Remarks:							
<p>Twins are believed to be identical but verification has not yet officially been received. Obviously, however, Carol got to the dinner table first - and ate the most - so she's slightly larger. Kim is still in an incubator at the hospital, but she is being bottle fed and the doctor is very pleased with her progress. We should have her home in 2 or 3 weeks. The two bigger Belnaps (Bruce & Phyllis) are also doing quite well. They've survived the shock very well and are now <u>twice</u> as happy - naturally!!</p>
