s. bds.—Dickson's Law of Wills, 12mo. 5s. 6d. bds.—Jennings on Tobacco, 12mo. 4s. 6d.; coloured, 5s. 6d. bds.—Niebuhr on the Geography of Herodotus, 8vo. 6s. bds.—Moseley on Hydrostatics and Hydrodynamics, 8vo. 12s. bds.—Burckhardt's Notes on the Bedouins, &c. 4to. 2l. 12s. 6d. bds.—Bourrienne's Memoirs, Vols. Lloyd, 8vo. 10s. 6d. bds.—Royal Book of Dreams, 12mo. 5s. bds.—Lane's Trip to Canada, 12mo. 9s. bds.—Mark's Devotional Testament, 4to. 16s. bds.—Patience in Tribulation, fcp. 3s. 6d. bds.—Domeier's Road-Book of Germany, 18mo. 10s. 6d. sheep.—Leigh's Guide to the Lakes, 12mo. 7s. bds.—Traits of Scottish Life, 3 vols. post 8vo. 1l. 7s.—Newman's Illustrations of the Exodus, prints 20s.; proofs 1l. 4s. sewed.—Tales of our Counties, 3 vols. post 8vo. 1l. 11s. 6d. bds.—Grindlay's Views in India, Part VI. 2l. 2s. sewed.—Little Jack, with German Translation by Skene, 12mo. 3s. 6d. bds.—Family Library, Vol. XIII. 18mo. 5s. bds.—Family Classical Library, Vol. V. 18mo. 4s. 6d. bds.

TO CORRESPONDENTS.

☞ We are obliged to defer our Report of Dr. Mühlenfeld's first of a series of Lectures on German Poetry; and can only notice now, that it possessed great interest for German students and for the admirers of that copious language.

We will not settle the dispute between bile, or boil: it raises our bile to be made a referee in such a case, and we are not sure that we should not have boiled our correspondent for troubling us, without a fee.

From whom did the correspondent who announces a Collection of Essays, &c. hear the "report" which "speaks favourably of their contents?"—if he speaks to himself, and is his own reporter, he cannot surely expect us to spread his home news. We must pass in like silence the most able sermon that ever was written, &c. described by another correspondent.

ADVERTISEMENTS

Connected with Literature and the Arts.

ARTISTS' BENEVOLENT FUND, under the Patronage of the King, instituted 1810, incorporated 1837.—The Friends of the Arts and Subscribers to this Institution are respectfully informed, that the Twenty-first Anniversary Dinner will take place in Freemasons' Hall, on Saturday, the 8th of May.

His Grace the DUKE of WELLINGTON in the Chair.
Stewards.

The Earl Brownlow	Henry Graves, Esq.
The Earl of Chichester	Robert Garrard, Esq.
The Earl of Rosslyn	Robert Jennings, Esq.
The Earl of Arden	G. Torant, Junr. Esq.
Viscount Clive, M.P.	George Meek, Esq.
The Right Hon. H. Goulburn,	Josiah Neeld, Esq. M.A.
M.P. Chancellor of the Exchequer	E. J. Oley, Esq.
Hon. W. S. Best	S. Oliver, Esq.
A. Cooper, Esq. R.A.	J. H. Robinson, Esq.
J. P. De la Fons, Esq.	Henry Sass, Esq.
Hon. G. Agar Ellis, M.P.	E. R. Slous, Esq.
William Emsay, Esq.	H. R. Tunno, Esq. M.P.
William Finlén, Esq.	J. Varley, Esq.
W. C. Fish, Esq.	S. C. Weston, Esq.
	Thomas Willmott, Esq.

Tickets, 17s. to be had any of the Stewards; at the Bar of the Freemasons' Tavern; or of the Secretary, 112, Mount Street, Grosvenor Square.

Dinner will be on Table at Half-past Five for Six precisely.
JOHN MARTIN, Secretary.

SONS of the CLERGY.—The Rehearsal of the Music to be performed at this Festival will take place on Tuesday, the 11th of May, in St. Paul's Cathedral; and the Anniversary will be held on Thursday, the 13th of May, when a Sermon will be preached there, before His Royal Highness the Duke of Clarence, the Archbishops of Canterbury and York, the Bishops, the Lord Mayor, Sheriffs, Aldermen, Clergy, &c. by the Rev. EDMUND GOODENOUGH, D.D. Prebendary of Westminster.

Divine Service will commence at Two o'clock, instead of Twelve o'clock, as heretofore, and the West Door of the Cathedral will be opened on each day at One o'clock.

Stewards.
H. R. H. the DUKE of CLARENCE, (5th time.)

His Grace the Duke of Portland	The Solicitor General, M.P.
The Lord Bishop of Bristol	The Dean of Lichfield
The Hon. and Rev. G. V. Wellesley, D.D.	The Dean of St. Asaph
The Hon. P. Howard, M.P.	Rev. Joseph Goodall, D.D. Prolocutor of Eton (second time)
The Right Hon. the Lord Mayor	Rev. Robert Hamilton, D.D.
Sir Henry Hallford, Bart.	Rev. Ralph Tatham, B.D.
Sir George Thomas Staunton, Bart.	John Meggott Elwes, Esq.
	John Soane, Esq. R.A.

The Music will consist of Selections from Handel's *Dettingen Te Deum*; the Coronation Anthem of the King's Hall (rejoice); and the Hallelujah Chorus—Green's Anthem, "God is our Hope and Strength"—Magnificat and Nunc Dimittis, Attwood. Conductor, Mr. Greatorce. Organist, Mr. Attwood. Leader of the Band (which will consist of the Members of the Royal Society of Musicians), Mr. Boston Revere.

The Committee respectfully state that contributions of gold will admit each person to the Galleries and Closets, and express their hopes that for admission into the choir, no person will contribute less than half-a-crown. To the individual, this latter small donation can be no object, whilst the aggregate is of the utmost importance to the interests of the Charity.

The whole of the Collections at St. Paul's Cathedral and Merchant Tailors' Hall will be appropriated by the Stewards in apprenticing the Children of necessitous Clergymen.

Tickets for the Dinner on Thursday, the 13th of May, at half-price, may be had of Messrs. Colburn, 7, St. Paul's Churchyard, and Waterloo Place; and at the First Fruits Office, Temple.

Benefactions to this Charity will be thankfully received by the Treasurer, J. H. Markland, Esq. 14, Whitehall Place, or Temple, and at the First Fruits Office, Temple.

* No Tickets are requisite for admission into the Cathedral.

LITERARY FUND.—The Forty-First Anniversary of this Society will be held at Freemasons' Hall, on Wednesday, the 12th May.
JOSEPH SNOW.

CONVERSATIONS with LORD BYRON
 on RELIGION, held in Cephalonia, a short time previous to his Lordship's Death.
 By the late JAMES KENNEDY, M.D.
 Edited by N. MURRAY, Esq.
 John Murray, Albemarle Street.

PICKERING'S ALDINE EDITION
 OF THE BRITISH POETS, publishing in monthly volumes, in cloth, price 5s. to range with the Family Library, the Waverley Novels, and the Cabinet Cyclopaedia.
Prospectus.
 It is the characteristic of the present age, to place science and literature within the reach of every class of society, by the publication of standard and popular works in a form to combine the advantages of cheapness, convenience, and beauty. The success which has attended this plan is not greater than might be expected from an arrangement so well calculated to meet the unprecedented desire for knowledge by which the world is actuated; and there is reason to hope that, in a few years, every work of reputation will be printed to range with these new and judicious editions of British authors.

Under these circumstances, it is presumed that a similar edition of the Poets of our country will be favourably received; for if it be desirable that the Prose Writers should be thus brought before the public, it must be more important that those productions of genius, which are connected with our earliest associations, and which exercise so powerful an influence over the heart, should be printed in the same beautiful manner, and with the same attention to economy and convenience; thus supplying the most interesting branch of a series of publications, which will soon become the "Library of the People."

With this view the Aldine Edition of the British Poets is undertaken. It will consist of all the popular poets with whose works the laws of copyright do not interfere, and the early volumes will be appropriated to those of the last century. The text will be carefully formed from the best editions; and to the works of each poet an original memoir will be prefixed.

Volume I. containing the "Poems of Burns," will appear early in May; and from the arrangements already made, one Volume will be punctually delivered on the first of each succeeding month.

William Pickering, Publisher, Chancery Lane, London; and D. A. Talboys, Oxford.

On Saturday, May 1st, will be published, in 8vo. price 4s.
THE BRITISH FARMER'S (Quarterly) MAGAZINE, No. XV. A Work devoted exclusively to Agricultural and Rural Affairs.

The Three Volumes completed, neatly half-bound, price 2l. 15s.

James Ridgway, Piccadilly; Bell and Bradfute, Edinburgh; J. Porter, Grafton Street, Dublin; and all Booksellers.

On the 6th of May will be published, Part I. of a new Series of
SIR WILLIAM GELL'S POMPEII.

POMPEIANA: the Topography, Edifices, and Ornaments of Pompeii.

By Sir WILLIAM GELL, M.A. F.R.S. F.S.A.

The Work will be completed in about Twelve Parts, forming Two Volumes.

A Part to be published every two months, containing Six Engravings, and occasionally two or three Vignettes, with two sheets of Letter-press, handsomely printed in royal 8vo. price 10s. 6d.; Imperial 12s. 6d.; Proofs, on demy 4to, 18s.; India paper, with the Etchings, limited to 25 copies, 1l. 11s. 6d.

Subscribers are requested to transmit their Names and Address, either directly, or through their respective Booksellers, to the Publishers,
 Robert Jennings and William Chaplin, 62, Cheapside.

Mr. Blackwood has in the press,
 In 2 vols. folio 8vo. with Portrait of the Author, engraved by Hodgkiss, from an original Picture, by John Watson Gordon, Esq.

THE LIFE of ALEXANDER ALEXANDER.
 Written by HIMSELF.
 And edited by JOHN HOWELL,
 Author of "Journal of a Soldier," "Life of John Nicol," &c.

This singular piece of autobiography exhibits, most minutely and faithfully, the real character of Alexander, the disowned son of a gentleman in the west of Scotland. It commences with infancy, traverses three quarters of the globe, and comprehends a period of nearly fifty years of the life of a man who has been placed in many trying situations, as a soldier, an officer in the West Indies, and an officer in the patriot armies of South America: it is, in short, the complete, unreserved history of a human being.

In folio 8vo.
 2. Songs of the Affections, by Felicia Hemans.

In 8vo.
 3. The Practical Planter, containing Directions for the Planting of Waste Lands, and Management of Wood. By Thomas Craikshank, Forester at Careston.

In 8vo. with Plates, from original Drawings.
 4. The Boscobel Tracts; being Narratives relating to the Escape of Charles II. after the Battle of Worcester, with Notes by the Editor, J. Hughes, Esq. A.M.

In 1 large vol. 8vo.
 5. The Greek Grammar of Dr. Frederick Thiersch. Translated from the German, with brief Remarks, by Professor Sandford.

In a few days will be published, 2 vols. folio 8vo.
LIFE and ADVENTURES of GIOVANNI FINATI, Native of Ferrara, who, under the Name of Mahomet, made the Campaign against the Wahabees, for the Recovery of Mecca and Medina; and since acted as Interpreter to European Travellers in some of the Parts least visited of Asia and Africa. Translated from the Italian, as dictated by Himself, and edited
 By WILLIAM JOHN BANKES, Esq.
 John Murray, Albemarle Street.

Nearly ready, post 8vo.
INTRODUCTIONS to the STUDY of the GREEK CLASSIC POETS, for the Use of Young Persons at School or College.
 Contents of Part I.—1. General Introduction—2. Homeric Contests—3. Life of Homer. 4. Iliad—5. Odyssey—6. Margites—7. Batrachomyomachia—8. Hesiod—9. Theognis.
 By HENRY NELSON COLERIDGE.
 John Murray, Albemarle Street.

In a few days will be published, in folio 8vo. price 7s. extra boards,
SWEETINGS of PARNASSUS. A Collection of Poems, with Essays in Prose on Miscellaneous Subjects.
 London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Burke's New Calendar.
 Early in May will be published, in 1 vol. 8vo. printed uniformly with the Peagee.

THE OFFICIAL KALENDAR for 1830;
 or, Alphabetical Register of the Public Institutions and Public Functionaries, Legislative, Judicial, Ecclesiastical, Civil, and Military, of the British Empire, including its Colonies and Foreign Dependencies. With Circumstantial Details of the Sovereign Houses of Europe, particularising the present Members of each Family, &c. &c.
 By JOHN BURKE, Esq.

Author of a General and Heraldic Dictionary of the Peerage and Baronetage, &c.
 This Work is arranged upon the model of Mr. Burke's Dictionary of the Peerage and Baronetage, and printed in exact accordance. Besides the Royal Family, Courts of Law, and Public Officers, Ecclesiastical, Civil, and Military, of the British Empire, the "Official Kalendar" will be found to comprise more ample details of the Sovereign Houses of Europe, including the Papal Government, Ministers, Ambassadors, &c. than have hitherto been published in England.
 Henry Colburn and Richard Bentley, 8, New Burlington Street.

Union of the Foreign Quarterly and Foreign Reviews.
 In May will be published, price Six Shillings, No. XI. of
THE FOREIGN QUARTERLY REVIEW.

The object of this Prospectus is to announce a union of interests between the "Foreign Quarterly Review" and the "Foreign Review." Coalition may sometimes be as advantageously effected in Literature as in Politics;—and rather more so, when a change from rivalry to friendship involves no concession of principle. The publications which have now united, whatever power they may have each possessed, were alike in their objects. They divided, therefore, that support which for the future they will seek to concentrate.

It would be easy to shew that the public as well as the proprietors of the "Foreign Quarterly Review" will derive benefit from the change. Without admitting that either of the rival works was conducted to a spirit of rivalry, it is evident that a junction of the force of each, whether of capital, or industry, or talent, must produce a more solid and permanent effect than any detached efforts, however vigorous. The sources of information, and the literary connexions, which were formerly the exclusive advantage of either, are now the joint stock; and it may reasonably be supposed, that where there is a larger choice of materials for an intellectual entertainment, the most attractive fare will be selected out of the abundance. Nor can it be denied that in Literature, especially, mediocrity of success must eventually produce a relaxation of exertion, and consequently inferiority of talent. Hope, "the hameless dish," is not an adequate foundation upon which to build a long continuance of energetic endeavours;—and Periodical Literature, more particularly, requires stronger nutriment than "empty praise." The public patronage has, indeed, been most liberally extended to each of the Foreign Quarterly Reviews; but it seems for some time past that the field was not large enough for a divided interest. It is, however, a rich and fruitful soil; and the labourers who are now prepared to cultivate it in union may reasonably expect a plenteous harvest.

The support which has been given to two such works, conducted, not unsuccessfully, under all the disadvantages of their competition, is the best proof that a Review devoted to Foreign Literature was demanded by the knowledge and taste of the present day. Indeed, when we look back upon the efforts of each of these Reviews, when we see the mass of information which they have presented to the merely English reader, and the number of valuable works which they have pointed out to the man of letters—above all, when we know that they have each mainly contributed to give circulation in Britain to the intellectual riches of the European continent, and thus to make the literary spirit of our own country more partial and exclusive, less liberal and enterprising, and universal,—we cannot doubt that a publication steadily conducted upon the same principles, and with a concentration of purpose and of power, must take its rank among those periodical works for which Great Britain is so distinguished.

It is unnecessary to recapitulate at any length the objects of the "Foreign Quarterly Review," or to detail the features of its intended arrangement. The public have already become familiarised with the plan of such a work. To present the most striking productions of Foreign Literature, whether ethical, or scientific, or historical, or imaginative, in a spirited and philosophical English dress; and to let nothing, even of the less striking and celebrated productions of the Continent, escape, which have any interest in themselves,—this is the purpose which we seek to accomplish, both in our elaborate articles and our shorter notices. Nor will the vigorous shoot of our own literature which is growing up in America be neglected. We hope to present to the intellectual curiosity of our own country a faithful portrait of what the activity of mind is doing throughout the world. The fidelity of the representation will be ensured by the industry of the Correspondents, the connexions of the Proprietors, and the diligent investigations of the Editor; and the spirit of the picture will be attained by the invaluable assistance, which both the former Reviews have already enjoyed, of some of the most accomplished scholars of other lands, and many of the ablest writers of our own nation.

Complete Collections of each former Series of the Reviews may still be had, viz:—
 The Foreign Quarterly Review, Nos. I. to X. at 7s. 6d. each, or in 5 vols. handsomely done up in extra cloth boards, price 3l. 15s.

The Foreign Review, Nos. I. to X. at 6s. each, or handsomely done up in the same style, price 3l.

SATURDAY, MAY 8, 1830.

REVIEW OF NEW BOOKS.

Memoirs of the Life of Sir Walter Raleigh; with some Account of the Period in which he lived. By Mrs. A. T. Thomson, author of "Memoirs of the Court of Henry VIII." 8vo. pp. 486. London, 1830. Longman and Co.

It were indeed but enlarging on a truism were we to dwell on how important to a biographer is the choice of subject: taking its importance as admitted, we cannot but congratulate Mrs. Thomson on a selection which seems to us peculiarly happy. We have always considered that the history of one individual mind—its efforts and progress—its changes, both in their causes and results, and the effect that one individual may thus produce—a more interesting and infinitely more beneficial study, than half the conquests and kingly successions by which history is registered and filled; and romantic attraction and moral investigation are alike called forth in the history of Sir Walter Raleigh. We see him first a young and ardent spirit, to whom obstacles seem but made to be overcome—excitements rather than dissuaves; we follow him through a course of courtly success, and, alas! courtly intrigue, with all its attendant meannesses and falsehoods. This part of Raleigh's life places in a most melancholy light the influence of degrading circumstance over the noblest nature. That his spirit was of itself high and chivalric, no one can deny who thinks for a moment on the many instances in which it was evinced: but never was argument so conclusive of the fatal effect of despotism, as the simple fact of the degrading power it exercised over even a Raleigh. In the present day, when so many avenues are open to honourable ambition, we can scarcely comprehend the servile anxiety evinced for royal favour; but we should remember royal favour was the only opening to the young aspirant for fame or fortune—that there was a species of religious feeling then mixed with the homage paid to royalty—that this right divine gave a kind of sacredness to obedience; while, on the other hand, it was the slight and unsafe tenure by which life and property was held in those days; add to this, the force of example—that most powerful moral tyranny—and we shall greatly extenuate that subjection from which ourselves are so happily freed; and only wish that a man whose mind was so much in advance of his age, had been equally in advance with his actions. The court success of Sir Walter is greatly relieved by the gallant expeditions in which he found fitting field for his courage and enterprise. One of our most distinguished navigators, at a period when ignorance and wonder went hand in hand, and danger gave the poetical colouring of romance to the whole, we cannot wonder that his love of discovery amounted to enthusiasm. The third period of his life is one of history's most extraordinary pictures of human strength and weakness; but we will pass in silence his humiliating concessions to James,

and rather turn to the noble use he made of his prisoned hours. One of the earliest advocates of religious tolerance, liberal, and if, to use the words of our fair historian, not always profound, at least always clear, he raised in his Universal History a fitting monument to himself. With regard to his last voyage, it almost seems to us that, harassed by misfortune, wearied by imprisonment, decayed in health, and over-excited by the hope on which he had brooded too much in solitude,—his impatience took the character of an insanity, which urged him on to the fatal expedition that finally led him to the scaffold. Such is the outline of a life which, in Mrs. Thomson's hands, is a mine of interest; from the first page to the last, the attention is roused and sustained; and while we approve the manner, we still more applaud the spirit in which it is executed: perhaps both of these will be best displayed by the following extracts.

"The family of Raleigh, at the time of his birth, was greatly reduced in circumstances, and in the full experience of those privations which attend poverty encumbered with rank. No title, except that of knighthood, had, indeed, as yet, given false splendour to a name which boasted an ancient connexion with Robert of Gloucester, a natural son of Henry I.; but the name of Raleigh had been one of some importance, and of great antiquity. Varying in its orthography from Rale, or Ralega, to Raleigh, Rawleigh, or Raleigh, this designation had been affixed to several villages and towns in Somersetshire, Devonshire, and Essex; and his ancestors settled in Devonshire before the Norman conquest. Allied by marriage to the earls of Devon, and related to various families of their own name in Somersetshire and Warwickshire, the ancestors of Raleigh had suffered a gradual decrease in their landed possessions; so that Fardel alone, of all their estates, remained as the inheritance of Walter Raleigh, the father of him who was destined again to raise his family to distinction. Some memoirs of ancient grandeur were still, however, preserved from the devastations of time or misfortune; and Sir Walter received, as an heirloom, a target, which had been suspended in a chapel at Smalridge consecrated to St. Leonard, by one of his forefathers, in gratitude for deliverance from the Gauls; and the records of this endowment are stated to have been afterwards presented to Sir Walter Raleigh by a priest of Axminster. That the origin and early piety of this ancient race were little known in the days of Elizabeth, until the fame of their celebrated descendant called them forth from obscurity, is evident from the anecdote which Lord Bacon relates, in illustration of the popular error which assigned to Raleigh the term 'Jack, or upstart.' Queen Elizabeth was one day playing upon the virginals, whilst Lord Oxford and other admiring courtiers stood by: it happened that the ledge before the jacks had been taken away; upon observing which, the two noblemen smiled, and when questioned by the queen regarding the cause of their

mirth, gave as the reason, 'that they were amused to see, that when jacks went up, heads went down.' The queen, notwithstanding this sarcastic allusion, had not, however, in receiving Raleigh into her favour, departed from her usual rule of never admitting 'a mechanic or new man into her confidence; and Raleigh had, afterwards, the credit, by his deeds, of directing the investigation of antiquaries to the details of his lineage. These, as points of curious inquiry, demand some attention; but are of subordinate interest in the history of one whose very poverty and obscurity became the origin of his fortunes, by being the stimulus to his industry.

"To the scene of his childhood, Raleigh, in common with many men who have afterwards encountered the cares of a public career, retained an indelible attachment. It is pleasing to find him, at a subsequent period of his life, when ambition appears to have engrossed him, endeavouring, though without success, to possess the humble residence of his youth. The patrimonial estate was Fardel, in the parish of Cornwood, near Plymouth; and Smalridge, near Axminster, is said to have belonged to his ancestors in the time of Henry VIII., but to have been sold, from the prodigality of its owners."

What will the exquisite of our time say to the following costume?—

"To the attractions of a noble figure, Raleigh studied to combine those of a graceful and splendid attire. Many of his garments were adorned with jewels, according to the richest fashions of the day, and his armour was so costly and curious, that it was preserved, for its rarity, in the Tower. In one of his portraits he is represented in this armour, which was of silver richly ornamented, and his sword and belt studded with diamonds, rubies, and pearls. In another, he chose to be depicted in a white satin pinked vest, surrounded with a brown doublet, flowered, and embroidered with pearls; and on his head, a little black feather, with a large ruby and pearl drop to confine the loop in place of a button. These, it may be said, were no extraordinary proofs of costly expenditure in dress, in days when it was the boast of Villiers Duke of Buckingham, to be 'yoked and manacled' in ropes of pearl, and to carry on his cloak and suit alone, diamonds to the value of eighty thousand pounds."

Our next is a fine anecdote of Sir Humphrey Gilbert. "That gallant officer reached Newfoundland, of which, by the usual form of digging up a turf, and receiving it with a hazel wand, he took possession, in right of the discovery made by Cabot; planted the first British colony there, discovered a silver mine, divided some portion of the lands among his followers, and began his voyage home, in the joyful expectation of further encouragement from Queen Elizabeth. But this brave man was destined never to return to his native country. The ship in which he had stored the silver ore, which he designed to shew as a specimen, was lost; and, before he had passed the Azores,

tempestuous weather and terrible seas sank the spirits of the sailors, who, in the true spirit of the superstitious fears to which they are prone, reported that they had heard strange voices in the night, scaring them from the helm. Even the principal officers were alarmed for the safety of Sir Humphrey, who had imprudently chosen to sail in the Squirrel, a small frigate. In vain did his friends entreat him to change his vessel, and to come on board the *Hinde*, the largest ship of the squadron. The honour of the dauntless Sir Gilbert had, unhappily, been touched by the imputation of cowardice, a report false as it was cruel. He persisted, therefore, in remaining at his post, saying, 'I will not desert my little company, with whom I have passed so many storms and perils; nor would he remain on board the *Hinde*, except for a short time, for the purpose of a convivial meeting with the officers, their last interview; and they parted, agreeing that all the captains should give orders to hang out lights at night. Meanwhile the dangers thickened; the oldest mariners declared that they had never witnessed such seas; the winds changing incessantly, the waves, in the simple language of a spectator, 'breaking high and pyramid-wise.' The hearts of the most courageous were appalled by a meteor, common in storms, which the seamen consider to be an apparition of fatal import, and which they call 'Castor and Pollux.' Once, the anxious company of the *Hinde* beheld the frigate nearly cast away; then again it approached them, and they saw Sir Humphrey sitting on the mainmast, with a book in his hand, exclaiming, as he regarded his companions in distress, 'We are as near heaven by

lights were
cried aloud
ring, the

Elizabeth's
y thought,
her death,'
and too slow for her own sake from misery, was now apparent to all. She joined, indeed, in her former amusements, but it was with a faltering step, and with faint attempts at forced cheerfulness. When, after a short absence, Harrington was summoned to her presence, she inquired if he had seen Tyrone? On his reply, that he had seen him with the Lord deputy, she smote her bosom, and said, 'Oh now it mindeth me that you were *one* who saw this *man* elsewhere;—the connexion between Harrington and Essex being thus recalled to her. And when Harrington, thinking to revive in her majesty the old remembrance of his pleasantries, which had often amused her, read some verses, she told him, in the language of a breaking heart, 'that she was passed all relish for fooleries.'

How true is the remark on the little of liking there seems to have been between Raleigh and Ben Jonson!

'The poet is said to have admired the talents of his eminent contemporary, but to have distrusted his sincerity. He is even asserted to have remarked, that Sir Walter Raleigh 'esteemed more fame than conscience.' Perhaps there are few men, who, like Ben Jonson, see closely into the darkest passions and into the most hidden motives of human nature, and who yet are able to divest their minds of suspicion, and their hearts of that contamination which proceeds from a long contemplation of vice, sufficiently, to render a just tribute of approbation to the virtues of others. It is probable, also, that party feelings may have influenced

Jonson's opinion of Raleigh; for whilst the latter was disgraced, and eventually deprived both of liberty and life, by James the First, Jonson was the peculiar favourite of that monarch as a dramatist, and was consequently disposed to view political questions much in the same point of view as the sovereign whom he served.'

We must not omit the touching mention of Raleigh's partner in affliction.

'Whether engaged in mournful retrospections or in fearful anticipations, Raleigh had not now the consolation which was afterwards afforded him in the society of his distressed and devoted wife. Although absent from him for whom she endured so much, this unfortunate lady relaxed not in her exertions to redeem from destruction the object of her earliest affections, and the pride of maturer years. Three years afterwards, when the king was in all his pomp and state at Hampton Court, and when the revels of the gay and great were at their height, we read of the humiliated and neglected Lady Raleigh kneeling to him in behalf of her husband, but passed in silence by the monarch. That Raleigh estimated her affection, and appreciated the strength and elevation of her character, is evident from the tone of the eloquent and pathetic letter which it was almost his earliest care to address to her after his trial. He wrote, indeed, in the first instance, to the king; but finding his petitions fruitless, he now directed to his wife and to his child every wish which anxious affection could dictate. His earnest desire seems to have been, that no fruitless sorrows should diminish the power of exertion which the helpless orphan whom he expected to leave would fully require from his surviving parent. 'Let my sorrows,' said he, 'go into my grave with me, and be buried in the dust. And, seeing it is not the will of God that ever I shall see you more in this life, bear it patiently, and with a heart like thyself.' He entreated her, not by seclusion and fruitless sorrow to lose the benefits of exertion: 'thy mournings cannot avail me: I am but dust. Remember your poor child for his father's sake, who chose you and loved you in his happiest time.' Such are, in part, the exhortations with which Raleigh sought to strengthen the resolution, and to sustain the spirits, of one whom he thought soon to consign to the neglect and indifference of the world.'

With the curious account of the estate of Sherborne we conclude.

'The lands of Sherborne were bequeathed by Osmund, a Norman knight, to the see of Canterbury, with a heavy denunciation against any rash or profane person who should attempt to wrest them from the church. This anathema was, in the opinion of the vulgar, first accomplished in the person of the protector Somerset, to whom, after sundry vicissitudes, the property devolved. This nobleman was hunting in the woods of Sherborne, when his presence was required by Edward the Sixth; and he was shortly afterwards committed to the Tower, and subsequently beheaded. The forfeited estate then reverted to the see of Salisbury, until the reign of Queen Elizabeth, to whom it was made over by Coldwell, bishop of Salisbury, at the instigation of Raleigh, who was blamed, and apparently with justice, for having displayed on this occasion a grasping and even dishonourable spirit. So strong were the religious prejudices of the day, that even the discerning Sir John Harrington attributed to a judgment from heaven a trifling accident which occurred to Raleigh whilst surveying the de-

mesne which he coveted. Casting his eyes upon it, according to the notion of that writer, as Ahab did upon Naboth's vineyard, and, in the course of a journey from Plymouth to the coast, discussing at the same time the advantages of the desired possession, Sir Walter's horse fell, and the face of its rider then, as the relater observes, 'thought to be a very good one,' was buried in the ground. * * *

'After his trial, the enemies of Raleigh pretended to find a flaw in the deed of conveyance, and for the omission of a single word, the oversight of a clerk, and which was in the paper copy only, it fell into the possession of the crown. The person principally benefited by this discovery was Car, Earl of Somerset, who brought the matter before the Court of Exchequer, in which a decision was given against Raleigh: 'a judgment,' observes the relater of the fact, 'easily to be foreseen without witchcraft, since his chiefest judge was his greatest enemy, and the case argued between a poor friendless prisoner and a king of England.' This event took place seven years after the commencement of Sir Walter Raleigh's imprisonment, until which period he had enjoyed the revenues of Sherborne. In vain did the persevering Lady Raleigh,—being, as her son describes her, a woman 'of a very high spirit, of noble birth and breeding,'—on her knees, and in the bitterness of her heart, in the presence of the king, implore Almighty God to look upon 'the justness of her cause, and punish those who had so wrongfully exposed her and her poor children to beggary.' The inflexible and insensible monarch, who had neither the feeling to pity, nor the discernment to value this devoted woman, returned, in his usual phrase, this reiterated reply, 'I mun have the land; I mun have it for Car.' And, accordingly, to Car was the estate conveyed. But the old prophecy, by those who observed the fate of Sherborne with curiosity, was still thought to hang to its destiny. Through the generous exertions of Prince Henry, it may be said to have belonged for a time to the house of Stuart, since he begged it from the king, pretending to fancy the place, but in reality with the hope of restoring it to the accomplished owner of the seat. Unwilling or afraid to refuse the request of his son, James compromised the matter by paying to Car the sum of twenty-five thousand pounds for the surrender of the estate, and even allowed the Lady Raleigh eight thousand pounds for the property. But the death of the young prince in 1611 frustrated his generous intentions, and left Sherborne still in the hands of the favourite. The premature decease of this promising youth was thought by the vulgar again to corroborate the old prophecy, and was one of those singular coincidences which, in human affairs, confirm the day-dreams of superstitious reasoners. But, in the times of the Tudors and the Stuarts, estates were so often gained and lost, on the one hand by the misfortunes of the real owners, and on the other by the iniquities of those who reaped them, that few exchanges of property from one family to another took place without being occasioned by some tragical occurrence. To Carew, the youngest son, and the injured survivor of Sir Walter Raleigh, the subsequent attainder of Car, and the forfeiture of his estates, upon his committal to the Tower for the murder of Overbury, appeared to confirm the ill-fortune attendant upon the owners of Sherborne; and the misfortunes which afterwards befel the house of Stuart were also considered by him to corroborate the old presage. The spell has, however, since been broken; for, on the con-

fication of Car's estates, Digby, Earl of Bristol, obtained Sherborne from the king, on account of his services in the embassy to Spain. This nobleman added two wings to the house; and in his family it now remains."

Few men present such varieties of aspect as Sir Walter Raleigh,—the young and aspiring gallant, the admiral and time-serving courtier, the brave and scientific officer, the calculating man of the world, the enthusiastic adventurer, the graceful poet, the thoughtful philosopher, and, at last, the sacrificed victim of tyranny to the scaffold: none of these points are neglected by his present biographer. To a degree of tact peculiarly feminine is added a depth of thought we are somewhat apt to consider as only belonging to the other sex. The utmost industry of research has been obviously bestowed in collecting authentic materials, with much judgment shewn in their selection, and the last finish is put to these pages by their especially elegant language, with very few verbal exceptions, which appear to have escaped in revision. We cordially congratulate the author; and if the work be a credit to herself, it is also a credit to the age in which such a work could be produced by a woman.

The Armenians; a Tale of Constantinople.

By Charles Mac Farlane, Esq., author of "Constantinople in 1826." 3 vols. 12mo. London, 1830. Saunders and Otteley.

We doubt much the advantage of this union of traveller and novelist—the *matériel* of the one interferes with the creation of the other; descriptions, manners, costume, &c., leave not sufficient room for character, incident, and feeling; the sea encroaches upon the land, the land upon the sea; and the author's memory and his imagination are too opposite for harmony. With his lively style, his keen observation, and his picturesque taste, Mr. Mac Farlane is the perfection of a traveller—as a novelist he is not so successful; for the two are perhaps at variance too much; for the merit of the one is to collect, that of the other to create. The story of these pages is very slight—a love-tale, composed of all the stratagems, anxieties, disappointments, pleasures, and pains, usual in such cases; while the remainder is filled up, and most admirably, with details of curious customs, shewing a very intimate knowledge of the people whose habits the author describes—characteristic anecdotes and scenes depicted with the eye of an artist and the feeling of a poet. The pages are full of delightful quotations: a few we must transfer to our own columns.

A Greek lover's soliloquy:—

"True, 'tis too true, she is a pretty girl—but she is an Armenian, after all. Yes! she belongs to the race of asinine ears, thick skins, and ponderous hands and feet! She does not, however, betray her breed; her skin is certainly as fine as that pure specimen of Greek blood I have been worshipping these three months; her hand lay in mine, small and soft, like an unfledged bird within its nest; her feet—a curse upon mestlers!—have not been seen; however, we shall see them, and her ears too, if she have no more affection for the yashmack than she has shewn this evening. I wonder whether they are as long as the ears of my neighbour, the somewhat fair and fat Pápú, that look like mushrooms undressed; but be they as long as those of the holy mule that carries to Mecca the annual offerings of the padishah, Veronica of the Tinghir-Oglus is a beautiful girl—and I am determined to see her again!"

A Greek Prince.—"His elevated condition allowed him the privilege, and he had changed his heavy, huge, graceless samoor-calpack for the Turkish fess and eastern turban, susceptible of such infinite elegance and grace; and if the pure white were prohibited to all but Osmanlia, the cherished green to all but the emirs, or cousins of the prophet, he could venture on other bright hues. His turban was of a bright gray, but lines of gold transversed it rather closely, and a fringe or tassel of gold fell from one of its extremities, and floated, as he walked, upon his shoulder; the exquisite linen's folds were broad, and roundly relieved; the whole had the Stambooli *non-chalant* and proud obliquity which is attained but by the finished eastern *petit-maitre*, which occupies the most anxious minutes of the toilette, and is the utter despair of the uninitiated, or of those who have not been admitted into the very penetralia of the fashion and bon-ton of the capital. From the aspiring side of his turban, to balance the tassel on the depressed side, there floated a bright carnation, entwined with the small white flowerets of the jasmin; and the rich blue silk knot of his fess, or scarlet skull-cap (the nucleus of the turban), just shewed itself in the midst of the rich folds, and formed a crown, or termination, to the whole. His benesh, light in colour and material, as befitted the season, was of the hue of the downy peach, of the manufacture of the finest looms of France; the cut was perfect—it fell in free graceful folds, but not lower than the calf of the leg—and the wide open sleeves flowed into drapery almost as classic as the toga from the raised arm of some ancient statue as he walked along with that elegant deportment—which he shared, however, with even the poorest of his countrymen. He did not wear the jubbee, or flowing silk gown, which, as generally worn by the Turkish effendis, gives an unnatural, effeminate appearance to the whole man, and assorts most ridiculously, in the stranger's eye, with thick beard and fierce moustache; his camisole, was beautifully worked in silk and gold thread; it was cut in the picturesque fashion of the Albanians, disclosing the neck nearly to the shoulder; whilst below the breast some fanciful apertures and loop-holes permitted a jewelled and enamelled watch to shew itself, and gave egress to a costly Venetian gold chain loaded with rings and seals. The shawl that girded his waist was an exquisite cachemere, and so well arranged, that both its blue ground-work and elaborate broad fringe, of many, and bright, and felicitously combined hues, were well and sufficiently displayed—another great art, be it said in passing, of the oriental toilette. The princes of Wallachia and Moldavia might even carry arms; and in Constantine's girdle there glittered a short, but massy-handed poniard, set with brilliant, rubies, and emeralds;—an instrument of death, throughout the East, being rendered the most costly toy, and considered as essential to the equipment of a gentleman. His shakshoers, or ample Turkish trousers, were of an amaranthine colour, and of materials still finer than the flowing cloak; they were contracted by a silken string above the ankle, and revealed that glory of glories, for a Christian—a rayah subject—that boon for which, alone, death had so often been dared by the intriguing ambitious Greeks; that summum bonum (in the words of Anastasius), a pair of yellow slippers!"

A Turkish Cemetery.—"He retired with that sentiment which in all solemn matters seems to induce us to seek utter solitude; he fled to the thickest part of the religious wood,

and sat himself down by a recently made grave's headstone—an elaborate work, with lofty caouk and folding turban, that denoted the precise rank and condition of him who now lay beneath in death's equality, with intricate arabesques, boldly relieved, and done in gold, and in the deep blue of the lapis lazuli, and with a long inscription running diagonally, and covering the whole slab, from the arabesques to the point where the springing green grass from the prolific sod waved round its foot. As common in the sepulchres of the rich, there was another sculptured stone at the grave's foot, but rather lower than that at the head; its only ornaments were a tree—a stately palm, gently relieved and coloured with green and with gold, and a wavy line, like the blade of an angel's sword, or the bolts in the bands of the Thunderer, which ran round the edge of the purely white marble. Two lateral slabs, whose breadth attained about one-third of the elevation of the head-stone, and about half that of the foot-stone, united both together; there was no covering slab, as the Turks in their material superstition, and by a rescript of the prophet, never lay weight over the shallow soil that covers the dead, lest it should check his rise at the judgment-day; but within the enclosure of the pale marbles, flowers that seemed to have been sedulously cultivated, saluted the eye with melancholy bloom, and the nostril with an odour overpoweringly languid. 'It ought to be pleasant thus to rest,' reasoned the moody lover; 'and thus, in the gloom of eastern cypresses, with the gleam of spotless marbles, and the blush of roses—in silence like this, and with a genial heat, a balmy air like these upon ye—grave! horrid as thou art elsewhere, here thou seemest replete with beauty, and wouldst make one almost in love with thee! 'Tis strange that a scene, sweet, poetical, ethereal, like this, should be the work of a gross, sensual, and barbarous people—the disciples of a false code! I would not live the life of a Turk—I have done so, perhaps, too much already—but, no! I would not envy the life of one wealthier, grander, than he this proud tomb covers; but when all is over, I could look with complacency to a resting-place like this, and prefer the Moslem's grave to all others. Even now, so beautiful and so holy is this spot, I could almost lay down my head on that pillow of green sward which crowns a humbler grave, and unrepiningly resign this troublesome spirit. I could almost wish to die, to be buried in a place like this!' Presently, his thoughts flowed in another course; and those who have reflected on the sudden turns of their own mind, and how, from the pure, and the calm, and the soothing, we frequently rush at once to the dark, the irritating, the harrowing, will not be surprised if his abstractions were of a character totally different from those which had immediately preceded them. In glancing at the back of the head-stone, he saw some but half-effaced traces of the graceful, the never-to-be-mistaken, ancient Greek chisel. He looked closer—he traced the outline of some exquisite female figures, that seemed to have formed a procession—he traced the emblematic extinguished torch, and the touching type of our immortality, a butterfly rising from its dull chrysalis coil; and he knew that same fair marble had once adorned another tomb than that of the Turkish effendi. But what was there? On one corner of the stone, defaced more carefully than the Pagan symbols, was the Christian cross and the mystic fish; and in examining these more closely, he observed that

they, with the commencing letters of an epitaph, had been cut over part of the more ancient classic work. 'And cannot even the solemnity of the grave,' mused the sad humourist, 'inspire the virtue of honesty, and respect for the ashes of the dead? What have we here but a repeated sacrilege—a double robbery? The Christian desecrates the Pagan's tomb—the Turk the Christian's, and effaces as equally obnoxious, the work of both, to make room for his own epitaph, which he fondly hopes will be respected and enduring! Who, then, need care where his ashes repose; or flatter himself—unless they be given at once to the elements, through the agency of fire, or cast into the remote and fathomless sea—that his remains will be undisturbed by man! Anon, the Muscovites may be masters of proud Stamboul, and the Turks—the Turks, who have never dug a stone, nor worked in the marble quarry, since their establishment in the fallen regions of architecture and sculpture, but have mutilated ancient art, and raised their motley structures with the exquisite fragments of my ancestors' skill, may see these cherished tombs (portions of their abused spoil) torn from the grave and the cypress grove, to build stables and barracks for the ghiaours! Let me be gone! the beauty of death and the repose of the grave, must be sought for in other objects and connexions than these, which, beautiful and impressive as they are, partake of the nature of every thing on earth, and afford no 'lasting delight.'

A travelling Resource.—"A Catholic Armenian, a clever, good-tempered fellow, who had known better days, thus described to me an ingenious contrivance by which he avoided the inconvenience of being attacked at Ortakeui, *à ne pas*—he said, 'I have a table with four legs on it; on it I lay my mattress, and my bed is made; on the floor; I am thus secure from the attacks of the ghiaours; they can't very well cross the water. And you escape their invasion?' 'Yes; all but that of a few bugs that may drop from the rafters and ceilings of the old house!'"

A lady going to seek a wife for her son, gives occasion to the following list of Turkish feminine accomplishments: "The large saloon into which the company was ushered by the hostess was empty, but presently a banging-to of doors, and a shuffling of papooshes were heard, and the nine unmarried daughters of the house came running in, one after the other, as if in a race. Once within the room, however, they became as meek and decorous as need be, and approached, like whirling dervishes about to begin their holy waltz, 'with measured steps and slow,' and with their arms crossed on their bosoms, to kiss the hand of the visitor who had come to choose a daughter-in-law among them. 'There they are, by the blessing of the Virgin! and all to be married,' said the mother; and then, as they passed before the low divan, one by one dropping their lips on the hands of her who had brought a husband for one of them into the world, she repeated the name and quality of each, in much the style and form that a horse-jockey or a 'guinea-man' would use in shewing-up a stud to a purchaser. There was certainly a variety—from mature nine-and-twenty to girlish thirteen, and the variety was marked in other things than age. One possessed in an eminent degree the accomplishment of embroidering tobacco-pouches; another was distinguished as a cook and a maker of sweetmeats; another made sherbets equal

to any that were ever drunk in the seraglio; one was the soul of economy, for she could house a whole day for a rubieh less than any body else; another was the soul of taste, for she could paint doves and roses on Kalemkiars, and sing psalms and Turkish songs to the accompaniment of some old Armenian pipers—very great performers, the attraction of the Tekke at Perá."

We must select one or two of the very curious remarks and descriptions of customs scattered over these volumes:—

Houris' Complexions.—"Apropos of houris, I never have heard or seen any remark made on the odd properties of colour Mahomet gives to the bodies of these eternal virgins. 'Some of them,' says he, 'are white, some rose, the third are yellow, the fourth are green.' Imagine a mistress with a pea-green complexion!

Laughing Turks!—"A friend—a gentleman who loves a laugh himself, and has as fine a perception of the droll and the witty as any man I ever knew, tells a good story about Turks laughing. He was at the town of the Dardanelles with another English traveller: while loitering about, he all at once missed his English servant, a humorous creature, worthy of such a master. After some search, H— was found in the bazars, dancing a minuet with a tall tame pelican: noways disconcerted at their approach, he finished his dance, and then with a ball-room bow, he took his partner by the wing, and, with a mincing gait, led her to take refreshments at a neighbouring kibaub shop. The solemn Turks almost died of laughter, and the roar that arose from the bazar could be inferior only to that of the Dardanelles battery, when Baron de Tott fired his great gun!"

The Fasular Fountain.—"The water of this fountain is said to possess miraculous qualities; the man who has once drunk it, cannot leave Smyrna without taking with him a wife of the place. A jovial friend of mine, who had drunk of the fatal stream, and left Smyrna and returned, and was likely to leave it again, without the encumbrance alluded to, on being questioned how that should happen, said he believed it was because he never drank it neat—he always mixed brandy with his water!"

We will conclude with the dying Janissary. "He recognised in the disfigured, fallen form of the gigantic Janissary, a certain Noured-Aghâ, whom he had known in former times, and whose herculean proportions, beautiful manly face, and thick black beard, had frequently excited the stripling's involuntary admiration and envy. But there he lay in the dust; his voice of thunder softened to a moan, and his almost super-human strength with scarce remains enough to raise his bare and muscular arm to motion to his friends that they should leave him. Some of those desperate fellows, casting a farewell glance at their chief, went on their way—but a certain affection—or respect, or awe, which the gigantic man imposed to the last on their barbarous minds, retained a few round the person of their chief, and after a long shuddering, as he seemed somewhat to revive, they proposed that he should rise from the ground, and they would carry him on, in their arms. 'It is of no avail, my friends,' said Noured, opening his eyes, which were glazed and ghastly, 'my hour is come—I hear the angel of death rustling his black wings over my burning head!' 'Man knows not his destiny until it is accomplished; and while breath remains, there is hope that Azrael has not received his warrant. Noured-Aghâ was in as bad a state as this when he was

dragged from the hoofs of the Muscove cavalry, in the plain before Shumla, and yet Noured has lived twelve years since then.' The dying man raised his head, and, after a tremendous effort, and a horrible rattling in his throat, he replied with a hoarse voice to his friends:—'Hark ye! twelve years ago my arm was broken by a Muscove bullet—the grape-shot, that fell thick as hail, wounded me in trunk and limb—a ghiaour's bayonet threw me to the earth, and a troop of horse charged over me as I lay! But twelve years ago I was the father of two bold boys—I had friends, I had hopes—but now!—Have I not seen this morning my sons in manhood's pride—my brother—the friends that gathered under my roof, fall one by one by my side? * * * * * Have we not seen ourselves deserted and betrayed, and does not triumphant treachery and revenge proclaim that our order—the glorious and the ancient—the order of Hadji-Bektaşh, is for ever annihilated, and a price set upon each of our heads? * * * * * The horror depicted on the countenances of his wild-looking followers, was immeasurably increased. Before they went on their way, and left his body to the wolves, to the dogs hungry as they, and to the birds of prey, they each cut off a small piece of his dress—and one, a nearer friend, perhaps, than the rest, detached a stripe of leather fastened round the upper part of his colossal arm by a buckle, containing the treasured passage from the Khoran—the amulet which was to preserve its wearer from evil eyes and evil fortunes. These sentimentalities, however, did not prevent them from securing his purse—his bright English watch in its shagreen case, his silver-sheathed yatagan, and richly-set pistols."

We must again repeat, that we think Mr. Mac Farlane the perfection of travellers:—animated, intelligent, and picturesque, he merits the destiny of the Wandering Jew; the existence of that gentleman being, however, in our minds, entirely disproved by the fact of his never having published any of his reminiscences.

There is a most interesting historical summary of the early history of the Armenians, which adds greatly to the value of these interesting volumes.

The Diary and Correspondence of Philip Doddridge, D.D. Vol. III. 8vo. pp. 560. London, 1830. Colburn.

ON the appearance of the two preceding volumes of this publication we went at considerable length both into remark and extract, in order to illustrate a work curious for its fresh portraiture of a celebrated individual, and still more so, from its withdrawing the curtain and exposing the recesses of the religious body to which he belonged. It is therefore unnecessary for us to go over the same ground again;—to point out how very like the influence of confessors in the Romish church is that possessed by pastors of other denominations; how *indury* and warm the worthy Dr. was in his love affairs; how much the unction of strong feelings also pervaded his religious life; and how genuine a picture these memoirs presented of human nature acting under the impressions which constitute the numerous class of our fellow-citizens familiarly known by the appellation of "serious people." The third volume resembles its precursors—in his private character exhibiting Doddridge as a most uxorious husband; in his public duties as a sensible, upright, and really good man; in both, without cant or hypocrisy. Having settled at Northampton, and being refused by his great *flame*, Miss Jennings, (who

afterwards became the progenitrix of the able and excellent family of the Aikins,) it was not within the scope of his ardent temperament to be without a "mistress" to court; and his correspondence on quitting the lady alluded to, and addressing himself, as Fidelio, to Miss Maris (under the fond *sobriquet* of Cordelia), whom he shortly married, is a very entertaining sample of the man, and of the style and manners of his time. We quote a letter

"To Miss Maris.

Oct. 2d, 1830.

"Dearest madam,—My absence from Northampton at the beginning of the week prevented my indulging myself in the pleasure of writing to you sooner; yet though I have been absent from home, I have hardly in thought been absent from you. You know, madam, the sincerity of my temper; and perhaps among all your lovers, which, young as you are, I doubt not have been many, you never had one that treated you with less ceremony. But what I want in form I make up in the affection which dictates my words, and will dictate my letter. In the honesty of my heart, I must tell you that I am surprised at the impression my last visit has made upon me. It was, *en vérité*, so great, that if every future visit is to do as much, till I see you once for all, it will be my wisdom to see you as seldom as possible. I regarded you before with respect as an agreeable stranger, and in a few hours you have made yourself more to me than my most intimate friends; and often when surrounded with them, I languish, because I am not with you. And yet, madam, I have not been insensible to the charms of your sex—but there is now a magic force which amazes me; for you have made a greater advance upon my heart in a few hours, than I intended to have allowed you in as many weeks; indeed, you have possessed yourself of so much room in it, that unless you will consent to be a tenant for life, our parting will be exceedingly troublesome, and it will be a good while before I shall get it into good repair again. If it were possible for a pretty lady to be troublesome, you would certainly be so; and with all my fond prejudices in your favour, I must profess that I have some cause to complain. It is natural enough that your dear idea should pursue me to the study and the chamber; but why must I think of you in public, and imagine there is something that resembles you in every agreeable woman I see, while I am proud to think that the resemblance is but faint? My predictions are accomplished sooner than I expected, and I already find so much of my happiness centered in your arms, that I believe you will find it a very hard matter to keep me out of them. It is impossible for me not to wish that you, madam, might feel some answerable warmth of passion; but as it is not to be imagined, so I dare not say that upon the whole it is to be desired. For really I think that, in an affair of such importance, it would be best that one of us at least should have some exercise of reason. I have sometimes my lucid intervals, especially this cold morning, and then I can hardly persuade myself that such a masterpiece of nature, so gaily adorned without, and so richly furnished within, was ever intended for my possession, though I believe few would more thankfully receive it, or use it with greater tenderness and respect. Yet, in the midst of so much uncertainty, I am sensible it is dangerous to dote upon it too much; and therefore, madam, I have taken up a hearty resolution of applying to my business as closely

as possible, and will try if it be not a practicable thing to live awhile without thinking of you. And because I find a peculiar pleasure in writing to you, and am soothing my passion while attempting to express it, I am resolved immediately to deny myself that gratification; and though I have a whole page before me, which I could easily fill out of the abundance of my heart, I am determined to break off without any further attempt to describe the zeal and respect with which I am, dearest creature, your most faithful, affectionate, and humble servant,

PHILIP DODDRIDGE.

"P.S. I hope, madam, you will not be displeased with what you have read, as not being doleful enough to express the gloom of a broken heart. The fact is, that I never despair but in the last extremity; and persuade myself you have too much goodness to delight in human sacrifices. Let us, I entreat you, see whether it be not possible to spend our lives together without ever giving each other one uneasy thought."

But the Doctor's poetry between two fair dames—Miss Catherine Freeman, who had jilted him, and the new object of his idolatry, Miss Maris, who had received him favourably, is perhaps the most amusing exhibition we can select: it is called

"The Heron.

A pampered Heron, of lofty mien in state,
Did strut along upon a river's brink;
Charmed with her own majestic air and gait,
She'd scarce vouchsafe to bow her neck for drink!
The glorious planet that revives the earth
Shone with full lustre on the crystal streams,
Which made the wanton fishes, in their mirth,
Roll to the shore, to bask in his bright beams.
Our Heron might now have taken Pike or Carp,
They seemed to court her by their near access:
But then, forsooth, her stomach not being sharp,
She passed them by, and slighted their address;
'Tis not,' said she, 'as yet my hour to eat:
My stomach's nice—I must have better meat.'
So they went off, and Tench themselves present;
'This sorry fish to affront me sure was sent,'
Cried she, and tossed her beak in high disdain!—
'I ne'er can like a Tench,'—and tossed her beak again!
They passed away, as Pike and Carp had done,
Poor humble Gudgeons then in shoals came on.
And now our Heron began to think of meat,
A handsome Carp she could vouchsafe to eat,
Or taste a Tench, provided it were neat.
She looked about, and only Gudgeons found.
'I hate that nasty fish,' said she, and frowned—
'Shall I, who Tench, and Pike, and Carp refused,
Be thus, by every little fish abused!—
A Heron eat Gudgeons!—No, it shan't be said
That I to such poor diet have been bred:
One of my birth eat Gudgeons!—No, thank fate,
My stomach's not so sharply set!'
Then from them straight she turned in scornful rage;
But quickly after felt her stomach's edge;
Swift to the shore she went, in hopes of one;
But when she came the Gudgeons too were gone.
With hunger pressed she sought about for food,
But could not find one tenant of the flood.
At length a SNAIL, upon the bank, she spied;
Welcome, delicious Bait! rejoiced she cried,
And gorged that nauseous thing, for all her pride!"

On the 22d of December, 1730, the Doctor was made happy in Miss Maris; and their affections appear to have flourished with undiminished vigour throughout their long and exemplary union. The following piece of pleasantry may be instanced to shew how much the author of the *Family Expositor* indulged in innocent mirth among his higher pursuits: it is a letter presumed to be written by his first child, a baby just born.

"From my little Girl to my Sister.

"Honoured madam,—I am but a little girl, and so I shall write you but a little letter. However, I could not forbear paying my re-

* It will be observed that Catharine was then married; but of what order in society the *snail* may be considered an emblem, will be best left to the ingenuity of the reader.

spects to you, for I have heard my papa and mamma talk of you a great many times. They tell me you are very good, and then I am sure you will be very fond of me, and for that reason I heartily wish you were here, for I am sure I have need enough of your assistance. I am but a new comer into your world; and though I have not lived quite six weeks in it, I have already met with a great many misfortunes. Experience tells me that, as Menander expresses it, in a fragment preserved by Plutarch, de Tranquillitate Animæ, *ἡ σὺ εὐτυχὴς ἄστυ καὶ βίος*: so that I think Tully was entirely in the right when he said, 'si daret mihi aliquis Deus, ut ab hac ætate repuerassem, et in lunis vagiam, valde recusem.' *Tul. de Sen. mihi.* p. 172. Were I, indeed, to write the whole history of my calamities, it would fill more than a sheet of royal paper. I must only therefore mention those that are fresh in my memory. Even the other night my mamma was so unkind that she would not let me suck any longer than till all the milk was gone, and when I cried and bawled on, my naughty papa lay by and slept, for aught I could find, as soundly as if he had been a bachelor! At length, after much entreaty, the pap was brought to fill up the chink, and then it was so vilely smoked, that I could hardly eat it. I have a thousand things to say, and for that reason am very impatient to learn to talk; and really I thought I had the fairest opportunity in the world to succeed, for Miss Cotton has been here these two days, and now she is going away, to my great grief, semper ego, &c. *Juv.* I could run on a great while, but my papa is just come into his study, and orders me to be taken away, for fear I should spoil his pen: so they have seized me, and are just going to put me into my cradle—but I will stay till I have given my duty to my uncle, my service to Mrs. Nettleton, and kind love to good Mrs. Mary. I am, madam, your most affectionate, though afflicted niece, and obliged humble servant,

"P.S. I hope you will not be surprised at my Latin and Greek quotations; for I assure you that I understand both these languages quite as well as I do my native English!"

At this busy publishing period we refrain from multiplying quotations; and conclude by repeating, that we have been greatly delighted by the contents of these volumes. Some of the details about settlements in various places, and with various congregations, &c., might have been omitted; but there is a raciness in the whole which must cause the work to be a favourite with all who relish truth and character in productions of the sort. We ought farther to observe, that there are many parts of a graver and more instructive description:—death-bed consolations, remarks on education, the discussion of theological questions, notices of eminent literary persons, and other matters, add to the interest with which we peruse these pages.

The Barony. By Miss Anna Maria Porter. 3 vols. 12mo. London, 1830. Longman.

We never think of criticising, in the common acceptance of the term, any work of the Misses Porter: they come with so many pleasant memories of long summer mornings past under some tent-like tree; of long winter evenings, when our grand annoyance was, that the lamp would need trimming just in the midst of some interesting part; of old romantic fancies, and gentler, but not less touching excitement,—that even before we open the book, our goodwill is conciliated, and our favour ready. The volumes before us, however, might, well stand

on their own merits, and we are glad to meet Miss Porter on her old ground of historic romance;—the time is that of James II., and the principal characters, as usual, stand out the very beau ideals of fictitious perfection; while the attention is attracted and sustained by a most interesting narrative. In the *Barony* the heroines are particularly well contrasted; and the descriptions are picturesque, even to poetry: a very sweet picture might be painted from the following.

“ Never had a day in May been more beautiful than the one now devoted to pastoral pleasure. The breath of actual summer was in the still, glowing air; and its glittering heralds—innumerable butterflies—were on the wing, amongst the flowers of the verandah, and the bouquets of oleander and Spanish jasmine which ornamented the marble walk under that verdant roof. A little removed from that, and arranged as if growing there in native beds, were rich groups of exquisite exotics, loading the air with sweetness, even to lusciousness, and dazzling the sight by the brilliancy and variety of their colours. Still further on, where the moss-green turf sparkled in the sun, as if inlaid with emeralds, stood a single pink thorn, a scarlet chestnut, or a Siberian crab-tree, covered with their carnation blossoms. Under these, little tents were pitched, or silken awnings stretched, to protect groups of the maskers; or to cover tables, laid out with refreshments, suited in character to the supposed frequenters of tent, canopy, or hut. Seeing a party of hired minstrels advancing towards one of these, Miss Hungerford turned into a close walk, quite embowered with lilac, hastening to gain one of the paths where the dressed walks ended. Winding after winding of the garden, which at length brought her to a small, but very agreeable, her pace was quickened, and she perceived her progress, later than she had anticipated, she got from the shadows of the lilac, and then, looking up, she found herself gazing above her head, meeting the sun in the glance of his diamond bright eyes as he darted across her path, stayed her hasty passage, as if to let herself be tempted into delicious sleep by the lulling hum of insects under these deep shades, and the silvery chirping of grasshoppers through their high grass. In one part, the trees receded and opened out a view of a broad sequestered glade, which, judiciously left to its own silence and beauty, struck Eveleen with that sweet surprise with which we see a lovely landscape for the first time. This green solitude terminated in a beautiful sheet of most transparent water, in which willows, weeping birch, larches, and pendent wild flowers, glassed themselves; and crowding over its extremest point, left it doubtful whether the water were a lakelet or a stream. Miss Hungerford lingered to note the graceful fringes of its miniature banks and promontories, whence her eye ascended to the nobler groves rising behind. There the silver-shafted beech and oak mixed with the dark-channelled stems of acacias and the porphyry-like trunks of many an ancient yew, spared less for its age than for its effect. The sad olive of this venerable tree contrasted admirably with the sunny green of livelier foliage. If the lights in this spring-shade were too spangly, the shadows without sufficient breadth, and the tone of colour not of depth enough to suit a mortal's pencil, the gazer felt that one great hand can give harmonious results to every discord; and she looked long on the picture, therefore, without imagining it in summer or autumnal fulness. Meanwhile,

the cool air from the water seemed blowing back from her sated sense the richer breath of what was called the myrtle garden and the orangerie—a breath which fancy indeed only retained; and she stood now, thinking how much fresher, and purer, and exhilarating, was the clear untinged air of heaven than when cumbered unceasingly by accumulations of scents meant only for our passing regale. A solitary swan, white as the dazzling clouds above her head, was alternately plunging under, and rising from the clear water in the distance. A nymph bathing, in a landscape by Claude Lorraine, naturally followed, in idea, a moment's admiration of this single little object; and as Eveleen stood musing, she felt that Rohesia was beautiful, and might be made a lome of happiness.”

In conclusion, we cannot but commend the beautiful and healthy spirit of that best of morality, the morality grounded on religious feeling, which thoroughly pervades these graceful pages: our only excuse for not illustrating which at much greater length, is the difficulty, amounting to an impossibility, of detaching any accommodable portion from the continuous narrative, to afford an idea of its propriety and attractions. It is sufficient to say, that the work does credit even to the high name it bears.

The Cabinet Cyclopaedia. Vol. VI.; Eminent British Lawyers. By Henry Roscoe, Esq. Barrister-at-Law. London, 1830. Longman and Co.; J. Taylor.

The subject of this volume is most happily chosen; it is one of equal individual attraction and national interest. The lives of our eminent lawyers are an honourable and striking part of our history: usually playing a conspicuous political part, they have in most instances stood forward as defenders of the constitution, as the most upright supporters of the laws under which they acted; and their general incorruptibility is a noble picture of public virtue. Their private lives are peculiarly attractive and encouraging to an Englishman, shewing how talent and perseverance make their own way; for not one of these eminent individuals but could look back and say, “ This height of fame and fortune is of my own raising.” These memoirs reflect great credit on Mr. Roscoe: we prophesy well of his success at the bar, if he attends to his briefs as he has done to his biographies, where he has evidently spared neither pains nor trouble. Perhaps, in a literary point of view, his industry is even too conspicuous, and might have afforded room for more reflection, more discussion, more analysis of motive, and more of original matter. Had we not liked so much what he has done, we had not made these remarks; but the truth and neatness of the following observations on Sir S. Romilly will justify our wishing that he had contented himself less with mere extract.

“ Amongst all the qualities which combine to form a great and powerful character, there is none more strikingly excellent than that constancy of purpose which, through difficulties and defeats, still presses onward to its object. The mind inspired and strengthened by this lofty principle regards every obstacle that would turn it from its settled purpose, not only without dismay, but with exultation, as conferring additional honour upon the struggle which it is so well prepared to sustain. Maturely weighing the means which it possesses for the accomplishment of its great designs, it finds in the strength of its own unswerving

resolution the confidence and the promise of success. The misfortunes, the failures, which would deter weaker minds, are turned into instruments of power; and, as difficulties multiply around, they but unite more firmly the energies before which they are destined at length to yield. A man of the most ordinary powers, animated by this principle, will perform a giant's labours; while without it the noblest intellect may expend itself in the triflings of a dwarf. Throughout the whole of his life, Sir Samuel Romilly was remarkable for the earnest perseverance with which he applied himself to the accomplishment of his designs. In the various attempts which he made to improve the criminal code, his resolution was frequently put to the severest test. Opposition, neglect, ridicule, and reproach, conspired to deter him from his great and excellent purposes; but never, for a moment, made an impression upon his firm and resolute mind.”

We must also, as a proof of the writer's abilities, give his picture of an English mob.

“ With a confidence in their power which their successes gave them, the rioters did not hesitate to announce publicly the particular mansions which they had devoted to destruction, amongst which was that of Lord Mansfield in Bloomsbury Square. His lordship, being aware of the intended attack, despatched a messenger to Sir John Hawkins, the magistrate, requesting his immediate attendance. Sir John, accompanied by a number of constables, proceeded without delay to Bloomsbury Square, where he found Lord Mansfield in a state of great agitation. The Archbishop of York, who resided in one of the adjoining houses, was present, and appeared to be more collected. By the advice of Sir John Hawkins, a detachment of military was sent for, who soon afterwards arrived. A consultation was then held as to the position in which the guards should be placed, when Lord Mansfield, notwithstanding the remonstrances of Hawkins, insisted that they should be stationed in the vestry of St. George's church. The commanding officer endeavoured, in vain, to dissuade him from suffering the troops to leave the house; but his lordship was peremptory, and the guards were marched to their station. The mob soon afterwards arrived, and in an inconceivably short space of time the walls of the house alone remained standing. The whole of the library of printed books and MSS., the private papers, the pictures, furniture, and other valuable effects, were all consumed. In order to shew how disinterested was their enthusiasm, a large silver tankard, containing a considerable sum in guineas, was thrown into the blaze. Sir Nathaniel Wrazall, who was an eye-witness of the conflagration, has left the following account of it:—‘ I was personally present at many of the most tremendous effects of the popular fury on the memorable 7th of June, the night on which it attained its highest point. About nine o'clock on that evening, accompanied by three other gentlemen, who, as well as myself, were alarmed at the accounts brought in every moment of the outrages committed, and of the still greater acts of violence meditated, as soon as darkness should favour and facilitate their further progress, we set out from Portland Place, in order to view the scene. Having got into a hackney coach, we drove to Bloomsbury Square, attracted to that spot by a rumour generally spread, that Lord Mansfield's residence, situate at the north-east corner, was either already burnt or destined for destruction. *Hart Street and Great Russell*

Street presented each to the view, as we passed, large fires, composed of furniture taken from the houses of magistrates or other obnoxious individuals. Quitting the coach, we crossed the square, and had scarcely got under the wall of Bedford House, when we heard the door of Lord Mansfield's house burst open with violence. In a few minutes, all the contents of the apartments, being precipitated from the windows, were piled up, and wrapt in flames. A file of foot soldiers arriving, drew up near the blazing pile; but without either attempting to quench the fire, or to impede the mob, who were, indeed, far too numerous to admit of their being dispersed, or even intimidated, by a small detachment of infantry. The populace remained masters; while we, after surveying the spectacle for a short time, moved on into Holborn, where Mr. Langdale's dwelling-house and warehouses afforded a more appalling picture of devastation. They were altogether enveloped in smoke and flame. In front had assembled an immense multitude of both sexes, many of whom were females, and not a few held infants in their arms. All appeared to be, like ourselves, attracted as spectators solely by curiosity, without taking any part in the acts of violence. The kennel of the street ran down with spirituous liquors, and numbers of the populace were already intoxicated with this beverage. So little disposition, however, did they manifest to riot or pillage, that it would have been difficult to conceive who were the authors and perpetrators of such enormous mischief, if we had not distinctly seen at the windows of the house men, who, while the floors and rooms were on fire, calmly tore down the furniture, and threw it into the street, or tossed it into the flames."

Our Village. By Mary Russel Mitford. Fourth Series. 8vo. pp. 345. London, 1830. Whittaker and Co.

WE welcome Miss Mitford as we would welcome the golden rain-fall of the laburnum; the opening of the thousand small flowers that form the fragrant cluster of the lilac; the first gooseberry tart, that happiest union of sweet and sour; or, as we would welcome violets, cream cheese, &c.;—in short, we give her the same welcome as we would to all the sweet signs that tell of present spring and coming summer. This little volume is the fourth of a very delightful series; and it has all the arch humour, the exquisite bits of landscape, the light but true touches of character, that made its predecessors so popular. Yet, as most of the sketches in these pages have already received the tribute of praise and liking, it were but repetition to transfer what is so well known to our columns.

First Love. 3 vols. London, 1830. Saunders and Otley.

WE cannot say much in favour of this novel: the story belongs to the old school of intricate improbabilities, and the characters are as common as ever circulated. We ought to be obliged by the author's information, that all the mottoes to the chapters are taken from his MS. works; but for that, we had believed the "castles, moonlight, heroes, and shields," to have been scraps of Ossian, set in blank verse.

Description of the Petrisseur, or Mechanical Bread-Maker. W. Foat.

THIS is a translation from the French, and describes "a patent apparatus, invented by Memsr. Cavalier, Brother, and Co., of Paris,

for the much-desired and invaluable purpose of making bread, without the disgusting, tedious, defective, and expensive agency of hands and feet labour." It is impossible for us to give an idea of this machine in a few lines, or without the aid of an explanatory plate. We must therefore refer our readers to the pamphlet itself, and to a small model of the machine, which, it is stated, will soon be deposited in the National Repository in the King's Mews. There are certainly few purposes to which machinery could be applied with greater advantage than to the more cheap, expeditious, cleanly, and perfect preparation of an article which, in all civilised countries, forms so large a portion of the food of man as bread.

The Athenæum; an Original Literary Miscellany. Edited by Students in the University of Glasgow. 12mo. pp. 242. 1830. Robertson and Atkinson, Glasgow; Constable and Co., Edinburgh; and Hurst, Chance, and Co., London.

THIS is a various and entertaining little volume, and does its coterie of young authors much credit. All we dislike is the title;—there is a classical affectation in it, very pardonable, however, in the production of a university; though we see no appropriateness in the word "Athenæum" as applied to a collection of modern tales, poetry, and criticism. We extract, as a specimen, the following very sweet little poem:—

"Lines written in a Young Lady's Prayer-book.

I ask thee not in that calm hour
When thou dost ope this holy tome,
To own that I had e'er the power
To call thy wandering fancies home;
Nor would I wish thee to forget,
Even when all thoughts of earth grow dim,
The tones that thrilled when first we met—
Deep as devotion's holiest hymn!
It is enough—enough for me—
To think that when thy knee is bent,
Thine eye perchance may turn and see
These traces of a sad content:
For since 'twere almost heaven to kneel
Then, like thee, meekly, at thy side,
It is a bliss, even thus I feel,
To be with thoughts of it allied! T. A."

Clara Gazul; or, Honi soit qui Mal y pense. 3 vols. 1830. Printed for and published by the Author.

THE production of a female who, under the name of Harriette Wilson, obtained much notoriety by the publication of some indecent Memoirs: as a literary composition it is contemptible; and, without violating the laws of decorum so openly as its predecessor, it contains much that is objectionable and offensive to good taste.

Memoirs of a Gentlewoman of the Old School. 2 vols. 12mo. London, 1830. Hurst, Chance, and Co.

TRULY the productions of an elderly lady,—gossippings of some fifty years ago, to which affection might listen in a family circle, but little likely to attract the public.

Weeds and Wild Flowers. By the late Alexander Balfour, author of "Campbell, or the Scottish Probationer," &c. *With a Memoir of the Author.* pp. 280. 1830. D. Lizars, Edinburgh; Whittaker, London; W. Curry, Dublin.

THIS volume must be a gratifying memento to Mr. Balfour's friends: he was an amiable and intelligent man, whose struggles and progress are depicted in the interesting Memoir prefixed to these pages.

The Fugitives; or, a Trip to Canada. By Edward Lane. 12mo. pp. 328. London, 1830. E. Wilson.

OF most questionable morality, with the coarsest possible language, and an ill-arranged story, we can only wonder how the work ever came to be written or published.

Fiction without Romance; or, the Locket-Watch. By Mrs. Maria Pollack. 2 vols. Printed for the Author. London, 1830. Wilson.

EVIDENTLY the production of one anxious to benefit by the inculcation of excellent principles,—the leisure hours of many of our young readers may be much worse employed than in the perusal of these well-meaning pages.

Perkin Warbeck; or, the Court of James IV. of Scotland. By Alexander Campbell. 3 vols. London, 1830. Newman and Co.

THE fortunes of that enterprising adventurer, particularly his stay in Scotland, afford a variety of incident to our author, who also gives some picturesque descriptions of those olden times.

British Domestic Animals. Edinburgh.

THIS is a work published under the patronage of several members of the Highland Society of Scotland, describing the breeds of the different domestic animals of that country, with plates, engraved by Lizars, from portraits painted from life by Howe. Part the First relates to "Horses, selected for strength, speed, and other properties, with an account of their pedigree, services, age, &c.;" and Part the Second to "Cattle, selected from different districts of Scotland, as specimens of the various improved breeds; with remarks from practical farmers and men of science." It is evident that, to the agriculturist especially, a work of this character, exhibiting the improvement in the breeds of various domestic animals, and explaining the causes of those improvements, must, if well executed, be highly interesting and advantageous; and, in our opinion, the publication before us, with reference both to the text and to the illustrations, does great credit to those by whom its various departments have been undertaken. One of the most picturesque and characteristic plates is a portrait of "Duncan," a celebrated Orkney or North Island horse, about twelve hands high, the property of the Right Hon. Charles Hope, lord president of the Court of Session. Duncan is now thirty-three years old, and is, of course, enjoying the *otium cum dignitate*; but in his youthful days "he was an uncommonly fast trotter, and remarkably safe. His lordship's four sons all rode him in succession; and within these five or six years he carried one of them to Ardgower, a distance of nearly one hundred and forty miles, in less than three days. Duncan's performances were not altogether confined to the road; in his more vigorous days he frequently made his appearance in the field with the East Lothian fox-hounds, carrying his youthful riders with great spirit. It is a curious trait of sagacity, that he seemed to know exactly his own duties; none more ready than Duncan to receive a feather-weight, but woe betide the full-grown wight who ventured into the saddle! he would immediately squat, *à la kangaroo*, in such a manner as to defy the most accomplished horseman to keep his seat." The plates and descriptions of "Bounty," a hunting mare, "Meg," a draught mare, and "Canteen," a thoroughbred racer; as well as of a "Fifeshire Bull,"

"Tees-water and Fife Cows," "an Ayrshire Bull," and "Ayrshire Cows," all convey most valuable information. The Second Part closes with some "Interesting Observations on the Origin of Domestic Cattle, by James Wilson, Esq., F.R.S.E., &c."

ORIGINAL CORRESPONDENCE.

Paris, May 4.

A NEW historical novel, in two volumes, has just made its appearance here, under the title of *les Mauvais Garçons*. It displays an animated, and, according to the French critics, a faithful picture of Paris during the captivity of Francis I. in 1525. At that time the metropolis of the *grande nation* was infested by a tribe of nondescript adventurers, broken gamblers, cut-purses, beggars, students, Bohemians, and other marauders, known under the general and characteristic appellation of *mauvais garçons*. The archers of the watch, like modern Charlies, frequently participated in the depredations of these midnight plunderers, whose war-cry was, *Vive Bourgogne! à sac! à sac!* Such are the data which have furnished the materials of a work possessing much local interest, and some dramatic sketches.

The *dilettanti* will scarcely credit the fact, that Mademoiselle Sontag has been—in what vocabulary shall I find a phrase to soften the appalling intelligence?—that Mlle. Sontag has been absolutely hissed at Berlin. Such, however, is the dismal truth. After a series of successful appearances in the characters of *Desdemona*, *Rosina*, and *Edile*, in the comic opera of *Jacoupe*; the divine Sontag was hissed in the part of *Anna*, in Mozart's *Don Juan*. And this, too, from a Berlin audience! *Uresco puerilis!* The *mauvais garçons* have come to the rescue, and have been obliged to have recourse to the aid of the public. The *dilettanti* have been obliged to convene, and to discuss the propriety of the hissing, and the propriety of the hissing in the second instance was decided by the recollection of the cruel affront, that she again fainted. Another prima donna, who happened to be in the theatre, "quite by accident, as a body might say," was obliged to finish the part.

"Can such things be,
And overcome us like a summer cloud,
Without our special wonder?"

The concert season is fast approaching towards its close. The Parisian *dilettanti*, unlike their more tonish London brethren, are not sufficiently advanced in civilisation to protrude their winter into the dust of June or July, and in a few weeks the *roulades* of our drawing-room nightingales will be abandoned for the song, *au naturel*, of the lark and the linnet.

Paganini is still at Frankfort, where he continues to give public concerts. His last took place on the 11th ult. A superb medal of Beethoven is now on sale in Paris. On one side is the head of the celebrated composer, with the words "Louis von Beethoven?" on the other, a lyre surrounded by the following inscription—"Né le 27 Decembre, 1770, à Bonn; mort le 26 Mars, 1827."

ARTS AND SCIENCES.

ROYAL INSTITUTION.

DR. EDMUND CLARK gave the conclusion of his remarks on the ascent of Mont Blanc. Having recapitulated the outlines of his previous lecture, as noticed in a former No. of the *Literary Gazette*, he proceeded to lay before the meeting samples of all the rocks occurring in the ascent. The specimens from the

Roche Rouge and Les Derniers Rochers, had all the general appearance of granite; but it seems that accurate examination has confirmed the doubts of De Saussure, and that which appears to be mica is found to be talc. This fact gave rise to several unexpected and curious conjectures as to the antiquity of these granitic rocks. M. Brochant, in a learned dissertation on the subject, has come to the conclusion, that there is no true granite in the Mont Blanc; and that its rocks are less ancient than the real granite formation. The junction of the real micaceous granite with the talcose rock, has not yet been carefully examined; and it is one of those geological observations of great interest, which may throw additional light on our views of the formation of granite. Some very interesting specimens of granite veins from Cornwall were laid on the table; but it still remains to be shewn how the granite peaks assumed their present imposing appearance: whether the surrounding rocks have been washed away, which is a hard speculation; or whether the granitic peaks have been thrown up in their present form alone, and so the mass has lost its fluidity before reaching the surface; or lastly, whether we have yet accumulated a sufficiently accurate knowledge of the facts, to admit of generalising with any great probability of success. The appearance of vitrified portions of hornblende, on the exterior of another specimen from the rock above the Alléc Blanche, unquestionably indicates the effect of lightning. A small portion of the same rock, melted by the blow-pipe, was produced; and it was mentioned, that a powerful shock of an electric battery had been found to form little vitreous globules in the same way. The doctor, in this lecture, made many remarks on the distance at which Mont Blanc can be seen; and, by undeniable testimony, it appears that at Lagnes the mountain is occasionally visible. The sweep of country taken in by a circle having this radius, was shewn, and it appears that the distance in a straight line is about as great as from London to Rouen on one side, to Exeter on another, to Hull northwards, and to the mouth of the Scheldt on the east; of course this does not prove that these points could be seen, unless as much elevated as Lagnes itself, which stands on a hill.

In describing the descent, Dr. Clark appeared to think the descriptions given rather too formidable; and, in alluding to the importance of accuracy and truth, spoke very highly of Mr. Brockedon's views of the Alpine passes, and exhibited a very pleasing view of Mont Blanc from Lyons, by this accomplished artist. The results of barometrical calculations of the altitude of Mont Blanc were given by the four common methods of Robinson, De Luc, Sir G. Shuckburgh, and Dr. Hutton; and also by the more elaborate methods of Professor Littrow and Mr. Bailey; and the mean of these calculations was found to correspond very nearly with the trigonometrical height as given by Baron Zach in his *Correspondance Astronomique*, &c.

Various specimens of the rocks of the Grand Mulet were placed on the table, with a collection of the plants found in these celebrated regions. The *phyteuma hemisphericum* appears to grow on the very loftiest spots: a pretty little specimen of it in flower was brought down from the Grand Mulet rocks on the 27th of August, 1825. The meeting was well attended, and the lecture excited the most lively attention.

COLLEGE OF PHYSICIANS.

DR. ROBERTS in the chair.—The paper which Dr. Francis Hawkins read at this assembly consisted of "Observations on the blood," by Dr. Stevens, of the West Indies. In the malignant fevers of that climate, Dr. Stevens had observed that the blood appeared to be changed in many respects from that of health; and the changes which it had undergone were, in his opinion, principally these:—it was more fluid than natural; its colour was blackened; and the saline matter which it contained was considerably lessened in its quantity. These observations induced him to perform certain experiments upon the blood, from which he conceives that the following results may be deduced:—

1st. That the acids, in general, when mixed with the blood, give it a dark colour; 2d, that the pure alkalis have a similar effect, although not in the same degree; 3d, that the neutral salts, on the contrary, give it a bright arterial colour, as likewise those salts which contain a slight excess of alkali; 4th, that the same re-agents are capable also of restoring the colour of the dark blood which is taken from the bodies of those who have died of the yellow fever. Dr. Stevens hence concludes, that the loss of saline matter is the chief cause of the changes which the blood undergoes in fever; and he affirms that these changes may be prevented by giving saline medicines,—a practice which he says he has himself pursued in the West Indies with the happiest effect: the mortality of the yellow fever being thereby greatly diminished. It is his opinion, that far too little attention has of late been paid to the state of the fluids in fever.

HORTICULTURAL SOCIETY.

The anniversary meeting of this Society took place on Saturday last; Mr. Knight, the President, in the chair.—A report, or more properly, perhaps, a series of observations from the council, was read to the meeting: from this document it appeared that economy was now to be the standing order; it also stated several improvements that were to take place: some of these are so apparent, that it is surprising the Society should have gone on so long, without one or other of the numerous fellows pointing them out: *ex. gr.*; the shrubs and curious flowers in the garden are to be "ticketed" with their respective names, to do away with the attendance (and of course expense also) of the bores who heretofore acted as *cicerones*. Mr. Stapleton raised some objection to Mr. Lindley's salary: he thought it was too large, and Mr. Lindley too clever. Council for the year was next chosen; connected with which, the only circumstance worth mentioning is, that a Mr. Bentham was called to Mr. Sabine's quondam situation. Another meeting took place during the week, at which Mr. Stapleton resumed his discussion regarding Mr. Lindley's salary; but it came to nothing: the President remarked, that if these discussions were to be carried on, he should leave the chair! Mr. Stapleton immediately replied, that he then would move for a dissolution of the Society, and payment of its debts by subscription. Ultimately it was arranged, that discussions relating to the Society's financial matters should only be allowed after the regular business of the meeting.

ZOOLOGICAL SOCIETY.

THE anniversary meeting of this thriving Society was held on Monday last; the Duke of

Somerset in the chair. Our limits preclude the possibility of minutely entering into the details of the very satisfactory reports which were read to the members: suffice to say, that the proceeds of last year were more than those of any previous season; that the treaty for ground, which had been carried on between the Commissioners of Woods and Forests and the Society has terminated in favour of the latter; that the land of the Kingston farm, though poor for agricultural purposes, is well adapted to the objects of the Society, viz. the breeding and rearing of rare beasts, birds, and fishes, of which some have already begun to breed, and others are soon expected from foreign parts for the same purposes. The report also eulogised Mr. Sabine, and stated that he was to resign the treasurership. A ballot for officers was postponed till Thursday, in consequence of much confusion having arisen by the tardy arrival of the balloting lists.

At the meeting on Thursday, Lord Auckland took the chair; and there were present, Earls Winchelsea, Darnley, Essex, Caernarvon, and several others of the nobility. A noble lord gave notice that at the next meeting he should move that the composition monies of fellows be in future reserved; the interest only to be applied to the liquidation of the Society's expense. Council and officers for the year were then chosen.

GEOGRAPHY: NEW SOCIETY.

WE are very glad to have received the prospectus of a plan for forming a London Geographical Society, which we have long considered to be a great desideratum among our learned and useful national institutions. The Geographical Society of Paris has contributed, and is constantly contributing, much valuable information to the world; and assuredly this maritime country, with colonies in every quarter of the earth, the most enterprising seamen, and the most zealous travellers, ought not to be in the rear, where it has the means of being at the head of such interesting inquiries. The prospectus for the establishment of the London Geographical Institution, after remarking on the paramount consequence of geographical science, and the want of any encouragement to its cultivation in England (of all the countries in the world!!); and after describing the progress and beneficial results of the Parisian association during the nine years of its existence, goes on to propose the formation of a similar society in London, whose object shall be to collect and register all the useful facts comprehended under the two great divisions of physical and political geography; those of physical geography, including mountains, rivers, soil, climate, distribution of animals, vegetables, minerals, &c.; and those of political geography, comprehending ancient and modern civil divisions of countries; sites of towns, both ancient and modern; nature of government; distribution of languages; roads, canals, manufactures, population, education; the whole statistics of a country, &c. A house or chambers, a library to contain all the best books on geography, with maps, charts, &c.; a correspondence to be formed with similar societies and individuals in different parts of the world; prizes for the determination of particular questions, and inquiries which would extend our knowledge of geographical facts; and the occasional publication, in a small and cheap form, of all the useful results at which the Society arrives, are among the leading features of this plan, of the success of which we cannot entertain a doubt, and to the advancement of

which we shall be happy to contribute by every means in our power,—especially as the idea was originally thrown out and recommended in our columns more than twelve months ago.

NEW COMET.

MR. SOUTH, at his observatory, Kensington, and with his noble five-foot equatorial glass and twenty-foot achromatic, has been diligently watching this celestial stranger, discovered by M. Gambart, at Marseilles, on the 21st ult. in the constellation Pegasus. When found, it was in about $21^{\text{h}} 10^{\text{m}}$ of right ascension, and $8^{\circ} 37'$ N. declination. April 21st, when observed by Mr. South, $15^{\text{h}} 35^{\text{m}}$ sidereal time, it was right ascension $21^{\text{h}} 35^{\text{m}}$, declination, $16^{\circ} 27'$ N. The nucleus was well defined, and the tail distinct. Whether approaching or receding from the earth, has not yet been ascertained; so that we cannot inform our timid and terrified readers whether this is the visitant whose threatened call upon us in 1832 is to excite so strong a sensation.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE President in the chair. — A paper on the occurrence of iodine and brome in mineral springs, by Dr. Daubeny, professor of chemistry in the University of Oxford, was read.

A paper was lately read, "On the progressive improvements made in the efficiency of steam-engines in Cornwall; with investigations of the methods best adapted for imparting great angular velocities," by Davies Gilbert, Esq., of which we give the following abstract.

The practical adaptation of the steam-engine to mechanical purposes is considered by the author as due to Mr. Newcomen, whose inquiries were introduced into Cornwall very early in the last century, and soon superseded the rude machinery which had, till then, been employed for raising water from the mines by the labour of men and of horses. The terms of Mr. Watt's patent in 1769, which secured to him, until the year 1800, the receipts of one third of all the savings in fuel, resulting from the adoption of his improvements in the construction of the engine, rendered it necessary to institute an accurate comparison between the efficiency of his with former engines. A copy of the report drawn up on this occasion, in October 1778, is given in the paper; but as the dynamic unit of one pound, avoirdupois, raised through a height of one foot, by the consumption of one bushel of coal, had not yet been established as the measure of efficiency, the author, proceeding upon the data furnished by that report, calculates that the duty performed by Watt's engine on that occasion was 7,037,800. In the year 1793 an account was taken of the work performed by seventeen engines on Mr. Watt's construction, then working in Cornwall. Their average duty was 19,569,000, which exceeds the performances of the former atmospheric engines in the standard experiment in the proportion of 2.78 to 1. Some years afterwards, disputes having arisen as to the real performance of Mr. Watt's engines, the matter was referred to five arbiters, of whom the author was one; and their report, dated in May 1798, is given, as far as relates to the duties of the engines. The general average of twenty-three engines was 17,671,000. Since that period, so great have been the improvements in the economy of fuel, and other parts of the machinery, that in December 1829, the duty of the best engine, with a cylinder of eighty inches, was 75,628,000,

exceeding the duty performed in 1795 in the proportion of 3.865 to 1, and that of the atmospheric engine of 1778 in the proportion of 10.75 to 1.

The remainder of the paper relates to the friction in machinery, and the different modes of obviating its effects. With a view of reducing the amount of friction, the author is led to consider what are the most proper forms for the teeth and cogs of wheels, and through what intermediate steps a given increase of angular velocity may be most advantageously communicated. Equability of velocity is obtained, though at the expense of some degree of sliding friction, when the outline of the teeth of the wheels are involutes of circles. Friction, on the other hand, is wholly prevented when their form is logarithmic spiral; but the angular velocities will then be variable. Hence these two advantages are incompatible with one another; but, on the whole, the author gives the preference to the involute, which produces an equability of angular motion. The most advantageous mode of increasing velocity by a series of wheels, is to adjust them so that the multiplication of velocity shall proceed in a geometrical progression.

KING'S COLLEGE, LONDON.

THE front elevation of this truly national institution, which we have this day the gratification of presenting to our readers, is deserving of admiration for its noble simplicity. It has features of solidity, as well as harmony, about it, which, we cannot doubt, will hereafter prove analogous with the qualities of its scholastic character.

The main building (the front of which faces the west, and is rather more than three hundred feet in length,) will stand upon the same ground level with the Strand. In order to accomplish this, a lofty sub-structure is raising, of which the portion immediately beneath the front shewn in our plan will be appropriated to the purposes of the institution, and contain a series of spacious accommodations for the students of the high school, or *lower department*, as it is called; as well as certain rooms connected with the College, or higher department. Among the former will be one school-room seventy-two feet long and fifty-two feet broad, and another, sixty by rather more than thirty feet; besides convenient class-rooms, refreshment-rooms, offices, &c. These form the basement, above which is the ground floor, where are the various entrances to the higher department, as seen in the annexed plan. This floor will comprise eight lecture-rooms (the largest being about sixty by forty feet); attached to which are as many apartments for the use of the professors—a hall for public examinations, &c. above seventy feet long—a noble public hall of entrance, and an entrance to the lecture-rooms for the students; and, adjoining the southern extremity of the front, but turning immediately westwards and facing the Thames, the ground floor of the principal's residence, the erection of which will complete the eastern wing of Somerset House. The first floor will contain the chapel, of the same dimensions as the hall for examinations, &c.—calculated for the accommodation of nearly one thousand auditors; two excellent lecture-rooms, with private rooms attached; fourteen apartments, of suitable size, for scientific collections, museums, libraries, &c. The second floor is also susceptible of being applied to various purposes, which, so far as we can learn, will not receive any specific appropriation until experi-

ence shall shew in what manner it can be most beneficially applied.

We understand that the halls and rooms for the lower department, on the basement floor, are amply sufficient for the accommodation of between four and five hundred pupils; and that those for the higher department will afford space for the convenient reception of two thousand students. It is confidently calculated, as we gathered from the report read at the annual meeting on the 30th ultimo, that both of these departments will be opened in the autumn of the ensuing year; though hopes are entertained that the high school may be ready at a somewhat earlier period.

As all access from the quadrangle of Somerset House will be closed, a separate entrance to the College will be formed across the site of the two houses recently pulled down, and facing the New Church in the Strand.

In giving the public a correct sketch of the front elevation of the College, we have endeavoured to convey as full information, with respect to its internal arrangements, as we have been enabled to collect from the ground plans and other sources of information. Whether these last shall be completed, to the full extent contemplated, is a question, which, we hope, and feel confident, will be speedily determined by the liberality of our fellow-countrymen; on

every class of whom, from the monarch to the humblest citizen, such an institution as the present possesses claims of no ordinary magnitude, and of no transient importance. May its founders live to reap their reward—"encouraged by the sight of that public benefit which will accrue to all mankind, and chiefly to our nation, by its foundation!"—(Abraham Cowley's proposition for a "Philosophical College" at London. Vide his Works. London, 1669, folio edition, p. 43 of the fourth part.)

Having given this sketch of the plan and arrangements of the building, here follows an engraving of the front elevation —

ORIENTAL TRANSLATION COMMITTEE.

At a recent meeting, a resolution of considerable interest to oriental scholars, and of importance to literature, was agreed to; viz. that a sum, varying from 20 to 100 sovereigns, at the discretion of the committee, be given to any person who can point out a translation in the Arabic, or any other oriental language, of a lost Greek or Latin work, or of a so

delivered at Willis's Rooms, by Dr. Müllersfeldt, professor of German at the London University. We much regretted to find so small an audience; it must have arisen, certainly, from the want of publicity. Our space will not admit of expatiating at large; we must restrict ourselves to a mere notice. The Dr. commenced with requesting (almost unnecessarily) the forbearance of his auditors for the imperfections of his address in the English language, and then took a rapid survey of German poetry, from its infantile state in the northern sagas, to its cycles of romance, and minnesongs, or noble age, when it commenced its alliance with European literature, down to the period of the Reformation, dilating upon the influence that great event had upon its progress, when, for a time, it remained stationary, the whole energies of the human mind being directed to the spiritual masters of soul and salvation, nicely criticising points of doctrine, and investigating the full force of faith. But the warblings of the Muse were still heard, her lyrical effusions took the form of spiritual hymns, upwards of thirty thousand of which are still preserved, as an evident testimony of the religious inspiration or enthusiasm of five hundred poets or poetasters. Germany, as the doctor justly observed, has paid most dearly for the privileges derived from the valiant obstinacy of Luther;—its plains have been incessantly inundated with blood, and its mountains illuminated by the lurid glow of hostile beacons:—yet was the victory worthy of the sacrifice—the human intellect

spurned its fetters, and denounced its oppressors. The greatest benefit that accrued to German polite literature from the Reformation, was the elevation of the high German dialect to the enviable supremacy of being the written language of the empire; and this was effected by Luther's translation of the Bible. This literature, until within the last sixty years, shared the baneful influence of the national political alliances: its tendencies of late have taken a more ennobling direction; it has dared to think for itself, to which it owes the magnificent spectacle it at present displays. We shall have the opportunity of following the doctor into the details of his survey from week to week; and we again strenuously exhort all lovers of German poetry to avail themselves of these lectures.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

Of the Exhibition at Somerset House, which opened on Monday last, we are bound to say that, although we do not think it equal to some of its predecessors, and although it contains various flagrant outrages against good sense and good feeling, it still displays so many fine and redeeming examples of genius and talent, as amply to sustain the high character of the British School of Art. Before we proceed particularly to notice any of the works of which it is composed, we beg to make one remark with respect to their arrangement. As far as regards the centres (we speak of the Great Room) nothing can be better; but, in other respects, if there ever was a year in which especial disregard has been shewn to taste and justice, it is the present. Pictures are placed on a level with the eye, which ought never to have been allowed to meet the eye at all; and others are hung above and below, and thrust into holes and corners, whose merits entitled them to a very different description of treatment.

After the first glance round the room, and after we had in some degree recovered from the dazzling and confusing effect of so many vivid colours, and of so much burnished gold, the attractions of the mantel, as in former years, drew us to their examination; and we are happy to add, that we were gratified by that

examination in no common degree. First, from its subject and character, we notice

No. 125. *His Majesty King George the Fourth received by the Nobles and People of Scotland, upon his Entrance to the Palace of Holyrood House, on the 15th of August, 1822.* D. Wilkie, R.A.—It would have been extraordinary if the talents of a Wilkie, operating upon such materials, had not produced a work at least equal in merit to any of his former productions. We cannot describe the composition of this fine performance more perspicuously than in the words of the catalogue.

"In the principal station of the picture is represented the King, accompanied by a page, and the exon of the yeoman of the guard, with horsemen behind, announcing, by sound of trumpet, to all ranks of his expecting subjects, the arrival of the royal visitor to the palace of his ancestors. In front of his Majesty, the Duke of Hamilton, first peer of Scotland, in the plaid of the Earls of Arran, is presenting the keys of the palace, of which he is hereditary keeper. On the right of the King is the Duke of Montrose, lord chamberlain, pointing towards the entrance of the palace, where is stationed the Duke of Argyle, in his family tartan, as hereditary keeper of the household. Behind him is the crown of Robert the Bruce, supported by Sir Alexander Keith, hereditary knight-marshal, attended by his esquires with the sceptre and the sword of state. Near him is carried the mace of the exchequer, anciently the chancellor's mace, when Scotland was a separate kingdom. On the left of the picture, in the dress of the royal archers, who served as the King's body-guard, is the late Earl of Hopetoun; and close to him, in the character of historian or bard, is Sir Walter Scott. These are accompanied by a varied crowd, among whom are some females and children, pressing forward with eagerness to see and to welcome their Sovereign upon this joyous and memorable occasion."

In this last-mentioned particular the artist has shewn peculiar taste and judgment. The earnest curiosity and pleasurable anxiety of the loyal spectators to obtain a peep at their gracious and royal visitor, who is the centre of attraction to all, breaks in upon the formality of the King's reception with the happiest effect.

The reflected light upon his Majesty's countenance is beautifully managed, and the various distinguished persons by whom he is surrounded are admirably depicted; especially the Duke of Argyle, than whose head we never saw any thing more firmly and characteristically painted. We congratulate Mr. Wilkie on the successful accomplishment of his very arduous though inspiring task.

No. 124. *Judith*. W. Etty, R.A.—As it is to be presumed that few persons are unacquainted with the subject, it would have been far better had the quotation been omitted; for if any thing could have lowered the tone of our admiration of the extraordinary powers displayed in this noble painting, it would have been the perusal of so ill-timed and ill-suited a passage. In contemplating the work itself, it is impossible to speak in the future tense, and to say with the motto to the catalogue, that “the spirit of the British artist will be awakened.” Here is one instance at least in which it has been awakened; and that with little or none of “the patronage which raised and rewarded the Italian and Grecian masters.” We have no hesitation in asserting, that this is a picture of which the British school may justly be proud. Mr. Etty has, in our opinion, attained a degree of excellence in it far superior to that of any of his former productions. The academic parts are more carefully studied, the drawing is more correct, than in his *Benaiah*, and other works of a similar kind. The sleeping guard, the midnight stillness in connexion with the act, are so well presented to the eye in part, and to the mind's eye altogether, as to become appalling. As a composition it ranks highly. In brilliance of colouring, we know of nothing, ancient or modern, that can go beyond it; and indeed, but for the masterly hand which has regulated the resplendent materials brought together, they would be too vivid to be tolerated.

On the opposite side of the room, in No. 20, *Ines de Castro parted from her Children* (*Alphonso, King of Portugal, Donna Ines, Abou, Gonzales, Coello, &c.*) H. P. Briggs, A.—We find another claimant to the honours of the British school of historical painting; and one who, although his style and execution are entirely different from those of the last-mentioned picture, must, nevertheless, “have his claims allowed,” by every impartial judge of art. Mr. Briggs has also, we think, like Mr. Etty, made a great stride in his art; especially in respect to composition and colouring. There are, however, passages which we could wish somewhat changed. The expression of the mother is scarcely agonised enough for the occasion; and the head of the daughter is so introduced as to create some confusion in form. Nevertheless, it is a very fine production, and is one of the greatest ornaments of the room.

No. 7. *Pilate washing his Hands*. J. M. W. Turner, R.A.—Although it may be said that editors and reviewers are “nothing if not critical,” yet we can with a safe conscience affirm, that we are always more disposed to “extenuate” than to “set down aught in malice.” When offences like this come before us, however, we should be guilty of an unwarrantable neglect of duty, if we were not to visit them with the severest chastisement. What demon can have whispered to this great artist, so unapproachable in his proper sphere, that he possessed a talent for historic art! And what “kind friend” could have placed his performance thus conspicuously obtrusive, instead of concealing it in some out-of-the-way situation, where the spectator might be left to conjecture the existence of beauties which his eye

was unable to discover! It is a wretched and abortive attempt to substitute certain qualities of technical art, for character, expression, and all that belongs to the dignity and pathos of the subject.

(To be continued.)

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

(Second Notice.)

No. 181. *Byron's Dream*. J. D. Harding.—If this be the quality of “such stuff as dreams are made of,” we care not how much of the manufacture meets our eye. The mutual advantage which results from the reflected powers of poetry and painting were never better exemplified than in this beautiful composition. Standing upon its own merits as a work of art, it is one of the most splendid specimens in the present collection; and both as regards striking contrast, rich variety, and dazzling and powerful effect, it presents a *coup d'œil* of the most impressive and brilliant kind.

No. 195. *Misty Morning; View in St. John's Vale, Westmorland; with Cattle* by R. Hills. G. F. Robson.—A more complete union of talent cannot well be imagined than that which appears in this performance; of which grandeur of scenery, truth of effect, and polish of execution, are the leading features. Nor have any of the works painted conjointly by Wilson and Mortimer, or Barrett and Gilpin, exhibited a more perfect accordance than the joint labour of Messrs. Robson and Hills.

No. 211. *Scene in the Vicar of Wakefield*. Miss L. Sharpe.—This is perhaps the only way in which a twice-told tale can be tolerated. There might be twenty graphic illustrations of such a story; and all interesting and effective. In the present instance, the scene is beautifully got up (if we may use such a phrase); and with a truly feminine feeling. We question if any artist of the other sex could have hit the character of the town ladies with so much nicety;—preserving the attractive, yet shewing enough of the meretricious. A little more positive and powerful expression in some of the other heads, especially in that of Dr. Primrose, might not, perhaps, have been disadvantageous.

No. 215. *A Sea Gull*. W. Hunt.—Much as we admire Mr. Hunt's talents, both in the character of his figures, and in the sparkling effects by which they are generally accompanied, we are of opinion that his *forte* lies in subjects of still-life. With great fidelity of representation and power of execution, there is a charming simplicity and pathos in this little drawing.

No. 220. *View in the Grounds at Belton, the Seat of Earl Brownlow*. P. De Wint.—One of the most agreeable spots we ever contemplated: the grand and the placid unite in it to excite pleasing emotions. Mr. De Wint has done it ample justice.

No. 222. *A Clay Pit*. W. Hunt.—A rare example of the picturesque, both in character and in effect.

No. 234. *Sion, in the Valais, Switzerland*. H. Gastineau.—In former exhibitions we have had occasion to admire the grand and elevated character of Mr. Gastineau's Swiss views; but we do not think that he ever presented one of higher pretensions than this of Sion, nor has the skill of his pencil ever been more advantageously employed.

No. 265. *China Mender*. A. Chisholm.—Upon the plan of Gerard Dow, Mieris, and others of the Flemish school, Mr. Chisholm in this carefully finished work has produced an

assemblage of figures and still-life well suited to attract by their character and arrangement, as well as by the skill displayed in their execution.

No. 281. *Preparing for the Festa*; No. 286. *A Peasant of Ischia, in a Festa Dress, praying to the Madonna*. P. Williams.—Interesting, as well from their character and composition, as from the highly-wrought style in which they are executed. The flesh is perhaps a little too cold and marble-like in its hue.

(To be continued.)

Rome, March 23.

THE long-talked-of exhibition opened to-day for the first time. The gallery is composed of five spacious rooms, crowded with the works of native and foreign artists, some of whom are already known to us by the fame of their brush or chisel. As I paced the vast rooms, I recognised many artists whose productions I have seen noticed in your *Gazette*. I was most forcibly struck by the diversity of their several styles: the English were conspicuous for science and colour; the French for grand conception and vigorous drawing; the German for romantic fancy and tedious precision; and the Italians for historical composition and stiff, academical figures. This exhibition has never been equalled here for variety and talent.

The small painting of Mr. Severn, of Ariel represented flying on the bat's back, and holding a peacock's feather, which forms a graceful crescent with its golden plumage glittering in the sun, is very fine. Ariel looks that arch little spirit so well described by Shakespeare. The depth of space over which he soars, and the immeasurable regions in which he is imagined to range, are happily expressed by the tone of the back-ground. The flesh is well painted—the figure and bat in good drawing—and the subject being painted on gold, gives great richness and effect to the whole. As to the composition, I would write in golden characters, that Mr. Severn has shewn poetry in every touch, science in every shade, and life in every lineament. Mr. Robert Finch has purchased this little gem, and possesses the original sketch.

A bust of this gentleman, in Greek marble, by Mr. W. Ewing, is distinguished by elaborate chiselling and purity of style. A large painting by M. Horace Vernet, President of the French Academy of Rome, is also remarkable. The subject represents the pope carried in procession in the church of St. Peter's. His holiness appears in the chair of state, attended by the cardinals, priests, *garde du corps*, and other officers of dignity, as is usual on particular occasions. The whole group forms a most gorgeous and imposing *coup-d'œil*.

ORIGINAL POETRY.

SONGS.

1. *The Absent*.

THERE is no music on the strings
Of her neglected lute;
Her white hand wakes no more its chords—
Her bird-like voice is mute.
She wreathes no flowers for her vase,
No roses for her hair—
She loiters in her favourite grove,
But her heart is not there.

THE dancers gather in the hall—
She is amid the band,
With vacant smile and wandering glance
For those who claim her hand.

Her eyes fill with unbidden tears,
Her cheek is pale with care—
Lonely amid the festival,
For her heart is not there.

She broods above her own dear thoughts,
As o'er her nest the dove;
Memory and hope own but one dream—
Her first young dream of love.

She hears a gallant trumpet sound,—
A banner sweeps the air—
She sees a knight lead on the charge,—
And oh, her heart is there!

2. *The Companions.*

WITH thy step in the stirrup, one cup of bright
wine,
We'll drink the success of thy sabre and mine:
When as boys we took down the bright arms
from the wall, [hall],
And rushed, in mock combat, around the old
We longed in true warfare the weapons to wield:
—Now the foe is before us, and yonder the field.

We'll onward together, thy steed beside mine,
Our blow be as one when we rush on the line;
Should one fall, one only, the other will try
A step for his vengeance, another to die—
On the neck of the fallen yield up his last breath,
And the vow of their boyhood be cancelled by
death.

But rather this evening as victors we'll ride
O'er the field of our conquest, the place of our
pride, [as one—
With our names on each lip, but named only
'Tis the glory of either what each may have
done.

Now on for the harvest that darkens yon plain,
We'll look in his face, and he not again.

3. *Memory.*

It was a song of other feelings
That belonged to other days,
Ere I marked the stern revealings
Of the curtain time must raise.

When my heart and step were lighter
Than they'll ever be again,
And the dream of hope was brighter—
For I believed it then.

That sweet song was of gladness,
Yet it has left with me
A shadow one-half sadness,
One-half dear memory.

Though the darkness of November
Around my heart be thrown,
Yet how pleasant to remember
The spring hours once its own!

4. *The Departed.*

SET thy spur to thy steed, thy sail to the wind,
You may leave the far vale and the mountain
behind; may't be;
Like the storm o'er the south in thy flight thou
But where may't thou fly from the memory of
me?

The struggle, the pleasure, the toil, and the
strife,

May fill up thy days with the hurry of life;
But night cometh lonely o'er land and o'er sea,
And in silence and shadow I still am with thee.

With no rose on my cheek, with no rose in my
hair,

But cold as the love whose remembrance I bear,
Breathing vows that are broken, and hopes that
are fled, [dead.

A voice breaks thy slumber—the voice of the

Let thy loveliest slave lull thy sleep with her
strain—

Ay, drain the red wine-cup,—it all is in vain:
From the haunt of thy midnight I will not
depart, [heart.

For thy guilt is my power—my home is thy

5. *The Portrait.*

AH! let me look upon thy face,
Fling back thy clustering hair;
It is a happiness to gaze
On any thing so fair.

'Tis such spring-morning loveliness—
The blushing and the bright—
Beneath whose sway, unconsciously,
The heaviest heart grows light.

The crimson flushing up the rose
When some fresh wind has past,
Parting the boughs—just such a hue
Upon thy cheek is cast.

Thy golden curls, where sunshine dwells
As in a summer home;
The brow whose snow is pure and white
As that of ocean foam.

For grief has thrown no shadow there,
And worldliness no stain;
It is as only flowers could grow
In such a charmed domain.

I would thy fate were in my hands:
I'd bid it but allow
Thy future to be like thy past,
And keep thee just as now.

L. E. L.

FIRST AND LAST—NO. III.

The First and Last Agony.

OH! the tears that fell
When we were parting, as we deemed, for ever,
The quickening throb, the bosom's anguished
swell,

That pained the more for every strong en-
deavour:

Oh! the thoughts that came,
Like withering light'ning through a twilight
calm,

Destroying, in their wild and feverish flame,
The gentle dreams that were to us like balm!

Oh! the long embrace,
The tearing of the impassioned hearts asunder,
The burning tears upon the quivering face,
That rose from the hot fount the bosom
under!

This was the earliest sorrow known to me,
'Twas my first agony!

But thou hast forgot
The vow of truth in that dark moment spoken,
The heart that swore to rest on one dear
spot,

And never wander, though it should be broken.
And the memory

Of that last parting from thy heart is gone,
Even like a raging billow of the sea,
That burst, and left no echo of its tone.

Thou wert lost to me;
Yet still I trusted I might keep thy heart:
But I have learnt thy falsehood; and for thee
Could not one sweet, one soothing tear-drop
start.

And the shock that rang
Upon my tortured feelings, withering all,
Was such a maddening and o'erwhelming
pang,

No more upon my crushed cold heart can fall,
I have but now to lay me down and die:
'Twas my last agony!

Worton Lodge, Inceorth.

M. A. BROWNE.

MUSIC.

NEW PUBLICATIONS.

The Lays of a Wanderer. First Series. The
Music, with Accompaniments for Piano-
Forte or Guitar, composed by C. Walthers.
Johanning and Whitmore.

AT a period when German music is making
such an impression in England, when the com-
positions of that country have been so unani-
mously applauded, and when we look for the
taste being further cultivated by the perform-
ances of natives who are expected to visit our
metropolis,—we esteem Mr. Walthers to be
particularly fortunate in the time of appearing
before the public with this book of songs,
which are in English and German. Of the
seven airs, we consider every one to possess
great merit, and to deserve popularity. "The
Tippler" is very lively and original—"Fare-
well, my gentle Harp," sweet and plaintive;
the poetry of the latter, by Mr. Croly, must
further recommend it to the lovers of melody.
Mr. T. H. Stirling has also furnished the En-
glish verses to several of the airs; and in
others, Mr. Walthers himself has combined the
triple offices of composer, poet, and artist; for
the lithographic plates are from his hands.
On the whole, this is a very delightful volume,
and will afford great pleasure to our fair musi-
cians.

Will you buy my Matches? By R. Lämpus.
Mayhew and Co.

A BALLAD for Vestris, of the "Buy a Broom"
order, and likely to please the trollers of these
pretty things.

