## OGDEN CITY．

$\theta$GDEN CITY has heen well termed the＂．Jnaction C＇ity．＂ It is the western terminns of the LThion Paritie lait－ way：the east－ eru termims of the Central l’arific Rail－ way：northern terminus of the Etah Cen－ tral Railway： sonthern ter－ minns of the Utah \＆Northern Railway：and western terminns of the Denver \＆ Rio Grande Western Railway．It is the greatest railroad center in iTtah；the judicial seat of Weber Comnty and the second city in size and commercial importance in the Territory．and has an esti－ mated population of 10,000 peo－ ple．

Its formiler was Captain James Brown，of the Mormon Battalion， who purchased，June 6，1545，a

VIEW OF OLIDEN FRUM THE REXCH．
base of the mountains north to the Hot Springs：thence west to Salt Lake；thence sonth along the shore of the Lake to a point op－ posite Weher Cañon：thence east to the begiming．This land was then menltivated and the price paid was $\$ 3000$ ．The City of $\mathrm{Og}^{-}$ den is now the second city of Utah as regards population and importance．Its railroad ron－ nections and farorable location make it certann that at no distant
day it will be one of the most im－ portant business center＇s of the Irreat North West：already it has become a very important wholesale market and as the year＇s go by it is constantly gain－ ing gromad． $65^{-}$

The city is pleasantly located， its streets are broad and straight， its water supply is abmelant and pure．being brought in pipes from the Ogden River out of the cañon just east of the city．The streets are well lighted with electric lights，the cli－ mate is heal－ thy，and the scenery on all sides is grame and imposing： the Wasatch range of mom－ tains make a beantifullack groumd on the east，and the lireat Salt Lake stretch－ es away to the west and northwest．

The Ogden River，which flows through the northern portion of the rity，will some day furnish the power for almost any num－ ber of factories of all kinds． These together with the iron works already estahlished，and the R．R．shops which will soon be all absolnte necessity，will make the city an important man－ ufacturing center．

The public buildings are all
substantial, and as the city increases in size and importance owing to the farorahle location of the pulbic gromme, the pulbic buildings will of necessity lave to be grand and imposing.

The hotel accommodations of the city are first class; in fact, the principal hotel is, withont clonbt. the finest hotel in the 'lerritory. Ogden is woll supplied with chmehes, having one C'atholic, one Episeopial, one Presbyterian, one Motholist, one Baptist, aml the Lattor-l)ay Siants hive a T'abernate and several ward meeting housps. while those of a donbting state of mind have an A Irnostic Hall. Each of the elmodes, except the Baptist. hats a Mission school under its managrment or superintembed by compretent teachers, most of themeriving instruction in the common branches. while some give attention to the higher branderes of education. Ther Sistrrs (C'atholice) sefool is a fine and rommodions halding. managed with that atecutary peruliar to their society. The Ogden Academy has just been erected by the New West Edhcational ('ommission. This is the largest and most commodious school building in the 'Ierritory, and it will soon be one of the leading educational institntions in the west.
'The city has a large Central school bnilding and several ward school honses under the control of sehool trustees of the city.

The secret and charitable societies established in Ogiten are a Masonic Lodge, Chapter and Commandery, Independent Order of Odd l'ellows, Ancient Order of United Workmen, Kinights of Pythias, one each of hojal Arcamum and Conductor's Brother-
hoorl, with a strong membership in Joln 1 . Dix Post. No. B, Cirand Army of the liepmblic.

The railioad lines now termimating here hare commened the erection of a magnificent [tnion D'assenger lepot, and are arranging for extensive freight depots which are to be pushed to completion, at an out lay of from $\$ 400,000$ to s.jo0,000, thas settling beyond dispute that Ogden is to be the great raibroad center of the intermountain regions. Its allyantages
their chiddren have educational amd social allantages. While the surrounding States and Territories were suffering from intense cold during the winter': of 'S6-7, at Ogrlen the thermometer only once tom hed 12 decrees above zero. while most of the time dnring the winter for the past filteen years it has sellom rearhed zero. The dryness of the atmosphere. tempered down ly the influence of the great inland sea, make it the most desirable place to win-

M.MIN STKBET, I.OOKLD: SOUTH.
-climatic, educational and so-ciat-as a plare of residence are rery desirable, and are ahealy attrarting the attention of stock and mining men from the surroundines comntry and T'erritories, as well as earbitalists from it listance to invest in real esiate, not only for investment, but to make homes lor themselves where their families can imbulge in luxuries of fresh froits and regetables, and
ter in this latitude. The smmmes are warm but seldom mcomfortahly loot. the nights heing cool and refreshing. 'To those who are rontinually pushjug to Califormia for health, we would say. stop a rear in the Salt Lake Valley and we renture the assertion that yon will be so moch improved in health and pleased witl the sensons that you will berome permanent residents.

## UTAH FOR HEALTH.

P7VERY pretty story is told in the Norse mythology, and as near as I can remember it runs as follows:
Balder, the god of the summer sunlight, abode among the clouds in a royal asgard, ate of ambrosial foorl, and drank the nectar of immortality. His lather was Odin, the progenitor of kings and the fountain-head of poetry, painting, and song. Balder was the portege of gods, who protected him from threatener peril or impending evil. It fell on a day that he wandered from home without his invisihle armor, and trearherous Lopter, father of the Femis-wolf, songht to take his life. This could be done only by (1. "eptive finesse. Lopter thereme, pat a spray of the gentile nistletoe into the hand of Hoder, ho was blind. and bade him cast it toward the spot on which Balder was standing: when lo! the harmless sprig changed into a javelin and Balder was slain. At this the gods were struck with a speechless horror and funereal clouds long over the earth and hid the face of the sun, to symbol their mourning. Then Hermorl, his brother, volunteered to ride into the dominion of Death (something like Orphens in the Greek mythology) to ransom the well-beloved son of Odin. Nine days and nights he rode his valliant steed, Sleipnir, through Norwegian bogs, challenging venomous toads and with his steel corselet warding off the Ygdrasil serpent, till he was come to the mouth of the pit. Here Hermod made known his errand and told of the great world bowed down with grief, and how it refused to be comforted. Death replied that

ENTRANCE TO OGDEN CANON.
he must have some proof of this unusual manifestation, and that if all things on the earth-the living as well as the lifeless-the plumes on forest trees, and the mighty sea-the valleys that lay in the warm embrace of the sum, and the spangled hills-and every fish that breasted the ocean, and the birds_that floated through the
great deep of heaven - would weep, then should Balder be given back. And Thor beat the clonds with his hammer and Odin moved the hearts of all things else, till the earth was a carnival of sorrow.

Of course this is only a pleasant myth that has come down to us through the classic folk-lore of
the North; but, norertheless. it most beantifully illustrates the gramdeme of that self-xitcritiong devotion which gores into the grave to materialize a vamished loved one. 'Though it be alahle

Weep-if the ramishing soul conld be bromght back to lirighten the ghom horming over the thresile. And they wonld fan lic down with the womm if this hittor, bitter cup might only pass away.

visits to the babhling spring well ${ }^{-}$ ing out of the leaning hillsidesrich with the breath of elover amd redolent of sum-hine. In the morning the sirk one puts ont a thin hand to meet your ereetines and says: •• am better mow, anl to-monow I shall be well again. But the noon hrings derper roses to the rhecks, and mearthly splendor to the brilliant eyes: and the Huttoring lueath gros. out with the twilight. and no moluing will aver come.
suma brief syogsis of mone than one-seventh of all the drathberls in the world, and it will he no womler if the realer eontemplate the abour figwes with a shabler of imemelality. Bat it is nevertheloss a fact and I repeat. that more than ane-serenth of the hmman family die of lmer malady. So yom soe that the viotims of consmmption are scat-
we love it becanse it tolls the story of a fatting form bronght back from the realm of shatde and re-hatilitated among the semes of its former fonglusts. The ringing gamitlet has a musisoft as a mother's lullaby, but cheering with hold melowly the valler of denth. It sists the star of Ilope alowe the shadows that hang over the tomb and twines its minviting portal with garlands of affection more andurning than the iry and sweeter than frankinemse. How many time have I sem kindred and friends in minte sorrow aromed a postrate form whose restless spinit was abont to pass over into the realm of shadow amd mothingeres! And so have you, my reader. And we have heard them sty a thomsand times, plain as the dombl elonfuence of whe conld speak, that if their hearts were the womd, then should all things in it

Of all leath-berke, the conswmptive's is the most pitiful, but the least to be regretted, hecause. Hown the mad is mevitable, each day brings added hope, and painless dreams of coming health,and
tered over the earth as thick as "Abtumn leaves in Valambrosia," lut not ome diess of that fell discuse in this furored region. In a practice here of twelve to fomrteen years more or less exten-
sive, I have never seen a case of consumption that I thonght orioginated here, and I have made diligent inquiry among my medical brethren, and I believe their experience is like my own. A residence here will restore to natural tone lungs already dereloping tuberculosis; but the system must not be too much hroken nor the vital powers ton much depressed, for langsalready
life; for the higher one ascends, the more attennated those elements become, and the more eagerly the instinctive faculty reaches ont for them. This increased activity adds to the development of the lungs and the walls of the rhest for much the same reason that the olacksmith's hand that wields the hammer is larger and stronger than the one that does not.
the pressure, for they are but rudimentary compared with what they must be to live in this attenuated air. It is only by the inhabitation of the oxygen and some other minor elements found in the air that combustion is maintained and animal life supported: and this is found in proportion to the hight. In other words, the horse can live only by receiving a given quantity

GIIEN CANON, LOOKING EAST.
destroyed have no more power to grow again than an amputated finger has to rebuild its several organism. I suppose that the increased altitude above sea level has something to do with strengthening the luugs as well as the muscles that envelope them. At this hight one has to breathe deeper and more rapidly in order to get from the air the nutrative qualities that maintain

It is well understood liy horse owners that a horse camot keep up it long continned effort on the turf here withont fatigue, until his lungs become thoroughly inured to the atmospheric fuel that there mudergoes combustion for the purpose of keeping the heart up to its prodigious high-pressure movement. Why? becanse the air cells will not contain sufficient air, nor their walle support
of oxygen, and in this high altitude he has to work over a larger quantity of air in order to obtain it. "Where there is a will there is a way," however, and a horse coming from a lower plane into this higher one, instinctively feels that he must have more air, he sets himself about getting it. The nostrils dilate and the vital cmrent is pamped into them until they look like funnels of blood,
the wimlpipe expands，the lungs distronl will earh insplation un－ til the thank heare amd evere masere in the homy quivers with the strain．How many all owner of a fast lomse thinks of this when his moble brute is timishing a plenominal mile on counage alona？If he wonld lont wait a feal matil thr lung rells and their partitions．torgether with the outore wrapping of maseles， berombe larger：thicker and stronger：to retalin the ont－pres－ swe of weight，has heen removed by this increased height them combla alorse trot amile at the lop of his－pered withas little dis－ frose as an elogine conld go the same distaller．＇This is predisely true of mand．＇The realer will re－ member（if le were not born hereyt lat when he tirst rame in－ to this revation．how lireguently he laid to sit down to recover from the fitigue invilent to this ratitiml air．And if the＂olaret＂ did not spring from his nose he

I have not attempted to give any fine－spun theories of my own． nor sought to weave them to－ gether with glit tering verbiage to
bewilder the_reader; but I have tried to tell a simple story made up of accepted facts, most at least, known to the world from the days of Hypocrites; and I wish that I had more time and ability to devote to this charming subject, for at every step in this boundless field of investigation one meets with constant and agreeable surprises. Since a Committee of the Chamber of
phthisis pulmonalis, or consumption not one dies from such a disense originating here.

Now we are come to speak of that foster-sister of Consmmption and full twin-sister of Misery-Asthma-whether humoral or dry. After being in this climate a year, if one will continue to remain, all the distressing phenomena common to asthma will disappear never to come back
even as his ancient progenitor did when God breathed into his nostrils and he became a living sonl. The smuken eye with its black areola and far-away expression so common in this distressing disease will have its oldtime look of inspiration come back again and be in very fact the window of a happy soul. The heart will bear its increased burden with delight, and the

MAIN STREET, LOOKING NORTH.

Commerce requested me to prepare this paper for them. I have had no time to consult authorities, but have written "off hand" from memory. But whatever be the basis of speculation in this matter, or whether the reasons that I have advanced be assailable or not, the eternal truth remains, and is indisputable, that while more thrm one seventh of the human race die anmully with
but in guise of some ngly nightmare to remind the robust man of the horrid dreams that haunted the long hours of his invalid night. The doughy, patulous face will give place to the rosy cheek and nourishing blood will pour into them from its recent conflict with the air in healthy lungs, and the once frail man will stand erect on his feet clothed with the full majesty of health,
sick room will lose that frightfur somnd of a strangling victim. The lungs will expand with the pressure of God's melhackled air, while every artery will throls with pure blood, ambitions to charn through all its labyrinthine ways to the very toes. As I before intimated, this recovery is sure to remain only so long as the patient remains here, for candor compels me to say that I have
known many instinnes of relape on moving out of this comutry. This rhage from disease to hasatid does not arem to depmed - 0 math on the elinatio comulitions atreally explained as unom a pernliar dement in the air. which hats been given the name of "emene (whatever that may be. for I lo wot know, and atrom many hetter than I am are in the same lwat.)

It is not the object of this writer to misked the pmblic in regard to the elimate of ofglen City and Weher comats. Clah, as al health-remert: nor to seek hy

the looke verthage of all irrespomsible charlatim to praise it more than at life-long residence here will justify; Herefore. I say that all morbid eomditions will ley mo means memd here and there are some diseases that not only develop pernicions emditions. but these rapidly alugment mitil diath comes to close the scene. I have no doubt but one far gone with ronsumption or asthma, one whose vital forees
have been lioken one the crmel whecel of want of liurnt out by the fires of dixsipatime or in

battling longe with either of there mereiless malaties, wond hardy survive even af few mont has of this pampring air. 'Thesytem camot stand the strain of discopline necessary to acoomplish the enll somght. Let one in a tolerably grom emulition. lant who fords that he has the taint of these remel scomrges burning in his veins, come ont here, and in a few monthe the old mightmes. acenstomed to his former hageard apmeamere Would not know him.