DRAMA.

KING'S THEATRE.

Matilde di Shabran e Corradino was repro-
duced on Tuesday evening, Madlle. Blasis sus-
taining the part of the heroine. The more this
opera is heard, the more it is liked; it is cer-
tainly the most attractive composition Rossini
has ever produced: the concerted pieces are
matchless; and the whole opera is got up in a
manner highly creditable to the management.
The duet, *Piacere equal gli Dei*, between Don-
zelli and Blasis, was rapturously encored; and
the curtain dropped amid plaudits which mani-
festly testified how much the audience felt
gratified by the general performance.

Matilde di Shabran was followed by the final
scene in the third act of Zingarrelli's *Romeo e
Giulietta*. The selection of this scene afforded
to Madame Malibran, who enacted the part of
Romeo, ample opportunity to display, in decla-
mation, her rich and sound contralto tones—
more particularly as her voice has not to con-
tend with orchestral accompaniments; but it
appeared to us to be only in the execution of
her recitative that she eminently succeeded.
Her performance of "*Ombra adorata*" was, to
our taste, disfigured by the introduction of chro-
matic runs and misplaced ornaments, which
only went to mar the original melody.

DRURY LANE.

A PRODIGIOUS hit has been made at this house,
by the production of an historical opera, with
Rossini's music of *Guillaume Tell*, entitled
Hofer; or, the Tell of the Tyrol. For this we
are indebted to the taste and talents of Mr.
Planché, who, with great judgment, departing
from the story so hackneyed on the stage, has
constructed a drama entirely new to it, as a
vehicle for this beautiful music. As ours is
not a military critique, we shall not describe the
insurrection of Hofer against the Bavarians,

nor detail the vicissitudes and adventures of the struggle,—suffice it to notice, that they are told in a dramatic and interesting manner. But the music is really fine, the concerted pieces most delightful and effective; and the whole (sung, too, by native singers) such a treat as has rarely been heard on the boards of an English theatre. Miss Stephens and Madame Vestris are two of the sweetest of cousins; Mr. H. Phillips (as *Hofer*) superb, and Sinclair charming; the latter has never enjoyed such an opportunity for the display of his powers since he has been before the public, and he has availed himself of it in a style which must greatly enhance his high reputation. We ought not to pass unnamed Miss Faucit, Mr. and Mrs. Bedford, Messrs. Bland, Webster, Salter, and Miss Chickini, who, with the rest of the *corps*, contribute essentially to the triumph of the opera. The scenery is also excellent; and, rare to say, the poetry is poetry—eminently lyric, and an honour to the author. A new farce has also been produced here this week, called *A Joke's a Joke*; or, *too much for Friendship*: but it unfortunately turned out to be no joke at all, being a very poor affair.

Covent Garden has likewise given birth to a farce this week; but, like that at Drury Lane, it was unsuccessful, and the *Colonel* was dismissed the service.

EXHIBITIONS.

WE have taken a hasty glance at Mr. Lough's glorious group, the *Battle of the Standard*, at the Egyptian Hall; and have no hesitation in ranking it among the noblest efforts of the sculptor's art, modern or ancient. Indeed, in some respects, we would say it is the most extraordinary production of that kind that ever exalted the fame of an artist. Twelve warriors and seven horses engaged in deadly combat—the fierce, the overthrown, the dying and the dead,—seem to be a subject beyond the reach of the boldest ambition and the greatest talents. But our young sculptor has grappled with it nobly; and his performance is truly wonderful. We can find no words to express our admiration of it. In the room are other compositions by the same hand, and all displaying genius of the highest order.

While at the Egyptian Hall, we may note a striking picture of the *Deluge*, painted and exhibited by Mr. Rawson Walker;—and also that our musical favourites, the Prague Minstrel band, daily continue to attract fashionable audiences,—their new selection of music giving higher gratification than that of the preceding week. A vacant hour, which is the length of the performance, can hardly be occupied more agreeably than in hearing pleasing music well played, and in the company of a large portion of that rank and beauty which the metropolis has to boast of at this gay season.

VARIETIES.

German History.—As a reward for the great labour undergone, and zeal evinced, by Dr. Pertz, in editing that valuable and interesting work, *Monumenta Germaniæ Historica*, he has been appointed to the office of principal librarian at Hanover; which had remained vacant from the death of the illustrious Leibnitz.

Egypt.—A letter has been received at Paris from Dr. Pariset, dated Cairo, Jan. 5. After giving an interesting account of his favourable reception by the Patriarch of Antioch, and other distinguished persons, who had shewn him

great attention and made him many presents, he states that it was his intention to proceed along the Delta, and to be at Abouzabel in February. If the plague should continue to rage there, he was to stay until it subsided; if not, he would be ready to return to France or Syria in April. The Libyan authorities had undertaken to build an hospital, and to found a medical school, under the direction of Frenchmen. Dr. Pariset states that the Maronites are very kind and hospitable towards Frenchmen, from the circumstance of their being Catholics; but that they give no encouragement to the English. He speaks highly of his success in using the chlorurets of lime and soda in cases of plague against infection; and in a subsequent letter, dated Abouzabel, Feb. 19, gives an interesting account of a public examination of the pupils of the school of medicine in that place. He informs us that in this school there are about twenty of the pupils very far advanced in medical and surgical knowledge, and that children of nine or ten years of age were able to give satisfactory demonstrations of the human skeleton. The examination took place in presence of Mussulmans of every rank, who seemed to be much pleased with it. There were very few symptoms of plague; and the doctor imagines that the part of Egypt in which he was sojourning would this year escape.

Small-Pox.—It appears that, owing to the hostility of the ignorant classes of the people in Paris to vaccination, the most frightful mortality is constantly occurring from small-pox, in the Hôpital des Enfants Malades. Nor is that the only evil; for children, leaving the hospital full of the variolous poison, spread the infection throughout the city.

Antiquarian Research.—A good example of the certainty of antiquarian research occurs in the last *Gentleman's Magazine*; where Mr. F. Madden in a letter notices, that the inscription on a plate representing a Squirrel, in a preceding No., had been made out to be *Ignare notis*; whereas it happens to be in allusion to the animal, *I crave notis, i. e. I crave nuts*.

New Leather.—It is stated, that a French tanner has discovered a method of tanning hare and rabbit skins, so as to fit them for the manufacture of shoes, gloves, &c. equal to calf or kid.

Paris Academy of Inscriptions and Belles Lettres.—There are eight candidates for the six places vacant in this Academy. They are, M. Champollion, sen., M. Champollion, jun., M. Cousin, M. Reynaud, M. Augustin Thierry, M. Thurot, the Count d'Hauterive, and M. Amedée Jaubert. The election was to take place yesterday (May 7).

The oldest of the French journalists, M. Prudhomme, author of the *Journal des Révolutions de Paris*, which commenced in 1789, has just died at Paris of apoplexy, at the age of 77.

The Paris Geographical Society have offered a gold medal, value 2,400 francs, for the most complete and faithful description of the ruins of Santo Domingo Palanque, near the river Micol, in the ancient kingdom of Guatemala. The candidates for this medal are expected to furnish the most faithful description possible of these ruins, with drawings and observations relative to the manners, habits, customs, and language, of this ancient people. Some information is also expected concerning the Votan or Wodan of the Chiaparese, who has been compared to Odin or Bouda. It is wished that the paper should be written in Latin, but it will not be objected to if written in English,

Italian, Spanish, or Portuguese. The medal will be awarded in 1832.

A Paris paper contains some interesting details relative to the Polytechnic School of Copenhagen. This account of the establishment states, that it is on the most extensive scale and in a flourishing condition. It is under the superintendence of the celebrated Ersted, and five professors. The students are obliged to have a thorough knowledge of German and French, and are said to get on surprisingly.

Berlin.—The Academy of Sciences at Berlin have elected MM. Arago and Poisson to fill the seats vacant by the deaths of MM. Laplace and Volta.

Emigration.—A great number of Alsatians, Swiss, and Germans, with their families, are on the point of embarking at Havre for America.

Rail-Roads.—An iron railway is about to be constructed in France, from the coal mine of Epinal to the Canal de Bourgoyne, which will be six leagues in length.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XIX. May 8.*]
We are informed that a clever writer is far engaged in a work of an original character, which is to appear under the singular title of *Satanic Records*; or *Autobiography of a Nobleman*.—The *Drama of Nature*, a Poem, by Joseph Mitchell Burton.—George Cruikshank is etching a series of Illustrations of Popular Works, by which we will be bound to say he will make them more popular.—The Rev. Dr. Wiseman, rector of the English college at Rome, is now engaged in translating some oriental works in the Vatican: he is a great friend of M. Angelo Mai.

LIST OF NEW BOOKS.

TO CORRESPONDENTS.

Two lines must suffice of the long poem "written 8th February, 1830;" never was the Wind so boldly apostrophised before!
O Wind! thou hast vitality, thou wanton, inconstant, universal ravisher!

ADVERTISEMENTS

Connected with Literature and the Arts.

ARTISTS' BENEVOLENT FUND, under the Patronage of the King, instituted 1810, incorporated 1837. The Friends of the Arts and Subscribers to this Institution are respectfully informed, that the Twenty-first Anniversary Dinner will take place in Freemasons' Hall, on Saturday, the 8th of May.

His Grace the DUKE OF WELLINGTON in the Chair.

Stewards.

- The Earl Brownlow, The Earl of Chester, The Earl of Rosslyn, The Earl Winton, Viscount Clive, M.P., The Right Hon. H. Goulburn, M.P., Chancellor of the Exchequer, Hon. W. S. Best, A. Cooper, Esq. R.A., J. P. De la Foss, Esq., Hon. G. Agar Ellis, M.P., William Estlin, Esq., William Fildes, Esq., W. C. Fish, Esq.

Tickets, 17s. to be had of any of the Stewards; at the Bar of the Freemasons' Tavern; or of the Secretary, 112, Mount Street, Grosvenor Square.

Dinner will be on Table at Half-past Five for Six precisely. JOHN MARTIN, Secretary.

SONS OF THE CLERGY.—The Rehearsal of the Music to be performed at this Festival will take place on Tuesday, the 11th of May, in St. Paul's Cathedral; and the Anniversary will be held on Thursday, the 13th of May, when a sermon will be preached there, before His Royal Highness the Duke of Clarence, the Archbishops of Canterbury and York, the Bishops, the Lord Mayor, Sheriffs, Aldermen, Clergy, &c. by the Rev. EDMUND GODEFROU, D.D. Prebendary of Westminster.

Divine Service will commence at Two o'clock, instead of Twelve o'clock, as heretofore, and the West Door of the Cathedral will be opened on each day at One o'clock.

Stewards.

H. R. H. the DUKE OF CLARENCE, (fifth time.)

- His Grace the Duke of Portland, The Lord Bishop of Bristol, The Hon. and Rev. G. V. Wellesley, D.D., The Hon. F. G. Howard, M.P., The Right Hon. the Lord Mayor, Sir Henry Hallford, Bart., Sir George Thomas Staunton, Bart.

The Music will consist of Selections from Handel's Dettingen Te Deum—the Coronation Anthem ("The King shall rejoice"), and the Hallelujah Chorus—Green's Anthem, "God is our Hope and Strength"—Magnificat and Nunc Dimittis, Attwood. Conductor, Mr. Greenacre. Organist, Mr. Astwood. Leader of the Band (which will consist of the Members of the Royal Society of Musicians), Mr. Cotton Reeve.

The Committee respectfully state that contributions of gold will admit each person to the Galleries and Closets, and express their hopes that for admission into the choir, no person will contribute less than half-a-crown. To the individual, this latter small donation can be no object, whilst the aggregate is of the utmost importance to the interests of the Charity.

The whole of the Collections at St. Paul's Cathedral and Merchant Tailors' Hall will be appropriated by the Stewards in appointing the Order of necessity. Tickets for the Dinner on Thursday, the 13th of May, at half-past Five o'clock precisely, at Merchant Tailors' Hall, to be had gratis, of Messrs. Rivington, St. Paul's Churchyard, and Waterloo Place; and at the First Fruits Office, Temple.

Benefactions to this Charity will be received by the Treasurer, J. H. Markland, Esq. 14, Whitehall Place, or Temple; and at the First Fruits Office, Temple.

* No Tickets are requisite for admission into the Cathedral.

LITERARY FUND.—The Forty-First Anniversary of this Society will be celebrated at Freemasons' Hall, on Wednesday next, the 12th of May, when His Grace the DUKE OF SOMERSET, the President of the Institution, will take the Chair.

Stewards.

- The Earl of Glencairn, The Hon. Henry Eden, The Right Hon. the Lord Mayor, Richard Bentley, Esq., Edward Lytton Bulwer, Esq., Edward Bull, Esq., Rev. George Crabbe, B.D., Robert Fisher, Esq., Captain Glascock, R.N.

Tickets, 20s. each, to be had of the Stewards; also of Mr. Know, at the Chambers of the Society, 4, Lincoln's Inn Fields; and at the Bar of the Freemasons' Tavern.

SCHOOL OF PHYSIC IN IRELAND.—The Professors in the School of Physic will deliver a Course of Clinical Lectures, at Sir Patrick Dun's Hospital, during the ensuing Summer, commencing the 1st of May. Hour of the daily Visit at the Hospital, 12 o'clock. For Particulars, apply to Dr. Crampton, or Dr. Barker. (Signed) DAVID BREKTON, M.D. Registrar to the College of Physicians.

April 20, 1830.

Registrar to the College of Physicians.

NATIONAL REPOSITORY for the Annual Exhibition of new and Improved Productions of Arts and Manufacturers, Royal Mews, Charing Cross. Patron, the King. The Third Exhibition of this Institution is now open to the Public.

Admittance, 1s.—Catalogues, 1s.

T. H. TULL, Secretary.

TOURNAMENT of the FIELD of the CLOTH OF GOLD, 15, Oxford Street, near Charles Street, No. 10 square.

Mr. WILMSHURST'S Magnificent Picture of the Tournament of the Field of Cloth of Gold, painted on Enamel, on the vast Surface of 42 superficial Feet, presenting the unparalleled appearance of a Painting of such extraordinary Dimensions on one Sheet of Glass, without the Frames or Joinings being visible. This splendid Work contains more than 100 Figures, including upwards of 40 Portraits, with the strictest Attention to Costume. Admission, 1s.—Description, 6d. Open from Ten till Dusk.

BOOKS PUBLISHED THIS DAY.

Family Library.

On Thursday, April 22d, was published, with a Portrait, 5s. THE FAMILY LIBRARY, DRAMATIC SERIES, No. I. containing the PLAYS of PHILIP MASSINGER, Vol. I. illustrated with Explanatory Notes, and adapted to the Use of Families and Young Persons, by the omission of all exceptional Passages.

New editions of the Family Library, just published, Nos. V. VI. and IX., being the History of the Jews. Nos. IV. and X.—Lives of British Painters.

Nearly ready.

A Third edition of Nos. I. and II.—The Life of Buonaparte, 2 vols.

Also,

Court and Camp of Buonaparte, 1 vol. And, No. VII.—The Natural History of Insects. John Murray, Albemarle Street.

THE PILGRIM'S PROGRESS, with a Life of JOHN BUNYAN. By ROBERT SOUTHLEY, Esq. LL.D. &c. &c. John Murray, Albemarle Street; and John Major, Fleet Street.

Handsomely printed in 4to. with a Portrait, price 4s. 3s. boards. THE LIFE OF RICHARD BENTLEY, D.D. Master of Trinity College, and Regius Professor of Divinity in the University of Cambridge; with an Account of his Writing, and Anecdotes of many distinguished Characters during the period in which he flourished. By the Very Rev. JAMES HENRY MONK, D.D. Dean of Exeter.

Printed for C. J. G. and E. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and J. and J. J. Deighton, Cambridge.

Post 8vo.

LEVI and SARAH; or, the Jewish Lovers. A Tale of the Polish Jews. John Murray, Albemarle Street.

Three of the most widely circulated Weekly Newspapers published in London, Seven-pence each. Sold by all Newspaper Agents in Town and Country.

THE OBSERVER, price Seven-pence. A Monday edition of the Observer is regularly published, containing the latest news, clerical intelligence, the corn market, up to the Monday afternoon; always published sufficiently early for the newsman to send by the general post. This edition is rendered particularly acceptable to persons in the country, and those residing abroad. The price of the Monday edition of the Observer is Seven-pence. Printed and published by W. I. Clement, adjoining the Office of the Morning Chronicle, in the Strand, London.

Bell's Life in London, price Seven-pence. Bell's Life in London is the best and cheapest journal extant for sporting varieties. It is a large folio twenty-column weekly journal, published in London every Saturday afternoon, in time for that day's post, and may be received at the distance of two hundred miles from London on Sunday. This paper combines, with the news of the week, a rich repository of fashions, wit, humour, and other interesting incidents of real life. The events in the sporting department are copiously detailed, and, for accuracy, stand unrivalled. The emblematical illustrations, which head the articles on drama, poetry, the turf, the chase, the ring, the police, cricketing, pigeon-shooting, the aquatic register, and the affairs of the fancy, were all designed by Cruikshank, in his most humorous and happy manner. These cuts alone are worth more than the price of this newspaper, which is only seven-pence. The sale of Bell's Life in London and Sporting Chronicle, is the largest of any London weekly journal except the Observer. Innkeepers and publicans are hereby invited to benefit by additional business to their house, from taking in Bell's Life in London and Sporting Chronicle, being a journal of comicality and fun, calculated to "drive dull care away," and dissipate the blue devils. Office, 169, Strand, London.

The Englishman, price Seven-pence. This highly respectable and independent weekly newspaper is published at No. 170, in the Strand, every Sunday morning, at Four o'clock, at the price of Seven-pence only. The Englishman has now been published twenty-six years, and during that long period has lived in such repute, and obtained such high commendations—that of the strictest impartiality. It may be truly said of the Englishman, that it is "open to all parties—influenced by none." As a family newspaper, the Englishman stands unrivalled; not a line, or an advertisement, of an immoral tendency, is allowed under any circumstances to stain its pages. The Englishman is a twenty-folio-column journal, the same size and price as the Observer. The paper upon which it is printed is an excellent sort, and the type almost new; indeed, for variety, quantity, and quality, it is the most perfect. In speaking of Sunday newspapers, it is proverbial to say, the Englishman is almost a library in itself; and such readers who do not desire a party paper, a trial of the Englishman is strongly recommended as a neutral journal, in which such a combination of literary talent is engaged as cannot be excelled by any weekly newspaper whatever. The Englishman is sent from London by the mails on Sunday, and may be had in the country on the blank post days.

THE NEW MONTHLY and LONDON MAGAZINE, for May 1830.

Contains among various other interesting Articles: A Glance at the State of Parties—Novel Fictions of the Duke of Wellington—Mr. Huskisson—Monos and Daimonos, a Legend—Faults on both Sides—Cognetry—Anecdotes of Russia; a Residence at Moscow—On Fashion in Medicine—Recollections of a Göttingen Student, No. VI.—Specimens of German Genius, No. II.—Sketches and Recollections, No. V.; Talma—The Lounger, No. II.—Parisian Journal—The Painter—On the Principles of Admission into the Royal Academy—Letter to Martin Acher Shee, Esq. P.R.A. &c. &c.—Critical Notices of New Publications—The Drama—Fine Arts—Varieties, Domestic and Foreign—Biographical Memoirs of Persons lately deceased—Provincial Occurrences, &c. &c. Henry Colburn and Richard Bentley, 6, New Burlington Street.

Price 2s. with an Engraving of a new Torricellian Air-pump, and a coloured Plate of Platea Carnaria, or flesh-coloured Flukes.

THE EDINBURGH JOURNAL of NATURAL and GEOGRAPHICAL SCIENCE, Number VIII. for May 1830. Under the direction of WILLIAM INSWORTH, M.R.C.S.E. and HENRY H. CHEEK, F.R.S.A. &c.

Contents.—1. On the Native Forests of Aberdeenshire, by the Rev. J. Farquharson, F.R.S. (concluded).—2. Account of the Series of Islands usually denominated the Outer Hebrides, by William Jardine, M.D. &c.—3. Description of a Göttingen Torricellian Air-pump, by K. T. Kemp, Esq.—4. Description of a new Species of British Fish, by Capt. Thomas Brown, F.L.S. &c.—Reviews: 1. Two Essays on the Geography of Ancient Asia, by the Rev. John Williams, Vicar of Lamptey, &c.—2. A System of Geography, and Natural and Political History, by J. G. Barrow, Esq. &c.—3. A Review of the recent Discussion before the Academy of Sciences in Paris, on the "Unity of Organisation." Part 2. M. Geoffroy St. Hilaire's Answer to Baron Cuvier.—4. On the present State of Science Abroad, No. 1. Scientific Coteries of Paris.—5. Arcana of Science and Art, &c.—With numerous Collections in Geography, Natural History, and Natural Philosophy, Catalogue Raisonné, Miscellaneous Intelligence, &c. Printed for Daniel Lizars, Edinburgh; Whittaker, Treacher, and Co. London.

The 23d edition, with great Improvements, and the whole Art brought down to the present State of Horticultural Knowledge, by James Maury, A.L.S. in 12mo. 7s. 6d. boards.

EVERY MAN HIS OWN GARDENER; being a complete Gardener's Calendar and General Directory; containing Directions for all work necessary in the Kitchen Garden, Orchard, Hot-house, Flower Garden, Pleasure Garden, Shrubbery, Greenhouse, Hothouse, &c. for every Month in the Year; with practical Directions for raising, propagating, and forcing; and also relative to Soil and Situation. To which is added, a complete Systematic Catalogue of Plants proper for Cultivation in British Gardens, with Directions for their Culture. By THOMAS MAWE and JOHN ABERCROMBIE. London: Printed for Rivingtons, Longman and Co., J. Nunn, T. Cadell, Baldwin and Co., J. Richardson, J. Booker, R. Kirby, J. M. Richardson, Hurst and Co., Harvey and Co., Hamilton and Co., J. Duncanson, Whittaker and Co., Hatchards, W. Joy, R. Scholey, Simpkin and Co., Cowie and Co., E. Hodgson, J. Hearne, Wesley and Co., Poole and Co., and Houlstons.

Price only 4s. 6d. neatly bound,

VALPY'S FAMILY CLASSICAL LIBRARY, No. V. Containing Beloe's Translation of Herodotus.

The object of the Proprietors of this undertaking is to produce a work which, from its cheapness and elegance, may recommend itself to all classes. The numerous existing editions have hitherto precluded the community at large from an acquaintance with the writings of the greatest poets, historians, and orators, the world has produced. The Four Numbers already published comprise Demosthenes, Sallust, and Xenophon. Henry Colburn and Richard Bentley, 6, New Burlington Street.

In 3 vols. post 8vo.

RANULPH DE ROHAIS. A Romance of the Twelfth Century. By the Author of "Tales of a Voyager to the Arctic Ocean." William Kidd, 6, Old Bond Street.

New Work by the Author of Pelham, &c. Just published by Messrs. Colburn and Bentley, 6, New Burlington Street.

PAUL CLIFFORD. By the Author of "Pelham," "Devereux," and the "Disowned."

In 3 vols. post 8vo. 2. Private Memoirs of Napoleon, by M. de Bourrienne, Private Secretary to the Emperor. Complete in 4 vols. 8vo.

"One of the most faithful narratives of that extraordinary man's career that have yet reached the public."—Atlas.

3. The Mussulman. By R. R. Madden, Esq. Author of "Travels in Turkey, Egypt," &c. In 3 vols. post 8vo.

4. Notes on the Bedouins and Wahabys, collected during his Travels in the East. By the late John Lewis Burckhardt. In 1 vol. uniformly printed with his other Works. Published by Authority of the African Association.

"It contains the best account of the Arab tribes we have ever seen."—Literary Gazette.

5. Women as they are, or, the Manners of the Day. 2d edition, in 3 vols. post 8vo.

6. The English Army in France; or, Personal Narrative of an Officer. In 2 vols. small 8vo.

7. The King's Own. A Tale of the Sea. By the Author of the "Naval Officer." In 3 vols. post 8vo.

In a few days,

8. The Third Volume of Dr. Doddridge's Private Correspondence.

9. Travels through the Crimea, Turkey, and Egypt. By the late James Webster, Esq. of the Inner Temple. In 2 vols. 8vo. with Plates.

GENUINE EDITIONS. SHAKESPEARE'S PLAYS and POEMS, with the Corrections and Illustrations of various Commentators, comprehending a Life of the Poet, and an enlarged History of the Stage.

By the late EDMOND MALONE. With a new Glossarial Index. In 2 vols. 8vo. with two Portraits, and an Engraving from the Monument at Stratford, price 12s. 12s. boards.

2. Shakspeare's Plays, accurately printed from the Text of the corrected Copies left by the late George Steevens, Esq. and Edmond Malone, Esq. With Mr. Malone's various Readings, a Selection of Explanatory and Historical Notes from the most eminent Commentators, a History of the Stage, and a Life of Shakspeare. By Alexander Chalmers, F.R.S. Handsomely printed in 8 vols. 8vo. with a Portrait, price 8s. 12s. boards.

3. Shakspeare's Plays, the same edition as the preceding, printed on fine thick paper, embellished with Engravings from the Designs of celebrated Artists, illustrating a scene in each Play, price 4s. 10s. boards.

4. Shakspeare's Plays, in 10 pocket vols. with Glossarial Notes, and a Portrait, price 1s. 10s. boards; or on royal paper, 4s.

5. Shakspeare's Plays, complete in 1 vol. 8vo. with a Sketch of his Life, a Glossary, and a Portrait, price 12s. boards.

6. Shakspeare's Plays, Miniature edition, in 8 vols. with an Engraving and Vignette Title to each Volume, price 2s.

Printed for C. J., G., and F. Rivington; T. Egerton; Longman and Co.; T. Cadell; J. and W. T. Clarke; J. Booker; J. Booth; J. Richardson; J. M. Richardson; R. H. Evans; R. Scholey; J. Bohn; Baldwin and Cradock; Hatchard and Son; Newman and Co.; Harding and Co.; Hamilton and Co.; Whittaker and Co.; Simpkin and Co.; J. Setchell; Parbury and Co.; J. Hearne; G. Wilson; T. Ward; E. Hodgson; J. Dowling; M. Doyle; J. Wicksteed; and Smith, Elder, and Co. London; also by T. and J. Dighton, Cambridge; Wilson and Sons, York; A. Black, and Stirling and Kenney, Edinburgh.

MEMOIR of the Rev. THOMAS LLOYD, M.A. Rector of St. Andrew's, Northamptonshire, and formerly Fellow and Tutor of King's College, Cambridge. To which are annexed, an Essay on the Literary Beauties of the Scriptures, which gained the Norrisian Prize in 1794, and Five Discourses preached before the University of Cambridge. By the Rev. H. R. L. L. W. M.A.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, and sold by Hatchard and Son, Piccadilly.

PRACTICAL REFLECTIONS on the ORDINATION SERVICES for Deacons and Priests in the United Church of England and Ireland; for the Use of Candidates for Orders, and of those who renew their Ordination Vows; and respectively proposed as a Manual for Ministers of all ages. To which are added, appropriate Prayers for Clergymen, selected and original.

By JOHN BREWSTER, M.A. Rector of Eggescliffe, in the County of Durham. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, London.

Also, by the same Author, 1. Meditations of a Recluse, 8vo. 9s. 2. Meditations for the Aged, 12mo. 5s. 3. Contemplations on the last Discourses of our blessed Saviour with his Disciples, 8vo. 10s. 6d. 4. Lectures on the Acts of the Apostles, new edition, in 1 vol. 8vo.

A BRIEF EXPOSITION of the FOREIGN POLICY of Mr. CANNING, as contrasted with that of the existing Administration. Printed for John Hatchard and Son, 187, Piccadilly.

ROUGE et NOIR; in Six Cantos. The Game—the Salon—the Palais Royal—the Sharper—Frascati—the Goullotine; and Versailles, a Poem. By WILLIAM REED, Esq. Printed for Longman, Rees, Orme, Brown, and Green.

FINANCIAL REFORM SCRUTINISED, in a Letter to Sir Henry Parnell, Bart. M.P. By General Sir SAMUEL BENJAMIN, K.T.G. Formerly Inspector-General of Naval Works. London: J. Hatchard and Son, 187, Piccadilly.

THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. DE LAUD.

Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland. This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions, with precision, the most masterly strokes of all the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years. London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catherine Street, Strand; and to be had of all Booksellers.

Published by W. Curry, Jun. and Co. Dublin; Hurst, Chance, and Co. London; and sold by all Booksellers. In 2 vols. 12mo. price 14s. with Engravings, by W. H. Brooke. TRAITS and STORIES of the IRISH PEASANTRY, designed to illustrate their peculiar Modes of thinking and acting. Contents. I. Ned McKewen, Introductory—II. The Three Tasks, or the Little House under the Hill, a Legend—III. Shane Faith's Wedding—IV. Larry McFarland's Wake—V. The Battle of the Factions—VI. The Funeral—VII. The Party Fight—VIII. The Hedge School—IX. The Station. A genuine and capital Irish stories and traits these are; equally entertaining as descriptive in manner. We have here a publication which may well be placed on the shelf beside its most popular contemporaries.—Literary Gazette, April 10.

Also, by the same Author, Father Butler—the Lough Derg Pilgrim; Irish Sketches. 12mo. 3s. 6d. boards.

PERKIN WARBECK; or, the Court of James the Fourth of Scotland. An Historical Romance. By ALEXANDER CAMPBELL. Printed for A. K. Newman and Co. London.

Just published, Nun of St. Agatha, a Romance, 3 vols. 18s. Corsair's Bride, by the Author of Bandit's Bride, 3 vols. 18s. Jewish Maiden, by the Author of Ambition, 4 vols. 12. 2s.

THE ELEMENTS of ALGEBRA. Designed for the Use of Eton School. By the Rev. J. BAYLYE, M.A. Late Fellow and Mathematical Lecturer at Emmanuel College, Cambridge. Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

FITZ of FITZ-FORD. A Legend of Devon. By Mrs. BRAY. Author of "De Foix," "the White Hoods," &c. "We conclude with admiration, our hearty approbation of 'Fitz of Fitz-Ford,' whether for the sound principles of religion and morality which it every where incidentally inculcates, its lively delineations of character, or the simplicity of style with which it is penned; and we will venture to predict, that when the numerous works now portraying the intrigues and follies of the present age shall sleep in oblivion, Mrs. Bray's romances will survive, an example of the permanence, secured by an adherence to the simplicity of nature."—Gentleman's Magazine, Smith, Elder, and Co. 65, Cornhill.

GERMAN and ENGLISH DIALOGUES; or, Easy Introduction to the German Language. This work is particularly intended for Pupils, and those intending to travel in Germany, and who are tolerably well acquainted with the Pronunciation. It contains upwards of Eighty well-written and amusing Dialogues, with a suitable Vocabulary, where necessary, and an Alphabetical List of the Verbs, &c. It further explains the New System of Declensions founded on the Works of the most eminent German Grammarians. The Work also contains an Alphabetical Collection of Idioms, with literal and elegant Translations, exemplifying the character of the two Languages, together with Epistolary Specimens, Invitation Cards, Notes, Receipts, accompanied by an Alphabetical Series of Kingdoms, Republics, Provinces, Principal Towns, and Native Names, which, with an Appendix of Two Lithographic Tables exhibiting the Alphabet and Forty Copies of German current Hand-writing, will be found very useful to the Traveller and Learner.

By J. F. REYMANN, Professor of the German Language. "This work is more elementary than the former (alluding to the German Poetical Anthology), and is one which will be found very useful to beginners. It supplies a better collection of German dialogues than the learner of that language had before the opportunity of possessing. Besides rules and explanations of constructions and idioms, Mr. Reymann has given, at the end of the volume, two copious lithographic tables of German handwriting. Those who know the difficulty of deciphering that character will be sensible of the value of such an appendage."—Times. "This is a useful practical elementary work, well adapted to the necessities of the German student. It does its compiler great credit, more especially for the alphabetical collection of idioms with which it abounds."—Star. Printed for Treuttel, Wurtz, Treuttel, Jun. and Richter; and Dulau and Co. No. 54, Square; Black, Young, and Young, Tavistock Street; J. D. Haas, 11, Berner's Street; and sold by all other Foreign and English Booksellers.

LECTURES on the ELEMENTS of HIEROGLYPHICS and EGYPTIAN ANTIQUITIES. By the MARQUESS SPINETO. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and sold by Deightons, and Stevenson, Cambridge; and Parker, Oxford.

LOUISA EGERTON; or, Castle Herbert. A Tale. By MARY LEMAN GRIMSTONE. This is a novel of strong interest, lively humour, and originality of idea. Published by G. Virtue, 26, Ivy Lane, Newgate Street; and may be had of all Booksellers.

BOTANICAL COMMENTARIES. In 8vo. 14s. boards, the First Volume of FLORIST'S DIRECTORY; being a familiar Treatise on Floriculture, particularly the Management of the best stage, bed, and border Flowers, usually cultivated in Britain. To which are added, Directions for the Management of the Hot house, Greenhouse, and Conservatory, with the different Modes of Raising and Propagating Exotic Plants. Interpersed with many new Physiological Observations. By JAMES MAJIN, A.L.S. Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

HORATIUS FLACCI OPERA, with an Ordo and Verbal Translation. By JOHN STIRLING, D.D. Vicar of Great Gaddesden, Hertfordshire. A new edition, critically revised, and with the Ordo and Translation interlinearly arranged. By P. A. NUTTALL, LL.D. To be completed in 4 vols. 12mo. price 4s. each.

"Stirling's is the most accurate and useful translation which has ever been laid before the public."—Moss's Classical Bibliography. "It will enable the un instructed in classical literature to form an idea of Horace, and is well calculated to be useful to busy scholars, and even to idle and forgetful scholars at a later period of life."—Literary Gazette. "To persons endeavouring to acquire a knowledge of Latin without the help of a master, (and we believe there are many humble retired students of this class), the publication we are noticing will form a very acceptable offering."—Athenaeum. London: Printed for Thomas Ward, 84, High Holborn.

ESSAYS on the PRINCIPLES of MORALITY, and on the Private and Political Rights and Obligations of Mankind. By JONATHAN DYMOND, Author of an "Inquiry into the Advantages of War with the Principles of Christianity," &c. London. Published by Hamilton, Adams, and Co. Paternoster Row.

CATALOGUE of the LIBRARY of the COLLEGE of St. MARGARET and St. BERNARD, commonly called Queen's College, University of Cambridge. Methodically arranged. By THOMAS HARTWELL HORNE. Printed for the Society of Queen's College, and sold by C. J., G., and F. Rivington, St. Paul's Churchyard; and J. and J. Dighton, Cambridge.

Preservative against POPERY; shewing the Safety of adhering to the Protestant Church of England, and the Danger of continuing in the Church of Rome. From Sir H. LYNDSE'S "Via Turca." Published by James Nisbet, 21, Berner's Street, Oxford Street.

SERMONS on the Dangers and Duties of a Christian. By the Rev. ERSKINE NEALE, B.A. Lecturer of South Shields, and late Assistant Minister of Monkwearmouth. To which are added, Remarks on the Prospects and Present State of Parties in the Church of England. London: Hurst, Chance, and Co. St. Paul's Churchyard.

EMILY MORELAND; the Maid of the Valley. By H. M. JONES. If the sale of a work is any criterion to judge of its merits, this novel will rank with any of the present day, 3000 having been sold within the last six months. Published by G. Virtue, 26, Ivy Lane; Simpkin and Marshall, Stationers' Court; and may be had of all Booksellers.

PASTORALIA; a Manual of Helps for the Parochial Clergy, containing a Scriptural View of the Clerical Duties—Prayers for the Use of the Clergy—Scheme of Pastoral Visitation—Outlines of Sermons—and Books for the Use of the Clergy. By the Rev. HENRY THOMPSON, M.A. Of St. John's College, Cambridge, Curate of Wotton, Somerset. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

MEMOIRS of the ASTRONOMICAL SOCIETY of LONDON. Vol. IV. Part I. In 4to. price 24s. Also to be had, Vol. I. Part I. 21s. Vol. I. Part II. 24s. Vol. II. Part I. 30s. Vol. II. Part II. 30s. Vol. III. Part I. 12s. Vol. III. Part II. 20s. Tables and Catalogue 25s.

Preparing for publication, in monthly volumes, price Five Shillings,
THE LIBRARY of GENERAL KNOWLEDGE.
 LEDGE.

In announcing the speedy publication of the Library of General Knowledge, its Projectors beg distinctly to state, that they embark in their undertaking without any design whatever of trenching upon the ground already occupied by others. As little is it their desire to decry the exertions of those who labour in the same vineyard, and seek the same end with themselves. For these, on the contrary, they entertain the highest respect; but the field seems sufficiently wide for all parties, and therefore they enter it. They are willing to persuade themselves, moreover, that the circumstances under which they approach their task are somewhat favourable to their success. Almost all our knowledge arises from experience, and hence, by imitating as far as can be, the excellencies of their predecessors, no less than by avoiding their errors, should such chance to have been committed, they hope to produce a series of works which shall at once satisfy the judgment, and suit the tastes of those who relish amusement the most when it comes united with instruction.

The Projectors of the Library of General Knowledge offer no display of great names. These may dazzle for a moment, but they seldom effect more. As little are they disposed to make professions, which are in a cases more easily made than realised. Their wary and prudent conduct, if it prove such as they confidently anticipate, it will receive, because it will deserve, the approbation of the public.

The Library of General Knowledge will be conducted by the Rev. G. R. Gleig, M.A. &c. assisted by a large proportion of the most eminent and ablest writers of the day, including Henry Colburn and Richard Bentley, 8, New Burlington Street.

On the 30th of May will be published, the 2d edition, in 1 large vol. 8vo. containing 600 pages, price 18s.; or, the Plates on India paper, price 11. 7s. 11s. 1s.

THE HISTORY and ANTIQUITIES of the TOWER of LONDON; with Memoirs of Royal and Distinguished Persons, deduced from Records, State Papers, and Manuscripts, and from other Original and Authentic Sources.
 By JOHN BAYLEY, Esq. F.R.S. F.S.A. M.R.I.A. &c. &c.
 Illustrated with numerous Engravings.
 London: Robert Jennings and William Chaplin, 63, Cheapside.

Health's Historical Illustrations to the Waverley Novels.
 On the 20th of May will be published,
ILLUSTRATIONS to GUY MANNERING; Six Subjects, price 5s. 6d. (adapted to the new edition of the Works). A very limited number in 8s. India Proofs before the letters, 18s.; Proofs 12s.; royal 8vo. 7s. 6d.
 Mr. Charles Heath has the honour of announcing to the Subscribers to the New Edition of Sir Walter Scott's Novels, that he is preparing a Set of Plates, to be executed in the same style of excellence as his popular Annual, "the Keepsake," from the first Artists, and at a price that will add very little to each volume, which will make the edition one of the most beautiful and complete.
 Published by Robert Jennings and William Chaplin, 63, Cheapside.

In a few days will be published, price 5s. Vol. I. containing the "Poems of Burns," of
PICKERING'S ALDINE EDITION of the BRITISH POETS, to appear in monthly volumes, ranging with the Waverley Novels, Family Library, and similar Publications.
 It is characteristic of the present age, to place science and literature within the reach of every class of society, by the publication of standard and popular works in a form to combine the advantages of cheapness, convenience, and beauty. To sweeten this taste, and to direct it to the poetry of our country, the Aldine Edition of the British poets is undertaken. The text will be carefully formed from the best editions; and to the works of each poet an original memoir will be prefixed.
 William Pickering, Publisher, Chancery Lane, London.

A Natural History of Great Britain, on a new and interesting plan.
 On the 1st of June will be published,

THE BRITISH NATURALIST.
 Second Volume.
 London: Printing for Whittaker, Treacher, and Co. Ave Maria Lane.
 Of whom may be had,
 The First Volume, with numerous Illustrations, price 2s. 6d.
 "This is a very uncommon book. It is more readable and interesting to what are called general readers; and to a more literary man, who confines his perusal to belles lettres productions, it is almost the only book of the sort which could be named."
 —Athenæum.
 "The bold and commendable purpose of the very able writer in this volume is to make every body acquainted with our natural history, that is, to study living subjects, and abandon dead systems. Such a work, pursued in the spirit with which it is so well begun, will be sure to make its way."
 —Monthly Magazine.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LIBRARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; sold also by J. Chappell, 95, Royal Exchange; E. Partridge, 10, Maria Lane; W. G. Wood, 11, St. Paul's Churchyard; Smith and Son, and Robertson and Ackland, Glasgow; and J. Cumming, Dublin.—Agent for America, O. Rich, 18 Red Lion Square, London.

SATURDAY, MAY 15, 1830.

REVIEW OF NEW BOOKS.

The Poetical Works of Sir Walter Scott. In 11 vols. : Vol. XI. Part I. *Essays on Ballad Poetry, and Introductions.* Edinburgh, 1830, Cadell and Co. : London, Simpkin and Marshall.

AN animated literary auto-biography, and by Sir Walter Scott. What a mass of interest lies in those few words! from the country book-club, that hurries its bookseller with orders for the last volume of Memoirs, to the London drawing-room, crowding to gaze on the lion of the night, the same passion of individualising our previous idea of a great man predominates. Whether it is that curiosity inherent in our nature, or, to subtilise a little, that levelling spirit which would fain believe that a display of the same weaknesses, passions, hopes, and fears, makes our idol one with ourselves,—we have not time to analyse; but certain it is, that the diorama which brings before us actual scenes of the author's life, is one of our most popular exhibitions. Denon's talents for telling a story are said to have been such, that Napoleon was wont to interrupt an unhappy narrator with, "*Ah, Denon, contez nous cela!*" This peculiar talent—this natural honey-dropping from the lip—Scott possesses in perfection; and the history of his poetical career, as developed in a series of introductions to his various works, makes this a truly delightful volume. But his own account confirms what was always our opinion,—that he only (like Wordsworth) wanted some strong passion to have given his pages the last touch of poetical perfection: he has been the Lucullus of literature—he conquered, and then enjoyed; he has led a life of pleasant study and social intercourse; and if his heroes are scarcely ever terrible in the conflict of passionate feelings, it is because these feelings found no original cause, no answering tone, in his own mind. But in all other qualities, how large is his portion! His descriptions are fairy wands, that call up the scene before you; his narrative is dramatic in its power, and—but who ever took up a volume of his without reading, or read without remembering? Like Prospero, we bury our book, and break our rod of criticism, in his favour: let him speak for himself.

"My birth, without giving the least pretension to distinction, was that of a gentleman, and connected me with several respectable families and accomplished persons. My education had been a good one, although I was deprived of its full benefit by indifferent health, just at the period when I ought to have been most sedulous in improving it. The young men with whom I was brought up, and lived most familiarly, were those who, from opportunities, birth, and talents, might be expected to make the greatest advances in the profession to which we were all destined; and I have the pleasure still to preserve my youthful intimacy with no inconsiderable number of them, whom their merit has carried forward to the highest honours of their profession. Neither was I in

a situation to be embarrassed by the *res angusta domi*, which might have otherwise interrupted my progress in a profession in which progress is proverbially slow. I enjoyed a moderate degree of business for my standing, and the friendship of more than one person of consideration efficiently disposed to aid my views in life. The private fortune, also, which I might expect, and finally inherited, from my family, did not, indeed, amount to affluence, but placed me considerably beyond all apprehension of want. I mention these particulars merely because they are true. Many better men than myself have owed their rise from indigence and obscurity to their own talents, which were, doubtless, much more adequate to the task of raising them than any which I possess. Although it would be absurd and ungracious in me to deny that I owe to literature many marks of distinction to which I could not otherwise have aspired, and particularly that of securing the acquaintance, and even the friendship, of many remarkable persons of the age, to whom I might not otherwise have made my way; it would, on the other hand, be ridiculous to affect gratitude to the public favour, either for my position in society, or the means of supporting it with decency,—matters which had been otherwise secured under the usual chances of human affairs. Thus much I have thought it necessary to say upon a subject which is, after all, of very little consequence to any one but myself. I proceed to detail the circumstances which engaged me in literary pursuits. During the last ten years of the eighteenth century, the art of poetry was at a remarkably low ebb in Britain. Hayley, to whom fashion had some years before ascribed a higher degree of reputation than posterity has confirmed, had now lost his reputation for talent, though he still lived admired and respected as an amiable and accomplished man. The Bard of Memory slumbered on his laurels, and he of Hope had scarce begun to attract his share of public attention. Cowper, a poet of deep feeling and bright genius, was dead; and, even while alive, the hypochondria, which was his mental malady, impeded his popularity. Burns, whose genius our southern neighbours could hardly yet comprehend, had long confined himself to song-writing. Names which are now known and distinguished wherever the English language is spoken, were then only beginning to be mentioned; and, unless among the small number of persons who habitually devote a part of their leisure to literature, those of Southey, Wordsworth, and Coleridge, were but little known. The realms of Parnassus, like many a kingdom at the period, seemed to lie open to the first bold invader, whether he should be a daring usurper, or could shew a legitimate title of sovereignty."

An interesting view of German literature follows, and he proceeds to its influence on himself.

"In Edinburgh, where the remarkable coincidence between the German language and that of the Lowland Scottish encouraged

young men to approach this newly discovered spring of literature, a class was formed, of six or seven intimate friends, who proposed to make themselves acquainted with the German language. They were in the habit of living much together, and the time they spent in this new study was felt as a period of great amusement. One source of this diversion was the laziness of one of their number, the present author, who, averse to the necessary toil of grammar and its rules, was in the practice of fighting his way to the knowledge of the German by his acquaintance with the Scottish and Anglo-Saxon dialects, and, of course, frequently committed blunders, which were not lost on his more accurate and more studious companions. A more general source of amusement, was the despair of the teacher, on finding it impossible to extract from his Scottish students the degree of sensibility necessary, as he thought, to enjoy the beauties of the author to whom he considered it proper first to introduce them. We were desirous to penetrate at once into the recesses of the Teutonic literature, and were ambitious of perusing Goethe and Schiller, and others whose fame had been sounded by MacKenzie. Dr. Willich, (a medical gentleman), who was our teacher, was judiciously disposed to commence our studies with the more simple diction of Gesner, and prescribed to us 'The Death of Abel,' as the production from which our German tasks were to be drawn. The pietistic style of this author was ill adapted to attract young persons of our age and disposition. We could no more sympathise with the overstrained sentimentality of Adam and his family, than we could have had a fellow-feeling with the jolly Faun of the same author, who broke his beautiful jug, and then made a song on it which might have affected all Staffordshire. To sum up the distresses of Dr. Willich, we, with one consent, voted Abel an insufferable bore, and gave the pre-eminence, in point of masculine character, to his brother Cain, or even to Lucifer himself. When these jests, which arose out of the sickly monotony and affected ecstasies of the poet, failed to amuse us, we had for our entertainment the unutterable sounds manufactured by a Frenchman, our fellow-student, who, with the economical purpose of learning two languages at once, was endeavouring to acquire German, of which he knew nothing, by means of English, concerning which he was nearly as ignorant. Heaven only knows the notes which he uttered, in attempting, with unpractised organs, to imitate the gutturals of these two intractable languages. At length, in the midst of much laughing and little study, most of us acquired some knowledge, more or less extensive, of the German language, and selected for ourselves, some in the philosophy of Kant, some in the more animated works of the German dramatists, specimens more to our taste than 'The Death of Abel.'"

His friendship with Lewis is another link in his progress: we cannot omit the following extract.

"I had, indeed, tried the metrical translations which were occasionally recommended to us at the High School. I got credit for attempting to do what was enjoined, but very little for the mode in which the task was performed; and I used to feel not a little mortified when my versions were placed in contrast with others of admitted merit. At one period of my schoolboy days I was so far left to my own desires as to become guilty of verses on a thunder-storm, which were much approved of, until a malevolent critic sprung up, in the shape of an apothecary's blue-buskined wife, who affirmed that my most sweet poetry was stolen from an old magazine. I never forgave the imputation, and even now I acknowledge some resentment against the poor woman's memory. She indeed accused me unjustly, when she said I had stolen my brooms ready made; but as I had, like most premature poets, copied all the words and ideas of which my verses consisted, she was so far right, that there was not an original word or thought in the whole six lines. I made one or two faint attempts at verse, after I had undergone this sort of dawlplucking at the hands of the apothecary's wife; but some friend or other always advised me to put my verses in the fire, and, like Dorax in the play, I submitted, though 'with a swelling heart.' In short, excepting the usual tribute to a mistress's eyebrow, which is the language of passion rather than poetry, I had not for ten years indulged the wish to couple so much as *love* and *doce*, when, finding Lewis in possession of so much reputation, and conceiving that, if I fell behind him in poetical powers, I considerably exceeded him in general information, I suddenly took it into my head to attempt the style by which he had raised himself to fame."

Glenfinlas and the *Eve of St. John* were written about this time.

"Thus I was set up for a poet, like a pedlar who has got two ballads to begin the world upon; and I hastened to make the round of all my acquaintances, shewing my precious wares and requesting criticism—a boon which no author asks in vain. For it may be observed, that, in the fine arts, those who are in no respect able to produce any specimens themselves, hold themselves not the less entitled to decide upon the works of authors; and justly, no doubt, to a certain degree; for the merits of composition produced for the express purpose of pleasing the world at large, can only be judged of by the opinion of individuals; and perhaps, as in the case of Molière's old woman, the less sophisticated the person consulted, so much the better. But I was ignorant, at the time I speak of, that though the applause of the many may justly appreciate the general merits of a piece, it is not so safe to submit such a performance to the more minute criticism of the same individuals, when each, in turn, having seated himself in the censor's chair, has placed his mind in a critical attitude, and delivered his opinion sententiously and *ex cathedra*. General applause was in almost every case freely tendered; but the abatements in the way of proposed alterations and corrections were cruelly puzzling. It was in vain the young author, listening with becoming modesty, and with a natural wish to please, cut and carved, tinkered and coopered, upon his unfortunate ballads—it was in vain that he placed, displaced, replaced, and misplaced; every one of his advisers was displeased with the concessions made to his co-assessors, and the author was blamed by some one, in almost every case, for having made two holes in attempting to patch up one. At last, after

thinking seriously on the subject, I wrote out a fair copy (of *Glenfinlas*, I think), and marked all the various corrections which had been proposed. On the whole, I found that I had been required to alter every verse, almost every line; and the only stanzas of the whole ballad which escaped criticism were such as neither could be termed good nor bad, speaking of them as poetry, but were of a mere commonplace character, absolutely necessary for conducting the business of the tale. This unexpected result, after about a fortnight's anxiety, led me to adopt a rule from which I have seldom departed during more than thirty years of literary life. When a friend, whose judgment I respect, has decided, and upon good advisement told me, that a manuscript was worth nothing, or at least possessed no redeeming qualities sufficient to atone for its defects, I have generally cast it aside; but I am little in the custom of paying attention to minute criticisms, or of offering such to any friend who may do me the honour to consult me. I am convinced that, in general, in removing even errors of a trivial or venial kind, the character of originality is lost, which, upon the whole, may be that which is most valuable in the production. About the time that I shook hands with criticism, and reduced my ballads back to their original form, stripping them without remorse of those 'lendings' which I had adopted at the suggestion of friends, an opportunity unexpectedly offered of introducing to the world what had hitherto been confined to a circle of friends. Lewis had announced a collection, first intended to bear the title of 'Tales of Terror,' and afterwards 'Tales of Wonder,' which last was finally adopted."

The following is the account of how he finally decided on pursuing the career of literature.

"It may be readily supposed that the attempts which I had made in literature had been unfavourable to my success at the bar. The goddess Themis is, at Edinburgh, and I suppose every where else, of a peculiarly jealous disposition. She will not readily consent to share her authority, and sternly demands from her votaries not only that real duty be carefully attended to and discharged, but that a certain air of business shall be observed even in the midst of total idleness. It is prudent, if not absolutely necessary, in a young barrister, to appear completely engrossed by his profession; however destitute of employment he may be, he ought to preserve, if possible, the appearance of full occupation. He should at least seem perpetually engaged among his law-papers, dusting them, as it were; and, as Ovid advises the fair,

Si nullus erit pulvis, tamen excute nullum.

Perhaps such extremity of attention is more especially required, considering the great number of counsellors who are called to the bar, and how very small a proportion of them are finally disposed, or find encouragement, to follow the law as a profession. Hence the number of deserters is so great, that the least lingering look behind occasions a young novice to be set down as one of the intending fugitives. Certain it is, that the Scottish Themis was at this time peculiarly jealous of any flirtation with the Muses on the part of those who had ranged themselves under her banners. This was probably owing to her consciousness of the superior attractions of her rivals. Of late, however, she has relaxed in some instances in this particular; an eminent example of which has been shewn in the case of my friend, Mr. Jeffrey, who, after long conducting one of the most influential literary periodicals of the age, with unquestionable ability,

has been, by the general consent of his brethren, recently elected to be their Dean of Faculty, or President, being the highest acknowledgment of his professional talents which they had it in their power to offer. But this is an incident much beyond the ideas of a period of thirty years' distance, when a barrister who really possessed any turn for lighter literature, was at as much pains to conceal it, as if it had in reality been something to be ashamed of; and I could mention more than one instance in which literature and society have suffered loss, that jurisprudence might be enriched. Such, however, was not my case; for the reader will not wonder that my open interference with matters of light literature diminished my employment in the weightier matters of the law. Nor did the solicitors, upon whose choice the counsel takes rank in his profession, do me less than justice by regarding others among my contemporaries as fitter to discharge the duty due to their clients, than a young man who was taken up with running after ballads, whether Teutonic or national. My profession and I, therefore, came to stand nearly upon the footing on which honest Slender consoled himself with having established with Mistress Anne Page: 'There was no great love between us at the beginning, and it pleased Heaven to decrease it on farther acquaintance.' I became sensible that the time was come when I must either buckle myself resolutely to the 'toll by day, the lamp by night,' renouncing all the Delilahs of my imagination, or bid adieu to the profession of the law, and hold another course. I confess my own inclination revolted from the more severe choice, which might have been deemed by many the wiser alternative. As my transgressions had been numerous, my repentance must have been signalled by unusual sacrifices. I ought to have mentioned, that, since my fourteenth or fifteenth year, my health, originally delicate, had become extremely robust. From infancy I had laboured under the infirmity of a severe lameness, but, as I believe is usually the case with men of spirit who suffer under personal inconveniences of this nature, I had, since the improvement of my health, in defiance of this incapacitating circumstance, distinguished myself by the endurance of toil on foot or horseback, having often walked thirty miles a-day, and rode upwards of a hundred, without stopping. In this manner I made many pleasant journeys through parts of the country then not very accessible, gaining more amusement and instruction than I have been able to acquire since I have travelled in a more commodious manner. I practised most sylvan sports, also, with some success, and with great delight. But these pleasures must have been all resigned, or used with great moderation, had I determined to regain my station at the bar. It was even doubtful whether I could, with perfect character as a juriconsult, retain a situation in a volunteer corps of cavalry, which I then held. The threats of invasion were at this time instant and menacing; the call by Britain on her children was universal, and was answered by many, who, like myself, consulted rather their will than their ability to bear arms. My services, however, were found useful in assisting to maintain the discipline of the corps, being the point on which their constitution rendered them most amenable to military criticism. In other respects the squadron was a fine one, consisting of handsome men, well mounted and armed at their own expense. My attention to the corps took up a good deal of time; and while it occupied many of the happiest hours of my life, it furnished an additional reason for my reluct-

ance again to encounter the severe course of study indispensable to success in the juridical profession. On the other hand, my father, whose feelings might have been hurt by my quitting the bar, had been for two or three years dead; so that I had no control to thwart my own inclination; and my income being equal to all the comforts, and some of the elegancies, of life, I was not pressed to an irksome labour by necessity, that most powerful of motives; consequently, I was the more easily seduced to choose the employment which was most agreeable. This was yet the easier, that in 1800 I had obtained the preferment of Sheriff of Selkirkshire, about 300*l.* a-year in value, and which was the more agreeable to me, as in that county I had several friends and relations. But I did not abandon the profession to which I had been educated, without certain prudential resolutions, which, at the risk of some egotism, I will here mention; not without the hope that they may be useful to young persons who may stand in circumstances similar to those in which I then stood. In the first place, upon considering the lives and fortunes of persons who had given themselves up to literature, or to the task of pleasing the public, it seemed to me that the circumstances which chiefly affected their happiness and character were those from which Horace has bestowed upon authors the epithet of the irritable race. It requires no depth of philosophic reflection to perceive, that the petty warfare of Pope with the dunces of his period could not have been carried on without his suffering the most acute torture, such as a man must endure from musquitoes, by whose stings he suffers agony, although he can crush them in his grasp by myriads. Nor is it necessary to call to memory the many humiliating instances in which men of the greatest genius have, to avenge some pitiful quarrel, made themselves ridiculous during their lives, to become the still more degraded objects of pity to future times. Upon the whole, as I had no pretension to the genius of the distinguished persons who had fallen into such errors, I concluded there could be no occasion for imitating them in these mistakes, or what I considered as such; and, in adopting literary pursuits as the principal occupation of my future life, I resolved, if possible, to avoid those weaknesses of temper which seemed to have most easily beset my more celebrated predecessors. With this view, it was my first resolution to keep, as far as was in my power, abreast of society; continuing to maintain my place in general company, without yielding to the very natural temptation of narrowing myself to what is called literary society. By doing so, I imagined I should escape the besetting sin of listening to language which, from one motive or other, ascribes a very undue degree of consequence to literary pursuits; as if they were, indeed, the business, rather than the amusement of life. The opposite course can only be compared to the injudicious conduct of one who pampers himself with cordial and luscious draughts, until he is unable to endure wholesome bitters. Like Gil Blas, therefore, I resolved to stick by the society of my *commis*, instead of seeking that of a more literary cast; and to maintain my general interest in what was going on around me, reserving the man of letters for the desk and the library. My second resolution was a corollary from the first. I determined that, without shutting my ears to the voice of true criticism, I would pay no regard to that which assumes the form of satire. I therefore resolved to arm myself

with the triple brass of Horace, against all the roving warfare of satire, parody, and sarcasm; to laugh if the jest was a good one; or, if otherwise, to let it hum and buzz itself to sleep. It is to the observance of these rules (according to my best belief), that, after a life of thirty years engaged in literary labours of various kinds, I attribute my never having been entangled in any literary quarrel or controversy; and, which is a more pleasing result, that I have been distinguished by the personal friendship of my most approved contemporaries of all parties. I adopted, at the same time, another resolution, on which it may doubtless be remarked, that it was well for me that I had it in my power to do so, and that, therefore, it is a line of conduct which can be less generally applicable in other cases. Yet I fail not to record this part of my plan, convinced that, though it may not be in every one's power to adopt exactly the same resolution, he may nevertheless, by his own exertions, in some shape or other, attain the object on which it was founded; namely, to secure the means of subsistence, without relying exclusively on literary talents. In this respect, I determined that literature should be my staff, but not my crutch; and that the profits of my labour, however convenient otherwise, should not become necessary to my ordinary expenses. With this purpose I resolved, if the interest of my friends could so far favour me, to retire upon any of the respectable offices of the law, in which persons of that profession are glad to take refuge when they feel themselves, or are judged by others, incompetent to aspire to its higher offices and honours. Upon such an office an author might hope to retreat, without any perceptible alteration of circumstances, whenever the time should arrive that the public grew weary of his endeavours to please, or he himself should tire of the occupation of authorship. At this period of my life I possessed so many friends capable of assisting me in this object of ambition, that I could hardly overrate my own prospects of obtaining the moderate preferment to which I limited my wishes; and, in fact, I obtained, in no long period, the reversion of a situation which completely met them."

Speaking of the *Lady of the Lake*: "I remember that about the same time a friend started in to 'heeze up my hope,' like the minstrel in the old song. He was bred a farmer, but a man of powerful understanding, natural good taste, and warm poetical feeling, perfectly competent to supply the wants of an imperfect or irregular education. He was a passionate admirer of field sports, which we often pursued together. As this friend happened to dine with me at Ashiesteel one day, I took the opportunity of reading to him the first canto of the *Lady of the Lake*, in order to ascertain the effect the poem was likely to produce upon a person who was but too favourable a representative of readers at large. It is, of course, to be supposed, that I determined rather to guide my opinion by what my friend might appear to feel, than by what he might think fit to say. His reception of my recitation, or prelection, was rather singular. He placed his hand across his brow, and listened with great attention through the whole account of the stag-hunt, till the dogs threw themselves into the lake to follow their master, who embarks with Ellen Douglas. He then started up with a sudden exclamation, struck his hand on the table, and declared, in a voice of censure calculated for the occasion, that the dogs must

have been totally ruined by being permitted to take the water after such a severe chase. I own I was much encouraged by the species of reverie which had possessed so zealous a follower of the sports of the ancient Nimrod, who had been completely surprised out of all doubts of the reality of the tale."

We shall conclude by collecting in a paragraph the various receipts of his poems:—

"The work brought out on the usual terms of division of profits between the author and publishers, was not long after purchased by them for 500*l.*, to which Messrs. Longman and Co. afterwards added 100*l.* in their own unsolicited kindness, in consequence of the uncommon success of the work. It was handsomely given to supply the loss of a fine horse, which broke down suddenly while the author was riding with one of the worthy publishers. * * The publishers of the *Lay of the Last Minstrel*, emboldened by the success of that poem, willingly offered a thousand pounds for *Marmion*. The transaction being no secret, afforded Lord Byron, who was then at general war with all who blacked paper, an opportunity to include me in his satire, entitled *English Bards and Scotch Reviewers*. I never could conceive how an arrangement between an author and his publishers, if satisfactory to the persons concerned, could afford matter of censure to any third party. I had taken no unusual or ungenerous means of enhancing the value of my merchandise,—I had never higgled a moment about the bargain, but accepted at once what I considered the handsome offer of my publishers. These gentlemen, at least, were not of opinion that they had been taken advantage of in the transaction, which indeed was one of their own framing; on the contrary, the sale of the poem was so far beyond their expectation, as to induce them to supply the author's cellars with what is always an acceptable present to a young Scottish housekeeper, namely, a hogshhead of excellent claret."

We find, in spite of our columns, we must extract the account of his own change from poetry to prose—*Rokely*.

"The cause of my failure had, however, a far deeper root. The manner, or style, which, by its novelty, attracted the public in an unusual degree, had now, after having been three times before them, exhausted the patience of the reader, and began in the fourth to lose its charms. The reviewers may be said to have apostrophised the author in the language of Parnell's Edwin:—

'And here reverse the charm, he cries,
And let it fairly now suffice,
The gambol has been shewn.'

The licentious combination of rhymes, in a manner not perhaps very congenial to our language, had not been confined to the author. Indeed, in most similar cases, the inventors of such novelties have their reputation destroyed by their own imitators, as Actæon fell under his own dogs. The present author, like Bobadil, had taught his trick of fence to a hundred gentlemen (and ladies) who could fence very nearly, or quite, as well as himself. For this there was no remedy; the harmony became tiresome and ordinary, and both the original inventor and his invention must have fallen into contempt, if he had not found out another road to public favour. What has been said of the metre only, must be considered to apply equally to the structure of the poem and of the style. The very best passages of any popular style are not, perhaps, susceptible of imitation, but they may be approached by men of talent; and those who are less able to copy them, at

least lay hold of their peculiar features, so as to produce a burlesque instead of a serious copy. In either way, the effect of it is rendered cheap and common; and, in the latter case, ridiculous to boot. The evil consequences to an author's reputation are at least as fatal as those which befall a composer, when his melody falls into the hands of the street ballad-singer. Of the unfavourable species of imitation, the author's style gave room to a very large number, owing to an appearance of facility to which some of those who used the measure unquestionably leaned too far. The effect of the more favourable imitations, composed by persons of talent, was almost equally unfortunate to the original minstrel, by shewing that they could overshoot him with his own bow. In short, the popularity which once attended the *school*, as it was called, was now fast decaying. Besides all this, to have kept his ground at the crisis when *Rokeby* appeared, its author ought to have put forth his utmost strength, and to have possessed at least all his original advantages, for a mighty and unexpected rival was advancing on the stage—a rival not in poetical powers only, but in that of attracting popularity, in which the present writer had preceded better men than himself. The reader will easily see that Byron is here meant, who, after a little velitation of no great promise, now appeared as a serious candidate, in the First Canto of *Childe Harold*. I was astonished at the power evinced by that work, which neither the *Hours of Idleness*, nor the *English Bards and Scotch Reviewers*, had prepared me to expect from its author. There was a depth in his thought, an eager abundance in his diction, which argued full confidence in the inexhaustible resources of which he felt himself possessed; and there was some appearance of that labour of the file, which indicates that the author is conscious of the necessity of doing every justice to his work, that it may pass warrant. Lord Byron was also a traveller, a man whose ideas were fired by having seen, in distant scenes of difficulty and danger, the places whose very names are recorded in our bosoms as the shrines of ancient poetry. For his own misfortune, perhaps, but certainly to the high increase of his poetical character, nature had mixed in Lord Byron's system those passions which agitate the human heart with most violence, and which may be said to have hurried his bright career to an early close. There would have been little wisdom in measuring my force with so formidable an antagonist; and I was as likely to tire of playing the second fiddle in the concert, as my audience of hearing me. Age also was advancing. I was growing insensible to those subjects of excitation by which youth is agitated. I had around me the most pleasant but least exciting of all society, that of kind friends and an affectionate family. My circle of employments was a narrow one; it occupied me constantly, and it became daily more difficult for me to interest myself in poetical composition:—

* How happily the days of Thalama went by!

Yet, though conscious that I must be, in the opinion of good judges, inferior to the place I had for four or five years held in letters, and feeling alike that the latter was one to which I had only a temporary right, I could not brook the idea of relinquishing literary occupation, which had been so long my chief employment. Neither was I disposed to choose the alternative of sinking into a mere editor and commentator, though that was a species of labour which I had practised, and to which I was attached. But I could not endure to think that I might not, whether known or concealed,

do something of more importance. My inmost thoughts were those of the Trojan Captain in the galley race,—

Non jam prima peto Mnesteus, neque vincere certo:
Quamquam O.—Sed superent, quibus hoc, Neptune,
dedisti:
Extremos pudeat rediisse: hoc vincite, cives,
Et prohibete nefas.*

Perhaps the most curious and marked traits in these memoirs of Sir Walter Scott are the total want of enthusiasm in his character, and the strong sense, the clear, worldly spirit of calculation displayed: he was the very man to get on in life. Our copious extracts will be their own excuse; and we can only say, amid our author's many delightful works, this is one of his most delightful. Who is there but will be happy in this admission behind the inner veil of his private life?

Hannibal's Passage of the Alps. By a Member of the University of Cambridge. London, 1830. Whittaker and Co.

WE thought that the question of Hannibal's passage had been settled—at least, we know that some persons who are considered as wise and learned have committed themselves by saying that De Luc, and Wickham and Cramer, by their investigations, and Brockedon by his *Illustrations of the Passes of the Alps*, had convinced them that it had been set at rest, and that the honour of the passage had remained with the Little St. Bernard. A new combatant, however, appears against all these, armed with a little Greek, and nothing else, to support his pretensions. His extreme ignorance of the regions upon which he writes has betrayed him into the error of believing, that because he has drawn a *red line* over a map, and called it *Hannibal's route*, it was just as easy for the army of Hannibal to have traversed the country which he fancies his map to represent; and, as he says, "that the question to be discussed is not, what was the best or the worst, the longest or the shortest road," he has amused us by adding another variety—an *impracticable one*.

The author seems at once to have jumped to the conclusion, that every thing in Messrs. Wickham and Cramer's Dissertation upon the Passage of Hannibal, must be wrong, because some rendering by them of the Greek text of Polybius into English does not agree with his notions. He might have had modesty enough to have entertained some doubt of his own. Those authors are distinguished as scholars, and, what is of more importance to the inquiry, they have actually examined and investigated, in repeated journeys, the various routes in the Alps, by which different authors have conjectured that Hannibal passed these mountains; they have believed the account of Polybius to be true; and they have found upon the Little St. Bernard only such localities as agree with the events related by Polybius. But our author, who has brought to the inquiry something like the geography of a schoolboy, and not more than his Greek, has sought to destroy all the evidence of Wickham and Cramer by verbal criticisms alone, except upon the fact of the view of the plains of Italy from the Col de Viso, the pass which he advocates; but he seems to have forgotten that there were other and more important, because less equivocal, proofs to establish, than the view of Italy from the summit of the pass: a space must be discovered there large enough to encamp an army such as Hannibal's, and a white rock must be found at the foot of the pass, where Hannibal could have protected the passage of his army the night before they attained

the summit. Does the Member of the University know that no such rock is found near the Viso, and that the crest of the pass is so mere a ridge, that fifty men could not be stationed there at the same time, and that no site for an encampment exists on or near it? Polybius says, that the army encamped on the summit of the pass for two days. How does our "learned Theban" try to get over this difficulty?—by doing the very thing of which he accuses the authors of the Dissertation—adapting the text of Polybius to his theory, and stating that the Carthaginians encamped about the summit of the pass of Monte Viso—'Ἐνασταίως δὲ διανύσας εἰς τὰς ἰσπερβολὰς αὐτοῦ καταστρατοῦσθαι, καὶ δύο ἡμέρας προσιμῆναι—“and on the ninth day, having completed his ascent to the summit of the pass, he encamped there, and remained two days;” not about it, as our author has rendered it, to serve his own purposes, but upon it: and it is worthy of remark, that the word ἰσπερβολὰς, used by Polybius for the summit of the mountain, does not apply to the summit of the mountain; it is merely the *highest part of the way over*. But even the preposition *about*, thus falsely pressed into the new military service, will not assist the "Member" on the pass of the Viso; for there is no place on it, or near it, or about it, where the army of Hannibal could have encamped. The pass is over a narrow ridge, stretching like a wall between two mountains; and in order to attain it, the traveller must climb over some beds of perpetual snow, by a path impracticable for mules. The passage of the Viso can only be made on foot; and from time immemorial until the end of the fifteenth century, it was only thus attainable. About the year 1480, however, a Marquess of Saluces, in whose territory the valley of the Po (which descends from the Monte Viso) lay, caused a road to be made to facilitate the commercial intercourse of his subjects with Dauphiny by mules across the Viso; and to avoid the ridge of the pass, he directed a road to be cut through the mountain, about 300 feet below it, and carried a gallery 230 feet long and 8 feet high and wide, from the side of Piedmont to the side of Dauphiny. Twenty years were spent in the formation of this mule-path, which has now been long destroyed; and the *trou de traversette*, the name by which the passage was known, has been for many years so completely closed up on both sides by the *débris* which have fallen from the mountain, that even its situation cannot now be traced: and this is the pass by which, in its primitive state, our author would have us believe that Hannibal, with his elephants, and horses, and beasts of burden, traversed, and upon which he encamped! Our Member of the University of Cambridge is evidently unacquainted with the country which he describes, and seems to rely upon the Marquess of St. Simon's authority for the practicability of the route of the Viso to Hannibal.* But of this the marquess appears to be as ignorant as himself.

Though St. Simon,† in his *Histoire de la*

* "Le Col de Viso, bon à pied, allant de vallée de Queyras à Grisoles dans la vallée du Pô en Piedmont.—*Topographie des Grandes Alpes*, par le Marquis de Pesay. Gen. Bourcet, in his *Mémoires Militaires sur les Frontières de la France*, mentions the impracticability of the passage of the Viso, before the gallery was made, and since its destruction. General Bourcet surveyed the entire frontier of France towards Piedmont; and his authority is the best ever published.

† St. Simon's authority in history is no better than in geography; for he speaks of the passage by Francis I. of the Viso, instead of the Argentine: Francis never passed the Viso, if contemporary historians and the autobiographical memoirs of his companions are any authority. It is curious to compare St. Simon's statement, when he has a theory to establish, in his passage of Hannibal, with the efforts which he makes in the same work,

Guerre des Alpes, writes of the "courses que j'ai faites entre Barcelonnette et Briançon," yet this no more proves his acquaintance with the pass of the Viso, than our author's book proves that he ever wandered from the banks of the Cam. In the war of 1744, when St. Simon was engaged in the siege of Coni, he became acquainted with the pass of the Argentière, by which the army of Don Philip and the Prince of Conti passed into Piedmont: he had occasion in his marches to pass by the Col de Vars and by the valleys of the Durance and the Ubaye—but not by the Viso, which we feel convinced that he never saw, not only from his incomprehensible statements in page 32 of his preface, but from his doubt or denial of the only fact upon which the theory of the passage of the Viso by Hannibal rests—the view thence of the plains of Italy. Our author states this fact upon the authority of Brockedon's *Passes of the Alps*, but, with a disingenuousness of purpose which deserves reprobation, he quotes only a part of a sentence in which the impracticability of the pass of the Viso is shewn, though the plains can be seen from the Col, as if Brockedon advocated also the pass of the Viso to be the route of Hannibal; whereas all the proofs which that author has collected tend directly to establish the passage of the Carthaginians by the Little St. Bernard! But this is not the only misquotation which betrays either an intention to deceive, or an unpardonable ignorance of the subject: in page 97 our Cantab describes the appearance of the Alps and *Monte Viso* from *Le Breoule* in the valley of the Durance in Dauphiny, as if *Monte Viso* could be seen from this place; and again quotes from Brockedon a description of the appearance of the *Monte Viso* from a place in the plains of Piedmont, four days' distance from *La Breoule*—in point of fact, it is not possible from any spot within the distance of two days' journey from *Le Breoule* to see the *Viso*. Does this Member of the University of Cambridge think that his numerous misrepresentations can be overlooked in the world's admiration of his Greek criticisms? such as his accounts of plains lying between Tallard and the Ubaye;—that Hannibal's army was without baggage;—that the Allobroges, who could supply the army of Hannibal, were "an unsettled tribe of warlike barbarians, and their metropolis a village;"—and that olives do not grow north of *Barcelonnette* (when it happens that they are not found there, but grow as far north as the lake of *Como*):—does he imagine that such matters as these at all affect the real question at issue?

The complacency with which he has drawn a red line over his map and called it Hannibal's route, is very amusing; from *La Breoule* this line leads—not to *Embrun* and the valley of the *Guil*, which lay directly before him—but, out of the way, up the val-

Guerre des Alpes, to shew the dangers encountered by him in the pass of *Le Breoule*: he says "the difficulties are so great, that nothing but habit prevents the people of the country from considering the danger which is always present; that a man cannot remain on horseback in passing, because the pass, which has been cut out of the side of the rocks, is not high enough;" and he describes its appearance along the gorges as "like ruts formed in the walls of narrow roads by the ends of the axles of carriages:" he says that "conductors are obliged to remove the ornaments from the heads and pack-saddles of the laden mules which pass, lest they should strike the rocks above them; and that if the loads extend too far from the sides of the beasts, there is great danger in touching the rocks at the side, where a slight shock might destroy the equilibrium of the beasts, and they would fall over into frightful abysses:"—and this is one of the places where St. Simon and his Cambridge follower would have us believe that the elephants of Hannibal passed before even such a road was made!

ley of the Ubaye, one of the most sterile in that country, where an army which had to procure supplies on its march must have been starved: having reached *Barcelonnette*, however, the passage of the Alps by the *Argentière* was then of easy accomplishment, and in two days the army might have been in the plains of Italy; but then it could not have enjoyed a view from the summit of the *Viso*, upon which our author was fixed; and the distances would not have suited this pretty theory. He writes of the Carthaginians being "conducted from the valley of the Ubaye up the deep gorges of the river *Guil*"—as if these were in connexion; and his only excuse can be, that he was not aware of the intervention of an enormous range of mountains. The red line, therefore, is carried on over mountains and through defiles, regardless of the impossibility of an army following its course, and taking it for granted that this trifling objection would not be made: if, however, this route had been passable to such an army, it would only have led them to the same spot in four days, which they might have reached by the valley of the Durance, from *Le Breoule*, in one. Nor is it the work of *Wickham* and *Cramer* alone that our author opposes: *Polybius* is quite as intractable to his hypothesis—for in page 35 he says, that "the distances are so inaccurate and inconsistent in *Polybius*, that they cannot be safely followed." More learned authorities than he is, have followed them without difficulty—but not by his impossible route. Is it not intolerable, that the testimony of *Polybius*, who travelled over the line of Hannibal's march within forty years of the event, expressly to verify his narrative, should be disputed by one thus pretending to inform us, who, if he was ever out of Cambridge, certainly never visited the countries upon which he presumes to write, and of which he is so ignorant?

Orlando Innamorato di Bojardo; Orlando Furioso di Ariosto: with an Essay on the Romantic Narrative Poetry of the Italians; Memoirs and Notes. By Antonio Panizzi. Vol. I. London, 1830. W. Pickering.

A COMMENTATOR must be made up (as some old French author says of his mistress) of all opposite qualities: he must have the industry of the antiquary, the imagination of the poet: without the first he will never be able to collect his materials—without the second he will never make good use of them. Of both these qualities is Mr. Panizzi possessed: a devout admirer of his national literature, his enthusiasm has made him patient; and the interest he evidently takes in his researches, prevents a shade of tedium from approaching either him or his reader. We would instance his analysis of the history of *Palamon and Arcite*, as one of the most perfect pieces of criticism and comparison we know. We do not agree with him in tracing *Charlemagne*, &c. to a British origin, in preference to the Gaulic: "let each divide the palm." These hypotheses, that go so far into remote ages, are like the early discoverers' accounts of America,—one story held good till another was told. But we do give our author the very greatest credit for the industrious ingenuity with which he collects passages, draws inferences, and thus deduces facts which throw great light on that romantic but fable-hidden period. His idea that *Charlemagne* is rather a cento of the bad qualities of his successors, than that great monarch himself, is as curious as it is original; and his other illus-

trations are equally excellent—witness the following:—

"Idolatry and paganism constituted the religion professed by the Danes or Normans. Against Christianity they were as inveterate as the Saracens, but treated in a friendly manner those Christians who embraced their worship, as many did. Most of the places which the Saracens had attacked and plundered, or with which the Moslem name was connected, as having been the scenes of their exploits, were visited also by the Normans. *Bordeaux* and *Tours* were at one time devastated by them. The latter of these towns had been saved from the fury of the Saracens in 732 by the victory of *Charles Martel* over them; but under *Charles the Bald* both places were plundered, and the city afterwards burnt by the Normans in 853. *Provence* had been infested by Normans in the time of *Charles Martel*, and was ravaged both by Saracens and Normans, during eight years of the reign of another *Charles*, sovereign of that country, nephew of *Charles the Bald*, who died in 863. Between the end of the ninth and the beginning of the tenth centuries, the Saracens, as well as the Normans, together with the Hungarians, attacked the kingdom of Burgundy on different sides. It is not, therefore, surprising, that ancient historians should have asserted *Ogier le Dannoys* to be a Saracen from Africa; for, amongst these plunderers, resembling each other in cruelty, rapacity, and hatred of the Christian religion, it was difficult to distinguish the Mahometan from the Pagan. This theory, founded on the state of affairs at the period in question, is supported by what has been hitherto supposed the ignorance of the old romancers in continually confounding Mahometans and Pagans together, till at length they made a god of Mahomet, and supposed the Moslems to be idolaters. When, in the twelfth century, paganism had almost wholly disappeared, and the Saracens were the nation against which all Christendom joined in making war, the persons who from the popular lays formed those narratives now called Romances, could not possibly have had either the means or inclination for discriminating between Pagans and Mahometans. Not the means, because it required more learning than they possessed; nor the inclination, because the descendants of the Normans were then Christians, and settled in France, England, and Italy; they could have no wish to perpetuate the memory of events so little honourable to their ancestors. Nor would the clergy waste the popular passions by exciting an idle hatred against enemies no longer in existence. But all interests were joined in obliterating all distinction between the old enemies of Christianity, by fixing on the Saracens both their own crimes and those of the Normans. How could the writers of that period suspect that a *Charles*, who was represented as fighting against the enemies of Christianity in *Provence* about the same epoch (if an epoch was mentioned at all), which enemies were sometimes designated Pagans and sometimes Moslems; how should such writers doubt that he was combating the same party all the while? In those days it is probable that every enemy of Christianity was fancied to be a Saracen, and therefore the Normans, adoring *Apollino* and *Trivigante*, were supposed to be Mahometans, and to worship Mahomet. This will also serve to explain why, according to the old romances, there were Mahometans or Saracens in places where the name of the prophet had perhaps

never been heard of; more particularly in Denmark, whence the Normans originally came. Finally, we here find a plausible reason for the strange opinion that Denmark was in Africa or Asia, and that through that country the knights returned to the west, who had been fighting gloriously in the east, against the Soldans of Persia, Babylon, or Egypt."

We will not omit one short note, shewing how greatly one age resembles another; and that the principle which now leads the poet to Paternoster Row, is but the same which governed his music in the baron's hall.

"That the itinerant poets did not sing or tell their stories for nothing, is beyond all doubt; and it would be pedantic to quote instances of it. I shall content myself with mentioning one piece of this kind, which is singular, from the way in which the poet's payment is alluded to. In the *Reverie*, published by Le Grand, the poet interrupts his whimsical effusion at once, and says; 'I shall sing no more without money.'"

We cannot but give the highest praise to our Italian's English, not for the mere grace of style, but for its animation: the pressure of matter alone prevents us from illustrating it by his very lively, as well as neatly turned, strictures on the heroine of the *Teseide*.

There are some elegant translations by Lady Dacre, Stewart Rose, and Sotheby: we must give the lady's performance preference, though Mr. Sotheby's are wonderfully close and poetical.

"And Forisene was in her heart aware,
That love of her was Oliver's sole care,
And because Love not willingly excuses
One who is loved and loveth not again;
(For tyrannous were deem'd the rule he uses,
Should they who sue for pity sue in vain;
What gracious lord his faithful liege refuses?)
So when the gentle dame perceived the pain
That well might wrought to death her valiant knight,
Her melting heart began his love requite,
And from her eyes soft beamed the answering ray
That Oliver's soul-thrilling glance returns;
Love in these gleamy lightnings loves to play,
Till but one flame two youthful bosoms burns.
To tend his grievous wounds she comes one day,
And towards him with greeting mute she turns;
For on her lips her voiceless words are stayed,
And her bright eyes are fain to lend their aid.
When Oliver perceived that Forisene
Accosted him with shrinking timid grace,
The pains which insupportable had been
Vanished, and to far other ills gave place;
His soul is most sweet hopes and doubts between,
And you might almost, 'mid these flutterings, trace
A dear assurance to be loved by her;
For silence is Love's best interpreter.
He might besides, as she drew near, observe
O'er all her face a deep vermilion dye,
And short, and broken, checked by cold reserve,
Her accents of condoling courtesy,
For the sharp wounds he suffer'd, to preserve
Her worthless self in her extremity.
With downcast looks, that speak of hope the while—
For this of lovers ever is the style.

And thus in lowly accents fall'ring still:—
'The fates, despiteful destiny,' she said,
'Or, in whatever sort, high Heaven's will
Me to a miserable death had led;
Thou cam'st, Sir Paladin, and didst fulfil
Heaven's high behest, from highest Heaven sped
For my release, and 'tis through thee I live!
'Therefore for these thy wounds I justly grieve.'
These words within his inmost heart found place,
And on their sweetest Oliver relled,
E'en for the joy of that one moment's space
Gladly the knight before Love's shrine had died,
O'ercome by gratitude for so much grace!
And prizing little all of life beside,—
Nay, holding, I had almost said, at nought—
He, bashful, thus gave utterance to his thought:—
'Never, fair lady, in my earthly course,
Have I done aught that brought so true content;
If I have rescued thee from fate's dark force,
Such sweetness through my heart the deed hath sent,
As none can match from any other source:—
I know thou would'st at my every pain prevent—
But different wounds far different balms assuage,
'Twere better else I'd felt the monster's rage.'
Well knew the maiden to interpret right
These gentle words and print them on her heart;
So in Love's subtle school each task is light!
And, sighing, to herself she said apart,

'Yes, thy new grief I will with mine requite—
Nor were it better thou hadst felt death's dart;
Ingratitude such love shall never know,
This breast is not of adamant, I trow.'

With sighs departed Forisene fair,
And Oliver remained afflicted more;
Nor of his gashes took he thought or care,
For anguish of the inward wound he bore.

And weeping, lingering, sighing sad between,
'Adieu!—the knight had said to Forisene.

When the fair maid beheld her parting knight,
She many times to follow him designed,
With other thoughts all wild and opposite,
Nor longer could she keep her love confined.
Then to gaze after him, though lost to sight,
Led to her lattice by the archer blind,
The cruel urchin twang'd his fatal bow,
And on the earth beheld the damsel low!

The tidings heard, her aged father sped
To raise his prostrate child,—and she was dead!"

To the general reader these pages present much attraction: the analysis of the stories is amusing; the criticisms are excellent, and enlivened by much of shrewd observation and witty remark: but to the Italian student the disquisition is invaluable; no library where Ariosto, Tasso, &c. are favourites should be without this their fitting companion. We must conclude by the technical praise of how beautifully the book is got up and printed: Mr. Pickering has done honour even to his press, by the gentleman-like style in which he has clothed this gentleman and scholar-like performance.

The Mussulman. By R. R. Madden, Esq. Author of "Travels in Turkey, Egypt, Nubia, and Palestine." 3 vols. 12mo. London, 1830. Colburn and Bentley.

THESE are three very amusing volumes; oriental and sentimental, both in the best sense of the words. There are lively sketches of the race of the turban and sabre; some good contrasts of the sad and serious; and several narratives introduced with very good effect. We select the following as a pitiable, and we believe a most true picture of the "landed interest in the East." It might serve as a lesson to some of our own malcontents.

"The earliest feat I remember of my youth," said he, "was beating a rogue out of the village, who had robbed a chicken-oven: I was so incensed against the fellow, that I verily believe I should have killed him, had I had a sword. Blessed prophet! said I, how is it possible there can be such rogues in the world; is it not pleasanter to eat one's own bread than that of another? And is it not safer to live by industry than by knavery? These rogues must have different natures to mine; they must surely be of another race altogether. My father having died, I succeeded to all his property. I need not tell you it was acquired under the beys; for since Mohammed Ali has been our pasha, no man has been able to make money, much less to keep what his father made for him. I farmed twenty feddans of the choicest land in the Faïoum, from the lord of the soil, the mighty pasha. I turned up the earth, and beans and rice came forth in abundance. Praise be to Allah! said I, what a happy world is this! But the soldiers came round, and said, 'Where is the produce of the pasha's land?'—and coming into my house, they found a pilau of rice on the floor. 'Allah!' said they, twirling their mustachoes, 'here is a pessavink, who has the audacity to eat the grain he grows;—down with the presumptuous knave, and up with his feet!' In the twinkling of an eye, their thick sticks were belabouring my soles; and when they were fatigued with the operation, and I half dead with the pain, they bade me rise. 'Kafir,' said the chief man of them, 'did you imagine

your soul was yours, in the land of Mohammed Ali, that you dared to eat his rice? Did you not know, that you were the slave of a generous master, who took the produce of the soil at his own price?'—and, with that, they measured the stock and carried it away; giving me an order on the Miri for the sum they were pleased to allow me. It barely paid the expense of cultivation; but when I went to the haznahdar, he gave but a fourth of the tuskaree in money, and a cheque on a merchant for the remainder. The merchant told me I must take half the amount in cloth and cottons. I was obliged to do so; and having sold these in the bazar for half what they cost me, I returned home half ruined. It is better, said I, to throw up the land at once; another good crop would utterly destroy me! I went to the casheff who governed the district, but he laughed at my beard when I told him my intention: 'Give up the land, indeed,' said he; are you mad enough to think the pasha will permit you? Go home and dig the canals, and be sure you water your rice-ground well; for if your cultivation be not better than it was last harvest, you will be surely flogged.' I went home with a sorrowful heart; I tilled the ground; I irrigated it from morning to night; the grain sprung up, my heart died away at the fertility of the soil; the crop was more abundant than ever;—I was completely undone. There was no salvation for me from the curse of such a plentiful harvest, except in flight; and accordingly I fled the most unfortunately fertile district in all Egypt. I began to think the man who robbed the chicken-oven must have been a farmer of the pasha's. 'The peasant cannot help stealing,' said I, 'if the prince be an oppressor.' I remember having heard a learned man say, the prayer of the oppressed was to be dreaded, even when the arrows of the tyrant had drained the blood of the poor man, that his supplications were not to be suppressed. I thought it would be a good thing to rob the public granaries; I procured employment in one of them; I began with a handful of beans, and ended with a sackful of opium and indigo. I was at length discovered, and I suppose it is needless to say, when I was thrust out of doors I had not a leg to stand on. Why should I confine my depredations, said I, to the substance of Mohammed Ali? he is not the only oppressor of the poor fellow, the hard-working peasant. Every one who is rich is the poor man's enemy; therefore to plunder him can be no crime. I accordingly commenced with a Jew banker; I slipped into his house at dusk, and left it with a dozen amber-mouthed chibouques. I increased in adroitness with the magnitude of my attempts; at last I carried away a bale of tobacco from the storehouse of a merchant of Bar 'el Cham—the prophet was not with me; I was seized at my own door, and beaten till further blows were deemed unnecessary. It was written, I was not to die just then. I recovered shortly, and the first use I made of my returning strength, was to plunder a mosque of five Persian praying carpets. [Here there was a general murmur of disapprobation among the prisoners.] I could not help it,' continued the sacrilegious felon, 'the pasha's oppression made me a rogue; the contempt and uncharitableness of the world made me a villain; and the frowns of my unpropitious planet, and the loss of the prophet's patronage, made me a kafir; and therefore I robbed the temple of Allah; but I did not prosper. I sold the plunder to a Greek priest, who was on his way to Elcods, the holy city

of Jerusalem, for three hundred piastres. I returned home delighted with my sale. I looked at my money, I counted it over and over; a piece fell on the floor: a clod on a cold breast could not give a duller sound. Beard of the prophet! cried I, here is treachery. I examined the other pieces, every coin of them was base money. Allah Allah! cried I, in my desperation, there is no faith, no honesty in the world; the very priest cheats the robber of the church. I must put this money off, said I, in the best way I can; and then, cursing the mother of the Greek priest with becoming fervour, I sallied forth. It occurred to me there was a deaf jeweller in the bazar. I proceeded to his shop, hoping, as I had been deceived by the sight of the money, so might he. From the sound I had nothing to fear. Having purchased a quantity of goods, I paid down the money. There was no one in the shop but a blind muezzin from a neighbouring mosque. The merchant examined the money: 'It looks good,' said she, 'and I suppose it is so; if the poor muezzin was not blind, I would get him to examine it likewise.' Thank Heaven, said I to myself, that he is blind, otherwise it would go hard with me. I was on the point of leaving the shop, with my purchase under my arm, when the unlucky son of darkness groped his way to the counter, and bade the merchant jingle the pieces on the money trough. I was ready to sink into the earth. Piece after piece was jingled, and condemned. I endeavoured to escape, but the merchant laid fast hold of me—and here I am covered with crimes, which Allah, in his justice, will lay at the door of the poor man's oppressor, the pasha of El Masr."

The heroine is very sweetly drawn; and the whole work much raises our estimate of Mr. Madden's talents.

National Portrait Gallery of Illustrious and Eminent Personages of the Nineteenth Century. With Memoirs by William Jerdan, Esq. No. XIII. King's Edition. Fisher, Son, and Co.

THE great success of this work has induced the publishers, as we have already stated, to issue a quarto edition, with proof impressions of the plates, distinguished by the name of "the King's Edition." We avail ourselves of the appearance of this thirteenth No. to extract from the Memoir of Mr. Canning the following anecdotes, which we think cannot fail to be interesting to our readers.

The first is in illustration of the statement that it was chiefly attributable to Mr. Canning's persuasion that the Princess of Wales was induced to quit England, in 1813.

"The writer of this article one day happened to wait at Gloucester Lodge while the Princess of Wales had an interview with Mr. Canning; and on her retiring, was shewn into the room which her royal highness had left. He found Mr. Canning standing by the fireplace, very deeply affected; and after some matters of less consequence, the conversation turned on the then engrossing topic of the day. In the course of this, to him so interesting scene, he accidentally leaned his arm upon the chimney-piece; when Mr. Canning (who was describing the forlorn situation of her royal highness as she had just painted it to him) exclaimed with great emotion—'Stop! your sleeve is now wet with a princess's tears.' It was true:—her royal highness had been weeping there over her deserted condition; and we believe that within a few hours of this time, Mr. Canning, moved by her distress, had ap-

plied for, and obtained, the frigate which bore her from the English shore."

The next relates to the appointment of Mr. Canning as Premier.

"It can, alas! be no breach of etiquette or betrayed confidence now to record how powerfully Mr. Canning was affected by his majesty's behaviour on this exciting occasion. On the succeeding day, when he described it to the writer, he was almost overcome by the emotions called up by the bare recollection of the king's goodness. They were alone in St. James's; and the important subject of the resignation of Mr. Canning's late colleagues, the propositions for the choice of new members to the cabinet, the course of policy to be adopted on certain leading questions,—had been considered in a manner worthy of the frank and manly natures of both the parties; when his majesty, who had a while leaned upon the arm of the chair on which Mr. Canning sat, held out the royal sign of his entire confidence, and gave him his hand to kiss, accompanied by expressions so sincere and gratifying, that the deeply touched minister could only drop on his knee and impress on it the silent oath of his utter devotedness and love. We could wish, if it were possible, to paint a historical picture of so interesting a scene, and one which ought never to be forgotten when the patriotic virtues of either the monarch or the subject are remembered."

The last anecdote that we shall quote shews the amiable and benevolent feelings of Mr. Canning in a very striking point of view.

"The writer was one day with him when either the newspapers or some private person gave an account of a woman with a family of children in mourning having watched the egress of Lord Sidmouth (then home secretary) from his official residence, and thrown herself bathed in tears at his feet, while the children clung to his dress and implored, in the most melting tones, mercy for a husband and a father, who was under sentence of death and about to be executed. The sentence, it appeared, was irrevocable, and the noble lord had literally to be torn from the despairing group. We well remember Mr. Canning's observation—'I would not be in that situation, exposed to such an affliction, for all the power and influence possessed by all the ministry.'"

Picture of India, Geographical, Historical, and Descriptive. 2 vols. 12mo. Whittaker and Co.

WHEN we have so many voluminous publications upon India, which, important and valuable as they are, tax the time of general readers too much to enjoy very general circulation, the present work is peculiarly acceptable. It is diligently compiled, easily written, and very neatly as well as usefully illustrated by plates and maps.

Illustrations of the Anglo-French Coinage. Large 4to. pp. 167. London, 1830. J. Hearne.

To this very beautiful, and, to the lovers of numismatics, most interesting and invaluable work, we cannot, this week, pay the detailed attention it so richly deserves. We will, therefore, only say (previous to its appearance on Monday next), that it illustrates the mintage of the English kings in France, from the acquisition of Aquitaine by Henry II., for three centuries, in a manner beyond all praise; whether we look at the accuracy and beauty of the engravings, by Finden; at the number and rarity of the coins (many of which are

unique); or at the amazing industry and skillful comments of the collector, who has, by his researches, corrected some errors, and added some most curious particulars to this memorable period of British history.

An Introduction to a Course of German Literature; in Lectures to the Students of the University of London. By Ludwig von Mühlentfels, LL.D., &c. 8vo. London, 1830. Taylor.

THE present volume comprises the introductory part of a Course of Lectures on the History of German Literature since the time of the Reformation, delivered by Dr. Mühlentfels to the pupils of the University of London. Considering the literature of a people as "the great repository of their ideas," the lecturer shews, that without it the history of a nation cannot be properly understood; as, on the other hand, "the literature of a people, the bloom of the national mind, cannot be duly judged and estimated without tracing its course as the product of the historical development of mankind generally, and in particular, of that of the nation to which it belongs." Accordingly, he commences his Introduction by tracing in a rapid but lively sketch the progress of mankind through the prominent stages of its history down to the period of the Reformation, when the modern literature of Germany begins. But besides this historical introduction, the subject to be treated of requires also an elucidation of the character of the various branches of literature, their relation to science and art, and to each other mutually; and this inquiry, which is more of a philosophical kind, occupies another portion of the volume before us. "Science and art," says Dr. Mühlentfels, "are forms by which the human mind represents the nature of its divine origin. The former is called into life through the activity of intellect, the latter through feeling and fancy." Science, according to its nature, belongs to mankind generally; while the productions of art partake of the peculiar character of nations and individuals. Dr. Mühlentfels excludes from the plan of his Lectures the history of all those branches of German literature which have any reference to science, and directs his attention more exclusively to the department of history, speculative philosophy, rhetoric, and poetry, which stand in the nearest relation to the arts.

We regret that the limits prescribed to this notice must prevent us from entering more deeply into the views here developed by Dr. Mühlentfels. We think that these Lectures are highly creditable to his zeal and talent as a literary inquirer, and as a professor in the new institution to which he belongs; and we would particularly recommend a perusal of them to those who attend the public Lectures on German poetry which Dr. Mühlentfels has just commenced at Willis's Rooms.

ORIGINAL CORRESPONDENCE.

Paris, May 11.

Aurea Mediocritas! by your leave a moment, and let me take up the cudgels in defence of arrant nonsense. Mediocrity I take to be one of the most sneaking, beggarly, wishy-washy characteristics that can mark the *decadence* of an age. Whereas, thorough-faced absurdity is sometimes amusing, and, besides, in this age of mind, will soon become rather rare; two reasons which, in my idea, entitle it to a decided preference. The march of intellect will shortly render downright stupidity a distinction. "It offends me to the soul" to bear an encomium on a passable production of any

description. If I cannot meet with unmixed excellence, give me something so ineffably ridiculous, that the *bêtise* is apparent on the surface. I hate your mediums, through whose tame, spiritless dulness the mind is obliged to dive in order to get at the absurdity, which, in the case under consideration, is the cream of the jest. There is a species of nonsense so sublimely nonsensical, that only to think on it does the heart good. This divine nonsense, in praise of which I would fain raise my voice, is now becoming much more uncommon than many worthy people are apt to imagine.

Appropos of what is this exordium? Of the first and second representations of *Bibiana*, at the German Opera: neither more nor less. I feel myself in the humour to build an argument on a needle's point. The poem of this opera fulfils all the conditions necessary to constitute the most glorious absurdity, and precisely for that reason appears to me deserving of particular mention. But that it concludes with a marriage, *comme à l'ordinaire*, I should be tempted to call it a most exhilarating tragedy. *Bibiana*, a fair maiden, such as could be found only in Bohemia, where, it seems, wonders are thickly sown,—*Bibiana* loves *Ottomar*, son of one *Henry de Hornbourg*. *Ottomar* loves *Bibiana*, for the old reason of love for love. *Henry de Hornbourg*, a placid elderly gentleman, loves every body; and *Kust*, a gentleman robber, and decidedly the *bel esprit* of the piece, loves nobody at all. *Henry de Hornbourg* is not only a universal philanthropist, but a first-rate hand at draughts; and, to indulge in his innocent recreation, always carries a draught-board about his person, as a lover carries the miniature of his mistress, or a *chevalier d'industrie* a pair of cogged dice. On a certain excursion, the old gentleman discovers that he has forgotten his draught-board in the chapel of *Culm*, where, *en passant*, he had stepped in to say a *pater-noster*. Spite of a vehement paternal remonstrance, and notwithstanding that the sacred edifice has the reputation of being a den of thieves as well as a house of prayer, the bold *Ottomar* instantly proposes to return in quest of the precious movable. *Bibiana*, however, succeeds in dissuading him from his fell design, though, as to the why or wherefore, the poet has not insulted the capacity of his audience by the slightest hint. We have then an amorous duet—an invocation, I believe, to the lamp of night; and *Bibiana* sets off, at a round pace, for the redoutable chapel, where *Kust* holds a species of house of commons, the members of which are distinguished by the usual political shades—ministerial, opposition, and radical. *Kust*, be it known, is rather a facetious personage—an animal compound of the monkey and the tiger; in short, something like the *Fra-Diavolo* at *Feydeau*; and frequently goes abroad into what is called the world, disguised in a clean shirt. When the road proves but indifferent, his favourite mode of raising the wind is to entice some maid of high degree to the chapel, on pretence of honourable intentions, and then and there barbarously to throttle her, in order to obtain possession of her “jewels, cash, and keys.” At the moment of *Bibiana's* appearance in the chapel, the monster, who has no bowels of compassion, drags a fair and noble *châtelaine* to the front of the stage (exactly opposite to the prompter's snug retreat), mercilessly rifles her of her trinkets, and, with exquisite breeding, conducts her to the side scenes, to spare the audience the horror of witnessing bloodshed, and so becoming *particeps criminis*. *Bibiana* decamps with the draught-board, and, into the

bargain, the victim's jewels. *Kust*, in a twinkling, whistles his band together, and commences a pursuit, but in vain; because, it seems, that in Bohemia Providence always protects innocence—except in a few occasional instances not worth mentioning. And, after all this, the old gentleman, *Henry de Hornbourg*, gives a ball, at which, like a gallant troubadour as he is, *Kust*, of course, makes his appearance, in the character, as I before hinted, of a gentleman. As usual, the gay deceiver endeavours to inveigle *Bibiana*, who agrees to meet him in the chapel. And then the valiant *Ottomar*, at the head of his father's vassals, rushes, sword in hand, upon the bandits;—a thing which, to be sure, he might have done long before; but in that case the catastrophe of the opera would have come in at the wrong end. And then the opera concludes with a blowing up, and a wedding, and

“Songs, and quavers, roaring, humming, Guitars,” &c.

Such is the history of this opera, which, independent of its really attractive music, is curious on account of the sheer absurdity of the *libretto*. The musician, whatever be his talent, cannot obtain a complete triumph over the nullity of an opera-poem destitute of all dramatic interest. It is therefore no mean tribute of praise to *M. Pixis* to affirm, that he has contrived to render even the opera of *Bibiana* interesting, solely by the merit of his music. The overture is brilliant, and the choruses, especially those of the robbers, merit an unrestricted encomium. A comic duet in the third act excited much applause.

The operatic ballet of *Manon Lescaut* may be expected to go through a successful run of at least thirty or forty representations, at the *Académie Royale de Musique*. The principal, though rather equivocal, merit of this composition, is the fidelity with which it portrays the dissolute manners of the court of *Louis XV.* A crowd of minor accessories contribute to the piquancy of the exhibition. *Marquesses* and *fashionables* of the olden time, arrayed in magnificent costumes—originals, well furnished with smelling-bottles, snuff-boxes, tortoiseshell cases, and the other gimcrackery of their day, add a degree of truth and local colouring to the scene. *Messrs. Scribe* and *Auber* have completed a new opera, which will be immediately put in rehearsal at this theatre.

At the theatre of the *Opéra Comique*, *l'Auberge d'Aray*, a one-act lyric drama, will be represented, for the first time this evening, for *Miss Smithson's* *début*.

A letter from Germany states that *Paganini* will shortly quit that country for *Holland*, where he will remain till the end of the year. In the month of *December* he is expected in *Paris*, whence he will proceed to *London* in *April*.

I give you the latest gossip on the subject of *Sontag*. About two years ago, a shoe-maker in *Berlin* exhibited, in large letters, on the door of his shop, the following ensignation:—“*Boot* and *shoemaker* to *Mademoiselle Henrietta Sontag*.” A baker in the same capital has lately renewed the joke, by displaying an equally curious show-board over his shop-front: “*Fancy bread-baker* to *Mademoiselle Sontag*.” The fair siren, indignant at this reiterated pleasantry, intends, it is said, to remonstrate through the medium of the public press.*

* Appropos of this lady: we have received a letter, and the *Berlin Gazette* of *April 22d*, which contains a critique on her appearance as *Doña Anna* in *Don Juan*. From this it appears, that instead of being hissel, as described in the *Paris* correspondence, her performance was crowned with the highest approbation. In justice, we cannot re-

Fido and *Bianco*, the two learned dogs now being exhibited in *Paris*, have been honoured with a mark of distinction which *Messrs. Bourmont*, *Victor Hugo*, *Dumas*, and other personages of note, share in common with the illustrious quadrupeds. An ingenious artist has executed a lithographic print, in which the animals are represented playing their favourite game of *écarté*. *Fido*, who is out of luck, apparently bears the injustice of fortune with most impatient spirit. *Bianco's* broad grin exemplifies the truth of the old proverb, “they laugh that win.”

ARTS AND SCIENCES.

LINNÆAN SOCIETY.

SINCE our last notice, two meetings have been held. At the first, *Lord Stanley* presided; and a paper by *Richard Chambers, Esq.*, was read: the communication was on luminous insects; and tended to shew that the *ignis fatuus*, and other similar appearances, are to be referred to insects, and not to vapour. At the last meeting, which was held on *Tuesday* week, *A. B. Lambert, Esq.*, in the chair, a paper on the *Aeronautic Spider*, by *John Blackwall, Esq.*, was read: this paper is an addition to one by the same author already published in the 16th vol. of the *Society's Transactions*. The writer considers as fully established, that the ascent of these spiders is to be attributed to ascending currents of rarefied air.

MEDICO-BOTANICAL SOCIETY.

EARL STANHOPE in the chair. The reading of a paper which had been commenced at a previous meeting was concluded. It is entitled, “*Collections towards an essay on the medicinal properties of the plants composing the natural order Gentiana*,” by *J. P. Yosy, Esq.*, communicated in a letter to the *President*. The author, describing the characters of the order, passes on in review the different genera (twenty-seven in number) of which it is composed, enumerating under each the species which deserve the attention of the medical botanist. The following are his conclusions:—That of the 400 species, and upwards, which compose this order, more than one-tenth are or have been, in different countries, esteemed and employed as bitters in the cure or alleviation of diseases, or considered capable of being so employed. The author announces that he purposes to devote especial attention to this order in the course of his trans-Atlantic voyage.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE President in the chair. A paper was read, entitled “*An Essay on the preserved bodies of aboriginal Peruvian Indians*,” by *W. T. Carter, M.D.*, surgeon *R. N.*, communicated by *Dr. Granville, F.R.S.*; of which we shall present an epitome in a subsequent Number.

The following is an abstract of a paper lately read. The communication is entitled, “*On the elasticity of threads of glass, with some of the most useful applications of this property to various kinds of Torsion Balances*,” by *William Ritchie, Esq., F.R.S.*, &c.

The author proposes the employment of threads of glass in the construction of torsion balances, in place of the silver wire used by *Coulomb* for the measurement of minute electric or magnetic forces. He describes a galvanometer of his invention acting upon this

fuse to quote this critical opinion against our own information.—*Ed. L. G.*

principle, the intensity of the galvanic current being measured by the torsion of a slender filament of glass, to the lower end of which a magnetised needle is fixed at right angles. He also applies the same power to the improvement of the sensibility of the common balance for weighing minute bodies, by affixing to the beam a long glass thread horizontally in the axis of suspension, by the torsion of which, when the balance has been brought nearly to a level, the more accurate adjustments are to be effected. On the whole, he considers that glass, from its perfect elasticity, possesses decided advantages over metallic wires for the construction of instruments acting on the principle of torsion.

SOCIETY OF ANTIQUARIES.

MAY 6.—Mr. Hallam in the chair. A paper was read respecting a spur discovered in Dorsetshire; and the reading of Rich's account of Ireland was continued.

On Thursday, Hudson Gurney, Esq. in the chair. A communication was read respecting some Roman coins and other antiquities, including a fragment of fine red pottery, found near Newcastle. The reading of Rich's account of Ireland was again resumed, in which it was stated that the Irish rebels were much favoured and supported by the disaffected English, and that there had been an understanding between the governor of Ireland and Tyrone, through which the latter continued his criminal proceedings with impunity, while the governor and his family were freed from the plundering attacks of the rebels;—that, in fact, Tyrone was supplied at the expense of the government; for many who pretended to be friends of the government, obtained stores and ammunition on pretence of guarding their houses against the attacks of the rebels, and then privately conveyed them to Tyrone.

ROYAL SOCIETY OF LITERATURE.

[A fortnight ago we gave a brief outline of the proceedings at the anniversary meeting of the Royal Society of Literature, and have now the pleasure to lay before our readers the Address delivered upon that occasion by the learned and venerable President, the Lord Bishop of Salisbury. His lordship having condescendingly gratified us with the MS. from which he read this speech, we have it in our power to vouch for the accuracy of a document, not only interesting to the members of the Society, but to the whole literary world, and especially to Biblical scholars and those who desire to be informed respecting the early planting and preaching of the Christian faith in these islands.]

The Society, which his Majesty, in the first year of his reign, proposed to be instituted for the advancement of general literature, has now reached the tenth year of its institution, the eighth of its confirmation by the royal sign manual, and the sixth of its establishment by charter. The means of advancing literature proposed by the Society, and sanctioned by his Majesty, are described in the charter to be, by the publication of inedited remains of ancient literature, and of such works as may be of great intrinsic value, but not of that popular character which usually claims the attention of publishers—by the promotion of discoveries in literature—by endeavours to fix the standard, as far as is practicable, and to preserve the purity, of the English language—by the critical improvement of English lexicography—by the reading, at public meetings, of interesting papers on history, philosophy, poetry, philology, and the arts—by the publication of such of those papers as shall be approved by the Council of the Society—and by the assigning of honorary rewards to works of great literary

merit, and to important discoveries in literature.

The execution of these several means of advancing literature (as far as the resources of the Society rendered practicable) has been fulfilled in a way which we trust has not been unworthy of his Majesty's most munificent patronage;—1. by the publication of several successive fasciculi of hieroglyphics; 2. by the disposal of his Majesty's medals in reward of the eminent talents and valuable works of Mitford and Mai, of Rennell and Wilkins, of Stewart and Schweighauser, of Coxe and Crabbe, and of Roscoe and De Sacy; 3. by the election of Royal Associates, distinguished by valuable works in various branches of literature; 4. by the publication of the Society's Transactions; 5. by the recital, at the ordinary meetings, of interesting memoirs on history, geography, chronology, antiquities, philology, numismatic and hieroglyphic literature.

The council of the Society continue to receive valuable communications on these several subjects, as will appear from the secretary's report of the recitals at the ordinary meetings which have been held since the last anniversary.

One of the earliest objects of the Society was the hope of contributing to the critical improvement of our lexicography. That will never be perfected till the public are in possession of more ample materials for investigating the formation and progress of our language than we have at present. I cannot therefore omit this opportunity of recommending to the notice and encouragement of the Society the very interesting proposals which have been lately offered to the public (copies of which are lying on the table) for editing by subscription the *Wycliffite Versions of the Old Testament*; of which the editors observe, that the language of our forefathers may be said to exist entire in the Wycliffite versions, and that from them may be drawn copious and satisfactory illustrations of its formation and progress. Its great importance in a religious view, in which the public have a general interest, I need not here enlarge on. In a literary view it will be a sufficient recommendation of the undertaking to the Society, that it will essentially promote two chartered objects of its institution,—the publication of inedited remains of our ancient literature, and the critical improvement of our lexicography.

The learned librarian of the Vatican, who received one of his Majesty's medals of the first year, continues to deserve well of the republic of letters by the additions which his indefatigable researches are making to the general stock of classical and ecclesiastical literature. In our own country, Mr. Lemon will soon deliver to the public, under the sanction of the commissioners for the publication of state papers, (from those stores of his Majesty's State Paper Office, which he has brought from a condition of chaos to the most luminous and perfect arrangement)—the long-expected, important, and interesting documents of the reign of Henry VIII.

The British Museum, like all our public libraries, abounds in inedited materials of ancient literature, sufficient to satisfy the curiosity and to gratify with success the most ardent and indefatigable philologist. I particularise the British Museum, because I have been informed by one of its learned librarians, that among the oriental MSS. of Mr. Roch has been lately discovered a Syriac translation of a Greek work, the very existence of which had been more than doubted.

A history of inedited literature, which should bring under one view the notices of unpublished works of antiquity which are scattered through the catalogues of public libraries, and the writings of Cave and Fabricius, is a desideratum which, to a great extent, might be accomplished without much difficulty. But, as most public libraries are imperfectly catalogued, many tracts being often included in a volume under one title, the production and discrimination of these hidden treasures requires the knowledge and perseverance of Langfaire, Maillon, or Montfaugon; and for the detection and development of re-script MSS. is requisite the dexterity of Knittel, Barret, or Mai.

I cannot refrain from repeating a hope, shall I call it? or a wish, that hereafter the funds of our Society may be sufficient to employ some future Leland for the single purpose of forming such collectanea from our public libraries.

A history of *lost*, or *apparently lost*, literature, is also a desideratum in the annals of general learning, which, while it may excite regret for the loss of many valuable works, must impress us with gratitude, by comparison with what we do possess, and with wonder that so very few of the pre-eminently best have been lost, which will be evident from what we know were held to be the best in the days of Aristotle, Dionysius, and Quintilian.

The importance of a chronological view of the lost literature of the first four or five centuries may be exemplified in its relation to an important event, which, before I conclude this address, I hope to prove a great historical fact, expressly asserted by writers of the sixth and seventh centuries, but denied by some modern writers, on the presumption that the testimony of writers of the sixth and seventh centuries is of no more weight than the opinion of writers of the nineteenth.

In the second century alone, Fabricius enumerates between thirty and forty writers whose works are entirely lost, or known only by their fragments, besides many treatises of Irenæus, Clemens Alexandrinus, Melito, and Hippolytus, which are lost.

Of the third century, Fabricius notices very numerous lost works of Origen, Methodius, and Dionysius Alexandrinus, besides enumerating nineteen once celebrated names, whose works are altogether, or for the most part, lost.

Of the fourth century there are several works of Eusebius remaining in the libraries inedited, and so far at present lost to the public; and there were many considerable works of this father of ecclesiastical history, of which all are totally perished but their names; besides several other ecclesiastical historians of the fourth and later centuries, which are lost.

The view which I have thus taken of the lost literature of the first four centuries may induce us to repress our scepticism and distrust as to events of the first century which are asserted by writers of the sixth and seventh centuries, who possessed many sources of information which we do not. The importance which I attach to such a view of the lost literature of the primitive church may be exemplified in its relation to the first introduction of Christianity to the British Islands, which is expressly ascribed to the great apostle of the Gentiles by writers of the sixth and seventh centuries, and circumstantially confirmed by writers of the first, fourth, and fifth centuries. For instance, the founder of ecclesiastical history says, in the fourth century, that the Gospel was preached in the British islands by *some* of the apostles. Eusebius derived the materials of his historical knowledge from records

deposited in the library of Jerusalem, provided by the munificence of Constantine, and by Alexander, one of its bishops; a great part of which has long since perished, or lies concealed in libraries, awaiting the successful researches of some indefatigable Mai. In ascertaining, therefore, the credibility of events ascribed to the first century by writers of the fourth, fifth, sixth centuries, or of later periods, even where no contemporary testimony is extant, we must not forget that they may have possessed authorities once known to have been extant, but now lost or not known to us. When, therefore, we apply this criterion to the testimony of a Latin writer of the sixth century, and to a Greek of the seventh, and another of the fourteenth, who assert that St. Paul preached the Gospel in the British Islands, we might not unreasonably allow them the credit of having had adequate and express authority for their assertion, even if no such authority were now extant; for they assert no more than is almost necessarily involved in the general testimony of Eusebius. For if the Gospel was preached, as he affirms, in the British Islands by some of the apostles, the apostle of the Gentiles, who was personally commissioned to carry salvation to the ends of the earth, we might venture to conclude must have been one of them. But we are not confined to the probability of this almost unavoidable inference; for when two very learned writers of the fourth and fifth centuries, Jerome and Theodoret, affirm of St. Paul, that after his release from his first imprisonment at Rome, he preached the Gospel in the west, and went to Italy, and Spain, and other nations, even from ocean to ocean, and carried salvation to islands in the ocean,—we cannot doubt that so circumstantial an account of St. Paul's travels by such writers as Jerome and Theodoret, was founded on authentic documents, knowing, as we do, that many historical authorities were extant in their times, which are now lost. Irenæus, who was born before the death of St. John, says the apostle went to the ends of the earth—*ὡς πέρατων τῆς γῆς*, an expression which the ancients usually applied to the west, as we see by Hesychius's interpretation of Homer's *πέρατα γαίης* by *τὴν δύσιον*. Irenæus, in his expression *ὡς πέρατων τῆς γῆς*, evidently alluded to the commission which St. Paul received to carry salvation to the ends of the earth, *ὡς ἰσχυαίου τῆς γῆς*.

So far nothing seems to be wanting to a full historical proof that St. Paul preached the Gospel in Britain, but the authority of a contemporary witness; and that authority we have in the testimony of Clemens Romanus, who was the fellow-traveller of St. Paul, and had therefore the best possible means of knowing the truth of what he asserted. Clemens, then, says, in his first and genuine epistle to the Corinthians, that St. Paul was a preacher of the word, *κηρὺξ τοῦ λόγου*, in the east and in the west, and that he went to the end of the west, *εἰς τὸ πέραμα τῆς δύσεως*. Such being the direct testimony of Clemens, we have only to ascertain what is meant by the expression *τὸ πέραμα*, and what country in the time of Clemens was called the end of the west. One of the highest Greek grammatical authorities, Hesychius, interprets *πέραμα* by *πέλοσ* and *ἰσχυαίου*, the end, the extremity of any thing. We cannot therefore be mistaken in translating *τὸ πέραμα τῆς δύσεως*, the end, the extremity of the west; nor in applying the expression to Britain, if we recollect that Britain is called by Catullus *ultima occidentis insula*; and its inhabitants, by Horace, *ultimos orbis Britannos*. At a later period,

Theodoret places Britain *ἰσχυαίου τῆς ἰσχυαίου*, and the most remote from Rome of the three western provinces, Spain, Gaul, and Britain.

Whether, therefore, we regard the literal testimony of writers of the sixth and seventh centuries, or the circumstantial evidence of the course and direction of St. Paul's travels after his liberation from his first imprisonment at Rome, or the personal testimony of St. Paul's fellow-traveller to the extent of the apostle's travels in the west, we appear to have every thing necessary to constitute an historical proof that St. Paul preached the Gospel in the British Islands.

It may not be uninteresting to add, that we possess in the British Museum the original MS. from which this most valuable monument of Christian antiquity, on which I have been laying so much stress, was first printed; that it is, probably, a MS. of the fourth century, being a part of the MS. volume which contains the celebrated Codex Alexandrinus;—MSS. which carry with them this additional interest, that they reduce the inquiry into the truth of Christianity to the narrow compass of four centuries, making us, as it were, contemporaries of Eusebius, and Jerome, and Augustine, in an age not more distant from the first days of Christianity than the reign of Henry VII. from the present time.

But, to return from this digression, let us submit this historical fact, as I now presume to call St. Paul's preaching in Britain, to what is sometimes found to be a more rigorous criterion than any external evidence; I mean the internal probability and practicability of the fact—its consistency or inconsistency with the character and the commission of the apostle, and with the public circumstances of the Roman emperor in the apostolic age. The historian of the Acts of the Apostles informs us, in the words of St. Paul, that it was his special commission to carry salvation to the ends of the earth; and the purpose of his final commission, when in the west, at Rome, at the close of his first imprisonment, was, "that the Gospel might be fully preached by him, and that all the Gentiles might hear." When he was charged with this final commission, he had preached the Gospel very extensively in the east, and had finally taken his leave of those parts. There was nothing in the extent of a journey from Rome to the end of the west to deter even an ordinary traveller, and still less could it present any impediment to him who laboured more abundantly than the rest of the apostles; and the state of the Roman empire was singularly favourable to the propagation of the Gospel to the end of the west: for at that time, says Gibbon, "the public highways, which had been constructed for the use of the legions, opened an easy passage for the Christian missionaries from Damascus to Corinth, and from Italy to the extremity of Spain or Britain."

For trespassing so long on your patience in detailing what appears to me satisfactory evidence of an event most interesting to us as Christians, as Englishmen, as Protestants, personally identified with the ministry of St. Paul by writers of the first, the sixth, and seventh centuries, and circumstantially confirmed by grave and learned historians of the fourth and fifth century—I trust that I need make no apology, especially as it may be the last time that I may have the honour of addressing you at an anniversary meeting from this chair.

I must not, however, close this address without noticing the much lamented loss which the

Society has sustained, since the anniversary the year before last, by the death of two of its most distinguished members—one an actual, the other an honorary, member—the Archdeacon of Stafford and Dr. Young, who were truly literary characters; the former eminent for his learning, piety, taste, general knowledge, and suavity of manners; the other, for great original talents, which rendered him a "maker," an inventor, a discoverer—talents which would have done credit to any reward or all the rewards which the Society could have conferred upon him, had he lived to partake of them; the former having been, by his presence and counsel at our constituent meetings, very instrumental in the formation of the Society; the latter, by his peculiar skill in the development of the hieroglyphic characters, enabling the Society to give effect to the first of its chartered objects—the publication of *inedited remains of ancient literature*.

EGYPTIAN ANTIQUITIES.

THE great interest which must attach to M. Champollion's labours leads me to think that the following slight sketch of the results of his late expedition to Egypt may not be altogether unacceptable. At a meeting of the *Société des Bulletin Universel*, which took place on Tuesday the 20th, under the presidency of the Duc de Dondeauville, M. Champollion, who is one of its members, gave an account of his discoveries, and displayed some hundreds of drawings made under his inspection. These, however, form but a small part of his collection. He spoke in the highest terms of the zeal of the artists who accompanied him; and the beautiful execution of the drawings sufficiently testified their ability. M. Champollion considers that the subject of Egyptian architecture has been completely exhausted by the draughtsmen and savans under Denon; he has therefore confined himself to the examination of the bas-reliefs and paintings with which the exterior of the Egyptian buildings, and the interior of the tombs, are so richly decorated. These are all situated below the second cataract; beyond it the structures are uninteresting. He dwelt on the fact, that the tombs were ornamented with figures, explanatory of the calling or actions of their inmates. Thus, on that of the veterinary surgeon is exhibited a sick ox showing his tongue, while medicine is administered to another. The king's butler caused all the vessels of gold, silver, and enamel, which were once in his custody, to be sculptured on his tomb. Nothing can exceed the beauty of shape, and richness of ornament, shewn in the vases and patera. Many are drawn with bunches of flowers, to shew the purpose for which they were used. These of course rather injure the effect; but so perfect is the taste both of the form and the ornaments, that they might be thought to belong to the best times of Grecian art. The machines for raising water, the process of purifying it with bitter almonds, angling with rod and line, are represented exactly as they are practised in Egypt to this very day.

Next came a marvellous variety of animals and birds, painted with amazing exactness. The camelopard, different sorts of antelopes, a deer, elephants, hippopotami, a nondescript resembling the kangaroo, various sorts of geese, and the famous ibis. M. Champollion hopes, by the production of this drawing, to settle the long-disputed question concerning this bird. It appeared to me to be of the stork tribe, of moderate size, with pencilled plumage, brown and white.

But by far the most interesting part of his exposition was the description of the tombs of the kings and queens which he has explored. He possesses the portraits and accompanying hieroglyphical accounts of the actions of the Egyptian monarchs of many dynasties. Some of these kings M. Champollion recognises in the faces of the sphinxes and colossal statues made under their reign. Thus the Ethiopian Sabacon preserves his proper features, although he is clad in the Egyptian royal robes. The son of Alexander, who was recognised as king of Egypt, and Cæsarion, son of Cæsar and Cleopatra, are drawn as youths. The Ptolemies shew decidedly the Greek physiognomy, and may be verified by their medals. But the Roman emperors resemble monarchs on a signpost, utterly destitute of likeness to their originals; for the very good reason, that the artists never saw them. By the discovery of the female tombs, M. Champollion has been enabled to explain the Greek notion of the Ethiopian Memnon. The portrait of this prince bears the negro features strongly marked. M. Champollion has found the portrait of a negress queen, and by the accompanying explanatory hieroglyphics, it appears that she actually was the mother of this Ethiopian Memnon. Singular to say, on the tomb of Sheshah he found the names of the fenced cities which he took from Judah before he reached Jerusalem. The sepulchres of the mighty conquerors exhibit bas-reliefs of hundreds of yards in extent, explanatory of their victories. The different people whom they conquered are drawn with their characteristic features and national dress: Jews, Arabs, Indians, and Negroes. Twice occur paintings of the Ionian Greeks, quite agreeing with the *luxurians laois*, their long tunics, ornamented with the peculiar border so common on the ancient Athenian urns; and their names above, in hieroglyphics. The conferences of Sesostris with the Scythians before the battle; the battle itself; the sithed chariots of both armies, those of the Egyptians in good order, and beautifully formed—the Scythian in disarray and of ruder workmanship; the same monarch meeting his fleet on the banks of the Indian Ocean; and a variety of other remarkable subjects,—are set forth with a vigour of design, and precision of detail, such as we have hitherto thought the Greeks to have exclusively possessed. These Scythians, by the by, are true Tartars.

Next came a perfect Egyptian arsenal; bows, arrows, spears, swords, and sithes; ships of all descriptions, some like royal barges, blazing with gold: the gathering of the corn, the flax, and papyrus, the vintage, and the sowing, were all displayed in detail.

The *séance* was very interesting in other particulars; but the foregoing, in addition to your letters, will shew the extent of M. Champollion's own pretensions.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Second Notice.]

No. 181. *Palestrina; Composition.* J. M. W. Turner, R.A.—Here we have Mr. Turner on a very much better ground than in No. 7, (noticed in our last) *Pilate washing his Hands*;* although still not on his right one. In such performances as this, he may exhibit the richness and even the riot of his imagination with impu-

nity, or rather with applause. There is enough of nature to shew that attention to her has formed the basis of a structure full of poetical feeling, but exceedingly artificial withal. It is so long since Mr. Turner has wandered from the domains of fact into the regions of fancy, and our eye has now been so long used to the peculiarities of his adopted style, that when we are called upon to gaze on such splendid and dazzling works as the present, we are not surprised to find ourselves in a fairy-land, in which the objects themselves, and the hues with which they are invested, are entirely different from the realities to which we are accustomed in this sober and every-day world.

No. 40. *Psyche.* Sir W. Beechey, R.A.—Lovely and joyous, this lightly-tripping fairy form has sprung from the veteran artist's pencil, as if it were the creation of the most youthful fancy. Neither in colouring nor in execution is it at all inferior to the productions of Sir William's early days.

No. 53. *The Fall of Phaëton.* J. Ward, R.A.—In his treatment of this subject, Mr. Ward has displayed his usual knowledge of animal anatomy; and has thrown his horses into situations that call forth all his powers in their representation. The impression produced on the spectator is, nevertheless, an exceedingly painful one. Who can avoid shuddering when he contemplates the tremendous fate which evidently awaits the unfortunate charioteer and his steeds?

No. 72. *Morning; an Italian Composition.* A. W. Callcott, R.A.—If the last-mentioned picture has created any agitation in the mind, the present is better calculated than any work of art which we have for a long time seen, to soothe and calm it. Great as was our admiration of the talents displayed by Mr. Callcott in the exhibition of last year, we must say that we think he has in this beautiful production surpassed his former surpassings. The sweetness and tranquillity of the general character of the composition, the clearness and purity of the atmospheric and other tones, and the delightful execution, so completely in accordance with the fine conception of the work, entitle it to rank with the best landscapes of the greatest Italian artists that ever lived.

No. 80. *May Morning.* H. Howard, R.A.—This beautiful group of aerial and floating forms would, we think, have appeared to more advantage, and would have retained more of its visionary character, had the substantial human beings who are addressing it been omitted.

No. 115. *A Dog of two Minds.* W. Mulready, R.A.—The meaning of this picture is not easily to be discovered; and when discovered is far from pleasing. In point of execution, it is an admirable specimen of Mr. Mulready's talents.

No. 144. *Shylock and Jessica.* G. S. Newton, A.—A charming little work. The keen and suspicious glance of the Jew, and the demure composure of his daughter, are very amusingly contrasted. The whole is richly, but harmoniously coloured.

No. 163. *The Bower of Diana.* T. Stothard, R.A.—Although recently executed, as beautiful and imaginative a composition as this veteran and highly-gifted artist ever produced.

No. 192. *Scene from the Red Rover.* W. Daniell, R.A.—A print from this admirable performance has already been noticed in the *Literary Gazette*; but the qualities of art which the picture exhibits are still more deserving of

encomium. The quiet and solemn light of the moon, as contrasted with the dreadful catastrophe, is highly poetical and awful: as for the possible seamanship of the piece, we are incompetent judges, never having been out in such a storm. As landsmen, we should surmise that few sailors ever were; and if they had, they must have *let go the painter*; so that we must, after all, have had a picture of imagination rather than of reality.

No. 197. *The Orphans.* J. Wood.—Although there is perhaps too much display of tattered costume, this is a work which does great credit to Mr. Wood. He has perfectly succeeded in the representation of silent but expressive grief.

No. 19. *Dell Scene, in the Park of the Right Hon. the Countess of Dysart, at Hattingham, Suffolk.* J. Constable, R.A.—As powerful, fresh, and sparkling as Nature herself; and free from any unpleasant predominance of Mr. Constable's peculiar mode of handling.

No. 81. *A Maltese Ass and Mule Foad, with her former Ass Foad in the Background.* J. Ward, R.A.—Frequently and highly as we have admired Mr. Ward's talents in animal painting, we do not remember ever having met with a more exquisite specimen of them than this characteristic and masterly little picture.

No. 135. *Venus rising from her Couch.* J. Ward, R.A.—Badly drawn, badly coloured, and, what is much worse, indelicate. Why are the modest and lovely young females who daily grace the rooms of Somerset House with their presence, to have their feelings outraged, and blushes called into their cheeks, by a work like this,—placed too in a situation in which it cannot possibly escape near notice? We are sorry to add, that it is not Mr. Ward's only offence in the present Exhibition, and that he is not the only offender.

(To be continued.)

WATER-COLOURS' EXHIBITION.

[Third notice: Conclusion.]

No. 323. *The Captain's Story.* G. Cattermole.—A story told in real life with the spirit which this performance exhibits, could not fail to excite great attention. Whether the artist means to illustrate a tale already told, or to throw out a hint on which to found a new one, we know not; but his drawing is well calculated to call up images of marvels and adventures, such as the Red Rover himself might describe; or such as Mr. W. Daniells has painted from his description.

No. 340. *The Recess.* J. F. Lewis.—A brilliant assemblage of costly objects, splendidly, yet harmoniously, coloured.

No. 353. *Rembrandt and his Models.* J. Stephanoff.—In this beautiful and highly-finished production we recognise to the fullest extent one of those striking examples of depth of tone and colour, which, as we have already observed, give to this Society the right to call themselves "Painters." As a work of art, no better subject could have been selected for displaying the rich variety of Mr. Stephanoff's pencil. At the same time it must have presented difficulties not easily to be overcome. The figure of Rembrandt appears like that of an enchanter, with his magic wand, ready to marshal and call into form the splendid but chaotic mass of materials by which he is surrounded. This performance ought scarcely to lose any of its value in the eyes of the artist or of the amateur, because it may not be regulated by the strictest rules of composition; for, tried by that test, what would become of Zoffany's justly celebrated picture of the Florence Gal-

* A wag, who looked long at this composition without being able to make head or tail of it, (as was the case with most spectators), retired, saying, he fancied "a pilot washing his hands" was a fine marine subject.

lery, and many other works of a similar character?—While contemplating a picture of such power and richness, we cannot help diverting to the invaluable assistance which water-colour painters have derived from the recent improvements made in the pigments used by them; improvements which not only impart brilliance to their colouring, but ensure its durability. To the persevering and successful experiments of Mr. George Field, and other men of science, it is owing, that the beauties of the water-colour paintings of the present day are not like those of the flowers of the garden,—the pride of the season, but which speedily fade and perish.

No. 32. *View near Skiddaw, Cumberland.* H. Gastineau.—Just the spot which a poet or a painter would select for the illustration of the romantic and picturesque. Harmoniously and beautifully executed.

No. 31. *Loch Corouisk, Isle of Sky.* G. F. Robson.—We have seen many twilight effects from Mr. Robson's pencil, but none to which the word "intensity" has been so applicable.

No. 35. *Church of Notre Dame, Dresden.* S. Prout.—One of Mr. Prout's most successful productions. Not only are the forms admirably delineated, but an atmosphere is introduced, which great practice and skill alone could have represented with such fidelity.

No. 51. *Distant View of Rye, with Cattle going to Water.* T. Fielding.—A fine Cuyplike effect.

No. 72. *Landscape, with a Timber-waggon.* S. Austin.—"Landscape" is rather too diffuse a term to apply to close scenery like this, which has the character of a composition, well studied in all its parts from nature, and admirably put together.

No. 104. *Cottage, Caernarvon.* G. Pyne.—Great talent is here displayed in colouring and execution. A little more space in the scene would have more advantageously set off the principal object.

No. 338. *London Bridge, 1730.* G. Pyne.—Reminiscences like this, so treated, are equally gratifying to the antiquary and the amateur. These are productions of infinite promise from a young artist;—of a good stock, however.

We cannot conclude our notice of this truly interesting Exhibition without observing, that the taste evinced by Miss Byrne and Miss Scott in their beautiful representations of fruit and flowers, greatly contributes to the production of that variety which is so essential to every collection of works of art.

SIGNOR CAMPANILE'S PICTURES.

WE have had much gratification in viewing two pictures by Signor Campanile, a Roman historical and portrait painter of distinguished talents, now in London. The one represents the Adoration of the Holy Sacrament in the Paulina Chapel in Rome, on Maundy Thursday; the other the Sermon preached on the Piazza Colonna in Rome, during the Jubilee of 1825. The former, especially, is a magnificent work, and gives an excellent idea of one of the most splendid and imposing ceremonies of the Romish church, performing under circumstances which materially add to its interest and effect: the latter, besides being very sweetly executed, is curious, as exhibiting the various costumes of the environs of Rome. It appears that these two fine performances are to be disposed of by chance, as soon as a sufficient number of subscribers have set down their names for that purpose.

ORIGINAL POETRY.

FIRST AND LAST.—NO. IV.

The First and Last Prayer.

"PRAY for me, mother! pray that no blight
May come on my hopes and prospects bright;
Pray that my days may be long and fair—
Free from the cankering touch of care;
Pray that the laurels I grasp at now
May live ere long around my brow;
And pray that my gentle ladye-love
May be fond as the nightingale, true as the
dove."

The mother knelt by her own hearth-stone,
With her hand on the head of her only son,
And lifting up her glistening eye,
Prayed for all blessings fervently;
And then she took one lock of hair
From his manly forehead smooth and fair,
And he kissed her cheek, and left her side
With a bounding step and a smile of pride.

"Pray for me, mother! pray that ere long
My soul may be free as a wild bird's song,
That away on the wings of the wind is driven,
And goes to rest with them in heaven:
Pray for it, mother!—nay, do not weep!
Thou wast wont to bless my infant sleep;
And bless me now with thy gentle breath,
Ere I sink away in the sleep of death."

The mother knelt by his side again—
Oh, her first prayer had been all in vain!
His ladye-love had been false to him—
His fame in slander's breath was dim:
She looked on his altered cheek and eye,
And she felt 'twas best that he should die;
Then she prayed for his death in her fond de-
spair, [prayer!
And his soul passed away with that last wild
Worton Lodge, Isleworth. M. A. BROWNE.

SKETCHES OF SOCIETY.

PUBLIC DINNERS.

The Artists' Benevolent Fund.—The Anniversary on Saturday was very numerously attended: above two hundred sat down to dinner at the Freemasons' Tavern, Lord Rosslyn in the chair; the Duke of Wellington being prevented by his official duties. The day passed off with much social enjoyment, and an ample subscription rewarded the exertions of the president and stewards. We rejoiced to learn, from the secretary's report, that the Fund is rapidly augmenting; and it appeared to us that the relief required was uncommonly small—the annual expenditure in that way being little more than 100l.

The Literary Fund.—On Wednesday the friends of this admirable charity met at the same place; his Grace the Duke of Somerset, president, in the chair, supported by Lord Milton, the President of the Royal Academy, Mr. Cam Hobhouse, Mr. Gally Knight, Mr. E. Lytton Bulwer, Mr. A. Spottiswoode, Mr. Sotheby, Captain Marryat, Mr. Lockhart, Mr. Croly, Mr. Cunningham, and other distinguished individuals. The company, above 150 in number, were addressed by the chairman, Lord Milton, Mr. Hobhouse, Mr. Sotheby, Mr. Knight, and Messrs. Croly and Burn (as registrars), who severally advocated the cause of the Institution, and went through the forms usual on such occasions. Above 500l. was announced as the amount of the subscription; and it augured well of the Society to observe among its supporters the principal publishers of the metropolis.—Mr. Longman, with others of the partners of that extensive house; Mr. Murray; Messrs. Colburn and Bentley; Mr.

Rivington, Mr. Whittaker, &c. &c. There were also many persons of literary name present; and the meeting broke up after enjoying a very gratifying evening, with a pledge from the majority to repeat the pleasure at Greenwich on the 23d of June.

MUSIC.

WE neglected last Saturday to notice Mrs. Anderson's concert, at which that lady's exquisite performance on the pianoforte (especially a concerto in A minor, and a grand duet by Hummel,) gained her immense applause, justly merited by her pre-eminent talents and excellent character. The whole entertainment was delightful. Hummel (who, they say, is as eager for profit as praise,) distinguished his school to great advantage. A M. Ponchard made his first appearance with no striking effect; and the sweet voice of Madame Stockhausen happily relieved the graver performances, though Malibran, Lalonde, and De Begnis, shared in the harmony of the day.

On Wednesday, Mr. Cipriani Potter's concert at the King's Theatre also presented a delicious treat to amateurs. At Mr. F. Cramer's, on the preceding week, we have to notice the very successful *début* of a native artist, young Parry, the son of our favourite Welsh composer and *flageoletist*. He sang in a good English style, and was much applauded.

DRAMA.

AT the King's Theatre, Cimarosa's *Matrimonio Segreto*, for Donzelli's benefit, on Thursday, introduced Lablache to an English audience. The opera was excellently cast, and went off with great *éclat*. The *débutant* is an admirable comic actor, as well as capital singer; and being well sustained by Malibran, Donzelli, Lalonde, Santini, and others, the evening was justly the most brilliant of the season.

At the other theatres, benefits have produced some miscellaneous novelties, but nothing requiring criticism. Miss Paton, the queen of song, had an overflowing bumper on Thursday, and no house could hold an audience equal to her public deserts. The boy Burke, at the Surrey, had also a full benefit on Tuesday, and astonished the natives by the versatility of his precocious talents.

Florence, April 23, 1830.

THE English society at Florence have just enjoyed a treat of which it would be difficult to give you an adequate description. You must have heard of the private theatre of Lord Burghersh,* and the extraordinary success of the Italian operas of his own composition, which he has brought out upon it. It was known that since the production of the last of these, namely the *Fedra*, he had employed himself in writing to the old opera of *The Siege of Belgrade*; and of course the greatest anxiety prevailed amongst his countrymen to see how he would treat an English subject, and particularly one which in England had been so effective. It was understood that Lord Burghersh had never heard the old music of this drama; and the proof (as far as the absence of all similarity) was certainly clearly afforded at the production of this very delightful opera, which took place a week ago, and was repeated last night. The plan of the old drama has in some degree been changed: the parts of Catherine, Peter, and Ismael, have been very much augmented, and several additions have been made to the other parts of

* We have spoken of it repeatedly in the *L. G.*—Ed.

Ghita and Leopold. The consequence of this is, that the three parts of the ladies are become nearly equal, Catherine and Lilla being the two high sopranos, and Ghita the lower one.

The Seraskier remains the leading part amongst the men; but the part of Peter has been very much increased, and produced great effect. I send you the cast of these as they were filled up from amongst the amateurs residing here; and I assure you it boasts of talents you rarely see brought together on any stage. And now for some description of the opera. It was most successful, delightfully so: the music is entirely original; it has not the least resemblance to Lord B.'s other compositions; it is of as different a style from the *Fedra* or from the *Scompiglio*, as was his *Mass*, produced last year, from the operas he had formerly written. It is English music, but brought together with all the science, feeling, and taste, of his other productions:—but to be judged of, you must hear it; and I hope it will not be long before it may be produced on a larger theatre. I make no comparisons with other music or with other composers; but feel satisfied the merits of this will establish it a first favourite wherever and whenever it is performed. Lord Burghers's triumph has been complete throughout this opera. His Italian compositions had already been crowned with the most eminent success; but in the present instance it was thought that the English language, whatever might be the merit of the music, would sound hard to a Florentine audience. There never was a greater error; and in common with every Englishman present, I confess I felt a satisfaction not easily to be described, at the refutation of a sentiment which I have too often heard in the mouths of Englishmen, that our language was not adapted for music:—now, upon this occasion, there was not an Italian who did not admit, generally to their great surprise, that in the whole opera they had not heard a sound which was harsh or disagreeable, and that the language appeared to them in singing as harmonious as it was possible to desire. As this perhaps will be the only occasion when a test of such a nature can be had, as it is hardly possible, under any other circumstances, that an English opera should be produced before Italians, I could not refuse myself the pleasure of giving you these details.

VARIETIES.

Bridges.—Suspension bridges are increasing in number in France. A bridge of this description, recently finished at Forçals, on the Rhone, is mentioned as a *chef-d'œuvre*. Within the last six months a great improvement has been made in the manufacture of the chain cables used for this purpose. By a new process, the iron-founders are enabled to manufacture chains of equal strength and elasticity to those of Great Britain.

Ferdinand VII.—A colossal statue of this monarch, by M. Chardigny, a French sculptor, is about to be erected at Barcelona.

Appointment.—At the last sitting of the Academy of the Fine Arts in Paris, M. Granet was chosen to fill the place become vacant by the death of M. Taunay.

Elections.—At the last sitting of the Academy of Inscriptions and Belles Lettres in Paris, the following persons were elected to fill the six vacant seats: MM. Thurot, Champollion jun., Thierry, Lajard, Joubert, and Mionait.

Etruscan Antiquities.—A letter from Rome announces that some interesting discoveries

have been recently made at Tarquinia, Corneto, and other places in ancient Etruria. Eight or ten *tumuli* were opened to the west of Tarquinia. The painting of the interior of these sepulchral chambers was in good style, and in high preservation; but the sculpture on the outside was very inferior: several vases of large dimensions, and in the best style, covered with fabulous animals, were discovered in the tombs. Near Corneto were found two stone coffins, with couchant statues, which appear to have belonged to the time of the Lower Empire.

Bronze Colossal Elephant: Paris.—The enormous bronze elephant, which was originally intended to be placed as a fountain on the site of the Bastille in Paris, is now, it seems, to be fixed on a pedestal, in a vacant space in the *Champs Elysées*; M. A. Malavoine, the architect, having obtained from the city of Paris, for eighty years, the grant of the land in question, without rent, on condition of its reverting with the statue to the city, so as to become a national monument. The pedestal will be about 50 feet in height, and the castle on the back of the elephant will be at an elevation of 100 feet from the ground. Staircases to ascend to the castle will be made in the legs of the elephant, and the body will be fitted up elegantly as a saloon: persons entering the elephant to pay one franc for each admission: from this fee the architect expects to derive a large income.

The American Cow-tree.—Mr. Fanning, who was in England last summer, and brought with him some specimens of the cow-tree, the first ever seen here (but which unfortunately died), together with a drawing of the tree, and some of the milk dried in the form of lozenges, has written a letter, dated from Carcasses, in the month of February this year, to a gentleman to whose patronage he was much indebted whilst in London, in which he states that he was on the point of setting out for that part of the country called the *Silla*, for the purpose of procuring new specimens of this extraordinary plant, the existence of which, though attested by Von Humboldt, has been called in question by some persons. Mr. Fanning had great hopes that he should be more fortunate this time, and that the plants would arrive safe. He says they will reach England early in the summer.

Patent Safety Lock.—We have been favoured with an inspection of a new safety or protector lock, apparently of great merit. It has been declared that, however complicated may be the wards or interior of a lock, it cannot be called perfectly secure from an ingenious artist. The inventor of this new lock therefore proposes to guard the key-hole, so that any attempt to force or pick the lock, must of necessity be discovered. For this purpose a small box or chamber, with a lid similar to a snuff-box, is affixed over the front of the lock, with a key-hole corresponding in size with that of the lock. The lid of this chamber being open, the bolt is turned, and the key withdrawn in the usual way; after which a small paper label is laid over the key-hole, and the spring cover shut down, so as to prevent any possibility of its removal except by violence. The person having the key can thus, in all cases, see, before he again opens the lock, whether any attempt has been made to open it during his absence. It is the invention of a Mr. Gottlieb, who holds an appointment in the Excise Office, and is, we are told, patronised by the board.

Polish Chain Bridge.—A suspension bridge is about to be constructed across the Vistula, at Warsaw.

Carcasses.—In the Central Society of Agriculture in France a prize of 1,000 francs was adjudged to M. Payen for the best paper on the means of using the carcasses of domestic animals for agricultural purposes. The Society has offered a prize for the next year on the same subject.

Prisons.—The number of persons in confinement on the 31st December last, in the different prisons of the Netherlands, was 6,499, of whom 5,426 were males, and 1,173 females; being, as compared with the population, 1 to every 932.

Berlin.—A new museum of painting has been built at Berlin on a very splendid and extensive scale. It will be opened shortly, with a rich collection of paintings and sculpture. In this museum the *chefs-d'œuvre* of painting are not suspended, as in this country; but are placed against screens, which form as it were alcoves in different parts of the room.

Population of Rome.—According to the late census, the population of Rome is now 144,541, being an increase in one year of 2,221. There are in the "Eternal City" 33,680 families, 35 bishops, 1,490 priests, 1,964 monks and friars, and 2,300 nuns. The Catholic inhabitants are 107,060; the remainder consists of Protestants.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XX. May 15.]

The Rev. John Romney is, we hear (and he is not sure that we have not mentioned it before), about to publish *Memoirs of the Life and Works of his Father, George Romney, the eminent painter.*—M. Lamartine announces new poems, under the title of *Harmonies Poétiques et Religieuses.*

TO CORRESPONDENTS.

Hesperus, * * * to a Maniac, and many other poetical favours, are unavoidably declined.

We have not read Mr. Babbage's book against the Royal Society, having only incidentally seen it on a bookseller's counter. It seemed bitter enough, and we shall probably be induced to canvass its opinions.

The Report of the Royal Institution, an interesting Letter from Calcutta, and many other papers, are postponed: the pressure of novelties upon us is at present very heavy.

The lines on Bill Bury, the undertaker (who, according to the writer, has philologically transmitted his proper name for the act of interment), want novelty of point, though they have plenty of mere pun. We are tired of mutes dwelling on the mutability of life, and of serious indispositions carrying people to the grave; of undertaking persons' cases after the doctors had given them up, and of dead men being sailors because they were in the shrouds:—all these are lively jokes no longer, but dead and buried by Joseph (Miller) and his brethren.

ADVERTISEMENTS

Connected with Literature and the Arts.

THE TWENTY-SIXTH ANNUAL EXHIBITION of the SOCIETY of PAINTERS in WATER COLOURS, is now open, every Day, from Nine till Seven, at the Gallery, Pall Mall East.

SOCIETY of BRITISH ARTISTS. The Exhibition for the Sale of the Works of living British Artists, in Suffolk Street, Pall Mall East, is now open to the Public, from Nine till Six.

TOURNAMENT of the FIELD of the CLOTH of GOLD, 15, Oxford Street, near Charles Street, Soho Square.

LIVERPOOL EXHIBITION, 1830.—All Works of Art intended for the ensuing Exhibition must be sent, addressed to the Liverpool Royal Institution, Colquitt Street, to be delivered on or before the 27th July.

PLYMOUTH EXHIBITION of PICTURES. The Twelfth Exhibition of Paintings and Drawings will Open, at the Athenæum, Plymouth, on Monday the 18th day of July next.

MR. FAWCETT having signified his intention of quitting the Stage at the Close of the present Season, the following professional Gentlemen held a Meeting this day, in the Theatre—

Resolved.—That the Gentlemen present do form themselves into a Committee for the purpose of assisting Mr. Fawcett, by every means in their power, on his Benefit, Thursday, May 20, being the last Night of his Appearance—that his retirement may be as brilliant as his professional talent and private worth have been conspicuous.

Resolved.—That as Miss Fanny Kemble and Mr. Mathews have already kindly volunteered their services on this occasion, that application be made to other distinguished Members of the Profession, to assist in varying the Entertainments, and enable the Committee to carry into effect the desirable object which they have in view.

Resolved.—That as Miss Fanny Kemble and Mr. Mathews have already kindly volunteered their services on this occasion, that application be made to other distinguished Members of the Profession, to assist in varying the Entertainments, and enable the Committee to carry into effect the desirable object which they have in view.

THE EARL of MORTON'S COINS. By Auction by Mr. SOTHEY and SON, Wellington Street, Strand, on Thursday, June 3, and Five following Days (Sunday excepted), at Twelve o'Clock, a most extensive and valuable Collection of Greek and Roman Coins and Medals, in Gold, Silver, and Copper, including a few Modern; formed by the Right Hon. James Earl of Morton, who died in 1764, during a Residence on the Continent, under the Guidance and Advice of the Abbé DuRoi.

This Collection is particularly rich in choice Gold and Silver, both Greek and Roman, many of which are in a high state of preservation. The Series of Imperial Greek, in particular, may be considered the most extensive and valuable ever offered to public sale in this country.

One Hundred beautiful Vases for Twenty-five Shillings. This day is published, No. XXV. of WESTALL'S GREAT BRITAIN ILLUSTRATED, containing Four finely engraved Views, by Edward Finden, Esq. of Chester, Rydal Lake, Stonehenge, and Edinburgh Castle, with Descriptions of each. Price 1s.; or India Proof, 2s.

"We never saw any thing before so remarkably beautiful at such very reduced prices."—Gent's Magazine.

A CATALOGUE of the LIBRARY of the COLLEGE of St. MARGARET and St. BERNARD, commonly called Queen's College, University of Cambridge. Medically arranged, by the Author.

THE LIFE of THOMAS KEN, deprived Bishop of Bath and Wells, viewed in connexion with the Public Events and the Spirit of the Times, Political and Religious, from his Birth to his Death; including some Account of the Life of Morley, Bishop of Winchester, his first Patron, and the Friend of Isaac Walton, Brother-in-Law to Ken.

AN ACCOUNT of the SHIP LIFE-BOAT. By JAMES MATHER, Esq. Member of the Wernerian Society, Member of the Royal Physical Society, Honorary Member of the Society of Arts, Scotland, &c.

Member of the Wernerian Society, Member of the Royal Physical Society, Honorary Member of the Society of Arts, Scotland, &c. Of the various plans for the important object of saving human life in cases of shipwreck, we regard the one proposed in the ingenious pamphlet before us, as the most simple, cheap, and efficacious. In this case the crew will not be left to the chance of assistance from the shore, as they are by the inventions of Captains Manby, Greathead, &c.—Edinburgh's Literary Journal.

Copyright. Price 10s. 6d. dedicated, by permission, to the Lord High Chancellor, A TREATISE on the LAWS of LITTE-RARY PROPERTY: comprising the Statutes and Musical Compositions, Engravings, Prints, &c. including the Piracy and Transfer of Copyright, with an Historical View and Disquisitions on the Principles and Effects of the Laws.

A FOURTH SERIES OF OUR VILLAGE.

By MISS MITFORD. In post 8vo. price 10s. 6d.

Dramatic Scenes, post 8vo. 10s. 6d.

Julian, and Foscarl, Tragedies, 8s.

Our Village, new edition, 3 vols. 25s.

2. The Picture of India; exhibiting, in a brief, yet clear and graphic manner, the Geography, Topography, History, Natural History, Native Population, and Produce, of that most interesting Portion of the Earth; with a Particular Account of the European Settlements, with the present State of the British Territories, and an impartial View of the India Question, with reference to the impending Discussion on the Renewal of the Charter. In 2 small 8vo. vols., with many appropriate Illustrations, 10s. in handsome cloth boards.

3. Traits of Scottish Life; Pictures of Scenery and Character. In 3 vols. post 8vo. 7s.

4. The Picture of Australia. In post 8vo. with Map, 10s. 6d.

The book before us contains the fullest and most satisfactory information concerning the natural history, meteorology, products, statistics, and every other desirable point of knowledge. It seems to be very impartial in its accounts, and contains such a multiplicity of curious, instructive, and interesting matters, that we know no geographical work of superior character. —Gentle's Magazine.

5. The Cambrian Tourist; or, Post-Chaise Compendium through Wales; containing curious Sketches of the Welsh Territory, and a Description of the Manners, Customs, and Games of the Natives. In a neat pocket volume, the 6th edition, corrected and considerably enlarged, with View and Maps, 8s. bound.

6. A general Biographical Dictionary. By John Gorton. In 2 vols. 8vo. containing 2150 pages of close print, 35s. cloth.

Mr. Gorton's publication is altogether one of great excellence, calculated to beget a large number of subscribers, and deserving extensive popularity. We may also mention, that it is sufficiently large to contain every thing necessary, but not too extensive for the ordinary purposes of study, filling in this respect, an open space in the fields of biographical literature. —Athenæum.

7. Illustrations of Masonry. By the late William Preston, Esq. Post-Master of the Lodge of Antiquity, the 14th edition, 12mo. with important Additions, Alterations, and Improvements, by the Rev. G. Oliver. 8s.

9. The Principles of Gothic Architecture, elucidated by Question and Answer. By Matthew Bloxham. In folscep 8vo. with numerous Engravings. 4s.

10. The Art of Invigorating and Prolonging Life, by Food, Clothes, Air, Exercise, Wine, Sleep, &c.; or, the Invalid's Oracle, containing a large number of pointing out agreeable and effectual Methods, to prevent and relieve Indigestion, and to regulate and strengthen the Action of the Stomach and Bowels. To which is added, the Pleasure of making a Will. In 12mo. the 6th edition, very greatly augmented and improved. 7s. 6d.

11. Memoirs of Mrs. Ann Judson, late Missionary to Burmah, including a History of the American Baptist Mission in the Burmah Empire. By I. D. Knowles. 18mo. with Portrait and Map. 3s. 6d.

The 6th edition, enlarged, in 1 vol. 18mo. price 7s. 6d. plain, or 12s. coloured.

CONVERSATIONS ON BOTANY, with Twenty-one Engravings.

The object of this work is to enable young persons to acquire a knowledge of the vegetable productions of their native country; for this purpose the arrangement of Linnaeus is briefly explained, and a native plant of each class (with a few exceptions) is examined, and illustrated by an engraving; and a short account is added of some of the foreign species. Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had,

Conversations on General History, from the Creation of the World to the Birth of Christ. In 12mo. 10s. 6d.

No research seems to have been spared, and the author has placed the information acquired from the most authentic sources in a very luminous point of view. —Literary Gazette.

Conversations on the English Constitution, 12mo. 8s.

Conversations on the Animal Economy, by a Physician. 3 vols. 12mo. illustrated by Plates, &c. 10s.

In 18mo. price 2s. 6d.

THE CHRISTIAN HOUSEHOLDER;

or, Guide to Family Prayer. By the Rev. SAMUEL RICKARDS, M.A. Late Fellow of Oriel College.

J. Parker, Oxford; and Rivingtons, London.

Price 8s.

A LECTURE ON THE THEORY OF MORAL OBLIGATION; being the First of a Course of Lectures delivered before the University of Oxford in Lent Term 1830.

By WILLIAM MILLS, B.D. Fellow of Magdalen College, Professor of Moral Philosophy.

Oxford: Sold by J. Parker; and Messrs. Rivington, London.

Library of Useful Knowledge.

GEOMETRY, Plane, Solid, and Spherical, in Six Books. To which is added, in an Appendix, The Theory of Projection, so far as it is auxiliary to Geometry, with an Account of the Plane Sections of the Cone and Cylinder, in which certain general Properties of the Conic Sections are demonstrated by help of the foregoing Theory. Also a copious Analytical Index.

London: Published under the superintendance of the Society for the Diffusion of Useful Knowledge, by Baldwin and Cradock, Paternoster Row.

In compiling the present Treatise, the leading object has been to furnish the "Library of Useful Knowledge" with a body of geometrical information, in which nothing might be wanting that seemed necessary or desirable, whether to the correct explanation and solid establishing of the science, or to its application in the different branches of natural philosophy. Such an object, it is plain, can never be accomplished by a mere elementary course, which has solely in view the instruction of beginners; it implies many discussions and distinctions, many theorems, scholia, and even whole sections of matter, which it is better that a beginner should pass by, while he confines his attention to the few and simple but important propositions to which perpetual references is made, and which may be regarded as constituting the high road of geometry. At the same time, the purposes of instruction have not been lost sight of; and accordingly, while the present work may be considered sufficiently extensive to answer every useful purpose, it will be found also to include an elementary course of study complete in itself, by the help of which a person totally unacquainted with the subject may become his own instructor, and advance by easy steps to a competent knowledge of it.

Elegant Literary Presents.

THE SEASONS, by Thomson.—The Minstrel, by Beattie.—The Task, Table Talk, and Minor Poems, by Cowper.—Milton's Paradise Lost, 2 vols.; Paradise Regained, and Minor Poets, 2 vols.—The Shipwreck, by Falconer, and the Poems of Goldsmith and Gray; each Volume embellished with Six Engravings, from the Designs of Mr. Westall, and together forming the most unexceptionable, elegant, and appropriate Volumes hitherto offered as presents for Young Persons.

History of the Jews Examined.—Price 2s. 6d.

MILLMAN'S HISTORY of the JEWS Examined and Refuted on the Evidence of the Scriptures. "Speak thou the things which become sound doctrine."—Titus, ii. 1.

"Take heed what you hear."—Matt. iv. 23. James Kidgway, Piccadilly; and of every Bookseller.

Published by Effingham Wilson, Royal Exchange. Price 2s.

MORAL PHILOSOPHY; an Utilitarian Catechism. Of what philosophical sect or party are you? I am of the humble and obscure sect of truth seekers, little enough patronised in high places; but in default of any better baptism, you may call me an Utilitarian.

Architectural Library, 59, High Holborn. Just published by J. Taylor.

THE STEAM ENGINE. By THOMAS TREDGOLD. Comprising an Account of its Invention and Progressive Improvements, with an Investigation of its Principles, and the Proportion of its Parts for Efficiency and Strength, detailing also its application to Navigation, Mining, impelling Machines, &c. and the Results collected in numerous Tables for Practical Use. Illustrated by Twenty Plates and numerous Woodcuts. In 4to. price 21. 2s. boards.

Where may be had, 1. A Practical Treatise on Rail-Roads, with Plates. 8vo. price 10s. 6d. boards. By T. Tredgold.

2. A Description of a New Method of Propelling Locomotive Machines, and of Communicating Power and Motion to all other kinds of Machinery. By W. Mann. 8vo. price 1s. 6d.

In 9 vols. 8vo. price 15s.

MEMOIRS of a GENTLEWOMAN of the OLD SCHOOL. By a LADY. London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

REMARKS on the CONDUCT of the NAVAL ADMINISTRATION of GREAT BRITAIN since 1815. By a FLAG OFFICER. Fas cut et ab hoste doceri.

London: Sold by James Kinney, Piccadilly; and all Booksellers.

Burke's Works complete, with General Index. In 16 vols. 8vo. price 61. 17s. boards.

THE WORKS of the Right Honourable EDMUND BURKE. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

* * * A few Copies may be had on royal paper, price 91. 12s. in boards. Several of the later Volumes, in demy and royal 8vo. and 4to. to complete Sets.

BOOKS IN THE PRESS. THE EDINBURGH REVIEW, No. 101, will be published on Monday the 17th.

Contents: Art. I. Naval Tactics; Breaking of the Enemy's Line, Sir Howard Douglas and the Quarterly Review.—II. Sir James Turner's Memoirs of his Life and Times; Scottish Covenanters.—III. Public Schools of England; Eton.—IV. Transactions of the Astronomical Society of London.—V. Scottish Judicial Reforms, and Law of Scotland and England.—VI. Mr. Godwin; Cloudesley, &c.—VII. Mr. Beleruden Ker's Question of Registry, or no Registry in England.—VIII. Duty on Coal, and the Coal Trade.—IX. Mr. Robert Montgomery's Poems; and the Modern Practice of Puffing—X. Finance; the Budget.—XI. Delavigne's Marino Faliero, and the Anglo-French Drama.—XII. Gleig's Life and Correspondence of Sir Thomas Munro.

Printed for Longman, Rees, Orme, Brown, and Green, London; and Adam Black, Edinburgh.

IRELAND and its ECONOMY; being the Result of Observations made in a Tour through the Country in the Autumn of 1829.

By J. E. BICHENO, Esq. F.R.S. Sec. Linn. Soc. &c. &c. John Murray, Albemarle Street.

CONVERSATIONS with LORD BYRON on RELIGION, held in Cephalonia, a short time previous to his Lordship's Death.

By the late JAMES KENNEDY, M.D. Of H. B. M. Medical Staff. John Murray, Albemarle Street.

LIFE and ADVENTURES of GIOVANNI FINATI, Native of Ferrara, who, under the Name of Mahomet, made the Campaign against the Wahabees, for the Recovery of Mecca and Medina; and since acted as Interpreter to European Travellers in some of the Parts least visited of Asia and Africa. Translated from the Italian, as dictated by Himself, and edited

By WILLIAM JOHN BANKES, Esq. John Murray, Albemarle Street.

INTRODUCTIONS to the STUDY of the GREEK CLASSIC POETS, for the Use of Young Persons at School or College.

Contents of Part.—1. General Introduction.—2. Homeric Questions.—3. Life of Homer.—4. Iliad.—5. Odyssey.—6. Margius.—7. Batrachomyomachia.—8. Hymns.—9. Hesiod. By HENRY NELSON COLERIDGE. John Murray, Albemarle Street.

SATURDAY, MAY 22, 1830.

REVIEW OF NEW BOOKS.

Commentaries on the Life and Reign of Charles the First, King of England. By I. D'Israeli. 8vo. Vols. III. and IV.* London, 1830. Colburn and Bentley.

NEARLY two years having passed since the publication of Vols. I. and II. of this interesting work, it may be expedient to remind our oblivious public (which has either so many things to remember, or so great a knack of forgetting, that hardly any matter lasts even the nine days by axiom allotted to the existence of a wonder), that these Commentaries are calculated to throw an impartial and steady light upon the leading events in the reign of the first Charles—a reign more resembling a romantic tale, or a tragic drama, than almost any period which could be selected out of the history of any nation. By his research and fair criticism, Mr. D'Israeli has been enabled to continue his labours with the same spirit that marked their commencement; and his work is thus eminently entitled to popularity. We do not mean to say that there are not facts stated which others may question; far less that there are not opinions broached and conclusions drawn with which many will refuse to agree; but we will say, that there is an evident disposition throughout to place both sides unreservedly before the reader, and to argue openly and candidly upon the data and dicta of each. Thus, for example, in examining the character of Laud, Mr. D'Israeli quotes Neal for the Presbyterians, and Lawson for the High Church—and he differs from both, on grounds which it would be difficult to take from under him, and reasoning which it would not be easy to overthrow.

The third volume sets out with the era when Charles, having dissolved his third refractory parliament, attempted to reign alone by prerogative; and, as the author shews, it began auspiciously, in the correction of two great royal errors,—favouritism and military ambition. To this succeeded ten years of extraordinary national happiness; but the storm was gathering in the sunshine! It is, however, more agreeable to dwell in the sunshine than in the storm; and we shall select our examples from the author's account of the golden period embraced between the rising of the parliament, 1628, and the commencement of the trouble in Scotland in 1638. It was during these halcyon days of the king's life that he indulged in all the luxuries of his fine taste for the arts; and painting, sculpture, architecture, music, and literature, flourished in England. And it is a splendid trait in the recollections of Charles, that even in his deepest adversity his love of intellectual refinement never forsook him: when a prisoner in the Isle of Wight, he wrote to his librarian, Patrick Young, respecting his books and medals; and Mr. Upcott has also a note from him, at the

time he was with the Scots, to Secretary Nicholas, in which he orders certain volumes to be sent to him, and points out their particular situation in one of his apartments at Whitehall. Upon this Mr. D'Israeli says well—"a prince without art and literature is only one of the people on the throne."

We differ on one point from the author, while descanting on this topic, when he says, "Charles the First unquestionably was the first English monarch who opened galleries of paintings and statues—domiciliated the genius of Italian architecture—and, in the ardour of his capacious designs, meditated, at no distant day, to call around his throne, what lay scattered in Europe, a world of glory as yet unconquered by his people." The whole of this eulogy is deserved by the king; but there is abundant evidence to prove, that the "genius of Italian architecture," and of Italian painting, carving, and other branches of the fine arts, was domiciliated in England in preceding centuries, by our Henries and our Edwards. Westminster Palace, the Painted Chamber, and other early relics, afford to this hour abundant evidence of this fact; and in the reign of Elizabeth, the cunning of foreign artists and artisans was largely employed in this country, though truly her majesty's own collection of rarities were very feminine and paltry. Still the capacious and elegant mind of Charles effected enough to command our warmest admiration. The names of the Earl of Arundel, of Inigo Jones, of Hollar, of Cleyne, of Mytens, of Rubens, of Vandeyck, of Selden, of Harvey, of Shirley, of Lord Orrery, and of many other distinguished men, are intimately connected with the name of Charles Stuart in the illustrious exhibition which the arts, sciences, and letters, make at this brilliant epoch; and the contrast which it forms with the dismal times that succeeded, when fanatical austerity and gloom pervaded the land, is as striking a contemplation to the philosophical imagination as the history of England can afford. The importation of the Arundel marbles, the establishment of Mortlake tapestry manufacture, the building of Whitehall, the purchase of the cartoons of Raphael and of the cabinet of the Duke of Mantua, the invitation and employment of the most celebrated painters, &c.—and all under the most straitened circumstances of royal revenue,—add to the splendour of the king's character, as a munificent patron of the arts, and a passionate lover of learning.

"There are (says Mr. D'Israeli) some delightful literary anecdotes of Charles. The king had been harassed by the zealot Obadiah Sedgwick repeatedly pressing the king for his opinion on his fanatical 'Leaves of the Tree of Life'; a mystical explanation of the second verse of the twenty-second chapter of the Revelations. The king, having read part of the manuscript, returned it, with his opinion, that, 'After such a work, he believed the composer stood in some need of sleep.' The happy ambiguity of this playful criticism, accepted in the better sense, gratified this par-

liamentary preacher. There was some Cervantic humour in Charles's gravity. When pressed by a parliamentary commissioner to conclude the treaty, the king ingeniously replied, 'Mr. Buckley, if you call this a treaty, consider if it be not like the fray in the comedy, where the man comes out, and says, 'There has been a fray, and no fray;' and being asked how that could be, 'Why,' says he, 'there hath been three blows given, and I had them all!' Look, therefore, if this be not a parallel case.' The conversation of Charles, on many occasions, shews that he was a far superior man than his enemies have chosen to acknowledge. The famous Oceana Harrington, when commissioned by parliament, attending on the king, his ingenuousness and his literature attracted the king's notice. Harrington was a republican in principle, and the king and he often warmly disputed on the principles of a good government. One day Charles recited to him some well-known lines of Claudian, descriptive of the happiness of the government under a just king. Harrington was struck by the king's abilities, and from that moment never ceased admiring the man whom he had so well known. Charles displayed the same ability at the treaty of the Isle of Wight, where he conducted the negotiation alone, his lords and gentlemen standing behind his chair in silence. That occasion called forth all his capacity; and it was said, that the Earl of Salisbury, on the parliament's side, observed, that 'the king was wonderfully improved:' to which Sir Philip Warwick replied, 'No, my lord! the king was always the same, but your lordship has too late discovered it.' We cannot doubt that Charles the First possessed a rate of talent and intellectual powers, to which his historians have rarely alluded. In a conversation on writing plays in rhyme, one party affirming that the bondage of rhyme would confine the fancy, and Lord Orrery being of a contrary opinion, as arbiter, Charles commanded his lordship to employ some of his leisure in a dramatic composition, in rhyme, which produced 'The Black Prince.' But it was not only in the lighter graces of poetry that the fine taste of Charles delighted: more serious and elevated objects equally engaged his attention. Charles was desirous that the national history should be composed by a man of genius. He had been pleased with the Historical Essay of Lord Bacon's Henry VII. With great judgment he fixed on Sir Henry Wotton for a complete history; and to stimulate that very elegant writer, granted him a munificent pension of five hundred pounds. Charles unquestionably was himself a writer of the history of his own times; and however we may determine on the authenticity of the much-disputed *Icon Basilike*, there will be found some portions, and some peculiar expressions, which, it is not probable, perhaps possible, that any one could have written but himself. Certain it is, that the manuscripts of the king were numerous. No monarch has had his pan

* A fifth volume is promised, to conclude the work, by carrying the unfortunate monarch through the civil wars.

so constantly in his hand. During his long confinement at Carisbrooke Castle, his life offers a beautiful picture of the imprisonment of a literary character. The king had his constant hours for writing, and he read much. We have an interesting catalogue of the books he called for during this period. Yet there exist no autographs of Charles except some letters. This seems to indicate some purposed destruction. We know that the king revised the folio Memoirs of Sir Edward Walker, and that he supplied Clarendon, from his own memorials and journals, with two manuscripts, fairly written, on the transactions of the years 1645 and 1646. What became of these originals, with others, which were seized in the royal cabinet taken at Naseby? If it be true, as it appears, that Charles instigated Clarendon to compose his History, posterity may admire the king's exquisite discernment. There was not another man of genius in the royal circle who could have been more happily selected. Charles appears to have designed that his court should resemble the literary court of the Medici. He assembled about him the great masters of their various arts; and while they acquired the good fortune of the royal patronage, and were dignified by his honours, they more largely participated in that sort of affection which the real lovers of art experience for the persons of great artists. We may rate Charles's taste at the supreme degree, by observing, that this monarch never patronised mediocrity: the artist who was honoured by his regard was ever a master-spirit. Father of art in our country, Charles seemed ambitious of making English denizens of every man of genius in Europe; and of no monarch have been recorded such frequent instances of the deep personal interest entertained for individuals. Charles, with his own hand, wrote to Albano, to invite that joyous painter of childhood to reside at the court of England. When another artist, Tormentius, was condemned to perpetual imprisonment, Charles, in the excess of his admiration for his works, interceded for the wretched man; pleading only for the artist, the rarity and excellence of his works were alone dwelt on by the king. Rubens and Vandyke, with other illustrious names, Charles had made his own; and we cannot read a history of foreign art without meeting with the name of Charles the First,—so closely had his patronage or his kindness connected this monarch with his contemporary artists in every country. No royal history opens domestic scenes of equal fascination with those which occurred in the constant intercourse of the grave and stately Charles with his favourite companions, the artists themselves. His conversations with them were familiar and unreserved. In the breakfast-room of Charles the First were hung, by his special order, the portraits of his three favourites, Rubens, Mytens, and Vandyke. Vandyke, by the desire of Charles, married an English lady, and resided in England. The king would frequently go by water to the painter's house in Blackfriars to his studio, and often sitting to Vandyke himself, would commission the queen, his family, and his courtiers, to allow no rest to his facile and unwearied pencil; they delighted to view themselves in the unshadowny splendour of his portraits. A traditional story was floating in the last century, the probability of which seems to authenticate the fact. Vandyke was painting the portrait of Charles the First, while the monarch was complaining in a low voice to the Duke of Norfolk of the state of his finances. The king perceiving that Vandyke

was listening, said to him laughingly, 'And you, sir! do you know what it is to want five or six thousand pounds?' 'Yes, sir,' Vandyke replied: 'an artist who keeps open house for his friends, and whose purse is always at the command of his mistresses, feels too often the emptiness of his strong-box.' In this unreserved manner Charles indulged himself with the artists. Beck, whose facility in composition was extraordinary, was aptly complimented, by Charles familiarly observing to him, 'Faith, Beck! I believe that you could paint riding post!' It is not wonderful that a monarch, who so well knew how to maintain his personal dignity, and was even coldly formal in the court circle, should have been tenderly remembered by every man of genius, who had enjoyed the flattering equality of this language of the heart, and this sympathy of companionship. A celebrated performer on the flute, who afterwards became so eminent during the Protectorate, as to be appointed music professor at the University of Oxford, Dr. Thomas Wilson, with equal pride and affection, remembered, that he was often in attendance on Charles, who, in the intensity of his delight, used to lean over his shoulder while he played. Old Nicholas Laniers, who subscribed one of his plates as being 'done in my youthful age of 74,' was one of those artists, as Lord Orford designates them, 'whose various talents were so happy as to suit the taste of Charles the First, musician, painter, and engraver!' Laniers was one of the king's active agents for the selection of works of art, while he himself could add to them. He outlived the persecution of that political period, and shed tears many years after in the funeral hymn on his royal master, set by himself. But if it be delightful to view Charles the First indulging the most kindly feelings to artists, it is more so to find that he knew and entered into their wounded feelings, and could even forgive their caprices. The king's earliest 'picturer,' as he is styled in the royal warrant, was Daniel Mytens, a Flemish artist, who has left us one of the finest heads of Charles the First in his happier days, ere care and thought had stamped their traces on his majestic countenance. On the arrival of Vandyke, great as was Mytens' reputation and the favour he enjoyed, the artist fancied that his sun had set—his 'occupation had gone!' In a sullen humour, Mytens requested his majesty's permission to retire to his native home. Charles having learned the cause of this sudden attack of spleen, used the wayward genius with all a brother's tenderness. The king healed the infirmity of genius, assuring the jealous artist, that 'he could find sufficient employment both for him and Vandyke.' It was no doubt after this, that Charles hung the portrait of his old artist between the two greatest masters of art; and it is pleasing to record, that the brothers in art, with the monarch as their common friend, became brothers in their affections; for Vandyke painted the portrait of Mytens. The king's constant attendance on Rubens, when that great painter was in England, the honours he bestowed on him, and the noble offers he made him, are not sufficiently known. This great painter found, and felt in Charles the First, a congenial spirit. Having painted the history of St. George, representing Charles, 'wherein, if it be possible, he hath exceeded himself,' as a contemporary writes, Rubens would not part with the original till he had finished a copy for himself, that, as he said, the picture might remain in his house at Antwerp, 'as a perpetual monu-

ment of his affection for the English king.' This interesting anecdote seems authenticated by the circumstance that such a picture appears in the mortuary catalogue of the collection of Rubens."

With this delightful extract our limits force us to be content, as an illustration of these volumes. A very judicious chapter goes to prove that the queen did not exercise that control over her husband which has been attributed to her by preceding writers: the instances are curious—but still the balance wavers. A similar remark applies to the author's interesting view of the proceedings of the famous Countess of Carlisle; and his critical history of the Puritans is an episode of the most attractive description. That there is nothing new under the sun ("except roasting grapes") is rather amusingly exhibited in the notice of the controversy between the "godly" and the "court" of that time, respecting the observance of the Sabbath, and comparing it with the discussion which has just arisen between the Bishop of London and the press in our own day. In this part the author's research into sabbatical institutions, and the revival of the Book of Sports* by Charles for the purpose of dissipating the gloom, has furnished us a chapter of uncommon curiosity. Among others, "A popular preacher at the Temple, who was disposed to foster a cheerful spirit among the common people, yet desirous that the Lord's day should not pass undistinguished, declared that 'those whose hands are ever working whilst their eyes are waking, through the whole week, need their recreations on the Lord's day;' but that Sundays should be observed with strictness and an abstinence from all recreations, only by 'persons of quality' who had the whole week for their amusements." This jest was, at any rate, better than the prohibition that "no one shall run on the Sabbath day, or walk in his garden, cook victuals, make beds, sweep house, cut hair or shave. No woman shall kiss her child"!!

But we must conclude. Vol. IV. ends with the flight of Charles from London to Hampton and Windsor, January 1642-3; and an Appendix contains some very interesting and original correspondence between Sir J. Eliot, Hampden, and other celebrated persons.

Notes on Haiti, made during a Residence in that Republic. By Charles Mackenzie, Esq., late his Majesty's Consul-General in Haiti. 2 vols. 8vo. London, 1830. Colburn and Bentley.

SLAVERY is that state of being, in which one portion of the community, trampling upon the natural rights of the other, denies to it an equal participation in the enjoyment of civil institutions, abuses its mental and physical endowments to sensual or selfish purposes, and regards it as a property, possessing scarcely higher claims to consideration than an inanimate machine or a brute creature. Whatever may be the gradations of treatment—whether, with the Athenian, our benevolence assuage their condition by lenity, or with the Spartan

* "Having prohibited Sundays as days of recreation, and abolished all saints' days, or festivals, the common people evidently murmured at the deprivation of their periodical holidays. The feelings of the people were more natural than their parliament, even in the gloomy land of Puritanism. This must have been the occasion of a remarkable ordinance issued in 1647 concerning 'days of recreation allowed unto scholars, apprentices, &c.' The second Tuesday in every month was set apart for the holiday of these persons, when it was ordered, that 'all windows of shops and warehouses shall be kept shut on the said day of recreation.'"

and Roman, our obduracy aggravate their sufferings and destitution—still the lash that drives the slave to a market or to the scene of his labours must ever remain an instrument of mental and corporeal debasement to his injured race. In this state of being, where he has no possession but what another claims the right to wrest from him, the edge of his reasoning faculties becomes blunted, sensual instinct obtains the mastery over his animal impulses, and the gratification of his passions becomes the only stimulant which can warm him into energy, or blunt the sense of his degradation. Those who have meditated on the consequences of a system which denies that "all men are brethren," and levels one human being to the scale of the brute that perishes, will not stand in need of any argument to shew the natural tendency of such a cause to produce such a consequence as we have shortly traced; neither will they find any difficulty in referring to their obvious source the miserable state of morals in every land where slavery has established its relentless dominion; whether it be under a Grecian, a Turkish, an African, or an American sky.

With such feelings as these we took up the volumes before us; and their record has not belied our expectations. They present a memorable picture of humanity just emerged from the bondage of body and mind; and display in shaded outlines the features of a community which has not yet shaken off the vices inseparable from a condition of servitude. We were prepared for this state of things. Knowing, from personal experience, that as high an order of intellect may be concealed under a dingy or a swarthy, as under a fair tint of the skin, we were as little surprised to find the self-emancipated Africans of Haiti adapting their ways to the example of civilised nations, as we should have been to have found that, after a struggle, in which they had afforded so many proofs of a manly intellect, they had relapsed into a state of barbarism. We were also prepared to learn, that lust and indolence characterised this infant people; they are but the handmaids to that state of mental degradation in which their late masters had retained them; but these vices will, we cannot doubt, be ere long disarmed of their sinister dominion; for education will teach the Haytian that to be happy he must be industrious, and that to taste the real enjoyments of life, it is necessary he should curb the passions. It was not a little gratifying to us, therefore, to find that the government had "given evidence of its conviction of the advantages that must result from education," and that "this is an object which engages its solicitude." If it do but erect its scholastic system on the broad and fast rock of a pure code of religious morals, we shall not despair of beholding, even in our own day, the Hesperides of the Antilles become a region as much distinguished by the prosperity and happiness of its cultivators as by the generous fertility of its soil.

In its actual state this island affords but scanty elements out of which to construct the various springs and safeguards of a free constitution. Military despotism accordingly usurps, to a certain extent, that station which will, we trust, one day be filled by the strong arm of a wisely-directed civil power. Mr. Mackenzie reached the capital at the close of May 1826; and in his lively picture of its characteristics naturally comprises the "powers that be."

"Port-au-Prince is the seat of the republican government, and is the principal post of an 'arrondissement,' under the peculiar pro-

tection of the president, who strictly vindicates his claim to his official designation by interfering with every thing. The effective service under him is carried on by different departments. The secretary-general, Inginac, united in his own person the offices of secretary-at-war, of foreign and home minister. Among his other duties he promulgates the orders of the president, and such laws as have received his sanction; and he also countersigns certain documents. I believe a secretary-general existed under the colonial system. The minister of finance, designated 'Secrétaire d'état des finances,' M. Imbert, and the treasurer-general, M. Nau, arrange all fiscal matters; while the 'grand juge,' who, strange to relate, is a military man, presides in the supreme court of justice, and exercises jurisdiction over all the inferior courts and law officers. There are at Port-au-Prince, besides the court already named, one of cassation, another for civil and criminal cases in the first instance, and a 'juge de paix' court for minor matters of all kinds. A tribunal of commerce was talked of, but I know not whether it has been yet constituted. The city, as well as Fort Bizotton, is garrisoned by regular troops, and there are various military posts both within and without. At most of them the strange exhibition is made of chairs or seats for the sentries on duty, and hammocks for the remainder of the guard. The first place at which I remarked this singular arrangement was in the front of the president's palace. At the outlet to Leogane, I have repeatedly seen the sentinel squatting on the ground, holding his musket between his knees. From this singularly elegant attitude he is scarcely ever roused, except by the clattering of horses' hoofs, moving faster than is meet in the presence of a Haitian post. He then starts up, growling the awful words, 'an pas!' so familiar to all trotting delinquents. There is also an adequate stimulus to move him, in the prospective confiscation of the plantains, yams, or fruit, of any unhappy wight, who, in contravention of the 'code rural,' strays to the market on forbidden days. The police is military, forming a particular regiment; and, from having lived above two months nearly opposite to the juge de paix, I can aver that they have abundant employment, which they perform with the usual delicacy of their profession. The delinquents were chiefly offenders of both sexes against the code rural—persons, in fact, who preferred dancing all night, and drinking tafia, to the labour prescribed by that law."

Delinquency, however, is not confined to dancing and drinking, but extends even to the wanton violation of their own civil rights,—rights as capriciously exercised as they are ill-understood, and, on most occasions, arbitrarily construed by the ruling authorities. Let the following suffice for the edification of our Benthams, O'Connells, *et id genus omne!*

"In consequence of some misconception of the president's proclamation for the election of members of the Chamber of Commons, the elections took place generally in December 1826, instead of the following month. The capital, however, was correct, and did not exercise its right of election until the prescribed day. This city returns three regular members and three supernumeraries, as in Spain during the constitution, and is now the case in Mexico. Universal suffrage is the law of the land, founded on the Haitian Magna Charta, if I may so designate the constitution of 1806, revised in 1816, and now the apparent rule of proceeding. The only individuals who cannot

vote, are those under judicial sentence, idiots or menial servants. Trusting to this law, the American emigrants, who are adopted citizens, proposed to elect, as one member, a methodist preacher, one of their number, and for that purpose proceeded in a body to the church (where the elections take place); and it was reported to me that they were entered in at one door and civilly handed out of the opposite one, without having been allowed a solitary vote. The first candidate was elected without any opposition; the second was proposed by the government, and he of course was chosen; but some doubts were raised as to the validity of the election; for although there were more than one opposing candidate, the singular phenomenon had occurred of there being five more votes in his favour than there were voters present. This apparent inconsistency did not affect the proceedings; and only one individual ventured to make some observations on the miraculous excess of votes. He had scarcely begun to speak, when so loud a clamour was raised that he was glad to run off, which he literally did, 'au grand pas;' and it is added, by the historian of his glories, that he actually did not stop until he found himself safe among his household gods, at a distance of half a mile from the scene of tumult. The party which had so successfully discomfited our hero, emboldened by success, determined to pursue still further their ingenious and simple expedient, and when the votes were collected for the next candidate, also on the government interest, he was declared the sitting member, in consequence of having twenty votes more than there were voters present. I was not present at this strange exhibition; but I have faithfully recorded the statements made to me by various persons at various periods. Ballot is the mode of election employed, which of course facilitates the proofs of double voting. A representation was said to be made to the president of these irregularities; but he is reported to have declared his utter disbelief of the statement made; and as I never heard of a reference in such a case in Haiti to an election committee, I believe that the two honourable members were assured of their seats until the dissolution of the parliament."

Well may the writer add: "Such an occurrence naturally leads to reflections on the expediency of the semblance of a popular representation in an unformed community, and from what I have seen among these people, as well as on the continent of America (I mean among the new republics), I confess that I entertain very serious doubts of its compatibility with the permanent advancement of the community at large."

During a residence of fifteen months, there appears to have been scarcely one single point, civil, political, physical, or commercial, which was left unsifted by the unwearied and well-directed diligence of our observant fellow-countryman. He assumes nothing for fact which does not come within his personal experience, or cannot be adequately supported by collateral and indisputable evidence: what he sees, he relates with simplicity; and what he gathers from others, he candidly refers to its proper source. Even had we no voucher in that jealous regard for character, which must belong to a gentleman who has again been called upon to fill a highly responsible office, it would be impossible for any candid reader to suspect his report on Haiti of partiality or misrepresentation. It is on this account that we the more lament the imperfect idea our remaining extracts must convey of the nature, novelty, and value of

Mr. Mackenzie's investigations. Among the more amusing of his sketches, that of the "Ude of Aux Cayes" stands prominent.

"The great body of the town's-people appear to be in easy circumstances, and do not, I think, lounge quite so much as their brethren of Port-au-Prince. A circumstance occurred, which I noted as illustrative of the state of society. The town-adjutant (who holds the rank of captain, if I recollect aright) is, moreover, a professional cook, and generously contributes to the epicurean delights of all and any who call upon him, for a doubloon. In his former capacity he had called upon me in a gorgeous uniform of green and gold; in the latter, he was employed by my host, preparatory to his entertaining the magnates of the city; and, to my utter surprise, after he had completed his labours, I saw him marched off between a file of soldiers. I was afraid that my friend had incurred the displeasure of the general, for degrading his military profession by reverting to his original calling, and made anxious inquiries as to the cause of the phenomenon that had astonished me; but great was my amazement on being informed that the aforesaid adjutant was very prone to get drunk after such hot work as that in which he had been engaged; that the general had fixed a day or two after for entertaining his friends; and to secure the assistance of the Ude of Cayes, he had marched him in safe keeping to his house in the country, before he had any opportunity of making himself 'o'er all the ills of life victorious!' The young men of Cayes are the dandies of the republic, and better maundered than the majority of their countrymen. Many of the young women are very pretty, and graceful in their forms."

As a pendant, we present the portrait of Christophe's executioner; which is followed by an interesting sketch of the emperor's rise and fall, his residences, citadel, family, &c.

"Among the other things to which a stranger's attention is called, is a savage, ruffian-like black man (named Gattie), who labours as a porter. He walks about bare-footed, dressed in a linen shirt and trousers, with a large beard, and his eyes fixed on the ground. This fellow was Christophe's chief executioner, of whom it is told that, when directed to perform the duties of his office, he invariably waited on the relatives of his victim and demanded a fee, in proportion to which he inflicted more or less torture on the unhappy sufferer. He had attained from practice such an unenviable dexterity in decapitation, that for a proper remuneration he could with his sabre remove the head at one stroke, and by the instant prostration of the trunk, avoid staining the collar with blood. At least such is the tale told, when, shuddering at his ill-omened countenance, he is pointed out by those who remember him in all his glory and iniquity. I repeatedly saw him, but always alone. Yet I was told that he earned a decent livelihood as a porter among the foreigners. It is a matter of surprise that he should still live in the scene of his atrocities, in the midst of numberless individuals who have been by his hand bereft of some of their nearest and most valued ties. It speaks well for the people."

We have seen it publicly stated, that the island was altogether destitute of the precious metals; but the subsequent statements, which concern the Spanish portion of Haiti, afford a very different view of its mineral riches.

"The two days that I spent at this place (St. Jago) were devoted to complete my stock of local knowledge; and, among other points,

I was curious to learn the causes of the failure of the Mining Association. Two phials that contained at least three ounces each, filled with gold dust, in the form called by the Spaniards 'pepitas,' gathered by hand from the sands of the Yaqui, were exhibited to me. One of the grains was as large as the end of my little finger. There can thus be no doubt that gold does exist, though it does not appear that it is in the form of ore."

Again: "Cotuy was never a place of much importance, though it was founded very early (in 1505); but in its neighbourhood there are said to be mines which were worked so lately as 1747, having been previously abandoned from a dearth of labourers. The latter workings were directed by the father of Valverde, the historian of Santo Domingo. The principal mine, in the mountain called Maymon, is of copper, which contains eight per cent of gold. Lapis lazuli has been found in the same mine; and not far distant, it is reported that emeralds have occurred. Iron, in a very pure state, also abounds in the neighbourhood. Cotuy is also near to the gold mines of Cibao, the highest mountain range in Haiti; in which Spanish cupidity is said to have entombed thousands of Indians. Although now wholly unproductive, their reputation of richness is almost unbounded. Not only are the mines reported to abound in this precious metal, but the sand washed down by the mountain streams is reported to be charged with it; and out of their produce as much as two hundred and forty thousand crowns of gold have been struck off in one year in the mint of Concepcion de la Vega. A great quantity, besides what was brought to the mint, was supposed to have been secreted to avoid payment of the king's dues."

We shall now leave the reader to determine, by a perusal of the volumes themselves, how far they merit the claim which we have put in for them on the score of their intrinsic value, no less than of their spirited portraiture of a community whose appearance forms so striking a novelty in the records of civilised life.

Pompeiana; or, Observations on the Topography, Edifices, and Ornaments of Pompeii.
By Sir William Gell, F.R.S., F.S.A., &c.
New Series, Part I. London, 1830. Jennings and Chaplin.

THE merits of Sir William Gell's former publication on this interesting subject are well known to the artist and the antiquary. The present "is intended, not only to supply the omissions of the former work, but to describe those more recent discoveries which are by no means inferior in interest or singularity."

"Among these," observes the author, in his preface—"the excavation of the Chalcidicum, which took place soon after the publication of the former work, laid open the only example of that species of edifice which has existed in modern times. Not long afterwards, the great area of the Pantheon was discovered, and the whole circuit of the Forum was perfectly cleared. The excavations being continued, a wide street occurred, beginning at the arch adjoining the back wall of the temple of Jupiter in the Forum, and ending in a second triumphal arch, near which were found the bronze fragments of the equestrian statue it had once supported. On the right was discovered a temple of Fortune, doubly interesting, because founded by the illustrious family of the Tullii; and about the centre of the left side of the same street an entrance was opened into an area, which proved to belong to the public

baths, or thermæ, of the city. Some of the apartments of this edifice yet remained covered by stone arches, which, having resisted the pressure of the cinders and accumulated earth, retained, in all their original freshness of colour, those beautiful ornaments and fretted ceilings, of which so few have resisted the lapse of eighteen centuries. The discovery of the baths is perhaps of greater consequence than may at first appear; for, notwithstanding the enormous ruins of the Roman Thermæ, their component parts seem to have been little understood, and even variously named, by the authors who have undertaken their elucidation. At Pompeii, on the contrary, the absence of xystus, theatre, palestra, and an infinite number of other intricate divisions, which render the Thermæ of the great capital so complicated and unintelligible, leaves a satisfactory and defined idea of the use and meaning of every other portion of the fabric. Previously to the discovery of the baths, the whole of a narrow alley behind the Chalcidicum had been cleared, and a passage opened to the street running between the Forum and the Thermæ. From that alley a still smaller avenue ran between the Chalcidicum and the building which is known on the spot by the name of the Pantheon; thus adding to the former map of Pompeii an entire square or island of public edifices and habitations, and forming, in itself, no mean acquisition to the antiquary. This excavation was also remarkable for the discovery of an ancient well of considerable depth, and still retaining fifteen feet of water, which, from its situation, might possibly have been there before the destruction of the city. These various objects, with the house, named that of the Tragic Poet, situated opposite to the northern side of the Thermæ, cover a plot of ground advancing nearer to the centre of Pompeii than any which had formerly been cleared, and, in consequence of a greater depth of superincumbent soil, they have generally been found in a better state of preservation. They form, altogether, the connexion of two portions of the plan of the city, which were scarcely united by the unfinished excavation of the Forum at the period of the former publication. The house of the Tragic Poet has exhibited superior specimens of painting, while the subject of ancient art itself is exciting more of the public attention, and meeting with merited though tardy admiration, through the zeal and industry of M. Ternite, who is engraving at Berlin a superb collection of the pictures of Herculaneum and Pompeii, under the auspices of the King of Prussia."

Sir William complains of the great and increasing difficulty of obtaining permission to draw and measure the newly discovered antiquities; and states, that an astonishing number of interesting objects are destroyed by the action of the weather, before an opportunity is afforded of making drawings of them. To the researches of foreigners especially, great obstacles appear to have been hitherto thrown in the way by the acting superintendent of the excavations; but that office having lately been conferred on a more worthy person, antiquaries may hope for the abolition of exclusion. The writer remarks, that "excepting the outlines of a few of the paintings which have been published in the *Museo Borbonico*, nearly the whole of the objects detailed in this work might have passed away without representation or record, had not the author been on the spot, and thus been enabled to avail himself of every favourable moment for acquiring the necessary materials."

"It may not be quite uninteresting," says Sir William, "to notice the progress of the excavations, which, notwithstanding all that has been said on the subject to the contrary, seem to have been as well conducted, and as steadily pursued, as times and circumstances have permitted. Since the return of the legitimate sovereign, more than half of the Forum has been cleared; the Senaculum or Temple of Jupiter, the Chalcidicum, the Temple of Mercury, the Pantheon, the Temple of Venus, that of Fortune, the Therma, and innumerable private houses have been disinterred; and though it be true that more labourers might have been employed, it is not less so that the work ought not to proceed till the objects already explored are roofed and fortified against the weather. At present, considerable expense attends the excavation, on account of the greater depth of soil which occurs toward the centre of the city. The preservation of the vaults of the Therma has been a work of no trifling importance; and both time and skill are necessary in the application of the means best calculated to hand down to posterity whatever can be saved of these crumbling relics of antiquity."

It appears that "not a day passes without the discovery of something of greater or less importance; while the previous acquisition of at least twenty great statues of marble and four of bronze, not to mention a countless multitude of smaller figures and precious objects, promises an ample harvest in future. It is certainly surprising that so few skeletons have yet been found in Pompeii; but by estimating the number, 160, already discovered at about an eighth of the whole, according to the proportion which the city already laid open bears to the area enclosed by the walls and supposed suburbs, we shall find that nearly 1,300 of the unfortunate inhabitants were destroyed by the fatal eruption; a computation by no means insignificant to the population of a city scarcely two miles in circuit, and of which so considerable a portion was occupied by public buildings."

The work is exceedingly well got up, and some of the plates are very beautiful. Besides an elegant title-page and several vignettes, there are—"the Wall of the Pantheon," splendidly coloured; "Poets reading," a fine and classical outline; "Frigidarium;" and "Part of the Street of the Mercuries and the adjacent Houses."

Sketches from Nature. By John M'Diarmid. 12mo. pp. 368. Edinburgh, 1830, Oliver and Boyd: London, Simpkin and Marshall.

A NUMBER, the majority, of these pleasant sketches, if our memory does not mislead us, have already run the gauntlet of the press, and rendered the talent of their writer familiar to the public. He is indeed one of the best storytellers we know; his embellishments always clever, and his general manner extremely taking. In the volume before us, between thirty and forty papers are devoted chiefly to curious illustrations of natural history; but there are some of a different class, and we select one of the latter, as likely to interest our readers, while it very well illustrates Mr. M'Diarmid's excellent miscellany.

The real History of Jeanie Deans.

"It is no longer doubted or denied, that Helen Walker, of the parish of Irongray, in the neighbourhood of Dumfries, was the prototype of the heroine who, under the fictitious name of Jeanie Deans, figures so conspicuously in the

'Heart of Mid-Lothian.' Her history, however humble, was, in some respects, eventful, and when stripped of all adventitious ornament, may be given very briefly, though few readers require to be informed that it has been expanded into an interesting and somewhat bulky novel, by the fertile genius of Sir Walter Scott. From whence her parents came is not known, but it is generally believed that they were what are called 'incomers' into the parish of Irongray, and were in no way connected with the Walkers of Clouden, a race alike distinguished for respectability and longevity, and who have flourished time out of mind upon the fertile and pleasant banks of the Cairn. Her father appears to have been a labouring man; and at his death, his widow, who was then well stricken in years, became dependent for support on the industry of her daughters, Nelly and Tibby Walker. But this the former was far from viewing in the light of a hardship—she who was so rich in sisterly, could not be deficient in filial affection—and I have been informed by Elizabeth Grierson, housekeeper to Mr. Stott, optician, Dumfries, who, when a 'lassie,' knew Helen well, that though sometimes constrained to dine on dry bread and water, rather than pinch her poor old mother, she consoled herself with the idea that a blessing flowed from her virtuous abstinence, and that 'she was as clear in the complexion, and looked as like her meat and work, as the best of them.' The respectable female just named, who has herself passed the boundary line of three-score-and-ten, resided in her youth at a place called Dalwhairn, in Irongray, where her father cultivated a small farm. Helen Walker at this time, — that is, at least 'sixty years since,' — was much, as the phrase goes, about her father's house; nursed her mother during her confinement, and even acted as the leading gossip at all the christenings; was respected as a conscientious auxiliary in harvest, and uniformly invited to share the good things of rural life, when the *mart* happened to be killed, or a *melder* of corn was brought from the mill. Her conversational powers were of a high order, considering her humble situation in life; her language most correct, ornate, and pointed; her deportment sedate and dignified in the extreme. Many of the neighbours regarded her as 'a little *pensy* body' — that is, conceited or proud; but at the same time they bore willing testimony to her exemplary conduct and unwearied attendance on the duties of religion. Wet or dry, she appeared regularly at the parish church, and even when at home delighted in searching the Scriptures daily. On a small round table the 'big ha' Bible' usually lay open, and though 'household affairs would often call her hence,' it was observed by her visitors that when she lacked leisure to read continuously, she sometimes glanced at a single verse, and then appeared to ponder the subject deeply. A thunder-storm, which appals most females, had on her quite an opposite effect. While the elemental war continued, it was her custom to repair to the door of her cottage, the knitting-gear in hand, and well-coned Bible open before her; and when questioned on the subject by her wondering neighbours, she replied, 'That she was not afraid of thunder; and that the Almighty, if such were his divine pleasure, could smite in the city, as well as in the field.' When out-door labour could not be procured, she supported herself by footing stockings—an operation which bears the same relation to the hosier's craft that the cobbler's does to the shoemaker's. It has been reported, too, that she sometimes taught children to read; but as no one about Clouden remembers

this fact, I am inclined to regard it as somewhat apocryphal. Helen, though a woman of small stature, had been rather well-favoured in her youth. On one occasion she told Elizabeth Grierson that she should not do as she had done, but 'winnow the corn when the wind blew in the barn-door.' By this she meant, that she should not hold her head too high, by rejecting the offer of a husband when it came in her way; and when joked on the subject of matrimony herself, she confessed, though reluctantly, that she once had a sweetheart—a youth she esteemed, and by whom she imagined she was respected in turn; that her lover, at a fair time, overtook her on horseback, and that when she asked if he would take her up, answered gaily, 'That I will, Helen, if ye can ride an inch behind the tail.' The levity of this answer offended her greatly, and from that moment she cast the recreant from her heart, and never, as she confessed, loved again. I regret that I am unable to fix the exact date of the principal incident in Helen Walker's life. I believe, however, that it occurred a few years previous to the more lenient law *anent* child murder, which was passed in 1736. At this time her sister Tibby, who was considerably younger, and a comely girl, resided in the same cottage; and it is not improbable that their father, a worthy man, was also alive. Isabella was courted by a youth of the name of Waugh, who had the character of being rather wild, fell a victim to his snares, and became *enceinte*, though she obstinately denied the fact to the last. The neighbours, however, suspected that a child had been born, and repeatedly urged her to confess her fault. But she was deaf to their entreaties, and denied all knowledge of a dead infant, which was found shortly after in the Cairn, or Clouden. The circumstance was soon bruited abroad, and by the directions of the Rev. Mr. Guthrie, of Irongray, the suspected person, and *corpus delicti*, were carried before the authorities for examination. The unnatural mother was committed to prison, and confined in what was called the 'thief's hole,' in the old jail of Dumfries—a grated room on the ground floor, whither her seducer sometimes repaired and conversed with her through the grating. When the day of trial arrived, Helen was told that 'a single word of her mouth would save her sister, and that she would have time to repent afterwards;' but, trying as was the ordeal, harassing the alternative, nothing could shake her noble fortitude, her enduring and virtuous resolution. Sleep for nights fled from her pillow; most fervently she prayed for help and succour in the time of need; often she wept till the tears refused to flow, and her heart seemed too large for her body; but still, no arguments, however subtle—no entreaties, however agonising—could induce her to offend her Maker by swerving from the truth. Her sister was tried, condemned, and sentenced to be executed at the termination of the usual period of six weeks. The result is well known, and is truly as well as powerfully set forth in the novel. Immediately after the conviction, Helen Walker borrowed a sum of money, procured one or more letters of recommendation, and without any other guide than the public road, began to wend her way to the city of London—a journey which was then considered more formidable than a voyage to America is in our day. Over her best attire she threw a plaid and hood, walked barefooted the whole way, and completed the distance in fourteen days. Though her feet were 'sorely blistered,' her whole frame exhausted, and her

spirits sadly jaded, she found it impossible to rest until she had inquired her way to the residence of John, Duke of Argyll. As she arrived at the door, his grace was just about to step into his carriage; and as the moment was too critical to be lost, the heroic pilgrim presented her petition, fell upon her knees, and urged its prayer with a degree of earnestness and natural eloquence that more than realised the well-known saying of 'snatching a grace beyond the reach of art.' Here, again, the result is well known; a pardon was procured and despatched to Scotland; and the pilgrim, after her purse had been replenished, returned home, gladdened and supported by the consoling thought that she had done her duty without violating her conscience. Touching this great chapter in her history, she was always remarkably shy and reserved; but there is one person still alive who has heard her say, that it was through 'the Almighty's strength' that she was enabled to meet the duke at the most critical moment—a moment which, if lost, never might have been recalled in time to save her sister's life. Tibby Walker, from the stain cast on her good name, retired to England, and afterwards became united to the man that had wronged her, and with whom, as is believed, she lived happily for the greater part of half a century. Her sister resumed her quiet rural employments, and, after a life of unsullied integrity, died in November or December 1791, at the age of nearly fourscore. My respectable friend, Mr. Walker, found her residing as a cottier on the farm of Clouden, when he entered to it, upwards of forty years ago, was exceedingly kind to her when she became frail, and even laid her head in the grave. Up to the period of her last illness, she corresponded regularly with her sister, and received every year from her a cheese and 'pepper-sake,' portions of which she took great pleasure in presenting to her friends and neighbours. The exact spot in which she was interred was lately pointed out in Irongray churchyard, a romantic cemetery on the banks of the Cairn; and though, as a country-woman said, there was nothing to distinguish it 'but a stane ta'en aff the dyke,' the public will be well pleased to hear that Sir Walter Scott intends to erect a suitable monument to her memory. Though subscriptions were tendered, he politely declined all aid, and has already, I believe, employed Mr. Burn, architect, to design a monument, which, in connexion with the novel, will transmit her fame to a distant posterity, and in all probability render the spot so classical that it will be visited by thousands on thousands in after generations. The above narrative, though exceedingly hurried, is perfectly accurate in point of fact; and I have only farther to add, that the story of Helen Walker, *alias* Jeanie Deans, first became known to Sir Walter Scott through the attention of the late Mrs. Commissary Goldie, as will be seen when he issues the new edition of the *Heart of Mid-Lothian*."

As a concluding remark, we may say, that our worthy contemporary has now, as before, produced a work of a very delightful character, and one which must fix the attention of old and young, while it improves and amuses either age.

The History and Antiquities of the Chapel at Luton Park, a Seat of the most Honourable the Marquess of Bute. By H. Shaw. Folio. Carpenter and Son. London, 1830.

The day is past in which collections of illustrated designs for Gothic Villas, &c. &c., illustrated by tawdry prints in aquatint, would

meet with any public encouragement; but the day has been, of which many deplorable proofs remain on record. A new light has, however, now dawned upon us; and the architect of the present time, to obtain any notice from his contemporaries, must prove that he has studied—ay, and diligently studied—those interesting remains which, in spite of the revolutions of time and fashion, are still remaining to us. The best works that have lately issued from the press generally contain practical forms and accurate details of early buildings—not mere picturesque views, as heretofore; and correctness of design and execution, in our recent structures, have followed in a proportionate ratio.

Mr. Shaw, in the work now before us, has selected one of the most curious and florid specimens of the date of Henry VIII.; and his delightful plates are evidence of the great care he has taken to give all its varying richness with the most perfect fidelity. Its leading characteristics are fully explained in Dr. Ingram's account of the chapel, which we annex: "The whole of the interior presents a rich display of panel-work, beautifully carved in oak, and ornamented by an assemblage of elegant cornices, embattlements, niches, canopies, crockets, and finials; having the usual accompaniments of stalls, seats, and misereres, as in the choirs of our cathedrals, with a splendid pulpit and desk of tabernacle-work, surmounted by a gorgeous canopy, which is carried, by several gradually diminishing stages, to the height of more than eighteen feet from the floor. At the upper end is an altar-screen, consisting of two tiers of solid arch-work, divided by a bold fascia, charged with oak leaves, vine leaves, roses, lilies, and thistles; each containing ten niches, with perks for the reception of statues, and having their recesses finished with the most florid and fanciful tracery, of which a similar example will not easily be found in this country." Mr. Shaw's illustrations consist of twenty plates, and a vignette executed on copper, with a delicacy and aerial effect that is perfectly beautiful, and place his name in a very elevated rank as an architectural draughtsman and engraver.

Some difficulty appears to exist in ascertaining with certainty the history of this extraordinary wood-work; but Dr. Ingram, who seems to have examined all the varying testimonies with his usual acumen, suggests—and there appears great probability of the fact—that it had originally belonged to the chapel of the gild or fraternity of the Holy and Undivided Trinity and the most Blessed Virgin Mary, within the parish church of Luton. "The register of this gild or fraternity has lately been discovered, from the contents of which it appears to have been one of the most wealthy and splendid in the kingdom. It exhibits an annual catalogue of the masters, wardens, brethren and sisters, bachelors and maidens, in richly illuminated calligraphy, with the names of the kings and queens of England, bishops, abbots, priors, and other persons of consequence, who were enrolled amongst its members, or noticed as founders, patrons, and benefactors. The period which it embraces, from the fifteenth of Edward IV. (1475) to the last year of Henry VIII. (1546), as well as the general character of the ornaments, exactly harmonises with the style of embellishment observable in the Luton Chapel; and from the opulence of the society, as well as the patronage which it enjoyed, there is every reason to infer that it was capable of producing whatever was magnificent in design

and elaborate in execution." The fraternity was dissolved by statute during the reign of King Edward VI., and the oak-work subsequently transferred to its present situation by Sir Robert Napier. A copy of the original deed or instrument of consecration of the chapel is subjoined, by the kind permission of the Marquess of Bute, to whom the work is very appropriately dedicated.

The Family Classical Library; or, English Translations of the most valuable Greek and Latin Classics, with highly finished Engravings of the Authors. No. IV. Xenophon. Vol. II. The Cyropædia. Translated by the Hon. M. C. A. Cooper. London, 1830. Colburn and Bentley.

THIS work, of which we predicted well from the beginning, has already advanced far enough to justify our very favourable prediction. The volumes now before the public contain the Oration of Demosthenes, by Leland; Salustius's Conspiracy of Catiline, and the Jugurthine War, by Rose; and Xenophon's Anabasis, or March of the Ten Thousand, by Spelman; besides the author mentioned above,—the whole furnished with all the necessary apparatus for clearing the difficulties of the text, biographies, introductions to the several parts of the volumes, and notes of manners, antiquities, and history. There can be no conceivable doubt of the value of such a publication: unless our forefathers have been in error for the last five hundred years, a knowledge of what has been contained in the great writers of antiquity is essential to the formation of an intelligent mind. That men may live without the knowledge of Homer or Virgil, Thucydides or Cicero, is not the matter in dispute; but that, in every civilised land of Europe, itself the great centre of civilisation, the tone of manners, the refinement of taste, and the vigour of public inquiry, nay, more, the manly energy of public freedom, have been born with the birth, and grown with the growth of classical literature, is among those opinions that have long since amounted to maxims with all the more elevated and generous portion of mankind. The universal opinion could not be more strongly proved, than by the fact of giving up to the acquisition of the languages of those works, almost the whole period of those invaluable years, when the mind is most plastic—the sensibility most vivid; and when must be laid the foundation of every quality that makes the difference between man as an encumbrance of the earth, or as the light and honour of his species. It is palpable, that this extraordinary study was not for any object of direct necessity. The languages had passed away from human use; the knowledge was, in none of the usual senses of the word, convertible to human advantage. What Demosthenes uttered when he

"Welded at will the fierce democracy,
Shook th' arsenal, and fulfilled over Greece:"
or what Plato poured forth, bright, pure, and lofty, as a stream from the summit of one of his native hills, was neither food, nor raiment, nor fire, to any man of the millions, who in every age of revived Europe, have stood, like aspirants, worshipping and awaiting the impulse of those splendid oracles of truth and virtue. The homage was paid from the conviction, that to the illustrious minds of the dead, the living must come for the gift of power like their own; that as the human understanding is a blank, it was only by inscribing it with the character of ancient genius, that it was to be made capable in its turn of transmitting

wisdom to the future; or that, like the phosphoric stone, they must imbibe their light from the sunbeams alone, if they could hope to shine in their own twilight age.

But it is evident, that if this admirable result were fully worth the labour by which it was attained, still, the less unnecessary labour employed upon it the better. Human life has enough to do, without the burden of gratuitous toil; and if the knowledge contained in the treasures of the classics could be obtained without the waste of time and power employed of old to dig the literary mine, it would be so much gained for the general intellectual service of society. This is undoubtedly effected by translations, in a considerable degree even for the scholar. Of course, if his object be to feel the genius and skill of the classic in the highest degree, the original alone must be his primary study. The purity of the stream is to be tasted in perfection only at its fount. But even to the scholar, an able translation renders a service which he will be the last to deny. It gives him the matured judgment of a scholar, perhaps of many, generally his own superiors, in place of the crude conjectures of his solitary perusal; and it supplies at one view those notes and illustrations which every student knows to be, at once, among the most valuable helps, and the most difficult to supply.

To the unlearned in the ancient languages, translation is, obviously, the single resource, the only entrance into that "garden of the Hesperides," whose fruits are more excellent than if they were of gold and diamonds. To one half of the human race, and that portion too possessing the most powerful influence on our earlier years, and sometimes exerting the noblest influence on our more mature career—to woman, the classics are a sealed book, refusing, like the volumes of the old necromancers, to open one of their mysterious leaves, until the master of the spell pronounced the charm, and then flowed forth the words of power.

We look upon it as among the happiest characteristics of this age, that its invention is so extensively occupied in bringing within the bounds of literature the great outlying regions of society; in reclaiming by a vigorous effort of cultivation the wastes and wildernesses that negligence has suffered to usurp a large portion of the intellectual soil; in refusing to believe that any province of the solid system has been consigned to a providential barrenness, and in determining not to despair of the human capacity of happiness and knowledge, in what remoteness from both man may be found. The attempt will probably be often made on false principles; there may even be instances in which "tares will be sown with the wheat," and the intention be directly mingled with purposes of future public evil: but those instances can be but few; the harvest of good will have a redundancy and a richness that will grow over the mischievous seed; and the result will be, as of every benevolent and sincere labour of man, a hallowed repayment in national peace and virtue.

It is on these principles that we would encourage the widest extension of works like the present, giving us the moral wisdom of the mind in some of its most illustrious forms. The mere man of science may follow good or evil, with scarcely a higher restraint than the natural influence exerted over the passions by a vigorous intellect; the dull mathematician may look upon the laws of his country with a malicious and hostile eye; the keen metaphysician may see nothing in the patriotism or

politic honour, but a game for his selfishness or his ambition;—but no man can sit beside the monuments of ancient valour and virtue without feeling something of the holiness of the ground; no man can read the inscriptions even on the wasted and fallen tombs of Greek and Roman glory, without some thirst of noble envy at the fate of the mighty dead; none can follow, even in fancy, their splendid career, without honouring the magnificent qualities of head and heart that raised them above their species, and feeling himself, like one who has stood in the presence of superior natures, in some degree purified and exalted by the vision.

A well-written preface tells us that due selection has been made in the subjects of the translations; a principal point being, that the work should be adapted for the library of both sexes: thus the chief portion of the work will be given up to the orators, historians, and poets, of which the present volumes give a most satisfactory specimen, in every sense of the word.

Having said so much on general merits, we abstain from particularising the several works, and content ourselves with congratulating alike the projectors and the public on the progress of this series, being perfectly secure of its value as a source of attractive and important knowledge to society; to the student who desires to extend and reinforce his classical acquirements; and to the man of learning who desires to revive his early recollections.

No. V. *Herodotus*, from Beloe's translation, has appeared since the above was written. We cannot entirely approve of the choice of this version: see our remarks a few weeks ago on Taylor's edition of the same classic.

An Official Calendar, &c. &c. 12mo. pp. 864 (double columns). London, 1830. Colburn and Bentley.

NOTWITHSTANDING all the improvements of late years in almanacs, directories, pocket-books, guides, &c., it must have been felt by every one having occasion for particular references connected with public business and public men, at home or abroad, that there was still some ample and well-arranged work of this description to be desired. Such a performance we consider the present to be; and having examined it sufficiently to detect errors if they were common, we are bound to say of it that it is compiled with much care, and consequently contains a very small proportion of slight inaccuracies. In alphabetical order, there are lists of public institutions of every kind, of national establishments, of army and navy, of parliament, of foreign courts, and, in fine, of most matters for which it can be necessary to consult a publication of the kind. We therefore cordially recommend the *Official Calendar*: if possible, an index of the names mentioned, with a reference to the pages where, would add value to future editions.

The Fortunes of Perkin Warbeck; a Romance. By the Author of "Frankenstein." 3 vols. London, 1830. Colburn and Bentley.

FULL of strange incident and mysterious interest, Perkin Warbeck, either as the last of the Plantagenet's ill-fated race, or else as the most picturesque of impostors, led a life admirably adapted for the novelist; and Mrs. Shelley, taking up the belief that he really was Duke of York, flings over her subject all the attraction belonging to the innocent and unfortunate. The story is so ill calculated for extract, that we must content ourselves by commending the good use our fair author has

made of her *matériel*, which she has invested with the grace and excitement of her own poetical imagination. The character of *Monia* is a conception as original as it is exquisite.

Juridical Letters; addressed to the Right Hon. R. Peel, in reference to the Present Crisis of Law Reform. Letter I. By Eunomus. 8vo. pp. 34. London, 1830. J. and W. T. Clarke.

THIS is the first of an intended series of letters to an individual whose labours towards improving the administration of the law in England are prominent objects of public attention. The writer's professed design is to controvert the opinions of the Benthamite school on the one hand, and on the other to rebut the arguments of its ultra-antagonists, who have pronounced any attempt to reform the existing system to be "an innocent foolery, or a mischievous innovation." He evidently brings to the consideration of this momentous subject a mind replete with every needful information, and imbued with a just sense of the causes which have produced the failure of the Prussian, Napoleon, Netherlands, and other continental codes. The position he has taken is, in our opinion, every way befitting the character of a real friend to the institutions of his native land;—of one neither blind to their imperfections, nor insensible of their general value.

The second of Eunomus's Letters, which has this moment been put into our hands, appears every way worthy of his first.

The Practical Planter; containing Directions for the planting of Waste Land, and management of Wood: with a new Method of rearing the Oak. By Thomas Cruickshank, Forester at Careston. 8vo. pp. 448. Edinburgh, 1830, Blackwood: London, Cadell.

IN these days, when every branch of useful or ornamental culture becomes a science, and is pursued and studied by active minds, we cannot be surprised that such a subject as is here discussed should have obtained its share of attention. Its better knowledge Mr. Cruickshank's work is well calculated to increase; and we can safely say he has produced a mass of information which ought to be familiar to every particular improver of land, and to every one zealous for the more extended cultivation of our national resources. The chief novelty in the plan for rearing oaks is, previously to plant Scots firs or larches, to act as *nurses* to the young trees. There are many interesting anecdotes, as well as much valuable intelligence, in this truly *Practical Planter*.

The True Plan of a Living Temple; or, Man considered in his proper Relation to the ordinary Occupations and Pursuits of Life. By the Author of the "Morning and Evening Sacrifice," &c. &c. 3 vols. 12mo. Edinburgh, 1830, Oliver and Boyd: London, Simpkin and Marshall.

THE author has acquired much popularity on religious subjects, which these volumes are well calculated to increase. They possess a good deal of enthusiasm, together with rational piety; and are eminently deserving of praise for their effort at dispersing those gloomy views which are entertained by certain sects, and which would convert this fair natural world into a dungeon fit only for hypocrites and ascetics. The notes and illustrations, which occupy nearly all the third volume, are particularly interesting.

The New Bath Guide; or, Memoirs of the B———d Family, in a Series of Poetical Epistles. By Christopher Anstey, Esq. A new edition. By John Britton, Esq. pp. 176. London, 1830. Hurst, Chance, and Co.

A BIOGRAPHICAL and topographical Preface, with notes and anecdotes by Mr. Britton, enrich this new edition of a once extremely popular production; and one which its wit, humour, and knowledge of life, are likely to continue in its popularity, long after the fashions and ton of Bath have passed away. Mr. Britton's Introductory Essay is very good-humoured; and, among other critical points, shews that Anstey could not have borrowed any of his plan from Humphry Clinker's, which was published six or seven years after the *Bath Guide*. The volume is got up with great neatness, and must be very acceptable to the public.

The Burial of the Righteous. A Sermon on the occasion of the Death of the Rev. W. Roby. Preached at the Providence Chapel, Rochdale, January 31, 1830. By John Ely. London, 1830. Holdsworth and Ball.

We seldom notice single sermons; but, as referring to the brother of the author of the *Popular Traditions of Lancashire*, as a tribute to a man much esteemed by the church to which he belonged, and as the production of a writer of respect in this denomination of Christians, we think it merits a mention, as one of the most amiable specimens of the doctrines of the Independents: for death seems, if not to abate their strictness, at least to soften their gloom.

ORIGINAL CORRESPONDENCE.

Paris, May 1, 1830.

A NEW opera, in three acts, entitled *Danilowa*, has been represented at the theatre of the Opéra Comique. The story is founded on an incident of real life that took place in Russia during the reign of Catherine II. The arrangers, with true poetic license, have so amplified and embellished the original anecdote, that in its present costume it can scarcely be recognised. The following, however, is the "simple story;" for the operatic compound I do not take upon me to analyse. *Danilowa*, possessed of a handsome person and the ripened charms of blushing sixteen, was a dancer at the Institut des Arts—an academy under the direction of the grand chamberlain of Russia, and at which the pupils are all lodged and supported at the expense of the crown. Even females not natives of Russia are frequently educated at this establishment, which, however, they are not at liberty to quit till after the expiration of a certain term. At the period during which the scene of the opera is laid, two *maîtres de ballets* were attached to the institution, M. Didelot and M. Duport. The latter, having arranged a ballet in which *Danilowa* was prevented from appearing by indisposition, imagined that his colleague, envious of his fame, had induced the fair votary of Terpsichore to withhold her talents on the occasion. A complaint was accordingly preferred before the grand chamberlain, who ordered a physician to inquire into the merits of the case. The Esculapius, one of those considerate savans who imagine that nothing short of death should prove an excuse for the momentary postponement of a public performer's engagement, decided, in his wisdom, that *Danilowa* was well enough to dance. In obedience to this absurd and cruel mandate, she made her appearance on the

stage, was attacked with a violent fever in the course of the night, and the next morning was a corse. A public outcry was raised against the grand chamberlain, who, aided by certain golden arguments, endeavoured to silence the murmurs of *Danilowa's* sole surviving parent. The hapless mother, however, refused to barter for gold the last consolation of the wretched—the privilege to mourn. Such are the feeble data which serve, though with sundry alterations, as the groundwork of the new opera. For the catastrophe of a death, that of a marriage, the *dénouement obligé* of every modern opera, has been substituted. Thus, of two evils the adapters have wisely chosen the least.