Lat me call your attention to another frightful malady from which this fitvored region is ex.

iphscopal chlirch.
empt: I allude to rathios, or hyilrophohia, sio firr as I know there hais never heen a case reported. althongh we have rastly more loge than we need, ant having the nithal weaknes of their kind. they ghared amone themelves and rije the hergatr:s heel just the same as they do anywhere else. ('The begear sometimes get. allgry, hut he does mot ge mat.) If one be hit lis lis: faporite spaniel he pays no more attention to it than the pain demams. I shall not attempt to formulate a thenry on the singular mationship hetween a man's heel and

the bite of his dog in this neek or the woods: for the fart is I haven't any theory. though it is a pleasant contemplation to know that if the doge will only survive his attack on the tramp. the tramp will Hhrive without inconvenience.

And now wr come to another remarkable phenomenon not gencrally kown. I-uppose that all phenomena are remarkathle, lont this one is a little out of the
common of even strange things. We have no sunstroke or coup de soleil. May be people make a living here without having to work hard enough to heat their hood sufficiently to produce this morbid condition. May be-but no matter, men are never struck down here by the sun's rays the same as they are elsewhere, owing, perhaps, to the conditions favorable to reidy evaporation spoken of elsewhere. This relieves the blood of its increased heat, which theorem is based on the same proposition that the bottom of a boiling kettle is always cool.

AETHOLISI CHURCH.
Venomons reptiles and poisonons imsects, such as make life a burden in the Southern and Middle States, do not find this a healthy climate. Sometimes one finds an innocent little bug as a hed companion, but it is so seldom that he would not be lonesome withont it, and it is regurded more as a social visitor, or a raru avis, or a soureni; than all interloper. But fleas do not swarm ont of the earth as I have seen them aromid Los Angeles; nor do spiders, lirge as a baby's
hand, weave their thick cables among the trees to trip the unwary traveler, as they are said to

MORMON TABERNACLE.
do in Arizona. Sonth America, and the Hawaiian lslands. The "rattler" is seldom found outside lis hamests in the momntains. st. Patrick may have published his urirse forbidding him this beautiful retreat reserved for the delightful hahitation of man: I do not know. But true it is that in the harvest field, where such accidents are most common elsewhere, the meditations of the hired man are not disturbed by the hiss of the deadly adder nor the rattle of his suakeship: (especially if the man leave his jug at home.) But I fear that the reader has found this paper already too tediously long, and as a line hiss to be drawn somewhere I will draw it at " snakes," and so conclude this imperfect monograph on Ogden City, as a natural suniturium.

## APPRECIATION.

1. A case of Phthisis Pulmonis, or Truberculosis, or Cousumption, as a primary of idiopathic disease has never been known here.
2. Asthma has never been developed here, but, on the contrary, when one comes here already stricken with it a quick, surprising and almost spontaneous cure is effected.
3. Lungs, weak from whatever cause, grow rapidly strong again; and the morbid conditions of them change to healthy function so rapidly that the patient can hardly comprehend it.
4. There has never been a case of simon-pure sum-stroke for any chronicler to record in the history of any of these settlements.
5. There has never been a recorded or observed instance of a

CATHOLIC CHURCH.
dog "running mal" or the victim of his bite being seized with liydrophobia.
6. Tenomons reptiles are entirely unknown here, except the rattlers, which are extremely rare, and confine themselves to mountain locations and are almost inaccessible to man or domestic animals.

## A. S. Condon, M. D.

[Republishald from the columns of the Osten Hirali.]

# OUR INLAND SEA. 

GREAT' SJLT L.AKE has long been a combiosity that has puzzlex the minds of thove who have made it a stuly. Whether it was formerly a part of the ocem. or whether it is the result of volcanic action is not known. Next to the Ifrad sea it contains more silt to the gallon than any other borly of water on the fare of the earth.
rule does not always hold good however. for it has been observed that when the show and rain was less than nsual, the evaporation would be in excess of the supply, and when two or three dry years follow in surcession, the water becomes more salt, and the smrfilce of the Lake decreases at the rate of in or 100 sumare miles a year: When we have heary suow in the winter. and a heary manfall in the spring. withoceasiond

Doctor Smart of the I. S. Army, in 18\%. He fomil an imperial gallon to coutain nearly twentyfour and a half ounces of salline matter, amomting to nearly fonrteen per cent:

The Lake is fast becoming popular for seat bathing: the water is so buoyant that it is impossible to sink, and anyone can swim in it. People who have tried all of the famons sea bath-
ing resorts in the world, say that they have never found anything to equal it. One can remain in the water from one to six hours without being exhausted or feeling any bad effects from it.
Captain Panl Boyton, who spent several weeks in this Territory in 1SS6, says that he never has found a body of water to equal it. He came near losing his life in attempting to cross
than alive, and although he is a brave man, money could not induce him to again go upon the Lake during a storm.
Several elegant bathing resorts have been built on the shores of the Lake during the last two years, and thonsands of people take a dip in the briny seaduring the bathing season, Tomists are delighted and they tell their friends to be sure and take a

## IRON KING.

0NE of our leading industrial men said the other day:
"What would you think if I were to say to you that in Alaska they have whole mountains of iron ore. which, when smelted, will produce pigs of cast iron so malleable that they can be beaten out into thin plates, and then polisheif like the finest steel?

OGDEN CANON LOOKING WEST, GREAT SALT LAKF IN THE IISTANCE,
to Church Island from Garfield beach, a distance of only a few miles, during a storm. He would not have feared to rom the most dangerous point ou the Atlantic Coast in such a storm, but he could do nothing in the waters of the Great Salt Lake on this occasion; the waves struck against him like lead, and he was knocked about like a piece of cork, and at last he was washed ashore more dead
bath in the Lake if they come this way during the bathing season. All along the shore elegant places for summer residences are to be found, and in a few years hundreds of homes will be built, and people east and west will spend the hot months away from the toil and care of business, and regain health and strength by bathing in our inland sea, and breathing our pure mountain air.
"Wouldn't you say that the quicker we could run a raihroad into that country to bring out some of the iron possessing such wonderful properties, the better for all our industrial pursuits in which this stanch metal is so great a factor ?
"I think you would. Well, this kind of iron exists. It exists in quantities so vast that if the number of tons were stated, the
amount would be beyond the comprehension of an ordinary mind. The ore is easy of treatment, and. when the metal is rast into pig. one of the pigs can bep bent and broken, and a piece of it lail on an anvil and hammered, withont being cracked or splintered, into a thin plate. It actually beats all the stories of mallealility that ever I read or heard outside of thase related of gold. which of comse. alan be leaten into leaf.
"Hon't you think that in prossessing such a wonderful reannere, Alakka has something
tains existed in Alaska, or within the Antarctic circle, or on the moon, all the railway companies. and all the smelting men, and all the iron workers: in the comitry would be stheming and plaming to milla al mad to rearh the irom fields: and forming eompanies in erert smeiters and irom works there."
Another gentleman. who derotes some of his time to sciontili" pursuite, saill:
" lact me tell yom. sir. that if by some nat tuat or legal obstarlo all importation of iron groods into this comntry hand heen stopped

Laios mor
better than her sibrer mines. or her seal fisheries ! Becallse this resoure is practically ine chanstinle. It comld supply the word witl iron for a thousaml years to come.
" 1 have said that iron ore posisessing these properties does exist. This is true; but not in Alaska, so far as 1 know. It exists here, at our very dhors, within half an hours rite of the great railway junction in Ogden. And probalily that is the reason why so few of us know anything about it. If these iron monn-
tiften years ago. Utalu in general and Ogden in particular would have leen the greatest mammacturing "enter of iron and steel grools in the whole world. Even if we hat not beenable to luing in skilled tahor, nor expericmed furnace buildersand iron workers. we still could have accomptishech this work. It might have heell necessary for tu: to go back am begin in the primitive fastion, as men began comitless ages agn, when they first learned to extract the ore from the momentains and roast it to get the helpful
metal. Prehistorie man was the worker in iron. He threw humps of ore into a fire of wood or "harcoal. and atter the ure was in whole or in part redneed, he hammerel the mass of epongy metal, thens formed, into such shapes ats suiten his mututured fancry, and were possible under his unskitled hands. And if we had been obliged to adopt this plan, we conld have compassed the experience of a seore of centhries within two or three years in this fast moring stare, and ly this time the prodincts of sinr mills would have ranked amming the highest in the world.
-. Thar great womler to me has benn that we have wilfully failow to take allantage of on ciremmstances simply beranse we were not foreed to take alvantage of them. There is surarely an antirle manufactured from iron in any of its forms whicll could mot be prowlued here if omly the men of experience and rapital would lorate at this point, and wive their attention to this suliject. Fontme stanilx really th shower her hessings menn the conterprising man who inangurates this inlustrial.
We real not long since of Cinrnegic. the irou king: who, in a brief time. has made himself a prince in the royal family of the industrialists, by me:ns of this very metal, iron.
"For one. I stand ready to take off my hat to the man who will make limself. riglit here in Oylen, the iron king of America. He call do it by having a large stock of grit and experience. and a moderate stock of "apital."
Another, a selholarly man, said:
" In my extimation, irm is the noblest of metals: and I regret that sol little is thonght of it in this land, and that we have in the
past utterly refnsed to claim its acquaintanceship, although it has waited patiently at our doors for recognition. Lyemrgus avowed only a practical reason for banishing gold and silver money from Sparta, and using nothing but iron for coin; but in my admiration for iron, I ascribe to the great law-giver a poetical feeling in making his decree. To others, iron may be homely--too
down for $\$ 1.50$ to $\$ 2$ per ton. The ore is extremely rich, and yet easily worked. There are several kinds of ore, each having peculiar quality; but of each there is enough to supply a score of furnaces through all time to come. Some of these ores are in demand for fluxing purposes. We have recently seen a letter from the office of one of the principal smelters at
he said that prehistoric man cast his ore into a fire and drew it forth, half-heated, to pound it into useful shapes.

The quality and quantity of the iron ores around Ogden are such that any iron worker who may examine the question cannot avoid a feeling of enthmsiasm.
The low lands of Ogden are productive of natmral gas. It is the opimion of our industrial

orimin canun, looking east.
plain to excite affectionate regard; but I confess myself its ardent devotee, and I think as much of Lycurgns for this one act, as for all his other reforms combined."

It is true that 0 gden has within easy reach inexhaustible quantities of iron ore. At any point within the city limits where works might be established, the best grades of ore can be laid

Butte, agreeing to pnrchase any quantity of ore which may be shipped from a certain mine at Ogden, and to pay therefore $\$ 5.50$ per ton. Negotiations are now on foot to secure a railway freight rate which will enable the mine owners to begin shipment.

Another mine assays 57 per cent of pure iron. This mnst be the class of ore to which our scientific friend referred when
men that sufficient gas could be brought $n \mathrm{p}$ from a number of wells, and united in one pipe, to answer for all smelting purposes. The gas works will give a considerable quantity of coke. In addition, Pleasant Yalley slack, which is rery cheap in this market, can be used with admirable snccess.

Water power is to be had simply for the asking.
Convenient locations upon
which to ereet necessary works. cam be ohtained at nominal prices.

The demand for jron in this region is very great. The opportunity for the establishment of fommbries to nse the proinct of iron smelters could not be better.

While foundries in the East are crowled beyond their rapacity in certain lines of mamufactmre, the West must wait for its needed supplies. And this thing must continne year after year: indefinitely, moses we learn to use the bounties provided by nature for our conrenience and wealth.
hron works were once established in Ogden: but, throngh mismanagement, legal chicanery, and possibly something not lar removed from dishonesty, the stockholders were bled to death and the works -right in the diwn of a mighty success-were abandoned.
Local capitalists who kiow the advantages to be derived from iron works here have always lesitated since that day to put their money in such an enterprise; because they wonld be, in the main, dependent upon strangers for the management of an affair of the kind; becanse few men here are supposed to have a practical understanding of the subject.

But this question ouly needs a little eximination on the part of any man arquainted with the iron industry to convince him, if he be a reasonable person. that the finest opportunity of the age exists here to-day.
werrer county court housk.

them down at the Bay said that they were made from the best iron for this purpose to be fouml in the known world: they had an especial tonghmess, and yet lightness, which could not be paralled bey the prodnet of any other iron region. This firm issued its order
for an unlimited quantity of can region. This firm issued its order
for an unlimited quantity of can wheels and other goods; lut the order never received attention, for the canses heretofore stated.

Some quantities of iron have been produced here from the ores within easy reach.
ln one instance two ores were blended, and rar wheels were made from the product. They were sent to San Francisco, tester there. and put immediately into use. The firm which handled

Stoves were successfully made.
Ihe incident related in the opening of this artirle abont the malleability of east iron is not exagrerated. It is a positive fact that the pig of the cast iron made without especial eare from the hended ores of this region, can he lammered into a plowshare or a pruning hook.

We are informed that a gentloman is here from the East who intends to establish works on a mammoth seale at this point. He was to have hegin operations earlier than this time: but ill health has prerented, and it is barely possible that his personal misfortme may become a permaneat commmity disaster: because he camot proceed matil he recovers his wonted strength and energy. He is barked loy mimited capital: and he recognizes the adrantages and necessities of iron works at Ogden. the natual center of the inter-mountain region.

Even with the estaltlishment which he proposes to make here, the field cannot be filled. We are located at a point which enables producers and manfacturers to ship easily to any spot on the civilized globe. The constant railroad bulding in this region creates a demand for rails and spikes enongh to keep mighty mills in operation.
Capritalists are cordially invited to give this matter investigation. lt is no impracticable scheme: lout it is such an opportunity as will appeal to the business sense
of any person having means and experience in iron working,

The man who accepts this situation fully, and prosecutes the necessary works without delay, will in very truth become the Iron King of the West.
F. J. Cannon,

Editor Osden Merald.
msurveyed, and hence not in market, but can be taken under squatters' rights. Lands which were considered worthless five years ago are now sought after, since dry farming-raising crops without irrigation-has become common, and artesian wells have become practicable in many arid

## A PRACTICAL MAN.

MY eastern friend, I want to give yon a little plain American common sense talk. If you are a manufacturer let me present to you an unvarnished statement of facts.

Suppose your line is woolen goods and your location is in the Atlantic region. You first invest an enormons capital in a plant: then another enormous amount in a stock of raw material; then another enormons amount in the labor necessary to produce the finished goods -all these expenditures hefore yon can hope for returns. Yon are subjected constantly to the danger of strikes and anarchistic efforts to disorganize social and commercial prosperity. The vast "corners" accomplished, often by unscrupulons men and speculative dealers. keep your business in a constant state of comparative meertainty; and despite all the energy which you possess, you know that very often yon meet
sale. These approximate the following number of acres:

| Crittenden. | .207,000 |
| :---: | :---: |
| Thornburg. | 23,000 |
| Cameron. | 22,400 |
| Rush | 10,000 |
| Total. | $\underline{262,400}$ |

Of the nearly thirteen million acres of land surveyed, and in progress of survey by the Government, probably not much orer one half has been disposed of, so there remains very much land
localities. Lands are being entered to such an extent as to keep the Land Office in Salt Lake City well employed.