Among other green-room chit-chat in Paris, it is whispered, as a profound secret known only to a few hundred intimate friends, that M. Dumas is on the point of undertaking a journey to St. Petersburg, with the view of collecting materials for a drama on the subject of Peter the Great. *Il tra loin, ce M. Dumas*, as a Parisian wag lately observed.

A new theatre is about to be erected on the site of the ancient Ambigu Comique;—another temple of Satan, as Maw-worm might say, in addition to those already open for the seduction of the stray sheep that wander near the purlieus of the Boulevard du Temple. Alas for the sinful doings of this metropolis!

One of the most celebrated ex-actors of Franconi's circus, the Arabian horse Aboukir, was lately sold in the public market of Valenciennes, at the ignoble price of 260 francs—about ten pounds eight shillings, good and lawful coin of the British realm. *Sic transit gloria mundi!*

Marschner's opera of the *Vampyre*, though an imitation of Weber's manner, has been favourably received at Prague. The overture, it is said, bears some resemblance to that of Freyschutz, and the introduction strongly reminded the audience of Spohr's *Faust*. The *Vampyre* has been succeeded by two unsuccessful compositions of Skraup, *les Amaxones*, and *l'Ombra Notturna*. At Leipsic, another opera of Marschner, *le Templier et la Juive*, has met with decided success, if an overflowing audience at each representation may be reckoned a test of success. An opera entitled *le Prince Lieschen*, by an unknown composer, has not found equal favour in the eyes of the public.

The new opera, *der Bergmann* (the monk of the mountain), which had been some time announced at Dresden, has made a hit. The musical composer, M. Wolfram, was gratified by a summons to appear on the scene of his triumph.

ARTS AND SCIENCES.

ROYAL INSTITUTION.*

BEFORE we enter upon any report of the proceedings of a late assembly, it will be necessary to premise that, in the year 1824, government resolved to institute a trigonometrical survey of Ireland, under the direction of Lieut.-Col. Colby, analogous to those surveys which had been previously carried on and completed both in England and Scotland. Col. Colby determined to make the survey as scientific and accurate as the economical plan of government would admit. That no time might be lost, the triangulation was carried across the Channel from Scotland to the Dynes mountain, near Belfast, which was the first station taken up in that island, and after-

* It is neither indifference to the meritorious inventions of Le Roy, Héraultcloupe, and their predecessors, nor to the able and satisfactory manner in which they were handled by Mr. Burnett, but the peculiar nature of the subject itself, that obliges us to omit a notice of the discourse, which enters much into medical details.

wards pursued from the north of Ireland to the south. During the progress of these operations, Col. Colby resolved to measure a new base in Ireland, independent of the bases before measured in England and Scotland, and also to use such means and precautions as should ensure the utmost possible accuracy which human ingenuity could devise. The great difficulty in this part of the investigation consists in the construction of a standard measure, which, whilst it may be capable of application over eight or ten miles of ground, shall be liable to no change in its dimensions by the influence of the force required to move it, and other circumstances attending its use, and above all by change of temperature. To obtain such a measure, Col. Colby conceived the design of constructing the measure of different metals, in such a manner that their expansion and contraction should always compensate each other, and so give an invariable standard of length. The construction of the apparatus was placed in the hands of Mr. Troughton, and, finally, measuring rods, perfect in their kind, were produced, and a base line $7\frac{1}{2}$ inches in extent, measured in the north of Ireland by the successive application of these bars over that extent of ground.

At this meeting, Mr. Faraday undertook to give an account of these measuring bars, and of the Irish triangulation generally. Col. Colby had kindly placed his data at Mr. Faraday's disposal, for the better illustration of the discourse; and, through the kindness of Messrs. Troughton, Sims, and others, parts of a magnificent measuring apparatus, recently constructed by Messrs. Troughton and Sims for the East India Company, were placed in the lecture-room. Two of the compound compensation bars were arranged on tressels and tripods over the irregularities of the floor and benches, with all the care used in the measuring; the microscopes for observation of the points limiting the measures were in their places, as were also the standards, the bowling telescope, and other essential parts. The apparatus consists of two bars, one of brass and the other of iron; these are placed about one inch and a quarter apart, but strongly bound together at the middle by two cylinders of iron which act as rivets; they are then fixed on to a strong iron pin, which is fastened within the box intended to enclose the bars. The middle of the compound bar being thus fixed permanently, the neighbouring ends of brass and iron are also connected, but not immovably; on the contrary, a short cross-bar of iron may be considered as commencing at the brass bar, then proceeding to the iron one, beyond which it projects about two inches. This cross bar is attached firmly by axes to the ends of the brass and iron, and has no motion independent of that which is occasioned by their moving. A similar arrangement is established at the other end of the compound bar. Now, as the brass and iron expand by heat, it will be readily perceived, that this cross-bar is pushed forward, or away from the middle of the whole arrangement—that, in fact, the measure is lengthened only as the brass expands more than the iron; and the part of the cross-bar attached to the brass will be thrust forward more than the part attached to the iron; and, consequently, if at the first the cross-bar were perpendicular to the long bars, it would, when the latter were heated, become inclined to them. A little consideration will therefore shew that there is a part of the cross-bar projecting on the iron side, which is not thrust forward at all, but is stationary, notwithstanding any change which may take

place in the length of the two bars, provided their expansion is by the uniform application of heat to both at one time. This point is the one required; it is carefully sought for by the most attentive and minute observation upon the bars themselves, whilst they are subject to change of temperature; and as a similar point exists, and is found at the opposite extremity of the arrangement, they are both marked by a minute dot upon a silver stud, and constitute the extremes of a measure invariable for regular changes of temperature. The compound bars are put into a box, supported upon the two invariable parts by ratlins, and surrounded within by woollen cloth; but even under these circumstances the precautions were found not quite sufficient, and an experimental correction had to be applied for the difference of radiating power between brass and iron, and also for their difference in capacity. This was effected by giving such surfaces to the two bars as should enable them to heat and cool exactly in the same ratio: the points marked on the silver studs then became invariable. These bars are ten feet long, and the double microscopes by which the dots upon two consecutive bars are observed, are six inches apart, and are also constructed upon the compensation principle, so as to be invariable. The application of the bars, and the measurement of the base, was intrusted to Captain Pringle, and Lieutenants Henderson, Drummond, Murphy, and Mould. It was executed in the years 1828-9, on the eastern shore of Loch Foyle; the part measured was about 7½ inches long, and 2¼ inches more were added by triangulation. It is concluded that the error cannot extend to above 1½ inches in the whole distance; and in proof of the general accuracy, the results obtained by a double measurement in one part of the base may be mentioned. A tide river intersects the plain on the shore of the Loch, and the measured line had to cross it at a part where the width was 460 feet. Piles were driven into the river, and all other arrangements made to secure accurate results; yet, as the observers had to work in water sometimes breast-high, and were liable to other inconveniences, the measurement was repeated, that any error (if such existed) might be discovered. The whole difference in the two measurements, made entirely independent of each other, was ⅓ part of an inch in the 460 feet.

Mr. Faraday then went into a brief account of some circumstances connected with the triangulation of Ireland generally, and gave many interesting particulars relating to it; but as we are led to expect from what he stated, that the subject will be resumed at a future meeting, we shall reserve further observations on this very interesting and scientific process until it is again brought forward.

We noticed in the library an exceedingly beautiful, and at the same time simple, dead-beat escapement for clocks, quite new, and the invention, we were informed, of Mr. Chancellor.

COLLEGE OF PHYSICIANS.

Dr. Turner in the chair.—The Registrar read a paper, communicated by Dr. Burne, on a peculiar disorder of the throat, which consists in a severe attack of inflammation confined to the epiglottis. The peculiarities of this disorder are, 1st, an extreme difficulty of deglutition, not accounted for by the condition of the throat as seen by an ordinary inspection; 2d, the undisturbed performance of respiration; 3d, the situation of the pain, which occurs in a lower and more anterior part of

the throat than in common attacks of inflammation. The disorder sometimes proves fatal, chiefly through exhaustion, in consequence of the inability to swallow. It must not therefore be treated by general bleeding, or other measures calculated to reduce still farther the patient's strength.—Dr. Francis Hawkins afterwards read a paper, by Dr. Calvert, "On the chemical and medical properties of the Sand-rock Spring in the Isle of Wight." The water of this spring contains a larger proportion of iron than any other natural chalybeate water. The metal is contained in it in the state of sulphate combined with the simple sulphate of alumina. The only natural springs that can be compared with it are those of Hartfell, near Moffat, and of Horley Green, near Halifax, in this country; and those at Alais, at Vals, and at Passy, in France; and they are all much weaker chalybeates. The medical properties of the Sand-rock Spring were experienced in the case of the soldiers stationed in the depot at Newport, who had suffered from the Walcheren fever; and Dr. Calvert has since found it a useful remedy in numerous complaints arising from relaxation and debility.

HORTICULTURAL SOCIETY.

The first quiet meeting since the *exposé*, was held on Tuesday last; Mr. Knight in the chair.—Mr. Lindley read a paper on certain plants of the class Parasite. Of this curious, and in a variety of instances useful class, there are not twenty species to be found either in the Jardin du Roi at Paris, or in the Bavarian Botanic Garden, both of which are celebrated for their collections; whilst England possesses two hundred species. The paper was a clever one; still the meeting was marked by a kind of absurdity in horticulture, which must have made the judicious grieve. A stunted cherry-tree, bearing a handful of forced fruit, which, though ripe, was as sour as vinegar, had been brought all the way from Northampton per waggon: it is quite impossible to say what points in science this exhibition was meant to illustrate. Again, a bundle of asparagus lay on the table, 125 stalks of which weighed 2½ lbs: its disagreeable size was matter of curiosity; but not a word was said about flavour. The president, in a very candid manner, directed the attention of the meeting to the state of the garden, and other property belonging to the Society; pointed out some past faults, stated that they should not again be allowed, and courted the visits of the fellows, that they might judge for themselves. From the economical plans now adopted, and which it is understood will be prosecuted still further, the Society might, it was alleged, be considered as in a fair way of recovery.

LITERARY AND LEARNED.

ROYAL SOCIETY.

The President in the chair.—Considerable discussion, arising out of certain statements contained in Mr. Babbage's "Decline of Science in England," took place at the meeting on Thursday, in which the President, Mr. South, Drs. Roget, Lardner, and Granville, Mr. B. Kerr, and others, took a part. It is but fair to state, to the honour of the disputants, that the debate, though warmly carried on, was not characterised by anything of an unbecoming tone. The greatest attention was paid to the explanations of the worthy president; and the meeting adjourned, in the

utmost harmony, till next Thursday, when Mr. Babbage was requested to attend. No paper was read. Mr. D'Alton's interesting work on the History, Learning, Religion, &c. of Ireland, and Professor Quetelet's Scientific Tour through Germany, were presented.

At a recent meeting a paper entitled "On the quantities of water afforded by springs at various periods of the year," by J. W. Henwood, Esq., F.G.S., communicated by the President, was read. The following is an epitome of it:—

It has been a matter of dispute, whether the whole of the water afforded by such springs as are but little influenced by the change of the seasons was derived from rain. With the hope of elucidating this question, the author endeavours to ascertain the comparative quantities of water yielded by the same spring at different periods; and to obtain simultaneous observations in springs rising in different strata and existing at considerable depths in the earth. For this purpose he has availed himself of the information contained in a paper by the President of the Royal Society, given in a recent No. of the *Literary Gazette*, on the performance of steam-engines in the Cornish mines. The details of these investigations occupy several tables. After making due allowance for the loss of water, owing to imperfections in the engine, which he considers as nearly balanced by the amount of rain-water which penetrates from the surface and is carried off by the adit, he thinks himself warranted in assuming the actual quantity of water raised by the engine as representing with sufficient accuracy that which would be naturally afforded by the springs of the mine. On comparing the known quantity of rain falling in any district with the quantity of water given out by its springs, added to that returned to the atmosphere by evaporation from the same district, which he estimates according to Mr. Daniell's method, he finds the former of these quantities is to the latter nearly in the proportion of two to three. After adverting to the hypothesis of the infiltration of sea-water, which might be proposed in explanation of this excess in the supply of springs, he remarks that he was not able to detect the presence of sea-salt in the water from the bottom of the mine of Huel Towan, which he examined in August 1828.

SOCIETY OF ANTIQUARIES.

On Thursday last, Mr. Hamilton in the chair.—Davies Gilbert, Esq. exhibited two plaster casts, from an ancient cross at Penzance in Cornwall, with faint traces of inscriptions. Dr. Meyrick exhibited a pair of elegant ancient candlesticks of brass, engraved and enamelled. They were bought at Aix-la-Chapelle, of a general dealer,—therefore all trace of their history is lost; but from the costume of the figures on them, the doctor assigns the commencement of the 12th century as the date of their manufacture. The same gentleman also exhibited a pix, which, from the style of the ornaments, he considers to be about of the same age with the candlesticks. A communication from Mr. Townsend of Preston, Sussex, accompanied by two drawings, was read, descriptive of some ancient fresco paintings discovered on the wall of Preston church. The subject of one was the murder of Becket; and the other the archangel weighing the souls of the departed, and Satan endeavouring to force down the scale. Mr. Townsend considers these paintings to be of about the time of Edward the First.

ROYAL SOCIETY OF LITERATURE.

ON Wednesday six new members were proposed; and Lord Prudhoe, one of the number, being a peer, was immediately balloted for and elected. A paper of great interest from Mr. Millingen, on the splendid Tyrrhenian vases recently exhumed in several parts of ancient Etruria, was read by Mr. Hamilton (a member of the council). Of this we shall give an epitome; and it will be found an admirable sequel to the general account of these discoveries, which we had the pleasure to publish a few weeks ago.

ROYAL ASIATIC SOCIETY.

THE Right Hon. C. W. W. Wynn in the chair.—A paper by Col. Tod was read; it communicated his remarks on a gold ring, of supposed Hindu workmanship, found sometime ago on the Fort Hill of Montrose in Scotland. Colonel Fitzclarence having seen it, was convinced of its eastern origin, and obtained the permission of its noble owner, the Countess of Cassilis, to submit it to the inspection of Col. Tod, in order that he might lay his remarks, in elucidation of its origin, before the Society. The relic bears certain signs of Hindu worship, round and over which is wreathed the serpent; on each side is one of the sacred kine, with the humped shoulders. Col. Tod observes, that the first inspection of the ring would naturally lead to the supposition that it was of Hindu origin; but there are strong arguments, on the other hand, for conjecturing it to have belonged to one of those "giant Getae" from Scania, who found sepulture in some of their ravaging descendants upon Scotland. The arguments in support of the theory attributing a common origin to the Indo-Scythic martial races of India and the early colonists of Europe, occupy the remainder of the paper, which is concluded with the observation, that the ring is a relic of singular curiosity, even had it been found upon the plains of India. Many donations in literature and the arts were made; and it was announced, that the anniversary meeting would be held on the 7th of June.

LONDON UNIVERSITY.

ON Saturday last the annual distribution of medals and certificates of honours took place at the theatre of the London University, which was crowded on the occasion. We have seldom witnessed a more interesting sight. The amphitheatrical seats were occupied by students and their parents and friends: in the centre sat the professors (about ten of the number only were present*), the warden, and a few friends; while the stage or platform behind the chair, which was occupied by Sir James Graham, were Lords Darnley, Auckland, John Russell, and other eminent patrons of the University. The finance report and other routine business having been gone through, the adjudication of the prizes was determined by opening the letters containing the names of the successful candidates; and a lively sensation (like that of the drawing of a lottery) was produced as the various victors were named and called up to the president to receive the meeds of their industry and talent. Most of them seemed to be intelligent and fine young men; and the discriminating way in which Sir James Graham delivered their honours into their hands, addressing them very

briefly, but with great elegance, feeling, and judgment, added much to the impression of the scene. It is not necessary for us to detail the pains taken to render these adjudications pure and just—the plan adopted by the several professors appeared to guard against every chance of partiality or erroneous decision; and we must observe that the general effect was truly delightful. The taste and ability displayed by the chairman throughout crowned the day (otherwise made pleasing by the judicious addresses of the masters and the modest demeanour of the students) with (to say the words) deep gratification.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.
(Third notice.)

No. 131. *The Truant*. T. S. Good.—Very clever and very entertaining.

No. 113. *Italian Boys playing at Cards*. R. Edmonstone.—There is great character, and a fine depth and richness of tone in every thing that proceeds from Mr. Edmonstone's pencil.

No. 199. *Romps*. T. Clater.—A well-told story. The confusion which the entrance of mamma has occasioned is very happily depicted; and the chiaroscuro and Terburgh-like execution deserve high praise.

No. 28. *The auld Friends*. J. Knight.—"Art's labour lost;"—an expression equally applicable to many other able performances in the Exhibition, which are hung either so high or so low as to render fruitless the pains which have been bestowed upon their production. We are quite aware that it is impossible to place all the pictures to advantage; but surely works of the class to which this of Mr. Knight's belongs, are entitled to a situation in which they could be seen.

Of the numerous portraits in the Great Room we must speak generally. Those by the late Sir Thomas Lawrence are the most interesting; both from their intrinsic merit, and from the mournful reflection, that it is the last time that the walls of the Academy will be so decorated. His portraits of *Lady Belfast*, *Miss Fry*, the *Archbishop of Armagh*, the *Earl of Aberdeen*, and *Thomas Moore, Esq.*, although the draperies and backgrounds are unfinished, are admirable proofs of his splendid and unrivalled genius. The head of the poet, especially, is life itself.—Mr. Shee, the present able and accomplished President, has several very pleasing portraits. That of *The Right Hon. Charles W. Williams Esq.*, in particular, is powerfully painted, and is a most faithful and characteristic resemblance.—We do not think that we ever saw the sweet and pearly tones of Mr. Phillips's colouring to greater advantage than in his beautiful portrait of *The Hon. Mrs. Ramsden*. He has five other portraits in the room; among which is a remarkably fine whole-length of *A Gentleman*.—Of four portraits by Sir William Beechey, executed with his usual skill and taste, that of *His Grace the Duke of Somerset* is the most striking.—*General Sir Hew Dalrymple*, and *The Marquess of Chandos*, are excellent specimens of Mr. Jackson's talents;—as are *The Earl of Surrey*, *The Duke of Norfolk*, and *Mr. Lockhart*, (the latter an admirable likeness), of those of Mr. Pickersgill.—We wish we could speak of the head in Mr. Wilkie's whole-length of *His Majesty in the Highland Dress of the Royal Tartan*, in terms of as unqualified admiration as we can of the general arrangement and effect

of the picture.—*Of The Countess of Jersey* there is a whole-length by the Baron Gerard. Although not exactly accordant with the English notions of portraiture, it is very carefully and finely painted.—Mr. Rothwell has a portrait of *Lord Downes*; so disadvantageously placed, that it is scarcely possible to see it. In the ante-room is his masterly picture which we noticed when at Mr. Colnaghi's: his other portraits are not of so high an order, at least in exhibition light.—A whole-length *Portrait of H. R. H. the Duke of Clarence* does Mr. Morton great credit.—We were also highly pleased with a *Portrait of a Hong Merchant*, by Mr. Chinnery.—There are many other clever portraits in the room, which our limits will not allow us to particularise, from the pencils of Messrs. Clint, Reinagle, Simpson, Briggs, Lane, Thompson, Lonsdale, Ramsay, R. T. Bone, S. W. Reynolds, Linnell, Faulkner, Wyatt, Hurstone, Say, Davis, Tannock, Partridge, Mrs. Carpenter, Mrs. Pearson, Mrs. J. Robertson, &c.

SCHOOL OF PAINTING.

No. 284. *Mount St. Michael, Cornwall*. C. Stanfield.—It is no disparagement to the talents which the School of Painting otherwise displays, to speak of this performance as the lion of the place; and a magnificent lion it is—roaring, "that it would do any man's heart good to hear it," and lashing out its tail with a rage well befitting the noble and powerful monarch of wild animals. The gigantic and lofty forms of the headland, with its venerable crowning pile—the tumultuous motion of the mighty waters foaming at its base—the gleams of sun which splendidly illuminate one portion of the subject—the deep and impenetrable mist in which another portion of it is shrouded—the happy introduction and appropriate employment of the figures, and the masterly style in which the whole scene of awful grandeur is executed—are all admirable. This fine work increases the high opinion which we have always entertained and expressed of Mr. Stanfield's genius. We state this the more strongly, because there seems to be an unjust and ungenerous disposition in some quarters to undervalue it.

No. 297. *The Welcome*. E. T. Parris.—Another charming picture of beauty, grace, and amiable sentiment, from this highly gifted and rapidly rising artist's pencil. Again we ask, Why was such a finished production shoved into a corner, instead of being placed in a situation in which the visitors to the Exhibition might have had an opportunity of examining its various excellences without inconvenience? But we recollect that it fared the same, or indeed worse, with poor Bonington. Is it a system pursued by the Academy for the purpose of checking the aspirations of talent? Nevertheless, we are pleased to understand that, after some competition, "the Welcome" has been purchased by Mr. Wynn Ellis, who is also the possessor of Mr. Parris's "Reflection."

No. 287. *Naïades*. G. Arnald, A.—A sweet and elevated character of landscape composition. The figures are only of subordinate interest; yet they are well suited to the scene.

No. 306. *The Orchard*. W. F. Witherington.—In addition to the other merits of this very clever work, Mr. Witherington has conquered the difficulties arising from the angular and unpicturesque ramification of fruit-trees, and, with his usual skill, has compelled them to assume a shape and character singularly pleasing. On the ground!

* It is known that an unfortunate schism has arisen among the teachers of the University, and spread into its councils. This is much to be regretted where unanimity is so essential: we fear there has been great weakness and trimming, if not utter mismanagement.—Ed. L. G.

No. 331. *Candaules, King of Lydia, shows his Wife by stealth to Gyges, one of his Ministers, as she goes to bed.* W. Etty, R.A.—We have on former occasions reprov'd Mr. Etty for his occasional tendency to a debasing sensuality in his smaller productions. Have we not enough of the voluptuous from the pencils of foreign artists, but is one of our own purer school—a man too so capable of better things—to mistake the proper direction of art, and thus to offend against decency and good taste? As an academic study, the central figure of this group might be admissible; but, in connexion with the disgraceful story, it deserves to be warmly reprehended.

[To be continued.]

NEW PUBLICATIONS.

Views of the Principal Objects in the direct Route from Genoa to Naples, Sketches taken during a Residence at Palermo; and Views of the different Islands of the Mediterranean, returning by Sea to Genoa; to which are added a few Sketches in Savoy. Taken in 1829 by H. Stretton, Esq.; drawn on stone by H. M. Whicheho. No. 1. Dickenson.

This publication is to consist of ten Numbers, each to contain three large views or five small ones. Those in the present No. are “the Coast of Palermo,” “the Bay of Palermo,” and “the Plain of Bagaria.” If we are unable to bestow very high praise upon these views as works of art, we have no doubt of their perfect fidelity,—a quality which renders any delineation valuable and interesting.

England and Wales. From Drawings by J. M. W. Turner, Esq. R.A.; with Descriptive and Historic Illustrations by H. E. Lloyd, Esq. No. VIII. Jennings and Co. A BEAUTIFUL Number; finely exemplifying the mastery over effect for which Mr. Turner is so justly celebrated.

Lawrence. From a Plaster Cast taken at the age of Thirty-four, in the possession of an attached Friend. Drawn on stone, by R. J. Lane, A.R.A. Colnaghi, Son, and Co.

THE attached friend who possesses the mask from which this tripartite view of the fine countenance of the lamented President of the Royal Academy has been taken, is, we believe, Mr. Charles Denham. Mr. Lane has made from it a front, a three-quarter, and a profile, drawing, on stone, with his usual skill and taste; and, notwithstanding the great drawback which is necessarily occasioned by the absence of the expression of the eye, the resemblance is very striking in them all; especially in the front view.

Illustrations of Popular Works. By George Cruikshank. Part I. Longman and Co.

OUR anticipation that these Illustrations would add popularity to the most popular works, is more than justified by this first sample. They are most humorous, most laughable, and most cleverly executed. The Vicar of Wakefield preaching, and the Family Picture; Weazel's combat, from Roderick Random (a parallel, by the by, to Baillie Nicol Jarvie's); Ten Breeches, from Knickerbocker; and the Deil fiddling away with the Exciseman, from Burns's song—are the truly ludicrous ornaments in this No. The two last are of the drollest possible cast.

Fisher's Illustrations of England.

No. 17, 18, and 19.

THE statement of the publishers, that this work has improved as it has proceeded, is undoubtedly justified by the Numbers under

our immediate notice. We have never, in the most expensive publications of the kind, met with more admirable plates than those of “The Interior of St. John's Market, Liverpool,” and the view of “Storrs, Windermere Lake.” The drawing and engraving of the former alone cost, it appears, upwards of thirty-five guineas. Nothing but the most extensive sale can warrant such an expenditure.

Select Views of the Principal Cities of Europe. From original Paintings, by Lieut.-Colonel Batty, F.R.S. Part II. Moon, Boys, and Graves.

GIBRALTAR is the subject of the present Part of Col. Batty's highly interesting work. Few places in the world are more celebrated than this gigantic, formidable, and important promontory; and in no respect is it more remarkable than for its exceedingly picturesque character. Of this Col. Batty has most successfully availed himself, and has combined with the naturally grand and varied forms of the rock, accidental effects of storm, shipwreck, &c.; which, ably seconded as he has been by the talents of Messrs. Wallis, Cooke, Smith, Varrall, Goodall, and Willmore, the engravers, render the six views, (including the vignette), of which the Part consists, among the most spirited and beautiful that were perhaps ever assembled.

Portrait of His Majesty. From the original Picture, painted, July 1825, by T. C. Thompson, R.H.A. Colnaghi and Son.

THE recent illness of His Majesty—and most rejoiced and grateful are we to be enabled to speak of it as a past event—has endeared him still more to the hearts of his faithful subjects; and must render the present a favourable moment for the publication of a new and authentic portrait, such as that under our notice. It is a strong resemblance of the King, and is engraved in a good bold style of lithography.

Characteristic Sketches of Animals. Drawn from the life and engraved by T. Landseer.

PART III. Moon, Boys, and Graves. NEXT to the amusement and information derived from seeing the animals themselves are certainly those received from the contemplation of such admirable representations of them as these by Mr. Landseer. Of the plates in the present Part, “the Brahminy Bull,” and “the Cheetah,” are certainly the most beautiful; although “the Hippopotamus,” and “the Mandril,” are perhaps the most picturesque. The vignettes are, as usual, clever and characteristic, and the descriptions perspicuous and entertaining.

BRITISH GALLERY.

A GLIMPSE at this Gallery enables us to anticipate for the lovers of the arts, and especially of our native school, a grateful treat in the collection of Sir Thomas Lawrence's works, on the eve of being exhibited. The general appearance of the rooms is superb; and the individual attractions possess extraordinary interest, from presenting many of the artist's *chefs-d'œuvre*, and many of his less known pictures.

ORIGINAL POETRY.

THE KING.

On hearing it said, that every Heart in England was united in Prayer for our beloved Monarch's recovery.

THERE'S a breath in that passing gale,
'Tis sweeter than earth's balms are,
'Tis not for earth it ascends,
'Tis the breath of a nation's prayer.

There's a heavenly sound in that breeze,
Hush!—England's child is at prayer;
She asks for a father's life,
With an only daughter's care.

“O Thou who perfectest prayer,
Speed thou my prayer on high;
They tell me a king cannot,
But I feel that a father can, die.”

There's a voice of thanksgiving!—Again!
There's pleasure resounds in those lays.
That bell?—rings—then our Sovereign lives—
England's prayers are converted to praise.
N. H.

FIRST AND LAST. — NO. V.

The First and Last Captive.

SHE sat in silence on the floor,
Her raven hair unbound
Spread her pale cheek and bosom o'er,
And swept the very ground:
Her eye was dim and downward cast,
And now and then a sigh,
Within her heart till then locked fast,
Heaved deep and bitterly.

It was a splendid palace-room,
Around with tapestry spread,
And, chasing back the twilight gloom,
A lamp its radiance shed;
Faintly it lit that pensive face,
Where strong and still despair
Had fixed its heavy darkening trace,
Stiffening each feature fair.

A pencil was within her hand,
And carelessly it moved,
Scarce under her own will's command
Along the floor it roved;
At length the letters, slowly traced,
Stood like a wizard's spell
(Even yet they are not quite effaced)—
“Remember Isabelle!”

She sat awhile, then started up,
To her cheek rushed back the blood—
She dashed away the silver cup
Of wine that near her stood:
She leant beside the window high,
She grasped its iron bars;
Whilst, pitying her, from the azure sky,
Looked down the silent stars.

It was in vain—her hands, too weak,
Forced not those bars apart,
And down she fell with one wild shriek,
That seemed to burst her heart:
Still she lay through the night hours mirk—
They came at morning tide,
And found that Death had done his work,—
So their first Captive died.

Years passed away—they brought again
A Captive to the tower;
Now many a dark and bloody stain
Profaned the palace bower.
The tapestry had fallen down,
The golden lamp was quenched;
From the cornice rich the silver crown
Of mimic flowers was wrenched.

Their Captive was an aged man,
Grief on his forehead high,
And on his lips, so thin and wan,
Tales but of misery.
His love, so beautiful and young,
Years gone, from him was torn,
And he had withered, yet thus long
His load of life had borne.

They placed him in this prison strong—
“Ay, be it so,” he cried;
“I care not—in yon heaven ere long
I'll meet my murdered bride.”

He cast his eyes to heaven, and then
Down on the floor they fell,
And he read, while thrilled each aged vein—
“Remember Isabelle!”

It was enough—the nerves that held
Through all that life's decay,
No longer by his pride compelled,
Resigned at once their sway:
He perished the last Captive there;
And still the peasants tell,
At eve these words sound through the air—
“Remember Isabelle!”

Worton Lodge, Isleworth. M. A. BROWNE.

BIOGRAPHY.

MR. WINSOR.

ON Tuesday last died, at Paris, in the 68th year of his age, Mr. Frederic Albert Winsor, with whom originated the application of gas to the lighting of streets and cities. He was the founder of the Gas-light and Coke Company in London, and of the first gas company which was established in Paris: from his public and persevering efforts arose these and every other gas-light establishment which has since been founded.

It will be recollected, that in 1803 Mr. Winsor demonstrated the use to which his discovery of gas-lighting might be publicly applied, though many men of high scientific reputation denied its practicability. His first public experiments were shewn at the Lyceum, in the Strand: he afterwards lighted with gas the walls of Carlton Palace gardens in St. James's Park, on the king's birth-day in 1807; and during 1809 and 1810, one side of Pall Mall, from the house which he then occupied in that street. His house was for many years openly shewn, fitted up with gas-lights throughout, to exhibit to the legislature and the country the practicability of his plans.

The memorial to his late Majesty George III. for a charter, and the evidence taken in parliament and before the privy council, bear testimony to the indefatigable and unremitting zeal with which he persevered until he overcame the obstacles which prejudice had raised against his efforts, and which threatened to prevent the general adoption of his discoveries and improvements.

In 1812, however, a charter of incorporation for a gas-light and coke company was obtained, and success crowned his labours; but his mind having been wholly possessed with the prosecution of an object of such public importance, he was too regardless of his own pecuniary interests, and omitted to retain a legal power over the advantages which resulted from his exertions: he unfortunately trusted too much for his reward to the honour of the parties with whom he was engaged. To the great object which he pursued he devoted the best years of his life, and sacrificed his fortune; and while he bequeathed an important benefit to posterity, the just recompense of his services escaped from his own hands: thus he created the fortunes of others, whilst he ruined his own and those of his family.

In 1815 he extended to France the advantages which had attended his efforts in England. There, too, he was the first to establish a company and erect gas-works: but rival interests created other companies, in defiance of patent privileges: and these associations, with large capitals, undermined his interests, and he again gave fortunes to others which ought to have been his own reward.

It is thus that a life, which, it may truly be said, has been an honour to England, has been

embittered, if not abridged, by cares and ingratitude. After all the services which he rendered to his country and to the world, and the gains which individuals have realised by his discoveries, the founder of gas-lighting has left no other legacy to his family than the remembrance of his virtues, and of those talents by which the present and future generations have been and will be benefited:

Sic vos non vobis.

MUSIC.

MR. PHILIPPS'S CONCERT.

THE vocal concert of this gentleman, “illustrative of principles for English singing, applied to music in parts,” took place on Monday last, at the London Literary and Scientific Institution, Aldergate Street. The performance consisted of a slight lecture, exemplified by a selection of airs, duets, and glees, in various styles of composition, which were very ably executed by a young lady (a promising pupil of Mr. Philipps), Mr. Wood, Mr. E. Taylor, &c. The evening's amusement called forth the merited applause of a very numerous audience.

THE HUMAN VOICE.

AT the last sitting of the Paris Academy of Sciences, M. Cuvier presented a report on a memoir by Dr. Benati, relative to the mechanism of the human voice. Dr. Benati, who is himself a very agreeable singer, has ascertained that the upper and falsetto notes are produced by the contraction of the throat; that singers who have a soprano voice have generally the tongue a third larger than that of other singers; and that tenors have the narrow parts of the throat susceptible of greater flexibility than bass singers. The reporter took this opportunity of stating, that a convict at Toulon, in whom, from disease, the communication between the trachea and the larynx had been destroyed, had acquired the power of uttering sounds by means of a particular kind of mechanism from the base of the tongue to the roof of the mouth. He considered that there was some analogy between the facts cited by Dr. Benati and the instance furnished by the Toulon convict.

DRAMA.

KING'S THEATRE.

SINCE our last publication, Cimarosa's celebrated opera of *Il Matrimonio Segreto* has been twice performed, and, glad are we to say it, to the most crowded houses we have seen for a long while. In a former notice (July 25, 1829) of this opera, we took occasion to draw a parallel between the productions of Rossini and those of Cimarosa. That the *Matrimonio Segreto* has been the model upon which Rossini has formed his buffo compositions, there cannot be a shadow of doubt; for many of his favourite “phrases” can here be traced to their original source. The affinity in the style of these composers is discoverable in the manner in which they conduct their concerted pieces, particularly their finales; but the orchestral accompaniments of Cimarosa are poor, compared with those of Rossini—not that the latter is not frequently noisy to a fault. In operative music, the instruments may occasionally produce those energetic and characteristic touches which give life to the whole composition: in this particular, Rossini often succeeds. Cimarosa, with the exception of an orchestral movement in the quartette of the first act of *Il Matrimonio Segreto*, following the words “*Così in poco il suo orgoglio*,” seldom avails

himself of the adventitious aid of instrumentation; but, on the contrary, too frequently keeps the orchestra tamely subservient to the voice or voices on the scene.

The remarks we have now to offer are confined to the performance of Saturday last. The opera, as it has been represented, is, as we have said, strongly cast, in so far as the enrolment of celebrated names; but we never rely upon *name*, and are generally disposed to acquiesce in the force of Ollapod's aphorism, that “name's nothing—merit's all,—rhubarb's rhubarb, call it what you will.” The part of *Paolino* is too high for Donzelli; the trembling and tragic tones of Lalande are by no means calculated to produce effect in the execution of comic music; the *Fidalgama* of Malibran is altogether a mistaken conception of the part; and the *Elisette* of Miss Bellchambers, from her dreadfully false intonation, destroys some of the most effective scenes and concerted pieces in the opera. Nevertheless, *Il Matrimonio Segreto* is well worth seeing, if only to witness the inimitable acting of Lablache. The fixed eye, and the vacuity of look which he throws into his countenance whilst endeavouring to catch the half-lost syllables of those who address him, exhibit the most natural representation of deafness that we have ever witnessed. Of the vocal abilities of this truly great actor, we shall freely and fully speak when we see him in a part better calculated to display his physical powers and musical taste. It is but justice to say, that, with the exception of his grotesque attire, *Il Conte Robinsoni* (we had nearly said “Jack Robinson”) found an admirable representative in Signor Santini. The duet of “*Se fiato in corpo avete*,” between him and Lablache, was admirably given, and rapturously encored. We are anxious to see Lablache in *Assur*, and Lelande in *Semiramide*: these are the characters that will put their talents as vocalists to the test.

DRURY LANE.

ON Thursday, Mr. Goldsmith appeared here in the slight part of *Morbleau* in *Monsieur Tonson*; and, under all the embarrassment of a *début*, displayed great capabilities for the stage. We have had the pleasure to see and hear this aspirant for comic honours; and if much versatility, considerable powers, a good face, a talent for mimicry of the highest order, whether in singing or acting, and other dramatic qualities, are likely to succeed, we can vouch for his having a land of promise before him.

The benefits this week have been glorious—Farren immense, and Harley extravagant: the latter had some pleasant novelties in the way of comic songs and parodies; amongst the pleasantest of which we rank the following laughable version of “Love's Ritornella.” We think if Harley had dressed a little more *at Wallack*, and magnified his Massaroni tuft, it would have told better. However, it took excellently well; and we doubt not “Real Havannah” will be as popular as its agreeable prototype: it is, we understand, from the pen of Mr. Ainsworth.

Real Havannah!
Real Havannah!
Precious cigar!
Gentle as mana,
Bright as a star—
Pleasant at fireside,
Cheery on road—
Best of all perfumes
At home or abroad
Real Havannah!
Puff away care—
Blow my misfortunes
Into thin air.

Real Havannah!
O who would dare
Meerschaum or hookah
With thee compare?
When thy bright tip
Any mortal may see,
Thou art his choice
And a smoker is he.
Real Havannah, &c.

Real Havannah!
Primest of stuff,
Sell me no humbug,
Vender of muff—
Think not on me
You can cut any jokes—
'Tis Toper Thomas
Himself who now smokes
Real Havannah! &c.

COVENT GARDEN.

MR. FAWCETT's farewell was both a gratifying and affecting spectacle. His merits filled the house with friends and admirers; and yet it was painful to see so old a favourite separating himself from the stage for ever. For nearly forty years he has been an ornament to the profession; and while his eminent histrionic talents cause us to regret the blank he has left on the boards, his great private respectability makes his retirement no less to be regretted as a loss to the national drama.

VARIETIES.

Education.—The general annual sitting of the Paris Society of Elementary Education took place lately. On this occasion considerable interest was excited by the presence of three young Africans, who had been sent to France for education, and who have made almost incredible progress in every branch. A report was read, from which it appeared that the expenditure of the Society, for the last year, had been 50,000 francs. The adjudication of the prize for an essay on "the Liberty of Instruction," was postponed to January 1831. A paper was read, stating the nature and objects of the Society; and that of the 32 millions who compose the population of France, sixteen do not know how to read and write. Other subjects of general interest were discussed during the sitting.

Suicidal Club.—Dr. Casper, in an article in the *Revue Britannique*, states that there existed some time ago in Prussia a club of suicides, composed of six persons, who not only vowed to destroy themselves, but also to make proselytes. They did not succeed in the latter respect, but all gave proofs of their own sincerity. The last of them blew out his brains in 1817. The same writer states that a similar club is reputed to have existed not long ago in Paris. This was composed of twelve members, one of whom was to be selected every year for self-destruction.

German Operas.—A letter from Paris states, that the German company now performing at the Italian Theatre there meet with good success. The receipts have sometimes reached 7000 francs;—an enormous sum for a French theatre.

Telegraph.—Several experiments have lately been made in France with the day-and-night telegraph, which is destined for the use of the French fleet in the invasion of Algiers. It was found to answer perfectly. The invention, however, is not new: it was first introduced by Admiral St. Haouen in 1823.

M. Fourrier, one of the secretaries of the Paris Academy of Sciences, died in that capital on Monday last.

The Printers' Pension Society.—This Society, formed for the relief of aged, infirm, and distressed workmen, connected with the press, and their widows and orphans, held their second anniversary at the London Tavern, on

Wednesday, where about a hundred guests were excellently regaled by Mr. Bleaden, whose liberal kindness to this Institution, as a friend and subscriber, seemed to have been extended to his kitchen and cellar. Lord Morpeth was in the chair, and addressed the company in a most eloquent and feeling manner on behalf of the charity. Various toasts also called up Mr. Poulett Thomson the member for Dover, Mr. Alderman Winchester, Dr. Dibdin, Dr. Birkbeck, Mr. Kelly, Mr. R. Taylor, Mr. Figgins, the treasurer, and other gentlemen, who severally spoke with great effect. A considerable sum was collected in aid of the annual provision made by the workmen themselves; and we rejoice to say that every thing bespoke the flourishing condition of this benevolent Institution.

Vesuvius.—The Neapolitan papers state, that two new openings have just appeared in the crater of Mount Vesuvius. For several preceding days loud detonations were heard in the interior, and the two new mouths have poured forth an enormous quantity of burning and bituminous matter.

Miss Wright.—This lady, so celebrated for her various philanthropic exertions, having ransomed thirty slaves, has hired a vessel at New Orleans, and sent them to Hayti, where she calculates on their forming a free colony.

Niebuhr.—A letter from M. Niebuhr has been translated from the Berlin *Gazette* into the London *Times*. It states, that notwithstanding the fire which consumed some of his papers, the next vol. of his *History of Rome* will be published next winter, and that the MS. of the sequel has also been preserved. Mr. N. offers some remarks on the subject of Artesian wells, and states them to have been well known, not only in Italy, near Modena, but in ancient Africa: so that the modern French claims respecting them are *old discoveries*.

New Musical Instrument.—An instrument called *Der Musicalische Improvisator* has been performing for the last two or three days in Piccadilly. By means of revolving barrels with lateral movements, it seems to originate endless variations *ad libitum*. We have calculating machines, and now a machine which executes fantasias and voluntaries like a master of mind. Men must, ere long, yield to machines! The Improvisator is altogether a curiosity; and, though its imitation of various instruments is, like most imitations, inferior to the originals, it does discourse very pretty music.

Natural History.—A society of hunters has recently been formed in Sweden, extending from one end of the kingdom to the other, the members of which have agreed to collect and to communicate to one another all the observations which they may be enabled to make with respect to the lives, manners, and habits of animals.

Hernani.—The first twenty-seven representations of *Hernani*, at Paris, have produced 103,102 francs.

Paris Academy of Sciences.—At a late sitting of this Academy, M. Moreau de Jonnes gave an account of the iron rail-way from Baltimore to the Ohio. According to his statement, the length of this road is 104 miles; the mean height of the elevations between the two extremities is 886 feet. Twenty-five miles were made in one year. The estimated expense was 20,000 dollars per mile, but it has exceeded the estimate.

Fruits and Wine.—M. Couverchel read a paper at the Paris Academy of Sciences on the ripening (*maturation*) of fruits. He marks two

distinct periods. In the first, which comprehends the formation of the principles of the fruit, the direct influence of the plant on the fruit is indispensable. In the second, which comprehends the ripening of the fruit, the acids, favoured by the heat, transform the gelatine into saccharine matter. The phenomena, in this case, are purely chemical; they are independent of vegetative life; and what proves this is, that most fruits will ripen when taken from the tree. M. Couverchel has made many experiments with the juices of fruits, from which it appears, that wines of inferior quality may be ameliorated, without the addition of substances foreign to their nature, and prejudicial to health.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXI. May 21.]

It is a literary novelty to tell that the Grand Seigneur has been pleased to allow Mr. Arthur Lumley Davids to dedicate to him his forthcoming Grammar of the Turkish Language; for we believe there have been very few examples of western works dedicated to the Sultan. This Grammar proposes to have the rules illustrated by examples drawn from the most celebrated Turkish authors; together with a Preliminary Discourse on the Language and Literature of the Turks, Dialogues, a Selection of Extracts in Prose and Verse from many rare Turkish MSS., &c. &c.—The Undying One, and other Poems, by the Hon. Mrs. Norton.—"The English at Home, by the Author of 'the English in France,' 'the English in Italy,' &c.—Mr. Johns, author of 'Dews of Castalie,' &c. announces a poem in Four Cantos, entitled the Pyramids.—Mr. Morgan, the reputed author of 'the Reproof of Brutus,' is about to publish a Letter to the Bishop of London in reference to his Lordship's late Pamphlet.

LIST OF NEW BOOKS.

Mrs. Shelley's *Fortunes of Perkin Warbeck*, 3 vols. post 8vo. 1l. 11s. 6d. bds.—Webster's *Travels through the Crimea*, &c. 2 vols. 8vo. 1l. 12s. bds.—Levi and Sarah, post 8vo. 8s. 6d. bds.—Binney's *Discourses on Faith*, 8vo. 10s. 6d. bds.—Stratton's *Book of the Priesthood*, 8vo. 8s. bds.—Muston on *Christian Friendship*, 12mo. 6s. 6d. bds.—Wodrow's *Church History*, 4 vols. 8vo. 2l. 8s. bds.—M'Gavin on *Church Establishments*, 12mo. 2s. 6d. bds.—Wilson's *Questions on St. Matthew and Acts*, 12mo. each 3s. 6d. sewed.—Sketches from *Nature*, 18mo. 2s. 6d. hf. bd.—Elementary *Lessons from the Italian*, 18mo. 1s. 6d. hf. bd.—Illustrations of the *Anglo-French Coinage*, royal 4to. 2l. 12s. 6d. bds.—Guthrie on the *Arteries*, 8vo. 14s. bds.—Searle on *Cholera*, &c. 8vo. 3s. bds.—Jephson on *Calculus*, Vol. II. 8vo. 16s. bds.—Wine-Drinker's *Manual*, 12mo. 6s. 6d. bds.—Heath's *Historical Illustrations to Waverley Novels*, Guy Manning, 18mo. 5s. 6d.; royal 8vo. 7s. 6d.; colombar 4to. proofs, 12s.—The *True Plan of a Living Temple*, 3 vols. 12mo. 1l. 2s. 6d. bds.

METEOROLOGICAL JOURNAL, 1830.

Wind variable, prevailing S.W. Generally clear, except the 13th, when a little rain fell.

Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

R. P. will find a letter at our Office.
We have no desire to "cut" F. S. H. for the pretty little poem offered to us, though we cannot find a nook for it in the *L. G.*

Mr. Eliason's Concert tickets reached us too late to admit of our attendance.

We have received several letters on the subject of the "Rights of Dramatic Authors," and are much gratified by finding that our remarks have given such general satisfaction. We are happy to have it in our power to inform "an Old Subscriber" and all whom it may concern, that the measure is daily gaining new and powerful friends;—that two of our most distinguished and influential noblemen have volunteered in the handsomest manner their support to it in the Lords;—and that, though the lateness of the season and the peculiarly pressing business of the session has retarded its progress, there is no doubt of its eventual completion.

ERRATA.—In the report of the Bishop of Salisbury's Address at the Royal Society of Literature, in our last, p. 321, col. 3, line 12, for "Langfaire," read "Langbaine;" p. 322, col. 1, line 46, for "apostle," read "apostles;" and in same page, col. 2, line 41, for "emperor," read "empire."

ADVERTISEMENTS

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

His Majesty having been graciously pleased to direct that the interesting Portraits of Sovereigns, and other distinguished Individuals, who assisted in bringing the late War to its conclusion, painted by the late President of the Royal Academy, should be exhibited for the Benefit of His Family, the Directors of the British Institution, anxious to carry into effect His Majesty's most gracious intention, give notice that the Exhibition of these Portraits, together with some other of the most celebrated Works of this eminent Artist, will be opened for the Inspection of the Public, at the Gallery of the British Institution, on Monday, the 24th day of May.

Admission 1s.—Catalogue 1s.
WILLIAM BARNARD, Keeper.

NATIONAL REPOSITORY for the Annual Exhibition of new and improved Productions of Arts and Manufactures, Royal Mews, Charing Cross. Patron, the King. The Third Exhibition of this Institution is now open to the Public.

Admittance, 1s.—Catalogues, 1s.
T. S. TULL, Secretary.

TOURNAMENT of the FIELD of the CLOTH of GOLD, 15, Oxford Street, near Charles Street, Rho Square.

Mr. WILMHURST'S Magnificent Picture of the Tournament of the Field of Cloth of Gold, painted on Enamel, on the vast Surface of 432 superficial Feet; presenting the unparalleled appearance of a Painting of such extraordinary Dimensions on one Sheet of Glass, without the Frames or Joinings being visible. This splendid Work contains more than 100 Pictures, including upwards of 40 Portraits, with the strictest Attention to Costume.

Admission, 1s.—Description, 6d.
Open from Ten till Dusk.

THE DELUGE—Egyptian Hall, Piccadilly.

Mr. WALKER'S large Picture of the Deluge, together with some of his other Works, will be open for Exhibition this day, at the Egyptian Hall, Piccadilly.

Admittance, 1s.—Descriptive Catalogue, 6d.

PLYMOUTH EXHIBITION of PICTURES.

The Twelfth Exhibition of Paintings and Drawings will Open, at the Athenaeum, Plymouth, on Monday the 18th day of July next.

Artists and Proprietors who may be disposed to contribute Pictures to the Collection, will be pleased to send them on or before the 5th day of that Month.

The Committee engage to take all possible care that no injury be done to the Works entrusted to them, and to pay the expenses of water-carriage to and from Plymouth.

R. C. CORYNDON, Secretary.
Athenaeum, Plymouth, May 10, 1836.

MR. F. MANSEL REYNOLDS'S PRINTS.

By Auction, by Mr. ROTHEBY and SON, at their House, Wellington Street, Strand, on Thursday the 3d day of June, 1836, and following day, at Twelve o'clock, a very choice Cabinet of Engravings, the property of F. Mansel Reynolds, Esq. consisting of fine Proofs and brilliant Impressions of the Works of Strangé, Woollett, Sharpe, Houbraken, R. Morghein, Bartolozzi, Raimbach, Golding, Warren, the Heaths, &c. &c.; among which will be found a brilliant Proof of Titian's Venus, before the letters, by Strangé—The Rape of Europa, Proof, by Beauvarlet—King Lear, a Presentation Proof of the Death of General Wolfe, Battles of the Hague and Boyne, Roman Edifices in Ruins, the Fishery, &c. by Woollett—An extraordinary assemblage of Rare Book Plates, principally consisting of choice Engravers' Proofs, &c. &c.

May be viewed on Tuesday the 1st of June; and Catalogues to be now had at the place of Sale.

THOMAS MOORE, Esq.—A Portrait of

Thomas Moore, Esq. engraved in the Lane Manner, after a Picture by G. S. Newton. Price of Proofs before the letters, 3s. 3s.; Proofs after the letters, 2s. 2s.; Impressions, 1s. 1s.

Sold by Colnaghi, Son, and Co. 8, Pall Mall East; and by Messrs. Moon, Boys, and Graves.

"The first requisite in every portrait is resemblance. We have seldom seen one more striking than the present. It is Mr. Moore himself, in one of his most animated moments."—*Literary Gazette*.

In atlas 4to. price 2l. 2s. Part VI. being the concluding Part of GRINDLAYS VIEWS IN INDIA, containing Six highly coloured Engravings, after some of the first Artists; with descriptive Letterpress of Scenery, Costumes, and Architecture, chiefly on the Western Side of India.

By Capt. ROBERT MELVILLE GRINDLAY.

"If there has been any foundation for the complaint that the splendid scenery, and the gorgeous architecture of India have never yet been adequately portrayed by the pencil, it will vanish when this work shall be known, which certainly equals, if it does not transcend, any antecedent production of the graphic art."—*Artistic Journal*.

Parts I. to V. may also be had, price 2l. 2s. each.

Smith, Elder, and Co. 65, Cornhill.

2. The Picture of India; exhibiting, in a brief, yet clear and graphic manner, the Geography, Topography, History, Natural History, Native Population, and Produce, of that most interesting Portion of the Earth: with a Particular Account of the European Settlements, with the present State of the British Territories, and an impartial View of the India Question, with reference to the impending Discussion on the Renewal of the Charter. In 2 small 6vo. vols. with many appropriate Illustrations, 16s. In handsome cloth boards.

3. Traits of Scottish Life: Pictures of Scenery and Character. In 3 vols. post 8vo. 7s.

4. The Picture of Australia. In post 8vo. with Map, 10s. 6d.

"The book before us contains the fullest and most satisfactory information concerning the natural history, meteorology, products, statistics, and every other desirable point of knowledge. It seems to be very important, and contains such a multiplicity of curious, instructive, and interesting matters, that we know no geographical work of superior character."—Genl's Magazine.

5. The Cambrian Tourist; or, Post-Chaise Companion through Wales: containing cursory Sketches of the Welsh Territories, and a Description of the Manners, Customs, and Habits of the Natives. In a neat pocket volume, the 6th edition, corrected and considerably enlarged, with Views and Maps, 8s. bound.

6. A general Biographical Dictionary. By John Gorton. In 4 vols. 8vo. containing 2150 pages of close print, 36s. cloth.

"Mr. Gorton's publication is also a work of great excellence, calculated to be useful to a large number of students, and deserving extensive popularity. We may also mention, that it is sufficiently large to contain every thing necessary, but not too extensive for the ordinary purposes of study, filling in this respect, an open space in the fields of biographical literature."—Athenaeum.

7. Illustrations of Masonry. By the late William Preston, Esq. Post-Master of the Lodge of Antiquity. The 14th edition, 12mo. with important Additions, Alterations, and Improvements, by the Rev. G. Oliver. 8s.

No. 1. of MOULE'S ENGLISH COUNTIES.—Chorographia Britannica: the English Counties delineated; or, Descriptive View of the present State of England and Wales, accompanied by a Map of London, and a Series of Forty County Maps, embellished with Vignette Views of remarkable Places, and Armorial Decorations, chiefly from the Seals of County Towns. Forming two vols. handsomely printed in 4to.

By THOMAS MOULE. Author of "Bibliotheca Heraldica," and Editor of several popular Topographical Works. Each Number will contain not less than Two Sheets of Letter-press, closely printed in double columns, on demy 4to. paper, accompanied by a beautiful Map, from the very best Authorities, and embellished with Four interesting County Views. London: Printed for G. Virtue, 28, Ivy Lane; Simpkin and Marshall, Stationers' Court; and may be had of all Booksellers.

In a few days. BURKE'S OFFICIAL KALENDAR for 1830; or, Alphabetical Register of the Public Institutions and Public Functionaries, Legislative, Judicial, Ecclesiastical, Civil, and Military, of the British Empire, including its Colonial and Foreign Dependencies. With Circumstantial Details of the Sovereign Houses of Europe, particularly the present Members of each Family, &c. &c. By JOHN BURKE, Esq.

Author of a General and Heraldic Dictionary of the Peerage and Baronetage, and Editor of the Peerage and Baronetage, and printed in exact accordance. Besides the Royal Family, Courts of Law, and Public Officers, Ecclesiastical, Civil, and Military, of the British Empire, the "Official Kalendar" will be found to comprise more ample details of the Sovereign Houses of Europe, including the Papal Government, Ministers, Ambassadors, &c. than have hitherto been published in England. Henry Colburn and Richard Bentley, 8, New Burlington Street.

Works published during the week by Longman, Rees, Orme, Htowa, and Green. THE EDINBURGH REVIEW, No. 101, price 6s.

Contents: Art. I. Naval Tactics: Breaking of the Enemy's Line, Sir Howard Douglas and the Quarterly Review—II. Sir James Turner's Memoirs of his Life and Times; Scottish Covenanters—III. Public Schools of England; Eton—IV. Transactions of the Historical Society of London—V. Scottish Judicial Reform, and Law of Scotland and England—VI. Mr. Godwin; Cloudeley, &c.—VII. Mr. Bellegren Ker's Question of Registry, or no Registry in England—VIII. Duty on Coal, and the Coal Trade—IX. Mr. Robert Montgomery's Poems, and the Modern Practice of Pothing—X. Finance; the Budget—XI. Delavigne's Marino Faliero, and the Anglo-French Drama—XII. Gleig's Life and Correspondence of Sir Thomas Munro.

The British Flora; comprising the Phanogamous, or Flowering Plants, and Ferns. By William Jackson Hooker, L.L.D. F.R.S. and L.S. Regius Professor of Botany in the University of Glasgow, &c. &c. In 1 vol. royal 12mo. 12s. cloth boards. The plan of the above work is similar to that of the first Part of Dr. Hooker's "Flora Scotica." The Mosses, and the rest of the Cryptogamia, will form a distinct volume, corresponding with the above, and with the "English Flora" of the late Sir James Smith.

Memoirs of the Life of Sir Walter Raleigh, with some Account of the Period in which he lived. By Mrs. A. T. Thomson, Author of "Memoirs of Henry the Eighth." In 1 vol. 8vo. with Portrait, 4s. boards. "Such is the outline of a life which, in Mrs. Thomson's hands, is a mine of interest from the first page to the last; the attention is roused and sustained; and while we approve the manner, we still more applaud the spirit in which it is executed."—Literary Gazette, May 8, 1830.

Sir Ethelbert; or, the Dissolution of Monasteries. A Romance. By the Author of "Santo Sebastiano," the "Romance of the Pyrenees," &c. In 3 vols. 12mo. 1l. 4s. 6d.

Literary Recollections. By the Rev. Richard Warner, F.R.S. Rector of Great Chalfont, Wilts, &c. In 2 vols. 8vo. 10s. boards.

The Barony, a Romance. By Miss Anna Maria Porter. 2 vols. 12mo. 1l. 7s. boards. "The descriptions are picturesque even to poetry; we cannot but commend the beautiful and healthy spirit of that best of morality—the morality grounded on religious feeling, which thoroughly pervades these graceful pages."—Literary Gazette, May 8, 1830.

Traditions of Lancashire. By J. Roby, M.R.S.L. 3d edition, in 2 vols. demy 8vo. with 12 highly finished Plates by E. Finden, and numerous Woodcuts, after Drawings by Mr. Frank Howard, price 2l. 2s.

A few copies of the first edition, in royal 8vo. with Proofs of the Plates on India paper, price 4l. 4s.; or with Proofs and Etchings, on India paper, price 4l. 14s. 6d. may still be had.

We welcome, with a pleasure we can hardly express, the very elegant and entertaining volumes of Mr. Roby's—Gentleman's Magazine.

Imperial 8vo. half-bound in morocco, 3l. 2s.; with Proof Plates, on India paper, 3l. 8s.

London: Fisher, Son, and Co., Ackermann and Co.; and Colnaghi and Co.

Mrs. Shelley's New Work, &c. Just published, by Messrs. Colburn and Bentley, 8, New Burlington Street, THE FORTUNES OF PERKIN WARBECK.

By the Author of "Frankenstein," "the Last Man," &c. In 3 vols. post 8vo.

2. Webster's Travels through the Crimea, Turkey, and Egypt. 2 vols. 8vo. with Plates.

3. Paul Clifford. By the Author of "Pelham," "Devereux," and the "Disowned." In 3 vols. post 8vo.

4. Private Memoirs of Napoleon, by M. de Bourrienne, Private Secretary to the Emperor. Complete in 4 vols. 8vo.

5. The Mussulman. By R. R. Madden, Esq. Author of "Travels in Turkey, Egypt," &c. In 3 vols. post 8vo.

In a few days, The Third and Fourth Volumes of 6. Mr. D'Israeli's Commentaries on the Life and Reign of Charles I.

7. The English at Home, by the Author of the "English in France," the "English in Italy," &c. 3 vols.

DR. LARDNER'S CABINET CYCLOPEDIA. Published in Monthly Volumes, small 8vo. price 6s.

On the 1st of June will be published, Vol. VII. Cities and Towns of the World, in 2 vols. Vol. I. with Woodcuts.

VI. Lives of eminent British Lawyers. By H. Roscoe, Esq.

I. IV. History of Scotland, in 2 vols. by Sir Walter Scott, Bart.

II. History of Maritime and Inland Discovery. Vol. I.

III. Domestic Economy. By M. Donovan, Esq. Vol. I.

V. Mechanics. By Capt. H. Kater and Dr. Lardner.

Volumes to be published, July 1.—History of England, in 3 vols. by Sir J. Mackintosh. Vol. I. Aug. 1.—History of Maritime Discovery, in 3 vols. Vol. II. Printed for Longman and Co.; and John Taylor.

KING'S COLLEGE, LONDON.—A Statement of Proceedings towards the Establishment of King's College, London; with Plans, Copies of the Charter and By-Laws, List of Governors and Proprietors, &c. Price 1s. Sold by Rivington, T. Murray, J. Hatchard and Sons, B. Fellows, J. Booth, Whittakers, Longman and Co., F. C. Westley, and J. Letts and Son, London; J. Parker, Oxford; Deighton, Cambridge; Bell and Bradfute, Edinburgh; and J. Cumming, Dublin. Copies of the Statement may be had by the Proprietors, gratis, on application at the Office of the College, No. 3, Parliament Street.

In 1 vol. 8vo. price 15s. boards, THE PRACTICAL PLANTER; containing Directions for Planting of Waste Land, and Management of Wood; with a new Method of rearing the Oak.

By THOMAS CRUICKSHANK, Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

Popular Novels lately published by Henry Colburn and Richard Bentley, New Burlington Street.

ADVENTURES of an IRISH GENTLEMAN; comprising an Account of his Residence in France during the sanguinary period of the Revolution. In 3 vols. post 8vo. 21s. 6d.

2. Tales of a Briefcase; Barrister. In 3 vols. post 8vo. 21s. 6d.

"The author of these Tales is evidently an acute observer of human nature, has witnessed some extraordinary incidents in life, and is gifted with the rare art of telling a story well."—Courier.

3. Stories of a Bridle, by the Authoress of the "Mummy." In 3 vols. post 8vo. 21s. 6d.

"A very original as well as amusing work, and one which we think will be universally liked."—Literary Gazette.

4. The Life of a Midshipman, a Tale founded on Facts, and intended to correct an injudicious predilection in Boys for the Life of a Sailor. Post 8vo. 9s. 6d.

5. Gertrude. A Tale of the Reign of Henry IV. In 2 vols. post 8vo. 9s.

"A beautiful and romantic tale, written in the true spirit of the age it illustrates."—Literary Gazette.

6. The Exclusives!!! A Satirical Novel of Fashionable Life. Third edition, in 3 vols. post 8vo. 31s. 6d.

"This extraordinary production continues to be the leading topic of conversation among the higher circles. The astonishment felt at the details connected with a certain system of London society is indescribable."—Globe.

For Travellers on the Continent. In 3 vols. 8vo. with most accurate Map and Plates, price 2l. 5s. TRAVELS in the MOREA.

By WILLIAM MARTIN LEAKE, F.R.S. Author of the "Topography of Athens," and "A Tour in the Interior of Minor."

"It claims a higher rank than to be classed among mere books of travels. These volumes are indispensable to the student of ancient Greece and Geography, as well as to the intelligent traveller in Greece; and they ought to be, and we have no doubt will be, found in every classical library."—Athenic Journal.

2. Information and Directions for Travellers on the Continent, by Mariana Starke. 6th edition, thoroughly revised and with considerable Additions. Post 8vo. 12s.

3. The Diary of an Invalid in pursuit of Health; being the Journal of a Tour in Portugal, Italy, Switzerland, and France. By the late Henry Mathews, A.M. 8d edit. 2 vols. post 8vo. 15s.

4. Antiquities, Arts, and Literature of Italy, by Joseph Forsthy, Esq. 3d edition, 2 vols. 8vo. 15s.

5. Rome in the Nineteenth Century, 4th edition, 3 vols. 8vo. 1l. 11s. 6d.

6. Switzerland; or, a Journal of a Tour and Residence in that Country, followed by a general View of its History, brought down to the present time. By S. Simond. 2d edition, 2 vols. 8vo. 24s.

7. An Autumn near the Rhine; or, Sketches of Courts, Society, and Scenery, in Germany near the Rhine. 2d edition, 8vo. 14s.

John Murray, Albemarle Street.

BOOKS IN THE PRESS. THE QUARTERLY REVIEW, No. LXXXV. will be published on the 30th instant.

First of June will be published (to be continued monthly), commencing with Bishop Sherlock, No. 1. handsomely printed in small 8vo. price 7s. 6d. of a Series of the most eminent DIVINES of the CHURCH of ENGLAND,

with Lives of each Author, Arguments to each Sermon or Discourse, Notes, &c. By Secy. T. S. HUGHES, B.D. Of Emmanuel College, Examining Chaplain to the Bishop of Peterborough, and late Christian Advocate in Cambridge.

Each work will be preceded by an original biographical memoir of its author. A summary of contents will be prefixed to every sermon, tract, or discourse; so that not only ready access may be had to any portion required for perusal, but the summary may be considered as a skeleton, calculated to assist the young divine in composition. Notes and observations will be added when necessary, and an index of passages in Scripture which have been commented on, by such author.

The Works of Dr. Barrow will follow those of Sherlock, which will be succeeded by the most popular Works of Hall, Atterbury, Jewell, Seed, Jortin, South, Hurd, Bull, Beveridge, Balguy, S. Clarke, Ogden, Paley, Waterland, Jeremy Taylor, &c.

Each volume will average 500 pages. It is not expected that the series will exceed Fifty Volumes. Any author may be had separately. Printed by A. J. Valpy, M.A. Red Lion Court, Fleet Street, where Subscribers' Names, for part or the whole of the Series, are received; and may be subscribed for at all Booksellers in Town and Country.

Portrait of his Majesty. On the 1st of June, No. 11. price only 1s. 6d. THE FAMILY MAGAZINE; containing, besides two beautiful Vignettes, a fine Engraving, from one of the latest Portraits, with Memoirs, of his Majesty George the Fourth; also, Fate of La Pérouse—Destruction of the Royal Palace at Copenhagen—Scenes of the War in Spain—The Planets and their Inhabitants—Decline of the Drama—The Astrologer. By W. H. Harrison, Esq.—Song for Wales. By the Author of the Legend of Genevieve—The Wreckers—The City of the Dead. By John Bird, Esq. &c. &c. A few Copies of No. I. may still be had. Hurst, Chance, and Co. London; sold by all Booksellers.

WAVERLEY NOVELS.—New Edition. Vol. XIII. of this edition, containing the Conclusion of the Heart of Mid-Lothian, and the Commencement of the Bride of Lammermoor, will be published on 1st June.

This Volume, besides an Introduction by the Author, is illustrated by Stephen Murray and Farrier.

All the early Volumes are again reprinted. Printing for K. Cadell and Co. Edinburgh; and Sampkin and Marshall, London.

Of whom may be had, The Poetical Works of Sir Walter Scott, Bart. in Eleven vols. 8vo. price 6l. boards; and Eleven vols. 18mo. price 3l. 3s. boards, with Smirke's Plates and New Introductions.

Also, The Eleventh Volume separately, in 8vo. price 18s. and 18mo. price 9s. to complete former editions.

Wiffen's Tasso. In a few days will be published, elegantly printed in 2 vols. royal 8mo. with 30 fine Engravings on Wood, by Thompson and Williams, from Designs by Bayter and Corbould, and a Portrait of the Author, price 15s. neatly bound in cloth.

THE JERUSALEM DELIVERED of TORQUATO TASSO, translated into English Spenserian Verse, from the original Italian; with a Life of the Author, and—formed after long and laborious research amongst the Month's Historians,—a List of English Crusaders.

By J. A. FENN. M.R.S.L. and Cor. Mem. of the Society of Antiquaries of Normandy, &c. &c. Printing for Longman, Rees, Orme, Brown, and Green.

Dr. Webster's English Dictionary. On the 1st of June will be published, price 7s. to Subscribers for the whole Work, and 9s. to Non-subscribers, Part III. of A DICTIONARY OF THE ENGLISH LANGUAGE; to which are prefixed an Introductory Dissertation on the Origin, History, and Connection of the Languages of Western Asia and of Europe, and a concise Grammar of the English Language.

By N. WEBSTER, L.L.D. This Work will appear in Twelve Parts, each consisting of Twenty sheets, forming 2 vols. 4to.

Few works of equal merit with this in improvement of typography and moderation of price. It is not a mere enlargement on Johnson's Dictionary, but an original work, the labour of Thirty Years, and contains 12,000 Words more than any other similar work. In respect to Etymologies and Affinities, it supplies the grand desideratum in English Lexicography.

Literary persons of moderate income, and Literary Societies, should hasten to secure Copies at the subscription price, as the subscription will close on 1st August.

London: Black, Young, and Young, Foreign Booksellers.

In a few days will be published, 3d edition, with numerous additions and improvements, illustrated by Engravings and Woodcuts, post 8vo. 15s. THE JOURNAL of a NATURALIST.

Plants, trees, and stones, we note. Birds, insects, beasts, and many rural things.

"We again most strongly recommend this little unpretending volume to the attention of every lover of nature, and more particularly of our country readers. It will induce them, we are sure, to examine more closely the objects which are so much to be regretted as objects of animated nature; and such examination will prove one of the most innocent and the most satisfactory sources of gratification and amusement. It is a book that ought to find its way into every rural drawing-room in the kingdom, and one that may safely be placed in every place where it may be ranked and station in life what they may."—Quarterly Review, No. 78.

"We think there are few readers who will not be delighted (if we are certain all will be instructed) by the 'Journal of a Naturalist.'"—Monthly Review.

"This is a most delightful book on the most delightful of all studies. We are acquainted with no previous work which bears any resemblance to this, except 'White's History of Selbourne,' the most fascinating piece of rural writing and sound English philosophy that ever issued from the press."—Athenaeum.

"To notice every thing of interest would be nearly to transcribe the entire book; therefore we must abruptly break off, after having held out by no means the most luscious tit-bit, either to the man of minute research, or yet the general philosopher."—Sporting Magazine.

John Murray, Albemarle Street.

On Monday, May 31st, will be published, illustrated with Eight Engravings, 8s. NO. XIII. of the FAMILY LIBRARY;

being the Third Volume of Lives of the most eminent British Painters, Sculptors, and Architects.

John Murray, Albemarle Street. Dramatic Series, No. II., being the Plays of Ford, Vol. I. will be published shortly after.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Moulton Street, Oxford Street; sold also by J. Chappell, 96, Royal Exchange. E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Son, and Robertson and Atkinson, Glasgow; and J. Cumming, Dublin.—Agents for America, O. Rich, 15 Red Lion Square, London.

J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 697.—AMERICAN EDITION.

SATURDAY, MAY 29, 1830.

REVIEW OF NEW BOOKS.

The Life of Richard Bentley, D.D., Master of Trinity College, and Regius Professor of Divinity in the University of Cambridge: with an Account of his Writings, and Anecdotes of many distinguished Characters during the Period in which he flourished. By J. H. Monk, D.D. Dean of Peterborough. 4to. pp. 668. Appendix, pp. 83. London, 1830, Rivingtons: Cambridge, Deighton.

DR. MONK has here performed a task most acceptable to every scholar, and to general literary history. The feelings and manners of authors have undergone so great a change, even within the comparatively short period which has elapsed since the death of Bentley, that a revival of the spirit of his times, opinions, and controversies, is like the description of a long-forgotten epoch: our faint remembrances are refreshed, almost mouldered images are restored to their niches, and the busy world of literature which preceded our living era is brought into an interesting contrast with our own pretensions, discoveries, and condition, as actors on the scene of learning and science. The life of Bentley, impartially and ably developed by Dr. Monk, involving in great measure the literary annals of the first half of last century, and the particular history of the University of Cambridge, was a desideratum which is now supplied in the most satisfactory manner; and a sterling work has been added to the stores of British biography. At the death of the late Master of Trinity, a mass of Bentley's correspondence with the greatest scholars of his time was happily found in Trinity Lodge;—Dr. Colbatch's papers, and others of the prosecutors of the Dr., have also been preserved, and tend to augment the value of this publication;—and from these and other authentic sources, the reverend dean, his successor, has had it in his power, and has well availed himself of the materials, to enrich his volume with much of new and curious illustration.

Richard Bentley was born, January 1661-2, at Oulton, near Wakefield, in the West Riding of Yorkshire, of respectable parents, and educated, after his infancy, at Wakefield. In 1676 he was admitted a subsizar of St. John's, Cambridge; and it would appear was early distinguished for eminent talents and acquirements. In January 1679-80 he commenced B.A., and was soon after appointed master of Spalding school, where he taught for about twelve months. Having, however, been chosen as tutor to the son of Dr. Stillingfleet, he acquired the most important facilities in the library of that eminent divine for cultivating his mind, and earnestly applied himself to studies of the highest order. In July 1683 he took his degree of M.A.; and though doubtless looking forward to the clerical profession, the unsettled state of the church under James II. prevented him from coming forward for a few years, and it was so late as 1696 that he was created D.D. Immediately after this, the famous controversy re-

specting the Epistles of Phalaris raged in the learned world, and produced the display of as much erudition and profound classical attainments as ever distinguished any literary discussion in any age or country. It must not, therefore, be carelessly viewed as a dispute on an indifferent point, whether a tyrant or a sophist was the author of these Epistles; but as a theme which occupied the minds and provoked the labours of the first scholars of the age, of Bentley, of Wotton, of Temple, of Boyle, of Swift, of Atterbury, of Smalridge, of Alsop, and others, and led to the elucidation of many of the most interesting questions in ancient literature. Dr. Monk's epitome of this, divested of the tediousness of the contest, and giving an admirable view of its leading features, is one of the most instructive as well as entertaining episodes which can be conceived. But before we turn the page to this part, we ought to notice, that Bentley being appointed first lecturer on the institution of Mr. Boyle, was the earliest individual in the field to spread the knowledge of Newton's immortal discoveries. Yet with all his vast erudition, his haughty and uncompromising temper raised him up many bitter enemies; and his career, instead of one of learned repose, was made one of anger and strife.

In 1692 it is stated, "The *Principia* had now been published about six years; but the sublime discoveries of that work were yet little known, owing not merely to the obstacles which oppose the reception of novelty, but to the difficulty of comprehending the proofs whereby they are established. There has been preserved among Bentley's papers a manuscript in Newton's own hand, containing directions respecting the books to be read as a preparation for the perusal of his *Principia*. Bentley, for whose use they appear to have been drawn up, having a mind well adapted for mathematical reasoning, not only made himself master of the system, but was able to discern the purpose which it might serve, in demonstrating the providence and benevolence of the Creator. Atheistical writers had propounded theories, whereby the creation of the world out of chaos, and the subsequent maintenance of our system, were explained by what they termed 'natural causes.' Such schemes, which excluded all immediate agency of the Divine will, had been numerous; but the fact was, that they all contradicted the laws of nature, upon which they pretended to be founded, as completely as was done by the Epicurean hypothesis of atoms descending down an infinite space by an inherent principle of gravitation tending not towards other matter, but towards a vacuum, and verging from the perpendicular. The erroneous but prevalent system of Des Cartes, which supposed the planets to be carried round the sun by the force of vortices, afforded too great a handle for atheistical reasoners, not to be pressed into their service. But our incomparable philosopher had now demonstrated the falsehood of the Cartesian notions, and established the general law of

gravity, and whatever relates to the motions, bulks, and densities of the planets, by proofs never to be shaken. To Bentley belongs the undoubted merit of having been the first to lay open these discoveries in a popular form, and to explain their irresistible force in the proof of a Deity. This constitutes the subject of his seventh and eighth sermons; pieces admirable for the clearness with which it is developed, as well as for the logical precision of their arguments. Among other topics, he shews how contradictory to the principles of philosophy is the notion of the matter contained in the solar system having once been diffused over a chaotic space, and afterwards combined into the large bodies of the sun, planets, and secondaries, by the force of mutual gravitation; and he explains, that the planets could never have obtained their transverse motion, which causes them to revolve round the sun in orbits nearly circular, from the agency of any cause but the arm of an almighty Creator. From these and other subjects of physical astronomy, as well as from the discoveries of Boyle, the founder of the lecture, respecting the nature and properties of the atmosphere, a conviction is irresistibly impressed upon the mind of the wisdom and benevolence of the Deity: and we are assured that the effect of these discourses was such, that atheism was deserted as untenable ground; or, to use his own expression, the atheists were 'silent since that time, and sheltered themselves under deism.'"

About two years after this, Bentley was made keeper of the king's library and chaplain to the king; and, from his contest with Joshua Barnes respecting the six spurious Epistles of Euripides, was plunged into the famous Phalarian controversy, to which we have already alluded, and into the details of which we have no convenience to enter. Suffice it to repeat, that it arose out of Sir William Temple's unguarded and untenable proposition, that *Æsop's Fables* and Phalaris's Epistles were the most admirable and ancient remains of profane authorship. This Bentley undertook to confute, and hence arose the celebrated *Battle of the Books*.*

A prodigious sensation was produced by Bentley's first dissertation to refute this theory, and prove from chronology, language, matter, &c. not only that these works were forgeries, but that Letters attributed to Themistocles, Socrates, and Euripides, were nothing better;†

* Apropos: we have in our possession an original letter of Dean Swift's, dated More Park, April 1, 1693, which completely explains the causes of his leaving his parsonage at Kilroot, in Ireland—the subject of much imputation and scandal, and the only important point in his life which Sir Walter Scott was not able to clear up in the Memoir prefixed to his edition of Swift's Works. See vol. i. p. 36. et seq. We shall take an opportunity of publishing this interesting document.—Ed. L. G.

† "Whether *Æsop* himself left any thing in writing, or whether his *Fables* were preserved by oral tradition, is a point which admits of dispute. From Plato we learn that Socrates amused himself when in prison with putting into verse some of these apologies, which he happened to recollect. The first collection which we hear of was made by Demetrius Phalereus, the peripatetic philosopher of Athens, who wrote and declaimed about a cen-

Against our critic all the forces of ridicule and learning were mustered—from the Tale of a Tub, and the Battle of the Books, to Atterbury's graver but hardly less satirical attacks. He, however, maintained his ground manfully, and in the issue his victory was complete—inasmuch that none of the Boylean associates ever afterwards appeared as critics.

In his disputes respecting Trinity College, Cambridge, of which he was made master, Bentley does not appear to have been so fortunate. His overbearing character excited a host of adversaries among the senior fellows, graduates, and others; and, what with proposed reforms and other things, the college soon became a scene of utter discord and contention. In 1700, by way of compensation, we may notice his marriage to Mrs. Joanna Bernard, a daughter of Sir John Bernard, with whom he enjoyed great happiness during a union of forty years: by her he had four children, two sons and two daughters. Next year he got the church dignity of Archdeacon of Ely, with two livings attached to it.

It would be absurd in us to attempt a relation of our critic's law-suits and turmoils; nor is it necessary to particularise his publications, or dwell upon his change of political party and adhesion to the Tory premier, Lord Oxford, to whom he dedicated, 1711, his splendid edition of Horace.

During all this time his fight at Trinity College was going on; and the Bishop of Ely's opinion being unfavourable to the master, sentence of deprivation was prepared against him, for wasting the college goods and violating the statutes—when death carried off first Bishop Moore and then Queen Anne. Bentley thereupon reconciled himself with the Fellows— but other troubles succeeded; and after being elected regius professor of divinity, making doctors of divinity in the king's presence, and other acts of public honour, the quarrels ran to so extravagant a pitch, that Bentley was finally prohibited from acting as a professor, and deprived of his degree by the senate, 1718. "On the votes being taken, the grace for degrading Dr. Bentley was carried in the Non-regents' House by forty-six voices against fif-

tury later than Socrates. After him the Fables were put into verse by some one whose name is lost: fragments of this collection have been preserved, and are principally in elegiac measure. The present collection originated with Babrius, a Greek poet, whose age is uncertain, but whom Bentley considers to be in the latest class of good writers: he composed Æsopian Fables in scæzon or choliambic verse, of which specimens are quoted by Suidas and others. Maximus Planudes, the same who translated Ovid's Metamorphoses, Cæsar's Commentaries, and other Latin books into Greek, amused himself with the edifying task of putting Babrius into very dull prose; and this notable performance is the very collection which is the delight of our nurseries, and which Sir W. Temple extolled above all other prose writings, as being at once the oldest and the best in the world. Babrius, however, was not so completely *transported* that that many traces of his verse, and indeed whole choliambic lines, remain; some of which Bentley pointed out, and observed that they were quoted elsewhere as from Babrius. This discovery had been before made by Neveletus, who printed 136 of the Fables, from a manuscript in the Heidelberg Library, in the year 1610. Planudes, who was himself a monk, makes Æsop speak in one place of the monastic order, and in another gives a quotation from the Book of Job. The subject, however, far from being exhausted, was but slightly touched by Bentley, and has received much greater light from writers who have had the advantage of older copies, in which the verses of Babrius may be extracted from their mutilated and disguised form, and exhibit, not indeed "the oldest prose writer in existence," but, in his stead, a terse, elegant, and pleasing poet, who lived many centuries nearer our own times. To this Planudes belongs, as Bentley believed, the Life of Æsop, filled with unfounded and absurd fictions; among these is the account of the old fabulist's personal deformity—a story as generally believed as the fact that he was a Phrygian and a slave, to whom the Athenians erected a statue; but one which is not only without authority, but contrary to every fair and probable supposition."

teen; and in the Regents' by sixty-two against thirty-five. This unexampled measure was thus effected by more than a double majority; but among the dignitaries of the University, a still greater proportion was found on the side of severity. An eye-witness records that a greater display of scarlet robes appeared in the Senate House on this day than ever had been seen in the memory of man: of thirty doctors present, no less than twenty-three voted for the degradation of their brother; and of ten heads of colleges, all but one joined in the same cause."†

Much pamphleteering followed this measure; and in 1724 the Dr. was legally restored to his rank and station.

"The habits of Dr. Bentley's domestic life continued in the same simple, and uniform course for many years. The greater part of each day he passed in his study, where he breakfasted alone; he joined his family at the other meals, and at ten o'clock for evening prayers; after which they retired for their night's repose. Habited in his dressing-gown, he pursued his studies with the same application as had distinguished the earlier periods of his life. The tempestuous feuds in which he was now embarked appear neither to have deranged his habits, nor affected his health. The only change which they produced in his course of life was by obliging him to make more frequent journeys to London, and pass a longer time at his residence in Cotton House. Once a year his family accompanied him; at other times he left them in college, travelling himself in the stage coach. His constitution seems not to have required exercise; nor do I hear of his taking any, except that he sometimes walked on the terrace in his garden. But robust as his health is represented to have been, it was frequently affected by catching cold; a consequence of the recluse life which he generally passed. Bentley's aversion to letter-writing increased with his years; and he seems for some time to have dropped almost all correspondence, except such as was called for by the imperious claims of business.

We find Bentley refusing after this the bishopric of Bristol and the deanery of Lincoln; and in 1728 his daughter Joanna was married to Mr. Denison Cumberland, of the family of Cumberland the dramatist. She was the Phœbe of the celebrated Pastoral in the *Spectator*. Among other memorabilia in the life of this eminent scholar, we should state that he proceeded some way with an edition of the New Testament, though circumstances led him to abandon the design; and he published an edition of Milton, with much in the commentaries (which were, as usual, very arrogant), both to condemn and commend, though the former strongly predominates. His labours on Homer, and his discovery of the Digamma, were performances of a far different character and value, and would alone immortalise his name as a profound scholar and sagacious critic; although Pope, Arbuthnot, and the "Portentous Club," fell upon the aged literary giant with all their ironical might. (See the

Dunciad, Martinus Scriblerus, &c. &c.) A paralytic stroke, however, in 1739, was more fatal to the further prosecution of these learned pursuits, and abruptly stopped his Homeric toils: on the following year he lost his amiable wife.

"Deprived of the comfort and support of her society and virtues, he felt for the first time the real afflictions of mortality. His daughters were both married: the eldest had first been the wife of Mr. Humphrey Ridge, a gentleman of good family in Hampshire, who, in less than a year, left her a widow. After his death she returned to her father's house, and solaced, by her attentions, the affliction of his declining years. In this duty she was joined by her sister, Mrs. Cumberland: after the death of her mother, she and her family passed much of their time in Trinity Lodge. Surrounded with such friends, the doctor experienced the joint pressure of old age and infirmity as lightly as is consistent with the lot of humanity. He continued to amuse himself with reading; and though nearly confined to his arm-chair, was able to enjoy the society of his friends, and several rising scholars, who sought the conversation of the veteran Grecian: with them he still discussed the readings of classical authors, recited Homer; and expounded the doctrine of the digamma; and, as it appears from the recollections of one of the visitors, Mr. Salter, used to communicate the earlier events of his own literary career.

"Meanwhile the whole government of the college was left in the hands of the vice-master; who seems to have managed matters with such address, that the four years of Bentley's life, subsequent to the prosecution, were, as far as I can discover, free from disturbance or uneasiness. It is a proof of no common tact and judgment, that after so violent an agitation for many years, he should have been able to calm the excited and angry feelings with which the society had been distracted. As the minor particulars of the lives of great men are objects of curiosity, it is recorded that Bentley enjoyed smoking tobacco with his constant companion; a practice which he did not begin before his seventieth year: he is stated also to have been an admirer of good port wine, while he thought contemptuously of claret, which he said 'would be port if it could.' He generally wore, while sitting in his study, a hat with an enormous brim, as a shade to protect his eyes; and he affected more than ever a fashion of addressing his familiars with the singular pronouns *thou* and *thee*."

But (oh this *but!*) says Dr. Monk, "My narrative has now reached its last stage; and no more remains but to relate the termination of Bentley's mortal career. He used in his old age to compare himself with 'an old trunk, which, if you let it alone, will last a long time; but if you jumble it by moving, will soon fall to pieces.' Tradition in Cambridge has recorded that he said he thought himself likely to live to fourscore, an age long enough to read every thing which was worth reading; adding, in his peculiar manner,

Et tunc magna mel sub terris ibit imago.

In January 1742 he completed his eightieth year. In June, I find that his health and spirits enabled him to officiate as examiner and elector to Lord Craven's two University scholarships; about a month afterwards he was seized with a complaint which is said to have been a pleuritic fever. He himself suggested that his case required bleeding; but Dr. Herberden, who was then a young physician practising at Cambridge, would not venture upon

* "Rud's Diary. Rud, who had become D.D. the preceding year, and was himself one of the fifty who voted in favour of Dr. Bentley, would appear from the following remarks not to have been greatly mortified at the catastrophe:—"So the great Dr. Bentley was reduced to be a bare Harry-Soph, being not able to gain above fifty votes in the whole University; though a great many did indeed stay away, that they might not offend him by voting against him; yet 106 appeared against him."

† "The single head who voted in Bentley's favour I conclude to have been Davies, the President of Queen's. Bradford and Waterland were out of the University during the whole of the proceedings."

that remedy. The illness appearing serious, his family sent to Stamford for Dr. Wallis, who lost no time in going to Cambridge to visit his venerable friend; but before his arrival, Dr. Bentley was no more. He expired on the 14th of July. Dr. Wallis is stated to have expressed much regret that the patient's own suggestion had not been complied with. His remains were interred on the north side of the communion-rails of the college chapel: after the ceremony, a funeral oration in Latin was spoken in commendation of the deceased by Philip Yonge, at that time one of the college tutors, who became shortly afterwards public orator, and in process of time Bishop of Norwich. A small square stone in the pavement comprises the only memorial of Dr. Bentley; and it is a remarkable circumstance, that the inscription on this stone withholds from him his title of Master of the College. This omission obviously proceeded from that part of the fellows, who contended that after the visitor's sentence of deprivation, he had ceased to be their legitimate head; and I infer from it, that Colbatch's party happened at that moment to be sufficiently strong to make the suppression of his title a condition of the interment taking place in the chapel with the usual honours. The feelings resulting from the late feuds will account for no monument being erected to the memory of this illustrious character."

The following is an appropriate conclusion to a review of an excellent work, in a periodical venturing to call itself a *Literary Gazette*. "The most valuable bequest of Bentley, was that of his library and papers; the whole of these (except some old Greek manuscripts brought from Mount Athos, which he left to the college) he made the property of his nephew, Richard, the sole executor of his will; probably expecting that he would give to the world his edition of the New Testament, and others of his unpublished lucubrations. But this gentleman never edited any posthumous works of his uncle; and returned the money of the subscribers to the Testament. Part of the books were sold immediately, the possessor not having a house large enough to contain the whole; the remainder continued in his parsonage at Nailstone, in Leicestershire, till his death in 1786, when they also were sold by auction; but with one important exception. The whole of Bentley's manuscripts and critical apparatus for his edition of the New Testament, his corrected copy of Homer, and copy-book of manuscript notes, his Hesychius, and Hephæstion, were bequeathed by Dr. Richard to Trinity College, of which he continued a fellow till his death. He had many years before given a valuable portion of his uncle's classical books, bearing his marginal notes, along with his literary correspondence, to Mr. Cumberland, the well-known dramatist and poet, by whom the papers were transferred to Trinity College, and the volumes sold to Lackington the bookseller; but by the public spirit and right feeling of the latter, his entire purchase became the property of the British Museum, and, as I have understood, without any advance of price."

Tales of the Tar. 12mo. pp. 333. London, 1830. Colburn and Bentley.

THE modesty of a single volume is so rare in these days, that it prepossesses us in favour of the author, Captain Glascock, R.N.; and the *Tales of the Tar* have justified our anticipation. They are nine in number; and we will pre-

sume to say, on our landsman critical authority, perfect pictures of sea fashions and seamen. As naval sketches, they are indeed true almost to a fault; every syllable is redolent of tar, and every thought and action seems to be generated by the motion of shipboard. Jack neither speaks, walks, nor reasons, like a fellow a-shore: his lingo, his swing, and his conclusions, are all essentially different; and while tossed by a hurricane, he sincerely pities the poor creatures on *terra firma*, who are exposed to accident from tiles or chimney-pots being blown about their heads.

The Breeze at Spithead, which occupies 174 pages of the work, is not only a narrative of great interest in itself, but of high importance in a historical point of view; the facts being gathered with much care from the most authentic sources, some of the actors in that mutiny, which at one time frightened our isle from its propriety, and threatened the most serious consequences to the kingdom.

"The sketch of the mutiny at Spithead," says Captain G., "which, under a consciousness of the vast labour expended in the accumulation of materials, the author had almost called a history of that alarming event, has been derived, in great measure, from the lips of some of the living delegates, who were 'the head and front of the offending,' and who, in their younger and more active days, dared not reveal that which, at this time, and at their present age, and harmlessness of character, may be discussed freely and at large. The individual who figures as chief speaker in the dialogue is now living in Greenwich Hospital. The author has not only availed himself of this man's name, but has endeavoured to preserve the characteristics of his mind and language; and it may be the more necessary to state this, inasmuch as his style of discourse may be thought inconsistent with the *no-education* and habits of life of a thorough-bred seaman. Fleming, indeed, is a remarkable person. The author possesses several of his letters relative to the subject of the mutiny; and their manner of expression, albeit a little ambitious, would not discredit a scholar. The professional reader, if he should happen to bestow a careful attention on the minor stories and anecdotes in the following volume, may, perchance, discover a few practical truths (by way of moral) lurking in the incidents. He may stumble on something which may either confirm some previous thought of his own, or suggest hints for future cogitation. Be this as it may, the author will, perhaps, be forgiven, for saying that his aim has not been confined to mere entertainment."

It is our duty to confirm this claim. The sea phraseology must not be fancied to be of that sort of slang which would prevent general readers from understanding or relishing the story; on the contrary, it is the seasoning of the dish: and with regard to moral and professional instruction, we are convinced that few officers in his Majesty's navy will rise from the perusal of this volume without being much benefited by the hints it throws out, and the lessons it affords for the good of the service. We will now endeavour to illustrate our opinions by an extract.

The sailors having determined on a redress of their grievances, the complaints respecting which had, it must be confessed, been sadly neglected—the breaking out of the storm is thus described:—

"Well, five or six weeks passes over from our first sailing to our return to Spithead, when, on the 15th of April, the Royal George

makes the signal to prepare to sea—this was of a Sunday afternoon. There was little more done that day than to broach the business.' 'How?' 'Why, by three thund'ring cheers, led by the lazy Charlotte, and followed by every ship in the fleet, as fast as they could rig their roars. Never, no, never since the fall o' man was known such a hallabaloo. Why, the very air rung wi' the roar, and the ships at their anchors shook for all the world like the shock of an earthquake. I was alongside the Charlotte at the time—for you see I was coxon o' the cutter as only a little afore left the frigate to fetch our carpenter aboard, as went to look at the model of a new fashion way o' fishing a taup-sail yard. Well, pea from pan never popped faster nor did Bill from the boat at the sound o' the Charlotte's cheer; 'for,' says I to myself, 'the breeze' began.' Afore you could well crack a biscuit I stood on her starboard gangway. There were the lieftennants, mates, midshipmen, purser, surgeon, warrant-officers, and all, flyin' up the ladders, and must'ring helter-skelter on deck, like men as was fairly mazed. The second lieftennant had charge o' the ship, for the first was ashore, and the captain, in course, was seldom aboard. One Mister W——n was second lieftennant, and a finer fellow, they said, never took trumpet in hand. I'll never forget, no never, as long as breath's in the body o' Bill, the look o' the man when he first tumbles up from below. 'What's the matter—what's the matter?' says he, lookin' up in the crowded riggin', with his eyes starin' out of his head—for the riggin' was reg'larly manned, and there was more, ay, more nor seven hundred souls in the shrouds! 'Oh God!' says he, flingin' himself down on his knees, and heavin' up his arms aloft—'oh,' says he, 'is it come to this! Shoot me—shoot me!' says he—'blow out my brains at once, for I never can live to hear it said, that whilst I, said he, with the blood billin' up in his face, 'whilst I had charge o' the ship, a disturbance broke out aboard!' 'We'll not hurt a hair o' your head,' sings out a couple o' hands, fast hurryin' down from the larboard main-riggin'—'No, not a hair,' says Uddlestone, one of the Charlotte's quarter-gunners, as was made one of her delicates. 'Not a hair,' says Bob Glyn, the other as belonged to the folksel—for I knew the pair on 'em well. 'Not a hair,' says Bob, stepping up to the man on his knees. 'Get up, sir—up, sir,' says Uddlestone. 'Rise, Mister W——n—rise, sir,' says Glyn, 'you've always behaved like a man,' says Bob, as he and Uddlestone lends the poor gemman a fist to get on his pins—'we've nothing to say, no, not a word against you, Mister W——n, nor officar aboard.' 'No,' says Uddlestone, 'we wants no more nor our grievances granted,—and it's not the lieftennants, nor yet the captains, in the fleet as can now do what we wants.' Well, you know, the whole fleet a followin' the Charlotte's cheer, shewed the officers at once 'twas a reg'lar blow-up, and not confined to one or two such dissatisfied ships as ourselves—so, in course, they tries to palaver over the Charlottes, and advises them to return to their reg'lar duty, like men. 'So we will,' says Glyn, 'when treated like men, but never afore. And moreover,' says he, 'the fleet,' says Bob, 'have made up their minds not to put breast to bar, or lift an anchor, till our wrongs are reg'larly righted.' 'But mind,' says one Bill Williams, a Welshman born—as fine a young fellow as ever you seed—he stood six feet two in his stockin'-feet—'mind ye,' says he, 'steppin' for'ard in front o' the officers—'ay, and let it be clapt in the log,' says he,

slappin' his thigh to give weight to his words, for Bill, they said, was a capital scholar, and could spout by the fathom wi' the best benches aboard—'mind, gemmen,' says he, 'if so be as the enemy's fleet puts to sea, we'll first give the ships up to the officers—follow and fight 'em—ay, and beat 'em in the bargain; for d— it,' says he, 'it never shall be said we shyd Mister Crappo, or hadn't the same nat'ral likin' to lick him as ever. And then,' says he, with a flourish of his fist, 'we'll come back to Spithead in the triumph,' (though I don know why he should fix upon *she*, for *she* wasn't altogether one of the stanchest), 'and repeat,' says he, 'our complaints till we makes every lord in the laird shake in his shoes.' Well, you know, the ball once opened, the next *step* throughout the fleet as was taken, was to get hold o' the keys o' the magazine and arm-chests. We then tried to mollify the officers—tho', I b'lieve, aboard the Mars, there wasn't many sweet words passed atwixt 'em; and what's more, I b'lieve they claps some blue-jacket sentries over some of their doors. But aboard most o' the ships, the officers were told no offence was meant to them; and to shew 'em there wasn't, it was wished they should carry on the reg'lar duty afloat, as if nothing had happened amiss in the fleet; but at the same time they gets a bit of a hint, they wasn't to interfere wi' the way we went to work to get our grievances granted.' "

The meeting of the delegates, two from each ship, and their proceedings, are related with singular accuracy; and there is an account of the ducking of a Jew who cracked a joke upon them, told in so amusing a way, that we regret it is too long to be quoted as an example of the author's humour. It is a remarkable circumstance, that after the Breeze at Spithead had subsided, a woman was the cause of the mutiny breaking out again at St. Helens.

"This damsel (it is stated) had been in the habit of receiving occasional visits from Admiral C—'s steward on shore; and upon one of those tender occasions had picked from the admiral's man, that the London and Marlborough were detained at Spithead until Lord Bridport had sailed, in order that, if necessary, Admiral C— might proceed to punish the crews of both ships by decimation—'What! by starvation?' cried Miller. 'You shall presently hear,' said Fleming, perfectly composed; 'and that Sir John had received orders to that effect from the commander-in-chief. Upon this information, the well-meaning girl, quietly dismissing her admirer, forthwith proceeded to St. Helens, to put Valentine Joice (who with the fair one, it seems, was a still more favoured swain than the steward,) in possession of a secret which was indeed of such vital importance to the ships' companies detained at Spithead. Already alongside of the George at St. Helens, she inquired for Joice; nor did she desire to ascend the side—'twas sufficient to see him below in the boat. Permission was granted, for the order of things was now reversed—a few days before all leave was obtained from Joice himself. In five minutes, at most, the untimely secret was disclosed—Joice's mind was made up; the girl's account fully confirmed the rumour already afloat; the die was cast, and before the next bell was struck, three tell-tale cheers, followed in fast succession by every ship at the anchorage, again proclaimed the distracted state of the fleet: though, he it remarked, not a ship had been previously prepared for so sudden a burst of—'"

A Lieutenant Bover, of the London, having

ordered the marines to fire on the seamen, by which a sailor was killed, very narrowly escaped being hanged for this deed. His neck was saved from the halter by the timely interference of two of the men; but his conduct was afterwards regularly investigated by the delegates in council.

"The delegates met in the Mars' gun-room. The case demanded the most solemn consideration; and the gun-room, as being apart from the people, was purposely selected to investigate the affair; though, I must say, that there was little obtrusive curiosity evinced on the part of the Mars' ship's company.' 'Of course not,' said Tailor; 'the committee-men had made up their minds on the matter.' 'Perhaps so. Well, the blood spilt in the London had already aroused the wrath of the fleet, and had called forth the worst feelings of the *worst* afloat—for what feeling can be worse than that of revenge? Upon the fate of the unfortunate lieutenant, each ship, with the exception of the London and George, had, unsolicited, sent in her sealed *sentence*. Nor was there evidence wanting to prove that the lieutenant's fire was the first to draw blood; for poor Bover himself was the first to confess the fact. The fourteen letters, or rather packets, for they assumed a formidable shape, were opened and read by the delegates of their respective ships. This occupied a few moments of solemn silence; and I'll venture to assert that no other instance ever occurred, in which fourteen papers, purporting to say so much, having been so thoroughly read and understood in so short a period.' 'Why you know,' said Tailor, 'it's only when people *mean* what they say, that they've little to say.' 'Exactly so—you say no more than true,' said Miller. 'Now, the whole time I was abroad, I never writes to the old woman in any other way than this—and more the old girl never wanted: 'Dear Bet,' says I, 'I'm well and hearty, and continues to 'lot as long as you continues an honest woman—Yours, Tom.' 'Now there, truth stares her full in the face. But if I spins her a long roguish yarn 'bout lubberly love, and the likes of that there tiresome trash, or sends her a longer sarmin 'bout followin' the sogers and the like, why, then, there's a thin look o' truth on one side or t'other. Bet natrally says, 'If Tom likes Bet, where's the kashun to tell at this time o' day,'—and if Bet likes Tom, why talk of followin' the sogers? And so I says, them as wanted the leaftennant's life shewed they were in earnest, or they wouldn't have said so little about it.' 'It were well for many,' said Fleming, 'if the lawyers and you could agree.' 'D—n the lawyers—back to the breeze, and keep full-and-by.' 'To the best of my recollection, the letters—the *dead* letters, as since designated, ran thus—'We of the Mars say, instantaneous death.'—'The Marlboroughs say, blood for blood.'—'The Minotauras have determined on death.'—'We of the Charlotte say, use the yard-ropes.'—And so on—a similar strain pervading the fourteen letters. At this moment Alex. Harding, my brother delegate for the London, was either taken really unwell, or feigned to be so—some suspected the latter. He rose from the table, walked about the gun-room, but never resumed his seat, or ever after sat as a delegate. The fact was, those brief documents of death unmanned him. He at once saw the feeling of the fleet. Nor were the majority of delegates, who were really a well-disposed and humane set of men, less sensible of the excitement afloat; but the dread of the reception with which they should meet on their return to their

respective ships, induced many to yield their opinion to that which was termed the 'general voice.' 'In course, the general vice was their only guide.' "

Fleming again interfered and saved the lieutenant. Lord Howe's visit to the mutineers, and the redress of their grievances, wind up the tale, with which, we have only to repeat, we have been highly gratified. The other anecdotes are short and entertaining, with many graphic hits; but we must spin our yarn no farther than one remaining extract—Jack's description of a young lady whom he imagined fell in love with him on her passage to Madras. "Bless your hearts, I lost,—or, what's all as one as lost, let slip thro' my fingers, on an out'ard-bound vyage to Madras, as nice a little craft as ever hit the fancy o' man—and for why? Because *miss* was too modest to open her mind, and Phill too green, at the time, to diskiver her drift. She was a reg'lar-built lady—played on your forty-pianor, and wore nothing but silks and satins all the way out to Madras. She'd the wickedest eye, and yet there was never no wickedness in it; for 'twas as blue and as bright as the sea in a calm; but 'twas the most rogishest eye I ever seed with a winch. She used to look under her lee-lid, as was always on the droop, for all the world like the slope of a lower-deck port of a rainy day. There was never—no, *never*, a craft more beautiful built. *She* wanted no *sheathing* on her bilge, or bends to make her stand up to her sticks. Her bearings were in the right place. She tumbled in, as in course she should, a little aloft. None o' your wall-sided wenchers for Phill. I never knew one on 'em yet as could properly carry their canvass. Her run was as clean as a clipper's; and, as for her bow, the le-la Pomone's herself wasn't finer beneath, or fuller above: Whenever 'twas *my* weather-wheel, she was sure to be backing, and filling, and boxing 'bout the binnacle, like a cooper round a cask. There she'd be, one time a larning her compass—another seeing which way her head was—now axing the name o' that rope, then the name o' this; the difference 'twixt a reef and a *trus* lover's knot; and then she'd send flyin' such a glance at a fellow as would either shake the ship up in the wind, or make her yaw from her course four or five points. Many and many's the blowin' up she's a-got me. But I take it Miss Morton (for *she* didn't go by a purser's name) took 'em all more at heart nor ever did Phill. 'I so loves the sea,' says she, a day or two after we crosses the Line: 'sailors,' says she, 'are such kind-hearted men. They've such sinnavatn ways with 'em. They takes such care o' their hair; and they seem,' says she, 'so fond o' children—even among the very pigs and poultry they've always a pet. Oh! *Mister* Farley,' says she, (for you see, and what's more, I never could come at the cause, she always *would* clap a handle to my name,) 'you *doesn't* know, Mr. Farley,' says she, 'how *much* I doats upon sailors. What *would* I give,' says she, letting fly another flash of her eye—'what *would* I give,' continued Farley, endeavouring to imitate the feminine tone of his quondam love, 'could I only follow their fortunes.' I thinks I now hears her voice—sees her afore me with her half-lowered lid fixed on her tapered foot (for she'd a foot like a Chinese child), as it peeped from under her petticoat, shoving the sand, that lay spread upon the deck, into the pitchy seams, as biled out in spite o' the awning. Well, you know, when she says, 'What *would* I give could I only follow their fortunes,'—so much she gets

hold o' my mind, that I'm blessed if the ship didn't broach instantly to, and slap goss, short in the irons, the fore-topmast, and to gallant studden-sail booms.' ”

Catalogue Raisonné of the Works of the most eminent Dutch and Flemish Painters. By John Smith. Part the Second, containing the Life and Works of Peter Paul Rubens. London, 1830. Smith and Son.

“WITH the difficulties, trouble, and expense,” Mr. Smith observes, “attending the compilation and publication of a work of this nature, the public generally are unacquainted; these can only be fully known to the author, or to those who have been engaged in a similar pursuit.” We are happy to add, that, from the cursory view which we have been enabled to take of his volume, he has surmounted the obstacles opposed to the successful execution of his task, in a manner highly creditable to the extent both of his knowledge and of his application. The Catalogue comprehends an account of nearly fourteen hundred pictures and drawings by Rubens; the distinctive qualities of most of which are described with a copiousness and an accuracy which must render Mr. Smith's work exceedingly valuable to the connoisseur and collector. It is preceded by a memoir of the great Flemish artist; at the close of which is the following able summary of the most prominent characteristics of his genius and his productions:—

“The numerous observations which occur upon pictures in the course of the following work, renders it necessary to be brief in reviewing the pictorial powers of this mighty genius—this universal painter, from whose prolific pencil proceeded, with a spontaneous facility, an inexhaustible variety and abundance in every class of the art—history, poetry, and familiar life; portraiture, animals, landscape, fruit, and flowers—each possessing such excellence, as though he had made that particular branch the exclusive object of his study. But though he could thus successfully adapt himself to every department of his art, his powers and genius appear to expand in proportion to the difficulty of the subject. When the vastness of the composition and the action required energy in the figures—when the passions, violently excited, were to produce terror or to excite horror in the spectator—in such scenes he had full scope, and could range at large, displaying profusely the riches of his invention and the inexhaustible stores of his poetic imagery. These mighty powers are exemplified in those prodigious works representing ‘the Fall of the Damned,’ ‘the Day of Judgment,’ ‘the Resurrection of the Just,’ and ‘the Conversion of Saul.’ The fervour of his genius is displayed with the same success in ‘the Overthrow of Sennacherib and his Host,’ ‘the Murder of the Innocents,’ and the agonising sufferings of ‘the Impenitent Thief on the Cross.’ A similar spirit pervades all those subjects in which the representation depends on the imagination; such are ‘the Battle of the Amazons,’ ‘the Rape of the Sabines,’ ‘the Death of Hyppolitus,’ ‘the Brazen Serpent,’ and ‘the Hunts of Wild Animals.’ His poetical taste is admirably depicted in Bacchanalian scenes, the Loves of the Centaurs, and other mythological subjects. ‘The Horrors of War,’ ‘the History and Apotheosis of James I.,’ ‘the Triumphs of the Church,’ and the Luxembourg series, evince his transcendent powers in allegory. It must, however, be admitted, that an equal degree of excellence is not discernible in those com-

positions where the predominant expression should arise from an emanation of the soul, or the supposed operation of invisible agency,—such inspiration as should illumine the countenance of holy persons, or radiate that of the suffering martyr, who glories in being thought worthy to die for his faith. In all these his expression is purely human, occasionally elevated, but seldom dignified, and never divine. As his mind imbibed a strong impression of objects, so his pencil faithfully transferred them to the canvass, where their material forms, texture, and expression, are always depicted with a strength and energy that must ever delight the connoisseur. But that which has won all eyes to admiration is his resplendent colour, the superlative beauty of which has become proverbial; even Titian is compelled to divide with him the palm of superiority. From that master he acquired his knowledge of the harmony of colours, although he retained the Flemish manner of using them; from his predilection to the taste he acquired in the school of Otho Venius, we may trace why his pictures are deficient in the chaste and solemn breadth of colour which distinguished those of his prototype, whose tints blend insensibly into each other; while those of Rubens, although brought together with equal propriety, being left pure, or only tenderly united with the pencil, require to be viewed at a suitable distance to conceal the manœuvre of the palette: when so viewed, they present a rich and perfect union, and such brilliancy and force as bear down all competition. His compositions, although frequently overcharged with objects, arising from the fertility of his invention, are always skilfully grouped, and united by intermediate links, presenting to the eye a curved line or the volution of a wreath; the whole being judiciously governed by due proportions of light and shade, and exhibiting the effect of a rich cluster of flowers. To a profound knowledge of all the principles of the art, he added that of being the most accomplished adept in its machinery of any one that ever painted; and his rapidity of execution was only equalled by his extraordinary powers of invention. It is recorded of him, that he performed as much in three days as another could complete in so many weeks: this astonishing rapidity was the cause of the frequent incorrectness in his drawing, observable in many of his productions; the fervour of his genius not allowing leisure for reflection. These defects, however, did not arise from a deficiency of knowledge, as may be instanced in numerous pictures, where the human frame is portrayed with most admirable correctness, the articulations being given with a precision that shews an accurate knowledge of anatomy; neither are his female figures devoid of grace, although they often present what may be more properly styled the comely than the beautiful. These defects unquestionably proceed from early impressions, uncorrected by a due study of the antique until those impressions were so fixed in his mind that no after-study could remove them. It is sufficient, however, to be able to say, that Rubens possessed a more universal genius, a more extensive knowledge of all the principles of the art, and a greater power in the practice of them, than any other painter who has hitherto existed.”