Ogden is to have a new $\$ 30,000$ city hall. Architects are now at work on the plans.
Our wholesale merchants have had a prosperous season so far.
Business has steadily increased had a prosperous season so far.
Business has steadily increased since September.
ogden river.

with disheartening reverses. At the best, the return upon yonr investment is nowhere near adequate to the amount involved and the risk taken.

I want now to show you how you can avoid throwing money away for needless expenses in your business; and how you can save that money to yourself and the poor purchaser of your goods.

The C̣ity of Ogden, the second
town in wealth. popmlation and importance in ITtals, and the greatest railroad and industrial renter of that Trmitory and of the entire inter-mountain region, offers an opening which yon are rerveant to your own interests il you do not accept. I'lhis city possesses ten thousand imhabitants. It hats cheap lamse and factories. Its water power call only be comparel to that which wonld be afforden hy Niaggata, if that stmpemdons ratamet could lie controlled. The city is the renter of all immenser region of slldily of palw material and demand for finished goorls. And yet we. the wool-growers of this region. hale our wool here in all its virgin dirt, and ship it to Bostom at an actnal exponse for wool carriage of five cents a poundpaying for dirl the same freight as for wool. Youl limy the wool from thith hamk. paying an item of atvance upon the prive in each case. Then you mannfacture it into such grools as we need in this region, where nealy all the clothes used by men are of a pure wool. Yous sell to johbers who ship these goorls to nis, and we buy them from thinl hamds, at an mormons freight, payg an item of adrance upon the price in each calse.

Why (all we not form a comlination to enrich wach other? I would like, of course. to get a hetter price for my wool; but I assert lookly-and 1 weak from my class when I say-that we would prefer to sell to factories located here, withont gaining a rent on present prices, than to sell to dealers who would ship the wool abroad, to the eventual detriment of one comstry.

These are some of the very simple farts concerning wool. I am surprised that they have not
been recognized and taken adfantage of long ago lyy eastern mamfacturers.
This same line of argument applies to you if yon are a manuficturer of iron, glass, leather goods, or almost any other class of falurics or machinery.

Womighower.

## SACRED HEART ACADEMY

 11 is institution is under the direction of the Sisters of the Holy Crons, and is sitnated in me of the tinest localitios of Ogden. The buildings are lamd-

SACREI HEAKT A(AI)FMY.
some and rommodious, and in every way well suited for educatimal purposes and contain special adrantages for the physiral health and comfort of the pupits. The salubrity of the fresh air and mountain breezes from the Wasatch range mider whose shadows it stands, makes it a veritable samitarium. The loundation of these buildings was laid by Right Reverem Bishop Scamlan (then Father Scanlan.) in 1578, and was formally opened the same year by a staff of seren Sisters, with a roll call of forty bupils. The sisters offer the adrantage of a thorough education to young
lanlies entrusted to their care, sparing no pains to promote the hest moral influence. as well as the health and happiness of their punis. "mens samia in corpore samo" being one of their motens. As the hone of reward sweetens labor, crowns of honor, grold and silver medals and where premimons are allong the many inemtives made hise of tor emulate stuly and lady-like deportment among the students. P'mils of all denominations are received, and whilst the ntmost care is taken in the religion instruction of the children of fatholic parents
there is no interference with the religions opinions of those of a dilferent belief.ment for the salie of good dicipline however, all are required to attend public and religious exercises. No wonder the fame of the Acardemy has spread lar beyond I'tah, and in-day there are seventeen Sisters acthally engaged in the instruction of sixty hoarders from the Teritories and States of the Pacifie Coast, and one hundred and thirty day pupils. The scholastic year is divided into two sessions of five monthe cach. The first session commences on the first Monday in September and ents on the last of Jamary. The second session commences on the first day of Febraay and ends the latter part of June. Pupils are received at all times during the year. The curricnlmm of studies comprises langnages, music, painting, drawing, sewing phain and fancy, and in fact all the solid and omamental requirements which make the perfect lady. This institution in one of which Ogden is justly proud.

## THE CENTRAL SCHOOL.

(С)HE Central School, as its name indicates, is sitnated, geographically and in the matter of population, very near the center of the rapidly-growing city of Ogden.

As a public school building it stands pre-eminently artistic in design and noble in structure.
When compared to buildings used for similar purposes, in the

The best and most attractive structures of all communities should be their educational institutions; and as Ogden has performed this duty well, words of commendation are appropriate.

The bailding contains fom large recitation rooms, two on each floor-the building being two stories. of brick-with wide halls between. and some five small rooms, one of which is used as a library, containing several

HIGM SCHOOL.

Territory, it is a monumental edifice, erected to the honor of the progressive minds that conceived it, and the generous public spirit of the men who furnished the means to execute the conception. At the same time no people deserve special praise for erecting good school honses. This is one of the great moral obligations that rests upon all civilized men. It is a duty, and they should only be commended for performing duty.
hundred volumes, and the others for recitation and other purposes.

The seating capacity will accommodate 400 pupils. The rooms are large, well seated, lighted and heated, with good ventilation: and also supplied with maps, charts, globes etc.

At present the course of study comprehends four departments, Academic (two parts), Grammar, and Intermediate.

The course of instruction completes the adranced studies of
the common branches, and introduces higher studies, when demanded. The present higher studies are rhetoric, mental and moral philosophy, civil government and political ethics, physiology, physical geography, bookkeeping and general history. A normal class is also instructed in the theory of teaching. Socal music is taught in all the departments.

The immediate environments of the building cannot be surpassed in the Territories. A large and commodious yard, well shaded, affording a fine ground for recreation, is in the rear, while the front is Ogden's pride. in the matter of lawns, with its beds of variegated flowers, making, from early spring to the frosts of autumn, one of the lovliest spots in our beantiful city, exercising a refining influence upon teacher and pupil, and causiug the tourist, as he passes, to stop and admire.

## OGDEN ACADEMY.

NOT a more desirable location can he found in all the beautifnl city of 0 g den than was chosen by the New West Education Commission, on the corner of Fifth and Spring streets for Ogden Academy. The building is of brick, two stories and basement. On the first floor are four large school rooms, with a mple halls and cloak rooms; on the second floor, one school room, a library, and a hall with a seating capacity of over six hundred. All the rooms are arranged according to the most approved methods for school purposes. In the basement are the furnaces, a labora-
tory, and rooms for gymnasium and other similar purposes. The heatins and rentilation have received careful attention, and are practically perfect.
The course of study has been carefully prepared and includes those branches msmally tanght in Eastern academies, fitting pupils for college. Beside the academic department there is a graded course of study beginning with a primary class, and contiming through the intermediate and grammar grades. A kindergarten department will be organized
fit them for the duties and responsibilities of mature jears. Those who trust pupils to this institution may feel assured that no pains will be spared to train them to good habits and to help them to establish good characters.

A boarding honse for pupils will be opened whenever there is a demand for it. Pupils wishing such accommodations will be under the immediate and constant care of the faculty, who will provide for their comfort and grood conduct, and will exercise a parental watchfulness over them.

RESIDENCE OF JUDGE P. H. EMERSON.
when the funds of the socicty will permit. 'ithe teachers have all had long experience in Eastern schools, and bring to their work here the ripe culture of years of successful school work.

The aim of the Academy is to develop intellectual, moral and spiritual strength by means of a thorongly and symmetrical education mader Christian influences. The conduct of the pripils is the constant care of the teachers who strive to inspire them with a true and noble ambition, and to

## SCHOOL OF THE GOOD SHEPHERD.

FoOR the purpose of giving a Christian education to children of all denominations the present building was erected hy the Episcopal Church, and opened in the latter part of 1577. It is a brick structure of two stories, containing three class roms, located on the corner of Young and Fonth streets. The school opened on the first Monday in last September with an enroll-
ment of 92 pupils, which number has steadily increased until at present there are over 140 names on the books of the school. For the first term of four months there has been an average attendance of over 90 per cent. The principal of the school has in sereral cases been compelled to refuse admission to new pupils from want of accomodation, as the seating accomodations are now crowded to their utmost capacity consistent with health.
The price of tuition in the Higher Department, which is tinnght by Prof. A. C. Newill, is $\$ 2$ per month, of the Intermediate Department, tanght by Miss A. Sweet, is $\$ 1.50$ per month, and of the Primary Department, taught by Miss Mable Cross, is $\$ 1$ per month. These tuition rates are entirely inadequate to support the school, as the revenue of the school from these sources only covers 50 per cent. of the expenses. ln order to be able tu ronduct the school as it should be ronducted, the school is dependent on the donation of anmal scholarships of $\$ 40$, which are given by Sunday Schools and generous individuals in the East who appreciate the sacredness and importance of this missionary work. The course of study pursued in the school is modeled closely after the comrses of study adopted in the best Eastern public schools, and all pupils before graduating can obtain a good High School education from "The School of the Good Sheperd." As proof of this it may be mentioned that one pmpil recently matriculated at Yale, and another at St. Stephen College, Now York, immediately after leaving this school. The keen interest taken by parents in the welfare of the
school, and the ever increasing number of applications for admission are the best proofs of the school's success, and strenuous efforts will in the near future be put forth to accommodate all pupils who may wish to enjoy the privilege of attending the school.
students' progress. The strictest disciplinary tactics are practiced thronghont the school. The school year is divided into four terms of ten weeks each. A short vacation is given at the end of each term and also the usual holiday vacation and legal days.

RESIDENCE OF L. B ADAMS
teachers are enabled to report good and regular attendance.
This school seems to be on a fair road toward a healthy school and it is hoped the patrons and people will give it the patronage it justly merits.

## OUR SCENERY.

0NE of the most desirable things in life is to live where there are beautiful surroundings. Beantiful scenery is almost always pictured with mountains, lakes, rivers and trees. Places that liave these are selected as resorts the world over. It is because of these qualities that the Ogden scenery is so noted.
The city of Ogden is located about three miles west of the base of the Wasatch mountains, and seven miles northeast of the Great Salt Lake. The Wasatch

## OGDEN SEMINARY.

()HE Ogden Seminary, Methodist School, is at present, in charge of L. M. Gillilan and wife. The school. proper. has two departments besides an Industrial school and Iustrumental Music. In the two departments every thing from the rudiments to preparatory collegiate studies, such as higher mathematics, latin, greek, elementary science. etc., are taught. In the higher department special attention is given always to the underlying principles of the subject under consideration; familiar topics are discussed, and in all the principle of education, educo is followed and students drawn out instead of stuffed with facts such as are ouly inteuded for encyclopedias. Test examinations are held at the end of every term to give parents and guardians some idea of the

RESIDENCE OF J. C. ARMSTRONG.

Improvements on the school premises and new regulations in all have been inangurated during the year and everything seems to be cared for and looked after.

Improvement in attendance is also noticeable and now the
range comes nearly to the Lake on the north, and form a semicircle aronud Ogden, then south parallel with the Lake. The sage brush plains thus enclosed are rapidly being plauted with trees. Cañons enter this semicircle of
mountains, giving a circulation of air. Ogden River comes in through the mountains east of the city and enters the Lake. Sereralmiles south, the Weber River enters the valley and joins the Ogden about a mile below the city: A view of the valley and city,
tains aromed Ogden as they see them from the depot, but they camot in passing through, get an idea of the real grambenr of the situation.

Ogden Cañon is one of the prettiest in the Territory; the scenery there is varied and is so grand as

RY.SIDINCE OF H, O. HARKNI.SS.

## CLIMATIC.

©HE following editorial from the Salt Lake Tribune gives the facts in regard to our climate exactly as they are:
A gentleman went from the East last fall to Califormia and spent the winter in Los Angeles. He had weak lungs, and songht the soft air which is loaded with the incense of orange blossoms, for a poultice for his lungs. But he fomm another enemy there The excessive humirlity of the air hall its effect, atal when the man paseed through here. he was all twister up with rhemation and suffering greatly. He was adrised to remain here and try the Hot springs or the Wiarm springs, and was promised that in three weeks he should be all right. We hold his case as typical of what is to be. As men have to leare Los Angeles and come here to
from the momatans, is one which camot be excelled for grandeur anywhere. It presents to the view a complete map of all the streetr, buildings and improvements, of the fields and groves, of the five railroads centering here, of the Great Salt Lake with it. promontory and its mountain islands, and of the rarions settlements in the valley.
A boulevard is to be built east from the northern part of the city to the mometains southward back of the city. At the base of the momntains where this boulevard goes the valley and city is presented as a view the like of which few cities can boast.
Few travelers ever see Ogden in passing through. Salt Lake City, being the most historie in the Territories, is sought more by visitors. 'They admire the mom-

RESIIE: CCE OF I', J. BARRATY.
to ranse those who visit to wish to repeat their visit often. Many travelers who have been in the wildest scenery of America and Europe, after passing through this cañon, have made the statement, that it is the prettiest cañon they ever saw.
shake off the effects of that climate, so we suspect the boom, which has been the property of Los Angeles, will, like the sick man, gravitate here in due time. When it comes to selling climate by the front foot, we have a corner on the market. We expect
to be able, within a few days, to lay before The Tribune readers the proofs, froma high scientific sonrce that the climate of $\mathrm{Og}_{\mathrm{g}}$ den is better for persons who have diseased or weak lougs than Los Angeles itself, while for a dozen other complaints that aftlict poor humanity, the advantages are all with us. Again, the effect of the climate of Southern California is prostrating: men
yearly to and fro across the continent, compare notes, they begin to understand this fact, and the result will surely be that the ticle will, after a little, begin to set this way. The Nation has become so tremendons, that there are now some thousands of people who annually go to seek places of recreation, both from the winter's cold and summer's heat. Of the class we shall catch

## BUILD A HOME.

§2EN of wealth are learning that the real pleasure of life is not in money getting, but that it is the enjoyment of the things that money cau provide. All perfect homes are the joy of those who make them, be they grand or homble. If a man possess wealth, he is foolish if he does not huild himself a home where he can

RESIIENCF OF F, J. KIFSFL.
lose their energy there. Men who went there years ago, are now, while perfectly healthy, content to let the world wag. The climate has given them a dry rot, and they simply "dream the hours array." 'The air here is a perpetnal tonic, and the rule is that men continue to work to the end, and die with the harness on. As the hundreds and thonsands of people who [oscillate
more and more, until before very long there will be an exodns this way. What are we doing to make the place attractive for their coming?

The Utah Canning Factory of this city will be enlarged next season so that it will require most all of the fruit raised in this vicinity to supply the establishment.
with his family enjoy the choicest blessings of life. If he is able it is not necessary that his home should be confined to any particular place of abode but he can have two or more residences and thus pass the different seasons in different localities. If he loves society and wishes to have his family enjoy every social advantage possible, it is natural and proper that he should have a res-
idence in some flourishing city. where he can enjoy all the pleaswres of the somial worth daring the winter months. When the simmer comes it is fashion to rush to a summer resort where it is over crowded and any thing but pleasant and agreealse. How much better it is to hare a summer residence in some healthy locality where health, rest and pleasure go together. Such a
to go to some summer hotel and rewd into small, inconvenient rooms.
There is no place in the United States lietter adapted to the building of such homes than in the immeriate vicinity of this city. Land is cheap, fruit and regetables, such as cam be produced no where etse, grow in abmatance, the air is pmre and brating, the scenery grand and

residence will soon leeome as much a home to the family as the old homestead where the litthe ones were born and ralised, and it will alford the owner more real pleasme and that at less expense, than he cold possibly enjoy at any pubic summer resort.

People who can affort it are fast leaming that it is much more pleasant to spend the summer montlis at their own home in some good locality than it is
imposing, the climate equal to and lar smperior to that of most all other localities-in fact, we have every thing that goes to make life enjoyalle.

The sea bathing in Cireat Salt Lake, mentioned in another article, is far superior to any sea bathing in the world.

People who have a desire to buidd a pleasant home in such a locality, will tind, mon investigation, that nothing in the above is over drawn.

## STONE AND MARBLE.

UTAH can supply the world with fine lnilding stone, so great are its quarries. The Denver and Rio Grande Western is filling a contract for 500 car loals of red sandstone to be delivered at Kansas City, and for 1160 car loads more at Denver. This stone is taken from a quarry near the road in Spanish Fork Ganom, where it is casily extracted and loated. This stone boseseses the important qualities of heing easily worked into any form desired. and of having is fine texture and pleasing shades of color. The front of the Cinllen Hotel binilding in Salt Lake eity, a fivestory structure is of this stone. lesides the contracts mentioned. the railway company have home and ontside demand for the stone. and they are sending out from three to six "al hadde per day. (itay sandstone of good quality is quarried in the same ricinity, and near there is also an immense mass of mottled or serpentine marble, which polishes nicely. and is so variegated and beantifnl, that it is destined to come into demand for varions classes of ormamental work. There are so many varieties of marble in Utah that works onght to be started in this city to convert marble into slabs and blocks, and also into finished work. With such a factory here it would be possible to erect marble houses ahmost as cheaply as brick. This class of manufacthre offers good inducements for the investment of capital either in this city or at some of the various quarries. If in this city, many varicties of marble and
sandstones conld be collected here, and thus would give such a factory a varied stock for the market, which, besides supplying the home market, would fiad demands both East and West. Granite should be included in such stone works. There are
and possibly more, in the cañon where natural dams exist. The cost of putting in dams at these places compared with the expenditure necessary to secure a head on some streams would be insignificant. At all of these places the entire river could be

residerice of hon. D. h. peery.
ons farmer to fructify his fields, orchards and gardeus. "Yes," continued the gentleman, "Ogden River is a wonderful stream, and the amount of power it can be made to furuish is heyond calculation."
The road from Ogden to Huntsville is built through the cañon through which Ogden River passes. The distance through the cañon is seven miles. The distance from Ogden to Huntsville is twelve miles. Huntsville is (60) feet higher than Ogrden is. It is estimated by experts that the fall of the river between the head of the cañon and its month, is from 4.50 to 500 feet. This gives to the river a rery swift invent and an abmendance of motive power:which,as stated above, can easily be utilized. At the lower end of the cañon is the greatest fall. Here in places it averages 2.00 feet to the mile. and
many quarries of granite suitable for monuments and other purposes, while the slate deposits in the islands in the great lake ought to be brought into use throngh being sawn into the many articles for which it is applicable.

## WATER POWER.

थfPROMINENT gentleman of this city who has traveled considerably in the United States, says Ogden River affords better facilities for utilizing its force than any stream he has ever seen. It is possible to utilize the whole of the water in a great many places and return it into the river. Not a drop of water need be wasted anywhere; consequently irrigating interests need not suffer. There are three or four points,

turned through to advantage. Every drop could be made to do work at each point and then could continue its course on to the broad acres of the industri-
there is always sufficient water to furnish any quantity of power. A grade of 160 feet to a mile, which it will be seen is far below what àctnally exists in some
places. will give 20 feet fall in every to rods. The number of places where such a fall comld easily be obtained is large, hence it is hardly pussible to estimate the quantity of power the river
been found in flowing wells and comes up with the water. With the proper arrangements for collecting it in a gasometer. it has been found that the supply is constant and regular. Several
large quantities. A lot of the latest improved machinery is to be midered from the East, and work is to loe commenced just as soon as posible.

## SOUND SENSE.

๔HE following report. propared by the chamber of commere Committee on Agriculture. stales so many facts in just the right way. that it is siven a place in this work. It is not the intention that the preople liast and West. who read this hook shomld be given to mblerstand that every thing here is so near perfeetion that there is no room for improvement. The adviere given to our farmers may serve to give some one who is in search of a

desirable location to go into the business of farming. some desimble information in regard to this part of the comatry. For it is to be supposed that prospective
settlers desire to know something of the disadvantages as well as the advantages possessed by a particular locality.
The Ogden Chamber of Commerce, through its Committee on Agriculture, recommends that the following suggestions be carefully studied by all interested:
Where now one car of potatoes

H. L. GRIFFIN WHOLESAIE PRODUCE.
that the packages will pres nt a neat appearance. Clean sacks should be used. Any article will sell to a much better adrantage in an attractive package than in a slovenly one.

Some may say that if we raise so many potatoes, and there happens to be a light demand, they will be a dead loss to them; but we say not necessarily so, for in that case they can be used for feed. This will result in increasing our live stock and furnishing material for such establishments as packing houses. We do not produce enough to bate our markets.

Dealers who are acquainted with the trade of the past few years will tell you that the trade of Utah consumes many carloads of (late winter) cablage. imported
is raised there should be fifty or a hundred, for in seasons when there is a great demand, we can obtain contracts for large quantities easier and at better figures than for small quantities; and again, much can be gained in the matter of freight rates where we can guarantee to ship a great number of cars in a season. The manner of putting up onr potatoes for market is a subject of great importance. Only one kind should be planted in the same hill. row or patch, and care should be used in selecting the best varieties. such as Goodrich, Peerless, Early Rose, etc. Then when sacking for market, be sure and put up large, well assorted goods, and only one kind in a sack. Have sacks well-filled, so
from California every season. The same is true of onions. We know of markets all through the East where many carloads of bot'i these articles could be placed at highly remunerative figures if we had them in the country. We say to the farmers, "Wake Up," and make yourselves independent, if not rich. You have the country, the climate and the soil, and can get the markets.

For two reasons it will pay growers to put out numerous orchards of peaches, plums, pears, apples, cherries and so fourth. In the first place, this is one of the best producing sections of the United States for them, and secondly, we have the best markets.

The flavor and size of our fruits. when they are properly selected
and cared for, are equal, if not superior to any grown in California. They bring higher prices in the Eastern markets than the latter, owing to the fact that we can get them there three to four days fresher. Being one thonsand miles nearer; we have very much the advantage over them in almost the entire market. They supply Denver. Omaha, Chicago, St. Louis,and intermediate points; also to some extent.New Orleans, Philadelphia and New York. The fruits are transported to these points in special fast fruit trains at a very low rate.

What we raise has all to be shipped out by express, as there is not enough at any time to load a car. We have to confine our market for these kinds of fruits to small towns in our vicinity, and when they are supplied, ship

F. J. KEISEL \& CO.
to Denver and other small points, paying $\$ 3.00$ per hundred, while California fruits are carried there for $\$ 1.10$, a difference of nearly forty cents per twenty pound box, or two cents a pound.

Several fruit houses in each of
the large centers above named, receive three to four cars of froit per week dmring the season. Just as some the whe hare earefully selected fruit cuough to
the enconragement for putting out large quantities of them.however, as for putting out the larger fruit, as they have to be shipper by express to thinly settled dis-

load by the car, we cath have all that trade that we want and rereive better figmes for it than we do now.

We heartily recommend you to give this matter immediate and serions attention. We believe there is more money to be made in growing fruits here than in any other part of the United States.
Strawberries, maphries, backberries, ete., do well here, and the choicest of them, well pateded, find ready market. There is not
tricts. There are now ahout as many black and rasplomry vines in bearing as on market demands, muless we ean make it profitalse to dry them in large quantities. We believe it would pay you to investigate this matter, ats dealers here ammally import many handreds of pounds at from ten to twenty rents.

Two mach care eamot be taken in packing these fruits. How many tealers can testify as to the manner in which our berries are often put up! After pur-
chase, they frequently find what appears to be a marketable lot, upon removing the top layer, composed chiefly of small. sour. noripe fruit. Arain. a shipper sends ont to a distant market a lot of froit which hist heen purchased as lirst-rliss. Ater a time his constomer moturastatement that the berries were so pener that thig conld not be disposed of at any pires, ams states that if mothing hotat sam lie had not to seme amy muse.
Whether berries, pardes or other fruits, only the same ripeness shonld the put together in a package. Ripe amd hard froit will not calry well together. The hard mashes into the ripe.
From the best information we can get, om local mureries can give yon hetter trees and shrubs for this altitude than foreign establishments. We therefore ad-

vise farties to comsult them before planting, as they haw mand that subjert a staty:
In the matter of grain, we would impress upon farmers the necessity of getting the hest rariety of seed, and freeing it from
all foreign seeds. Plant in rich soil. Do not plant wheat too many times on the same patch of land. You will find it very beneficial to change seed wheat every two years at least, and, in doing so, do not get your next door neighbor's, but go off a few miles for it. When you plant in lower valleys, try and get seed raised in the mplands. You will find it a great improvement in your next year's crop. In our opinion much of onr smatty wheat is cansed from planting on poor land, and the same seed year after year. There is no reason why onr wheat for its flommaking poperties may not become famons all over the Cnited States, aml reach the Itlantic and the Parific. We have as good mills as Minneapolis, and no lorality has hetter water power.

The demand for onr grain is

C. L. HEEBLES IIRUG STORE.
far in excess of the supply. If we would raise a thonsand bushels to where we now raise one hundred we could command trade with the world, because we could load ships with flone and wheat, and furnish large consuming
markets at home. It would then pay to erect elevators, which would greatly rednce the cost of handling. In relation to barley, we have to say that orders can be obtained much easier for fifty or a hundred car lots than for five cars, and at much better figures. There is seldom a season when we have oats sufficient to meet our demands. Stringent measures should be taken to destroy
tive to hutter, we would recommend that every farmer have a clean, cool, well-aired place for milk, and churn while the cream is sweet. Liverpool salt should be used, and the butter well worked, wrapped in clean butter cloth and marketed while fresh. When put up for shipping every roll shonld be of the same size and color. and the box clean.

We cannot too strongly urge

UIAH PRODUCF AND COMMISSION CO'S RUILDING.
wild oats, and more care used when they are threshed to keep then clean.

Onr poultry, butter and egg business can be made much more remmerative than it is now ly observing proper precautions. Merchants and snippers of this city and Territory have met with heavy losses on account of eggs being bronght in stale and not properly assorted. Much care shonld be taken to have them clean when marketed, and unt more than eight days old. Rela-
the necessity of carefully selecting all goods put up for shipping. It is a well-known fact that the prices received more than repay the extra trouble for selecting. We give the above remarks with the hope they will be of use to yon, and thus help to build up the country. We have beenasked to write these recommendations by numbers of our business men who are daily receiving letters from markets in all directions, and are thus in a position to know what is needed.

## MANUFACTURES.

(0)IIE following interesting extracts are from a very full and complete report made to the Ogden Chamber of Commerre by the committee on manuficture. After calling attention to the fact that it was a hard mitter to collect reliable facts, the report says:

2nd. We recommend that the Chamber of Commerce consider
plumper, and weigh more than they do after being shipped alive 1500 miles or more and slaughtered at other points. We have all the facilities, and more than at other points, hence this business can be "arried on here better than at any other point, this loeing the terminns of five railroads. That would furnish us a good market on the line of railroad for hotels, etc., in addition to oinr loral market and the

1. C II. 1
the advisability of forming a company for slanghtering and refrigerating eattle. sheep and hogs. There is, tributary to Ogden, a large area of comery that furnishes 100,000 head of heel and as many mutton, ammally, which are shipped alive, at present, to the East aml West. A car will hold 17 head of live stock, and 45 head dressen. The ammals: are worth more by 1 or 2 cents a pound, killed in Ogden; are
markets of the East and West. In comection rould be run a canning, potting and curing establishment for the camning and potting of beef, and for the curing of beef, pork, hams, ete.
surh an organization would bring to Oglen a vast amount of trade, as the people who ship their cattle here would naturally bank trade, and stop ower with us, opening a field of enterprise to our merchants.

The killing of stock in Ogden would leave the hides and offal here. which would be an impotns to mannfactures. We have plenty of salt to cure the hides, and it would furnish employment to tann and mamufacture the leather into boots. shoes and harness. The grease could be made into soap, the hoofs into glue. The farmers would raise more hogs and take their pay in cured meat and lard, in fact such an establishment once started wonld find employment for more than 100 men in the mannfacture of goods which at present we import. while we give away the offal and only receive payment for the bare meat.