The following observations will assist in resolving the problem which must present itself to the mind of every one who has had an opportunity of remarking the apparently miraculous fertility and facility of Rubens' pencil: “The perusal of the *Catalogue Raisonné* of

the works of Rubens will doubtless frequently excite in the mind of the reader surprise, if not incredulity; for he will naturally be inclined to doubt the possibility of one man having been able to produce such an immense number of pictures, many of which are of large dimensions, and offering such variety of subjects, and diversity in the compositions. These doubts the writer of the catalogue has often heard expressed, and to meet the question has been one of his endeavours: with this view he has inserted throughout the work all the authentic information he has been able to collect. Notwithstanding this, he thinks that he shall place the matter more intelligibly before his readers, by giving a brief account of the manner and the ingenious methods adopted by Rubens to vanquish this apparent impossibility. Presuming that the reader has gone through the account of the life of Rubens, in which the energies of his mind and physical powers are largely noticed, he will have perceived that he was able to perform, in the space of a few days, as much work as would cost other artists so many weeks; that numerous sketches, designs for the models of large pictures, were frequently the result of a few hours' amusement, or, at most, the efforts of two or three days' application. Let the reader, then, imagine such a genius, such a phenomenon in art, to have under his control six or eight clever pupils, well versed in the facile system of painting peculiar to the school; and that each of these was furnished with a model, or sketch, to work from on an enlarged scale, by the unerring medium of lines; and that, having correctly drawn in the subject, forwarding their several pictures under the continual inspection, and with the occasional assistance of their instructor; that, lastly, he passed over them his broad, rapid pencil, infusing life and spirit in every figure, and harmonised the piece;—he will perceive how, by the labour of a day or two, Rubens rendered the work his own, and worthy of his distinguished name. But, in addition to his regular pupils, it should also be remembered, that he had the aid of Francis Snyders and Paul de Vos, to introduce animals, fruit, and objects of still life, into such subjects as required them; and Wildens, Van Uden, and Mompers, to paint the landscape department: by such means the work of eight or ten persons was accomplished daily. Nothing short of such auxiliaries could have produced in less than two years the sketches and finished pictures representing, in a series of twenty-one allegories, the life of Marie de Medicis, besides portraits and other smaller works, done exclusively by his own hand. The same means were, doubtless, used to execute the immense pictures for the convent at Loeches, in Spain (as these were also painted at Antwerp), the ceiling of the Jesuits' Church, the Life of Decius, and the numerous pictures which formerly adorned the altars of the churches in the Low Countries. It must further be observed, that these skilful assistants, in the absence of large works, were unquestionably employed in copying pictures, frequently introducing in such copies certain variations from the originals, either in subject or size, so as to give them the appearance of new compositions; this may account, in some measure, for the great number of pictures of Holy Families, and other favourite subjects.”

The third Part of this interesting publication is promised this month; and will contain the life and description of the works of Van Dyck.

The Fortunes of Francesco Novello da Carrara, Lord of Padua: from the Chronicles of Gattaro; with Notes. By David Syme, Esq. 12mo. pp. 257. Edinburgh, 1830, Constable and Co.: London, Hurst, Chance, and Co.

WE cannot better characterise the work before us than in the words of its preface:—"Francesco Novello da Carrara, the story of whose eventful fortunes we are to tell, was the last and best of the House of Carrara, with whose history that of Padua is identified during the whole of the fourteenth century."

The old chronicles of the Italian states are replete with extraordinary incidents, and the most atrocious crimes are related in the coolest way imaginable, as things of course, and everyday occurrence. All the passions of which human nature is susceptible are there seen in visible operation; and it is pleasant to have our interest awakened, and our reflections excited, by the action of the figures that move along the scene, and strike and struggle as they pass, rather than by the solemn interlocation of the exhibitor."

They were, sooth to say, stirring times: now a battle, and now a banquet; to-day the hand grasped a sceptre, to-morrow a lance: constantly in action, generally in danger, men's passions were always being wound up to the highest pitch of excitement by the great key-notes of ambition and revenge; till hairbreadth escapes, violent death, and desperate success, were familiar events. For example, how slight a chance saved the Carraras!

"Mastino finding no attention paid to his letters, became enraged, and wrote Alberto under his own hand, that he would no longer call him brother, if he did not, on the receipt of that letter, imprison and decapitate the two Carraras, repeating that they were in a secret league with Florence and Venice, and watching for an opportunity to deprive him of Padua. This letter he intrusted to one of his officers, and it was delivered on the 28th July, 1337. Alberto perused it with grief, but the strictness of the order constrained him to obedience: so, summoning certain of his people, he commanded them, the moment they saw Marsilio and Ubertino within the palace gate, to assail and cut them both in pieces. Having planted these men at the foot of the stair leading to the delle Donne Palace, he next despatched a messenger to their house near S. Nicolo, to say he wished to see them instantly. The messenger found them in the garden in their slippers, wearing white doublets and cape, as if about to go to bed. When he delivered the message, they replied, 'What can Alberto want? we left him not long since,' and remained in close consultation. They at last resolved to go, and having ordered out a horse, mounted, dressed as they were, Marsilio on the saddle, Ubertino on the croup, and soon reached the street leading to the Molino bridge. Marsilio happening to look up, saw Alberto at the palace balcony (he had placed himself there to see them put to death), and called out pleasantly, 'Che Diavolo! what do you want now? we were just going to bed.' Alberto was much affected by their appearance, and called out, 'Do not advance a step farther. Go to bed: it was a mistake. I did not send for you.' Next morning he shewed them the letter, and Marsilio said, 'They who carry these tales to Mastino never gave him so much as an egg, whereas I have given him Padua; but I am here, and you and he may do with me as you please.' Alberto embraced him, saying, Mas-

tino was foolish to seek to diminish the number of his relations and friends; and immediately spoke of something else. But Mastino finding that his orders had not been executed, and fearing that the letter had fallen into other hands, wrote again, to order their instant execution, if they were not already dead, and gave that letter to a confidential servant, with strict charge to deliver it to no one but Alberto. He arrived in Padua on the 12th of August, and found Alberto playing at chess with a gentleman of Marsilio's party; Marsilio and Ubertino looking on. Having made a suitable obeisance, he advanced, when Alberto said, 'What does my brother want? how is he?' to which the person replied, 'He is well, and sends you this letter.' Alberto, turning to Marsilio, said, 'Take the letter, and read it;' upon which he took the messenger apart, and demanded the letter; but he refused, saying, he was charged to give it into the hands of the Signor Alberto, and none other. The game being finished, Alberto asked what the letter contained; upon which the messenger again approached, and explaining the order he had received, placed it in his hands. Alberto, however, gave it to Marsilio, and began another game. While his attention was thus engaged, Marsilio drew Ubertino aside, and shewed him the letter, when, aware that no time was to be lost, they immediately sent a messenger to the camp, to invite Piero Rosso, captain of the troops of the league, to march towards the city, and enter by the Ponte Corbo gate, which would be open. When the game was finished, Alberto asked what news, and Marsilio replied, 'Mastino wishes you, if any foreign falcons come this way, to procure him one.' Next day (13th August, 1337) they went, as was their daily wont, to the palace, and having reached the fruit-market, met Alberto, and were in conversation with him, when an officer of the court came up, exclaiming, 'My lord, save yourself! Piero de' Rossi, with the troops of Venice, is at the S. Stefano gate. The cry is, 'Live the house of Carrara!' Alberto, in great alarm, turned to Marsilio, and asked what he should do, and was advised to retire to the house of Ameda, at Santa Lucia. Marsilio and Ubertino then hastened to the Place della Biava, and there found the banners of Piero, whom they joyfully saluted and embraced. They next proceeded to the palace, and Alberto being brought thither under a strong guard, renounced the signory, and Marsilio was proclaimed."

After much of danger and difficulty, Francesco becomes master of Padua; but, in the midst of his triumph, he hears of the death of his father. The pageantry of the funeral is a fair picture of the splendour in which age delighted, and we regret that we cannot find space for it; but must make our *escape* to another narrow escape: Francesco, son of the signor, has been taken prisoner.

"On the 2d of July, Facino Cane left Bologna with Francesco Terzo and some others of the prisoners, and proceeding by Modena, got to Parma on the 5th, where he took a lodging for himself and them for the night, intending to continue his journey next day by Piacenza to Pavia. There happened to be of the party one Francesco, a barber of Padua, a servant of Francesco Terzo. This person went abroad in the course of the afternoon, and was gazing about him in the public place, as is the custom of strangers newly arrived in a great city, when he was accosted by an inhabitant, who recognised him as a Paduan, and expressed great pleasure in meeting a native of that place.

They entered into conversation, and as they walked along he thus addressed the barber:—"Why does not your master think of making his escape?—*Corpo di Cristo!* if he gets into the clutches of the duke he will never more see Padua. Let him trust to me, and I engage not only to get him out of this, but to conduct him safely within the Ferrarese territory. This offer I make for the love I bear his father, himself, and the whole house of Carrara, for you must know I was once chief farrier to the court at Padua, and these were the happiest days of my life.' The barber was delighted at the prospect of escape, and asked how it was to be effected? His friend replied, 'I will shew you that,' and leading him to the wall, pointed to a place where it was so low that they might easily descend, and would then have but to swim the moat to gain an adjoining thicket, from which, as he knew the roads, he could conduct them into the marquisate. The barber shook his head, and said it was a perilous adventure; to which the other replied, that he ran all the risk,—if they were discovered he would be hanged, while they would not be worse than before. The barber returned to the inn with all speed, and told Francesco Terzo what had passed. The plan pleased him much, and he found an opportunity of speaking to the stranger in the evening, when they arranged their measures. The great difficulty was to get out of the house, for the Signor slept with Rigo Galletto, and there were many chances against his being able to leave the room unobserved. However, waiting till Galletto was fast asleep, and stealing softly from his side, he dressed himself in the clothes of one of the servants, and took a platter in his hand. The barber went before him singing. When they were fairly out, they walked very fast to the wall, and found their friend waiting. It was about the fifth hour of night. They succeeded all three in scaling the wall and descending on the other side. The ex-farrier swam the ditch first, the others followed, and they went at their swiftest pace to the thicket hard by. During the day they lay concealed, at night they resumed their journey, and fortunately none of the parties sent in pursuit came upon them, although often within a few feet of their lurking-place. On reaching the territory of the Marquess of Este, he notified his escape to his sister Giliola, and requested her to send horses and clothes, as he wished to go directly to Padua. She came to him with the most affectionate haste, and having supplied his wants, directed some of her train to accompany him to Padua, where he arrived on the 17th of July, to the joy and surprise of the whole city. The Signor his father presented his deliverer with 1000 ducats, and possessions which yielded a yearly return of 300 ducats, besides a fair house, horses, and other gifts."

Among other miseries of the time was that fearful one the plague.

"Crowds had flocked for safety within the walls, bringing with them their cattle, and whatever they could remove, so that not only the houses, but even the churches, monasteries, and store-magazines were filled, while multitudes, who could find no other shelter, slept on straw, under porticoes and arcades. As the fodder fell short, the cattle began to die, and the air was poisoned by the filth of the streets, and the exhalations of corrupting carcasses. Provisions also began to grow scarce, and, taking advantage of the time, every one held his goods at a high price. The market rates were,—forty pounds of grain two gold ducats; a loaf four soldi; eggs three soldi;

a pair of fowls one ducat; a turkey two ducats; sugar forty soldi the ounce; wax forty soldi the pound;—in short, all the necessaries of life were very dear; and the bad air, and want of wholesome food, gave rise to a deadly pestilence. The invariable symptom of the disease was a small nut-like swelling, which appeared sometimes on the throat, sometimes on the limbs, sometimes on the arms, with acute fever, and in many cases with flux, so that in two days, or in three at most, the patient died. The deaths varied from 300 to 500 in a day, and from the end of June to the middle of August there died in Padua more than 40,000 individuals, as was known by the register of deaths kept in the episcopal palace. The bodies were buried thus:—every morning cars went round to receive the dead, and in every car were placed from sixteen to twenty corpses. A crucifix and lantern were fixed on the pole in front, and each car was attended by a priest. Deep trenches were opened in the burying-grounds of the city churches, and into these the corpses were thrown, and covered with earth. This was continued till the trench was filled, and each held from two to three hundred. A father might be seen bearing his son to burial, a son his father, a brother his brother, a wife her husband,—the men moving along in gloomy silence, the women weeping and wailing aloud, so that heaven must have been filled with compassion. Immediately after these dreadful obsequies, the citizens were obliged, their eyes filled with tears, their hearts with agony, to take arms against the bloody and relentless foe. Even in the Venetian camp the mortality was great, although, having more free space, they could better guard against infection. What more can be said? Since the destruction of Jerusalem, and the fall of Troy, never was earthly city so overwhelmed as the unfortunate Padua,—till then so rich and flourishing, and containing within the circuit of its walls as many wise and learned men as might have sufficed for the government of the universe.”

We most cordially recommend this volume to our readers; it is a most vivid historical picture, with all the interest of a romance. We give Mr. Syme great credit for the research and industry with which he has collected his materials, and still more for the animation and picturesque language in which he has narrated his hero's adventures.

1. *The Waverley Novels*. Vols. XII. and XIII. Cadell, Edinburgh.
2. *Dr. Lardner's Cabinet Cyclopaedia*. Vol. VII. *Cities and Towns*, Vol. I. Longman and Co.
3. *The Library of Entertaining Knowledge*. Vol. V. *New Zealanders*; and Vol. VI. Part I. *Insect Architecture*. London, C. Knight.
4. *The Aldine Poets*. Vol. I. *Poems of Burns*. London, Pickering.

The rapid revolution of these stars, of what we may call our regular periodical literature, imposes upon us the duty of brevity in some of our notes on their return: otherwise our pages could contain little else but descriptions and illustrations of this single branch of publication.

The two volumes of the Waverley set conclude the *Heart of Mid-Lothian*, and give a portion of the *Bride of Lammermoor*, one of the most beautiful and perfect of all the great author's delightful works. There is nothing very particular in the additional notes, except an interesting account of the unfortunate Madge Wildfire, which we shall probably insert in a future No. From the introduc-

tion, we learn that the fatal story of the *Bride of Lammermoor* had its origin in the family of Dalrymple; of which also a notice hereafter.

The new No. of the *Cyclopaedia* is devoted to Geography, and contains brief but excellent accounts of the principal cities and towns in Europe. We have hardly had time to glance it over; but we observe that it is literally crammed with well-executed embellishments.

The *Entertaining Knowledge* is truly entertaining: the volume on the *New Zealanders*, replete with curious and original matter; the part on *Insect Architecture* worthy (and this is high praise) of its entomological predecessors, with Mr. Rennie's valuable notes.

The *Aldine Poets* is a new and handsome addition to this class of publication. The neatness of Mr. Pickering's works needs no comment, and he has bestowed his best pains on this specimen, which consequently promises a charming series of popular poetry. The name is taken from the Alduses, famous printers who flourished at Venice in the 15th and 16th centuries; to whom we are indebted for the first editions of the several Greek Classics, and numerous editions of Latin and Italian poets. Our own spirited countryman bids fair to rival them, and earn his title honourably to himself and the art in England.

Constable's Miscellany. Vol. LII. *A History of Music*, by William C. Stafford. Constable and Co. Edinburgh; Hurst, Chance, and Co., London.

A HISTORY of names and dates is more useful than calculated for the pages of a periodical; and we shall content ourselves with commending Mr. Stafford's industry, and saying that the present little volume embodies much information touching the origin, composition, and performers, from the earliest period to the present day. As a work of reference, the compilation might have stood on higher grounds; but it is well enough for common popularity.

Noe. LIII. and LIV. a life of the Scottish hero, Sir W. Wallace, is not so much entitled to our applause as we could have desired, in a literary point of view. This ought to have been a very crack book of any Northern series.

The Oxonians. By the Author of the "Roué." 3 vols. 12mo. London, 1830. Colburn and Bentley.

We remember a story of an Italian priest who, while confessing an ostler, questioned him closely whether he ever greased his horses' teeth to prevent their eating their due allotment of oats: the man assured him he never had; and absolution was granted. But when the period of confession again came round, this fault was the very first to which the ostler pleaded guilty. "I thought," exclaimed the surprised priest, "you told me, that of this fraud at least you had never been guilty?" "I never had," replied the man, "till you put it in my head." Much upon this ground do we object to the volumes now before us; we object to them as introducing scenes, persons, &c. whose very existence it is matter of prudence and even virtue to keep out of sight: matter of prudence certainly, for it is to be more than doubted whether the description of luxurious enjoyment will not be more likely to attract than the late after-consequence to deter; and the commonplace bits of morality—those gratuities of cant to propriety—which are every now and then thrown in, seem something like peace-offerings, which enable the author to say— "How can you call a book in which there are such excellent sentiments immoral?" The

writer has mistaken his forte; it is not that of deep insight either into man or woman's character. It is a common but most mistaken idea, that knowledge of vice is knowledge of human nature, and that to depict crime is to be profound. It would be ridiculous to bid the novelist avoid the darker picture of vice—the bad as well as the good are his property; but we see no great moral advantage in having the words libertine, passion, seduction, always before us, while a warning is held out in the shape of sudden death or violent repentance, which, in nine cases out of ten, never happens in real life. In a literary point of view these volumes do not call for severe criticism; they are made up of the remains of the *Roué*, who again figures on the scene: story there is none, and the *dénouement* is not such as we can approve.

Nineteen Sermons on Prayer. By Bishop Andrewes. 8vo. pp. 322. London, 1830. Whittaker and Co.

A REPRINT of an old divine is extremely refreshing in these days; and here we have learning without pedantry, piety without cant. The volume is well worthy of this revival.

A Vindication of Christian Faith. By Dr. Inglis. 8vo. pp. 354. Edinburgh, 1830. Blackwood.

THIS is so sterling a modern religious work, that we may well class it with an ancient worthy. The historical portion, relative to the Jews, will be read with peculiar interest at present.

ARTS AND SCIENCE.
LINNEAN SOCIETY.

ON Saturday last the anniversary meeting of this Society took place; Lord Stanley in the chair. As is the customary practice, Mr. Bichenou communicated to the meeting the accession of fellows which had taken place during the past season; likewise the deaths which had occurred during the same period; amongst these we observed the names of Dr. Hamilton, Major General David Stewart, the venerable Chevalier de Lamarck, professor of zoology in the Jardin du Roi, Professor Brotero of Coimbra; Dr. Tozzetti of Florence; Dr. Schaub of Cassel, and several others. Twenty-one fellows had been elected during the year. Mr. Forster stated that the amount of subscription for the library, herbaria, &c. of Sir J. E. Smith, once belonging to Linnaeus himself, and now purchased by the Society, amounted to upwards of 1400l.; that the Society's other receipts for the year amounted to 1,600l., which exceeded the outlay by 200l. Several gentlemen set the example of an annual subscription in aid of the balance due to the executors of Sir J. E. Smith. Earl Brownlow, Professor Buckland, George Bentham, Charles Stokes, and William Yarrell, Esqrs., were elected into the council. The other officers stand as heretofore.

CELESTIAL PHENOMENA FOR JUNE.
21d 11h 50m — the Sun attains his greatest northern declination: the whole of the arctic regions enjoy the solar beams, and the antarctic are plunged in the deepest gloom of their long and dreary winter. At the end of the month, the earth arrives at its remotest distance from the Sun.

Lunar Phases and Conjunctions.

	D. H. M.
☉ Full Moon in Scorpio	6 2 19
☾ Last Quarter in Pisces	13 10 49
☽ New Moon in Gemini	20 3 3
☽ First Quarter in Virgo	27 15 16

The Moon will be in conjunction with

Jupiter in Sagittarius	D. H. M.	8 12 20
Mars in Aquarius	12 11 30	
Venus in Aries	16 22 45	
Mercury in Taurus	19 15 30	
Saturn in Cancer	23 11 30	

3^d and 27^d — Mercury stationary. 15^d 6^h 30^m
—inferior conjunction.

Venus is a morning star, and assuming a gibbous form: the following are her proportional phases:—

Illuminated disc	= 6.87007
Dark hemisphere	= 5.12083

Mars is a morning star, and approaching the Earth.

The Asteroids.—6^d —Vesta among the small stars in the tail of Cetus; it transits the meridian at 19^h 36^m. Juno between γ and ζ Aquarii; it transits the meridian 17^h 56^m. Pallas, two degrees south of Mirac, or α Boötis, a double star, the largest of which is red, and the smallest blue: this small planet transits the meridian at 9^h 42^m. Ceres is 20' north of 104 Virginis, and near a small nebula: its meridian at 9^h 21^m.

Jupiter is advancing to a favourable position for observation: the following are the eclipses of its satellites:—

First Satellite, Jan. 11	11 47
Second " " " " "	12 46
Third " " " " "	13 56
Fourth " " " " "	14 24
Fifth " " " " "	14 15 58

A nebula, discovered in 1780, presents itself in the constellation through which the bow is a nebula, and is a beautiful double star, consisting of nebulous matter in its immediate neighbourhood, as if driven off, leaving a double star on a dark ground. The nebula itself is divided into three portions, in a direction from the centre to the circumference, suggesting the idea of three roads leading to and terminating at the double star. A similar phenomenon is observed in the nebula of the sword-handle of Orion, the stars in which are insulated, and appear to repel the soft luminous matter that surrounds them.

16^d — Saturn in conjunction with 776 Mayer — difference of latitude 11'. This planet is advancing towards the Sun, and will soon be lost in his rays.

Uranus is visible in Capricornus, and transits the meridian at the following times respectively:—

Depford. J. T. B.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE President informed the meeting that he had written to Mr. Babbage, requesting him to attend on this evening, in pursuance of the resolution adopted on Thursday evening. Mr. Babbage, in answer to the President, states his unwillingness to become a party to such discussions as took place on the occasion alluded to: adding his opinion, that the meetings of the Society ought to be, as they were intended, devoted to philosophical inquiry, and not to angry debate. In this view the President concurred; and having recited one of the by-laws in support of it, he said that he trusted the matter would be allowed to rest. Dr. Roget then read a paper, by Mr. Costello, on the instruments used in operations of lithotomy, illustrated by cases.

The following is an abstract of the paper, by

Dr. Carter, "on the preserved bodies of aboriginal Peruvian Indians," promised in a recent No. of the *Literary Gazette*.

In this paper a description is given of the bodies of a female and of an infant, which were lately found in a state approaching to that of mummies, at the foot of a hill forming a promontory near Arica, on the western coast of Peru, and which were sent to England in 1827, by Dr. Hamett, and are now deposited in the Museum of Natural History at Haslar. A tradition exists that the desolate spot where they were dug up was an ancient burying-ground of the aboriginal inhabitants, although it is certain that no interments have taken place in it since the first invasion of Peru by the Spaniards. The cloth which formed the outer envelope of the mummy is of a dark brown colour, and wove from the wool of the *camelus vicugua*. The inner covering is of a finer texture, and consists of white cotton, either wove or spun, with blue stripes. The body has been compactly put together, and doubled up in a square form, with the breast upon the knees; the arms folded over the shoulders, and the face depressed, so as to occupy as small a space as possible. It was strongly confined, by several turns, with the *bejuero*, or tough and luxuriant creeping osiers, naturally twisted together, and knotted at regular rhomboidal intervals. Within the case were contained a considerable quantity of leaves of unknown plants remarkable in having lateral nerves, matté, heads of Indian corn, pods of capsicum, and two small globular vases. The skin of the body had the appearance of dried leather; the hair was well preserved, and was collected into long black platted tresses, doubled over the chest. Many of the muscles remain perfectly exsiccated, but distinctly marked. There was also found in the same place a detached head, apparently that of a female Indian; and from the peculiar care bestowed on its preservation, probably the wife of a cacique. The hair is still glossy, and in good preservation, very black, lank, and coarse, and firmly platted. The brain appears to have been extracted through the occipital foramen, and its place supplied by some bituminous substance, filling the cavity of the cranium. The fillets surrounding the head are terminated by knotted fringes, of differently coloured worsted, constituting the *quissa* of the Peruvians;—a species of symbolical writing not used for oral tradition, and, in this instance, serving as a record of the history of the deceased. This head appears to be much flattened posteriorly, and the frontal bone is also depressed; both of which are well known to be characteristic of the skulls of the aborigines of South America; and which were probably the result of artificial compression applied to the head during infancy. The author then enters into a disquisition respecting the funeral customs of the Indians, their modes of embalming, and of manufacturing cloths for interment. He concludes by a variety of statements illustrating the desiccating influence of the atmosphere and soil in those regions, whereby the bodies of men and animals are preserved in a dry state, somewhat analogous to that of the Egyptian mummies, for a very considerable number of years.

SOCIETY OF ANTIQUARIES.

ON Thursday, Henry Hallam, Esq. in the chair.—The reading of Rich's account of Ireland was concluded. An interesting communication from W. Hoskins, Esq. was also read, on the origin of Columnar Architecture. The

writer states, that in the infancy of the world, and even at the present day in savage countries, stone is only used in buildings erected for religious purposes; that when men began to settle in towns, their domestic structures were formed of timber, and that so late as David's time, we read of houses constructed of wood, for he built a palace of cedar; that in the early history of the Israelites they are described as setting up stones for altars or religious memorials only,—from which Mr. Hoskins considers were derived the Druidical cromlechs, as well as columnar architecture in general; and that the idea of pillars was not, as is supposed by many, taken from the trunks of trees supporting a roof, as there was no possible connexion between the domestic and religious architecture of the early ancients.

GERMAN LECTURES.

In his second lecture on German poetry Dr. Mühlhens commented on the poets of the sixteenth century. This proved a more interesting discourse than the first: he here introduced us to the worthy representative of the guild of *Meistersängers*, honest Hans Sachs, whose prolific muse presented his country with six thousand and forty-eight metrical compositions. In poetical talent the professor ranks him next to Luther, whose doctrines he fervently embraced. We cannot quite admit Tieck's comparison, quoted by the lecturer, between Hans Sachs and our own venerable Chaucer, and much less that of Göthe with Shakspeare. It may perhaps be called an English prejudice, but we object to the profanation of the shrine of the god of our idolatry by the admission within its precincts of the idol of any clime or time. We have not space to dilate on the various writers introduced—the grotesco-comic John Fischart, the flagellating Rollenhagen, Murner, Brandt, and Alkmar, and Burkhard Waldis, the *Æsop* of the age; but we now come to the first dawning of the German stage, which there, as well as throughout Europe, breaks forth in the monkish mysteries of the middle ages. These were followed by the *Fastnachtspiele* of the *Meistersängers*, which were performed in the houses of individuals, or in the open air; and the professor justly remarked, that if the number of auditors were at all proportionate to the actors, the assemblage must have been immense, for in the performance of a biblical piece at a small town in Bohemia, there were 100 actors and 500 supernumeraries. It is a remarkable fact, that the first trace on record of acting being pursued as a vocation is the mention of a troop of players called the "English company;" but why so called is not known, for it is not at all probable that they were English: these strollers laid Germany under contribution about the year 1600. Jacob Ayryer, an attorney of Nuremberg, and consequently the fellow-townsmen of Hans Sachs, was one of the first cultivators of the legitimate drama, if his rude efforts may be dignified by this appellation. Many of the early attempts of the German dramatic Muse are evident copies from the English, without, however, retaining any of their beauties. The doctor closed this lecture with the two writers who form the link of connexion with the sixteenth century, Frederick Spee and Rudolph Weckerlin, who gave the lecturer subject for interesting discussion in the strong contrast of their "*Leben und Weben*." Weckerlin visited England during the reign of James I., and made himself familiar with the language, which is evinced by a bibliographical curiosity introduced to us by the professor, and which is still extant in the

British Museum, where he met with it by accident: it is entitled the *Triumphal Show*, and was written and printed at Stuttgart in 1616, and contains a description of the festivities at that court on the occasion of the visit of Elizabeth, daughter of James I. of England, and consort of the unfortunate Elector of the Palatinate. The doctor read extracts from it, which were risible enough, and closed (although our readers may smile) with the preface, wherein Weckerlin apologises for his want of skill, and compliments the English nation.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.
[Fourth notice.]

No. 342. *Attachment*. E. Landseer, A.—We shall not easily forget a similar subject—a dog refusing to quit the grave of his master—painted by this able artist, and exhibited at the British Gallery some two years ago. The present equally interesting work is founded on a melancholy fact:—"In the spring of 1803 a young gentleman of talent and most amiable disposition perished by falling from a precipice of the mountain Helvellyn. His remains were not discovered till three months afterwards, when they were found guarded by his faithful terrier."

No. 226. *Jessica*. J. M. W. Turner, R.A.—Surely these vagaries of Mr. Turner's must be the result of studying a kaleidoscope. One of our critical contemporaries so happily characterises this production, that we feel the temptation to piracy to be irresistible:—"It looks," he observes, "like a lady getting out of a large mustard-pot."

No. 223. *A Contadina Family, returning from a Festa, Prisoners with Banditti*, C. L. Eastlake, R.A. *Elect.*—There is much varied and powerful expression in this exceedingly clever and well-painted picture; but "will the line stretch out to the crack of doom?" We strongly recommend Mr. Eastlake to close his series of banditti subjects.

No. 234. *A Shooting Party regaling—a Scene in the Moors; Portraits*. W. Simson.—It appears by the Catalogue that Mr. Simson is a resident in Edinburgh. We do not recollect having seen any of his works before; but the picture under our notice exhibits powers of no ordinary kind. The character of the composition, the depth of the tones, and the firmness of the penciling, shew the hand of a master.

No. 225. *A Landscape—Morning*. F. Finch.—Slight; but, to the artist's eye, beautiful and effective.

No. 238. *A Scene in the Farce of Love, Lav, and Physic; with Portraits of Messrs. Blanchard, Liston, and Mathews*. G. Clint, A.—A superb resemblance of Liston. The whole is admirably executed.

No. 244. *Les Savoyards*. Dubufe.—From what we had seen of M. Dubufe's works, we had imagined that clothed figures made no part of his practice; and we were therefore agreeably surprised by the characteristic picture under our notice. It does him great credit, which is more than we are able to say of his *Psyche*, No. 339.

No. 269. *The Pride of the Village*. W. E. West.—In this simple and quiet group there is far more pathos than in many subjects of more active and appalling incident. For the suffering saint or expiring warrior human sympathy cannot always be roused; but extinguished must be all his social feelings who can

contemplate without the deepest interest the lovely and fragile being here represented as "uttering no complaint, nor imparting to any one the malady that is preying on her heart."

No. 279. *Deoch-an-douris*. A. Fraser.—"Rome," says Sterne, "never imposed a penance half so severe as that of taking leave." It has probably been, with reference to such a feeling, that "the stirrup-cup" was introduced in order to assuage the sorrows of separation. Be that as it may, Mr. Fraser has entered into his subject *con amore*; and has produced a work equally pleasing to the lover of art and the lover of hospitality.

No. 280. *Recollection of a Morning's Ramble last Autumn*. J. J. Chalon, A.—Much of the interest belonging to this simple and extensive landscape has proceeded from the mind of the artist, who has communicated to it a most natural and Rembrandt-like effect.—No. 305. *La Place de la Fusterie (Fruiterie), Geneva, on a Market-day*, also by Mr. Chalon, shews the versatility of his powers. The one is all tranquillity, the other all bustle.

No. 328. *The Boar of Ardenne*. E. de la Croix. From "Quentin Durward."—The moment chosen is when the ferocious William de la Marck, having ordered the bishop of Liege to be brought before him dressed in his pontificals, commands his assassination. It is a very clever work; but the great number of figures, and the want of a concentrated effect, rather confuse the spectator.

No. 332. *Twilight*. R. Westall, R.A.—We do not remember ever to have seen Gray's charming description of the soothing hour of twilight more happily transferred to canvass. It strikes us, however, that an extended form would have been more advantageous to the picture than its present upright shape.

No. 343. *A Peasant of the Island of Ceylon*. W. Daniell, R.A.—Life, motion, and grace, are the characteristics of this animated figure; which ought to have been placed as a pendant to No. 134, *The Indian Widow visiting the Tomb of her Husband*, by the same artist. They form a perfect contrast.

No. 329. "Honest Isaak Walton." J. Inskipp.—An interesting subject, pleasingly treated.

Of the portraits which the "School of Painting" contains, two of the most striking are, No. 312, *Portrait of the Earl of Hardwicke*, the late Sir Thomas Lawrence, P.R.A.; and No. 281, *Portrait of Henry Hoare, Esq., Mrs. W. Carpenter*. A more admirable picture than the latter we have never met with. There are also very clever portraits by Phillips, Beechey, Pickersgill, Jackson, Briggs, Simpson, Rothwell, Clint, Reinagle, Green, Meyer, Joseph, &c. Mrs. J. Robertson has a *Portrait of a Young Lady*, the graceful *turnure* of which, and the able manner in which the satin is painted, remind us of Vandyke. As another example of female talent in portrait painting, we would instance Mrs. Pearson's *Portrait of Mrs. S. C. Hall*.

(To be continued.)

BRITISH GALLERY.

Works of the late Sir T. Lawrence, P.R.A.
NEXT to the sensation which would be excited by a sudden introduction to a living assembly of monarchs, statesmen, heroes, and beauties,—to a galaxy of all that is dignified in rank, splendid in talent, memorable in warlike achievement, and fascinating in female loveliness,—is that which is actually produced at the present moment on entering the Gallery of the British Institution, richly decorated as it is by nearly

a century of the most admirable productions of the highly-gifted and lamented Lawrence. It is bringing the powers of any artist to a most severe test when he is thus required, single-handed, to furnish a whole exhibition; and an exhibition, too, consisting almost exclusively of portraits; but it is a test which in this instance is most triumphantly borne. Whether contemplated merely with reference to their merit as works of art, or whether with that contemplation is associated the deeply interesting recollections which many of these noble performances are calculated to awaken, that visitor to the Gallery must indeed be cold and phlegmatic, who does not feel strongly impressed by the magnificent and delightful spectacle which presents itself to him.

It will here, among other things, be seen how important is the single but comprehensive quality of TASTE in the creations of the pencil. That high and rare quality it is allowed on all hands no artist ever possessed in a greater degree than Sir Thomas Lawrence. His mind was thoroughly imbued with it. It was inseparable from every effort. It accompanied the slightest and most careless touch of his crayon. Many of his groups of portraits, refined and elevated by the pervading influence of that invaluable quality, almost assume the character of poetical or historical compositions. It is extraordinary, indeed, to observe what a vast change portrait-painting in this country has undergone in that respect since the days of Jervas, Richardson, and Hudson. To Sir Joshua Reynolds is undoubtedly due the glory of having struck out a new path, and of having invested his own branch of the fine arts with a dignity and a charm, which, except in some few cases, it had never before possessed. How ably and successfully the example of the first President of the Royal Academy was followed up by the last, the walls of the British Gallery now abundantly shew.

The germ of epic art is very visible in such pictures as Sir Thomas's "Rolla," "Coriolanus," "Cato," and "Hamlet;" although the only work in which it is absolutely unfolded is his "Satan;"—a grand and appalling conception, which, however liable it may in some points be to critical remark, proves of what this great artist was capable, had the sympathy of the times, and the country in which he lived, encouraged him to devote himself to the more intellectual and ambitious walks of his profession.

Of the three apartments of which the British Gallery consists, the North Room, containing twenty-one portraits, the majority of them whole-lengths, painted by order of his Majesty for the Waterloo Gallery at Windsor, is peculiarly attractive; both because most of the pictures are new to the public, and because they are the striking resemblances of distinguished and celebrated persons; several of them "men of royal siege," and all of them sharers, more or less conspicuous and important, in the events of one of the most extraordinary periods of history. It is not our intention to enter into any detailed description of these pictures; but we cannot refrain from expressing our unbounded admiration of two of them in particular, which appear to us to be transcendent:—we mean "Francis the Second, Emperor of Austria," and "His late Holiness, Pope Pius VII." We know of no productions of a similar kind, by any artist, ancient or modern, with which they would for an instant suffer in the comparison. It is said that Sir Thomas considered the portrait of the Emperor of Aus-

* Morning Chronicle.

tria, in which he has conquered so many difficulties, arising from the singular costume, and from other circumstances, as the finest work of his life. While we gaze at it, we fully agree with him; but when we turn round, and behold his portrait of the venerable Pius, we at least hesitate to which the palm of excellence ought to be adjudged.

NEW PUBLICATIONS.

Portsmouth, from Spithead and Chatham. Engraved in line by J. C. Allen, from Drawings by C. Stanfield.

THESE interesting views are executed in a style which does great credit to the talents of the artist. Mr. Allen was a pupil of W. B. Cooke; and has brought forward his first speculation in the true spirit of enterprise, and in a way that at any other period must have insured success. As it is, these prints place him in the front rank of engravers of subjects of this class.

The Spirit of the Plays of Shakespeare. Drawn and engraved by Frank Howard. Nos. 17 and 18. Cadell.

THE plays illustrated in these Numbers are, "Romeo and Juliet," "Timon of Athens," "Henry the Fifth," and the first part of "Henry the Sixth." Mr. Howard pursues his pleasing task with unabated ardour and ability. Many of the groups are finely composed, and exceedingly beautiful. Amongst them we would particularise the First Meeting of Romeo and Juliet, their Parting, the Recovery of Juliet from her Lethargy, Henry the Fifth courting the Princess Katharine, Talbot and the Countess of Auvergne, &c.

James Bartleman. Hargreaves pinxt.; J. Thomson sculps. Published by the Misses Bartleman.

A FINELY-MARKED, characteristic, and highly-finished portrait.

ORIGINAL POETRY.

THE FESTIVAL.

THE young and the lovely are gathered:
Who shall talk of our wearisome life,
And dwell upon weeds and on weeping—
The struggle, the sorrow, the strife?
The hours of our being are coloured,
And many are coloured with rose;
Though on some be a sign and a shadow,
I list not to speak now of those.

Through the crimson blind steals forth the splendour

Of lamps, like large pearls which some fay
Has swelled with her breath till their lustre,
If more soft, is as bright as of day.

Beneath the verandah are flowers—
Camellias like Ivory wrought
With the grace of a young Grecian sculptor,
Who traced what some Oread brought;

And roses—the prodigal summer
Has lavished upon them its bloom,—
O never the East with its spices
Made altar so rich of perfume!

The bright crowd is mingling together—
How gay is the music they bring!
The delicate laugh and the whisper—
The steps that re-echo the string.

The harp to the flute is replying—
'Tis the song of a far-distant land;
But never, in vineyard or valley,
Assembled a lovelier band.

Come thou, with thy glad golden ringlets,
Like rain which is lit by the sun—
With eyes, the bright spirit's bright mirror—
Whose cheek and the rose-bud are one.

While he of the lute and the laurel
For thee has forgotten the throng,
And builds on thy fairy-like beauty
A future of sigh and of song.

Ay, listen, but as unto music
The wild wind is bearing away,
As sweet as the sea-shells at evening,
But far too unearthly to stay.

For the love-dream that haunts the young poet
Is coloured too much by his mind—
A fabric of fancy and falsehood,
But never for lasting designed.

For he lives but in beauty—his visions
Inspire with their passion his strain;
And the spirit so quick at impression
Was never meant long to retain.

But another is passing before me—
Oh, pause, let me gaze on thy brow;
I've seen thee, fair lady, thrice lovely,
But never so lovely as now.

Thou art changed since those earlier numbers,
When thou wert a vision to me;
And copies from some fairest picture,
My heroines were painted from thee.

Thy cheek with its sunset of crimson,
Like a rose crushed on ivory, bears
Its sunny smile still, but a softness
Is now in the radiance it wears.

A halo of love is around thee,
It is as if nature had willed
That thy happiness should be affection,
And thy destiny now is fulfilled.

Be thou happy—a thousand times happy!
If the gentle, the good, and the kind,
Could make of themselves an existence,
How blessed a fate thou wouldst find!

For never their elements blended
In a nature more lovely than thine;
And thy beauty is but a reflection
Of what thine own heart is the shrine.

Farewell! I shall make thee no longer
My sweet summer queen of romance;
No more will my princes pay homage,
My knights for thy smile break the lance.

Confess they were exquisite lovers,
The fictions that knelt at thy throne;
But the graceful, the gallant, the noble,
What fancy could equal thine own?

Farewell! and henceforth I enshrine thee
Mid the earlier dreams that have past
O'er my lute, like the fairies by moonlight,
To leave it more lonely at last.

Alas! it is sad to remember
The once gentle music now mute;
For many a chord hath time stolen
Alike from my heart and my lute.

Ah, most of their memories are shadows,
Flung down from the brightness of yore;
There are feelings for ever departed,
And hopes that are treasures no more.

But thou livest only in music—
A broken but beautiful spell;
'Tis as well, for my song has grown colder—
Sweet lady, for ever farewell!

'Tis midnight—but think not of slumber,
There are dreams enow floating around;
But ah, our soft dreams while thus waking
Are aye the most dangerous sound.
Like the note of a lute was that whisper—
Fair girl, do not raise those dark eyes;
Love only could breathe such a murmur,
And what will Love bring thee but sighs?

And thou, thou pale dreamer, whose forehead
Is flushed with the circle's light praise,
O let it not dwell on thy spirit—
How vain are the hopes it will raise!

The praise of the crowd and the careless,
Just caught by a chance and a name,
O take it as pleasant and passing,
But never mistake it for fame!

Look for fame from the toll of thy midnight,
When thy rapt spirit eagle-like springs;
But for the glad, the gay, and the social,
Take only the butterfly's wings.

The flowers around us are fading—
Meet comrades for revels are they;
And the lamps overhead are decaying—
How cold seems the coming of day!

There, fling off the wreath and the sandal,
And bid the dark curtains round close;
For your cheek from the morning's tired
slumber

Must win its sweet exiles the rose.
What, weary and saddened! this evening
Is an earnest what all pleasures seem—
A few eager hours' enjoyment—
A toil, a regret, and a dream!

L. E. L.

SKETCHES OF SOCIETY.

ISLAND OF CEYLON.

FEW civil improvements have ever been introduced among a people of a more extensively beneficial nature than the communication to the native inhabitants of Ceylon (the only settlement in India that is directly under the government of his Majesty,) of the right of acting as jurymen on the trial of their own countrymen for criminal offences, and the consequent resolution of the proprietors of slaves in the same island, that all children born of those slaves, after a certain date, should be born free. To commemorate two events of such importance not only to Ceylon, but to the cause of civilisation generally, a large and beautifully printed, engraved in aquatinta, and splendidly coloured, has lately been published by Mr. Ackermann. It represents the trial of five natives of high caste for murder, before the supreme court, in its new court-house at Colombo; and in the foreground the resolution for manumitting the future children of slaves is promulgating to a group of female slaves, who attended in public court in order to express their gratitude on the occasion, and who are surrounded by all the persons, Europeans as well as natives, who had any share in the transaction. The following passages, which we extract from a key published with the engraving, convey a brief but perspicuous history of the two interesting occurrences to which we have alluded:—

"Sir Alexander Johnston, when first member of his Majesty's Council in Ceylon, having conceived that the best mode of insuring the stability of the British authority in that part of the world was, to admit the natives to share the benefits of the institutions of our free country, was deputed in 1809, by the governor and council, to submit, in his official capacity, to his majesty's ministers such measures as he thought best calculated to accomplish this object. The ministers having approved the measures thus recommended, caused a charter to be issued under the great seal of England, granting to the natives of Ceylon the right of sitting upon juries, and of being tried by juries of their countrymen. Sir Alexander having returned in 1811, with the appointment of chief-justice and president of his majesty's council in Ceylon, lost no time in carrying the provisions of this charter into effect; and it was at his suggestion that the proprietors of slaves in the island, by way of manifesting their gratitude to the sovereign of a free nation for having granted to

them and their countrymen the rights of freedom, unanimously resolved, that all children born of their slaves after the 12th of August, the anniversary of his majesty's birth, in the year 1816, should be considered as free, and be brought up at their expense till the age of fourteen; thus associating for ever in the minds of their posterity, the memory of his majesty with all the blessings which are to be derived from a state of freedom.*

"The introduction of the trial by jury among all the classes of the natives of Ceylon, without distinction, has been the means of gradually removing the religious jealousies which prevailed among them, and habituating the people of all the different religions, and of all the different nations of Asia, resident in the island, to attend together the proceedings of the supreme court, both as jurors and spectators. Hence the painter enjoyed the best opportunity of representing not only the costume of the jurors, of the slaves, and of their masters, but also that of the natives of every part of India. The engraving accordingly exhibits with great accuracy, not only the costume of the priests of the Hindoo, Budhoo, and Mahomedan religions, but also that of the Protestant and Catholic missionaries, that of the Malabar inhabitants of the north, as well as that of the Cingalese inhabitants of the south and interior of Ceylon, that of the Malay princes and their attendants from the eastern islands; that of the people of the Laccadive and Maldive islands, that of the Hindoo population of the coasts of Malabar and Coromandel; and that of the Moguls, Arabs, and Parsees.

"Owing to the continual intercourse kept up between the natives of Ceylon and the people of Hindoostan, the privilege granted by his majesty to the former soon became generally known and desired throughout the British empire in the East; and, induced by the success which had attended the introduction of the measure in that island, the parliament, by an act passed in 1826, extended the same right to the natives of all the British territories in India. Hence, the trial by jury is now become an object of general interest to more than one hundred and twenty millions of people, inhabiting countries containing upwards of three hundred thousand geographical square miles, and extending from the Gulf of Cambay to the rivers Ganges and Barrumpooter, and from the Himalaya mountains to Cape Comorin.

"This engraving has been executed from a painting made by J. Stephanoff, after an original sketch taken by a native of Ceylon, who was himself a jurymen, and highly delighted with the right conferred on himself and his countrymen; and many of the figures are portraits of the persons of different castes, nations, and religions, who took an active part in the introduction of trial by jury, and in the emancipation of slave children."

At a time when the future government of India is a subject of public discussion before both houses of parliament,† it must be an object of great interest and curiosity to trace the origin and progress of measures which must ultimately produce the greatest moral and political change in the feelings and conduct of the natives of India. Of a few of the benefits which have

already been derived from them, the following extracts from a letter written at his own request to the president of the board of control, by Sir Alexander Johnston, in the year 1825, will give some idea:—

"The native jurymen, from knowing the different degrees of weight which may safely be given to the testimony of their countrymen, decide upon questions of fact with so much more promptitude than Europeans could do, that, since the introduction of trial by jury, no trial lasts above a day, and no session above a week or ten days at farthest; whereas, before the introduction of trial by jury, a single trial used sometimes to last six weeks or two months, and a single session not unfrequently for three months. All the natives who attend the courts as jurymen obtain so much information during their attendance, relative to the modes of proceeding and the rules of evidence, that since the establishment of jury trial, government have been enabled to find amongst the half-castes and native jurymen some of the most efficient and respectable native magistrates in the country, who, under the control of the supreme court, at little or no expense to government, administer justice in inferior offences to the native inhabitants. The introduction of the trial by native juries, at the same time that it has increased the efficiency and despatch of the courts, and has relieved both prisoners and witnesses from the hardships which they incurred from the protracted delay of the criminal sessions, has, independent of the savings it enabled the Ceylon government to make immediately on its introduction, since afforded that government an opportunity of carrying into effect, in the judicial department of the island, a plan for a permanent saving of ten thousand pounds a year. No man, whose character for honesty or veracity is impeached, can be enrolled on the list of jurymen; the circumstance of a man's name being upon the jury roll, is a proof of his being a man of unexceptionable character, and is that to which he appeals in case his character be attacked in a court of justice, or in case he solicits his government for promotion in their service. As the rolls of jurymen are revised by the supreme court at every session, they operate as a most powerful engine in making the people of the country more attentive than they used to be in their adherence to truth. The right of sitting upon juries has given the natives of Ceylon a value for character which they never felt before, and has raised, in a very remarkable manner, the standard of their moral feelings. All the natives of Ceylon who are enrolled as jurymen, conceive themselves to be as much a part as the European judges themselves are, of the government of their country; and therefore feel, since they have possessed the right of sitting upon juries, an interest which they never felt before in upholding the British government of Ceylon. The beneficial consequence of this feeling is strongly exemplified in the difference between the conduct which the native inhabitants of the British settlements on Ceylon observed in the Kandian war of 1803, and that which they observed in the Kandian war of 1816. In the war between the British and Kandian government in 1803, which was before the introduction of trial by jury, the native inhabitants of the British settlements were, for the most part, in a state of rebellion; in the war between the same governments in 1816, which was five years after the introduction of trial by jury, the native inhabitants of the British settlements, so far from shewing the smallest symptom of dissatisfaction, took, during the very heat of the war,

the opportunity of my return to England, to express their gratitude through me to the British government, for the valuable right of sitting upon juries, which had been conferred upon them by his present majesty. • •

"The difference between the conduct which was observed by all the proprietors of slaves on Ceylon in 1806, which was before the introduction of trial by jury, and that which was observed by them in 1816, which was five years after the introduction of the trial by jury, is a strong proof of the change which may be brought about in public opinion, by the judges availing themselves of the opportunity which their charging the jury on the first day of session affords them, of circulating among the natives of the country such opinions as may promote the welfare of any particular class of society. As the right of every proprietor of slaves, to continue to hold slaves on Ceylon, was guaranteed to him by the capitulation under which the Dutch possessions had been surrendered to the British arms in 1795, the British government of Ceylon conceived that, however desirable the measure might be, they had not a right to abolish slavery on Ceylon by any legislative act. A proposition was, however, made on the part of government by me to the proprietors of slaves in 1806, before trial by jury was introduced, urging them to adopt some plan of their own accord for the gradual abolition of slavery: this proposition they at that time unanimously rejected. The right of sitting upon juries was granted to the inhabitants of Ceylon in 1811. From that period I availed myself of the opportunities which were afforded to me when I delivered my charge, at the commencement of each session, to the jurymen, most of whom were considerable proprietors of slaves, of informing them of what was doing in England upon the subject of the abolition of slavery, and of pointing out to them the difficulties which they themselves must frequently experience, in executing with impartiality their duties as jurymen, in all cases in which slaves were concerned. A change of opinion upon the subject of slavery was gradually perceptible amongst them; and in the year 1816, the proprietors of slaves of all castes and religious persuasions in Ceylon, sent me their unanimous resolutions, to be publicly recorded in court, declaring free all children born of their slaves after the 12th of August, 1816; which in the course of a few years must put an end to the state of slavery which had subsisted on Ceylon for more than three centuries."

MUSIC.

NEW PUBLICATIONS.

A Fading Scene. Written by R. Montgomery; composed by J. Barnett. J. Barnett.

A MELODIOUS composition, with sweet words—plaintive and appropriate.

Helen Trevor. The Words by G. Sharp; composed by C. E. Horn. Goulding and D'Almaine.

EVERY thing about this ballad seems to taste of music, from the writer, G. Sharp, to the composer, Horn. Nor have we met with a sweeter composition for many a day—it is simple, easy, and pathetic; and we should dearly like to hear it sung by Miss Patou, to whom it is inscribed.

Hasten o'er the Lea. The Words and Music by Henry Fae.

WE do not remember to have heard of the name of Fae before; but from the taste here

* The number of slave proprietors (being in fact the whole of the slave proprietors in Ceylon) who agreed to this resolution was 761; and the number of full-grown slaves, male and female, to whom the resolution applied, was about 10,000.

† Sir Alexander Johnston, to whom India and the British empire at large are indebted for these two invaluable measures, was examined with respect to them before the Committee of the House of Lords on the 16th and 19th of last March.

displayed, we are sure his compositions are likely to be favourites with our fair friends.

The Pride of the Village. Written and composed by J. Green. J. Green.

A PLEASING piece, in the old ballad style, and with something peculiarly fanciful to recommend the music.

The Castanet. By E. Fitz Ball; the Music by G. H. Rodwell, Goulding and D'Almaine.

THE nice merry little ballad sung with so much effect by the nice merry little Mrs. Keeley in the *Spring Lock*. The accompaniment to the second part possesses much novelty, and does great credit to Mr. Rodwell.

The Bower of Love; and From Distant Climes a Troubadour, by the same parties, and in the same opera, deserve equal praise. As in the *Bottle Imp*, the music of these compositions requires only to be heard to become very popular, and contribute to rank the composer's works generally with the most brilliant song efforts of the day.

The Soldier's Boy to his Mother. By J. Macdonald Harris. Falkner.

EVIDENTLY intended as a companion to "the Mariner's Child to his Mother," to which we gave such well-merited praise. It is enough, therefore, to say that we approve as highly of this song. It would make a delightful duet with very little alteration. Mr. Harris sets compositions rather high for many voices to execute them perfectly.

To the Gay Tournament. By T. H. Bayly, Esq.; Music by T. Cooke. Cramer and Co. SANG by Vestris in *Perfection*, and a charming lively air, with which, as all the world are pleased, we need only *encore* the common opinion.

SIGNOR DE BEGNIS' Concert on Friday last week was one of the most attractive of the season, and the entertainments of the most varied and excellent description. The humour and talent of the Signor himself are enough to give *éclat* to such a performance; but he was surrounded by many of the most popular *artistes* now in the metropolis; and their combined exertions rendered the treat particularly full and agreeable.

DRAMA.

KING'S THEATRE.

IN our last number we expressed our anxiety to see Lalande and Lablache in *Semiramide*. Within the week the opera has been twice represented. Before we touch upon the vocal performance, we shall make a few remarks on the execution of the instrumental music, more especially as the orchestral department of this theatre seldom comes under the notice of the critic. We did not suppose it possible that the absence of one individual (need we say we allude to Spagnoletti?) could cause, on both nights, so sensible a deterioration in the execution of the general performance, vocal and instrumental. The slovenly and ineffective manner in which the beautiful overture of this opera was played, particularly on Saturday, was any thing but creditable to the theatre. Mr. Mori is, unquestionably, a solo player of the very first order; but there is a wide difference between *fiddling* a concerto and leading an orchestra.

Of the vocal cast of *Semiramide* we have now to speak. With the exception of Curioni, in

the character of *Idreno*, the distribution of the parts was altogether novel; Lalande was the Assyrian queen, Malibran *Arsace*, Lablache *Assur*, Ambrogi *Oroce*, chief of the magi, and Santini the *Spirit of Ninus*. We notice the performers as they appear on the scene. The voice of Lablache, we must premise, is, by some of our contemporaries, erroneously pronounced to be a bass: it is a baritone, of which the upper notes are decidedly the best. Nor is his voice of that immense volume, or gigantic tone, which many were led to imagine he possessed, in the manner in which he *bellowed* out his D, in his inimitable performance of the deaf *Geronimo*. The fact is, the voice of Lablache is very unequal; nor, in the lower register, is there aught of roundness, depth, or force. The style of his singing resembles that of Remorini; but those who remember that excellent *artiste* must give the preference to Remorini in serious songs. Neither does he possess the fire of Galli, or feeling of Zuchelli. In a word, the serious is not the forte of Signor Lablache; comedy best suits his person and powers. Nevertheless, we should like to see him in *Fernando*, in *La Gazza Ladra*.

Although the *Semiramide* of Lalande is not to our taste, inasmuch as there is a want of majesty in her mien, which considerably detracts from her merits as an actress, yet we are free to confess that her singing in this character has raised her somewhat in our estimation as a vocalist. Madame Lalande is neither devoid of taste nor feeling; her voice is peculiarly adapted for the delivery of pathetic passages; but she does not excel in the bravura; and there is a great want of closeness and precision in her execution of those runs which are more immediately confined to the diatonic scale.

Of Madame Malibran's *Arsace* we cannot speak in very high terms. We do not deny her the merit of looking and dressing the character better than her gifted predecessor; but to say that, either in acting or singing, she can compete with Pizaroni in the part, is praise beyond her merit. Her style of singing is at once unmeaning and meretricious, the sound being always at variance with the sense. From her extravagant fondness for what she may imagine to be ornament, the original melodies of some of the most beautiful cavatinas extant are totally deprived of their "fair proportions." We said, on a former occasion, in a notice of Madame Malibran's performance, that "the music of Rossini was sufficiently embroidered,* without adding to its original garb aught of gingerbread gaudery;" and added, "how different in this particular is Pasta! Pasta rather diminishes than adds to the numberless notes of this popular composer: any alteration she makes in the text of her author is always for the better. With Malibran it is quite the reverse." We conclude by observing, that we perceive, with regret, that many of our metropolitan critics, together with a considerable portion of the bald-pated public (no allusion to the *soi-disant dilettanti* who nightly occupy the front row in the pit), are fast making Madame M. more of an *enfant gâté* than she has yet become.

DRURY LANE.

A NEW drama, in three acts, called the *Spanish Husband; or, First and Last Love*, was pro-

* On Tuesday night an amateur observed to a friend seated beside him in the pit, that "Malibran's embellishing Rossini's music was something like sending coals to Newcastle." "No," replied a wag, "not coals, coke you mean."

duced on Tuesday, from the pen of Mr. Howard Payne. In plot it nearly resembles *Bertram*, the interest hinging on the return of a lady's first love, after she has been induced by her father to marry another. In language it is far inferior to its prototype, and its conclusion is most lame and impotent. A beloved son and brother is seen borne off, mortally wounded, with the greatest unconcern, by his father and sister; the latter of whom is coquetishly arranging some matrimonial business with a volatile sprig of royalty,—and the curtain falls upon the happy party. In the second act, too, amongst other incongruities, we have a strange artist introduced into a Spanish nobleman's study, where he stands with his hat flapped over his eyes in the nobleman's presence, and paints a whole-length of his wife, and as finely as Titian (at least, so says the gentleman), in the course of five minutes. To be sure, if he took off his hat, the husband would see it was his rival, and there would be an end of the business; but would it not have been possible to have invented a better disguise, and at the same time avoided the staring improbability of a fine painting being made as quickly as they take a black profile in the Strand? (for the painting itself, be it noticed, has no influence whatever on the plot). We think so; but, then, we are simple souls, and no dramatists, and are most likely mistaken. Defective, however, as the piece is, we must, in justice to the author, observe, that, with one or two exceptions, little was done for it in the way of acting, and less in the getting up. A conflagration, in the last scene of the second act, was so poorly and clumsily managed, that a situation of real interest was sadly injured, and the drama for some moments in jeopardy. Mr. Wallack was superbly dressed, but seemed to feel the improbability of his situations and the repulsiveness of his character. Jones and Harley had nothing to do worthy of them; but *Bianca* and *Julia* were, surely, susceptible of treble the interest imparted to them by Miss Phillips and Miss Mordaunt: the latter lady, indeed, little more than walked through the part. Mrs. Glover was admirable, as, indeed, she always is; and Cooper had the best of it among the gentlemen. We must not forget to mention, that Mr. Robinson, one of the counter-tenors of this theatre, sung a version of "*Le gallant Troubadour*" with much sweetness and taste, in the masquerade scene, and was honoured with a very general *encore*. The drama was announced for repetition by Mr. Wallack, amidst applause; but will scarcely live through the season, we imagine, near as it now is to a close.

COVENT GARDEN.

ON Tuesday, one of the most deservedly popular actresses that has adorned the stage in our time, Mrs. Davenport, took her farewell benefit, and final leave of the stage. The house, need we say it? was crowded on the occasion. This week, Miss F. Kemble has performed no fewer than four characters, requiring great variety of talent (at least, we take it for granted she played *Lady Twynly* last night); and, when we consider the youth of this sweet and gifted creature, we cannot wonder at the attraction which has attended them all, filling the theatre, and being warmly applauded whenever she appears. On one evening, *Teddy the Tyler* made us laugh as much as ever, though about its fiftieth repetition.

VARIETIES.

The late Winter.—It is extraordinary, that although the late winter was so rigorous in this part of the world, letters have been received from Kamschatka stating, that the oldest inhabitants do not remember one so mild.

Constantinople.—By permission of the sultan, a journal is about to be published at Constantinople, in the Turkish and French languages.

The Plague.—A long letter has been received from Dr. Pariset, dated Abouzabil, in Egypt, Feb. 25. It contains curious and afflicting details of the ravages of the plague in 1824, and of some recent cases. It appears that, in 1824, in the hamlet of Fishabauch, the number of the inhabitants of which was only 300, not fewer than 125 were carried off in two nights, and that the mortality in many other places was equally extensive and rapid. Dr. Pariset confirms the statement of Paré, that the plague is sometimes propagated by means of a particular kind of fly, which sucks the dead body, and afterwards biting living subjects, introduces the disease.

Water-proof Cloth, &c.—At the last sitting of the Paris Society for the Encouragement of National Industry, upon reading a report on the means of making cloth water-proof, by a solution of caoutchouc (Indian rubber), placed between two thin cloths, which being passed under heavy pressure becomes solid, it was stated, that the discovery of dissolving this gum for such purposes was made by the French chemists, Marquer, Laffond, &c. This is incorrect. It is an English invention.—At this sitting it was stated, that, in consequence of great improvements made in the manufacture of glass in France for optical and other purposes, that country has ceased to be tributary to Great Britain for a supply; and it was even boasted that some of the largest glasses now used in this country for telescopes are of French manufacture. Mention was made of a steam-engine of sixteen-horse power, in the establishment of M. Pihet, which has been at work daily for the last four years, and which consumes only 96lbs. of coals in the hour.

Chin-chopper!!—Wonders, to be sure, will never cease! A German, of the name of Michael Boai, we understand, has been found to execute the most difficult pieces of music, producing a tone and effect far beyond what can be conceived possible, by simply striking upon his chin! He has already performed before the courts of Vienna, Berlin, St. Petersburg, Copenhagen, and lastly at the Hague, to the astonishment of all the musical professors of those capitals. There is a certain attraction about the British metropolis, which rarely escapes the penetration of artists of this description; and therefore our readers will not be surprised to learn that he is now actually upon his way to London. By what term his extraordinary performance should be designated, will, we think, become a puzzle for the ingenious—*chin-chopper*, we suppose he would deem hardly sufficiently high sounding.

Spanish Architecture.—The first volume has recently been published at Madrid of a History of Spanish Architecture and Architects, by M. Cean Bermudez, a man most profoundly versed in the fine arts, who has devoted his whole life (and he is now 80 years of age) to the study of Spanish archæology. The merit of the author being universally acknowledged in his own country, and his object being national and patriotic, King Ferdinand has sent him twenty

thousand francs to assist in defraying the expense of his work, which will be in four volumes, and will embrace the history of Spanish architecture from the most remote period down to the present time. Spain is indeed a country well entitled to attract the attention and excite the interest of the lovers of the fine arts. Successively occupied by the Phœnicians, the Carthaginians, the Romans, and the Arabs, it contains monuments of the domination of all these nations—so different in their origin, language, and manners. From the fifteenth century, and during the period of the power of the Spanish monarchy, the arts made great progress, and have left the stamp of their grandeur in the magnificent productions of architecture which are the admiration of connoisseurs, and of which the Spanish people have a right to be proud.

Literary Piracy.—An ordinance of the Emperor of Austria has just prohibited, under severe penalties, the forgery of books. It is well known that Vienna has been from time immemorial the resort of the forgers of German works. In Paris, the editors of the *Revue Française*, the *Revue de Paris*, and the *Gazette Littéraire*, have combined in a resolution to prosecute the publishers of sheets, who appropriate to themselves entire compositions extracted from interesting periodical works. This question of literary property is about to be submitted to the decision of the tribunals. A summons has already been issued to the conductor of the *Pirate*.

Weber.—A Paris paper contains an account of the residence and death of this great composer in London, which is curious for its misrepresentations. The writer, who pretends to have been the friend of Weber, tells us that Weber was in great distress—that he lost 2,000 francs by his concert—that the Prussian and Saxon ambassadors, hearing of his distress, offered him pecuniary aid, which he refused; and that finally, in order to defray the expenses of his funeral, a guinea subscription was opened, each subscriber to be entitled to a ticket of admission to St. Paul's, and to write his or her name on Weber's tomb! This, says the writer, was a good speculation: St. Paul's was hardly large enough to contain the guinea spectators, and a sum was collected which would have sufficed for the support of his family; but every shilling remained in London. We should not be surprised if the Parisians were to believe this story!

French Bible Society.—By a report made to the Protestant Bible Society in Paris, it appears that the receipts of the Society amounted in the year 1829 to 43,377 francs, and its expenditure to 30,943 francs.

Population of Vienna.—According to official returns, it appears that in 1829 Vienna contained 289,785 inhabitants; of whom 142,654 were men, and 147,131 women. The number of births in 1829 had been 13,291 legitimate children; of whom 6,999 were boys, and 5,474 illegitimate children, of whom 2,197 were girls; 13,099 were Catholics, 161 belonged to the Reformed church, 30 to the Greek church, and 30 were Jews. The number of deaths in 1829 had been 13,829, of whom 7,295 were males, and 6,534 females; 13,453 were Catholics, 233 Protestants, 117 Jews, and 26 Greeks; 4,588 died before attaining the age of a twelve-month; 1,175 before they were 4 years old; 1,186 from 4 to 20 years old; 2,470 from 20 to 40; 2,087 from 40 to 60; 1,984 from 60 to 80; 337 from 80 to 100; and 4 above 100 years of age: 13,338 died of common disorders; 342 of the small-pox; 45 by suicide; only 1 by

homicide; and 106 of sudden death. During the whole year there was not a single person condemned to capital punishment.

Fossil Bones.—An immense quantity of the fossil bones of the hippopotamus, the elephant, the mammoth, and other species of animals no longer in existence, has been recently discovered in a cavern near Palermo.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXII. May 29.]

Prevailing wind, N.E. and S.W. Except the 21st, generally cloudy, with frequent and heavy rain. Thunder, accompanied with vivid lightning, from eleven till midnight on the 21st. The storm of the 23d, which in the neighbourhood of London was attended with fatal consequences, was here first noticed about three in the afternoon, when distant thunder was heard in the S.W., which approached us till due south, when the lightning was most vivid and the thunder most intense: it passed over to the E. and N.E., where, when at a considerable distance, the thunder rolled for half an hour without an intermission of three seconds. Rain fallen, 1 inch and 4/25 of an inch.

Number of days of rain, 14.
Quantity of rain in inches and decimals, 3.19375.
Winds.—3 East—4 West—0 North—4 South—2 North-east—1 South-east—12 South-west—4 North-west.

General Observations.—Rain fell on fourteen days, and the quantity was great for the season, though not equal to what was experienced in April last year, which was an extraordinarily wet month; the mean temperature considerably higher than since 1825, and the extremes of heat and cold greater than in any one of the corresponding months of the last seven years—the barometer was generally higher than for the last two years, although the maximum did not reach the average: a rainbow seen on the 23d, about 3 p.m., and soon after, the thunder was heard. The evaporation 0.475 of an inch.

TO CORRESPONDENTS.

N. R.'s lines are feeling enough; but we cannot insert them. H. H. is in the same order.
Neither having seen designs, plans, nor estimates, we are unable to speak of the proposed triumphal arch near Battle Bridge, in honour of his Majesty George IV. We are, however, of opinion, that in the centre of all very wide openings, or where several streets cross, there ought to be some object interposed for the safety of pedestrians.

ADVERTISEMENTS

MR. F. MANSEL REYNOLDS'S PRINTS. By Auction, by Mr. SOTHEY and SON, at their House, Wellington Street, Strand, on Thursday the 3d day of June, 1830, at Twelve o'clock, a very choice Cabinet of Engravings, the property of P. Mansel Reynolds, Esq. consisting of five Proofs and brilliant Impressions of the Works of Strange, Woollett, Sharpe, Houbraeken, K. Morgan, Bartolozzi, Rainbach, Golding, Warren, the Heaths, &c. &c.; among which are to be found a brilliant Proof of Titian's Venus, before the letters, by Strange—the Rape of Europa, Proof, by Beauvarlet—King Lear, a Presentation Proof from the Engraver to the Painter, with Autograph—Brilliant Proof of the Death of General Wolfe, Battles of the Hogue and Boyne, Roman Edifices in Ruins, the Fishery, &c. by Woollett—An extraordinary assemblage of Rare Book-Plates, principally consisting of choice Engraver's Proofs, &c. &c. May be viewed on Tuesday the 1st of June; and Catalogues to be now had at the place of Sale.

RIGHT HON. the EARL OF MORTON'S COINS and MEDALS.—By Mr. SOTHEY and SON, Wellington Street, Strand, on Thursday, June 3, and Five following Days (Sunday excepted) at Twelve, a most extensive and valuable Collection of Greek and Roman Coins and Medals, in Gold, Silver, and Copper, including a few modern, formed by the Right Hon. James Earl of Morton, who died in 1769, during a Residence on the Continent, under the guidance and advice of the Abbe DuRoi.

This Collection is particularly rich in choice gold and silver, both Greek and Roman, many of which are in a high state of preservation. The series of imperial Greek, in particular, may be considered the most extensive and valuable ever offered to public sale in this country.

To be viewed, and Catalogues may be now had, at the place of sale; also of the following Dealers in Coins and Medals:—Mr. Young, 41, Tavistock Street, Covent Garden; Mr. Cureton, 11, Aldersgate Street; Mr. Tull, 17, Great Russell Street, Covent Garden; and of Mr. Reynolds, High Holborn.

THOMAS MOORE, Esq.—A Portrait of Thomas Moore, Esq. engraved in the Line Manner, by W. H. Watts, after a Picture by G. S. Newton. Price of Proofs before the letters, 1s. 3s.; Proofs after the letters, 2s. 2s.; Impressions, 1s. 1s.

Sold by Colnaghi, Son, and Co., Pall Mall East; and by Messrs. Moon, Hoyle, and Graves.

"The first requisite in every portrait is resemblance. It is Mr. Moore himself, in one of his most animated moments."—Literary Gazette.

THE KING. Just published, by Colnaghi, Son, and Co., Printers to His Majesty, Pall Mall East. Engraving of a Portrait of the King, from a Painting by J. C. Thompson, Esq. R.H.A. (taken from the Original Figure painted in July 1825).

Price of the Proofs on India paper 11s.; Prints on plain paper 10s. 6d. To be had as above; of Mr. Pearce, Conduit Street; and of all the Printersellers.

Descriptive Catalogue of the unique, curious, and beautiful Minerals lately discovered in the Iron Mine at Haytor (or High Tor), Dartmoor, Devon; being the only complete Collection extant, and it is quite improbable that there ever will or can be another, or any more Haytor Minerals possessed by any body, as the Minerals were but few and soon exhausted and dispersed after the discovery; and, although the most diligent research was subsequently made, no more could be found; and a peculiar locality of character is so distinguishable in the whole of them as to be instantly recognised from any other description of Minerals, by all who nicely examine them.

Catalogues 1s. each, at 40, Tavistock Street, Covent Garden; also of Mr. Thomas, King Street, Covent Garden—to be deducted from any purchase made at the Sale, which will be at Mr. Thomas's Rooms, on the 8th and 9th of June, and may be viewed Two days previously.

This unreserved Sale will include the Haytorian Museum, comprising brilliant Specimens of Foreign and British Shells, Minerals, and Curiosities. Many of the Haytor Specimens are minute, exquisitely delicate and elegant, calculated for neat Cabinets.

TO STUDENTS.—The Pulpit, the Bar, and the Lecture Room, possess for the Student who has acquired the invaluable Art of Stenography, unfold Advantages over those not thus enriched, as not only the Substance, but the very letter of a valuable Discourse, Speech, or Lecture, may become the individual property of the rapid Writer.

Mr. Drake, practical Reporter, begs to apprise those who desire to attain it, that he gives Instruction in this Science, on a System peculiarly adapted for taking Notes verbatim. Speeches, Lectures, &c. reported on moderate Terms. Letters, to be post-paid, 8, Warwick Court, Holborn.

CIRCULATING LIBRARY.—Wanted, at the West End of the Town, or in the Neighbourhood of the Squares, a Circulating Library, with Stationery and Fancy Business attached. Apply by Letter, (post-paid) with full Particulars, addressed X. Y., No. 39, Paternoster Row.

Price 5s. Vol. II, with a Portrait, containing the "Poems of Burns," of PICKERING'S ALDINE EDITION OF THE BRITISH POETS. To appear in Monthly Volumes, ranging with the Waterley Novels, Family Library, and similar publications. It is the characteristic of the present age to place science and literature within the reach of every class of society, by the publication of standard and popular works in a form to combine the advantage of cheapness, convenience, and beauty. To meet this taste with respect to the Poets of our country, the Aldine Edition of the British Poets is undertaken. The text will be carefully formed from the best editions; and to the works of each poet an original Memoir will be prefixed, written by W. G. Wakeman, William Pickering, Publisher, London; and W. F. Wakeman, Dublin.

Price 11. 1s. THE NOBLE GAME of BILLIARDS, wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of most of the Sovereigns of Europe. Translated from the French of the celebrated M. MINGAUD, Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to His Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficients of the present day. It is, in this respect, a great desideratum to all the Admirers of the elegant diversion. The work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years. London: Printed and published by John Thurston, Billiard Table Manufacturer, 14, Catharine Street, Strand; and to be had of all Booksellers.

Mr. Murray has recently published the following New Works:—In 2 vols. 8vo. 30s.

3d edition, 6s. 6d. bound,
GREEK EXERCISES; or, an Introduction to Greek Composition, so constructed as to lead the Student from the Elements of Grammar to the higher parts of Syntax, and to refer the Greek of the Words, not to the Text, but to a Lexicon at the end. 2d edition, in which many important improvements are made, and Specimens of the Greek Dialects, and the Critical Canons of Daves and Porson, are added.
 By the Rev. F. VALPY, M.A. Master of Reading School.
 By the same Author, in 8vo. 2s. 6d. bound,
Second Greek Delectus; or, New Analecta Minora: intended to be read in Schools between Dr. Valpy's Great Delectus and Dalmat's Analecta Majora, with English Notes, and a copious Greek and English Lexicon.
 Sold by Longman, Baldwin, Whittaker, Simpkin, and all other Booksellers in Town and Country.

In 8vo. price 2s. 6d. boards,
BOS on the GREEK ELLIPSES; translated into English, and abridged for the Use of Schools and Colleges.
 By the Rev. J. SEAGER, Author of "Critical Observations on Classical Authors," and several Greek Criticisms in the Classical Journal.
 Printed by A. J. Valpy, and may be had of all Booksellers.

Also, by the same Author, uniform in size, and on the same plan,
1. Viger on the Idioms of the Greek Language. 9s. 6d. boards.
 This publication is well fitted to carry students still farther into the recondite parts of that majestic language. We gladly and our assistance in so rational an attempt, and observe with pleasure that, in conformity with the improved spirit of the age, Mr. Valpy's list of new school-books contains several others on the same plan.—*London Magazine*, Nov. 1839.
 "But when they have made real advances in Greek prose, read over with them the whole of Viger's Mr. Berry; what I now recommend is really one of the most useful parts of education. You should make them read Vigerus in this way twice every year, 5s. 6d. six, or seven years."—*Dr. Parr* (see *Johnstone's Life of Parr*, Vol. II. c.)
2. Hoogveen on the Greek Particles. 7s. 6d. boards.
 Hoogveen's work on Particles has always been considered a classic and in the study of the Greek language; and Mr. Seager has compressed and translated it in a manner which we could not desire to be better.—*Spectator*.
Viger, Hoogveen, and Bos, may also be had together, in 1 vol. price 30s. 6d. boards.
Hermann and Maittaire are under abridgment on the same plan, and will form about 300 pages each; and when completed, may be purchased separately, or the five Works together in 2 vols. 8vo.

Sir Walter Scott's Works.
 Published by R. Cadell and Co. Edinburgh; and Simpkin and Marshall, London.
WAVERLEY NOVELS. New Edition.
 Vol. XII. of this edition, containing the Heart of Mid Lothian, and illustrated by William Kidd and Januca Stephannoff, was published on the 1st of May. Price 5s.
 Vol. XIII. containing the Conclusion of the Heart of Mid Lothian, and the Commencement of the Bride of Lammermoor, and illustrated by F. P. Stephannoff and R. Farrier, will appear on the 1st of June.
 All the early Volumes have been again reprinted, and may be had of every Bookseller in Great Britain.

2. The Poetical Works of Sir Walter Scott, Bart. in 11 vols. 8vo. This edition of the Poetry, among other Additions, has attached to it—Two Essays on Ballad Poetry, now first published. Also, New Introductions to the Lay, Mairioun, Lady of the Lake, Rokeby, and Lord of the Isles. The Dramas, just published, form Vol. X. of this edition. The whole illustrated by a Portrait of the Author, by David Wilkie, and 23 Engravings on Steel, after Smirke and Nasmyth. Price 6l.

3. Another edition of the Poetical Works, in 11 vols. 8mo. beginning with the Lay of the Last Minstrel, and including the new Introductions. The Dramas, just published, form Vol. XI. The illustrations the same as the 8vo. edition. Price 3l. 3s.

4. Vol. XI. of the Poetical Works, to complete Sets of the former editions. This Volume contains the Two Essays on Ballad Poetry, all the new Introductions, and the Dramas just published. In 8vo. Parts I. and II. price 18s.

5. Volume XI., to complete the Works in 18mo. contains Macdutt's Cross, the Doom of Devorgoil, and Auchincrane. Also, the new Introductions. In 1 vol. 18mo. price 9s.

6. The Doom of Devorgoil, a Melo-Drama; and Auchincrane, or the Ayrshire Tragedy. In 1 vol. 8vo. 9s.
7. Tales of a Grandfather, Third Series; being a Continuation of Stories from the History of Scotland, from the Union of the Kingdoms to the Year 1748. In 2 vols. 10s. 6d.

Also,
The same Work, First and Second Series. In 6 vols. 11. 1s.

A 3d edition, 12mo. 4s. 6d.
SERMONS, Doctrinal and Practical, for Plain People.
 By the Rev. G. R. GLEIG, M.A. M.R.S.L. &c. &c.
 John Murray, Albemarle Street.
The Real India Question.
 In demy 8vo. price 3s. 6d. stitched,
NOTICES on the BRITISH TRADE to the PORT of CANTON; with some Translations of Chinese Official Papers relative to the Trade.
 By JOHN SLADE, late of Canton.
 Smith, Elder, and Co. 68, Cornhill.

Smith's English Flora.
 A new edition, in 4 vols. 8vo. 2l. 2s. boards,
THE ENGLISH FLORA.
 By Sir JAMES S. SMITH, M.D. F.R.S. President of the Linnæan Society, &c. &c.
 By the same Author,
A Compendium of the English Flora, 12mo. 7s. 6d.
The same Work in Latin, 5th edition, 12mo. 7s. 6d. boards.
A Grammar of Botany, illustrative of Artificial, as well as Natural Classification, with an Explanation of Jussieu's System. 3d edition, 8vo. 12s. or coloured, 17. 11s. 6d.
An Introduction to the Study of Physiologia and Systematical Botany. 8vo. 6th edition, with 15 Plates, price 14s. plain, or coloured, 11. 8s. boards.
 Printed for Longman, Rees, Orme, Brown, and Green.

Dr. Utnia on Insanity, &c.—Price 11. 6d.
REMARKS on NERVOUS and MENTAL DISORDER; with especial Reference to recent Investigations on the subject of Insanity.
 Published by Messrs. Underwood, 28, Fleet Street.
 "This pamphlet has many commendable points."—*Times*.

In 4 large vols. 18mo. price 11. 4s.
THE WEIRD WOMAN of the WRAAUGH; or, Burton and Le Moore.
 By Mr. COATES.
 Printed for A. K. Newman and Co. London.
 Where may be had, just published,
Secrets in every Mansion, by Anne of Swansea. 5 vols. 3d edition, 30s.
Perkin Warbeck, by Alexander Campbell. 3 vols. 16s. 6d.
Fitzwalters, Barons of Chesterton. 4 vols. 11. 4s.
Blandfords, by H. Rouviere Mosse. 4 vols. 11. 4s.

In 8vo. illustrated by eight coloured Plates, price 18s. boards,
COMMENTARIES on some of the most important of the DISEASES of FEMALES, in Three Parts.
 Part 1. Of the Disorders incident to Female Youth.
 Part 2. Of some Diseases incident to the Menstrual State.
 Part 3. Of the Disorders incident to the later Periods of Female Life.
 By MARSHALL HALL, M.D. F.R.S.E. &c. &c.
 Printed for Longman, Rees, Orme, Brown, and Green.

Drummond's First Steps to Botany.
 3d edition, in 12mo. with numerous Woodcuts, price 9s. boards,
FIRST STEPS to BOTANY; intended as a popular Illustration of the Science, leading to its Study as a Branch of general Education.
 By JAMES L. DRUMMOND, M.D. Professor of Anatomy and Physiology in the Belfast Academical Institution.
 Printed for Longman, Rees, Orme, Brown, and Green.
 "This answers more completely to the proper notion of an Introduction to botany than any work we have yet seen."—*Edinburgh Review*.

The Study of Medicine.
 In 5 vols. 8vo. price 3l. 15s.
GOOD'S STUDY of MEDICINE. Third edition, containing all the Author's final Corrections and Improvements; together with much additional modern Information.
 By SAMUEL COOPER, Author of the "Dictionary of Practical Surgery." The additions to the text and notes, by Mr. Cooper, are numerous and valuable, and the entire work merits our most unqualified recommendation. The surgeon whose library contains Good's Study of Medicine, and Cooper's Surgical Dictionary, need look around him for little more that is either scientific, useful, or practical, in any branch of his profession.—*Lancet*, No. 204.
 "There is no British work on the science and practice of medicine which can be compared to it in point of learning, extent of research, or profundity of copious, accurate, and important information."—*London Medical and Surgical Journal*.
 Printed for T. and G. Underwood, 28, Fleet Street.

The 5th edition, in 12mo. 6s. 6d.
EVIDENCE of the TRUTH of the CHRISTIAN RELIGION, derived from the literal Fulfillment of Prophecy, particularly as illustrated by the History of the Jews, and by the Discoveries of recent Travellers.
 By the Rev. ALEXANDER KEITH, Professor of Hebrew and Chaldee in the University of Glasgow.
 Printed for Waugh and Innes, Edinburgh; and Whittaker, Treacher, and Co. Ave Maria Lane, London.

In 12mo. with 12 Engravings, 7s. bound,
THE LINÆAN SYSTEM of SHORT-HAND, by which Half the Words of any Discourse may be written each with a Single Stroke of the Pen, and more easy to read than any System ever published.
 By J. H. CLIVE.
 "It is obvious that by Mr. Clive's ingenious and easy plan, a very useful and expeditious system of short-hand might be formed."—*Lewis's Lectures on Short-Hand*, p. 196.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Dr. Conolly's Work on Insanity.
 In 1 vol. 8vo.
AN INQUIRY concerning the INDICATIONS of INSANITY, with suggestions for the better Protection and Care of the Insane.
 By JOHN CONOLLY, M.D. Professor of Medicine in the University of London.
 Printed for John Taylor, Bookseller and Publisher to the University, 30, Upper Gower Street.

Diseases of the Chest.
 In 1 thick close-printed vol. 8vo. with PLATES, price 11. 4s. boards,
A COMPLETE TREATISE on DISEASES of the CHEST, and on AUSCULTATION, with Copious Notes, and a Sketch of the Author's Life. Third edition, revised, with additional Notes.
 By JOHN FORBES, M.D. Member of the Royal College of Physicians, and senior Physician to the Chichester Infirmary.
 Printed for Thomas and George Underwood, 28, Fleet Street.

3d edition, considerably enlarged, with Plates and Woodcuts, 12s.
SALMONIA; or, Days of Fly-fishing. In a Series of Conversations.
 By the late Sir HUMPHRY DAVY.
 John Murray, Albemarle Street.
 "One of the most delightful labours of leisure ever seen; not a few of the most beautiful phenomena of nature are here lucidly explained, yet the pages have none of the vernalish of philosophical abstruse, or finite reasoning."—*Biography of Sir H. Davy, Gentlemen's Magazine*, August.
 By the same Author,
Conversations in Travel; or, the Last Days of a Philosopher. Foolscap 8vo. 6s.

Under the Patronage of the King.
NATIONAL PORTRAIT GALLERY,
 No. XIV. published this day, contains Portraits and Memoirs of Sir Thomas Munro—Bathurst, Bishop of Norwich—and Earl Verulam.
 Fisher, Son, and Co. Newgate Street.

Interesting Works recently published by Henry Colburn and Richard Bentley, New Burlington Street.

Maxims, &c. by the same Author, 12mo. price 2s.
 Published by Longman, Rees, Orme, Brown, and Green.

Now ready, in 3 vols. post 8vo.
FIRST LOVE. A Novel.
 "One of the most beautifully written and delicately told tales we remember. Never, we think, were there the most stirring scenes of a first love, more ably depicted. The whole cast of the story is essentially feminine, and cannot fail of affording great delight, especially to the fair sex."—*Morning Journal.*
 Saunders and Ooley, Public Library, Conduit Street.

Cheap Monthly Edition of
LODGE'S PORTRAITS and MEMOIRS of the MOST ILLUSTRIOUS PERSONAGES of BRITISH HISTORY.
 Three complete Sets of Plates having been entirely exhausted in supplying the extensive and increasing applications for this popular Work, a Fourth Set has been prepared, which is now in course of publication in monthly numbers, and delivered with the Magazines and Reviews, by every Bookseller and Newsmen in the Kingdom.

A Biographical Catalogue and Prospectus of Two Hundred of the Portraits and Memoirs to be contained in this Work, may be obtained (free of expense) from every Book and Print-seller in the Kingdom, to whom they have been sent for presentation to persons desiring to acquaint themselves with the plan of the Work, or to subscribe for it.

London: Harding and Lepard, Pall Mall East.
 Country Booksellers desiring the agency of this Work, are requested to apply to the Publishers free of expense; and if any difficulty be experienced in obtaining Catalogues and Prospectuses through their respective London Agents, the Country Trade are requested to write direct to the Publishers, stating the case, and channel through which applications may have been previously made.

Price 10s. 6d. boards, the Second Volume of
THE FALL OF NINEVEH. A Poem. by EDWIN ATHERSTONE.

London: Published by Baldwin and Cradock.
 "He is copious, melodious, and energetic; his style is gorgeous and flowing; his descriptions magnificent; his banquets and revelries breathe the very air of splendid voluptuousness; and his scenes of battles and councils are full of solemnity and ardour."—*Edinburgh Review*, No. 96.

New and interesting Historical Novels, &c.
 Published by William Kidd, 6, Old Bond Street.
RANULPH DE ROHAIS. A Romance of the Twelfth Century.
 By the Author of "Tales of a Voyager to the Arctic Ocean."

In 3 vols. post 8vo.
 "The scene of this work is laid in England, during the commotions in the reign of Stephen. Every thing connected with those disturbances, this work describes with great historical accuracy. Its delightful poetry ought to recommend it to the lover of the Muses, and its ingenious plot cannot but render it a favourite with the reader of romance."—*Sunday Times.*

2. **The Domine's Legacy;** consisting of a Series of Tales illustrative of the Manners and Scenery in Scotland. 3 vols. post 8vo.
 "The 'Domine's Legacy' well deserves a place in every library."—*Blackwood's Magazine.*

3. **Derwentwater, a Tale of 1715.** 2 vols. post 8vo.
 "Derwentwater is a charming romance of the early part of the last century. The plain and unaffected style in which it is written, contrasts powerfully with the inflated stuff which forms the bulk of modern romances."—*Intelligencer.*

THE JOURNAL of a NATURALIST.

Plants, trees, and stones, we note,
 Birds, insects, herbs, and many rural things.
 "We again strongly recommend this little unpretending volume to the attention of every lover of nature, and more particularly of our country readers. It will induce them, we are sure, to examine, more closely than they have been accustomed to do, into the objects of animated nature; and such examination will prove one of the most innocent and the most satisfactory sources of gratification and amusement. It is a book that ought to find its way into every rural drawing-room in the kingdom, and one that may safely be placed in every lady's boudoir, be her rank and station in life what they may."—*Quarterly Review*, No. 73.
 "We think there are few readers who will not be delighted; we are certain all will be instructed) by the 'Journal of a Naturalist.'"—*Monthly Review.*
 This is a most delightful book on the most delightful of all studies. We are acquainted with no previous work which bears any resemblance to this, except 'White's History of Selborne,' the most fascinating piece of rural writing and sound English philosophy that ever issued from the press."—*Athenaeum.*
 "To notice every thing of interest would be nearly to transcribe the whole book; therefore we must abruptly break off, after having held out by no means the most luscious tit-bit, either to the man of minute research, or yet the general philosopher."—*Sporting Magazine.*
 John Murray, Albemarle Street.

In the press, and speedily will be published, in 1 vol. post 8vo.
THE LAY of the DESERT. A Poem, in Two Cantos.

No. 698.—AMERICAN EDITION.

SATURDAY, JUNE 5, 1830.

REVIEW OF NEW BOOKS.

The Pilgrim's Progress: with a Life of John Bunyan by R. Southey, Esq. LL.D. Illustrated with engravings. Large 8vo. pp. 411. London, 1830. Murray; Major.

AN edition of one of the most popular books in the English or any other language, and produced in a style every way worthy of that popularity. A life by Southey—two splendid designs by Martin (the Valley of the Shadow of Death, and the Celestial City), engraved by W. R. Smith—a portrait of Bunyan, and about thirty spirited and admirably cut wood engravings—the typography of W. Nicol, and the general care and taste of Major (to whom we are indebted for Walton and Dallaway)—conspire to render this volume all that the admirers of the old Bedford tinker, and the lovers of modern literary embellishment, could desire. Indeed, if we may judge from correspondence addressed to us, and poems, too, written on the occasion, we should say that the appearance of the Pilgrim in his new garb has excited quite a sensation in the public. Yet, with all these recommendations, the work does not offer much for us to descant upon. Every one is acquainted with the leading facts in the life of Bunyan: originally a bit of a blackguard, he took a religious turn, and became a Baptist preacher: he was imprisoned twelve years for his opinions by the intolerating laws of the period at which he flourished; after which he lived sixteen years, visited London regularly every year, and died at the Star on Snow Hill, the residence of Mr. Stradwick, a friend and grocer, one of the followers of his ministry. He was buried in Bunhill Fields burial-ground, then not so overwhelmed with mortal remains as it has since been; for Dr. Southey says:

“The dissenters regard it as their Campo Santo—and especially for his sake. It is said that many have made it their desire to be interred as near as possible to the spot where his remains are deposited. His age and the date of his decease are thus recorded in his epitaph: Mr. John Bunyan, Author of the Pilgrim's Progress, ob. 12 Aug. 1688, æt. 60.

The Pilgrim's Progress now is finished,
And Death has laid him in his earthly bed.

It appears that at the time of his death, the Lord Mayor, Sir John Shorter, was one of his London flock.”

In relating the circumstances of the career of this extraordinary individual, his biographer is sparing of his own reflections. He tells us the story simply, with all its appurtenances of fanaticism and cant, as well as its better points, exactly as if he had himself lived at Bedford a century and-a-half ago, and been a disciple of John Bunyan's. This, as opinion goes, will be reckoned a merit or a blemish: it certainly presents the subject in its plainest form. We pronounce no further judgment, but extract a few specimens of the manner.

“He must have been still a very young man when that outward reformation took place, which, little as he afterwards valued it, and

insufficient as it may have been, gave evidence at least of right intentions under the direction of a strong will; and throughout his subsequent struggles of mind, the force of a diseased imagination is not more manifest than the earnestness of his religious feelings and aspirations. His connexion with the Baptists was eventually most beneficial to him: had it not been for the encouragement which he received from them, he might have lived and died a tinker; for even when he cast off, like a slough, the coarse habits of his early life, his latent powers could never without some such encouragement and impulse have broken through the thick ignorance with which they were incrustated. The coarseness of that incrustation could hardly be conceived, if proofs of it were not preserved in his own handwriting. There is no book, except the Bible, which he is known to have perused so intently as the Acts and Monuments of John Fox, the martyrologist, one of the best of men; a work more hastily than judiciously compiled in its earlier parts, but invaluable for that greater and far more important portion which has obtained for it its popular name of the Book of Martyrs. Bunyan's own copy of this work is in existence, and valued, of course, as such a relic of such a man ought to be. In each volume he has written his name beneath the title-page in a large and stout print hand; and under some of the wood-cuts he has inserted a few rhymes, which are undoubtedly his own composition, and which, though much in the manner of the verses that were printed under the illustrations to his own Pilgrim's Progress when that work was first adorned with cuts (verses worthy of such embellishments), are very much worse than even the worst of those. Indeed, it would not be possible to find specimens of more miserable doggerel. But as it has been proper to lay before the reader the vivid representation of Bunyan in his feverish state of enthusiasm, that the sobriety of mind into which he settled may be the better appreciated and the more admired,—so, for a like reason, is it fitting that it should be seen from how gross and deplorable a state of ignorance that intellect which produced the Pilgrim's Progress worked its way. These, then, are the verses. Under the print of an Owl appearing to a Council held by Pope John at Rome. (Acts and Monuments, vol. i. 781.)

Doth the owle to them apper
which putt them all into a fear
Will not the man & trubel crown
cast the owle unto the ground.

Under the martyrdom of John Hus. (Acts and Mon. vol. i. 821.)

heare is John hus that you may see
used in deed with all cruellty.
But now leet us follow & look one him
Where he is full field in deed to the brim.

Under the martyrdom of John Rogers, the protomartyr in the Marian persecution. (Ib. vol. iii. 133.)

It was the will of X (Christ) that thou should die
Mr Rogers his body in the flames to fry.
O Blessed man thou did lead this bloody way,
O how wilt thou shien with X in the last day.

Under the martyrdom of Lawrence Sanders. (Ib. vol. iii. 139.)

Mr Sanders is the next blessed man in deed
And from all trubels he is made free.
Farewell world & all hear be lo
For to my dear Lord I must goe.

Another is here presented as it appears in his own rude hand-writing under the martyrdom of Thomas Haukes,—who having promised to his friends that he would lift his hands above his head toward heaven before he gave up the ghost, in token to them that a man under the pain of such burning might keep his mind quiet and patient, lifted his scorched arms in fulfillment of that pledge after his speech was gone, and raised them in gesture of thanksgiving triumph towards the living God.

hear is one stout and strong in deed
he doth not waver like as doth a Reed.
a Signh he give them yea last of all
that are obcdant to the heavenly call.

There is yet one more of these tinker's tetras-tics penned in the margin, beside the account of Gardener's death:

the blood the blood that he did shed
is falling one his one heart;
and dreffull it is for to see
the beginnes of his misere.—Vol. iii. 527.

These curious inscriptions must have been Bunyan's first attempts in verse: he had, no doubt, found difficulty enough in tinkering them to make him proud of his work when it was done; for otherwise he would not have written them in a book which was the most valuable of all his goods and chattels. In latter days he seems to have taken this book for his art of poetry, and acquired from it at length the tune and the phraseology of such verses as are there inserted: with a few rare exceptions, they are of Robert Wisdom's school, and something below the pitch of Sternhold and Hopkins. But if he learnt there to make bad verses, he entered fully into the spirit of its better parts, and received that spirit into as resolute a heart as ever beat in a martyr's bosom. From the examples which he found there, and from the Scriptures which he perused with such intense devotion, he derived ‘a rapture’—

That raising him from ignorance,
Carried him up into the air of action
And knowledge of himself.

And when, the year after Gifford's death, a resolution was passed by the meeting, that ‘some of the brethren (one at a time) to whom the Lord may have given a gift be called forth and engaged to speak a word in the church for mutual edification,’ Bunyan was one of the persons so called upon.”

Of his controversial writings, especially against the Quakers, whose doctrines he cordially reprobated, the account given by Dr. S. is curious; but neither for that nor for the particulars respecting his immortal work is it necessary for us to find room, seeing that the original is in almost every hand. The following is worth quoting:

“Bunyan may be supposed to have been always vehement and vigorous in delivery, as he frequently is in his language. One day, when

he had preached 'with peculiar warmth and enlargement,' some of his friends came to shake hands with him after the service, and observed to him what 'a sweet sermon' he had delivered. 'Ay!' he replied, 'you need not remind me of that; for the devil told me of it before I was out of the pulpit.' This anecdote authenticates itself."

His earliest biographer (continues his latest) says that "though by reason of the many losses he sustained by imprisonment and spoil, his chargeable sickness, &c., his earthly treasure swelled not to excess, yet he always had sufficient to live decently and creditably." But all that Bunyan had to lose by 'spoil' was his occupation as a tinker, which, fortunately for him and the world, was put an end to earlier than in the course of his preacher's progress he could otherwise have cast it off. That progress raised him to a station of respectability and comfort; and he was too wise and too religious a man to desire riches either for himself or his children. When a wealthy London citizen offered to take one of his sons as an apprentice without a premium, he declined the friendly and advantageous offer, saying—'God did not send me to advance my family, but to preach the Gospel.' No doubt he saw something in the business itself, or in the way of life to which it led, unfavourable to the moral character. His widow put forth an advertisement stating her inability to print the writings which he left unpublished. They are probably included in the folio edition of his works which was published in 1692, the year of her decease, by Bunyan's successor at Bedford, Ebenezer Chandler, and John Wilson, a brother minister of the same sect, who went in Bunyan's life-time from the Bedford congregation to be the first pastor of a Baptist flock at Hitchin. Three children survived him: there were none by the second marriage; and the blind daughter, the only one whom it might have troubled him to leave with a scanty provision, happily died before him. He is said to have kept up 'a very strict discipline in his family, in prayer and exhortations.' Such a discipline did not in this case produce its usual ill effect; for according to what little is known of his children, they went on in the way they had been trained. His eldest son was forty-five years a member of the Bedford meeting; he preached there occasionally, and was employed in visiting the disorderly members; he was therefore in good repute for discretion, as well as for his religious character. The names of other descendants are in the books of the same meeting: in the burial-ground belonging to it his great-granddaughter Hannah Bunyan was interred in 1770, at the age of 76; and with her all that is related of his posterity ends."

And so ends our Review of this beautiful volume: but we will add, by way of literary and critical curiosities, some of the epistles on the subject to which we have already alluded. The first is a remonstrance in the genial tone of Bunyan himself, which, from the signature, we suspect comes from his publisher.*

The Pilgrim and the Peas.

Dear good Christian brother, what art thou about? Green peas will be in ere the Pilgrim be out! Though he speaks for himself and speaks like a man, If aught might assist him, thy watering can. Thy brief panegyric I happen'd to see, And thought that thou spok'st in a promising key. Alas! it appears I was sadly mistaken; And nought can appease me save Locke or save Bacon!

* It is whimsical enough that the initials are the same in both publishers: it is therefore necessary to explain that we do not suspect J. Murray of the poetry, but J. Major.

Thine faithfully, hopefully (Peace be the bond),
Thy servant, yet far from the "Slough of Despond."
J. M.

Our next is a Sonnet on this reprint of Bunyan's Pilgrim's Progress.

Bunyan! thy Pilgrim in his Gothic dress
And phrase vernacular delighteth me.
Oft have I wish'd my fav'rite book to see
Adorn'd with all the charms of art and press,
So that it might a real *chef-d'œuvre* be.
'Tis done at last, and critics must confess
Its matchless worth: the text from errors free,
Restored by Southey's care to perfectness.
Major, to thee this splendid tome we owe;
Old honest Izaak's works were hid in dust—
'Twas thine to cleanse them from their antique rust,
And make his gold with pristine lustre glow.
Great Martin here in gloom and glory shines;
And beautiful are Harvey's chaste designs."

PERCY HENDON.

Our worthy Friend's, Mr. Bernard Barton's, lines having been appended by the Editor to his Memoir, we shall not copy them into our *Gazette*; but finally take our leave of the work with our hearty good wishes.

Levi and Sarah; or, the Jewish Lovers: a Polish Tale. By Julius Ursinus Niemcewicz. Translated from the German edition, with a Preface and Notes by the Editor. 8vo. pp. 346. London, 1830. Murray.

WRITTEN from the best motives and on the most enlightened principles, this tale calls for attention as a striking and terrible picture of the effects of bigotry, and shews how much ingenuity may be perverted, and useful industry turned to bad account, from the want of political freedom and encouragement, and under the influence of debasing superstition. The story itself is of slight importance—a mere thread whereon to hang graver matters, which in Poland were of too vital consequence for these pages not to attract universal attention. A most interesting memoir of the author, and his motives, is prefixed. We extract the account of the Polish Jews.

"As none of them are engaged in agriculture, they are but rarely to be found in the villages; and being thus assembled in the towns and cities, which are but few, they seem in most of them to form a very large majority of their population. The men have, for the most part, much finer countenances than the other Poles; their forms are better, as well as their attitudes and paces [action?]; and the long, flowing black dresses which they commonly wear, form altogether a striking contrast with the appearance of their slouching, loitering, idle neighbours. Their eastern countenances and complexions, and the waving beards of many, especially of those advanced to middle age, presented a new and striking feature. They seemed to be always in motion, and yet doing nothing; and it was natural to inquire how such numbers of them could procure the means of subsistence, especially as their wives and daughters seemed to be decorated with jewels or ornaments much more expensive than were to be seen among the inhabitants of the same class in the neighbouring provinces of the Prussian dominions which had just been passed through. It appeared extraordinary in a country where the laws prohibited them from possessing land—where their own indisposition to a rural life prevented them from renting and cultivating that of others—that they should not address themselves to some manufacturing or handicraft pursuits: but such the editor had reason to believe was the case; and all of them subsist by being the retail distributors of the labour of their neighbours in some way or other. They have in their hands all the inter-

* For the wood engravings.

mediate operations of the commerce of the country, to such an extent, that every one who wants either to buy or to sell any commodity performs the operation, however minute, through the instrumentality of his Jew. A lady of the highest rank in Poland affirmed, that if she wanted to purchase household linen, clothes, or furniture, she was obliged to employ her own Jew, or she was sure to be cheated. This kind of trafficking habit, though it leads to great wealth with some few individuals of the nation, leaves a great part in the most miserable state of poverty—a state which can only be encountered by the extreme of frugality, approaching to a kind of half starvation; whilst the rags and filth which cover their persons are hid from the eye of the observer by the long dresses of black stuff, which composes their principal but cheap garment."

With a view to enlighten and instruct, the present tale was written: of some of the absurd beliefs it combats, the few following are a specimen.

"The arch prince of the universe has thus spoken of it:—The palace of the residence of Jehovah is one hundred and eighteen thousand times ten thousand miles in height, and its extent one hundred and thirty-six times ten thousand miles. From one of his eyes to the other is reckoned thirty times ten thousand miles. From his right to his left hand are seventy-six thousand times ten thousand miles. His skull is three times ten thousand miles in length, and the same in breadth. The crown of his head measures sixty times ten thousand miles. The soles of the feet of the King of kings extend to thirty thousand miles.' We are thus told by the rabbin Akiwa in page 24: 'that the whole of God's majesty is in height twice thirty-six thousand times ten thousand miles.' Do not, however, you ignorant creatures, imagine that these miles are the same as ours: the miles of the Heavenly King are ten thousand times ten thousand ells in length, and each ell is four feet. In the book *Osmel* we read—'that the court and the dependants of Jehovah are adapted to his dimensions. His attendants are 360,000 angels, and 10,000 seraphim; that 36,000 of the former wait daily in their turn.'"

The next is even more ridiculous, and but as a specimen of the folly to which such speculations can be carried, would be profane.

"Rabbin Jehuda asserts that the day is divided into twelve hours. In the first three God sits and studies the law; in the next three he rules the world; in the next he eats; and in the last three he rests himself, and relaxes by playing with Leviathan. I must, however, observe to you, that with regard to the last three hours, rabbin Ephraim, in the third section of his Commentaries, states an opinion different from that of the other rabbins. He expressly maintains, that in the last three hours God employs himself in teaching the boys to read. As I have attempted to reconcile these different opinions, I do it thus: If on the Sunday, Tuesday, Thursday, and Saturday, God amuses himself by playing with Leviathan, he may teach the boys to read on the Monday, Wednesday, and Friday. As to what regards Leviathan, the Talmud says: 'that when an angel brought to God the news of the destruction of Jerusalem, he was so much vexed at it, that, to dissipate his grief, he went to Raju and continued a long time there, walking backward and forward. Before the overthrow of the temple it was his great pleasure to play with Leviathan; but now he never, or very rarely, so indulges. He does, however, relax

in reading the Talmud and in disputing with departed spirits about their faith."

Rule for drinking: "The Jew must drink no water on a Wednesday or a Friday night; but if, from having eaten for his supper some peppered pike, he should feel an intolerable thirst, he may take up the water-jug and say: 'My mother told me to take care of Szafriri, fririri, riri, ri,' and then he may drink."

The translation is executed with fidelity; and the memoir of the intelligent and amiable author is written with equal good feeling and ability.

The Jerusalem Delivered of Torquato Tasso: translated into English Spenserian Verse, with a Life of the Author. By J. H. Wiffen. Third Edition. 2 vols. 12mo. London, 1830. Longman and Co.

THE name of Tasso has ever been so dear to the lovers of poetry, and his beauties have been, hitherto, so imperfectly transfused into the English language, that we have a peculiar pleasure in calling the attention of our readers to a translation worthy of the author, and to typography and embellishments worthy of the translation. Prefixed to the poem is a Life of Tasso, drawn up with great ingenuity, research, and elegance, and interspersed with such versions of his minor poems as serve to illustrate the biographical memoir. We should have had much gratification in making some extracts from it; but the fear of exceeding our limits decides us upon proceeding to examine the *Jerusalem* itself.

Facility is the parent of negligence; and thus it is that the Italian poets, so richly supplied with similar terminations, leave nevertheless perpetually in their otherwise delightful compositions, the blemish of *identical* rhyme. But whatever may be the blemishes of Italian versification, the language itself (notwithstanding any imputation of effeminacy occasioned by the luxuriance of Marini, Pignotti, and others) is truly noble. Its beauty has never been questioned; its grandeur is abundantly displayed in the *Gerusalemme Liberata* of Tasso; its energy is felt in the indignant expostulation of Filacaja—

"Dov'è, Italia, il tuo braccio?"

its capability of compression appears from the examination of Simeon by Joseph in the *Giuseppe Riconosciuto* of Metastasio; and none can question its powers of terrific sublimity after listening to the awful strains of Dante's

"—thrilling verse that wakes the dead."

Making due allowance for the difficulties in translating such a language, and for the weariness which must now and then creep upon the most alert in so long a work, we have great pleasure in congratulating Mr. Wiffen on his brilliant success, and the public at large on their being at length put in possession of a version in which the lofty conceptions of Tasso may be contemplated with unabated pleasure. We intend no disrespect to Fairfax, whose translation has (considering the time when it was written) many points of extraordinary merit; but the splendour and general elevation of Mr. Wiffen's muse confer a superiority which, in our opinion, distances all comparison.

The opening of an epic poem is usually a matter of difficulty to the original author, and of severe perplexity to the translator. Mr. Wiffen has, however, upon the whole, extricated himself with great happiness.

"I sing the pious arms and chief who freed
The sepulchre of Christ from thrall profane;
Much did he toil in thought, and much in deed;
Much in the glorious enterprise sustain;
And hell in vain opposed him, and in vain

Afric and Asia to the rescue poured
Their mingled tribes: Heaven recompensed his pain,
And from all fruitless sables of the sword,
True to the red-cross flag his wandering friends restored.

O thou, the Muse, that not with fading palms
Circlest thy brows on Pindus, but among
The angels warbling their celestial psalms,
Hast for thy coronal a golden throng
Of everlasting stars! make thou my song
Lucid and pure; breathe thou the flame divine
Into my bosom: and forgive the wrong,
If with grave truth light fiction I combine,
And sometimes grace my page with other flowers than
thine!

The world, thou know'st, on tiptoe ever flies
Where warbling most Parnassus' fountain winds,
And that Truth, robed in song's benign disguise,
Has won the coxest, soothed the sternest minds:
So the fond mother her sick infant blinds,
Sprinkling the edges of the cup she gives
With sweets: delighted with the balm it finds
Round the smooth brim, the medicine it receives,
Drinks the delusive draught, and, thus deluded, lives."

In the conclusion of the first stanza neither of the two translators (for we shall confine ourselves to the two above mentioned) has quite hit off the energetic simplicity of

"Che l Ciel gli die favore, e sotto al santi
Segni ridusse i suoi compagni erranti;"

but the words of Fairfax—

"His soldiers wild, to brawls and mutinies prest,
Reduced him to peace, so Heaven him blest!"—

are more literally applicable to the actual events of the poem.

In the descent of Gabriel (canto i. stanzas 13 and 14), Fairfax, who had the fancy and mind of a poet, and who makes very little ceremony of leaving his original in quest of a new image, has substituted for Tasso's

"E si libro sull' adeguate penne"

a very striking one of his own—

"And shook his wings, with rory May-dews wet."

Milton himself has deigned to adopt this (*Paradise Lost*, book 5)—

"Like Maia's son he stood,
And shook his plumes, that heavenly fragrance filled
The circuit wide."

Mr. Wiffen has, with singular felicity, combined both pictures in the following superlative line:

"And shook his sparkling plumes, self-balanced on the wind."

In canto ii. stanza 96, Fairfax has, without the least authority, brought in the music of the spheres.

"Only that noise, heaven's rolling circles keet,
Soothed mortal cares, and lulled the world to rest"—
a splendid fault, which Mr. Wiffen has avoided in the following harmonious stanza:

"'Tis eve; 'tis night; a holy quiet broods
O'er the mute world—winds, waters are at peace;
The beasts lie couched amid unstirring woods,
The fishes slumber in the sounds and seas;
No twittering bird sings farewell from the trees,
Hushed is the dragon's cry, the lion's roar;
Beneath her glooms a glad oblivion frees
The heart from care, its weary labours o'er,
Carrying divine repose and sweetness to its core."