5th-We draw yeur attention to the salt lake interests. Sea water evaporating leaves 4 per cent. impure. English rock salt as mined is $1 \frac{1}{2}$ per rent. impure. We suggest the appointment of a committee especially to inquire into the method of prifying sult, for the prome of msing the salt manufartured in L'tah for pickling and ruing meats, and for exportation in rompetition with Liverpol salt for preserving butter fund for use as table salt: and to ascertain whether it is possible to pmify: or remove all impurities from Ltals salt, as it takes perlectly pure salt for the preservation and curing of meats and butter.
fith In the orgamization of companies to parsue the hasines: of slanghtering cattle, sheep and longs, the famers shonld co-operate and sustain, as they could convert the grain that they sell at 1 cent per lla.. and the potatoes that they sell at $: \frac{1}{z}$ cent per lb.. into meat that will not cost them one tenth of the freight to send
to market, besides suppling the home consumption. It will help them to keep their farms from being worn out by supplying them with fertilizers. The meat cured will net from 10 to 25 cents per lb ., while the freight cannot
over-double the price of the raw product.

9th-In Wyoming, Utah, Idaho and Montana 100 cars of glass are used annually, we suggest a special committee to inquire

trout pool, ogden canon.
whether window glass can or cannot be manufactured in Og den. All the material is found in Utah and there is a factory for making glassware and bottles in successful operation in Salt Lake City.
10th-We invite your consideration to the fact that out of the $7,000,000$ pounds of wool raised in Utah, $6,000,000$ pounds are exported, and we import our woolen goods. while it has been demonstrated by the woolen mills in Provo that the manufacture of woolens can be made a success in this Territory
11th-In conclusion, we would state that Ogden possesses the key, and holds the situation as the commercial and manufacturing center for Utah, Idaho, parts of Wyoming and Nevada. We have enough of power running to waste to manufacture all the goods needed in those States and Territories; we are the center of this whole commercial region, and we have the terminus of the five largest railroads here: and any industry that we may go into or any goods that we can manufacture, we are in the center of the market, and can ship to its destination without re-shipment. We are not depending on favors from one or two roads to make us, for we have them all, and if one does not the other will.
But let Ogden once start one or two of the manufacturing industries we have enumerated and the railroads will be begging for the freights and favors of the merchants and manufacturers of Ogden, with more clamor than Ogden has ever exhibited for the depots. When two or three of these industries are operated, Ogden will not need to ask for a depot; it will be put here too quick.

## SYRACUSE.

8YRATVEK is the name of the new hathing resort on the northeastern shore of liseat Salt lake at the temminns of the Ogden and Syrarmae railmad. The new resort was opened to thr pholic on the thlo of Jaly last, sinee which time it has been growing in populanity every day. With the exception of liarliold l eardr. it has the best beach of any resort on the Lake and it is only a guestion when it will be one of the best summer resorts to be fomm in the western romntry. The land near syratrose is very loretile and there is an abondanere of fresh water for irriguting pmrposers. la this partionlar it is ahead of any of the other resonts becatue it is possible to have one of the tinest parks in the I niteri states here on this fertile land. The management is in enterprising hamds and it is the intention that no expense whal be spared to make this one of the greatest hralth and ploasme resorts in the country. Next season the thongh trains from the bast on the linion Pacifie will be run down to the lake from this rity so as to give throngh passengers a chame to take a hath in the sreat inland sea before contimming their journey West. Every comvenienre that it has been possible to !!orvide in the shon time sine it was tirst derided to build the resort, has been provided and now large numbers of our ritizens run down to the Lake almost perer day during the week and enjoy a bath in the briny deep.

There is no sea bathing in the world to equal the (ireat salt lake, and in less than tive years dozens of resorts will be established along its shores and on the
istambe which it rontains, large substantial steamers will make regular trips from one resort to another for the areommodation of the thonsand tomrists who will flock to l'tah during the stmmer months. Elegant summer residences will be bmilt, and the hroken in health and the overworked will find hoalth and rest, while breathing the pure abr of themountains, and bathing in the lake. When all this comes to pass, syracuse will be one of the principal resorts, noted firs and noar for being the greatest health and pleasure resort in the rountry.

## DISTRICT SCHOOLS.

 ported ly a yearly Territorial appropriation, by looal taxation amd by tuition.The 'leritorial appropriation is derived from a general Territorial tax. 'The sehool law provides that a lowal tax may be levied in any district, not excopel-- per cent. per ammm. A tax of a per rent may he lovied by the trinstens withont comsulting the taxpayers any amomet above that monst be levied hy eomsent of the tax payors at a meeting ralled for that purpose Free sohools may thas be hat in any district where the tax-parers are disposed to loys a tax suffiriently large for that purpose. Sevoral districts in Weber County have, therefore, freer ardoobls.

There are twenty distriets in the comnty each directed hey a bomal of three trustees.

The total value of sobool proppety arcording to the repert of the emperintendent for 15si, was $\$ 75.3(i 3.30$. which is 84.67 .6 .5 in excess of the value in ISS6.

Forty six tearhers were employed in the thintr-fom selionls of Weber County, at an average salary to males of $\$ 0.2 .4$, and to females, $\$: 0.70$. To pay them, the distrints expembed Slig. -To.(i.), an inrrease ower last year of \$1.\%) 4.4 : of this amomnt the smm of S.9.60.). fi) was paid to males, and sif.16at.16 to females. The comrent expenses of rumning the schools, exchusive of teachers' salary, was \$1.611.14 in 1857, as against $\$ 1,601,2.0$ in 1.546 .

The sehools were in session on an werage, three torms and onefourth, or 1.51 diys:, eight districts having sebonos in session the whole year: three for three terms and one-half: tive for three trims: two for two terms: and two for one term each.

There was a total sehool population of t.i:2! ont of whicls nmmber -2.26 are boys and 2,060 girls. Ont of mmber set are childeren of mon-Mormon parents. and S.,i0.) children of Mormon parents.
'The emmolment was 3.299, or seventr-five per cent.. but the arerage daily attendance was 1,654 , or thirty-nine per rent.. to which may he added sermenty-seren mader sehool age and 13! over eighteen sears. who were enmollen. The actual most, therefore for teachers sabaries for each child actmally attending was $\$ 9.36$, and for all expenses, slt.iz.

The total revenue was sog.S2l.i9. The amount received from rlistrict tuxes was $\$ 10.129 .41$ : from Tervitorial appopriation, \$5.9.94.00; from tuition, S., (ide.9.91; aml the remminder from other somres. The total sum of siot,123.09 was expended for school burposes during the your.
'I'eachers associatir,ns and institutes are held, weflily, monthly,
and yearly, respectively. The latest and best methods of teaching are employed by the teachers. Music is receiving due attention in many of the schools. The buildings, and furnishings. of the Weber County schools compare favorably with any in the Territory.
The following table, taken from the ammal report of Supertendent Edward H. Anderson, gives a fair idea of the growth of the public schools in Weber County.

Value of School Property $\frac{\text { I867. }}{-}$| 1877 |
| :---: |\(\quad \begin{gathered}1887.970 .00 <br>

\$ 77.363 .30\end{gathered}\) Tutal palu to Teachers... \$5,332.8) \$6,262 0 5 $\$ 15.77365$ Local Iaxes Ralsed.... \$1,075.70 \$ 2,01 +65 \$10.129.41 School Population....... $1,422 \quad 2,876 \quad 4477$ Total Children enrolled. $\quad 975 \quad 1,794 \quad 3.299$ No. of Schools........... $18 \quad 21 \quad 34$

## THE SLAUGHTERING BUSINESS.

(6)OME one who has plenty of money with which be wishes to make more can do so by building a big slanghtering house in this city and ereating a market here for cattle and sheep. It is only a question of time when there will have to be a market established some where in this inter-momntain region for the cattle and sheep that roam over the hills and valleys. It is much easier and less expensive to send beef to eastern and western markets in refrigerator cars than it is to ship the live cattle in stock cars such a great distance. Thousands of tons of ice cam be put up in this city every winter if necessary, and with plenty of ice and the right kind of cars the business is an assured snccess from the start, a.s the cattle could he slanghtered at any time and the dressed beef could be packed in the cars and sent direct to Chicago or San Francisco, where it would arrive as
fresh as the day it was placed on board. Ogden is just the place to locate such an establishment, because of its unexcelled railroad facilities. Any one who desires to start surh a business would undoubtedly receive assistance from the U. P. and C. P. in some form or other. For instance the U. P. would in all probability agree to hanl all the ice necessary to be nsed from Evanston tree of charge. Ice ran as a general thing be procured in this city, hut as it can always be bad at Evanston, and as the quality is the very best, it might be well to arrange to get all the ice from that point. The railroads would also arange to keep ice along the road to replenish the cars if necessary. The roalls could well afford to encourage snch in enterprise in every way possible, becanse it would furnish them with a great deal of business. The cattle wonld have to be shipped into this market from the surrounding country and the dressed meat would be seat out.

There can be no question abont the surcess of such an enterprise, becanse good meat is always in demand in any eastern or western market. Ant all that is neressary is to arruge for getting it there, and there will be no tronble abont sales or profits; and then again there is always plentry of feed in this vicinity, so that catthe sent in here from a distance can be fed for a week or so if it is necessary to place them in good condition for killing.

The hides and tallow will pay all the expense of rmming such an establishment. and the horis and feet can be utilized for different purposes, so that taking all together there is good reason to believe that there is a chance to
make plenty of money after the business is once started.

The Chamber of Commerce will assist any one who desires to give it a trial in securing a location for the necessary yards and buildings.

## AGRICULTURE.

中EOPLE do not farm in Utah like they do in other parts of the Uniterl States. As a general thing the farms are small but owing to the al most unequaled productiveness of the soil a farm of a few acres will produce as much as a very large farm in Iowa, Illinois or any other of the great agricultural States.

The following interesting facts are gathered from a cirnlar prepared by the Denver \& Rio rirande Railway. They are perfectly reliable.

Fair Utaln wheat ranks with the hest No. 2 lied, which is the highest grade appearing in most of the Eastern markets. Onr choicest qualities, raised muder the most favorable conditions, are a unique product with scancely an equal in America. A number of points in Colorado, especially Denver, are already buyers of our wheat this year, while some shipments have been made to Kansas City. Enquires are also being made from California. Utah wheat has a brighter, larger kernel than that of the East, and though no handsomer than that of California, it is firmer ind its nutriment more concentrater.

We have known parties who are keeping up work horses, to pay 2.) to 30 per cent. more for Utah oats of ordinary quality than for a fair grade of Eastern. This was a couple of year's ago when cut rates of freight permitted the
bringing in of Eastern oats. Nothing more conclusive can be said of the real value of our oats than this, which after all, only represents current opinion among those who have tried botl. ITtah oats, therefore, command a stiff price and parties looking here for a supply shonld monderstand that in return for the comparatively high figne asked, the real feeding power of our grain is proportionately high. Utah oats have ramged in price during recent years from $1+$ to $1_{4}^{3}$ cents per pound on cars.
In 15S.5 on lirewing barley was exported in great quantities to St. Lonis, Milwanker. California and other points, where it invaribly grated as fully un to the best ('anadian brewing. I'tah barley beer is adrertised all over the Union, and signities the highest attainable degree of merit. It is the use of this barley which gives Utah beer so high a standard. Indeed onr white club brewing barley will hold its own anywhere as a strictly falmey product. Besides this grade I tah has for sale about a million pounds of mixed feed barley.
There is a few cars of ree anmually offered here at a figme usually ranging over one cent per pound. The quality is supert and the yield fair.

Utah does not pose as a corn comery, and rarely has any for export. The hot sultry nights which corn requires are not characteristic of our climate. East of the Wasatrli Monntains, however, along the line of the Denver de Rio Cirande Western, especially at tireen hiver, it is likely that corn growing will prove a considerable industry.

A special providence seems to
have reserved this T'erritory for the cultivation of lucerne, often called alfalfa, which the farming people of Utah have learned to look upon as one of the greatest hessings that has yet been vonchsafed them. The best crops come from lands that camot well be plowed becanse of their rongh character. Excellent results. have been had by merely clearing off the brush and casting the seed over such gromid. It takes longer to get a good start and irrigation is more difficult than if the ground were stirred up but it thrives hetter in the end. Lucern will do well even on grond that is too steep for a mowing machine, if only suffirient water can be got on it to give it a start. Its average grow th is ahont three feet thongh we have known it to reach over six feet when left for seed. A serions dronght may spoil the crop for the time being, but the following year it will come up as good as ever.
Utah is, par excellence the romntry for lucern seed and from 300 to +00 tons are exported annually at prices varying from seven to cleven cents per pound.

We raise some red and white clover seed, but have little left beyond our own needs for export.
The Utah potato has a reputation for excellence all over America and even in (ireat Britain. Other climes have tried in vain to match onr product, but the attempt serms futile. For many years great quantities have been exported from this Territory, and it looks as it we shall contime to do so for all time to come. We have seen a lot of sixteen hushels that went thronghout twelve potatoes to the bushel. The king of the Early, Pcerless
and Compton's Surprise yield in favored localities about 400 bushels to the acre. With high cultivation we have heard of 1,000 bnshels being raised to the acre. Utahalso has a fine reputation for carrots, which often yield of grod quality as much as 1,200 bushels to the acre; also for onions, turnips, parsnips, radishes, etc. Beets thrive astonishingly well, and far-sceing men tell that one day. the large tracts of low lying, lut now nowatered lands on the western side of this valley and elsewhere, will be under cultivation to the sugar beet for the mannfacture of sugar.
There is 110 reason why the cultivation of peanuts should not take its place as one of our foremost root prodncts. It has heen clearly demonstrated that our climate and soil are especially favorable to their growth, and every attempt that has been made which was only on an experimental scale, has borne ont this idea.

Of green stuffs we annually export large culantities of cabbage, cauliflower and celery, the latter growing exceptionally fine.

South of Ctah Lake, and in varions other localities, are grounds suitable for the growth of flax, which is native to onr soil, and would pay well for cultivation.

Hops are also native to Utal, its trailing vines literally overrunning every other kind of foliage in many of one cañons. The picking of wild liops has yielded ronsiderable of pin money to the comitry people, and Nature conld not tell in plainer words that this is pre-eminently a region favorable to their cultivation.

The same canses which give excellence to the grain and rege-
tables of Utalu also stamp her orchard products with a high caste. Fresh fruits are exported in considerable quantities, and wherever sent take the highest place and command the readiest sale. In general terms, the superior characteristics are firmness, beanty, and above all, fine flavor. Utah peaches are shipped, wrapped and unwrapped, in boxes about twenty pounds eacl, and find a ready market in Colorado aud ldaho. Our peach trees thrive best on light loam and gravely soil.
The apple is now generally acknowledged to be more free from worms (codling moth) than for some years previons, and thonsands of boxes have been shipped East and North by parties in Ogden, Salt Lake, Provo, Springville and other places. It is probable that each succeeding year will see our apples freer from worms and that in a few years they will have disappeured altogether. By papering the apples and shipping in refrigerator cars they may safely be transported long distances late in the fall. Green apples are a staple product of the Territory, and notwithstanding the lieavy shipments made, the demand last season was not equal to the supply.
There are many fine plums raised in Utah; the growth of plums last season fell much short of our usual quantity, and we were far from supplying the demand.
There is a sure demand for more Utah pears than have yet been produced. There is a lack chiefly of early varieties of which we have few beside the Bartlett. Growers have paid over much attention to winter pears, which ripen too late to secure favor-
able sale. They now realize the fact, and it is likely that future years will find a better supply of earlier kinds. The Utah pear is an extremely rich fruit.

In most seasons, Utah has a good crop of apricots for export, and cherries in limited supply, while grapes are in goorl quantity but at points favorable for shipping are not as handsome as those from California. In Southern Utah they raise beautiful grapes of fine rich flavor, the average yeild per acre being 6,260 pounds, according to the latest data. Strawberries and raspberries are both native to Utah, as is the red and black currant. Under cultivation the yield is very large and of surpassing quality.

Such is the wide reputation which Utah enjoys for the excellence of her dried fruits that they command a fancy price thronghout the entire United States. In competition with tho best Tennessee they bring in Chicago and other cities, from two to three times the price. The canse of course is primarily the excellent quality of our fruits with its rich flavor, but we owe to the peculiarity of our climate the ability to sun-dry with such success. A third reason is the singular rapidity with which moisture eraporates in this region, enabling the drying process to take place rapidly in the day-time, while the absence of dew, prevents the back-sets during the night. Fruits dried by artificial processes lose part of their virtnes, and it is doubtful whether much of it would be done were other climates as favorable as our own to sun-drying. Thus it is that Utah sum-dried fruits occupy a place by themselves in the market of America. A fancy article,
that has never yet boen produced here in anything like the quantity that could be sold, is the Utah peeled peach. There is nothing like it for fine flavor anywhere. It keeps well and commands twice or thrice the figures of the mpeeled. The apricots dried here invariably find a ready market, it being an exceptional year when they are not cleared out before Christmas. The price always ranks high and the fruit is a general favorite. Attention is now being turned to the German prume for drying purposes, and these will probably be kept separate. The time is at hand when these will take the place of those imported, and in a few years, exports are suro to follow.

Very few dried pears so far come to market. A very limited supply of nectarines have been brought in and quickly sold at a high price. This fruit is so fine in appearance and so rich in pulpy substance that its drying should be encouraged.

A novel product, which first occasions surprise and that finds great favor wherever introduced, is the dry ground cherry. This fruit is native here and has not yet been cultivated, to our knowledge. It grows only too freely for the farmers, however, as it spreads with great vigor. When scalded and dried, the fruit is of a beantiful golden color, making excellent pies, sauce and preserves.

The ease with which a well can be driven and flowing water secured in the valleys of this Territory has given a new impetus to farming and made lands available that have heretofore been considered beyond cultivation.

## NATURAL GAS GEOLOGY.

(a)
HE following article by J. S. McIntosh, in the Salt Lake Tribune, is on a question of considerable present interest:
The general geological conditions upon which the orcurrence of natural gas seems to depend, from a consideration of facts obtained by a long and practical experience in the oil busimess are: (1) The porosity of sandstone either in the Triassic or Jurassic formation. (2) The extent to which the strata above and below the gas bearing rock are cracked. (3) The relative proportion of water; oil and gas contained in the gas-bearing rock. (4) The pressure mider which the gas exists before being tapped by wells.
Kind reader. do not misunderstand me. I do not claim to know all the conditions of importance bearing upon the problem as to the reneration of natnral gas. But, from a diligent and careful observation of twenty-fire years, have found that sandstone of a porous nature produced the hest gas wells: which is found in the oil comity of Pemmelvania, as well as in the Westem country. Yet the origin of natural gas has an important bearing upon economic geology. It is helieved we are in possession of some data to throw some light on this interesting question of the canse of natural gas. Yet it is inconceivatle to permit a comHete explanation. However, I deem it necessiry that some statement should be mate in order to more thoroughly understand the conditions unon which its origin seems to depend. It would appear to some people that natural gals is closely related to
petroleum, and that their origin is due to the same canse-that is the decomposition of animal and regetahle life. It is genemally helieved that gals is not indigenons to the rock from which it is obtained, but comes from the decomposition of life forms which were entrapped in malerlying strata. It is also conceded by professional men. that gas is generated from carbonic sulstance. This may be a filct, yet 1 propose to show that natural gas exists in different countries where there are no parlonic formations. Fon instance: we have aun abundance of gas in Canada, Bast Indies and in different states in this Lnion. where carbonic formations are not known. We have also fomed gas where petrolem is not known to exist. 'That the absence of oil or coal in our 'Triassic formation east of the oil region in Pemssylvania, is explained ly the erarking of the rocks. A survey of the outcropping rocks and the dry wells. show that the Triassic or gasbearing rocks extends fin beyond the limits of the areal of the region in which any traces of gas lave been found. The general structural geology of gas regions is simple: 'The rocks lie nearly horizontal, dipping slightly to the southwest. An appreriation of the intensity of the dips may be had from the following figures:

From the city of badford. iv miles, in an air line southeast of the city of Erie, the rock dipson an average of $1+$ leet to the mile. From the city of Pittsburg. a distance of 70 miles, the average ilip per mile is ${ }^{(1)}$ feet. The maximum dip of Bradford oil region from surveys of $157!$, was 60 feet per mile. I claim the dip of gasbearing rock has an important
hearing upon the occurrence of gas. Yet it is not believed that gas wells can be located independently on what has been formmlated as the anticlimal theory: howeror, the greatest gas wells of l'emsylvania are fomed on thosie greatest anticlinal positions. Mr.J. F. Carll, assistant geologist of the oil regions of Pennsthania, claims faml I atcede with his views) that gas wells should be lowated on anticlinals, because gas is lighter than water or nil. and should seek the biggest reservoir premises: a sandetme rock containing oil, water or gras or only water and gas in such proportions that the fluids may stratify themselves as freely at they would in an open tank muler air, the water at the lower lever and the gas at the higher. It is proved by experience of over twenty-five years that no purfitable oil or gas well can be ohtained in the npper Deronian strata unless a good sand rock reservoir is found.

It is generally expected, and justly, that the oil and gas-making material was depositel hefore and perhaps in some cabes with the sand rock, not after it; that the tendency is oil and gas when generated is up. wards. Therefore the two primary conlitions to be sought are. gas-producing materials and sand rock reservoirs to hold the products. It is a well-known fact that all oil and gas-bearing rock are sedmentary: that they are composed of materials derived from older rocks, the disintegrated particles of which have been sifted, assorted and deposited in stratified layers by the action of water.

We do not need to go back to Pennsylvania or Canadia for an
explanation on natural gas or oil; we can find those old sedimentary and fossilated rocks right in Utah and Wyoming, overlaid by sand rock; we have oil and gas in this country in abundance, if we only had energy enough to sink for it.

We have oil and gas north of Rawlins, Wyo.; we have gas in Green River, Wyo.

We have oil and gas in abundance in Fossil, Wyo., and we have gas right here in Salt Lake City, although not in abundance at present, but by sinking down deeper I would almost guarantee that we would find the desired fluid in as great a quantity as in Pittsburg, or in any other part of the world, for we have the oil and gas-bearing rock much nearer the surface in this comtry than it is in the East, and it would cost much less to sink for it than in the East.

Let me here give you a brief description of the Geological Survey of this western country. In parts of this country we have what is called the Dacota group of rocks, which varies in thickness from 1500 to 3000 feet. This group of rocks is composed of blue. black, and reddish sha? e, intermixed with strata of a very close white sandstone varying in thickness from five to twenty feet, which contains fresh water. Underlying the Dacota group, and in many sections of the country, is found cropping out what is called the Triassic formations of rock, which is composed of strata of sandstone, conglomerate and limestone rock. The Triassic formation of rocks produce oil, water and gas, and is about 500 feet in thickness. Underlying the Triassic rocks is what is termed Jurassic rock, composed of red sand-
stone and red fire clay exclusively, and varies from 110 to 1700 feet. Underlying the Jurassic rock comes a very porous gray sand rock, in which oil and gas have been found in abundance in Wy oming Territory. The pressure of gas has not been tested, but when found, it threw oil and water sixty-five feet high. Those wells are all on an anticlinal. The rock dips in this section of Wyoming about 300 feet per mile. My anticlinal theory may be fanciful, but through a careful watch of the different formations, and the dip of rocks, I have never found oil or gas where the rocks lay perfectly horizontal (and I have sunk wells in various parts of the world.)

Profossor J. P. Lesley (geologist), in an address delivered in Pittsburg before the Institute of Mining Engineers, February 17th last, in referring to the anticlinal theory, says: "Location of anticlinal lines in the Pittsburg gas region has become popular, produced by a theory, and the whole community interested in the subject of natural gas, abide by no other theory than the anticlinal theory to obtain gas."

To this 1 add the important consideration, that the movements of oil and water have been shown by actual practice and are governed entirely by the character of the rock and its position.

I therefore claim that natmal gas is generated from the sedimentary sandstone composed from life and vegetable matter, disintegrated particles of which have been sifted and deposited by the action of water.

I also claim we have gas-bearing rock in and around this city, and at a much less depth than in the East. And the writer of this
epistle would like to see some enterprising firm take hold of this problem and sink for gas, and by doing so, I feel confident of their success. And success means a great benefit to our great and noble city. It is an undisputed fact that we have the best of facilities to make Salt Lake City one of the largest and finest cities in the world. The surromedings of this city are equal, if not better, than C'hicago, Philadelphia or New York. We can raise grain or fruit of all descriptions. We are surrounded by mountains which are rich in gold, silver and other precions metals. We have mineral springs of all kinds, both hot and cold. And then the Great Salt Lake (which is right at om door) a health and pleas-ure-seeking resort for us all. We have manufactories of different kinds. And as 1 now say, we have the finest climate in the world; and if we only had gas in paying quantities, it would not only induce manufactories to start up in our midst, but would induce other enterprises which would help to enhance the value of our property, and bring our already very attractive city to the front.

There is nothing in the above article which will not apply with equal force to the city of Ogden. By reference to an article which appears in another column, it will be seen that natural gas abounds here, and is being made use of by our citizens. This ar: ticle is based upon scientific facts, and the writer cevidently understands the nature of the question he is dealing with. It is because it contains so much valuable information of a scientific character which is in every way applicable to the city of Ogden, that it is given a place in this work.

## THE MIRACLES OF THE SEASONS.

бHOSE people who scold about the wather nowarlays ilo wrong and are at best but spoiled chitdren. Did not the antumn stretch out in sumny days and stary nights week after werk mentil the farmer began to grow apprehensive of the next seasums crop, and the stock men said low to each other: "Mhings Iook barlly for next seasum?" It was neeressary that springs should be resplenished in the hills. necessary that the harvest of mext summer shonld be prepared for: So nitture set her pumps to work, oll on the Pacific. Those pumps were made of smbeams, working on the warm eurrents of the sea, and the reservoir was the drifting air. Then on the land the same sunbeams made loot the earth, and the heated air arose amd floated away. This made a vacumon, and the arr from ibove the sea rushed in and upon the valleys of Sontheru California ame discharged a part of its loarl of moisture in drenching rain. Contimung, it came where the air was rolder on the desert in the higher altitude, and murh colder When a mountain range was met and crossed, and so from the Sierras clear up the west stope of the Rockies, and for a thonsand miles "p and down the fall has been in snow. We can witness the ontward phenomemon; the savants of the past liave made the demonstration for us, and made clein how the mirate is performed. but the sublimity of the process thongh which the waters of the soid, cleatisel of their salt, are carried and teposited upon the broald badelis of our mountain ranges, is only a
part of the glory. Another miracte even yet more wonderful will be performed when the spring and the summer retirn. Even now the sm has wheeled in his course in order to work with the water and the soil to perform that minacle. He will tonch and dissolve with his beans this waste of snow; first in the ralleys and then more slowly in the hills: la will ranse it to ranish and then caress with his warmoth the frozen earth and restore it to life. Then the canth will realize its makedness and rall up its grass. kimble anew the warmen in its trees, and they in turn will hide their maked limbs with foliage: later the suring blooms will be awakened ant following them will come the glory and the full frution of the harrest. 'The two mimeles are the perfect symbols of drath and resurrection, and we suspect that the life of the spring after the deatlo of the winter was what first caused poor mortality to tum its eyes mpward and to muse a hope of a life besond the grave. lombtless, too, the coming of the smis heat to awaken the stiffened corpse of the world in spring, is what miginated the faitla of the simple Fire Worshippers of old. So when mortals scold berause of darkened and stormy days and the starless nights. they should romfort themselves with the thonght that these days and nights are, after all, laten with mereies to the huminn race, and that they are bont " part of a minate which as a whole is more splemblil than erer poet imagined or artist sketeherl. And the furions cold is a necessary arljumet. While the smbleams were set to work in the sunny valleys and upon the warm southern sea, a notice

Was sent to the far north where Winter holis his seat that he with his outriders, the wild wind and the nipping frost. must be here to receive the gathered moisture, that he must roll the snow up with his winds matil every depression was heaped fnll and must then hold it with his frost until it sloonld become packed and settled. and mutil relieped of its wateh by the spring sun. This is now being done, but mortals with dimmed visions see nothing of the splendors of the mighty transformation scenes that are going on, but rather growl becanse it is cloudy and generally disagreeable. What a selfish and unreasomable race of creatures we are, and how narmow is the horizo: in which we patss ont little lives.Salt Lake Tribune of Jan. Sth.

## PRODUCTS OF THE SOIL.

HE following table will give a good idea of the arerage per acce of the products of the soil in [Tah.

Barley averages 32 bushels to the acre.

Corn averages 97 loushels to tho arre.

Oats arerage 36 bushels to the acre.

Wheat averages $2 S$ bushels to the acre.

Pears average $\overline{6}$ bushels to the acre.

Peaches average 120 bushels to the acre.

Plmms aremge 16.0 bushels to the acre.

Apricots average 145 bushels to the acre.

Cherries average 75 bushels to the arre.

Grapes arerage 6,260 pounds to the acre.

## UTAH FARMING.

9S a usual thing farms in Utah are small but exceedingly well cultivated. The farming population is composed almost exclusively of foreigu-born people who for numerous reasons follow old country styles of farming, and generally they live in small settlements or villages and the farms are scattered about adjacent to the village.