For a powerful contrast to this hulling melody, we must recur to the spirit-stirring description of the Christian army in march.

"When now the Orient opened to the sun
Its shining gates, the mingled voice profound
Of trumpet, tambour, horn, and cymbal,
Cheered to the march the stirring troops around;
Not half so grateful is the thunder's sound
In the hot dog-days to the world forlorn,
Presaging freshness to the thirsty ground,
As to these warlike tribes the music drawn
From martial tubes that treat of battles to be born.

Straightway, spurred on by strong desire, they drest
Their limbs in wonted armour; straight, in sheen
Of perfect panoply, the soldiers prest
Beneath their several regencies convene:
Ranged, the hosts join; and to the winds serene
Straight the borne banners all at once are given;
And in the imperial gonfalon is seen
The Cross, triumphantly outspread, and driven
Abroad in waving folds voluminous to heaven.

Meanwhile the sun in the celestial fields
Perpetually advancing, rose in height,
And struck from pointed helms and bossy shields;
Clear, trembling lustres that torment the sight;
The broad air burns with glory, like a bright

And boundless conflagration; neighings shrill,
From fierce steeds ramping in their wild delight,
Mix with the sound of smitten steel, and fill
The deafened country round, hill answering loud to hill.

The prudent chief, to guard from ambuscade
His marching army, sent a troop before,
Of light-armed horse, with orders to invade
The hollow woods, and each strange place explore;
And first the pioneers advancing, bore
Their instruments, whereby the rugged way
Gives easy access; rivers are bridged o'er,
Dells filled, mounts levelled; shaggy woods display
Their tracks, and each close pass admits the lively day.

There are no moated towers, no massy woods,
No levies gathered by their pagan foes,
Nor bursting streams, nor Alpine solitudes,
To countervail their course, or interpose
Cause of delay: thus in his grandeur flows
The King of Floods, when proudly he disdains
His liminary shores,—the torrent grows,
Swells o'er its ruined banks, and to the plains
Roaring sweeps down, nor aught its headlong wrath re-
strains."

The following stanza is beautifully soft and flowing:—

"Low accents, plaintive whispers, groans profound,
Sighs of a people that in gladness grieves,
And melancholy murmurs float around,
Till the sad air a thrilling sound receives,
Like that which sobs amidst the dying leaves,
When with autumnal winds the forest waves;
Or dash of an insurgent sea that heaves
On lonely rocks, or locked in winding caves,
Hoarse through their hollow aisles in wild low cadence
raves."

The Italian reader may here find much enjoyment in comparing this exquisite stanza of Tasso with the appalling strains of Dante's *Inferno*, canto iii.

"Quivi sospiri, pianti, ed alti gual
Risonavan per l' aer senza stelle,
Diverse lingue, orribili favelle,
Parole di dolore, accenti d'ira,
Voci alte e fioche, e suon di man con elle."

Nothing can be more finished than the description of Erminia at night.

"On high were the clear stars: the gentle Hours
Walked cloudless through the galaxy of space,
And the calm moon rose, lighting up the flowers
With froth of living pearl: like her in grace,
The enamoured maid from her illumined face
Reflected light where'er she chanced to rove;
And made the silent spirit of the place,
The hills, the melancholy moon above,
And the dumb valleys round, familiar of her love."

Compare with this, *Midsummer Night's Dream*, act i. scene 1:—

"When Phoebe doth behold
Her silver image in the watery glass,
Decking with liquid pearl the bladed grass."

The stanza immediately following—

"Poi, rimirando il campo, ella dice:
O belle agli occhi miei tende latine,
Aura spira da voi, che mi recrea,"—

might, not improbably, be in the mind of Gray when he wrote his beautiful and affecting Ode on a Distant Prospect of Eton College:

"Ah, happy hills! ah, pleasing shade!
Ah, fields beloved in vain!

I feel the gales that from you blow
A momentary bliss bestow."

The opening of canto vii. (to the twentieth stanza) is rendered *con amore* by Mr. Wiffen. It is too long for insertion; but the reader will peruse it with great delight. The twentieth stanza will remind him of Pope's fine passage—

"If ever chance two wandering lovers brings
To Paraclete's white walls and silver springs," &c.

In stanza 55 of the same canto, the last two lines are beautiful:

"His dirge was chanted by the whispering wave,
And the gray rustling woods sang requiem o'er his grave."
But, alas! what is there of all this in the original?

"E portai meco l' arme, e lasciai cura
C' avesse degno onor di sepoltura."

As our quotations have been so considerable that our readers may already exclaim, *Claudite jam rivus*, we can only recommend the whole of the thirteenth canto as executed with great energy and power.

Galileo, in his Letter to Francesco Rinuccini, expresses with great unction his preference of Ariosto to Tasso. We incline, however, to the more deliberate verdict of Metastasio in favour of the *Gerusalemme Liberata*; and we cordially rejoice that this noble poem has at length been so faithfully made "English poetry."

It is with great reluctance we turn from the contemplation of passages so beautiful; and with the more reluctance, because we have now before us the unpleasing task of stating objections. Impartiality, however, requires this; and we proceed to it in a spirit of more than mere good-will to Mr. Wiffen—of cordial gratitude for the magnificent regale which he has spread before us:—

"A table richly spread, in regal mode—
And all the while harmonious airs were heard
Of chiming strings, or charming pipes."
Par. Reg. book ii.

But gratitude itself calls upon us to point out a few particulars, in which a performance, already so excellent, may, in a new edition, (which must soon be called for), be rendered still more perfect.

Now and then, the desire of ornament has been carried too far:—canto 12, stanza liv., "dark abbeas," "Gothic shrine," "lift thy cowl," are phrases in false taste, and not warranted by the Italian. The same remarks will apply to the first stanza of canto xv., at the words

"ere yet the sun has told
His rosary on the eastern hills."

How much better the simplicity of the original!—

"Prima che 'l di che spunta, omal più s' erga."

In canto xii., after the three beautiful stanzas 64, 65, 66, comes the 67th, in which we are compelled to except against the line

"God, for thy mercy! 'tis her angel face!"

as too laboured, too visible an effort, to be pathetic. It must be owned, the beauty of the Italian is hard to attain:

"La vide, e la conobbe; e restò senza
E voce e moto. Ah! vista! ah! conoscenza!"

In a few instances the sense of the original has not been correctly given. Canto i. stanza 26, "the brilliant by-word" does not well express "quel sì chiaro rimbombo." Canto v. stanza 58, "in no imprudent flight" does not give the sense of "immantamente il passo torse." Canto vi. stanza 2, the words "intolerable moments" are not faithful to the original. "Intollerante" is applied to Argantes; the "impatient Argantes." Canto vi. stanza 111, "intelligential" is neither happy in itself, nor faithful to the "prontissimo" of the original.

Canto xii. stanza 41,

"No, not if I knew
That Death, with that fierce visage which strikes fear
Into the hearts of men, would dog me as a deer."

This is not faithful to Tasso, nor equal to him:—

"Non, se la Morte nel più fier sembiante
Che sgomenta i mortali, avessi, avanti."

A few words and phrases may be noted as objectionable:—"breme" may be fairly questioned, notwithstanding the authority of Spenser. "Abysmal" is unwarranted. "To admiration," "in extenuation," "sentiments," and even "gruff," (notwithstanding the authority of Dryden) are too familiar. "Areed" is to advise, direct: we doubt the propriety of "ared," as used in canto iv. stanza 90.

We have now only room to take our leave of Mr. Wiffen, and of this beautiful edition, with repeated thanks for the gratification he has afforded us, with sincere admiration of his genius, and the most cordial anticipation of his continued and increasing popularity.

Having referred to Mr. Wiffen's interesting Memoir of Tasso, it is rather a fortunate coincidence that we have just received the following letter, which throws a new light upon the most important and controverted point in the poet's life. The Society alluded to is the *Accademia Pontoniana*.

Naples, March 10, 1830.

At the last meeting of this Society some interesting holographs were read, tending to throw a new and unexpected light on the subject of the pretended insanity of the equally celebrated and unfortunate Tasso. The first paper read at the Academy bears marks of having been torn by two persons struggling to keep possession of it, and on it is the following note, in writing considered to belong to the beginning of the seventeenth century. "It is thought that these verses, found among the writings of Tasso, or torn from his hands, and presented to the duke, were the cause of the duel and of his misfortunes." In the verses themselves, it may be seen that the words *amore*, *rossore*, have been substituted instead of *core*, *pudore*.

Quando sarà che d' Eleonora mia
Possa godere in libertade amore?
Ah pitoso il destin, tanto mi dia!
Addio cetra, addio lauri, addio rossore!

As a poetical version might affect the sense, I merely turn it into prose.

When will it be, that of my Eleanor
I may enjoy in liberty the love?
Ah, pitous destiny, grant me so much!
Farewell lyre, farewell laurels, farewell shame!

Of the second holograph four verses only have been made public.

Perchè mi spugli ove il bel viso, adorno
D' ogni dono del ciel, più me non cura?
Veggio lo scritto ancor, l' acciaio, il giorno
In che un sol fallo ogni mia gloria oscura.

Why urge me where the visage fair, adorned
With every gift of heaven, loves me no more?
I see the writing still, the sword, the day
When one sole fault my every fame obscured.

By comparing these passages with the lines published by Signor Betti in 1827, it will appear plausible, I think, that Tasso was neither mad nor criminal; but that he was a poet who sunk under the meddling malignity of a courtier, and the credulity of a duke.

Flamma d' amor che mi divora il petto,
Spegni una volta il tuo fatale ardore:
Libertade perdi, e d' intelletto
Privo mi; vuol l' tratto mio signore!
Ah, flame of love that dost devour my breast,
Oh quench at last thy fatal heat:
My liberty I lost, and of intellect
I am deprived; so wills my angry lord!

If, nearly three centuries after the calumny, the honour of Tasso can be cleared, the fact would seem to shew that the errors of princes can neither be excused by contemporary adulation, nor disguised by persevering misrepresentation, nor even lost in the dust and oblivion of ages.

Four Years' Residence in the West Indies.

By F. W. N. Bayley. 8vo. pp. 693. London, 1830. W. Kidd.

Four years' residence in the West Indies has enabled our youthful and clever author to produce a book at once amusing and valuable—amusing from his lively (perhaps rather flip-pant) manner, and valuable from his judicious information. Indeed, we are highly pleased with a work which, in some points, refutes the proverb, that it is impossible to clap an old head upon young shoulders; for Mr. Bayley has so well employed his time between the age of eighteen and twenty-two as to entitle himself to the praise of judgment as well as boyish activity and vivacity. The latter, as we have hinted, might have been advantageously

restrained a little, in a few instances; but after all, there is a pleasant infection in good spirits, and we would infinitely rather travel with any author than a dull one.

We will pass by the voyage from England to Barbadoes (or Barbados, as Mr. B. spells it), and come at once to the landing.

"As this was the first time our captain had taken a vessel to Barbados, he made a signal for a pilot; and accordingly a black man, professing himself to be such, came on board. He was an African of ferocious aspect, and certainly not formed to create a very favourable opinion of his race in the minds of those who saw him. He took possession of the vessel with as much importance as if he had been a fine, rough, old English seaman, bearing up Channel. 'Vell, captain,' said he, 'so you have had a fine passage: I hope de ladies below are vell; if you hab no jection I will drink deir health.' Accordingly he had a glass of grog given him, and then turned to work. 'What de debil are you at dere in de fore-top? Com down dere; I want to put about; don't you see de vind blow?' and then turning to the man at the helm—'vy you no teer teady? Got tam you, sir,—vy you no teer teady, I say!' On hearing these expressions, I said to a negro, to whom I was paying three halfpence for a pineapple, 'Is that fellow free?' 'No, massa,' was the reply; and on inquiry, I have since learnt that he belongs to a gentleman in the country, to whom he pays eight dollars a month, out of above five and twenty, which he contrives to earn by fishing and piloting, and lives like a prince on the rest. This was the first instance I saw of the hardships of slavery!"

From this intimation it may be gathered, that the writer is not one of those who saw nothing but negro oppression and misery in the West Indies. On the contrary, though an advocate for gradual emancipation, he draws, on the whole, a favourable picture of the condition of the slave population; and his testimony is entitled to the more attention, as being the son of a military officer, and utterly unconnected with planters, he could have no bias to warp his views on this momentous question. We shall copy a few particulars respecting the Colville estate, which may be taken as a sample of the first impressions made on Mr. Bayley's mind, and of the actual state of the negroes in Barbadoes, as well as other islands.

"Mr. Merrythought (the manager) led the way to the houses of the slaves, through a very beautiful avenue of palm and cocoa-nut trees; and the huts themselves were built amongst a quantity of other trees, and surrounded by a copse of the richest and most variegated foliage. When we entered this little shrubbery, I found the huts as far from what I expected as the little dwellings themselves were from the north pole. The greater number of them were built of wattling, lined on the inside with a plaster of clay, and roofed with a thatchwork of palm or cocoa-nut branches: some, however, were of wood, and others had shingled roofs. In my description of the Barbadian houses, I omitted to mention, that American shingles were the materials generally used for roofing, instead of tiles or slates. Each hut was divided into two rooms; the one a bedroom, and the other a hall; which, in the West Indies, is synonymous with parlour. These chambers are furnished with necessary conveniences; one, containing a bed and table, is the sleeping room allotted to the parents; and the hall, which is usually a long bench, such as may be seen in

a military guard-house, on which the young children, if there be any, take their nightly rest. I also observed that none of these little dwellings were without their household gods, in numbers proportionate to the circumstances of their owners; these consisted of a cup and saucer, a mug or two, a knife and fork, a tin can, a pail which contained the water, and some half dozen of calabashes. A calabash in shape somewhat resembles a gourd, although it sometimes grows to a much larger size; it contains a milky pith, full of seeds, which the negroes scoop clean out of a small hole, which they cut in the top; it then serves as a bottle to contain rum, &c.; or by sawing it in half, they are provided with two vessels, which answer the purposes of basins or dishes. These calabashes are sometimes dyed by the slaves, who carve figures on them with a regularity and order that display much cleverness and ingenuity. But to return to the huts. I observed that some of them were furnished much better than others; and this I believe arose rather from the disposition of their owners to be neat and cleanly, than from their superiority of privileges over the other slaves. The mechanics of the estate, however, such as masons, coopers, carpenters, &c., have certainly an opportunity, from the knowledge of their trade, of making their abodes more comfortable and convenient than the rest. One I particularly remarked, which contained a neat four-post bedstead, of polished hard wood of the country, somewhat resembling cedar; on which was a good mattress stuffed with dried plantain leaves, with bolster and pillows: there was also a little shelf, on which stood a basin and a jug; a wooden chair, and a box, painted green, for containing the wearing apparel. The hall was furnished with half a dozen chairs and two tables; on one of these stood a pair of decanters, with some tumblers and wine glasses, and about eight cups and saucers of different patterns; while on a shelf above were ranged some dozen of plates and dishes. There were two framed pictures hanging in the room, and many more without frames, pasted against the walls. The negroes cook their little messes before their doors, in stewpans, which, by the way, are very commodious articles. To each hut is attached a small garden, which is generally pretty well cultivated, for the slaves have always time to attend to their little portions of ground; they grow yams, taniers, plantains, bananas, sweet potatoes, okros, pine-apples, and Indian corn; and the luxuriant foliage that shades their little dwellings from the burning rays and scorching heat of a tropic sun, usually consists of trees that bear sweet and pleasant fruits, such as the mango, the Java plum, the bread-fruit, the soursop, the sapadillo, the pomegranate, &c., and other grateful and delicious fruits, with which nature has so bountifully stocked the West India Islands. In every garden I observed a hencoop, which formed a receptacle for some half dozen of fowls, and in many a pigsty that might have contained a pair of those great grunting gormandisers, yclept pig and boar (of which it is a bore to read), lying on a litter of straw, and surrounded by another litter of those sweet, soothing, sensitive, and sagacious sucklers, which are said to resemble a fortnight, because they go week week, and are the only jewels which a Jew may not touch. There were also near each hut, goats tied under the shade of some tree or other, and feeding on the green herbage that grew around it: I observed, that while the kids were grazing or taking a nap, an old negro woman was stationed near, to watch

that they were not kidnapped. Mr. Merrythought now thought that I was growing too merry on a serious subject, and accordingly proposed that we should leave the huts, and proceed to the hospital, or, as it was called by the negroes, the sickhouse."

This place is under excellent regulations, and every attention is paid to the invalids, in whose recovery interest as well as humanity is concerned. An account of Codrington College, the only institution in the West Indies for the education of slave children, is introduced with great propriety, as are also details of the Charaib war in St. Vincent's, and of a visit to Mount Souffriere, an extensive, though now, happily, extinct volcano, in the same island. We conclude, however, with a few miscellaneous extracts.

"Literature (we are told) in the West Indies is at a low ebb. Booksellers are hardly known, and books little patronised. Reading is by no means a favourite amusement among the inhabitants. Many of the planters and private gentlemen have tolerable libraries, and superb bookcases to contain them; but I am inclined to think that the valuable volumes, cased, as they generally are, in gilt calf or Russia, are more for ornament than use; they contribute to furnish the rooms, but very little to improve the understanding of the West Indians: the fact is, the climate is too hot for study, and their minds are too much fatigued with the cares of business to lead them to seek for relaxation in any but very light reading, and very little even of that. Were I asked, I should give it as my opinion, that the coloured people read more than any other class of inhabitants in the Antilles. They have an innate desire for information, and a wish to acquire knowledge, which is always most praiseworthy, and very often most successful. The publications printed in the West Indies are seldom any other than newspapers and almanacs. Of the former, there are usually two published in each island; though in Jamaica, Barbados, and the larger colonies, there are perhaps more. In these the leading articles are some of them well written, the political remarks strong and independent, and the general arrangement of matter often considerable, and seldom uninteresting. The standard of talent, however, varies greatly in the different islands; and there are a few that display a vast superiority over the rest. Among these I think I may number the St. Vincent Gazette, by Drape, in which the articles are generally as well written as they are badly printed, exposing vast talent but little care; and the St. George's Chronicle, in which both care and talent are mingled to a very creditable degree. The almanacs are commonly of two kinds; one printed on a sheet for pasting up in the counting-houses of the merchants, and one in a small volume,—containing a good deal of useful information,—for the pocket. The almanacs published in Grenada are the most perfect that have yet appeared, both for the elegance of their typography and the usefulness of their contents: that printed by Baker is illustrated by a neat lithographic drawing, and he deserves great credit for having been the first to produce one with such an embellishment. I have often thought that a good monthly periodical would do well in the West Indies; but I have been told, that where the attempt has been made, it has usually proved unsuccessful, from having fallen into personalities, so generally disliked, and yet so difficult to be avoided in a small community. I believe there are a few book-societies in the

Antilles, founded for the very laudable purpose of procuring from England, for the amusement of the fair Creoles, all the new novels of the day.

"*Les beaux arts* are entirely neglected in the West Indies; sculpture and painting are strangers in the tropics. The magnificent scenery and splendid views of the western isles are left undelineated by the pencil of the artist, though they might adorn his portfolio and establish his fame. By the way, I wish some good miniature painter would find his way into those hot regions. The inhabitants, particularly the more sable ones, would hail him as the 'god of their idolatry;' he would get enough to employ his time for years; he would have the pleasing task of taking some most beautiful likenesses, and the yet more delightful occupation of receiving joes and doubloons from half the population of the Antilles. A good landscape painter, a clever engraver on copper or in mezzotinto, and a lithographic establishment, are also much wanted."

"*Droll Sayings.*—The blacks are a curious race, and they make use of most unaccountable expressions. My first servant in Barbados always replied to me when I scolded him, which was pretty often:—'Don't fret, Massa, don't fret; dat no good.' They also apply the term 'curse' to censure of the slightest kind. I once heard a free African call a young slave a 'wicked little picaninny,' as it appeared to me in joke, and I was astonished at her answer. 'You curse me, eh? you curse me;—you dam Guinea nigger!—You Willyforce-congo! I make you sabe how for you curse me;—and hereat she took up a brickbat, and having thrown it at his head, which had it struck it would have broken, ran away as fast as her legs could carry her. This child was about ten years old. Another slave, a young man, who had attempted to cut off his hand, that he might escape future labour, gave the following reason for so doing. 'Massa, you know sabe de parson say, If your right hand fend you, cut um off.' Fancy the cunning of the fellow!

"*Obeah*, or the detestable practice of spells, formerly existed to a great degree among the negroes, but it is now fast disappearing, and I have no doubt will shortly be extinct. It was first introduced into our colonies by the Africans, who have their minds filled with superstition. The many who once executed these spells were called Obi people, and pretended to be able to cause the death of all those who offended them, by catching their shadows. Had they only pretended, it would have been well; but their pretensions were often fatally put into practice, and the number of negroes lost on the various estates, in the different islands, rendered it necessary that the legislature should take it into consideration. There is no doubt but that the catching the shadows of their victims, or holding them spell-bound, was only a false pretence invented by the Obi men for murdering them by sinister means. Mr. Barclay, who was present at the trial of a notorious Obeah man on a plantation in Jamaica, tells us that 'one of the witnesses, a negro belonging to the same estate, was asked, 'Do you know the prisoner to be an Obeah man?' 'Ees, Massa; shadow-catcher truc.' 'What do you mean by a shadow-catcher?' 'Him ha coffin' (a little coffin produced) 'him set for catch dem shadow.' 'What shadow do you mean?' 'When him set obeah for summary' (somebody), 'him catch dem shadow and dem go dead;' and too surely they were soon dead when he pretended to have caught their shadows, by whatever means

it was effected.' When this practice was found to be attended with such dreadful consequences, the governments of the several islands, after discouraging it by every means in their power, made it punishable by death. This salutary law has effectually limited the occurrence of obeh: the yearly decrease of Africans in the colonies lessens the prevalence of superstition; and the light of religion, which is every where dispelling the gloom of ignorance, among many other evils will remedy this."

In conclusion, we have only to notice the most useful and the most ornamental portions of this volume: the first consisting of concise chronologies and statistics of the various islands, from their discovery to the present time; and the second of a number of well-executed lithographic embellishments. In both these respects the author deserves our praise; and the whole *mélange* he has presented, (heterogeneous, with light reading, poetry, &c., though it occasionally is), will, we are persuaded, be favourably received by the public in general.

The Life of Alexander Alexander. Written by Himself, and edited by John Howell, Author of "Journal of a Soldier," "Life of John Nicol," &c. 2 vols. 12mo. 1830. Edinburgh, Blackwood: London, Cadell.

WHEN we say these volumes are published by an act of kindness on the part of their booksellers, as a last resource to a destitute and unfortunate man, who has passed through a series of hardship and calamity rarely, we hope, concentrated in one life, we say enough to shew that our critical seat is vacant for the time, and that we appeal not so much to the judgment as to the best and most humane feelings of our readers. An illegitimate child, exposed from his birth to neglect, insult, and ill-usage, his faults those of a temper at once too hasty and yet timid, are the inevitable growth of such circumstances; and every page of his miserable existence is a bitter lesson.

Viewing the work apart, it has much both of interest and amusement; the scenes lie in various parts,—Ceylon, the West Indies, and South America,—and from his account of the latter we shall make some selections: we begin with his description of Bolivar.

"He is a native of Caracas, where he had extensive property at this time in the hands of the Spaniards. His height is about five feet eight, and he is well proportioned. Though a full white, his face was bronzed or weather-beaten, but very intelligent, full and round, with a natural smile, that rendered it pleasing without hurting that air of superiority which lurked in a dark and intelligent eye, the angry glance of which was benumbing. This eye enlivened a studious cast of countenance, whether natural or acquired I cannot say. He appeared the accomplished gentleman in all his actions. He waltzed beautifully. He was of sober and abstemious habits, and spoke gracefully and well to the point; his proclamations were numerous, and well adapted to their purpose. He spoke little in company, and had a great dislike to tipplers, babblers, idlers, gamblers, and duellists. He allowed the English to fight duels, but any American who fought was shot for the offence. He took a great deal of exercise, often walking and riding. He was very fond of the English, often talked about England, and placed much confidence in the British, holding out liberal encouragement to all adventurers; but giving at the same time a general order, that no foreigner was to be kept against his will, and that every one was to have his passport to return to his country when

he chose. Out of policy and regard to Britain he pardoned many villains, giving them passports and rations until they embarked, and even money to carry them off; yet others who left the country had to fight their way in the best manner they could. I was a witness to an instance of his clemency:—a Lieutenant-Colonel Wilson, who had been up the country with Paez, then commander-in-chief, was a spy to the Spaniards, and in communication with General Murillo; he entered into an intrigue to overthrow Bolivar and the Republic, by sowing dissension between the rulers. His plan was to disgrace Bolivar; and by working on the foibles of the British, he soon got them to declare for Paez. When all was ripe, he had the assurance to go to Paez and propose to him to be supreme ruler and to supersede Bolivar; which Paez, to defeat his object, agreed to, and a proclamation was issued to the British, and the army, to acknowledge Paez as the supreme chief and captain-general of the armies of the Republic. This they had been prepared for; Colonel Wilson had only to come down to Angustura, and take up with him all the British to the Apure, under the pretence of strengthening the army;—all this was to be kept secret from Bolivar. Wilson came down, and the report was soon spread abroad, that all the foreigners in Angustura were to go up with him to join the army of the Apure. But Paez, as soon as Wilson left him, sent down a boat with information of the design to Bolivar. Wilson was still going backward and forward to Bolivar on the most friendly terms, and dining with him. The first time he entered after the arrival of the message from Paez, Bolivar being reclined in his hammock, received him without any apparent change of manner, and desired him to come and sit down by him; when they entered into conversation, as if Bolivar knew nothing of his nefarious designs. After a short time spent in this manner, Bolivar, without any apparent emotion, drew the packet from his pocket which contained the irrefragable proofs of his baseness, and told him to look at it and inform him if he knew any thing of its contents. Wilson was immediately put into close confinement, when we all looked for his being shot; but in a little time he was sent off to old Guiana, a prisoner at large, until shipped off to the West Indies; and I believe he had money to carry him off. Bolivar said, 'I forgive you for the sake of your country; you have it to thank for life, and not me, sir.'"

He gives a most wretched account of the English adventurers.

"By this time the enthusiasm of the adventurers had almost evaporated. At their first arrival, their toasts in drinking were, 'The cause, the glorious cause, success to the cause,—Bolivar, and the glorious cause in which we are embarked!' and they thought of nothing but parading the streets in their military attire, and admiring themselves. The toasts were now forgot, feathers, epaulets, pistols, and books, were all gone to purchase bread. As their misery thickened, their nature soured, and foolish duels became frequent, two and three of a morning. Many of them were in the hospital with severe pistol wounds, and almost neglected. Their only consolation was, 'Well, it shews I am no coward.'"

Of General Paez, at Cojeral, we find the following:

"Here we supped with the general, and messed with him the two days we remained. His marquee was quite temporary, being poles stuck in the ground, with others laid across to

form the top, and thatched with leaves, both sides and top. The whole furniture consisted of a small table, one chair and form, his hammock, and a pocket-knife. Our mess was as simple as the marquee; the beef was roasted on a pole, stuck first through it, then upright into the ground, and a fire being kindled, it was turned round occasionally until well enough done. In this manner the cooking was going on all through the camp. A trumpet was sounded, the signal for those officers who messed with the general, his staff and others invited, to assemble, when all stood around and cut off for himself. There were not above two or three pocket-knives amongst the whole; but they accommodated each other, and then used only their teeth and fingers until satisfied. Paez sat on his hammock, one or two on the form; a little cassada, and a few roasted plantains, sliced on a plate on the table, the beef being stuck in the ground still on the spit. It was just a little crowd,—all quiet and busy eating. They did this pretty fast, and were soon done with it. The beef was excellent, and all were healthy and hearty-looking. As soon as we were done eating all retired. At the commencement of this scene, the rifle officer and myself were much astonished, and somewhat abashed; yet we could not help smiling as our eyes met. The space being crowded and inconvenient, I stood close to the general's left, and my companion next me. I felt awkward and bashful at helping myself and the other officer, as he made me cut for him. Paez and other officers observed our involuntary smile. I saw he was not pleased, though by this time he knew a good deal of the English character. He asked me in English, 'Is that good beef?' In my confusion I only heard distinctly the word beef, and as the French is *boeuf*, I thought he had spoken in French. I replied, '*Oui, Monsieur, il fait très bon boeuf.*' '*Parlez-vous Français?*' he said. '*Oui, Monsieur.*' He then helped us to a slice or two, cut by himself, saying, '*Mangez, Anglais, mangez,*' and gave us one glass of grog each, but no one else. We had our billet under a tree, along with the two sergeants, and when the trumpet again sounded, we two officers were invited to the same scene. Paez is a stout, active-looking little man, with a pleasing and very expressive countenance; he is a good musician and dancer, fearless and brave to excess; but rash to a fault, rushing into battle pell-mell, with no idea but that of overturning all opposed to him by mere animal force. Yet his feelings were very acute; and he grieved much after a great slaughter, even of his enemies, and became subject to severe epileptic fits. He had fought many successful battles, but he could not calculate the effect of evolutions like Bolivar. He was no politician, only a plain, fighting man, whose talent lay in rushing on to battle. He was quite void of learning, being able neither to read nor write. With much care he could just manage to scrawl P-a-e-z on the official papers that were presented to him; but his heart and soul were in the cause he had espoused."

Of the people of Margareta, the author speaks very favourably.

"I must acknowledge they were the most devoted people to their cause I ever saw, brave to temerity, and unmindful of privations in the patriotic cause. I have not a doubt that they would have died to a man rather than have submitted to an enemy. On the appearance of danger all were alert. To prevent surprise, signal posts were erected throughout the whole island. Three guns fired in instant succession

was the signal for an enemy's fleet in sight. At different times it surprised me to see with what pleasing alacrity these people, all through the island, both on the mountains and in the valleys, left their different employments or started from their hammocks: on a gun being heard every ear was on the stretch for the second and third, to repair to their respective stations; while the women and children were as ready to take refuge in the mountains. These alarms always ended in a hearty cursing of the Gourdas, and a wish they would land, to add to their piles of skulls. In their military appearance they were very poor, neither was etiquette observed in their guards, for they were to be seen lying and loitering all about, sporting and gambling, the sentinels standing long on their arms; when the governor or any principal officer passed, they just came to the shoulder, and looked him in the face. The inhabitants are remarkably sober and abstemious, so much so, that I never saw one of them the worse of liquor; as for food, the poorer classes can subsist with exemplary patience on what a European would account nothing. I have seen the young men go down to the river with a mama apple or two, eat them, seated on a rock, then take a hearty draught of water, and rise content and cheerful; they are equally patient under privations of every kind, cheering each other with the cry, 'Live the Republic!' or, 'It is for the good of the Republic.' They are naturally abstemious, though there is abundance of food on the island; deer are plentiful, and rabbits abound; and are in my opinion much sweeter than those of Europe, all except the belly, which is bitter, and always cast away by the natives. Partridges are in abundance; they have plenty of fowls in a domestic state, and hogs; cows and sheep are scarce; yet fish is the food of which they are fondest; and like the inhabitants on the Main, they use the soup of the fish, while they throw away the soup of the beef; so partial are they to fish, that the inhabitants of the mountainous parts come down to the shores to purchase them; the seas all round the island supply the greatest abundance, both of shell and other fish, all of which the inhabitants use, except eels, which they abhor, calling them serpents and devils, believing them to be poisonous; yet when they found that the British used them, they were caught and sold to them. So clannish are these people, that in the market where they sold their fish, none were parted with to any of us, until all the natives were supplied, even though a greater price was offered; so that we had often none, except the eels, and, at the best, only the refuse. The fish called the king-fish is most excellent and light on the stomach, so that a great deal of it may be eaten with impunity; it resembles much the salmon in shape and taste. They even eat the dog-fish; but it is coarse, and therefore salted and given to the working people when employed on the estates. There being no slaves, the people go for day's wages and food, like the peasantry of Europe; the wages are in general a pacetta, or about one shilling per day; and faithful patient labourers they are."

The volumes close with an account of the writer's most wretched situation. Friendless, penniless, broken down in health and spirits, his last remaining hope is in the sale of this work, which, much to his credit, Mr. Blackwood has enabled him to lay before the public:—it is an appeal to their humanity, and we need say no more to recommend it to our readers.

The Nature and Properties of the Sugar Cane; with Practical Directions for the Improvement of its Culture, and the Manufacture of its Products. By G. K. Porter. 8vo. pp. 388. London, 1830. Smith, Elder, and Co.

TAKING into consideration the mercantile and political importance of our West India possessions, and the great amount of British capital invested in colonial agriculture, it is somewhat remarkable, that until the volume before us, which has just issued from the press, we have met with no work worthy of the name of a treatise on the culture of the sugar-cane, and the preparation of its products for the European market.

Mr. Porter has treated the subject both as a scientific and practical man. He shews how much latitude there is for farther improvements in the management of West India estates. Instead of employing, as formerly, persons entirely ignorant of chemical and agricultural science, we are happy to learn that the day has dawned, when the advantages of chemical and mechanical improvements in the useful arts are likely to be as fully appreciated in our colonies as in the mother country.

The author gives a rapid historical sketch of the introduction of the sugar-cane into the southern portions of Europe. He shews, from good authority, that this valuable plant was known to the Chinese, if not to the Bengalese, many centuries previous to its importation into the western world; and that its products formed a very extensive article of commerce, under the term of "India salt," supposed to be crystallised sugar or sugar-candy. Whether the Portuguese introduced the sugar-cane into the West Indies from their East India settlements, or whether they carried the plants from Madeira or Sicily, is a matter of doubt; but the whole of the West India Islands appear to have been indebted for their staple article of culture to the enterprise of the Portuguese during the latter portion of the fifteenth and the beginning of the sixteenth centuries. The first growth of the cane in the islands subject to Great Britain was about the year 1640 or 1641, when it was brought to Barbadoes from the coast of Brazil. It was afterwards speedily spread throughout all the West India Islands.

According to Mr. Porter, there are not fewer than five or six varieties of the sugar-cane, differing no less in the quantity and quality of their products, than in the size and altitude of the plant in different plantations. A light brick earth, or clay and sand loam, is considered by the author as the most favourable soil for this valuable plant. It grows most luxuriantly in the alluvial or savannah lands; but the quality of the juice is less saccharine than in the more elevated districts, where the cane is smaller, and more exposed to the action of the sun. Very wet seasons, as might be expected, diminish the value of the crop more than one half. From being a highly succulent plant, it requires considerable moisture in its early stages, yet the full development of the saccharine principle needs a moderately dry season, and the action of an unclouded sun. One of the chief impediments to the full cultivation of many sugar estates is the difficulty of providing manure adequate to the exhausting nature of the crop.

It appears from Mr. Porter, that the variety of cane brought from the island of Otaheite not only arrives at maturity in about ten months, or from four to six months less time than the ordinary cane; but that it also with-

stands excessive drought in a remarkable degree, and contains less colouring matter in the juice. This variety, however, from being more tender in the plant, is not able to withstand the hurricanes which sometimes devastate whole plantations in the West India Islands. On one of the best plantations in the island of Jamaica, the author states, that the average produce of eleven years gave, for every 100 gallons of cane juice, 108 pounds of sugar; or, 122 the maximum, and 96 the minimum, for each 100 gallons. But in some other islands, more especially in unfavourable seasons, cane juice will not give more than two thirds of this quantity of sugar.

The distinctions which the author, in the following passage, endeavours to draw between the mucilaginous and saccharine principles of the sugar-cane are somewhat obscure—

"The juice of canes just arrived at their full growth is in the sweet mucous state: this, when clarified and concentrated, assumes a very deep brown colour, and becomes syrup of very thick consistency. If the heat applied be greater than 221° Fah., it will be decomposed. If the juice be expressed from the cane while maturing, the mucous juice is then in the saccharine state; and when clarified and concentrated produces syrup of a very deep colour and thick consistence: it can scarcely support 225° Fah. without decomposition, while the mucous juice, in the state of essential salt, remains undecomposed at the heat of 260°, and pure sugar will bear exposure to 300°, and even higher, without injury. It can now be easily perceived how greatly the presence of *sweet and saccharine juices* is injurious to the manufacture of sugar, when, as is now always the case, degrees of heat are used sufficiently high to decompose them. The mucilage is more or less abundant, according to the nature of the cane, and the situation in which it grows."

Mr. Porter might just as well have told us, in a few words, that all plants which produce saccharine fruits or juices are, in their earlier stages, mucilaginous; and that a process nearly analogous to vinous fermentation dissipates the excess of watery and carbonaceous matter, leaving the saccharine or valuable principle in more or less purity.

The following extract from the work affords a gratifying proof of the superiority of scientific cultivation and manufacture in the British colonies as compared with the management of sugar estates in some other districts:—"We have already mentioned the Brazils as having furnished to the English colonists their first lesson in the art of making sugar. From what we can learn, this art is now altogether in the hands of uneducated people in that country; and it is doubtful whether any improvements have been adopted by them, or if the principles which should govern the manufacturer in his operations are better understood by the Brazilians at the present day than they were by those from whom, nearly two centuries ago, the cane was procured by the English settlers in Barbadoes. The export trade of Brazil in sugar has always been very considerable; and, as we have seen, the markets of Europe were at one time almost wholly supplied from that country. The rum made in Brazil is said to be of execrable quality, and altogether unfit for exportation." The inferior quality of the Brazilian spirit is probably owing to the dirty habits of the natives in superintending the fermentation of the refuse sugar, *must*, or wash; since there is no reason to doubt, that with so fine a climate as Brazil, and such a luxuriant soil for tropical plants, that sugar canes

might be raised, equal in saccharine properties to the best plantations of Jamaica or Antigua.

Another extract from the appendix of Mr. Porter's work shews that he is no less an attentive observer of the animal economy than of vegetable economy in tropical climates. "From the tables published by our friend Dr. Jackson, an inference may be drawn, that an excess of the action of solar light and heat on the human body shews its morbid power more particularly in deranging those functions of life which are connected with the liver in the white race of mankind, while any considerable diminution in the intensity of these natural agents acts with comparatively greater morbid influence in deranging those vital functions which are connected with the lungs of the dark-skinned race of men. The effects of a diminution of solar light and heat on the lungs of monkeys, and of an excess thereof on the wool of sheep, are well known. But whatever may be the result as to the effect on human life, there cannot be any doubt but that some agent of nature acts in the West Indies more powerfully than in our climate, in producing such enormous masses of vegetable matter from comparatively small portions of soil; which, on analysis, does not appear to contain the principles of fertility in a much greater degree than our own. To discover in what this agency consists, is surely an object worthy of the pursuit of a liberal mind; and the investigation is therefore recommended to the scientific planter, who may peruse this note." To which excellent recommendation we beg to say Amen.

The work contains several well-executed plates of sections of the sugar-cane, and of the machinery employed in the manufacture of sugar and distillation of rum. The latter process appears to have been recently much improved by an invention, devised by the author, for regulating the degree of heat. The observations on refining sugar appear to us extremely judicious; and we can, altogether, recommend the volume as a most valuable addition to the library of the home West India merchant, as well as that of the resident planter.*

Remarks on Nervous and Mental Disorders, &c. By David Uwins, M.D. pp. 41. London, 1830. Underwoods.

A RECENT trial on lunacy excited a good deal of conversation, both in professional and literary circles; and, from the talents of a distinguished advocate employed in the cause, as well as from a vast load of ignorant prejudice, there fell no little odium on the medical men who gave their evidence in favour of the commission. To us it seemed, even at that time, somewhat extraordinary, that ten or fifteen gentlemen of eminence in their profession should be found so destitute of judgment as to present a unanimous coincidence of error, or so devoid of humanity as to endanger a fellow-creature's happiness and liberty, from the mere pride of maintaining an obstinate opinion. Yet the silence of the profession on the subject, their apparent insensibility to the serious charge of ignorance or cruelty, carried with it something ominous. With many points of defence, no one was found to undertake a cause of easy advocacy—a cause, too, which was the more

likely to become popular, as involving the merits of a question which comes home to the business and bosom of every man; and affording an opportunity of philosophical inquiry, far more interesting than the dry detail of professional technicality. Dr. Uwins, however, has written a pamphlet—and, it seems to us, a very able one—in which he enters, with much literary skill, at any rate, upon the subject of insanity; and, in the controversial parts of his publication, shews the manliness, ingenuity, and eloquence, which, on many occasions, he had already displayed. This pamphlet certainly exhibits the usual characteristics of Dr. Uwins' style; viz. a sifting of both sides of the question, and somewhat of diffidence in pronouncing the fiat of diplomatic opinion, which latter quality claims our respect.

Our limits will not permit us to enter at any great length on an examination of this production; but we cannot omit to notice an important principle laid down by Dr. Uwins; viz. that to study or practise any one branch of the healing art, to the exclusion of all the rest, is at once unscientific and dangerous. The author, from his appointment to the administration of Peckham Asylum, seems rather apprehensive of being styled a mad doctor; but he need never fear being classed in any unworthy association: with the intelligent part of the community—and the opinion of no others is worth having—he has already acquired a reputation, which, we venture to say, the present publication will augment.

Sweepings of Parnassus; a Collection of Poems: with Essays in Prose. By Steropes. London, 1830. Hurst, Chance, and Co.

FOR once we will allow an author to be his own critic, and just quote his self opinion. "On what particular day I was first visited with the *cacoëthes scribendi* I cannot precisely say; but I have no scruple in marking it as one of the most unlucky in my calendar." With this we perfectly agree.

Ranulph de Rohais; a Romance of the Twelfth Century. By the Author of "Tales of a Voyager to the Arctic Ocean." 3 vols. London, 1830. Kidd.

WE liked our author's former work better than we do his present more ambitious effort. The story is long and heavy; and we think he has chosen too early a period for his tale: we know too little of the times he describes, to feel much interest in them. His characters, &c. want that identity which gives such reality to fiction.

The Weird Woman of the Wraagh; or, Burton and Le Moore: an Historical Tale. By Mrs. Coates. 4 vols. London, 1830. Newman and Co.

WE cannot speak very favourably of these pages: much coarse taste is displayed in a complicated tale, told in language often deficient in grammatical correctness.

Robert Montgomery and his Reviewers; with some Remarks on the Present State of English Poetry and the Laws of Criticism. By Edward Clarkson. 12mo. pp. 164. London, Ridgway.

THIS is an able and various pamphlet, discussing the questions at issue between Mr. Robert Montgomery and some of that poet's critics and assailants; and displaying much general acquaintance with, and acuteness in appreciating, the merits and demerits of English poetry and criticism. The writer ranks Montgomery very

high in the scale of genius, and cleverly combats the opinions of those who have endeavoured to represent him as a mere pretender; while the public voice (judged by the unexampled sale of many editions of his productions) has hailed him as a true bard. Having, on every occasion, offered our own sentiments upon his books as they appeared, we need not now repeat them; but content ourselves with warmly recommending Mr. Clarkson's little volume, as a performance of much information and talent, and one worthy of perusal even by those who may differ most widely from the author.

ORIGINAL CORRESPONDENCE.

Paris, June 1, 1830.

IN France, the science of musical composition is reduced to mere imitation. The professional fabricator of operas serves the customer, according to his taste, with a dish of Mozart or Rossini, Beethoven or Weber, much in the same manner as the retailer of licensed poison manufactures Medoc or Champagne, Tokay or Lacrymæ Christi.

Guillaume Tell and *La Muette de Portici* are still in favour at the Académie Royale de Musique, the directors of which, it must be confessed, are not idle. *La Bayadère Amoureuse*, a new opera in two acts, by Messieurs Scribe and Auber, is in active rehearsal. *Robert le Diable*, music by Meyerbeer, is also in preparation for the month of August. The opera ballet of *Manon Lescaut* continues to attract crowds. After the departure of the German singers, a series of Italian tragedies, dramas, and comedies, by the most celebrated authors, will be represented at the Italian theatre; an arrangement to that effect having been concluded between M. Laurent the director, and M. Paladini of the Imperial theatre at Milan. Among the performers said to be engaged are several of established reputation in Italy.

From Berlin we hear that Sontag was to set off (May 24) for Warsaw, where the Emperor of Russia is expected, and where the prima donna will probably reap an abundant harvest of crowns, ducats, and diamonds. Indignant as the lady's numerous admirers may feel at the circulation of a recent report with regard to her unfavorable reception in the part of *Donna Anna*, the statement, whether correct or not, was universally credited in Paris. However, it is generally supposed that the disapprobation evinced originated in the malevolence of party spirit; for a prima donna, like a prime minister, must find it a hard task to please every body. The working of the same party spirit on the leaders of "the opposite faction," may account for the silence observed with regard to the occurrence by the Berlin journals that have reached England.

An opera entitled *Algol*, music by Lorentz Schneider, has been represented with complete success at the theatre at Cobourg.

Yesterday evening, a splendid ball, to which three thousand persons had been invited, was given by the Duke of Orleans to the King and Queen of Naples. The gardens of the Palais Royal were brilliantly illuminated. The King of France deviated on this occasion from the usual court etiquette, which forbids the French sovereign to visit even the most illustrious of his subjects, and, in compliment to the royal strangers, honoured the festivities with his presence.

The friend of a well-known personage having expressed his astonishment at the latter's apparent intimacy with certain indi-

* Connected with the subject of sugar manufacturing, the following was forwarded to us last week: it, however, rests only on anonymous authority.—Ed. L. G. "A gentleman in the city, whose attention has been for some time past directed to the refining of sugar, has, we understand, succeeded in discovering a method far superior to the one hitherto in use, by which the expense and trouble of the process will be very materially reduced."

viduals of *not* equivocal character;—"Yes," said the wit, "I always take a knave by the hand, to prevent him from putting it into my pocket."

EAST INDIA REFORMS.

Extract of a Letter from Calcutta, Jan. 3.

OF our new administration I hardly know how to convey to you even a very general idea. The new lord has in him a great deal that is very good, and but very little that I can call radically bad. His intentions are exceedingly pure; his distribution of patronage most thoroughly disinterested; his encouragement of those who do their duty most cheering to all honest-minded men; and his discouragement of the idle and humbug most praiseworthy. He has exploded the once great bugbear, the press; and by allowing people to write what they like, has caused what is written to be thought little of: there I think him right. He has abolished suttees; and there I think him right. He has made a great reformation in matters affecting the public finances; and there, too, I think him right in his views;—though not quite so in the scope which he has given to—'s love of theorising, by which the civil service, which could well have borne much reduction, has been reduced to a service in which all ideas of realising a fortune must be abandoned, and in which a prudent man, if he remain single, may make 500*l.* a-year, besides paying for his pension, after serving for twenty-two years. He (the lord) has strongly advocated the unrestricted permission for Europeans to acquire a permanent interest in land in India, and done all in his power to promote their settling in the country. He has contemplated the formation, by act of parliament, of a legislative council for India, composed of the governor and the supreme court; with powers to pass laws for all purposes and all occasions. He has shewn a marked determination to bring forward natives into the general society, and into public employment; and he seems also inclined to settle the revenue of the western provinces in perpetuity. He has resolved on draining the salt water lake; on having a steam communication with Benares; on building a new house in the Barrackpore Park; and, in short, on doing some hundred other things, all at the same time: so that we are all of us kept in the perpetual agitation of new schemes—and can never foresee to-day what to-morrow will bring forth. However, I think he is running too fast, and that much of what he attempts will fail. Personally, towards those who are in immediate contact with him, he is the kindest and most accessible man possible, and his lady is equally so to every one.

Our great public topics here now, are, the late discoveries of extensive forgeries of the Company's paper, and the trial by commission, and dismissal from office of —, for the evil deeds of his wife, in the bribe and present way. As to the forgeries, if you hear that there has been a grand intrigue in the Accountant-General's office,—that all the signatures are genuine, and have been obtained from the public officers through the chicanery of the writers of the office, don't believe it; for it will be proved the whole has been one of the best laid, most extensive, and iniquitous schemes of successful forgery ever heard of in India. As to the other affair, it was what any one might naturally have expected, when a man allows his wife to do any thing and every thing she pleases; but it is a wretched end for an old man, almost at the close of a career in which he had before enjoyed good repute.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

AT a late meeting Mr. Faraday gave a lecture "on the application of a new principle in the construction of musical instruments." This was the sixth of a series of lectures on acoustical subjects given by this gentleman, the subject matter of which has been furnished by Mr. C. Wheatstone.

The principle under consideration was that of springs, or tongues, of small dimensions, fixed at one end and free at the other, and placed so as to vibrate, when a current of air is directed against them, within corresponding apertures, without beating against their sides. As the audible sound is in this case produced by the periodical intermittences of the current of air, and not by the oscillations of the tongue, which acts merely as a mechanical agent to open and close the aperture with the requisite frequency, Mr. Wheatstone designates the apparatus (*viz.* the aperture and tongue combined) which effects this purpose, an *intermitter*. The philosophy of this principle had been explained on a former evening; it remained, therefore, at present only to state its practical applications; but previously to this, Mr. Faraday called the attention of the audience to a contrivance of Mr. Wheatstone's for illustrating, in the most obvious manner, the laws which determine the influence of the length, thickness, and material of the tongue of an intermitter, on the number of its vibrations; and which also, from its producing and registering all the gradations of sound within the range of three octaves, constitutes one of the most convenient *tonometers* which has yet been proposed.

A parallel arrangement of several of these intermitters in a plate of metal, tuned to the notes of a common chord, constitutes the original and simplest form of the *æolina*, or mund-harmonica. This instrument has appeared under innumerable shapes, but the only one which, with respect to the regularity and extent of its scale, the facility of performance, or the harmony of its effects, is that consisting of three chords, (of eight or ten notes each,) with ridges separating each note, and arranged in an ivory frame. This has many beautiful peculiarities, which no other instrument, or form of this instrument, possesses.

But as all these instruments are limited in their harmonies, and are incapable of any rapidity of execution, it occurred to several persons that these inconveniences might be obviated by placing the tongues on the surface of a tube or box, to allow or prevent the wind to act on each by a separate key, and to make such an arrangement of these keys as should render the performance easy. Various instruments constructed on this idea, in Germany, France, and England, were exhibited; but in all these instruments, which the inventors endeavoured to assimilate in their mode of fingering to the flute, two great defects exist; the quality of the tones, which in the *æolina* depends on the proximity of the mouth, is remarkably deteriorated by the necessary largeness of the wind-channel, and the distances of the keys occasions a necessity of shifting the hands incessantly during performance, which renders inequality of execution inevitable.

Mr. Wheatstone's symphonion was then exhibited, and shewn to possess greater capabilities of expression and execution, and to present greater facilities in its acquisition, than any other instrument similar in principle, while it was entirely free from either of the preceding defects. This instrument is extremely

portable, and presents the appearance of a small box, with an embouchure in front, and two parallel rows of finger-stops on each side: the systematic arrangement of these stops is such, that all the harmonic combinations and melodic successions within the compass of the instrument, are performed with the greatest ease. The powers of this instrument were exemplified by some performances on it by Mr. Godbé.

Another application of this principle was then shewn in the accordion, invented at Vienna, which consists of ten chords, put in action by a portable bellows for the hand, and regulated by finger-keys. The harmonies of this instrument are very full and organ-like, but it is limited in compass.

Those instruments constructed on the application of this principle to the mechanism of the organ or piano-forte, were next brought forward. Mr. Schultz's *æol-armonica*, the first instrument of this description brought to England, had been seen and heard in the lecture-room on a former evening. The instruments now exhibited were, Dr. Dowler's *glossophone*, rewarded by the Society of Arts; M. Dietz's *ærophone*, a sweet-toned instrument, three octaves in compass; a similar instrument, constructed by Mr. Stumpf; and Mr. Day's *æolian organ*, which last is the most extensive in its compass, and the most powerful in its effects, of any application which has yet been made of this principle.

Mr. Stumpf shewed the effect of his instrument, accompanied on the harp by Mr. Stockhausen; and the powers of the *æolian organ* were displayed by Mr. Wesley.

This principle, though of recent application in Europe, has been long in use among the oriental nations, and the *tshing*, or Chinese organ, a specimen of which was on the table, was stated as having been the origin of all the recent European improvements. The principle was first naturalised by Professor Kratzenstein, who employed it in the construction of his speaking machine, after having seen a Chinese organ at Copenhagen; and its first application to a musical instrument was the *organochordion*, made by Kirsnich of St. Petersburg, in 1780. Our limits oblige us to pass over the intermediate history of this invention.

On a late evening, a paper was read by Captain Manby on the means of preserving lives in cases of shipwreck, and on a new method of hauling boats through the surf; explained and illustrated by a beautiful set of working models. The gallant captain first pointed out the principles of this method for effecting a communication with a stranded vessel; but as these are already before the public, we shall not enter into them here. Shot with attached lines were thrown at a mast, and the audience made well acquainted with the practice required in cases of real danger. The mode of hauling off a life or other boat is new, and is intended to overcome the extreme difficulty constantly experienced in sending a boat from shore in a rough sea: this difficulty arises from the strength of the surf on a lee shore being greater in a storm than the force of oars can overcome. An anchor is therefore laid out beyond the line of surf, a buoy is attached, a single block without swivel is made fast to the buoy; a rope then passes from shore to block, and from block back to shore. If this rope were made fast to the anchor, and left in its whole length to itself, it would become buried in the sand and useless for most of its length: to prevent this, it is attached to the buoy, and a smaller buoy made use of about midway between the shore

and the anchor. This buoy is made fast to the rope which goes from shore, and carries a loop, through which that part of the rope passes that relieves from the buoy; so that it is suspended in the water without travelling, and therefore admits a boat to be hauled out. Once beyond the surf, the men stick to their oars, and help is carried to the vessel. The plan has been practically worked in cases of shipwreck, when no other was available.

STEAM FIRE-ENGINE.

[THE annexed description of Mr. Braithwaite's Steam Fire-Engine, it will readily be perceived, is not written, though acknowledged and corrected, by us. But having been much impressed with the accounts we received of its performance at the Argyll Rooms and other great fires, we thought it our duty, as collectors of useful scientific information, to request the favour of the inventor demonstrating its powers in our presence, with which request he most obligingly complied. Having, therefore, witnessed the extraordinary discharge of water by this machine, the rapidly with which it was got ready, the simplicity of its means, and the facility and certainty with which it was wrought, we were anxious to bear evidence to its literally prodigious efficacy. From two pipes at once, the quantity of fluid thrown upon high and distant points was quite astonishing,—to our belief, equal to subdue any, the fiercest, conflagration. Far superior in force to anything of the kind we ever saw, pouring forth unceasing torrents by self-action, it seemed to us that such an engine must be immediately and universally adopted: why it is not, we cannot pretend to tell; but we are sure that much of life and property would be saved if it were in general use. The following is the plain statement of an engineer, more competent to render such scientific details than we could be; but we can safely speak of the wonderful effect produced, and of the speed with which the whole process of lighting the fuel, and proceeding from the manufactory to the Regent's Canal, and beginning to play abundantly, as proved to our entire satisfaction by Mr. Braithwaite and his servants: inasmuch that we consider this to be one of the most valuable applications of steam.—*Ed. L. G.*]

The mechanical arrangement consists of two cylinders, the one of 7 inches diameter, being the steam cylinder; and the other of 6½ inches diameter, being the water-pump. By the horizontal position of the two cylinders, the parallel motion is easily produced, the stuffing-boxes serving as guides, simplifying materially the mechanical arrangement. The next, but most important part, is the boiler, which is upon the same principle and construction as the boiler, or steam-generator, in the "Novelty" locomotive engine, which exhibited on the railway at Liverpool, and by which the extraordinary effect in the present machine is produced. It may be interesting to state, that this boiler occupies ½ less space than any boiler upon any other construction yet made, and the weight is reduced in the same proportion. The saving in fuel is more than ¼; and the combustion being perfect, no smoke is emitted; consequently, the stupendous chimney necessarily used for other boilers is dispensed with—a small tube only being applied, sufficiently high to prevent the heated air (no hotter than the water in the boiler) from the contact with the engineer—(this description alike applies to all boilers on Braithwaite and Ericsson's patent principle). In the arrangement of the machine, the lateral portion of the boiler, containing the flue or hot-air tube, is under the cylinders; the steam chamber, with the feeding-box, forming a prominent feature. In the boot of the driving seat is the blowing apparatus, or bellows, for supplying the requisite quantity of air necessary for combustion, and to impel the flame and hot air through the small flue—too small to allow of what is commonly called atmospheric draught. This machine has also the necessary valves, gauges, &c. for safety and the due performance of the engine; and these constitute the general outline of the mechanical arrangement.

Now to its operation: the first and most important point is the quantity of water it will

deliver, which is about 9,000 gallons (about 40 tons) per hour, to an elevation of upwards of 90 feet, through an adjutage of ¾ of an inch in diameter. Through larger adjutages the quantity of water would be increased. With two ¾ jets, the quantity of water thrown to about 50 or 60 feet in height would be about 50 tons per hour; but the height very much depends upon the state of the wind. On a calm day, a distance of 140 feet has been accomplished with a jet of ¾ of an inch diameter. The next point, which is also very material, is the time required to generate (or what is usually called to get up) the steam, and get the machine into action. This has been proved in our presence. From the moment of igniting the fuel, the water in the boiler being quite cold, until the steam has acquired its full force requires eighteen minutes; and at the various fires to which the machine has been allowed to go, the steam has been ready before the necessary arrangements of screwing on the hoses, suction, and procuring the water, were completed. Nor have we the slightest hesitation in stating, that, with the assistance of competent firemen, who are constantly in the habit of making these arrangements, an engine upon this principle can be got to work as soon, or sooner, than the largest and most powerful fire-engine belonging to any of the insurance-offices. The mode of proceeding is simply, on an alarm of fire being given, the engineer ignites the fuel, and, in conjunction with his assistant, works the bellows. By the time the horses are harnessed and arrive, the fuel is thoroughly ignited. So soon as the horses are put to, a connexion is made from the wheels to the bellows, formed by an eccentric, by which means the bellows are worked by the horses during the progress of the engine to the scene of action. Should there not be a sufficient pressure of steam,* the engineer works the bellows while the regular firemen attach the hoses, &c. Another great feature and conveniency is the very trifling attendance the engine requires; namely only one man and his assistant; thus preventing the bustle and noise occasioned by the number of hands necessary to the ordinary engines, and which cannot be kept in operation without great assistance from the mob; thereby affording many opportunities for bad characters to plunder. The many advantages on this head must be evident. The expense of fuel is so trifling, it is scarcely worth mentioning, not being more than sixpence per hour. Having stated eighteen minutes as being sufficient to generate the steam (the water in the boiler being quite cold at commencing), it might be observed, were the machine in the hands of an insurance-office, the water, at a trivial expense, might always be kept hot, which would enable them to put the steam fire-extinguishing engine into complete operation in less than ten minutes!

The probable cost of one of these machines (such as that exhibited to us) is stated to be about £800, which was the offer to the different fire-offices, accompanied with a proposal to find a competent person to work the same, to be considered the servant of the office, and to keep the engine in repair for a term of ten or twenty years.

LITERARY AND LEARNED.

ROYAL SOCIETY.

At a late sitting a paper was read, entitled "experiments to determine the quantity of

* Which might be the case if the fire happened in an adjacent street.

light reflected by plane metallic specula under different angles of incidence, with a description of the photometer made use of," by Richard Potter, jun. esq.; communicated by the president.

Sir Isaac Newton has stated, that metallic specula, in common with all other substances, reflect light most copiously when incident most obliquely. Some experiments made by the author, with specula of his own construction, having raised doubts in his mind as to the accuracy of the prevailing opinion on this subject, which accords with that of Newton and of Bouguer, he instituted a more exact inquiry into the proportions of incident and reflected light from specula at various angles of incidence. He used for this purpose a photometer resembling that of Bouguer, and consisting of an upright screen, with a square aperture, across which a piece of thin tissue-paper was extended, destined to receive on one compartment the reflected light from one lamp, and on another compartment the direct light from another lamp, employed as a standard of comparison. By adjusting the respective distances of the lamps, the lights on the paper were rendered sensibly equal in point of intensity,—the equality being judged of by the eye viewing them from the other side. The measurements were taken alternately, first one of the direct, and then one of the reflected, lights, until a sufficient number of uniform results were obtained. The author, after taking every precaution that occurred to him for ensuring accuracy, invariably found that the proportion of light reflected by metallic surfaces, instead of increasing, diminished in pretty regular gradation, as the angle of incidence was augmented. Thus, in the first experiment, when the angle of incidence was 20°, the proportion of the reflected to the incident light was 69·45 to 100, at 40° it was 66·79, and at 60° it was reduced to 64·91. Some irregularities occurred in the series of results deduced from different sets of experiments, arising partly from the variability of the light given out by the lamps, and partly from the difficulty of preserving the metallic surface in the highest state of lustre which it has when newly polished. The author combats the opinion, that the quantities of light which metals are capable of reflecting when polished are in the ratio of their densities; and finds, that in those metals which were the subjects of his experiments, the quantities of light absorbed, or lost by reflection, at incidences nearly perpendicular, are almost exactly in the ratio of their specific heats.

GERMAN LECTURES.

DR. MÜHLENFELS' third lecture (18th ult.), we were glad to see so much better attended than the previous ones. This lecture contained a review of the first Silesian school, so called from the writers being almost all Silesians, and who, from their more general cultivation and truer perception of poetry, certainly take the foremost place among Germany's early poets. The exertions of Opitz entitle him to honourable mention: he ranks highest, however, as a cultivator of the didactic style; for his muse was prompted more by the dictates of the head than stimulated by the impulses of genuine inspiration. He was called by his contemporaries the "creator of German poetry," an honourable though hyperbolic distinction. Paul Flemming follows next,—a true and sweet poet, highly endowed with depth of feeling and energy of style: he accompanied the celebrated Persian embassy of 1635, to which the re-

nowned Olearius was secretary. He died at the early age of thirty-one, and much of this short life was spent in wandering. His erotic songs are sweet and fervid, and devout piety pervades his spiritual lays. Andrew Gryphius, a poetical Rembrandt according to the lecturer, next appears. His mind was of the most melancholy hue, embuing all it touched with its own dark shades: he was remarkable for the versatility of his culture; for, when professor at Leyden, he lectured on anatomy, logic, metaphysics, geography, history, mathematics, and astronomy, and also on physiognomy and chiromancy. His dramas are powerful; but he had the misfortune to select a Dutchman for his model; and he is unhappy in the application of the Alexandrine to the dialogue. He was followed by Logan, the great epigrammatist, who, in addition to the subtilty of his genius, was a good scholar, and had an extensive knowledge of mankind. No German author, except Lessing and Göthe, has, as Dr. Mühlensfels remarked, said so much in so few words: he previously styled him the Solomon of the century, and recommends the perusal of his works to all students of German literature: Lessing fully estimated his keen and acute genius, which is evinced by the selection he published of his works. A troop of inferior rhymers are next in order, but we cannot particularise them in this notice.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Fifth Notice.]

ANTE-ROOM.

No. 426. *Abbot Boniface*. G. S. Newton, A.—The very beau idéal of monastic luxury and ease; painted from Sir Walter Scott's description in "the Monastery;" and one of the most successfully embodied characters we ever saw on canvass. The colouring, effect, and execution, are all also admirable.

No. 375. *The Guerilla's Return to his Family, being the concluding subject of a series of four pictures, representing scenes characteristic of the events of the late war in Spain*. D. Wilkie, R.A.—Perhaps a little less sketchy, but in other respects in the same spirit, and in the same style of treatment, as the other subjects of the series, exhibited last year, and noticed at the time in the *Literary Gazette*. The guerilla is returning, like the knight of La Mancha, broken down both in body and in mind, and with difficulty to be recognised as the hardy enterprising patriot who sallied forth under the auspices and with the benedictions of his pastor. Whether the gaily coloured trappings with which his mule is decorated are a part of the *manubia* we know not, but they much enrich the general tone of the picture.

No. 428. *A Peasant Girl returning from Gloaming*. R. Westall, R.A.—Of Mr. Westall's success when he departs from his usual conventional style, and, availing himself of a model, represents some striking natural effect, this beautiful picture (like that of *A Girl at a Cottage-door*, exhibited last year) furnishes a sweet example.

No. 355. *Weber's Overture to Oberon*. F. Howard.—Does this young and ingenious artist not find the difficulties of the art sufficiently great when he undertakes that which is capable of being accomplished, that he must attempt that which is impossible—to paint sounds? Failing entirely, as was inevitable, in the object which he had in view, there is, nevertheless, much fine imagination in his work.

No. 352. *Jacques moralising on the wounded*

Stag. E. D. Leahy.—Recollecting some very able performances by Mr. Leahy, we have no doubt that his present production possesses great merit; but as to seeing it, for the purpose of forming a judgment, the hangers have rendered that impossible.

No. 370. *Hermione, Mamilius, and Ladies*. H. P. Bone.—The scene is happily conceived, the action of the little narrator is perfectly natural, and the expression of his partial auditors is very judiciously varied; the dignified character of Hermione being well contrasted with that of her delighted and laughing attendants.

No. 374. *The Water-Mill*. F. R. Lee.—There is a picturesque character in mills, and, generally speaking, in the objects by which they are surrounded, which has always rendered them favourite subjects with painters. In this able composition, the rustic dwelling, the splashing stream, and the umbrageous foliage, combine to produce a very pleasing effect. Being somewhat low in tone, however, the picture requires a stronger light than that which falls upon it in its present situation.

No. 376. *The Terrace of the Capuchin's Convent at Sorrento: the Island of Procida in the distance—Sunset*. W. Havell.—A very beautiful sunlit scene. Mr. Havell has in the present exhibition several other clever works, of which a sparkling and brilliant effect is the distinguishing feature.

No. 357. *Joseph presenting his Father and Brethren to Pharaoh*. J. M. Leigh.—Although we are not quite so highly pleased with Mr. Leigh's present performance as we were with his *Joseph sold by his Brethren*, in the last exhibition at the British Gallery, it, nevertheless, appears to us to possess great merit. We are happy to understand, that this young artist is about to proceed to Italy, to prosecute his studies as an historical painter. We wish him health and prosperity; and we have no doubt that on his return he will be an ornament to the British school.

No. 382. *Pallas directing Ulysses to the Palace of Alcinoüs, King of Phæacia*. P. H. Rogers.—As a classical composition, this picture evinces much talent; nor is it less estimable for its clear and brilliant execution.

No. 406. *A Country Lane*. Rev. T. J. Judkin, H.—There is a truth in this amateur performance, which would do credit to professional artists of extensive practice. It ought to have been placed where it might have been better seen.

No. 419. *Zagarolo, an ancient Town in the Campagna, Rome and Mount Soracte in the distance*. W. Linton.—We have the same complaint to make of the situation of this picture, which is of a very elevated character, and possesses great merit.

No. 424. *The Hon. Company's Ship the Duke of Sussex, off the Lizard*. W. Daniell, R.A.—This must be plain-sailing to Mr. Daniell, to whom hurricanes and wrecks have been so familiar; but straight forward as his subject appears, we cannot but admire the skilful execution throughout, particularly the perfect relief given to the well-filled sails by so slight an opposition of strength and colour.

No. 432. *Fish-Market on the Sands—the Sun rising through a vapour*. J. M. W. Turner, R.A.—Here is mist without mystification—vapour without vapouring. Who but must admire the perfect knowledge and fine feeling here displayed—the light and skilful handling the texture (if we may use the expression) of the whole work? It is provoking to see a man of Mr. Turner's genius, capable of producing

pictures like this, yet condescending to send forth such abortions as those we have noticed in some of our former Numbers.

No. 445. *The Glen of the Rocks*. J. A. O'Connor.—Why what a stock of these *hard-ware* materials must Mr. O'Connor have laid in! That he has availed himself of them with great power and effect we have always borne testimony. But would it not be advantageous in every point of view if he were to vary his subjects a little more?

(To be continued.)

NEW PUBLICATIONS.

The Right Hon. Lady Charlotte Bury. Drawn and engraved by T. Wright, from a Painting by Sir T. Lawrence. Colnagh.

THE sixty-sixth of the Series of Portraits of the Female Nobility published in *La Belle Assemblée*.—It is to be regretted, that the graceful whole-length from which this head has been engraved is not in the collection of Sir Thomas Lawrence's works now at the British Gallery. We well remember its being one of the most attractive pictures in the exhibition at Somerset House, about a quarter of a century ago.

Six Views of the most important Towns and Mining Districts upon the Table Land of Mexico. Drawn by Mrs. H. G. Ward, and engraved by Mr. Pye. Colburn.

THE style in which these picturesque views are executed is light and pleasing, and highly creditable to Mrs. Ward's talents and taste. They consist of careful and well-marked, but at the same time flowing, outlines, with just enough of shadow to render the various scenes perfectly distinct and intelligible. Each view is accompanied by a brief statistical description.

National Portrait Gallery of Illustrious and Eminent Personages of the Nineteenth Century. With Memoirs by William Jerdan, Esq. No. XIV. Fisher, Son, and Co.

THE field, the senate, and the cathedral, have contributed to the production of the present number, which contains portraits and memoirs of Major-General Sir Thomas Munro, the Earl of Verulam, and the Rt. Rev. Henry Bathurst, Lord Bishop of Norwich. Of these, the long and active career of the lamented Munro has, of course, furnished the most copious and diversified materials for the biographer. He was, indeed, in every point of view, an extraordinary and admirable man. Justly and finely was it said of him by Mr. Canning, that "Europe never produced a more accomplished statesman, nor India, so fertile in heroes, a more skilful soldier."

Studies from Nature. Drawn from nature and on stone by G. Barnard. Dickenson.

MR. BARNARD is a pupil of Mr. Harding's, and does his instructor great credit. These are, we believe, the first works that he has himself put forth; and they are executed with a facility and lightness of hand, and shew a taste and feeling, which convince us that he has the power of making himself an excellent artist.

Illustrations to the Waverley Novels: Guy Mannering.

WE have before us a set of proofs of the New Illustrations to the Waverley Novels, six in number; being those intended for the embellishment of "Guy Mannering." They are engraved by Messrs. Heath, Bacon, and Portbury, from designs by Messrs. Stothard, Wright, Richter, and Corbould; and are all highly characteristic, and finely finished. We are

particularly charmed with the plate of Julia Mannering lured to the balcony by the sound of her lover's flageolet on the lake; and that of the last scene in the cavern, in which Meg Merrilies is daring the pistol of Dirk Hatteraick: the former engraved by Mr. Heath, from a drawing by Mr. Wright; the latter engraved by Mr. Bacon, from a drawing by Mr. Richter. The grace and delicacy of the one, and the spirit and energy of the other, form an admirable contrast.

Landscape Illustrations of the Waverley Novels. From Drawings by Barrett, Brockedon, W. Daniell, R.A., Dewint, C. Fielding, J. D. Harding, S. Prout, R. R. Reinagle, R.A., Robson, T. Stothard, R.A., Stanfield, and W. Westall, A.R.A.; engraved by William and Edward Finden. Parts I. and II. Tilt.

THERE is no greater proof of the descriptive powers of an author than is afforded by his pages becoming the fruitful subjects of the pencil of the artist; and to no writer of the present day has that homage been more abundantly paid than to Sir Walter Scott. "From the numerous Historical Illustrations," observes the publisher of the work under our notice, "which have appeared to embellish the novels of the author of 'Waverley,' it is matter of surprise that no attempt has been yet made to convey an idea of the scenery, which, beautiful in itself, has been rendered doubly interesting by the eloquent descriptions of the distinguished author. To supply this deficiency is the object of the present undertaking." The work is expected to be completed in twenty parts, of which the two already published, each containing four plates, give a very favourable earnest. The views of "Arran," from a drawing by W. Daniell, R.A.; "Wandermere," from a drawing by W. Westall, A.R.A.; "Skiddaw and Keswick," from a drawing by P. Dewint; "Dunottar Castle," from a drawing by W. Daniell, R.A.; and "Loch-Ard," from a drawing by G. F. Robson, are especially beautiful.

Original Portrait of Robert Burns. Edinburgh, Constable and Co.: London, Moon, Boys, and Co.

THIS portrait was painted in 1786 by an artist of the name of Peter Taylor, and has now been sweetly engraved in the line manner by Mr. John Horsburgh. It represents the Poet in one of the rather grotesque-looking hats which were worn at that period, and which throws a shadow over the upper half of his countenance. This part is almost unanimously recognised to bear the most striking resemblance to his features; the lower division being more full, and the chin less defined than in the original, as recollected by many persons still living, with whom we have spoken on the subject. Altogether, it is a very interesting production; and when we consider the enthusiastic regard in which the memory of Burns is held by every Scotsman who possesses a single grain of feeling, or a sense of the charms of poetry, we may safely predict that it will be a universal favourite, not only in that country, but throughout many distant quarters of the world.

MINIATURE MEDAL OF THE KING.

AN admirable little golden gem has just appeared under this title, at a period when it has so many claims to popular sympathy. It is executed by Mr. Merlen, engraver at the Mint; and though only about half the diameter of a seven-shilling piece, (or $\frac{1}{4}$ ths of an inch,)

represents on one side the head of his Majesty, uniting beauty and force, and on the other the royal crown, surrounded by rays and laurels. The motto on the obverse is, "Georgius IV. D.G. Britanniarum Rex, F.D.;" and on the reverse, "God save our beloved King!" Small and minute as this tiny medal is, it gives us one of the best likenesses of the King we have ever seen on any coin; and, in every respect, it appears to be a lasting credit to the art, as well as a peculiarly pleasing tribute at this moment to the Monarch, about whose health such intense anxiety prevails.

BRITISH GALLERY.

ON Monday evening we had the great pleasure of visiting the Lawrence collection, lighted up for the reception of the directors and their friends. The sight was very brilliant, and many of the pictures were improved in tone and effect. On Saturday (such is the rage for this Exhibition) above 114. was received at the door for admissions.

PICTURE BY PROCCACINI.

WE have just seen a magnificent crucifixion by Giulio Cesare Proccacini, in the possession of Mr. Young, of Craig's Court, which that gentleman politely exhibits to amateurs and patrons of the fine arts. For splendour of colouring, anatomical correctness, and grand effect, it is a masterpiece, and far, far beyond any thing of which we had an idea from the name of the painter. We strongly recommend a visit to it to our friends.

ORIGINAL POETRY.

FIRST AND LAST.—NO. VI.

The First and Last Gift.

THEY stood together within her hall,
'Twas the sweet hour of the evening's fall;
The sunset glow through the window came,
And the crimson curtains threw back the flame,
And lent a flush to the floor of stone
Like that which love o'er her cheek had thrown.
Her delicate hand lay on his arm,
And 'twas strong to bind as a wizard's charm;
For how could he shake off that hand
That clasped him like a lily band,
As fair, as tender, and as weak?
There was a tear on her burning cheek,
And in his hand was a wreathed dark curl,
Clasped by a loop of gold and pearl—
It was her first gift, an amulet
That should forbid him to forget:
A glance on such a tress might bring
The heart from its wildest wandering.

They parted—he for Palestine,
To fight for the cause of the holy shrine,
Yet half regretting to leave behind
That heart where the holiest thoughts were
shrin'd;
And many a time, in the battle strife,
When the infidel seemed to have bought his life,
He would look on her gift, her first dear gift,
And up again his arm would lift,
New nerved for her, and never failed
To conquer, howsoever assailed
To shield this fair young orphan flower,
Till he should return to bid it rest,
More dearly cherished, in his breast.

Alas! alas! a dark change came
Over the fate of that gentle dame;
Wherefore she withered none could tell,
Yet in the quiet convent cell
The blight had reached her; her sweet cheek
grew
Hectic and clear in its healthless hue;

Her dark eye took a wandering light,
Like a vagrant meteor of the night,
Glancing on all, settling on none;
Her hand grew thin, and her rose lip wan,
And, worse than all, the rich dark hair
Was blanched by the snow of some untold care.
He came again—he came all warm
With love and hope—but her fading form
Was withered too much for even the dew
Of love its freshness to renew.
She gave him a curl of her hair—'twas gray—
Her last fond gift—she died that day.
He fell not then; but he went again
To seek his death on a battle-plain;
And when they found him midst the slain,
Her first bright gift was closely preat,
Twin'd with her last, to his bleeding breast.

Worton Lodge, Isleworth.

M. A. BROWNE.

MUSIC.

CONCERTS.

MR. PENN'S spacious drawing-rooms were filled with genteel company, and the concert (for the benefit of a distressed literary gentleman) appeared to give general satisfaction. Lablache, Donzelli, Lalande, Blasis, Curioni, and M. Ponchard, were all much applauded. Signor Pistrucci's *improvisation*, and Huerta's fantasia on the guitar, were also much admired. M. Lucet shewed great powers of declamation; and M. Gallais's *Lecture sur la nouvelle Græcque* was well received.

Last week, Mrs. Anderson's concert was performed exactly in the order printed. The room was crowded before the commencement, and several persons were seated in the orchestra. Mrs. Anderson was loudly cheered in all three of her performances, particularly in the duet with Mr. Hummel. Madame Stockhausen was encored in the new Swiss air, and Madame Malibran in the Spanish. Mori was also much applauded: indeed, the whole gave universal satisfaction.

On Thursday Mr. Sedlatzek's morning concert brought a crowded audience to the Great Concert Room; and the whole performances went off with great *éclat*. Moscheles, Lablache,* and Sedlatzek himself, were most liberally rewarded by plaudits for their exertions; and Madame Stockhausen was again honoured with an *encore*.

MICHAEL BOAI: THE CHIN-CHOPPER!!

IT is a fact: we have verified our paragraph of last week, and yesterday, at the Egyptian Hall, absolutely heard the Chin-Chopper play or chop several airs. A more novel and curious exhibition we certainly never saw. Mr. Boai, his wife a pretty guitarist, and a violin accompaniment, performed several pieces of music, the remarkable portion of which consisted in his producing sounds, resembling castanets more than any thing else, by apparently striking his chin with the two fore-fingers of both hands doubled. We presume the clucking to proceed from some action of the tongue and palate; but the extraordinary correctness of the tunes, the force and variety of the runs, and the exact semblance of the whole being produced by strokes upon the chin, rendered the performance extremely entertaining. A number of musical individuals, Miss Stephens, Sinclair, Sir G. Smart, &c., were present, and seemed greatly amused with the efforts of this *Chin-ese*

* This striking performer is, we are glad to see, about to give an English audience a taste of his wonderful qualities, by appearing at Drury Lane, for Jones's benefit, on Monday. Apropos, his famous duet with Santini, in *Il Matrimonio Segreto*, is taken from the scene between Lord Ogley and Stedding, in the *Clandestine Marriage*.

emperor; who will no doubt attract multitudes of the Bull family to hear his extraordinary music. Like the barber in the ballad, he will surely find that

"His crops never failed, for they grew on the chin."

VARIETIES.

Hydrophobia.—It is stated by Dr. Despine, a French physician, that he has observed, in his investigations on dogs, cats, pigs, and man, that the pathological character of hydrophobia is the same; and that it consists in a lesion of the *medulla oblongata*, or commencement of the spinal marrow, and that the extent of this lesion varies in proportion to the duration of the symptoms, between the incipient blush of inflammation and the destruction of the *medulla oblongata*, or its reduction to a state in which it becomes as diffuent as cream.

Asparagus.—In our report of the Horticultural meeting, this day fortnight, we noticed a specimen of *huge asparagus* which was shewn, and at the same time expressed a doubt of its quality, as nothing was said of its flavour. The grower of this "grass," Mr. Grayson, of Mortlake, has since taken the trouble to submit a sample to our examination; and we are in justice bound to state, that it is equally superior in taste as in size to the best Battersea plants we ever ate. Indeed, it is a great improvement of the vegetable, and has already been adopted by royalty and nobility to a considerable extent. Mr. Grayson, himself, cultivates about thirty acres of it: his first discovery was accidental; but having observed the specimen, he had the good sense to pursue the advantage, and has thus succeeded in producing heads about four times the ordinary size. We believe he has been similarly fortunate with raspberries.

On the 31st Jan. the ship *Java* arrived at Bavaria from Japan, having on board Dr. P. F. Von Siebold, the naturalist, who was imprisoned last year by the Japanese government, for having possessed himself of a map of that country.

Spanish Missionaries.—In California the Spanish monks frequently send dragoons into the mountains to hunt the Indians, for the purpose of making Christian slaves of them. The soldier so employed is furnished with a *lasso*; and if he succeeds in stealing upon a troop of Indians before they can perceive him, he throws his noose over the head of one of them, claps spurs to his horse, and gallops with his prey towards the station of the missionaries, which he sometimes reaches with nothing but a corpse. If, however, the victim arrive alive, he is immediately baptised, and becomes the property of the mission; and should he attempt to escape, he is instantly pursued by a horseman with the terrible noose, and expiates his criminal act by cruel punishments and chains. The lives of these unhappy creatures pass in the monotonous repetition of prayers which they do not understand, and the performance of severe tasks imposed upon them by the monks.

—*Kotzebue's New Voyage round the World.*
Silk.—The cultivation of the mulberry-tree, and the production of silk, are increasing in North America with great rapidity. A very interesting volume of essays on the subject has recently been published at Philadelphia.

Athens.—M. Emper, a member of several learned societies in Germany, has published a treatise on the exact period at which Athens was taken by Sylla, and fixes it in March of the eighty-sixth year before Christ.

Prussia.—In the year 1828, Prussia exported

103,933 quintals of iron, while three years before she exported only 65,000. The fabrication of silk is increasing rapidly, especially at Berlin; and in all respects Prussia is making great efforts to rival the principal states of Europe in industry and commerce. She has established marine schools, and schools of industry; a company has been formed for the purpose of undertaking expeditions to America; the navigation of the Oder, the Saale, and other rivers has been improved; more than twenty-one millions of Prussian crowns have been expended since 1817 in the formation of high roads; a society has been established at Berlin to encourage the cultivation of manufactures and the useful arts by the distribution of prizes; and Prussia has concluded treaties of commerce with several foreign powers.

Switzerland.—The population of Switzerland amounts to nearly 2,000,000. The federal contingent consists of 33,758 men; the reserve doubles that force; the armed landwehr consists of 140,000; total 207,516 men; not comprehending the federal staff. In case of necessity, the country can recall the 18,136 men at present in the service of several foreign powers.

Iodic Acid.—At a recent sitting of the Paris Academy of Sciences, a paper was read, on the combination of iodic acid with vegetable alkalies. It appeared from this paper, 1st, that morphine exercises a decomposing action upon iodic acid; and 2dly, that *quinina, chincoriune* and *trychinni*, thoroughly saturate iodic acid, producing well-crystallised saline combinations. The author of this paper imagines that these new compounds may be of great utility in medicine; but this opinion was not general among the members; for it is thought that the iodic acid, so far from diminishing the violent action of the vegetable alkalies with which it might be blended, would render them more powerful, as the salts, being more soluble than the bases, would be more speedily destructive of life. M. Pougerville has been elected member of the Academy, in the place of M. de Lally, deceased.

Egypt.—The last journals received from Egypt contain various complaints, addressed to the Pasha by the Provincial Assemblies, against their governors. The Pasha seems to be sincerely endeavouring to inform himself with respect to the wants of the country, and its present situation. It appears that a similar measure will, ere long, be adopted in Turkey. The sultan, it is said, is also about to assemble deputies from all the provinces of the empire.

Bavaria.—The King of Bavaria has given orders for the establishment of a Catholic Society, and a Protestant Society, for the dissemination of good moral and religious books among the people.

Naples.—In the year 1829 the number of births at Naples was 14,493; of which 7451 were boys, and 7042 girls. The number of deaths was 13,211; of which 7104 were men, and 6107 women. Only 8939 died in their own houses, the rest died in hospitals; 95 were between 90 and 100 years of age, and 16 were above 100; of which 16, one was a man, and 15 were women. On the 1st of January, 1830, the population was 358,555; being an increase of nearly 1350 on the preceding year.

Cheap Flour.—An account appears in the *Moniteur*, of the discovery, by chance, of the means of making flour from wheat straw. This being chopped small and passed through the mill-stones, yields a flour, coarse in appearance, but agreeable to the taste, and also nutritious. Made into a wash for pigs, or mixed with oats for horses, it is said to be an excel-

lent article of food. The bread which is made from it is superior to much of the common bread eaten by the lower orders on the Continent.

The Press in France.—It is stated in a Paris paper, that within the last three months seventeen new political weekly papers have been started in different provinces, and that fourteen of them advocate liberal principles.

Rapid Communication.—The *Journal du Havre* states that two vessels had arrived at New York from Belfast, one in 17 and the other in 15 days.

M. Caillié.—In a letter published in the *Moniteur* of the 4th of May, M. Caillié professes to refute all the doubts expressed in the *Quarterly Review* with respect to the authenticity and correctness of his journey to Timbuctoo. The French traveller takes the objections one by one, replies to them by long details upon the disputed points, and thus concludes his letter:—"A rival nation entertains a little jealousy at the unexpected success of an undertaking, in the prosecution of which it has expended considerable sums, and lost so many distinguished men. Poor, without support, without science, I have accomplished this task. I am come to tell Europe what Timbuctoo is. Truth constitutes the whole merit of my narrative."

Anatomy.—At the sitting of the Paris Academy of Sciences on the 24th inst. a figure was exhibited, by means of which every part of the human frame may be examined anatomically, without the necessity of having the real subject. This figure is intended to be sent to Egypt, for the medical school founded by the pasha at Cairo, for the use of the younger students.

Saxony.—The University of Leipsic has presented a petition to the King of Saxony, praying for the liberty of the press, in favour not only of the Protestant faith, but of all other dissenting opinions and beliefs.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXIII. June 5.]

Charles Lamb, the author of *Essays* by Elia, is preparing for publication a volume of *Poems*, under the title of *Album Verses*.—The *Cook's Dictionary*, by Richard Dolby, of the *Thatched House Tavern*.—*Six new Lectures on Painting*, by the late Henry Fuseli.

LIST OF NEW BOOKS.

Lardner's *Cyclopaedia*, Vol. VII. *Cities and Towns*, Vol. I. fcp. 6s. bds.—D'Israeli's *Charles I.* Vols. III. and IV. 8vo. 11. 8s. bds.—*The English at Home*, 3 vols. post 8vo. 11. 11s. 6d. bds.—*Family Classical Library*, Vol. VI. 18mo. 4s. 6d. bds.—*Hughes's Divines*, Vol. I. 8vo. 7s. 6d. bds.—*Bayley's Four Years in the West Indies*, 8vo. 11. 4s. bds.—*Wright's First Three Sections of Newton's Principia*, 8vo. 10s. 6d. bds.—*French and Skinner's Translation of the Psalms*, 8vo. 8s. bds.—*Adventures of Arion*, 12mo. 4s. bds.—*Life of Alexander Alexander*, 2 vols. post 12mo. 14s. bds.—*Thiersch's Greek Grammar*, by Professor Sandford, 8vo. 16s. bds.—*Anstey's New Bath Guide*, crown 8vo. 9s. 6d. bds.—*Findlater's Sermons*, 12mo. 4s. 6d. bds.—*Lewis's Career of Woman*, 12mo. 6s. bds.—*Family Cabinet Atlas*, Part II. 18mo. 2s. 6d.; coloured, 3s. 6d. sewed.

The lines of J. A. of New York, "inscribed to the affections," are not sufficiently poetical to be admitted.

ADVERTISEMENTS

Connected with Literature and the Arts.

NORTHERN SOCIETY for the ENCOURAGEMENT OF THE FINE ARTS. The Gallery is open every day, from Ten in the Morning until Seven in the Evening.

F. T. BILLAM, Hon. Secretary.
Admission, 1s.—Season Ticket, 3s.—Catalogues, 1s.
Gallery of the Northern Society, Leeds, May 25th, 1830.

TOURNAMENT OF the FIELD OF the CLOTH OF GOLD, 15, Oxford Street, near Charles Street, Soho Square.

Mr. WILMSHURST'S Magnificent Picture of the Tournament of the Field of Cloth of Gold, painted on Enamel, on the vast Surface of 432 superficial Feet; presenting the unparalleled appearance of a Painting of such extraordinary Dimensions on one Sheet of Glass, without the Frames or Joinings being visible. This splendid Work contains more than 100 Figures, including upwards of 60 Portraits, with the strictest Attention to Costume.

Admission, 1s.—Description, 6d.
Open from Ten till Dusk.
N.B. Designs and Estimates for every Description of Painted Windows.

MISS HARRIOT GOULDSMITH—The Public are respectfully informed, that the Paintings of the above Artist are now exhibited, at No. 53, Pall Mall, adjoining the British Gallery, previous to their disposal in Shops.

Particulars may be had on application at the Rooms.

CURIOUS BOOKS, &c.—To be Sold by Auction, by Messrs. SOUTHWATE, GRIMSTON, and WELLS, at their Rooms, 92, Fleet Street, on Monday, June 7, and Five following Days, at half-past twelve each Day, including a Selection from the Library of an Antiquary, comprising the best Works on English Antiquities, Customs, Amusements, &c.; curious Tracts on Catholic Miracles, Theatres and Theatricals, &c.; Broadside, Engravings, Drawings, generally relating to London; Pamphlets, Old Newspapers, Tickets, &c.; together with a capital Bookcase, Nest of Drawers, &c.

May be viewed and Catalogued had.

BEAUTIFUL WORKS OF ART, the Property of Mr. W. B. COOKE, of Soho Square.

Messrs. SOUTHWATE, GRIMSTON, and WELLS respectfully announce, that they have received Instructions to dispose of Mr. W. B. COOKE'S extensive Stock and valuable Collection of Engravings, well worthy the Attention of the Collector and Amateur; consisting of choice and brilliant Proofs before the Letters, of the following splendid Works:—Pamphlet, Gems of Art, Views in the South of France, and on the River Rhone, River Scenery by Turner and Girtin, Views in Saueux by J. M. W. Turner, R.A., Beauties of Claude, &c.

At the same time will be disposed of, the entire Remainders of the Stock, and a great number of Copper and Steel Plates of the above Works, together with their copyrights. The Collection comprises also a large Variety of framed and glazed Prints, &c. all in the finest condition.

Catalogues are preparing, and will be forwarded to those who will favour Messrs. Southgate and Co. 22, Fleet Street, with their Addresses.

GENERAL CEMETERY—A Public Meeting will be held at the Freemasons' Tavern, Great Queen Street, Lincoln's Inn Fields, on Wednesday, June 9th, at Twelve for One o'Clock.

LORD VISCOUNT MILTON in the Chair; To consider the best means of relieving the Metropolis from the Inconvenience arising from the present System of Interments of the Dead.
It is requested that all Communications may be made (post-paid) to Mr. G. B. Bowman, Solicitor, 18, Milk Street, Cheap-side; or to C. F. Cardan, Esq., 3, Inner Temple Lane.

THOMAS MOORE, Esq.—A Portrait of Thomas Moore, Esq. engraved in the Line Manner, by W. H. Watt, after a Picture by G. S. Newton. Price of Proofs before the letters, 2s. 6s.; Proofs after the letters, 1s. 6s.; Impressions, 1s. 1s.

Sold by Colnaghi, Son, and Co. 8, Pall Mall East; and by Messrs. Moon, Boys, and Graves.
"The first requisite in every portrait is resemblance. He has seldom seen one more striking than the present. It is Mr. Moore himself, in one of his most animated moments."—*Literary Gazette*.

The Subscribers to **TURNER'S ENGLAND AND WALES** are respectfully informed, that Part IX. is now ready for delivery. Part IX. of Views in England and Wales, from Drawings by J. M. W. Turner, Esq. R.A., with Descriptive and Historical Illustrations, by H. E. Lloyd, Esq.
Part I. IX. royal 4to. 14s. each; imperial 4to. proofs, 11. 1s.; imperial 4to. Proofs on India paper, 11. 11s. 6d.; colonizer folio, limited to Thirty Copies, 2s. 12s. 6d.

Part X. will appear on the 15th of June, forming Vol. I. of the Series.
London: Robert Jennings and William Chaplin, 69, Cheap-side.

Best's Historical Illustrations to the Waverley Novels.
Just published,

ILLUSTRATIONS TO GUY RAN- NERING, Six Subjects, price 5s. 6d. (adapted to the new edition of the Works), a very limited Number in 4to. India Proofs without the Letters, 11. 6s.; India Proofs, with Letters, 18s.; Proofs, 12s.; royal 8vo. 7s. 6d.

Mr. Charles Heath has the honour of announcing to the Subscribers to the new edition of Mr. Walter Scott's Novels, that he is preparing a Set of Plates, to be executed in the same style of excellence as his popular Annual, the "Keepsake," from the first Artists, and at a price that will add very little to each volume, which will make the edition most beautiful and complete.
Published by Robert Jennings and William Chaplin, 69, Cheap-side.

THE GENERAL PRAYER of the NATION, GOD SAVE OUR BELOVED KING!—A Miniature Medal of pure Gold, by J. B. Meylan, Engraver at the Royal Mint, containing, on one Side, His Majesty's Head, with the Motto, Georgius IV. D.G. Britanniarum Rex, F.D.; and on the Reverse, the Royal Crown, surrounded with Rays and Laurels, symbolical of His Majesty's glorious Reign, with the Device, expressive at the present moment of the general Prayer of the Nation,—God save our beloved King!
This little Medal, three-eighths of an inch in diameter, is remarkable for its exact resemblance to his Majesty; and also as a Curiosity, from the difficulty of executing so minute an object. It may be set in gems or rings.
To be had of Treuttel, Würtz, and Co. 80, Soho Square.
Price, in a Case, 1s.

Mrs. Ward's Views in Mexico—Just published,

By the Rev. HENRY CLISSOLD, M.A.

Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

ELEMENTS OF DESCRIPTIVE and PRACTICAL ANATOMY.

By JONES QUAIN, A.B. M.B. Sc. Lecturer on Anatomy.

Simpkin and Marshall.

"This is one of the best, if not the very best, elementary work on anatomy in the English language."—*Medical Gazette*, February 1829.

"An admirable system of practical anatomy; for the descriptions are not only clear and accurate, but minute and comprehensive to an extraordinary degree. We, indeed, say nothing more than it deserves, when we state that we know no work in the English language in which the anatomical descriptions are so fully and so accurately given, yet without superfluity or diffusiveness."—*Literary and Medical Journal*, Jan. 1829.

"Mr. Quain has freely availed himself of the writings of continental Authors, as well as of those of our own country, and enriched his work with their opinions and discoveries, making it an abridged summary of all the established facts and admitted principles of anatomical science. Though written designedly for the student, we can conscientiously recommend it to practitioners, as an excellent book of reference, and to pupils, as a most useful assistant in their operations in the dissecting-room, and a no less instructive companion in the studies of their chamber."—*Medical Chirurgical Review*, Jan. 1829.

POLITICAL ECONOMY.—In 8vo. price 12s. boards.

AN INQUIRY into the NATURAL GROUNDS of RIGHT to VENABLE PROPERTY, or WEALTH.

By SAMUEL READ.

Printed for the Author, and sold by Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

"Mr. Read, indeed, has evidently investigated the subject with a great deal of originality and independent thinking. Political economy has hitherto been confined to the production and distribution of wealth; whereas Mr. Read carries it a step farther, and begins by investigating the right to wealth or property. This innovation evidently gives a more definite and important object to the science, and causes it to assume a form altogether novel. We cannot at present spare room to detail any of Mr. Read's views or reasonings; but we say who are desirous of seeing the principles of Ricardo, Malthus, and Mill, dissected with no sparing hand, will find this book well worth perusing."—*Monthly Review*.

"It is impossible not to acknowledge that Mr. Read's work displays much good sense and powerful reasoning. It is quite evident that he has studied the subject with zeal and attention. He has a power of vigorous thinking and writing which is not very common."—*Edinburgh Literary Gazette*.

THEOLOGICAL ESSAYS, on Various Subjects; touching some important Doctrines as maintained by the Established Church, in accordance with the Sacred Scriptures, and in contrariety to certain Tenets of the present day.

By the Rev. H. BACON, LL.D.

Price 12s.

Sold by Messrs. Hatchard, Piccadilly.

This Work, as its title imports, opposed to such as professing to be Members of the Established Church, contravene or adulterate her essential and authorised doctrines. The author has fairly met them on their own ground, and foiled them at their own weapons; while he receives in the contest the effectual support of the Articles, the Homages, and the Liturgy, which are decidedly on his side. The work embraces the true orthodox principles of the Reformation, and evinces much research and application. The author appeals to the law and to the testimony of Divine Truth, and to the church in subordination thereto, as the standard and test of the soundness of the opinions which he advocates; and their attestations bear convincing evidence in favour of his statements. Great pains must have been employed in arranging and appropriating the numerous testimonies adduced in the appendix. But there is cause to regret that the author has not subjoined the names of the several authorities which he has cited; and the reason which he assigns for this omission is hardly satisfactory:—he says, that "conceiving the controversy to be with opinions, and not with men; he has therefore avoided mentioning the names of the writers he has noticed; and that he availed himself of their testimony, not with a view of confirming his own opinions, but rather to prove that the sentiments he entertains are not peculiar to the present day; and to prove, from a variety of authors, both ancient and modern, that they are neither novel nor obsolete." It might also be his aim to shun personally. Still, however, it would have been more satisfactory to have known the characters with whose views the author's coincide. Now would it have been less commendatory to have demonstrated, that men of exalted station, superior learning, and eminent piety, maintained precisely the same doctrines. And there is another desideratum—that the several Essays had been entitled with the particular subjects of discussion. Should the work be reprinted, perhaps these hints may be attended to.

To be Sold, by T. Cadell, Strand,

A SERIES of SIXTY MANUSCRIPT SERMONS, in Fifteen Parts.

By a DOCTOR of DIVINITY.

Part I. containing Four Sermons, may now be had, price Six Shillings.

Part II. will be ready for delivery on the first of July, and the succeeding ones monthly.

In 1 vol. post 8vo. price 8s. 6d. Illustrated with Plates

THE NEW BATH GUIDE; or, Memoirs

of the B—n—d Family.

By CHRISTOPHER ANSTEY.

A New Edition, with Notes, and a Life of the Author,

By JOHN BRITTON, F.S.A. &c.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

In 2 vols. 8vo. price 15s.

MEMOIRS of a GENTLEWOMAN of the OLD SCHOOL.

By a LADY.

"This work, we understand, is a real autobiography, and from the pen of Mrs. M'Carthy, a lady who was well distinguished in private life for her intelligence and accomplishments. It is written in a playful, easy, frolic kind of style. The first sentence is enough to recommend the book without another extract."

—*Courier*.
London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Books just published by Whittaker, Treacher, and Co.

Ave Maria Lane.

A FOURTH SERIES of OUR VILLAGE.

By MISS MITFORD.

In post 8vo. price 10s. 6d.

By the same Author,

Dramatic Scenes, post 8vo. 10s. 6d.

Julian, and Foscarei, Tragedies, 8s.

Our Village, new edition, 3 vols. 25s.

2. The Picture of India; exhibiting, in a brief, yet clear and graphic manner, the Geography, Topography, History, Natural History, Native Population, and Produce, of that most interesting Portion of the Earth; with a Particular Account of the European Settlements, with the present State of the British Territories, and an impartial View of the India Question, with reference to the impending Discussion on the Renewal of the Charter. In 2 small 8vo. vols. with many appropriate Illustrations, 16s. In handsome cloth boards.

3. Traits of Scottish Life; Pictures of Scenery and Character. In 2 vols. post 8vo. 77s.

4. The Picture of Australia. In post 8vo. with Map, 10s. 6d.

"The book before us contains the fullest and most satisfactory information concerning the natural history, meteorology, products, statistics, and every other desirable point of knowledge. It seems to be very impartial in its accounts, and contains such a multiplicity of curious, instructive, and interesting matters, that we know no geographical work of superior character."—*Genl's Magazine*.

5. The Cambrian Tourist; or, Post-Chaise Companion through Wales; containing cursory Sketches of the Welsh Territories, and a Description of the Manners, Customs, and Games of the Natives. In a neat pocket volume, the 6th edition, corrected and considerably enlarged, with View and Maps, 8s. bound.

6. A general Biographical Dictionary. By John Gorton. In 2 vols. 8vo. containing 2100 pages of close print, 30s. cloth.

"Mr. Gorton's publication is altogether one of great excellence, calculated to be useful to a large number of students, and deserving extensive popularity. We may also mention, that it is sufficiently large to contain every thing necessary, but not too extensive for the ordinary purposes of study, filling in this respect, an open space in the field of biographical literature."—*Athenaeum*.

7. Illustrations of Masonry. By the late William Preston, Esq. Post-Master of the Lodge of Antiquity. The 14th edition, 18mo. with important Additions, Alterations, and Improvements, by the Rev. G. Oliver. 8s.

6. The Life of Bishop Heber. By his Widow. 2 vols. 4to.

THE ARMENIANS. A Tale of Constantinople. By CHARLES MAC FARLANE, Esq. "Mr. Mac Farlane has in this work condensed, in a most agreeable manner, all the pictures, reflections, and anecdotes, of his oriental tour."—Standard. "It is not the ordinary reader alone who will ponder with delight over these pages: it will be read as a work of instruction as well as of amusement, the author having evidently not travelled to Constantinople to exaggerate the observations of others, but to make his own, and to describe only what he has himself seen and studied."—Edinburgh Review. Saunders and Otley, Conduit Street. Of whom may be had, by the same Author, Constantinople in 1829-30. 2d edition. "Of all the tourists who in the late demand has tempted to the press, Mr. Macfarlane will, beyond comparison, most reward the reader. The main purport of his book is specifically adapted to the very points on which the curiosity of the moment is most alive. For the condition of this part of the Eastern World, of its politics, temper, and prominent interests, just at present, are a greater piece of good fortune than it would have been reasonable to expect."—Edinburgh Review.

THE SUBSCRIBERS to Sir William Gell's Pompeii, Second Series, are respectfully informed that Part II. is now ready for delivery. POMPEIANA: the Topography, Edifices, and Remains of the Town. Henry Colburn and Richard Bentley, 8, New Burlington Street.

Elegantly printed in 2 vols. 8vo. with 30 fine Engravings on Wood, by Thompson and Williams, from Designs by Hayter and Corbould, and a Portrait of the Author, price 15s. neatly bound in cloth. THE JERUSALEM DELIVERED OF TORQUATO TASSO, translated into English Spenserian Verse, from the original Italian; with a Life of the Author, and—formed after long and laborious research amongst the Monkish Historians—a List of the principal Crusaders. By J. H. WIFFEN. M.R.S.L. and Cor. Mem. of the Society of Antiquaries of Normandy, &c. &c. Printed for Longman, Rees, Orme, Brown, and Green. A 2d edition, 12mo. 4s. 6d.

SERMONS, Doctrinal and Practical, for Plain People. By the Rev. G. R. GLEIG, M.A. M.R.S.L. &c. &c. John Murray, Albemarle Street.

GOOD'S STUDY OF MEDICINE. Third edition, containing all the Author's final Corrections and Improvements; together with much additional modern Information. By SAMUEL COOPER. Author of the "Dictionary of Practical Surgery." "The additions to the text and notes, by Mr. Cooper, are numerous and valuable, and the entire work merits our most unqualified recommendation. The surgeon whose library contains Good's Study of Medicine, and Cooper's Surgical Dictionary, need look around him for little more that is either scientific, useful, or practical, in any branch of his profession."—Lancet, No. 304. "There is no British work on the science and practice of medicine which can be compared to it in point of learning, extent of research, or profundity of copious, accurate, and important information."—London Medical and Surgical Journal. Printed for T. and G. Underwood, 23, Fleet Street.

SALMONIA; or, Days of Fly-fishing. In a Series of Conversations. By the late Sir HUMPHRY DAVY. John Murray, Albemarle Street. "One of the most delightful labours of leisure ever seen; not a few of the most beautiful phenomena of nature are here lucidly explained, yet the pages have none of the vishness of philosophical unbelief, or finite reasoning."—Biography of Sir H. Davy, Gentleman's Magazine, August. By the same Author, Conversations in Travel; or, the Last Days of a Philosopher. Foolscap 8vo. 6s.

A JOURNEY through NORWAY, LAPLAND, and PART of SWEDEN, with some Remarks on the Geology of the Country, its Climate and Scenery, the Ascents of some of its principal Mountains, the present political Relations of the two Countries, Statistical Tables, Meteorological Observations, &c. By the Rev. ROBERT EVEREST, M.M.F.G. Printed for T. and G. Underwood, 23, Fleet Street.

VOYAGE de la CORVETTE PASTRO. L'AN 1826, exécuté par ordre du Roi, pendant les Années 1826, 1827, 1828, et 1829, sous le Commandement de M. J. Dumont d'Urville, Capitaine de Vaisseau. Douze volumes, in-8vo. accompagnés d'Atlas, contenant près de 800 Planches ou Cartes, grand in-folio, gravées ou lithographées par les premiers Artistes de Paris. L'Ouvrage complet formera quatre-vingt-cinq livraisons. Prix de chaque Livraison, Texte et Planches, pour Londres, 10s. La 6ème Livraison de la Partie Historique vient de paraître. On souscrit à Londres à la Librairie Dramatique Française, chez Monsieur Delaporte, 37, Burlington Arcade, Piccadilly, où se trouvent les livraisons, le premier Volume de Texte, et les six premières Livraisons. Published by Longman, Rees, Orme, Brown, and Green.

A NUMISMATIC ATLAS OF GRECIAN HISTORY, compiling a Series of 360 Coins, arranged in the form of an Historical Chart; designed and executed on Stone, by BENJAMIN RICHARD GREEN, and accompanied by a Descriptive Letter-press. The Plates and Letter-press, 8s. 7s.; mounted in a Case, 8s. 17s.; on Roller, varnished, 2s. 8s.

A Lecture on the Study of Ancient Coins, as connected with History. Illustrated with Plates, price 2s. 6d. Mr. B. R. Green, 8, South Crescent, Bedford Square, undertakes the Classification of small Collections of Coins, and the arrangement of Cabinets. For Travellers on the Continent. In 2 vols. 8vo. with a most accurate Map and Plates, price 2s. 5s.

TRAVELS in the MOREA. By WILLIAM MARTIN LEAKE, F.R.S. Author of the "Topography of Athens," and "A Tour in Asia Minor." "It claims a higher rank than to be classed among mere books of travels. These volumes are indispensable to the student of ancient Greek history and Geography, as well as to the intelligent traveller in Greece; and they ought to be, and we have no doubt will be, found in every classical library."—Athenic Journal.

- 2. Information and Directions for Travellers on the Continent. By Mariana Starke. 6th edition, thoroughly revised, and with considerable Additions. Post 8vo. 12s.
3. The Diary of an Invalid in pursuit of Health; being the Journal of a Tour in Portugal, Italy, Switzerland, and France. By the late Henry Mathews, A.M. 3d edit. 2 vols. post 8vo. 15s.
4. Antiquities, Arts, and Literature of Italy, by Joseph Forsyth, Esq. 3d edition, 2 vols. post 8vo. 15s.
5. Rome in the Nineteenth Century, 4th edition, 8 vols. 8vo. 11. 11s. 6d.
6. Switzerland; or, a Journal of a Tour and Residence in that Country. Followed by a general View of its History, brought down to the present time. By S. Simond. 2d edition, 2 vols. 8vo. 2s.
7. An Autumn near the Rhine; or, Sketches of Courts, Society, and Scenery, in Germany near the Rhine. 2d edition, 8vo. 12s. John Murray, Albemarle Street.

Price 9s. In 1 vol. 8vo. boards. GREEK GRADUS; or, Greek, Latin, and English Prose Lexicon; containing the Interpretation, in Latin and English, of all Words occurring in the Greek Poets from the earliest period to the time of Ptolemy Philadelphus, and also the Quantities of each Syllable; thus combining the advantages of a Lexicon of the Greek Poets and a Greek Gradus. For Schools and Colleges. By the Rev. J. BRASSE, D.D. Late Fellow of Trin. Col. Cam. "The indefatigable application required in the compilation of the Greek Gradus is manifest; and we heartily recommend the work as supplying a desideratum in our school-books, and likely to be advantageously used to a very wide extent."—Literary Chronicle. Printed by A. J. Valpy, and sold by all Booksellers.

Dedicated, by permission, to the Right Hon. Sir Robert Peel, in 2 vols. 4to. with a Portrait by Finden, price 8l. 12s. boards. A HISTORY of the Right Hon. WILLIAM PITT, Earl of Chatham, containing his Speeches in Parliament, a considerable Portion of his Correspondence when Secretary of State, upon French, Spanish, and American Affairs, &c. &c. With an Account of the principal Friends and Persons connected with his Life, Sentiments, and Administrations. By the Rev. FRANCIS THACKERAY, M.A. Minister and Proprietor of Belgrave Chapel, Grosvenor Place, and Author of a "Defence of the Clergy of the Church of England," &c. &c. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

BOOKS IN THE PRESS. Fuselli's Lectures.—Second Series. In a few days, uniformly printed with his former Lectures. SIX NEW LECTURES on PAINTING, delivered at the Royal Academy, by the late HENRY FUSELI, P.P. Now first published from the original MSS. Henry Colburn and Richard Bentley, 8, New Burlington Street.

Of whom may be had, The First Series of Lectures, embellished with a Portrait and other Plates. Nearly ready, in 1 vol. neatly and closely printed in double columns, comprising upwards of 500 pages, price only 5s. 6d. bound.

THE COOK'S DICTIONARY and HOUSEKEEPER'S DIRECTORY. A New Family Manual of Cookery and Confectionary, on a Plan of ready Reference never hitherto attempted.