In early days this was necessary because of danger from Indians. Another reason for this, now is, that the farmers of a settlement or village are obliged to join together for the purpose of bnilding the necessary irrigating ditches and it is more convenient for them to be near together. Irrigation is a necessity here in Utah, but fortmately there is plenty of water and with a little work the land that would be considered worthless by any one who is not familiar with the country, can be made to bring forth fifty and oftimes an hundred fold. Where water is plenty it is not a difficult job for one man to irrigate from 25 to 50 acres of land and properly cultivate it during the season. Irrigation is not such a difficult thing after all; people who have been used to depending on the rains to bring up there grain and insure an average harvest can not understand how it is that people who have to depend on this means of watering their fields can possibly raise an abundant crop; but they do it, and as a rule with less work than an eastem farmer who depends upon rain to make good his harvest. When a Utah farmer thinks his wheat needs water, he does not have to depend upon the heavens
to supply it, he simply goes to the irrigating ditch which runs along the upper side of his field, and in a short time small streams of water are flowing down throngh the field of grain. These little streams are just far enough apart so that the water will soak through the ground on each side of the stream until all the space between the streams is thoroughly saturated. When the farmer thinks the grain is sufficiently watered he turns off the water from that particular field and looks after another field.

It is not very hard work to attend to the water and in this ronsists the principal work of cultivation. Some one may wonder how it is that the farming lands lay in such a way that they can be irrigated to advantage. An all wise providence seems to have provided for this, and to-day there is starcely a piece of land that is fit for farming purposes that dloes not slope from the monntains in such a way that there is no difficulty about irrigating it thoronghly. The farming land is to be found along the base of the monntains and in the plains below, but all of the land slopes away from the mountains, and as almost every cañon is provided with a stream of fresh water, it is not a very clifficult matter to provide water for all of the farming land in the 'Territory. Several large streams flow into the northern end of Great Salt Lake through broad fertile valleys, and the day will come when irrigating ditches will be bnilt on a large scale. In one valley within 30 miles of this city several thousand acres of land have been idle for years, waiting for some one to come
along and build a large irrigating diteh.

Scarcely a place can be found in the Territory where the farming land is not so sitnated that plenty of water can he obtained for it.

A good deal of land is racant to-day and subject to the desert land luw, or it can be purchased loy settlers.

The expense of ronstrncting irrigating ditches is more than compensated for by the satisfaction which the farmer has in knowing that he is not obliged to depend upon rain to make his crops good, that little matter he regulates to suit himself. The products of the soil are alluded to in another article.

## HOT SPRINGS.

0NE of the principal health resorts of this inter-mountain country is the IIot Springs, ten miles north of this city. For years the waters of these springs have been known to possess peculiar medicinal properties. In early days the people formiles around would come and "arry away the water in barrels and casks, and it would be used as a blood purifier.

Some years ago, R. H. Slater, purchased the springs and built a commodions hotel near them, and constructed pools for bathing purposes; since that time the reputation of the springs has constantly increased. The water possesses all the medicinal properties of the famous IIot Spring? of Arkansas, and more; in fact, some regard the water of the Utah Hot Springs as far superior in every way to that of the Arkansas springs.

For rhematic trouble nothing can equal the waters of the Utah

Hot Springs: although there is occasionally a case where the patient is not benefitted, but on the contrary the discase is aggravated ly the use of the water lor drinking of bathing pimposes. Such cases are rare and camot be acrounted for. Asa blood purritier the water from there springs. has no equal. The water is quite salty and very warm where it Hows out of the ground. Even after flowing through an open trough for several humdred feet into the enclosed pools it is so hot that few people cam bathe in it with comfort at tirst. A large pool has been constructed outside of the building where it is very pleasant to bathe during the simmer time.

Although the water is salty it possesses other mineral properties. which do not make it mopleasint to drink.

With the addition of a small quantity of pepper a very fair quality of chicken broth can be made, (it is not exacty chicken broth althongh it is better than chicken soup made by carrying a live chicken through a room where a ketlle of water is boiling.) and is very pleasant to drink. Hundreds of people visit this resort every year and it is fast growing in popularity as a health resort. The present proprietor has expented a great deal of money in fitting up the place and is able to make his grnests comfortable. It is also quite a pleasme resont as the bathing is good early and late in the season when it is too conl to bathe in the Lake.

Thae amome of business done in the postothere in this city has increased twenty-tive per cent in the last two quarters.

## OUR ENGRAVINGS.

$M^{0}$OST' of the engravings in this: hook were made by the famous Moss Engraving Co of New York from photographe by Adams Brothers. Any one who is familiar with the somery in the vicinity of this rity will recognize at once that they are well executel, and strangers who have an eye for the beantiful in nature will see that they are real works of art.

In selecting the subjects it was very dithicult to decide which of the many tine scenes ought to be reprodnced. and when the selections were finally made there still remained among the number put aside. dozens of scenes in every way equal to the ones chosen.
T'In engravers evidently appreriated the fact that the subjects were far superior to the usual run of subjects, hence the superior excellence of the work. Messis. Adams Brothers are to be congratulated beranse the engravers have so faithfully reprodured the artistic effect of these photos.

## METEOROLOGICAL.

FEW meteorological comparisons may be of interest to people who read a work of this kind. The following facts and figures are perfectly reliable:

## ASPHALTUM FIELDS.

भDOLPP BLSCH, the rich brewer, and a number of other rapitalists of st. Lomis, are developing the great asphaltum deposits of Thistle, a station on the I). d R. (i. W. Railway in Spanish Fork Cañon, Itah. The company has ordered a $\$ 25,000$ plant of machinery in St. Lonis and is now rereiving bids for the erection of a three-story building, 40x115 feet. The asphaltum will be rendered from bitmminous shale, which is soft and as hearily charged as it can carry. Nature has filtered it to the highest degree of purity, all that is recurired being the simple act of separation from a silicions combination. 'This, however, has been considered a difficult process under the conditions that usmally prevail in such deposits, but the energetic manager of the works. St. I. Le Sieur, has made the asphaltum fields of this region a close study for many years and has greatly simplified the process by which this can be accomplished. Our deposits of asphaltum rank among the most valuable of our native resonces ind it is extremely gratifying to have them systematically developed by men of brains, money and energy. We have the greatest comfidence that they will prove highly remuncrative and bring glory to the 'lerritory while enriching the operators. - Sult Lalie Jonrmal of Commerce.

Theme is hardly a more inviting field for enterprise than a large packiug establishment in Utah. We send away live meat to the East and hriug it back again when cured at the rate of thonsands of dollars annually.

## RAILWAY PROSPECTS.

T is now known among the local railway officials, and among other people admitted to the confidence of the magnates, that the plan proposed by President Adams for the building of the union depots here is as good as effected. A few days will doubtless see its formal consummation.
It is also well known that work upon the structure will be resumed in the spring-as early as the weather will permit men to begin advantageons labor.

Further, it is known that large freight warehouses and other buildings and premises for the convenience of the vast railway interests of this city are contemplated, and will be provided as rapidly as possible.

In addition to the foregoing certainties there are two others which must not be forgotten. One is, that the short line to Chicago, is as corrtain as death and taxes. This line, call it by what name you will-Salt Lake Valley \& Eastern, for instance-will be 192 miles shorter than any other present route between the two magnificent centers-Ogden and the Garden City. When built, if Chicago and Ogden continue to extend their borders as rapidly as they are doing now, we may find ourselves almost in the heart of that place. One of the towns will simply annex the other. The second of these two latter certainties is that the Missouri Pacific must and will have representation in the Junction City of the West; and attached to this is the contributing one that a feeder into the north will immediately follow the appearance of the Missomri Pacific in Ogden-not more to the benefit
and pleasure of this immediate locality than to the advantage and joy of Box Elder and Cache Counties, in Utah, and the settlements in the southern part of Idaho.

Altogether, no other city in the country has a railway outlook which begins to compare with that which shows between Ogden and the horizon of 1555.-Oyden Standard.

## RAILROAD FREIGHTAGE.

(С)HE following fignres show the amount of freight received and forwarded from this city during the year ending December 31, 1857:

| CENTRAL PACIFIC. |  |  |
| :---: | :---: | :---: |
|  | Foruarded. | Receired. |
| January | .11,154,003 | 6,749,75¢ |
| February | 8,005,143 | $4.167,297$ |
| Marel | 12.399,667 | 9,281,742 |
| April | 9,471,113 | 9,812,592 |
| May | 5,524,347 | 8,984,357 |
| June | 5,570,445 | 14,042, 196 |
| July | 3,614,978 | 11,157,89f |
| Augnst | 6,137,336 | 10,238,679 |
| September | 4,406,486 | 9,938,096 |
| October | $4,543,112$ | 9,381,(6) 8 |
| November. | 2,537,667 | 9.768,586 |
| December | 2,918,2u2 | 5,794,750 |
| Totals | 79,572,499 | 109,700.905 |

The following figures are taken from a carefnlly prepared table arranged loy the Union Pacific: Amount of freight received, 432,253,576 pounds. Amonut forvarded, $90,550,795$ pounds, $16,-$ 845,567 of fruit produced was forwarded from this city over the Union Pacific during the year:

The D. ©R. (i. W. has delivered 102, 593,740 pounds of freight and forwarded $85,975,600$ pounds. This road also forwarded $5,493,700$ pounds of fruit and produce. The above figures are taken from the tonnage report prepared by J. H. Bennett of the D. d. R. G. W. for the Salt Lake Tribune.

It will be seen that during the year the merchants of Ogden have received $644,547,221$ pounds of freight and have shipped out $256,398,594$ pounds to their customers.

## A BUSINESS CENTER.

$\epsilon$VERYTHING indicates that Ogden City is just entering upon an era of unprecedented prosperity. During the time of the building of the Oregon Short Line, business was more than lively in this city, and many thought that it would continue to improve after the road was completed: but as the road was the next thing to a failure from a business point of view, the boom that was expected to strike this inter-mountain region as soon as it was ready for business, failed to make its appearance, business flattened out and a great many firms were wrecked as a result.

The experience proved to be beneficient to the business interests of our city. Our business men tore down these air castles and commenced building up their business on a solid foundation, without depending upon outside influence to insme them success.

The consequence has been that our city has been gaining ground, slowly but surely, for the past three years, as a commercial center, and now bids fair to be the central wholesale market for the smrounding States and Territories.

In saying so much, we do not mean to set Ogden up as the rival of any of the neighboring cities. Its location is so eminently favorable for this class of business, that it is perfectly natural that it
should aspire to commercial honors.

It was the favomble location of chicago which has in comertion with the hasiness enterprise of its citizens, male it the great business center of the Nurthem Mississiphi Valley. and as Onden hats this advantage of location. our husiness men simply intend to make nise of all the natmal advantages which it possesses, in connection with their own lnsiness phuck and enterprise, to attain prominence in the commereial world.

A prominent Eastern rapitalist told the writer a shor time ago, that it was his opinion that (bylen was bound to grow and liecome a prominent manufacturing and commercial city. and that it would become so maturally berause of its lucation. He was satisfied that momey, judirionsly invested in real estate in rity property. would pay gond interest on the amome invested.

If strangers can see the natura] advantages of our eity at a glance, and feel assmred of its future prosperity, certainly onr citizens are not given to rain hoasting when they ram that the city is bound to berome one of the most impertant interior husizess renters of the great Northwest eomintry.

The Chicago d Northwestern and C. B. \& ( 8 . and one or two other malroads will certainly be ruming trains into this city in less than two years, and when they are open for business, one of the natural results will be a reduction in the rate of freight both Eastand West, which will prove beneficial to the comery generally. and have a strong tendency to transfer a large portion of the wholesale business which
is now enjoyed by Eastern cities, west of the Rocky Mountains. The building of more railroads will develop the country and increase the demand for merchandise. When all this comes to pass, then the rity that is the hub) from which all these spokes. of commerce radiate, will grow in proportion to the development of the surrombing cometry.

## UTAH SULPHUR.

(9)OLIE twenty-two miles north of Beaver, just south of the northern bonndary of Beaver county, says a correspondent, we turned to the east of the main road, and after traveling about a mile through the cedars, that are very abundant in both Beaver and Millard comenties, we reached the sulphur beds owned by Mr. Dickert of Salt Lake City, and Mr. Myers of Cleveland, Ohio. The sulphur can he seen on the surface of the earth over an area of about ten acres. How far it extends monder the Jow hills which surromd the heds and the thickness of the layer is not yet known though it has been tested thirty feet down. The best parts of the bed yet worked turn out ! 10 per cent of suldhur. The crade material is quarried out similar to the way rork is. It is thenloaded into a car whiel is drawn ly a mule to the smelter, about 300 yards distant. There it is put into steam retorts which hold about two and a half tons each. Ahout 60 pounds of steam is then applied for two homs. This is sufficient to melt the sulphur, which is drawn off into vats and allowed to cool. When hardit is taken out, allowed to dry, and it is taken to the mills. There it is put through a stone similar to a
flour mill stone and is ground into pieces abont the size of kernels of wheat. It is then passal through amother stone that grinds it as fine as flomr, and sacked ready for shipment. Un an average from eight to ten tons is thus turned out cach day, but the company is prepared to put up considerable more if the market demands it.-Sult Lake Einterprise.

## CHAMBER OF COMMERCE.

0FFICERS of the Ogden Chamber of Commeree for the ensuing year:
Judge P. H. Emprsox, President.
H. S. Youvg, First V'ice-President.
L. B. Adams, Secomll'ice-Presillent.
J. H. Knatss, Secretury.
O. E. Hill, T'reusurer.

DIRECTORS:
James Mack, Mill Owner.
H. L. Griffix, Wholesale Produce.
H. S. Youxg, Banker.
P. H. Emerson, Lawyel.
J. C. Armstrong, Banker.
L. B. Adams. Banker.
S. M. Presilaw, Contrartor amd Builder.
David Kay, Wholesale Produce. Sidney Stevens, Agricultural Implement Dealer.
J. Brinker, R. R. General Agent.
H. M. Boxd, Groceries and Produce.
Joun Watson, (iencral Merchandise.
Y. M. C. Slwa. Hides and Wool.

On the evoning of the 29th of December, a vigorous thunder storm rattled over the valley as the result of the warm day that had preceded it. How does that strike you folks baek East with your 20 below elimate for Christmas week?