By RICHARD DOLBY, of the Thatched House Tavern, St. James's Street. This volume furnishes a complete culinary code, digested into the convenient and most available form of an alphabetical work, a form never hitherto adopted in any book on this universally interesting subject. Many very elegant gastronomic novelties are included in this collection, as well as the whole art and mystery of confectionary. Henry Colburn and Richard Bentley, 8, New Burlington Street.

On the 1st of July, embellished with Plates, &c. (to be continued monthly).

THE JUVENILE LIBRARY, No. I. containing the Lives of Remarkable Youth of both Sexes. This Work will be conducted by William Jerdan, Esq. the Editor of the "London Literary Gazette," with whom a number of Authors of high character are associated, to illustrate the various branches of polite literature and popular instruction, in which their respective talents have already obtained public weight and celebrity. Henry Colburn and Richard Bentley, 8, New Burlington Street.

On the 15th of June will be published, price 1s. MONSIEUR MALET !! a comic Poem, founded on the Drama of the same name, performed with such unbounded applause at the Adelphi Theatre.

Author of "Montmorency, Poems," &c. Annotator of the "Devil's Walk," &c. &c. Illustrated with Six beautiful Designs, by Robert Cruikshank, engraved by Bonner, Walker, &c. &c. &c. Portraits of Mr. Mathews (in Character) will face the Title-page. N.B. Country Booksellers are requested to send up their orders by the 9th of June, so as to secure early impressions of the work. London: Published for the Proprietor, by Thomas Griffiths, Wellington Street, Strand.

In a few days, price 1s. 6d. MR. MORGAN'S LETTER to the BISHOP of LONDON.

"Unlike your favourite Zacharys I live, Careless to whom the flattering price they give: If Sophocles succeed, or high rewards attend: To happy if those talents I engage, To aid the people, and their grief assuage."—Asseuff of Bristol. Proof of Bristol. Printed for Hurst, Chance, and Co.; and Effingham Wilson.

On Monday, June 14, will be published, price 1s. THE MARCH OF INTELLECT; a Comic Poem. By W. T. MONCRIEFF, Esq. Illustrated by numerous Engravings, after Designs by Robert Cruikshank. London: William Kidd, 6, Old Bond Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Moulton Street, Oxford Street: sold also by J. Chappell, 98, Royal Exchange, E. S. Marlborough, Ave. Maria Lane, Ludgate Hill; J. Black, Edinburgh; Smith and Son, 2, Roberton and Atkinson, Glasgow; and J. Cumming, Dublin.—Agent for America, O. Rich, 13, Red Lion Square, London. (J. MOYES, Teak's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

O. RICH, 12, RED LION SQUARE, LONDON, AGENT FOR THE UNITED STATES.

Orders received for Books and Periodicals, the cost of which, including Commission and Shipping Charges, will in no case exceed the regular London Prices.

No. 699.—AMERICAN EDITION.

SATURDAY, JUNE 12, 1830.

REVIEW OF NEW BOOKS.

The Life of Reginald Heber, D.D., Lord Bishop of Calcutta. By his Widow. With Selections from his Correspondence, unpublished Poems, and Private Papers; together with a Journal of his Tour in Norway, Sweden, Russia, and Germany; and a History of the Cossaks. 2 vols. 4to. London, 1830. J. Murray.

It will be allowed, that the office of a critic to a weekly periodical journal is no sinecure; seeing that this work of goodly quarto size, and containing 1320 pages, is only one of the items of our literary labours for this week's bill of fare. Being a capital as well as a respectably sized dish—being various in its component parts, as well as excellent as a whole—we place it at the head of the table, and trust that by our skill in carving and helping it, we shall be able to hit the tastes and please the palates of all our social company of readers.

Reginald Heber was born April 21st, 1783, and belonged to a family of antiquity and property in Yorkshire; his elder brother being the well-known biblio-collector, whose library is one of the most rare and curious in Europe. His early years, of which some puerile anecdotes are recorded by the affectionate feeling of his biographer, were marked by a delicacy of constitution, as well as by great amiability of disposition and readiness of talent. Benevolent, and of the sweetest temper, study seemed to be pointed out by nature for his course of life, and the refinement of his taste confirmed the bias. Even in childhood he shewed himself to be a proficient with the pencil; and the cultivation of his mind, by close reading, speedily made him equally proficient with the pen. His juvenile productions also afford promise of the elegant poet; though we do not find much in his letters before the age of seventeen or eighteen to indicate endowments superior to the generality of well-educated youths. At this period, namely 1800, he was entered of Brazenose, Oxford; and during his first year gained the University prize by his Latin *Carmen Seculare*—verses highly creditable to his skill in composition. In 1803 still greater honours awaited his exertions, and his English poem of Palestine bore off the prize from all competition. Having finished his University career with sterling reputation, he, accompanied by his friend Mr. Hodson, set out in 1805 on an extensive tour through the northern nations of Europe; the usual Continental tour being then shut from English adventure. Of this excursion the Journal is very pleasing; but as we have often since gone over the same ground with later travellers, we shall only recommend it, and its adjunct, the History of the Cossaks, to the public attention, of which both are so well deserving.

Soon after his return, in 1807, Mr. Heber took holy orders, and was appointed to the vicarage of Hodnet in Shropshire, a good living in the gift of his family. He also took his degree of M.A.; and entered with delightful

fervour into the duties of his sacred profession, relaxing from them only to pursue the congenial enjoyments of literature. He wrote many articles for the *Quarterly Review*; and, stopping only to say, that about this time (April 1809) he increased his felicity by marrying Miss Amelia Shipley, daughter of the late Dean and grand-daughter of the late Bishop of St. Asaph,—we shall make a selection of a few of the interesting literary notes and anecdotes which we find scattered throughout his correspondence. As these are mostly very short, and sufficiently explain themselves, we shall not occupy our space by introducing them with many observations of our own. The first is not very complimentary, it must be confessed, to a venerable and esteemed contemporary of ours, the *Gentleman's Magazine*. The editor relates the following:—

“He wrote what none but quick and clever men can write, very good nonsense: some of his *jeux d'esprit* appeared in the grave pages of a certain ancient magazine, in which he occasionally corresponded with himself, keeping himself down to the dulness of his model, to the infinite amusement of the few who were in the secret. One, I recollect, was a solemn inquiry, from Clericus Leicestrensis, into the remedy for the devastations of an insect, which peculiarly attacked spinach,—the evil, the remedy, and the insect, being all equally imaginary. Another was a sonnet on the death of Lieutenant Philip V * * who was killed at the storming of Fort Muzzaboo, on the St. Lawrence (fort and war equally unknown); the last line was

‘And Marathon shall yield to Muzzaboo.’

Mr. Gifford once assured me, that ‘Mr. Higgins,’ in the *Anti-Jacobin*, deceived one person, at least, who seriously complained of the democratical tendencies of ‘the Rovers’ the *jeu d'esprit* from which the last line is quoted, also deceived one other; for it happened, by an odd coincidence, that there had been missing for some years, a certain Philip V * * whose uncle was so much pleased with discovering the scene of his death, and with this glowing eulogium from a witness of his valour, that he sent five pounds to Mr. Sylvanus Urban, for the author of the sonnet. His powers of imitation and of humour were not confined to his own language. Once, as Reginald was on his way to Oxford, he stopped at the Hen and Chickens, at Birmingham, in order to take a coach thence on the following morning. There happened to be in the inn a ball, which not only assembled persons from a distance, who consequently had engaged all the beds, but kept up such a noise throughout the night, that he could scarcely sleep even in his sitting-room. He employed and amused himself, therefore, in writing, in Homeric verse, a description of his situation: annexing a translation after the manner of Clarke, and subjoining the usual proportion of notes, he sent it to Lord Ebrington, then at Brazenose College.”

We annex the beginning, merely as a specimen.

510. Ω πωπει η μεγα πινθος εδοισον ισταται ανδρι,
Οσπιε ινακτιμινον πατ ισπερχομιος ποτλιβρον,
Η κλισην Λυκιν, η Βιλστονα, η Βοιμιχαριον

ri *Woldehampton* audit. De Bilstone et Bremicham
etiam in celeberrimo Jacobo Thomsono *Bremicham* inven-
nimus:—

‘Thy thund’ring pavement, Bremicham.’

V. 514. Non hospitale (ut videtur) festum paravere Bro-
michamenses, exclusum enim fuisse advenum satis con-
stat. Ergo Bone: Deæ tunc agi sacra Clarkius existimat,
falso, istiummodi enim sacra omnes excludebantur viri, et
tamen v. 518. *αριστες ιουκωνιστι* invenimus. Ut obscenæ
essent istæ saltationes, monente Abrescio, viâ credendum
etsi nullis mamillis exilique veste saltasse puellas ab om-
nibus fere acceptimus. Talia vocant festa Galli ‘un Bal
paré,’ anglicè ‘an assembly.’”

“Many of his contemporaries (adds Mr. Heber, on the authority of a college friend,) will recollect other exercises of kindred talent: one was a mock heroic poem, the subject of which was laid in his own college; but though he wished to forget this *jeu d'esprit*, as it gave offence at the time, and though (how few can look back on their youth without wishing far more to be forgotten!) it may be said of it, as, indeed, of all his other performances in this line, that his wit was without malice, and his humour without a tinge of grossness. His sense of the ridiculous was certainly at this time very keen, but I never heard him say an unkind word; and it was in effusions of this sort that the spirits of his youth found vent. Even at this time, however, he was a very severe student, and made up in hard reading at night, the time given to society and lighter pursuits in the evening. At no period did his success, unparalleled then and since in a university career, tempt him to the assumption of any airs of superiority. He was uniformly humble, and gentle, and kind.”

The subjoined are from Mr. Heber's own letters. They let out a little of the mystery of reviewing and criticism.

Anno 1810. “The poem on Talavera is very spirited, and only unfortunate in being necessarily compared with Scott; the author is understood to be Mr. Croker. The best article, I think, in the Review is the critique on Parr, which, both in wit, taste, and good sense, is

superior to almost every thing of Jeffery's. I intend, as far as my necessary business will give me time, to contribute frequently to the *Quarterly Review*, as it serves to keep up my acquaintance with several interesting subjects, which I might else, perhaps, neglect.

"I agree with you in thinking that my Russian notes are made more conspicuous in the *Quarterly Review* of Clarke's Travels, than the proportion they bear to the rest of the work would lead one to expect. You will not wonder, however, that he himself should be treated coolly, when I tell you that the reviewer is a staunch Muscovite, and an 'old courtier of the queen's,' during the most splendid days of Catherine. With the *Edinburgh Review*, as far as good words go, both he and I have reason to be satisfied. I do not, however, think that, even there, they have been sufficiently acquainted with their subject to appreciate justly his knowledge of antiquities, the liveliness of his sketches of manners, and his power of comparing one nation with another, which are, I think, his strong-holds. And they shew a little too plainly their constant wish to make every thing a handle for politics.

"How do you like the defence of Pitt in the last *Quarterly*? It is by the same person who reviewed Dr. Parr's Philopatus, and written still more powerfully. If I wished that Clarke had got more praise, you will easily believe that I was most thoroughly vexed and surprised at the rough way in which Dealtry is handled, and which I attributed, till I got your letter, to Dr. —, whom you seem to acquit. Gifford probably knew nothing of Dealtry; but he has been ere this informed as to his real character and attainments, which, though the past is irretrievable, will serve as a caution in future."

Anno 1811. "You have in your kind letter paid me two compliments which I very ill deserve; the first, in attributing to me the review of 'Kehama,' which is in truth by Scott; the other, in taking it for granted that I should answer your letter civilly. At least I have a better reason to plead for silence than the Cambridge man, who, on being asked in what pursuit he was then engaged, replied, 'That he was diligently employed in suffering his hair to grow.'"

Anno 1813. "I conclude you have rubbed up all your Russian to converse with the Cossak; had he been the sergeant who accompanied us to Ecatherinodar, I should have been delighted to renew the acquaintance. Gifford, the *Quarterly* reviewer, says all the world are Cossak-mad, and wants me to furnish him with a short article on the subject for the next number of the Review. I have not yet begun it, and know not whether I shall have time. I had previously offered a review of Sir W. Drummond's *Œdipus Judaicus*, a very wicked and foolish book, which its author has, in order to escape the reviewers, only circulated privately; on this account my offer was declined. D'Oyley, of Bennet College, has since answered him very well; and a third person, I know not who, has offered to review D'Oyley; so that I am able at present to attend pretty closely to my dictionary, and to the eastern languages and customs.

"Madame de Staël, to whom we were introduced the day after we left Tunbridge, said a good thing on the style of London parties, which she called 'une société aux coups de poing.' I told her R. G. —'s idea of the female slave-trade; but though she understood the mercantile part of the idea, I do not think

she was sufficiently acquainted with the arrangements of a slave-ship to feel the wit of the comparison, as to crowding, pressure, &c. We met her three times, and I had a good deal of conversation with her. She is so little different in appearance, manner, and general conversation, from many foreign women, that I could have fancied myself once or twice talking to la folle Gargarin. She is, however, better mannered, and more feminine and sensible than that worthy personage, and I think you would like her. She is not handsome; but certainly not ugly for her time of life.

"I have just met with a phenomenon which has considerably surprised me, in an epic poem on Gustavus Vasa, by an Eton boy of seventeen, named Walker. You will laugh at the idea, and so at first did I; but on carelessly looking it over to enable me to answer the questions of the lady who lent it me, I have found so much skill in the construction of his verse, and so many passages of lively and powerful description, as give promise of something very good indeed hereafter. Many parts will not shrink from a comparison with Pope's translation of the *Thebaid* at the same age. The story, as he has told it, is childish; and there is, as might be expected, a boyish ambition of introducing celestial machinery, such as angels and the Supreme Being, which are not happily introduced, and are weapons too ponderous for him to manage; but even this ambition, at his age, is no bad sign. I do not advise you to buy the book, but I do strenuously recommend your borrowing it, as it is really a curiosity. You, as an old Etonian, will probably be able to learn who the boy is, and whether he is thought clever in other respects."

Anno 1814. "From you I have, as you well know, no secrets: you may, therefore, be surprised that I had not already told you that the article on Madame de Staël, in the last *Quarterly*, was mine. In truth, had we met, you would have seen the MS. I desired Murray and Gifford, for obvious reasons, not to name the author; why they have attributed it to a 'young lawyer,' the father of concealment (for I will not use a harsher word) only knows.

"Lara, though it has several good lines, is a further proof of the melancholy fact, which is true of all sequels, from the continuation of the *Æneid* by one of the famous Italian poets of the middle ages, down to 'Polly, a sequel to the Beggar's Opera,' that 'more last words' may generally be spared without any great detriment to the world."

Anno 1816. "Murray has sent me a copy of a glorious poem by Milman on the Fall of Jerusalem, which he wishes me to review immediately. I have looked at some parts, and been delighted with it.

"I have been a little alarmed on receiving a parcel from Mr. Crawford of six quarto volumes of manuscript, each of them, 'so dick als dis sheese,' being the travels of Mr. Kinneir* through Asia Minor, respecting the merits of which I am to give an opinion, according to a rash promise which I made when I was with you. I was not then quite aware of the bulk of the undertaking, but must now persevere, though the journey may be as protracted as that of the ten thousand Greeks through the same route. How do you like the new 'Childe Harold?' I think the beginning tolerable, the end very fine indeed, the middle 'party per pale' (to use the he-

raldic term), very good and very prosaic and inharmonious. Bringing the mountains to bed of a young earthquake has been apparently suggested by the divine author of 'The Death of Hellebore.* I am not sure that a mouse would not have been the more eligible son and heir of the two. The Prisoner of Chillon is not yet arrived. I hear a very high character of a novel not yet published, but soon to be: 'The Tales of my Landlord, by Jedediah Cleishbotham.' The author I do not know."

Anno 1817. Sept. 24th. "I hope you have got through the autumn in better health than several of my friends. Poor Gifford has, I fear, been dismally ill. What is to become of the *Quarterly* when he goes?"

It is curious to see what he afterwards says of our late friend's able successor, Mr. Lockhart.

Nov. 1822. "Among the possible conductors of the *Quarterly Review*, a name has just occurred to me which I cannot help thinking very likely to answer: it is that of Lockhart, the son-in-law of Walter Scott, and the author of 'Peter's Letters,' which are written with abundant talent and caustic humour. He is, I understand, an advocate in Edinburgh, of great acknowledged talent, but little practice; and as his principles are decidedly Tory, he may be very useful at the present moment."

The celebrated and learned professor of Arabic:

Anno 1818. "The oriental scholar whose learning and modesty I praised is a Mr. Lee of Cambridge, who, from the situation of a journeyman carpenter in Shropshire, has, by his own application and talent, and in some small measure by the patronage of Archdeacon Corbet, raised himself to a great degree of deserved celebrity. His discovery relative to the Coptic is, that that language is radically the same with the Malayan."

Anno 1818. A good anecdote: "During the few days I was in Shropshire I heard a good deal of two New Zealand warriors, who have been brought over by a missionary society, and are staying with a clergyman in Shropshire. I was amused with one story which I was told of the youngest: some roasted rabbits were at table, which he supposed to be cats; on being asked whether New Zealanders eat cats, he answered, 'New Zealander eatte hog, him eatte dog, him eatte rat, him eatte creeper' (biting his own arm like a dog in search of a flea), 'him eatte warrior and old woman, but him no eatte puss!' Yet this eater of warriors and old women is said to be very docile to his spiritual pastors, and to have made no contemptible progress in whatever they have taught him."

Anno 1819. "Have you looked over Bristol's 'America?' I think it a curious book, full of useful information, and written, though with prejudices decidedly American, in a tone of more candour than you would guess if you only judge of it from the *Quarterly*, whose zeal against the Americans need not be expressed quite so strongly."

Anno 1820. The following relates to the excellent edition of Jeremy Taylor, published by Mr. Duncan, in XV. volumes, and one of the great delights of our library shelf, to which we always turn with a new gratification.

"I have, you are perhaps aware, engaged to write a life of Jeremy Taylor, for an edition of

* "A mock heroic poem, written by an acquaintance of Mr. Reginald Heber's, to prove that perfect nonsense, when clothed in high-sounding language and read with proper emphasis, may often be admired as eloquent poetry by superficial hearers. — *Ed.*"

* "Sir John Kinneir Macdonald, now (1830) British minister in Persia. — *Ed.*"

his works which Duncan and Co. are preparing. I do not dislike the sort of work, but labour under a lamentable want of materials. I am also engaged in finishing an article on Rennell's 'Illustration of the Anabasis.' It is a very heavy subject, and I am sorry I undertook it; but having advanced so far, it would be absurd to give in.

"I am sorry (he writes to Mr. Wilmot, now Horton) you have not had time to finish your article for the *Quarterly*. I have some weeks since sent them up one, and am now deeply engaged in another. The first was on a very fine poem of Milman's, *The Fall of Jerusalem*, which, as being almost exclusively laudatory, I found difficult, and did not well satisfy myself. My present theme is Southey's *Life of Wesley*,—a theme much more copious, and one which interests me a good deal. How I shall succeed in it, I do not yet know; it is no easy matter to give Wesley his due praise, at the same time that I am to distinguish all that was blameable in his conduct and doctrines; and it is a very difficult matter indeed to write on such a subject at all, without offending one or both of the two fiercest and foolishlest parties that ever divided a church—the high churchmen and the evangelicals."

To the same gentleman he makes the following sensible remarks on parliamentary speaking:

"I think you have laid more stress on the failure of your speech in seconding the motion of thanks than the case calls for. I read it as it was reported, and thought it read well both in point of language and matter, whatever may have been the expediency of introducing disputable questions into such a composition. But it is, I apprehend, no new thing in Israel for a man who speaks well on other occasions, to fail in that kind of laudatory oratory which your party, in this instance, assigned to you. Man is, by nature, rather a vituperative than a complimentary animal; the language of satire and censure has a far greater *copiam verborum* than that of praise; and this is so generally felt, that of all the speeches delivered in parliament, those for the motion and secondment of addresses are, I think, least read and least noticed by the public. On such a subject, even if you had spoken like an angel, few would have given you any great credit for it; and if you have, as you apprehend, done ill, such a single instance of failure will be effaced by the next good or even tolerable speech you make."

Anno 1821. "How do you like Lord Byron's *Faliero*? I am out of patience with it; it has all *Alfieri's* coldness and want of interest, without his strength and stateliness. I have just read a noble MS. play on the subject of the Sicilian Vespers, by a very pretty woman, an authoress in North Wales. If she can get it on the stage, I really think it will succeed." (Mrs. Hemans, to whom he also afterwards pays a well-deserved compliment.)

"I am pretty much out of the way of seeing new books. I believe you know my mind on the subject of *Faliero*; and of the Arctic voyage, all that can be said is, that Captain Parry has made certainly as large a book, and, perhaps, as amusing a one, for its size, as could be made on so barren a subject."

With this we shall close our cento of, we trust, amusing literary extracts, and proceed to select an example or two of the Bishop's poetical productions, and also an entire letter or two in evidence of his epistolary talent.

As we do not esteem his lyrics so highly as his verses of other kinds, we choose from the latter.

"The Spring Journey."

Oh green was the corn as I rode on my way,
And bright were the dew on the blossoms of May,
And dark was the sycamore's shade to behold,
And the oak's tender leaf of emerald and gold.
The thrush from his holly, the lark from his cloud,
Their chorus of rapture sung jovial and loud;
From the soft vernal sky to the soft grassy ground,
There was beauty above me, beneath, and around.
The mild southern breeze brought a shower from the hill,
And yet, though it left me all dripping and chill,
I felt a new pleasure, as onward I sped,
To gaze where the rainbow gleam'd broad over head.
Oh, such be life's journey, and such be our skill,
To lose in its blessings the sense of its ill!
Through sunshine and shower may our progress be even,
And our tears add a charm to the prospect of Heaven!

"The Outcast-bound Ship."

As borne along with favouring gale,
And streamers waving bright,
How gaily sweeps the glancing sail
O'er yonder sea of light!
With painted sides, the vessel glides
In seeming revelry,
And still we hear the sailor's cheer
Around the capstan tree.
Is sorrow there, where all is fair,
Where all is outward glory?
Go, fool, to yonder mariner
And he shall lesson thee.
Upon that deck walks tyrant sway,
Wild as his conquered wave,
And murmuring hate that must obey,
The captain and his slave!
And pinching care is lurking there,
And dark ambition's swell,
And some that part with bursting heart
From objects loved too well.
And many a grief with gazing fed
On yonder distant shore,
And many a tear in secret shed
For friends beheld no more;
Yet sails the ship with streamers drest
And shouts of seeming glee:
Oh, God! how loves the mortal breast
To hide its misery!"

This original poem we shall contrast with a lighter and playful effort.

"Sympathy."

A knight and a lady once met in a grove,
While each was in quest of a fugitive love;
A river ran mournfully murmuring by,
And they wept in its waters for sympathy.
'O never was knight such a sorrow that bore!
'O never was maid so deserted before!
'From life and its woes let us instantly fly,
And jump in together for company!
They searched for an eddy that suited the deed—
But here was a bramble, and there was a weed;
'How tiresome it is!' said the fair, with a sigh;
So they sat down to rest them in company.
They gazed on each other, the maid and the knight;
How fair was her form, and how goodly his height;
'One mournful embrace!' sobb'd the youth, 'ere we die!
So kissing and crying kept company.
'O had I but loved such an angel as you!
'O had but my swain been a quarter as true!
'To miss such perfection how blinded was I!
Sure now they were excellent company!
At length spoke the lass, 'twixt a smile and a tear—
'The weather is cold for a watery bier;
When summer returns we may easily die—
'Till then let us return in company."

There was, indeed, much of sportive good nature in this virtuous man and eminent Christian divine—witness the subjoined letters.

"Of his entrance into Benares, the seat of brahminical learning, and 'the most holy city of Hindoostan,' the Bishop gives the following characteristic description in a letter to the editor. 'I will endeavour to give you some idea of the concert, vocal and instrumental, which saluted us as we entered the town. —' *First beggar.* Agha sahib! judge sahib! burra sahib! yek puesa do! hum fuqeer hue! hum padre hue! hum booku se mur jata hue! (Great lord, great judge, give me some pice. I am a fakir—I am a priest—I am dying with hunger.)—*Bearers trotting under the tonjohn.* Ugh, ugh, ugh, ugh! — *Musicians.* Tingle tangle, tingle tangle, bray, bray, bray! — *Chuprassee, clearing the way with his sheathed sabre.* Chup! chup! jugih do judge sahib ke waste, lord padre sahib ke waste! baen! deina!

judlee! (Silence, give room for 'the lord judge, the lord priest; get out of the way, quick.) *Then very gently stroking and patting the broad back of a brahminy bull.* He! uchu admee! chulo, chulo! (Oh, good man, move, move.) — *Bull, scarcely moving.* Bu—u—uh! — *Second beggar, counting his beads, rolling his eyes, and moving his body backwards and forwards.* Ram, ram, ram, ram, kurte huen! — *Bearers, as before.* Ugh, ugh, ugh, ugh!"

We must reserve our other intended examples till next Saturday; and our remaining extracts must be miscellaneous and brief. At a commemoration at Oxford in 1820, we are beautifully told—

"He had the gratification of hearing *Palestine* performed as an oratorio in the same theatre, where, seventeen years before, he had recited it to an equally, or perhaps a more crowded audience than was then assembled. To the eye the scene was the same, but its component parts were widely different. Of the relations who were present at the former period, some had paid the debt of nature; the greater number of his contemporaries were scattered abroad in the pursuit of their respective professions; new faces occupied the arena. Yet there were those present who had witnessed and shared in the early triumphs of his genius, who now partook in the deep feeling with which the editor listened to lines which she could never read without emotion, now dressed in a garb which gave them additional beauties. Those seventeen years had passed over her husband's head, save with two or three bitter exceptions, in tranquillity and happiness. The few that he was thenceforth destined to live, bore, in many respects, a different character; but though not of tranquillity, they were far from being to him years of sorrow. A life so passed can never be productive of real unhappiness, however chequered by the common lot of mankind."

We have been obliged to avoid the discussion of the religious themes which are to be found in these volumes, and which will greatly recommend them to all serious readers, and especially to the friends of the Church of England; but they would have led us far too much into detail. They reflect a bright light on the character of their author; who was in 1815 elected Bampton lecturer; in 1817 made a prebendary of St. Asaph; in 1822, preacher at Lincoln's Inn; and in 1823 D.D., and Lord Bishop of Calcutta, as the successor of Middleton. This distinction was obtained by the influence of his friend Mr. C. Wynn, then at the head of the Board of Control; but it was not till after much irresolution, and a severe struggle, that a sense of sacred duty prevailed over him to accept of this appointment, which severed him from so many dear ties, and from such inviting temporal prospects in his native land. From his letters at this epoch we perceive that he was much excited by the occasion; and his enthusiasm breaks forth in a very natural manner, while the new views of life spread themselves open before him. On the 16th of June, 1823, accompanied by his family, he sailed for India, the enlarged sphere of his spiritual exertions; and every feature of the picture drawn of him, or gathered from himself thenceforward, impresses upon us the idea of as pure and good a man as ever breathed the breath of life.

Of his zeal in India the public is already informed; and his premature death it has deeply lamented. In him was lost a shining ornament and a most useful labourer in the Christian world.

"The following anecdote, strongly illustrative of eastern superstition and eastern tyranny, is related in the MS. of the Bishop's journal. Some circumstances induced the editor to omit its publication, the principal of which was, that, as the King of Oude was then living, and was in the habit of making his sides-de-camp translate English books into Hindoostanee for his information, she apprehended that the engineer, whose history it relates, might again fall under the power of the favourite. That fear having been removed by the king's death, and the immediate dismissal from power of Hukeem Mendee, the prime minister, she no longer hesitates to relate it. 'Many whimsical stories are current in Lucknow respecting the foibles and blindness of the poor king, and the rascality of his favourite. His fondness for mechanics has been already mentioned. In trying some experiments of this nature, he fell in with a Mussulman engineer of pleasing address and ready talent, as well as considerable, though unimproved, genius for such pursuits. The king took so much delight in conversing with this man, that the minister began to fear a rising competitor, as well knowing that the meanness of his own birth and functions had been no obstacle to his advancement. He therefore sent the engineer word, 'if he were wise, to leave Lucknow.' The poor man did so, removed to a place about ten miles down the river, and set up a shop there. The king, on inquiring after his humble friend, was told that he was dead of cholera; ordered a gratuity to be sent to his widow and children—and no more was said. During these last rains, however, the king sailed down the river in his brig of war, as far as the place where the new shop stood: he was struck with the different signs of neatness and ingenuity which he observed in passing—made his men draw in to shore—and, to his astonishment, saw the deceased engineer, who stood trembling, and with joined hands, to receive him. After a short explanation, he ordered him to come on board—returned in high anger to Lucknow—and calling the minister, asked him again if it were certain that such a man was dead. 'Undoubtedly' was the reply. 'I myself ascertained the fact, and conveyed your majesty's bounty to the widow and children.' 'Hurumzada!' said the king, bursting into a fury.—'look there, and never see my face more!' The vizier turned round and saw how matters were circumstanced. With a terrible glance, which the king could not see, but which spoke volumes to the poor engineer, he imposed silence on the latter; then, turning round again to his master, stopping his nose, and with many muttered exclamations of, 'God be merciful! Satan is strong! In the name of God, keep the devil from me!' he said—'I hope your majesty has not touched the horrible object?' 'Touch him!' said the king—'the sight of him is enough to convince me of your rascality.' 'Is-tufurullah!' said the favourite; 'and does not your majesty perceive the strong smell of a dead carcass!' The king still stormed; but his voice faltered, and curiosity and anxiety began to mingle with his indignation. 'It is certain, refuge of the world!' resumed the minister, 'that your majesty's late engineer, with whom be peace! is dead and buried; but your slave knoweth not who hath stolen his body from the grave, or what vampire it is who now inhabits it, to the terror of all good Mussulmans. Good were it that he were run through with a sword before your majesty's

face, if it were not unlucky to shed blood in the auspicious presence. I pray your majesty, dismiss us; I will see him conducted back to his grave; it may be that when that is opened he may enter it again peaceably.' The king, confused and agitated, knew not what to say or order. The attendants led the terrified mechanic out of the room; and the vizier, throwing him a purse, swore with a horrible oath, that 'if he did not put himself on the other side of the company's frontier before the next morning—if he ever trode the earth again, it should be as a vampire indeed.' This is, I think, no bad specimen of the manner in which an absolute sovereign may be persuaded out of his own senses."

As great deceptions are performed at courts nearer home: all are alike; and the independent mind must laugh to scorn the affected imbecility of the cunning tribe, who know that the appearance of talents would be a certain bar against rising in their line of life. The silk threads in Gulliver are the truths of sycophantic exhibition. The following anecdotes are more grateful to human nature.

"Almost the last business which Dr. Heber transacted before he left Shropshire, was settling a long standing account in which he had been charged as debtor to the amount of a hundred pounds; but it was believed by those who were best acquainted with the circumstances, that he was not bound either in law or probity to pay it. As he himself, however, did not feel certain on this point, he resolved to pay the mouey, observing to a friend who endeavoured to dissuade him, 'How can I reasonably hope for a blessing on my undertaking, or how can I commence so long a voyage with a quiet conscience, if I leave even the shadow of a committed act of injustice behind?' About the same time an unknown person sent him a small sum of money through the hands of a clergyman in Shrewsbury, confessing that he had defrauded him of it, and stating that he could not endure to see him leave England for such objects, without relieving his own conscience by making restitution."

But we must now conclude: having entered a cold bath at Trichinopoly, on the 3d of August, 1806, after a day's fatigue, his widow says:—

"He retired into his own room, and, according to his invariable custom, wrote on the back of the address on confirmation, 'Trichinopoly, April 3, 1826.' This was his last act; for immediately on taking off his clothes he went into a large cold bath, where he had bathed the two preceding mornings, but which was now the destined agent of his removal to Paradise! Half an hour after, his servant, alarmed at his long absence, entered the room and found him a lifeless corpse! Every means to restore animation, which human skill or friendship could suggest, were resorted to, but the vital spark was extinguished, and his blessed spirit had then entered on its career of immortality, and, perhaps, was at that moment looking down with fond pity on the exertions of those who would fain have recalled it to its earthly habitation, to endure again the trials and temptations of the world it had quitted. And, surely, if ever sudden death were desirable, it must be under such circumstances. With a heart full of love towards God and zeal for his service, and of that charity and good will towards mankind which are its certain accompaniments, having just officiated in his sacred office, listened with kindness to the wants of his poor brethren, and detailed some of his plans for their relief, he was called to receive

his reward. He had scarcely ceased from glorifying God in his mortal state, when he was summoned to join in that angelic chorus of praise and thanksgiving, whose voices fill heaven in honour of their Maker and Redeemer."

Perhaps there is a little of the tone of presumption in this statement; but when we reflect on every circumstance, we cannot in conscience blame it. We have only to add, that the Bishop had a practice of writing memoranda of short Latin prayers upon interesting occasions; and that there is much in these pages to demand the regards of the Church Missionary and Christian Instruction Societies, as well as of the whole reading world. With some things that might have been omitted, there is a vast proportion to amuse, to delight, to instruct, and to improve: and if the report be true (as we have reason to believe it is) that the preceding works of, and relative to, the Bishop of Calcutta have realised eleven thousand pounds to his surviving family, they may look forward to a very considerable accession through the wide circulation of these new volumes. A portrait of his Lordship; an engraving of his monument by Chantrey, (also published separately as a work of art); and a print of St. John's Church, Trichinopoly, adorn them.

The English at Home. By the Author of the "English in Italy," and the "English in France." 3 vols. 12mo. London, 1830. Colburn and Bentley.

We know few works that mark the change which has been gradually taking place in our literature more strongly than the one before us. What was just and true circulating library criticism some fifty years ago, has now no reference to its changed condition: talking of novels as the mere amusement of young gentlemen or elderly ladies, is living in an atmosphere of old prejudice, as much as he who still believes in the right divine of kings, or that laughter is the only sign of the human race that distinguishes the Frenchman from the monkey. Men of talent have in all ages taken for their thoughts, experience, theories, and feelings, that mode of expression which was most popular. In early times they threw their minds into orations, dramas, epics; in more modern ones, comedies, essays, satires, and pamphlets, embodied the spirit of the era; and what then was their province is now the province of the novel. Perhaps it has most especially filled up the vacant ground left by the drama. The drama requires a degree of faith, an openness to impression, a willingness to be led by the eyes, which are not to be found in a reading, thinking, analysing generation like our own. Now, if carried away by our impressions, the habit of self command inculcated from our earliest youth makes us prefer that they should do so in solitude: and, moreover, we like to mingle that degree of thought with our feelings which haste and witnesses alike prevent; and reflection, observation, and theory, the satire or the moral, find in the novel their most effective channel, because it falls in with the prevailing taste for reading,—and reading is a solitary and secluded method of either improvement or entertainment. The work we have just finished, for example, has thought enough in it for a horde of essays and political pamphlets, which a story develops by bringing into action. We may differ from many of the author's views, while we cannot but allow the talent with which they are taken; and the very act of differing causes us to think ourselves. *The English in France* was the first work which pointed out

the great change of the French character since the revolution; and Mr. Crowe's (the author, though some good judges have attributed these publications to Lord Normanby, whose style and manner are essentially different in every respect!) views of English society are equally fresh and original. There is much that is at variance with our own opinions; much that strikes us as the knowledge acquired by the man of observation rather than the man of experience—one who rather watches the progress of the game, than plays a part in it,—and hence is somewhat inclined to a theory of his own on probable results. Still, whether in denial or agreement, we cannot but do justice to forcible colouring, the penetrating and philosophic spirit, which gives to his pictures the reality of life. The first story, "Birth," is an animated drama, whose stage is London: the character of Lord Ratoath is genuine comedy, that of Fitzearne in darker and powerful relief, that of Willoughby one of a thousand, but whose very commonness is its greatest difficulty. We differ *in toto* from the spirit of the story: to represent want of high birth as such an insurmountable obstacle to success, is to check at once every effort of either genius or enterprise—a doctrine as dangerous as it is in great part untrue. Nevertheless, the difficulties, the distresses, and mortifications of the *parvenu*, are drawn with a most keen and vigorous hand. We will not analyse the story, thus forestalling its interest, and spoiling the pleasure of all its old-fashioned, and, we rather think, of many of its most modern readers also; and a single scene is scant justice to the author: we shall rather endeavour to give an idea of the spirit of these pages by selecting a few observations and reflections; only promising, that we thus illustrate rather the philosophy than the amusement:—will our readers content themselves with our assertion of the work's possessing also the latter quality?

"Lord Ratoath had kept his heart perseveringly empty and unoccupied by passion of any kind—and if any one would wish to learn how he effected this, he may be informed, that it was by frittering the said heart in whims."

"The chief requisite and secret for catching the tone of a people, or time, or class, is to know and feel what is common-place with them, what not."

"He forgot, or knew not, how essential a part of gentility was the science of killing game; how popular, how English, are sporting habits and knowledge; and how indispensable a requisite the being a passable shot is to success in any path of British ambition, the highest or the lowest, whether it be the sublime of politics, or the beautiful of dandyism. We know that when King William sought to regain the popularity which he had lost by his obstinate principles of toleration, his cabinet gravely advised him to visit Newmarket. Thus the love of a horse-race was considered a virtue capable of covering the crime or weakness of being a philanthropist. And to come down to the present day, know we not accomplished statesmen, high-born, sage, proof in talents and integrity, for ever repelled from influential station by want of popularity amongst their brother aristocrats; and this proceeding from no cause more deep than an aversion to game-laws, and a disdain to be the slayers of pheasants?"

"We must live for our age; and one may as well be ignorant of its language as of the topics which interest it. But his lordship was of the old school, when country gentlemen were country gentlemen, and when courtiers

formed a species quite separate and different from them; the one being animals in top-boots and round hats, the latter in buckles, embroidered waistcoats, powder, and 'Chesterfield manners. Alas! he knew not the amalgamation that has since taken place."

"Providence has admirably arranged, in placing the passion of love to await and seize us human beings on our exit from youth into manhood. It acts somewhat (if the comparison be not too fantastic) as a sanitary officer, who puts the voyager to quarantine on his reaching a new shore, and purifies him from any particle of pestilential atmosphere which might lurk about him. Love comes as a purifier of the heart from all the base and selfish maxims with which it may previously have been crammed."

"The best part of bad theories, whether of education or of aught else, is, that practice ameliorates them; the generous principles of our nature vindicate themselves, and penetrate, despite of being excluded or neglected."

"English conversation, as a French gentleman, subsequently the friend of Willoughby, was wont to observe, is like English land, circumscribed and intersected, hedged in and fenced out, studded with preserves so thickly, that the only perviable spot is the vulgar high road. To enumerate the topics forbidden to women, would be to frame a set of categories, from which nothing would be excluded except trifling and flirtation; and the track for even men to follow, is marked with few divergencies. Pride forbids this, false modesty that. It is considered pedantic, or an unfair monopoly of another's time, to talk of what we know best; and of what we know worst, though it is usual, it is scarcely advisable to dogmatise. At the present period of multiplied and voluminous knowledge, which defies all the power of study or capacity to grasp, the greater part of information we must glean from each other. Folks have come to perceive this, and they have really become as parsimonious of their ideas as of their money. Nought is uttered but with the hope of repayment, either in the same kind or in admiration."

"He has piqued you, then; *tant mieux*. I begin to have hopes that you are not insensible to Louisa's charms: for to feel, Harry, is the whole secret of wooing." "I have deeper cause than any idle jealousy to hate him." "Hate! fie! But resentment is better than mere apathy. Nothing great was ever achieved without some passion or other for its motive."

"Young ladies are hugely indocile in affairs of the heart, even when they happen to have no heart; for then the flutter of vanity or caprice supplies its throbs or beatings."

"I take the metaphor from an old and a valued friend, who used to counsel quaintly in exemplifying the advantages of unity of purpose. 'If you would raise an oak,' said he, 'you plant a single acorn; but you sow many seeds only for the grass-plat, or the flowery border, where beauty serves but to be trodden under foot.'

"Calumny is to some weak minds what bitters are to some weak stomachs—an absolute necessity. Depravity first craves for it, and what is nauseous and base in its nature becomes at last a pleasure to the perverted taste. Hence do we often see habits of talking ill-nature grafted upon the easy character of good-nature; and amiable persons, who would not harm a fly, dissect and poison a human character with excess of delight."

"Vanity is love's alloy. They are always mingled, even at the first; but as years ad-

vance, the coin of sentiment, like that of a kingdom, grows baser by degrees, and sinks profoundly in value, even while its expression or superscription remains the same."

"Human nature is made to be discontented, and Mrs. Oshaldistone was not long an exception. Good humour and good nature formed an excellent mixture; but it is not that of which we would form a god; and women like somewhat to worship."

"Your elderly gentleman is given to complain that there is a great deal too much love in our world of fiction; that it forms alone the connecting and continuous link in those works of the day that attempt to excite interest and command attention;—that we modern authors are a set of poor devils, who, but for love, could not live;—and the fact is not to be denied. Look at the ancients, say they, who were acquainted with other passions; they studied, and could develop a part of them. Love was with them, what it should be with mankind, a subordinate and temporary sentiment; they did not allow so puny a deity to occupy always, and for ever, the entire human heart. Excuses and refutations start up by the dozen. Choose one or two. The ancients were like children in one respect. The feeling to which they were most prone, to which they could be most easily and fully excited, was wonder. That unknown world, whence the spirits of men come, was near, was around them, far nearer than to us. For mankind seems to have rolled down a kind of Jacob's ladder, lengthening its distance and its descent from heaven at the revolution of each century. In early times, the wing of the voyaging angel fanned them, or his brightness dazzled them. Far off, the god which visited their dreams, and stirred in their consciences and aspirations, was fixed by them, and embodied in various shapes, and became startling reality to the children of the deifiers. Fable formed the true interest of an ancient narration, or reality that approached it in the gigantesque and the heroic. The gods and demigods still occupied the scenes. Humanity, as humanity, was not developed, and little interesting. To make a heroine attract sympathy, it was necessary to sacrifice her to the gods; to ennoble a hero, the audience should see him pursued and immolated by Fate. Now, however, we have rolled down to the foot of our Jacob's ladder, and that path of communication is removed. Angels no longer pass to and fro; heaven is far removed, and sight can reach to it but through the aid of a fixed gaze, and a strong religious telescope. In consequence, we have become the sole objects of wonder, of interest, and sympathy to one another. Instead of creating ideal deities, of all our fears and fancies, we have raised one half of the species to more than an equal rank, compared with the other. The sexes are mutual objects of a minor kind of idolatry, and we take all the interest in this new devotion that the ancients did in the worship of Pan, or the persecution of Fate. Love, then, it is seen, has replaced mythology: Love's rewards are, therefore, the sole store-house, whence can be sought or taken the machinery of the modern drama. We are confined to it; and we may answer the caviller against love as the furrier did the lady who complained of a want of a variety of furs, telling her, that Providence had made no new species of animal since last season. So it might be said, there has no patent been taken out for a new passion. Even the old ones are debased or worn out. Ambition is but dandyism; jealousy absurd, and out of mode; pride

is dwindled down to vanity. Love, love, in short, is the only stable and durable sentiment, except, perhaps, the small malignity of scandal that humanity can universally sympathise with."

"We have been somewhat amused by hearing this called a Fashionable Novel; and, as we have already noticed, a production of Lord Normanby, with all the comfortable string of common-places touching fashionable novels, lords writing, higher duties, the depreciation of literature, &c. &c. Nothing is more easy than this style of sweeping criticism; for its very blunders have all the respectability of old prejudices. But, in the first place, how any reader could mistake a work of the author of the *English in France*, for one by the author of *Yes and No*, is a piece of mental assimilation we do not quite understand. Lord Normanby's stories are always in action, his style animated, and full of persiflage,—the highest order of a French proverb, witty, keen, and actual, he is little given to digression, not at all to theory, still less to description, and with a most fresh and original vein of ridicule. The author of the *English at Home* is, on the contrary, a grave and reflective person; he deals in satire and ridicule; he analyses and dissects his characters, enters not only upon actions, but into their motives; often digresses, and loves theory and discussion; his truths are severe, and, we were going to have said, more profound, till we remembered that truth as often floats on the surface as in the depths of the stream: there is a bitterness about the one, in strong contrast to the veracity of the other; but certainly not one point of resemblance can we trace between the two. Secondly, we should like to know what is meant by a "fashionable novel?"—the term seems to us to have been strangely misapplied of late. We would use it as a term of reprobation to those works which depend on their personality; which, with no *matériel* of either observation or invention, purchase short-lived existence by feeding an idle appetite for scandal, or, at best, intrusion into private life. But let it be either a lively or just picture of society, let its pictures be at once actual and general,—actual in their truth, but general in not being susceptible of personal application,—in short, let it be the production of a man of talent; and it is worthy of that attention with which reader or critic should receive any new display of either humanity or society. But one would think, that the very fact of having had the best of educations, having many opportunities of seeing the world, and acquiring every variety of information,—in a word, being a gentleman, with all the advantages of his condition,—the mere fact of being a gentleman, was to render all these advantages nugatory. Confining talent and its means of exertion to the lower class, is as absurd as excluding them from it: the peer and the peasant, all history bears us out in the assertion, are equally gifted; but the extremes of opinion are always its fallacy. To which, let us add, criticism must always be unjust when it becomes personality.

The Undying One, and other Poems. By the Hon. Mrs. Norton. 8vo. pp. 272. London, 1830. Colburn and Bentley.

THERE is much in this volume of all that constitutes the fascination of poetry,—tones of tenderness whose echoes are in the heart,—sorrows over which we have all wept,—sad but sweet memories,—gentle appeals to the affections. Mrs. Norton has most truly touched what is the key-stone of a woman's lute,

sympathy; and it is because this sympathy is at once her *matériel* and reward, that we decidedly object to the subject of the principal poem. In the unnatural miseries of the Wandering Jew we can take no share; his griefs have no counterpart in our own. We believe a woman scarcely ever considers her hero in any other light than that of a lover; to this, all his qualities, good or bad, are subservient. Mrs. Norton is no exception to this rule; and her *Undying One* is only a narrative of the various love-adventures in which the Wandering Jew is engaged. Now, the first great feeling which excites our interest in a lover, viz. constancy, is enlisted against him; we cannot enter into his succession of attachments; and it revolts our romance to hear him entertain one mistress with an account of the wretchedness he has brought on another; and when the poem ends with his being "alone," we cannot but remember it is what he has been a dozen times already. We have taken this view of the work on its own ground; but we must add, that Isbal is a very poor representative of the awful and mysterious being whose existence was prolonged by a curse, and who must, of a terrible necessity, soon be far beyond all human affection or interest. But the poem abounds with passages of beauty, and many of its minor companions are very delightful; and we cite one of the pieces introduced into it, rather than a specimen of the narrative.

"None remember thee! thou whose heart

Pour'd love on all around;

Thy name no anguish can impart—

"Tis a forgotten sound—

Thine old companions pass me by

With a cold bright smile, and a vacant eye,

And none remember thee

Save me.

None remember thee! thou wert not

Beauteous as some things are;

No glory beam'd from thy lot,

My pale and quiet star—

Like a winter bud that too soon hath burst,

Thy cheek was fading from the first—

And none remember thee

Save me!

None remember thee! they could spy

Nought, when they gaz'd on thee,

But thy soul's deep love in thy quiet eye—

It had pass'd from their memory.

The gifts of genius were not thine

Proudly before the world to shine—

And none remember thee

Save me!

None remember thee! now thou'rt gone,

Or they could not choose but weep,

When they think of thee, my gentle one,

In thy long and lonely sleep.

Fain would I murmur thy name, and tell

How fondly together we used to dwell—

But none remember thee

Save me!"

Our next quotation, one of the smaller pieces, is an especial favourite, for originality, and the philosophy born of humour: we think it perfect in its way.

"Description of a Lost Friend.

Lost—near the 'Change in the city

(I saw there a girl that seem'd pretty),

"Joe Steel" a most cross-looking varlet,

With a visage as red as scarlet:

His nose and chin of a hue

Approaching nearly to blue:

With legs just the length and no more,

That will trot him from door to door;

And a most capacious paunch,

Fed with many a venison haunch.

Whoever will bring the same

To a tailor's of the name

Of Patterson, Watson, and Co.,

Shall receive a guinea or so.

And that all may understand,

And bring him safe to hand,

I subjoin as well as I can

The character of the man.

He's a grumpy sort of a fellow

Till liquor has made him mellow;

The sort of man who never

Wishes your guests to be clever

When he's asked to come and dine,

But only wants his wine.

He is but a stupid ass
Even when he's filled his glass,
And emptied it too, a dozen
Times, with some civil cousin.

I don't remember his saying

Aught that meant more than braying.

We met and we talked together

Of politics and the weather,

Of the taxes and the king,

And that silly sort of thing;

But he never would give an opinion

As to the sort of dominion

He should like to live under, if we

To think of such things were free.

He said it was all speculation,

More harm than good to the nation.

He wouldn't abuse the Commons,

Nor admire a pretty woman's

Ankle, that tripp'd though the park

When it wasn't light or dark.

Laugh at him—he turn'd sour;

Talk gravely—his brow would lower.

Sometimes he wished to grow fat

(I'm sure it was needless, that)

When he was over-fed.

Or out of spirits, he said.

Sometimes he wish'd to be thin

(When he pour'd fresh spirits in);

But he never, when we were alone,

Said any thing new of his own.

The merrier you were, the more

He grumbled, and fumed, and swore;

The happier you were, the less

He cared for your happiness.

We never agreed for a day,

Except when one was away.

And meeting too often of late,

It was my peculiar fate

To say something bitter and bad

About wives being not to be had

When a bachelor got a red nose,

And his short legs were shrunk in his hose—

It was witty; but cost me my friend:

For being too late to amend,

He took it amiss that I

The defects of his form should spy.

Perchance he had borne a few jeers

On the purple hue of his ears;

But to say that his legs were small!

Oh! his heart's blood was turn'd to gall.

So leaving his bottle, he swore

That he never would enter my door.

And I chuckled within my own heart,

Snapped my fingers, and saw him depart:

But, alas! now I've lost him, I find

There was no one so much to my mind.

I have now got a good-temper'd fellow;

But he tells me my face is grown yellow.

I have now got a new friend that is clever—

But he's brewing his good things for ever:

Another, who talks at a rate

That is frightful of church and of state,

And never will give in a jot,

Though you reason and bawl till you're hot:

Another—but why should I bring

Of friends, as of onions, a string

To my dinners, except that I feel

No number can make a Joe Steel!

When they're lively, I think it a bore;

When they're silent, I miss him the more.

I miss him when I would recall

Some fact of my youth to them all.

Not one of my friends seems to care

If I once had a head of black hair—

Not one of them seems to believe

How the pretty girls once used to grieve

When they mis'd me among them,—Oh! no,

I can have no friend equal to Joe!

I miss his round, red, surly face—

I miss his short legs from their place—

I miss him—! I'm growing quite sad;

I think my old v'rt is turn'd bad—

I miss him, and draw this conclusion

(Though others may think it delusion),

That, with all their worst faults at their back,

(And I'm sure poor Joe Steel had a pack)

Though they never can alter or mend,

There's no friend like a very old friend!"

We leave the following to speak for themselves, just pointing attention to their variety.

"Oh! life is like the summer rill, where weary daylight dies:

We long for morn to rise again, and blush along the skies.

For dull and dark that stream appears, whose waters, in

the day,

AR glad in conscious sunniness, went dancing on their

But when the glorious sun hath 'woke and looked upon

the earth.

And over hill and dale there float the sounds of human

We sigh to see day hath not brought its perfect light

to all.

For with the sunshine on those waves, the silent shadows

Oh! like that changeful summer rill, our years go gliding

by.

Now bright with joy, now dark with tears, before youth's

And thus we vainly pant for all the rich and golden glow,

Which young hope, like an early sun, upon its course can

throw.

Soon o'er our half-illumined hearts the stealing shadows come,
 And every thought that woke in light receives its share of gloom.
 And we weep while joys and sorrows both are fading from
 To find, wherever sunbeams fall, the shadow cometh too!"

"We have been friends together,
 In sunshine and in shade;
 Since first beneath the chestnut trees
 In infancy we played;
 But coldness dwells within thy heart,
 A cloud is on thy brow:
 We have been friends together—
 Shall a light word part us now?
 We have been gay together;
 We have laughed at little jests;
 For the fount of hope was gushing
 Warm and joyous in our breasts.
 But laughter now hath fled thy lip,
 And sullen glooms thy brow;
 We have been gay together—
 Shall a light word part us now?
 We have been sad together,
 We have wept with bitter tears,
 O'er the grass-grown graves, where slumbered
 The hopes of early years.
 The voices which are silent there
 Would bid thee clear thy brow;
 We have been sad together—
 Oh! what shall part us now?"

"Babel.

Know ye in ages past that tower
 By human hands built strong and high?
 Arch over arch, with magic power,
 Rose proudly each successive hour,
 To reach the happy sky.
 It rose, till human pride was crushed—
 Quick came the unexpected change;
 A moment every tone was hushed,
 And then again they freely gushed,
 But sounded wild and strange.
 Loud, quick, and clear, each voice was heard,
 Calling for lime, and stone, and wood,
 All uttered words—but not one word,
 More than the carol of a bird,
 Their fellows understood.
 Is there no Babel but that one,
 The storied tower of other days?
 Where, round the giant pile of stone,
 Pausing they stood—their labour done,
 To listen in amaze.
 Fair springs the tower of hope and fame,
 When all our life is fairly land,
 Till, scarcely knowing what to blame,
 Our fellows cease to feel the same—
 We cease to understand.
 Then, when they coldly smile to hear
 The burning dreams of earlier days,
 The rapid fall from hope to fear,
 When eyes whose every glance was dear,
 Seem changing as they gaze—
 Then, when we feel 'twere vain to speak
 Of fervent hopes, aspirings high,
 Of thoughts for which all words are weak,
 Of wild far dreams, wherein we seek
 Knowledge of earth and sky—
 Of communings with nature's God,
 When impulse deep the soul hath moved;
 Of tears which sink within the sod,
 Where, mingling with the valley cloud,
 Lies something we have loved—
 Then cometh ours:—and better theirs—
 Of stranger tongues together brought,
 Than that in which we all have shares,
 A Babel in a world of cares—
 Of feeling and of thought!"

"The Arab's Farewell to his Horse.

My beautiful! my beautiful! that standest meekly by
 With thy proudly arched and glossy neck, and dark and
 fiery eye; (speak—
 Fret not to roam the desert now, with all thy winged
 I may not mount on thee again—thou'rt sold, my Arab
 steed! [wind—
 Fret not with that impatient hoof—snuff not the breezy
 The further that thou fliest now, so far am I behind:
 The stranger hath thy bridle rein—thy master hath his
 gold—
 Fleet-limbed and beautiful! farewell! thou'rt sold, my
 steed—thou'rt sold!
 Farewell! these free untired limbs full many a mile must
 roam,
 To reach the chill and wintry sky which clouds the
 stranger's home;
 Some other hand, less fond, must now thy corn and bed
 prepare;
 The silky mane I braided once, must be another's care!
 The morning sun shall dawn again, but never more with
 thee [wont to be:
 Shall I gallop through the desert paths, where we were
 Evening shall darken on the earth; and o'er the sandy
 plain [again,
 Some other steed, with slower step, shall bear me home

Yes, thou must go! the wild free breeze, the brilliant
 sun and sky, (must fly.
 Thy master's home—from all of these, my exiled one
 Thy proud dark eye will grow less proud, thy step be-
 come less fleet, [to meet.
 And vainly shalt thou arch thy neck, thy master's hand
 Only in sleep shall I behold that dark eye, glancing bright,
 Only in sleep shall hear again that step so firm and light:
 And when I raise my dreaming arm to check or cheer thy
 speed,
 Then must I starting, wake to feel—thou'rt sold, my
 Arab steed!
 Ah! rudely then, unseen by me, some cruel hand may
 chide, [ing side:
 Till foam-wreaths lie, like crested waves, along thy pant-
 And the rich blood that is in thee swells, in thy indig-
 nant pain, [started vein.
 Fill careless eyes, which rest on thee, may count each
 Will thy ill-use thee? If I thought—but no, it cannot
 be—
 Thou art so swift, yet easy coursed; so gentle, yet so free.
 And yet, if haply when thou'rt gone, my lonely heart
 should yearn—
 Can the hand which casts thee from it now command thee
 to return?

Return!—alas! my Arab steed! what shall thy master do,
 When thou, who wert his all of joy, hast vanished from
 his view?
 When the dim distance cheats mine eye, and through the
 gath'ring tears
 Thy bright form, for a moment, like the false mirage
 appears.
 Slow and unmounted will I roam, with weary foot alone,
 Where with fleet step, and joyous bound, thou oft hast
 borne me on;
 And, sitting down by that green well, I'll pause and sadly
 think,
 'It was here he bowed his glossy neck, when last I saw
 him drink!
 When last I saw thee drink!—away! the fevered dream
 is o'er! [more!
 I could not live a day, and know, that we should meet no
 They tempted me, my beautiful! for hunger's power is
 strong. [long.
 They tempted me, my beautiful! but I have loved too
 Who said that I had given thee up? Who said that thou
 wert sold? [their gold?
 'Tis false—'tis false, my Arab steed! I fling them back
 Thus, thus, I leap upon thy back, and scour the distant
 plains; [pains!
 Away! who overtakes us now, shall claim thee for his

We must say, we think Mrs. Norton's genius
 essentially lyrical—sweet, variable, and most
 musical snatches of song; and one to whose
 voice we attend with present pleasure and
 future hope. Yet we cannot but observe, that
 a false desire of originality sometimes betrays
 the fair author into similes, the propriety or
 beauty of which we are unable to recognise;
 for instance,—

"My heart is like a withered nut."

Now, the grace of a comparison is in its associa-
 tion; and the association here is at once lu-
 dicrous and offensive. Besides, a nut is hollow
 or maggoty, not withered; and though we have
 heard of hollow hearts and maggoty people, we
 never before heard of maggoty hearts! But
 this is ungallant criticism; and we must as-
 surage it by adding, that this volume is fully
 calculated to sustain the fair writer's former
 popularity.

Illustrations of the Anglo-French Coinage, &c.
 4to. Hearne.

In our No. 695 we briefly alluded to the ap-
 pearance of this interesting and important
 numismaticological work; to which, though
 still but partially and imperfectly, we must in
 justice again beg to call the attention of the
 public. Referring to the general eulogy in
 our No. alluded to, we shall now advert to a
 few of the points which have more particularly
 attracted our notice in the course of these
 pages; and at the very outset we are disposed
 to question the author's assertion that the old
 blind King of Bohemia was slaughtered by
 the Black Prince at the battle of Cressy. It
 is true that several French writers impute
 this bloody deed to the English hero; but we
 are not inclined to receive their dubious testi-
 mony, and especially since no contemporary
 vouchers for the fact, which could scarcely have

passed without comment had it actually hap-
 pened. That the King of Bohemia fell by an
 unknown hand, is the common story delivered
 down to us; and we are unwilling to sully
 the laurels of a prince whose whole character
 was so opposite to savage cruelty, by crediting
 this Gallic rumour.

The author's notices of the *Guainois* coin-
 age are curious; the name sounding so like the
 future *guinea*; and being a striking etymolog-
 ical corruption from the Roman provincia
Aquitania, unde Guyana, Guienne, (p. 6).

At page 10, the author, describing a gold
 hardi of the Black Prince, alludes to the fillet
 of roses about his head as the distinctive dia-
 dem of a sovereign duke; this fillet, however,
 appears in many illuminations of the 14th
 century on the heads of noblemen, certainly
 not sovereign dukes, though they might enjoy
 sovereign powers of another kind. This coin
 does not appear to be accurately engraved,
 for it does not altogether agree with the de-
 scription. No cuisse can be seen; and, in our
 judgment, the prince is not in armour (as in
 specimen 6), but in a civil dress of state.

P. 15. In the notice of a gold pavilion, or
 royal, the writer speaks of the awkward posi-
 tion of the four ostrich feathers, two on each
 side of the hero; but the more remarkable
 feature of the coin is, that there are the un-
 usual number of four. On a coin of Edward
 III. (p. 28) the garter of the order is supposed
 to be visible: this is well worth the attention
 of antiquaries. P. 35, a rare gold hardi of
 Richard II.; the king is represented (says the
 author) in his state tabard or midleg, with a
 rich border at the neck, &c.: we think this a
 mistake, though Fosbrooke's Encyclopædia is
 quoted in support of it. There seems to us to
 be no tabard, but a shirt or gown, with a bor-
 der common from the time of the Anglo-
 Saxons, and not a peculiar fancy of Richard's.
 A similar remark applies to the variety of the
 coin (p. 35), which has neither ruff nor tabard,
 as supposed.

Having now noted the few immaterial points
 which we consider questionable in this valu-
 able performance, to prove, as it were, that our
 profession is nothing if not critical, we turn
 with pleasure to a brief mention of some of
 the great merits of this volume. It is a vast
 accession to our numismatic knowledge, and
 connected with an epoch and country equally
 glorious to English history. Indeed, we deem
 it a perfect treasure of its kind, and extremely
 honourable to individual enterprise; first, in
 making so extraordinary a collection; and sec-
 ondly, in affording so beautiful an account
 of it to the public. The expense of the latter,
 as well as the patience, zeal, and industry, of
 the former, entitle the party to our warmest
 praise. Of this, some idea may be formed
 when we state that ninety-eight remarkable
 or unique coins, in the possession of the
 author, are here finely engraved by Finden;
 that the types in the gold series are possessed
 of the utmost interest, amounting to forty-six,
 while the total in the British Museum, and
 the King's cabinet and mint at Paris, is only
 twenty-nine, viz. nineteen in the Museum,
 five in the cabinet, and five at the mint.

At page 152, the author has a curious argu-
 ment to prove that two half groats with effigies
 of the Black Prince were satirical, and struck
 after the mint towns had been taken by the
 French; and it must be owned that it is diffi-
 cult to assign the imbecile appearances on these

• At least, forty now published for the first time
 † Except one or two.

coins to any imperfection of art. The following also is no new as to deserve quotation.

"The gold florin was first coined in the celebrated city of Florence, according to Villani, A. D. 1252. The excellence of the gold and weight made it speedily current all over Europe; and the type, at least with different modifications of its value, was adopted, I believe, by all the principal powers, besides archbishops, bishops, and abbots, as well as by all the different grades of princes, from the duke to the simple baron, possessing the right to strike money. Tobieson Duby, in his *Monnoyes des Prélats et Barons de France*, gives portraits of twenty-one gold florins, struck in that kingdom alone, exclusive of those that issued from the royal mints, before Charles the Fifth prohibited the type as '*infra dignitatem*,' it having been borrowed from the Florentines. In Germany this celebrated coin was still more extensively spread, and, as was to be expected, the imitations in Italy were even more numerous. On the obverse, and on almost all the reverses, the imitators followed exactly the type of the original, described page 1, Plate I., No. 1. The weight of the florin was about 54 Troy or 67 grains of the marc of Paris; that of the double from 106 to 108, and the half in proportion. The half florin, especially of Aragon, is not very rare; of the double, although of much less frequent occurrence, some specimens are still preserved in royal cabinets. These weights, as far as can be judged from those, seem to have been strictly adhered to, and correspond exactly with the only individual of Edward III.'s English florin coinage that is known to have descended to our days. Snelling says it was then (1763) in possession of Mr. Hannot, of Woodford Bridge, and is now, I suppose, in the British Museum: he calls it a *quarter* florin, which name it still retains, by mistake no doubt, for its weight and fineness are exactly those of the *half* florin of every other country in Europe struck at that time, and for two centuries afterwards. Snelling is silent as to his authority in so naming it, and I have not had leisure to examine the documents on the subject; but I have no scruple in saying, that if it is styled a *quarter* florin in the original warrant, it is a clerical error; for it is not to be supposed that a wise prince, like the third Edward, should, from mere caprice, have ordered a deviation from the universal usage of Europe, and which must have been attended with at least some inconvenience in commercial dealings, without any possible advantage. His double florin, at this rate, ought to have weighed 216 grains,—a most absurd idea, which no person acquainted with the gold coinage of that early period can entertain. The rose noble of his eighteenth year, the heaviest gold piece he struck, and which, from its extreme rarity, was probably soon withdrawn from circulation, weighs only 138½ grains, a *third* less than what the double florin must have amounted to. Two years afterwards, in his twentieth year, the noble was reduced to 128 grains, which did not seem to have been more approved of, for it was again lowered to 120, at which it finally remained. On these considerations I am, I think, justified in supposing that the coin, formerly Mr. Hannot's, and hitherto denominated the *quarter*, is in reality the *half* florin, in which case it will correspond in weight with every *half* florin then in circulation in Europe. I may add that, on the continent at least, the gold *quarter* florin is unknown."

The subjoined moots a novel point respect-

ing two coins not readily to be classed, as they are neither English nor Irish, and, though from an Aquitaine type, bear no allusion to Aquitaine!

"On this type of the Aquitaine money, as well as that of the demi-gros tournois, which in this century had been very generally adopted in the northern part of the continent, there is no reference whatever in the legend to Edward's transmarine possessions! It cannot have been a trial piece, for I possess two, found in different parts of Aquitaine; and it is extremely improbable that two trial pieces, rare of the commonest type, (from the few originally struck) should have fallen into my hands, of a coin hitherto totally unknown. It could not have been coined in Ireland, although, from the legend, it is applicable to the currency of that kingdom. Aquitaine had no trade with Ireland except in wines and brandies, for which the Irish probably paid in English money: I believe the Anglo-Gascons drew no commodities from Ireland for which they paid, as we do the Chinese, in silver,—yet here is an Anglo-Irish coin struck in Aquitaine!" Perhaps some learned numismatist of the sister kingdom may be more fortunate than I have been in solving this enigma. I have examined, I believe, two thousand or more of the gros and demi-gros tournois, in hopes of finding a third specimen; but in vain. It is too well preserved to admit the most remote doubt that the word is any other than "Hibernie."

The Hibernie stands where Aquitaine is usually formed. But we have said and extracted enough to put every numismatologist, and we trust many readers of other literary habits, on the *qui vive* to examine this estimable work, and we leave it to their care with our most hearty commendations. It is full of singular antiquarian matter.

ARTS AND SCIENCES.

GEOGRAPHICAL SOCIETY OF LONDON.

WE are happy to see the suggestions, first promulgated in the *Literary Gazette*, respecting the formation of a Geographical Society in London, at length so highly and powerfully adopted as to leave no doubt either as to the formation of such an Institution or as to its efficiency. In England we move slowly, perhaps, but if the cause be good, perhaps not the less surely. The hints we have thrown out during the last two years did not immediately fructify, but they made their impression; or, not to spoil our metaphor, they took root; and when we lately intimated that they were about to produce the desired return, the statement seems to have stimulated those most competent to realise the harvest into the activity which was, alone, requisite to the occasion. On the 24th ultimo, a meeting of the Raleigh Travelling Club took place, with Mr. Barrow, the Secretary of the Admiralty, in the chair, when resolutions were agreed to for establishing a Geographical Society.

1. To collect, register, and digest, and to print for the use of the members, and the public at large, in a cheap form and at certain intervals, such new, interesting, and useful facts and discoveries, as the Society may have in its possession, and may, from time to time, acquire.

2. To accumulate gradually a library of the best books on geography—a selection of the best voyages and travels—a complete collection of maps and charts, from the earliest period of rude geographical delineations, to the most improved of the present time; as well as all such documents and materials as may convey the best information to persons intending to visit foreign countries: it

"Simon, in his 'Essay on Irish Coins,' page 17, says, 'that he cannot with any certainty produce any money of Edward the Third: his surmise, that a heavy coin of the penny type is a half groat, requires no refutation. Henry the Fifth struck the first Irish groat.'

being of the greatest utility to a traveller to be aware, previously to his setting out, of what has been already done, and what is still wanting, in the countries he may intend to visit.

3. To procure specimens of such instruments as experience has shewn to be most useful, and best adapted to the compendious stock of a traveller, by consulting which, he may make himself familiar with their use.

4. To prepare brief instructions for such as are setting out on their travels; pointing out the parts most desirable to be visited; the best and most practicable means of proceeding thither; the researches most essential to make; phenomena to be observed; the subjects of natural history most desirable to be procured; and to obtain all such information as may tend to the extension of our geographical knowledge. And it is hoped that the Society may ultimately be enabled, from its funds, to render pecuniary assistance to such travellers as may require it, in order to facilitate the attainment of some particular object of research.

5. To correspond with similar societies that may be established in different parts of the world; with foreign individuals engaged in geographical pursuits, and with the most intelligent British residents in the various remote settlements of the empire.

6. To open a communication with all those philosophical and literary societies with which geography is connected; for as all are fellow-labourers in the different departments of the same vineyard, their united efforts cannot fall mutually to assist each other.

7. And lastly, in order to induce men of eminence and ability in every branch of science, literature, and the arts, and in particular those who have travelled by sea and by land, and all such as are skilled in geographical knowledge, and likely to become useful and efficient members, to adopt a moderate admission fee and annual contribution.

A provisional committee of individuals, distinguished for scientific knowledge and extensive travel, was appointed to frame the constitution of this Society; and when we name Mountstuart Elphinstone, Sir T. Brisbane, Sir A. de Capell Brooke, Cam Hobhouse, Mr. Hay of the Colonial Office, Colonel Leake; Captains Beaufort, Basil Hall, Sir J. Franklin and Smyth, R.N.; Mangles, of the same service; Mr. Barrow; Lieut.-Col. Colby, of the Engineers; Mr. R. Brown, of the Linnean Society; Henry Ward; Major the Hon. G. Keppell; Mr. Murdoch, Mr. Murchison, and Mr. Greenough, with Commander M. Konochie as the Secretary, we fancy we have said enough to shew what sort of an Institution this is likely to be. It gives us pleasure to add, that the gentlemen who had previously met in a similar cause, (that to which our last notice referred,) have had a friendly conference with those who have thus superseded their good intentions; the result of which has been a junction and cordial co-operation with this body;—and the Society already musters an almost complete number of members, including the Duke of Wellington, Duke of Bedford, Lord Melville, Lord Aberdeen, Lord Bexley, Lord Prudhoe, Davies Gilbert, Sir R. Peel, Sir George Murray, Sir George Cockburn, Mr. Charles Yorke, Mr. Croker, Sir G. Clerk, Sir R. Inglis, Captain Beechey, Captain Sir E. Parry, Dr. Roget, and a long list of men eminent in the literary annals of the times. We are almost confident that such a union will do all we anticipated from a Society of the kind in the greatest maritime country the world ever saw; and we believe no time is to be lost by those who may desire to belong to the first five hundred, upon whose adhesion a general meeting will, we learn, be convened to settle definitively the constitution, &c. of this desirable Institute.

ROYAL INSTITUTION.

MR. BROCKEDON, "On the perception and application of colours." The observations which Mr. Brockedon offered, though they occasionally verged on physiology, were chiefly of a character suited to the painter and artist. He spoke of the three principal colours, and the proportions in which they constituted white light; illustrating this part of his subject by experiments with Mr. Field's chromascope and other apparatus. He then dwelt on the nature of

complementary colours, and exhibited a beautiful movable diagram, in which one colour being taken, its complementary colour could be immediately ascertained by inspection. He next considered the nature of ocular spectra, or those impressions of a complementary nature which are produced on the eye when viewing a coloured or luminous object. The common experiment of looking steadfastly for a short period at a red wafer on white paper was referred to. When the wafer is blown off, it will be recollected that a powerful green ocular impression is left in its place. Mr. Brockedon concluded, by touching on the structure of the inner coats of the eye, and the visual rays, as they have been ascertained and drawn by Mr. Bauer, and remarked upon the arrangement of an infinity of parallel and equidistant lines, which, by the action of the muscles, could be set farther from, or nearer to each other. He also referred to the well-known power of such arrangement of lines in producing definite colours; and suggested, that perhaps nature had here placed that power of compensation, which, by enabling the eye to develop a complementary colour, might also enable it to bear with diminished fatigue the effect of any vividly coloured body set before it.

SOCIETY OF ARTS.

THE annual distribution of rewards by the Society of Arts, &c. took place on Monday last, at their house in the Adelphi; the Earl of Radnor, V.P., in the chair. The great room of the Society, in which are Barry's celebrated pictures, was filled to overflowing with a genteel and attentive auditory. A considerable number of the medals were bestowed on young persons of both sexes for proficiency in the arts of design, the intelligent and animated countenances of many of whom seemed to give earnest that among them may hereafter be found names worthy of ranking with those of Flaxman, and Lawrence, and those other illustrious masters of their art who have received their first public encouragement from this institution. An elaborate specimen of embossed silver, by Mr. Woodbridge, being a copy of one of West's historical pictures, attracted general attention and admiration.

Medals were given to J. Peart, Esq., of Settle, for improving waste land; and to W. Blurton, Esq., of Field Hall, near Uttoxeter, for his swing frame for drying cheeses on. Medals and pecuniary rewards were given to Mr. Chancellor, of Dublin, for a remarkably simple clock escapement; and to Mr. Harrison, of Barton-on-Humber, for a clock escapement and a fly, particularly applicable to turret clocks, the models of which will form an interesting addition to the fine collection of improvements in clock-work already possessed by the Society.

"Three rewards," the secretary stated, "have been given for inventions, the object of which is to afford the means of escape from a house on fire. To the Chevalier Aldini, of Milan, the gold Isis medal, for his armour of wire gauze lined with asbestos cloth, which will enable the wearer to traverse a sheet of flame during fifteen or twenty seconds without injury; to Mr. J. Braidwood, of Edinburgh, the large silver medal, for his chain ladder; and a similar one, with the addition of 10%, to Mr. Henfrey, for his fire-escape.

"The loss of life by fire, although amounting to a very small fraction of the annual mortality, is yet of sufficiently frequent occurrence in London to excite ingenious and humane

persons to contrive means and machines for facilitating the escape of those who may be placed in such perilous circumstances, and to justify the Society in devoting a considerable portion of their time in estimating the value of the many projects for this purpose that are annually offered to their notice. We seem to have arrived at two general principles on this matter: one, that help to be effectual must be applied from without, and not by persons whose minds are agitated by the imminent hazard of personal destruction; the other, that assistance to be effectual at all must be immediately applied, and must therefore be made the subject of police or parish regulation, and not trusted to the casual efforts of bystanders. In Edinburgh the attendance on fires is committed to the fire-engine establishment, a particular branch of the police of that city, regularly drilled and disciplined, and thus rendered expert not merely in the use of the fire-engines, but in the application of the various means that may be adopted for facilitating the escape of persons from jeopardy. Of this establishment Mr. Braidwood is the superintendent; and the reward which the Society have voted to him they wish to be considered not so much as a testimony of their approbation of any particular instrument invented or used by him, but as a tribute to the zeal and activity which he has shewn in combining the use of fire-escapes with the ordinary fire-engine service."

An improved pack-saddle, and a muzzle for crib-biting horses, were exhibited and rewarded, as well as sundry improved tools, among which Mr. Hilton's conical hollow plane for boring with perfect accuracy the bung-holes of casks, attracted much notice. The large silver medal was presented to Mr. J. Ritchie, F.R.S., for his photometer, or instrument for measuring the relative intensities of light, and therefore capable of practical application in estimating the comparative value of gas from coal, oil, rosin, &c., as sources of artificial light.

A silver medal was likewise presented to M. Feuillet, of Paris, for his very simple and ingenious method of removing the impressions of wood blocks and metal plates from the paper on which they were originally printed to other paper. By means of this invention, valuable prints, the paper of which has become stained, mildewed, or otherwise injured, will probably be found capable of being restored.

Two beautiful models executed by Mr. R. Cowling Taylor were exposed, and rewarded with the gold Isis medal of the Society. One of them exhibits the surface of a tract of country containing about eleven square miles, and forming, perhaps, the most interesting part of the great coal-field of South Wales, near Pontipool. The other model shews the geological structure of the same district, distinguishing the beds of useful minerals, such as coal, iron-stone, fire-clay, and building-stone, as well as shewing the faults or dislocations of the strata, as far as they have been observed. The surveys and measurements, both above and below ground, on which these models were constructed, were made by Mr. Taylor, in the years 1825-6.

Rewards were also given for various improvements on the silk-loom to Mr. S. Dean and Mr. W. Jennings, two ingenious weavers and mechanics of Spitalfields, whereby the complex machinery of the Lyonesse loom is greatly simplified, and its action improved.

Finally, the large silver medal was awarded to Lieutenant H. Lister Maw, R.N., for pigments and other articles collected by him in

South America, on the banks of the Marañon, and presented by him to the Society.

COLLEGE OF PHYSICIANS.

DR. ROBERTS in the chair.—The first paper, read by Dr. Francis Hawkins, was a communication from Mr. Chevalier, on the advantages which he had observed to arise from combining small quantities of the sulphate of quinine with other medicinal agents; especially if the solubility of the sulphate be at the same time diminished by the addition of some alkaline substance. In this manner he conceives that the quinine acts as a local tonic,—invigorating the muscular action of the intestinal canal; and thus it is capable of increasing and sustaining the effect of the other remedies with which it is combined. A paper was then read, communicated by Dr. Roupell, on the nature, qualities, and mode of the preparation of *piperine*, an active vegetable principle, extracted chiefly from the berries of the black pepper. This substance, when first discovered, was classed among the vegetable alkalies, but has since been considered as a resin, with some peculiarities of character. Dr. Roupell had found *piperine*, administered in doses of from one or two grains, successful in the cure of several severe and obstinate cases of ague, which had resisted the control of every other remedy.

LINNEAN SOCIETY.

LORD STANLEY in the chair. A paper on *Paussida*, a family of Coleopterous insects, by Mr. J. Westwood, F.L.S., was read. The magnificent skeleton of his Majesty's Giraffe was exhibited by special permission: the bones have been put together in an exceedingly beautiful manner, by Mr. Gould, the articulator of Guy's Hospital, and, by means of screws in some of the principal joints, it can easily be taken to pieces, so as to admit of its being removed without inconvenience: its height is about fifteen feet. The skeleton is to be conveyed to Windsor as soon as circumstances will permit. A specimen of the fruit of the Papaw-tree, ripened in a hot-house of John Barker, Esq., at Aylesbury, was also exhibited, and is probably the first that has been brought to maturity in this country. The Chairman nominated Dr. Maton, Messrs. Brown, Lambert, and Forster, to be his vice-presidents for the ensuing season.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE President in the chair.—Three interesting papers were read. A portrait of Dr. Maskelyne, the late distinguished astronomer-royal, by Vanderberg, was presented by Mrs. Storey, his daughter; and a special vote of thanks was passed to the lady for this donation. A long list of interesting works, as presents to the Society, was read.

The following is an abstract of a paper lately read, entitled, "On the theoretical investigation of the velocity of sound, as corrected from M. Dulong's recent experiments, compared with the results of the observations of Drs. Moll and Van Beck," by Dr. Simons, assistant at the observatory of Utrecht.

Laplace has demonstrated, that Sir Isaac

* We observe that Dr. Roget, the able and intelligent Secretary of the R. S., has circulated a Letter addressed to the President (the correctness of which is confirmed by the President's answer), wherein he completely exculpates himself from the charge of having vitiated in any degree the minutes of the Council. On the contrary, that he acted not only with perfect fairness, but also with discretion, and in a manner agreeable to the proposed reforms of the very parties who have accused him.

Newton's formula for obtaining the velocity of sound, requires, in order to render it correct, that it be multiplied by a certain co-efficient, depending on the ratio between the specific heats of atmospheric air under a constant pressure and under a constant volume. Laplace has endeavoured to deduce this co-efficient, first from the experiment of M.M. de la Roche and Berard; secondly, from those of M.M. Clenient and Desormes; and lately from the more accurate investigations of M.M. Gay Lussac and Welter. By applying this correction, the velocity of sound deduced from calculation corresponded very nearly with the result of actual experiment. Still, however, a degree of discordance was always found to take place. With a view to perfect the theory still further, Dulong attempted, by reversing the process of Laplace, to deduce the co-efficient by which the Newtonian formula is to be multiplied directly, from experiments themselves. The object of the present paper is to compare the investigation of Dulong with the experiments on the velocity of sound made by Drs. Moll and Van Beck, of which an account has lately been published in the *Phil. Trans.* By applying the values of the co-efficients thus obtained, the computed velocities of sound came out much nearer to the observed velocities; and the author concludes by remarking, that such differences as yet remain between calculation and experiment, may, with great probability, be ascribed to the errors which are unavoidable in observations of so complicated a nature.

SOCIETY OF ANTIQUARIES.

HUDSON GURNEY, Esq., in the chair. Mr. W. Nicholls exhibited to the Society a Roll of the Parliament in the reign of Edward VI., illuminated with the arms of the lords of parliament. Mr. Planché exhibited an ancient snuff-box, supposed to be of the very earliest form and make. It was inlaid with different woods and ivory, with a full-length figure on the top in the costume of James I.: it contained a steel grater, on which to rub the tobacco into snuff, and was called a snuff mill; whence Mr. P. considered was derived the more modern word *mull*. A letter was read from Mr. Bird, accompanied by a drawing of Roman pavement discovered at Bishopstone, in the county of Hereford, on the supposed site of the Roman station of Kentchester. Sir Richard Colt Hoare, Bart., presented to the society several drawings of Roman pavements. A letter was also read from the Rev. John Skinner, addressed to Sir R. C. Hoare, being a disquisition on extensive discoveries of Roman remains which have been made at Cammertun, in Somersetshire, attempting to prove that Cammertun is the same as the Roman *Camelodunum*.

WESTERN LITERARY AND SCIENTIFIC INSTITUTION.

At the half-yearly meeting, in Leicester Square, on Tuesday evening, a very satisfactory report was read by the secretary. The library now contains four thousand volumes, and the subscribers amount to about seven hundred and fifty.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Sixth notice.]

MODEL ACADEMY.

It has in some instances happened that, owing to the Model Academy having been the last in our series of notices, its contents have not been

mentioned in the *Literary Gazette* before the doors of the Exhibition have closed for the season. In justice to the talent which this room displays in the present year, we will, by descending to it at once, assist, as far as in us lies, in drawing towards it the public attention which it deserves.

No. 1169. *Statue of Hercules Agonistes*. W. G. Nicholl.—Great talent and great study must have combined in the production of this gigantic and powerfully energetic figure. In common with most of the works placed in this most unsuitable apartment, it appears "shorn of its beams." Although the whole, however, cannot be advantageously seen, the parts may be sufficiently inspected to shew the truth and skill with which the muscles are brought into action. It has been said by some, that this action is exaggerated. We are not of that opinion; and we have no doubt that a strict reference has been made throughout to nature, as well as to the finest examples of ancient art. It must be acknowledged by every one, that Mr. Nicholl has aimed highly, and has accomplished much.

No. 1170. *A Monumental Statue, in marble, of his Royal Highness the late Duke of Montpensier*. R. Westmacott, R.A.—From the agonising struggles of bodily pain, we pass to the repose of the tomb; and a more beautiful and perfect representation of that deep repose has never been produced. It is here, indeed, in the words of Hamlet, "to die—to sleep—no more!" What a tasteful improvement is this upon the straight, stiff, recumbent monumental figures of former times!

No. 1171. *Group, in marble, of a Mother and Child*. E. H. Baily, R.A.—There are few subjects which a master of his art, such as Mr. Baily, would prefer to the display of maternal affection and the charms of infancy. The tender emotions demand peculiar skill and feeling, and have seldom been successfully exhibited: with respect to infantile beauty, too, it is rare in modern, and almost wholly unknown in ancient, art. In the execution of this highly interesting group, Mr. Baily has shewn the same powers which distinguished him in his *Eve*, his *Poetry and Painting*, and his other celebrated performances.

No. 1270. *A Monument representing Bishop Heber blessing two Hindoos*. F. Chantrey, R.A.—The sentiment conveyed in this monumental composition is of the most exalted devotional character. The profound humility and self-abasement of the simple and single-hearted Hindoos, and the benignant and affectionate posture and expression of the bishop, are equally admirable.

No. 1277. *The Seven Ages*. W. Behnes.—Although Mr. Behnes has quoted the commencement of the celebrated passage from Shakespeare, it has furnished him with little except the hint, which he has amplified in an admirable manner, and has assembled all the varieties of the human character which are to be found between the helplessness of infancy and the decrepitude of age. The composition is circular; but is so contrived, that the figures are all seen as in a picture, and not in compartments radiating from the centre, as in the *Shield of Achilles*, and other performances of a similar description. To say that Mr. Behnes has produced a work of great merit, is very insufficient praise. We recognise throughout the whole of it an originality of conception, and a vigour of execution, which incontrovertibly establish his claim to a high rank among the first sculptors of the day.

* See also our first Review.

No. 1274. *Marble Statue of Cupid*. W. Behnes.—An exquisite little figure; full of tenderness and taste.

No. 1273. *Group, in marble, of the Children in the Wood*. J. Gott.—Executed with a feeling of the true character of the subject, which does Mr. Gott great credit.

No. 1197. *A Figure of Hope, designed for a Monument*. T. Denman.—With the exception of the head, similar to a figure exhibited by Mr. Denman last year. The expression in the countenance is, we had almost said, divine.

No. 1196. *Hymen giving Physio to a Married Couple*. E. Advice.—Phoo! nonsense! We mean *Hymen giving Advice to a Married Couple*. E. Physick.—After all, our mistake was little more than one of words; for to most people advice is much the same as physic. The artist has shewn considerable talent in this pleasing production. But where is the bridegroom? We are sure that Mr. Physick is too gallant a man to think of implying that, under such circumstances, the lady alone requires mental medicine.

No. 1185. *The Birth of Venus*. S. Nixon.—A fine and classical composition; in which beauty of form is combined with pure and chaste conception. We wish some of our other sculptors would attend to Mr. Nixon's example in that respect. Academic studies are seldom fit for public exhibition; and when either a sculptor or a painter so far lowers the dignity of his art as to become a pander to vicious propensities, he deserves reprobation and contempt.

No. 1173. *Musidora*. R. W. Sievier. No. 1177. *Marble Statue of Psyche*. T. Campbell.—From the annual appearance of these subjects, one might almost suppose that it was agreed by artists that it could not be what Captain Glasscock would call "a reg'lar-built" exhibition without them. Justice compels us to add, that although we wish Mr. Sievier and Mr. Campbell had made the pages of Thomson and Apuleius yield them more novel matter, they have succeeded very happily in their representations of feminine grace and beauty.

No. 1172. *Devotion*. J. Gott.—We are decidedly of opinion, that this figure would have appeared to greater advantage without the introduction of the artificial and heterogeneous rosary.

Of the busts, one of the most interesting under any circumstances, and unquestionably the most interesting at the present awful moment, is

No. 1265. *Bust, in marble, of his Most Gracious Majesty George the Fourth, executed by command of his Majesty*. S. Joseph.—In this admirable performance Mr. Joseph has well united the general character of dignity with a strong individual resemblance of our beloved and suffering monarch.

Among many other busts of acknowledged excellence, but which, in the common-place though not less true phrase "are too numerous for insertion," we noticed those of *John Soane, Esq., R.A.*, F. Chantrey, R.A.; *Lord Ebrington, W. Behnes*; *The late Lord Kinnaird, T. Campbell*; *M. Faraday, Esq., F.A.S., &c.*, E. H. Baily, R.A.; *The Earl of Belfast, T. Campbell*; *The late Sir Thomas Lawrence, P.R.A.*, E. H. Baily, R.A. and R. W. Sievier; *The Rev. Dr. Richards, W. Behnes*; *The late infant Son of the Hon. Lord Elcho, S. Joseph*; *John Galt, Esq., J. Henning, Jun.*; *The Right Hon. Henry Kendal Bushe, Lord Chief Justice of Ireland, P. Turnerelli*; *Algernon Jones, Esq., J. Haskoll, &c. &c. &c.*

[To be continued.]

GENERAL CEMETERY.

In a recent No. of the *Literary Gazette* we gave a wood engraving of the splendid design for a general cemetery in the vicinity of the metropolis; and we now insert a different (a bird's-eye) view of this undertaking, which we observe is rapidly acquiring not only public note, but great strength and consistency. On Wednesday a meeting was held at Freemasons' Tavern, to form a company for carrying the plan into effect; and when we state that Lord Milton was in the chair, and the Marquess of Lansdowne, Lord Radstock, Sir R. Price, Sir J. D. Paul, Mr. Spottiswoode, M.P., the Rev. Mr. Harris of Liverpool (where a similar cemetery has existed for three years, to the marked improvement of the town), Mr. B. Beaumont, and Mr. G. F. Carden, were the movers and seconders of the resolutions in its favour, we need offer no remark on its likelihood of success.

We are not surprised that public opinion should be decidedly expressed in this matter; but we are surprised that the enlightened capital of highly civilised and intelligent England should have been so long in adopting a measure so obviously called for by every circumstance which can be rationally considered either for the welfare of the living or the decent honour of the dead. Not to dwell on the disgusting ideas suggested by accounts of pestilential effluvia being perceptible in our very streets (as from the burial-ground near the populous quarter of Fetter Lane), or on the ghastly horrors of sepulture in the vaults of churches, where the worship of God above is diverted by the hideous contrast in the charnel-house below; is it not demonstrable to common sense, at a single glance, that the final earthly separation of the departed from the existing, calls for entombment apart from the crowd of cities and the breathing-place of the busy hum of men? When we have heard the solemn ritual of our religion pronounced in the crypt of a church—the “dust to dust, and ashes to ashes,” and seen the coffin shoved in like a tea-chest in an India warehouse, above the rotten tenements of preceding corpses, we have felt such abhorrence as to wonder that custom could ever have braced the nerves and minds of our fellow-creatures to endure the practice. How much more soothing and appropriate it is to witness our general mother Earth close over the remains of those once dear to us,—to hide even from our imaginations the painful spectacle of their assimilation to the maternal bosom which has received them, while we cherish the memory of their living looks, and forms, and actions! How much more beautiful, we will say, is this, than, with every new tenant of the sepulchre, to see them rot and rot before our very eyes,—to be sensible of the most shocking consequence of humanity in our most frequented places, and where we go to worship!

With this strong impression on behalf of the general principle involved in the project now brought forward, we have only to utter our earnest hope that it will be carried into effect. We observe with satisfaction that every guarantee is given to prevent its being made a jobbing speculation; that a committee of men of rank, worth, and responsibility, is to superintend the details; and that the experiment can be begun and tried on a moderate scale, without interfering with the ultimate completion of the splendid cemetery proposed by Mr. Goodwin, and of which we now lay this second view before our readers.

PANORAMA OF AMSTERDAM.

ONE of the most beautifully painted panoramas we have ever seen; with exquisite effects of buildings, shipping, low lands, water, and sky. It reflects infinite credit on the talents of Mr. R. Burford, by whom it has just been opened in the Strand; and is an object alike worthy of public attention as a production of art, and as an accurate representation of a city interesting from its peculiar site and original appearance. The bridges, the canals, the distant country, the city itself, the boats and vessels, the various groups of people, are all admirably painted; and the foreshortening and perspective, throughout, equally fine.

LOVE AMONG THE ROSES.

WE have been much gratified by the inspection of a model of this subject by Mr. C. Smith, of Gloucester Place, which was not completed in time for the Exhibition. It represents Cupid reposing on a bank of roses: his shafts peep from among them; and in his hand he holds the flower called "the forget-me-not." The expression of infantile beauty is well preserved, and the whole composition is treated with great skill. Mr. Smith's studio is replete with models of taste and busts of character. Among the latter we recognised a striking resemblance of the late Mr. Terry.

NEW PUBLICATIONS.

Sketches from various Masters, Ancient and Modern, for the Scrap Book, Album, Portfolio, &c. Nos. 1, 2, 3, 4, 5, and 6. S. Hollyer.

A VERY pleasing publication. Each number contains four or six plates, according to the size. The publisher states that it is his intention to select subjects from the best masters, so as to give the greatest variety in every branch of the art. The plates in the six numbers which have already appeared are from pictures, or drawings, by Vandervelde, Vanderneer, Lewis, Asselyn, Reynolds, Howard, Berghem, Tomkins, Gainsborough, Allen, Titian, Poussin, Downing, Gerard Dow, Hamilton, Bonington, Westall, &c. A few of them are engraved in line, but they are chiefly in mezzotint. Some of the latter are too black. This is a fault which is but too general in the works of the present day; although we well know that, in many cases, it is by no means the fault of the engraver, who is compelled to surrender the suggestions of his own taste and feeling, for the purpose of securing a large number of impressions from a plate.

Rowton. The Winner of the Great St. Ledger Stakes at Doncaster in 1829. Published by R. Ackermann, Jun.

THE pictured beauty of a creature like this is enhanced by a splendid victory, which, like the fame of a human conqueror, gives an added interest to the exquisite graces of proportion, and the brilliant spirit of expressive animation, that pervades almost the hoof, as well as the nostril, the eye, and other nobler parts. Rowton is painted by J. Fernelley, and engraved by C. Turner: we are assured by its owner, Mr. Petre, that it is an excellent likeness, and we will vouch for its being an admirable work of art. W. Scott, who rode it for the Leger, is mounted; and in the same plate (no pun) J. Scott, the trainer, is characteristically represented by the side of his hack pony. To the sporting world we can hardly conceive a more attractive publication; and we learn with a pleasure almost approaching to the fancy of

an amateur, that Mr. Ackermann is to follow up this capital *début* on the turf by a portrait of Priam—a horse as famous as the father of *any-ass*.

MUSIC.

CONCERT ROOMS, KING'S THEATRE.

THAT incomparable leader, Spagnoletti, took his benefit at these rooms on Monday night. We know not when we have attended a concert so admirably conducted. The band appeared to us to be far superior to what we have been accustomed to hear at the King's Theatre. Several pieces, vocal and instrumental, composed purposely for the occasion, were enthusiastically received by a very crowded and gratified auditory. The vocal pieces most deserving of notice were, a *canone* for four voices, with orchestral accompaniments and harp obligato, announced in the card to be the production of Signor Costa, the present clever "conductor" of our operatic establishment; and a beautiful *cavatina*, entitled *Amico il fato*. This song was exquisitely sung by Madlle. Blais, to whom it is dedicated by that admirable pianist and clever composer, Mrs. Schwieso, wife, we believe, of the harp and patent pianoforte manufacturer of that name. Madame Malibran also sang a Tyrolian air composed expressly for her by Hummel. We thought Hummel was a man of more taste, and that Madame M. would not condescend to sing such a *cow-boy* composition, which assails the ear with the unmeaning sounds of *yo-e-yo-e-yo-e-yo*. Huerta's performance on the guitar was enthusiastically encored; an honour rarely conferred on instrumental players.

NEW PUBLICATIONS.

THE third volume of the *Tyrolese Melodies* (the Rainers'), and the words by Mr. Haynes Bayly, has just been put into our hands: to say it is equal to the preceding volumes,—the melodies characteristic, the arrangements by Moscheles excellent, and the poetry by Bayly appropriate,—is giving it the least praise it merits.

DRAMA.

KING'S THEATRE.

THE absurd, to say nothing of the impolitic, practice of endeavouring to "draw houses" by attractive names rather than by trusting to a judicious "cast" in the vocal distribution of the parts of an opera, was never more fully, and we may add more painfully, exemplified than in the last two representations of *Don Giovanni*. It would indeed be a supererogatory task to discuss performances as much below criticism as the music of the incomparable composer is above it. Suffice it to say, that on the two occasions to which we allude, *Don Giovanni* was regularly d—d,—the entire company appeared as if they had conspired to commit a midnight murder; Mozart was sacrificed to the selfish feelings of the performers; and there were other errors in arrangement not to be approved. No one will deny, that to give to this unequalled composition the full effect intended by its author, the orchestra should neither be deficient in talent nor force; instead of which, we not only, as Pat says, "found missing" many of the Troubadour's troop; but we observed, that those places which, on common occasions, were wont to be occupied by "four-and-twenty fiddlers all in a row," were, to the great annoyance of many a middle-sized man, taken up by four-and-twenty lordless ladies, all in insufferably

high feather. How, then, is it possible that the members of the band, not only "bound in" by "blue bonnets over the border," but by broad bussels over the musical margin, can find elbow-room sufficient to give even the most common-place effect to a choral crash? Besides, ogling in an orchestra is very unlike Lady Bull; and it is not according to the all-accomplished Chesterfield to be throwing sheep's eyes at tormentors of *cat-gut*. Dragonetti, though already stuck up in the print shops, is not, to be sure, a very dangerous man, nor is Lindley likely to try his tongue at a well-timed compliment; but we think the young and clever conductor, Mr. Costa, might conduct himself in a very unceremonious manner, were he to catch an ecstatic glance of the Honourable Mrs. Bull, whilst expressing her dumb admiration of one of Donzelli's forty-horse-power bawls.

On Tuesday night *Il Matrimonio Segreto* was repeated with even increased effect. Lablache surpassed himself; and though we are not altogether free from apprehension that he will eventually turn out something like the "single-speech Hamilton" of St. Stephens, we again and again repeat, that his personation of the deaf *Geronimo* is one of the finest pieces of comic acting ever achieved upon the stage. Indeed, we question, whether even in the best days of Munden, that celebrated comedian could have elicited such irresistible peals of laughter from audiences constitutionally disposed to indulge in somniferous solemnity. On this night, although Malibran was absent, she was not so much missed by the discriminating few: her place was supplied by Specchi; and, considering the short time allowed to prepare for the part, the character of *Zaidama* was well conceived and ably sustained.

It not being our intention to touch upon the merits or demerits of the ballet of *Flore ed Zephire*, particularly as the plot is beyond our simple comprehension, and we have no great predilection for either mythological or allegorical subjects,—we shall confine the few remarks we now have to offer to the dancing of the delightful and all-delighting Tagliioni. The style of this *artiste*, which is peculiarly her own, is not to be described,—it must be seen to be duly appreciated; nor do we think that even the chisel of Canova could have done justice to the classic positions and graceful forms into which she manages to mould a figure not by nature so symmetrically turned as that of the late Miss M. Tree. *Tally-ho-ny*, so called by some of the fox-hunters in the stalls, is somewhat too tall and thin to come under the denomination of an elegant figure; but there is so much of modesty in her mien, such unartificial gracefulness in her general gait, such easy elegance in every movement that she makes; and so thoroughly is she free from the pert strut and pompous deportment so peculiar to people of her calling, that we cannot stop to descant upon her fair proportions, or attempt to criticise her "mortal coil." We do not mean to insinuate that we have not seen dancers of more agility and flexibility of foot, because in these particulars we think she has been surpassed by Ronzi Vestris; but then Tagliioni is not, if we may so express it, a *bravura* dancer. Nor can we better convey a notion of the peculiarities of her style, than by comparing her, especially in the exhibition of those graceful positions which come under the technical designation of *arabesques*, to the singing of Pasta's "*Di tanti palpiti*." In fact, Tagliioni is the Pasta

of dance. If there be any fault discoverable in her style, we are inclined to suspect it will be found to be more in her arms than in her legs, which surpass all preconceived notions even of the *legs talonis*: the points of the elbows should never be seen, and angular positions ought always to be avoided.

VARIETIES.

Constantinople.—The Sultan has had his portrait painted by Mr. Lauriston, an English artist. After the first sitting, the Mufti, alarmed at this innovation, presented his highness, in order to dissuade him from such a profanation, with a long remonstrance, supported by texts from the Koran. The Sultan laughed at the Mufti and their remonstrance, and the picture was finished. Mr. Lauriston, however, hastened to quit Constantinople; and people there say that he acted wisely.

Currents of Wind.—A letter from Naples, dated May 21st, states that for some days previously the atmosphere had been covered with a kind of thick red fog, which was found to be a fine red dust, covering the ground and trees. It was at first imagined that this was the smoke of Vesuvius, but on close inspection it was pronounced to be African dust, which had been brought by the winds from Africa.

Greek Calendar.—The Greek Calendar, the abolition of which was in vain attempted by the Emperor Alexander, has just been abolished in Russia, with the consent of the Synod.

M. Fourier.—This learned and scientific individual, the perpetual secretary of the Académie des Sciences, a member of the French Academy, and formerly secretary of the Egyptian Institute, died at Paris, on the 16th ult., of an affection of the lungs. He was scarcely sixty years of age. On Monday last, M. Arago was elected, by a large majority, to the perpetual secretaryship of the Academy of Sciences, vacant by M. Fourier's decease.

Poetical Lectures by Mr. James Montgomery.—We have just heard, by chance, that this distinguished poet has delivered two out of a course of four lectures on the history of literature, at the Royal Institution. How stupidly must such a matter have been managed to escape the notice of every literary journal and newspaper in London!! We should have thought it difficult to conceal the thing so closely.

Mr. Burchell.—We have heard with pleasure that Mr. Burchell the African traveller has recently returned from the Brazils, laden with the products of that country, and prepared to give the world an account of it and them, which we anticipate will be as valuable as his preceding works.

Pilgrims.—A caravan of pilgrims, on their way from Persia to Mecca, arrived early in March last at Erzeroum. It consisted of five hundred persons; among whom were a wife of the schah, one of abbas-mirza's, and many of the khans and beys of Tauris and Choi. The caravan proceeded to Aleppo.

Muscular Motion.—A machine has been invented in France, the object of which is to give to the human body a muscular exercise, considered to be efficacious in nervous disorders.

Westminster Abbey.—A picture of Westminster Abbey, painted by M. Allaux, is now exhibiting at the Neorama, in Paris.

Captain Dillon.—This gentleman, we hear, who was sent for by the French government, some time ago, to France, for the purpose of

taking command of an expedition in search of further relics of the voyage of La Pérouse, is about to return to England, very much disgusted with the French; who, after having kept him in Paris for several months, have abandoned their intention, and dismissed him without the slightest compensation.

Incendiary Balls.—Among the means to be employed for the reduction of Algiers is a new projectile called *balle incendiaire*. These balls are put into pistols and muskets of large calibre, and discharged by men who have been well exercised. The ball is so constructed, that it ignites every combustible substance against which it strikes. Several experiments were lately made in Paris, in presence of a commission appointed for the purpose, and they are stated to have been fully successful.

Indian Corn.—It is stated in a letter from Paris, that in consequence of the total failure of the crops of Cobbett's corn in the vicinity of the French capital last season, very few experiments of the kind will be tried this year. A farmer near Rouen is said to have lost 15,000 francs by his speculations in this way.

Longevity.—An American paper cites an example of rare longevity in an Englishman of the name of John Hill, residing near Chambersburg, who is above 130 years of age. He was a soldier in the reign of Queen Anne, and enlisted when he was eighteen. It appears that, until the last eight years, he has been exceedingly intemperate, and has frequently been seen lying out of doors in the coldest nights, in a state of complete intoxication. When above a hundred, he still worked with as much activity as most of his fellow-labourers. His mind seems not to be at all weakened, and he does not look above sixty or seventy years' old.

Diorama.—A view of Paris from Montmartre, painted by M. Daguerre, is the subject of a new dioramic exhibition at Paris. The Campo Santo, at Pisa, by M. Bouton, is about to be transferred to London.

Agriculture.—A preparatory school of agriculture has been established at Paris. Among the proposed objects of instruction are, the French, English, and German languages, linear, topographical, and descriptive drawing, the elements of mathematics, general notions of natural philosophy, and mineral and vegetable chemistry, the principles of vegetable physiology, general notions of mechanics, hydrostatics, and hydrodynamics, rural architecture, the elements of manufacturing and commercial economy, &c.

Mexico.—M. Beltrami has presented to the French Academy sixteen Mexican pictures, which have assisted him in framing the genealogy of the Aztek and Toltek kings; and another painting, of which he has availed himself to prove the succession of the chiefs of the republic of Thlascala.

Useful Arts.—The Society in Paris for the Encouragement of National Industry, lately distributed a number of gold and silver medals for inventions and discoveries connected with manufactures and the useful arts. The funds of the Society are in a very flourishing state.

Statistics.—Statistical societies are getting very much into vogue in France: several have recently been established in the provinces.

Animal Remains.—The *Messenger des Chambres* of Tuesday last contains an account of the discovery of some curious animal remains in a cave near Chokier in France. The bones and teeth were found in a bed composed of parts of the cave which had fallen in, and black mud, and were about three feet

in depth. The bones of the horse, bear, elephant, fox, rhinoceros, ox, and stag, were found mixed, in the immediate vicinity of the jaw-bones of the hyæna. Most of them contained their gelatine, and none exhibited signs of having been gnawed. These remains belonged to at least fifteen species, amongst which are the cavern bear, the horse, and the hyæna. Many of them are in a fine state of preservation, and the teeth have not lost their enamel. The following classification is given of them: the cavern bear, hyæna, wolf, fox, mole, hare, rabbit, water rat, field rat, common rat, ox, stag, unicorn rhinoceros, bicorn rhinoceros, and Indian elephant, a few bones of birds of species not determined, and a few common snail-shells. The most extraordinary part of the discovery is, that there were three distinct layers of stalagmites, under each of which bones were found.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXIV. June 12.]

Musical Memoirs, comprising an account of the general State of Music in England, from the first Commemoration of Handel, in the Year 1704, to the Year 1830; with Anecdotes, &c., by W. T. Parke, Principal Oboist at Covent Garden Theatre for forty years.—Personal Memoirs, or Reminiscences of Men and Manners at Home and Abroad during the last Half Century, by Pryse Lockhart Gordon, Esq.—No. 1. of the Juvenile Library, containing the Lives of Remarkable Youth of both Sexes, edited by W. Jerdan.—We observe that a second journal in the French language has been commenced in London: it is called *L'Independent*, and in form and arrangement resembles an English newspaper.—Mr. Britton has announced a Dictionary of the Architecture and Archaeology of the Middle Ages; including the Words used by Old and Modern Authors in treating of Architectural and other Antiquities.—The Denounced, by the Author of Tales by the O'Hara Family.

LIST OF NEW BOOKS.

Cruikshank's Illustrations of Popular Works, Part I. royal 8vo. 6s.: 4to. proofs, 10s. sewed.—Allen on the Royal Prerogative of England, 8vo. 8s. bds.—Martineau's Traditions of Palestine, post 8vo. 6s. bds.—Inch Kenneth, a Poem, fcp. 5s. bds.—Bennett's Tewkesbury, 8vo. 15s. bds.—Macvicar's Economy of Nature, 8vo. 16s. bds.—Tarver's Study of the French Language, Part I. 12mo. 4s. bds.—Hansard's Parliamentary Debates, Vol. XXII. royal 8vo. 1l. 10s. bds.—Scott's Poetical Works, Vol. XI. 8vo. 18s.: 18mo. 9s. bds.—The Undying One, &c. by the Hon. Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

Our friends and correspondents ought to be aware that, with every wish, liberally, to promote the interests of the arts, sciences, and literature, we cannot insert sheer advertisements as general intelligence, and far less as opinions of our own.—Ed. L. G.

We are this week obliged to postpone many articles, which we can promise will make our next No. as various and interesting as the present is, we trust, made by the novelties which have claimed the priority.

The Editor of the *Literary Gazette* is not aware of the circumstance that Ensign Dale made the original drawing of the Swan River Settlement, which was given with a late No. of the late *Foreigner* L. G.

We intend to participate in all the enjoyments of our worthy friend Mr. Owen's Millennium, when it arrives, and shall endeavour to attend the exposition of the means by which it is to be brought about; but we have not room for the Prospectus or Pisgah view of this modern Land of Promise, far less for its geographical, topographical, and constitutional details.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE EXHIBITION of the SOCIETY of PAINTERS in WATER COLOURS, at the Gallery, Pall Mall East, WILL CLOSE for the present Season on Saturday, the 26th Instant.

Open every Day, from Nine till Seven.

Gallery of the Northern Society, Leeds, May 25th, 1830.

THE WEST of SCOTLAND THIRD EXHIBITION of the WORKS of LIVING ARTISTS will open this Season, on the 9th of August. Works of Art intended for this Exhibition will be received from the 12th till the 21st July.

C. HUFCHESON, Secretary.

Exhibition Rooms, Argyle Arcade, Glasgow, June, 1830.

LITERARY FUND.—GREENWICH MEETING.—The Annual Meeting of the Literary Fund will be held at the Crown and Sceptre, Greenwich, on Wednesday, June 23. Dinner at Four o'Clock.

The Members and Friends of this Society who may honour this Festival with their presence, are requested to leave their Names with Mr. Snow, at No. 4, Lincoln's Inn Fields, on or before Tuesday, the 22d Instant.

PICTURES of EXTRAORDINARY

EXCELLENCE, the Property of a Nobleman. Mr. EDWARD FORSTER respectfully acquaints the Public, he has received Directions to Sell by Auction, at his Gallery, 54, Pall Mall, on Wednesday, 16th June, and following Day, at Twelve, a splendid Collection of Italian, Flemish, Dutch, and English Pictures, of which it is impossible, in the limits of an Advertisement, to enumerate all that are entitled to particular distinction. An Interior, by Adrian Ostade, with several Figures, an exquisite Specimen, from the King of Bavaria's Collection. Two Portraits, one by Titian, the other by Rembrandt; both extraordinary Chef-d'œuvre. The Fish-Market, by Jan Steen; a Flower Piece, by Maria Van Oosterwyck, which for truth and loveliness of colour, cannot be too highly praised. The Head of St. Sebastian, by Guido, from the Gara Bertolotti, the finished Study for the Picture in the Dulwich Gallery; the Remorse of Judas Iscariot, by Rembrandt; Portrait of Pope Julius, by Raffaele; a grand Landscape, with Cows and Grey Horse, by Cuypp; a View of St. Mark's Place, by Canaletti; a capital Picture. Three Landscapes, by Wynant, one enriched with Figures by A. Van der Velde; and Specimens of most of the distinguished Masters of the Dutch School, and several very fine Italian Pictures. May be viewed, Three days prior, and Catalogues, at 1s. each, may be had at the Gallery, 54, Pall Mall.

plete Establishment in the Bookselling, General and Fancy Stationery, and Printselling Business, capable of being considerably enlarged.

Any Young Man wishing to enter into Business, will find this a most favourable opportunity, as a sum of 2500. to 4000. will cover his coming-in.

Particulars may be known of Messrs. Hurst, Chance, and Co.

65, St. Paul's Churchyard.

TO PARENTS and GUARDIANS.—

WANTED, an Apprentice to a Bookseller, Stationer, and Printseller, in the Country, where he will have every opportunity of thoroughly learning his Business, and will be treated in every respect as one of the Family. Premium, 100 Guineas. Address, by Letter, post-paid, to B. P., care of Hurst, Chance, and Co. 65, St. Paul's Churchyard.

DUTCH and FLEMISH PAINTERS.—

The Author of the Catalogue Raisonné of the Works of the most eminent Dutch and Flemish Painters, begs very respectfully to inform Subscribers that the Third Part, intended to contain a Description of the Works of Anthony van Dyck, and announced for publication in May last, is unavoidably postponed until the beginning of the ensuing Year; the Author having since deemed it advisable to include in that Part the Works of David Teniers the younger. 137, New Bond Street.

PRIAM, Winner of the Derby Stakes at

Epsom, 1830. R. Ackermann, Jun. most respectfully acquaints the Nobility and Gentry, and all who partake in the Pleasures of the Turf, that he has obtained permission of Mr. Chibney to publish the Portrait of Priam, to be painted by Mr. J. Femeley, of Melton Mowbray.

R. Ackermann, Jun. begs to say he pledges himself to the getting of it up in a superior manner to any thing yet introduced to the Public, excepting Rowton, which is now ready, and in course of delivery to the Subscribers.

Subscribers' Names received at his Eclipse Sporting Gallery, 191, Regent Street, where a fine Collection of Sporting Prints and Drawings are always on view.

THOMAS MOORE, Esq.—A Portrait of

Thomas Moore, Esq. engraved in the Line Manner, by W. H. Watt, after a Picture by G. S. Newton. Price of Proofs before the letters, 3s. 3d.; Proofs after the letters, 2s. 2s.; Impression, 1s. 1s.

Sold by Colnaghi, Son, and Co. 8, Pall Mall East; and by Messrs. Moon, Boys, and Graves.

"The first requisite in every portrait is resemblance. We have seldom seen one more striking than the present. It is Mr. Moore himself, in one of his most animated moments."—*Literary Gazette.*

Original Portrait of Robert Burns.

Now ready, dedicated, by permission, to Sir Walter Scott, a genuine and original

PORTRAIT of ROBERT BURNS,

printed in 1789, by the late Mr. Peter Taylor, and finished in the first style of Line Engraving, by Mr. John Horsburg. Size of the Print, 9 inches by 12 high.

Prints £0 15
Proofs on French paper 1 1
Proofs on India paper 5 5
Proofs on India paper, before Writing 2 2

Edinburgh: Constable and Co. 19, Waterloo Place; and Moon, Boys, and Graves, Printers to His Majesty, London.

Extracts from Testimonials, (the Originals of which lie with the Publishers).

From Sir Walter Scott, Bart.

"I am much gratified by the sight of the Portrait of Robert Burns. I saw that distinguished poet only once, and that many years since; and being a bad marker of likenesses and recollector of faces, I should, in any ordinary case, have hesitated to offer an opinion upon the resemblance, especially as I make no pretensions to judge of the line arts. But Burns was so remarkable a man, that his features remain impressed on my mind as if I had seen him only yesterday; and I could not hesitate to recognise this portrait as a striking resemblance of the poet, though it had been presented to me amid a whole exhibition. I will accept of the inscription which you tell me the proprietors intend putting to the engraving, as a great honour."—*Walter Scott.*

From Miss Dunlop, Daughter of the Poet's esteemed Friend.

"Miss Dunlop is in the habit of seeing the poet frequently, from the time of his first publication at Kilmarnock, till the time of his death, and his was not a face to be forgotten. Yet, since then, it has not been placed so brightly before her 'mind's eye,' as on opening the box containing this portrait."

From Miss Maitland, (Baroness).

"I return you the fine portrait of Burns, taken from the life by the late Mr. Peter Taylor, his early friend. In my opinion, it is the most striking likeness of the great poet I have ever seen; and I say this with the more confidence, having a perfect recollection of his appearance."—*Agnes Maitland.*

MUSIC.

FREDERICK KIRKMAN, Son of the late

Mr. JOSEPH KIRKMAN, of No. 19, Broad Street, Golden Square, Grand Piano-Porte Maker to His Majesty, begs leave most respectfully to inform the Nobility, Gentry, and his Friends, that he has succeeded to the Business of his late Father. He intends to continue the same on the Old Premises as above, which have been in the possession of his Family for upwards of a century, and invites an Inspection of his choice Assortment of Instruments of every Description, ready for immediate Sale.

BOOKS PUBLISHED THIS DAY.

2d edition, considerably enlarged, with Plates and Woodcuts, 12s.

SALMONIA; or, Days of Fly-fishing. In

a Series of Conversations.

By the late Sir HUMPHRY DAVY.

"One of the most delightful labours of leisure ever seen; not a few of the most beautiful phenomena of nature are here lucidly explained, yet the page have none of the usual dry philosophical unbelief, or finite reasoning."—*Biography of Sir H. Davy, Gentleman's Magazine*, August.

By the same Author,

Conversations in Travel; or, the Last Days

of a Philosopher. Foolscap 8vo. 6s.

Price 11s.

THE NOBLE GAME of BILLIARDS,

wherein are exhibited extraordinary and surprising Strokes, which have excited the admiration of the Sovereigns of Europe. Translated from the French of the celebrated

M. MINGAUD.

Formerly Capitaine d'Infanterie in the Service of France. Dedicated, by permission, to the Most Noble the Marquess of Cleveland.

This work is elegantly got up, and comprises 43 well-executed copper-plates, with directions for performing, with precision, the most masterly strokes of all the celebrated proficient of the present day. It is, in this respect, a great desideratum to all the admirers of this elegant diversion, no work having appeared in the English language which can be compared with it, for the beauty and precision of its rules and illustrations; and none which comprise the great improvements and discoveries made in the game within the last twenty years.

London: Translated and published by John Thurston, Billiard Table Manufacturer, 14, Catherine Street, Strand; and to be had of all Booksellers.

Family Library.

Illustrated with Eight Engravings, 5s.

THE SAILOR BOY; or, the Admiral and

his Protegé.
By ROSALIA ST. CLAIR.

Author of *Ulrica of Saxony*, *Hanker's Daughters of Bristol*, *Fashionables and Unfashionables*, *Son of Othello*, *First and Last Years of Wedded Life*, *Eleanor Ogilvie*, &c.

Printed for A. K. Newman and Co. London.

The following will appear this Summer:—
The Suttee; or, Hindoo Convert, by Mrs. General Manwaring, Author of *Moscow*, &c. 2 vols.

Price 7s. in royal 8vo. boards,
HORA PHILOLOGICA; or, Conjectures
 on the Structure of the Greek Language.
 By WILLIAM SEWELL, M.A.
 Fellow of Exeter College, Oxford.
 Oxford: D. A. Talboys; Whittaker and Co. London.

Where may be had, just published,
Heeren. A Manual of Ancient History,
 particularly with regard to the Constitutions, the Commerce, and
 the Colonies of the States of Antiquity. By A. H. L. Heeren, Knight,
 of the North Star and Guelphic Order; Avic Counselor, and
 Professor of History in the University of Göttingen, &c.
 Translated from the German. In 1 thick vol. 8vo. 15s. Oxford,
 1830.

"We consider it to be one of the best volumes that could be
 put, for information, into the hands of the student, or, for refer-
 ence, into those of the instructed. No good library should be
 without it."—*Literary Gazette*.
 "In point of utility, it will benefit equally professor and student,
 by enabling the first to methodise his acquisitions, and
 guiding the other through his untried and intricate course."—*Monthly Magazine*.

2. **Heeren. A Sketch of the Political History**
 of Ancient Greece. By A. H. L. Heeren, Professor of History
 in the University of Göttingen, &c. Translated from the
 German. In 1 vol. 8vo. 10s. 6d. Oxford, 1830.

"There is less of narration in Heeren than in Niebuhr; but in
 every other particular, his works seem to us likely to be far more
 popular than those of the historian of Rome. His style is re-
 markably clear and pleasant, his learning abundant, and, above
 all, he is replete with the spirit of ancient society, without ever
 losing sight of the advantages which modern thought sup-
 plies the historian of antiquity. His views with regard to govern-
 ment, commerce, and manners, are excellent, and supply a most
 valuable counterpoise to the exclusive and narrow opinions of
 some late politicians and economists."—*Athenaeum*.

3. **Niebuhr. A Dissertation on the Geogra-**
 phy of Persia, with a Map; and Researches into the History of
 the Scythians, Getae, and Sarmatians. Translated from the
 German of B. G. Niebuhr. In 8vo. 4s. cloth boards.

4. **Addition. The Miscellaneous Works,**
 in Prose and Verse, of Joseph Addison. A new edition, with a
 Literary Notice, &c. elegantly printed upon a superfine white
 paper, with Plates of Medals, 4 vols. fols. cap. 8vo. cloth boards, 1l.
 "Whoever wishes to attain an English style, familiar but not
 coarse, and elegant but not ostentatious, must give his days and
 nights to the volumes of Addison."—*D. Johnson*.

Fruits and Flowers.
 2d edition, corrected and enlarged, in small 8vo. with six
 coloured Plates; price 5s. 6d. boards.

THE FLORIST'S MANUAL; or, Hints
 for the Construction of a gay Flower Garden, with Direc-
 tions for preventing the Depredations of Insects.
 By the Authoress of "Botanical Dialogues," and "Sketches
 of the Physiology of Vegetable Life."

2. **A Historical and Botanical Account of**
 Fruits known in Great Britain, with Directions for their Culture.
 By Henry Phillips, F.R.S. 2d edition, enlarged, 8vo. 10s. 6d.

3. **History of Cultivated Vegetables,** com-
 prising their Botanical, Medicinal, Edible, and Chemical Quali-
 ties, Natural History, &c. 2d edition, in 2 vols. 8vo.
 Henry Colburn and Richard Bentley, 8, New Burlington Street.

Price 7s. 6d.
DIVINES of the CHURCH of ENGLAND,
 No. 1. containing Vol. I. of the Works of Bishop Sher-
 lock, with a Life of the Author.
 By the Rev. T. S. HUGHES, B.D.

To be continued monthly.
 Printed and published by J. Talbot, Red Lion Court, Fleet
 Street; and sold by all Booksellers.

FLORA CONSPLICUA; a Selection of the
 most Ornamental Flowering, Hardy, Exotic, and Indige-
 nous Trees, Shrubs, and Herbage, with Directions for embellishing
 Flower Gardens and Pleasure Grounds; the Remarks as to Cul-
 tivation, Treatment, and Propagation; the particular Earth for
 each Plant; its Height or Growth, Month of Flowering, and Na-
 tive Country.

By RICHARD MORRIS, F.L.S.
 Author of "Essay on Landscape Gardening," &c.
 Containing Sixty highly coloured Figures, drawn and engraved
 from living Specimens, by WILLIAM CLARK.
 Price Two Guineas, delivered in extra cloth boards, and forms
 a most splendid volume.
 "The plates themselves are treasures; they offer to us the most
 exquisite specimens of design and colouring; but they must be
 seen to be appreciated. We recommend this very beautiful and
 moderately priced 8vo. to all country gentlemen; without it their
 library certainly is not complete."—*London Review*.
 T. Griffiths, Wellington Street, Strand.

In 1 vol. demy 8vo. price 15s. cloth.
THE NATURE and PROPERTIES of
 the SUGAR CANE, with Practical Directions for the
 Improvement of its Culture, and the Manufacture of its Pro-
 ducts. Illustrated by several Engravings, Statistical Tables, &c.
 By G. B. PORTER.
 Smith, Elder, and Co. 65, Cornhill.

Pugin's Architectural Works.
 Just published, at his Office, 105, Great Russell Street,
 Bloomsbury, Part IV.

EXAMPLES of GOTHIC ORNAMENTS,
 selected in various Parts of England and France. Prices,
 medium, 15s.; royal 4to. India, 1l.

 T. Cadell, Strand, London.

The 2d edition, in 1 large vol. containing 600 pages, price 18s.
 or the Plates on India paper, price 1l. 5s.

THE HISTORY and ANTIQUITIES of
 the TOWER of LONDON, with Memoirs of Royal and
 Distinguished Persons, deduced from Records, State Papers, and
 Manuscripts, and from other original and authentic Sources.
 By JOHN BAYLEY, Esq. F.R.S. F.S.A. M.R.I.A. &c. &c.
 Illustrated with numerous Engravings.
 London: Robert Jennings and William Chaplin, 62, Cheapside.

THE REAL DEVIL'S WALK; embel-
 lished with numerous Engravings, from Designs by R.
 Cruikshank.
 Of the "Devil's Walk" there's been much talk,
 And folks seem mighty curious,
 Now this is the real "Devil's Walk,"
 And all the rest are spurious.
 London: Effingham Wilson, Royal Exchange.

In 1 vol. 8vo. price 25s. boards, illustrated by upwards of
 50 Explanatory Plates.

AN ESSAY on NAVAL TACTICS, Sys-
 tematical and Historical, in Four Parts.
 By JOHN CLERK, Esq. of Edinburgh.

 by a Naval Officer.
 Printed for Adam Black, Edinburgh; and Longman and Co.
 London.

In 1 vol. 4to. price 1l. 15s. boards,
MEMOIRS of HIS OWN LIFE and
TIMES.

By Sir JAMES TURNER, 1832-1870.
 From the Original Manuscript, containing a full Narration
 of the Insurrection in Scotland in 1666.
 "The Publishers of the work now before us are entitled to our
 thanks; we do not welcome it the less cordially that the senti-
 ments which the author expresses on the leading questions which
 he has occasion to touch differ widely from our own."—*Edinburgh*
Review, No. 101.
 Printed for Adam Black, Edinburgh; and Longman and Co.
 London.

In 2 vols. foolscap 8vo. with Portrait of the Author, engraved by
 Hodgetts, from an original Picture, by John Watson Gordon,
 Esq. price 14s.

THE LIFE of ALEXANDER ALEXAN-
 DER. Written by HIMSELF.
 And edited by JOHN HOWELL,
 Author of "Journal of a Soldier," "Life of John Nicol," &c.
 This singular piece of autobiography exhibits, most minutely
 and faithfully, the real adventures of Alexander Alexander, the
 disowned son of a gentleman in the west of Scotland. It com-
 mences with infancy, traverses three quarters of the globe, and
 comprehends a period of nearly fifty years of the life of a man
 who has been placed in many trying situations, as a soldier, an
 overseer in the West Indies, and an officer in the patriot armies
 of South America: it is, in short, the complete, unreserved his-
 tory of a human being.
 Printed for William Blackwood, Edinburgh; and
 T. Cadell, Strand, London.

Price 10s. 6d. boards, the Second Volume of
THE FALL of NINEVEH. A
Poem. By EDWIN ATHERSTONE.
 London: Published by Baldwin and Cradock.
 "He is copious, melodious, and energetic; his style is gorgeous
 and flowing; his descriptions magnificent; his banquets and
 revels breathe the very air of splendid voluptuousness; and
 his scenes of battles and councils are full of solemnity and ardour."
 —*Edinburgh Review*, No. 95.

Neatly printed in post 8vo. price 10s. 6d. boards.
ORIGINAL LETTERS of LOCKE,
 ALGERNON SIDNEY, and ANTHONY LORD
 SHAFTESBURY, Author of the "Characteristics." With an
 Analytical Sketch of the Writings and Opinions of Locke and
 other Metaphysicians.
 By T. FORSTER, M.B. F.L.S. M.A.S.
 Corr. Memb. of the Acad. of Science at Philadelphia, &c.
 London: J. B. Nichols and Son, Parliament Street.

In 8vo. 6s. 6d.
MEMOIR of the LIFE of HENRY
 FRANCIS DAGUESSEAU, Chancellor of France,
 and of his Ordonnances for Consolidating and Amending certain
 Portions of the French Law. And an Historical and Literary
 Account of the Roman and Canon Law.
 By CHARLES HUTLER, Esq.
 John Murray, Albemarle Street.

Published by John Harris, Corner of St. Paul's Churchyard.
SKETCHES from the VOLUME of
CREATION, as displayed in the Seasons of the Year;
 an original Work for Youth.
 By the Rev. BOURNE HALL DRAPER,
 Author of "Scripture Stories from the Old and
 New Testaments."
 Illustrated with Five Engravings on Steel, and Two superior
 Woodcuts. 12mo. price 5s. half-bound.

Also, by the same Author,
Stories from Scripture, Old Testament, on
 an improved Plan. 2d edition, with 24 Illustrations, 12mo. price
 6s. half-bound.
Stories from Scripture, New Testament, 2d
 edition, illustrated with 24 beautiful Engravings, price 6s. half-
 bound.
 "These stories present an excellent course of moral instruction,
 pleasingly blended with the tales of sacred history, and therefore
 eminently fitted for the attentive perusal of the young."—*Literary*
Gazette.

A 3d edition, 18mo. 4s. 6d.
SERMONS, Doctrinal and Practical, for Plain People.
 By the Rev. G. R. GLEIG, M.A. M.R.S.L. &c. &c.
 John Murray, Albemarle Street.

New Works just published by Messrs. Colburn and Bentley, 8, New Burlington Street.

THE UNDYING ONE, and other Poems.
 By the Hon. Mrs. NORTON,
 Authoress of the "Sorrows of Rosalie," &c.

2. **Tales of a Tar,** by the Author of the "Naval Sketch Book." 1 vol.

3. **The Third and Fourth Volumes of Commentaries on the Life and Reign of Charles I. King of England.** By I. D'Israeli, Author of the "Curiosities of Literature," &c.

4. **The English at Home,** by the Author of the "English in Italy," &c. 3 vols.

5. **Travels through the Crimea, Turkey, and Egypt.** By the late James Webster, Esq. of the Inner Temple. In 2 vols. 8vo. with Plates.

6. **The Fortunes of Perkin Warbeck,** by the Author of "Frankenstein," the "Last Man," &c. In 3 vols. post 8vo.

7. **The Mussulman.** By R. R. Madden, Esq. Author of "Travels in Turkey, Egypt," &c. In 3 vols. post 8vo.

Also nearly ready,
 8. **The Denounced.** By the Author of "Tales by the O'Hara Family," the "Nowlans," the "Croppy," &c. In 3 vols.

9. **Personal Memoirs; or, Reminiscences of Men and Manners at Home and Abroad,** during the last Half Century. By Fryse Lockhart Gordon, Esq. In 3 vols. 8vo. with Portrait.

On Saturday was published, Part II. on 31st July, each Plate, plain; or finely coloured, 11s. 6d. additional, of the most highly finished, most convenient, and comprehensive Atlas ever published. To be continued in Twelve Monthly Parts, from Engravings on Steel, by Mr. Thomas Starling.

THE FAMILY CABINET ATLAS, constructed upon an original Plan, and embracing many important new Features.

Also, just published,
 1. **The Senate; a Satire.** Part I. The Lords. 2s. 6d.

2. **The Game of Life; a Novel.** In 2 vols. price 18s.

"True and graphic pictures from actual life, exhibited with startling fidelity."—*Literary Gazette.*

3. **The Lost Heir; a Novel.** In 3 vols.
 "A powerfully written story."—*Courier.*

4. **Tales of the Five Senses,** illustrative of their Mechanism, Uses, and Government. Edited by the Author of the "Collegians," &c. 10s. 6d.

5. **The Romance of History, Spain (New Series),** 3 vols.

6. **Bacon's Life of Francis,** 2d edition, in 3 vols.

7. **The Art of Dancing,** by C. Blais, 1 vol. Printed for Edward Bull, New Public Subscription Library, 35, Holles Street, Cavendish Square.

In 8vo. price 12s.
PAROCHIAL LAW; embracing the Law of Scotland on the following Subjects—Churches—Church Offices—Churchyards—Parish Dues—Manse and Glebes—the Poor—Sacraments—Necessaries for the Administration of—and Schools.
 By ALEXANDER DUNLOP, Esq. Advocate.
 Printed for Blackwood, Edinburgh; and T. Cadell, Strand, London.

New Works.—In 8vo. post 8vo.
FIRST LOVE. A Novel.
 "One of the most beautifully written and delicately told tales we remember. Never, we think, were the heart-stirring scenes of a first affection more ably depicted. The whole cast of the story is essentially feminine, and cannot fail of affording great delight, especially to the fair sex."—*Morning Journal.*

In 3 vols. post 8vo.
 2. **The Armenians; a Tale of Constantinople.** By Charles Mac Farlane, Esq. Author of "Constantinople in 1828."
 "Mr. Mac Farlane has in this work condensed, in a most agreeable manner, all the pictures, reflections, and anecdotes of his oriental tour."—*Standard.*
 "It is not the mere novel-reader alone who will ponder with delight over these pages; it will be read as a work of instruction as well as of amusement, the author having evidently not travelled to Constantinople to exaggerate the observations of others, but to make his own, and to describe only what he has himself seen and studied."—*Morning Journal.*

In 2 vols. 8vo. Plates,
 3. **Constantinople in 1828-29, 2d edition.**
 "Of all the tourists whom the late demand has tempted to the press, Mr. Macfarlane will, beyond comparison, most reward the reader. The main purport of his book is specifically adapted to the very points on which the curiosity of the moment is most alive. For the condition of this part of the Eastern World, of its politics, temper, and prominent interests just at present, an authority so recent and so satisfactory as Mr. Macfarlane is a greater piece of good fortune than it would have been reasonable to expect."—*Edinburgh Review.*

In 3 vols. post 8vo.
 4. **The Collegians; a Novel.** 2d edition.
 "We do not remember to have ever seen a more beautifully drawn love scene than that which this work presents to us; and we believe no novelist ever developed with more exquisite pathos the sensations of a breaking heart when it first feels the stroke which annihilates its only hope."—*Monthly Review.*
 Saunders and Otley, Public Library, Conduit Street.

A New History of England.
 No. XXV. price 6s. (to be continued) of
A HISTORY OF ENGLAND, from the Earliest Periods to the present Time; in which it is intended to consider Men and Events on Christian Principles. By a CLERGYMAN of the CHURCH of ENGLAND.
 The Work, it is presumed, will be comprised in about Fourteen Years of Age.

English Translations of the Classics.
 Neatly bound, price only 4s. 6d. with Map of Lower Egypt,
THE FAMILY CLASSICAL LIBRARY,
 No. VI. containing Heloë's Translation of Herodotus.

The object of the Proprietors of this undertaking is to produce a work, which, from its cheapness and elegance, may recommend itself to all classes. The expensive existing editions have hitherto precluded the community at large from an acquaintance with the writings of the greatest poets, historians, and orators, the world has produced.
 The Four Numbers already published comprise Demosthenes, Sallust, and Xenophon.
 Henry Colburn and Richard Bentley, 8, New Burlington Street.

Italian Literature.—In crown 8vo.
ORLANDO INNAMORATO E PURIOSO DI BOJARDO ED ARIOSTO, with Notes and Illustrations in English.
 By ANTONIO PANIZZI.

Vol. I. containing the Introductory Essay, price 12s.
 The Orlando Furioso of Ariosto is known to every reader of Italian Literature, whilst the Orlando Innamorato of Bojardo, which is, in fact, the ground-work of that poem, is known only by name, or by the Rificamento of Berni or Domenichi. Ariosto's work is, in many parts, unintelligible without Bojardo's, notwithstanding its great merit, has not been republished for near three centuries. It is anticipated that, by uniting these works, which are more nearly allied than the Iliad and Odyssey, the undertaking will be appreciated by all lovers of Italian poetry, and will be deemed an accession to every library.
 "To the general reader these pages present much attraction. The analysis of the stories is amusing, the criticisms are excellent, and enlivened by much of shrewd observation and witty remark; but to the Italian student the disquisition is invaluable. No library, where Ariosto, Tasso, &c. are favourites, should be without this, their fitting companion."—*Literary Gazette.*
 "We seldom remember to have reaped more genuine pleasure from the perusal of any single volume, embracing so much erudition and research, than from what is here modestly entitled an essay. It is the work of a highly cultivated mind, replete with liberal and enlightened views, and evincing originality and talent not commonly combined with so much patience of research."—*Athenæum.*
 "This is a volume of much real merit, edited by Professor Antonio Panizzi, and reflects no little credit on his judgment, taste, and talents."—*Dublin Literary Gazette.*
 William Pickering, Publisher, 57, Chancery Lane.

With a Portrait, price 5s. Vol. II. (completing the Poems of Burns), of
PICKERING'S ALDINE EDITION OF THE BRITISH POETS. In Monthly Volumes, ranging with the Waverley Novels, Family Library, and similar publications.

"The Aldine Poets is a new and handsome addition to this class of publication, and from the specimen, promises to be a charming series of poetry."—*Literary Gazette*, No. 697.

"We trust that this undertaking will meet with that encouragement at the hand of good taste which it merits. A complete collection of our poets, with well-written memoirs, and printed in a good readable type, is a desideratum, and from the specimen of the work now sent forth, we feel assured that the Aldine edition will supply the want. The Life of Burns is drawn up with much judgment and feeling; and we give Mr. Pickering and his editor praise for having begun the series, with a Poet whose works breathe such true British feelings as those of poor Burns."—*Athenæum*, No. 134.

William Pickering, 57, Chancery Lane.
 Vols. III. and IV. will contain the Poems of Thomson.

In 8vo. with Plates, with 15s. boards,
THE HISTORY OF TEWKESBURY.
 By JAMES BENNETT.
 Published by Longman, Lees, Orme, Brown, and Green, London; and J. Bennett, Tewkesbury.

True State of Slavery in the West Indies.
 Now ready, in 1 vol. demy 8vo.

By F. W. N. BAYLEY, Esq.
FOUR YEARS' RESIDENCE IN THE WEST INDIES.

"Four Years' Residence in the West Indies" has enabled our young and clever author to produce a work at once amusing and valuable; amusing from his lively manner, and valuable from his judicious information. His volume deserves our praise, and will, we are persuaded, be very favourably received by the public in general."—*Literary Gazette.*
 London: William Kidd, 6, Old Bond Street.

In 1 vol. post 8vo. price 8s.
THE LAY OF THE DESERT. A Poem, in Two Cantos. By HENRY SEWELL STOKES.
 London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

BOOKS IN THE PRESS.
 Preparing for publication,
THE EDINBURGH CABINET GEOGRAPHY, and the **EDINBURGH CABINET GAZETTEER,** intended as Manuals for Study and Reference.
 These Works are preparing, with the greatest care, by the most eminent geographers of the day; and of a nature, while the times of peace are fully aware, and of a correspondence has been opened with the best informed on these subjects in foreign countries.
 Edinburgh: Oliver and Boyd. London: Simpkin and Marshall.

Dr. Lardner's Cabinet Cyclopædia.
SIR JAMES MACKINTOSH'S HISTORY OF ENGLAND, Vol. I. price 6s. will be published July 1.
 Printing for Longman and Co.; and John Taylor.

In the press, and nearly ready, 1 vol. post 8vo.
LEGENDARY TALES, in Verse and Prose.
 Collected by H. FOX TALBOT, Esq. James Ridgway, Piccadilly; and all Booksellers.

Preparing for publication,
THE EDINBURGH CABINET LIBRARY, comprising Geographical Discovery and Adventure, Biography, History, and Poetic Literature.

The present age is honourably distinguished from all that have preceded it, by the avidity with which it is thirsting for every species of useful knowledge, and by the successful efforts made to diffuse such knowledge among all classes of the community. The elevation which these pursuits confer on the human character, and the inexhaustible sources of refined pleasure which they open, justify us in regarding this new impulse given to the public mind, as one of the most effectual means of promoting the improvement of society.

To meet this increasing demand for information, several extensive and useful series of works are now in course of publication. Of the value of these, the Editors of the Edinburgh Cabinet Library are fully aware; but it is supposed to them that another series, of a character not less select and attractive, may still be added.

It will be generally admitted, that the best foundation of useful knowledge is laid in an extensive acquaintance with the realities of nature and human life, and while they tend to exalt the imagination and refine the taste, may also betray the youthful mind into error, unless the impressions they make are corrected by a careful survey of the scenes and events of real existence. The representations, too, of the aspects of nature, the vicissitudes of human life, and the varied features of human character, afford not instruction merely, but an exhaustless store of solid and rational entertainment.

The works, then, composing this series, will be chiefly such as exhibit, under their real form, man and the objects by which he is surrounded,—especially in his domestic and social nature, amid scenes that are so analogous to those which he engages the great body of mankind. Such themes, it is conceived, will be more generally instructive than those which portray man only in that lofty sphere where he acts under the almost perpetual sway of policy and ambition. Among the subjects which the undertaking will embrace, it may be found peculiarly interesting to trace the career of those adventurers who first traversed the expanse of stormy oceans, and penetrated into the interior of barbarous kingdoms. In following the progress of discovery, a view will also be obtained, not only of the form and structure of the globe, but of whatever is most splendid in the objects both of nature and of art. Certain portions of this library will trace the leading changes and revolutions through which the nations of the modern world have passed, with their present moral and social condition,—present the instructors and benefactors of mankind as they move in their private circles,—and mark the steps by which the sciences and arts that improve and refine human nature have arrived at their present stage of advancement.

Other subjects, in accordance with the general scope and tenor of the series, will be occasionally introduced.

Such is the plan by which, out of varied and costly materials that have been accumulated, it is intended to form a Cabinet Library, comprising all that is valuable in those branches of knowledge which most happily combine amusement with instruction. The utmost care will be taken, not only to exclude whatever can have an injurious influence on the youthful mind, but to embrace every thing calculated to strengthen the best and most salutary impressions.

Every distinct subject will be comprehended in one volume, or at most in two volumes, which may form either a portion of the series or a complete work by itself; and each volume will be embellished with numerous and appropriate engravings by the most celebrated artists.

Several of the works have been in preparation for a considerable time, and will be published at short intervals; but as it is the leading object of the editors to have each subject completed with the most anxious care and deliberation, they are unwilling to subject themselves to the mechanical necessity of a monthly periodical issue.

The entire series will be the production of authors of eminence, who have acquired celebrity by former labours in their respective departments, and whose names, as they appear in succession, will afford the surest guarantee to the public for the satisfactory manner in which the subjects will be treated.

The Edinburgh Cabinet Library will be printed uniformly with the beautiful edition of the Waverley Novels now in course of publication, and from its size, may be bound up as a companion to the works of Dr. Lardner's Cabinet Cyclopædia. Notwithstanding the very great expense at which this Library must be brought out, the Publishers, confident of extensive support, offer each volume at the moderate price of Five shillings, in cloth boards.

Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 11, Wellington Street, Waterloo Bridge, and 7, South Molton Street, Oxford Street: sold also by J. No. 700.—AMERICAN EDITION.

SATURDAY, JUNE 19, 1830.

REVIEW OF NEW BOOKS.

Mémoires de Constant, Premier Valet de Chambre de l'Empereur, sur la Vie Privée de Napoléon, &c.—Memoirs of the Private Life of Napoleon, his Family, and Court. By M. Constant, First Valet de Chambre to the Emperor. 8vo. Vols. I. and II. Paris, 1830. Ladvocat. London, Dulau and Co.

WE have here the first two volumes of a series whose materials are sufficiently in detail to extend to any number that may suit its publisher. They contain a full and particular description of how the emperor ate, drank, washed, dressed, slept, waked, saluted his wife or let it alone, with a minuteness which a Frenchman only would have thought of giving. There is accordingly more of amusement than of information in these pages. M. Constant is not a man to see farther than was absolutely necessary—one who would take all for granted that did not concern his office; and who evidently considers his teaching Napoleon to shave himself, to have been one of the great events of the time. Reversing the line of the poet,

“What small effects from mighty causes spring!”

the principal personal consequence of Buonaparte's becoming emperor, is, that he is obliged to shave himself, for fear some secret enemy should take that opportunity of cutting his throat. The habits of Napoleon seem to have been different from what we should have expected of one brought up to all the hardships of a camp: Constant states, that he was always dressed from head to foot, like a child. We shall select a few anecdotes, such as seem to possess most novelty—an attraction of which there is much deficiency in these pages, all of whose contents might well have been compressed into a single volume.

The editor, Ladvocat, however, defends the publication of memoirs by a valet-de-chambre in the following most poetical manner. “The valet-de-chambre of a hero becomes, from his very station, a different thing to a valet-de-chambre. Amber is but a piece of coarse earth, and the stone of Bologna is but a fragment of rock; but the one breathes of the rose, and the other reflects the sun.” So now for a little of the light and the essence whose influence is on M. Constant, who seems duly impregnated with the atmosphere of a court: witness the gallantry with which, when playing trictrac with the empress, he allowed her to beat him.

“If that was flattery, I must avow myself culpable; but I think I should have acted in the same manner towards another woman, whatever might have been her rank, had she been only half as charming as Madame Buonaparte.”

Rival Powers.—“During our first journey into Italy, the first consul wished to hear Marchesi: after much solicitation, the singer came, but with all the importance of a man who considers his dignity injured. The simple costume of the consul, his slight figure, his thin face, and his unimposing distinction, were ill

calculated to make an impression on the theatrical hero; and on being asked to sing an air, he replied only by a bad pun, ‘Signor General, if you want a fine air, you will have the very finest in the garden.’ Dismissal and imprisonment were the consequences of this impertinence; but on Buonaparte's return after the battle of Marengo, thinking the unhappy singer's punishment had been more than sufficient for a poor joke, he sent for him, and again requested a song. Marchesi had found his voice, and he now sang equally graciously and delightfully: the first consul shook hands and complimented him (as our author expresses it) most affectionately. Peace was thus established between the two powers, and Marchesi henceforward only hymned the praises of the consul.”

There are some interesting details on the marriage of Hortense. Constant denies strongly the idea of a connexion between her and the emperor; and we are the more inclined to believe his assertion, as we do really think even this crime would have appeared to him but the result of situation and royalty, and one that he seems much more likely to have palliated than denied. Those most concerned in the marriage were punished for their selfishness: General Duroc, her first attachment, by witnessing the after greatness to which his match with her would have led; and Josephine, in the unhappiness of her daughter, sufficiently exhibited the interested motives (the hope of conciliating Buonaparte's brothers, always inimical to her) which led her to promote the union.

Dialogue on the re-establishment of mass:—“While dressing the first consul, M. Joseph Buonaparte entered with Cambaceres. ‘Well,’ said the first consul to the latter, ‘we are going to mass; what do they think of it in Paris?’ ‘Why many,’ replied Cambaceres, ‘intend going to the first representation, and, if the piece is not amusing, hissing it.’ ‘If any one takes it into their head to hiss, they will soon be shewn the door by the grenadiers of the consular guard.’ ‘But suppose the grenadiers should join the others in hissing?’ ‘I am not alarmed about that: my old moustaches will go here to Notre Dame, as in Cairo they did to the mosque; they will observe what I do; and seeing their general grave and attentive, they will be the same, and say to themselves, It is the watchword!’ ‘I am afraid,’ said Joseph Buonaparte, ‘that the general officers will not be so accommodating: I have just left Augereau, who breathes only fire and fury against what he terms your capuchinades. He and several others will not be so easy to bring within the pale of our holy mother-church.’ ‘Bah! Augereau is just a bawler, who makes a racket; and if he has any little imbecile cousin, he will put him to school, that I may make a chaplain of him. Apropos,’ continued the first consul, addressing Cambaceres, ‘when will your brother go and take possession of his see at Rouen? Do you know he has the best archbishopric in France? he will be cardinal in a year; it is a settled affair.’ The second consul bowed—what else could he do? Certainly

Buonaparte was very accurate in his moral calculations.

“Whenever there was a distribution of arms given as honours, there was a dinner at the Tuileries, to which all, let their rank be what it would, who had a share in these distinctions, came; there were often two hundred. Generals, colonels, common soldiers, sat together without distinction; and Buonaparte spared no pains to make his guests feel at ease; but the embarrassment of many was not to be surmounted: they would sit two feet away from the table, not venturing to touch napkin or bread, colouring up to the ears, and their necks stretched towards the general, as if to receive the word of command; and often did the servants remove plates which had not even been touched. This timidity did not, however, prevent their enthusiastically feeling the distinction. Nothing could be more popular than Buonaparte's manners. He drank with them, and made them repeat what gallant act had procured for them this mark of honour. On rising from table, he thus addressed them:—‘My brave fellows, you must soon baptise me the new-born one,’ (pointing to their sabres of honour). Heaven knows they did not spare themselves.”

The strange difference between French and English manners was never more strongly marked than in the following scene. Who on this side the Channel would ever have thought of describing it?

“In that earlier period, when the first consul inhabited the palace of St. Cloud, he slept in the same bed as his wife; of late years, etiquette interposed, and a little chilled the conjugal tenderness; and at last the first consul slept in a room pretty far removed from that of Josephine. Between them was a long corridor, on each side of which slept the different ladies in waiting. When the first consul wished to pass the night with his wife, he undrest in his own room, which he left *en robe de chambre*; I walked before him with a flambeau. At the end of this corridor was a staircase of about sixteen steps, which led to the chamber of Madame Buonaparte. Great was her joy when she received a visit from her husband; all the house heard of it the next day. I still see her, saying to all who came near, rubbing her little hands together, ‘I am up very late to-day; but you see Buonaparte passed the night with me.’ And that day she was even more kind than usual; she rebuked nobody; every one obtained whatever they asked.”

The confinement of Colonel Delille was very rigorous; he was not allowed to receive any written communication. “The rigour of these orders was, however, softened by his son, about four or five years of age; his father obtained permission to embrace him, and was conducted to him by a turnkey. The poor little thing acted his part like a finished conspirator; he pretended to limp, complaining bitterly of sand in his boot. The colonel took him on his knees, contrived to turn his back on the jailer, and, while taking off the child's boot, secured

the letter concealed in it, which gave him information of the progress of the trial, and what he had himself to hope and fear."

The annexed is a striking instance of superstition in the emperor.

"During one of his campaigns in Italy he broke the glass over Josephine's portrait; he never rested till the return of the courier he forthwith despatched to assure himself of her safety, so strong was the impression of her death upon his mind."

A journal scarcely worth printing is joined to the end of the first volume, of one of those ladies attached to the *ancien régime*, who nevertheless accepted places at the imperial court, renouncing their principles, but preserving their opinions. The chief facts in this diary are the fair journalist's great indignation against Buonaparte for not liking ladies who talked much, for interfering with their costume, and, worse than all, there is a pathetic paragraph, of the glory of France being lost, and herself being horrorstruck, by the emperor's addressing some German princesses as 'Mademoiselles.' The curiosity of this journal is, that though our literary valet sees fit to publish it, he every now and then inserts a little note of contradiction or softening. Most of the personal details respecting the emperor are known; but we, at least, do not remember the very singular fact, that the beat of his heart was imperceptible to himself and others. It required both time and trouble to break in horses for his use, and he neither rode well nor gracefully; he was not fond of hunting, neither was he a good shot. Among many anecdotes, we select the following:

"One day, at the end of a stag-hunt, he approached Mde. de L., and asked, 'What shall we do with the stag? I place his fate, madam, in your hands.' 'Do what you please,' was the somewhat unfeeling reply of the lady; 'I take no interest in it.' The emperor turned away coldly, and said to the chief huntsman, 'Since the stag has the misfortune not to interest Mde. de L., he does not deserve to live; let him be killed.' He was so shocked with her want of humanity, that he spoke of it the whole evening in terms very little flattering to the lady."

Nothing can be more minute than all the particulars into which this most accurate of valets enters: five pages describe how the emperor was shaved, how he would be shaved on one side only at once, how he finally learnt to shave himself, and how Rustan was obliged to hold his mirror, for he splashed the soap lather over the toilette and curtains; how he had toothpicks made of box-wood, and used slight mixtures of opium for tooth-powder; how he never would wear pantaloons, and always adhered to his black stock; habits to which he was accustomed, and ease, were all he sought in dress; indifferent as to the form, he was nevertheless particular as to the fineness of the material. The same man who wrought for him when at the military school, made his shoes when emperor, and was succeeded in the office by his son; hence, observes Constant, they were always ill made: and he records, with an air of triumph, that, after many efforts, he prevailed on his master to have them rounded, instead of pointed, at the toes. In process of time the lasts became too small; and the scene in which the poor shoemaker is summoned to take new ones, is too absurd to be omitted. "I went myself to the shoemaker, who, though he had made for his majesty, had never seen him: the poor man was stupified with fear—his head was turned. How should

he ever appear before the emperor, how must he be dressed? I gave him all possible encouragement, and told him he must have a black coat, breeches, sword, and hat. Thus accoutered, he arrived at the Tuileries, and entered his majesty's room; he made a profound bow, and stood embarrassed enough. 'You are not the person who used to make my shoes,' said Napoleon. 'No your, majesty, emperor, and king, it was my father.' 'Why does he not come now?' 'Because, please your majesty, emperor, and king, he is dead.' 'How much do you make me pay for my shoes?' 'Eighteen francs.' 'It is very dear. Your majesty, emperor, and king, may have them much dearer if you please.' The emperor laughed heartily at the simplicity of this avowal; this laughter completely disconcerted the shoemaker, who, with his hat under his arm, approached to take measure, but the hat rolled down, the sword got between his legs, was broken, and down he fell on his hands and knees; at last, released from hat and sword, he succeeded in taking the length of the emperor's foot."

Will the following remark be taken as a proof of the great happiness of childhood, in having but such slight troubles, or must we admit that their troubles are as great to them? "How happy you are!" said one of Josephine's little pets to her; "you have no mamma to scold you when you tear your clothes." * * *

"The whole army had been ordered to leave off powder, and cut off their queues; many murmured, but all obeyed, excepting one old grenadier belonging to Junot's brigade, who vowed no force should take from him his beloved queue, unless his general cut the first hair. On this reaching Junot's ears, he swore that should be no hindrance: the man was sent for, Junot took up the scissors, and began clipping; and, dismissed with a twenty-franc piece, the veteran went contentedly to be trimmed by the barber."

"The emperor and his brother Lucien had a grand quarrel on account of the latter's marriage with Mde. J., a lady who had been more than suspected. One day, on Lucien's refusing to marry the Queen of Etruria, the emperor said to him indignantly, 'See to what you are led by your foolish passion for a woman of galantry.' 'At least,' replied Lucien, 'mine is young and pretty.' This evident allusion to Josephine so enraged the emperor, that he dashed the watch he held on the floor, exclaiming, 'I will break you, since you will listen to nothing, as I have done this watch.'"

That Lucien, however, was prudent in some of his affairs of the heart, let the next anecdote witness.

"Lucien was just now very desirous of being in the good graces of the Mde. Mézirai, a pretty and lively actress. The conquest was not a very difficult one: in the first place, it had never been matter of difficulty; secondly, the lady knew Lucien's opulence, and took his liberality for granted. The first attentions of her lover confirmed this opinion. She was settled in a superb house elegantly furnished; and the contract for it given her the day on which she took possession. At every visit he made her some splendid present; this lasted some time: at length Lucien, tired of his bargain, became desirous to get rid of it in the least expensive manner. He had given her a magnificent pair of diamond girandoles; and before he allowed the least coldness to appear in his manner, he took up these earrings one morning, while assisting at his mistress's toilette: 'Truly, love, I shall quarrel with you;

as if I could refuse you any thing, and here are you wearing diamonds whose setting is quite old-fashioned.' 'It is not six months since you gave them me.' 'Six months! as if any woman who had a respect for herself—a woman with the least good taste, would wear what had six months' date: I must send them to my jeweller to be re-set.' The prince was of course most tenderly thanked; and he went away with the earrings and divers other ornaments; but a quarrel next day averted the necessity of returning them. Still the house and furniture were so much gained; when one morning the proprietor waited on her to know if she wished her lease renewed; she ran for her deed of purchase,—it was only a receipt for two years' rent."

We now leave these volumes, for the present at least, to those who delight in personal details, of which they are full. Like other works of the kind, they will be glorious materials for the novelist, philosopher, and historian, some hundred years hence. And now, amid the conflict of opinion, their amusement at least has equal interest and variety. They have not yet been translated into English.

The Denounced. By the Authors of "Tales by the O'Hara Family." 3 vols. 12mo. London, 1830. Colburn and Bentley.

MR. BANIM was the first who made successful efforts in the field of Irish literature—the first to shew how much of strange adventure, of strong passion, of original character, are to be found in the annals of the last century. Enlightened in his views, liberal in his principles, though devoted to, and an advocate of, opinions in favour of religious tolerance—powerful in the delineations of strong excitement, and the workings of internal passion—giving usually a story of great interest;—we do not wonder at the popularity his writings have obtained, and we cannot but consider such popularity as highly beneficial. It is well to put, frequently, in a familiar shape the evil effects of bigotry; the danger of laws so easily wrested to the support of private malice; and the crime as well as mischief of persecution under the name of religion. It is true that these days of intolerance are passing away; but what was the work of opinion is best opposed by the diffusion of another opinion more just and true—the history that has been, ought to operate as a warning to the history that is to be. The volumes before us contain two tales: the first is a romantic story of adventure and escape in the time of William—the second more of private life and individual feeling; and in both the interest is strongly excited and well kept up, though the *dénouement* of the first is somewhat hurried: we are much deceived, if most readers would not wish to know a little more of the future fate of "the Last Baron of Crana." The disadvantages, the discouragements of the penal laws, particularly in the last tale, as operating to prevent all home education among the Catholics, are put in the strongest light. Our author's chief fault is an exaggeration both of language and description; the one is sometimes inflated, and the other overcoloured: we recommend a little softening down to his attention. One of his great merits lies in his perhaps least ambitious efforts; there is a vividness, a reality, about them which gain an intense hold on the reader's imagination: in the scene we have marked for quotation, principally for its length, the air of reality seems to us very striking. We should premise, that Gernon is poaching on the

grounds, as much out of defiance to the Papists as for the sake of the game, his only companion a bull bitch, when Patrick O'Burke arrives at the spot, from which his half-crazed tutor has just retreated.

"My service to you, sir," he said, stepping a few paces from Gernon, who awaited his approach, resting on his piece, and whistling in a low cadence, as he looked in another direction. "And mine to you, sir," he was answered. "What injury have you done upon the gentleman who just parted from you?" continued Patrick. "Gentleman?" repeated Gernon, measuring him with a deliberate glance from head to foot—"I can't tell who you mean by 'gentleman,' young master; but I do not care if you know that the mad creature who left my side a moment ago has undergone no injury from me." Patrick, recollecting the peculiarities of his poor tutor, and his aptness to cry out upon slight occasions, was reasonable enough, in his heated mood, to give credit to this answer. He soon found another subject for talking on, however. "You came here to speak on business with Mr. Pendergast, friend?" "No, friend." Gernon continued his low whistle. "With some of his establishment, then?" "I know not any of them; and on that head wish to remain as wise as I am." "But our gamekeeper, Rory Laherty, is not quite unknown to you?" "A passing acquaintanceship, merely." "Briefly; what do you here, sir?" "As briefly—who is it that asks?" "The O'Burke, and on Mr. Pendergast's account: so, tell your errand now:—answer my question." "Perhaps—if you answer one of mine first." "Let me hear it:" Patrick also rested on his piece. "Where did your worship attend to hear lawful prayers the last Sabbath day?" "Impertinent fellow!" cried Patrick, haughtily. "Impertinent? and fellow? Both. Shew me, and shortly too, that you went to church last Sunday—ay! and the Sundays before it, for as many months as we can count, or pay me twelve-pence, current money of the realm, in satisfaction for every Sabbath day's worship you have missed; such being the fine by law established upon stayers-away from God's service, and loose livers in this pious land." "You shall not tempt me, by your rudeness, fellow, to forget who I am, whoever you may be," said Patrick: "but again I demand to know what is your business here?" "Sport—not business," answered Gernon. "And what kind of sport?" "Such as fills—this," continued Gernon, touching the already half-filled leathern bag which hung from his shoulders. "With whose permission, friend?" "Mine own," replied Gernon, coolly filling a small tin measure with brandy from a wicker-cased bottle which he drew out of his pocket:—"Tis a hot day enough, for a September day: will you please to taste?" offering the measure. "I thank you, no; but it remains for me to tell you, that you must henceforth have Mr. Pendergast's leave, as well as your own, to kill his birds and other game on these grounds." "Oh, not at all: see, for example;" he put his piece suddenly to his shoulder as a small flock of wood-quests flew over his head, fired, and brought down two of the birds:—"Fetch me them, Maud, dearee," he continued—and Maud flew to obey his command. Patrick lost all patience at this imperturbable insolence. "The ugly brute shall never take them off the grounds!" he cried. "To be sure, no—but I will for her," said Gernon, pacing to meet the bitch. "Nor you either, by heavens!" Patrick sprang before him, turned round, and presented his piece. "Hollo?" questioned Gernon, staring

at him. "Mind me, fellow," rejoined Patrick; "your shot is gone—I have mine to the good; so take care what you attempt to do." "Oh, brave! brave!" exclaimed the other, scoffingly; and the words were scarce spoken, when, flinging down his own piece, he jumped head-foremost upon Patrick, and with one twist of his arms possessed himself of his: "Stop, now, Maud! stop! I don't want your help this time; only keep an eye on the lad, to hinder him and me from any more scuffling: 'tis a pretty sporting-piece," curiously eyeing his prize; "and luck is in my road, this morning, to make my own of it." "You are robber as well as poacher, then?" asked Patrick, whose wrath and courage united, though both of the most positive kind, did not prompt him to an immediate continuance of hostilities, under the circumstances. "It can hardly be called poaching," answered Gernon, "to provide a matter of a few dozen of birds for the good bull-feast to-morrow; or robbery, to disarm a concealed Papist, under authority of the Act of Parliament of the last year, in that case made and provided." "Put back the O'Burke's gun in hand, and quit grounds!" here interrupted old Rory Laherty, suddenly arriving on the scene, close by the disputants: he was also armed. "Skirt him, beauty!" exclaimed Gernon, as, with the rapidity and certainty of thought, he wheeled round upon Rory. The old man knew not what was doing, when he found himself without his piece, and at the same moment felt Maud tugging his ample skirts, in obedience to her master's orders. "I must soon press a baggage wain in the king's service, at this rate," pursued Gernon, "to carry Papists' arms to the royal stores, yon," pointing towards the town: "And now, steady young O," to Patrick, who again seemed to meditate an attack,— "I will shoot you as I would shoot a Papish rabbit, if you budge an inch—as for your gamekeeper (so called, but that's to be looked to, yet), Maud can manage him." "Maybe not," said Patrick: then he addressed Rory in Irish; "Is he at hand?" "Within a whistle," replied Rory; "and upon the wind." "Brann! Brann!" cried Patrick; and Brann, our former acquaintances, now grown into the giant which Pendergast had predicted he would be, came galloping out of a near cover. The instant the animal saw how matters stood, his heavy ears, previously cocked, fell low, his eyes glared like live coals, his bristly coat grew rough, and he redoubled his speed to join his friends. At the same moment, still another power appeared in view, in a contrary direction, namely, John Sharpe, his old musket resting on his arm, and his (need it be said?) inch-long pipe between his teeth. "Look to yourself, Maud! a shot a-piece for the Papists, and look to yourself!" Thus Gernon expressed his arrangements for his changed position, holding a piece in either hand, and pointing one at Rory and the other at Patrick. And promptly taking his hint, Maud freed Rory's skirts, and faced round to reconnoitre her more formidable enemy. "This is all fair," continued Gernon; "all fair, and prime sport." The fractious tones of John Sharpe reached him from a distance, demanding, in his own idioms, the meaning of the scene before him, and bidding every human being, and the dogs too, be quite still until his closer approach; but, after a hasty glance at him, Gernon proceeded as if he were not in existence. "I have heard tell of your Papish joyant of a dog, Master big O, and long wished to make him and my little beauty better friends; now they are like to be in for it: so, we have nothing to do but look on, and shew them fair

play—Wait for him, Maud! wait for him!" Brann yet wanted about one hundred yards of the ground occupied by his adversary, who, even anticipating her master's advice, coolly though ferociously awaited his attack. John Sharpe, seeing his all-powerful commands made light of, redoubled his exhortations in the other direction, raised his voice to a cracked scream, presented his musket with the left arm, shook his right fist, and at last, in an effort to run forward, fell. At this instant Brann came within a bound of Maud, and, perhaps in deference to the beauty's sex, suddenly stopped short. Feeling no such scruples with respect to him, she was fast in his throat, in requital for his gallantry, before he seemed well aware of her intent. At the first consciousness of assault, or of pain, the noble brute chucked his head backward and forward, but in vain; Maud held him firm. The great strength of his neck and shoulders was sufficient to raise her clear off the ground, and he often did so, but still to no purpose; and in a short time, self-exhausted by his own struggles, as much as he was enfeebled by loss of blood, and agitated by pain, he submitted for a moment to the advantage she had gained over him, lowering his head, so as to permit her to tug hard, and uttering short and broken barks, while she did not suffer a sound to escape her. "The bit will be out the next tug or so if he gives up that way," observed Gernon; while Patrick and Rory looked on, utterly astonished and grieved at this inconceivable discomfiture of their boasted Irish stag-hound: "but stop; what's in his head, now?" continued the Mayor of Bull-ring. Of a sudden, Brann resumed his struggles to shake off his deadly foe. Then he jumped backward, and dragged her with him; her dangerous tugging being now ended, and her whole strength exerted to cling close and keep her gripe. They went back many paces from the spot on which had commenced the fight, Maud still dragged or tossed at the will of her captive. "He wants to get her into the water, the born devil!" cried Gernon; and he had scarcely spoken, when Brann confirmed his surmise, by slipping into a small but deep pool, which he had gradually approached, and forcing the bitch with him. They sunk; they quickly rose again; Brann now above Maud, but Maud's tusks still in his throat, while the water grew tinted with his pure Milesian blood. "And now he wants to drown her!" continued Gernon, observing that, indeed, Brann, easily remaining uppermost in the new element, as well by virtue of his superior strength, as by his skill in swimming, struck Maud repeatedly with his heavy paws, and almost plunged his own nose under water, to keep her from breathing a mouthful of air. "Well! if the ould soul of cunning Papistry be not in the body of that Papish brute, my name's not John Gernon! Draw dogs, Master Patrick, draw dogs! I consent to have it called a drawn-battle, till some other day. Help me, man, I say, or else the to-morrow's bull may wear his garland home to his stall!" and so saying, he discharged both the loaded pieces which he had hitherto held in his hands, evidently as a precaution against an attack upon himself by their owners, Rory and Patrick; and then, flinging them on the bank of the pool, jumped into the water. Patrick followed his example, more out of anxiety for Brann's oozing wound, than for the life of Maud; and both swam, or waded breast or knee high, according to the varying nature of the ground at the bottom of the pool, round their dogs. The bitch's teeth were now easily disengaged from her adversary's throat, for, in fact, she

was half drowned, and sense and muscular power began to decrease together. 'Take him with you, to the mass, if you like, a' God's name! and land him at your own side, there,' exhorted Gernon, when they had parted the animals, and each seized his own by the neck."

We regret we have not room for the bullfight, or some illustrations of the second story; but our readers cannot do better than refer to the volumes themselves, when we think they will agree with our high estimate of Mr. Banim's talents: he is well entitled to rank among the foremost of our modern writers.

Discoveries in the Science and Art of Healing.

By John St. John Long, Esq. M.R.S.L. Together with the Evidence upon which the Author claims the Confidence of the Country, &c. &c. 8vo. pp. 111. London, 1830. Burgess and Hill.

WHEN (as we are ready, and conceive it to be our duty, to bring forward every pretence of improvement in science or art,) we first brought forward for investigation the claims of Mr. Long to the much-desired discovery of a cure for consumption, we excited no small degree of anger on the part of many of our esteemed medical friends. We were, in spite of our general character, which should have exempted us from such reproaches, accused of encouraging quackery and abetting error, and we were laughed at for supposing the disorder to be susceptible of cure. Nay, some genuine quacks, but who had been systematically trained to medicine, and only mixed public writing with their other drugs, used us still worse; and had we not been blessed with an excellent constitution, we are persuaded they would have killed us outright—if railing and abuse could kill. But we calmly held on our course: we said then, as we say now, that Mr. Long's pretensions ought to be examined, and, if erroneous, put down—if justified by results, supported; for the question at issue is of infinite and vital importance to society. There is not a family in the country whom it does not affect; there is not a single breast which it can fail to interest.

And after the inquiries we have made, and the experience we have had, we will not be rallied out of a belief in what we perceive through our own organs of sense, though it were fifty times more improbable than that an individual, not bred as a surgeon or physician, may have made a great discovery in the healing art. The history of the world is full of such events; and we are inclined to think that more valuable mysteries have been unfolded by chances and accident than by scientific research directed to any specific object.

In the volume now before us Mr. Long fairly challenges his adversaries, and brings forward such testimonies in proof of his successful practice, that we do not know by what process of reasoning they can be resisted. Sure we are, that on the tenth portion of such evidence in a court of justice, the decision upon men's properties and lives would be taken without a moment's doubt, and the world would be completely satisfied with the verdict. But in almost all professional matters it is curious to see with what ire an intruder is viewed: one would fancy that the attempt to paint a picture, or compose a tune, or assuage a disease, were in itself infamous in any individual not duly initiated; yet Mr. Long fortifies himself on the authorities of the great Lord Bacon and Sir Astley Cooper, that they, at least in regard to the medical art, did not consider it in this light. "Every medicine (says the former) is an innovation; and he that will not apply new

remedies, must expect new evils, for time is the greatest innovator;" and Sir Astley tells us that "persons who object to a proposition merely because it is new, or who endeavour to detract from the merit of the man who first gives efficacy to a new idea by demonstrating its usefulness and applicability, are foolish, unmanly, envious, and illiberal objectors; they are unworthy of the designation either of professional men or of gentlemen."

Now, by rules of this order we would have Mr. Long's system tried. The whole science of medicine is neither more nor less than a conflict of opinions; hardly two of its wisest and most experienced adepts agreeing upon any one malady or any one method of cure. Hence variances at consultations, and hence the suggestion of fifty different remedies for every ill that attracts attention: such as hydrophobia at this moment. Surrounded, therefore, with so much of doubt and darkness, we are not disposed to quarrel harshly with any individual who endeavours to elucidate some part of the mystery; and we must say for Mr. Long, that he advances into the arena in a candid, open, and manly manner. He states: "the object of this work is to lay before the public the successful results of my researches on some of the more important diseases of the human frame, particularly in the cure of consumption and mania, and prevention of the fatal consequences of small-pox, measles, and hooping-cough, or other analogous inflammable disorders, to which I shall subjoin my reasons for departing from the established rules of medical practice. To point out a new and heretofore unassigned origin for various deviations from the standard of health, whether hereditary or contracted, and to shew that these depend on a certain *acid matter* or *fluid* pervading the system while in a *state of disease*. To prove by indisputable facts that *insanity* is a disease of the *body*, and not a primary distemper of the *mind*. And also to meet the wishes of many correspondents, who are solicitous of being informed of the nature and extent of the diseases that come within the reach of my discovery, and to make the general outline of my practice, in its various adaptations and analogies, intelligible to every capacity; and briefly, to submit the documentary evidence upon which I claim the confidence of the country. In this succinct sketch I shall confine myself to facts, the results of my own experience, and simply state that which I am able and ready to prove by trial at any time, with the view not only of increasing the benefits of my discovery, but of silencing the idle declamation of those whose interest it may be to oppose me."

This, at least, is a plain and honest declaration; and the author proceeds to lay down, with the same plainness, the principles on which he founds his system. Among these the leading ones are—to avoid the use of injurious medicines; instead of weakening, to invigorate the constitution of patients, whatever may be their disorder; and to abstain from blood-letting and reductions, as generally hurtful, since they do not remove deteriorated qualities, but take quantity from quantity, not quality from quantity. There is an obvious common sense in these propositions, whether they may or may not be consistent with the dicta of medical authorities; and we are inclined to think well of common sense in preference to the jargon of schools.

Mr. Long next asserts that he has cured innumerable cases of consumption, after the parties had been given up by the faculty; and that more recently he has found his mode of

treatment applicable to mania and other diseases, which have been effectually removed by it. He also repeats his challenge to undertake the cases of twelve or eighteen persons in three different stages of consumption, (incipient, fair, and desperate,) brought to him by physicians, and to rest the whole merits of his practice on this trial.

Upon these two points we need make few remarks—the test offered shews no fear of failure, and if Mr. Long is so obnoxious to objection as his enemies represent, why do not they overwhelm him at once by this experiment? The matter at issue is important enough to deserve a trial: nay, if only one life, instead of the lives of the hundreds to whom Mr. Long appeals, was concerned, he should be taken at his word and put upon his probation. But till that is done, he must be judged by such facts as he alleges in support of his success; and this volume, it cannot be denied, contains the most staggering proofs which it is possible for medicine to produce.

The great Dr. Cullen held that a remedy for consumption might be discovered; and Mr. Long is only one of several * who have claimed the credit of unfolding that inestimable secret. But he does more, he brings forward his living witnesses to demonstrate the truth of his assertion. And, be it observed, these are not ignorant, uneducated, low, and incredible persons; but, on the contrary, individuals of intelligence, of the first education, of high rank, and of the most unquestionable credibility. When we see the names of such men, to documents of the kind produced by Mr. Long, as Lord Harewood, Lord Dartmouth, Lord Howe, Lord Ingestre, Sir Thomas Lawrence, ladies of similar station in the upper circles, physicians, superior officers in the army and navy, eminent merchants, and plain sensible citizens, (and there are all these,) we really do not know on what ground we could refuse credence to the fact, that he has and is achieving many and very extraordinary cures: and Mr. Long has now under his care eminent members of the houses of Lords and Commons, and ladies of the first distinction, bearing evidence to their improvement, or perfect recovery.

But we have yet another substantiation of Mr. Long's method to state, and truth and justice will not suffer us to withhold it, to whatever obloquy it may expose us in sceptical quarters. We did not introduce the question to the public (as it may be remembered by our readers) without satisfying ourselves, by personal inquiry and examination of patients, either cured, or in the way of being restored to health; and we only vouched so far as they declared to us. This was a year ago, and we were told that the whole was an illusion, and that these parties would infallibly relapse and

* A curious paper was lately read to the Académie des Sciences, at Paris, by M. Flourens, on what is called hibernation. Hibernation, in natural history, is the state of torpor and lethargy in which several animals, as the marmot, for instance, pass nearly the whole of the winter. Cold, insensible, immovable, rolled up into a ball, they continue for three or four successive months without eating, without drinking, without breathing, and almost without any circulation. M. Flourens made a variety of experiments, with a view to ascertain the causes of this phenomenon. The result appears to be, that it is by the gradual decrease of respiration in these animals that the cold is permitted to operate in producing the state of torpor alluded to; and that as the respiration regains its activity, the operation of the cold becomes less and less influential. From other experiments made on birds, M. Flourens confidently draws the following conclusions, as applicable to human beings; viz. that a prolonged exposure to cold is one of the most powerful causes of pulmonary consumption; and that, on the contrary, living in a warm place is so powerful an antagonist of that malady, that, alone, it is sufficient to cure it when it has not been allowed to proceed to the last stage.

die: but they have *not!* We have made it our business, before we returned to the question, to see them again, to write to them, and to ascertain the exact situation in which they now are. The result has been most satisfactory: and as one case is the counterpart of nearly all, we will refer to that stated at pages 64 and 5 of Mr. Long's book. We visited this individual, (so distinguished in the scientific and mechanical world,) and we saw the dying man of two and three years ago, in perfect health, attended by a beautiful infant family, and attributing his "recovery from the grave," on the brink of which he had stood, to the efficacy of the system pursued by Mr. Long. Such a fact needs no comment.

But not to intrude too much upon our readers with a subject of this kind, we shall close for the present, reserving some remarks on the pathology involved in the author's theory for another occasion.

The Family Library, No. XIII.; British Painters and Sculptors, Vol. III. London, 1830. J. Murray.

OUR worthy friend Allan Cunningham improves so much as he goes on, that we could wish his three volumes increased to three times three. This is a very interesting performance, with lives of Grinling Gibbons, Gabriel Cibber, Roubiliac, Wilton, Banks, Nollekens, Bacon, Mrs. Damer, and Flaxman: the last is the best of the whole; and the penultimate, we think, rather the worst, from not being treated in the same liberal and generous spirit which has been extended to the masculine portraits in the book, but ungallantly withheld from the only female. We must also protest against some of the posthumous assaults upon the memory of Sir Joshua Reynolds: the anecdotes may be true, but they may also be miscoloured; and as the dead cannot explain or refute them, we are always sorry to see a bright name darkened, where no moral purpose can be promoted by the act. We are sure that honest Allan has been impelled to do as he has done by a strong sense of justice; but still we would rather that he had softened somewhat of its sternness, and left the whip to other hands.

Having said thus much by way of preface, we shall extract a few passages from the interesting memoir of Flaxman, the most classical and imaginative of England's sculptors.

Flaxman (born at York, July 6, 1755) was the son of a moulder of figures, and in his father's little shop, in New Street, Covent Garden, and in the Strand, imbibed, or rather, perhaps, developed, that (innate) genius which raised him to such fame in after life. He was a weakly child, and slightly deformed; but serene in disposition and enthusiastic in soul. His tastes were precociously displayed, not only in drawing and modelling, but in reading Homer and other illustrious authors—extraordinary pursuits for a boy of the tender age of seven years.

"A great and salutary change (his biographer tells us) took place in his tenth year. He had been hitherto weak and ailing; his studies had been repeatedly interrupted by long fits of illness, and, unable to move without crutches, he had seen little of the green fields, and shared in none of the sports natural to boys of his age. A flush of health came upon him at once; he grew strong, lively, and active; the crutches were thrown aside, never to be resumed; and full of a new spirit, he thought of nothing but adventures such as happened to heroes of romance, and longed to have opportunities of showing his generosity and cou-

rage. A perusal of that enchanting book, Don Quixote, a tall folio, 'translated by sundry wits of Oxford,' wrought this enchantment upon him. 'He was so much delighted with the amiable though eccentric hero,' observes a biographer, 'and his account of the duties and honourable perils of knight-errantry, that he thought he could not do better than sally forth to right wrongs and redress grievances. Accordingly, one morning early, unknown to any one, armed with a little French sword, he set out, without a squire, in search of adventures which he could not find. After wandering about Hyde Park the whole day without meeting enchanter or distressed damsel, he returned home rather ashamed of his romantic flight, and never again sought to emulate the exploits of him of La Mancha, though he always retained a great admiration of his character.' This family legend lends some countenance to a story which I may relate without attesting. Flaxman, it is said, was one day describing a statue remarkable for the truth of its proportions, and more for its heroic beauty, which he had seen somewhere in Italy, and wishing to give a clear idea of it, put himself into the position of the figure, and holding up his hand and extending his right arm, said, 'Look, my lord, at me.' The diminutive stature and disproportioned body of the great sculptor supply the ludicrous of a tale which more will laugh at than fully believe. When health and strength came, Flaxman seems to have made up his mind to follow sculpture. He modelled and drew most assiduously; his father's shop was his academy, and the antique statues which it contained supplied him with form and proportion; their serenity of sentiment presented something akin to his own emotions. If it be true that Roubiliac said he saw no symptoms of genius about our artist's boyish compositions, he was not more fortunate in another artist, to whom, in a moment of confidence, he shewed a drawing of a human eye: 'Is it an oyster?' inquired Mortimer. The joke of the jester made a deep impression upon the sensitive boy, and he resolved to shew no more attempts of either modelling tool or pencil to those who consider it wisdom to humble the enthusiasm of youthful genius. His belief in his own talent was not to be shaken by a few light words; the feeling of internal power had come early upon him; and when he sat, a lonely child with his crutches beside him, reading of poets, heroes, and ancient worthies, he had resolved to attempt something by which his name also might be continued to the world."

We do not follow the narrative through the details of his attracting the attention of Mr. and Mrs. Mathew, who cultivated his predilection for the mighty writers of Greece and Rome; or of his studies at the Academy, where Engleheart carried off the gold medal from him,—upon which occasion Mr. Cunningham severely censures Reynolds and the council. Among his labours at this period for subsistence may be mentioned the making of models for the Wedgewoods' celebrated pottery; and in ten years, previous to 1782, he exhibited thirteen works at the Royal Academy, "including five portraits in wax or in terracotta, and a sketch for a monument to Chatterton. The busts are not even named—no description has reached us of the monument of Chatterton—but of the other seven works a more particular account can be rendered. One was a model in clay of Pompey after his defeat at Pharsalia—a second of Agrippina after the death of Germanicus—a third, Hercules with Dejanira's

poisoned shirt—a fourth, Acis and Galatea—and a fifth, the death of Julius Cæsar. Some of these were terracottas and in relief, others were in plaster of Paris; all were less than half the size of life, and none of them were in marble. Here is a sure proof of the early pecuniary difficulties under which this eminent man laboured—if patronage had smiled, the plaster-model would assuredly have been converted into marble, and the half-size expanded to that of life. In the year 1782 he quitted the paternal roof, hired a small house and studio in Wardour Street, collected a stock of choice models, set his sketches in good order, and took unto himself a wife—Ann Denman—one whom he had long loved, and who well deserved his affection. She was amiable and accomplished, had a taste for art and literature, was skilful in French and Italian, and, like her husband, had acquired some knowledge of the Greek. But, what was better than all, she was an enthusiastic admirer of his genius—she cheered and encouraged him in his moments of despondency, regulated modestly and prudently his domestic economy, arranged his drawings, managed now and then his correspondence, and acted in all particulars so that it seemed as if the church, in performing a marriage, had accomplished a miracle, and blended them really into one flesh and one blood. That tranquillity of mind so essential to those who live by thought, was of his household; and the sculptor, happy in the company of one who had taste and enthusiasm, soon renewed, with double zeal, the studies which courtship and matrimony had for a time interrupted. He had never doubted that in the company of her whom he loved he should be able to work with an intenser spirit: but of another opinion was Sir Joshua Reynolds. 'So Flaxman,' said the president one day as he chanced to meet him, 'I am told you are married—if so, sir, I tell you you are ruined for an artist!' Flaxman went home, sat down beside his wife, took her hand, and said with a smile, 'I am ruined for an artist.' 'John,' said she, 'how has this happened, and who has done it?' 'It happened,' said he, 'in the church, and Ann Denman has done it—I met Sir Joshua Reynolds just now, and he said marriage had ruined me in my profession.' For a moment a cloud hung on Flaxman's brow: but this worthy couple understood each other too well to have their happiness seriously marred by the unguarded and peevish remark of a wealthy old bachelor. They were proud, determined people, who asked no one's advice, who shared their domestic secrets with none of their neighbours, and lived as if they were unconscious that they were in the midst of a luxurious city."

This is a beautiful picture of a well-assorted union; and we would hold it out as worth all the models that ever even Flaxman made, for the imitation of every conjugal pair, whether they happen to be engaged in the fine arts, in literature, or in the ordinary pursuits of life.

Flaxman, thus happily and congenially married, visited Italy in 1787, and speedily acquired a great reputation; and here again Mr. Cunningham pays a distinguished tribute to the virtues and excellence of his partner-wife.

"Those (he says) who desire to see Flaxman aright during his seven years' study in Italy, must not forget to admit into the picture the modest matron who was ever at his side, aiding him by her knowledge and directing him by her taste. She was none of those knowing dames who hold their lords in a sort of invisible vassalage, or with submission on their lips and rebellion in their hearts make the victim walk as suits their sovereign will and pleasure. No;

they loved each other truly; they read the same books, thought the same thoughts, prized the same friends, and like bones of the same bosom, were at peace with each other, and had no wish to be separated. Their residence was in the Via Felice; and all who wished to be distinguished for taste or genius were visitors of the sculptor's humble abode. Patrons now began to make their appearance: the author of the Homeric designs might be countenanced with safety." These designs were the well-known and noble series to illustrate the *Iliad* and *Odyssey*.

On his return to England, Flaxman found Banks, Bacon, and Nollekens, in full employment; but he immediately entered upon the highest branch of his art, and cultivated it with such success, as to acquire the foremost rank of them all. In his forty-fifth year he was made a member of the Royal Academy; and his future life was spent in private esteem and public honour; his productions, full of poetry and magnificent ideas, nobly sustaining him at the pinnacle which his genius had reached. The account of his various works and the incidents of his life, is ably written; but we must refer to the original for the gratification of perusing it, and content ourselves with one farther extract, which curiously describes the sculptor's process in working in marble.

"It was the practice of this eminent artist to work his marbles from half-sized models—a system injurious to true proportion. The defects of the small model were aggravated, at the rate of eight to one, in the full-sized marble; and such is the nature of the material, that no labour, however judicious, can effectually repair so grievous an error. It is true, that one with an eye so correct, and a taste so well determined, was unlikely to make great mistakes; but all those acquainted with working in marble know, that the removal of one defect is often the means of discovering two, and that any change is like cutting a tooth out of a nicely balanced wheel. By working in that way, indeed, time is supposed to be saved, also some expense—and chiefly the difficulty is eluded of raising up a large structure of wet clay, and preserving it in just proportion till modelled and cast in plaster. But little labour and little thought go to construct a skeleton of wood, in the shape of the figure to be made, round which the modelling clay is wrought—a constant practice with those who feel it to be wiser to work in a soft and pliable material than commit themselves with small models in the difficulties of marble. By means of this skeleton of wood, the naked figure is raised; and farther frame-work is constructed to support hanging draperies. Wire and bits of wood will suspend arms or folds; while the whole skeleton is kept in its position by an upright piece of timber, resembling the mast of a ship, which rises out of the centre of the turning-bank on which the statue is modelled. When the skeleton is ready, and the modelling-clay nicely beat up till it is pliable as the softest dough, the artist places the sketch which he means to copy before him, and cutting the square lumps of clay into long thin slices, works it round the frame-work and beats it solidly in, so as to leave no crevices in which water may lodge and endanger his labour. The clay wrought with tools of wood, and with the hand, gradually grows into the desired form: the artist turns the figure round and round—proves it in strong and in weak lights—compares it with living and also dead models; and when he conceives it to be true in proportion, and expressing the wished-for sentiment, pro-

ceeds to clothe or drape it. All statues are modelled naked and then clothed: this insures accuracy of proportion and gracefulness of shape, without which no drapery will hang with elegance, and fine workmanship is thrown away. To obtain a natural and flowing drapery, a cloak or robe of the same texture of that to be represented is put upon the lay figure—the figure itself fixed in the proper position, and the robe adjusted till it falls in the desired manner: the general idea of the drapery—the chief leading lines—are already determined, and from the robe the detail is copied. In these great essentials—proper conception of sentiment, posture, and drapery—Flaxman was a master. When the model is completed, a mould in plaster of Paris is then made over the figure; and all the clay and frame-work are removed. The mould being made in two parts is readily washed and placed together; the cast is then formed of a finer plaster than the mould, and irons are put up the centre to support it. With a wooden mallet and a blunt chisel formed like a wedge, the artist removes the outer mould, which peels readily off; when the plaster statue is entirely cleaned down, it is then fit to be dried in a hot stove, and copied into marble. Had Flaxman made his models full size, he would have been no loser of time; and certainly in fame, of which he was justly more careful, he would have been a gainer. The process of rough-hewing the marble from a full-sized model, is quick, and easy, and safe, compared to using the lesser size; and in carving the artist sees his way far better, where every fold, however minute, is clearly made out and defined. The simplicity and accuracy of the new pointing instrument furthers labour greatly, and transfers the minutest part of the original plaster-model with mathematical precision to marble. Flaxman latterly became sensible of the advantage of large models—his Archangel Michael overcoming Satan was made in that manner, and so were several of his lesser works."

LIFE OF BISHOP HEBER.

CORIOUS as were our analysis and illustrations of this work in our last *Gazette*, we are induced by its interest to add yet a few columns to the notice.

"In a review of Sir John Malcolm's *History of Persia*, which appeared in the *Quarterly*, Mr. Heber introduces a prophecy of the death of Timour, or Tamerlane, who, 'after founding an empire more extensive than the life of any other man has sufficed to traverse, was arrested, like a tyrant of later days, in his schemes of universal sovereignty, by the rigours of a premature winter, which prevented his march to China.' He died at Otrar, seventy-six leagues from Samarcand. 'This event,' he observes, 'almost naturally slides into poetry.'

Timour's Council.

Emirs and Khans in long array
To Timour's council bent their way;
The lordly Tartar, vaunting high,
The Persian with dejected eye,
The vassal Russ, and, lured from far,
Circassia's mercenary war.
But one there came, uncall'd and last,
The spirit of the wintry blast!
He mark'd, while rapt in mist he stood,
The purposed track of spoil and blood;
He mark'd, unmoved by mortal wo,
That old man's eye of swarthy glow;
That restless soul, whose single pride
Was cause enough that millions died;
He heard, he saw, till ev'ny woke,
And thus the voice of thunder spoke:—
'And hast thou thus, in pride unfill'd,
To bear those banners through the world?
Can time nor space thy toils defy?
O king, thy fellow-demon I!

Servants of Death, alike we sweep
The wasted earth, or shrinking deep,
And on the land, and o'er the wave,
We reap the harvest of the grave.
But thickest then that harvest lies,
And wildest sorrows rend the skies,
In darker cloud the vultures sail,
And richer carnage taints the gale,
And few the mourners that remain,
When winter leagues with Tamerlane!
But on, to work our lord's decree;
Then, tyrant, turn, and cope with me!
And learn, though far thy trophies shine,
How deadlier are my blasts than thine!
Nor cities burnt, nor blood of men,
Nor thine own pride shall warm thee then!
Forth to thy task! we meet again
On wild Chabanga's frozen plain!"

There is some romantic writing in a masque entitled "Gwendolen," to which we are sorry we have only room to refer; while we insert a very playful letter on a subject of a light and sportive character.

"There is yet another hospital for minor wits, which, in wideness of circulation, falls only short of the *Quarterly Review*; in elegance of exterior, surpasses the most splendid album; and which, from its judicious mixture of useful information, elegant literature, and blank paper nicely ruled, is the peculiar favourite, the chosen companion, the faithful confidante, and depository of secrets for the young, the fair, and the tender-hearted. Alas, my dear—I fear you have been so ill educated that you do not at once perceive that I allude to 'Gledge's Royal Engagement Pocket Atlas and Almanac,' a work which has the distinguished merit of gathering up the smallest possible sparkles of human intellect; which affords a twelve month's immortality to many whose names would otherwise have never been repeated out of their own families; which offers to our notice scenes from popular novels unknown to any review; prints of villas, to which the nearest ale-house-keeper could hardly shew the way; fashions which she who follows does it at her own peril; and poetry, which Milton himself would have found it necessary to imitate, if Milton had sought the applause of milliners and young apprentices. Let it not, however, be supposed that there is no distinction of rank in Gledge's paradise, or that the higher distinctions are not here, as elsewhere, the exclusive inheritance of talent and of toil. To carve a snuff-box requires, indeed, less genius than to produce a Laocoon or a Farnese Hercules. But even in snuff-boxes there is a great difference; and much diligent study, and many sleepless nights, are requisite before we can hope to receive a prize pocket-book for the best charade, and to produce a logogram on which our fame may rest in profound security. So, at least, I am assured by a young acquaintance who overtook me some time ago in the streets of a great mercantile city, where he had a few years previous been placed by his parents with an eminent conveyancer. I had known him before as a youth of very pleasing manners and exterior; of good temper; of lively talents; and, at least, as well informed as the majority of lads who pass from the school to the counting-house. I was, therefore, not surprised that, while pressing me to dine with him, he enforced his request by the offer of introducing me to some very agreeable literary characters, with whom he had been so fortunate as to form an intimacy. I felt, however, I knew not why, something like a cold shudder when he further informed me, that these able and amiable young men were in the habit of meeting in an evening to read their own works to each other. But, as I was able to plead a previous engagement, I went on to inquire with some interest, and much personal tranquillity, into the nature

of those studies to which his friends were chiefly addicted, and of the compositions which were thus produced for the common advantage of the society. 'Oh, sir!' was his reply, 'we are all, like yourself, zealous votaries of the muses.' Many of us have repeatedly obtained the prize for charades and riddles; I have myself made so much progress as to have written three letters in verse to my parents,—and you will perhaps think me vain—but I am now just engaged in a logogram, which, even Mudge himself assures me will be very tolerable. 'Mr. Mudge,' I said, 'is, I presume, the most formidable critic of your society.' 'Oh, sir, he is all in all with us. He is, indeed, a man of extraordinary talents, who has been, for some time, the main support of the 'Royal Engagement and Pocket Atlas,' and whose contributions, under his assumed name of *Asphodel*, have been solicited with propitiatory presents by half the stationers in the kingdom. Poor Mudge,' he continued, 'he is, indeed, an enthusiast in logograms! It was only last week that, after a restless night employed in intense meditation, a heavy slumber fell on him, from which he awoke under the strangest circumstances imaginable. His pulse beat high; his skin was feverish; a word, of which he felt, as it were, the weight, seemed bursting from his soul, and a conviction flashed on his mind that this word contained the elements of the most extraordinary logogram in the English language. He sprang from his bed,—he thrust his head through the window. Immediately a stream of words extractable from this one rushed on his memory, and he has already made out a list of five hundred and seventy-six, without one obsolete among them! When I had recovered from the whimsical contrast which this logogrammatic *Berserksgangr* presented to the parallel exploit of Coleridge, who wrote his *Kubla-Khan* under the effects of opium, I inquired if this prolific 'Mater Lectionis' was a very long one. 'Only four syllables,' he answered, with a smile; 'but perhaps, sir, if you are not much in the habit of composing logograms, you can hardly conceive how many words a single well-chosen noun may be coaxed into. For instance, how many are there in steam-boat?' 'Two,' I rashly made reply,—steam and boat.' 'Aha!' said he, with a laugh of good-natured superiority, 'have I caught you? Are there not to be framed out of these letters, beast and boast, and toast and oats, and beam and meat?' 'Oh spare me!' interrupted I, 'you have perfectly convinced me.' 'I thought so! and do you know that this is my own logogram, and that I have already gotten eighty-six words, and hope to find more?' 'This,' said I, 'is indeed vastly clever and curious; but what (I speak ignorantly) has it to do with poetry?' 'Surely, sir,' was the reply, 'you do not think that Gledge would admit into his pocket-book any thing which was not in verse? No, believe me; we are obliged not only to describe our original word enigmatically and poetically, but to give each of its dependent terms in a separate couplet, and under the like mask of a riddle. Let me tell you it is no easy matter to give a figurative and allegorical account of eighty-six words successively.' I here lifted up my hands and eyes, which action my young companion observed, and continued, 'It would indeed, as you may think, be impossible without long practice; but my friend Mudge, who is far above any paltry jealousy, has put it in my power to make a progress beyond any of the

club, by revealing to me the secrets of his own eminence, and procuring for me 'Bysshe's Art of Poetry and Complete Rhyming Dictionary.' Of course you are well acquainted with the work; but those who have not seen it would be quite astonished to find how easy it is, with such a guide, to write poetry.' 'Has Mr. Mudge,' I inquired, 'favoured his friends with any poetry of a different description from logograms?' 'Has he not?' was the reply; 'I should like to repeat to you his 'Weeping Window,' and his 'Answer to an Invitation to a Strawberry Feast.' We had by this time arrived at the point where we were to separate, but the temptation was too strong to resist; I turned down his street, and became his willing auditor, endeavouring, at the same time, with all my power to commit the precious morsels to memory. The first, unhappily, in a great measure escaped me; and I can only remember that a window-glass, on a rainy day, was called 'the amorous pane of a despairing lover.' In my report of the second I can answer for my own accuracy, though I must despair of doing justice to the luminous comments with which my friendly reciter accompanied them. 'He begins,' said he, 'as you will observe, in a playful style:

Friend Higginson, I've understood
That strawberries are wholesome food,
And see no cause to doubt it;
For many pottles I have swallowed,
And no bad consequence has followed,
Then why say aught about it?

'Why, indeed?' said I. 'Oh sir, said he, impatiently, 'observe the invocation which follows:)

Hail, strawberry! thou fruit divine!
In any other shape than wine,

(Strawberry wine, you know, is but nasty stuff)

With Branker's patent suavity!

(Branker, you will observe, sells patent sugar)

Such parties do I daily see
At Phoebe Brown's, by aid of thee,
Who dissipate their gravity.

(Phoebe Brown sells strawberries. Now comes the apology:)

But, Higginson, upon my soul,
Though much I love the spoon and bowl,
I can't go with you now!
Such an engagement have I fix'd,
My hope is vain of strawberries mix'd
With extract of the cow!

Extract of the cow! ha, ha, ha!—meaning cream; ha, ha! But you are in a hurry: Good morning. Let me see you if you come into this neighbourhood again.—Extract of the cow! There's for you!

Speaking of his Majesty's trip to Scotland in 1821, Mr. H. truly observes—

"I rejoice exceedingly that the king's expedition is to take place. . . . If, after visiting Ireland, he sails in his yacht to Glasgow, and thence returns by Edinburgh and York, he will have done much, very much, towards regaining a positive and personal hold on the affections of a people who are naturally more inclined to admire and serve the stately figure whose smiles and bows they have shared in, than the abstract term which they have only known as G. R. on the top of a tax-paper, or which they have seen embodied in the vile caricatures of Hone and Company. I verily believe the Welch could hardly have rejoiced more if Arthur had risen again, than in the prospect of seeing him; all those who handle harp or organ anticipating royal applause, and all those who write dissertations and publish archaeologies, looking forwards to the establishment of British professorships in the univer-

sities, and many similar *avatars* of bounty and patronage."

We have spoken of Heber's serenity of mind and gentle gravity, yet how innocently gay!—thus he writes at sea, after sailing for Calcutta:

"Of the sea, on which so large a part of my future life must be passed, (more particularly if I carry my Australasian visitations into effect,) I have already some means of forming an opinion, and so far as I am myself concerned, we seem likely to suit each other perfectly. Though we have had a good deal of contrary weather, and our full allowance of the noble game of pitch and toss, I have not been unwell even for an hour; and between the various occupations of reading, writing, walking the quarter-deck, watching the flying fish, and learning Hindoostanee and Persian, I have not as yet felt any of that vacuity of time of which I was most apprehensive, and of which others have complained as the worst calamity of a long sea-voyage. The only want I feel is of exercise,—a serious one, and which I know not how to remedy; merely pacing the deck is nothing. I cannot (*salva gravitate*) amuse myself with running up and down the shrouds as the young cadets do;—and though I have a most majestic and Patagonian pair of dumb bells (after the manner of Bengal), I cannot use them in my cabin without endangering my wife and child, and have not yet reconciled myself to exhibiting them on deck, or among the hen coops. My resource, I apprehend, must be to live more sparingly in proportion to my necessary inactivity; but, as my northern appetite still subsists in full vigour, even this will be by no means an agreeable remedy; while it is one of which my shipmates seem to have no notion. Most of them every morning begin at half-past eight with a breakfast of cold ham, mutton chops, or broiled herrings; renew the war at twelve with biscuit, cheese, and beer; dine at three in a very substantial manner; tea it and toast it at six; and conclude the day at nine with a fresh lading of biscuit and cheese, and a good tumbler of grog or wine and water. The ladies, indeed, do not leave their cabins before dinner-time, and are only present in the cuddy at dinner and in the evening. Yet I hear the clash of knives and forks going on with great spirit behind the bulk-heads; and have every reason to believe that the weaker sex finds at least as much need of a full and generous diet as the colonels, majors, and captains of sea and land. And this (I am assured by many persons) is the custom of India, where 'to eat little and often' is recommended by the best physicians. The 'often' they have certainly hit off to a nicety. Of the 'little' I will only say, that if this be the abstinence of the East, it is no matter of wonder with me that some folks leave their livers there. Though now decidedly within the tropics, and with the sun to the northward of us, we have no heat to complain of; and though most people on board have assumed linen or camlet clothes, it has been, I think, as much from fashion as necessity. Till within these few days, indeed, the weather has been decidedly cold; and, while in the latitude of Lisbon and Gibraltar, the captain more than once complained that, if it had not been for the 'blue water,' he might still have fancied himself amidst the cold and 'dirty' weather of the Channel or the German Sea. Of this blue water I had heard much, and it certainly does not fall short of my expectation. In bright weather it is, as compared with our green sea, richly and strikingly beautiful, and the flakes of foam streak it like *lapis lazuli* inlaid with silver. Even in storms it has

a warmer and richer tint than that of the waves which chased us from Ibreei's land towards Parkgate, and enables me to understand more fully than I ever did before the 'wine-faced sea,' *oinea pavos*, of Homer. For the rest, I have seen dolphins, flying fishes, and a grampus; a whale and a shark have paid the ship a visit, but I was not then on deck. The flying fish are, as yet, very small; and the flocks in which they skim along the surface of the waves gives them so much the appearance of water-wagtails, that a repeated and attentive view is required to convince a stranger of their actual fishhood."

As an appendage to this, we cannot resist a sketch of him in one of his journeys in India, written by his companion Mr. J. Lushington.

"September.—Hume says that admiration and acquaintance are incompatible towards any human being; but the more I know of the Bishop, the more I esteem and revere him—

cujus amor tantum mihi crescit in horas,
Quantum vere novo viridis se surrigit albus.

He seems born to conciliate all parties, and to overcome what has before appeared impossible. Most great talkers are sometimes guilty of talking absurdities; but, though scarcely an hour silent during the day, I have never heard him utter a word which I could wish recalled.

"Futtehpoor.—In coming through a brook of water running across the road, the Bishop's horse thought proper to lie down and give him a roll; with his usual kindness, instead of kicking him till he got up again, he only patted him, and said, 'he was a nice fellow.'

"Kulcanpoor.—Notwithstanding the threatening appearance of the skies, the Bishop and I set off to ride a long sixteen miles. We had sent on all our clothes, hoping it might clear up; but had scarcely rode a hundred yards when a rain came on that wet us to the skin; and as we had not a dry rag to put on had we returned to the tents, we faced the pelting storm, which, by the by, was straight in our eyes, most manfully. 'We staid not for brook, and we stopped not for stone,' but dashed on to Pulliampoor, which we reached in about an hour and a half,—at least I did; his lordship's horse knocked up, and he was not up for half an hour after me. There was no standing on ceremony, and I rode on and got a fire lighted in a wretched serai. Perhaps the smoke and stink, &c. kept out the cold, which I thought I must have caught after standing so long in drenched clothes. The scene was rather good when the Bishop arrived. There was the Lord Bishop of all the Indies sitting cowering over a wretched fire of wet wood, the smoke of which produced a bleary redness about the eyes, surrounded by a group of shivering blacks, some squatting, some half afraid to come further than the doorway of the hut; and in the back-ground, close to his head, my horse's tail, with a boy attempting to scrape off some of the mud with which the poor beast was covered all over. The walls were of mud, and the roof of rotten smoked bamboo, from which were suspended two or three Kedgerees pots. We cut jokes upon the ludicrous figure we were conscious of making, and were comfortable enough as long as we were eating, which we did with ravenous appetites. But in a short time we began to be sufficiently wretched, worse far than the 'stout gentleman' on a rainy day—for the 'traveller's room' leaked like a sieve. There were camels, and oxen, and tattoos too, all standing and crouching to be rained upon; and one solitary cock, with his tail drawn up by the wet into a single feather; but there were not even a

couple of gabbling ducks to enliven the dreary yard. The small tents which had been sent on last night were so soaked, that if you touched the roof with the tip of your finger, it immediately attracted a stream of water which ran down your sleeves; they were perfectly pregnant with rain, and at the slightest motion given emitted a sluice. Our beds being all thoroughly soaked, though covered with oil-cloth, we were obliged to turn into the palanquins, which were, perhaps, the best of the two, as one is quite secure from rain in them."

And here we end, again warmly recommending these volumes to the public.

Pickering's Aldine Edition of the British Poets. Vol. II.

THIS handsome volume concludes the poems of Robert Burns (thus comprised in two neat and convenient tomes); and we have rarely seen a prettier book. We could have wished that some of the looser productions of the poet's fancy had been omitted, though no great friends to that sort of fastidious emendation.

Personal Memoirs; or, Reminiscences of Men and Manners at Home and Abroad during the last half Century: with occasional Sketches of the Author's Life: being Fragments from the Portfolio of Pryse Lockhart Gordon, Esq. 2 vols. 8vo. Colburn and Bentley.

THE very miscellaneous reminiscences of an old gentleman, who has seen much of the world as an officer of marines, a soldier-officer, a traveller, and an observer of what passed around him. It is a book to be taken up and laid down with great amusement; but as our mode of reading is more of the business order, i. e. straight forward, we shall defer our notice of the work till next week, when we shall have the pleasure of exhibiting a selection of its medley contents to our readers.

Conversations on Religion with Lord Byron and others, held in Cephalonia, a short time previous to his Lordship's death. By the late James Kennedy, M.D. Medical Staff. 8vo. pp. 461. London, 1830. J. Murray.

THIS interesting publication has reached us too late for a detailed criticism. The author, though of the class called evangelical, describes Lord Byron as having only "a slight tincture of infidelity." His error, he contends, was levity, but no deliberate denial, or rejection, of religion; in short, "he was like all those nominal Christians who are unregenerate." He was unsettled—not happy, and wished to be convinced of the truth; but rejected the appellation of infidel, which he said was a cold and chilling word. There are some curious anecdotes in the volume.

An Inquiry concerning the Indications of Insanity; with Suggestions for the better Protection of the Insane. By John Conolly, M.D., Prof. of Medicine in the University of London. 8vo. pp. 495. London, 1830. J. Taylor.

A MORE interesting subject, or one less understood, could not be brought under public discussion; and we are glad to see a physician of Dr. Conolly's skill apply his talents to its elucidation. Like hydrophobia, insanity appears liable to many conflicting definitions, and to still more numerous nostrums prescribed as certain cures. Dr. Conolly has brought the strong artillery of common sense, as well as

professional knowledge, to bear upon the questions. Need we add, that his book is one of marked utility?

Parochial Law. By Alex. Dunlop, Esq., Advocate. 8vo. pp. 416. Edinburgh, 1830. Blackwood.

THE able work of an able writer on subjects of this kind. Though of little use as a book of reference on this side of the Tweed, it must possess great value in Scotland; and we could well wish to see a similar epitome in England.

The History of the Church, from the Creation of the World, &c. By the late A. S. Paterson, of Aberdeen. Revised, &c. by the Rev. J. Brewster. 2 vols. 8vo. Aberdeen, 1830. Clark and Son; Edinburgh, Oliver and Boyd; London, Whittaker and Co.

THE worthy author began soon enough with his history—the creation—when there was no church! Nevertheless, in the way of question and answer, this is a genuine deduction of sacred history from the Bible, and, in later times, from Calvinistic divines and authorities.

Traits of Scottish Life, and Pictures of Scenes and Characters. 3 vols. London, 1830. Whittaker, Treacher, and Co.

WE really cannot award very high praise to the present author—his pictures want force, and his characters originality; while the ground he has taken has been too thoroughly beaten, for the subject to give him any assistance in the way of novelty.

Sir Ethelbert, or the Dissolution of Monasteries; a Romance. By the Author of "Santo Sebastiano," &c. 3 vols. London, 1830. Longman and Co.

SANTO SEBASTIANO was a very popular novel of our younger days, and these volumes possess the same interest of story, kept up by undeveloped mystery; while somewhat of our modern school is visible in the exactness of historical detail, and the minute accuracy of manners and costume. Our author has thus added industry to invention, and united a due portion of research with his romance.

The Sailor Boy; or, the Admiral and his Protégé: a Novel. By Rosalia St. Clair, Author of "Banker's Daughter of Bristol," &c. &c. 4 vols. London, 1830. Newman and Co.

A NOVEL of the old school, with as many incidents as pages; and really very amusing. We doubt not but many of our novel-loving readers will feel much interest in the pains and perils of the sailor hero.

ORIGINAL CORRESPONDENCE.

THE RAINER FAMILY.

[In a recent L. G. we inserted a very characteristic epistle of the elder Rainer to a friend; and we have been so much interested by the following, from and to the same parties, as to find a place also for its appearance.]

Edinburgh, June 5th, 1830.

MY dear friend,—I received your letter at Dublin, and have seen with great pleasure that you and all your's do well, we have altered as you see our road and are gone from Dublin instead to Liverpool to Edinburgh we intent to stay a few weeks longer in England, and then we are obliged to say good by to this country for ever! to this country to which we are so much indebted and to which we have to thank all our wealth comfort and happiness in our old days! it is most painful for

us to leave this country where we have met with so great encouragements and we are proud to say a great many of truly good friends; who from Royal George through all ranks protected and advised us as we came to England ignorant of the world and the English language, but the good and hospitable people of England received us so that we never shall forget it in our life and we will feel always thankfull and obliged to England and her most gentlemanly population! I hope to have the pleasure to see some of our friends in our own country, and we will with great pleasure do every thing in our power to make their stay as pleasant as possible, yet dear — if you or any of our friends shall coming to our country you have not need to enquire in large Towns for us, no, you shall ask for the small Ziller Valley and for the like small Village of Kügen and there you will find us amongst our family and relations in small houses build of wood happy and comfortable I hope! !

I have no doubt but that we could life here in England by all means good and comfortable but my dear friend if I look on the other side on the watter I see my old beloved father weeping for anxiousness to see us I see my dear wife her face towards the sea and I hear her calling out, felix my husband come in the arms of your wife as soon as possible your wife has no other wish in this world then to see you and to life with you! and this is sufficient to make me sorry for every one day that I must spend abroad.

Now I beg your pardon for trespassing so long on your time and I send, in union with my sister and brothers, our sincerely respect and good wishes to you and all yours, believe me I am your truly friend, FELIX RAINER.

Shall anything coming to you for us be so kind to send us to, Newcastle upon Tyne, in which place we will be in a fourthnight, we leave Edinburgh to moro for Aberdeen I would feel obliged if you would write me a few lines to Newcastle, good by.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

THE last of these agreeable evening meetings for the season took place on Friday se'nnight. The subject was on the laws of the co-existing vibrations in strings and rods; being one of that series of illustrations of the philosophy of sound, contrbuted by Mr. Wheatstone, and delivered by Mr. Faraday. Such parts of the preceding lectures on this exceedingly interesting subject, as had reference to the vibrations of strings, either in the lowest mode as a whole, or in the higher mode when subdivided into aliquot parts by nodal points, were touched upon by Mr. Faraday, who then shewed the co-existence of these modes of vibration in the same string. The experiments were performed with rods, the different laws applicable to strings and rods being also pointed out at the same time; after which, the means of rendering visible the paths traced by strings or rods, when vibrating either in one or several modes, were stated. Dr. Young's experiments upon the reflection of light from the strings of a piano-forte, were next noticed, and then the phenomena under consideration made evident upon a much larger scale by means of Mr. Wheatstone's *kaleidophone*. This instrument consists of an elastic rod, or wire, fixed firmly in a vice at one end, and furnished with a bright metallic bead at the other; when in the light of the sun, a candle, or lamp, a spot is reflected by the bead, which, as the

rod vibrates, is extended into a closed line, depicting the orbit of the end of the wire. By drawing a violin-bow along various parts of the wire, so as to produce different sounds, or, by merely tapping the bottom of the wire, beautifully formed and regular luminous figures are seen, rendering every vibration of the rod visible. Co-existing vibrations of various kinds were here shewn.

At the close of the lecture, Mr. Faraday referred to some very curious observations on the means of contriving the rectilinear motion of a body having great velocity, with that of the eye at right angles, or an inclination to it, so as to produce the appearance of a compound motion and apparent deflections of the moving body. It was stated, that hopes were entertained of making these the foundation of a method for measuring extreme velocities occurring only in short spaces, or through small arcs; but as these are at present undergoing investigation, we do not now consider it expedient to enter more at length into the theory.

It is gratifying to find that the exertions made at this Institution continue to secure their reward; and that every season adds many to the number of its friends. The managers, it appears, have announced an intention of founding a quarterly scientific journal, to be called "the Journal of the Royal Institution"—not as a matter of profit to the Institution; but whatever accrues above the expenses incurred by the managing committee to be expended on the continual improvement of the work. We trust it will succeed, and be of such a character as to invite the scientific of our own and foreign countries to support it.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE President in the chair. Several interesting papers were read, and some others enumerated. The President informed the meeting, that, in pursuance of an arrangement entered into between the council of the Society and the trustees of the British Museum, relative to the exchange of the Arundel MSS.; he, although not bound to do so by the noble donor of the MSS., had consulted with his Grace the Duke of Norfolk, his representative, and had received the assent of his grace to such exchange, provided the trustees of the Museum preserved the MSS. by themselves; putting certain marks upon them to shew whence they had come. The President therefore examined the books in the British Museum, a portion of which were intended to be given in exchange; but although the value of duplicates in that Institution amounted to about 10,000*l.*, still there were not in the collection more than 600*l.* or 700*l.* worth of books at all suitable to the Royal Society; thus leaving about 2,600*l.* or 2,700*l.* of a balance on the value of the MSS. yet unsatisfied by the trustees of the Museum. On this point the President last Saturday met the trustees,—and they came to a resolution of disposing of certain duplicates, and of laying out the funds accruing therefrom upon such scientific works as the council and fellows of the Royal Society should choose, from time to time. This arrangement appeared to give the meeting great satisfaction.

The following is an abstract of a paper lately read; it is entitled, "On the occurrence of Iodine and Bromine in certain mineral waters of North Britain." By Charles Daubeny, M.D. F.R.S., Professor of Chemistry in the University of Oxford.

The author lays claim to being the first who

announced to the public the existence of bromine in the mineral springs of England: a discovery similar to that which had been previously made by others in many analogous situations on the continent. His reason for offering the present communication to the Royal Society is, that he has examined on the spot a great number of mineral springs, and endeavoured to obtain, wherever it was practicable, an approximation to the proportion which iodine and bromine bear to the other ingredients. He has also aimed at forming an estimate of their comparative frequency and abundance in the several rock formations; an object of considerable interest in geology, as tending to identify the products of the ancient seas in their most minute particulars with those of the present ocean. The results of his inquiries are given in the form of a table, in which the springs, whose waters he examined, are classified according to the geological position of the strata whence they issue, and of which the several columns exhibit the total amount of their saline ingredients; the nature and proportion of each ingredient, as ascertained by former chemists, or by the author himself; and, lastly, where they contained either iodine or bromine; the ratio these substances bear to the quantities of water, and likewise to the chlorine also present in the same spring. He finds that the proportion of iodine to chlorine varies in every possible degree; and that even springs which are most strongly impregnated with common salt, are those in which he could not detect the smallest trace of iodine. The same remark, he observes, applies also to bromine; whence he considers, that although these two principles may, perhaps, never be entirely absent where the muriates occur, yet their relative distribution is exceedingly unequal. The author conceives that these analyses will tend to throw some light on the connexion between the chemical constitution of mineral waters and their medicinal qualities. Almost the only two brine springs, properly so called, which have acquired any reputation as medicinal agents, namely, that of Kreutznach in the Palatinate, and that of Ashby de la Zouch in Leicestershire, contain a much larger proportion than usual of bromine,—a substance, the poisonous quality of which was ascertained by its discoverer, Balard. The author conceives that these two recently found principles exist in mineral waters in combination with hydrogen, forming the hydriodic and hydrobromic acids, neutralised, in all probability, by magnesia, and constituting salts, which are decomposable at a low temperature. He has no doubt that a sufficient supply of bromine might be procured from our English brine springs, should it ever happen that a demand for this new substance were to arise.

At the last sitting, on Thursday, the Society adjourned for the long vacation.*

SOCIETY OF ANTIQUARIES.

HUDSON GURNEY, Esq., in the chair. Mr. E. Hawkins exhibited to the Society a gold medal found in Bedfordshire; Mr. Dawson Turner, a curious brazen enamelled dish; and Mr. Britton presented some beautiful drawings of the architectural details of the chapel of Henry V. at Westminster. The Rev. John Skinner's disquisition on the site of Camelodunum, and the Roman remains discovered at Cammerton, was concluded. A communication was read from John Gage, Esq., director,

* Mr. Babbage has circulated a printed answer to Dr. Roge's explanation; in which he reiterates his charge respecting the Society's minutes.

being a short history of St. Olave's Church and ancient Hostelry at Southwark, accompanied by drawings, and an appendix containing documents, &c. confirmatory of the account.

The meetings of the Society were then adjourned to the 18th of November.

ROYAL ASIATIC SOCIETY.

ON Saturday the anniversary meeting of this Institution took place; Sir Gore Ouseley in the chair. Colonel Broughton read a statement of the Society's affairs during the past year. In noticing the present volume of the Society's *Transactions*, particular allusion was made to the article and plates descriptive of the Arabic globe in the Society's museum. This globe was given to Sir John Malcolm by the religious chief of the Bohras, a sect found in great numbers in the Rajpoot states; they are said to be the descendants of the followers of the *Sheikh ul Tubal*, or old man of the mountains, renowned for his exploits during the period of the Crusades. The auditors' report exhibited a balance in favour of the Society to the extent of 524l. Sir Alexander Johnston addressed the meeting in the name of the committee of correspondence, and detailed its operations for the past year: from his address we gathered, that the committee had directed its attention to a comparison of the languages or dialects spoken throughout Polynesia; and in this branch of its labours acknowledged the valuable assistance and co-operation of Baron William Humboldt and Sir C. Colville. Another point was the subject of the early communications, commercial and warlike, which had subsisted between Europe and Asia. Thirdly, the committee had turned its attention to the history of the institution of property in law and slaves, and of marriage among all the various classes of inhabitants throughout the whole extent of India. Lastly, the history of the various settlements of foreign nations in India, the circumstances under which they took place, and their effect upon the original inhabitants of the country, was spoken of: on this point Mr. Baber, Mr. Milman, Lord Prudhoe, Colonel Briggs, and several other individuals distinguished for their learning and talents, were mentioned as coadjutors.

The various reports were received with much satisfaction; and the usual ballot for officers having taken place, the meeting separated.

ORIENTAL TRANSLATION FUND.

Anniversary meeting; Earl Amherst in the chair. The right honourable chairman of the committee read a report for the past year. It alluded, in general terms, to the flourishing state of the Institution, and noticed his Majesty's donation of fifty guineas for two royal medals. The absence of Colonel Fitzclarence was much regretted by the committee; but it afforded an opportunity of descanting on his arduous exertions in the cause of oriental literature during his sojourn at Rome, with a freedom of eulogy which his presence would necessarily have limited. The treasures of the Vatican library had been thrown open to the committee by the liberality of his Holiness the Pope, the services of the eminent scholar Signor Mai had been promised, and a branch committee formed at Rome. The report expatiated on the advantages likely to arise from this accession to the committee's strength; and mentioned that the prospectus would be translated and published in Italy. The establishment of the Oriental Institute at St. Petersburg, and of the Branch Oriental Translation Committee at Calcutta, were next adverted to; after which,

the report detailed the works printed during the past year, and those which were in course of preparation; and then named the gentlemen who had been selected as deserving of the rewards of the committee; viz. for the royal medals, Professor Lee and J. F. Davis, Esq.; the Institution medal, Major Price; and for the pecuniary rewards, Messrs. Fraser, Neumann, and Belfour. The report concluded with a list of new subscriptions, received since the last anniversary, amongst which were those of his Majesty, the King of the Netherlands, the grand Dukes of Tuscany and Hesse Darmstadt, &c. &c. From the auditors' report, it appeared that there was a balance in hand of £1,400. The various reports were ordered to be printed, and the rewards handed to the successful candidates whose names we have mentioned, or to their proxies, with suitable remarks. Amongst the distinguished individuals present were the Earl of Carlisle, Lord Selsey, Count de Lasteyrie, Vice-President of the Asiatic Society of Paris, and several others.

PINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Seventh and concluding Notice.]

ANTIQUARY ACADEMY.

THE miscellaneous character of the contents of this apartment might, if it were well lighted, give it a greater interest than any other portion of the Academy. In its present sombre state, however, it can be considered little better than as a lumber-room, into which things of all shapes and descriptions are thrown, and huddled together;—a perfect chaos of pictorial materials. Of these materials, the prints, drawings, and miniatures, are, generally speaking, the most important; and we shall select a few of those, and of the other items, which come within the range of vision, and which deserve remark.

No. 449. *His Grace the Duke of Newcastle, painted by Sir T. Lawrence*; No. 450, *John Soane, Esq., painted by Sir T. Lawrence*. C. Turner, A.E.—Engraved in mezzotinto, and in a style which for clearness and brilliancy cannot be surpassed.

No. 983. *Portrait of the late Archbishop of York, from a Picture by Hoppner*. J. Heath, A.E.—On looking at this admirable line engraving we were forcibly reminded of "auld lang syne," when, in the illustration of such works as *Bell's Poets*, and the *Novelist's Magazine*, Mr. Heath's graver was distinguished above that of any of his contemporaries; and we rejoiced to see that, after the lapse of so many years, his powers were in no whit abated.

No. 984. *His Grace the Duke of Wellington on horseback, engraved from the original Picture painted by Sir T. Lawrence*. W. Bromley, A.E.—This is a masterpiece of the British school of engraving. As far as the situation in which it is placed will allow us to examine its texture, Mr. Bromley seems to have most happily introduced all the tasteful variety of execution requisite to express the several materials of which the picture is composed.