## DOES CAPITAL ALWAYS WIN?

(-)HIS is a question which has been ofteu answered affirmatively: indeed, we should say that capital is commonly believed to be the principal lever to success. While we do not for a moment wish to place a low estimate upon the value of ample capital, we do think that in many cases it is greatly over-estimated. How many people there are in the world who are always saying that if they had but so much money they could make a fortune or conld work wonders. These people never dream of trying to accomplish their task by steady and persistent work, but sit down and wait until some good and generous spirit comes round and hands them the money. It is needless to say that as a rule they wait a long time, and oftener than not wait entirely in rain for the generous spirit. If these projectors of wealth would be practical and endeavor to put some of their theories into practice, much better results on the average would be secured. The man who sits and waits will never succeed.

But is capital so necessary to a yoning business man as is usually supposed? If it were possible to collect the statistics of all merchants who commence business, with the capital of each, and the ultimate result of all, we verily believe that the majority of the most successfnl would be fonnd to have commenced with a comparatively small sum. If we inrestigate the history of most of the successful merchants of today, it will be found that they commenced business with little or no capital.

Why, it may be asked, is it that we do not have so much faith in one who commences with a large capital? We have faith in them, providing all other things are equal, but as a rule, they are not equal. In the first place there is a temptation, which is very seldom resisted, to rely to much on the capital and too little on the energy. The man who has capital often lacks the merits which those who are not so "lucky" possess. We do not deny that in the hands of competent men capital has large power, and is capable of being used with force against those who have none. At the same time we think that men should not place too high a value upon it, thus standing in their own light. If a man has some capital. a good character, combined with industry and good judgment, we think that lack of sufficient capital should never stop him from trying to accomplish his ends. If he does try, nine times out of ten he will prove successful. We therefore say, do not be discouraged simply becanse you have not capital sufficient to make business easy, but try and work hard to overcome the difficulty.

Notuing is said in this work about the many different business enterprises which our citizens engage in. By reference to the advertising pages any one who is at all interested can find out what kind of business the enterprising business men of Ogden follow. Long-winded business puffs are not neressary in this instance, because on the advertising pages better and more eloquent articles can be found than coald possibly be written in any other way.

## NOTICE.

бHE peonle who receive a copy of this work are requested to read it carefnlly and ponder over it. It has been prepared at great expense and was not destined for the waste basket. Most every one who is so fortumate as to obtain a copy will appreciate it, but for fear that some one who is not interested in the beauties of nature may get hold of a copy of this work, it has occurred to us that such a note as this is proper. If you are not at all interested in the work hand it to the next person yon happen to meet and the chances are ten to one that he or she will accept it with pleasure,and thank you very much for the present.

## BONANZA MINES.

I T is upon true fissure veins that the great mines of the world have been located. Names and production as follows:

| Bissenna Si |  | Mine. | \$ | 16,311,000 |
| :---: | :---: | :---: | :---: | :---: |
| Santa Anna | " | " |  | 21,347,000 |
| Valanta | " | " |  | 31,813,000 |
| Parmillian | " | " |  | 70,000,000 |
| Teta Madre | " | " |  | 335,940,000 |
| Comstock | " | " |  | 410,000,000 |
| Rio Grande | " | " |  | 650,000,000 |
| Sierra Madr |  | " |  | $800,000,000$ |
| Potosi | " | " |  | ,000,000,000 |

The world's annual production of which the United States produces fully one-half, is at present
$\$ 200,000,000$
During the last trenty-five years India has taken an average of $\$ 38,000,000$, and China $\$ 9,000$. 000 ,making the average yearly absorption of silver by these nations
$47,000,000$
In he arts the United States is using in gold and silver $\$ 15$, 000,000 yearly, and the rest of the world fully $\$ 35,000,000$ more,making in all per annum Counting loss and abrasion....

## $50,000,000$

 $3,000,000$We have left for the purposes of coinage for the entire world only
$\$ 100,000,000$

## FLOUR.

INN no class of indnstry, perhaps lave improvements been more rapid and startling than in that of mannfacturing flour. New machinery is constantly being made, and the man who will secure the most extensive patronage must be in possession of the most recent machinery for comverting grain and flour.
The yield of wheat in the vicinity of Ogrlen every year is large. The supply is ample, amb in addition to the large quantity consumed locally, hundreds of car loads are dispatched to all points East, West, North anl South, every year. hudeed to such large proportions has the flomring lusiness in Ogden grown, the city has very aptly been termed "the Mimeapolis of the West."
At present, Ogden has two of the finest flom mills in the Western comitry. These are fitted with the very best machinery, and they turn ont inn enormous quantity of bread stulf every year.

These mills are the Eagle Mills, the Phenix Mills, and the Advance Mills. The former are operated by steam power and the latter two by water power.

The market for Ogden flour, as stated above, is found in all the States and Territories. Throngh the energy and enterprise of the gentlemen who control the local flouxing industry, the market is constantly being extended, inn the mills are kept ruming almost day and night.

Another demand for flour will be ereated when the proposed wacker factory is established. It will be much better for Ogden people to be able to eat crackers
mate at home from grain grown and ground close to their doors, instead of having to patronize outside manfacturers whose groods are mate from flour producal elsewhere.

The flom mills of Osdenare heneficial institutions. They are well patronized and the patronage is encomraging for the present season, and the millers are haper. A lew other establishments of an industrial nature: ats well equipped and as energetically managed is what Ogren needs and is what Ogden will get too.Oyden Heruld.

## THE RAILROAD AN EDUCATOR.

中ROF. HOGfi, of Fort Worth. furnished some good matter for reflection as one sits by is sheerful fire on an otherwise dismal wintry day, such as the days that have passed and those we expect to meet in the future. His little pamphlet on "The Railroal as a Means of Edncation" ought to act as a smre cme for pessimism, for it comblusisely demonstrates that we live in the best age of the work, and are preparing at better age for our surcessors to live in.
As one looks nuon the first snow of the season the mind goos through all that it knows of the homors of travel in cold lands: the traveler lost in the snows of the Aps, and perhaps rescued hy those wonderful dogs of the Hospice of St. Remard, which played so great a part in our youthful visions of adventme. By the haply agenes of raihoads the frozen traveler and the wonderful dogs are remote as those of the iron-armored knights who went in cruest of dragons that deromed Christian maids.

A enshoned railway carriage. well warmed and cosy enough to shep in. takes the triweler under the Alps by way of the Momen Cenis or St. (iothard Tunnel, in less time than it takes to go from one part of the new corporate limits of Omaha to the other: and with infinitely more comfort. The So., 100.100 expended in the ronstraction of these tumnels gave the Italian and Swiss peasants twenty years of experience of the blessing of grood wages. In onl own comstry a jomrney miderneath the $\Lambda_{1}$ pralachian lange is arcomplished as quickly and as pleasantly as a "run down town." It is no longer true that,

## 'Mountains interposes

Make enemies of nations, which had else Like kindred drops been mingled into one.

The interclange of commodities and thoughts is now easy between all civilized people.

And not only have the railway projectors ammihlated distance. they have rednced risk to what would have seemed an impossible minimum filty years ago. Between May 10 and Norember 10 , 15\%, a certain line of railway (arried 4.95.),712 passengers withont injury to one of them: the same line earried $1 \overline{7}, 0(i+,!1)$. tons of fieeight and $15.3(3: 366$ passengers in one year without a loss of life on property. For instance, ten thonsand miles of railways center in Chicago, seven hundred trains enter and leave its depots every day, and with ravely a serious accident. The same can, in effect, be said of Ogden. Nor have they only made trarel swift and sure. they havemade it cheap. Serenteen bamels of flour can be carried from Chicago to New York at the rate of one rent per mile. In less than thirty hours one can
pass from the great city of the West to the great city of the East, warm and dry, no matter how wet and cold it may be without. Those fruits of the tropics which were almost as inaccessible to the boy of fifty years ago as the jewels of Golconda, are now sold for a cent at every street corner. The mannfacture of domestic products has been so stimulated by facilities of transportation that the man of very moderate means, even the ordinary wage-worker, now furnishes his house more tastefully and clothes himself more comfortably than many a German baron did a centnry ago. And the application of steam to the process of printing and the telegraph to the collection of news, has placed those greatest of luxuries, the book and the newspaper; in the rank of the most cheaply purchased necessaries.
Nor shall those successful railway managers who have accumniated such wealth as would have seemed fabulous to our fathers be condemned unheard. Not only have they done good to all of us by cheapening the pleaswres and needs of life while gathering riches for themselves, but they have, for the most part, used their riches more beneficiently than is generally credited to them. Colonel Tom Scott died worth $\$ 20,000,000$, and bequeathed $\$ 200.000$ to colleges and hospitals at his death, besides giving largely during his life. The late William H. Vanderbilt, albeit he was often spoken of as "the public be damned Vanderbilt," gave not less than \$92.),000 to education aud charitable purposes. The gifts of the first and second Tanderbilts aggregated $\$ 1,525,000$. Now the Van-
derbilt property has never been estimated at more than $\$ 150,000$,000 , so that their gifts are in the ratio of one per cent to capital. Does he who is worth $\$ 10,000$ generally leave $\$ 100$ by devise to public charities or colleges? Or does he who is worth $\$ 100,000$ generally leave $\$ 1,000$ ? Do not these figures show, at the least, as much of charitable impulse in a millionaire as in the man of moderate wealth? And it must be borne in mind that the younger Vanderbilts have added largely to the good deeds of their sires.

And the late Colonel John W. Garrett left $\$ 1,000,000$ in six per cent bonds for the use of the Baltimore Association for the relief of the poor. This was probably at the rate of $2 \frac{1}{2}$ per cent of the value of his estate. The gifts of John Hopkins and Leland Stanford were in still higher proportion to the true value of their properties. So that it is certain that the growth of wealth has not crushed ont the spirit of active benevolence. Men can enjoy the increased comforts of life untroubled by a just suspicion that the era of brotherly feeling has been supplanted by one of greed. The world of to-day is. morally as well as materially, better than that of yesterday. And the world of to-morrow will be vastly better than that of to-day, if the intelligent people of to-day will exert themselves and do as much toward making it so as the too often and too harshly judged railway kings have been doing.

It is possible that a few errors may have crept into this work, regardless of the fact that the utmost care has been taken from the first to guard against them,

## A BURSTING BOOM.

HE Deseret Neus says that the Los Angeles boom, like many others, has its drawbacks. Recently the celebrated climate, which has been selling at about a thousand dollars a foot front, suddenly became a little erratic in its conduct, and the result was that quite a section of the town was blown orer by the spicy breezes of that favored clime. Whether or not this has had any effect on investments there, certain it is that the Evening Express of that place published a list of delinquent taxes, principally under the head of "Unknown Owners," which filled forty-four long columns of finely-printed matter. The said "unknown owners" are notified in an e litorial note that unless the amounts due are paid immediately the lots will be sold for taxes.-Ogten Stundard.

The Salt Lake Valley and Eastern, is the name of a new railroad which it is purposed shall be built in the near future, already a survey of the Western portion of the road has been made, and it is learned from reliable sources that it is the intention to commence work early May nex $仑$. This new road will extend from this city to some point on the Missouri River where it will connect with a leading eastern road and form one of its many Western connections.

The Secretary of the Chamber of Commerce. will be pleased to answer all letters of inquiry, that may be sent him ly parties desiring to obtain particular and reliable information in regard to the great and growing Territory of Utah.

## DRAITEDT SPDFICNES

## OR THE GREAT IRON SPRINGS.

Loeated light Miles North of Ogrden City, Utah.

## the greatest water cure of the world.

Reposing in the bosom of the Great salt Lake Valley, and fluwing from the base of the Wasatch Mountains.

These Springs liave the merited reputation of being one of the wonders of the world ; and seckers of pleasure and lovers of sight-seeing, as well as those in search of health, will be amply paid by visiting them.

Go and try the virtues of these waters. One trial only is necessary to convince the sufferer. Good hotel accommodations. Every attention shown to invalids.

Nature has united her forces, and, with her marvelous powers, has wrought a combination of happy influences which have centralized this fortunate valley of the mountains. The grand loeation of these springs with the cliffs and rugged environs, is not the incentive which attracts so many thousands from the shores of every courtry. It is the balsamic waters which gush forth from these Springs and pour their healing offerings into every hand that will recere them, murmuring their promises of restoration to every ailing body, and there offer to receive the burlen of all bodily afliction.

It is health-the spirit and essence of all true happiness, which hundreds of afficted, who have visited these springs and been cured of the within named maladies, caf testify that these thermal waters have proven a jer. FECT SPECHIC for KIEUMATISM (in all its forms) DSEFPSA, CONstipation (the seat of a score of diseases), piles leaning (in every form), syphilis, catarrh, diabetes, or any urinary affections, amd the treatment of female diseases, has proven the efficacy of these thermal waters from the vast amount of iron they contain. In reluailding since $m y$ great lass by fire my bathing accommodations are second to none.

## R. H. SLATER, Proprietor.

## JOHN SCOWCROFT \& SONS,

## The Union Pacific Railway,

## UTAH AND NGEADA RAILWAY,

Beg to announce the opening of their New Bathing and Pleasure Resort,

## GAREIEID BEACIF,

On the southern shore of Great Salt Lake, a few minutes ride from Salt Lake City.
A Magnificent Patilion, (dimensions $165 \times 65$ feet,) built over the water 400 feet from the shore, (approached by a pier over 300 feet in length) with a tower in the center overlooking the Lake on all sides.
Over Two Hundred Elegant Dressing Roomis with stationary wash-stands, showers for rinsing off the salt water of the Lake, mirrors and every comfort and convenience for bathers, suggested by long experience.

A Handsome Station Building (350x50 feet) of the latest improved design, with high tower in the center.

A Grand Goncert in the Pavilion Guery Afternoon.
Bathing Suits for Ladies, Gentlemen and Gbildren.
The Refreshment Saloon, equipped with all the appointments of a first-class establishment, where the choicest refreshments will be dispensed by polite attaches.
The Restaurant and Lunch Stani, equal to any first-class hotel in the West, at "moderate prices.
The Bathing Grounis.-This is the only bathing resort on the entire Lake Shore, having a clean sandy beach, ifree from mud, rocks and offensive vegetable matter. Ladies and children may bathe here with perfect safety, owing to the density of the water being so great that one may float upon the surface without an effort.
The Giants' Cave (only a short distance from the beach.) is an additional attraction of this delight ful resort. It is an opening extending over 300 feet into the mountain side, with a ceiling from 10 to 75 feet in height.

Trains Run at Firequent Intervals.
